(Continued from page 744)

Screw Threads and Bolts:

The International Metric Thread was adopted in 1898 by the International Metric Congress. It has a thread angle of 60° and the diameters of screws specified range from 6 mm (1 mm pitch) to 80 mm (6 mm) pitch.

Both the UK and the USA, which follow the FPS system, have different systems of screw threads; this fact greatly hampered their war efforts due to considerable difficulties in the combined effort to secure interchangeable production. The Axis powers, which followed the Metric System, had no such difficulties.

A number of conferences were held in 1945 and 1946 on the Unification of Engineering Standards between the UK, Canada and the USA with the object of arriving at a series of standards for screw threads (including pipe threads) limits and fit, drawing practice and metrology in mechanical engineering. Though considerable progress has been made for an early agreement on a number of specific screw thread forms for special applications, the drawback in comparison to the Metric System will still remain.

If action is taken by India toward adopting the metric system as such, there would be need for an easy mode of computing measures under the system that we have and the one that we would be taking up. For this reason, we suggest that the following two tables could be of great use during the transition period:

Conversion Factors from the FPS System to the Metric System:

To Convert	Into	Multiply by
Inch	Centimeter	2.54001
Inch	Meter	0.0254

WORLD OF TEA

(Continued from page 750)

with keen demand. Quotations: Clean Black Pekoe Rs 2; Plain B.P. Rs 1-7-6; Medium Assam B.P. Rs 1-9 to Rs 1-9-6; Best CTC Assam B.P. not quotable.

The pattern of demand in the export sale was repeated in this week's dust sales wherein offerings totalled 19,500 chests. There was a better general demand at lower levels with the bright liquoring autumnals from all districts meeting with good demand at increasing price levels. The rest of the catalogues were easier by 1½ to 2 annas. Quotations: Medium Dooars Dust Rs 1-8 to Rs 1-9; Medium Assam Grainy Dust Rs 1-10; Best Assam CTC Dust Rs 2-10 to Rs 2-12; In the leaf sales for internal consumption 6,000 chests were offered and except for CTC fannings which met with good support, others recorded declines upto 2 annas.

In the sale held in Cochin on April 13, a little over 1,125,000 lbs of tea were on offer and there was a good general demand. Prices for low medium teas were 2 annas above last rates. Best liquoring teas met with keen demand with flavoury kinds attracting particular attention. All fannings grades advanced by 2 to 4 annas per lbs.

WORLD OVERSEAS

(Continued from page 752)

purchase terms, are already having a marked influence on home consumer demand.

There were also large increases in capital investment and stocks. This boom in investment is a good thing in the long run because it means modernization of plant which will raise Britain's competitive power in world markets, and it also means higher standards of living at home.

At the same time, short-term needs have to be balanced against long-term ones, and too rapid expansion of investment on top of higher consumption and increased stocks places a heavy strain on an economy with relatively low reserves. This overloading of the economy led to a curb in investment but even so 1956 will see more industrial investment than 1955, together with a greater increase in the completions of new factory capacity.

It is noteworthy that cuts in expenditure by nationalized industries do not include any curb on productive investment in the coal industry.

In short, the Government's prime objective in the economic field has been, and still is, to get supply and demand into balance and to watch all indications to see whether further measures are necessary to achieve this end. If so, there is no doubt that they will be taken.

The Government is not going to retreat in any way from its general policy of encouraging economic expansion. It is all a matter of tempo, observers point out.

*

SOUTH INDIA MARKETS

(Continued from page 760)

normal placed at Rss 851 in a steady and firm front.

Faq Copra was absorbed at around Rs 277-8 per candy. Raimoong whites were dealt at Rs 270-4 while Rai and Vettumeni were just indicated at Rs 286-4 to Rs 260 respectively.

The Kozhikode Pepper Market continued to be weak and prices declined were Rs 10 per kandy. Ginger also declined by Rs 25 per candy. At Alleppy activity continued to poor in hill produce and quotations for black pepper, ginger and turmeric were Rs 750, Rs 800 and Rs 300 for candy respectively.

WORLD OF JUTE

(Continued from page 751)

Arrivals of Raw Jute into Calcutta and Mill Stations during March 1956 were 6,42,000 bales of which 4,85,000 bales were of Indian origin and 1,57,000 bales Pakistani. Such arrivals for the nine months ending March 1956, totalled 52,19,000 bales of which 39,44,000 bales were of Indian origin and 12,75,000 bales Pakistani.

The following table shows price trends during the week:

The Seamaster—made for a Life of Action

Seals out Water — Seals in Accuracy

With unerring precision the Seamaster ticks off the most exciting seconds of your life—*in any climate* . . . aloft, ashore, afloat . . . under the surface, too, thanks to the thrice-sealed, waterproof Seamaster case. Its world-famous Omega automatic movement makes the Seamaster a peerless timekeeper—the kind of engineering triumph to which Omega owes its unequalled series of precision records at the Geneva observatory. Embodied in the consummate accuracy of the Seamaster is Omega's experience as final arbiter of the Olympic Games, the world's most *highly* contested sports event.

Stainless Steel Rs. 405/- 14 ct. Solid Gold Rs. 1150/-
Steel/Gold Rs. 505/- 18 ct. Solid Gold Rs. 1330/-

For the Investor

Speculative Forebodings

Investment Gossip:

SPECULATIVE scrips in the Calcutta Stock Exchange by this mid-week delved to levels which they had not seen for some weeks. The few minor gains here and there are no compensation for the general downward trend. It is not easy to lay one's hands on any concrete development, to explain this week's behaviour of the market. There is no new nationalisation proposal. No clear announcement of any drastic change in policy, no new tax anywhere and not even a harsh word for the private sector, which with or without provocation, persons in high authority some time feel tempted to indulge in.

The current complex of sentiment seems to be a kind of indirect impact of inconclusive discussions, rumours and prophesies. And most of these have either come from the Union Finance Minister or are centred on him. With no immediate aim in view, he said that the Taxation Enquiry Commission's recommendations were not the last word, with the Government, for future fiscal policy, that with the advent of the Second Plan, the T.E.C. Report had become a little out of date and that the Government were considering taxes not contemplated by the Commission. It was only last week that he announced a few tax concessions, which are gratefully appreciated by sections of private business. This fact has been completely submerged in his new statements.

But with all that, Sir Chintaman Deshmukh is never regarded as an enemy of the private sector. And that is the reason why reports about his resignation, threatened, sent to the Prime Minister or vaguely contemplated, raised a new wave of disquiet. There are some persons who do not in the least mind the oppression of their spouses, howsoever intolerable it may appear to others. Private business obviously does not like new or higher taxes. But if taxes are inescapable, let Sir Chintaman do it. That seems to be the attitude. For this reason at least, one would wish that he stays on for a long time.

Then there are rumours about the new industrial policy. It is now nearly four weeks since the first appearance of "reliable" press reports on this subject. What has taken place in the meanwhile and is taking place has given rise to much speculation. Many have started believing that the policy is undergoing changes unfriendly to the private sector.

The long drawn out talks between the Union and Mysore Governments on the nationalisation of the Kolar Gold Mines have thrown a wet blanket over an atmosphere already damp. It is generally believed that the State Government, determined to take over the mines, are keen on making it as good a bargain as possible.

Mr Siddaveerappa, Minister for Industries, Mysore State, said in Bangalore early this week that the Union Government wanted that a speedy decision should be taken on the quantum of compensation to be paid to the companies and on questions of foreign employees and future set-up. He further made it clear that with regard to compensation the Government of India were eager that it should be "fair, reasonable adequate and just".

Though the categorical statement of Mysore's Industries Minister has helped revive confidence among marketmen, reports about the shape of things to come with regard to the new industrial policy are of a variety that tends to deepen the gloom. For, it is now believed that the revised policy will reflect Government's decision to control and direct the production of minerals.

£R$

HIGHLIGHT

The third and concluding article on the Metric System appears in this issue. The series has a wide sweep. There is a historical background. There are many points which are flattering to national sentiment. But that is not the main thing. What does the changeover imply? How is it advantageous? On what aspects of life does it impinge? These questions are the most pressing. A rather complicated but highly fascinating change is the theme.

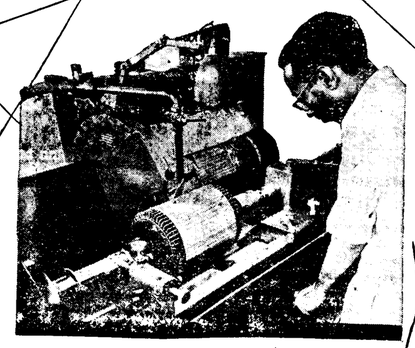
Investment Notes:

IT is reported that a broad understanding as regards mutual consultations in the future has been arrived at between the Action Committee of the shareholders of Rallis Ltd., and the management of the company. Under the agreement, periodical joint-meetings will be held and the management have agreed to make available to the Committee the necessary information about the activities of the company from time to time.

£R$

Thirumbadi Rubber Co., Ltd., have announced the issue of Debenture Stock at par for Rs 5 lakhs 7½ per cent per annum less tax, payable on March 31 and September 30. It is repayable at Rs 50,000 per annum by annual drawings over a period of 10 years, first repayable on 30th September 1961. It is redeemable at any time after five years from the date of issue on three months' notice. Last date of receipt of application is May 15, 1956.

£R$



Amalgamated Coffee Estates Ltd., have called a meeting of Debenture holders to extend the period of redemption from 1956 to 1963 with the rate of interest enhanced to 6 per cent and if the resolution is passed at the meeting to be held on 30th April, the Debentures will be 6 per cent taxfree as from 1st January 1956.

£R$

India Sugar & Refineries Ltd., have announced the issue of 3,20,000 Ordinary shares of Rs 10 each at a premium of annas 8 per share. Half of the nominal value and the full premium (Rs 5-8) are payable on each share on application. These shares will rank for dividend as and from July 1, 1956 and will rank pari passu with the existing issued Ordinary shares of the Company and will be offered to the persons who are on the register on May 21, 1956 at the rate of one ordinary share for every ordinary share held.

BRUSH KIRLOSKAR ELECTRIC MOTORS

Quality Machines in the making

Q. What is this man doing?
A. Grinding.

"Precision is our Motto."

All component parts of 'BRUSH-KIRLOSKAR' motors are machined to the closest tolerances.

The above picture shows the grinding of a Squirrel cage rotor of 'BRUSH-KIRLOSKAR' motor to a close tolerance of 0·0005". The rotors being ground to very close limits ensure an uniform air gap between stator and rotor resulting in smooth starting.

Cambodia Resumes Dividend

Balance-Sheet Reviews:

The Cambodia Mills Limited, under the Management of Peirce, Leslie & Co. Ltd., have had a remarkably good year in 1955; and this is fully in confirmation of the trends of profits in India's Textile Industry.

Sales have improved by Rs 12.59 lakhs to Rs 1.23 crores. The net profit is nearly four times the 1954 figure at Rs 3.98 lakhs against Rs 1.03 lakhs. The provision for depreciation has been increased to Rs 2.01 lakhs from Rs 1.91 lakhs. While the ordinary dividend was passed over last year, and while there was a debit carry forward from 1954 of Rs 55,087, the current year's profits have enabled the payment of a dividend of 5 per cent. This leaves Rs 27,593 to be carried forward.

The capital of the Cambodia Mills consists of Rs 20 lakhs in ordinary shares and Rs 1 lakh in preference shares. Undistributed profits, excluding the carry forward, are at Rs 20 lakhs.

The gross block of Rs 39.69 lakhs has a net value of Rs 18.03 lakhs. Additions during the year to block have been of the order of Rs 5½ lakhs.

There was a sharp reduction in stocks from Rs 31.58 to Rs 10.97 lakhs; in miscellaneous deposits and advances from Rs 10.21 lakhs to Rs 6.34 lakhs; and in investments from Rs 2.50 lakhs to Rs 30,800. Consequently, Cambodia has had substantial cash balances, such that deposits in banks are placed at Rs 10 lakhs. Liquid assets at Rs 32.53 lakhs compare with a taxation reserve of Rs 32,074 and sundry debts adding upto Rs 8.96 lakhs as against Rs 23.56 lakhs in the previous balance sheet.

£R$

Kil Kotagiri

1954-55 was a good year for plantation companies, but not as good as 1953-54. The net profit of the Kil Kotagiri Tea & Coffee Estates Company, Limited worked out to Rs 4.07 lakhs in the year ended October 1955 as against Rs 6.06 lakhs in the previous year. Taxation absorbed Rs 1.47 lakhs (Rs 2.14 lakhs), depreciation Rs 28,293 (Rs 46,971), and reserve fund Rs 1 lakh (Rs 1.25 lakhs). The dividend has been reduced to a rate of 20 per cent against 30 per cent last year and absorbed Rs 1.72 lakhs.

The balance sheet of Kil Kotagiri, which is under the management of Peirce, Leslie & Co. Ltd., consists of Rs 7.50 lakhs in ordinary shares and Rs 2.50 lakhs in preference shares. There is a reserve fund of Rs 5 lakhs.

The gross block is placed at Rs 14.52 lakhs as against the net block of Rs 11.65 lakhs. The company continues to have ample cash balances, as attested to by Rs 5 lakhs shown as deposits in banks.

Liquid assets are placed at Rs 9.83 lakhs against which there is a taxation reserve of Rs 3.76 lakhs, loans of the order of Rs 6,000 and sundry debts adding up to Rs 2.51 lakhs.

£R$

Savamalai Estates

The accounts of the Savamalai Estates Limited, a company whose agents are Peirce Leslie and Company Limited, for 1955 serve as further evidence that, for plantation companies, the year just past was not as good as the two immediately preceding 12 month periods. Although the outturn by Savamalai improved from 2,203 cwts to 2,860 cwts, and although sales also increased from Rs 3.64 lakhs to Rs 3.82 lakhs, the expenditure ran at a higher level, so that the net profit was reduced from Rs 1.35 lakhs to Rs 1.19 lakhs. Taxation receives Rs 35,250 (Rs 41,658 in 1953-54), depreciation gets a provision of Rs 16,108 (Rs 13,625) and there is a transfer of Rs 50,000 to the reserve fund as against nil last year. The ordinary dividend has, consequently, been reduced to 10 per cent from a payment of 25 per cent in 1953-54.

The capital of Savamalai is Rs 3.67 lakhs, against which undistributed profits total Rs 3.71 lakhs. The gross block shows an increase of over Rs 22,000 to Rs 3.11 lakhs. The net block has a value of Rs 2.49 lakhs, development expenditure is marked nearly half a lakh higher at Rs 3.49 lakhs, cash balances are reduced and liquid assets are shown at Rs 2.69 lakhs. Against this, the liabilities comprise Rs 69,385 under taxation reserve and Rs 69,461 as sundry debts.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE visit of Bulganin and Khrushchev to Britain, possibly the last round of the most highly-publicised diplomatic sojourn of modern times, bears unusual political significance. After Churchill's surprise visit to Moscow during one of the most critical stages of the last World War, the Prime Ministers of Britain and Russia have met only on foreign soil.

Churchill went to Moscow at a time when a difficult war had to be won. The Russian leaders have now been to England, when the prospect of a far more diabolic conflagration has to be smashed. On the Western side, it has been clearly demonstrated that Britain understands and accommodates the Soviet point of view to a much larger extent than any one else. If at all a rapprochement between the communist and democratic countries is possible, it could only originate from an Anglo-Soviet understanding.

The Russian leaders know the temper and understanding of the British people too well to cherish false aims for their visit. To the neutral countries of Asia, they might have gone with a propagandist mission. With Britain their aim must be totally different. Having disowned Stalinism, and dissolved the Cominform, they are in a position to demonstrate their sincere desire for world peace before a politically mature and skilfull people.

In a country, which is striving toward economic equality and mass welfare, through means and methods, openly antagonistic to those employed by the Soviets, the two leaders could have expected no better reception than they actually had. Khrushchev's unfriendly observations on the policy of British Labour, provoked the wrath of even an extremist like Bevan. The visit cannot be deemed a total success as a piece of public relations work.

It is reported that the problems of the Middle East, Indo-China and disarmament were discussed between the guests and the British Premier. The talks must have served to dissolve mutual suspicions further and to improve understanding of each other's points of view. No verdict of immediate failure or success is justified on efforts which form part of a long chain of international events. At least, the swing off the cold war has been maintained.

One great benefit of these visits is the opportunity they provide for those who guide the destinies of the Communist world to see first hand how their personalities and doctrines appeal to the average citizen in countries which claim to have achieved a large measure of economic equality. The attitude evinced by the British public, the workers, the students and representatives of the various social organisations, whom they came across, must have created an impression on the minds of Bulganin and his colleague, which no newspaper comment or diplomat's statement could have conveyed so accurately and so indelibly. It is in this sense that mutual understanding could be said to grow, through exchanges of top-level personal visits. There is a new appeal much deeper than those between Governmental spokesmen and party leaders. When either side is willing to make adjustments in policies, to the liking of the other, it is most helpful to know the real emotional pulls of the people concerned. The two Soviet leaders have undoubtedly gained by getting a straight access into the heart of the British people. That can be a sure gain for the world as well.

European Economy in 1955

THE latest Economic Survey of Europe, published by the United Nations, testifies to another year of rapid expansion in Western Europe, on lines more or less akin to what was recorded in 1954. Industrial production went up by 10 per cent as in the previous year. The increase was achieved without any major changes in the price level and with no more than a negligible deterioration in the balance of trade with overseas countries. Looking back over the last three years, the chemical industries had the most sustained and rapid rate of increase in output. Compared to the earlier months of 1953, output at the end of 1955 was at least a third more. The steel and metal-using industries have kept close company with chemicals in respect of the pace of expansion.

One of the most outstanding features of this expansion was the utilisation of many pockets of surplus capacity in a number of countries. France and Belgium were able to utilise their steel and coal surpluses; Italy and Austria their surplus capacity in engineering industries. The free liberalisation of internal trade among the Western European countries not only resulted in a general lowering of import prices but in the expansion of industrial capacity, notably in Western Germany whose exports rose by 25 per cent between 1954 and 1955.

Soviet industry recorded an even higher rate of increase at 12 per cent. Here it is noteworthy that two-thirds of the increase is the result of rises in productivity and one-third of additions to the industrial labour force. The relative importance of labour productivity was reflected in the emphasis given by the Soviet authorities on the need to keep real wages well behind the level of individual output. In comparison with 1954, the biggest increases in Soviet industrial output were for oil products, machine tools, agricultural engineering and cement. Grain production in the Soviet Union was higher by 22 per cent. For Eastern European countries also, the increases were substantial and mostly comparable to those of Western Europe, the rates ranging from 8 per cent in Eastern Germany to 14 per cent in Rumania.

The general liberalisation of imports in Western Europe, however, obscures certain shifts which render the short-term prospects for the demand for European exports somewhat unpromising. Technological developments have long been tending to a situation in which the dependence of Western Europe on outside supplies is getting reduced. In some cases national economic policies aggravated this trend. Disinflation in the U.K. is an instance in point.

Unless there were to be a constant flow of loan funds outside Europe and a positive encouragement of imports, the future pattern of trade might be radically different from what obtained, say, twenty years ago. It is quite on the cards that Western Europe, like the U.S.A., will become more and more isolated in respect of foreign trade. A growing home production points to this result, in the alternative, interdependence with the rest of the world could still be maintained, if the traditional restrictive commercial policy of many of the Western European countries were to undergo revision.

Technical progress also casts its shadow on employment on a scale Western Europe is hitherto unfamiliar; more and more investment is the answer. In many European countries, notably Italy, Greece, Netherlands and Finland, the growth of population reinforces the need for larger investment. Some of the national economies are facing the problem of how to square up the requirements of a progressive improvement in the standard of living, which is open to them, with those of current sacrifices. The attainment of a reasonable balance involves questions which are engaging expert attention.

The course of investment is not uniformly smooth everywhere. There are shortages of risk capital here and there. But, on the whole, Western Europe does not seem to consider this shortage as a serious problem. In Netherlands, for instance, relatively large profits are available, much of which are being ploughed back. But even where there is an overall abundance of capital, effective demand, by which is meant a reasonably high interest rate has still a great deal to do with its unrestrained flow. In Belgium, on the contrary, demand is slack. In this respect, France excels Belgium. In France medium-term bank credits, shares and bond issues are kept down for lack of demand.

While net investment generally is proceeding at a reasonably high rate, it is still felt that the pattern of investment is not beyond improvement. In other words, every promising development does not receive deservedly prompt attention, and it is fairly difficult to say whether it is due more to the financial obstacles in the way, of which individual firms have experience, than to the decadence in the spirit of enterprise. There is one conclusion which can be indubitably stated and which has some significance with reference to present-day conditions in India also; the more plough-back profits are conspicuous, the less the financial strain for industrial enterprises; but it is not every firm which can rely on plough-back profits in any substantial measure.

The European labour market has also developed problems, many of which are peeping into Asian economies as well. While the United

India and the Metric System—III

By P. E. MEHTA

An Indian Finance Special Study

IN the third and the final article on the subject we shall go into the details about the invention of the decimal system, how efforts were made by the British to introduce the Metric System in India and our concluding remarks on the subject.

Confusion Regarding Metric Measures and Decimal System

Many of our readers seem to be confusing the Metric measures with the decimal system as per the discussions we had with quite a few and we shall touch the background of the numeral system a little. Measuring in its fundamental sense means counting and counting can only be done when there is a system of enumeration. The first system of enumeration was the Roman System of numbers which had numbers from one (I) to nine (IX), ten (X), fifty (L) one hundred (C), five hundred (D) and thousand (M). The Roman system of enumeration was clumsy as when we want to write 1789 in the Roman System it would be M D CC L XXX IX. The basis of the Roman enumeration System was the figure 10 which they took from the ten fingers of the hand as in primitive times all counting was done by the fingers. The Roman System of figures was very clumsy in case of addition and subtraction, but was very difficult for multiplication and division and that is why the Romans never advanced beyond the mill (10^3). The invention of the zero (O) by the Indians and the Indian numerals which are wrongly called Arabic numerals and decimal system has been discovered for the science of calculation of high numbers.

Decimal System an Indian Invention

The history of India is so old that we the descendants of the Vedic sages and savants, with our western education forget to give due credit to our ancestors. The following paragraphs are quoted from "THE PAGEANT OF INDIA'S HISTORY" and they speak for themselves.

"In the field of mathematics the Vedic Indians, from the very beginning were using the decimal system of numbers, a discovery probably their own, which the whole world has since borrowed. They also made use of extremely large numbers. In the fourth century B.C. the highest number used by the Greeks was the myriad (10^4) and the Romans never advanced beyond the mill (10^3), but the Vedic Indians centuries before had already proceeded to use 10 to the fourteenth power (10^{14}).

Indian numbers commonly miscalled Arabic, were introduced by Indian merchants in Alexandria, probably in the second century A.D. Asoka used written numerals five hundred years earlier in his Brahmi inscriptions. BUT AN UNKNOWN INDIAN MATHEMATICIAN, ABOUT A CENTURY BEFORE THE CHRISTIAN ERA, MADE THE GREATEST OF ALL CONTRIBUTIONS TO ARITHMETIC, THE INVENTION OF THE PLACE VALUE SYSTEM AND ZERO. According to this system, numerals acquired a value depending on their place or position, in a series of numbers built upon the decimal plan. The civilized world today takes for granted this ingenious numeral system, by which all arithmetical calculations can be worked out by the use of only nine numbers and zero, and completely forgets what it owes to India for this wonderful discovery. In comparison with the Indian system, the ancient Greek alphabetical notation and the clumsy Roman symbols were very inconvenient.

The earliest reference to the new system in India appear in Sanskrit literary works of slightly before and just after the beginning of the Christian era. From the end of the fifth century, however all Indian mathematicians were already using the new system. By the seventh century, it had made its way eastward to Sumatra, Cambodia and Annam as proved by inscriptions with dates recorded in the Indian Saka era. A century later, Indian mathematical works were translated into Arabic in Bagdad. The Arabs had hitherto possessed no numerals of their own, but had used Greek or Coptic signs, and had done their calculations on the abacus. They atonce perceived the superiority of the Indian system and eagerly took it over, giving full credit to India. They introduced it into their African and Spanish conquests, and from Spain it passed into Europe. Europe first tentatively began to use Indian numerals and the Indian numerical system in the tenth or eleventh century, but it was not until the seventeenth century that they came into general use in the Western World.

The father of scientific astronomy in India was Aryabhata. He is known to have been teaching astronomy at Pataliputra in 499 B.C. Aryabhata was advanced enough to believe that the earth rotated on its axis, and he was able, without the use of telescope or any modern scientific instruments, to calculate by epicycles and eccentric circles, the position and co-axis of planets.

Aryabhata described various original ways to perform different mathematical calculations including the extraction of square and cube roots and the solving of the quadratic equations. In all his calculations he made use of decimals and the Indian inventions of zero and place value system. He was thus well in advance of mathematicians of any other country. As the Indian number system is the basis of the Metric System of measurements, we may claim to have prepared the grounds for the modern way of measuring."

Attempts made by the British to Introduce the Metric System in India

The British after consolidation of their power in India tried to reform the system of weights and measures existing in the country. A Central Committee was appointed in 1867 to reform the system of weights and measures existing in the country and to bring in standardization.

Without going into details of the proceedings which in the end decided to make F.P.S. system the legal one we would like to give briefly the memorandum proposed by the Chairman of the Committee, Colonel Strachey R.E., He pointed out that weights and measures were as diverse as was well nigh possible, but India did not differ in this respect from other countries in which uniformity had not been prescribed by the authorities. He said that throughout India the old standard of weight was based upon the current coin of the locality and that weights and measures varied from town to town and even within the town or rural area for various commodities. In view of this condition of things, he suggested firstly, that it would be necessary to set aside the whole of the existing weights and measures of all sorts in order to establish uniformity and secondly, that the INTRODUCTION OF THE METRIC SYSTEM WOULD HAVE TO FOLLOW AS A COROLLARY.

He was of opinion that the assimilation of the English weights to those of France was a mere question of time, and that the existing English System could not last. He, therefore, advocated the adoption of the French kilogram as the basis of the new system of weights in India.

Colonel Strachey had more hesitation as to measures of length, and would defer any change. But objected distinctly to the general introduction of the English foot as a standard, as he believed it would eventually have to be given up. If any new unit were to be introduced, he thought the metre the best standard to adopt.

A draft of a Bill to regulate the weights and measures of India was appended to Colonel Strachey's Memorandum; he proposed the Bill to take effect from 1st January 1871. It provided for the legal establishment of all the French Metric weights and measures, the construction and deposit of official local standards, the appointment of Officers and local inspectors, together with the requisite provisions for the discharge of their duties, and for the regulation of commercial weights and measures. After the publication of this Memorandum finding that it did not meet with the assent of a majority of his colleagues, Colonel Strachey retired from the Committee. Thus if the efforts of Colonel Strachey had succeeded India would have made better progress.

Recommendations for the Adoption of the Metric System by all Countries made by the International Chambers of Commerce Conferences 1935 & 1939

The Conference of the International Chamber of Commerce held in Paris in June 1935 had in the agenda the important subject of the unification of weights and measures throughout the world. The study committee of the conference carefully discussed the present position with respect to the three rival systems; the English system, the American system, and the metric system. Their conclusion is as follows:

"From all points of view whether commercial, historical, didactic or scientific, it is evident that the whole world candidly desires a uniformity of weights and measures. Only one of the three above systems can bring that uniformity.

"Before the war, one was sceptical about the final result, but not now-a-days. It seems inevitable that the metric system will be the universal system for the following reasons:

"52 nations or governments, representing two-thirds of the human race, have adopted it.

"In no country there is any indication of the tendency to go back to the old system."

After discussing the Report, the International Chamber of Commerce adopted a resolution for the international application of the decimal metric system. The US delegation reserved their opinion. This resolution mooted by M. Richard Bjerke (Norway) is as follows:

"The International Chamber of Commerce;

"Stating that the decimal meric system has been adopted in course of the post war years by a large number of countries;

"Observing that there exist, especially in the Anglo-Saxon countries, other systems of

An Indian Finance Special Study

weights and measures which, if continued to be used, would obstruct for a long time to come international unification;

"Considering that practical experience gained by countries which have adopted the metric system shows clearly the happy results obtained by its adoption in the field of trade and industry, by activising national economy and simplifying international relations.

"Appeals:

"to the national committees of countries where the metric system has been officially adopted, to kindly attract the attention of their respective governments, if necessary, to take necessary measures for making its use obligatory to the exclusion of all measures of length or mass;

"the introduction of a uniform system in all countries should undoubtedly obviate much of the vexatious superfluous calculations. A large majority of nations having adopted the decimal metric system of weights and measures, it is highly desirable that all other countries follow suit.

"The International Chamber of Commerce therefore strongly urges to the National Committees of countries where non-metric system is still in use to press their governments to take necessary measures for the adoption of the metric system after a transitional period." Unfortunately shortly after this resolution was passed the Second World War broke out and the valuable suggestions made were not put into force.

What should be the period of Transition

We have given a very good deal of thought to this question as this to our mind is the important factor from the viewpoint of the country. The Council of Indian Standards Institution in its report of December 22, 1949 on the Metric System under para 5 have suggested the following period of transition:

"The period of transition of about 15 years foreseen in three phases—

(a) preparatory—3 to 5 years, comprising of a programme of education and propaganda.

(b) change of system—5 years, during which the type of legislation proposed by the Centre will be adopted by all the State Governments.

(c) the final phase—3 to 5 years, at the end of which the change will have to be completely accomplished, the metric system being then the only legal system.

We are in complete disagreement to the above and feel that the transition period allowed for the weights and measures should not be more than 5 years.. The first two years should be for education and propaganda and the final three years for complete adoption of the system. In case of change over for engineering drawings and machinery a further period of five years should be allowed, but no compulsion or direction is necessary in this matter as in competition and supplying machines and equipments to metric standards the firms will have to fall in line.

We are sure that if the Indian Standards Institute looks to the question in 1956, they will certainly modify their suggestions given in 1949 in view of the Revolutionary Industrial policy of the Government of India.

In a recent speech made by Mr T. T. Krishnamachari Minister for Commerce, Industries and Iron & Steel, giving a comparative study he said that "America took nearly 50 years and Russia 35 years to attain industrialization of their respective countries, whereas, India was seeking to complete its programme of industrialization within 15 years. If the Honorable Minister meant this seriously then in our opinion the transition period should be only one year as the highly ambitious programme of industrialization can hardly be fulfilled under present system of weights and measures.

Concluding Remarks

In the short span of the three articles we have tried to touch on all aspects of the problem, and in some cases we have not been able to give complete explanation, as a book can be written on the subject. To those readers who are interested in further study of the subject we recommend them the very fine study made by Mr Pitamber Pant in his Memorandum to the Introduction of Metric System in India.

In this nuclear age when we talk about the peaceful use of Atomic Energy, all calculations in the atomic science are made with the Metric System, so if India wants to attain her rightful position, she has to fall in line with the rest of the world.

There are no doubts in our mind that the Metric System be introduced at a very early date by an Act of Parliament.. India is on the threshold of an Industrial Revolution the type of which has no parallel in the twentieth century. For accelerating our industrial potential the Second Five-Year Plan has laid a great stress on Heavy and Basic Engineering Industries. In the first article under advantages of the adoption of the Metric System we have mentioned that 30 per cent of the time can be saved in the Drawing offices and Designing offices where engineering calculations are made. Thus if the Metric System is adopted the work planned for in five years for the Engineering Industries can be accomplished in three and a half years which we feel a very great advantage.

As mentioned previously the ground work for the decimal and the place value system was done in India and the French perfected the standards and the measures and so we owe much to the unknown Indian mathematician and to Aryabhata and the French Scientists for their work and that we take advantage of it.

When the Metric System was adopted in France, M. Prier member of the Convention made the remark "that the adoption of decimal measures, is as decisive for human industry and the destiny of great societies as was the modern invention of printing and the gun powder. The great German thinker the positivist Jacobi F.H. (1743-1819) said that the advantages of this technical revolution, which allows a saving of intellectual labour comparable to the effects of the invention of machines, railroads, telegraphy or logarithmic tables—the final object of which is after all, an increased production of wealth. M. Favre a member of the French Convention which adopted the Metric System mentioned that it was the first article of a programme of International Co-operation".

At the Russian Technical Society, Prof. Kvolsen, prophesied the ultimate universal adoption of the metric system in the following words:

"The metric system is an elemental force impossible to subdue and to fight against it is a sheer recklessness. Open the gates to it and it would come in as a friend, as a benefactor, but if you close the door upon it, it would take you by storm as an enemy and would conquer territory inch by inch falling upon you through million chinks. It would be beseiging on all sides and would step by step force you to yield positions to it. Against its invincible power you wonld have to lay down arms and would finally find yourself in a desperate position."

We shall conclude this article by quoting the Prime Minister Mr Jawharlal Nehru who said last year: "Our Parliament has accepted the principle of introducing the Metric System in India and legislation has already been passed in regard to coinage. The rest will no doubt follow. It is important, however, that there should be full publicity about this system and the obvious advantages that it will bring to us. We are, on the whole, a conservative country and it is not very easy to change old-established customs. But I am sure that our decision to adopt the Metric System is the right one from every point of view. For the scientist, the technician and the statistician, it is the only system that can be used. But even to the people generally this will bring relief and many facilities. There will no doubt be slight inconveniences to begin with, but this will not last."

EUROPEAN ECONOMY IN 1955

(Continued from page 785)

Kingdom, Norway, Sweden and Switzerland and to a lesser extent the Netherlands and France have been enjoying in the post-war period "full employment" as it is broadly understood, it is only lately that other countries, notably Western Germany and Austria, have come to share this status. Only in Italy and Belgium unemployment persists in a degree considered unhealthy. Temporary shortages and surfeit of labour do occur, but these are seldom regarded as a serious challenge to economic policy.

In one respect there has been a distinct improvement. There is now very little of the excess turnover or absenteesm which developed as a disagreeable concomittant of the excess demand of the early post-war years. At present, policy-makers' main headache seems to centre round the behaviour of wage levels.

A continuing ageing population also anticipates a problem for the future. Throughout North-Western and Central Europe, this process has become more or less uniform. It is estimated that while in 1951 the number of people of 65 years of age and over accounted for 15 per cent of the working age population, that is, between 15 and 64, at the beginning of 1956, it is found to be one per cent higher. This trend necessitates re-thinking on a number of demographic issues, most pertinently the age of retirement. As the Report points out, the question of retirement age has now to be considered in relation to the requirements of social policy and to the full utilisation of the working capacity of old people. France presents a paradoxical situation. While on the one side the fear of unemployment persists, on the other population trends suggest the need for a high pensionable age.

The labour market for women still broadly reflects the rule "last in, first out". Statistics of unemployment among women are incomplete, but it could be maintained that the proportionate increase in the employment of women has been greater in the United Kingdom than that for men. Women's demand for part-time jobs in almost every country exceeds the supply. Welfare legislation encourages this demand. Trade Unions naturally are lukewarm in their attitude to the expansion of the part-time segment.

A Proper Guidance

The report of the Herbert Committee, which recently inquired into the working of the electricity industry in Britain, should be a valuable source of inspiration and guidance to other countries as well, particularly India, where the rates charged for electricity have long remained a highly controversial issue.

The report is of even deeper significance to State-owned undertakings as a whole. For it provides some precise criteria to judge the performance of a section of industrial undertakings which have hitherto been groping for such criteria. Conditions in Britain are somewhat dissimilar to those in India, but this circumstance does not affect the relevancy of the principles which the Committee has prescribed.

The first principle indicated by the Committee is that the industry should supply electricity to any class of customer in such a way that it should not have to face higher costs than a private concern would have to face in similar circumstances. The widespread assumption that the British Electricity Act of 1947 either implicitly or explicitly permitted sale of electricity on a non-commercial basis is challenged by the Herbert Committee.

In elaborating the point, the Committee stipulates two main requirements. One is that revenue should be sufficient to cover all outgoings properly chargeable to revenue account. The other is that prices charged to individual customers should reflect as intimately as possible the relevant cost of supply.

In the latter respect, the Committee's recommendation militates against the statutory obligation thrown on the Electricity Boards to simplify the methods of charging as far as possible. The Committee has suggested the repeal of that obligation.

The recommendations made on behalf of a general revision of salaries and the reorganisation of the supervisory machinery are intended to impart to the Electricity Authority that measure of efficiency without which uneconomic costs could not be got rid of. In essence, the Committee wants a complete stoppage of every form of uneconomic activity by the electricity authority; where electricity could not be supplied at reasonable costs, the Committee would have it not supplied. The following passage sums up the spirit and purport of the report:

'We attach great importance therefore to the industry being run on business lines. It should have one duty, and one duty alone: to supply electricity to those who will meet the costs of it and to do so at the lowest possible expenditure of resources consistent with the maintenance of employment standards at the level of the best private firms. Any deviation from this task should be undertaken only on precise instructions. The line between the Government and industry should be a clear one for all to see.'

There is no reason why this advice should not hold the same appeal for State owned undertakings in general.

Editorial Notes

Future of Advertising

The Chairman, of the Indian Society of Advertisers refers to the 360 million people of India as a vast mass market for products, new and old. We are inclined to be somewhat sceptical of alluring descriptions of this kind. This scepticism becomes deeper when he compares India with the USA. In the one case, there is a people who are engaged in ceaseless competition to produce new forms of comforts and luxuries and for whom super-abundant resources have opened up a virtually limitless vista of opportunities.

In the other, there is a race between population and economic effort to keep the masses comfortably above want. It is unrealistic to speak of these two conditions in the same breath, especially as potential markets for goods. Immediately in India, the State is engaged in a vigorous effort to place more goods and services in the hands of the people. It is also keen that they should tighten their belts for a few years to come. If consumption expenditure were to leap up, there will not be enough left for productive investment which is by any showing far more urgent and unavoidable. There are two rival calls on the new purchasing power.

To say this is not to refute completely the thesis of Mr D. M. Khatau. Nor is the State in any way justified in regarding advertisement as a luxury, if not a waste. An expanding economy, with increasing levels of production all-round, a rising consciousness of the need to reduce physical toil and to augment the area of leisure, should in its train stimulate wider and new demands. The intelligent advertiser has, therefore, a sound future in India. What has to be guarded against is only an exaggerated estimate of potentialities. Even the State, which is extending its functions cannot and will not seek to eliminate advertising for the sale and distribution of the manifold services which are coming under its sphere.

If growing literacy and incomes are matched by suitable messages on behalf of the supplier of goods and services, mass demand will necessarily go up. The advertisers' function will continue undiminished. Mr Khatau's appeal to the rising industrialists is timely. It may well be extended to the established ones also. One of the major handicaps of advertisers in India lies in the imperfect appreciation of their service by private industry generally.

★

Demise of Cominform

Coming in the wake of resounding changes in Russia, the dissolution of the Cominform has caused practically no surprise. For sometime speculation about the future of the organisation was rife but the decision to bury it was taken quite recently. The reason advanced is that the Bureau "in its composition and the content of its work no longer conforms to the new conditions" in the international situation and so has exhausted its usefulness.

The Cominform was set up in 1947 to take the place of the Comintern dissolved by Stalin to please his war-time allies. Serving mainly as a propaganda forum and a source of inspiration to the faithful, the Bureau was regarded by others as Kremlin's chief instrument of subversion. The expulsion of Yugoslavia at the behest of Stalin, a flagrant instance of interference, turned out mortal to its prestige.

Post-Stalin Soviet diplomacy envisaged the tearing down of the iron curtain and developing contacts with the outside. But Russia's pleadings for peaceful co-existence were hitherto viewed sceptically by the non-Communist world to whom the existence of the Cominform was itself a potential threat.

Mr Nehru more than once was reported to have stressed the desirability of ending the Bureau as proof of the bonafides of Soviet declarations. That they were very hesitant to take so momentous a step is borne out by the fact that even while in Delhi the Russian leaders defended the Cominform. The present decision is obviously meant as a sop to international non-Communist opinion. The timing is also significant, coming as it does on the eve of the Soviet leaders' visit to the U.K.

With the Cominform has gone the boosted monolithic unity of Communist Parties the world over. Formally at least, Moscow ceases to be the hub of world Communism and every party is left to evolve its own policies and programmes. This was an important pronouncement of the Twentieth Congress; the disappearance of the Cominform serves to reinforce it. Many hope that the end of the cold war is in sight and that giving up its fears and suspicions, the Western bloc would accept Russia's proffered friendship.

★

Against Austerity

Last week-end, one of the Congress members of the Lok Sabha put forward a rather heterodox suggestion to tackle unemployment.

Trends in Bank Deposits and Advances

FOR two weeks in succession, advances of Scheduled Banks have recorded a decline. The peak for the busy season was touched in the week ended March 30, 1956 with the total at Rs 760.80 crores. In the week ended April 6, 1956 there was a drop to Rs 756.80 crores and in the week ended April 20, 1956 to Rs 754.80 crores. The decline by Rs 6 crores cannot be considered very significant. But taking into account the increase in deposits by Rs 24.12 crores in the same period, it is possible to say that the peak of the busy season has been definitely passed and that from now on the banking system will gain considerably in strength.

Since October 7, 1955 it has been a rather busy time for the lending institutions. As against an increase in deposits by only Rs 42.93 crores, advances rose by as much as Rs 165.63 crores. This naturally meant heavy strain especially as there was keen competition from exchange banks for available funds. The call rate was at times over 4 per cent. Business was done even at 4½ per cent. The increase in the Bank of England rate to 5½ per cent in February this year complicated matters.

It must be said that the Scheduled Banks handled the situation skillfully and that the most effective use of available funds has been made. As far as possible, investments were not touched and cash balances were maintained at the minimum levels. The total of cash on hand, balances with Reserve Bank, balances with other banks and money at call and at short notice was only Rs 106.65 crores on April 13, 1956. It was Rs 133.06 crores on October 7, 1955. Investments were lower by Rs 29.56 crores at Rs 356.37 crores, while borrowings from the Reserve Bank of India rose by Rs 41.36 crores to Rs 49.42 crores. The position will be clear from the table given below:—

TREND OF DEPOSITS AND ADVANCES OF SCHEDULED BANKS IN 1954-56.

(In crores)

Date	Demand & Time Liabilities.	Advances.	Total Cash.	Investments.
15-10-1954	914.60	520.10	122.44	348.16
1- 4-1955	957.29	632.52	97.44	344.31
7-10-1955	1,031.50	589.17	133.06	385.93
30- 3-1956	1,050.31	760.80	102.02	360.07
6- 4-1956	1,069.76	756.80	110.59	359.55
13- 4-1956	1,074.43	754.80	106.65	356.37

N.B.—Borrowings from Reserve Bank and Borrowings from the State Bank and/or a notified bank have declined in fortnight ended April 13, 1956 from Rs. 85.63 crores to Rs. 60.08 crores.

For a time, there was anxiety that the prevalence of fairly high short-term rates, which were out of alignment with the Reserve Bank rate, would create an embarrassing situation. But this stage is now past and there is no need to think in terms of a higher bank rate. In fact, the development in the slack season should prove to be favourable and the requirements of the next busy season could be more easily met.

Last year, deposits increased from Rs 957.29 crores on April 1, 1955 to Rs 1,031.50 crores on October 7, 1955. Advances declined by Rs 43.35 crores to Rs 589.17 crores. Investments were thus higher by Rs 41.62 crores at Rs 385.93 crores, with a sizable increase in cash balances.

In the coming months, the increase in deposits can be expected to be at a much higher rate as the banking system has not yet felt fully the effect of the big increase in notes circulation in the last two months on account of deficit financing. In fact, as compared to 1954, the increase in deposits has been at a slower rate in 1955 especially if it is remembered that the increase in note circulation was very much more. In 1954, deposits rose by Rs 94.38 crores while in 1955 the increase was only of the order of Rs 90.02 crores. Probably, the larger investment by private traders in commodities has been responsible, to a certain extent, for the absence of a pronounced increase in deposits in recent months. But since the adjustments have been very nearly completed and surplus cash in the rural side is being absorbed by an increase in the offtake of manufactured goods, a new record in respect of deposits can be expected to be established in the current year. Since 1947, there was a decline in the working capital of banks till the end of 1952. Only in 1953 a small increase was recorded while in 1954 and 1955 conditions have been definitely more favourable. If, at this stage, there could be an understanding between banks in regard to the acceptance of money on a call basis at specified rates and there is no complicating effect on account of a rise in prices, any increase in business activity can be financed without much difficulty.

+

As per the statement of affairs of the State Bank of India for the week ending April 20, Deposits and Other Accounts show a fall of Rs 1.35 crores from Rs 236.04 crores to Rs 234.69 crores. Borrowings from other banking companies etc. have risen by Rs 2.02 crores. Bills Payable are less by Rs 1.71 crores. Other liabilities show an increase of Rs 1.34 crores.

On the assets side, Government and trustee securities held show a decrease of Rs 0.09 crores, which is more than offset by a rise of Rs 0.10 crores in other authorised investments. Cash in hand and with the Reserve Bank has risen by Rs 1.81 crores. Loans, etc. and Bills discounted and purchased show a fall of Rs 0.93 crores.

Mr Macmillan's First Budget

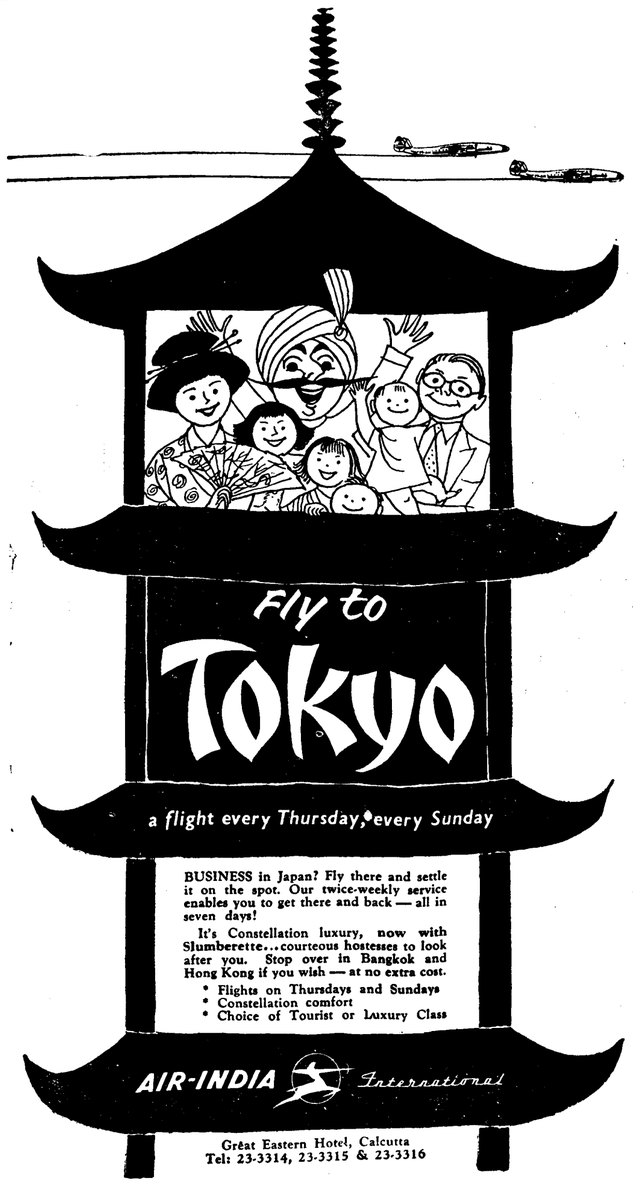
By PAUL EINZIG

ON the day following Mr Macmillan's Budget statement the London Stock Exchange displayed a cheerful tone and sterling rose to above 2.81, the highest point since its decline last Summer. The verdict of the Stock Exchange and of the international foreign exchange market was distinctly favourable. In itself a firmness on the Stock Exchange could have been interpreted as an indication that the markets were anticipating more inflation. Since, however, it was accompanied by a firmness of sterling such interpretation would be out of place. Rightly or wrongly, investors, speculators, and dealers in foreign exchanges have taken an optimistic view about Britain's economic prospect as a result of the measures announced by Mr Macmillan on April 17.

The new Chancellor's new taxes would not in themselves justify optimism about the possibility of checking inflation. Although he increased slightly the tax on tobacco and the Profits Tax—thereby squeezing slightly both the working classes and the employers—he gave away the proceeds in the form of some long overdue concessions, mainly to the middle classes. It cannot be said that the Budget has inaugurated a disinflationary fiscal policy—unless we accept the view that capital expenditure by the Government need not be covered by current revenue. That conception has become thoroughly discredited in recent times. It is indeed absurd to imagine that the effect of purchasing power created through capital expenditure by the Government differs in any way from that of purchasing power created through an excess of current expenditure over current revenue. Spending by workers engaged on some Government capital investment project is just as inflationary as the spending by Civil servants whose salaries form part of current expenditure unless it is covered by revenue.

It is to the credit of Mr Macmillan that he discarded the unwarranted differentiation between the two types of expenditure and reestablished a proper Budgetary equilibrium. This alone justifies a certain degree of optimism. It means that Government deficit is no longer added to the inflationary forces in operation. There is, however, no overall Budgetary surplus which would mop up the inflation created in the private sector of the economy as a result of the operation of the wages spiral.

Instead of aiming at a large revenue surplus to that end, Mr Macmillan concentrated his main effort on measures aiming at stimulating savings, especially by the lower income groups. He increased interest rates on Savings Certificates and Defence Bonds, and he exempted from taxation, up to a certain limit, interest earned on Savings Bank deposits. To a large extent the effect of such measures will probably base transfer of funds to these types of savings from other types of savings. The net increase of saving resulting from these measures is not likely to be spectacular.



On the other hand Mr Macmillan decided to introduce a new type of Bonds available to the saving public. His decision to adopt premium Bonds required considerable political courage because there is strong prejudice in a by no means insignificant section of the British public, against any form of State lottery. It is immaterial whether those opposing it are sincere or whether they are hypocrites. The Government is certain to lose votes as a result of this decision, especially as the Opposition is doing its best to make political capital out of a measure which they really favour in their heart of hearts.

Mr Macmillan's success will depend largely on the response of the public to the premium bond issues. There is good reason to expect that it will appeal to many people who are not tempted by higher interest rates or by tax exemption. If, as a result of a substantial net increase of saving, much excessive purchasing power is mopped up it might provide the solution to Britain's inflationary problem. Unfortunately, it may take at least six months before the new scheme could be put into operation, and meanwhile uncertainty would prevail about the disinflationary effect of Mr Macmillan's measures.

In order not to depend entirely on the outcome of the premium bond issues Mr Macmillan has embarked upon an economy drive in public expenditure. His announcement that he would cut down expenditure during the current financial year by at least £100 million was received with some doubts, because similar undertakings were given on repeated occasions by his predecessors who were unable to implement their promise. Mr Macmillan's past record justifies, however, a certain amount of optimism in this respect. When in 1951 he became Minister of Housing he announced his determination to build 3,00,000 houses a year. His predecessor Mr Aneurin Bevan, who was an efficient administrator, declared this to be impossible. Yet Mr Macmillan exceeded considerably his self-imposed target. It is not unreasonable to hope, therefore, that on the present occasion too his performance will surpass his promise.

In order to bring the wages spiral to a halt, however, it will be necessary to continue the credit squeeze. In his Budget statement Mr Macmillan reminded the bankers that the Government has legal powers to force them to restrict credit and that he would be quite prepared to exercise those powers unless voluntary restraint by the banks produced the desired result. Taking everything into consideration it seems therefore that the popular verdict in favour of Mr Macmillan's Budget expressed by the Stock Exchange and the Foreign Exchange market, was fully justified.

Motor Vehicles (Amendment) Bill

✱

Claims Tribunals to adjudicate third party claims.

MANY changes, some of a far-reaching character have been proposed in the Motor Vehicles (Amendment) Bill, more particularly in Chapter VIII relating to provisions on compulsory insurance. Chapter VIII, relating to compulsory insurance of motor vehicles, against third party risks, came into force on 1st July 1946. Since then, with minor modifications, the Act has been in force for the last ten years. Experience has suggested many modifications relating to insurance provisions and the Government of India have introduced them. There has been little publicity for the provisions. Insurers should know the context in which their future operations will require to be channelled.

The issue has acquired added importance since publication of the view held by the Madras State Government that the State should directly be insurer to third party risks. The competence of a State to transact insurance of this nature is open to question in view of the categorical provisions of Section 94. A State is not an insurer in terms of Section 93 complying with requirements of the Insurance Act 1938. Technically, therefore, in terms of the Motor Vehicles Act of 1939, and as amended thereafter, the State Government has no competency to be an insurer and thus legally is not competent to transact third party insurance. Perhaps, this issue is now being examined by the Government of India to whom the Madras State Government proposal has reportedly been submitted. Apart from technical competency, it is neither proper nor logical for a State Government to contemplate trading in insurance when general insurance so far has been left to the private sector. Such a proposal creates more complications than it resolves for the Government of India and for the people in view of the present character of general insurance in India.

Some of the amendments proposed in Chapter VIII—insurance of motor vehicles against third party risks—are aimed at removing the lacuna experienced in the last few years. Thus, in Section 94 of the Act, in the case of government-owned vehicles, exemption from insurance has been proposed only in respect of vehicles used for administrative and allied purposes and not for vehicles used for a commercial purpose or for the purposes of a commercial department. A conditional exemption may, however, be given to vehicles owned by the Government or by a local authority or a state transport undertaking and used for commercial purposes: It is being provided that exemption may be given where a fund for meeting the liabilities arising out of the use of such vehicles is constituted by them. Therefore, a state transport will have some insurance liability as other commercial vehicles. This eliminates preferential treatment to Government commercial vehicles. Therefore, private and public transport will ply on equal terms and unless there is constituted a fund as aforesaid, large vista of insurance for general insurers is going to be opened.

In Section 95—the main operative section as to scope of cover—it is at present discretionary with the State Government to lay down that a policy of insurance should also cover liability arising under the Workmen's Compensaton Act 1923. Since it is considered socially necessary to make this provision compulsory, provision is being made by the proposed amendments to include compulsory liabilities arising under the Workmen's Compensation Act. This liability is restricted to six employees carried in a goods carrying vehicle.

There is a current malpractice whereby insurance of motor vehicles is evaded by taking out a cover note at the time of payment of tax and not following it up with a regular policy of insurance thereafter. It is now proposed to make it obligatory on an insurance company to notify to the prescribed authority whenever any such case comes to its notice.

A new provision is being added to validate in India policies of insurance issued by the insurers of any 'reciprocatory counters'—meaning a country notified as such by the Central Government—in respect of motor vehicles which ply on any route common to India and the country concerned in pursuance of a mutual arrangement between the two countries.

The most important amendment for insurers relates to Section 110. Under the existing Section 110, powers to appoint persons to investigate and report on motor accidents have been given to State Governments, but the officers so appointed are not empowered to adjudicate on the liability of the insurer or on the amount of damages to be awarded except at the express desire of the insurance company concerned. The provision, it is claimed, has not helped persons of limited means in preferring claims on account of injury or death because a civil decree has to be obtained before the obligation of an insurance company to meet claims can be enforced. It is, therefore, proposed under the new Bill to empower State Governments to appoint Motor Accidents Claims Tribunals to determine and award damages.

A claims tribunal shall consist of two or more members. No member shall be appointed unless he is or has been a High Court Judge or a District Judge or is qualified for appointment as a judge of the High Court. All applications for compensation will be limited to liabilities arising under the Act and no application for compensation shall be entertained unless it is made within thirty days of occurrence of the accident. The Tribunals, however, have the power to extend the period to more than 30 days if the tribunal is satisfied that the applicant was prevented by sufficient cause from making the application in time.

There is thus, apparently, no time limit for claims to be time-barred. That will work to the detriment of insurance companies for innumerable claims will require to be kept open, if claimants can establish 'sufficient cause.'

No appeal shall lie against any award of a Claims Tribunal if the amount in dispute in the appeal is less than two thousand rupees. No civil court again shall have jurisdiction to entertain any question relating to any claim for compensation which may be adjudicated by a Claims Tribunal. No injunction against any award of the Claims Tribunal can be granted by the Civil Court.

The intention in the Bill is to make the Claims Tribunal virtually an autonomous body against which, in practice, there will hardly be any appeal for most of the claims in India are within two thousand rupees. It will thus be a body with wide authority. The underlying assumption in the constitution of the Tribunal is lack of honesty of insurers in discharging their contractual obligatons. It has been assumed that insurers endeavour to disown obligations on some pretext or other. A Claims Tribunal as a guarantor of the rights of the common man is thus considered socially necessary which, it is believed, will be a compelling force upon insurers in the country.

Enforcement of third party liability, in each case, is ultimately a question of fact and if as is assumed insurers have disowned, in many cases, obligations, the reason is sufficient proof could not be adduced to substantiate a claim under the Motor Vehicles Act or under the policy. Most claims are settled out of court. Methods are inexpensive both for claimants and the insurers. These informal methods are now sought to be replaced by imposition of a constituted court in whatever name it may be called. That will entail endless payment of fees to intermediary lawyers—an expense not necessary now where direct negotiations are held with the company. Payment of fees and arguments before Claims Tribunals will be of no avail if the facts of the case do not establish the legal liability of the insurer. Claims Tribunals will thus be an additional intermediary. They will not be able to influence materially results. Insurers with a view to rendering competitive service cannot, in fact, disown liability where liability has been established. Competition is the greatest compelling force. No other compulsion is necessary. Nor is Claims Tribunal an improvement over existing Civil Courts. Almost the same formalities are bound to be necessary. Their constitution indicates, in some form, lack of confidence in the capacity and good faith of insurers. Whether this stigma is warranted can only be determined by a collection of materials from the claims departments of insurers.

Other provisions in the Bill, apart from insurance, relate to replacement of the existing classification based on the use to which they are put by a classification based on the type of construction of vehicles. A system of licensing of conductors has been proposed. The Central Government will have permissive powers to regulate inter-state operation of transport vehicles. At present there is no proper regulation of inter-state traffic with the result that on many inter-state routes passengers and goods have to be transferred to other vehicles at inter-state borders. A stage has reached when it is necessary, in the public interest, to take suitable measures to regulate the inter-state operation of transport vehicles.

The necessity to amend the Motor Vehicles Act 1939 is most urgent in regard to the operation of road transport service by "nationalised" agencies. The Act, in the present form, contains no provisions, relating to the introduction or expansion of nationalised transport services. Some States have either amended the Act with local effect only, or promoted separate legislation to influence their schemes of nationalisation of road transport. It is now considered desirable to have a uniform law relating to the nationalisation of road transport services. With this end in view, a new Chapter IVA has been proposed and provision has been made therein for payment of compensation to any holder of a permit, if his permit is cancelled or the terms thereof modified.

✱

Paper Industry Looks Ahead

Paper manufacture is on the road to becoming a major industry, especially if it be possible, at the end of the Second Plan, to achieve a rated capacity of 4,50,000 tons and production of 3,50,000 tons. This is not an unlikely target considering that existing licences cover a capacity of nearly 3,50,000 tons and only a lakh tons more remain to be planned for. Judging from the performance of the industry in the First Plan, this target has fair chance of being achieved.

The Chairman of the India Paper Makers' Association, Mr V. Mehta, speaking at the annual general meeting last week, fully endorsed this optimistic outlook. The entire increase in installed capacity on actual production, he revealed, was brought about by the completion of or progress in expansion schemes taken up at the beginning of the First Plan. The industry's policy of ploughing back the earnings into expansion schemes has worked well. It is apprehended that new tax proposals relating to undistributed profits might react adversely on the success of this policy.

Mr Mehta did not omit to mention the avoidable delay that has entered the setting up of a Development Council for Paper as also in conducting a survey of raw materials for the industry. It was regretted that Gocernment were inclined to underrate the importance of associating representatives of the industry with these projects. Pointed attention was drawn to two other aspects of development: the possible impact of new projects on the present production and reasonable aspirations of existing units and secondly, the likely difficulties due to inadequacy of transport.

STATE BANK OF INDIA

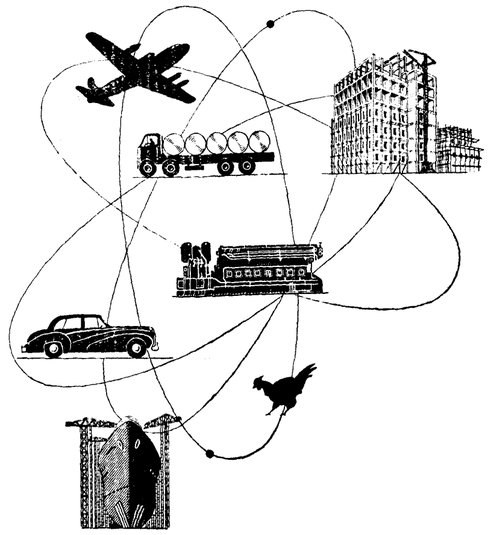
Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be — can be made to run more smoothly with the help the Bank can offer.



Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

In a "Who's Who" of industry and commerce, if such existed, you would find many differing activities—and you would also find on every page the names of users of Hollerith. The reason is clear. Diverse though business is, it is united in its demand for higher and higher standards of efficiency . . . and in Hollerith electronic punched card accounting and the use of Hec Computers, it has a large part of the answer.

EDITORIAL NOTES

(Continued from page 789)

He wanted unbridled spending which would stimulate production and set in a chain reaction in which every body would find a job and the standard of living would go up.

The suggestion is an antidote to the plea for austerity, which in a limited way the State itself has come to insist on as part of national policy for the period. While any thesis built on spendithriftness and extravagance is indefensible as a solution to unemployment, there is yet some logic in the suggestion referred to above. There is a call for discovering the proper limit for austerity; if consumption is to be restricted unduly, production too is bound to be throttled. It follows therefore, that the limit set on consumption should have a suitable reciprocal relation with the expansion of production. In practice, the lifting of controls, the liberalisation of imports and the priority chosen between different spheres of production are all the result of the recognition of this need. At the same time, it would be equally unwise to leave consumption to take care of itself.

At a low level of national income, and with a vast industrial outlay ahead, free and indiscriminate spending is certainly out of the question. It is for this reason that even a direct tax on expenditure is receiving influential support. At the moment a spending spree if permitted, would only result in the demand for luxuries, mostly of foreign origin. There is a prima facie case against such a situation.

Not only should the economy proceed on the basis of a firmly dependable balance between savings and current consumption but a similar balance between the flow of indispensable goods and services, which enter most into mass consumption and that of luxuries which do not. The argument in favour of increases in consumption is of value only to the extent that it indicates the damping effect of austerity carried to extremes.

Markets Depressed

PRICES in the jute goods market displayed a sagging tendency throughout last week. Apart from the absence of foreign business, sentiment was adversely affected by reports of beneficial rainfall in jute growing areas. Though rumours about Russian business continued to influence price movements it is becoming increasingly clear that the effect of such business will not be felt all atonce. It would appear that the offtake from this direction will be gradual. However, as the IJMA point out in their report on the conditions prevailing in the Indian jute industry and trade during March 1956, the "sharp change in sentiment regarding the raw jute outlook" is to a great degree responsible for the weakness of the goods market during the week under review.

Discussing the outlook for the trade and industry in the immediate future the IJMA report says: "It is interesting to note that hessian prices have not been lower since last October and according to a leading American buyer, at the present levels, burlap offers greater value than probably any other commodity sold in world markets today. ... If the Argentine comes into the market and effected considerable purchases, then it might alter the position. The market has been waiting for the Russian business for some time, and if it goes through in addition, then the situation will definitely change and the market will recover to a great extent."

As mentioned above the Russian business seems to be fading out of the picture as a factor determining price levels. Despite lower price levels, there has been no indication in the past three, four weeks of any quickening in the tempo of purchases by North America. Presumably prospective buyers of Indian jute goods have been encouraged to postpone their purchases in view of of the change in the situation brought about by conditions in the raw jute market. In other words, overseas buyers seem to be confident that they can obtain their requirements much cheaper than current prices if they wait for a little longer. Meantime, raw jute dealers have not shown any great anxiety to dispose of their stocks at any price. As a matter of fact, Assam Bottoms have even gained half a rupee to be quoted at Rs 28 per maund before turning quiet once again at Rs 27-8 per maund.

After a steady opening, the goods market developed signs of weakness in sympathy with the raw jute section. The report that there had been heavy rainfall on Sunday after a spell of hot weather conditions in the jute growing areas had an adverse effect on sentiment. On Monday the market opened quiet but prices soon advanced on rumours of some business done with Russia. The higher levels could not be maintained due to lack of support. Hessian 40" x 10 oz was three annas higher on balance at Rs 39-1 but B. Twills receded by 10 annas to Rs 108-2. In the forward section July-Sept. Hessian was a couple of annas higher at Rs 39-8 while B Twills was a full point lower at Rs 107-12. In the raw jute market despite lack of mill interest, April-May Assam Bottoms was steady at Rs 28 per maund.

On Tuesday mills came out as sellers and almost immediately bears became active depressing prices. It would appear that operators consider it a sign of weakness on the part of mills to come out as sellers, as it is common knowledge that the mills carry large stocks. Hessian 40" x 10 oz came down to Rs 38-12 while B Twills lost ten annas to be placed at Rs 107-8. In the forward position, July-September Hessian was 4 annas lower at Rs 39-4 but B Twills declined steeply to Rs 106-12.

The market developed an easier undertone with prices marked down further all along the line on Wednesday on news that further beneficial rainfall had been reported from the growing areas. Hessian 40" x 10 oz dropped a couple of annas to Rs 38-6 and B Twills lost ten annas to Rs 106-14. July-Sept. Hessian receded to Rs 39-2 from Rs 39-4 and B Twills declined by 10 annas to Rs 106-2.

The following table shows price trends during the week.

	Week's Opening	Week's Closing
Hessian	Rs. a.	Rs. a.
40"×10 oz		
.. Ready ...	38 14	38 10
.. May ...	39 4	38 14
.. July-Sept. ...	39 6	39 2
40"×8 oz ...	32 14	32 4
40"×7½ oz ...	30 4	29 14
Sackings		
B Twills Ready ...	108 12	106 14
.. May ...	109 8	107 0
.. July-Sept. ...	108 12	106 2
Hy. Cees Green ...	107 4	105 0
Corn Sacks ...	109 4	107 0
Cubans ...	137 0	134 0
A. Twills ...	135 0	132 8
L. Twills ...	125 0	121 12
D. W. Flour ...	130 8	127 0
Sugar Bags ...	125 12	122 12

The raw jute market ruled quiet in the absence of mill business. Throughout the second half of the week, there were reports of rainfall in the growing areas. The fear that the recent hot spell would have adversely affected the progress of the new crop has been removed and it is now believed that expectations of an earlier and plentiful crop will be fulfilled. Assam Bottoms April-May shipment which kept steady at Rs 28 per maund at the start, shaded to Rs 27-8 by the end of the week. Had it not been for the considerable resistance put up by raw jute holders, prices would have de-

World of Tea

Quality Teas in Good Demand

QUALITY teas continued to be in good demand both in the Calcutta and London auctions this week. In Monday's Export tea sales in Calcutta better Fannings and any bright liquoring autumnals met with fairly good demand from the very start. The demand became stronger for these descriptions and by close prices were several annas higher. Medium brokens were fully firm but clean plain descriptions were lower by half anna. Poorest liquoring stalky kinds were also easier declining by half to one anna. While Darjeelings were neglected whole leaf grades were rather weak. Offerings consisted of 50,800 packages. Quotations: Clean Black Pekoe—not quotable; Plain B.P.—Rs 1-7; Medium Assam B.P.—Rs 1-9 to Rs 1-9-6; Best C.T.C. Assam B.P.—not quotable.

At this week's Internal Sale in Calcutta 20,800 packages were on offer and the demand was fair. All bright liquoring teas and Black leaf teas suitable for the Middle East met with good demand and fetched slightly higher prices, now and then, than those obtained in the previous sale. Irregular conditions, however, prevailed in the case of other descriptions. Grainy types were done ½ to 1 anna lower while powdery varieties were 1 to 1½ annas easier. Advances upto 4 annas were scored by the very best autumnal CTC's. Quotations: Medium Dooars Dust Rs 1-8; Medium Assam Grainy Dust Rs 1-9 to Rs 1-9-6 Best Assam CTC Dust Rs 2-10 to Rs 2-12 nominal.

In the tea sale held early last week in Cochin demand was less general than in recent sales. Except best liquoring high-grown types, almost all others met with an irregular market. Wynad descriptions were 1½ to 2 annas easier while medium sorts were generally marked lower. There was however some demand for Residual types.

In the sales held in London 27,473 packages were offered. Demand was good at around last week's levels with useful liquoring autumnal Assam and Dooars teas meeting with active support.

The stock position of tea in London continues to be encouraging for the exporting countries. Stock as on April 13 at 97.3 million lbs. is very much below the 163.6 million lbs. which represented the stock on the corresponding day of last year. As compared to the previous week, however, stocks are slightly higher.

It is now revealed that exports of Indian tea in 1955 have declined by about 86.9 million lbs. bringing in about Rs 19.6 crores less foreign exchange. As against 449,961,000 lbs. exported in 1954, India's exports in 1955 have totalled only 363,091,000 lbs. The sharp decline will not come as a surprise to those who have been closely following the fortunes of tea in the past year. Partly because of the suspension of export of tea direct to London auction and partly due to other reasons, the UK showed a marked preference for Ceylon tea. However, the UK continued to take the bulk of the Indian supply. In 1955 that country had taken 249,266,000 lbs. as against 326,489,000 lbs. in 1954. Next to the UK, USA has taken the largest quantity having imported 24,060,000 lbs.

In this connection it may be noted that India continues to enjoy the position in World of Tea as being the highest producer of tea with the largest area (789,471 acres) under the crop. During 1955, India produced 664,554,000 lbs. while Ceylon's output amounted to 380,013,000 lbs. and Indonesia's 95,610,000 lbs. Pride of place is again held by India in the matter of exports, with 363,091,000 lbs. Ceylon coming second with 360,858,000 lbs. It is significant to note that Ceylon whose production was of the order of 380,013,000 has exported almost its entire production.

Tea exports from Ceylon continue to show an upward trend. During January 1956 exports from this country have been higher at 27.69 million lbs. as compared with 24.97 million lbs. during the corresponding month of the previous year. The increase is accounted for by a sharp increase in the shipments to Iran and Iraq and a million lb. increase in the exports to the UK.

Figures now made available by the Government of Pakistan show that during the year 1955-56, though the acreage under tea has increased from 74,000 to 76,500 acres, the tea crop is estimated at 52.5 million lbs. as compared to 54 million in the previous year. The decrease in output is attributed to bad weather conditions throughout the plucking season.

(Continued from previous page)

clined much more sharply. The present position seems to be one of equal strength between the mills and the raw jute holders. The former appear to be in a fairly comfortable position as regards their supply of the raw material. They are not hardpressed for ready supplies. The hope that the new crop will be not only plentiful but will be available earlier than usual has given added strength to them. The latter argue that since mills have perforce to come to them for supplies before the arrival of the new crop, they are in a stronger position.

US Notes

LINES are being drawn for Congressional debate on the Bill authorizing US participation in Organization for Trade Cooperation (OTC), and proposed administrative arm for General Agreement on Tariffs and Trade (GATT). This week, the Ways and Means Committee of the House of Representatives formally reported the Bill to entire House. The Bill is now expected to get hearing before the Rules Committee which passes on all proposed legislation preliminary to action on the House floor. In reporting the Bill, the Ways and Means Committee strongly recommended its approval. In a 200-page report signed by 17 out of 25 members, the Committee points out that OTC would further help break down barriers to trade, and thus help strengthen the economic positions of US and other free nations. The makeshift machinery under which the GATT has been operating for nine years, it notes, has been only partially successful. Clearly required, the Committee says, is an agency such as OTC. It can exert continuous pressure toward removing as many remaining obstacles to trade as possible; it can function as a peacemaker in trade disputes among 35 GATT partners to counter arguments of protectionist minority that OTC bill would violate the constitution and commit US to endless tariff concessions in possible disregard for Congressional wishes. The Committee majority points out that OTC would not involve delegation of Congressional authority nor would it, in any way, impinge on sovereignty of the United States. The authorization for US trade concessions, it recalls, already spelled out in Trade Agreements Law under which the United States has been negotiating the reduction of trade barriers bilaterally, and multilaterally through GATT for some years. The majority views are bound to have great weight when the floor debate on OTC measure begins. A résolution supported by a dozen Congressmen, however, may delay the Bill. This resolution calls upon the Ways and Means Commitee to begin thorough investigation of the United States position in regard to GATT before the Congress is asked to pass on OTC. Because the United States joined in general agreements in 1947, under authority delegated to the President in Trade Agreements Law, the GATT itself never has been submitted by the executive branch to Congress for approval. Another Congressional Committee, meanwhile, has taken close look at economic situation in the United States.

In a special report this week, the staff members of the Joint Congressional Committee on the President's Economic Report find that the first quarter of 1956 "has been marked by continued indications of economic strength." They estimate the gross national product at a surprising annual rate of $399,000 million in the January to March period. This is $1,700 million higher than in the fourth quarter of 1955, a rise substantially greater than expected. The final figures will be available when the Commerce Department issues more detailed report, probably, within a week. Nevertheless, broad survey by the Congressional Committe, which functions as watchdog over Administration's economic policies, indicates that the big jump in the first quarter gross product was due mostly to rise in personal consumption. These personal consumption expenditures increased to an annual rate of $259,400 million. The Congressional report puts personal income for the first quarter of 1956 at an annual rate of $313,600 million. This would indicate that income rate jumped from $313,100 million in February to $350,000 million in March—an increase also exceeding the earlier unofficial estimates. It was on the basis of such lower income estimates that the Treasury Department had computed its anticipated tax revenues. With revenues now running above the estimates, the question of possible tax cut has come up and some Congressmen have renewed pleas for tax action. Both the Administration and Congressional Committee on Economic Report, however, remain opposed to tax cutting, citing possible inflationary impact. Significantly, the Committee's report attributed much of increase in the first quarters gross national product to higher prices. It notes that with output pressing against capacity in many industries, and with unemployment close to a minimum, increases in production and employment have been limited. On balance, the report concludes, changes in economic indicators in recent months reinforce the view that overall restrictive policies such as last week's increase in Federal Reserve discount rate continue to be warranted.

*

Britain

ON April 4 the British Treasury issued the monthly statement on the gold and dollar reserves, and simultaneously published the customary White Paper on last year's balance of payments. The reserves show an increase of $67,000,000 to $2,277 million in March, the largest monthly increase for two years following increases of $28,000,000 in January and $61,000,000 in February. These figures are encouraging and show that the disinflationary measures taken by the Government are proving effective.

It is worth recalling that the better trend set in as far back as six months ago, after Mr R. A. Butler's emphatic declaration at Istanbul, to maintain the value of the £. The loss last December was occasioned by the annual payments on the North American loans, and did not indicate a reversal of the underlying trend. The gain of $157,000,000 in the first quarter of this year is a distinct sign of improvement, even though this is a favourable season for the earnings of the Sterling Area.

It is fully appreciated that a much greater improvement is necessary. Satisfactory as the recent improvement may be, there is no feeling of complacency in official circles. As was reaffirmed in the recently published Economic Survey, "if the measures so far taken are slow in producing results, they will be reinforced".

As the main data of the balance of payments were already included in the Economic Survey, the principal interest of the new White Paper lies in the presentation of detailed tables. It is now clear that the main deterioration in the United Kingdom current balance took place in the second half of 1954, and that there was a further, although more gradual, worsening up to the end of last year.

The figures of the UK current balance exaggerate the deterioration during 1955. A surplus of £174,000,000 in the first half of 1954 declined to £15,000,000 in the second half of 1955. The main factor was an increase in the deficit in the UK's visible trade, with imports rising more steeply than exports.

The October dock strike also helped to damp down export earnings for the second half of 1954, the benefit going to shipments in the first half of 1955. If allowance is made for this special factor and for the normal seasonal adverse trend in the second half of the year, the deficit in the second half of 1955 is shown to be far less disquieting than the figures itself might suggest.

It is natural that imports should rise at a time of prosperity. That exports have not kept pace has been due to excessive home demand, and it is for that reason that Government policy still aims to limit such demands. The steady improvement since the end of 1955 is not likely to result in any change in the present firm policies. ,

"Invisible" earnings (earnings from services such as shipping, banking, etc.) also showed a decline last year. This was largely due to fortuitous circumstances. In particular, the net income from oil transactions decreased because of back payments on royalties, and expenses connected with the reopening of the Abadan refinery, which will result in higher earnings from increased production later on.

It is sometimes asked why the UK's balance of payments is more sensitive to short-term fluctuations than that of some other European countries.

The White Paper gives one important reason—large Government commitments abroad, which have been met in good and bad years. Thus, last year military expenditure abroad amounted to £150,000,000 (50 per cent more than the deficit for the year). Colonial grants reached £30,000,000; relief and other grants amounted to £20,000,000; and the net interest paid on Government loans was £40,000,000. Together, these obligations totalled no less than £240,000,000.

Little has been known about the trend of UK private long-term investment abroad. For the first time, the White Paper fills this gap in our knowledge. Such investment averaged £150,000,000 to £175,000,000 in the period from 1952 to 1955, and reached £125,000,000 last year. Naturally, the greater part was intended for the development of the resources of the Sterling Area (£100,000,000 last year). This figure shows that the UK is continuing to play its part in the development of the Sterling Area; but it also indicates the necessity to achieve a surplus in order to finance such investment, since it cannot be met by drawing on the reserves for any length of time.

After taking into account other known capital transactions—including a decrease in sterling liabilities by £63,000,000, and a decline in the reserves by £229,000,000—there remains a balance of £175,000,000 which cannot be accounted for (that is, "errors and omissions"). This item is rather larger than in previous years but still less than 2 per cent of the gross turn-over of transactions included in the balance of payments. It indicates that the figures for either current earnings or capital inflow have been understated.

It is highly probable that a large part of this amount relates to short-term capital attracted to London, which indicates the effectiveness of the Government's measures to restore foreign confidence. It would, however, not be surprising if, later, more complete information should show that part of this unidentified item relates to current earnings and that, accordingly, the current deficit is lower than the present estimate. But even a deficit of £50,000,000 would not be satisfactory.

The aim of the United Kingdom remains to achieve a surplus in order to be able to fulfil its oversea commitments and to build up its reserves. To do this, it will do its utmost to expand its exports at a faster rate. There is little doubt that the Government's present disinflationary policies will succeed in reducing the claims of the home market on Britain's productive capacity, and thus leave the way open to British exporters.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

MR T. T. Krishnamachari's reply to the debate on the demands for the grants for the Ministry of Commerce and Industry was, in many ways, a characteristic performance. It revealed a sure grasp of fundamentals and a complete mastery of the details of his tasks and was, of course, forthright and controversial. There is some evidence that he considered what he had to say on the occasion as of more than usual significance. He made the rather cryptic remark about this being his last 'Budget speech' and therefore presumably considered it as something of a 'swan song'—a summing up of the lessons of his experience and thinking on the subject of economic planning. There can hardly be any doubt that the cerebrations of such a lively mind as Mr Krishnamachari's in daily contact with the problems of his task are of inestimable value for any one interested in national planning.

*

Not that there were no puzzles in his speech. One of the more teasing was the indication the speech gave of a rather 'catastrophic' attitude of mind, especially in its purpler patches. Such an attitude was so uncharacteristic that I am obliged to put it down to the exigencies of rhetoric. Otherwise, I cannot imagine T. T. K. talking seriously about our 'being poised almost on the edge of a precipice', especially when the whole factual tenor of his speech has been of a kind to indicate that a certain cautious optimism would not be, under the circumstances, unduly complacent. (After this rather alarmist warning, he goes to say: 'If we choose the right set of principles ... we can become an economically prosperous nation. If we proceed in a haphazard manner ... my only prayer would be, God help us'. But is the situation really so desperate and the choice so compulsive and immediate?)

*

This 'either ... or attitude' is particularly ironic since it comes at the end of an impassioned plea for realism in economic thinking. Mr Krishnamachari wisely pleads for what he calls 'the injection of a large doze of realism in our economic thinking, in the shaping of our economic policy'. His insistence that our problems are unique and cannot be solved by blind imitation of solutions evolved in different circumstances and elsewhere is also unexceptionable. Nor can anyone seriously quarrel with him when he says that our problems have no single set of solutions and that we must 'synthesise our aims and objectives and policies ... our action and our thinking.' But this task is a continuous process, involving resilience and readjustments to new developments. By hypothesis, therefore, any dogmatism about its probable advantages of such a synthesis (whose nature one would be hard put to define in detail), or the dire consequences of its absence is misleading in the extreme.

*

The second apparent puzzle is about the exact nature of the realism that Mr Krishnamachari advocates. In his first reference to what might be termed as the 'philosophy of planning', he contrasts the view of some persons in the country who consider the pace of development envisaged in the Plan as inadequate with what he refers to reaction of 'people outside'. He then goes on to quote from a book on the Theory of Economic Growth to the effect that the rate of economic growth can be too high for the health of society. "Societies are not necessarily wise to choose to speed up their rate of economic growth above its current level; if they do, they will enjoy substantial benefits but they may also incur substantial costs, in social or in spiritual terms and whether the potential gains exceed the potential losses must be assessed separately in each situation as best we may.' Mr Krishnamachari goes on then to indicate that he for one 'would not commit this country to a type of planning which, while it might seem to meet our immediate aspirations would, in actual fact be impossible of achievement. ... It would be, in my view, equally undesirable to undertake an expansion for which we may have to pay a price that is too high in terms of social ... and spiritual costs.'

*

There are several ambiguities here which I must deal with. First, about the outside view. Mr Krishnamachari quotes some generalisations about the possibility of excessive rate of development being won at terrible human cost, but does not quote anyone who actually thinks that the Indian plan now under discussion is likely to produce a lop-sided development of that sort. Indeed almost all the foreign observers, who have been here recently and who have studied the subject in some detail, aver that, despite the risks involved, we could not possibly have adopted a slower pace of development. Mr Strachey, the British Socialist leader and Professor Galbraith, the American economist, who were recently in India to study the Plan, have both gone on record as approving of the size of the Plan. Secondly, Mr Krishnamachari nowhere states whether he himself considers the present size of the Plan as too ambitious either from the point of view of available resources or from that of the human cost involved. The point is left tantalisingly vague in this particular speech though, in other contexts we have heard the Commerce Minister speak warmly about the need for a quick raising of the living standards. On particular targets again, on steel, for example, T. T. K. envisages a pace of production that others consider as far too ambitious.

*

What then is the key to the puzzle? It is that Mr Krishnamachari was probably thinking not so much of the Plan's targets as those of some of the more impatient among his own party men who want the targets under the Plan revised upwards. There is, of course, a strong and vociferous section of the party who are so dazzled by totalitarian achievements elsewhere that they would want the country to pay excessively human misery and curtailment of personal liberty for a rapid development of our resources. If these were the persons whom Mr Krishnamachari had in mind (as he most probably did) then, of course, his salutary warning about the need for a qualitative as well as quantitative assessment of achievement under planned development is unexceptionable. But toward the end of his speech Mr Krishnamachari complains that 'even in the functioning of the government which is an organised unit, we have no synthesis in our economic philosophy'. This may give the misleading impression that Mr Krishnamachari believes that the present targets under the Plan are on the ambitious side. But if my guess that Mr Krishnamachari's criticism is aimed at the extremists in his own party is correct, then, this cryptic remark may refer to such of his colleagues in the government who feel that the pace of development should be further accelerated.

*

A third apparent puzzle does not so much stem from anything that Mr Krishnamachari has said in this particular speech as from certain popular identification of him with certain attitudes. These popular notions about him are a most crude and unjust simplification of really involved attitudes. And once these distortions are removed, the puzzle resolves itself. For instance, Mr Krishnamachari's passionate concern for avoiding human misery implied in a rapid pace of development may sound strange to ears that have all too unthinkingly identified him with the class that wants

rapid industrialisation, and regardless of the number of things and persons that such policy would almost destroy. There are many who always think of him as secretly engaged in sabotaging the Planning Commission's proposals for the amelioration of small-scale industries. (His feud with the Planning Commission is, by the way, rightly or wrongly, a firmly established popular belief). They quote, as an instance, his doubts about the Ambar Charka, expressed, it must be admitted, with his hardly concealed show of inability to suffer fools gladly. And yet in this very speech he shows himself as acutely aware of the basic realities of our economic problem—our enormous population, unemployment, scarcity of land and materials and, above all, technical skill. These are soluble by no ready-made panaceas, but by an approach that will take note of these special conditions. In this very phrasing of our economic predicament and in the enunciation of an integrated approach that would avoid excessive social cost are implied an acceptance of the logic of labour incentive and decentralised planning.

*

One reason why Mr Krishnamachari is a much misunderstood person is the fact that he has to fight his battles on two fronts. And some quirk in him, I believe, makes him tell any particular audience that aspect of matter that it is sure to find unpleasant, though on sober consideration, it will be admitted to be barest truth. Thus, when he addresses a gathering of businessmen, he quips about capital not being so shy as frigid. And when he meets his party-men gushing uncritically about the Ambar Charka, he calls it an anachronistic contraption. Thus his choice of audiences, conventionally speaking, is always wrong. Had he been sarcastic about the businessmen's misdemeanours before a party gathering, he would certainly have saved himself a lot of trouble. But he would then have done his country not much good.

*

The documentary films released by Burmah-Shell are a valuable aid to popular understanding of rural and urban conditions in India. The programme of production of these films is entrusted to a Canadian expert, Mr James Beveridge. Already a number of interesting documentaries have been produced and distributed. The series on the Major Industries of India, the Village Industries and the Small Industries and another series entitled 'Life in India' provide a balanced and constructive visual review of aspects of national life, and accurate knowledge of which is indispensible for young and old alike. The two latest films, 'Iron and Steel' and 'Kabauliram', released on the 25th April throughout India, on which date the company is also celebrating the Second Plan Day, provide an insight into the activities in the Community Projects and the inner story of the country's most important basic industry. Such films would go a long way toward assisting public appreciation of the efforts on the Second Plan.

*

It is over a year since the British Bank of the Middle East has taken over the Indian Branches of the N. I. C. Bank. The balance sheet of these branches, at Bombay and Calcutta, reveals that 1955 has been a year of remarkably good results for a bank that has scarcely got going in this country. Profit amounted to Rs 9.63 lakhs. Deposits totalled Rs 2.44 crores. Cash was shown at Rs 74.04 lakhs. Investments and advances were Rs 30.91 lakhs and Rs 5.57 crores respectively. The Bank has helped to widen and increase Indian business contacts in the Middle East, particularly with the Persian gulf region. A contributor, together with other exchange banks, toward the Industrial Credit ant Investment Corporation, the bank is helping, in its own way, the promotion not only of India's import and export trade, but also of private industrial undertakings in the country.

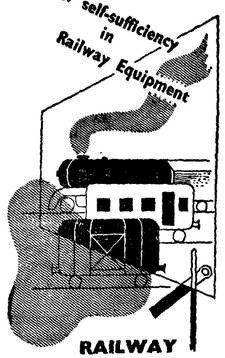
Bombay Review

Millowners Meet

THE annual meeting of the Bombay Millowners Association held last Tuesday gave the leaders of the cotton textile industry another opportunity to express their views on the problems facing the industry. These problems are by now familiar to those who have been following the controversies over the future of this industry in all the current discussions on the subject. These problems have no easy solution and dogmatism and prior affiliations to particular solution serve merely to darken counsel. Sectional thinking without regard to the overall economic situation is another obstacle to clear thinking and readiness for readjustments.

That the problems of cloth production in the country have peculiar and special features owing to other economic factors like unemployment is one of the reasons for the draft plan's omission to fix specific targets. Mr G. D. Somani, Chairman of the association has expressed himself very vigorously on the current official thinking (which is yet tentative) on the relative roles to be assigned to the handloom and mill interests. Very many people, other than him, with less direct interest in the fortunes of textile industry have had similar to those he voiced. For instance, Mr Somani referred to the proposal to subsidise the Ambar Charka and to the fears that the handloom sector may not be able to fulfil the targets likely to be assigned to it. He mentioned the possible consequences of such a failure, a disastrous short supply of an essential commodity with the evils attendant on such a shortage. He referred to 'the inflationary impact that is being already felt due to deficit budgets of the last two years' and the deficit financing on a large scale contemplated under the second plan and said, that 'unless the consumer goods industries are galvanised to generate more goods in time', the fears of the planners that we might have the worst of both the worlds would become a horrible reality.



In discussing this or any other aspect of the plan it is necessary to bear certain broad considerations in mind. First among these is that economic planning whether socialist or not, implies a certain ordering of economic life, a certain channelisation of investments and productive resources. This central direction is, unless there is prior doctrinaire affiliation, based on strictly pragmatic principles of getting the most out of the productive potentialities consistent with the preservation of human dignity. Secondly, this planning, being by hypothesis designed to meet a complex of economic situation with different and sometimes contradictory strands in it, is likely to involve development in certain directions at the expense of certain others. It may sometimes happen that this ordering is not strictly according to what might be called the most economically efficient mode of production on a short term basis. Such a state of affairs may be due to either because an earlier imbalance is sought to be redressed, or because other aspects of the economy not strictly connected with productive efficiency—like unemployment, for instance—may dictate a particular course of action.

Thirdly, though our plan has no ideological framework of a rigid kind, it does envisage what is now known as a 'socialist pattern' this has been amplified to mean an ordering of the economy designed to promote not so much private profit as 'social gain'. This involves certain orientations of the plan which, may affect adversely certain particular interests already entrenched.

Having said all this, it is necessary to remember that neither the Planning commission, nor the members of the government are so simple minded as not to realise that a plan is merely a means to an end and unless there is a certain flexibility in the means, capable of meeting any new situation, it would founder with disastrous consequences. Mr Somani himself has testified to the Planning commission's awareness to the dangers he voices. There is hardly a page in the draft plan that does not emphasise the need for so ordering things as to make posssible a change, should situation warrant it. Why, very many people consider the plan as so vague in important details—like the source of finance, for instance,—as to be no plan at all! And even about the particular complaint of Mr Somani, the Government's awareness of the complexity of the problem has made it expedient to be silent on the targets and allocations. All this shows a tentativeness in approach which, while not abandoning its declared intention of proceeding with labour incentive and decentralised pattern of production of consumer goods, would yet be sensible enough not to jeopardise the failure of the plan by not reacting to new situations promptly. The fixation of annual targets contemplated by the Planning commission shows again this anxiety to keep firm control of the situation.

On Ambar Charka itself, the Government is still awaiting the decision of an expert committee. But it would be idle to pretend that the next five years would see any expansion of the textile mill industry on a scale the industry itself would desire. This is a fact that the industry has to accept whether it likes it or not. Most businessmen are willing to accept the hard logic of any particular situation. Therefore, despite the industry's complaint that they are being penalised for the sake of conferring benefits (often illusory) on other sections of the economy, it is a safe assumption that it would accept the inevitable. and make the best of it. But it is necessary to know exactly where they stand in this as in other things. It is from this point of view that Mr Burns plea at the meeting that the private sector should be told "just exactly what part it was expected to play in the second five year plan and the conditions under which it must play that part" is so unexceptionable. Mr Burns referred in this connection to the new industrial policy statement that is being drafted at the moment. He said 'I would only ask that the re-writing of the 1948 statement should be as categorical as possible so that all concerned may know just exactly where they stand.' One sympathises also with his view that 'once stated, that policy should remain undisturbed

Controls on Forward Trading

AN event which caused not a little flutter in Bombay last week was the resignation of Mr Purushottamdas Thakurdas from the position of both Chairman and Director of the East India Cotton Association. This brings to a head the disapprobation of the business community over the increasing impact of the decisions of the Forward Markets Commission on their day-to-day work. No one would dispute the need for regulating forward trading through statutory measures to prevent abuse of hedge facilities as a means to making quick money. But to hold the entire system in suspicion, exaggerating the possible waywardness of speculators, is only to wreck a trading arrangement that has hitherto well justified its existence.

Mr Thakurdas, who has been the Chairman of the Association for the past 30 years, is unequivocal and outspoken about the reasons of his resignation. Futures trading, says he, is a technical, complex and delicate art and its control should be with those who not only possessed knowledge but were also in day-to-day touch with it and stood to suffer themselves from the results of either misdirected policies or errors of judgment. He does not quarrel with the wisdom of a strictly impartial overall superintending body, provided such a body attends to the general direction of the trade, but does not interfere in the detailed and day-to-day working of the Association. He warns that the safeguards, procedures and rules of working which the Association has devised over a period of 35 years are in jeopardy to the detriment of the trade.

Mr Thakurdas points out that, while the Forward Markets Commission laid stress on a rise in price and a ceiling within a ceiling, there was no mention of the need for securing the growers, who are neither very vocal or organised, a fair price in accordance with the forces of demand and supply, as may be available even within the limitation of the official ceiling prices which are well below the world price of cotton.

In a more or less candid reply to the criticism, the Commission has emphasised the need for working hand in hand between itself and the Association. While granting that the trade should itself look after its affairs, it is reiterated that its procedures and rules will have to be brought in conformity with the general principles laid down. The resignation of Mr Thakurdas is regretted, but it is hoped that it will not stand in the way of co-operation in the future.

BOOKING OF

'EXCEPTED ARTICLES'

and the Railways' Responsibility

★

The Railway shall not accept responsibility for the loss, destruction or deterioration of any package containing articles which are enumerated as "Excepted Articles" in the Second Schedule under Section 75 of the Indian Railways Act, when the total value of such articles contained in the package exceeds Rs. 300/-, unless the contents of the package and their value are declared and the authorised percentage charge (compensation for increased risk) paid at the time the package is booked for carriage by the Railway.

Where the value of such articles in any parcel or package exceeds Rs. 300/-, the sender or his authorised agent must record in the Forwarding Note whether he engages to pay the percentage charge prescribed. Should he elect not to pay prescribed percentage charge on value, the package will be accepted for carriage but the Railway shall not be responsible for the loss, destruction or deterioration of the same. The percentage charge on value must in all cases be pre-paid.

Commodities like Woodens, Glocks and Timepieces of any description, Maps, Art Pottery and all articles made of Glass, China or Marble, Silk, Shawls, Lace and Furs, Radio (Wireless) apparatus, Photographic apparatus, Statuary, Scents are a few examples of the "Excepted Articles."

★ *Rules and conditions regarding the booking of "Excepted Articles" and the full list of these articles appear in the Goods and Coaching Tariff published by the Indian Railways Conference Association and in placards displayed at stations. Detailed information may also be obtained from the Station Masters.*

Co-operative Sugar Factories

The All-India Seminar of Co-operative Sugar Factories, the first of its kind, organised by the Union Food and Agriculture Ministry concluded last week at Ahmednagar after a three-day session. Looking through the list of new licences for sugar factories, it can be seen that there is a strong official bias in favour of co-operative organisations. In the Second Plan, provision has been made for the creation of 35 new sugar factories on co-operative lines.

The question of reserving the entire field of expansion of the sugar industry to co-operatives was vehemently supported at the Seminar. The Rural Credit Survey's Report was quoted in support of such reservation. While fostering in every way co-operative units, it is necessary that Government should not be hidebound by rigid rules which would push into the background considerations of economic advantage. It is as well to realise that establishment and operation of a co-operative unit is commercially more difficult than in the case of a private factory at least in the initial stages.

But where co-operatives can profitably work, the Seminar's suggestions are worth serious consideration. Financial assistance for raising stock capital should be given in special cases and areas to small cultivators for the purpose of purchasing shares by means of medium term loans from co-operative banks. Other rural co-operative societies might also be allowed to invest and wherever necessary, the contribution of the State Government should be suitably enhanced. The Industrial Finance Corporation, it is appreciated, has made substanial investment in co-operative sugar factories and it is hoped that it will be equally helpful in sanctioning long-term loans.

Another proposal relates to the need of adequate provision of working capital from the very beginning. The Reserve Bank is requested to provide the necessary funds to Apex Co-operative Banks and, where the Apex Banks were not sufficiently strong, through the State Bank of India.

Complaints regarding the procurement of steel and cement and the delays in railway sidings were heard. There was the suggestion to limit the number of produce members so that their entire produce could be absorbed by the factory. The progressive association workers with the management also received enthusiastic support.

★

Mr Master Speaks Out

Not long ago, Mr M. A. Master made powerful plea for a change in Government's shipping policy, for taking the private industry into confidence and for removing the threat of nationalisation of the existing lines. While sayng this, he acquiesced in the concept of both sectors participating in the shipping industry. This was logical as the Government were called upon to contribute more than 80 per cent of the investment in this regard during the Second Plan.

However, periodical pronouncement from official quarters continually put shipowners in disabling uncertainty. Whatever be the authenticity of such statements, the shipping industry is thereby compelled to sit tight, against their better judgment. Addressing Bombay's Democratic group and the Commerce Graduates' Association, Mr Master has once again sounded a note of profound apprehension over Government's policy; and he gave his reasons for such a view.

Certain fundamental shifts and crucial changes are taking place, he said, aimed at the nationalisation of the shipping industry. These changes are (1) the abandonment of the policy of mixed economy in shipping (2) denial to private enterprise run its ships along routes covered by State-owned corporations (3) proposed reservation of crude oil and refined products to the tankers of the State (4) carriage of Govern-

Problems of the Second Plan

ADDRESSING the planning forum of Universities and colleges here last week, the Finance Minister gave a detailed analysis of the problems staring him in the face in his task as the provider of funds for the Second Plan. He began by referring to the controversy in regard to the allocation under the Plan for transport and social services and the possibility of utilising household industries to provide the additional consumer goods. He stated that there is likely to be 'almost universal resistance' to a cut in these services, even if these cuts were in favour of heavy industries. As regards transport, Mr Deshmukh stated that even the present allocation under the Plan was somewhat excessive, in view of other demands on the resources. He has therefore asked the Railway Board to try to devise, with expert assistance, methods that would increase the efficiency of the railways and achieve economy of operational cost. Even so, there are many who believe that the very tasks imposed upon the railways by the Plan would require a larger outlay. As elsewhere under the Plan, it is a question of almost inexhaustible demands coming to terms with limited resources.

As regards the development of labour incentive methods of production of consumer goods, Sir Chintaman stated that the problem, especially in relation to the production of yarn by Ambar Charka was under examination by an expert body. But the economics of this mode of production, especially in its financial implications of subsidy and so on was still not very clear. The Finance Minister estimated on a rough calculation, that a subsidy of 80 crores of rupees will have to be provided for, if this method of yarn production should be adopted. This led the Finance Minister on to the question of the size of the Plan and the likely increases in it in order to provide for items not taken account of earlier. Besides this subsidy for Ambar Charka, increased allocation for defence may be expedient in view of current uncertainties over Pakistan's attitude toward us. Then there may have to be further allocation for coal and for exploration, and exploitation of oil resources. All this is likely to push up the outlay by another 300 to 400 crores.

Regarding the resources for finding even the original estimate of Rs 4,800 crores, Sir Chintaman was quite frank. He said that of the planned outlay, he was certain of obtaining about a half of the planned amount. Of the remainder, half is expected to be provided by deficit financing. For the rest, the Finance Minister said in effect that we will have to keep our fingers crossed and expect windfalls of various sort. Among these, the Finance Minister thinks that the expectation of Rs 800 crores of foreign aid is somewhat on the optimistic side. The best he hopes for is only half this amount. But even after taking credit for Rs 800 crores from abroad, we still have to find Rs 400 crores. No one knows where we are going to get it from. There are, however, four methods of getting this sum: additional taxation, or additional borrowing, or additional foreign assistance or, in the last resort, additional deficit financing.

On the subject of deficit financing, the Finance Minister pointed out that it was difficult to be dogmatic in view of many of the imponderables of the situation. The 'question marks' are numerous: "Is money going to circulate with the same velocity as before? Is production going to answer our expectations? Are the Gods going to be kind to us?....Are the consumption propensities in the country going to remain the same? and so on". All development processes involve a certain inflationary pressure, but so long as we keep firm control of the reins, the runaway steed (the analogy of the Finance Minister's) can be kept in check. There are, besides, a few escapes, though, one should, for other reasons be chary of making use of them too readily. One of them is import of goods for avoiding shortage. This is already happening in the case of cement. Another hope is the surplus elsewhere of commodities that we ourselves may find scarce. In this connection, Sir Chintaman referred to the US Commodity Credit Corporation as a possible source.

As regards internal resources, he thought that for the next four years, he will be obliged to raise at the Centre an additional Rs 50 crores annually by way of taxes. He referred in this connection to many suggestions about fresh sources of revenue, but wisely refused to adopt them without further examination in detail. "I have been told that there were various surpluses—surpluses in rent, surpluses among lenders and surpluses of various kinds with property owners and so on and so forth apart from land revenue—and a very tempting prospect was held out before me that he could certainly lay hands on fifty per cent of these. I have not yet discovered how I might be able to do this. Unless one has in one's possession the detailed distribution of the income of these classes, it would be dangerous to assume that such large percenatges can be extracted from the owners of these incomes." He, however, stated that all these suggestions will have to be considered carefully in the next few months. Further suggestions like tax on wealth, tax on expenditure and 'tax on this and tax on that' will also have to be carefully sifted and decision taken.

However, Sir Chintaman expressed himself, as not unduly dismayed by problem of raising revenue by taxation, for everyone understands that in this gigantic national endeavour, he has to make some sacrifice. 'It is a challenge to our resourcefulness to devise forms of taxation which will not create a great deal of mental disturbance in the country'. It may be that certain standards of living may have to be reduced in the process, but that would not, in the Finance Minister's view, be too great a price to pay for the raising of the living standards of the common man, the annual income of whose family is only about Rs 1,600.

In the ultimate analysis, it is a question of deciding upon a pace of development that is not unadventurous and, at the same time, avoids taking on more than we can reasonably achieve. If we are timid in our expectations, we would have failed in our duty toward those of our countrymen who have lived only too long in conditions of appalling misery. On the other hand, an ambitious plan that goes awry would be even more of a disaster. But situated as we are, we cannot possibly have a plan of lesser proportion, compared to what has been achieved elsewhere (but under totalitarian conditions which we do not want here) the aim of a five per cent annual increase in the national income is modest. The necessary effort **must**, therefore, be forthcoming and if we fail to achieve all our objectives even after putting forth the best, it would still have been worth while. As the Finance Minister put it: 'here, as in everything else it is not failure but a low aim that will be the crime'.

Land Reform in the States

While the imposition of a ceiling on wealth is being deferred for valid practical reasons, the Union Government is more enthusiastic about limiting, through legislation, the size of holdings. The State Governments also look in the same direction, but with varying emphasis on policies and methods. The Planning Commission have a Land Reforms Panel for the purpose of imparting uniformity in progress. But the task of this Panel has become, lately, complicated and a little confusing.

In Bihar, the Land (Ceiling and Management) Bill, now before the Assembly, is accused shar than in other States and even of being against the directives of the Planning Commission. The Bill divides holdings into four categories, the ceilings varying from 25 acres in the case of irrigated land and 75 acres in the case of jungle land. Compensation varies between Rs 75 per acre and Rs 15 per acre. The provision to put better managed plots on a special footing was in the original bill, but was deleted during the Bill's sojourn with the Select Committee. In contrast, the Land Reforms Bill in the Madras State proceeds more cautiously and slowly with due exemptions made in order not to disturb efficiently managed farms.

The draft Second Plan recommends that the ceiling on land should be fixed at three times the average family holding where the family consists of five members and at six times, where the family exceeds five. But the draft gives a fairly wide latitude for the individual States to adjust to prevailing local conditions. Bihar apparently makes full use of this clause. The Bill is to apply equally to new requirements as well as existing holdings. Travancore-Cochin was the first State to think in such terms, but the measure did not materialise for political reasons.

In UP, a pioneer in land reform, the ceiling is put at 30 acres and applies only to future acquirements. In Hyderabad, four and a half times the family holdings is fixed as the ceiling. In Bombay, 48 acres is the normal ceiling but large families are allowed up to 96 acres, again a provision which is absent in the Bihar Bill.

Now, what will be the net results of making land legislation more sweeping in Bihar than in other States? A predominantly agricultural State, it has a large proportion of middle class farmers. Imposition of ceiling at this stage would mean that these will be downgraded to the lower class, compared to office and factory hands who have a fixed, and generally a more substantial, income. The rate of compensation that is sought to be paid to the Bihar landholders is another cause for widespread disapproval.

*

Rs. 24 crores for forests

The Union Minister for Agriculture. Dr Punjabrao Deshmukh made a significant broadcast on forest development in the Plan. Apart from a detailed description of financial allocations and the embryonic proposal for the establishment of a Forest Commission at the Centre, the talk did not touch an aspect of forest administration that was revived by the States Reorganisation Commission. The Commission suggested the revival of the Indian Forest Service and the taking over of forest lands by the Centre. A major legislative reform is believed by many to be necessary to correct certain maladjustmnts that have been under-mining the preservation and development of forest wealth.

The total expenditure planned for forestry under the Second Plan would be over Rs 24 crores.. The Centre would directly incur an expenditure of nearly Rs 2½ crores in forest research, education, and demonstration centres for upgrading secondary timbers. Another Rs 2½ crores would go to States to finance schemes not immediately remunerative. Loans to the tune of Rs 10 crores would be advanced for the implementation of other forest projects. The States would contribute about Rs 9 crores to complete the financial provision for such schemes as also for schemes which they would undertake entirely on their own.

A possible reason why the Centre has not thought it necessary to make forestry a Central subject may be that New Delhi has its hands full. Nevertheless, a Forest Commission would be set up mainly for two functions: to co-ordinate the various activities in this field and secondly to administer the allotted funds properly. The successful implementation of research activities is also a subject coming under the Commission's purview.

Development plans have been framed to secure three objectives: the preservation and extension of area under forests; the formation of plantations of valuable species that would add to the forest resources; and, thirdly, improvement in the methods of tapping and availing of forest wealth.

The gap between existing forest resources and national requirements is so wide that the plan as now drawn up can only be a right beginning. It is to the good that it is being realised that Vanamahotsava festivals alone would not make much of a difference.

An interesting sidelight of the Second Plan programme would be the cultivation of medicinal plants and the introduction of better qualities of the fodder grass, the adoption of rotational grazing, etc. To begin with, two research stations will come into being at Bangalore and Coimbatore.

NORTH INDIAN MARKETS

The Food Reserve
Modest Gains in Prices:

WITH the overall food supply position well under control, the Government of India seem confident in stabilising the foodgrains prices. At the moment they have in reserve about two lakh tons of wheat and nearly three and a half lakh tons of rice. During last year imports of foodgrains aggregated seven lakh tons and, according to current indications, this year the figure will be higher, probably, at one million tons of wheat and an equal quantity of rice. In this first three months of 1956, wheat imports totalled 90,000 tons.

Foodgrain prices in the Hapur market recorded modest gains toward last week-end after early fall during mid-session. Wheat average quality was dealt at Rs 12-8 in the beginning, but since then improved to Rs 12-12 per maund. Daily arrivals of wheat at Hapur averaged 500 maunds for most part of the week, but declined toward the end to 250 maunds. Stockists are still reluctant to enter the market and are studying the implications of UP Government's tax proposals on foodgrains and pulses. Wheat stocks at Hapur are put at 3 khatles.

Rice prices hardened during the week and were quoted at: Basmati Rs 25 to Rs 33, Ranggooni Rs 16-12 and coarse quality Rs 14-12 per maund. The all-India final estimate of rice for 1955-56 now available shows an increase of 4 per cent in area and 3.8 per cent in production over last year at 76,253,000 acres and 25,474,000 tons respectively. Gram prices continued steady at small daily arrivals hardly sufficient to meet local requirements and in the face of lack of arrivals from Punjab.

While barley prices recorded a modest fall of 0-2-0 annas per maund during the week to Rs 8-2, bejhar prices eased by 0-4-0 annas per maund to Rs 7-12 Daily arrivals are all absorbed locally and as yet there has been no stock-building. Maize and bajra are off-season cereals these days and stock locally is very small. Despite a fall of 3.4 per cent in area over last year, at 27,025,000 acres bajra production in the country has recorded a modest increase of 6 per cent in production at 3,400,000 tons.

Sugar prices continue to rule dull and depressed due to comfortable supply position and slack outside buying enquiry coupled with restricted loading facilities. The production of indigenous sugar from the beginning of the season upto March 22 has been better at 13.22 lakh tons as against the corresponding figure last year at 12.05 lakh tons. The continued slackness in demand has forced the mills to reduce their prices here and also in the Deccan. Most of the factories in this area are still crushing and the season may drag on up to May 15. Latest mill delivery prices are:— Jaswant Rs 28-8, Simbhauli Rs 28-5, Mowana Rs 28-12 Daurala Rs 29-8, Amroha Rs 27-14, Bijnore Rs 27-14, Mansoorpur Rs 28-12, Rampur Rs 31. Retail Rs 30, Khandsari Rs 32 to Rs 26-4 per maund.

Gur arrivals have increased slightly as the producer is now anxious to push its products in the market and harvesting season has finished. Ready gur prices which were otherwise depressed recorded slight gains in the weekend on revival of loading facilities to Gujerat and were to-day quoted at Rs 11-2 per maund. Arrivals averaged 400 maunds daily and stock is put at 11500 maunds.

Futures of gur eased during the week and were today quoted at Rs 10-8-3 and Rs 9-15-6 for Baisakh and Fagun delivery respectively, having touched the highest during the week at Rs 11-3 and Rs 10-4-3 and lowest at Rs 10-7 and Rs 9-14 respectively.

The gur season is to come to a close shortly and latest reports indicate that there would be increased sowings for the new coming season.

The Peninsula

The Communist Party Congress

THIS week, the attention of South Indian intellectuals, as for that matter, of intellectuals all over India, is mostly concentrated on the Congress of the Communist Party of India at Palghat. It is seldom that even the Communist Party of India with its usual bunch of delicate issues has come to face so large and delicate a combination of important questions on policies, domestic and foreign.

When one includes the foreign aspect also, it is not to be suspected that the Indian party can afford to a line different from what the ruling group in Russia suggests. In the one-sided relationship between the national party and the Soviet leadership, the first has frequently to face the awkward position of having to put its obedient stamp of approval on whatever surprises the Kremlin springs on it.

It is a painful truth that the devotion of Malenkov and the dethronement of Stalinism came as most disagreeable surprises, to the Indian Party. But it has scarcely any choice other than to proclaim a thoroughly loyal acceptance. This time the new attitude taken by the present Soviet leadership to Stalin and his inter-national outlook would certainly be discussed threadbare by the Palghat Congress, but it would be silly to imagine that the result of this discussion could lead to anything beyond a solemn endorsement.

It is reported that in the first few meetings there were violent dissensions among the leading members; possibly these dissensions have centred round the interpretation of the latest Soviet move and the attitude the Indian Party should take on it. But all that seems a purely private affair and in the interest of discipline, quite correctly so. After having experienced many splits and defections, the party would not attempt to develop quarrels over issues over which its own delibrations can have no bearing. Already in the statements issued by Indian Communist leaders, the new policy has received its inevitable support.

The dissolution of the Cominform has presented another delicate issue on which the party will feel called upon to express its views. Here again, there is scarcely any room for Indian initiative; for one thing, the Indian Party is not a member of the Cominform and is, therefore, not entitled to any voice on its fate. Its views are relevant only as an outside sympathiser. The outcome is a foregone conclusion.

It is in the sphere of India's domestic politics and in that of the party's own internal organisation and relations with other political groups that the Palghat Congress would be devoting its main thought and attention. The international visits of Soviet leaders in recent months represent a sort of public relations work which is undoubtedly embarrassing to the CPI.

The visit of Bulganin and Khrushchev to India and the bonds of Indo-Soviet friendship which that visit strengthened have to a large extent undermined the political ground of the CPI. The same thing is now happening in the wider world sphere.

The party is wedded to what is called the parliamentary tactics in its bid against the Congress Government. Though in the Lok Sabha it could succeed in establishing itself as the main opposition and in West Bengal, the Pepsu and in the Travancore-Cochin States, it could secure substantial percentages of seats in the legislatures public faith in the party's future was shaken by the complete rout it sustained at the Andhra elections. In the T-C State, in spite of long-drawn-out manoeuvring, the party could not succeed in establishing a non-Congress Government after the recent defeat of the Congress Ministry.

The only practical issue on which it is still able to fight the Government is the linguistic division of the country, but there it is embarrassed by the presence of strange bed—fellows. The steady pace of Congress policies toward a socialistic economic structure deprives the party of much of the ideological resources to fight the Congress. To the left of the Congress there are also the Socialists who make convenient inroads on the sphere of propaganda and ideology which the Communist party would have entirely for itself.

In this situation it is no wonder that some of the leaders have started asking whether it is after all very necessary that the party should have a separate existence. The question of course comes only from a small minority, but the very fact that it is being raised shows that there is a weakening of morale, a falling off of distinctive political props.

It is very unlikely, one can even say impossible, that the party will decide to liquidate itself. In the alternative it has to re-examine the general political situation in India and find out what precise role it can fill as an opposition to the ruling party. What should be the programme it could put forward to win over the sympathy of the masses and what are the methods it can offer to implement that programme? Above all, it will have to decide whether the present leadership can be permitted to continue or whether it must stand by giving place to others.

To pose these questions is simple, but to answer them is extremely difficult in the context of the cordial relationship existing between the Soviet Government and the Government of India, the great competitive political pull the second Five Year Plan offers to the Congress party, the existence of several Leftist groups who in the eyes of the general public are scarcely distinguishable from the Communist party by virtue of the doctrines they proclaim, and, above all, the absence of a third alternative to the Parliamentary method, on the one hand, and violent agitation, on the other, for the capture of power.

In these circumstances, one should think that even if no straight answers are provided for the questions posed above, it is up to the party to discover and put forth a working programme for consolidating its position wherever it enjoys a respectable method of public support and for strengthening it through more active contact with the voters.

Specific decisions in this respect can no longer be postponed, in view of the coming general elections. To some extent, as in the case of Travancore-Cochin and Andhra, the party cannot chalk out its policy without reference to what possible election friends would like to do. One useful innovation might be to conceive of joint fronts with other Leftists groups, not merely for purposes of election but with the full understanding of how to work together in the event of a common victory.

It was the absence of such an understanding that disabled the Leftist groups for forming governments where electorally they could command more seats than any other party. One hopes that on this point the party will show a more constructive lead than it has found capable of in the past.

The increasingly closer association of countries in the Communist bloc and the neutral powers of the world should be welcome to the C.P.I. Possibly, in a long-range view of future international prospects for communism, the party can look forward to a time not far distant when this association may transform itself into mutual understanding of a more vital character. It is almost a common characteristic of the neutral States in Asia that they believe in parliamentary democracy; in other words, politically the inspiration comes from the West.

In the shaping of the economic structure of society, the sources of inspiration are more diffused. In India, the Prime Minister has frequently said that he is only concerned with whatever is good for the people; he does not mind where a particular idea or method originates; if it is advantageous to the people of India, it can be freely introduced into the economy.

There is an inexorable shift to conditions where economic opportunities will be largely equal between man and man. The impact of this broad equality, both in ideology and in endeavour, has not failed to catch even the capitalist powers of the West. For a national party wedded to communism, these trends are clearly encouraging.

The C.P.I. may well choose to sub-merge its immediate interest as a party beneath the requirements of international communism which has taken this new direction. Even in conditions of co-existence, what is ruled out is only open animus against the other party and violent propaganda against it. Presumably it is still the belief of sincere communists everywhere that the expansion of their creed is predetermined by natural economic loss and that no force can resist it. This belief should offer solace to any national wing of Communists, whatever frustrations arise through the vicissitudes in policy—making by the world leadership.

T.T.K. Tours Karnataka

Mr T. T. Krishnamachari's four-day tour of Karnataka closely followed that of the Prime Minister. Public interest was keen in knowing from the Industries Minister, the precise nature and extent of the impact of the Second Plan's industrialisation on the region. The clues given by the Minister was not disappointing.

Mr Krishnamachari made it clear, at the outset, that it would neither be possible nor proper to decide establishment of large scale industries on a population basis. Criteria of sound economy were paramount. Heavy industries cannot, therefore, be established merely to satisfy local claims.

The Minister made a first-hand study of the various regions of Karnataka in which task he was assisted by Mr D. P. Karmakar, Union Commerce Minister. There are possibilities of starting large scale as well as small scale industries especially where the integration with Mysore takes place and when electricity, manpower and resources will be available in appropriate quantities.

The aim of planning, explained the Minister, was the provision of gainful employment to each and every citizen of the country. This was possible only with the complete and quick industrialisation of the country. America took about 50 years to achieve it. Russia did it in 35 years. He thought India will industrialise itself within another 15 years.

At a meeting in Hubli, Mr Krishnamachari expressed more or less the same idea in monetary terms. The First and Second Plans were formulated with the aim of securing average Indian family an annual income of Rs 3,000 in 30 years. The Minister referred to the present rise in foodgrains prices and said that Government were confident of preventing further rise and of stabilising the prices. However, the trend indicated that Government have to be on the alert and could not rest on the achievement of the First Plan in regard to self-sufficiency in food.

Considering the non-availability of coal in the region, Mr Krishnamachari advised the Kannadigas to concentrate on medium and small industries. It was unwise to be enamoured by heavy industries, small and medium industries provided more employment avenues as also gave quick returns on investment.

The Minister said at a reception by the West Coast Paper Mill at Dandeli, that the region between Poona and Bangalore had a good future in respect of heavy and small industries. He did not elaborate the point but must have had in mind the prospects of immense power development.

*

Engineers and Natural Resources

The problem posed by disputes over the sharing of the waters of inter-State rivers is a very old one. It is to be solved partly through legislative measures, such as, the setting up of an arbitrating body, and partly through co-ordinated approach over bigger territorial units. Inaugurating the annual conference of the Association of Engineers of the Madras PWD, Minister S. R. Sethupathi foresaw that legislation to take powers to arbitrate on all inter-State river problems will soon be on the Statute book. He also anticipated that reorganisation of States would eventually add to the usefulness resulting from joint exploitation of river waters and mineral resources. Presently difficulties over sharing of river waters exist between Travancore-Cochin and Madras. But neither arbitration nor the formulation of Dakshina Pradesh can be a substitute for mutual goodwill between the different regions. A salutary principle to be followed in this regard will be that a region in the lower reaches of the river should not expect or demand anything more than the surplus waters after the use of areas upstream.

That the State's PWD Engineers should feel rather apprehensive of their future seems quizzical at a time when engineers are the profession most favoured by the programme of national reconstruction. Since the partition of the State in 1953, and the consequent reduction in the strength of their cadre, the Association was feeling uneasy. The proposal for reorganisation of the State is also viewed, for some unclear reason, with alarm. The argument that practically all the water resources in the State are exhausted and therefore the scope of PWD engineers is limited is over-pessimistic. There were many other building activities in which they could be of service. Much more so, if as the Minister rather blandly prophesies, every essential service is to be nationalised.

SOUTH INDIAN MARKETS

Groundnut & Oil Dull: Record Coffee Output

The groundnut and oil markets, after ruling steady, closed slightly easier during the last week. Activity was restricted in both sections.

Big millers evinced little or no interest and buyers were from among small crushers. Daily seed arrivals averaged 20 tons. Excise duty charged on the millers put them at a disadvantage compared to small and rotary crushers, who were able to sell at appreciably lower prices. Any export quota release by Government is unlikely, due to the prevailing high level of prices of oil. Demand for seeds was small.

Superior oil quality seeds were dealt at Rs 155 per candy in the beginning of the week, but improved to Rs 161 and then declined and closed at Rs 159. The quotation for Bold varieties was Rs 154-155 per candy.

In the oil section, except for small buying by Calcutta interests, the market was lifeless. The quotation for ready oil improved from Rs 315 to Rs 318 but declined and closed at the opening level. The quotation for April delivery was Rs 315 per candy.

Arrivals of tanned cow hides were moderate. Prices were firm, though quality showed deterioration. There were moderate arrivals of tanned cow calf and buff calf; clearances were irregular and prices unchanged. Prices varied much in f.a.q. marks, depending on the standard of each mark. In prime class marks, enquiries were mostly for better grades. Prices varied from 55d to 57d.

Arrivals of tanned goat and sheep skins were fair. Prices for both were easier by three annas per pound.

*

Trading in pulses was dull with poor offtake in the Madras market. Retail prices fell by about 6 pies per measure. Better arrivals and slackened demand accounted for a slight fall in Bengalgram and Blackgram prices.

*

The area under ginger in 1955-56 in the districts of Madurai, Malabar, South Kanara and the Nilgiris is estimated at 15,300 acres, states the third and final forecast report issued officially.

Compared with the area of 14,880 acres estimated for the corresponding period of last year, it shows an increase of 2.8 per cent. Compared with the average area of 13,840 acres calculated for the previous five years ending with 1954-55, the present estimate reveals an increase of 10.5 per cent.

An increase in area is estimated in the district of Malabar, and a decrease in the district of Madurai. The area estimated is the same as that of last year in the districts of South Kanara and the Nilgiris.

The total yield is estimated at 5,450 tons of dry ginger. Compared with the estimated yield of 5,090 tons of dry ginger for the corresponding period of last year, the present estimate shows an increase of 7.1 per cent. Compared with the average yield of 4,660 tons of dry ginger calculated for the previous five years ending 1954-'55, it reveals an increase of 17 per cent.

The wholesale price of dry ginger per maund of 82 2/7 lbs. or 3,200 tolas on March 2, 1956 was Rs 102-14 at Mangalore. Compared with the price in the corresponding period of last year, this shows an increase of 12 per cent.

*

Indian coffee growers have produced this year their all-time record crop of over 30,000 tons. Robusta picking has been late this year, and the full tally of the season's crop has not been made, which may go up to over 32,000 tons, coming fairly close to the Second Five-Year Plan target of coffee production.

*

There has been a phenomenal rise in the prices of both new and old varieties of "Molakolukulu" paddy in Nellore. The market closed at week-end with Rs 310 per putty (1,876 lbs) in the case of old paddy, and Rs 272 in the case of new paddy.

The price of new rice is ruling high around Rs 35-8 per bag of 160 lbs,. and old rice at Rs 39.

It may be recalled that though the price of new paddy was rising steadily since the time of harvest from Rs 210 to Rs 265 per putty, old paddy remained steady for most of the period around Rs 275 per putty. This variety also has moved up in price and reached a peak in the course of the last ten days, the rise being about Rs 35 per putty.

The retail price of rice at annas ten per Nellore type of seer is hitting the consumers very hard, particularly in view of the equally sharp increase in the prices of almost all commodities essential for daily life.

The Dunlop Rubber Co. (India) Ltd.

*

Mr. CECIL STACK'S REVIEW

The 80th Annual General Meeting of The Dunlop Rubber Co. (India) Ltd. was held on the 25th April, 1956 in Calcutta. Mr. Cecil Stack, Managing Director said:—

Gentlemen,

The Directors' Report and Accounts for the year 1955 have been in your hands for some time and with your permission I will take them as read.

THE YEAR'S TRADING:

From the point of view of volume of sales the year under review may be considered very satisfactory. Progress was achieved in all products and the factory worked to full capacity throughout the year, thus maintaining the highest possible level of employment. In my speech last year I advised you that our consumption of crude rubber in 1954 was the highest recorded, being 18% above 1953. Another record was created in 1955, rubber usings being nearly 10% higher than in the previous year. Nevertheless we had difficulty in meeting the demand for our products which is indicative of the continued expansion of India's economy and the growing importance of our own particular industry. As I suggested on this occasion last year, the level of output and employment will require to be expanded considerably if the demand for rubber products under India's second Five Year Plan is to be met, and we as a company hope to play our full part.

Distribution of the Company's products was again adversely affected by unsatisfactory transport conditions and shortage of railway wagons. The indications are that this problem will become more acute in years to come and in my opinion it calls for the most serious attention by the Government of India.

Total sales in value were 10% higher than in 1954 but as the result of selling price reductions the net profit at Rs. 96,72,154 was approximately the same as for the previous year and the ratio to turnover declined from 7% to 6.4% before taxation. The price reductions on this occasion arose out of Government's implementation of the Tariff Commission's recommendations regarding tyre prices. I do not propose to comment on the Commission's report other than to say we do not necessarily agree with some of the findings but this has not in any way affected our relations with the Government which I am pleased to say remain satisfactory.

PRODUCTS:

In the Rubber Industry in recent years the most intensified research has been undertaken in relation to new varieties of raw materials and new methods of manufacture. Development work continues on a vast scale and no manufacturer can afford to stand still. In this respect we are fortunate in having available the benefits of Dunlop research activities not only in Great Britain but in many other countries, notably Canada, United States of America, Germany, France and Malaya. Our technical staff are in constant liaison with the world-wide Dunlop Group research organisation, which ensures that the most modern production methods, equipment and materials are available to us.

The Dunlop Trakmaster Giant tyre, which is specially designed for rough and cross country routes, has proved most popular and it is hoped that this year supplies will be sufficient to meet all demands. Another important development has been the introduction this year of the new Dunlop Roadster Giant tyre which I have no doubt will be equally successful. This tyre has been thoroughly tested in many countries of the world on some of their worst roads and results everywhere have been outstanding. The tubeless car tyre which your Company were first to introduce in 1954 has given excellent results and is now being fitted as original equipment by most car manufacturers.

Further progress was made in our sales of tractor, off-the-road and aero tyres and new records were again created in our production and sales of cycle tyres and rims. The use of the bi-cycles has grown so rapidly that we have not so far been able to keep our cycle tyre capacity abreast of the demand although it is hoped to remedy this before long. Stock shortages unfortunately existed throughout the year and to ease the situation Government have now adopted our suggestion of permitting tyres to be imported.

Substantial increases were also achieved in sales of other products, for which increased manufacturing capacity is also required if the needs of our customers are to be met. Great strides were made in Dunlopillo Latex Foam Cushioning, which is now firmly established as the most economical and hygienic material for cinemas, hospitals, hotels and transport services. It is also being used increasingly for domestic purposes and by car manufacturers.

Our rubber-ply transmission belting sold well throughout the year and we have had difficulty in maintaining dealers' stocks at an adequate level. Many important contracts for Conveyor belts which are supplied only against firm orders have been fulfilled from our Sahaganj factory. It is gratifying to know that our industrial vee belts and fan belts are proving so popular as borne out by an increase in sales of over 60% compared with the previous year. The excellent quality of our braided hoses has justified our decision to increase our range of sizes so that we can meet consumer needs more fully.

During 1955 we further expanded our activities to cover the highly specialised field of anti-corrosive and abrasive linings. This service is available to a wide range of industries and not only do we undertake the application of linings to vessels and pipes at our factory, but at customers' premises as well.

RAW MATERIALS:

The raw material supply position was satisfactory throughout the year except in the case of crude rubber. Against the total consumption of rubber by manufacturers in 1955 of 27,543 tons, India produced only 22,481 tons which means that there was a deficit of over 5,000 tons. In such circumstances it is the larger manufacturers who are forced to import a position of their requirements, especially when the world market price is higher than the controlled Indian price. We in fact imported 2,368 tons of rubber in 1955, but we experienced considerable difficulty in obtaining import licences from Government and our stocks at times fell dangerously low.

The controlled price for local rubber was increased from Rs. 138 to Rs. 150 per 100 lbs. in February 1955 and again to Rs. 155-12 in September. The prices paid by us for imported rubber ranged from Rs. 144 to Rs. 207. There were no significant price changes in other raw materials.s.

PROFIT AND LOSS ACCOUNT:

The net profit for the year was Rs. 96,72,154 and after deducting the provisions for taxation and retirement gratuities the balance of profit available for disposal is Rs. 61,28,686 compared with Rs. 69,45,891 for 1954. The Directors propose the same rate of ordinary dividend as for 1954, that is 15%, which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 22 lakhs to General Reserve as against Rs. 30 lakhs last year. This will increase General Reserve to Rs. 1 crore 90 lakhs as shown in the Balance Sheet. The total amount transferred to Reserves during the last 11 years was Rs. 2 crores 67½ lakhs, representing earnings retained and fully employed in the business.

BALANCE SHEET:

The additions to Fixed Assets during the year amounted to Rs. 33,70,000 consisting mostly of plant for expansion and modernisation. The amount of depreciation written off in 1955 was Rs. 27,51,000 as against Rs. 30,20,000 in 1954. Schedule VI of the Indian Companies Act, 1956 lays down that any future amount written off for depreciation in excess of the amount reasonably necessary shall be treated as a reserve and not as a provision. In view of this the Directors have considered it desirable to transfer to Special Depreciation Reserve an amount of Rs. 113,86,000 representing depreciation on Buildings and Plant provided in the post-war years at higher than normal rates.

Stock inventories at Rs. 391,63,000 are Rs. 4,18,000 lower than at the close of the previous year in spite of expansion in the volume of production and sales. This was due mainly to abnormally low stocks of raw rubber and some categories of finished goods. Bank and Current Balances are also lower by Rs. 6,90,000 but Sundry Debtors are up by Rs. 16,74,000 as a result of the higher sales turnover, giving an increase of Rs. 7,16,000 in total Current Assets. Net Working Capital is, however, approximately Rs. 6 lakhs lower than at the end of 1954 and the closing bank overdraft is reduced by Rs. 17,49,000.

EMPLOYEE RELATIONS:

During the past year no effort has been spared in maintaining our high reputation for working conditions and general labour relations, which, I am happy to say, remain consistently good. Further extensions and improvements have been made to our housing and social amenities for the benefit of our factory staff and operatives. The construction of new quarters for 30 of our Watch and Ward personnel was completed and these are now fully occupied. Work on the additional married operatives' quarters which I mentioned last year was unavoidably delayed but we shall shortly commence the building of 65 further houses. During the year electric lighting was installed in 800 single quarters. The addition of a Tennis and Social Club, consisting of a clubhouse and 3 floodlit tennis courts, has proved extremely popular and successful. A retirement gratuity scheme, which is additional to the provident funds which have been in force for many years, was introduced at the beginning of 1955 and will benefit all long-service staff and operatives.

Once again all our employees, at head office, factory and in the field, have shown initiative and devotion to duty and played their part in the achievement of the year's results. I know you will wish to join with the Directors in sending them a message of thanks and appreciation of their continued efforts.

THE BRITISH BANK OF THE MIDDLE EAST

(Incorporated in England by Royal Charter, 1889 with Limited Liability).

BALANCE SHEET OF INDIAN BRANCHES AS AT 31st DECEMBER, 1955.

CAPITAL AND LIABILITIES.	Rs.	A. P.	Rs.	A. P.
1. CAPITAL:

Manager, Bombay Office.

AUDITORS' REPORT.

We have audited the foregoing Balance Sheet of the Indian Branches of the British Bank of the Middle East, as at 31st December, 1955, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the authenticated returns of the Calcutta Branch and report that:—

(a) We have obtained all the information and explanations which we have required;
(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches; and
(d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

BOMBAY, 20th March, 1956.

Stock Exchanges

PRICES TEND LOWER

Watch-dog-Writes:

STOCK exchanges in India are in a depressed mood consequent on reports of the decision of the Union Finance Minister to resign from the Cabinet in case Bombay city is not included in the new state of Maharashtra. While Sir Chintaman Deshmukh's reported decision in this regard is the immediate cause for the lack of support in the markets, it is by no means the only cause. The most powerful factor that is now governing market sentiment is the uncertainty regarding the new Industrial Policy. A contributory influence has been the situation created by Government's decision to allow the Mysore State to nationalise the Kolar Gold fields. Rumour has it that the Union Government's mineral policy that will be revealed in the industrial policy statement will not be of a variety that will infuse confidence to the private sector.

In the Calcutta Stock Exchange, except for a few bright spots here and there, prices have been generally marked down under the lead of the more speculative counters.

Dalal Street has fared no better with fresh buying interest conspicuous by its absence.

In marked contrast to the general trend of stock exchanges in the country, the Madras Stock exchange displayed a steadier undertone with attention centering on textile, plantation and selected miscellaneous industrial shares.

Prices displayed a sagging tendency in the London Stock Exchange due to profittaking brought about by the setback in Wall street and the rather unsatisfactory nature of the March trade figures.

*

Calcutta

THE Calcutta Stock Exchange ruled quiet with the speculative counters losing ground on bear pressure. The cautious mood of operators who have preferred to sit on the side lines in view of the uncertainty shrowding the industrial policy statement has been further accentuated by the reported decision of the Finance Minister to resign in case Government did not accede to the demand for including Bombay in the new state of Maharashtra. Presumably operators are of the opinion that a new Finance Minister would not be friendly to the private sector.

Except for Jessop which spurted to Rs 35-14 from Rs 34-10 on interested buying, the Engineering section was quiet. Indian Irons which began the week steady at Rs 35 steadily lost ground to be finally placed at Rs 34-8. Richardson & Cruddas was steadier in earlier dealings but closed quiet at Rs 27¼. TEXMACO was uninteresting at Rs 23-9.

An easier tendency prevailed in the jute section. National jute opened at Rs 23-14 but on selling pressure later on eased to close at Rs 23-6. Megna was sold down to Rs 77. Ganges came back to Rs 67½. Belvedere was however slightly better at Rs 160. Anglo India was unchanged at Rs 170.

Coal shares were listless. Burrakur was fractionally lower at Rs 14. Central India was shaded at Rs 6-13. East India reacted from Rs 32-6 to Rs 31-8. Western Bengal was almost unchanged at Rs 6-14.

In the Mining section Indian Copper improved to Rs 6-11 from Rs 6-7 on reports that the bonus issue would be made shortly Another bright spot in the section had been Burma Mines which steadied to Rs 3-9 from Rs 3-4 on renewed buying interest. Karanpura Development recovered to Rs 25-11 from Rs 24-6. Metal Corporation was quiet at Rs 11 as was Orissa Minerals at Rs 24-8.

Miscellaneous industrials were featureless. Among paper mill shares Indian Paper Pulp was quiet at Rs 24-11. Orient Paper reacted steadily from Rs 35-8 to be finally placed at Rs 35. Shree Gopal was a steady counter at Rs 18-13 but Titaghur eased to Rs 43-14 from Rs 44-14. Elsewhere India Steamship was well maintained at Rs 8-9. Anglo Bros. gained six annas to Rs 22¼. B. I. C. was steadier at Rs 10-11 as was Electric construction at Rs 13-6. Indian Cable advanced from Rs 30-8 to Rs 31. Martin Burn was wanted upto Rs 25-3 National Carbon was slightly better at Rs 26.5. Rohtas Industries was quiet at Rs 22-6.

Though the undertone was steady, prices where market were fractionally lower on balance in the tea section. Basmatia was six annas lower at Rs 38-12. Brooke Bond was done at Rs 24-6 as against Rs 24-8 a week ago. Dhelakhat receded to Rs 21-14 from Rs 22-9. New Dooars was lower by five points at Rs 350. Among the few bright spots were Hantapara which advanced to Rs 340-8 from Rs 337. Jayshree was another steady spot at Rs 12-9 as was Rydak at Rs 83½.

*

Madras

STEADY conditions prevailed in the Madras Stock Exchange last week. Textiles, Plantings and selected industrials met with good support most of the time at advancing prices.

Planting shares were the most prominent with enquiries well spread. Kil Kotagiri was higher at 7-7 cd. while Chembra peaks was well maintained at Rs 4-13. Dividend hopes pushed up T.R. & T. to Rs 13-14 Neelamalai moved up to Rs 7-7 with Kalpeta firming up to Rs 31-4. Rajagiri was wanted up to Rs 24-6 while Cochin Malabar was sought after upto Rs 8-13. Velimalai was a firm spot at Rs 7-7. Kumergode was a bright spot improving steadily to be finally placed at Rs 7. Cottanad moved up to Rs 20-8 while Mercara were higher at Rs 8-4 buyers. Coffee lands was a steady spot at Rs 18-11 as was Consolidated Coffee at Rs 22-15.

Selected shares in the Textile section received good support while others displayed an irregular trend. Coimbatore Spinning was wanted upto Rs 91 with Loyal having buyers at Rs 47-4. Janardana was in request at Rs 109. Travancore Rayons had buyers upto Rs 15-10 with Trichinopoly done at Rs 12-8. Mettur spinning recorded slight improvement as did Cambodia. B & C recovered to Rs 187.

Industrials were a steady market with interest centering on sugar shares because of improved prospects.

WORLD OF FINANCE

(Continued from page 790)

April 20, notes in circulation have come down by Rs 6.32 crores. Notes held in the Banking Department show a rise of Rs 6.61 crores. Total notes issued are up by Rs 0.31 crores.

In the Banking Department, Central Government Deposits have increased by Rs 2.58 crores. Deposits by Other Governments are less by Rs 6.83 crores. Deposits by Banks show a rise of Rs 2.38 crores, as also other liabilities to the extent of Rs 1.84 crores. Bills payable are down by Rs 0.89 crores.

On the assets side, Notes are up by Rs 6.62 crores; Government Treasury Bills are less by Rs 0.89 crores. Balances held abroad are down by Rs 6.02 crores. Loans and advances to Government are less by Rs 0.20 crores. Investments have fallen by Rs 1.92 crores. Other loans and advances show a rise of Rs 1.40 crores.

GATEWAY NOTES

(Continued from page 800)

ment cargo by private shipownersat unremunerative rates (5) failure of Government to carry out the assurances relating to financial aid for efficient development of a mercantile navy and (6) the proposal to turn the loans to be given for the acquisition of additional tonnage as equity capital which would vest control of private undertakings in Government.

In these changes may be seen a gradual alienation of the private sector from the projected development and expansion of shipping. This is unjustified in the face of the fact that in the achievement of the shipping target of 6,00,000 GRT in the First Plan, the contribution of the private sector was six times that of the State. It would be a ruinous blow on the morale of the private sector if the present policy is furthered on the way to eventual nationalisation.

*

Calling the Strike off

The Nagpur High Court's judgment invalidating the agreement reached between a section of millworkers and the management of the Empress Mills, has not put an end to the three month old dispute, but it does provide an opportunity for the parties to come to an understanding and resume work. It is true that the workers on strike have gained a technical victory over the employers.

It was contended on behalf of the respondents—the parties to the agreement, the State Government and the State Labour Commissioner—that the agreement could not be the subject of legal challenge as the changes proposed could be made under the standing orders by which wide powers were given to the management. The contention was dismissed on the ground that the changes resulting from the agreement were not contemplated by the standing orders which were designed for normal conditions. It was also ruled that the workers who were not members of the respondent union will not be bound by the agreement.

The workers on strike were reported to have decided to resume work. The mill managements are also inclined to reopen the mills. And apparently only two factors delay full resumption of work. After so long a closure, the boilers and other machinery would take some time to get going again. Also, unless a sufficient number of workers in all departments and shifts reported on duty, it would not be possible for the mills to start functioning. Many of the workers on strike are reported to be in their home villages at the moment.

*

Strike Paralyses Coastal Shipping

Last week saw the recurrence of the all-too frequent strikes in the shipping industry. Coastal shipping, passenger as well as cargo steamer services, was completely paralysed as nearly 1,000 seamen working on ships of the Bombay Steam Navigation Company went on strike. In response to the call given by the Jahaji Mazdoor Union, the seamen are demanding better service conditions.

As many as seven passenger ships were held up in Bombay docks last Tuesday. Nearly 500 worken in the docks, from clerks to porters, were forced into idleness as a result. The size of the consignment of cargo held up is cause for concern. While the inconvenience to passengers and business keeps on mounting, reported negotiations between the disputing parties have not fructified.

FOR THE INVESTOR

(Continued from page 784)

ward. In 1954, on sales of Rs 6.14 lakhs, Travancore Ogale reported a loss of Rs 60,658. By then, the debit carry forward was at Rs 2.06 lakhs. For the year under review, with an improvement of over Rs 1 lakh in sales to Rs 7.23 lakhs, a net profit has been enabled. With a transfer of Rs 1.10 lakhs from general reserves and Rs 40,000 from the dividend equalisation reserve, the earnings of 1955 are placed at Rs 1.70 lakhs. After providing Rs 44,134 lakhs for depreciation (Rs 38,847 in 1954) the debit carry forward is reduced to Rs 88,092.

The balance sheet of Travancore Ogale shows an ordinary capital of Rs 9.98 lakhs. The reserves of the company are placed at nil, thanks to the current year's transfers to the appropriation account. The gross block of Rs 14.96 lakhs has a net value of Rs 11.11 lakhs. Liquid assets at Rs 2.14 lakhs are slightly better than 50 per cent of liabilities —Rs 3.43 lakhs as loans and Rs 64,212 as sundry debts.

GATEWAY GOSSIP

(Continued from page 799)

until it is found necessary to state it again and responsible statesmen should be discouraged from any reference to it as by doing so they merely raise doubts as to whether the policy remains unaltered or is about to be changed.' I suspect a certain impishness in the last statement, for a mere reference to the policy statement does not automatically raise doubts about its permanence! But even so, official conduct in this respect has been so wayward that a fear of this sort, though exaggerated, seems not wholly unjustified. By all means let us have flexibility in the means but let us have a clear and unambiguous statement of what the private sector is expected to do so that they may make their plans accordingly. A plan in which only the public sector does all the planning is no plan at all, since the private sector is still part of the economic circle.

The Seamaster—made for a Life of Action

Seals out Water — Seals in Accuracy

With unerring precision the Seamaster ticks off the most exciting seconds of your life—*in any climate* . . . aloft, ashore, afloat . . . under the surface, too, thanks to the thrice-sealed, waterproof Seamaster case. Its world-famous Omega automatic movement makes the Seamaster a peerless timekeeper—the kind of engineering triumph to which Omega owes its unequalled series of precision records at the Geneva observatory. Embodied in the consummate accuracy of the Seamaster is Omega's experience as final arbiter of the Olympic Games, the world's most highly contested sports event.

Stainless Steel	Rs. 405/-	14 ct. Solid Gold	Rs. 1150/-
Steel/Gold	Rs. 505/-	18 ct. Solid Gold	Rs. 1330/-

How banking helps the
OILSEEDS INDUSTRY

OILSEEDS and oil-bearing nuts are grown on more than 25 million acres in India, of which almost *half* lie in the South. From oilseeds we get cooking oil, paints and varnishes, lubricating oil and soap.

The growing of oilseeds and the extraction of oil forms a major industry in South India. Banking has greatly helped the growth of the oilseeds industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the oilseeds industry.

We at Palai are proud that so many leading concerns connected with the industry in South India employ the *complete* banking service we offer:

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans & Overdrafts — Confidential Credit Reports, etc.

If you have business interests in the south, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

A LEADING BANK IN SOUTH INDIA

For the Investor

Uncertainty Removed

Investment Gossip:

I do not know what to make of the Royal Exchange; Dalal Street by its actions bewilders me. I should have thought that, on a golden platter, operators in these two arenas were offered fare that ought to have satiated them with news of cheerful import. What has, however, happened is that, largely, stock exchanges have been content to mark time.

Of course, I might be told that the sluggishness that we have seen in recent days is the result of heavy carry over charges in Calcutta. That makes sense all right. But I am surprised that there should be an insufficient realisation of the import and significance of the revised statement of industrial policy.

Let us make no mistake about it. If the greatest bar to enterprise on the part of the private sector heretofore has been an uncertainty in its mind as to the fields of endeavour which Government might, any time, take upon themselves, that uncertainty has now been removed.

If, secondly, there were apprehensions that the private sector would be squeezed out, that the State would increasingly be responsible for and embark upon new industrial ventures, those apprehensions now stand belied.

A fair statement of policy—and a policy that is just and realistic. There is a categorical listing of industries whose development will be the sole responsibility of the State; there is an indication of other fields of endeavour in which the State would assume an increasing responsibility; and, finally, there is the implicit reservation, as it were, of all unlisted industries for the private sector.

What does it matter if, in the heavy industries, Government do attain to the position of being the predominant, if not the sole, producer of goods? The scope that remains for the private sector's growth is enormous, almost unlimited.

Nevertheless, as on past occasions, I am not sorry that markets have not responded immediately and frenziedly. Even as development and industrialisation in terms of the Second Plan will daily reach a higher tempo, so I should like to see consolidation of gains in the stock exchange every so often.

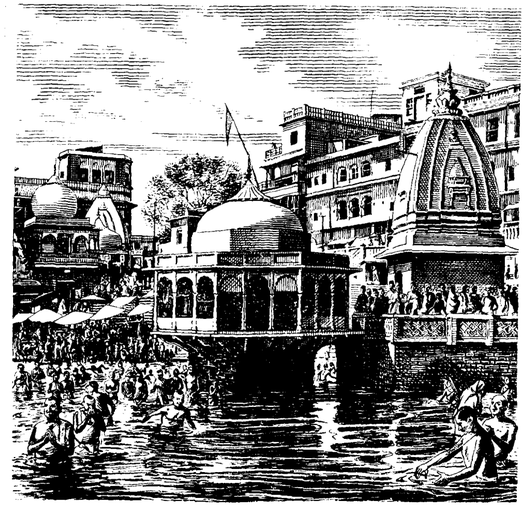
Travancore Rayons

Investment Special:

THE golden fibre was jute; silk was a silver thread, especially when it was woven by the skilled and dedicated artisans of years bygone. In the *modern day*, both gold and silver have disappeared from our coinage. What remains is nickel—but nickel today is, for monetary purposes, tender as legal as gold and silver used to be. And, consequently, in the modern day, a new fibre has achieved the status of being reckoned a thread that weaves prosperity even as it enshrouds the wearer of cloth made with it in the utmost comfort. I refer to rayon.

The synthetics comprised in rayon and the many other man-made fibres are relatively new to the world. In India, a good beginning has been made and the rayon industry has been in existence for just about a decade. In that decade, the progress attained is remarkable; and, thanks to the enterprise and initiative seized by Indian interests, India *today* makes rayon of a quality that stands with the best made in the world.



The analogy that I have related of the fibre of rayon being equivalent to pelf measured in terms of today's money is fully brought out in the accounts of the Travancore Rayons Limited. Suffice it here for me to point out that profits have been so bountiful as to enable the company, from year to year, to embark upon extensive expansion programmes and, at the same time, to increase the distribution to shareholders. For the latest year, the company has raised its dividend to 7½ per cent.

HIGHLIGHT

The first leading article deals with the Second Plan expenditure; the second with the Industrial Policy. In respect of both the Plan and the Policy Government cannot be accused of timidity. Nor have they exceeded the bounds of caution. A high level of expenditure, however, calls for careful priorities and allocation of resources. The industrial policy meets a political challenge as well. The State has ordained for itself a suitable role without throttling the private sector. Mixed economy is continued but on extended levels. Co-existence becomes more organised. The private sector has a smaller area but ample opportunities yet.

Around India with Brooke Bond

Haridwar—Har-Ki-Pauri . . .

Haridwar is situated at the point where the Ganga enters the Indo-Gangetic plain from the Himalayas. The holiest spot in Haridwar is a bathing ghat called Har-Ki-Pauri—formed by diverting the waters of the Ganga—in the centre of which stands a temple. Here hundreds of devotees come to bathe and pray daily. Every twelfth year, during the Kumbh Mela, Haridwar assumes an even greater importance when millions of pilgrims and sadhus congregate here to take a holy dip for self-purification.

Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

Indore Malwa Union Mills Results

Balance-Sheet Reviews:

The performance of the cotton textile industry in 1955 has been characterised by increases in profits out of proportion to the improvements recorded in sales. The report and accounts of the Indore Malwa Union Mills Limited for 1955 are typical of the balance sheets that are being released and which testify to the boom conditions enjoyed by the cotton textile industry in that year.

Indore Malwa's sales rose by Rs 33 lakhs to Rs 2.26 crores; and, in the meanwhile, the net profit has more than quadrupled from a figure of Rs 6.10 lakhs in 1954 to Rs 25.32 lakhs. Thus, it will be seen that the increase in net profit works out to better than half of the rise in sales.

Out of profits in 1955, the company has apportioned Rs 8 lakhs to taxation. Depreciation receives three times the **1954 figure of Rs** 3.16 lakhs at **Rs 9.78 lakhs. Out of** profits, further, a sum of **Rs 3 lakhs** has been transferred to the **dividend** equalisation fund—**this is the equivalent of 6 per cent of the ordinary capital. The dividend distribution** has been raised **by 50 per cent to** the rate of 9 per cent, **and this absorbs Rs 4.5 lakhs, leaving Rs 9,551** to be carried **forward.**

The balance sheet of **Indore** Malwa discloses a **capital,** all in ordinary shares, of **Rs 50 lakhs. Funds** are placed **a trifle higher** than **Rs 6 lakhs.**

On the assets side of the ledger, **the gross block of Rs 1.34 crores has a net value of less than a quarter at Rs 31.42 lakhs. Stocks are substantially reduced and so,** too, the outstandings. **The reductions** under these two heads amount to roughly **Rs 34 lakhs. This is** offset partly by investments rising by a level of **Rs 16 lakhs** to **Rs 17.46**

lakhs; and this is accounted for by the acquisition of 1½ lakhs ordinary shares in the India United Mills. Secondly, miscellaneous deposits and advances are marked higher by Rs 16 lakhs at Rs 18.11 lakhs; in this regard, the contributory heads are Rs 10.01 lakhs as advance on account of the Labour housing fund and Rs 6.02 lakhs representing advance against taxes.

Liquid assets are placed at Rs 1.28 crores, against which the sundry liabilities include Rs 24.37 lakhs under taxation reserve, Rs 40.44 lakhs as loans and deposits and Rs 38.52 lakhs as other debts.

£ R$

The Indian Wood Products

The Indian Wood Products Company Limited, under the managing agency of Gillanders Arbuthnot, has been enabled to increase its net profit for the year ended September 1955 by virtue of an improvement in sales and a careful check on expenses. Sales have registered an increase of a little over Rs 4 lakhs to Rs 41.82 lakhs; but, at the same time, expenses are higher by merely Rs 40,000 at Rs 21.15 lakhs. In the result, the net profit is marked nearly Rs 4 lakhs higher at Rs 18.11 lakhs against Rs 14.37 lakhs in the previous year.

The provision for taxation is substantially higher at Rs 7.31 lakhs (against Rs 5.84 lakhs in the previous year). Depreciation receives Rs 82,545 (Rs 86,381). The reserve fund receives 50 per cent more at Rs 3 lakhs. The results achieved have, of course, enabled the company to increase its dividend by 2½ per cent to 30 per cent, and this absorbs Rs 6 lakhs, leaving Rs 2.77 lakhs to be carried forward.

The capital of Indian Wood Products consists of Rs 20 lakhs in ordinary shares. Against this, undistributed profits comprise Rs 16 lakhs as the reserve fund, Rs 4.43 lakhs in the form of other funds and Rs 2.77 lakhs as carried forward.

As against the gross block of Rs 19.00 lakhs depreciation so far provided amounts to Rs 14.36 lakhs, thus giving the block a net value of Rs 4.65 lakhs. The only substantial change in the composition of liquid assets relates to deposits in banks: this figure has risen by Rs 4 lakhs to Rs 7.5 lakhs.

Liquid assets are marked as 6.40 lakhs higher at Rs 55.53 lakhs. The sundry liabilities work out to less than 1/3 of this figure. The taxation reserve is placed at Rs 4.88 lakhs, and other debts total Rs 12.10 lakhs.

The National Rayon Corporation

India's new industries may be said to have been born under a lucky star. The National Rayon Corporation Limited has yet to complete its first decade of existence. But, thanks to the proper utilisation of resources in men, materials and money, and thanks to the enterprising management by Chinai & Company (Private) Limited the managing agents, National Rayon has entered into the select list of bodies corporate whose ordinary dividend is in excess of 10 per cent.

So carefully have India's enterprises been thought of, that every increase in production is anticipated by an unsated increase in demand. Sales have risen from the 1953 level of Rs 2.85 crores successively to Rs 2.96 crores and Rs 3.42 crores in 1954 and 1955, respectively. The net profit is a trifle lower than the 1954 figure at Rs 1.02 crores. But the company has, nevertheless, been able to increase the dividend distribution by reason of the fact that it has been possible substantially to reduce the provision for deferred taxation reserve. Appropriations from 1955 profits include Rs 50 lakhs for depreciation (Rs 45 lakhs in 1954), Rs 10 lakhs to the reserve fund (Rs 15 lakhs) and Rs 5 lakhs for deferred taxation (Rs 23 lakhs). Moreover, a sum of Rs 10 lakhs has been transferred to the debenture redemption fund—an item which does not previously figure in National Rayon accounts. The ordinary dividend has been raised by 2 per cent to 12 per cent, absorbing Rs 19.02 19.02 lakhs of the profit; and the carry forward is Rs 5.12 lakhs.

The paid-up capital of National Rayon is Rs 3.32 crores, exclusive of Rs 1.85 lakhs representing amounts paid up on forfeited shares. Preference shares account for Rs 1.74 crores, and ordinary shares are placed at Rs 1.58 crores. Furthermore, debentures have been issued to the value of Rs 1.50 crores. Against this, there is a reserve fund of Rs 25 lakhs and other funds totalling Rs 60 lakhs.

That National Rayon has been gearing its machinery in such manner as to enable the company to meet the additional demand for its products is attested by the figures relating to the gross block. Since 1953, additions to block have gone up by more than Rs 2 crores.

Plan Expenditure and its Implications

THE report that the Union Cabinet has approved the proposed outlay of Rs 4,800 crores in the public sector may seem, at first, to have put an end to one of the major uncertainties regarding the Second Plan. The decision to fill the uncovered gap of Rs 400 crores in the resources budget would also be regarded as helpful in the same way to the Planning Commission which, it may be thought, are now free to finalise their plans on this basis. But those who have followed the announcement of official ideas on planning would wonder whether these reported decisions have, in fact, settled anything at all.

There is, in the first place, the fact that Sir Chintaman Deshmukh was absent from the cabinet meeting which considered these questions, because of the revival of the Maharashtrian demand for clarification of the future of Bombay City. The recrudescence of rumours of his resignation is to be regretted as much from an economic as from a political point of view. Though Sir Chintaman's views have of late, much in them that are surprising, to say the least, in a former Governor of the Reserve Bank, he is one of the few in the Central Cabinet who can view the social and economic objectives of the Government in proper relation to the facts of the economic and financial position of the nation.

He is as unwilling as Mr Nehru or Mr Nanda to play down the programme of relief to unemployment through encouragement to cottage industries. He is not easily scared by gloomy forecasts of the effects of deficit financing on a large scale. But, at the same time, he is conscious that the Plan in its present form involves a degree of strain which can be justified only if commensurate efforts are put forth and if certain conditions, not the least of which is the monsoon, are favourable.

At judiciously chosen intervals, he has been emphasising the possibility that the Plan period may have to be extended, if a lowering of the targets may not be desirable or necessary. While he has been hopeful about the Central Government's ability to raise the additional taxation needed to finance the Plan, he is not equally sanguine about the willingness or the capacity of the State Governments to do so. His presence at the Cabinet Meeting, during a discussion of the Second Plan, is, therefore, more than ordinarily necessary. And it would not be far-fetched to suggest that his participation in the discussions might have made a difference.

The basic question about the Plan is of course, the sufficiency of resources. There is, indeed, much to be said for an optimistic view of the extent to which funds will become available; ours is a developing economy. The principal sources of taxation have expanded remarkably during the last few years. They can be made to yield much more if our legislators are not as obsessed as they are about the burden of taxation on the lower income groups. Government's new borrowings short term and long term, market loans and small savings have by no means exhausted the possibilities. Nationalisation of life insurance has brought to the Government a fertile field, which with a little care may be made to yield a rich harvest by way of institutional savings.

The Second Plan is going to open new avenues of productive activity; and in each of the next five years, taxable capacity is bound to be much more than in the previous year. If planning is sound, inflation will prove to be no more than a mere bogey. There is nothing in our foreign relations to suggest that foreign aid will be less. On the other hand, there are signs of a keener realisation in the Western Nations of the wisdom and expediency alike of keeping economic aid apart from political motives and considerations. And, lastly, on the question of foreign exchange, recent trends in our foreign trade show that our exports will be not only on a larger scale but more diversified, while over our imports we shall have greater control and more of alternative sources of supply to choose from. In such conditions, it would be folly to limit our vision or fetter our hands by assuming a low scale of available resources.

Nevertheless, it would be unwise to overlook the scale of the demands on what we may have at our command in the next five years. There is one fact which, in this context, we cannot afford to forget. And that is: the plans of State Governments and Union Ministries amounted, at the time of their submission, to nearly Rs 12,000 crores. It is an extremely drastic axing that has reduced it to the Rs 4,800 crores of the Draft Outline. Such cuts are rarely effected with full discrimination. The demands of the Khadi and Village Industries Board have, if anything, greater sanctity in the eyes of the Planning Commission and of many of the Central Ministers than the demands of the Railway Board whose responsibility it is to see that coal and iron ore do not wait indefinitely at the pit heads, or important construction is not delayed for lack of wagons to take cement and steel to the work sites.

Not only are the advocates of cottage industries more vociferous in their demands, but their plans have greater appeal for the Government, because of their supposed benefits for the masses and, even more, because of their value at the coming elections. Whatever that may be it would be difficult to contend that the pruning of the plans which had been prepared for the State Governments and the Central Ministries was just what it should be. Decisions once made have a value of their own because of their finality. But, in the case of the Second Plan, such finality seems too much to ask for. It is almost certain that the allocation for the Railways will have to be stepped up, when the impact of the new steel plants on transport facilities will begin to be felt. There is also the other circumstance that a large provision, now estimated at Rs 30 crores for the initial stages, will have to be made for the prospecting of oil. If more coal is to be raised under the public sector than was at first contemplated, a larger amount will have to be allocated under this head. And we have also to think of the possibility of one pleasant surprise. If we strike oil in any part of the wide area in which prospecting is to be done, we cannot for financial reasons allow that oil to remain buried under the earth. It is on these solid grounds, and not for the excitement of upsetting plans already made, that the possibility of having to increase the outlay in the public sector has been mentioned.

If the Central Cabinet has decided to stick to the figure of Rs 4,800 crores, it has also a duty to show how this is consistent with the need to do all that may be necessary for the success of the Plan in the next five years. Will the Government continue to turn a blind eye on the shortness of the transport facilities or pray that no rich oil-bearing fields will be found? Will they continue to swear by that blend of poor politics and poorer economics which has already created certain kinds of vested interests in the country? There can be no question that, however high they may estimate the resources that will be available in the next five years, they will not be high enough to enable the Government to provide for all the schemes that they have till now favoured. Economics, let us remember, is a service that is concerned with the distribution of scarce resources among competing ends. The question of reducing all the schemes that have been prepared to a rational order of priorities—rational, that is, in the sense of freedom from sentimental considerations—cannot be shirked merely by taking a very liberal view in preparing the resources budget. As has been pointed out already, every item on the income side is an elastic one with great possibilites of expansion. But, in the nature of things, resources cannot be so large as to let us look on precious oil and on Ambar Charka alike.

One suspects that the unpleasant task of deciding priorities and letting the chances of each scheme depend on the scale of total resources has again been shirked. Mr K. C. Neogy's plea for dividing the Plan into two parts and making the second part contingent on availability of resources has gone in vain. The Government have apparently forgotten that this was precisely the course adopted by the Planning Commission in the Draft Outline of the First-Plan. The doubts in regard to foreign aid were cited as the reason for the uncertainty in regard to the second part. The uncertainty is not less today, though it obtains only beyond a much higher level of total outlay. Since, even at this stage, there is no certainty about the additional schemes of a complimentary character that will crop up in the course of the Plan, it seems unwise to shirk the task of grading the schemes with a view to facilitating the choice between them at later stages. The Cabinet is wise to resist further additions to the total for the public sector. But a necessary complement of that decision is a decision about priorities.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

A Challenge Answered

THE new industrial policy, formally announced by the Prime Minister on April 30, may be said to mark the end of the transitional stage in economic thinking and action since the advent of freedom. The Industrial Policy Resolution of 1948 was tentative, anticipatory and largely experimental. In 1948 there was no Constitution for India, though national aims and objectives were more or less clearly defined in the resolutions of the Congress Party which formed the principal mandate to the Government of India. The 1948 declaration was made in a background of hurry and innumerable political preoccupations; it did not come as the product of any consistent, mature or comprehensive thinking on national economic problems.

It is remarkable therefore that even under such conditions, the Government of India could embody in the Policy Resolution almost all the principal features which were to be found trustworthy and tenable eight years hence. Though a few diversions were made during the

tenure of the policy, its fundamental soundness and strength were vindicated not only with regard to conditions current during the last eight years but also to those of a prospective phase, when more clearly-defined social and economic aims came to inspire and direct the national endeavour.

Naturally, the last few years were clouded with some uncertainties about the future set-up. The State was trying to find its feet, to understand through trial and error to what extent it could meet the aspirations of the masses toward a better life, to what extent the the status quo could be maintained without affront to these aspirations, how and at what pace new ideas could be accommodated and how the innumerable problems generated by the changes could be met with the minimum cost to social cohesion and stability.

The nationalisation of civil aviation, the conversion of the Imperial Bank of India into the State Bank and the nationalisation of life insurance were steps which invited the criticism that the Government were transgressing their own self-imposed limits. The charge is not even superficially tenable. The policy enunciated in 1948 provided room for such steps and every one of them has been completely justified by the positive reasons which guided the State. Once new social needs are recognised or receive a fresh emphasis no Government committed to a welfare state can defer action or be lukewarm about it.

Inevitably, there did exist an air of uncertainty about the economic policy. But it was only another way of saying that the conditions were not static and the State had to move in pace with the changing conditions. It goes to the credit of the Union Government that in the matter of industrial policy, they have not used their inherent freedom recklessly or in disregard of any legitimate interest concerned.

The few changes embodied in the new revised policy, as for that matter the entire policy itself, will have to be viewed in the general background of current national and international problems. It is not known what changes the Prime Minister has made of his own accord in the original draft. The statement bears the unmistakable imprint of his personality and outlook. He has the unique capacity of seeing every detail in the widest possible perspective and of conceiving a general picture in which all the parts cohere magnificently. The monolithic unity of the new policy could be understood only in relation to the social set-up for the promotion of which it is an acknowledged instrument.

When the State has accepted the obligation toward a socialistic pattern of society and the people are being educated in its implications, the State has necessarily to assume a paramount role in economic activity. The industrial policy envisages the extension and consolidation of State control over a growing area of the industrial sector, 'a predominant and direct responsibility for setting up new industrial undertakings and for developing transport facilities". The private sector is offered a residual status but a fairly wide one at that. Its sphere is mostly confined to the production of consumer goods even where it cannot hope to enjoy any monopoly. In the manufacture of several products reserved exclusively for the private sector, as for instance, paper, ceramics and soap, the State is already conspicuously in the field. Over a wide range in the joint area where the State and the private sectors could co-exist, the State will admittedly have the major share but the private sector also has a great deal of opportunity to develop the existing units and new ventures through private enterprise are not ruled out. Here, the original draft was friendlier to the private sector. Road transport, anti-biotics and other essential drugs have now been transferred to the State sphere.

The keynote of this division of functions is that the State will be responsible for all the basic industries, whether they be the exploration of industrial raw materials or the production of capital goods. In other words, the State assumes complete responsibility for the foundational structure of industrial development. It makes itself responsible for a considerable part of the super-structure as well. In the future, it is the State which will extend its industrial activity, possibly at the expense of the private sector. The pace and manner of such expansion will largely depend on the behaviour of the private sector itself.

If the latter sizes up the new situation correctly, gives up the pranks which have besmirched its name in the past and modifies its outlook in a manner consistent with the national aims, its future needs not be gloomy. The Draft Second Plan envisages an outlay in the private industrial sector which provides scope for a higher annual investment than was recorded during the first Five-Year Plan. Private undertakings are now offered financial succour wherever they are found to be deserving of it. And this assistance will by no means be stingy or half-hearted. Up to Rs 7 crores, the State is prepared to subscribe to the equity capital of a private enterprise. Besides, the flow of foreign capital can be as smooth as before, as it is not burdened with any new obligation. The development of industries under State initiative, running on complementary lines, will offer a substantial and stable market for many of the products of the private industries. There is a pledge by the State that between State and private undertakings in the same line of production, no discrimination will be observed. These conditions reflect the desire for concrete encouragement of the private sector. If vague and remote fears are laid aside, this sector can look forward to the future with greater zest and confidence.

In two respects, it should also be ready to make the adjustments called for. The profit motive can be retained; it is good that it should be. But it should be sufficiently diluted with a sense of public good. This dilution, we are sure, will, instead of turning out to be a handicap for the private sector, will only raise it in public esteem and restore the confidence which has somewhat been impaired in recent years. It has also to meet the demand for a vital structural change. The new policy insists that it should develop on co-operative lines. The compulsion for this change is bound to grow stronger in course of time.

It must also be mentioned that the private sector is among the chief beneficiaries of the great blow which the new industrial policy strikes at extremist political opinion in the country. The policy meets a great challenge. The left'st parties have not been slow to exploit the few set-backs to Congress prestige which have recently occurred. If the ruling party were to take a narrow and faint-hearted view of the State's role in future economic life, it will only be providing more powder and shot for these parties. This can simply not be done. The pathetic groping of the PSP for a set of distinctive principles and programmes to be pitted against those of the Congress and the confusion which has marked the Communist Party's efforts to frame charges against the Government reflect the remarkable success of Pandit Nehru in disarming his political adversaries. The industrial policy must help him vastly in this direction.

BALANCE-SHEET REVIEWS

(Continued from page 824)

The gross block as at the end of 1953 was placed at Rs 4.81 crores and the relative figure at the end 1955 is Rs 6.25 crores. Depreciation so far provided amounts to Rs 2.05 crores, and the block has, thus, a net value of Rs 4.80 crores.

It is noteworthy that every head of asset in the latest balance sheet is placed at a higher figure. Chief among these changes are the rise of Rs 12 lakhs odd in stores, of Rs 18 lakhs odd under stocks, Rs 7 lakhs under miscellaneous deposits and advances and Rs 12 lakhs under cash. Incidentally, there is also an amount of Rs 5 lakhs as deposits with banks.

The liquid assets of National Rayon amount to Rs 1.78 crores. Among the liabilities, that relating to loans has been wiped out, thanks to the debenture issue of last year. The sundry liabilities are placed at less than a half of the liquid assets. The taxation reserve is at Rs 51,427 and other debts are shown at Rs 83.61 lakhs.

The Bombay Dyeing and Manufacturing

The Bombay Dyeing and Manufacturing Company Limited has had what we may call a staggering year in 1955. If the cotton textile industry has generally benefitted by the prevalence of supremely favourable conditions in 1955, it was inevitable that Bombay Dyeing should present accounts which are better than the norm for textile units. For, it is no accident that Bombay Dyeing enjoys a blue chip preference among investors: the accounts are such that any investor who has some money at his disposal, would put some of it in Bombay Dyeing.

Actually, Bombay Dyeing's sales are Rs 3 lakhs lower at Rs 7.23 crores. But the net profit has increased by more than 50 per cent to Rs 96.55 lakhs from Rs 62.08 lakhs. The first result of such increased profits was, naturally, an increased provision for taxation. The provision under this head has been raised by Rs 11 lakhs to Rs 29.50 lakhs. Secondly, consequent to additions to block during the year, the allocation to depreciation has also been raised substantially—the figure has gone up from Rs 14.62 lakhs to Rs 26.87 lakhs. Thirdly, Bombay Dyeing has profited sizeably from the benefit of development rebate announced by Sir Chintaman Deshmukh in his budget last year. The amount under this head was Rs 10.36 lakhs in 1954, and is placed at the higher level of Rs 14.88 lakhs in 1955. The ordinary dividend has been raised by 2 per cent to 10 per cent.

Bombay Dying's capital, all in ordinary shares, is Rs 2.51 crores. The reserve fund is placed at Rs 50.01 lakhs, and other funds total Rs 2.50 crores.

As against the gross block of Rs 4.93 crores which is a figure over Rs 1 crore higher than the block as it stood at the end of 1933—there is a depreciation fund on the liabilities side of the ledger of Rs 3.30 crores. In other words, the block has a net value of Rs 1.63 crores. During the year, stocks were reduced by Rs 40 lakhs to Rs 1.53 crores; outstandings have been halved to Rs 20.75 lakhs; and investments have been cut by Rs 25 lakhs odd to Rs 73.02 lakhs. The cash reserves of Bombay Dyeing totalled Rs 2.68 crores, of which Rs 81.95 lakhs is in the form of deposits with banks.

The balance sheet total is in striking distance of the Rs 11 crores mark at Rs 10.80 crores. Liquid assets add up to Rs 5.87 crores. The liabilities are at just a third of this figure—a taxation reserve of Rs 23.94 lakhs, loans to the tune of Rs 14.85 lakhs and sundry debts of the order of Rs 1.53 crores.

WORLD OF FINANCE

(Continued from page 828)

April reveals that Demand liabilities have declined by Rs 2.56 crores to Rs 648.31 crores. Time Liabilities are higher by Rs 4.21 crores at Rs 427.77 crores. While Borrowings from the Reserve Bank are higher at Rs 50.80 crores, those from the State Bank are lower at Rs 8.81 crores. Investments are lower by Rs 0.79 crores at Rs 355.58 crores. Advances including bills purchased and discounted are Rs 2.15 crores lower at Rs 752.65 crores.

Editorial Notes

Status Quo for Burma

Although the final returns of the general elections in Burma have not yet been announced, it can now be safely predicted that the Anti-Fascist People's Freedom League of Premier U Nu will come out decisively successful. This, in glaring contrast to the trouncing of the erstwhile ruling party in Ceylon, provides a rare instance of how a party in power needs not necessarily be unpopular.

Rangoon has voted solidly for the AFPFL which has secured over 66 per cent of the votes cast. U Nu has himself won a smashing victory over his rivals. Besides, three Ministers of his Cabinet have been re-elected with comfortable majorities. The verdict of the capital city may be taken as an index of public opinion throughout Burma. That the Party's popularity is very wide-spread is borne out by the resounding victory of the Home Minister at Mandalay, once replete with Communist influence.

The reason for the continued hold of the AFPFL is not far to seek. Socialistic in outlook, the Party has been eminently successful in bringing succour to war-ravaged Burma. Though opposition is rampant, none of the rivals has brought forward a better and more plausible approach to tackle the various problems confronting the country. The Communists are not the formidable obstacle they were, because of the growing confusion and dissension within their ranks; also, their policy of violence and terrorism has become increasingly unpalatable to the common man and as such the Party stands isolated as never before. The vast majority of the people living in villages, remote from communist influence, has immense faith in U Nu's integrity and his ability as an administrator.

The overwhelming success of U Nu's Party will be welcomed by Burma's neighbours, especially India. It ensures continuation of the policies which were so beneficial in lessening tension and furthering the cause of peace.

*

Faster than Ever

World population trends in recent years should strike a disturbing note, especially for regions already groaning under the pressure of numbers. According to the UN Demographic Year-Book, the average annual rise in the growth of population from 1950 to 1954 has exceeded that of any similar period in history. The population of Asia has increased by 21 million per year and at 1451 million represents 55 per cent of the world's total population. The population of Oceania and Latin America have grown even faster than that of Asia. Among individual countries, Venezuela leads with an annual rate of 3 per cent followed by Panama with 2.9 per cent, Ceylon with 2.8 per cent and Mexico with 2.7 per cent. Ireland records the smallest percentage of growth with 0.04 per cent.

While in the American and European cities there are more women than men, in the Arab countries and Asia, men outnumber women. In Ceylon, there are 127 men for every 100 women. While in Thailand, Pakistan, Ceylon Yugoslavia, India and Korea, considerably less than one-fifth of the population live in cities and towns, in Britain and the United States between 60 to 70 per cent inhabit the urban areas. Wide variations persist in respect of the average length of life. Against 32.5 years for males and 31.7 for females in India, in the Netherlands the average length of life for males is 70.6 years and for females 72.9 years.

In the majority of countries, women are found to live between 2 and 7 years longer than men. India is an exception. That in India 60 per cent of the women between the age of 56 and 64 are widows is sought to be explained by the higher mortality of males and the lack of sanction for widow remarriage among large sections of the people.

Land Ceilings in Bihar

The Bihar Agricultural Land Ceiling and Management Bill has undergone a change of name at the hands of the Select Committee of the State Assembly. The Bill is now styled the Bihar Fixation of Ceiling Areas of Lands Bill. The ceilings proposed are 25 acres for a family of five in areas having perennial irrigation, 50 acres for lands with one or more crops not coming under the first category and 75 acres for hilly and sandy tracts. These ceilings, fixed by the Select Committee, are considerably more rigorous than those originally proposed. But even at the revised levels, the ceilings have come up for strong criticism at the hands of Bhoodan leaders.

A joint statement issued by Sri Jay Prakash Narain and two of his colleagues in the Bhoodan movement condemns the Bill as being far short of the requirements of the day. In Bihar, 87 lakhs of tillers have to be provided with land. The ceilings now fixed would yield a surplus which will meet only a small fraction of this requirement. The Bhoodan leaders want an absolute ceiling of 30 to 40 acres and a land levy on every landholder owning more than 5 acres. They claim that Bhoodan work has already created a climate in which redistribution in the manner and scale suggested by them would be smoothly possible.

They have also stated that eventually all land must be owned by villagers and in due course public opinion would accept the proposition as the best for everyone concerned. In the present climate of opinion, the leaders want legislation adequate to provide at least subsistence holdings for the entire body of landless tillers in the State.

The T. E. C. Report

The Union Finance Minister's statement in the Lok Sabha that the Taxation Enquiry Commission's Report has to some extent become out of date seems somewhat unfair not only to the Commission but to the Indian public. Last year in his budget speech Sir Chintaman said that he would be implementing the recommendations of the Commission step by step and the entire fiscal policy would be governed by the spirit of the Report.

He now says that the Taxation Enquiry Commission submitted the Report before the Second Five Year Plan, that new problems have arisen and that consequently the Report had lost its freshness. The argument seems plausible. Any government can always claim freedom of action outside the purview of any expert report. But in this case, the TEC made their recommendations in full view of the Second Plan ahead. It cannot be maintained that the advent of the Second Plan has fossilised any material part of the Commission's Report. The Report itself has given sufficient latitude in the matter of new taxation and has fully anticipated new demands on the exchequer. The Report does not appear to stand in the way of the Finance Minister's laying his hands on new sources of taxation. It is of course true that in exigencies sources not favoured by the Commission may have to be tapped.

The Taxation Enquiry Commission have not declared any source of taxation completely out of bounds for the Government. There is sufficient lack of rigidity in their recommendations to enable the Government to go ahead with new proposals without openly flouting the Report. On the contrary, when the Report itself comes in for destructive criticism, even measures which the Commission might have approved, explicitly or other wise, are likely to be misconstrued as unduly harsh. This risk is not unavoidable.

There is also no reason for shelving some of the more important recommendations of the Commission. The difficulties in the way of setting up of an all India Taxation Council are obscure. The new Amendment to the Constitution does not offer a complete substitute.

Reducing the Foreign Exchange Gap

IN order that a moiety of the Reserve Bank's foreign exchange reserves may be put to more dynamic use for bridging the gap in the foreign exchange reserve needed for the Second Plan, it is now proposed to amend the Reserve Bank of India Act with regard to the reserve rate and the value of the gold stocks. In our issue of December 10, 1955, we had put forward a plan of self-help as part substitute for foreign aid; and we suggested that the gold held in the Issue Department must be revalued so as to make available the hidden reserve of approximately Rs 80 crores, and that the rate of gold plus foreign securities to note liability, which now stands at 40 per cent, be lowered suitably. The net effect of the implementation of these suggestions would be to free anything like Rs 300 crores of foreign securities for utilisation in connection with the Second Plan. An amending Bill, introduced in the Parliament this mid-week, seeks to give effect to changes on these lines. We quote below extracts from our issue of December 10, 1955:

> "Fourth. There is nothing sacrosanct about any specified ratio of gold plus foreign securities to note liability. The ratio can be lowered suitably in the emergency created by the Second Plan, to be restored once the Plan's effects in the shape of increased exports and decreased imports begin to materialise.
>
> Fifth. If we remember right, we have some sterling securities in the Silver Redemption Reserve. They will come handy now."

When the Reserve Bank of India Act was placed on the statute book in 1933, the clause with regard to the valuation of gold was a reproduction of the connected section in the abortive Bill of 1926, though, by 1933, both the UK and India had gone off the gold standard, and the market price of gold had risen considerably. Gold, thus, came to be shown in the reserve at a price considerably lower than the market price. There was, too, the devaluation of the dollar, so that gold in the Reserve Bank's reserve stood at a price which was lower than the rupee price as also of the dollar price of gold. This kind of artificiality has been allowed to continue, in spite of the World Bank fixing, on its formation, the gold price of the Indian currency. The change now proposed provides for the valuation of the gold stocks at the price fixed by the World Bank. It may, therefore, be said that the announcement carries out an overdue alteration in the Reserve Bank Act. Incidentally, it sets free a hidden reserve of Rs 80 crores.

As for the reserve ratio of 40 per cent, it is noteworthy that, in this case also, the Act of 1933 was content to repeat timely the connected clause in the 1926 Bill, and failed to take note of the fact that, in the meantime, the Bank of England itself had ceased to observe any reserve ratios, the ownership of and responsibility for gold and foreign securities having been transferred in September 1931 to the Exchange Equalisation Fund. This meant that the entire issue of the Bank of England had no backing of gold or of gold securities. So profound a change in the status of Britain's note issue failed to influence the Indian law-makers in 1933. So, we stuck to the conventional 40 per cent.

This convention is as dead as Queen Anne so far as most countries are concerned. In India, while the 40 per cent convention is to disappear, the idea that there must be some measure of reserve ratio will continue to be effective. It is, perhaps, best that the precedent of Britain in regard to the transfer of foreign exchange reserves from the central banking institution to the Treasury is not being tamely followed. The point to emphasise is that the first steps toward filling the foreign exchange gap through a programme of self-initiative have been taken. We commend to Authority a reperusal of our article on Self-Help vs. Foreign Aid, appearing in Indian Finance bearing date December 10, 1955.

+

According to the Reserve Bank Statement for the week ending April 27, notes in circulation have come down by a further Rs 4.64 crores to Rs 1505.01 crores. Notes held in the Banking Department are higher by Rs 5.68 crores at Rs 22.35 crores Total notes issued are up by Rs 1.04 crores.

In the Banking Department Central Government Deposits have increased by Rs 2.74 crores to Rs 58.60 Deposits by Other Governments are higher by Rs 1.48 crores at Rs 27.01 crores. Deposits by Banks are lower by Rs 2.49 crores at Rs 50.84 crores. Other Liabilities are higher by Rs 0.13 crores at Rs 33.31 crores. Bills payable are also higher by 0.11 crores at Rs 6.22 crores.

On the Assets side Notes are higher by Rs 5.68 crores at Rs 22.35 crores. Government Treasury Bills are lower by Rs 0.80 crores at Rs 12.07 crores Balances held abroad are down by Rs 8.51 crores at Rs 44.20 crores. Loans and advances to Government are up by Rs 0.79 crores at Rs 1.79 crores. Investment have fallen by Rs 0.45 crores at Rs 44.19 crores. Other loans and advances show a rise of Rs 5.24 crores at Rs 69.71 crores.

+

The Statement of Affairs of the State Bank of India for the week ending April 27, shows that Deposits and other Accounts have declined by Rs 5.16 crores to Rs 229.53 crores. Borrowings from other Banking Companies etc., have sharply increased by Rs 2.97 crores to Rs 7.06 crores. Bills payable are lower by Rs 0.17 crores at Rs 7.95 crores. Other Liabilities are higher by Rs 0.54 crores at Rs. 4.77 crores.

On the Assets side, Government and other Trustee Securities are slightly lower by Rs 0.07 crores at Rs 94.82 crores. Other Authorised Investments are unchanged at Rs 10.45 crores. Cash in hand and with Reserve Bank has declined by Rs 2.53 crores to Rs 13.34 crores. Loans etc., and Bills discounted and purchased are higher by Rs 0.51 crores at Rs 135.08 crores.

The statement of the position of the Scheduled Banks as at 20th

Communists and Automation

By PAUL EINZIG

SIMULTANEOUSLY with the flood of woolly phrases about "the friendly and peaceful intention of the Soviet Union towards Britain" that emerged from the ten day visit of Khrushchev and Bulganin the launching of a new Communist offensive in the cold war in the sphere of automation has passed almost unnoticed. In this new phase of the cold war, the Communists have come out openly with their plan to sabotage the efforts of British industry to keep up with the tide of technological progress. The announcement of the new policy assumed the form of a resolution passed by the Communist-controlled National Committee of the Amalgamated Engineering Union, according to which the Union declared itself firmly opposed to any dismissals through redundancy. Workers displaced because of automation are in future to be given full wages until other work is found for them in the same factory. The resolution also demands that no firm is to introduce automatic machinery without "consulting" the Union.

The attitude of British Trade Unions in general towards automation has been anything but favourable. It is true, in the past many Union leaders paid lip-service to the need for technological progress in the interest of raising the standard of living. They could hardly do less since amidst over-full employment there is no possibility of increasing the output otherwise than by increasing productivity with the aid of improved technological equipment. And the real wages of the workers inevitably depend on the output. If the policies of the Unions were dictated by enlightened self-interest they would do their utmost to encourage employers to proceed with automation at the utmost speed.

But the self-interest that dictates the policy of the British Trade Unions has been far from enlightened. Instead of aiming at raising the volume of output they aimed at raising money wages. To that end it is necessary to maintain the existing degree of scarcity of labour so that the bargaining position of the Unions should remain strong to enable them to enforce the wages demands that follow each other with increasing frequency. In the absence of a corresponding increase in the output the rise in money wages means of course a corresponding rise in prices and the cost of living to offset the difference between the rise in wages and the increase in the volume of goods and services. But the Unions and their members are too intoxicated with their power to stop to think about the futility of their attitude.

While paying lip-service to the need for automation, most Unions have in fact been doing their best to slow down its progress. Apart from frequent instances of insistence on automation being accompanied by "featherbedding", their excessive wages demands have gone a long way towards handicapping the progress of automation in Britain. On two occasions within the last four years—in 1952 and again in 1955-56—the inflationary conditions brought about by the wages spiral forced the British authorities to resort to credit restrictions. The direct and indirect effect of such restrictions was necessarily a setback in the progress of automation.

Until now, most Union leaders, while opposed to unhindered progress of automation, were at any rate anxious not to appear to be opposed to it. It was left to the Communist controlled Amalgamated Engineering Union to discard this pretence and come out quite openly with a set of claims which, if accepted, are bound to slow down further automation in Britain. It is true in some instances the introduction of automatic equipment increases productivity to such a degree that the employers can afford to keep the redundant workers at full pay in permanent idleness. Even so, the practice of featherbedding would be necessarily detrimental from the point of view of the reduction of prices that would enable consumers to benefit by automation. It would also prevent the reallocation of labour among other industries which are at present handicapped by shortage of manpower.

What the Amalgamated Engineering Union overlooks is that in a large number of instances the increase of productivity through automation is not sufficient to enable employers to retain a number of redundant workers in perpetuity. The installation of new automatic equipment with a high rate of obsolescence cannot be profitably undertaken unless the superfluous workers can be dismissed. While the employers may be able to afford to be generous to those workers who are thus dismissed through no fault of their own, in most instances any obligation imposed on them by the Unions to retain the redundant workers would deprive them of the benefits derived from automation. Under such a rule in a great many instances it would not be worth their while to proceed with automation.

The workers will have to pay sooner or later a heavy price for their short-sightedness. In addition to preventing them from benefiting by a higher standard of living that could be achieved through automation, they are exposed to unemployment through the strengthening of the competitive power of other countries where industries are allowed to proceed with automation. Those industries will be able sooner or later to capture the markets of their British rivals in which case there are bound to be large-scale dismissals.

The object of Communist controlled Trade Unions in resisting automation in Great Britain is twofold. They take advantage of the inability of the rank and file of organised labour to see beyond their nose. The prevailing widespread fear of technological unemployment through automation secures for the Communists widespread support in the Trade Unions. Their present attitude is popular among the workers. Should employers refuse to comply with the newly formulated demands, there is a good chance for the communists to stir up trouble.

The latest move in this phase of the cold war also pursues the aim of handicapping the progress of automation in Britain, in order to secure a comparative advantage for the Soviet bloc in this sphere. Automation is making rapid progress in Soviet Russia and in the satellite countries. If its progress can be held up or slowed down in the democratic countries, this would secure immeasurable economic, political and military advantages to the Communist cause. The fact that this new offensive was launched out at the very moment when the Soviet leaders were engaged in discussing peaceful coexistence with the British Government recalls the experience of Pearl Harbour when Japan attacked in the middle of peace negotiations. The lessons of this modified repetition of history are well worth retaining.

LOK SABHA QUESTIONS

NO REVIEW OF PREMIUM RATES

NEW DELHI, March 20.—The Government of India had no intention to undertake any review of rates of premium of life insurance in the near future, the Finance Minister, Mr C. D. Deshmukh, said in the Lok Sabha today.

Replying to Mr Balwant Sinha Mehta, who asked whether it was a fact that the Finance Minister's remarks about life insurance premium rates made in the Lok Sabha on March 3 had been interpreted by many to mean that a further reduction in the rates was likely in the near future, Mr Deshmukh said: "Yes, my remarks in the Lok Sabha appear to have been interpreted by some to mean that a further reduction in the premium rates was likely to occur in the near future and this might have caused some holding back of business temporarily. I should like to make it clear that the Government has no such intention."

A NEWS THAT MATTERS

TO ALL CUSTODIANS

Custodians may inform Policyholders that no further reduction in the rates of premium is in the contemplation of Government and that Government has issued instructions to Custodians to ensure payment of valid claims without delay and sanction and grant admissible loans on policy with all expedition.

SECRETARY
Ministry of Finance,
(Deptt. of Economic Affairs)

World *of* Business

The Problem of Malpractices in General Insurance

SIR Chintaman Deshmukh in one of his many statements on nationalisation of life insurance referred to general insurance and is reported to have stated that the "Government were aware of malpractices among them (meaning general insurance companies) and may re-examine the question of nationalisation if they did not improve". Malpractice is a social vice and constitutes a slur on national character. Its impact on the trade is of minor significance compared to the way it corrupts the community. A welfare state wedded to the doctrine of social good is thus entitled to examine the question of nationalisation of general insurance from the point of view of social necessity, although nationalisation of general insurance for the ideological background of life insurance is not socially necessary. This new social necessity of the Government of India has to be countered effectively by the trade if it wishes to survive. That objective, therefore, underlines the necessity of removing and eliminating malpractices.

Malpractice in general insurance has been its bane for many years, almost from the time general insurance came to be written in this country. It was fostered mainly by Managing Agency Houses holding Principal Agencies of general companies when they stipulated taking advantage of the absence of any regulatory provisions in the then Insurance Act, for large commissions, far in excess of what is now stipulated in the Insurance Act 1950. There were some regulatory provisions in the then voluntary Associations, who had also 'Breaches Committees' to investigate, report and impose penalties within their competence. In Calcutta region, Principal Agency Commission was not defined. It was therefore, usual to have contracts stipulating commission as high as 35 to 40 per cent or even higher. In Bombay and Madras, the regulatory provisions were somewhat loose, there being no legal sanction against offenders. These provisions and stipulations were thus the precursor of releasing unsocial forces which eventually covered the entire general field.

Unsocial forces thus unleashed gathered additional momentum from the physical and psychological consequences of Second World War. In a war, the first casualty is debasement of human character. Countless forms of illegal gratifications which cropped up during the war could not but have their effect on purchase and sale of general insurance. The result went to such proportions that general insurance in India faced a disaster unless effective correctives were applied. Illegal rebates and payments continued to deplete the resources of the companies. It was felt necessary to introduce statutory provisions with a view to regulate inflow of funds to reserves rather than to channels leading to depletion of reserves.

This view led to Amendments of the Insurance Act 1938 in the year 1950 leading to limitation of expenses by incorporation of Section 40(c) and limitation of agency commission to 10 per cent, 15 per cent and 20 per cent. These provisions did have a sobering effect for some time. But Section 40(c) led to scramble for business resulting in deteriorating underwriting and acceptance of substandard risks. That again led to inflated claims with the result that whatever could be saved in expenses was more than accounted for by outgo in claims. An analysis recently made led to the startling conclusion that total outgo after the amendments increased by about ten per cent over what it was before the amendments of 1950.

It thus follows that Amendments of 1950 could not influence appreciably the drift of funds. Since the passing of the Amending Act and, indeed, for many years therefore a concerted endeavour has been going on to come to grips with the problem. All the attacks have been superficial, including the currently adopted 'Code of Conduct'. After Mr Deshmukh's warning, leading Bombay insurers drafted a scheme to check malpractices. Its whole basis is geared to one practical theme—namely, to arrest drift of business from one company to another. That is advantageous for established insurers and is thus vitiated by self-interest. Its other recommendations are too theoretical to merit consideration.

The problem of malpractice is in last analysis a problem of the surplus. It is the surplus from which money for illegal gratifications comes from. If for the sake of argument it is conceded that 20 per cent is available as surplus, this surplus, or a large part of it, finds its way back into the market through the automatic pressure of competition and the knowledge that, economically, there is an additional 20 per cent or at least something available which can be conceded to agents or insurers.

The realisation that surplus is fountain from which springs all funds for malpractices, an experiment was made by reduction of fire rates. This insurance is the most profitable business in the country and thus fire premiums provide the main source of surplus. It was not realised that extinguishment of surplus is not the purpose of trading. Aim of the industry normally can be no more and no less than increasing the quantum of surplus. The surplus provides the general reserves. The surplus again provides the revenue for shareholders. Depletion of the surplus by compulsory reduction of rates skips the main issue. Reduction of rate is defensible if the experience so warrants. It is indefensible for the ultimate purpose of checking malpractices.

Section 17 of the Banking Act provides for compulsory transfer of a part of the surplus to reserves. The manner of enforcing a similar provision for general insurance requires to be examined. If by mathematical investigation it is found that every hundred rupee of gross premium income in fire insurance provides a surplus of 20 per cent a statutory provision can be laid down whereby 12½ per cent or 10 per cent thereof must be allocated to reserves before debiting any other expense to the account. In the event of catastrophic claims, it will be permissible, if circumstances so warrant, to draw on the reserves. This line of thought calls for thorough examination by experts and actuaries. If in the light of investigation, a modification of statutory expense provisions is warranted, there is not likely to be difficulties in giving effect to the modifications by an amending piece of legislation. Government of India's attitude to malpractices is well-known. All support is thus assured.

Apart from these preventive measures, malpractice can be eliminated by insurers if there is seriousness amongst insurers themselves. It has been found from experience that agents and organisers are unable to retain even the full statutory commission as almost the entire extra payments require to be conceded to the insureds and sometimes even part of the normal commissions due to the agents and organisers. The insureds are thus the recipients who taking advantage of the competitive weariness of insurers bargain for themselves the best advantage. An agreement, therefore, amongst insurers not to pay a cent more than the statutory commission can eliminate malpractice in a day. Not that this devise has not been tried; it was never seriously taken up. Should, therefore, the Government of India take the initiative in obtaining from the Chairman and each director and managers including all executive officers and all Branch Managers, a personal guarantee and undertaking not to rebate or levy illegal gratifications and to observe in letter and spirit the laws of the country, malpractice is likely to disappear. No Chairman will affix his signature without ensuring that his company fulfills the obligations and no executive, apart from personal guarantee of his own, will dare to embroil his Chairman. The undertaking should be so worded as to involve personal penalties in the event of a breach. A mandatory circular to this effect can do infinite good. Should there be objection from the trade to sign the declaration, that will be an obvious proof that the trade is not honest in its profession. The hypocrisy will then be exposed and it will then be necessary for the social good to examine quite seriously whether nationalisation of general insurance in public interest is necessary.

It has been held that obvious lacuna in such a scheme is proving a guilt first as, in the present, in almost all cases, it is impossible to adduce levy of illegal payment. Therefore, it is submitted, that the underground channels of payment will continue unsilted despite all the undertakings of the Board and Management. Whilst there is some semblance of truth in this, it is felt that Chairmen and Boards, who are men of eminence in the country, will not desire their names to be associated with malpractices and if as an additional precaution a Board resolution is demanded by the Controller of Insurance on malpractices, the executive wing who carries out the mandates of the Chairman and the Board will obviously have no scope to permit any illegal payment even if they can clothe the payment with all formalities to give it a legal shape.

✱

PROSPECTS FOR RUBBER

India's rubber industry, small as it is in relation to its counterparts in other progressive industrial countries, seems set for a bright future. The last two years established records for this industry. The output in 1954 was higher than in any previous year. In 1955 it was still higher. What was more significant was that the improvement benefitted all the manufacturers, large and small.

At the annual general meeting of the association of rubber manufacturers in India, Mr Cecil Stack expressed confidence about the scope for this industry during the Second Plan period. He argues that the railways cannot be expected to meet in full the requirements of the expanding traffic, and that the deficiency will have to be met by automobile transport. The latter will be called upon to make a bigger contribution in the years ahead. Production of motor vehicles is expected to increase

World *of* Jute

Good Prospects for Burlap in US

CONDITIONS in the jute goods market continued to be depressed with prices all along the list sharply marked down. While the lack of foreign enquiries had made a reactionary tendency inevitable, confidence seemed to have been undermined by the small size of the Russian business received by the market during the week.

It would appear that American buyers have sized up the situation correctly. Reporting on burlap trading in New York during March, the Jute Bulletin of the Indian Central Jute Committee observes that one of the reasons for the lethargic condition had been the belief widely prevalent among American buyers that burlap prices in Calcutta were bound to drop further. A contributory factor had been the sizable increase in the shipments of jute goods from Pakistan. Shipments of Pakistani burlap to the USA during January were 4.73 million yards which are about 10 per cent of the total Calcutta shipments to the States during the same month.

The jute goods industry in Pakistan has reported record production during the financial year 1955-56. Output for the 11 months ending February 1956 together with the estimated production for March has totalled over 117,000 tons. Exports calculated on the same basis as production added upto 74,000 tons. On a monthly basis production reached the peak in December 1955 when 11,969 tons were manufactured. Pakistan's internal consumption has also increased. Exports are being made largely to the dollar markets.

Pakistan earned over Rs 5.4 crores from the sale of jute goods during July-December 1955. In all, 36 countries including the USA, UK and Africa bought Pakistani gunnies during the period.

It is, however, gratifying to note that burlap bag dealers in America expect that burlap sales in 1956 have every chance of recording an improvement over 1955. Speakers at the annual convention of the National Burlap Bag Dealers' Association held in New York early this week generally agreed that prospects for burlap consumption this year appeared even brighter than they were last year. But they were unanimously of the view that in order to raise burlap "above the level on which it had rested so long" vigorous action had to be taken by jute goods manufacturers.

The fact that increasing interest is being shown in the use of jute products in industrial fields in the USA augurs well for Indian jute manufactures. It is also expected that the potential market for burlap container will continue to expand.

Against these encouraging features, there are the adverse developments such as the further switching of commodities now moving in burlap to paper and an acceleration of the movement of feed to bulk handling.

It is, therefore, evident that unless burlap continues to offer attractive terms both as regards quality and price, the anticipated improvement may not materialise. It is idle to expect substitute packaging materials to yield ground easily. Indications are that competition is keener than ever. It is to be hoped that the jute goods industry will not let go the golden opportunity for establishing itself firmly in the US market.

Easy conditions prevailed in the jute goods market during the past week. In the continued absence of foreign business the bull syndicate which had been maintaining prices at a fairly steady level seemed to have lost confidence and it became evident on the last day of the month that the Syndicate could not fulfil its obligations on the Due Date. With the failure of the bull syndicate to take delivery of B Twills on Due Date, prices all along the list receded sharply. As against Rs 38-10 Hessian Ready on Monday reacted to Rs 38-5 while B Twills lost one rupee six annas to be placed at Rs 105-8. In the forward position July-Sept. Hessian came back to Rs 38-12 from Rs 39-2 with B Twills marked down to Rs 105 from Rs 106-2.

Prices touched further low levels on Tuesday when Mills emerged as sellers for ready goods at higher levels. The absence of foreign enquiry accelerated the downtrend. Hessian Ready lost another five annas to Rs 38 B Twills dropped another 12 annas to come down to Rs 104-12. July-Sept. Hessian was easier by quarter point at Rs 38-8 and B Twills was eight annas lower at Rs 104-8.

Wednesday saw yet another bout of selling; and as a consequence prices recorded new lows. Hessian Ready was pushed down to Rs 37-15 while B Twills was sold down to Rs 104-8. July-Sept. Hessian was two annas lower at Rs 38-6 with B Twills couple of annas lower at Rs 104-6.

The following table shows price trends during the week:

	Week's Opening	Week's Closing
Hessian	**Rs. a.**	**Rs. a.**
40"×10 oz		
,, Ready ...	38 10	37 15
,, May ...	38 14	38 2
,, July-Sept. ...	39 2	38 6
40"×8 oz ...	32 4	32 8
40"×7½ oz ...	29 14	30 2
Sackings		
B Twills Ready ...	106 14	104 8
,, May ...	107 0	105 8
,, July-Sept. ...	106 2	104 6
Hy. Cees Green ...	105 0	103 4
Corn Sacks ...	107 0	104 8
Cubans ...	134 0	132 0
A. Twills ...	132 8	130 0
L. Twills ...	121 12	119 8
D. W. Flour ...	127 0	121 8
Sugar Bags ...	122 12	120 0

Easy conditions prevailed in the raw jute market with no mill business of importance passing during most part of the week. Toward close, however, mills showed considerable interest at lower levels. Assam Bottoms May-June delivery which was quoting at Rs 27 per maund earlier in the week receded to Rs 25-12 by the end of the week.

The following table shows price trends during the week: (Bottoms basis)

	Opening	Closing
	Rs. a.	Rs. a.
Northern White ...	27 0	26 0
Assam White ...	27 0	26 0
Local Northern ...	27 0	26 0
Local Daisee ...	27 8	26 8
Bimli F.A.O. ...	25 0	24 0

Reports received from Pakistan indicate that conditions are conducive to the completion of highland sowings and also for the growth of the plants which at present are reported to be in good condition. Activity in the raw jute market in Pakistan continued to be at a low ebb with prices remaining unchanged. Overseas demand was also meagre.

World *of* Tea

Prices Firm Up

Prices firmed up in this week's Export tea sale in Calcutta. There was a strong and general demand with most descriptions selling 2 to 4 annas dearer than at the previous week's auction. Toward close, however, a weaker tendency was discernible. The most favoured sorts were clean Black B.O.Ps and O.Fs with useful liquors. Prices for those categories were sometimes quoted 4 annas above previous markings.

Among Clean Common teas, stalky kinds at times ruled easier. While the very poorest sorts were firm to dearer, the better Whole Leaf grades sold well. High prices were realised for the really good C.T.C. teas which were generally a strong feature of the sale.

Quotations: Clean Black Pekoe—not quotable; Plain B.P.—Rs 1-8; Medium Assam B.P.—Rs 1-10; Best CTC Assam B.P.—not quotable. The sale consisted of 52,500 packages.

The pattern of price movements in the Internal Sale was similar to that of the Export sale. In earlier dealings a fairly good general demand was noticed with Black Leaf teas proving to be the strongest feature. Prices of those kinds were two to three annas above previous rates. While all teas with a clean Leaf appearance and fair liquors met with good demand at prices upto one anna dearer, poorer types encountered little support. Quotations: Medium Dooars Dust—Rs. 1-8 to Rs 1-9; Medium Assam Grainy Dust Rs 1-9-6 to Rs 1-10-6; Best Assam C.T.C. Dust Rs 2-10 to Rs 2-12 (nom). The sale consisted of 20,400 packages.

Fair demand was met with at the Leaf offerings which consisted of 4,450 packages. Prices were irregularly one to one-and-a-half annas above last rates.

Prices for all types were fully firm at the export sale held in Cochin on April 26. Approximately 1,250,000 lbs. were on offer. Though quality showed a decline there were some useful colourv medium teas. Particular interest was evinced by buyers in Fannings grades.

Fairly good demand was noticed in this week's auctions in Colombo where 6,768,116 lbs. were on offer. Among Nuewara Eliya teas, prices were considerably lower for all grades. Following a decline in quality, High Grown teas were generally lower. Among Medium grown teas broken grades fetched higher prices. There was a good demand for the bright liquoring types from among low grade teas. Medium varieties among Fannings were steady but High growns were generally lower.

Good liquoring teas continued to be in good demand at this week's London auction in which 25,735 packages were on offer. Stocks of tea in London at week ending April 20 were slightly higher at 100,366,420 lbs. as compared with 97,309,410 lbs. on April 13. However, stocks continue to be sharply lower than those in the corresponding week in 1955 when they stood at 163,213,490 lbs.

Figures relating to production of tea in Ceylon in March released last week in Colombo have confirmed earlier expectations that tea output in the first three months of 1956 would record a sharp decline as compared with the corresponding period of last year.

Production during the first three months this year totalled 84.4 million lbs compared with 103.5 million lbs during the corresponding period of last year. The decline is attributed to the adverse weather conditions.

The Government of India have issued a notification fixing the price of tea for the purpose of determining the export duty at Rs 3-4-3 per lb. as against Rs 2-13-4 per lb. in force from April 1, 1956. There is no change in the existing rate of duty of annas six per lb.

World Overseas

US Notes

PRELIMINARY report by the Department of Commerce reveals that US shipments to other countries in March set a new monthly record of $1,500 million topping the previous high of May 1952 by 5 per cent. The March total also was 14 per cent greater than February's and 15 per cent above March 1955.

For the first quarter of 1956, exports aggregated $4,180 million, exceeding the total for the first quarter of 1955 by more than 15 per cent. They also were well above $3,884 million, the total of first quarter of 1953, the year in which US exports reached a record annual high.

Particularly heartening is rise in recent years of commercial exports as opposed to US government paid shipments. So far this year, these aid shipments have averaged less than $100 million a month, slightly below the 1955 monthly average. In 1953, however, US assistance to exports averaged $293 million a month. Thus, commercial exports so far in 1956 have been averaging close to $1,300 million a month, compared with monthly average of $1,022 million for record year of 1953.

No final figures available as yet for March, but the Treasury Department estimates customs receipts, usually indicative of import trends, at nearly $62 million for the month. This is 10 per cent more than in February when imports came to about $1,050 million and is highly likely therefore that March will make sixth straight month in which US imports gain exceeded $1,000 million mark. In 1955, the record import year, US receipts of goods from other countries averaged $948 million a month. And in 1953, the previous record year, the import average came to $914 million a month.

The expansion of international trade which goes hand in hand with prosperity in the United States, Western Europe and other parts of the world is reflected also in strong market for dry cargo vessels and oil tankers. One reason, last year for instance, was that Western Europe's rising coal output failed to keep pace with needs of its expanding steel industry. The result was that coal import from the United States increased threefold. This year, another increase in European coal imports of about 30 per cent over 1955 anticipated. Meanwhile, Europe's heavy demand for grains and fuel oil, partly as a result of severity of past winter, has placed additional pressure on shipping facilities. The newly developing nations, meanwhile, are benefitting from their economic relations with the United States in yet another way. All told, more than 14,000 persons have come to the United States in recent years under Bilateral Programmes to study production engineering research and management. In addition, some 800 American consultants have advised the developing nations on industrial technology and managerial practice.

In the United States, this year's record-breaking scope of industrial expansion plans is forcing machine tool makers to schedule substantially larger production. Shipments of machine tools in March increased some 15 per cent over February and additional gains in production loom ahead. New orders received in March increased 10 per cent over February; what is more, they were 51 per cent over orders placed in corresponding month of 1955. The industry backlog now has reached the level equal to 8.6 months shipments at March production rate.

American machine tool builders are enjoying larger demand than at any time save for sharp defence expansion booms generated by World War II and the Korea conflict. At present, moreover fully 8 per cent of total demand for tools is due entirely to domestic civilian requirements. Foreign demand accounts for another 10 per cent of market. Thus, defence spending now takes up only 10 per cent of total machine tool demand.

*

Britain

THE National Coal Board (NCB) proposes to spend nearly £1,000 million during the next 10 years on the reconstruction of the coal industry in the United Kingdom. This was announced in the report Investing in Coal, published on April 23 by the NCB.

Required investment will represent something of the order of 4 per cent or 10d out of every £ invested within the British economy.

Explaining the increase in required investment over that set out in the Board's original Plan for Coal, published in 1950, the report points out that, apart from the rise in prices sending up costs, a number of major projects have been added to the original plans.

The revised plan provides for an output of 240 million tons a year in 1965, of which 228 million tons will come from Coal Board mines, 10 millions from open-cast workings, and 2 millions from private mines. Output last year totalled 221.6 million tons.

To achieve the 1965 target, it will be necessary by the end of the period not only to complete the vast majority of major reconstruction schemes now in progress, but also to start and complete more than another 100. Then, the report concludes, "the country can look forward to a coal industry that will move ahead at a steadily increasing pace over the years to come. And the industry's employees can look forward to far-reaching changes and improvements wherever opportunities exist for them".

The Board estimates that the industry in 1960 will require 682,000 mine workers with an output per man-year of 319 tons, and 672,000 in 1965 with an output per man-year of 342 tons. This compares with a manpower in 1955 of 704,000 and an output per man-year of 298 tons.

Twenty colliery reconstruction schemes were completed at the end of 1955, while at the same time there were 147 in various stages of completion.

The Minister of Fuel and Power, Mr Aubrey Jones, in a memorandum issued on April 23 said he had given his approval to the general lines of development now proposed by the NCB.

Mr James Bowman, chairman of the NCB, said at a press conference in London that the plan should not in itself result in higher coal prices. "We are determined that the mining industry shall not lose any chance, now or in the future, of exploiting to the full any technical advance that clearly can help us".

*

Final figures issued by the Board of Trade on April 23 show that the UK's export achievement in March was even better than was indicated by the provisional figures published on April 12. UK exports in March reached a total of £271.3 millions—an increase of £1.7 millions on the provisional figures—and thus exceeded by over £3.5 millions the previous highest monthly figure recorded in October 1955.

Imports in March amounted to £330.2 millions. The rise of £21 millions between February and March was a good deal less than between the same months of previous years. Re-exports, at £13.3 millions were a little lower than in the two preceding months. In the first quarter (January-March) as a whole, however, re-exports were over one-quarter more than in the same period of 1955.

The value of UK exports in the first quarter of this year was 4½ per cent higher than in the corresponding period of 1955. Export prices rose by about 5 per cent.

*

British Railways are planning to spend about £23,000,000 on the construction of 1,750 multi-unit Diesel trains, and about £26,000,000 on new passenger coaches, during the next two years. Some 2,600 new coaches will be built this year.

These projects, part of British Railways' £1,200 million modernization scheme, are mentioned in a statement on the ways in which the scheme is to be implemented.

A first instalment of 174 mainline Diesel locomotives has already been ordered, and delivery of them will start in 1957. More than 500 Diesel shunting locomotives are now in service, and during 1956-57 the total will be increased by over 400 more.

The new passenger coaches will include multi-unit electric vehicles with improved bogies, and mainline corridor coaches that can be hauled by steam or Diesel locomotives. All passenger-carrying vehicles will be of steel construction, apart from a few multi-unit coaches that will be built in light alloy. The modernization plan envisages the replacement of all timber-bodied passenger coaches within the next seven years.

About 70,000 new freight wagons are to be built this year. Other improvements to be carried out in the next two years include: measures to speed traffic, the construction of new tunnels, the extension of electrification, the establishment of Diesel maintenance facilities at many towns and cities, the construction of new marshalling yards and goods yards, and major alterations to stations.

*

India is among the countries which have expressed their wish to participate in the fourth International Handicrafts, Homecrafts, and Hobbies Exhibition to be held later this year at Olympia, London (September 6 to 21). International participation, the number of "live" demonstrations, and entries in the competition classes will be on a bigger scale than ever before.

The Commonwealth, Europe, and the Far East will be represented by many attractive pavilions where crafts-men and crafts-women of the countries concerned will demonstrate their traditional handicrafts.

Countries planning to participate in the exhibition include Afghanistan, the British West Indies, Ceylon, the Federal Republic of Germany, the Gold Coast, Hungary, Iceland, Indonesia, Japan, Jordan, Korea, Liberia, Morocco, Nigeria, Pakistan, Rumania, Spain, Yugoslavia, and China, which will be exhibiting for the first time. Britain will be represented by a display of over 1,000 prizewinning entries from handicrafts enthusiasts all over the United Kingdom.

*

More than 3,000 oversea visitors from about 60 different countries are expected at the Royal Show, the biggest agricultural show in the world, to be held this year at Newcastle-upon-Tyne from July 3 to 6.

This estimate has been given by Mr. Harold Hobson, secretary of the Royal Agricultural Society of England the organizers of the Show.

The Queen Mother is expected to visit the Show on the second day.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE long-awaited statement of Government's revised industrial policy was made by the Prime Minister in the Lok Sabha on Monday last. In a sense, the actual announcement came as something of an anti-climax. This was so for two reasons: One was that the details of the policy were being speculated upon for over a month and anticipated more or less correctly with the result that the announcement merely confirmed expectations. On the other hand, to the hard core of pessimistic opinion, which had canvassed Government's more doctrinaire commitment to theoretical socialism was actually the case, the announcement came not only as a surprise, but as discomfiture. It was as though one was poised to deal a deft blow to a serpent that was making for you and found that the serpent was no deadlier than a piece of rope. As in the analogous case of the budget proposals earlier in the year, the feeling of relief was mingled with a feeling of disappointment, almost of having been cheated.

*

But, for people who have been following the trend of events and of official thinking on the subject of economic and industrial policy in the country in the last few years, the inevitability of the policy as announced now is clear enough. The striking thing about the statement is, in the first place, its continuity with the past, especially with the policy of 1948 which it has now revised. At the same time, it is a measure of the changes that have taken place in the country since the first statement was made. In 1948, India was still in the process of political consolidation, and the Constitution was still far away, and the Planning Commission were only a proposal. Since then, so much has happened; much of it consciously worked out within the frame work of a social philosophy of an acceptable end of individual and national life, and some of it under the inexorable pressure of the economic facts of life. In a sense, the industrial policy statement now enunciated is merely the summing up of the wisdom of the last few years, especially in that aspect of national policy which concerns itself with the aspirations of, rather on behalf of, the people coming to terms with the stern facts of an under-developed economy.

*

This is clear from the policy statement's invocation of the Constitution, the fundamental rights guaranteed therein, and the directive principles of State policy in elucidating the nature of the policy. It begins by quoting its obligation, under the Constitution, to secure for all citizens "justice, social and economic, and political; liberty of thought, expression, belief, faith and worship; equality of status and opportunity". This leads to a whole series of directive principles aimed at redressing age-old inequalities in privilege among us, and at giving form and content to our faith in the dignity of the individual human being.

*

For a variety of reasons, into which it is inexpedient to go now, this basic objective has meant the adoption of what is now called a "Socialist approach" to the question of economic development. The clear adoption of this pattern of economic development by the Congress, by the Government and by the Parliament is another development of the last few years that needed to be incorporated in the new policy statement.

So much about the ends. As for the means, there are two aspects of the question: first, in conformity with our way of thinking in these matters, the means have to be above board; for, the means determine the nature of the ends. This is not just a platitude, for this implies that we have resolutely set our face against totalitarian forms of achieving breath-taking results at enormous human costs; and that whatever we do will be done in the slow, often exasperatingly slow, democratic process.

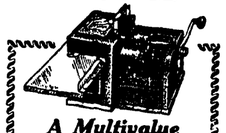
*

The second aspect of the question was that the means adopted would have some bearing on the realities of the situation. Within the framework of desirable ends of life, there will be no doctrinaire commitments which will fly in the face of the facts. The first result of such a realistic approach was the birth of the Planning Commission—an event of outstanding importance since the first statement was made. The Planning Commission are principally an instrument for the realistic appraisal of the needs and resources of the country and the preparation of programmes of utilisation of these resources to the best national advantage.

*

The relative priorities in the First Plan have shown that the approach has been pragmatic. Its ends were more or less governed by the same consideration as was enunciated in the first industrial policy statement: "the securing of a continuous increase in production". As a plan born at a time of shortages, especially of essentials, and severe inflationary ills, it concentrated on the strengthening of the bases of the economy, like agriculture and power production. The success that has by and large attended the First Plan has proved this to have been the best policy under the circumstances.

*



The Second Plan, born at the end of the first and attempting to build on the foundation laid by it, has, from the pragmatic point of view, certain obvious duties and certain obvious opportunities. These are primarily those relating to the exploitation of the industrial potential of the country. The industrial policy now enunciated will have, therefore, to make sense, first as one that gives reality to the claim that the pattern of development is socialist; and, second, that the policy takes note of the realities of the economic situation.

*

As regards the first, the increased area of the public sector that has been envisaged, the avowed policy of reducing disparities in income and wealth and the "prevention of private monopolies, concentration of economic power in a small number of individuals" show clearly that the socialist pattern is no empty phrase. As regards the second aspect of the matter, the policy statement reiterates, in a number of contexts that, situated as we are, the private sector must continue; and that, in this view, we should provide it the necessary freedom to develop to the fullest possible extent within the limits prescribed. While, for example, the policy statement contemplates State trading on an increasing scale, it clearly states: "As an agency of planned national development, in the context of the country's expanding economy, the private sector will have the opportunity to develop and expand".

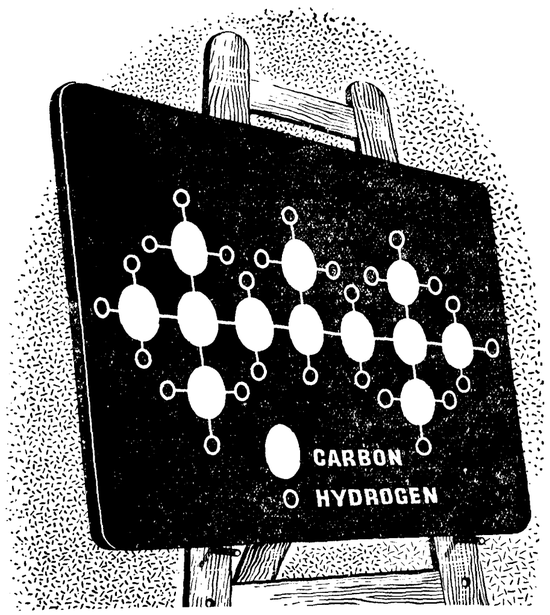
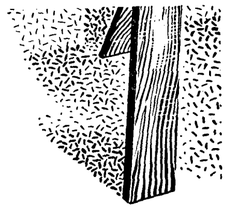
Again, in the demarcation of the sphere of the public and private sectors, it is emphasised that "the division of the industries into separate categories does not imply that they are being placed in water tight compartments. There will not only be an area of overlapping, but also a great deal of dovetailing between the industries in the private sector and public sector....in appropriate cases, privately owned units may be permitted to produce an item falling within Schedules A, (i.e. industries, new units of which will be entirely in the public sector).. Further, heavy industries in the public sector may obtain some of their requirements of lighter components from the private sector, while the private sector in turn would rely for many of its needs on the public sector".



While no one can pretend that all this constitutes as much liberty for development as the private sector would have desired, the opportunity for expansion allowed is not inconsiderable in the context of avowed and accepted national policy. Moreover, ambiguity and uncertainties in official policy rather than restrictions in the way of development have been the complaint of the private sector. Now, the private sector knows clearly that there are certain industries clearly out of bounds for it. There are seventeen of them, and they are all more or less basic industries and utilities which the private sector cannot have taken on without State assistance, because of their heavy capital base. There are certain others, also listed, in which the State will take an increasing interest, but in which private enterprise can work either on its own or in conjunction with the Government. These are secondary industries of a "heavy nature", machine tools and ferro-alloys, drugs, fertilizers, road transport, etc. And, lastly, there is the residuary category which will be the normal sphere of the private sector. It will be the policy of the State to "facilitate and encourage" the development of these industries in the private sector. The genuineness of the Government's profession in this regard is clear from the assurances given of ensuring the "development of transport, power and other services, and by appropriate fiscal and other measures." More interestingly and importantly, the statement promises to "foster institutions to provide financial aid to these industries." To entrepreneurs, this source of funds will be particularly welcome. To others, the Government's desire to be a share holder in private business is welcome as opening up interesting possibilities in economic organisation that bypass the conventional socialist panacea of doubtful value, nationalistton.

*



Inevitably, the greatest amount of interest aroused by the policy statement was in regard to its demarcation of the spheres of interest between the private and public sectors. Even here, by a curious trick, the private sector is identified wholly with industry organised on a large scale. But there are whole areas in our economy which are private and which

AN EDUCATION IN Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

Bombay Review

A Foreign Expert on Railway Expansion

IT is always salutary to throw open aspects of the national economy for critical scrutiny by foreign experts. Only the latter are capable of viewing conditions and problems in a light and with reference to criteria totally different from those which the country's own administrators and other experts usually take. The foreign experts can judge with reference to impressions gathered on a wider arena of experience. All these are undoubtedly good.

But there is the difficulty invariably felt by the foreigner in the matter of understanding local peculiarities and evaluating them at their proper worth; international comparisons in such situations are not unlikely to be somewhat misleading.

The views of Professor Galbraith, the US economist, on the expansion of Indian Railways in the Second Five-Year Plan reflect the above-mentioned merits and drawbacks. When the Railway Ministry was clamouring for at least a 50 per cent increase in the Plan allotment for Railways, no one thought of the possibility of a suggestion coming from an expert that even the proposed investment of Rs 900 crores was extragavant and could be substantially curtailed.

The US economist has made such a suggestion. He has made it after a careful and detached study of all relevant aspects and in the broad setting of the entire Plan. The suggestion itself will be utterly distasteful to the Railway Ministry; but it should stimulate in the Ministry and the Planning Commission a new approach to the problem of internal transport and of railway transport in particular.

With commendable courtesy and circumspection, professor Galbraith puts forward the view that there is a considerable range in any system within which management and organisation can be substituted for investment and the traffic handled with suitable expedition. He is not at all inclined to the view that the railways have been absorbing too much investment. On the contrary, he does recognise that the war years saw long capital starvation nor is it in the least suggested that too much of investment is now going into the railways. What he does suggest is that even in the best managed system, management can substitute extensively for investment and that in India its substitution should be carried out as far as humanly possible. It is now open to the Railways to examine how far this is possible. The Professor himself has indicated a number of directions in which investment in railways could be reduced without a corresponding measure of impairment to transport facilities.

For short distance hauls of goods, he recommends the truck in preference to the rail. As a means of encouraging alternative road transport, short haul rates are to be increased. Likewise, a telescopic rate structure with higher rates for short distances is suggested. He fails to see why electrification should proceed at the rate envisaged in the Second Plan. With a smaller investment at least for the time being, the diesel car can be used instead of electric trains. He has also indicated a number of relatively minor items in which a larger utilisation of human labour could fulfil almost all the requirements intended to be met through capital investment.

The policy behind the suggestion is that after sufficient development has taken place in the matter of basic industries and a large part of the capital goods required for expansion becomes domestically available, it would be more profitable to undertake much of the new investment on railways. In the meanwhile, efficiency could be improved through a greater concentration in management. The diversion of goods traffic off the railways calls for a re-orientation of official policy in regard to development of road and river transport. Such a re-orientation is already faintly in evidence. But a firm new policy has to be pursued and on clearer and more determined lines.

The Professor's view that passenger traffic has to be and can be discouraged may not receive general approval. He is certainly correct in maintaining that luxury travel should be discouraged and that effort and money spent on rolling stock can better be diverted to more profitable purposes. He also points to the prospect of steel, heavy engineering products and electrical equipment becoming comparatively abundant in the course of the next four or five years, by which time the railways can well undertake electrification, large-scale additions to routes etc. For the moment, he wants the people to travel less and the State to discourage travel through appropriate revisions in fares and concessions.

It is here that difficulties are confronted which do not appear to have impressed the foreign expert in all their magnitude. First of all, road transport cannot lift the potential displacement of either passenger or goods traffic from the railways unless there is an expansion there at a revolutionary pace. There is hardly any sign of such an expansion. Even urban and suburban motor transport is a story of unending congestion, with often a high degree of personal risk for large numbers of the passengers.

Luxury travel as a foreigner understands it scarcely exists in the Indian third class, where the bulk of passenger travel is concentrated. Though stray individuals travel for pleasure, the majority of passengers travel only if they must.

Concessions to needy travel which the Professor suggests will lead to a state of affairs where ninety per cent of the passengers would be genuinely entitled to the concession and at least half of the remaining ten per cent will try to secure it by unfair means. The impact of such a change on passenger revenues is easily imagined. Lower class passengers have started securing a few grudging comforts but will take several years before even these bare amenities are extended to all the lines and to all the trains.

The Estimates Committee of the Lok Sabha in its twenty-fifth Report has drawn attention to some of the amenities provided for in representative countries.

On Soviet Railways' sleeping accommodation is provided on all long distance trains; conductors are posted in each coach and an electrician and a carriage examiner travel with each train to look to the convenience and comforts of passengers on the way. Each compartment has an electric table lamp with a radio receiving set incorporated in it, which is connected with the Radio room on the train, from where the operator relays music and other interesting programme or information for passengers. At all big stations exist spacious waiting halls, comfortable retiring rooms and special waiting rooms for children and their mothers with provision for nurseries, playing rooms and special hospitalisation rooms.

On Swedish State Railways all trains have special creche compartments for children in charge of qualified matrons with arrangement for washing, bathing and feeding small children. Special carriages for sick passengers are attached to passenger trains on payment of three third class fares with accommodation for two patients and one attendant.

The Austrian Federal Railways provide a telephone service at stations to passengers and the public, who enquire about train schedules, and connections for international trains. From any telephone booth in any part of Austria a caller can ring up the Information Centre in Vienna and immediately obtain all the information required by him.

The Italian Railways have at bigger stations booking windows not by classes, but by destination stations or sections and tickets for all the three classes, i.e., I, II and III, are available at the same window.

The German Federal Railways have at large stations' cinema halls, where they exhibit short information feature films generally having educational, social or propaganda value. Passengers holding current outward or transit rail tickets are admitted to these shows without any extra charge. There are separate offices for verbal and telephonic enquiries. In the telephone enquiry offices, which are not accessible to the public, each enquiry clerk is competent to supply information for any part of the Railway, and the telephone arrangements are such that the incoming call automatically goes to an unoccupied phone.

The British Railways provide camping coaches at specially selected stations for the convenience of holiday travellers and sight-seers. It is understood that most of these coaches are, if not all, suitably converted or rebuilt old stock, which are not fit to run on regular trains. They are specially worked to and stabled at the holiday stations and serve as camps. These coaches provide sleeping compartments for six to eight persons, a commodious living room and a kitchen and are fully equipped with cutlery, cooking utensils, towels, table linen and beddings. The coaches are booked on purchase in advance of not less than 4 adult return rail tickets for a six berth coach and 6 adult return rail tickets for 8 berth coach

In any other country, where people are less fatalistic and more sensitive to physical suffering, conditions of third class travel as obtaining in India would not have been tolerated. Professor Galbraith admits that it may be cruel to raise fares as a disincentive to travel. Any suspension of improvements to passenger amenities should also be viewed in the same manner.

In India particularly, railway traffic has also certain social and political implications whch are not easily apparent to a foreign visitor. When there are marked divisions and antipathies among the people, travel promotes understandng and contributes in some way to the development of a common national consciousness. Invisible benefits such as this cannot be lightly thrown away. They have a value even as media of mass education.

Gateway Notes

A Mixed Record

THE Review of the cooperative movement in India for 1952-54, published by the Reserve Bank of India, strikes a generally satisfying and confident note. Compared to expectations and the possibilities ahead, no one can say that the achievement of the movement has been up to the mark. The Report concedes this fact at least by implication. What is significant for the future is that the movement has made creditable progress in some directions and can claim to have established itself as one of the major series of institutions in the country as well as one of the most important instruments of all-round social and economic development.

During recent years cooperatives were having a considerable share in the stepping up of food production, the fair and equitable distribution of scarce goods, the rehabilitation of ex-servicemen and displaced persons, provision of help to handloom weavers and in a few instances, the promotion of industrial ventures. During 1952-54, the number of cooperative societies went up by 7 per cent and membership by 10.1 per cent, the progress being almost the same as in the preceding two years. The increase in the working capital of 14.8 per cent however, was far short of a rise of 31.4 per cent achieved in 1950-52. At the end of 1953-54, there were nearly two lakh societies with a membership of over a crore and a half and working capital of over Rs 350 crores. These figures taken as a whole bear good testimony to the progress of the movement.

The rest is a mixed picture. In agricultural credit societies, there is a nearly universal deterioration in repayment performance. The proportion of overdues to outstandings rose from 25 per cent in 1951-52 to 29 per cent in 1953-54. Price depression is offered as an explanation. The resources for medium term loans are still limited. Lending rates in primary societies rule high in many of the States, though efforts are being made toward reduction. Though multipurpose societies do function here and there, the idea does not seem to have taken firm roots or received wide public attention in any State.

Rationalisation has brought down the number of Central Banks, though individual banks are thereby strengthened both in membership and share capital. There has been a rise in total deposits of the Central Banks but the bulk of it is accounted for by Bombay alone. Individuals, instead of banks and societies, are gaining place as loanees. This is far from being a healthy trend. State cooperative banks also show the same trend. In the case of the Bombay State Cooperative Bank particularly, there was an extraordinary increase in advances to individuals from Rs 57.81 lakhs to Rs 320 lakhs in 1954.

Cooperative industrial ventures are confined mostly to handloom textiles and a few other small industries. Regionally such ventures have not extended very much beyond Bombay and Madras. Cooperative marketing appears to have received a set-back with the transformation of a controlled into a decontrolled economy. Some of the difficulties experienced in the marketing of goods by cooperatives have been exposed by the experience during the change. Even in consumer cooperation, there have been setbacks and lack of loyalty on the part of the primary societies to the wholesale societies is not uncommon. The one supreme lesson the Review draws is that the State cannot abdicate its responsibility in any manner and that what the State does will largely make or mar the future of the movement.

*

From Minimum to Living Wages

This year's annual session of the Indian National Trade Union Congress commencing on May 3 is of more than ordinary significance. From a preview of the changes in policy which the Congress is likely to advocate, it has to be inferred that a new impact is in store. Hitherto, the wage policy of the Government has been inspired by the national minimum. This minimum itself was calculated with reference to living standards which have been left behind in the course of the last decade and a half.

Here one comes up against the tangles of a controversy. While the industrialists are inclined to argue that labour is now absorbing a more than proportionate share of the recent increase in national wealth, labour leaders take the opposite view. They maintain that the increase in national wealth is not adequately reflected in wage levels. More than that, they claim that it is time that the idea of a minimum wage is given up in favour of that of a national living wage as the guiding principle. This subject is likely to figure prominently in the deliberations of the Congress.

A new employer-employee relation is also being foreseen. The participation of workers in the management of industries has become an undoubted feature of future policy. This being so, the workers should be prepared in various ways to take up new responsibilities. For many reasons, a progressive rise in wage levels is considered indispensable. With that prospect is mixed up that of industrial peace during the Second Plan period.

Even without anticipating the INTUC's recommendations, it is clear that a new problem is being posed in the sphere of financial administration. Any considerable rise in wage levels without a corresponding retreat of money through small savings etc., will necessarily be inflationary. It will directly militate against the policy of austerity which the Planning Commission prescribes. If the INTUC puts forward recommendations for wage increases' it will be very difficult for the Government to overlook them. Politically it will be dangerous. It is for these reasons that this year's session will have to be regarded as of special significance.

*

Future of the City

Current indications are that certain changes in the States' Reorganisation Bill might precede its reference to a Joint Select Committee of the Two Houses of Parliament. States' Reorganisation is still a matter for lively discussion in the Capital, and the

BOOKING OF
'EXCEPTED ARTICLES'
and the Railways' Responsibility

★

The Railway shall not accept responsibility for the loss, destruction or deterioration of any package containing articles which are enumerated as "Excepted Articles" in the Second Schedule under Section 75 of the Indian Railways Act, when the total value of such articles contained in the package exceeds Rs. 300/-, unless the contents of the package and their value are declared and the authorised percentage charge (compensation for increased risk) paid at the time the package is booked for carriage by the Railway.

Where the value of such articles in any parcel or package exceeds Rs. 300/-, the sender or his authorised agent must record in the Forwarding Note whether he engages to pay the percentage charge prescribed. Should he elect not to pay prescribed percentage charge on value, the package will be accepted for carriage but the Railway shall not be responsible for the loss, destruction or deterioration of the same. The percentage charge on value must in all cases be pre-paid.

Commodities like Watches, Clocks and Timepieces of any description, Maps, Art Pottery and all articles made of Glass, China or Marble, Silk, Shawls, Lace and Furs, Radio (Wireless) apparatus, Photographic apparatus, Stationary, Scents are a few examples of the "Excepted Articles."

★ *Rules and conditions regarding the booking of "Excepted Articles" and the full list of these articles appear in the Goods and Coaching Tariff published by the Indian Railways Conference Association and in placards displayed at stations. Detailed information may also be obtained from the Station Masters.*

Professor Galbraith on the Plan

J. K. GALBRAITH, the well-known Harward Economist, who has been in India for sometime now at the invitation of the Indian Statistical Institute to study the Indian Plan, has submitted to the Government a report of extraordinary interest. Professor Galbraith has brought to bear on the subject an entirely different background from our own and his recommendations have, therefore, a freshness of approach which is lacking in much of the Indian discussion of the Plan. As the considered opinion of an expert who has no axe of his own to grind, the report generally approving the basic assumptions of the Second Plan must be extremely heartening to the Government and the Planning Commission.

Professor Galbraith's report has dealt with four aspects of economic planning in India: First, resource-supply, and the strategy of inflation control: second, Public Organisation: third, Indian Economic Philosophy; and, lastly, rail-road and transportation. General comment on the Professor's report has so far tended to be confined to his refreshing and controversial recommendations on Railways, largely because of the fact that the tenor of his recommendations has tended to be the opposite of official and even popular thinking on the subject in India. But his remarks on the other aspects of the Plan are just as important.

First, regarding the size of the Plan. On this and on the proposed mode of financing the various programmes under the Plan, Professor Galbraith is unequivocal: 'There is substantial and often profound advantage in the policy that is being followed in financing the Second Plan, provided some precautionary steps are taken'. The advantages listed by the Professor are, first, a large plan has the advantage of being a direct inducement to a large effort. Against the dangers of a big programme must be set the even greater dangers of frustration of the democratic spirit which would follow from one that seems reluctant, inadequate and even insufficiently bold'. To those that urge inflationary dangers in deficit financing on such a scale, Professor Galbraith suggests that the danger is not unique. India's fiscal policy has been, in the Professor's view, unduly conservative in the past and it is wise, therefore, to accept risks in the opposite direction.

That the Plan involves the very real possibility of inflation is not denied by him. The risk must be taken, but it is necessary at the same time to provide oneself wth an 'elastic defence' to deal with any emergency; This defence involves measures for prevention, for mitigation and in the last resort, if inescapable, withdrawal. First among these defences, would be a tax programme adjusted to requirements, that is neither in advance nor behind, needs at any appropriate moment. As part of his general thesis that the Indian situation calls for unorthodox economic thinking, Professor Galbraith commends the British economist Kaldor's suggestion for an expenditure tax..

The second precaution suggested by the Professor is a well thought-out plan to stabilise prices of essential commodities. This is to be done by supply. In this connection Prof. Galbraith suggests negotiation for a contingent grant or loan from the United States of surplus grains.

Should, however, demand outrun supply, the Government has two alternatives. It is either the introduction of controls and rationing, or of curtailing expenditure, including expenditure on the Plan. Prof. Galbraith is rightly not impressed by arguments about the undemocratic nature of controls pointing out that during the war many a liberal democracy invoked them. (Professor Galbraith was the wartime price administrator in the United States). But he is more worried about the serious management problem, as he puts it, posed by the elaborate apparatus of control. Our own experience of wartime controls has been so unhappy that we would readily agree with the Professor's suggestion that it should be resorted to only in case of real urgency.

The other alternative of cutting down expenditure, would create a number of technical and psychological and even moral problems. On the face of it, it would be very bad planning that abandons expensive projects halfway, because of inflationary pressure. It would be an admission of defeat in more than one way, that the planning was bad in the first instance, and that we were unequal to difficulties that were thrown up by our very aspirations and, therefore, did not deserve to succeed. To the masses of the people, the pinch of rising prices coupled with the too obvious abandonment of benefits advertised as just round the corner would just be the last straw. But Professor Galbraith argues that a plan that is admittedly on the ambitious side implies the contingent right of being pruned. But politically it would be inexpedient to give the impression of events getting the better of you. Professor Galbraith suggests that the people at large should be educated about the implications of the plan especially about the possibilities of setbacks. Moreover, a clear distinction must be drawn between failure due to inadequacies of the administrative kind and failure due to absolute shortage of resources.

Professor Galbrath says truly, (almost tritely) that there are no dangers that cannot be met by appropriate organisation and determination. And on this subject of organisation, he has some important things to say: 'On a visit to India one cannot fail to be impressed by the number and variety of the tasks which the Government of India and the State Governments are assuming. These responsibilities will greatly increase in the years ahead. It is in the field of organisation and administration and not economics, where the most interesting problems will be encountered and where the most interesting problems will be met. It is here that Indian leaders are being least guided by experience and are reflecting least deeply on their course'. This is a point of view so persistently pesented by Indian Finance in all its discussions on the Plan that this comment would not exactly come as surprise to readers, though they may understandably be distressed at Professor Galbraith's finding that no real hard thinking on the subject has yet been done by the Government. Professor Galbraith has made certain detailed suggestions on the subject which are worthy of most careful study of the authorities.

On the subject of railways, it may be stated without going into details that Professor Gailbraith thinks that most be made of the present allocations which has no direct bearing on the other targets of the Plan. Prof. Galbraith's sug-

The Liberal Specialist

The evolution of technical experts, free from the natural handicaps of specialisation, is an important feature of the new industrial education in India. Of this, however, we have seen only the beginnings. At the Kharagpur Institute, the training given to technical students is calculated to impart a liberal background to the special study. Speaking at the Annual Day of the Bihar Institute of Technology, Sir Jehangir Ghandy turned to this aspect of training and said that the future technician should also be a good manager with a balanced personality. According to Sir Ghandy, who is also Chairman of the Eastern Regional Committee of the All-India Council of Technical Studies, technical institutions which found it difficult to introduce the management course should at least try to provide a general knowledge of the economics and functions of industry. He drew attention to the growing facilities for management training in India. Soon there would come up an Administrative Staff College at Hyderabad which would provide a short course to senior industrial executives. A National Institute of Management is also envisaged. The Tata Steel Company is now embarking on a programme of Training Within Industry. Several other industries are also developing similar internal training programmes. At the same time, he warned that the country's resources were still inadequate and that foreign expert assistance should not be looked askance at.

*

New Industrial Projects

One of the major projects which would be sponsored by the National Industrial Development Corporation during the Second Plan is the manufacture of heavy earth-moving equipment, high pressure boilers, rolls and rolling-mill equipment required by the metal industries. In the Draft Second Plan, Rs 35 crores is provided for the projects to be sponsored by the Corporation. Over and above this amount, nearly Rs 25 crores will be made available to it for the modernization of cotton and jute mills.

An expert committee of the Corporation has investigated projects for castings, steel forgings and steel castings. This committee envisages an initial monthly capacity of 1000 tons each for the first two items and of 500 to 600 tons for the last. The Corporation is already in touch with several firms in the Continent and in Japan for detailed reports on the proposed project. It is expected that its location will be near one of the steel plants and that it can start production in another three years.

Along with this, a number of other projects are now under the active consideration of the Corporation, which is also trying to fix priorities between them. An Italian firm is reported to have undertaken the detailed study of the requirements of varied types of drugs and dyes. The manufacture of carbon black would shortly engage the attention of leading technicians from a well known US firm. The manufacture of synthetic rubber, machine tools, air compressors, high power diesel engines and printing machinery is in various stages of investigation.

*

A New Territorial Issue

A new territorial controversy has started simmering in an unsuspected quarter. Congress members of Parliament from Uttar Pradesh have pressed their States' demand for the merger of Bagelkhand. It is argued that this area, now in Madhya Pradesh, has close cultural ties with UP and is indispensable for the healthy growth of the latter's economy. In a recent meeting, the Congress M.P.'s decided to place their demand before the Select Committee of Parliament which is having the States Re-organisation Bill under consideration.

The suggestion has also been forthcoming that the Chief Ministers of UP, Vindhya Pradesh and Madhya Pradesh should meet and present an agreed solution for the re-adjustment of boundaries giving Bagelkhand to Uttar Pradesh. In Madhya Pradesh, there seems to exist a feeling that the territory asked for could be gladly surrendered, provided there is a quid pro quo. Perhaps they favour surrender, in return of a larger slice of territory from UP.

On this issue the UP Congress Committee had to listen to a suggestion demanding mass resignation of members of Parliament from the State, in the event of the claim not being conceded. The suggestion, however, has not received any wide support and Mr Algurai Shastri's pacifying answer at the Committee meeting is significant. Mr Shastri is reported to have said that most of the important posts in the Union Cabinet were held by leaders from UP, that the Planning Commission was presided over by a leader from UP, that UP was the source of inspiration for the country's cultural and religious life and that in keeping with the tradition of the head of the family, the State must make sacrifices for the sake of others.

*

Aid to Handicrafts

The allotments made out of the lastest instalment of Central loans and grants for the development of handicrafts provide a general idea of how funds are being utilised in this sphere. Out of a total of nearly Rs 5 lakhs, the biggest slice of Rs 2,25,000 is to be utilised by the All-India Handicrafts Board for organising an exhibition of Indian handicraft goods at two centres in West Africa. Another sum of Rs 65,000 is given to the Board for holding an exhibition in the Washington State Fifth International Fair at Seattle.

The Indian Institute of Art-in Industry, Calcutta, gets a grant of Rs 25.000 against an equal amount to be collected by the Institute from other sources. Rajasthan gets a grant of Rs 23,000 for the purchase of a mobile van for publicity and sale of handicraft goods. Loans ranging from Rs 2.000 to Rs 6,000 are being given to a few other States. mostly for publicity and demonstration purposes.

The Indian Co-operative Union, New Delhi. is given a loan of Rs 80.000 for the production and marketing of handicrafts. Bengal gets a grant of Rs 20.000 for the development of wood and stone carving industries, and Bombay a grant of Rs 12,000 for the development of pottery.

It is not to be presumed that every instalment of allotments will fill the same pattern, but there does seem to exist a fairly heavy bias in favour of expenditure on publicity, particularly on exhibitions. This expenditure, at least at the initial stage, may be indispensable but care must be taken to see that there is some satisfactory correspondence between the money spent and the results obtained. The estimation of results will in no way be difficult with the latest statistical techniques on hand.

*

Fruit Development

Recently much work has been done in Uttar Pradesh in the field of fruit development. The fruit processing factory in Ramgarh run by the U. P. Government has established itself on a commercial scale. Its products find a good market. Thanks to the mobile horticultural units of the State Fruit Utilization Directorate, orchards around the Ramgarh factory are able to show progressively increasing output. Lately, the Directorate has decided to send a few officers to the Continent on a special study tour. U. P. bids fair to be India's principal fruit garden and to compensate in a large measure the loss of the North West Frontier areas as a supplier of fruits to the sub-continent.

While other States are also moving in the direction of better-organised fruit cultivation. there is considerable scope for comparing notes among all the State Governments. The example and experience of UP may have a great deal to convey. In many districts, it is found that fruit growing is more profitable than any alternative crop. As long as there is a huge national deficiency in fruit supply, the maximum and unrestricted encuragement should be given to the production of fruit all over India. Newly reclaimed areas, particularly the hilly tracts, may often offer better scope for fruit growing than for other crops.

NORTH INDIAN MARKETS

Irregular Trend in Food Prices

FOOD grains prices were irregular last week. While at the Hapur market rates were marked slightly higher, in the Delhi market conditions were rather easier. In Hapur both average quality wheat and farm quality ruled steadier. Higher price levels were enabled mainly by the small arrivals which found ready buyers in local consumers. In Delhi the decline in rates had been brought about by increased arrivals from UP and Punjab.

Increased arrivals pushed down gram prices but both barley and bejhar ruled firm on seasonal demand coupled with smaller arrivals. Pulses continued to show a hardening tendency due to good demand. In the Delhi market, barley developed a reactionary tendency due to lact of enquiry. Trading in maize was also dull with prices displaying a sagging tendency.

The All India final estimate of maize for 1955-56 puts the current year's area and production at 8,909,000 acres and 2,519.000 tons as against the partially revised estimate of 9,311,000 acres and 2,939,000 tons for 1954-55. This shows a

Madras Review

The Peninsula

Some Illusions Exposed

THE proceedings of the National Development Council and targets of new taxation set for the Southern States emphasise the fact that South India today is suffering from an unfortunate combination of eagerness for economic progress and unwillingness to secure its essential conditions. In one view, both spring from the same source, an overwrought group consciousness which makes each group uncomfortably aware of its economic backwardness and incapable of the cooperation with other groups which is necessary to overcome that backwardness. It is not difficult to trace the evil to its origin. But little is gained and much may be jeopardised by doing so. Suffice it to say that, next only to Bombay which is still riven by the lack of concord between Maharashtrians and Gujeratis, Madras is the worst sufferer from the host of evils which were let loose on the country when the ideal, so called, of linguistic provinces was first adopted. The Andhras led the way in this well-nigh suicidal path when, on the strength of a satyagrahi's death, they got the Telugu-speaking districts of Madras constituted into a separate State. Behind all the tall talk of separate culture and the like, there lay the rankling feeling that in the old State, the Tamils were having the best of everything and the Andhras had to go to the wall. The non-Andhra elements in Madras affected a lofty indifference to the schismatic tendencies of the Telugu speaking people, but were themselves affected by them, once the S.R.C. Report and States Reorganisation became all-India issues. The discord between Tamils and Malayalees which came to the surface immediately after the publication of the Government of India's resolution on the S.R.C. Report would make one wonder how the two peoples ever lived together amicably. While enthusiasts for linguistic States have still a large following among the common people, the first signs of doubt about the wisdom of this course are now clearly discernible.

Every evil provides its own cure through its excesses. Linguism provoked mild derision when it was confined to the Andhras. But when it spreads to all the other groups and the Government of India is forced to parcel out the whole land in little principalities, the more thoughtful people at least are brought face to face against the absurd consequences of the change. Travancore and Cochin as little princely States are one thing. But Travancore and Cochin as a unit of the Indian Union striving for common standards in all matters with other units is an altogether different matter. What has helped linguism forward is the thought that each group fancied itself the gainer from separation. The time has at last come when it is widely realised that, when a big unit is split up into many parts, all are losers and none is a gainer.

The Tamil districts of Madras have been the last to wake up to this truth, since more than the other language groups they were in a position to attribute to themselves the whole of the glory of Madras in its former state. The prestige and influence of the leaders from the South were assumed to be an exclusively Tamil creation and inheritance, a share in which other peoples were foolish to throw away. But much has happened lately to disabuse the Tamilian mind of this notion. For one thing, the superior natural resources of the old Andhra districts of Madras have enabled the new state to disprove the gloomy prognostications of its opponents. And now the prospects of Visalandhra is enough to cure Tamilnad of its complacent assumption of superiority. And there is no questioning the fact that, once the Malayalam and Kannada-speaking districts of Madras are also detached, the remaining rump will have little to preen itself on.

The coincidence of discussions over the S.R.C. Report with the drawing up of the Second Plan have fortunately compelled many to consider how each of the new States will fare under the Second Plan. This examination which Tamils, Malayalees and Kannadigas are all equally obliged to make has had the effect of making them all equally restive about the consequences of a too minute partition of an estate which is none too rich. Its first effect is to induce these peoples to join together in the complaint, which the Andhras formerly used to make against Madras, that the economic interests of South India have been ignored by the Central Government.

The complaint that South India's backwardness is due to the step-motherly treatment meted out by the Central Government will not, of course, bear a moment's scrutiny. What has South India got to compare with the coal and iron ore resources of Bihar and Bengal or the fertility of the soil in the UP or the wealth of business talent in Bombay? In fact, we must be grateful that hydro-electric development and the conditions of the 'thirties enabled Coimbatore to develop its cotton textile industry. In all others, we have lagged behind. The superior yield and quality of sugar cane in the South is only now being utilised to build up a sugar industry. But in a period of planned development such as is attempted, it is the natural resources for basic industries that matters. Here everything hangs on the success of the pilot schemes in Neiveli; and the Chief Minister's satisfaction with the progress made indicates that the hope is not so forlorn as it seemed a year ago. The prospects for the South depend on two problematical developments. One is the success of the Neiveli scheme which may enable the utilisation of the iron ore resources of Salem. The other is the prospecting for oil in the Cauvery Delta.

But whatever the chances in this regard, there is no doubt that a continuance of the provincialism of the past will hit South India hard. Even development of irrigation and electric power, which has been the forte of the South, will suffer if over every river project the governments are to fall out. Travancore-Cochin State is not willing to let the waters that run to waste in the Arabian Sea be turned to fertilise the lands in Tamil Nad. Mysore is in no mood to settle the dispute over the Palar. Andhra will not look at any scheme for utilising the surplus flow of her rivers for the South. And yet all these schemes would be put through smoothly if South India were a single unit or some sort of federation within the Indian Union.

These facts are slowly seeping into the consciousness of the politicians and the public. While Rajaji's sponsoring of the Dakshina Pradesa idea was no strength to the cause, Mr C. Subramanyam, the Finance Minister appears to have a special way of his own for pushing it forward without waking-up the sleeping dogs of opposition. At the last meeting of the National Development Council at Delhi he not only emphasised the need for the development of the South—Mr Hanumanthiah also did the same—but also expressed his preference for the zonal councils having some responsibility in this regard. The exclusiveness of the South will break down by and by; and only then will the prospects of genuine development be bright.

Dakshina Pradesh

Strangely enough, the proposal for the formation of Dakshina Pradesh is gaining new and influential support, after the initial impact has died down. It will be recalled that in the Madras State, the proposal did not find favour with any considerable section of the people and barring a few political leaders it found few enthusiastic protagonists among individuals. The Chief Minister was definitely cold and took refuge on the pretext of having to wait for public opinion to express itself. The Finance Minister has been a warm advocate from the beginning; C. R. was another; but the number of such enthusiasts could be counted by the fingertips. In the State Assembly also, there was more of opposition than encouragement.

The climate seems to be changing. Mr S. R. Sethupathi, Public Works Minister, has now come forward with a categorical and emphatic statement in support of the proposal. He has gone to the extent of declaring its opponents as unconscious enemies of Tamil Nad and self-seekers to boot.

The Minister explains that the integration of Madras and Travancore-Cochin States would result in the formation of a most fertile area fed by the waters of the Western Ghats. He has no doubt that Dakshina Pradesh would quicken the economic progress of the people of the entire territory. He interprets the recent by-election to Lok Sabha from Trivallore as a victory for the proposal. The voters did did not favour those who opposed Dakshina Pradesh. The people of Tamil Nad are warned against being misled by interested persons. Drawing on the ancient history of the South, Mr Sethupathi calls how the idea of a common state is by no means new.

The new support which the proposal is receiving does not seem to be an isolated phenomenon. After the initial suspicion, the people are veering round to the view that a common State has clear advantages over two or three small separate entities. What is now required is a bold and more imaginative leadership from those whose voice counts most among the people of Madras and Kerala.

✱

Advisory Committee for T-C State

The bitterness of Central intervention in the administraion of Travancore-Cochin will be somewhat softened by the appointment of an advisory committee, on which the Union Government are reported to have already taken a decision. There is precedent from PEPSU for an appointment of such a committee. In PEPSU, the Presidential nominee in charge of the administration was assisted by a similar committee.

The merits of the proposal are however rather dubious. For the committee is likely to consist of members from the Lok Sabha and the Rajya Sabha, representing the Travancore-Cochin State. Possibly, Non-congress members will also be included. This body will be consulted by the advisers to the Rajpramukh in respect of legislation proposed for the state and any other matter of special local interest. As far as legislation is concerned, it will only be the relevant part of the Central legislature functioning as a separate body. The difference lies in the fact that as a body they may have a more effective voice than when they function as part and parcel of Parliament. A democratic colour will certainly be imparted to the administration, though it will be a kind of remote control.

✱

Selective Support from C.P.I.

The Political Resolution adopted by the fourth Congress of the Communist Party of India almost fully endorses the foreign policy of the Government of India. The denunciation of military pacts is in line with the outspoken declarations of the Prime Minister on this subject. For the first time, the Party has given full official recognition to the part played by India in the international field, "a role that has heightened India's international prestige and evoked in every patriotic Indian a sense of national pride". Mr Nehru's proposal to settle the Kashmir dispute on the basis of the present cease-fire line has found wholehearted support. Condemning the policies of the US, the Resolution has exhorted people's vigilance to "defeat the imperialist game of embroiling India and Pakistan in a conflict."

On two points, however, the communists have taken exception to the Government's policy. They are critical of the attitude toward Goa and have demanded "effective measures" for its liberation. But at the same time they have failed to offer a workable suggestion. Another sore point for them is India's membership of the Commonwealth. The communists have been relentlessly opposed to this link and they have now taken the opportunity to rub in the impression that Britain has been rather unsympathetic to India on certain vital issues.

The resolution on internal policies, adopted after much deliberation, stresses that the Communist Party should play its rightful role as the vanguard of democratic forces and "must come forward as an independent national force." The opposition to the present government would continue, notwithstanding the Party's readiness to

(Continued on page 857)

SOUTH INDIAN MARKETS

Pepper Forecast

THE third and final forecast report on the pepper crop in Madras issued officially on May 1, states that production of Black pepper in 1955-56, according to present estimate, is expected to amount to 9,720 tons as against 8,870 tons in the previous year. As far as price levels are concerned, however, there has been a decline during this year as compared with the previous year.

The area under pepper in the districts of Malabar, South Kanara and the Nilgiris is estimated at 123,950 acres (105,200 acres in Malabar district, 18,600 acres in South Kanara district and 150 acres in the Nilgiris district.) Compared with the estimated area of 119,650 acres (102,000 acres in Malabar district, 17,500 acres in South Kanara district, and 150 acres in the Nilgiris district) for the previous year, the present estimate shows an increase of 3.6 per cent. Compared with the average area of 114,370 acres calculated for the previous five years ending 1954-55, the present estimate shows an increase of 8.4 per cent. The yield is estimated at 9,720 tons of black pepper. Compared with the yield of 8,870 tons of black pepper estimated for the previous year, the present estimate shows an increase of 9.6 per cent. Compared with the average yield of 8,380 tons for the previous five years ending with 1954-55, the current year's estimate reveals an increase of 16 per cent.

The whole-sale price of black pepper per standard maund of 82-2/7 of 3,200 tolas as reported from important market centres on March 9, 1956 was Rs 100-2 in Cochin (decrease of 18.2 per cent compared with price which prevailed in the corresponding period of last year); Rs 102-15 in Mangalore (decrease of 15.1 per cent); Rs 112-4 for Wynad and Vatakkan varieties (decrease of 5.2 per cent); Rs 99-12 for Nadan variety in Tellicherry (decrease of 11.1 per cent); Rs 105-13 for Wynad variety (decrease of 9.9 per cent); Rs 101-12 for Vatakkan and Nadan varieties in Kozhikode (decrease of 3.8 per cent).

Despite continued difficulty in confirming business with the UK arrivals of tanned hides were taken by shippers at high prices. Among light weights and medium weights, Run and Fourths were in good demand with Fifths meeting with occasional enquiry. Depending on the nature of demand—urgent or regular—prices were steady to firm. Though inferior Fifths were generally lower on account of lesser local demand, those descriptions continued to rule firm in the export market as dealers in Madras were reluctant to discount prices.

Just as in the case of tanned cow hides, tanner cow calf were also in fair demand despite poor quality of arrivals.

The market for tanned buffalo hides was rather dull with demand continuing on a moderate scale and at unchanged prices. Firm conditions prevailed in tanned buffalo calf arrivals of which were as usual and clearances good with prices firm.

The market for goatskins and sheepskins was irregular with the former steady and the latter showing a sagging tendency. During the week ending April 28 about 10,000 tanned goatskins and 50,000 tanned sheepskins were cleared from the Madras market. Stocks estimated at approximately 50,000 tanned goatskins and 80,000 tanned sheepskins.

The Madras Groundnut market showed slight improvement in the latter part of the week under review with prices for superior oil quality and bold varieties recording advances upto two rupees on considerable interest shown by crushers. Latest reports from Cuddalore indicate that in certain taluks of South Arcot the yield is likely to be below normal. Interest continued to be at a low ebb in the Oils market with Calcutta as the only buyer. Sellers were also uninterested in view of the powercut.

The Punjab National Bank Ltd.

Shri S. P. JAIN'S REVIEW

The 109th Ordinary General Meeting of The Punjab National Bank Ltd. was held on Thursday, the 26th April, 1956, in Delhi. Shri S. P. Jain, Chairman said:

Gentlemen,

I have great pleasure in welcoming you all to the 109th Ordinary General Meeting.

1955 has been a year of great significance in the history of your Bank. The institution completed 60 years of its useful service to the country and this historic occasion was celebrated on a national scale. Messages of blessings and good wishes were received from the Prime Minister, the Vice-President, Governor, Reserve Bank and heads of large banking institutions in India and abroad as well as from the innumerable constituents of the Bank. The celebrations were in a manner befitting the prestige and reputation of your Bank and with all these blessings and good wishes I have confidence that the Bank will continue its march forward increasing its service and value to its constituents and the country.

BALANCE SHEET 1955

The Report of your Directors and Audited Statement of Accounts giving the working results of the Diamond Jubilee year are already in your hands. The Accounts for the year show a record profit of Rs. 69.40 lakhs, including the sum of Rs. 4.99 lakhs brought forward as against a profit of Rs. 56.86 lakhs in 1954 and Rs. 41.79 lakhs in 1953. After the transfers—Rs. 11 lakhs to taxation, Rs. 24 lakhs to Contingency Reserves, Rs. 5 lakhs to General Reserve, Rs. 13.5 lakhs for bonus to staff and Rs. 1,30,000 for gratuity to staff and charity, the Board has proposed a final dividend of Rs. 2 per share in addition to the interim dividend of Rs. 1-8 declared on 1st September 1955. This raises the rate of dividend to 14% per annum. I am sure you will agree with me that the results of the year under review are satisfactory.

Deposits:—The Jubilee year has recorded increase in the total working capital by Rs. 21 crores from Rs. 91.16 crores in 1954 to Rs. 112.89 crores in 1955. During the last five years the total assets have nearly doubled. The Deposits of your Bank increased from Rs. 75 crores to Rs. 90 crores during the year. The rise in our deposits in 1955 was 19.1% against 8.8% in the case of other Scheduled Banks as compared to 15.82% against 10.85% in 1954. It is noteworthy that the rate of increase in our deposits which in 1954 was nearly 1½ times of that of other banks became nearly double in 1955. The results of the first quarter of the current year give us the confidence that our progress at a higher rate will be maintained. We have also enlisted a larger number of new depositors as is evident from the following table.

NUMBER OF DEPOSIT ACCOUNTS

Nature of Deposits	All other scheduled banks			Punjab National Bank		
	June 1953	June 1954	June 1955	June 1953	June 1954	June 1955
Demand Deposits ..	6,93,424	8,93,310	9,08,069	1,05,625	1,05,371	1,03,931
Savings Deposits ..	17,70,802	18,45,532	19,23,598	2,35,117	2,48,550	2,71,402
Time Deposits ..	2,88,162	3,07,562	3,40,341	40,786	46,736	57,659
Total ..	29,52,388	30,46,404	31,72,008	3,81,528	4,00,657	4,32,992
% increase over June, 1954 ..			4.12			8.07

One point that is engaging the attention of all banks in the country as is evident from the speeches of the Chairmen of different banks is the rising cost of money. A study of this question reveals that this feature is due to the change in the pattern of deposits arising out of two reasons. From semi-urban and rural areas where new business is developing deposits are secured more in the shape of fixed and savings fund than as current accounts. This tends to raise the proportion of higher-interest-bearing time deposits and increases the average cost of money to banks. The second and more important factor is the unhealthy competition among banks in large cities, especially ports. The banks are offering interest at substantial rates for call money on large amounts. This trend has been encouraged especially due to higher cost of money prevailing outside India. The consequent shift in deposits that is taking place is evident from the following table.

(In Rs. Crores)

Year	Demand Deposits.		Time Deposits.		Total Deposits.	
	Indian Scheduled banks	Exchange Banks	Indian Scheduled Banks	Exchange Banks	Indian Scheduled Banks	Exchange Banks
(a) 1948	533	130	262	35	797	166
(b) 1955	483	136	349	75	832	211
(c) Increase or decrease ..	—50	+ 6	+ 87	+ 40	+ 35	+ 45
(d) Percentage of (c) to (a)	—9.7	+4.6	+33.2	+114.3	+4.4	+27.1

I request the Reserve Bank of India to carefully consider ways and means to suitably deal with this development.

Liquidity:—The liquidity position is very satisfactory. Our liquid assets consisting of cash on hand amounting to Rs. 8,35,89,262/-, balance with other banks Rs. 81,55,186/-, money at call and short notice Rs. 10,67,420/- and investments in Government and Trustee securities, Rs. 44,41,88,690/- totals Rs. 53,70,00,558/- which forms 59.59% of the total deposits. The Bills purchased and discounted amounted to Rs. 7,64,69,766/-. When these are added to the otner Liquid Assets, the total comes to Rs. 61,34,70,324/- which is 68.07% as compared to 60.53% in the case of other scheduled banks.

Loans:—During the year under review, loans and advances including bills increased by Rs. 9.62 crores to Rs. 42.02 crores. The percentage of our loans to deposits is 46.63 as against 63.34 of other scheduled banks. There is thus a good margin for us to develop further to bring ourselves to the level of other scheduled banks.

For the past two years we have been expanding our foreign exchange business. There still remains large scope for improvement and expansion. Bill business expanded considerably. Bills purchased and discounted were Rs. 7,64,69,766/- against Rs. 4,71,31,112 of the previous year.

You will recall that I mentioned at the last meeting about opening of new offices in suitable places. This programme was implemented after necessary detailed surveys. Thus, during the year 13 new offices were opened increasing the number of branches from 313 to 326. We have a programme of opening new branches in the current year almost on the same scale. We are taking steps to see that proper personnel with suitable qualifications and experience are available to man these branches.

BONUS SHARES

Your Directors have decided to issue three bonus shares against existing 7 shares of the total aggregate value of Rs. 37.5 lacs raising the issued capital from Rs. 87.5 lacs to Rs. 1,25,00,000. This issue is proposed against premium money received from shareholders. Application in this regard has been made to the Controller of Capital Issues. It is gratifying that in the speech of the Finance Minister amending the taxation proposals he has appreciated the difference between bonus shares issued from accumulated profits and those issued against share premia which are but receipts of capital from the shareholders themselves. The acceptance of this distinction ensures that this issue of ours will not be subjected to any tax and encourages us to hope that the requisite permission from the Government will be forthcoming soon. It is also a matter for satisfaction that the Finance Minister has rightly allowed inclusion of share premia in the capital base for purposes of dividend tax. Your reserves including Rs. 5 lacs now transferred will stand at Rs. 60 lakhs. With the rising earning capacity of the Bank, it will be possible to transfer without disturbing dividends larger amounts to Reserves and to build them up to Rs. 1¼ crores equal to the paid-up capital after the issue of bonus shares. This increased capital structure will give the Bank a much wider and stronger base. I am sure that this step will be welcomed both by the shareholders and the depositors.

You will naturally expect me to make some observations on the general economic trends in the country. I shall deal with some aspects relating to banking and national development.

BANKING FOR DEVELOPMENT

We have finished a phase of development and are on another phase of greater activity for building up our economy. We can look back with legitimate pride that the past few years have been full of fruitful activity and our achievements were amply reflected in the stability and generally buoyant trends that came to prevail in the economy. There was phenomenal rise in the deposits of banks from the stagnant figure of Rs. 850 crores in 1953 to Rs. 1022 crores in 1955. Government borrowing expectations were exceeded by 50%. After the serious debacle in 1946, it was probably for the first time that a number of new industrial floatations were launched with great success. In 1955, consent for raising as much as 127.7 crores of rupees was given by the Controller of Capital Issues. The investing public started taking greater interest in the activities of the old and new Companies.

The developments in the early part of the current year, however, caused a set-back. Nationalisation schemes, prospects of heavy taxation and the policy of expanding State sector diverting resources from the people's sector to that of the State and the uncertainty regarding supply of goods consequent on the bias in favour of developing small-scale and cottage industries restricting the development of large-scale industries all cumulatively contributed to dampen the buoyancy and the spirit of confidence. The combined efforts of the different sectors of the eco-

nomy are required for the tremendous venture of nation building that we are embarking upon. It cannot be gainsaid that the achievement of the desired development, with the rapidity that is essential, would depend on the allotment of the resources in proportion to the ability of the sectors to effectively contribute to such development. It will be a sad mistake if the enthusiasm that has been raised is caused to be deflated by policies that have largely an ideological bias.

Banks are effective instruments as structures of credits to support expanding activity. Development of banking is, therefore, an important factor. If we analyse details of notes in circulation and the deposits of banks, we find that during the years 1954 and 1955 the deposits of banks have gone up at a much higher rate than during the earlier years. The notes in circulation have greatly increased since. However, the ratio of deposits to the notes in circulation has declined. During the war years, there was expansion of currency on a much larger scale. Due to the general scarcity of goods and difficulty of securing imports, there were larger savings and the banks increased their deposits. From the year 1943, there was an upward trend in deposits. The percentage of deposits to notes in circulation was as much as 86.6 in 1946. But it declined to 74.5 in 1953 and is only 70.4 at the present time as will be seen from the following table.

Last Friday	Notes in circulation. (1) (Rs. Crores)	Deposit liability of Scheduled Banks (2) (Rs. Crores)	Col. 2 as % of col. 1
1946	1225	1061	86.6
1953	1125	838	74.5
1954	1200	932	77.7
1955	1362	1022	75.0
6th April, 1956 ..	1507	1061	70.4

The increase in deposits in 1954 was 94 crores against increase in notes circulation by 75 crores thus registering a ratio of 125%. In 1955, the ratio is only 56%. As against an increase in note circulation of the order of Rs. 162 crores, the increase in deposits was Rs. 90 crores. The trend in the first quarter of 1956 is still lower. Against an increase of Rs. 145 crores in note circulation, the deposits have increased by only Rs. 39 crores. The ratio is thus only 27%. This trend indicates that the rise in deposits in the coming years will be anything like 40 to 50%. It is not likely to be on the scale of the war years when the increase in deposits was very nearly equal to the increase in note circulation. With this low velocity of money the inflationary pressure of deficit financing will be much less. Any pressure that will be felt will only be in respect of cloth and food-grains.

DEFICIT FINANCING AND INFLATION

In the context of larger doses of deficit financing, fears are expressed about inflationary trends showing themselves. But the price trends as they are do not lend any strength to such fears. Any increase in prices that has taken place is mostly in food articles and industrial raw materials of agricultural origin. In the former category, there has been a rise in the prices of both cereals and pulses. The rise in prices is to an extent attributable to the increase in taxes especially sales-tax. Further, prices are high in the off-season and the level is brought down with the arrival of new crops. It is also necessary to remember that prices had been hammered down last year on account of the accumulation of stocks of food-grains with the Government and the phenomenal increase in agricultural production in the country in 1953-54. Support schemes had to be introduced and prices had to recover to more economic levels. A part of the rise in prices must, therefore, be regarded as corrective. It is thus important that the meaning of the rise in prices should be clearly understood and there should be no efforts at restriction of consumption. On the contrary, the level of consumption should go up in the country as that alone will encourage production and help build up a healthy economy and better life for the people. So far as the agricultural situation is concerned, I do not feel there should be any fear of a repetition of the experience prior to 1952. Large areas have been brought under irrigation in 1954-56 and there is ample evidence to suggest that the efficiency of agriculture has tended to increase. Food production can be expected to rise significantly and it may happen that the records of 1953-54 will be easily surpassed in many cases. If, however, due to fall in agricultural production on account of adverse weather conditions, prices rise, it will not be due to inflationary factors. The situation must be met by adequate imports. If production of cloth is maintained as also such other essential materials as cement, steel, etc., a healhy process of larger consumption and larger and added variety in production will evolve itself and there will be no risk of the increased rate of deficit financing creating inflationary trends in the economy. However, the government policies, economic and fiscal, must be such as to leave resources and enable their utilisation in productive channels so that inflationary tendencies have no chance to develop.

NEED FOR CORRECT REVENUE ESTIMATES

In this connection, an analysis of the budget estimates and actuals for the last five years reveals that the Government have under estimated revenue and efforts have consequently been directed towards drawing larger resources to the Government sector. The following table shows that against an anticipated deficit of Rs. 2.43 crores there was actually a surplus of Rs. 221.34 crores in 1951-56.

Year.	Budget Estimates (Crores) Rs.	Accounts (Crores) Rs.
1951-52 ..	+26.10	+128.09
1952-53 ..	+ 3.73	+ 38.93
1953-54 ..	+ 0.45	+ 8.50
1954-55 ..	—15.36	+ 33.51
1955-56 ..	—17.35	+ 12.31 (revised)
Total ..	— 2.43	+221.34

Considering the actual surplus each year during 1951-56, it will be correct to asses that the total savings from current revenues of the Central & State Governments would be over Rs. 700 crores against the estimate of Rs. 573 crores. In the Second Plan, the savings from current revenues are estimated at Rs. 800 crores. Out of this Rs. 350 crores will be derived from the existing taxation and Rs. 450 crores from additional taxation. Obviously, this is an underestimate as the buoyancy of revenues will be very much more in the coming years. Tax revenue has increased from Rs. 405 crores (including State's share of divisible taxes) in 1950-51 to Rs. 483 crores in 1955-56. In 1956-61, the increase in tax revenues will be much more pronounced. By 1960-61, on the basis of the existing taxation, a total of Rs. 610 crores is estimated to be secured while the additional taxes that hve been proposed this year for Rs. 36 crores will fetch more than Rs. 50 crores by 1960-61 and take the total of tax revenues to Rs. 660 crores. Taking these into consideration the total savings from current revenues should be expected to be as much as Rs. 950 crores. It needs no emphasis that a correct appraisal of the possible revenue receipts should be made. If more money is gathered towards the Government sector, the effort of the private sector is stultified as it is deprived of resources that could be utilised to greater advantage by it in achieving expanding production to counteract inflationary forces. As I suggested earlier, the allocations should be made according to actual performance and capability. It is also necessary to achieve results quicker in production so that inflationary forces can be kept in check.

EMPLOYMENT

This takes me to the question of employment that is sought to be provided in the Second Five-Year Plan period. This is a problem of vital significance to the whole economy and I would, therefore, like to refer to certain details. It is envisaged in the Plan to provide employment to 8 million people by an expenditure of Rs. 7,100 crores, i.e., employment will be provided for 1,10,000 persons per Rs. 100 crores roughly. Towards this end, labour intensive developments are lent powerful support. General estimates have been made of the amount of employment that cottage and small-scale industries and other fields of activity could provide against the investments proposed. The details of employment potential, however, seem to disprove the commonly held view in respect of cottage and small-scale industries.

ESTIMATE OF EMPLOYMENT POTENTIAL UNDER THE SECOND FIVE-YEAR PLAN

(In lakhs)

	Investment (Rs. crores)	Additional employment. Direct employment.	Construction.	Trade & Commerce & Social services.	Total employment.
Irrigation & power	898	0.51	3.72	2.10	6.33
Railways	900	2.53	1.27	..	5.60
Other Transport and Communications	484	1.80			
Industries & minerals	1200	8.00	4.03	6.00	18.03
Cottage & small scale industries .	400	4.50	0.45	0.68	5.62
Others (Fisheries, Forestry, Education, Health, etc.)	3128	13.65	11.53	18.26	43.45
Total ..	7100	30.99	21.00	27.04	79.03

The investment proposed in cottage and small-scale industries is about Rs. 200 crores. It should be expected that a similar amount would almost certainly be invested by the people. Against this total of Rs. 400 crores of investment, the employment possibility visualised is 4.5 lakhs. To this may be added at the most 25% by way of additional employment under Trade and Commerce etc. totalling to 5.62 lakhs. The investment envisaged in the large-scale industries in both private and public sectors is of the order of Rs. 1,290 crores. The direct employment potential in this field according to estimates in the Plan is 18 lakhs. These figures indicate that cottage industries do not provide any larger level of employment and proper investment on industries with modern techniques and of diversified character will provide equally large employment. This is an analysis significant from the point of view of the pattern of investment that must be pursued in order to achieve the objectives that we have hopefully laid before ourselves. It must be borne in mind that cottage industries do not contribute to the revenues for social services, etc., unlike large-scale industries whose contribution is very large. The subsidy that is required to be provided to prop up cottage industries is an additional drawback. Further, cottage and small-scale industries will provide employment but not employment that will afford an increasing standard of living. Large-scale industries will provide employment and give the means for increasing standard of living.

ADMINISTRATION AND STAFF

Banks in India have a growing role to perform in the national economy. Your Directors are devoting all their efforts in this direction to see that your Bank is organised into a perfect mechanism devoting istelf to the service of the people. The employer employee relations in your banks have been comparatively happier. I must express my thanks to all our worthy constitutents for their continued co-operation and confidence. I extend my thanks also to the Officers and Staff at all levels who have contributed to the fulfilment of the common task.

*

GATEWAY NOTES

(Continued from page 836)

embers of controversy have not wholly died down.

Bombay presents by far the most baffling problems. The Home Minister's comprehensive reply to the three-day debate in the Lok Sabha has, however, left the members in the dark regarding Government's intentions as to the future of the contested city. The three Maharashtrian members of the Central Cabinet have lived up to the expectations of their home-State.

Pandit Pant practically rejected the plea of some members for a democratic set-up for the State of Delhi, which will be a Centrally administered area. Nevertheless, there will be active association of the people with the local administration.

The arrangement by which Himachal Pradesh is kept apart to satisfy popular wish, will necessarily be temporary. But its duration can only be guessed.

There is the strong possibility of the merger of Tripura with Assam. However, it will be a matter to be considered by the Select Committee.

The Bengal-Bihar merger proposal has necessarily to wait for a definite expression of popular opinion. In other words, the initiative will continue to rest with the States concerned.

The same principle will be held in the case of formation of zonal councils with statutory powers. Pandit Pant was opposed to investing these councils with statutory powers unless such a step originates on the initiative of the composite States.

THE TRAVANCORE RAYONS LIMITED

Review of Speech made by Shri A.R. Ramanathan, Chairman, The Travancore Rayons Ltd., Rayonpuram:

Gentlemen,

I have great pleasure in extending to you all a cordial welcome to this Tenth Ordinary Annual General Meeting of the Shareholders of the Company. The Directors' Report and Statement of Accounts have been circulated already and, with your permission I shall take them as read.

The net profit for the year 1955 is Rs. 25,40,383-13-4, after providing depreciation of Rs. 27,07,667-6-2. This amount, together with the balance of Rs. 1,23,122-1-11 brought forward from the previous year, makes a sum of Rs. 26,63,505-15-3. Out of this, your Directors have thought it prudent to transfer to Deferred Taxation Reserve a sum of Rs. 14,00,000 bringing up this reserve to Rs. 30,00,000. I am sure, you will agree that, in view of the heavy tax liability likely to arise in the future, this provision is essential. The balance left is Rs. 12,63,505-15-3. An increased divided of 7½ per cent has been recommended. Your directors are following a steady and conservative dividend-policy, having due regard to your long-term interests, and I hope their recommendation will receive your approval.

I had the privilege of referring, at the last Annual General Meeting, to the partial completion of our expansion plans. I am now glad to report that all the schemes were fully and successfully completed during 1955. It is a matter for genuine satisfaction that we have, thus, been able to fulfil our part in the fruition of the First Five Year Plan. The second Five Year Plan has just emerged with its principal emphasis on industrialisation. As the Directors have mentioned in their report, it is their firm intention and eager desire to amply fulfil the new targets allotted to this industry under the Second Plan. We have in view the stepping up of the rayon yarn production by another 1.8 tons per day and that of cellulose film by another 4 tons per day, by 1957-58.

As you would have been able to see from the balance sheet, the Block Account has registered a phenomenal increase. A creditable feature, in this connection is that our entire expansion cost has been met out of our own resources. The shareholders would indeed be immensely pleased when they see during 1956 the full working results of the expanded plants. The liability to the Travancore-Cochin Government now stands reduced to Rs. 56½ lakhs against the initial figure of Rs. 96 lakhs. The machinery and buildings have been valued at Rs. 2,91,62,100 for purposes of insurance.

The import policy of the Government of India continued to take due account of the indigenous interests. However, in the case of the transparent cellulose film, the Government were obliged to allow imports in order to meet pressing demands. Our production position has since improved considerably and there is now enough justification for a revision of the Government's policy. In order that our expanded production may find a ready market and your Company may continue to sail smoothly, we have approached the Government and impressed upon them the fact that the country has attained self-sufficiency in this commodity and there is, hence, no need for future imports of the non-moisture-proof cellulose film. Let me hope that the Government will view our request sympathetically.

While dwelling on this subject of Government policy, I feel it may not be out of place for me to refer to some points of vital importance to the economy and progress of the country. The private Sector has remarkably adapted itself to the changing pattern of society, and judged by its performance under the First Five Year Plan, it deserves every encouragement. It, therefore, behoves the Government to fully avail of the talent, money and experience of this Sector, especially when there is so much to be done, and all that needs to be done as well and as fast as possible. Industry and business should be taken in by all those who are prepared to venture and risk. Experience shows that progress has been built through individuality, initiative and enterprise. Here, I can do no better than quote the wise words of our revered Mahatmaji:

> "I look upon an increase in the power of State with the greatest fear, because although apparently doing good by minimising exploitation, it does the greatest harm to mankind by destroying individuality which lies at the root of all progress."

The Government has already taken many vital steps towards the socialistic pattern of society and, if I may say so, at too fast a pace. I would suggest that some time be given now to enable co-ordination, adjustment and consolidation, rather than be moving too hastily.

I referred last year to the need for eliminating the dependence of this industry on foreign wood-pulp. I am glad to tell you that the Government of India are keenly alive to this vital problem. They have constituted a Pulp Investigation Committee. Some Italian and German experts were deputed by the Government to carry out independent invesitgations as to the Indian raw materials best suited for Rayon Pulp and as to the most advantageous location for a Chemical-pulp-Plant. The results are awaited with interest. The pulp making plant being a very specialised and costly machinery, thorough all-round investigations have to be made before-hand, especially with regard to the availability of raw material and whether adequate and continuous supply could be ensured for producing about 50 tons of pulp a day: otherwise the factory will be faced with shortage of raw materials after some time. Planned reforstation will be necessary for feeding such plants. This will have to be investigated.

Another noteworthy step taken by the Government of India is the setting up of a Development Council for the Art Silk Industry and it is hoped that the industry will benefit by this step.

You may all be aware that from 1st April this year, the new Companies Act 1956, has come into force, with its wide ramifications and revolutionary changes. We are studying the steps to be taken to bring your Company's working in line with the various provisions of the new law. The relationship with the employees continued to be cordial, on the whole, except for an unjustified strike of about three weeks' duration, precipitated by the workers in a lightning fashion. The loss occasioned has certainly been reflected in the Balance Sheet, and the working results would have been much better but for this. Employment in the factory has increased by about 20 per cent consequent to its expansion. The wage and salary scales provided by your Company are, as far as I see, about the best prvealing around here, and I look forward to the uninterrupted and full co-operation of the employees. As their own advance and prosperity are inextricably intertwined with that of the Company, I ask of them to give of their best, work hard and efficiently, and produce more, so that they may in turn reap good dividends.

I wish to place on record the valuable services rendered by the employees, by and large, during the period under review. Their continued co-operation, I am sure, will go a long way in our achieving our rightful place among the major industries of the country. I sincerely hope that, at this rate, there will not be any necessity to look for foreign technicians for running the present machines, though their help may have to be sought for running any new Plant which we may acquire under our expansion plans.

With these observations, I now beg to move that the Directors' Report, Balance-Sheet and Profit and Loss Account for the year ended 31st December 1955 be approved and adopted.

MAHINDRA AND MAHINDRA LIMITED

NOTICE

The 10th Annual General Meeting of the Shareholders of Mahindra & Mahindra Ltd., will be held at the Registered Office of the Company, Gateway Building, Apollo Bunder, Bombay-1 on Monday the 14th May, 1956 at 4-30 p.m. to transact the following business.

1. To receive and adopt the Directors' Report, the audited balance sheet and profit and loss account for the year ended 31st October 1955.

2. To declare dividend on Preference and Ordinary Shares.

3. To appoint a Director in place of Mr. K. C. Mahindra who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.

4. To appoint a Director in place of Mr. H. C. Mahindra who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.

5. To appoint a Director in place of Mr. Jal H. Mehta who ceases to hold office by virtue of Article 116 of the Articles of Association but is eligible for re-election.

6. To appoint a Director in place of Raja Maharaj Singh who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for re-appointment.

And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

Ordinary Resolution—

"Resolved that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Raja Maharaj Singh who has attained the age of 77 years and who retires under Article 116 of the Articles of Association of the Company and that he be re-appointed a Director of the Company."

7. To appoint a Director in place of Sir D. N. Mitra who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for re-appointment.

And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

Ordinary Resolution—

"Resolved that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Sir D. N. Mitra who has attained the age of 65 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."

8. To appoint a Director in place of Rai Bahadur Isher Das Sawhney who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for reappointment.

And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

Ordinary Resolution—

"Resolved that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Rai Bahadur Isher Das Sawhney who has attained the age of 73 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."

9. To appoint Auditors for the Current year and to fix their remuneration.

10. Section 293, sub-section (1) (d) restricts the total borrowing powers of the Board of Directors to the paid-up capital of the Company and its free reserves which amount to Rs. 80 lacs. The Company's borrowings from the various banks amounted to Rs. 9,26,49,989 on 31-3-1956. It is therefore necessary to approach the shareholders for approval of these borrowings by the Company.

And to consider and if thought fit to pass the following resolution as required by Section 293 (1) of the Companies Act, 1956 and the relative explanatory note as required by Section 173 of the said Act is annexed hereto.

"Resolved that the consent of this Company be and it is hereby accorded to the Board of Directors borrowing monies in excess of the aggregate of the paid up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose and that such borrowing shall be exclusive of the temporary loans obtained or to be obtained by the Company from the Company's Bankers in the ordinary course of business. Resolved further that the Company doth hereby ratify and confirm, all borrowings by the Directors after 2nd April, 1956 which are in excess of the aggregate of the paid up capital and free reserves of the Company."

A member entitled to attend and vote at a Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
KESHUB MAHINDRA,
Director.

28th March, 1956.

The transfer books of the Company will close from 30th of April 1956 to 14th of May, 1956, both days inclusive. The dividend, when sanctioned, will be made payable to those shareholders whose names stand on the Register of the Company on 14th May, 1956, and the dividend warrants will be duly posted to them on or after the 25th May, 1956.

The shareholders are requested to immediately notify any change of address.

EXPLANATORY STATEMENTS AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

In respect of Item No. 6 of the above notice of the 10th Annual General Meeting of the Company it is notified that Raja Maharaj Singh who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 77 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956 to be passed, for his reappointment as a Director and special notice under the Provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 7 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that Sir D. N. Mitra who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 65 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956 to be passed for his reappointment as a Director and special notice under the provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 8 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that Rai Bahadur Isher Das Sawhney who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 73 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956 to be passed, for his reappointment as a Director and special notice under the provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 10 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that the major portion of the borrowings from the Banks is on account of the financing of import of Steel which the Company has been doing on behalf of the Iron and Steel Controller as well as on its own account as a recognised stockist. In the calendar year 1955 out of the total imports of 520,000 tons of Steel in India by the Iron & Steel Controller, the Company imported over 187,000 tons which represents about 36 per cent of the total imports. Each ton of Steel costs on the average between Rs 500 and Rs. 700. Financing of such large imports needs strong banking credits. The Company has been fortunate in securing such assistance from the following Banks: Lloyds Bank Ltd., Bank of India Ltd., Bank of Tokyo Ltd., Mitsui Bank Ltd., National Bank of India Ltd., Bank of China.

The Government of India has entered into several contracts with Governments of Russia, Belgium, Germany and China for the import of Steel and the Iron and Steel Controller has allotted to the various importers of Steel the commercial handling of such business and the Company is receiving its share of such allotments.

With the advance planning to import three million tons of Steel in the next 3 years, the tempo of purchase will continue to increase and consequently the share of your Company in such imports will also increase. This will require provision of additional credit facilities.

The anticipated increased turnover in Jeeps, Spare Parts, and in manufacturing operations will also require additional finance provisions. Trading for the first five months of the current year is well above the average of the past year in all the divisions. In order therefore to maintain and develop its business it is necessary for the Company to have recourse to large credit facilities from Banks and other institutions.

SOUTH EASTERN RAILWAY TENDERS.

The Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 invites Tender No. CS3/56/12326R(55) for supply of 8 Nos. of Tank roof water made from aluminium alloy INDAL 3S 1¼ per cent manganese complete 38 galls. capacity to I.R.S. Drg. CA-401 and 8 Nos. of 120 galls. capacity to CEC Drg. 960 Tender forms are obtainable from his office (I.B. Section), on remittance of Rs. 2/- per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta—23 by Local firms. This amount is not refundable. Closing date is 23-5-1956 at 12 noon. Firms not on the Railway's list of approved contractors must submit a valid Income-tax Clearance certificate signed by the Income-tax Authority with their tenders.

S2.

INDIAN ALUMINIUM CO., LTD.

Mr. K. C. Mahindra's Review

Addressing the Annual General Meeting of Indian Aluminium Company, Ltd., held at Calcutta on April 27th 1956, the Chairman, Mr. K. C. Mahindra said:

"Last year I expressed my view of the immediate future for your Company as one of restrained optimism. You will have observed from the audited accounts of the Company sent to you, that net profits for the year 1955 amounted to over Rs. 26 lakhs, which is almost double that attained in any previous year. I think we can regard this result, which reflects the benefits of expanded production facilities and improved market conditions for the Company's products, with satisfaction and pride. Although sales increased by more than 50% compared to 1954, the advantages of capacity operation of balanced plant facilities, which the expansion had made possible, were not fully realised in 1955, as output and production costs of metal were adversely affected by inadequate power supply to our Alupuram Works during the earlier part of the year. It would, therefore, not be unreasonable to expect some further improvement in the results of the current year's operations."

Referring to the development of the Company's activities in the fabricating field, the Chairman stated: "Apart from continued progress in the production of medium- and high-strength alloy rolled products at Belur Works, an extrusion plant was brought into operation at Alupuram in March 1955, and an expansion of the Kalwa plant was initiated which will increase the capacity for paste production by 50% during the current year. To sustain this expansion of fabricating activities, the Company continues to supplement its metal production by increased purchases of imported and indigenous scrap and ingot. However, the increasing cost of metal purchases under prevailing conditions of general world shortage is fast resulting in a situation which would compel us to increase prices correspondingly.

"The Directors have been alert to the need for expanding smelting facilities with a view to satisfying the Company's own increasing requirements of metal as well as those of other fabricators, and, in my earlier addresses, I have referred to the project which has been under consideration for some time for the establishment by the Company of another smelter near the Hirakud Development in Orissa. Your Directors have now decided to proceed with the scheme which envisages a smelter at Hirakud with an initial annual ingot capacity of 10,000 tons, but capable of easy expansion to 20,000 tons or even more, as soon as circumstances both warrant and permit it.

"The expansion of ingot production poses financial and organisational problems more serious than those of increasing fabricating capacity. Even though the plan for the proposed Hirakud smelter is based upon expansion of the existing facilities for bauxite and alumina production, thus requiring less capital compared to that which would be necessary if entirely separate integrated facilities were to be created, the requirements of the project are estimated at nearly Rs. 9 crores for the first stage of 10,000 tons annual production.

"You will, I am sure, readily appreciate the difficulties in financing an expansion of this magnitude which will more than treble the Company's existing fixed assets. Organisationally, technicians and expreienced operators in this industry are scarce all over the world and even for engineering and design work we have to stand in a queue. Thus, a programme has been devised giving priority to the smelter, which is expected to come into operation by the end of 1958, and undertaking the major part of the subsequent bauxite-alumina expansion immediately after the completion of the smelter, so that the entire integrated plan is in operation before the end of 1961.

"The dominating feature in the economics of the aluminium industry is the large investment required in fixed capital assets and the heavy charges that it involves in the form of depreciation and the cost of obtaining money. In recognition of this, smelter projects are almost everywhere financed by the issue of fixed-interest debt to cover the greater portion of the total capital cost, the balance of the necessary capital being raised by a combination of share-financing and the accumulation of funds from depreciation and retained earnings. Accordingly it is proposed to finance only a part of our requirements for the expansion project by a new issue of capital, the remainder of the funds being obtained by means of medium-term loans from banks and the cash flow from depreciation and earnings.

"I believe that the importance given to the ploughing back of earnings will not only serve the long-term interests of the Company and its shareholders, but that it is also in keeping with the needs of the country during a period of intensive industrial development as foreseen in the second Five-Year Plan."

"I welcome the co-ordinates on which the Plan is based, the adventure which it excites and the aspirations it hopes to fulfil" Mr. Mahindra declared, and while he also accepted without reservation the ideal of a socialist co-operative commonwealth, he wondered whether there had not been "a great confusion in targets and objectives in the scheme of planning". He drew attention to the apparent inconsistency between the emphasis placed on development of basic industries and the desire to find resources "for fashionable fads like an aircraft carrier or the Amber Charkha", and the incongruity of allocations for development of communications which will provide only 30% extra carrying capacity as against the anticipated rise in industrial and agricultural output of about 50%, superimposed on an existing shortfall of 10-15% in transport facilities.

"I will not comment on the reasonableness or otherwise of the approach to technological progress in the context of the various programmes" Mr. Mahindra continued, "but taking another example, decentralisation and village self-sufficiency within limits may become the ideal basis for building a socialist co-operative country, but little or no attention has yet been paid to the organisational efforts needed to undertake such a mighty task. Some very radical institutional changes are required of the bureaucracy if the various state-sponsored industrial and social ventures are to succeed. We have, no doubt, a cadre of bureaucrats—perhaps as efficient, hardworking and patriotic as are to be found in non-governmental services. Nevertheless, the climate of service in bureaucracy is such that regimentation in thinking becomes a matter of course, and it has been the experience of almost every country in the world that the dead hand of bureaucratic control has not succeeded in inciting the requisite effort, zeal and inspiration, without which this great adventure in nation-building cannot succeed.

"The scarcity of managerial talent is already acutely felt with the rapid growth of the so-called public sector. We will succeed or fail with the build-up or lack thereof of the organisational capabilities of state ventures. The supreme and exacting task of management is a task which cannot be learned from text books or over a brief period of apprenticeship. While we proceed to do the learning, there is a grave danger of an oligarchic stranglehold by the army of bureaucrats. Perhaps it is not widely recognised that nationalisation, public ownership, sarvodaya are not the passports which purchase immunity from inexorable laws of industrial economics. One may honestly hold the view that classic theories of supply and demand do not apply to an under-developed economy. One may hold the view that private enterprise in India has been guilty of sins of ommission and commission which it cannot be forgiven. One may also come to believe that profit motive is at the most of all evil. And yet, one should not ignore the vast lack in experience and in management knowledge which is required to run an industrial undertaking or a chain of co-operative marketing societies, or perhaps even the village industrial panchayats on whom such high hopes are set...."

Adverting to the role of deficit financing in the second Plan, Mr. Mahindra said: "The Finance Minister has repeatedly expressed his awareness of the inflationary tendencies which would become more oppressive with the repeatedly large doses of deficit finance contemplated in the second Five-Year Plan. He may have devised some built-in restraints or he may be thinking of imposing more detailed physical controls. I hope he is aware of the limitations of the techniques of controls which can only shift the pressure of excessive demands, but do not diminish the same...."

The Chairman then reverted to the Company's own financing problems in connection with the expansion at Hirakud and said "the Directors consider that in view of the large sum involved the Company should invite from the shareholders and the public only a portion of the capital, the rest being covered by medium-term loans and funds generated within the Company.

"The Directors are examining the most appropriate way in which this new capital issue might be made by the Company. While the details of the issue are still under consideration, it has been decided that the issue will be in the form of convertible loan stock, which would carry a fixed rate of interest and confer upon the holders the right to convert the loan stock into Ordinary shares of the Company. Since this type of stock combines the attraction of a secure rate of return over a number of years with the option of conversion for possible greater returns or capital appreciation which is expected from the equity of a growing and expanding enterprise, I hope that it will prove to be an attractive form of investment.

"In accordance with the statutory obligations, the stock would be offered, in the first instance, to the holders of Ordinary shares in the Company in proportion to their respective holdings. Aluminium Limited, the Canadian majority shareholder of the Company, has agreed to take up half of the new issue, and to relinquish the remainder of its pre-emptive rights so as to permit increased Indian participation in the Company. This would provide an opportunity to holders of Preference shares also to subscribe to the proposed new capital issue.

"The Company is now on the threshold of a new period of expansion and we hope to play our full part in the vast development that is taking place in the country's economy. I trust that we will continue to receive the active

INDIAN ALUMINIUM CO., LTD.—Chairman Speech (Contd).

support and encouragement of the Government in this effort, and I should here like to express our gratitude for the understanding attitude of the Government and the Tariff Commission towards the needs of the aluminium industry evidenced by the extension of the protection tariff for a period of three years.

"Before I conclude, I am sure all of you would like to join me in expressing our high appreciation of the services rendered to the Company by Mr. J. W. Cameron, who retired from the position of Managing Director towards the end of last year. The contribution he made towards the progress of the Company during fifteen years of service in positions of increasing responsibility deserves our sincere gratitude, and to him and the other employees of the Company is due in large measure the credit for the successful results of the past year."

✱

OLYMPUS

(Continued from page 837)

gestions on the subject makes fascinating reading and much as I should like to discuss them, there is no space for it here at the moment. The most controversial part of his suggestions is the one relating to making passenger travel less attractive so that resources may be diverted to more urgent uses. Though it is doubtful whether anyone in coaches and so on. One wishes that the Railways thought of more practical aspects of amenity-provision, like the sleeping cars for long distance travellers.

On the subject of Indian thinking on economic problems, Professor Galbraith's chief impression was a certain lack of confidence of Indian intellectuals in their country's economic policy. He also noticed a certain lack of self-confidence and attributed it to a long period of political—and by extension intellectual—subjugation to Britain. Quoting the analogical American attitude of obsequiousness to British opinion in economic matters till recent times,—a subject on which Professor Galbraith has spoken in other contexts too—he suggests that the time has come for Indians to realise that their own economic practice is probably trailing a new line of thinkthis country, especially among the poorer classes, travels unless he has to, it is true that a great deal of the publicised programme of the Railways relate to such fancy affairs like air-conditioned third class ing in economics. He thinks that the tendency to look abroad for answers to our problems and a certain dogmatism in economic panaceas are responsible for the ineffectualness of Indian intellectuals in influencing the economic policy of the country. Commending the pragmatic approach, he suggests that the socialistic pattern that provides for the continuance of the private sector should make it possible for the private sector to work as effectively as possible in national interest. At the same time, he commends to the private sector entreprenuer the wisdom of 'having decent labour relations; and of seeing that profits are 'invested in further developments and not diverted in high personal incomes and expenditures.'

Professor Galbraith's note, it will be seen from what I have stated above, is an extremely valuable document and there are indications that his views are receiving the most serious attention of authorities. One indication of it was the Finance Minister's hint at the Planning Forum of Universities and Colleges that the railways should make the most of the allocation already made by operational efficiency. rather than ask for more allocation. It is to be hoped that the other suggestions of Professor Galbraith, especially those relating to organisational matters will be carefully considered and acted upon.

✱

WORLD OF BUSINESS

(Continued from page 830)

by 150 per cent from 23,000 units in 1955 to 57,000 units in 1960. A cent per cent increase in the production of bicycles is also envisaged. All this would mean a much higher demand for tyres and rubber accessories. Industrial expansion in other spheres will contribute further to the demand for various other types of rubber production.

The problem for the industry will then be how to meet the demand adequately. Raw rubber, already short of requirements may, for some time to come, show an even greater gap in supplies. The Rubber Board has plans to replant 70,000 acres in South India, but the increase in production expected from this replanted acreage is not likely to become available until 1963. The situation is likely to be met by the establishment of a synthetic rubber plant for which possibilities are already being explored. In respect of other raw materials, particularly chemicals, the present dependence on imports will continue, though in a diminishing measure.

NORTH INDIAN MARKETS

(Continued from page 838)

decrease of 402,000 acres or 4.3 per cent in area and 4,20,000 tons or 14.3 per cent in production.

The overall decrease in acreage during the current year has been shared mainly by Bihar, Uttar Pradesh and Rajasthan and has been attributed to unfavourable climatic conditions at the time of sowing. The decrease in production has been shared mainly by Bihar, Uttar Pradesh and Rajasthan and to lesser extent by PEPSU, Hyderabad, Punjab and Ajmer. The decrease in production is due partly to the decrease in acreage and partly to unfavourable climatic conditions during the growing period.

With supplies plentiful. the sugar market ruled dull. The overall increase in sugar production in the country also had a restraining influence on buyers who were naturally in no hurry to accumulate stocks at high prices. Though gur remained easier during earlier dealings, it rallied later on better offtake. Stocks at the end of the week were put at 1,10,000 maunds. In the Delhi market also gur was steady. Earlier higher prices, however, could not be maintained because of reports of higher output from producing centres. Sugar staged a moderate rally after earlier quietness brought about by heavy arrivals.

Conditions were steady in the oil market consequent on poor arrivals of the new season crop. Good demand for oil from Calcutta and Assam was a contributory factor.

The All India second estimate of rape and mustard for 1955-56 puts the current year's area at 2,386,000 acres as against the adjusted second estimate of 2,226,000 acres for 1954-55. This shows an increase of 160,000 acres or 7.2 per cent in area over last year.

The Food and Agricultural Ministry early this week denied reports appearing in certain sections of the press that the Central Government this year are contemplating to increase the support price of wheat and gram. Describing the reports as 'entirely baseless' a Press Note issued by the Ministry says: The support price of wheat will continue to be Rs 10 per maund and that of gram Rs 6 per maund this year also. State Governments concerned have been informed of this decision and advised to enter the market on behalf of the Government of India only when the prices of these commodities decline below those levels.

In the Calcutta Shellac Market after initial firmness turned dull toward close. Closing quotations are: Pure Buttonlac Rs 125; Lemon No. 1 Shellac Rs 124-8 buyers; Lemon No 2 Shellac Rs 119-8 buyers; F.O. Std. 1 shellac Rs 114 buyers; pure T. N. Shellac Rs 108-8 basis done and buyers; I.T.N. Shellac Rs 101-8 buyers; No. 1 Kusmi Seedlac Rs 121-8 buyers; No. 2 Kusmi Seedlac Rs 113 buyers; Fine Bysaky Seedlac (Manbhum) Rs 110 buyers; Fine Bysaky Seedlac (C.P.) Rs 105-8 buyers; Ordinary Bysaky Seedlac (C.P.) under 5 per cent Rs 95-8 buyers; Ordinary Bysaky Seedlac Rs 88-8 buyers: Kireela Rs 39 buyers. Shipments during May until the 1st were 1,400 packages comprising Sheliac 1,141 packages; seedlac 200 packages; buttonlac 27 packages; others 32 packages.

✱

CLIVE STREET GOSSIP

(Continued from page 834)

are yet organised to the extent to which the large scale industries are organised. It is Government's policy to see that this section is organised on a sound footing. The Second Plan has, as is well known, provided a strategic role to this section of the Private Sector, from the point of view of, among other things, employment. The policy statement reiterates the central role assigned to small scale industries. Organised industry may still feel apprehensive about how precisely this policy is likely to impinge on its plans for development. But such uncertainties cannot be set at rest by the nature of the problem. Should the expectation, that the small scale industries would provide the consumer goods in sufficient quantities, be proved to have been too optimistic, a change over to other modes of production would be inescapable.

On the whole, the policy statement is welcome to all interests concerned for the setting at rest of a great deal of uncertainties that had arisen over the precise nature of the Government's Socialism. For this, clarity in official attitude should make it possible for everyone to order his affairs accordingly.

—EAVESDROPPER.

THE MODERN MILLS, LIMITED.

NOTICE OF 15th DIVIDEND.

NOTICE IS HEREBY GIVEN THAT a Dividend of Rs. 5/- and a Bonus of Rs. 3/- per share of Rs. 50/- for the year ended 31st October, 1955. sanctioned by the Shareholders at the Twenty-second Annual General Meeting held on the 27th April, 1956, is made payable at the registered Office of the Company on and after Wednesday, the 9th May, 1956, between 12 noon and 3 p.m. on week days, other than saturdays, and between 12 noon and 1-30 p.m. on Saturdays, to those Shareholders whose names stood on the Register of Members on the 2nd April, 1956.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
ManagingAgents,
V. N. CHANDAVARKAR,

Stock Exchanges

PRICES RECOVER

Watch-dog-Writes:

STOCK Exchanges in India had been steadier last week though the volume of business passing continued to be at a low ebb.

With the announcement by the Prime Minister in the Lok Sabha on Monday evening the revised industrial policy, the Calcutta stock market staged a recovery under the leadership of Indian Iron. However, thoughts of the coming settlement in which carry-forward charges were expected to be heavy, kept down enthusiasm. After settlement day, there had been a slight recovery; business passing showed no marked expansion.

Dalal Street also turned heavy as the enthusiasm, engendered by the absence of adverse news for the private sector in the new industrial policy statement, failed to make operators extend their commitments. Presumably, settlement considerations were responsible for the unimpressive performance of the Bombay Stock Exchange also.

The undertone continued to be steady in the Madras Stock Exchange with interest centering on selected shares especially in the plantings section.

Barely steady conditions prevailed in Wall Street with the main body of shares showing predominantly fractional losses.

Despite continued caution on the part of investors, the London Stock Exchange displayed a steady undertone with selected industrials meeting with good demand.

✱

Calcutta

The Calcutta Stock Exchange spent the first half of the week under review in a depressed mood due to the uncertainty engendered by the imminence of the revised industrial policy. When on Monday evening the Prime Minister announced it, marketmen to their great relief found that it contained no shocking news for private enterprise. Almost immediately sentiment rallied with Indian Irons making rapid headway. The recovery, however, could not be extended as enthusiasm was considerably subdued because of Wednesday's settlement. The market closed the week steady.

Firm conditions prevailed in the giltedged section. 3 per cent 1986 moved up from 76-15 to be finally placed at Rs 77-2. 3 per cent 1966-68 improved to Rs 93-1-6 from Rs 92-12-6.

In the cotton textiles section Cawnpore was unchanged at Rs 8-5. Elgin was fractionally lower at Rs 27-2 as was Kesoram at Rs 17-5. New Victoria moved between Rs 2-4 and Rs 2-6.

Coals were a dull market. Burrakur opened at Rs 14 but declined to Rs 13-13 to recover again to Rs 14. Bengal was unchanged at Rs 530 as was Central India at Rs 6-14. Western Bengal moved within a narrow range to close at Rs 6-15. New Beerbhoom was maintained at Rs 19-12 with South Karanpura also keeping steady at Rs 9-12. Bharat was marked at Rs 7-7 with Ondal changing hands at Rs 15-3 and Talcher at Rs 3-7.

Jute shares continued to be listless. National which opened the week at Rs 23-8 was at one time sold down to Rs 23-4 but the scrip recovered towards close to Rs 23-10. New Central was a bright spot improving to Rs 17-2 from Rs 15-4 and closing at Rs 16-6 xd. Standard was another firm spot having been done upto Rs 103.

Baranagore was quiet at Rs 134. Budge Budge was steadier at Rs 138 with Champdany unchanged at Rs 150, Birla recovered to Rs 17-2 from Rs 16-14. Anglo India improved from Rs 169 to Rs 172. Howrah after being higher at Rs 22-8 receded to Rs 22-2 Kinnison recovered to Rs 165 from Rs 162.

In the Engineering section, Indian Irons opened the week at Rs 34-8 and by midweek advanced to Rs 35-4 on the announcement of the new industrial policy. The scrip, however, soon encountered pressure and receded to Rs 34-13 on Tuesday. On Wednesday the quotation was further lower at Rs 34-9 which was also the settlement rate. Opening on a subdued mood on Thursday the scrip steadily made headway to close better at Rs 34-12. Among other Engineerings Jessop which was done upto Rs 36-2 encountered profit taking throughout the week to be finally placed at Rs 35. Richardson & Cruddas which started the week with the quotation as high as Rs 28-4 developed a reactionary tendency to come back to Rs 27-4 by close. TEXMACO opened at Rs 23-10 receded slightly to Rs 23-9 and recovered to Rs 23-12 by close on Tuesday. By settlement day the quotation had come down again to Rs 23-8. Regaining lost ground the scrip closed the week better at Rs 23-12. Burn & Company receded by 7 points to Rs 349. Kumardhubi was almost unchanged at Rs 10-4 as was Marshalls at Rs 6-2. Britannia Building advanced to Rs 8-4 from Rs 7-5. Bhartia Elec. Steel was a steady feature at Rs 17-6. National Iron was marked at Rs 7-4. Indian Standard Wagon was maintained at Rs 181, Braithwaite was crossed at Rs 28.

Irregular conditions prevailed in the tea section in the absence of interest. Ananda Assam was however a steady feature advancing to Rs 45. Baghmari on the otherhand eased to Rs 28-12 from Rs 29. Basmatia was slightly better at Rs 38-12. Beteli was unchanged at Rs 23. Belgachi gained Rs 1-4 to be done at Rs 46-4. Brahmapootra was almost unchanged at Rs 9-7 Gungaram was sharply lower at Rs 340. Puttinbarrie advanced from Rs 54 to Rs 56-8. Hantapara after declining to Rs 326 recovered to Rs 330. Kyang Tea reacted to Rs 5 from Rs 6-9.

In the Miscellaneous section, the Mining group was generally in good request. Burma Mines continued to attract attention and the scrip advanced over the week from Rs 3-9 to Rs 4-2. Consolidattd Tin improved from Rs 2-8 to Rs 2-12. Indian Copper was however unchanged at Rs 6-10 at close. Karanpura Development was unchanged at Rs 26. Tavoy Tin was done upto As 15. Among Shippings India Steamship moved up from Rs 8-5 to Rs 8-11. India General Navigation was also steadier at Rs 108-8. In the Paper Mills group Orient Paper after coming back to Rs 34-14 recovered to Rs 35-4 by close. Shree Gopal Paper was slightly higher at Rs 18-4. Among oils British Burma was a steady counter at Rs 4-1. Among chemicals Smith Stanistreet was done at Rs 16-4, while among Public Utilities Calcutta Electric was unchanged at Rs 13-8.

In the Miscellaneous industrials section B. I. Corporation met with some support and advanced from Rs 10-6 to be finally placed at Rs 11-1. Clive Row Investment was done at Rs 11-2 as against Rs 10-15 done previously. Dunlop Rubber continued to be uninteresting at Rs 30-3. Electric construction Equipment changed hands at around Rs 13-3. F & C Osler was easier at Rs 12 but French Motor was steadier at Rs 20-10. Indian Cable met with some enquiry and moved upto Rs 31-1 from last weekend's rate of Rs 30-10. Imperial Tobacco was almost unchanged at Rs 14-8. Indian Aluminium receded to Rs 20-14 from Rs 21-8. Jardine Henderson was maintained at Rs 100. National Carbon was done at Rs 26-4. National Rolling was fractionally better at Rs 9-10. Rohtas Industries was done upto Rs 22-13.

BALMER LAWRIE AND COMPANY LIMITED.

NOTICE is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held at the registered office of the Company, 21, Netaji Subhas Road, Calcutta, 1, on Monday, the 18th day of June, 1956, at 12 noon to consider and, if thought fit, to pass with or without modification the following resolution, which will be proposed as a Special Resolution, namely:—

"That this meeting consents to Mr. Colin Gordon Montgomery, a relative of Mr. Alexander Thomson Montgomery, a Director of this Company, holding and continuing to hold with effect from the commencement of the Companies Act, 1956, an office or place of profit namely as an assistant, under the Company."

SOUTH INDIAN NOTES

(Continued from page 840)

support it on issues like world peace and land reform.

That the CPI has renounced its all-out opposition to the Government is manifest in the decisions that have been taken at Palghat. There is an unmistakable shift in the Party's attitude and outlook, the reason for which might be sought in momentous changes elsewhere, of which the denigration of Stalinism and the dissolution of the Cominform take pride of place.

*

FOR THE INVESTOR

(Continued from page 823)

But, as I said, I propose to defer the accounts to next week for my consideration. What I should like to do here is to underline and emphasise some of the remarks that were made at the annual general meeting by the company's chairman, Mr A. R. Ramanathan. For, these are remarks which bear testimony to the gathering strength of nascent industry; furthermore, there is also an indication of the almost limitless demand that the future will see for rayon and rayon products. Mr Ramanathan has reported that Travancore Rayon's expansion plans have been fully and successfully implemented: and he adds that the company has the firm intention and eager desire amply to fulfil "the new targets allotted to this industry under the Second Plan". Rayon yarn production is envisaged as being raised by 1.8 tons per day and cellulose by an additional 4 tons per day; and both these increase in production are, it is hoped, to be achieved by 1957-58.

A remarkable feature of this prosperous industry is that Travancore Rayon has been able to finance its expansion programme from out of its own resources. Demand for transparent cellulose film has, in the past, been of such dimensions as to necessitate import by this country. With improving production, however, it now appears that indigenous availability will be able to take care of estimated demand; and, in this view, Mr Ramanathan asks that Government should revise import policy in this sphere.

It is hardly necessary for me to suggest that Mr Ramanathan's request is reasonable and just; nor does it require me to point out that the rayon industry is, to slip into metaphor perhaps not permissible, sure of a golden future.

The Seamaster—made for a Life of Action

Seals out Water — Seals in Accuracy

With unerring precision the Seamaster ticks off the most exciting seconds of your life—in any climate . . . aloft, ashore, afloat . . . under the surface, too, thanks to the thrice-sealed, waterproof Seamaster case. Its world-famous Omega automatic movement makes the Seamaster a peerless timekeeper—the kind of engineering triumph to which Omega owes its unequalled series of precision records at the Geneva observatory. Embodied in the consummate accuracy of the Seamaster is Omega's experience as final arbiter of the Olympic Games, the world's most highly contested sports event.

Stainless Steel Rs. 405/- 14 ct. Solid Gold Rs. 1150/-
Steel/Gold Rs. 505/- 18 ct. Solid Gold Rs. 1330/-

Other OMEGA Models available from Rs. 235/-

Available from Sole Agents in India:
Ch. ABRECHT
D-5 CLIVE BUILDINGS, CALCUTTA ● 269, HORNBY ROAD, BOMBAY
AND FROM OMEGA-TISSOT SELECTED JEWELLERS ONLY

For the Investor

A Safe Criterion

Investment Gossip:

RECENT and current trends in regard to investments in shares suggest two important criteria which may be usefully kept in view by bona fide investors seeking to find a safe and profitable asylum for their savings from time to time.

These two criteria are: First, the purchases made on behalf of the accumulating funds in nationalised life insurance. Second, the industries particularly affected by the execution of the Second Plan.

In today's Gossip, I shall deal with the first. It is now known in stock exchange circles that Mr L. S. Vaidyanathan was entrusted with the task of investments in the private sector on behalf of such quantum of life insurance funds as was earmarked for investment in the private sector; that the Custodians in various parts of India notified him of the funds they were in a position to spare for this purpose; that, in persuance of this directive, large parcels of TISCO and ACC were purchased; that such purchases were effected with such aplomb and competency that this portfolio is already showing a substantial excess of present values over purchase price.

Calcutta, however, felt neglected that a similar compliment was not paid to any of its Custodians or to any of the shares quoted in Lyons Range. Suitable representations in this behalf were made to Government.

In an earlier issue, I had referred to this development, and forecast that Sir Dhirendra Nath Mitter, Chief Custodian of the Hindustan Cooperative, might be chosen for the Eastern Zone for analogous investment purposes. I understand that it has now been officially decided to make Sir D. N. Mitra the Calcutta counterpart of Mr L. S. Vaidyanathan; and that operations on the Calcutta Stock Exchange might start very soon.

Sir Dhiren is likely to face limiting conditions in open market purchases. The first essential condition for the continuity of an open market purchase policy is the availability of shares in such large numbers that any considerable purchases by the Custodian will not dry up the floating stocks. This condition is admirably served by Tata Ordinaries and Associated Cements. The only scrip in Calcutta, which satisfies this description, is Indian Irons.

In most other scrips, even moderate purchases will cause sharp price-advances, and precipitate a conspicuous famine of stock.

Take Alkali or Dunlops—two stocks which are sure to merit the attention of the Custodians. The shares are firmly held; and, once the Custodian starts operating, the market will turn "all buyers, and no sellers."

Some of the cement shares like Rohtas Industries, Sone Valley and Asoka Cement and some engineering shares like Braithwaite, Textile Machinery and Jessops offer good prospects; but are the opportunities to secure any large parcels in the open market so good?

This handicap need not, however, dismay Sir Dhiren at the start. For a beginning, Indian Irons would well repay his affections and activities.

Indian Irons are to be prized as a significantly attractive "growth" stock. Profits in large amounts are being ploughed in and appropriately utilised for the large-scale expansion plans. In two years' time, the effects of the expanded production at an economic cost will be impressively reflected in the company's profits.

In relation to this assured prospect and guaranteed benefit to the share-holders, the Custodian will be justified in assuming that the present price of Indian Irons is more or less the bottom price; that there are ample grounds for anticipating a substantial capital appreciation; and that the yields, too, will be stepped-up, once the company's own contribution to the new capital expenditure is fully provided for.

It stands to reason that the very process of the Custodian's purchases will put fear into the hearts of the professional bears; and that they will see both discretion and wisdom in minimising blank sales.

It is also to be hoped that the reformed Calcutta Stock Exchange Committee will take positive steps

Travancore Rayons Results

Balance-Sheet Reviews:

Steadily impressive are the words that correctly describe the progress of Travancore Rayons Limited in recent years. Sales have increased successively from a figure of Rs 1.53 crores in 1953 to Rs 1.62 crores and Rs 1.87 crores in 1954 and 1955 respectively. During the same period, the net profit has risen by roughly Rs 7 lakhs each year from Rs 38.8 lakhs in 1953 to Rs 52.48 lakhs in the year under review. Meanwhile, the provision for depreciation has risen from Rs 23.31 lakhs to Rs 27.08 lakhs. In the latest year, the reserve for deferred taxation is provided Rs 1.25 lakhs more than in the previous year, at Rs 14 lakhs. The ordinary dividend rose by 1¼ per cent absorbing a sum of Rs 7.50 lakhs as against Rs 6.24 lakhs required to pay last year's dividend at 6¼ per cent. Finally, the carry forward is more than doubled to Rs 2.64 lakhs from Rs 1.23 lakhs brought in.

Travancore Rayons have a preference capital to the extent of Rs 50 lakhs and ordinary capital of the order of Rs 1 crore. Furthermore, debentures taken up by the Travancore Government are being repaid at Rs 5 lakhs a year. In the latest balance sheet, debentures are shown at Rs 26.50 lakhs.

The funds of Travancore Rayons aggregate Rs 30.07 lakhs—largely comprised by the deferred taxation reserve of Rs 30 lakhs.

The balance sheet total has risen from Rs 2.71 crores in 1953 to Rs 3.25 crores.

It will be appreciated that the decline in debentures, accompanied as it is by a rise in the value of the gross block, is indicative of the company's success in providing internally the resources necessary for expansion in productive capacity. The gross block has gone up by over Rs 1 crore during the last 12 month period. As at the end of 1954, the gross block stood at Rs 2.75 crores, and the latest figure is Rs 3.81 crores. The block, incidentally, has a net value of Rs

HIGHLIGHTS

Not so many decades ago, one of India's Finance Ministers in his budget speech remarked: "The monsoons rule India."

One of the newspapers duly reported this as: "Monsoons ruin India."

It depends on how you look at it, to discover whether you agree with former or the latter statement.

For, from one point of view, there is no doubt that, in the past, the monsoons did rule India's fortunes; and, for this very reason, they may also have said to have infused India's economy with an element of a gamble in weather.

This fact was reflected in the money market conditions of years bygone. There was a definite busy season, there was a distinctive slack season.

This was to be expected, because the demand for money, based as it was on agriculture, was seasonal.

Today, with the greater industrial activity, the monsoons do not wield as enormous an influence as they used to; and this is reflected in the fact that the busy season is busier, and the slack season is less slack and of shorter duration.

These are matters discussed in the World of Finance article.

2.53 crores. The ready demand for Travancore Rayon's products is attested to by the diminution in stocks from a level of Rs 66.07 lakhs to Rs 48.04 lakhs.

The higher levels of the gross block and the decline in stocks, are both responsible for the liquid assets being placed at a lower figure of Rs 71.52 lakhs. Loans are placed at Rs 64.24 lakhs and other debts stand at Rs 51.45 lakhs.

It is not clear from the accounts, where exactly credit has been taken for development rebate. Since additions to plant and machinery during the year have totalled Rs 1.01 crores, it would appear that the company will benefit substantially by way of a rebate on tax. It is, therefore, fair to conclude that the relief provided by the rebate on tax will, to that extent, improve the position for shareholders in the next few years of what must undoubtedly be strident expansion.

£ R$

Godfrey Phillips India Limited

The improvement in sales by one-third has enabled Godfrey Phillips India Limited to double their net profit and more in the year ended December 1955. Sales have gone up from a level of Rs 1.85 crores to Rs 2.50 crores; and, in the result, the net profit has risen from Rs 10.50 lakhs to Rs 23.94 lakhs.

This is indicative, of course, of the vigorous action taken by the company to put in motion measures which would make possible the reversal of the trend that obtained in 1954, when both turnover and profits were badly affected. Out of increased profits for 1955, the chief beneficiaries are taxation and the ordinary shareholder. The provision for taxation is at almost three times the 1954 figure, of Rs 3.30 lakhs at Rs 9.50 lakhs. The ordinary dividend has been doubled to a rate of 20 per cent absorbing Rs 8 lakhs.

Depreciation is more or less maintained at Rs 4.46 lakhs against Rs 4.40 lakhs. And the transfer to gratuity reserve has been stepped up by Rs 12,000 to Rs 79,000.

The balance sheet of Godfrey Phillips discloses ordinary capital of Rs 40 lakhs and preference capital of Rs 30 lakhs. Funds total Rs 7.81 lakhs, of which Rs 4 lakhs is accounted for by the rehabilitation and replacement reserve.

The gross block of Rs 55.96 lakhs has a net value of Rs 31.09 lakhs. Except for goods in transit, all other heads of assets show an increase over 1954 figures. The most important of these increases are, firstly, a rise in stocks from Rs 62.33 lakhs to Rs 78.92 lakhs and outstandings from Rs 18.72 lakhs to Rs 24.93 lakhs. The higher levels of stocks and outstandings reflect the higher level of output during the year; and, as the Chairman pointed out, these are counterbalanced by an increase in the bank overdraft. The liquid assets of Godfrey Phillips are placed at Rs 1.15 crores. As against this, the taxation reserve is placed at Rs 10.60 lakhs; loans—that is, the bank overdraft—are shown at Rs 25.38 lakhs. Other debts are at Rs 20.75 lakhs and the carry forward is Rs 11.97 lakhs. It will be seen that the total of liquid assets is just about double the sundry liabilities.

£ R$

Churulia and Sendra Coal

Two coal companies under the managing agency of F. W. Heilgers (Private) Limited have published their accounts for the second half of 1955; and, in both cases, the trading account reveals a loss; again, in both cases, a dividend has nevertheless been paid to ordinary shareholders.

Churulia suffered a loss of Rs 5,384 in the second half of 1955. This was set off against the brought forward of Rs 12,201, an ordinary dividend absorbing Rs 4,688 is to be paid, and the balance carried forward is Rs 2,129.

As against a share capital of Rs 6 lakhs, there is a reserve fund of Rs 1.44 lakhs. On the other side of the ledger, the assets largely consist of general investments placed at Rs 7.28 lakhs. It may be recalled that these assets largely represent the 2|5th share in the Karanpura Mining Syndicate investments in which are shown at a cost of Rs 6 lakhs. As against the liquid assets of Rs 7.56 lakhs, the sundry debts are just Rs 10,335.

Sendra Coal has reported a net profit of Rs 10,902 for the half-year ended December 1955 after transferring Rs 15,000 from general re-

Slipping Sands of Land Reform

As the Planning Commission approach the stage by finalising the Second Plan. they are sure to find their toughest problem is to provide sure guidance to State Governments such as will secure soundness and uniformity in land legislation. As in many other cases. the difficulties of practical reform and the handicaps of ill-informed and excessive enthusiasm begin to be felt only when the authorities get to grips with the problem itself. The Congress and the Government have hitherto been led by a burning desire to serve the interests of the cultivators and latterly by anxiety to take the wind out of the sails of the opposition parties. These two are by themselves insufficient as guiding principles for new legislation of vital economic importance. But the insufficiency could not be recognised so long as the State Governments had only to legislate for abolition of Zamindary in Zamindari areas and for a more equitable distribution of the produce between landlords and tenants in ryotwari areas. In both these cases the requirements of liberal legislation are in close accord with the needs of efficient cultivation and even sound economics.

In the Zamindari areas the difficult problems of compensation and providing finance for payment of it have been tackled over a period. Though lately some estimates of the total finance required for this purpose in the UP and Bihar are sufficient to fill the stoutest hearts with dismay. the reform will be pushed through willy-nilly without causing serious heart-burnings in any large class of people. or threatening the smooth working of the agricultural economy. Reform of land rents. too have proceeded apace. because for one thing. the change is not a radical one and for another landlords as a whole are neither unsympathetic towards the cultivatiors nor militant towards the State.

The success already achieved in these two respects. though it has emboldened the advocates of thorough-going changes and made them impatient for achieving them. are really no help in this regard. Between asking the middle class land-owner to give more to his tenant and depriving him of all title to the bulk of his landholdings there is indeed nothing in common. The next step in our land reforms, let us make no mistake about it, is to tell all holders of land above a very small limit that the land is no longer theirs except for what they may be allowed to possess and cultivate by themselves. It is no longer a question of allowing the landowners to preserve a semblance of ownership and interfering with them only so far an equitable distribution of its produce calls for such interference. The emphasis has shifted definitely from the division of the produce to the title over the land itself.

On top of a division of the produce which pays little heed to the owner's investment or the manner by which he acquired the title to land giving a certain rate of yield comes the question of celling on land holdings. The principle underlying this redistribution of land is that land. unlike joint stock company shares or other forms of property is limited and that to give satisfaction to land-hungry people it is necessary to fix cellings on land holdings. From then enthusiasts of land reforms proceed to the next step, that no one should be allowed to possess more than a given average of land, the exact extent being determined by the income from it which must be sufficient to support a family. Now these ideas, which seem sound enough in an election manifesto, reveal that ugly potentialities quickly enough to those who have to give concrete form to their proposals for change. State Governments which have endeavoured to hasten these reforms have had to recoil from their original ideas or to allow the greater part of the new legislation to become a dead letter. Hyderabad which is supposed to be foremost in this respect had the advantage that its land system is a predominantly feudal one and no one would shed any tear for it if it should disappear. But if the accounts of the people who are in the know of things are to be trusted there is a wide gulf between the land laws of the State and the actual state of affairs.

In Bombay, the law is content with the statement that as from a certain date land will be deemed to have been acquired by the tenant. In Madras, even the bill for a new division of produce has not been pressed yet. Meanwhile, evidence is accumulating not only about its iniquities but about its threat to the cause of efficient cultivation. The truth of the matter is that it is next to impossible to arrive at a uniform basis of land legislation or determine a fair basis of compensation. Shareholders in an industrial venture can be treated alike regardless of how many of them are original shareholders, how many acquired their holdings in a boom and how many during a slump. The contribution of these different classes of share holders to the development of the property that is acquired by the State may with justice be assumed to be equal. But in the case of land, no such assumption can be made. The owner of a piece of landed estate does not own in common with other owners. Nor does he get it managed by somebody from whom theoretically at least all the owners stand aloof equally. Some land owners have put their all into land: for some, land is only one of a number of different forms of property. Some have developed it with their money, their skill and their labour. Others have only drawn a Ricardian rent from it. Some have bought at low prices. Some at high prices. A few have developed unresponsive tracts. Facilities for cultivation whether of the natural kind or of the kind provided by the State vary from region to region, even district to district.

In such conditions, uniformity must inevitably reek with injustice. And what is the extenuation that the State can plead That land is limited and people are land hungry? May not land owners ask whether land is the only form of wealth that is limited in quantity, Have we a surfeit of other forms of wealth? Or are men indifferent to them. The truth again is that the direction of reform is set not by people who understand these problems but by those who are actuated by mere visionary zeal or in the alternative by demagogy pure and simple.

In an agricultural country like India, it is inevitable that entrepreneurial ability in the true sense of the word should have considered land as having the first claim on their attention. The Tatas and their like may have turned to industry; but for the small scale investor and the man with ability to realise hidden natural potentialities land was the obvious first choice in the old days. For land is to be treated differently from other forms of property in respect of distribution and compensation for dispossession, but limits on available land are a palpaply insufficient explanaton.

It would be different, however, if it can be claimed that possible injustices to one class are more than balanced by substantial good to the nation as a whole. Such however is not the case. In one case at least, namely Madras, the new legislation wll benefit a small class of tenants who may become more numerous than the landlords whom they dispossess, but only a fourth of the vastly larger class of agricultural labourers. While the landlords in the past have engaged hired labour freely, the tendency of the tenants in the future will be to keep as much of the work as possible within the family and thus cut the work available to the landless labourers. It would be foolish to imagine that statutory minimum wages for agricultural labour will be any help to them, since the law cannot prevent the tenants' family from staggering the work on the farm. The hollowness of the argument about land hunger will be evident from a consideration of the lot of these people. Latest reports from Delhi indicate that the Planning Commission has scrapped its chapter on land reforms and writing it out afresh. It is to be hoped that behind these fresh efforts there is a fresh approach.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

The New Abode

To our knowledge, there is only one building in the whole of Calcutta where forty-five people can simultaneously travel up the lift. It is India Exchange, where the Indian Chamber of Commerce has formally moved in, this Friday. The distinction is symbolic of the measure of convenience and comfort which the new abode provides to one of India's foremost industrial and commercial organisations. The old habitat of Chamber was a rather agonising survival from the days of the Second World War. Any visitor would have been disagreeably impressed by the way in which the senior officers of the chamber were huddled up in a room, each of them trying to concentrate on his duties in stoic indifference to what went on in front, to the right and to the left.

From the eighth floor of the spacious and majestic building which towers over the main-business centre of the City, the Chamber functionaries can proudly look down upon the diminutive memories of the past. To this justifiable pride will be added a sense of larger responsibility bread by fast-changing economic conditions.

An impersonal entity like the Chamber of Commerce cannot feel the satisfaction and pleasure of ownership. But those who guide its destinies can well think in terms of a new security and seek to make it as enduring as possible. In that elevating task, they will have the good wishes of everyone interested in the orderly progress of the economy of this vast country and the trade and industry of Calcutta in particular.

How Projects Fare

The third Annual Programme Evaluation Report on the community projects offers a somewhat outspoken criticism of the weak features of a programme which is vitally bound up with contemporary economic progress. The Report draws attention to the fact that the projects are intended primarily to arouse the interest of rural folk on their own welfare, to release their unexploited energies and, in the atmosphere of the new awakening, to harness them to frutiful endeavour toward self-improvement in all directions. Once the outlook of the people changed and they became aware of the potentialities of self-help the major task involved in the programme would be over. Though on the whole "everything runs as any other Government Department", the Report does record such a change in outlook, both among the officials and among the villagers.

This has been the most valuable achievement of the community projects during the last three years. The villagers have given up whatever initial scepticism they had. There is hardly any trace of antipathy. Among project officers, there is to be seen a growing sense of dedication and of satisfaction over the constructive achievements, especially in the form of additions to material output. In fact, the Report is rather critical of the average officer's concern to show more of physical accomplishments. In some areas, there exists a distinctive preference for "the spectacular as against the less noticeable though more lasting and fundamental improvement". It is possible to disagree and say that physical achievements are more reliable and inspiring.

On the basis of the experience gained, the Report recommends changes in the general approach to future work. The technical departments should be strengthened. Popular institutions should be developed and more effective coordination between extention agencies and popular institutions secured. The Gram Sevak in many areas is being burdened with work for which he is neither intended nor trained. The village school teacher with a little suitable training is looked upon as excellent agent for work of the type held paramount by the Project Administration.

*

Engineering Industry

In his speech at the Annual General Meeting of the Engineering Association of India, Mr A Rajagopalan, President of the Association, took as his principal theme the industrial policy and outlook of the Government, a theme which does not have the merit of freshness but continues to possess an irresistable appeal to the spokesmen of private industry.

The main charge which the President levels against the Government is that an atmosphere of great uncertainty has been created by such steps as the Amendment to the Constitution, the new Indian Company's Act, the nationalisation of the Imperial Bank of India and of life insurance and the new taxation. It is felt that after having recognised the role of the private sector in a mixed economy, the Government are not giving wholehearted support to it and that, on the contrary, they are doing many things which stifles the incentive to work and to save.

Mr Rajagopalan has assured the Government that if they could avoid giving the impression that mixed economy was only a halfway house on the road to full-fledged socialism and allow full scope for initiative and provide suitable incentives, the private sector would spring a welcome surprise in the form of quick and remarkable results.

There is room for doubt that this interpretation of the impact of Government policy is what is generally held by private industry. While the latter does not wholly approve the industrial policy, adverse criticism does not seem to be so severe or harsh as the impressions conveyed in Mr Rajagopalan's speech.

He concedes the desirability of of the State assuring to every individual the right to work, the right to a minimum reward, the right to a minimum of leisure and a scheme of social insurance which will enable the old, the disabled and the unemployed a bare subsistence. If the economic implications of these rights are carefully examined and if the need for and power of incentives is recognised as applicable to every individual alike, the sanction and justification for the economic policies followed by the Government would be self-evident.

In the realm of details, the speech is more secure. British experience and the current attitude of British trade unions are not entirely on the side of labour participation in industry as conceived by the Planning Commission. When alternatives are being successfully tried, there is at least no hurry to pursue a method which, as far as this country is concerned, remains mostly an aspiration.

The immediate fortunes of the engineering industry are rated satisfactory. The expansion in steel production and temporarily in steel imports would afford considerable relief. The import policy of the Government has been so adjusted as to suit the requirements of the industry and it is gratifying to note that the industry too has risen to the occasion by putting into the market prompt and adequate supplies at reasonable prices.

There are still a number of odd corners in the sphere of coordination between the industry and the Government. The Association President suggests that indents should be pooled so that the industry would be spared the embarrassment and the difficulty of manufacturing items in small quantities. There should be a revision of the conditions in respect of delivery. The prospect of overall shortage of rail transport haunts the industry. Mr Rajagopalan hopes that the Planning Commission would raise the allotment to the railways sufficiently high to enable the full implementation of their original plan of expansion.

*

No Beating about the Bush

The Government of India have enlisted the services of two German experts for advice on the organisation of small-scale industries. These experts are now touring India. It must take sometime before they acquire a complete picture of the problem on which they are obliged to tender counsel. Meanwhile, one of them, Mr Volrath, has given expression to some general views. Mr Volrath recommends for wider acceptance the practice already in vogue in Calcutta and some other industrial centres, of large-scale industries being fed by small-scale enterprises for tools, component parts and accessories. In Calcutta, a number of big manufacturers have themselves encouraged this kind of decentralised production through small units and many of them have inspecting organisations covering these units.

This is the method generally in vogue in Japan: and some believe that the organisation and the economy of this method are well suited to countries where pressure of population is high. It is possible to look at this method from a different angle, and describe it as the technical dispersal of large-scale industries. That there is scope for such dispersal in India is demonstrated by the successful experience already obtained.

But the real problem lies elsewhere, in the sphere where small scale industries function in a competitive, instead of in a subsidiary role, in relation to the large-scale industries. The handlooms form the most striking example. The handloom industry is also typical of a method of production and organisation in which there is the minimum replacement of physical by mechanical labour and consequently the maximum of employment for men. This employment is secured at the cost of comparative efficiency and of a comparable level of individual remuneration.

Here lies the basic dilemma of small-scale industries in India. As yet, no one seems to have discovered an abiding solution. The German experts, we hope, would concentrate on this problem as the most fundamental of all, which bear on India's small-scale industries.

World of Finance

Fundamental Changes in Seasonal Influences

BY count of time, we should be at the fag-end of the busy season; but, by all recognisable omens and signs, and from available indices and indicators, the busy season this year has still a long way to go. Active note circulation continues to expand; bank credit is in full demand; the central banking institution is liberally providing funds against usance bills; and Government disbursements are in a spate. Nor is there any ground for anticipating that the trend in these respects will experience a reversal in the immediate or near future. In fact, the patterns of the busy season and of the slack season appear to be undergoing a significant transformation since 1954. The busy season has been busier than the norm, and the slack season is conspicuously less slack than the norm.

The developments in this regard merit closer study. They are, probably, symptomatic of changes in fundamental influences operating in, and affecting, the Indian money market. Though the First Plan was mainly devoted to projects connected with agricultural production and river valley projects, industry has been progressing in strident style. Our preoccupation with the results and achievements of the dams and irrigation facilities has diverted our attention from the truly spectacular results and achievements in the industrial sphere. In brief, substantial as is the expansion in the area brought under cultivation and in the size of the harvests, even more substantial is the expansion in the industrial sphere. The established industries like cotton textiles, cement, paper, engineering and sugar have recorded increased production of note-worthy significance; and new industries like rayon have emerged as infant prodigies.

Historically, the seasonal pattern of the Indian money market was determined by the monsoon and the agricultural operations based thereon. Except in the eastern regions of the Peninsula, the monsoon that is of vital import to the country commences in June and lasts till September. In the case of the jute crop in what is now East Pakistan, the April showers play an important role. The major crops of India received their sustenance from the clouds which sweep over the land from May-end. So, the sowing is generally done in June; and the harvesting begins in December and extends up to March. Thus, the period when the crops thrive on the fields is time for money market circles to take things easy; and, once harvesting begins, the movement of crops, the financing of this movement, the export of India's specialised products—all these occasion brisk activity. From this point of view, the monsoon months become roughly equivalent to the slack season and the cold weather with the busy season.

The point to emphasise in this analysis is that the distinctive features of the two seasons were governed by the predominance of agricultural operations as a money market influence. The fundamental change which is emerging in recent years is that industrial production is fast taking the place of agricultural production as the dominant money market influence. Sugarcane is in the sphere of agriculture; and sugar production in in the old days had to be financed from November to April. Thanks to extended irrigation facilities, intensive cultivation and intelligent use of fertilisers, the crushing season has steadily expanded; and the sugar industry needs to be financed up to June-July. This is cited as an instance of the new industrial predominance in the old agricultural pattern.

Industry, in most cases, is busy all the year round; and, save for the sugar industry, the seasonal pattern is known for its absence. There is another important factor to be taken into account in this study. Not only is industry working at a high pitch, but its products move out of the factory godowns with welcome rapidity. There is no lock-up of finance in stocks of raw materials or manufactured goods. All the same, the magnitude of credit required by industry is considerably larger, thanks to the higher tempo of production. A whole series of wholesalers and retailers stand in need of larger credit, thanks to quicker turnover at higher levels. For all these reasons, the new influences in the money market are more and more industrial and commercial, and less and less agricultural. Industry is not seasonal in the sense in which agriculture is. So, the busy season of the Indian money market is affected by the old agricultural factors (but on a larger scale) plus the new aggressively progressive industrial factors; and the slack season is slack only from the agricultural point of view, and far from slack from the industrial point of view.

The 1956 slack season may, therefore, be expected to be less slack than the norm and to be shorter in duration.

Peninsular and Oriental P&O Steam Navigation Company

Steady Progress in a Year of Inflation . . .

At the One Hundred and Sixteenth Annual General Meeting of the Peninsular and Oriental Steam Navigation Company held on May 9th 1956 in London, Sir William Crawford Currie, G.B.E., managing director, presided and said during the course of his speech that:

The result of the operations of the Group for 1955 had been a profit after taxation of £5.6 million, which was some £350,000 larger than for 1954. It must be added, however, that investment allowances had relieved taxation to the extent of over £800,000 and had the investment allowance not operated, the profits would have been some £300,000 less than they were last year.

The dividend still represented only some 1.3% tax free on the capital employed in the business.

DIVIDEND CONSIDERATION

Turning to current conditions as a guide to dividend considerations, Sir Wm. Currie said that costs continued to rise at the rate of 6% to 7% per annum—a rise which was extremely difficult to match in revenue. Tramp earnings continued to be remarkably good. Those of the Liner Companies operating in the East had some reason to expect better conditions generally than they had met in the past few years. The Australian trade, however, was lacking stability, and could fall off seriously under the impact of economic stress. Since the close of the group's accounts, there had been two increases in the price of oil and an increase had recently been negotiated in the basic rate of wages of our seagoing staffs, which together in a full year for the P & O Company alone, quite apart from the rest of the Group, would increase the outgoings by £425,000. The loss to the Group resulting from the recent prolonged strike in Australia was estimated to be over £300,000.

DIRECTORS' OVERSEAS VISITS

During the past year six members of the P & O Board, including Sir Wm. Currie himself had visited one or more of the Company's trading areas. He was sure such visits did real good. In a changing Eastern world the pattern of life changed with it and the difficulties which confronted their people abroad did not lessen as the months went by. The chairman was glad to be able to report to Stockholders that the interests of the Company were in good hands. In the various agencies they were encouraging the employment and promotion of the nationals of the country.

He expressed grateful thanks to all P & O people at sea, to all the company's agents, and to all P & O people ashore, for what they had done to keep the flag flying.

Britain's First Automation Strike

By PAUL EINZIG

PROGRESS of automation has now developed into an acute industrial conflict. At the time of writing Britain is experiencing its first strike against automation. It came about as a result of the decision of the Standard Motor Company to dismiss a number of workers who are about to become superfluous when the installation of automatic transfer machines in the tractor works is completed. Although the strike is unofficial it is certain to receive the blessing of the Trade Unions concerned. What is even more significant the firm of contractors engaged in the installation of the automatic equipment had to suspend its work because its own workers refused to carry on the task.,

Organised labour in Britain has thus embarked upon active resistance to automation. This attitude is viewed with grave concern not only by the Government and by employers in industry, but also by the more intelligent and responsible Trade Union leaders who realise that British industries must automate or perish in face of competition by their more progressive rivals overseas. These Union leaders are, however, helpless in face of the very effective Communist agitation against automation. The reason why this agitation is so effective is that the arguments appeal to the workers who are only interested in their immediate position. In any case no adequate effort has been made either by the Government or by employers to enlighten the workers about the advantages of automation.

The idea that dominates the minds of workers is that dismissals through redundancy must be prevented at all costs. It is true during 1955 some 2 million employees changed jobs of their own free will. Those who would be dismissed through redundancy will experience no difficulty in finding alternative employment amidst the prevailing condition of labour shortage. The workers take the line, however, that it is for them to decide when to relinquish their posts. They want to be at liberty to walk out of their jobs whenever they feel like having a change but they want to be safeguarded against being compelled to change their employment.

It must be admitted that in the present instance the fault lies not exclusively on one side. Although the Standard Motor Company claims to have warned the Unions that

there would soon be redundancy dismissals the actual notice given to the men was just over a fortnight. There has been no suggestion of any severance pay or any other form of compensation arising from their dismissal. It is true, it may be reasonably assumed that the men could find new jobs almost immediately. Even so, their dismissal entails a certain amount of hardship or inconvenience. In many instances the men will have to accept lower paid jobs in which their specialised skill would be wasted. In other instances they may have to change their residence or they may have to incur additional travelling costs.

In its attitude towards social aspects of automation the British employers are distinctly less progressive than their American opposite numbers. The difference may be explained by the fact that in Britain the balance of power has shifted to a much greater extent in favour of organised labour than in the United States. During the post-war years British employers had to put up with a great deal of interference with the management of their works, and collective agreements with the Unions on wages and working conditions have been the result of hard bargaining in which the Unions were usually in a decidedly stronger position. It is not surprising therefore, that employers should feel that, having been forced to agree to certain terms, they are under no moral obligation to pay a penny beyond the amounts prescribed in the contracts.

The strike did not arise out of compensation claims but on the fundamental principle whether the managements are entitled to make use of labour-saving equipment for the purpose of saving labour. The attitude of the workers is based on the ideological conception that factories should be run for the sole benefit of those who work in it. The present strike is a clash between fundamental principles and its outcome is liable to affect Britain's entire industrial future. Should the workers have their way, Britain's prospects would have to be viewed with the utmost pessimism.

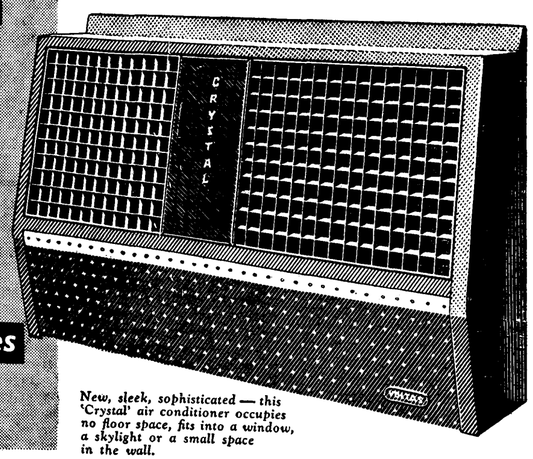
What the workers fail to realise is that the present situation has been brought about by their own excessive wages demands. Had it not been for the inflationary rise in their wages the Government would not have felt impelled to resort to disinflationary measures. The trend would be as expansionary as it had been before the adoption of these measures, even though a more moderate increase of consumer purchasing power would have moderated the rate of expansion. When some 18 months ago the Austin Motor Company installed automatic transfer machines it did not dismiss any of its workers, because, amidst the then prevailing expansionary conditions, it was possible to employ them for the purpose of increasing the output. Meanwhile, the expansionary trend has been halted. Consequently automation can no longer be used for expanding the output because of the fall in demand. In existing circumstances automation must aim not at increasing the output with the aid of an unchanged manpower, but at maintaining the output with the aid of a reduced manpower.

Possibly the lessons of this experience may be beneficial in the long run. Up to now it was generally assumed that workers can have both full employment and the non-stop rise in wages. If only they could be made to realise that excessive wages demands can only be satisfied at the cost of dismissals they might adopt a more reasonable attitude in the future. For the moment they are convinced that they can have it both ways, judging by the recent resolution of the Amalgamated Engineering Union demanding a complete ban on redundancy dismissals and also wages increases and additional overtime earnings totalling some £270 million a year. They seem to ignore the fact that should their wages claim be accepted the Government would be forced to intensify greatly its disinflationary effort, in order to counteract the inflationary effect of this addition to consumer purchasing power. The intensified disinflationary drive would necessarily mean a reduction in employment. Britain's future depends largely on whether the workers can be made to realise such elementary truths.—(Copyright).

Here's the NEW model

Crystal

It's smarter,



it's smaller

—and costs

much less

and it's got

7 plus features

New, sleek, sophisticated — this 'Crystal' air conditioner occupies no floor space, fits into a window, a skylight or a small space in the wall.

THINK of it! Cool, filtered air to breathe; a quiet atmosphere to work or sleep in; a fresh invigorated feeling — you get them all from the new model 'Crystal', the finest room air conditioner yet made for the Indian climate.

Write to Voltas Limited for details of the new, wonderfully inexpensive 'Crystal'.

For better HEALTH and greater COMFORT

Crystal ROOM AIR CONDITIONER

Full 1 ton capacity

World of Jute

Sharp Rise in Jute Goods Stocks

STOCKS of jute goods have again recorded a sharp rise. From 95,000 tons as at the end of March 1956, total stocks have increased to 107,300 tons at the end of April 1956. Hessians have gone up by 5,600 tons from 30,300 tons to 35,900 tons while sackings have shown a sharper increase of 7,500 tons to 62,700 tons from 55,200 tons. Other varieties, however, are shown 800 tons lower at 8,700 tons from 9,500 tons. At the corresponding period of last year total stocks stood at 103,400 tons made up of 39,000 tons of hessians, 62,900 tons of sackings and 1,500 tons of other varieties.

Considering the fact that mills have been working for longer hours and with larger loomage now than at this time last year, the size of the total stocks cannot be said to stand at an "anxious" level.

It cannot be denied, however, that taken by itself the latest stock figure is somewhat disturbing. From the following table it will be found that stocks at the end of April 1956 are the highest since October 1953.

Even supposing that production during April has been as high as in March, the resulting position is not very encouraging. For, for stocks to stand as high as 107,300 tons despatches should have been much lower than in March. It is, however, to be noted that the period covered by the 4 months Jan-April is generally a slack period for jute goods despatches. But compared with last year the pattern is slightly different this year. In the first four months of 1955, despatches were rather steady at 76,700 tons, 74,800 tons, 76,700 tons and 76,100 tons whereas this year they have been at 72,900 tons, 80,000 tons and 92,800 tons respectively for January, February and March. As has been pointed out earlier, April seems to have reversed this trend.

	Stocks (In 000 tons)			
	1956	1955	1954	1953
Jan.	78.4	76.4	95.7	128.4
Feb.	89.7	82.9	95.4	136.3
Mar.	95.0	94.6	92.9	138.7
April	107.3	103.4	91.4	137.5
May	.. ..	94.7	86.5	138.8
June	.. ..	87.6	86.9	133.8
July	.. ..	81.5	80.8	136.7
Aug.	.. ..	79.2	70.7	133.4
Sep.	.. ..	69.7	67.9	118.6
Oct.	.. ..	62.3	69.4	102.9
Nov.	.. ..	63.0	69.0	98.3
Dec.	.. ..	63.5	69.6	98.6

A detailed comparison of the stock position at the end of April 1956 with those at the corresponding months of the previous three years will instil confidence rather than dissatisfaction. It will be seen from the above table that April is generally a month of high stocks. As against 107,300 tons in April 1956, stocks were 103,400 tons in April 1955, 91,400 tons in April 1954 and 137,500 tons in April 1953. It will be interesting to note that during 1955 April had the hghest stocks; that in 1954 and 1953 only two more months had stocks higher than April.

If it is remembered that exports usually begin to pick up from the second quarter, the big rise in stocks in April need not cause undue alarm.

Prices in the jute goods market showed a hardening tendency toward close due to bull support. Though on Tuesday the market ruled rather quiet in earlier dealings on the announcement that stocks of goods with IJMA Mills have recorded a sharp rise to 107,300 tons, sentiment rallied by the time the day's transactions came to a close. The upward movement was mainly impelled by the firmness of raw jute. On Wednesday taking advantage of the rise in rates mills came out as sellers. But this time the sales were fully absorbed and the market closed the week fully steady with sackings making considerable headway.

The market opened the week with Hessian Ready done at Rs 38 and B. Twills quiet at Rs 104-12. July-Septr., Hessian was placed at Rs 38-7 and B. Twills at Rs 104-6. By mid-week prices especially in the sackings section displayed a hardening tendency due to bear covering and on account of shipper interest at lower levels. While Hessian Ready was unchanged at Rs 38, B. Twills moved up by fully one rupee to be placed at Rs 105-12 July-September Hessian was three annas lower at Rs 38-4 and B. Twills were higher by 10 annas at Rs 105.

On Tuesday, the big rise in stock figures had a restraining influence on marketmen as the general expectation had been that the increase would be small. In later dealings, however, prices resumed their upward movement helped by the firmness of the raw jute market. Hessian Ready continued unchanged at Rs 38 and B. Twills gained couple of annas to Rs 105-14.

Conditions continued to be fully steady on Wednesday also inspite of mills' sale of ready and forward sackings. Hessians were, however, quiet with Ready marked down by an anna to Rs 37-15. B. Twills recorded a smart advance to Rs 106-4.

	Week's Opening Rs As	Week's Closing Rs As
Hessian:		
40″×10 oz ..	38 2	37 15
40″×8 oz ..	32 4	31 14
40″×7½ oz ..	29 12	29 8
B. Twills ..	105 2	106 4
Cornsacks ..	105 12	106 8
A. Twills ..	129 0	129 0
L. Twills ..	119 0	119 8
D W. Flour ..	122 8	121 8

The raw jute market considerably firmed up with sellers reserved. Assam Bottoms May-June shipment was reported done at Rs 27 per maund.

The raw jute market in Pakistan ruled quiet during the past week with a small turnover. Overseas enquiries continued to be meagre. Arrivals from the interior into Narayangunj were estimated at about 2,000 maunds. May-June shipments Pakistan Jat Bottoms Rs 30-0; District Bottoms Rs 29-8 and Northern Bottoms Rs 29-0 all per maund.

World of Tea

Good Demand for New Season Tea

NEW season's teas from Darjeeling offered for sale at a special Export sale held in Calcutta on Wednesday met with a strong demand with a number of invoices with attractive flavour realising prices well above Broker's valuations. Stylish whole leaf grades and Fannings were the strongest feature and generally sold above valuations. Plainer sorts met with less demand with prices rather irregular.

The inability of the trade to maintain retail prices of tea at fairly constant levels has rendered it difficult to face the keen competition offered by other beverages. Speaking at the annual trade dinner last week in London, Mr. C. A. Crossle, Chairman of the Tea Trade Committee pointed out that since the UK trade depended on its ability to offer the housewife tea constant in quality and nearly constant in price, it should be the common endeavour of the trade and the producer alike to ensure that no frequent changes occurred in the retail price of tea.

Last year's violent fluctuations in tea market prices have been the result of interference at source with the free flow of tea. "We are faced with keen competition from other beverages and we would like to feel that those with whom we share a common interest would not hinder our efforts to meet this competition."

The remedy is to allow tea to flow freely to the point of requirement and Mr Crossle wants that the individual grower should be permitted to sell his tea in markets where his experience has shown that he can get good prices. This way "we can hope to see an end to the present ludicrous price differentials between market and market and on day's sale and the next."

Prices movements were irregular and easier for all kinds at this week's tea sales in London where about 27,616 packages of tea, including 21,466 from North India and 1,658 from Pakistan were on offer. Though the better quality medium kinds were in fair demand thin liquoring and stalky teas were ½d to 1d lower per lb. Withdrawals were heavy and the undertone was weak at close with the quotation for clean common broken pekoe at 3s 4½d.

Meanwhile stocks of tea in London continue to show steady improvement. Stocks of tea on April 27 were higher at 103,802,160 lbs. as compared with 100,366,420 lbs. on April 20. However, stocks are considerably lower than at the corresponding week of the previous year when they totalled 163,850,720 lbs.

A majority of the types of tea offered at this week's Export tea sale in Calcutta met with good demand with prices fully firm. The few good liquoring C.T.C. teas on offer were in keen request and sold well. All bright liquoring teas with autumnal character and Black leaf fannings grades were a strong feature. While plain and medium brokens were sometimes a little easier, plainer kinds often sold at dearer rates. The export sale consisted of 53,000 packages.

An irregular tendency was noticeable at this week's Calcutta Internal tea sales wherein approximately 20,800 chests were on offer. Demand, however, had been good. The two descriptions which sold well advancing by one to two annas were a few black leaf teas and some best liquoring autumnal C.T.C. Assams. Quotations: Medium Dooars Dust Rs 1-8 to 1-9; Medium Grainy Dust Rs 1-9 to to Rs 1-10; Best Assam C.T.C. Dust Rs 2-12 to Rs 2-13 (nom.).

In the leaf sales, approximately 5,800 chests were on offer. Here again though the dmeand was good rates were rather irregular.

In the Internal Sale held in Cochin on May 3, demand was uninspiring with withdrawals heavy. Best liquoring High growns sold 2

(Continued on page 879)

World Overseas

US Notes

Preliminary estimates just released by US Department of Commerce show that new monthly import record of $1,149 million was set in March, topping the previous high of March, 1951, by 4 per cent. March also was 10 per cent above February, 1956, and 13 per cent above March, 1955. The United States purchase abroad now have exceeded $1.000 million mark in every month since last October.

For first three months of 1956, the US imports hit quarterly high of $3.271 million, some 19 per cent above the first quarter of 1955 and 6 per cent above last year's fourth quarter. The monthly average for the first quarter this year amounted to $1,090 million. In 1955--the record year for US purchases from other countries—imports averaged $948 million a month.

It is interesting to note that increase in US imports has been outstripping rise in US commercial exports which also are running at record rates. True, other countries still are buying more goods from the United States than they are selling to it. But their merchandise trade deficit with the US has dropped to $188 million a month so far in 1956, compared with $240 million a month in 1955, and $220 million a month in 1954.

Coinciding with the expansion of US imports, Britain's gold and dollar reserves—measuring rod for the sterling area market—have risen every month since the beginning of 1956, after sagging in 1955. These reserves rose another $51 million in April to a total of $2,328 million, with part of increases attributed to dollar-earning exports by Australia and African territories which are members of sterling area.

This evidence of US imports remaining high in April—though, probably, not up to the record level of March—is supported by US Treasury Department's Report of Customs receipts on foreign goods entering the United States. This week, the Treasury Department estimated receipts for the month of April at nearly 57.5 million, only 16 per cent below March and 12 per cent above April last year. Customs receipts cannot be considered the exact measurement of import level since more than half of all US imports enter the country duty free: nevertheless, they have proved to be reasonably accurate barometer of import trends.

Products covering the wide range, both raw materials and manufactured items, are finding larger markets in the United States. American industry sources have reported, for instance, that US imports of crude oil, averaged 860,000 barrels a day during first quarter of 1956 —some 16 per cent more than in the same period of 1955. The second quarter arrivals, moreover, are estimated at 915,000 barrels daily, a rise of 25 per cent over the corresponding period of last year.

Automobile provides good example of manufactured product that is finding growing market in the United States. The annual sales of imported automobiles in the United States climbed to more than 58,000 in 1955 from 12,000 in 1949. In an effort to capture even greater share of the American market, manufacturers in France, Germany, Italy, Sweden and Great Britain have joined the American car makers in exhibiting their new models at 1956 International Automobile Show, now in progress in New York. The Congress, meanwhile, has taken action that may well contribute to continuing the growth of US trade with rest of the world. The Appropriations Committee of the House this week allowed the Commerce Department funds to expand its foreign trade statistics and to cooperate more closely with State Department in gathering information of value to both exporters and importers.

*

Britain

The gold and dollar reserves of the Sterling Area rose by $51,000,000 during April and stood at $2,328 million on April 30 Defence aid estimated at $4,000,000 was received from the USA during the month, and $2,900,000 were paid to creditors of the European Payments Union (EPU) in bilateral settlement.

On the provisional figures for the month, the UK had a surplus of £14,000,000 with the European Payments Union, which will fall to be settled in May as to 75 per cent in gold or dollars and as to 25 per cent by a reduction of the debt to the Union.

As the figures indicate, Britain's progress towards a more satisfactory gold and dollar position is continuing at a steady pace. But there is still a good deal of ground to be covered, and it should be remembered that this is the season of the year when the gold and dollar figures are normally at their best.

The apparent decline between March and April—the reserves rose by $67,000,000 in March—should not be regarded as particularly significant. There are large Government receipts, like those for off shore sales, that tend to be concentrated in one month to the detriment of the next, and no doubt something of this kind has affected the relationship between the March and April outturns.

The EPU figures, revealing as they do the first surplus since May of last year, are most encouraging, though here again April is normally a month when good results are expected. The two previous Aprils had rather larger EPU surpluses.

The improvement in the gold and dollar position has now been continuous for seven months. Reduction of the deficit began in October, and the first surplus was in January. The reserves in the first three months of this year stood at: January $2,149 million, February $2,210 million, and March $2,277 million. *

A new £48,000,000 development plan, to be carried out at the Abbey Works, Port Talbot, over a period of four years, has been announced in London by the Steel Company of Wales.

The plan, designed to increase the production of steel ingots at the works from 2,400,000 to 3,000,000 a year by 1960, has now been approved by the British Government.

"An immediate start is to be made with the work", the announcement said.

The plan provides for the conversion of steel ingots into steel sheets and plates as well as tinplates to assist in meeting the expected increase in the demand for flat rolled steel products in 1960. The plan has an important place in the programme of the steel industry to meet the demands of the home market and to increase the volume of exports. It is estimated that the plan will involve expenditure at the rate of £12,000,000 per annum for four years.

*

Details of some of Britain's major oversea financial commitments, which will need to be sustained by a large surplus on the current balance of payments, are given in the latest Treasury Bulletin for Industry.

In 1954 and 1955 capital commitments came to about £200,000,000. But in future years, the Bulletin points out, the total will certainly go up again.

Some of the heavy commitments which the United Kingdom has already undertaken are: (1) Releases from the U.K.'s subscription to the International Bank. (Out of the £60,000,000 to be available over six years from 1953, £7,200,000 has so far been called on from the £24,000,000 already authorized.) (2) Special credits to Iran and Pakistan of £20,000,000 under the Export Guarantees Act. (They have not yet been fully drawn.) (3) Subscription to the International Finance Corporation of £5,000,000. (4) Lending of £26,500,000 for the third Indian steel plant. (5) Assurances of U.K. support for the building of the Aswan High Dam in Egypt: (6) Loans under Colonial Development and Welfare Acts. (These have been running at a rate of just under £20,000,000 a year. The annual rate is likely to go up. There is also the Colonial Development Corporation, which has been lending abroad some £6,000,000 annually in the last few years.)

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Ever since I read some months ago that Professor Galbraith of Harward was coming to India to study the Second Plan. I have been looking forward to reading what he may have to say about it. This was not due to any exaggerated deference to foreign experts, but a certain curiosity about the views on our Plan from one whom I had only recently discovered as a most stimulating and witty interpreter of an economy very different from our own. The particular book that fell into my hand was entitled American Capitalism. (Mr Galbraith, I have since discovered, has no use for other more seemingly respectable euphemisms for the term). In this book he has developed with great ingenuity the thesis that the American Economic System works today on a principle that is something of an analogue of that now unfashionable notion of international diplomacy—balance of power, or as Mr Galbraith calls it, 'the concept of the countervailing power'. Commenting on the fact that the American economy is apparently behaving in brazen defiance of 'rules', he points out reasonably that in that event "the trouble lies not with the world but with the ideas with which it is interpreted. It is the ideas which are the sources of insecurity, the insecurity of an illusion". The illusion he destroys with some zest is one that is widely prevalent in the US., that their economy is governed still by the principle of self regulating competitive market.

*

But of immediate relevance to my curiosity was not so much the brilliant theoritical elaboration of the central thesis of the book, as certain comments on the American economy in the chapter entitled the "Unseemly Economics of Opulence". He mentions in this chapter, what is commonplace enough, that one of the important sources of strength of the American Economy is its abundance. But he makes the further point, not so generally realised that the strength derives from the 'margin for error' provided by this very endowment. Discussing the 'inefficiency' implied in that fantastic phenomenon of modern commerce—advertisement and sales promotions, he by passes arguments of the unctious opponents as equally solemn defenders of the phenomenon by suggesting that 'our proliferation of selling activity is the counterpart of comparative oppulence... It may be waste but it is the waste that exist because the community is too well-off to care."

*

It is this ability to afford inefficiency in husbanding material and human resources that makes the American Economy so different from that of the other parts of the world, especially Asia, Africa and to an extent Europe. "Wealth, especially growing wealth, has not only been a solvent for mistakes, it has also been a solvent for what, in its absence, might have been grave social strains." It is this aspect of the matter that that many Americans do not visualise with sufficient clarity. They assume with a splendid unself consciousness that everybody must be as well provided as they are and can afford the kind of peccadilloes that they themselves have indulged in. From this springs a whole series of differences in psychological, political and even moral orientations. They find it difficult to understand, for instance, how Mr Nehru can be so exasperatingly 'moral' on a question on which, if they knew the truth, only their wealth enables them to have the luxury of a conviction. They can even afford to discover themselves wrong in some of their convictions as they did, for instance, over the goings on of Senator MacCarthy.

*

In the more limited sphere of economics, the consequence of the absence of room for manouevre has been, to make Mr Galbraith's analysis of American Economy largely irrelevant for our purposes. That was why I was interested to find out what he may have to say about our efforts. Economics, as far as we are concerned is still the science that details with scarce resources that have alternate uses. We are till at a stage of development with which the dazzling successes of mid-twentieth century American temporaneous than the days of Economy is apparently less con-Ricardo and Malthus (?), when it was reasonably believed that unrelieved poverty was the ordained state of man, any surplus wealth being "promptly absorbed into the additional months that wealth itself would spawn." Only we have the further complication of this temporal anamoly of being in the twentieth century with an economy appropriate to the nineteeenth and eighteenth centuries. The embarrassments this involves, and emulatory desire to match performance elsewhere, and the problems connected with attempts to jump historical processes are only too well known.

*

And yet the Indian Plan is a manly attempt at this, what at first sight looks, hopeless task. What would be Mr Galbraith's suggestions on the subject? In a sense, Mr Galbraith's report was a disappointment. (I must add that I have only read press summaries of the report and for all I know what I missed may still be in the full version of the report.) The reason for my disappointment was that I was looking for the wrong kind of thing. I was looking for the professor's brilliant theoritician, whereas it was Mr Galbraith, the Deputy Administrator of the O.P.A., the executive head of price control administrations of World War II that I ought to have looked for. It is in some ways a particularly egregious error to have made since the Government of India have far more important use for Mr Galbraith than the production of an interesting academic exercise. In the event, they were amply justified in drafting the help of Professor Galbraith since his specific suggestions on the Second Plan are among the most refreshing and constructive I have read.

*

The only theoretical strand in the report, so far as can be gathered from the summarised reports is that relating to what Mr Galbraith calls the Indian Economic Philosophy. This portion is not so much speculative as homiletic. Mr Galbraith gives as his 'central and dominant reactions to his stay in India a certain lack of confidence in and a certain 'cynicism' about, the economic policies of the Government among numerous Indian intelectuals. This, he traces to a certain unwillingness to think independently on their problems and tendency to intellectual servitude to foreign ideas. This coupled with a certain penchant for doctrainaire solutions makes them largely ineffective in any discussion of the real problems.

*

That this indictment is largely true can be denied only with hypocracy. It is of course difficult to define precisely an Indian Intellectual, as indeed any intellectual, except in music hall terms. My own feeling is that India has a large intellegentia larger perhaps than many other countries—but of that rarer being who is almost physically excited by an idea we are, numerically speaking, less well provided. Even among these excessive obsequiousness to authorities elsewhere is either an ideological predicament or an educationally conditioned reflext. Even

when they are theoretically preoccupied, they would hardly explore problems thrown up by current Indian experience. For instance, the opportunities and difficulties I mentioned earlier—the simultaneity of a backward economy in an age of abundant technical knowledge elsewhere: the possibility, as a result of experience, of avoiding the excessive cost paid for development by economies that started on their career of development much earlier than we did: the very real opportunity for evolving a kind of economy that ensures a certain reasonable state of well-being for all of us without distorting in the process, human relationship. These are speculative regions which our current experiments in planning can help chart. Phenomena like the Bhoodan are lazily and contemptuously dismissed as cranky without really examining the data: the far reaching consequences, again, of the Second Plan's simultaneous emphasis on the development of heavy industry and the small scale industry have not been studied in any detail.

✱

But the most deplorable part of the whole business is the intellectual sloth involved in the refusal of these persons to concern themselves with the details of the tasks under the Plan. There is an all too common tendency to escape into the realms of sterile discussion of the theoretical assumptions of a particular decision instead of studying the practical implications of a particular course of action. Mr Galbraith's chief complaint about Indian planning is that the least strenuous thinking has gone to the tasks of organisation under it. While the financial and other implications of the Plans are discussed ad naseum, little is heard about organisational problems.

✱

Mr Galbraith himself has made some important suggestions on the subject which I shall discuss next week.

Partners in Progress

ONE OF the most important developments in Indian industry is the new aluminium smelter going up at Hirakud, Orissa. Designed and constructed by the Canadian consultants of Indian Aluminium Company, this 10,000 ton smelter will embody the latest advances and techniques developed in their world-wide research activities. Canadian money, too, will share the costs of this project, to finance a part of which Indian Aluminium Company proposes to issue new capital.

The Hirakud smelter will be yet another milestone in the history of this Canadian-Indian partnership of progress.

BALANCE-SHEET REVIEWS

(Continued from page 864)

New Central Jute

An event of importance in Calcutta's corporate scene was the merger of the three Sahu Jain jute mills, constituted now under the style of one of them, the New Central Jute Mills Company Limited. Of course, for the reason that the companies were merged as at the end of 1954, and since the accounts of both Albion and Lothian do not coincide, it is not possible to study the consolidated balance sheet in reference to what are normally called comparative figures. Thus what we can do is merely to note the size of the figures as they relate o the enlarged and merged entity of New Central. Sales during the year 1955 amounted to Rs 4.54 crores. The margin of net profit worked to a little better than 10 per cent, being placed at Rs 46.14 lakhs. The provisions are Rs 13 lakhs for taxation and Rs 11.18 lakhs for depreciation. The ordinary dividend is at 15 per cent absorbing Rs 12.82 lakhs, and the forward is placed at Rs 8.71 lakhs.

The balance sheet of New Central discloses an ordinary capital of Rs 85.50 lakhs and preference capital of Rs 33 lakhs. Undistributed profits are at a staggering level. There is a capital reserve of Rs 1.71 crores, the reserve fund is at Rs 1 crore, and the carry forward, as we have seen, is at Rs 8.71 lakhs.

New Central gross block is valued at Rs 4.29 crores. The most important of the liquid assets is stocks, at Rs 1.03 crores. The company has the comfortable cash position of Rs 10.73 lakhs.

Liquid assets of New Central were placed as at the end of 1955 at Rs 1.83 crores. On the other hand, the liabilities comprised Rs 7.87 lakhs as taxation reserve, Rs 65.18 lakhs as loans, and Rs 43.95 lakhs as other debts.

It is scarcely to be doubted that the consolidation of the three Sahu Jain jute mills will enable optimum working as reflected in a decline in overhead costs. As such, we can confidently expect that, when the accounts for 1956 are published—and conditional only on the jute goods market continuing to be fairly satisfactory—the results will reflect the advantages that have been gained by the scheme of merger that has been executed by Sahu Jain Limited.

SOUTH EASTERN RAILWAY TENDERS.

The General Manager, South Eastern Railway, Garden Reach, Calcutta—23, invites Tender No. GM4/56/58CS(56) for supply of 332 tons of M.S. Dog Spikes BG and NG to C.E.'s Drg. BGM/8B, alt. 2 and NGM/9. Tender forms are obtainable from the Controller of Stores, Garden Reach, Calcutta—23 (I.B. Section) on remittance of Rs. 5/- per copy by Money Order to him direct in the case of outside Firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta—23 by local firms. This amount is not refundable. Closing date is 22-5-56 at 12 noon. Firms not on the Railway's list of approved Contractors must submit a valid Income-tax clearance certificate signed by the Income-tax authority with their tenders.

Bombay Review

INTUC Session

The proceedings of the Indian National Trade Union Congress Annual Session embody labour aspirations which call for some radical changes in current wage policy. Mr G. D. Ambekar, the President of the Congress, has put the whole matter in a nut shell. 'Without a revision of wages no enthusiasm can be created in the working classes and among the public for the successful implementation of the Second Five-Year Plan and their co-operation in the national development will be very difficult."

The INTUC is reputedly friendly to the Government; and in its approach to the workers it has had frequently to face the charge of being a Rightist group. The realistic manner in which the organisation has been seeking to interpret workers' demands to the Government and the Government's difficulties to the workers has attracted to it the majority of industrial workers in India. The strength of the organisation has steadily grown in the last few years.

The Government on their part are colsely associated with the INTUC leadership; and but for this association and the understanding it has bred, industrial peace during the first Five-Year Plan would not have been as secure as it actually turned out to be.

There is a note of moderation in the interpretations and demands coming from the INTUC: and this very fact casts an obligation on the Government to give the utmost consideration to them. It can be said that the demands of labour as emanating from the INTUC are the minimum which organised labour would be prepared to accept.

The thesis for a higher level of wages is sustained by the following arguments: While during 1950-54 the share of wages in net income from factory industries has declined from 42 to 33 per cent, the share of profits including dividends, interest and taxes went up from 58 to 67 per cent. Relatively, labour has fared worse than the other interests. Secondly, production has gone up by 37.2 points between 1950 & '55 The enforcement of the new Company Law would result in reduction in administrative charges which may bring about a saving of another 10 points. The cuts in high-level emoluments are expected to result in further savings equal to another 5 points. All told, the paying capacity of industries would be 52 points higher. An increase of 25 per cent in wages will therefore be amply justified.

Mr K. P. Tripathi, the General Secretary, speaking in the Session, criticised the excessive ploughing back of resources through bonus shares, etc. He pointed out that such additions to capital reflected the capacity of the industry to pay more by way of wages. The diversion to dividends of what could have gone into wages, according to him, should be stopped; he further points out that disproportionately large dividends would only aggravate differences in income and the consequent concentration of wealth. In the General Secretary's view, a 25 per cent increase in wages should be straightaway granted to the workers and linked with a two-year contract for industrial truce.

In order to save the workers from the invisible loss of real wages, Mr Tripathi demands stabilisation of price levels on a wider front. Hitherto, the method of controlling price levels through Central Reserves has been more or less confined to food grains. A case is made out for the extension of the method to all essential goods such as salt, gur, kerosine oil and coarse cloth.

In the course of his address, Mr Tripathi also dwelt on the need to balance the purchasing power of the non-food producing population against the marketable surplus of agricultural production. Though there is nothing new in this idea, it has certainly not received adequate consideration at the hands of the authorities as an indispensable basis of price policy. If this basis is understood, it may be possible to do away with price support, except perhaps in a very temporary and localised manner. There is irrefutable force in the contention that in a country where a large proportion of the population goes without two full meals a day and nearly one fourth of the people spend 80 per cent of their income on food alone, increases in food production should find ready consumers rather than go abegging for buyers.

On the question of employment opportunities, opinion was definitely in favour of the maximum encouragement to labour intensive methods of production, which is another form of saying that the small-scale industries should be nourished well in as vast a scale as possible. Mr Ambekar went to the extent of condemning high industrialisation as another form of purging to maintain political power in the hands of a particular class.

One of the Resolutions passed by the Subjects Committee urged the Government to act promptly and boldly and to give all necessary financial and other assistance for the fullest development of the khadi and other village and small-scale industries through organisations set up for the purpose 'giving them importance equal to that of the basic industries. The Resolution demands that no further permits for the installation of looms and spindles in the mechanised sector of the textile industry should be granted.

In the mechanised sector, as for instance, the textile mills, rationalisation is not wholly disapproved. But the question must be subjected to scrutiny by a special committee and whatever steps are to be taken, they must proceed on the assurance that no worker is displaced.

On the question of industrial peace, the INTUC Working Committee's Resolution welcomes the Prime Minister's suggestion that in a planned economy there should not be any room for strikes and lock-outs and industrial conflicts should be

resolved by peaceful and constitutional methods. The Resolution points out that the working class in a large measure has already accepted this method, but that the machinery provided for it under existing legislation is 'inadequate, dilatory and defeating its own purpose'. Along with it, the apathy of State Governments is complained of. While improving the machinery on the one side, industrial truce is sought to be ensured by the complete fulfilment of the recommendations of the Fair Wages Committee, implying the acceptance of the right of the workers to progressively higher standards of living. Separate Wage Boards for different industries follow as a consequential demand.

*

The public sector has come in for some criticism in a Resolution specially devoted to that sector. This Resolution stresses that whatever labour laws and regulations exist should be applied to the public sector, including public utility and other services run by the Government and local authorities. In the matter of treatment of workers, of the provision of amenities and of prompt machinery for the settlement of disputes, this Resolution asks the Government to function as a model employer. There is apparent dissatisfaction with the attitude of the public sector towards trade union activities. Regional disparities in development, the participation of workers in management, the extension of amenities and incentives to the entire body of industrial workers form the themes of the other Resolutions.

The INTUC Session has indicated unmistakably the minimum conditions under which whole-hearted labour co-operation could be secured for the Second Plan. As a piece of general guidance the Resolutions are friendly and constructively helpful. But difficulties cannot we ruled out when it comes to a question of details. For instance, a demand has been made for wage boards. Alongside there is also a demand for the living wage as suggested by the Fair Wages Committee.

The wages board will not always find it easy to discover a living wage which would also be practical. The Fair Wages Committee has not failed to anticipate the underlying conflicts between the different considerations which should govern the determination of the living wage. The living wage, according to the Committee, must provide a measure of frugal comfort to the worker and his family, but the wage level itself will have to be related to the paying capacity of the industry. the level and distribution of national income. the general level of wages in the region and the productivity of the individual worker. A fairly complicated task is involved for the proposed wage boards.

*

After the great silent revolution in which five hundred and odd crowned heads were thrown into the dust, a country cannot be expected to revive its regard for monarchy. The creation of Rajpramukhs was a concession to orthodox sentiment and the appropriation into the administrative fold of a handful of individuals who could go on well with their erstwhile subjects was to some extent dictated by the dearth of talent. On the whole, the Rajpramukhs had smooth sailing in their respective States, though now and then they could not avoid getting entangled in the repercussions of political feuds. The SRC Commission have recommended the abolition of the institution of Rajpramukhs.

Now there seems to be a move to offer governorships to at least some of them by way of consolation. It is not clear whether the Government of India have the intention of obliging the Nizam. Anyway, opposition has already bestirred itself. The President of the Visalandhra Mahasabha has raised the point that no Rajpramukh should be appointed in a territory he had ruled before. Mahasabha President is emphatic that the Nizam should not be appointed as governor of his State.

Unfortunately, the Nizam has built up a background in which the people of the Hyderabad State could no longer look upon him with any since affection. The Nizam is known to have great administrative talent, though at least in the latter half of his personal rule, he was content with no more than a general supervision of the affairs of his State. Whether any other State would willingly accept him remains to be seen.

That monarchy itself in this continent has not wholly forfeited respect could be seen from the events of the Nepal coronation. In this border country, a young ruler is endeavouring to transform a somewhat mediaeval economy into a modern one. There is no doubt that the personal factor is paramount.

National Development Council Approves the Second Plan

WITH the solitary dissident vote of Mr Hanumanthayya, the Chief Minister of Mysore, the National Development Council which met here recently passed a resolution generally approving the objectives priorities and programmes embodied in the draft plan. Both in his inaugural address and in his concluding speech, Mr Nehru put the national effort envisaged in the Plan in perspective. This had the salutary effect of making the discussion avoid getting bogged in the details of the task, or, to change the metaphor, of saving the participants from missing the wood for the trees.

Referring to the tasks of national planning, he said: "Just as the flow of life is continuous, planning and development which try to regulate the flow of life of a nation have to be a continuous process". The analogy of Life is particularly apt since it implies an attitude of mind that makes for seeing the Plan as an instrument that tries to organise something whose essential characteristic is a state of flux. "Whenever we have considered the Plan anew, fresh ideas have come, fresh criticisms have come and so it is difficult to say that we have finalised. That is why this whole effort, while it has a certain measure of finality for the moment, is now said to be flexible and something which we can consider from time to time and improve upon with further experience."

For those who still consider that the Second Plan is inspired by doctrinaire commitments, to unexamined dogmas, Mr Nehru has the reassuring word that it is nothing of the sort: "We are no longer playing about with words and phrases and with ideological approaches . . . because we are dealing with actual problems and try to seek some solution, partly, of course, by the ideological approach, but more so by considering the actual problems that we have and the experience that we have gained".

As is not unusual with the Prime Minister whenever he is on the subject of the Plan, he could not, even on a severely 'technical' occasion like this, altogether conceal his excitement and sense of tremendous opportunities offered by this high adventure of planning the prosperity of millions. "The more one has considered planning, the more one has seen the complexity of the matter, the more one has been fascinated by it. But while one sees the complexity of it, new problems arise for us to consider at every step. At the same time, the more we think, the more our self assurance increases, if, I may say so, in our belief that we can do this and do it effectively".

Giving further indication of the fact that the Plan is no lazy ideological alibi, but a product of the most strenuous thinking on our problems Mr Nehru said: "The more we have dealt with planning the more it has taken a shape of our own effort to meet with the problems of India and not merely to imitate or copy the efforts made by others in other countries to meet their problems. The fact is that we have been thrown upon our own resources, not only material, but mental and intellectual resources".

Thinking ahead of a decade from now the Prime Minister said that the Second Plan was the real beginning. "I should imagine that we would require two more plans, i.e., the second and the third to be firmly established and to produce the momentum which would enable our economy to go ahead almost self-propelled. I think we require ten years for that. After that of course, progress will be continuous with every five years or every year, but I think that probably the main difficulties and the main hurdles will be crossed within that ten year period"

Referring to the need for a sense of urgency animating all our efforts in the furtherance of the plan, Mr Nehru referred to the familiar comparison of our Parliament with that of a country at war. This implies apart from active co-operation from all, an all-exclusive absorption in the tasks of the Plan. This also implies compromises of various sorts, or as Mr Nehru puts it: "sacrifices—sacrifices even of opinions and convictions" up to a point. Whether we are on a war-footing or not, the giving of supreme importance to the "whole co-ordinated approach of the Plan and of being courageous enough to suppress ourselves when suppression is necessary for the wider good" are the essential pre-requisite of the success of the Plan.

During the discussion, many interesting points of view, especially on land reform, emerged. The rather self-conscious industrial bias of the Second Plan was, it was emphasised, not to be at the expense of agriculture. The importance of ensuring adequate and even abundant food supply during the Second Plan period was stressed by the Prime Minister who said that in a sense the entire success of the Plan depended upon our ability to avoid scarcity and to control prices of food stuffs. Many members suggested increase in targets of food production, now fixed at ten million tons a year. It was agreed that while 15 per cent increase over this year's production envisaged for the Plan-period should be allowed to stand for the present, the Planning Commission should hold further consultations with the States and see whether higher targets should not be aimed at. In any case. it was agreed that efforts should be made every year to exceed the target.

Regarding the resources for the Plan, no detailed discussion seems to have taken place. The only suggestion made was that the final version of the Plan should not have an uncovered gap presumably because it sounds odd that a social blue print of this sort should leave such a vital question unanswered. But it is not seen how an unequivocal answer to this question can be given at this stage in view of the many uncertainties of the situation. A Plan of this size is not exactly a tidy affair with all loose ends nicely tied up.

On the question of raising the taxes needed for the purpose of the Plan, the Chief Ministers promptly promised to raise fresh taxation at the rate of Rs 50 crores per year. In view of past performance it is also difficult to see how far this promise is going to be fulfilled. But the task cannot, by any means, be shirked in view of the requirements of the Plan. Therefore, the unpleasant task of extracting this sum from the people has to be faced by the authorities at the State level, despite political embarrassments of various sorts especially with an election just round the corner.

On the question of land reforms, especially in relation to the fixing of a ceiling on agricultural holdings, there was a great deal of divergence of opinion. The draft plan had envisaged the ceiling in monetary terms suggesting that a family holding be defined as the the area of land that yields a gross average income of Rs 1600 per annum or a net income of Rs 1200 per annum and fixed the maximum holding permissible at three times the family holding. This means that no family can have a holding of more area than that would fetch a gross income of Rs 4800 a year.

Put this way, invidiousness involved in this vis-a-vis owners of other forms or property and skill is at once apparent. The Mysore Chief Minister who expressed himself strongly on the subject was supported by Dr B. C. Roy of West Bengal and many members from Bihar. It was pointed out with some justice that this kind of arrangement discriminated against the rural population. Considering that under the new dispensation the owner of the land must also be its cultivator, the maximum gross earning of only Rs 4800 is grossly inadequate compared to what many in the cities get for doing much less vital work with no risks involved. Moreover, the man in the city getting the equivalent income is not likely to pay any tax, whereas his rural counterpart will have to pay some kind of land revenue and other levies. Mr Hanumanthayya suggested that there should be an exemption from land revenue for incomes up to a particular limit as is allowed in income tax.

This considerable body of influential opposition to the idea of ceiling has had this effect of leaving the question of fixing a ceiling on land holdings for the decisions of the State Governments. This, it will be recalled, was also the position under the first Plan. The Prime Minister who saw that many even among the rank and file were of the view that the ceiling proposed was on the low side, declared that the Commission had merely suggested certain broad principles for general guidance and that it was ultimately for the State Governments to evolve suitable measures based on local conditions.

Except for this modification, the exact extent of which will be clear only when the Plan emerges in its final form, the National Development Council approved (Mr Hanumanthayya dissenting) the Second Plan's general approach, size and priorities. The resolution passed at the end of the two day session affirmed the common determination of the Central and State Governments to carry out the Plan and to improve upon the targets set in it. It also called upon all the citizens to work wholeheartedly to realise the task, targets and aims of the Plan.

WORLD OVERSEAS

(Continued from page 870)

In addition, the Bulletin points out, there are other possible commitments. Substantial sums may be required for the Kariba hydro-electric project in the Federation of Rhodesia and Nyasaland. There is also the Volta River project in the Gold Coast, in which, in principle, the U.K. would favour participation.

"£200,000,000, however, is not the full measure of current surplus needed" the Bulletin adds. "Over and above this sum, it must provide for any net reduction of total sterling liabilities, for the repayment of the U.K. debt to the European Payments Union, and for the rebuilding of the reserves"

The Bulletin estimates that the U.K. needs in normal circumstances a surplus of between £300,000,000 and £350,000,000.

The conclusion given by the Bulletin is: "A large surplus on our current balance of payments is not just a convenient additional safeguard. It is something which the U.K. must have. . . ."

North Indian Notes

A Testing Time for Congress

With the next general elections in sight, it is sad to contemplate that the party in power, instead of showing new strength and vigour, reveals unprecedented weaknesses. In West Bengal a substantial group of Congress-men have chosen to take the party openly to task for having failed to implement its quandom pledge in respect of linguistic reorganisation.

Two by-elections for Parliament have unmistakably shown how strong feelings on this subject are in this State. The Chief Minister hurriedly raised the white flag in answer to the adverse verdict in the City election. Political consequences of this surrender, howsoever pleasantly concealed in democratic phrases, are not altogether unpredictable. In Bihar, a powerful wing in the Congress Party has revived opposition to the transfer of the SRC area to West Bengal, a proposal which the Union Government are unequivocally committed to implement. This opposition may therefore bring even the entire State Congress Party into open conflict with the all-India Executive.

In the UP, a number of by-elections to the State legislature have indicated that the political wind has taken a direction against the Congress. Some of the best strongholds of the Party are obviously in the interior States. If these strongholds are undermined and they show up cracks, it forebodes ill for the ruling party.

In one of his public speeches at Ahmedabad, Mr Khandubhai Desai, the Union Labour Minister has warned the party against parochialism and lack of discipline. He has reminded Congressmen that their strength lay in patriotism and in the loyalty they showed to national interest, at the expense of whatever else might come in its way.

In the present situation, the Congress is succeeding well in its economic programme which is more vital for public welfare. On political issues, it cannot claim the same measure of success and there has been some conspicuous blundering. It is easy for public attention to be focussed on the political rather than on the economic aspect. Consequently, the party faces the risk of loss of support, of which indications are not lacking. Only those who could effectively persuade the warring State parties to bury their quarrels can lift the party from the present morass. Its future depends on the number and influence of such persons. Just now, there are not too many to be so counted. On Pandit Nehru may fall the best part of the task of keeping the organisation in workable discipline and unity.

*

Engineer's Pool

It is gathered that the Engineering Personnel Committee of the Planning Commission has recommended the constitution of a technical man-power committee of the Union Cabinet and similar committees by the States Governments functioning under the general supervision of the Central Committee. With a view to meet the prospective shortage of engineering personnel, the Government are asked to establish eighteen engineering colleges and sixty-two diploma institutions over and above those envisaged in the Second Plan. According to the Personnel Committee, there should be a common pool of officers from which the Central and States Governments could draw on and suitable men sent abroad to countries in Asia and Africa when there was demand. Selections by the Public Service Commission once or twice a year and the formation of a roster from which the different Departments could replenish their officers, would ensure the supply of engineers of the requisite quality and in the requisite strength from time to time. To encourage performance by students, it is suggested that the old practice of offering guaranteed posts for those who stand foremost in the examination should be restored.

State Governments can have no reason to disapprove of the creation of a pool as is suggested; for, as many of the major industrial projects are to be run by the Centre, there is not likely to be any serious interference with the sphere of action of the States. As most of the States are handicapped by the dearth of engineers, a common reserve from which they can freely draw will be a great boon.

The Personnel Committee is not averse to a cess on employers for the purpose of apprenticeship training, in the event of sufficient voluntary effort in that direction not forthcoming.

*

Indigenous Advertising

The debate on a non-official Resolution in the Rajya Sabha spotlighted some of the salient aspects of the advertising trade in India. The mover drew attention to the fact that five foreign agencies shared between them about 72 per cent of the total advertising business; Indian advertising agencies, more numerous than the foreign, secured only the remaining 28 per cent. The per unit turn-over for the Indian firms is thus relatively small.

A few arguments on this pattern were advanced by the supporters of the Resolution pleading that Government business should be increasingly transferred to Indian advertising agencies. A member from Orissa wondered why the foreign firms continued to function at all in India. That the issue was rather embarrassing was reflected in the Information Minister's reply

NORTH INDIAN MARKETS

Stock Release to arrest Rise in Prices

THE Government of India have come forward last week to contradict rumours of contemplated increase in the support price of wheat and gram. This has in some measure arrested the rising trend of price in foodgrains. Nevertheless, after a slight fall during the middle of last week prices recorded a steady trend toward the weekend.

Support price of wheat will continue to be Rs 10 per maund and that of gram Rs 6 per maund. In case prices decline below this level, the State Governments concerned are expected to enter the market. The price fluctuations in UP's eastern districts make it probable that the UP Government may decide to take the above step.

Wheat average quality at Hapur is now quoted at Rs 12-10 against the last touched during the week at Rs 12-8 per maund. Farm quality is done at Rs 14-4. The daily arrivals have risen to 2000 maunds most of which is lifted by local consumers and stockists and some transactions of farm quality were also made to Guzaret. Wheat stock locally is put at 6 khaties. The prevailing price at this time last year was Rs 9 per maund for average quality wheat and stock was only 1 khati.

A steady trend was maintained by rice prices. Rice exports have been totally banned and adequate quantity of rice is being released from Central Reserves through tenders and auctions. Purchase of rice put internal market by the Government has been stopped. Latest local prices are: Basmati Rs 26 to Rs 33, Rangooni Rs 16-8 and coarse Rs 15 per maund.

In Punjab the spokesman of the Government has indicated that wheat price may not be allowed to fall below Rs 11 per maund this year. The price support policy was introduced in the Punjab last May when the State Government on behalf of the Union Government placed about 20,000 tons of wheat at Rs 10 per maund. Although wheat crop in Punjab this year is normal, the anticipated increase of Re 1 per maund in the Union Government's price support policy toward wheat may be continued as reflecting Government's anxiety to provide a minimum fair price to producers who have been hard hit by floods in the last year. It may, however, be recalled that the Punjab Board of Economic Enquiry recommended Rs 14 per maund as the reasonable price which producers should get consistent with the increase of late in the cost of production.

Price of fair average quality of wheat are now quoted between Rs 12-6 and Rs 12-12 per maund in Ludhiana. The new crop wheat arrivals are on the increase.

In Delhi ready foodgrains exhibited firmness due to poor supply position. Rates of wheat farm quality advanced further on decreased stock position. A sympathetic increase was registered by gram; pulses were unchanged. Peas futures advanced sharply on Madhya Pradesh support.

Sugar prices continued to rule dull and depressed. The latest available figures up to April 15 puts the current season's production of indigenous sugar in the country at 15,29,000 tons as against 14,04,000 tons during the corresponding period last season. Indications are that the total production may surpass the 17 lakh mark. There is no paucity of cane for mills in west UP and the total production in the State is expected to reach one lakh tons. Mill delivery further eased lastweek.

The week saw a reversal of previous weak's trend of improvement for ready gur prices. Price eased to Rs 10-4 per maund; outside demand was weak and despatches visibly declined due to poor loading facilities. Daily arrivals average 400 maunds and local stock is put at 110,000 maunds.

A modest fall is recorded by oil and oil seed after bullish activity for several weeks past. A fall in demand at the highest rates provides the explanation.

Madras Review

The Peninsula

Overtures for Alliances

THE decision of the Communist Party of India to associate itself "with other democratic forces" in the country was elaborated by Mr. P. Ramamurthi, the leader of the Opposition in the Madras Legislative Assembly, in the course of a public statement. The Communist Party now stands on the thesis that both the Government of India and the Congress Party are divided selves. In the first case, many of the policies pursued by the Government of India are avowedly unacceptable to the Communist Party; the party has expressed its opposition to such policies in unmistakable terms, but the general trend of economic changes which result from these policies is approved by the Communist Party. For the Second Plan, the Party's co-operation is offered for what it is worth.

The link with the Commonwealth, the continued existence of British interests conspicuously in India's economy and the existence of a rightist bias in the Governmets' outlook otherwise defensible in the Party's eyes, are black marks for the Government. Likewise, the Congress Party also is viewed as an incoherent organisation, where the unlovable rightists and the relatively agreeable leftists mix together. Mr Ramamurthi has extended an invitation to the second group to join hands with the Communists in realising social and economic aims, which, according to him, are common or at least nearly so to both.

This offer coinciding as it does with the friendlier turn in Soviet attitude to the Western Powers and the Parlimentary democracies of South East Asia, is not ill-timed. It fits in with the general change in Communist attitude on a world-wide front. In India, it is also not easy for the Congress to proclaim in the open that the offer of co-operation is inspired by sinister motives; the international setting is surely unfavourable and prejudicial to such an interpretation.

Historically, attempts to form united fronts by the Communist Party have ended almost in every case either in the merciless overthrow of the groups who co-operated and the exclusive ascendancy of the communists or in the brutal exposure of Communist tactics by their new found friends; we find more than one example for this from the postwar history of Eastern Europe. In India, there have been temporary alliances between the Communist Party and the Socialists; invariably such alliances have ended in the restoration of mutual discord and breaches resulting in greater bitterness and feud than what obtained previously.

Even the temporary electoral alliances as in the Travancore-Cochin State could not work smoothly or lead to any stable coalition enabling assumption of power.

It is with reference to this bleak and dismal record, that the prospect for United Fronts as envisaged by the Communist Party should be estimated. There is no doubt that the position taken by the party just now is a fine tactical stroke. Because the Congress is showing cracks here and there. In West Bengal, a substantial body of Congressmen have resolved to form a separate "democratic" group and the specification of aims for such a group is such that a conflict with the parent body, if not separation, looks inevitable. There are political malcontents within the Congress in other States as well.

All the same, it is doubtful how far these sections would vote for an open alliance with the Communists. The chances are greater this time for the two Socialist groups to be tempted into an alliance with the CPI, at least for election purposes.

It is frequent experience that a united opposition to the ruling party brings results, while a divided opposition splits votes and renders a decisive verdict at the polls difficult. There is no doubt that for non-Cogress groups, if they come to some kind of mutual arrangement for pooling electioneering resources and division of candidates, the chances will be better than otherwise. The Socialists, of all groups, know this to be their advantage. And there is no reason why they should shrink from an ad hoc alliance with a party from whose fundamentals their disagreement is emphatic and well-known.

A stern negative to the Communist Party's overtures has already come from the President of the All-India National Trade Union Congress Mr S. R. Vasavada wants more proof of a concrete nature from the communists, if they expect the Indian workers to be friendly with them. Mr Vasavada's statement is in reply to the All-India Trade Union Congress' offer to work with the INTUC on a common programme. The All-India Trade Union Congress is a communist-led organisation.

The INTUC Chief has reiterated a familiar charge against the Communists. "They are appealing for the unity of labour but the Indian workers will think twice before they actually associate and enter an alliance with the Communist Party. The past record of the Communists is unpatriotic and is of a disruptive nature."

Anyway, the problem of working class unity has to be faced. Lately this question has become increasingly important especially with reference to the growing public sector. The Government certainly does not want more of Communist leadership in the public sector. With the spread of trade union organisations among middle class employees, the threat of unfriendly domination of the em-

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the FORTY-EIGHTH ORDINARY GENERAL MEETING of Members of the Company will be held at the Registered Office of the Company at Clive Buildings, Netaji Subhas Road, Calcutta, on Tuesday, the 29th May 1956, at 12 noon to transact the following business:—

(1) To receive and adopt the Directors' Report and the addited Balance Sheet and Profit & Loss Account for the year ened 31st December 1955.
(2) To sanction the declaration of a Dividend.
(3) To elect Directors in place of Messrs. M. I. KeeKeeBhai and H. J. Silverston, Directors, who retire by rotation, but are eligible for re-election and offer themselves accordingly.
(4) To pass a Special Resolution for the re-election of Mr. J. N. C. Killick who is an employee of the Managing Agents and who retires by rotation and is otherwise eligible for re-election. (See Special Resolution and Special Notice below.)
(5) To appoint Auditors for the year ending 31st December 1956, and to fix their remuneration.

Notice is further given that the Ordinary Share Transfer Books of the Company will be closed from the 14th May 1956 to 28th May 1956, both days inclusive.

AS A SPECIAL RESOLUTION..

That Mr. J. N. C. Killick who is an employee of Messrs. Steel Brothers & Company Limited, the Managing Agents, be and is hereby re-elected a Director of the Company.

SPECIAL NOTICE

The above Special Resolution is in accordance with section 261(1)(f) of the Companies Act 1956, since Mr. J. N. C. Killick is an employee of the Managing Agents, and it will be necessary for the Shareholders to pass a Special Resolution if they decide to re-elect Mr. Killick a Director.

By Order of the Board,
STEEL BROTHERS & COMPANY LIMITED.
Managing Agents.

Clive Buildings,
Netaji Subhas Road,
Calcutta.
30th April, 1956.

N.B.—A member entitled to attend and vote at the abovementioned Meeting may appoint a Proxy who need not be a member to attend and, on a poll, to vote on his behalf.

Road Transport

The facts narrated by Mr B. V. Vagh, Vice-President of the Indian Roads and Transport Development Association, in a Press Conference at Madras, reflect conditions which do not appear sufficiently propitious for the proper development of road transport in the years ahead. Coming as they do from a reputed authority on transport problems, Mr Vagh's views are entitled to friendly official response. He repudiates the suggestion that road transport which has always been in the private sector is costlier than rail transport. He also points out how in spite of the nationalisation of passenger transport here and there, as much as 92 per cent of it still remained in private hands as also nearly the whole of goods transport. During the first Five-Year Plan Period, the number of motor vehicles increased only by 3.5 per cent per year while during the three decades before, the average annual increase was 12.5 per cent.

This setback, according to Mr Vagh, has to be traced to the fear of nationalisation and increased tax burdens. The situation in the immediate future is more hopeful because the threat of further nationalisation has been removed. The Planning Commission have issued directives to the State Governments to stay their hands in this field. But this is only a negative gain. The Planning Commission have not accurately estimated the transport requirements of the Second Plan and till a correct appraisal is made, a fair distribution of allotments cannot be attempted.

Meanwhile, the courtesy week for nationalised bus transport in the City of Madras has focussed attention on the inconveniences and risks for the passengers concerned. Whatever be the financial results of state transport, and these are not always complimentary, the level of public convenience seems to be uniformly unsatisfactory. Apart from frequent accidents, there is almost perpetual overcrowding near the bus stops, unexpected failure of buses to turn up at the proper time and comparative neglect of certain routes. The irritation occasioned by delays and over-crowding often gives rise to discourtesy, if not intemperate behaviour among the passengers. The only sure answer to these ailments lies in a suitable increase in the number of vehicles and their distribution according to the requirements of the various routes.

*

Soil Conservation

The Madras State will be spending nearly Rs 3 crores on soil conservation in the Second Plan Period. This amount is several times that of the allotment under the First Plan and has no comparison with the actual expenditure of Rs 6.3 lakhs incurred during that period. Soil erosion has become a serious problem for a number of Districts; mostly so for the Nilgiris. The enactment of the Madras Hill Stations Preservation of Trees Act, 1955, has removed the legal bottleneck in the way of the enforcement of steps calculated to protect soils, particularly in sloping areas. The slow progress in the First Plan period is explained by the lack of trained personnel and administrative difficulties in the way of the Central Soil Conservation Board and the Government of India sanctioning expenditure. The Central Board has now prepared a model Soil Conservation Bill for adoption by the State Governments. Under this Bill, State Land Improvement Boards and District Land Improvement Committees are sought to be established. These institutions will have the power to prepare, approve and execute soil conservation works.

As for personnel, village officers, revenue inspectors, gram sevaks, assistant project officers and block development officers are being trained to contact the ryots and explain to them principles of soil conservation. The efforts of these officers will be backed up by Government publicity and propaganda. An approximate area of 25,000 acres in the Nilgiris, 1,250 acres in Kodaikanal and about 35,560 acres in the plains in the Coimbatore, Salem, South Arcot, North Arcot, Tiruchirapalli, Malabar, Chingleput and Tirunelveli districts will be covered by the programme. A provision of Rs 119 lakhs, out of the total Plan provision is reserved for the reclamation of eroded ex-panchayat reserved forests, by afforestation and extension of casuarina plantations.

Bapunagar

A social experiment of great potentialities for the future was inaugurated at Guntur by Mr Jagjivan Ram, the Union Communications Minister. It is a model colony where Caste Hindus and Harijans are to live side by side. The colony is called Bapunagar and situated sixteen miles away from Guntur. Of the hundred houses it contains, twenty are intended for occupation by Caste Hindus.

The colony has emerged as a product of the joint efforts of officials and the public. The principal aim of this colony is to eradicate untouchability by serving as a model colony of free mixed existence between the Caste Hindus and the Harijans. The first of its kind in Andhra State, the colony has an open air theatre, a creche, a maternity centre, an elementary school, a bath room and a park.

The Minister for Social Welfare in Andhra who inaugurated the child welfare centre hoped that in the Second Plan period, every District would open at least one colony comprising houses for sections of the poor, and the present model would be followed.

SOUTH INDIAN MARKETS

Food Grains Steady, Sugar and Gur Dull

IT was reliably known that the Madras State Government proposes the release immediately for sale about 10,000 tons of rice as a measure to check the upward trend of the price of rice. The reported selling price of the stock so released from the Central Government's reserve pool is annas 11½ per Madras measure. In all the important towns the prices have shot up. Arrangements for distribution are being made. The question of extending them to mofussil areas will probably be deferred for the time benig.

New crop paddy from Andhra has started moving into the Madras Market. Government announcements regarding release of rice stocks had a salutary effect on the market. Prices should come down with the release of hoarded stock and Government's sales. Nellore raw rice ruled steady but new raw rice from Akkulu and Ramsagar eased by 8 annas and 1-12 per bag of 164 pounds. Tanjore boiled rice registered a decline of annas 8 per bag of 160 pounds; Boiled rice prices are also expected to decline with the arrival of short term paddy.

In the pulses section of the producers markets were characterised by cautious and slow trade. Despite normal offtake, in the beginning of May, the undertone was easy. Tovardhal eased by Re 1 to Rs 2 per bag. Black gram was unchanged to Re 1 per bag lower; Bengal gram lost annas 8 per bag.

The Alleppey Cocoanut oil market was marked by a lingering easy undertone. Activity was small and shorn of enthusiasm. Business enquiries from overseas and up country were uninspiring. The turn-over was poor. Spot was offered by sellers at Rs 392-8 per kandi. Traders, however, forecast a bright outlook in the near future, and buyers offered higher rates for long term delivery, in reflection of the lead of futures. May delivery opened at Rs 401-8 per kandi and after early increase to 403 on scattered bull support, recorded later to close its price at Rs 401.

Oil cake was inactive, sellers quoting around Rs 80 per kandi. Copra inflow was thinner. FAQ copra was taken up around Rai Rs 292-0; Rai Moong Rs 282-8; Vettumani Rs 257-8 all buyers.

Black pepper values dropped further due to lower offers from competing markets and business was done at Rs 725 and Rs 737 per kandi. Ginger was done at around Rs 775 per kandi, termeric being placed at Rs 300.

The price of groundnut in the Madras Market during the week advanced modestly but in contrast oil prices forged ahead steeply. Arrivals of seeds averaged 30 tons a day. Crushers were the main buyers and took no more than just enough to meet their day-to-day requirements. The quotation for superior oil improved from Rs 160 to Rs 163-164 per kandi and dull varieties from Rs 153 to Rs 157-158 per kandi.

Sowing operation in Coimbatore and Poliachi areas have been helped by the timely rains of the previous week.

Calcutta interests were the only buyers in the oil section. Sellers tend to show some resistance in anticipation that the quantity of oil coming in from rotary and small crushers would show a considerable shrinkage in the coming weeks. Ready oil price improved from Rs 317 to Rs 327-8 and for May delivery from Rs 318 to Rs 328-329 per kandi. There was no business with foreign destination in the absence of export quota.

The Madras market was weak on the tanned cow hides section. Arrivals were about the same as in the previous week but due to the weaker tone of London, Clearances were slower. Price eased by 3-9 pies per pound. Arrivals of tanned calf hides were fair and clearance was moderate. Prices were mostly unchanged. Arrivals of cow calf and goat skins were restricted due to weak trading on account of overseas market. Prices were about annas 2 lower.

The week saw a setback in trading with London and reportedly buyers were bidding low prices. Business was reported at 48d to 49d; for 5-5½ pounds averages. 39d; 37d and 34½d for 8-8½ pounds. Raw hides market in all centres were reported to be steady. Arrivals of tanned goods and sheep skins were fair. Prices were lower by annas 2 per pound.

*

WORLD OF TEA

(Continued from page 869)

to 4 annas below last markings. Good Mediums, Wynaad descriptions and Low Mediums were irregular but generally declined 1 anna to 3 annas, whilst residuals were barely steady. There was an increased demand for Black Leaf Middle East descriptions but these sorts also followed in the general decline and were 2 to 3 annas easier.

MINERVA MILLS LIMITED

NOTICE TO SHAREHOLDERS

NOTICE is hereby given that the Thirty-sixth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday the 15th day of June, 1956 at 4-30 P.M. (S.T.) to transact the following business:—

1. To recieve and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December, 1955.

2. To declare a dividend.

3. To appoint a Director in place of Mr. N. D. Sirur who retires under Article 100 of the Articles of Association of the Company but who is eligible for re-appointment.

And to consider, and if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Sec. 261 of the Companies Act, 1956, has been received by the Company.

SPECIAL RESOLUTION

RESOLVED that in view of the provisions of Sec. 261 of the Companies Act, 1956, Mr. N. D. Sirur, an Associate of N. Sirur & Co., Private Ltd., the Managing Agents of the Company, who retires under Article 100 of the Articles of Association of the Company, be and he is hereby reappointed a Director of the Company as required by the provisions of the said Section."

4. To appoint a Director in place of Mr. Pratab Singh Mathuradas who retires under Article 100 of the Articles of Association of the Company but who is eligible for re-appointment.

5. To appoint a Director in place of Mr. B. D. Kulkarni who retires under Article 100 of the Articles of Association of the Company but who is eligible for re-appointment.

And to consider, and if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Sec. 261 of the Companies Act, 1956, has been received by the Company:

SPECIAL RESOLUTION

"RESOLVED in view of the provisions of Sec. 261 of the Companies Act, 1956 that Mr. B. D. Kulkarni, an Officer of The Modern Mills Ltd., which Company is under the management of the Managing Agents, Messrs. N. Sirur & Co., Private Ltd., who are also the Managing Agents of this Company, who retires under Article 100 of the Company's Articles of Association, be and he is hereby re-appointed a Director of the Company."

6. To appoint a Director in place of Mr. Pingle Venkat Rama Reddy who retires by rotation but who is eligible for re-appointment.

And to consider, and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

ORDINARY RESOLUTION

"RESOLVED that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to Mr. Pingle Venkat Rama Reddy who has attained the age of 73 years and who retires by rotation under Article 109 of the Articles of Association and that he be and is hereby re-appointed a Director of the Company."

7. To appoint a Director in place of Mr. Maneklal Premchand who retires by rotation but who is eligible for reappointment.

And to consider, and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

ORDINARY RESOLUTION

"RESOLVED that the age limit prescribed under Sec. 280 of the Companies Act, 1956, shall not apply to Mr. Maneklal Premchand who has attained the age of 67 years and who retires by rotation under Article 109 of the Articles of Association and that he be and is hereby re-appointed a Director of the Company."

8. To consider, and if thought fit, to pass the following ordinary resolution:—

ORDINARY RESOLUTION

"RESOLVED that the consent of the Company under the provisions of Section 293 (1) (d) of the Companies Act, 1956 be and it is hereby accorded to the Board of Directors of the Company borrowing monies for the purposes of the Company even if such borrowings (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) together with the monies already borowed by the Company exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

9. To consider, and if thought fit, to pass the following ordinary resolution:—

ORDINARY RESOLUTION

"RESOLVED that the Registers, Minute Books and documents of the Company required to be maintained and disclosed under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 143, 144, 150, 151, 152, 157, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 of the said Act, be kept open to inspection by the persons entitled thereto under the aforesaid provisions, to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid Sections, at the Registered Office of the Company on any working day between the hours of 12 noon to 1 P.M. and 3 P.M. to 4-30 P.M. (S.T.) except on Saturdays and between 11-30 A.M. to 1-30 P.M. (S.T.) on Saturdays, Provided However that the Register required to be maintained under Sec. 307 of the Act shall be open to the inspection of any member or holder of debentures of the Company (if any) as aforesaid during the period prescribed by clause (a) of sub-section (5) of Sec. 307 of the said Act."

10. To appoint Auditors for the current year and to fix their remuneration.

An explanatory statement concerning Resolutions Nos. 3, 5, 6, 7, 8 and 9 is being posted to the shareholders.

The Transfer Books of the Company will be closed from the 15th day of May 1956 to the 9th day of June 1956, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

By Order of the Board,
N. SIRUR & CO., PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

Bombay,
27th April, 1956.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, Netaji Subhas Road,
Calcutta,
7th May, 1956.

Stock Exchanges

STEADY CONDITIONS

Watch Dog Writes:

Stock Exchanges in India ruled steady last week with operators coming out to lend active support to the speculative issues.

In the Calcutta Stock Exchange Indian Irons attracted considerable attention and the quotation was taken to a new high for recent trading. Other equities steadied up in sympathy.

In Dalal street, though the buoyancy of Indian Irons imparted some enthusiasm the general tendency was subdued on account of the lower production reported for April by TISCO.

The Madras Stock Exchange displayed a steady undertone with interest centering on Plantings shares.

Dull conditions prevailed in Wall Street due to lack of interest.

With the credit squeeze becoming more effective, the undertone in the London Stock Exchange continued to be cautious.

*

Calcutta

STEADY Conditions prevailed in the Calcutta Stock Exchange during last week with Indian Irons recording a sharp rise. Presumably operators had been encouraged to extend their commitments by the promise of favourable working conditions held out by the revised industrial policy of the Government of India. Sectionwise Mining shares were very prominent with selected miscellaneous industrial shares coming in for support. Teas were quietly steady. Gilt-edged were steady.

In the Gilt-edged Section, 3% (1986) advanced from Rs 77-2 to Rs 77-11. 3% (1966-68) firmed up to Rs 93-3 from Rs 93-1-6. 3½% (1964) was unchanged at Rs 98-12 with 3½% (1965) quoting fractionally better at Rs 98-10-6.

Textiles were selectively higher. Kesoram gained As 11 to Rs 18 Elgin was done upto Rs 27-5. New Victoria steadied upto Rs 2-10.

Though business passing continued to be at a low level, prices where marked were slightly higher in coals. Burrakur gained 3 annas to be finally placed at Rs 14-3. Central India moved up by 3 annas to Rs 7-3 South Karanpura was four annas higher at Rs 9-14. New Beerbhoom hardened to Rs 20-1. Union was quiet at Rs 12-1. Bhulanbararee showed a gain of 4 annas at Rs 13-4.

Listless conditions continued to prevail in the jute section in the absence of fresh support. Agarpara was fractionally higher at Rs 11-13. Howrah moved up from Rs 22-9 to Rs 23-2. National advanced from Rs 24-5 to Rs 24-8. New central was five annas higher at Rs 16-14. On selling pressure Anglo-India receded from Rs 176 to Rs 168 while Barnagore kept steady at Rs 135. Chitavalsah was almost unchanged at Rs 14-14 as was Hooghly at Rs 40 Nuddea was done upto Rs 39-8.

Mining shares were generally an active market. Burma Mines after having been done upto Rs 4-9 from Rs 4-2 closed the week steady at Rs 4-5. Consolidated Tin was unchanged at Rs 2-14 while Karanpura Development was quiet and stood at Rs 26-2. Indian Copper after earlier steadiness reacted to close at Rs 6-9. Metal corporation tended to sag and by close was four annas lower at Rs 10-4. Tavoy Tin was steadier at Re 1.

Steady conditions prevailed in the Engineering Section. Indian Irons after opening the week steadier at Rs 35-3 soon touched the Rs 36 mark. Opening strong at Rs 36-7 on Tuesday the scrip was taken upto Rs 37-2 on Wednesday before closing on that day at Rs 37 TEXMACO was a steady spot advancing by 3 annas to Rs 24-2. Jessop was quietly steady at Rs 35-1 as was Richardson at Rs 27-2. Braithwaite shaded to Rs 27-10 with National Iron no better at Rs 7-2. India Machinery was in request and advanced by 9 annas to Rs 3-6.

Selected shares continued to be in request in the tea section. Ananda Assam gained quarter point to Rs 45-4 with Baghmari recording a gain of 12 annas to Rs 29-8. While Banarhat reacted to Rs 360, Basmatia was in request and moved up by 8 annas to Rs 39-4. Belgachi was one point higher at Rs 48 while Bishnauth was fractionally higher at Rs 25-14. Dhelakhat advanced from Rs 21-5 to Rs 22-2. Methoni was 4 annas higher at Rs 24-12. Among the shares that lost ground were East India turning quiet at Rs 25-12. Hasimara shading to Rs 39-14 Kalinugger and Khoreel losing a point to Rs 110. New Dooars was a steady feature at Rs 356.

In the Miscellaneous section, Ashok Cement met with buying support and advanced to Rs 11-1 from Rs 10-8. Dalmia Bharat gained nearly one point to Rs 15-14. Sone Valley hardened to Rs 8-7. Among Oils, British Burma was three annas higher at Rs 4-6 while among paper mills Orient Paper moved up from Rs 35-13 to Rs 36-11 with Shree Gopal wanted upto Rs 18-10. In Shippings, India Steamship was unchanged at Rs 8-11. B. I. Corporation closed higher at Rs 11-7. While Dunlop Rubber was couple of annas higher at Rs 30-5 Indian Cable receded to be finally placed at Rs 30-5. Electric Construction was fancied up to Rs 13-11 F & C Osler reacted to Rs 11-12 but Indian Aluminium was quiet at Rs 20-15. Martin Burn met with some enquiry and moved up slightly to Rs 25-1. Rohtas was well maintained at Rs 22-13.

BHARTIA ELECTRIC STEEL CO., LTD.

NOTICE

NOTICE is hereby given that the Twenty-seventh Annual General Meeting of the members of Bhartia Electric Steel Co., Ltd., will be held at the Registered Office of the Compony at 42, Shibtolla Street, Calcutta on Monday, the 4th June, 1956 at 4 P.M. to transact the following business:—

(i) To consider and pass the audited Accounts and Balance Sheet of the Company as at 31st Dcember, 1955 and the reports of the Board of Directors and Auditors of the Company.

(ii) To declare a dividend.

(iii) (a) To appoint Directors in the place of Mr. B. P. Khaitan, Mr. N. L. Bhartia and Mr. P. R. Bagri who retire by rotation and also by virtue of the provisions of Section 261 of the Companies Act, 1956.

(b) To appoint Directors in place of Rai Moongtulall Tapuriah Bahadur and Mr. R. L. Bhartia who also retire by virtue of the provisions of Section 261 of the Companies Act, 1956.

Separate special resolutions will be proposed for re-appointment of each of the said Mr. B. P. Khaitan, Mr. N. L. Bhartia, Mr. P. R. Bagri, Mr. R. L. Bhartia and Rai Moongtulall Tapuriah Bahadur as Directors of the Company. The said Rai Moongtulall Tapuriah Bahadur has attained the age of 69. Notice is hereby given that the resolution relating to his re-appointment will provide for a declaration that the age limit of 65 years shall not apply to him.

(iv) To appoint Auditors for the year 1956 and fix their remuneration.

(v) To transact any other admissible business with the permission of the Chairman.

Explanatory Note with regard to agenda

(iii) (a) and (b) mentioned above: Messrs. B. P. Khaitan, N. L. Bhartia, R. L. Bhartia and P. R. Bagri, who are directors of the Company and are proposed to be re-appointed, are also directors of the Managing Agents M/s. Bhartia Company Ltd., Rai Moongtulall Tapuria Bahadur is the father of Sri Baijnath Tapuria, one of the Directors of Messrs. Bhartia Co., Ltd. The Managing Agents, by virtue of the Managing Agency Agreement with the Company, are entitled to nominate a director on the Board of this Company. In the premises, having regard to the provisions of Section 261 of the Companies Act, 1956, special resolution is required to be passed at the next Annual General Meeting for their re-appointment as directors. All the said persons have been on the Board of this Company for several years past and take keen interest in the welfare of the Company. It will, therefore, be proposed that the said persons be re-appointed directors of the Company. Section 281 of the Companies Act, 1956, provides that a person who has exceeded the age of 65 can be appointed director if the appointment is approved by a resolution passed by the Company specifically declaring that the age limit shall not apply to him. In the circumstances so far as the resolution for re-appointment of Rai Moongtulall Tapuria Bahadur who has attained the age of 69 is concerned the same will have to comply with the requirements of Section 281 of the Companies Act 1956.

By Order of the Board,
BHARTIA COMPANY LIMITED,
Managing Agents.

42, Shibtolla Street,
Calcutta, 24th April, 1956.

Note:—(1) The Share Transfer Register of the Company will be closed from 18th May to 4th June, 1956, both days inclusive.

(2) A member of the Company entitled to attend and vote at the above meeting of the Company shall be entitled to appoint another person as his proxy to attend and vote instead of himself and a proxy need not be a member.

(3) Dividend declared, if any, at the above meeting shall be paid only to the Registered Share-holders of the Company as on 4th June, 1956, or to their order or to their bankers.

(FOOTNOTE FOR JUTE COMPANIES).

(a) After writing back Rs. 60,000 from Taxation Contingencies Reserve.

(b) After transferring Rs. 2 lakhs from General Reserve.

(c) After transferring Rs 4,07,975 from General Reserve and Rs 55,000 from provision for taxation.

(d) After transferring Rs 36,518 from General Reserve; Rs 10,000 from Jute Stock Reserve and Rs 40,000 from provision for taxation.

(e) After transferring Rs. 1,25,000 from Dividend Equalisation Reserve and Rs. 1,00,000 from Taxation Reserve.

(f) After transferring Rs. 2,50,000 from Taxation Equalisation Reserve.

(g) After transferring Rs. 3,00,000 from Reserve for Machinery Renewal and Replacement.

(h) After transferring Rs. 50,000 from Genl. Reserve.

(i) After writing back Rs. 1,00,000 from provision for taxation and Rs. 25,000 from provision against anticipated loss on forward contracts.

(j) After writing back Rs. 1,70,000 being surplus tax provision.

(k) After transferring Rs. 1,00,000 from Dividend Equalisation Reserve.

(l) After transferring Rs. 4,00,000 from General Reserve.

(m) After writing back Rs. 2,36,696 from Reserve for Exchange Losses.

(n) After transferring Rs 61,808 from General Reserve.

(o) After transferring Rs. 2,00,934 from General Reserve.

(p) After transferring Rs. 2,65,555 from General Reserve, Rs. 70,555 from Dividend Equalisation Reserve and Rs. 25,000 from Taxation Reserve.

(q) Dividend at 5 per cent per annum for the years ended 31st December, 1952 and 31st December, 1953 and additional dividend at 1½ per cent per annum for year ended 31st December 1953.

(r) After including Rs. 69,535 being refund of E.P.T. and after writing back Rs. 40,000 from provision against difference between cost of Raw Jute Stock and estimated value.

(s) After transferring Rs. 1,30,784 from General Reserve and Rs. 1,25,000 from provision for taxation.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After providing Rs 1,60,179 for further taxation of previous years and transferring Rs. 1,52,000 from Tax Contingencies Rs 75,000 from Jute Stock Reserve and Rs 33,365 from General Reserve.

(v) After transferring Rs. 1,21,421 from General Reserve and writing back Rs. 1,45,256 from provision for difference in exchange on Agency Fixed Assets.

(w) After transferring Rs. 1,00,000 from Dividend Equalisation Fund and Rs. 75,000 from General Reserve and writing back Rs. 15,000 being excess provision for taxation.

(x) After transferring Rs 1,00,000 from Dividend Equalisation Reserve.

(y) After transferring Rs 5,94,144 from Capital Reserve.

(z) For five half-years ended 30-9-54 at 4 per cent per half-year.

(ah) Leased out to Albion jute.

(a1) After transferring Rs 1,25,000 from provisions for taxation; Rs 1,75,000 from Emergency Reserve; Rs 50,000 from General Reserve and Rs 94,500 from Dividend Equalisation Reserve

(a2) After transferring Rs 1,85,000 from General Reserve; Rs 45,000 from provision for taxation and Rs 65,946 from provision for losses on forward contracts.

(a3) After transferring Rs 4,00,000 from General Reserve, Rs 2,00,000 from Dividend Equalisation Reserve and Rs 2 00,000 from Jute Stock Reserve.

(a4) After transferring Rs 2,86,000 from Contingency Suspense.

(a5) After transferring Rs. 1,10,000 from Contingency suspense and including Re 1,47,639 being items relating to previous half-years

(a6) After transferring Rs 5,18,425 from General Reserve and Rs 35,000 from provision for taxation.

*Arrears of dividend for two years ended 31-3-51 at 6% per annum.

†Arrears of dividend for year ended 31-3-49.

‡Arrears of dividend for year ended 31-3-48.

(FOOTNOTE FOR MISCELLANEOUS INDUSTRIALS).

(a) After writing back Rs. 1,75,000 being amount written back from Reserve for Post-war Research and and Experimental work.

(b) After transferring Rs 1,00,000 from Reserve for depreciation on investments.

(c) After transferring Rs. 30,000 from Dividend Equalisation Fund.

(d) After transferring £312,264 from Capital Reserve and £732.970 from sundry reverves.

(e) After transferring Rs 1,10,000 from General Reserve Rs 40,000 from Dividend Equalisation Fund.

(f) After writing back Rs. 14,00,000 from provision for taxation and including Rs. 5,82,952 being profit on sale of Investments.

(g) After transferring Rs. 1,00,000 from Investment Reserve.

(h) After crediting Rs. 2,13,328 due from Government of India on Indemnity account.

(i) After writing back £77,492 being over provision in previous years.

(j) After transferring £1,50,000 from General Reserve.

(k) After transferring Rs. 9,00,000 from Contingencies Reserve and Rs. 29,913 from Depreciation Reserve.

(l) After transferring Rs. 2,00,000 from General Reserve.

(m) After transferring Rs. 5,27,000 from Div. Equal. Fund.

(n) Arrears of Preference divdend upto 31st March, 1952.

(o) After transferring Rs. 2,69,176 from General R.s.

(p) After writing back Rs. 1,24,002 being provision for taxation and including Rs. 23,689 being refund of Income-tax.

(q) Bonus shares in the ratio of one fully paid ordy. share for every five ordy. shares will be issued in lieu of Dividend.

(r) Includes Rs. 2,47,369 being surplus reserve for taxation written back.

(s) Dividend at 5% per annum from 1-1-1947 to 31-12-1950.

(t) Dividend at 5% per annum from 1-1-1945 to 31-12-1946.

(u) Dividend at 5% per annum from 1-1-1951 to 30-6-1955.

(v) After transferring Rs. 9,28,184 from taxation reserve.

(w) Preference dividend for four years 1950, 1951, 1952 and 1953 at 5 per cent per annum.

(x) Bonus shares in the ratio of one ordy. share for every 14 ordy. shares held will be issued in lieu of Dividend.

(y) After transferring Rs 11,75,000 from Dividend Equalisation Fund.

(z) After crediting Rs. 4,66,841 being realisation of value of pre-evacuation Metal stocks and writing back Rs. 8,00,000 taxation Reserve and Rs. 2,70,517 war time provision for expenditure no longer required.

(a1) After writing back Rs. 1,78,000 from Taxation Reserve.

(a2) After transferring Rs. 2,50,000 from General Reserve.

(a3) For two years ended 28-2-1953 at 4½ per cent per annum.

(a4) After transferring Rs 1,35,079 from Investment Reserve; Rs 1,77,397 from Taxation Reserve and Rs 1,06,876 from Income-tax liability for 1947-48 to 1949-50.

(a5) There was no trading and the activities were confined to the Installation of the Factory.

(a6) Includes Rs 7,25,671 being Depreciation provided in previous years on block Assets sold written back.

(a15) Includes Rs. 6,65,597 being adjustment for products trading in previous years written back Rs. 7,20,000 being provision for Tanker Special Survey (1952) Docking, written back; and Rs. 80,902 being Post-war Refund of E.P.T.

(a16) Includes Rs. 8,62,989 being adjustment for trading in previous years written back.

(a20) After writing back Rs. 29,000 being excess provision for taxation and Rs. 12,125 being excess provision of Managing Agents' Commission.

§Includes stock on hand.

(a) After transferring Rs 12,50,000 from Reserve Fund; Rs 2,09,000 from Dividend Fund and Rs 1,02,872 from Depreciation and Renewal Fund.

(b) Dividend for four years from 1st April 1951 to 31st March, 1955 at 6¼ per cent per annum.

(c) Rs. 5 lakhs to be capitalised and issued as Bonus shares of Rs. 50 each in the proportion of one share for every five shares held.

(d) After transferring Rs. 1,84,474 from taxation reserve.

(e) Arrears for 1946, 1947 and 1948.

(f) After crediting Rs. 1,18,664 being excess provision for bonus for 1951 and Rs. 6,77,776 being E.P.T. and after transferring Rs. 1,50,000 from Dividend Equalisation Fund.

(g) After transferring Rs. 1,80,000 from Reserve.

(h) After transferring Rs. 3,37,000 from Dividend Fund.

(i) In addition to dividend, a Bonus of one ordinary share of Rs. 10 each at par of Jay Shree Tea Gardens for every 20 ordinary shares of Kesoram Cotton Mills will be issued.

(k) After transferring Rs. 70,000 from General Reserve and Rs. 37,500 from Dividend Equalisation Reserve.

(l) Dividends for 6 years from 1949 to 1954 at 5 per cent per annum.

(m) Dividend to be paid out of Dividend Equalisation Fund.

(n) After transferring Rs. 1,00,000 from Dividend Equalisation Fund.

(o) Managing Agents have foregone their minimum commission of Rs. 50,000 and have instead charged 10 per cent on net profit.

(p) Includes Rs. 1,46,000 transferred from provision for taxation and Rs. 4,98,443 being Refund of E.P.T.

(q) After transferring Rs. 1,00,000 from General Reserve.

(r) After transferring Rs. 4,41,000 from Div. Equal.

(s) After transferring Rs. 5,00,000 from Reserve Fund.

(t) After transferring Rs. 90,000 from Dividend Equalisation Reserve.

transferring Rs 4,00,000 from General Reserve.

(v) After transferring Rs. 5,45,597.

(w) After transferring Rs 1,80,00[illegible] from contingencies reserve; Rs. 50,000 from General Reserve, and after writing back Rs. 1,20,000 from provision for taxation and Rs. 3,00,000 from cotton stocks in previous periods written off.

(x) After transferring Rs. 12,50,384 from Reserve Fund.

(y) After transferring Rs. 2,00,000 from General Reserve and Rs. 1,25,000 from Contingencies Reserve.

z) After transferring Rs. 25,000 from Dividend Equalisation Fund.

(a1) Includes Rs 3,89,645 being Refund of E.P.T.

(a2) After transferring Rs. 6,20,000 from General Reserve.

(a3) After transferring Rs. 1,06,060 from provision for taxation not required.

(a4). After transferring Rs. 5,25,009 from General Reserve.

(a5) After transferring Rs. 1,75,000 from Dividend Equalisation Fund.

(a6) After transferring Rs. 4 lakhs from Reserve for fall in prices.

(a8) For two years ended 31-3'51 at 5% ptr annum.

(a9) After writing back Rs 95,665 being balance of bonus provided in previous years.

★

THE PENINSULA

(Continued from page 877)

ployees in the public sector has become real.

The Prime Minister has indicated his faith in democratic methods and work on the lines of truth and non-violence and he wants working class unity to be built on these principles. How the future will shape will depend on the sincerity and strength with which the INTUC applies itself to the task of extending its field and the measure of co-operation it receives from the managements in the private sector and the Government. Moderation and restraint on both sides will be of vital importance. not only for the smooth functioning of the industries in both the sectors, but for the political future of the country as well.

NORTH INDIAN NOTES

(Continued from page 876)

to the debate. His contention was that while the Government were trying to distribute more and more business to the Indian concerns, they had to take note of differences in standards of efficiency. Everything Swadeshi used to be associated with this handicap.

In fairness to the foreign agencies, their superior standards must be acknowledged; but the fact that they are branches of powerful worldwide organisations, could not be overlooked. The scales are loaded against the Indian concerns. There is another side to the picture. Advertising, being a business calling for little investment, tends to attract all and sundry. Overcrowding inevitably impairs standards. The Indian advertising firms have thus an inescapable domestic problem. The relation between increased business and improvement in efficiency is reciprocal.

For the Government, there is also the technical handicap of their being not able to poke into the affairs of autonomous corporations and the railways, who, incidentally, command substantial volume of business in the public sector. That the Government are in sympathy with the spirit of the Resolution is shown by the fact of its acceptance by the Rajya Sabha in a slightly amended form.

★

FOR THE INVESTOR

Continued from page 863)

to end the present satta system which confers unmerited benefits on the bears.

Indian Irons provide for the Custodian an expansive open market field, and, if the same skill and aplomb in purchases is displayed as in the case of the purchases of Tata Ordinaries and Associated Cements for the nationalised life funds, this portfolio, too, in a few months' time, make excellent showing.

The Bona fide investor is, thus, presented with a safe criterion. What shares are engaging the interest of the Custodian? Those shares are worth his attention, too. For, between Mr Vaidyanathan and Sir D. N. Mitra, we have two officials whose acknowledged expertness and integrity are a guarantee that whatever they decide to buy is worth buying.

The Seamaster— made for a Life of Action

Seals out Water — Seals in Accuracy

With unerring precision the Seamaster ticks off the most exciting seconds of your life—*in any climate* . . . aloft, ashore, afloat . . . under the surface, too, thanks to the thrice-sealed, waterproof Seamaster case. Its world-famous Omega automatic movement makes the Seamaster a peerless timekeeper—the kind of engineering triumph to which Omega owes its unequalled series of precision records at the Geneva observatory. Embodied in the consummate accuracy of the Seamaster is Omega's experience as final arbiter of the Olympic Games, the world's most *highly* contested sports event.

Stainless Steel Rs. 405/- 14 ct. Solid Gold Rs. 1150/-

Steel/Gold Rs. 505/- 18 ct. Solid Gold Rs. 1330/-

Other OMEGA Models available from Rs. 235/-

Available from Sole Agents in India :

Ch. ABRECHT

B-5 CLIVE BUILDINGS, CALCUTTA ● 269, MORNBY ROAD, BOMBAY

For the Investor

Reform Satta System

Investment Gossip :

IT is now admitted, on all hands, that something must be done to reform the satta system prevalent in the Calcutta Stock Exchange with regard to shares in the clearing. The system, as it now functions, presents the bears with an unearned profit on a silver plate.

The iniquity of a bye-law which helps blank sales has remained unredressed, though I drew attention to this evil many months ago. Reason? Vested interests wield enormous power and exercise strategic influence.

But something must be done. And done quickly.

I would suggest that two new scrips be placed on the forward list; and that these two scrips be governed by a bye-law which takes care to avoid the present practice.

The two new scrips may well be Rohtas Industries and Jessops. This may be considered as a kind of experiment..

If the new bye-law works smoothly and successfully in the case of these two scrips, it will be then for the Stock Exchange Committee to replace the existing bye-law by the new one.

The Calcutta Stock Exchange Committee must bestir themselves and do something.

£ R$

Investment Notes :

Indian Coppers have firmed up to Rs 7-1 from Rs 6-9 quoted a week ago. News has come to the effect that the Corporation has won the litigation between it and the Bihar Government over the keyanite mining leases in Kharsawan.

Orient Papers have warmed up to Rs 36-12 from Rs 35-12. It is understood that this company has taken over the management of the Air Condtioning Corporation Private Limited from Messrs Gillanders Arbuthnot and Company.

The Bird group of Coal companies has announced that, in conformity with the provisions of the Companies Act 1956, there will henceforward be no half-yearly audited accounts. The final annual closing will, therefore, be for the year ended 31.12.1956.

An extraordinary general meeting of the shareholders of the Hooghly Mills Company—a jute concern—has been convened for May 18. A group of shareholders seeks to change the control and management of the company, the present managing agents being Messrs Gillanders Arbuthnot and Company. This group, it is believed, is jointly holding somewhat less than the total shares, while the managing agents hold 27 per cent. Gillanders are prepared to sell their holdings and quit their managing agency, provided the above group offers the remaining shareholders the same price for their stock as it pays to Gillanders. The outcome of the meeting is keenly awaited.

Shipping shares have been meeting with good enquiry during the past few days, India Steamship in Calcutta being quoted at Rs 8-10 and Scindias in Bombay at Rs 18-4. The present levels of prices seem to be an attractive proposition following the Centre's decision to permit a further rise of 5 per cent in coastal freight rates. This rise in rates is expected to help shipping companies to meet the increasing operational costs to some extent at least. There are also rumours that the Custodians of nationalised life insurance companies have been authorised to go in for shipping shares.

Digvijay Cements are presently quoted around Rs 194 with only a few sellers in evidence. The company has proposed, subject to the Government sanction, to offer at par, to the existing shareholders, 45,000 new Ordinary shares of Rs 100 each in the ratio of one share for every two shares held and 40,000 new Cumulative Preference shares of Rs 100 each in the ratio of one for one.

According to Mr Somani, the Chairman of the company, the erection of the new cement mill is almost complete and production is expected to be started by the end of June. The work of the third kiln is also well under hand. With the completion of the second extension project, the factory will

STATE BANK OF INDIA
Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be—can be made to run more smoothly with the help the Bank can offer.

Why not talk things over with your nearest bank agent, or write for information?

GLEANINGS

If we were asked what it is that highlights the weekly issues of Indian Finance, the answer would be: Constructive suggestions.

The average of suggestions (which usually get acted upon some time later) is two per week.

In the current issue, constructive thinking has produced three suggestions which, all of them, are eminently practicable, on the one hand, and are of considerable value, on the other.

Take, for example, Investment Gossip. Many is the investor who has suffered because of speculative antics: and speculative decisions, on the Calcutta Stock Exchange, are influenced by the premium present of satta to the bear: this satta assumes such proportions as to insure the bear against loss even in the event of a rise in the market, over the year, of something like Rs 3 in Indian Irons.

Watch-dogs' suggestion is that forward trading in two scrips should be tried with the proviso that these would not attract the buy-law which insists on satta. As the headline has it, the idea mooted is that there must be reform of the satta system.

Or take the Leading Article. We all admit that India's Five-Year Plans are People's Plans. Why not really make them so? And, in the bargain, secure much needed revenues with which to finance our development projects?

The Leading Article emphasises that we should have new attitudes to new taxes: which would be Development Duties and Levies directly to be borne by the people and directly to be applied to financing the Plan.

Another important suggestion is contained in World of Finance. There has been an inclination to make much ado about the deposit war that banks are in midst of. The over-simplified solution that was suggested in certain quarters was that Government (that is, the Reserve Bank) should set a ceiling on deposit rates,

But a structure with merely a ceiling, and no floor, can by no means be sound. If we were to do more than fix maxima for deposit rates, we should next have (in all probability) an advances war. Consequently, our suggestion is that we should have both a ceiling and a floor—the one on deposit rates, the other for the minimum chargeable on advances.

Dividend Raised by IBP

Balance-Sheet Reviews:

THE Indo-Burma Petroleum Company Limited has produced excellent working results for the year ended 31st December, 1955. During the year under review, the opportunity arose of acquiring a substantial interest in Balmer Lawrie and Company Limited. Negotiations for the acquisition, which were begun during that year, have since been satisfactorily concluded with the purchase of 20,000 equity shares. This may probably be the reason that the shares of the company have been well maintained around Rs 43-0 for some weeks past, presently quoting Rs 40-12 x.d.

Sales for the year have shown a slight decline, proceeds from sale of production and commission earned being shown at Rs 6.62 crores as against Rs 6.64 crores in the previous year. The net profit, before providing for Taxation and Depreciation, however, amounts to as much as Rs 77,66,853 as against only Rs 61,22,374, although the former amount includes Rs 10.00 lakhs transferred from General Reserve and Rs 6.95 lakhs from Taxation Provision Account. In this connection, the directors have stated that the sum of Rs 6.95 lakhs, transferred from Taxation Provision Account, is in excess of anticipated tax liabilities for earlier years in respect of which assessments have not yet been finalised. The transfer of Rs 10.00 lakhs from General Reserve has been made to cover payment of a bonus dividend of Re 1 per share on the Ordinary share capital.

Apart from setting aside a sum of Rs 2.00 lakhs for Investment Depreciation Reserve, the provision for Taxation has been raised from Rs 24,00 lakhs to Rs 28.90 lakhs. The Depreciation amount is slightly lower at Rs 4.82 lakhs against Rs 5.58 lakhs. Pakistan Exchange Loss written off amounts to Rs 6.94 lakhs, while there was no such provision in the previous year.

After paying the usual dividends on the Preference shares, the dividend on the Ordinary shares has been raised from 30 to 40 per cent (including a bonus of 10 per cent).

According to the Directors' report, the company's suit against the Union Government of Burma in respect of claim for war damage has made little progress.

£R$

Bhartia Electric Steel

The working of Bhartia Electric Steel Company, during the year ended 31st December 1955, has resulted in an increase in net profit to Rs 18,67,212 from Rs 15,93,130 in the previous year, while sales are shown at Rs 1.29 crores against Rs 1.10 crores.

With regard to allocations, the Depreciation amount has been raised to Rs 7.00 lakhs from Rs 4.75 lakhs, while Taxation has been allocated Rs 13.00 lakhs. Taxation Reserve has, however, been reduced to Rs 3.50 lakhs from Rs 5.25 lakhs. Thanks to an increase in profits, the dividend on the Ordinary shares has been raised by As 4 to Rs 1-4-0 per share.

The Directors have, in their report, stated that efforts to improve the working of the Steel Foundry division of the Ballygunge Works have met with a certain measure of success; and, since the latter part of the year under review, there has been an improvement in production as well as in the quality of castings pro-

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

New Attitude to New Taxes

THE Second Plan's allocation to the Railways, even at the higher revised level, is considered inadequate to the tasks which will have to be discharged by the transport system in response to increased raw material demand for expanding industrial production, increased industrial and agricultural output, and increased consumer demand. Controversy has reached a high pitch; and, while the agitational impulse is in full fury, the constructive side of the problem is in eclipse.

If, at all, any move has been taken in a positive direction, it is to dissuade travel by rail. All propaganda hitherto was designed to promote travel; hereafter, people are to be expected to use trains only when absolutely necessary. How far appeals to this end will have any tangible results, is doubtful.

Meantime, it is certainly worth considering whether the hiking of fares will serve the purpose. In this connection, it needs to be remembered that fares in India have risen moderately while other costs have risen sharply.

Such an increase in fares will no doubt start an uproar. It will be urged that the poor man will be most hit. This kind of outcry is bound to greet any rise in taxes or fares.

In relation to the series of Plans that are in prospect, a new attitude on the part of the public is essential. The Plans are, it is claimed, People's Plans. It is obvious that the people at large should not only share in the profits, but also shoulder responsibilities and burdens.

Taxes should be so devised as to enable the general population to make a significant contribution. On the one hand, they should be taxes of universal applicability; on the other, they should be taxes 'without tears.'

The increase we propose on Railway fares should be described as Development surcharge on fares. This description should help create the wide-spread feeling that everyone is putting his shoulder to the wheel of the Plan. By the same token, there should be a Development surcharge of quarter anna on post-cards.

The old salt duty cannot be revived for sentimental reasons, though, from the practical point of view, the abolition of the duty has made no difference to the price paid for his salt by the consumer. The State has lost the revenue: the population has gained nothing. We suggest that a Development duty be levied on salt. The proceeds are to be directly used for the Plan.

A Development surcharge on fertilisers is another revenue source which merits closer study from this point of view.

The aim should be to raise Rs 50 crores from the general population by way of development levy; and this will be reminder and reassurance to the public that they, too, are 'doing their bit'.

To revert to the Railways. Apart from discouraging rail travel, Authority must give thought to alternative modes of transport wherever feasible; by way of illustration, we should like to refer to the potentialities of aerial ropeways in relieving congestion in coal transport.

One of the critical bottle-necks is going to be the supply of coal from Raneegunge to Durgapur. The steel works, the power plants, etc, proposed to be set up in Durgapur will need coal of the order of 2 million tons annually. The railway charges for short distance hauls are onerous.

Both from the transport and cost points of view, it is worth making a survey of the Raneegunge-Durgapur region from the standpoint of aerial ropeways.

Our concrete suggestion is that one terminus for the ropeways will be in the heart of the coal-fields (with feeder ropeways to the bigger mines); and the other terminus will be located in Durgapur. The carrying capacity will be 2 million tons a year. The coal will be mobilised at a central station in Raneegunge, and will be conveyed directly to the steel and other factories on the one hand and to the barges on the DVC canal on the other. Mechanical handling will be employed in all operations. The entire project may not cost more than Rs 2 crores.

If a survey of the region be made by experts in aerial ropeways, and if the transport and financial authorities find that the supply of 2 million tons of coal could be smoothly arranged by a capital project costing a moderate Rs 2 crores, the whole scheme could be completed ahead of the proposed steel works at Durgapur.

Above all, we would have furnished a significant solution to the much-vexed problems of transport bottle-neck.

The Dawn of an Epoch

MAY 15, 1956 is a red-letter day in the history of modern India. On this day, the blue-print of an integrated socio-economic national plan was finalised and announced. Posterity will remember this plan as marking an epoch for the Indian Union. When it is conceived as the first phase of a planned development spread over two or three decades, its significance becomes all the greater.

In many vital respects, the Plan marks a turning point not only in the economic development but in the structure and outlook of society. The Second Plan is part and parcel of a non-violent revolution, whose real character is somewhat masked by the methods pursued in achieving it and by the terminology in which is being discussed.

The First Five Year Plan deserves to be called so, only to the extent that to a certain broad framework of aims, priorities and methods were conceived and implemented. This framework was introduced, even as a concept, after many of the major projects falling within its scope were taken on hand. It might be said that the First Plan was mostly a case of assembling and pushing together the schemes which would have gone on independently. The long-term significance of the First Plan lies in the atmosphere it provided for co-ordinated thinking on national aims, exchange of ideas, enlistment of foreign expert views and the evolution of a compact body of aims and principles to be subsequently embodied in the Second Plan.

The targets of production, the figures of expenditure and their allotment, the methods of raising finance and the discussion of problems arising out of these might well create a first impression that the Second Plan is concerned solely with increases in production and raising the standard of living of a low-income population. This unquestionably is a major aim. But the method of achieving it is of equal importance. Most of the controversies surrounding the Plan refer to these methods. In the economic structure, which the Second Plan seeks to create, the freedom of the individual, his relation with the State, his obligations to society and to others who co-operate with him in the processes of production and distribution, will all be transformed possibly beyond recognition. This transformation may not take place completely within the span of the next five years; but there can be no mistake about the new direction to which every policy and principle is made to converge. The destination is somewhat vaguely stated as a socialistic pattern of society.

Glimpses on the character and range of this transformation are afforded by the new features emphasised. While the free industrial sector is to have a fair and wide scope for functioning, it will have to subordinate to social good the profit motive, hitherto the hall-mark as it were of free enterprise. This sector will have to earn a certificate of good conduct from time to time, the penalty for failure being its gradual effacement. The workers are no longer mere wage earners. They can feel the thrills and prestige of partnership in management; and can claim a voice in policy and a share in the profit. The conventional boundaries between the different factors of production will thus wear out, though this is not going to happen all at once.

The State becomes the dominant partner first in industry and then possibly in commerce. In agriculture, State aid and direction will be extended and enlarged. In the background of the changes in personal laws contemplated by measures such as the Hindu Code, the economy takes new clues and new forms of incentives through the relatively intangible impact of State policies.

By far the weightiest contribution to be expected from the Second Plan is the big lead it gives in the direction of economic, particularly, technological freedom. It has been possible for a friendly team of Russian experts to say without meaning or giving offence that the Indian engineers possess more theoretical than practical knowledge. After another ten years it is doubtful if a similar team will pass a similar remark or if it does, it will go unchallenged, Some idea of the effort being undertaken for the expansion of technical education could be had from the fact that as much as Rs 50 crores is allotted for this purpose. The annual rate of out-turn of graduate engineers and diploma holders is expected to grow up from 3600 and 4900 respectively to 4500 and 6500. The Engineering Personnel Committee of the Planning Commission has recommended proposals for 18 additional engineering colleges and 62 engineering schools, along with the maximum expansion of the capacity of the existing institutions. By the end of the Plan period, it can safely be presumed, a very high proportion of the technical jobs for which foreign assistance is now indispensable, will be handled entirely by Indians.

In another, more important way, the country's economic dependence will be lessened. The production of basic industrial material like steel and cement, electricity and chemicals, will leap up. In view of the increase in population and in

the standard of living envisaged, selfsufficiency in these materials may be farther off, but the gap between domestic demand and supply will be considerably narrowed.

One of the special merits of the Plan is that it leaves no aspect of co-ordination untouched. While there is sufficient awareness of what is desirable and what is feasible, the maximum balance is sought between agriculture and industry, between industry in the public sector and in the free sector, between large-scale and small scale industries, between the different sources of revenue, the different major allocations in expenditure, between the different regions and between the consumption requirements of the present and the investment outlay for the future.

Even within the Planning Commission critics are not wanting of some of the major assumptions behind the Plan. There is no attempt to under-rate their criticism. An effective answer lies in the absence of rigidity in the entire Plan or for any part of it. Neither the targets nor the allocations are viewed in the spirit of inviolable commitments. The flexibility which the Prime Minister stresses is not a mere curtesy term. It is an answer both to present criticisms and to the possibility of unforeseen emergencies, as for instance a bad crop or a deterioration in the international situation.

At the same time, there is scarcely any room for the suspicion that the Government may be found wanting, if they are faced with a steep rise in price levels consequent to deficit financing of the order Rs 1200 crores, The Government will not hesitate to resort to any disinflationery technique, physical control not excepted. It is not going to be a wild chase after dreamy objectives. There is the assurance in the Report that, after all the experience gained in the post-war years, the Government are sure of their feet and are well prepared to deal with uncalculated difficulties and unexpected bottlenecks.

The Plan admittedly does not offer a ready answer to all the controversial problems raised. Land ceilings, in spite of the misgivings of several State Governments, are not to be given up. The idea is not new either. It is the legacy from the First Plan. The Report, however, prescribes exemptions designed to obviate any adverse impact of the principle on land already efficiently cultivated and whose break-up would be uneconomical.

There is also a commendable desire to rule out, at least for the present, ideas which wear a forbidding look. Frankly, a ceiling on income does not enjoy wide acceptance. The Report concedes ceiling on income as an 'end product rather than the beginning of a whole process'. Discarding the approach through legislation, it is hoped to attain this end with the help of various measures and policies such as 'progressive adaptation of the tax system and through institutional changes which place an increasing proportion of the community's surplus directly in the hands of public authorities, promotion of co-operative forms of production, elimination of functionless rent-receivers, substitution of private usurious credit by institutional credit, control of private monopoly and enlargement of the public sector in strategic lines of production and trade.' It is a circuitous method but none the less sure for it.

That in its final form, the Second Plan is content with a single major change on the Draft through the upward revision of the total outlay by Rs 100 crores is a compliment to the perspective and judgment of the framers of the Draft Plan. Parliament is not likely to introduce any fundamental alteration, though amidst the focus of a critical Opposition, whatever loose ends exist will be tidied up. It is now possible to leave the realm of discussion and to start thinking of the most effective means of ensuring public co-operation. It augurs well for the Plan that the Socialist and the Communist groups have offered their willing support though with some degree of mental reservation. When other reforms like States Reorganisation and the introduction of the metric system have also to proceed apace, the Government cannot in the least afford to take a light view of the task ahead. Much new ground has to be broken, from the administration of child welfare to the management of atomic reactors. Evidence is not wanting that among Government officers there is frequently an irresistible fascination for the spectacular in preference to more solid achievements. Right or wrong, in the attiude of the masses, the Government have become the Ma Bap of everyone. The responsibility cannot be shirked.

"Is Production Control Necessary in 1956."

A Critical Study.

By RAI SAHEB H. B. KANOI

THE Tea Industry is one of the most important Industries in India and the biggest earner of foreign exchange for the country. It also provides employment to over twelve lakhs of persons as staff and labourers. It is, therefore, imperative that it should be run and maintained on the best possible lines, so that its economic progress is not jeopardised in any way. It has been observed during the past few years that there have been very frequent fluctuations in the tea market, which has been rendered quite unsteady due to the unusual rises and falls in prices. This undoubtedly affects the Industry's economic condition as also the morale of the producers. It is, thus, essential that adequate steps are taken to avoid such uncertainties in the sale of the commodity. Much, however, depends on the producers themselves. Several factors are said to be responsible for this unsteady nature of the market, but the main factors are given as the world supply and demand position, the quality of the tea and foreign competition.

The present world supply and demand position vis-a-vis India, judged from the quantum of Indian tea consumption in the world, shows that the demand for Indian tea is not lacking in any way. Internal consumption is on the increase (estimated at about 220 million lbs). Russia is expected to enter as a new buyer of about 20 million lbs this year, besides the USA and others, who are already importing Indian tea.

The UK is, of course, the principal buyer of our teas. Production this year may also increase as the Season has started earlier. The present position of supply and demand, therefore, appears to be balanced.

It is, however, believed that excessive production may lead to increased stocks and congestion in the market, which would tend to bring the market down. Indiscriminate increase in production can be expected only if the quality is ignored altogether, coarse plucking is resorted to and stalky and fibrous teas are allowed to go into the market. There being very little demand for poorer teas in the markets, these teas will naturally be abandoned or will deteriorate the market. Moreover, such teas cannot compete in the world markets and will remain unsold, causing loss to the producers and slump in Calcutta.

It is, therefore, a matter for serious consideration whether control or restriction on production is the only adequate remedy for avoiding this contingency or whether there is some other better way without causing loss to the producers, the Industry and the Government.

It is a well known fact, supported by past experience, that quality tea never lacks demand in the world markets and will also stand foreign competition. Hence, the production of quality tea will go a long way to solve this problem. If all the producers in India concentrate fully on quality, their production will automatically be controlled to a great extent. Resort to fine plucking and elimination of stalk and fibre to maintain quality will naturally tend to bring down production. On the other hand, the teas thus sent out will meet ready demand in the world markets and will give a good return without creating congestion or slump.

Moreover, if only quality tea goes into the market, the consumers in India will also have the facility of tasting good tea, which is not generally available to the common man today. This will ultimately contribute to a rise in the internal consumption of the country, thus helping to counteract over-production.

Besides production of quality tea, which is of course the best way to improve the market conditions all round, the position of individual tea gardens also calls for a careful scrutiny and examination with regard to their production. It is observed that quite a number of tea gardens are producing tea at an average per acre far below the economical standard. This is due to a lack of proper cultivation and supervision. This uneconomic production and consequent poor manufacture does not go to meet the enhanced cost under the Plantation Labour Act, and it becomes a source of burden to the producer as well as the Industry and the tea produced will affect the market adversely. Such gardens should, therefore, be improved by better standard of cultivation so that they would yield appropriate quantity of crop per acre producing only quality tea, and become good assets to the Industry. Side by side with this, the Government might restrict extension of new tea areas and thus retain the balance of supply and demand. The land consequently left surplus in the gardens could be utilised with advantage for other agricultural produce. The Government are much more a beneficiary in this Industry than the producers and should, therefore, put pressure on the Industry for production of only quality tea, putting restrictions on the clearance of stalky and fibrous stuff from the factories.

The last but not the least important of the considerations is the introduction of the International Tea Agreement, which is expected to be signed by the producing countries very shortly. This will regulate the world's Tea trade and will provide adequate outlet for our teas on the basis of our production. The sooner this agreement is reached, the better it is for us to send our quality teas all over the world.

Thus, it is clear that it will be in the best interests of the Industry if the producers pay whole hearted attention to their Tea Estates, improve the lot of their gardens and stick to production of only quality tea—restraining altogether from passing out stalky or fibrous stuff into the market. If they strictly adhere to these principles, there is no risk of depression in the market and no need will be felt to control production in 1956.

Encouraging Central Revenues

An Indian Finance Special Study

Second Plan Can be financed liberally from internal Sources

LATELY, the Planning Commission have revealed an anxiety to finance, to a greater extent, developmental expenditure under the Second Plan through "savings" from current revenues. The earlier estimates assumed that Rs 350 crores could be had as savings from existing rates of taxation (Central and State Governments combined) and that another Rs 450 crores should be obtained from additional taxation. Under the second head, it was agreed that the revenue from new taxation would be collected in equal shares by the Central and State Governments. Accordingly, new taxation proposals had to be framed for Rs 225 crores in each case.

Recently, however, fears have been expressed to the effect that the savings from revenues might be adversely affected on account of the increase in expenditure under defence, subsidies for Ambar Charkha and other heads, and that more taxes will have to be raised. Above all, at the latest meeting of the National Development Council, which considered the revised draft of the Second Plan, the consensus of opinion was that the 'uncovered' gap of Rs 400 crores between the outlay of Rs 4,800 crores and the tentative estimate of available financial resources should be bridged by additional taxation, savings and public borrowings by the Centre and the States.

These developments have been responsible for the latest suggestions that new taxation should be levied for Rs. 850 crores and that there should not be an element of uncertainty about the availability of funds, especially as the ceiling in regard to deficit financing has been fixed at Rs 1,200 crores and as unrestricted creation of currency might accentuate inflationary pressures to such an extent that the main objectives might be found difficult of fulfilment.

In the present context, it has consequently happened that two questions have suggested themselves. Firstly, have the estimates regarding the availability of savings from current revenues been correctly made? Secondly, have the existing levels of taxation, which, in particular directions, are already the highest in the world, been properly borne in mind when determining the scope for new taxation consistent with the need to retain initiative and enterprise?

An attempt has, therefore, to be made to find out whether there has been any underestimate regarding the availability of savings from current revenues and whether, having regard to the buoyant trend of tax revenues, larger sums could not be found. In the First Plan, the savings from current revenues on account of the Centre (including Part 'C' States) were first estimated at Rs 160 crores: and on account of the Part 'A' and 'B' States and Kashmir at Rs 408 crores. The revised estimates placed the figures at Rs 160 crores and Rs 412.7 crores respectively. Total savings were, therefore, estimated at Rs 572.7 crores (revised).

The actual experience, however, has been much better. An examination of the figures relating to the Central Budgets in 1951-56 is of significance in this context. As will be evident from the table given below, the budget estimates regarding revenue receipts have been extremely conservative while those regarding expenditure have been exaggerated. It has happened that, over the five-year period, the actuals have disclosed sizable surpluses. Revenue receipts have been appreciably higher while actual expenditure has always been below the revised estimates. Thus, the revenue position has been considerably strengthened. Against the anticipated net deficit of Rs 2.43 crores on the basis of budget estimates, the actual surpluses realised aggregated to as high a figure as Rs 221.34 crores. The improvement from the point of view of the revenue position was, therefore, as much as Rs 223.77 crores.

TABLE—A

Showing the Budget Estimates of Revenue and Expenditure as compared to the actuals or revised figures for the past five years.

(In crores of Rupees)

Year:		Revenue	Expenditure	Surplus (+) Deficit (—)
1951-52	Original Estimates	401.89	375.79	+ 26.10
	Revised	497.67	405.06	+ 92.61
	Actual	515.37	387.27	+128.09
1952-53	Original Estimates	404.98	401.25	+ 3.73
	Revised	418.64	422.43	— 3.79
	Actual	435.11	396.18	+ 38.93
1953-54	Original Estimates	439.26	438.81	+ 0.45
	Revised	413.69	430.65	— 16.96
	Actual	415.98	407.48	+ 8.50
1954-55	Original Estimates	451.73	467.09	— 15.36
	Revised	451.08	456.08	— 5.00
	Actual	456.13	422.82	+ 33.31
1915-56	Original Estimates	481.58	498.93	— 17.35
	Revised	501.67	489.36	+ 12.31
1956-57	Original Estimates	527.75	545.43	— 17.68

The Planning Commisson's calculations regarding savings from revenues are made on a different basis. But it is undeniable that unexpected surpluses prove to be helpful. Allowing for the possibility of a slight unfavourable experience on account of the Part 'A' and 'B' States, it will not be incorrect to say that the First Plan was financed, from revenue surpluses, to the extent of at least Rs 700 crores (of which over Rs 300 crores could be said to be on account of the Centre) against the revised estimate of Rs. 572.7 crores. That is, out of the central budgetary receipts of Rs 2,324.26 crores during the First Plan period, it was possible to utilise about 13 per cent to meet development expenditure.

The point now arises: What can be the expectation of savings from current revenues during the Second Plan period; and how far are the savings estimated by the Planning Commission an underestimate? As has been already indicated, a sum of Rs 800 crores is expected to be secured as savings from current revenues in 1956-61. We suggest that much more than this sum can be found for two reasons. The buoyancy of tax revenues in the coming years will be markedly emphatic while new taxation is contemplated at a much higher rate. Tax revenue increased from Rs 405 crores (including States' share of divisible taxes) in 1950-51 to Rs 483 crores in 1955-56. This increase was brought about both by a rise in receipts from proved revenue sources and through additional taxation. The increase in the budgetary total would have been much more but for the fact that the receipts from export duties declined considerably and were at their lowest in 1955-56. Receipts from excise duties, on the other hand, have recorded a gratifying increase from Rs 71.50 crores in 1950-51 (without allowing for the States' share) to Rs 143.75 crores in 1955-56.

In 1956-61, budgetary receipts can be expected to maintain a similar strong rising trend. There can be a rise in tax revenue from Rs. 483 crores in 1955-56 to Rs 610 crores in 1960-61 while the total for the five-year period might be about Rs 2,850 crores. If, as it appears now, there happens to be a more strident increase in receipts from excise duties, the total receipts can be nearer Rs 3,000 crores. Assuming that the same saving of 13 per cent, as in 1951-56, will be possible, the Centre can expect to find from the revenue budget on its account about Rs 370 crores after providing for current expenditure outside the Plan for about Rs 2,500 crores against Rs 2,000 crores previously. This larger sum should be sufficient for meeting increased defence expenditure, normal increase in administrative expenses, etc. If a careful watch is kept on all types of expenditure, much waste can, in fact, be avoided.

It will thus be seen that the Centre alone can find Rs 370 crores from current savings whereas the PC's estimate is only Rs 350 crores for the Centre and States combined. If the States for their part can be expected to find Rs 175-200 crores, the total can be around Rs 550 crores. There is thus a hidden reserve of Rs 200 crores.

As regards new taxation, Sir Chintaman Deshmukh has already taken the first move. When he presented the budget for 1956-57, he announced new taxation proposals which would fetch an annual revenue of Rs 36 crores. The Centre would benefit to the extent of Rs 34.15 crores. There is a feeling that the receipts have been underestimated. But, having regard to the recent concessions under the dividend tax, about Rs 35 crores can be expected to be obtained. (Latterly, heavy export duties have been levied on some commodities.) But, with the prospect of increasing production, larger taxable personal and corporate incomes and heavier dutiable imports, it could be expected that the new taxes would yield much more over a five-year period. The annual average might prove to be more than Rs 45 crores. Which means, even on the basis of the new taxes recently imposed, the Centre could be expected of fulfil its target in respect of revenues from additional taxation. The States must be expected to do their part as proposals have already been made for levying new taxes which will fetch Rs 160 crores and the increase in sales tax revenue alone might be a bountiful surprise.

The latest suggestions for levying further additional taxation have, therefore, to be viewed against this background. It has been made clear that there is room for increasing expenditure outside the plan by Rs 500 crores on account of the Centre alone in 1956-61 and that, as between the Centre and States, savings from current revenues in the same period can be about Rs 550 crores. Even if it is proposed that the uncovered gap of Rs 400 crores should be met by tax receipts to the extent of 50 per cent the hidden reserve of over Rs 200 crores will take care of this portion of the gap. The re-

Editorial Notes

Travel Less Call

The Prime Minister has expressed himself on the side of those who think that passenger travel in trains should be restricted. His argument is that accommodation being insufficient to meet the needs of all who wish to travel, the traffic should be curtailed. He has also disclosed that the Government were considering measures toward that end, and hinted that increases in fares could be one of them. That personally he is rather half-hearted in his desire to check travel is discernible from his approval of concessions intended to encourage people to know their country and see its manifold developments. By implication, he admits restricting travel is socially harmful.

Anyway, as overcrowding has to be tackled and there is scarcely an alternative, it is for the Government to discover the proper devices. The axe must first fall on official travelling. With the extensive development of telephonic communication, much of the official contacts now achieved by actual travelling could be secured without anyone moving from his seat.

Even less defensible is the profuse participation of Ministers and senior officials in what are purely ceremonial functions. The attendance of high ranking persons in such functions proliferates travel. Once this duty gets completely delegated to persons nearer the spot, a great deal of travelling accommodation and Government money could be saved. The free passes which are now being lavishly issued to public servants offer scope for scrutiny and reduction.

The travel less campaign must initially be directed to Government servants and those employed in the public sector who have become a privileged class in this respect. For the rest, if all the agonies of lower class travel have not proved a deterrent, we wonder what else will. A moderate increase in fares is not likely to have any serious effect on the volume of travel though, from the point of view of revenue, it would be attractive.

To stay at home may be put up as a sign of patriotism and national service, but its appeal will be confined to a small section who invariably travel high, and consequently do not contribute to the problem of overcrowding. Pandit Nehru mentions the Chinese permit system, but denies any intention to adopt it. In no democratic country is travelling regulated by permits. In India if it comes it will be a master-stroke of oppression.

*

Intractable Indo-China

The UN Secretary General has laid to his credit a great achievement by facilitating the cooling down of tempers in the Middle East, throhgh personal exertions on the spot. For a number of days Dr Hammarskjoeld was hopping across deserts pacifying now one party and now another, when every one was threatening to fly at each other's throat. One outsider could have done little to disentangle the belligerent knots in the Middle East. In this case Dr Hammarskjoeld had the good luck to see that his efforts were sustained at higher levels. After the visit of the Russian leaders to Britain, the prospect of immediate war in the Middle East completely receded.

International relief over this development is somewhat chilled by the continuing presence of the war-threat in Indo-China. In recent months, both North and South Vietnam have raised their armed strength to dangerously abnormal proportions.

The situation closely resembles the international cold war, where both sides are ready to 'talk peace with strength'. While Mr Dinh Diem denies any commitment compelling him to join in a united general election, Mr Van Dong who controls Northern Vietnam expresses his readiness to make arrangements for a joint election. Having within his territory three fifth of the population of undivided Vietnam, the Vietnam leaders' stand on this question can easily be seen to be one of decency assured of certain dividends. He can accurately foresee the verdict of the regimented majority he commands. His southern counterpart also knows it too well. And therein lies his worst fears. To overlook this glaring fact and wish for a domestic initiative for peaceful settlement in Vietnam is surely illusory thinking. The two armies can be kept apart, if the big Powers who divide their sympathies equally are keen on averting war.

Longer Lease for English

From the fragmentary previews available, it does not appear likely that the Official Language Commission will be able to produce a unanimous report. A strong minority in the commission do not favour the replacement of English by Hindi at the pace contemplated by the Constitution. They hold that to be faithful to the Constitution in this respect would be harmful to the non-Hindi speaking people. This minority represents the Bengali, Assamese, Oriya, Tamil, Malayalam and Kannada areas.

In other words, the opposition to the implementation of the Constitutional provision according to schedule extends to the bulk of the non-Hindi speaking areas. A number of eminent scientific and cultural associations have lent support to this point of view. The Indian Science Congress, for instance, has no doubt that the scientific and industrial advancement of the country would be jeopardised, if English were to be replaced in these fields in any foreseeable future.

In view of this opposition, the Commission may not venture to recommend strict adherence to the Constitution in the matter of the introduction of Hindi as the national official language. The dissidents are themselves divided on the length of the period over which the retention of English should be prolonged. Opinions range from ten to thirty years. It is a welcome sign that even in the Hindi areas, leaders are now ready to accept a longer period; at least many of them are keen to avoid giving the impression that Hindi is being forcibly thrust down the throats of a large unwilling population. The report of the Commission will demonstrate the strength of opinion in favour of a suitable revision of the Constitutional provision concerned.

*

A dual approach

In his message to the inaugural session of the Asian Institute of the International Commission for the Prevention of Alchoholism, the Prime Minister conveyed personal impressions on prohibition, which are a model for detachment. While conceding that prohibition as a national policy has a far greater scope in India than in many other countries, Pandit Nehru has emphasised the necessity to go about it cautiously with a fair awareness of the risks involved and of the real character of the problems presented by drink.

He is clear in his mind about the dangers of an ineffective policy. He does not make any theoretical approach. There is already a vast fund of experience in different parts of the country on which he could draw and which, as it stands, substantiates his reading.

He draws attention to the fact that prohibition has to proceed on two different lines, one calculated to win over people in the top ranks of society who take to drink as a fashion and the other to reform those who habitually resort to drink as a mode of escape from life's basic worries.

The reformation of the second, by far the larger group, is proceeding on fairly satisfactory lines. It is with regard to the other, smaller group that a determined effort has yet to come. If, as the head of the Government of India, Pandit Nehru can make an effective appeal to the social elite to wean themselves off of a fashion of this kind, it will start crumbling. What ought to be avoided in these matters is a fanatical and crude approach. Short of a direct frontal attack, the Government, if they are sincere, can do a great deal toward "dehydrating" the fashionable.

The Problem of Malpractices in General Insurance

By Mr. P. P. GINWALLA, F.C.I.I. (Lond)

THE article in the INDIAN FINANCE dated the 5th instant under the above caption is of considerable interest. There are, however, certain observations that need some vetting.

To conclude that the evil of excessive rebating started with Managing Agents taking a bigger slice of commission on their business is not quite correct. This extra commission on a volume of good portfolio which proved profitable had some justification. Moreover, it was not an attempt to cheat the Treasury of its due share in tax collection. If the Insurance Company did not pay the tax, this was collected from the Managing Agencies These houses were almost 100 per cent solvent and paid the same amount of tax which escaped taxation in the hands of Insurers. There were no bogus Agents, Inspectors or Organisers between whom this commission was shared.

With the modifications in the Insurance Act limiting Principal Agency commission to 20 per cent, these Managing Agencies gladly accepted the cut because, with the ceiling on overall expenses, it was impossible for any Insurer to pay the old rates of 35 per cent or 40 per cent. In the case of Insurers having a good volume of such tied business, perhaps there was some margin or surplus left, despite the overall ceiling, which the Insurers were tempted to fritter away in getting market business at higher cost, after the 1950 amendment of the Insurance Act. With the reduction in Fire and Riot rates, even this tendency has been further checked with the overall premiums reduced and the administrative cost remaining the same or, even increasing with annual increments.

Therefore, to say that the commission of Managing Agencies unleashed unsocial elements is not correct. If the same commission was not justified for market business, no prudent Insurer should have paid it. Does a Trader pay wholesale commission rates on retail sales? Generally not. And yet there are some who would do this.

Then what are the real facts that brought about the disaster? Let us face these facts boldly without hesitation and without meaning any offence for anybody. The late thirties and early forties witnessed registration of more General Insurance Companies, most of these started by business magnates who had some ready business to feed these Companies. There was nothing wrong in this venture for, horizontal combinations can be seen anywhere in the world. However, the second World War generated a good deal of black money which was utilised in capturing business at high cost. So long as this method of settlement was available, the accounts of Insurers did not present unfavourable picture. There was brisk competition and Premium figures was the order of the day. After 1948 this illicit source or reservoir of black money started to exhaust. Conservation of business presented difficulties. Yet the charm for Premium figures could not be lost. The Promoters demanded more and more Premium and, the qualified and experienced Underwriters looked aghast. Their underwriting skill had no value. Men who produced premium from anywhere were installed as Managers and Branch Managers. The Claims Department was neglected. It is not difficult to prophesy the future under this situation.

Then the illicit source, if not exhausted, became shy. Even the utilisation of hidden wealth had to be productive and, if its employment in General Insurance business did not yield marginal returns, there were other avenues for its employment. The result was that Premiums written on paper were not forthcoming as accounts could not be readily settled. The Balance Sheets showed alarming figures of uncollected premia and dues from Agents. Then came legislation putting a ceiling on expenses. Whilst this checked the extent of illicit rebating, it has put honest people at a considerable disadvantage. In my opinion these honest few will have to put up with this disadvantage for yet some time to come in the general interest of business.

No doubt further deterioration was checked but, legislation cannot heal the wounds already inflicted. Premiums lost will have to be written off, voluntarily or by compulsion. False Reserves must vanish and Capital reconstructed, where necessary. The bitter pills of thoughtless actions must have to be swallowed and, the sooner this is done, the better for the trade.

REMEDIAL MEASURES

Any remedies prescribed should not be worse than the disease. Excessive policing is not going to help. It has failed in the last three years and, the disease will show signs of further malignancy if it is imposed with vengeance. The Utopia that cannot be achieved in other trade, cannot be created in General Insurance. In the first place it is for the Insurers who achieved success initially by anti-social means to realise that, if they cannot face competition now, they cannot seek to create monopolies by stopping any drift of business. There are others that are equally keen to survive. If problems have been created, they must be faced and solved. If this means reduction in business and staff, it is not going to kill them. For their sake they cannot force suffering on others.

What is the guarantee that, by stopping drift of business, they will force a healthy sentiment in the market? These bigger institutions have a mass of skilled force, abundant Reserves to write more hazardous risks which their younger counterparts will be afraid to touch. Let them explore such avenues. Instead, they are attacking vehemently even what little is available for the smaller units in the trade. In the satisfaction of this greed lie the root causes for malpractices and corruption.

If they are sincere in their belief that by stopping drift of business, they will root out the evil of excessive rebating, let them come out with a genuine helping hand for the younger Companies that are run on sound lines. Will they agree to give up some part of their surplus non-reciprocally at 32½ per cent to 35 per cent commission by way of reinsurance? Such voluntary arrangements are not uncommon in other trades. If there is no such desire, then this suggestion is a myth—a clever ruse to perpetuate self interest.

There are sufficient corrective measures in the existing Act and Rules with unheard of powers in the hands of the Department of Insurance. Nothing further is needed. The Companies that are determined to flout them will not be able to survive long. How long can fictitious assets continue to be shown as good?

It is true that the other measures in the Bombay scheme are not only too theoretical but fantastic. The framers of this scheme have forgotten that business and trade cannot run with a police force at the doors. Too much publicity has been given to paint Underwriters a set of 'bad boys'. If there be similar probings into other trades, the position would be found the same. It is no use over-dramatising malpractices.

The existing slabs of expenses cater for units of various sizes and, in my opinion, no changes are necessary. But there is a section of opinion that there should be broader slabs. I also feel that a separate series of slabs for Marine business are not necessary. Although the difference in commission is only 5 per cent, why should the slabs be lower than this difference? The business is very much non-tariff and involves a lot of clerical labour and stationery for policies of small premiums. The margin allowed every year by the Executive Committee for drop in Premium income allows for administrative expenses which do not decrease with this drop. This concession is necessary in the interest of maintaining the quality of business. There being no limitation on expenses for business overseas, rules must be framed for expenses on Indian business not being loaded on to foreign business.

The suggestion that Chairmen and Directors should give a letter of undertaking that their executives will not indulge in malpractices is rather amusing. Are they, in any way, less responsible for the sorry state of affairs of some of the Companies? Do they not understand what is good for them? I understand this experiment was suggested in Pakistan. How many letters have been executed and with what results I do not know. For all these years Executives were made to sign periodical certificates and now this responsibility is to fall on Chairmen and Directors.

In conclusion I appeal that this drama in General Insurance should cease and, the Machinery already in existence be given a chance to work. It takes time for remedies to work and, chronic complaints cannot be cured by repeated doses of more powerful remedies. If the Government wants to nationalise General Insurance also, it is not going to ask our consent.

Air Conditioning Corporation Private Limited

It is understood that Messrs Gillanders Arbuthnot and Company Limited, have relinquished the Managing Agency of The Air Conditioning Corporation Private Limited. From the 1st of April,

World of Finance

Ceilings & Floors

WHILE it is proper that the Reserve Bank should, for effective credit control, have the power to vary the proportion of reserves maintainable against deposit liabilities of banks, it is of equal importance and urgency that the Bank should use its good offices for the establishment of conventions as regards ceilings on deposit rates and floors for advance rates. It is an open secret that banks have failed in their attempts to arrive at workable understandings in this matter. It will be wrong to assume that the cleavage is in terms of exchange banks versus Indian banks. It will be equally incorrect to generalise that the reconciliation of the interests of the more powerful banks with those of the less powerful is difficult. The factor which has retarded common action is the low level of discipline which afflicts both insurance companies and banks. Unauthorised rebating is the besetting sin of insurance companies; and suicidal competition is that of banks. In this predicament, intervention by the Reserve Bank, so far as banks are concerned, is inescapable.

This has been our view since we made the first suggestion in this behalf more than two years ago. Early action is emphasised by the developments in the current busy season. We are past mid-May; yet, the bidding for deposits and the clamour for advances have the peak-of-the-season quality. Due to speculative price-advances in commodities, the Reserve Bank has had to ask banks to submit fort-nightly returns furnishing specific information with regard to bank advances. The total of bank advances is at an all-time high; and the demand does not show signs of abatement. We have no doubt that bank credit is far too cheap both absolutely and relatively in comparison with rates in London and with the percentage of increases in other costs and prices in India.

The swiftness with which the bill market scheme was brought into being over five years ago was due to the plan of preliminary consultations which Sir B. Rama Rau devised for this purpose. We suggest that he should now take the initiative in arranging consultations with regard to the maximum of rates payable by banks on deposits, and the minimum of rates chargeable by banks on advances. One cause for the break-down of talks among the bankers themselves was that the ceiling in the one case was not considered as bound up with the floor in the other. The two are inseparable; and it is on this basis that the discussions should be initiated by Sir B. Rama Rau.

+

Currency Expansion: Rs 10 crores

THE returns of the Reserve Bank for the week ended May 11 show an expansion of currency for Rs 10 crores against rupee securities. In the ordinary course, this would be interpreted as expansion against ad hoc Treasury Bills, the money so created being intended for replenishment of the Centre's resources. On the present occasion, however, there are reasons to think that this expansion is not against ad hoc Treasury Bills, but against marketable securities transferred from the Banking Department. In the case of expansion against Treasury Bills, the customary practice is to indicate the addition to rupee securities, not at the nominal value of the Treasury Bills, but at the nominal value less the discount. Thus, if the expansion against ad hoc Treasury Bills be Rs 10 crores, the addition to rupee securities would be shown as Rs 9.84 crores. In the returns of the Issue Department for the week ended May 11, the increase in rupee securities is shown at a round figure of Rs 10.00 crores. Our inference is that this increase in rupee securities is due to marketable securities; and this conclusion is confirmed by the decline of Rs 10.12 crores in Investments held in the Banking Department. There is, however, another confusing fact. The Central Government's deposits show a rise of Rs 9.52 crores; and this would ordinarily justify the inference that recourse to ad hoc Treasury Bills has been in the interest of the Centre's ways and means position. Such an inference has to be revised in the light of the fact that, in the statement under review, State Governments' deposits show a fall of Rs 11.45 crores. We are, therefore, inclined to link the increase in Centre's deposits with the decrease in the deposits of the State Governments. Either the Central Government could have sold a considerable amount of ad hoc Treasury Bills to the State Governments, as a result of which the Centre's balances will show a gain at the loss of the balances of the States. Or, this might be due to inter-Governmental transactions involving payments by the Sates to the Centre. It is, however, difficult to say what the nature of such transactions could be at this time of the year.

The returns of the Reserve Bank for the week ended May 11 show an increase of Rs 7.37 crores in active note circulation to Rs 1,525.88 crores. Notes held in the Banking Department have risen by Rs. 1.60 crores to Rs 8.78 crores. Rupee coin is lower by Rs 1.02 crores at Rs 104.51 crores. Rupee securities show a rise of Rs 10.00 crores to Rs 708.69 crores.

In the Banking Department, deposits of the Central Government have risen by Rs 9.52 crores, while those of the Provincial Governments have declined by Rs 11.45 crores to Rs 6.67 crores. Bank deposits are shown at Rs 49.73 crores against Rs 49.40 crores and other deposits at Rs 12.86 crores against Rs 14.10 crores. Balances held abroad have declined by Rs 3.51 crores to Rs 36.54 crores. "Other Loans and Advances" have moved up by Rs 11.19 crores to Rs 88.08 crores, which includes Rs 52.08 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 107.22 crores. Investments have shown a decrease of Rs 10.12 crores to Rs 33.75 crores.

+

Currency Expansion: Rs 55 crores

AN analysis of the Reserve Bank returns for the last six weeks shows an increase of Rs 59.22 crores in active note circulation. Notes in circulation stood at Rs 1,525.86 crores on May 11. There has been an expansion of currency for Rs 25.03 crores against foreign securities and for Rs 29.87 crores against rupee securities. Rupee coin at Rs 104.51 crores shows an increase of Rs 1.35 crores. But it must be remembered that, early in April, the Central Government exercised the option, provided by the Reserve Bank of India Act, to tender rupee coin for Rs 5 crores. This means that rupee coin to the extent of Rs 3.65 crores has flowed into circulation. The deposits of the State Governments show a sharp decline of Rs 55.36 crores to Rs 6.67 crores. During March, the States received considerable payments from the Centre on various accounts; and it is obvious that these additional receipts have been more than fully utilised on account of payments by the States to the Centre and, possibly, on account of the investments made from the States' cash balances. Another significant change is the decline of Rs 53.18 crores in balances held abroad. Rs 25.03 crores is accounted for by the transfer to the Issue Department. The fall of Rs 28.15 crores represents the net loss of foreign assets during the six weeks. "Other Loans and Advances" show an increase of Rs 8.14 crores to Rs 88.08 crores; and this is a measure of

Towards A Lower Bank Rate?

By PAUL EINZIG

THE London Stock Exchange has been reasonably steady during recent weeks. The popular explanation is that the market anticipates further inflation. Yet it should be obvious that further inflation must mean more disinflationary measures which would affect unfavourably Stock Exchange prices. The real reason why the trend has been reasonably favourable is the widespread belief that the next change in the Bank Rate would be in a downward direction. In face of the inflationary trend that continues unabated, this may appear absurd. Nevertheless, there are several reasons why the possibility should not be excluded.

What gave rise to speculation on the possibility of a reduction of the Bank Rate was the perceptible decline in Treasury Bill rates, which now stand under 5 per cent against a Bank Rate of 5½ per cent. It is assumed that the decline has taken place with the approval of the monetary authorities and possibly on their initiative. There is no doubt that it is to the advantage of the Treasury to lower Treasury Bill rates, not only because of the high cost of their floating debt, but also because of the difficulties in funding any substantial part of the floating debt. So long as short-term money rates are so high the Treasury will have to offer even higher rates for any medium term or long term issue.

The trouble is that it is widely assumed that any reduction in the Bank Rate would let loose a fresh flood of inflation, partly through the effect of easy money on the volume of credit, and partly through the Stock Exchange boom that it would generate. There is room, however, for two opinions on the effect of a lower bank rate on the volume of credit. Under the automatic system high Bank Rate necessarily means tight money and low Bank Rate easy money. Under the existing system, however, the authorities are well in a position to make money tight even if the Bank Rate is kept relatively low by means of the various devices of monetary policy at their disposal.

The example of the United States shows that there is no need for raising the Bank Rate to an almost prohibitive level in order to bring about disinflation. The British authorities, too, would be well in a position to keep money tight even if the Bank Rate were to be reduced well below its present figure. They could do so by means of open market operations or by instructing the banks not to relax the credit squeeze. It is true the number of people who are now deterred from borrowing by the high interest This would only mean, however, rates would then become reduced. that the credit squeeze would depend less on the unwillingness of the borrowers to borrow as on the inability of lenders to lend. The change would not be popular among bankers who would be compelled to refuse applications for credit to an even larger extent than they are now. But, given the powers of the authorities to bring about tight money and to instruct banks to limit the volume of their credits, it would be quite feasible to keep down, and even to reduce further, the volume of credits even on the basis of a 3 per cent Bank Rate.

Admittedly, such a drastic reduction of the Bank Rate would be followed by a sharp rise on the Stock Exchange. This would result in large profits to speculators and investors. The actual inflationary effect of such profits would be, however, negligible. A large part of it would be saved and reinvested. To the extent to which beneficiaries of the Stock Exchange boom would increase their expenditure, it would affect the prices of luxuries but, its effect on the prices of necessities would be negligible. The favourite argument against Stock Exchange profits that it gives rise to additional wages demands has become utterly untenable in the light of Britain's experience during the last six months. The fact that holders of equities and Government loans suffered heavy capital depreciation during that period has not prevented the Unions from stepping up their wages claims which have been more exaggerated and more frequent than at any time during the previous Stock Exchange boom. Wage rates increased by six points in six months. This in spite of the fact that the cost of living index rose only by 1 point during the same period.

The phase in which wages demands are put forward as a result of reasonable arguments has long been passed in Britain. Wages demands are put forward on the basis of the industrial balance of power which has changed heavily in favour of the workers as a result of over-full employment. So long as the Government is unwilling to carry the credit squeeze far enough to bring about a certain degree of unemployment, the Unions will continue to press their excessive wages claims, irrespective of the ups and downs of the Stock Exchange.

Technically it is quite feasible to bring about a sufficient degree of credit scarcity even on the basis of a much lower bank rate. What matters is that industrial firms should be made to realise that they may not be able to secure the necessary amount of credit to finance their business on the basis of a higher level of wages. Unfortunately, as things are at present, they can rely on being able to pass on to the consumer any additional wages they may have to pay out.

The real solution of Britain's inflationary prices resis not with the monetary authorities or with the Unions or with the employers, but with the consumers themselves. So long as they put up meekly with the endless succession of increases in prices and services charges inflicted upon, there is the utmost temptation for producers to concede wages claims, and for Unions to put forward such claims. If only a certain degree of consumer resistance could develop it would make employers and employees halt in their pursuit of the inflationary spiral. Failing any inclination on the part of the consumers to resist, it is for the authorities to make credit conditions much tighter, and hope for the best.—(Copyright).

WORLD OF BUSINESS

(Continued from page 929)

1956, the Corporation is a wholly owned subsidiary of The Orient Paper Mills Limited (Managing Agents: M/s Birla Brothers) and is being run as a director controlled company. It is also learnt that Mr J. C. Kapur will continue as a Director of the Corporation.

Ever since the Corporation was founded in 1930, it has played a pioneering role in the development of the refrigeration and air conditioning business in India. It is learnt that the Corporation proposes to expand its engineering, contracting and manufacturing activities. The manufacturing programme includes room air conditioners, railway air conditioning equipment, industrial blower fans, and other items of heavier refrigeration and air conditioning equipment. To implement these plans, the Corporation is entering into a manufacturing agreement with their Principals, Messrs The York Corporation, USA, Messrs Buffalo Forge Company, USA, as also, Messrs The Safety Car Heating and Lighting Company, USA.

World of Jute

Listless Conditions

EXCEPT for speculative interest in B Twills, the Calcutta jute goods market last week ruled listless with foreign enquiries conspicuous by their absence. The lack of enthusiasm has been the result of the statistical position of the industry as revealed by the various sets of figures made available during the past fortnight.

The IJMA figures relating to production of jute goods in April reveal that output during the month has dropped by 5,400 tons to 93,900 tons as compared with the previous month when production totalled 99,300 tons. All categories have recorded declines. Hessians are lower by 2,100 tons at 32,900 tons; Sackings are down by 2,800 tons at 55,000 tons and other varieties are 700 tons lower at 6,000 tons. Compared with the corresponding month of the previous year, total production is higher by 8,200 tons. But it is significant to note that while output of Hessians is almost unchanged, production of sackings has gone up by 5,700 tons with other varieties accounting for an increase of 2,600 tons.

Now that the two important sets of figures, production and stocks, are available, it will be easy to find out how the industry and trade have fared in April. It is to be conceded that the conclusion that emerges is not of a variety that can arouse spontaneous enthusiasm. But it is, however, to be noted that the position is by no means depressing.

It is no doubt true that stocks stand at a new high since October 1953 and that despatches in April have declined sharply. Since the month has begun with an opening stock of 95,000 tons, it is evident that despatches have been no more than 81,600 tons. There has been a drop of 11,200 tons in despatches in April as compared with March. But compared with the corresponding month of the previous year, despatches are higher by about 4,000 tons.

Apart from the unimpressive showing of Despatches, news from North America is also somewhat discouraging, Burlap consumption in U.S. in April has declined to 69 million yards from 71 million yards in March while stocks in that country are higher by 2 million yards at 255 million yards, made up of 144 million yards spot and 111 million yards afloat.

Though it cannot be denied that April has been a disappointing month for the industry, the position since the turn of the year considered as a whole continues to be satisfactory. In the first instance, total despatches in the past four months are higher at 327,300 tons as compared with the corresponding period of the previous year when they were 304,300 tons. Secondly, US Consumption of Burlap is higher by 19 million yards at 280 million yards in the first four months of 1956 as compared with consumption in the country during the same period last year when it amounted to 261 million yards.

Price movements in the Jute Goods market, during the past week, were rather erratic due to speculative manipulation. The news of the drop in US burlap consumption from 71m yards to 69m yards in April had no adverse effect on market sentiment, and prices developed a rallying tendency on reports of the formation of a Syndicate by bulls who managed to take delivery of ready B. Twills. Moreover, the reports of a likelihood of a squeeze in B. Twills were also a contributory factor. Mills, taking advantage of the rise in prices, sold fair quantities at higher levels in forward positions.

Toward the close of the week, however, the market turned weak and prices were sharply marked down on reports of the failure of the Bull Syndicate to take delivery of B. Twills. On the whole, Hessians ruled comparatively better than Sackings as will be evident from the following price trends:—

	Week's Opening	Week's High	Week's Closing
	Rs. a.	Rs. a.	Rs. a.
Hessians:			
40" × 10 Ozs. Ready ..	38 0	38 0	37 10
40" × 10 Ozs. June ..	38 2	38 2	37 12
40" × 10 Ozs. Oct.-Dec. ..	37 12	37 12	37 10
40" × 8 Ozs. ..	31 14	32 0	31 8
40" × 7½ Ozs.	29 8	29 8	29 4
Sackings:			
B. Twills ..	106 6	107 2	104 8
Heavy Cees (Green) ..	104 8	105 8	104 8
Cornsacks ..	105 8	107 4	104 4
Cubans ..	131 0	131 8	129 8
A. Twills ..	129 8	130 0	128 8
L. Twills ..	120 0	120 0	118 8
D. W. Flours	121 8	122 0	120 8
Sugarbags ..	119 0	120 0	119 0

The Raw Jute market, after ruling steady during most part of the week, turned a shade quieter toward the close in sympathy with the manufactured goods section. Sellers were, however, reserved on unconfirmed reports that the exports of jute from Pakistan would become more difficult for the rest of the season. But mills showed only limited interest on the belief that there would be a glut in the beginning of the season. Only the following mill business was reported done in:—Assam and Indian Northern Bottoms at Rs 26-12; Assam and Indian Northern Middles at Rs 29-4; Daisee Tossa Middles at Rs 29-4 and Daisee Mesta Bottoms at Rs 24-12, all per maund for May/June delivery.

World of Tea

Outlook for New Season's Crop

ALTHOUGH there has been a pause in Tea prices at the Calcutta auctions this week, the undertone is generally better since reports about the strength of the London market have arrived here. Stocks in London, as on the 4th May 1956 at 102.05 million pounds, are substantially lower now than they were a year ago, at 165.79 million pounds. The UK trade believes that, with the recent lifting of the Indian Government's restrictions on direct exports to the London auctions, the additional quantity arriving there will be only 15 million pounds and not 25 million pounds as it had thought earlier.

According to the Board of Trade, London, imports of tea into the UK were lower at 47.35 million pounds during March 1956 as compared with 61.46 million pounds in the corresponding month of last year. Among the main producing countries, India and Pakistan lost substantial ground and supplied only 27.39 million pounds and 1.18 million pounds as against 39.28 million pounds and 2.52 million pounds respectively last year. Imports from Indonesia were also a shade lower at 728,911 pounds; but those from Ceylon improved from 10.44 million pounds to 11.05 million pounds. The performance of other countries was mixed. Thus, total imports in the first quarter of the current year were lower at 128.29 million pounds as compared to 176.73 million pounds in the corresponding period of last year.

The crop figures, released this week, show an outturn of 19.47 million pounds of North Indian teas during April as compared with 18.89 million pounds for the same month last year. This represents an increase of 0.58 million pounds for the month and is 0.63 million pounds in excess of the average for the past three years.

In Ceylon, production of high-grown teas shows a drop of 10 million pounds during the quarter ended March. A drop in the production of medium and low-grown teas has also been noted. Medium teas dropped from 38.7 million pounds in the first quarter of 1955 to 31.5 million pounds in the first quarter of 1956, while low-growns dropped from 20.5 million pounds to 17.5 million pounds. Trade sources have stated that the drop in production has helped to maintain the price of Ceylonese teas at competitive levels.

In general, as Messrs Cresswell & Company point out, the prospects for the coming season are considered brighter than a year ago, as consumption is steadily expanding, especially in India, while stocks in the UK are comparatively low and can be said to offset the carry-forward of the 1955 North Indian crop. They add that the new season should be satisfactory for growers provided world production remains within reasonable bounds and costs are not forced up still further.

But Messrs Carrit Morans point out that, although the supply position has once more been brought nearly into line with demand, the situation is not one for complacency. Rising prices might well check the growing consumption in India and large crops in India and Ceylon, during the coming months, can bring a sharp decline in prices when the "rains" teas reach the market.

It cannot, however, be denied that the new season will be particularly rewarding for those who produce the best quality teas. Moreover, an international tea agreement, which is awaiting signature, will play some part in regulating supplies entering the world market. Again, the Indian Tea Board has advised owners of gardens, who have planted tea without valid permit on land, not permitted on March 31, 1953, to take immediate steps to regularise their plantings.

Meanwhile, offerings in the Export Sale held at Calcutta this week consisted of 52,000 packages for which there was a fairly good demand, but at somewhat lower rates. Better liquoring teas declined by about As 2 per pound, while medium kinds, particularly Broken Pekoes, were a full one anna per pound lower. The poorest kinds were fully firm to occasionally dearer, while stylish Broken Pekoe Souchongs and well-made Whole Leaf grades were also firm to dearer. No rates were given as offerings consisted largely of end-of-the-season types.

In the Internal Sale, offerings consisted of 21,700 packages of Dusts for which there was a fair general demand. Black Leaf teas, suitable for the Middle East, were the strongest feature of the sale and were often several annas dearer. Good liquoring Mediums and non-wither Dobars were fully firm and occasionally dearer, while the very best CTC Assams received good support and advanced by one to two annas per lb.

Commons, poorer mediums and the more ordinary CTC Assams were irreegularly one to two annas per pound easier, and the very fibrous residue CTC teas were a weak feature and often difficult of sale. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-8-0; Medium Assam Crainy Dust Rs 1-9-0 to Rs 1-10-0 and Best Assam CTC Dust Rs 2-12-0 to Rs 14-0 (Nominal).

The offerings of other grades consisted of 6,500 packages for which there was a fair demand, but at an irregular one to three annas below last rates.

In the Export Quota section, the rate was quoted at 10 pies per pound for Old season's teas. There were buyers of New season's teas at 36 pies with sellers at 42 pies.

At the auctions held at Colombo, offerings were 8,292,760 pounds. The quality was much inferior, and there was considerably less demand. The market continued to weaken as the sale progressed and prices were on a very much lower level, resulting in heavy withdrawals.

The quality of Nuwara Eliya teas declined and prices for all grades were much lower. Also, the quality of high-grown teas was poor and prices were fully 50 to 80 cents per pound lower at the start of the auction and declined further by 20 to 30 cents per pound toward the close. With progressively weakening demand, prices of medium-grown teas also declined

(Continued on page 939)

World Overseas

US Notes

BUSINESS statistics continue to reflect optimistic tone in the United States with evidences of strength outweighing cautionary signs. The latest data show increases, for instance, in employment, sales and construction during April. A survey reveals that nearly three-fourths of more than 400 businessmen, who attended the US Chamber of Commerce meeting in Washington last week, expect employment and sales in their companies to go up or remain steady through the rest of the year. The total employment in the United States rose during April some 900,000 over March, to a high of 63,930,000. The biggest increase—about 700,000—was in agricultural employment. In non-farm sector, employment was higher than expected at this time of the year. Despite production cutbacks and some layoffs in autos and a few other fields, overall manufacturing employment, which usually registers substantial decline in April, this year dropped by only 40,000. Employment increases were chalked up in wide range of industries, including metals and metal products, furniture, electric and other instruments, textiles, paper, chemicals and rubber.

Spending for new construction, pursuing usual seasonal upturn, rose to $3,300 million in April, some 9 per cent more than in March and matching April record of last year. This year's four-month total of $11,800 million was same as for record breaking January to April period of 1955. Most of the last month's increase resulted from gains normally expected in private residential building and highway construction.

A note of caution has been sounded meanwhile, on account of rise in inventories which have been climbing for 15 months. The total business stocks—including those held by manufacturing wholesale and retail establishments—came to $83,800 million at the end of March after adjustment for seasonal trends. But, while this was six per cent higher than in March 1955 it presented a rise of only $200 million, over February, 1956. Most of the inventory-increase of past few months in fact, has been at manufacturing level. Retailers' stocks in March actually fell to $350 million, with two-thirds of the decline registered in hard goods. Department stores also showed sizeable inventory decline.

The reassuring factor is continuing rise in sales. The total sales in March, on seasonably adjusted basis, were up to $53,100 million—a rise of $200 million which matches increase in inventories. Sales of manufacturing and wholesale establishments were off slightly. Retail sales, however, expanded by $400 million with particularly pronounced rise in non-durable goods.

Increase in retail sales reflects general optimism of buying public backed by high employment and continued advances in consumer income. The total personal income in the first quarter of 1956 rose by $2,100 million to an annual rate of $313,600 million. Private industry payrolls were up to annual rate of $180,000 million, some $1,500 million more than in preceding quarter. Also up was non-farm income, while rental income was virtually unchanged. The net farm income, however, dropped slightly. The total disposals income money available for consumer spending after tax payments—put record annual rate $277,000 million in the first quarter up slightly from the previous quarter and six per cent above the first quarter of 1955.

Order backlogs furnish additional evidence of continued economic vitality. While unfilled orders are relatively low in some consumer goods lines, such as automobiles, in many other leading industries—particularly in capital goods lines—they range from equivalent of six months to two years production at current output rates. Particularly noteworthy are order backlogs for; freight cars—nearly two years output; machine tools—nine months; electrical equipment—more than a year; aircraft equipment and electronics—one to two years. Other industries showing strong order positions include these producing steel equipment, petroleum and coal mining equipment paper and cement.

*

Britain

By John Kingsley

The trouble with the British economy at present is that there is too much to be done. A mere glance at current commitments shows that they add up to an alarming total. The internal commitments are in respect of a high investment rate, a rising standard of living, a large defence programmme, and comprehensive welfare services. In the external balance there is need to build up the reserves, pay off debts, and also for a high level of investment. In addition, there is that part of Britain's defence commitment—about £160,000,000—which has to be paid for overseas.

When one looks at this list, two conclusions stand out. The first is that they provide a certain risk of overstrain—that is, of inflation. Some people have alleged that full employment is the cause of Britain's inflation. In fact, both full employment and inflation are themselves caused by the acceptance of commitments on this mammoth scale.

The second conclusion is that internal and external commitments are to some extent in conflict. If the available surplus is invested at home, it is not simultaneously available to be invested abroad. There is also a certain conflict between each of the objectives inside the external group. If money is invested in an under-developed Commonwealth country, it cannot simultaneously be added to the reserves of the Sterling Area.

The problem, therefore, is to keep all these commiments in balance. From time to time one commitment becomes of particular importance—as the rearmament programme did in 1951—and there has to be a difficult period of re-adjustment. Of late years, main attention has been given to the internal needs of the economic. Recently, however, there has been some serious thought about external capital requirements.

*

These are now estimated to amount to at least £300,000,000 a year after account has been taken of the Government's total oversea expenditure of £250,000,000 on defence, colonial and other grants, and on interest on loans. The £300,000,000 is comprised mainly of oversea investment of one kind and another. In the last four years, net Government lending plus net long-term investment has averaged £180,000,000. In 1955, it was only £165,000,000, but it cannot be kept down to that level.

The net long-term investment figure is worth special examination. The average figure has been £160,000,000. That compares with a figure for the United States of £250,000,000 last year. (Here one may fairly refer to the 8 : 1 ratio of the national incomes in the U.S.A. and the U.K.) Through International Bank, through special credits to Middle Eastern countries, through contributions to projects like the construction of a steelworks in India, or the Volta River scheme, or the Aswan Dam plan, this investment will both continue and increase.

In recent years it has been partly a bankers' investment. That is to say, Britain has financed loans to other countries ultimately out of funds deposited in London. That has been necessary because the British balance itself has seldom been large enough. Even with this banking credit, the central reserves of the Sterling Area have remained low.

*

This relative weakness of the reserves is important because sterling itself has now to finance something approaching half the total of world trade. To protect the position of sterling is an overriding principle of British policy. It is recognized that it would take at least two years of steady progress at the present rate to build up the reserves to a satisfactory level.

Carew's DRY GIN

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Carew's DRY GIN

WHILE reading Professor Galbraith's views on the organisational problems connected with the Second Plan (which I had promised to discuss this week), I was marginally struck by a rather curious fact. A great deal of foreign comment on the Plan has been impressed, not to say appalled, at the magnitude of the organisational problems involved in a Plan of this size. Domestic comment, on the other hand, has, to a large extent, obstinately tagged itself on to the financial and ideological implications of the Plan. It is difficult to indicate precisely the reasons behind this orientation in comment. At its best, domestic anxiety at the large assumptions made under the Plan may derive from a profound misgiving that we may be biting more than we can chew; at its worst, the nagging ideological fussiness and the pessimism about the financial implications of the Plan may be really an escape from the real tasks of the Plan—namely, the matching of our wits and energies to the inescapable challenges of our times. As for the foreign comment, at its best, as in the case of Professor Galbraith's, it is inspired by an appraisal of the managerial and organisational resources required under the Plan. As it is not so respectable, it is sometimes based on the all-too-easy assumption that India is just not capable of coping with the problems likely to arise out of its immoderate aspirations.

*

Be that as it may, friendly foreign comment on the Plan has always been bothered by the immensity of the organisational tasks. Dr Balogh, the Oxford economist who commented on the Plan in its early stages, made the point that the Plan may well prove ambitious from the point of view of organisational adequacy. Now, Professor Galbraith thinks that there is a 'substantial and even profound advantage in the policy that is being pursued in financing the Second Plan'—a judgment from which a great deal of articulate opinion in the country differs (not that it is necessarily correct). On the other hand, Professor Galbraith thinks that it is in the sphere of organisational tasks that the "Indian leaders are being least guided by experience and reflecting least deeply on their course'. Indian Finance, for one, (in all its discussions of the Plan) has been making the point that it is in the field of organisational resourcefulness that the Plan will meet its real challenges. Discussing the Plan-frame papers in June last, I stated: 'I am endlessly bothered by the inadequate discussion of organisation in all the current cerebrations about the Plan. I am afraid there is a tendency to escape into the dizzy raptures of figure-juggling, or to retreat into cosy regions of sterile argument about theory. . . . You can talk endlessly and interestingly about the rival theories of conspicuous consumption and conspicuous belt-tightening But development is to be conceived as a job of work to be done.'

*

Professor Galbraith makes the same point. He is rightly impressed by the number and variety of the tasks undertaken by Government in India. These tasks are sure to increase several-fold in the next few years, and it is 'in the field of administration and organisation and not economics where the most interesting problems will be encountered and where the most serious dangers would be met.'

*

In discussing this problem, Mr Galbraith confines himself, if one were to judge from the press reports, to the tasks connected with the new industrial enterprises in the public sector; and this, it must be emphasised, is but a fraction—though an important fraction—of the problem. There is, for instance, the whole area of administrative and organisational problems connected with rural development, the community projects and extension services: then, there are the almost intimidating tasks of organisation of the machinery for financing, producing and marketing consumer goods manufactured on a decentrialised basis. There are the social services sought to be provided by the State: and, lastly, there is the inevitable expansion of the conventional tasks of the Government, the humdrum job of tax gathering and administering funds and so forth. These tasks, especially the last, still retain the characteristic of the old dilemmas, though in the organisational tasks connected with the community projects a great deal of unconventional thinking is bound to be necessary.

*

But the one aspect of organisational conundrums that has assumed a certain urgency in view of the priorities implied in the Second Plan, is the one relating to industries operated by the Government. Here, the inadequacies of the situation in the matter of personnel (which Mr Galbraith has discussed) have the lineaments of a crisis. It is imperative that a decision should be taken about the kind of institutional and conventional framework for the tasks undertaken.

*

The chief difficulty, but one that is not unique to India, is that, during the last hundred years, the functions of the civil servant and Government institutions have undergone a revolutionary change. But there has been no corresponding change in the basic assumptions about the kind of control that ought to be exercised over the activities of Government. Time was when the civil servant was the King's flunkey and, therefore, an object of abomination of Parliament. Even when the modern civil service based on competition was introduced in the middle of the last century, the civil servant was still considered as somebody who, in diverse ways, was undermining the sovereignty of the Parliament. So, the convention of strict accountability of executive action to Parliament, especially in the matter of finance, by the institution of public account committees and so on became part of the British tradition and, therefore, of our system. But the solution today is radically different from what it was before. A civil service has become a bureaucracy, and the latter is in the process of becoming a managerial oligarchy and yet we keep on talking the old language.

*

It may be argued that the vast expansion of bureaucratic power makes accountability all the more necessary. No one who knows the ramification of bureaucratic power—the most despotic because the most anonymous—would demur with this view. But what is the sense in giving a man a particular job and not allow him the necessary freedom to perform it? The fact is that Government have ceased to be institution for collecting taxes and policing the State, but have become an industrialist on their own account. It is the simplest requirement of the situation that Government ought to behave like one.

*

It is true that, in the best circumstances, Governmnet cannot

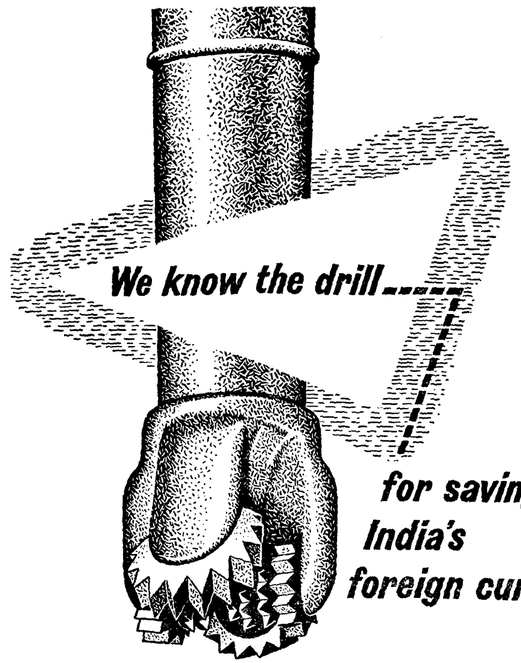
be as free as the private industrialist, whatever the private industrialist himself may say to the contrary. As cogently argued by Professor Galbraith, there are the inhumanly high standards of probity to which public enterprise must conform. The old saw, that justice should not only be done but appear to be done which governs at least in profession all Government action, has always appeared to me an attribute of perfection to which even God Almighty, I am afraid, cannot always lay claim. (Its moral validity—what does appearance matter, so long as the right thing is in fact done—is even more dubious). In a private firm matters are arranged to the best advantage of the business (assuming that the proprietor did care for the business) without regard for appearance. What will Mrs Grundy say is not a problem that has ever bothered any private entrepreneur on purely business grounds. But when the periodic fits of morality (to adapt Lord Macaulay's famous phrase) seize the public (Indian or British)—and these fits can be induced by politicians with the eye on the main chance and newspapers with circulation troubles—there is always the need to keep a facade of impartiality.

*

The result of this possibility is that officials always tend to burke responsibility; and passing the buck is irresistibly resorted to when vital and controversial decisions are to be taken. Thirdly, productive enterprises have of necessity to be run by men on the spot; and, if every time the man has to reckon what the member from Old Sarum will say if he bought a pint of tar without previous sanction from the Ministry, what kind of work can be turned out at these places?

*



A device that has been evolved to meet the dilemmas of this situation is statutory corporation. Mr Galbraith recommends it as the basic unit of public management. The idea is that the man on the spot is to have a large measure of initiative on the details of the tasks, within a well-defined framework, powers and responsibilities. Theoretically, this offers an ideal solution, but, in practice, at any rate, in India, the conventions that ought to govern the relationship between the corporation and the Government are yet to crystallise.

*

One important suggestion that Mr Galbraith makes with regard to these statutory corporations deserves the closest consideration. He is against the idea of setting up a new corporation for each new industry to be set up in the public sector. This is what appears to have happened so far in India, though no policy implications need be read into this fortuitous state of affairs. But this mode of organisation, Professor Galbraith considers quite wasteful of administrative talent—which is not in plentiful supply. This also necessitates the pulling out of the man who has made a success of a particular corporation to take on the job of directing a new corporation. Mr Galbraith considers that the man so drafted for the new task may not prove as good in it as he did in his last. His suggestion is that the pattern of industrial organisation in the public sector should be a relatively small number of operating corporations each in command of a considerable and increasing number of enterprises. These corporations should also plan for increasing the number of enterprises under them.

"Insist for your containers on "BHARAT". They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 "BHARAT BARRELS" price is Rs. 25-8 ex-factory. If you do not get BHARAT BARRELS, Write to Box No. 247, BOMBAY."

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

Bombay Review

Discriminating Nationalisation

AS was to be expected, Dr. John Matthai's speech at this week's luncheon meeting of the Rotary Club was, in argument, in emphasis and in conclusion, characteristic of him. The announced title of the address was: The Case for Nationalisation. One who was present at the function and heard his speech from beginning to end said that the description was definitely misleading, and a more correct one would be: The Case against Nationalisation.

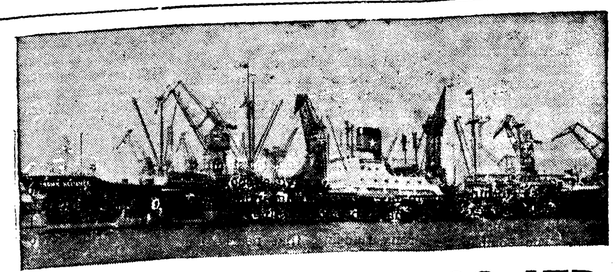
But, a comment of this kind should be an over-simplification of the spirit and substance of what the eminent economist had to say on the important and controversial question of Nationalisation. It is clear, on the one hand, that his was in no sense an insidious advocacy of the private sector; and, on the other, that his was no unfriendly criticism of Government policies. In the case made out by him, he is largely in agreement with Lord Keynes, whose general view in this respect, as approvingly cited by him, is expressed in the following words: "It is not the ownership of the instruments of production which it is important for the State to assume. If the State is able to determine the aggregate amount of resources devoted to augmenting the instruments and the basic reward to those who own them, it will have accomplished all that is necessary."

For the more or less analogous stand which Dr Matthai takes he has coined a telling name: Discriminating Nationalisation. It is arguable that there cannot be much difference between his position thus expressed in a nut-shell and the position of Mr Nehru who has repeatedly urged that he is no whole-hogger for nationalisation. The Prime Minister has, again and again, committed himself and the Government to the policy of mixed economy, which may be broadly paraphrased as "Nationalisation where necessary, free enterprise where possible."

Yet, it is obvious that Dr Matthai intends, by his Rotary address, to draw forcible attention to the difference which, on closer scrutiny, pertains to approach and emphasis. Dr Matthai admits unhesitatingly that, in certain fields, nationalisation is a fundamental principle without question and without qualification. At the same time, he realises that, in certain circumstances, nationalisation is justified. But, he suggests the formulation of definite criteria to be applied in assessing whether the circumstances in question justify nationalisation. The onus of such proof is squarely placed on the Government who, it follows, cannot be the final judges on this issue. The constructive point made by Dr Matthai is best described in his own words:

> Two things are important where an industry is sought to be nationalised. First, it must be established that in the national interest there is a good case for it. Secondly, the public as well as the interests concerned should know definitely what are the grounds on which the final decision is taken. The policy of government would on this basis be one of discriminating nationalisation. The tests by which the discrimination is exercised should be clearly laid down and the necessary enquiry should be made not by government but by an independent body with requisite knowledge and experience whose judgment would command confidence.

If the procedure recommended by Dr Matthai is adopted, would the Kolar Gold Fields be adjudged an appropriate case for nationalisation? His own view is that it is difficult to imagine a case less suitable for nationalisation. The Kolar Gold Fields are not a new enterprise. Gold is a speculative commodity. The use of currently produced gold as a means of strengthening exchange reserves is diminishing. India's contribution to world production is negligible. The low levels at which gold is now extracted in the mines in question makes it expensive.



Dr Matthai, therefore, distinguishes between the industries in regard to which there is prima facie need for State ownership and State management, and the industries in which whether such a need exists should be decided upon by an impartial and expert tribunal. Dr Matthai and Pandit Nehru are in agreement that mixed economy is the right policy for the development of India's economic and social objectives; where they differ is that the Prime Minister visualises rapidly growing significance and tasks for the public sector, free enterprise being assigned a positive but subsidiary role, the economist takes the view that free enterprise should be the rule, State enterprise being limited to certain cases. The conclusion of Dr Matthai is that "there is no case for a general application of the principle of nationalisation and that private or, as I prefer to call it, free enterprise should be the rule, State enterprise being confined to cases where there is proved necessity for it."

This is clearly an important divergence in emphasis; and thus leads to a divergence in approach. Dr Matthai is, thus, led to plead both for caution and discrimination in the policy of nationalisation. "I therefore come to the conclusion that it is in the government's interest at the present stage to proceed slowly and with caution in the matter of nationalisation. If the experiments in nationalisation meet with disappointing results, the reaction on the pattern of society that government are trying to build will be serious. I suggest therefore (1) that nationalisation should be strictly limited in scope, (2) that it should be applied selectively not in regard to categories of industries but to specific industries, (3) that the approach to it should be empirical, (4) that, as far as possible, it should be decentralised."

There are reasons to think that the first flush of nationalisation is fading wherever this policy had been implemented; and that second thoughts are favouring the kind of approach now put forward by Dr Matthai. In the doctor's own case, reappraisal has induced caution and discrimination. And it is not without significance that, soon after independence, India was unqualifiedly in favour of nationalisation; and that mixed economy is the later vogue. So, Government, too, could claim that they are realistic and empirical, and not ideological and dogmatic, in this matter.

"How far, and no further" is a demarcation with regard to which it is vain to expect agreement on all hands. Government's policy has been stated as clearly and as precisely as it is possible in the circumstances; and the policy statement sets out the extent of "how far" and the limitation of "no further". It cannot be expected to give satisfaction to every interest and to every section; but the reception accorded to it is encouraging and conclusive testimony to the fundamental soundness of the restated policy.

Gateway Notes

Risks in New Methods

The report on the discussions of the Agricultural Research Committee of Bombay says that too carefully tended plants are more susceptible to pests and diseases than those which receive only moderate attention. Here plants react in the same way as human beings. Perhaps, a biological principle may be drawn from it. Whatever be it, the conclusion has a bearing on the methods of agriculture which have, of late, been receiving warm Government support.

If as the Report says, the number of diseases and insect pests have increased since the introduction of intensive cultivation, there is something undoubtedly to be said against the methods. The Indian peasant is not always quick to respond to innovations. In the methods of crop-raising. Modern technological experts are invariably prone to look upon this attitude as reactionary. Perhaps, the expert is wrong and the peasants correct.

The suspicion of unfamiliar methods can well be the result of experience embedded in tradition, whose validity can be tested only by long-term processes. The Bombay report may not be final. The data on which it is based may have some special features and consequently the conclusion itself may have a limited value. Likewise, it can have universal validity and be an indubitable pointer to unforeseen risks.

It is, however intriguing why foreign countries where intensive methods of cultivation are in vogue for decades together and as a matter of normal practice do not report the same difficulties as the Bombay experts claim to have found out. Most of the methods which India has lately introduced are copied from countries where they have been successfully tried for long periods.

The only possible inference is that there are in the Indian environment peculiarities which militate against the methods. Nothing can be settled conclusively on experiments confined to one particular spot or region. The Bombay findings must stimulate similar experiments elesewhere, preferably under diverse physiographical conditions. The recent increase in crop production are officially claimed to be partly the result of intensive methods. In view of the possibility of the increased occurrence of diseases and pests in areas where this method is adopted, it is wise to restrain enthusiasm over it, and to await the conclusions of further expert scrutiny, before wide extensions are launched.

Communist Support to Plan

Mr P. C. Joshi, member of the Central Committee of the Communist Party of India, has disclosed that his party have decided to support the Second Five Year Plan, in view of the fact that its aims are good. From the Communist angle, the Plan has certain attractive features.

The Communists have never sympathised with the ideal of Sarvodaya. The development of basic industries which the Plan aims at gives Sarvodaya a decent burial. Amidst the all-round industrialisation moving ahead like a colossus, the Sarvodaya ideal can scarcely make its appearance anywhere except in an anaemic and apologetic form. The Communist Party does not conceal its glee over the triumph of industrialisation against Sarvodaya. For the Party, the Plan offers another more agreeable feature.

It is the communist thesis that whatever might be the professions and declarations of the Western Powers, they are keen on preventing industrialisation in India; the US particularly is charged with manoeuvres calculated to keep India a predominantly agricultural country for ever, with as little of industrial development as possible. To the extent the Plan aims to industrialise the country, it would mean discomfiture for the Western Powers. Here is another reason why the Communists should welcome the Second Plan.

Simultaneously, industrialisation under the public sector strikes a direct blow at the capitalists. Once the State starts running heavy industries, it secures an effective control over the private sector. Mr Joshi speaks of the encouragement given to cottage industries also with approval. He suggests that the flow of profits outside India through the foreign firms should be checked and these along with the reserves accumulated by the Indian Companies should be completely ploughed back into industry.

Needless to say that the Party, when lending its support to the Plan, does not like to emphasise the points which it disapproves.

GATEWAY MARKETS

Sharp Fall in Bullion

ACTIVITY on the Bombay bullion market, during the week under review, was mostly of a squaring-up nature and of switch-over from the maturing contract to Jeth delivery. Neither bulls nor bears were inclined to commit new business.

Toward the close of the week, however, there was a sharp fall in prices with silver bearing the brunt of liquidation. The debacle in silver necessitated the imposition of a margin at the rate of Rs 500 per bar on outstanding sales. Gold also gave a poor performance with selling induced by the sharp break in silver.

Strong rumours, that nearly 100 bars of silver had arrived in Calcutta from Tibet, created nervous sentiment right from the beginning; but, as the session progressed, a rally ensued on talks that the Tibetan imports would be small during the period of the current contracts. Moreover, excellent spot demand also acted as a contributory factor for the rallying tendency in prices.

Silver steadied up on the rumours that despatches of silver coins from Tibet had been held up by the authorities and that they would not come during the tenure of the current settlement. Backwardation charges, therefore, widened by Rs 1-2 to Rs 4 within the space of a week. Inflow and outflow amounted to 8 and 25 bars respectively, while 10 bars were reported to have been despatched to Surat. Vaisakh delivery moved between Rs 175-11 and Rs 176-15, to finish the week at Rs 176-11. Spot silver (.996) was done at Rs 180-11 to Rs 181-15, to close at Rs 177-1.

Gold, too, steadied up on good spot demand and bear-covering. Widening backwardation charges and the reserved attitude of sellers due to stringency of floating stocks, were the twin factors which gave a fresh impetus to the sentiment. Arrivals and off-take were 2,000 and 4,000 tolas respectively. Vaisakh delivery moved between Rs 103-14 and Rs 104-7 and terminated at Rs 104-6, while Jeth delivery was done at Rs 102-4 to Rs 102-8, to finish at Rs 102-7. Ready gold moved between Rs 105-4 and Rs 106-7, to finish at Rs 103-3. Mysore gold was done at a premium of As 2 over the bullion rate. Sovereign was lower at Rs 66-0 as against Rs 66-8 quoted early in the week.

There is a general feeling that the demand for the yellow metal will taper off soon in view of the closing of the busy season and due to the approach of the monsoon. Market circles are now increasingly anxious to know the stage reached by the Forward Markets Commission in its enquiry into the utility of futures trading in bullion and how the Government will react.

*

Oil Seeds

Revival of fresh trade support helped Oilseeds market to recover recent lost ground. The market was also influenced by the paucity of stocks of groundnuts and other seeds. Although there were no deals on foreign account, the firmness in prices was also due to dwindling arrivals of seeds and oils, both from Madras and Gujerat. Small receipts of oils were reported to have taken place from Hyderabad centres, but the same could not satisfy the demand locally.

The revival of American enquiry for Indian castor oil around higher levels brought forth support to castor futures. Shippers were inclined to buy, while professionals remained on sidelines. They indicated further scope of exports of castor oil to the UK and the USA as there were trade enquiries from these sources. Castor seed May delivery, after touching a high of Rs 147-8 from a low of Rs 143-4, finished the week at Rs 147-2. September delivery commenced at Rs 151-8 and after touching Rs 154-14, delined at the close to Rs 154-4. In the ready section, Madras quality was quoted at Rs 29-6. Castor oil commercial quality was done at Rs 16-6 to Rs 17-6.

Firmness of castor seed had steadier effect on Groundnuts and Linseed which improved moderately. Groundnuts Bold June-July delivery was done at Rs 35-11 with Khandesh quality done at Rs 36. May delivery oil was placed at Rs 19-1 and June-July at Rs 19-6 to 19-10.

The market for Linseed ruled steadier with bold ready quoting at Rs 34. Linseed Oil was placed at Rs 21-6.

Indications are now available that hedge trading in Groundnut will commence toward the end of the current month or in the beginning of next month. It is learnt that the Forward Markets Commission has reacted favourably to the move. The proposed trading will begin first in February 1957 contract in which all qualities will be tenderable. The contract provides for upcountry delivery of goods with the facility covering 38 centres situated in all the important groundnut-growing areas. The unit

Bombay Review

World of Cotton

Trade and Consumption Trends

THe permission granted by the Government of India to extend by six months to December 1956 the validity of import licences for American cotton has been greeted with relief by Cotton traders and mills. The quantity of foreign cotton licensed for import during the current season up to April would approximate 6 lakh bales, which is India's normal quantum of imports. As against this, actual arrivals, so far, have been of the order of 3.94 lakh bales. With still four months to go and, on the basis of the present indications, it seems probable that this quantity might be supplemented by a further offtake of at least 1.50 lakh bales, if not more. This estimate is worked out on the assumption that Indian mills will go in increasingly for new crop American cotton, business in which has reportedly been placed around 70,000 bales. Mills can now safely buy American cotton to any extent and can import new US crop, to be shipped in November and December.

The cotton consumption trend, during the first six months of the current season, provides encouraging reading. Consumption totalled 25.08 lakh bales as against 23.68 lakh bales for the corresponding half-year of the previous season. The monthly average of Indian cotton for the first half of the current season comes to 370,170 bales and of foreign cotton at 47,190 bales as against 337,150 bales and 57,470 bales respectively for the corresponding period last year.

In the case of consumption of foreign cotton, it must be noted that, in general, there has been a decline in the quantum of imports as between the first six months of this and the previous season. It must, however, be conceded that the second half may show some change in consumption statistics, due mainly to scarcity of indigenous cotton. Although mills are expected to show increasing interest in the US cotton on account of its cheapness, their purchases in other markets are likely to be limited in the coming months. For, the East African cotton crop has almost been marketed, while the prices of Sudanese and Egyptian varieties are so high that many mills have found them unremunerative. In other words, the mill demand will, in coming months, centre on American cotton.

The following table indicates the consumption of both Indian and foreign cotton during the first six months of the current season as compared with the same period last season (figures in bales of 400 lbs):—

	1955-56 Indian	Foreign	Total
September ..	382,979	45,174	428,153
October ..	385,910	45,938	431,848
November ..	352,871	42,881	395,552
December ..	397,245	51,650	448,895
January ..	353,259	49,606	402,865
February ..	348,949	52,195	401,144
Total ..	2,221,013	287,444	2,508,457

×

EXPORT TRENDS:

Cotton exports from India, during the current season, also show that exports have been higher than during the last five or six years. In view of the liberal export policy, total exports from 1st September 1955 to 28th April 1956 have amounted to 5.58 lakh bales as against only 1.53 lakh bales for the corresponding period last year. Out of these total exports, raw cotton accounted for 4.77 lakh bales, and Zoda and yellow pickings, etc., 78,267 bales as against 143,581 bales and 6,286 bales respectively. Shipments, according to destinations, are as follows (in bales of 392 lbs each):—

	1955-56	1954-55
United Kingdom ..	64,437	22,717
Continent ..	94,066	38,191
Hong Kong ..	40,469	3,221
China	57,578	..
Japan	293,369	71,753
USA	4,152	15,916
Other Foreign Countries	4,145	1,360
Total ..	558,216	153,158

×

HEDGE CONTRACT:

The trade has been very anxious to resume hedge trading at an early date in view of the growing unemployment in the cotton trade. Efforts are being made to speed up the drafting of the terms of the new hedge contract, so that the Forward Markets Commission may be approached for obtaining the necessary permission. It seems that the members of the Hedge Contract Committee are not unanimous on the issue of contracts. One school of thought is in favour of running two contracts simultaneously and the other school one. Both the schools are, therefore, asked by the authorities to present their cases, after discussion among the members, by May 26. The Hedge Contract Committee will meet after this date to consider their cases and to come to a decision.

×

SPOT COTTON:

Activity in the spot cotton market continued to be good and prices ruled distinctly firm. Mills were reported to be buying moderate quantities of Vijay, Surti and Jharilla varieties and their interest was focussed on Jharilla in particular, and Lakshmi, Jayadhar and Punjab styles in general. Business was done in Vijay 27/32" at Rs 990; Porbunder at Rs 755; B.P. 52 at Rs 1,740; Rampura 320F at Rs 855; Amravati Joda at Rs 621; Kalyan at Rs 885 and Belapur at Rs 745.

In the foreign section, prices of all varieties advanced by Rs 25 to Rs 70 per candy. Good business was reported done in higher grades of Sudan, East African and US cotton varieties. California 1.5/42" was put through at Rs 1,460 for October/November delivery; Busoga at Rs 1,635 and Sudan G/25 at Rs 2,755 for June/July delivery.

×

NEW YORK MARKET:

The cotton market at New York was featured, in early dealings, by the renewed firmness of old July, prices of which advanced on trade and New Orleans buying due to scarcity of offerings. The balance of the list was aided by the action of July, but upturns were held in check by hedge selling and liquidation with the market nervous owing to uncertainty about export cotton programme developments. July, after touching a low 33.35 cents, finished at 34.52 cents, while New Orleans May was quoted at 35.98 cents.

The Crop Reporting Board of the US Department of Agriculture, in its final crop report of the 1955 season, puts the revised estimates of cotton production at 14,721,000 bales, which compares with the preliminary final figure of 14,663,000 bales, issued last December, and last season's final crop of 13,679,000 bales. The yield per acre is estimated at 417.0 lbs against 341.0 lbs last season.

×

LIVERPOOL MARKET:

Business was slow, being confined to small routine trade buying and selling. New July/August position showed sharp improvement, with trade and local buying on prospective tight spot situation in this delivery. Other deliveries were sympathetically steady. Old contract May/June was quoted at 26.45, while new contract May/June was done at 30.65. The Egyptian contract was inactive, May/June being quoted at 59.25.

×

KARACHI MARKET:

In the Karachi market, rates ruled steady. Sind Deshi was done at Rs 105; Punjab Deshi at Rs 99; LSS Punjab at Rs 96/8 and NT Rolling at Rs 98.

×

COTTON AND PIECEGOODS:

In the middle of last week, the Government decided to extend free licensing of all varieties of cotton piecegoods—mill-made and power-loom—and cotton manufactures to all permissible destinations except Nepal, Tibet, Bhutan, Sikkim and Portuguese possessions in India for shipment up to 31st December, 1956. The existing licensing procedure and other conditions will continue.

The latest decision by the Government to abolish the 6¼ per cent export duty on coarse cloth is expected to boost exports. It is, however, feared that, if increased exports are not followed by larger output, the internal supply will shrink. It is hoped that the Government will take immediate steps to increase production of coarse varieties in order to hold priees down.

*

WORLD OF TEA

(Continued from page 933)

by 50 to 60 cents per pound. Low-grown teas were in much less demand and prices were fully 35 cents per pound lower for all grades.

The fall in prices of all grades in Ceylon was mainly due to a large volume of tea offered for sale. The Ceylon Government have, therefore, decided to remove all restrictions on the exports of medium-grown teas until the end of June; and this decision has been arrived at due to the anticipated accumulation of teas as a result of possible cancellation of some tea auctions during the "Buddha Jayanti" holidays.

Under the Ceylon Government regulated scheme for direct shipment of tea to London, shippers are allowed 32.50 million pounds of medium-grown teas and 32.50 million pounds of high-grown teas. As a result of the above decision, restriction will apply only to high-grown teas. Tea traders feel that lifting of restriction on medium-tea shipments to London will considerably ease pressure on Colombo sales and help stabilise the market eventually.

Olympus

The Final Shape of the Plan

THE Second Five Year Plan presented to the Lok Sabha on Tuesday by the Prime Minister is substantially the same as that outlined in the draft published some months ago. There has, however, been an increase in the total outlay by a hundred crores and this, rather unexpectedly, is due to an increase in the investment proposed in the private sector. This is particularly surprising, since all recent discusson of the upward revision of the Plan had reckoned with increases only in the public sector owing to the need for subsidy for the Ambar Charka, and for meeting further defence requirements. The increase now allowed to the Private Sector is not, in the context of the overall size of the Plan significant, but it may be considered as something of a gesture to the private sector which has been clamouring for a greater share in the total investment under the Plan.

Both in his brief introductory speech and in his intervention on the programme for the discussion of the Plan in Parliament, Mr Nehru emphasised the flexible nature of the proposed programmes. "We want to revise our Plan every year, to see what we have left undone, our difficulties, our resources and all that, so that we may keep in touch in reality." Inevitably I shall not be able to find in a single despatch a complete picture of the Plan. I shall confine myself on this occasion to the financial implications of the Plan

As is well known, the original outlay on the Plan was Rs 7,100 crores but with the addition of Rs 100 crores to the investment in the private sector, the present estimated outlay is Rs 7,200 crores. With the expenditure in the public sector remaining at Rs 4,800 crores, the outlay planned therein is exactly double that allowed the private sector.

Contrary to general expectations, the gap of Rs 400 crores in the resources is left uncovered but the Plan suggests that this will be covered 'by additional measures to raise domestic resources'. How this is to be done is to be decided later; but it is recognised that the "only possible source that can be drawn upon for meeting this gap is taxation and to the extent possible, profits of public enterprise."

The Plan's original expectations of resources remain unchanged at: (1) Surplus from current revenues: Rs 800 crores. This means an expectation of Rs 350 crores at last year's rates of taxation and Rs 450 crores as additional taxation; (2) Borrowing from the public; Rs 1,200 crores, of which Rs 700 crores are from market loans and Rs 500 crores are to be from small savings; (3) Other budgetary resources like Railways' contribution and provident fund and other deposits Rs 400 crores; (4) Foreign assistance: R 800 crores; (5) Deficit Financing: Rs 1,200 crores.

On the estimate of surplus of Rs 350 crores from current revenues the Plan states that this has been arrived at after detailed examination of last year's figures of revenue receipts of both the Central and State Governments. The possibility of this surplus being reduced owing to prohibition and other faddisms has not been provided for.

Regarding savings, the Plan's targets have always been considered as on the low side by Indian Finance. This is more or less tacitly conceded by the Plan's statement that it expects that "the net absorption of securities by the market would in fact be larger." It is curious that the Plan should not have sought to assess this expectation more precisely and to that extent reduce the uncovered gap. Even more curious is the fact that with this expectation, it should not have listed this among the possible ways of bridging the gap and mentioned only taxation and profits from public enterprises as the only forlorn hopes.

Regarding small savings, the Plan rightly expects every citizen to do his duty in this gigantic endeavour but its faith that this co-operation would be forthcoming in the measure required seems to be dubious since its target under this head is unduly pessimistic.

Regarding credit expansion, Rs 200 crores will be by set-off to sterling balances and the net addition to currency would only be Rs 1,000 crores. This is regarded as the maximum expansion that is consistent with prudence. Reliance placed on the Reserve Bank's wide powers for credit control—both qualitative and quantitative—for ensuring that the dangers of inflation and deflection of money from productive into speculative channels are kept away. The possibility of physical controls are also mentioned.

Regarding taxation, the Plan mentions with rather depressing insistence the need for further taxation. It mentions in some places a new figure of Rs 850 crores instead of the Rs 450 crores mentioned in the break up of the resources of the Plan. This is related to the uncovered gap of Rs 400 crores. All manner of new fangled taxes like the tax on wealth, expenditure, gift and so on are mentioned as possibilities to be explored.

Regarding external finance, there is already with us an unspent balance of past authorisation of Rs 94 crores. The Soviet Union is giving credit for Rs 63 crores for the erection of Bhilai Steel Plant and though a part of it is to be repaid there shall be a net accretion of Rs 43 crores in this account. The British Government and Bankers have promised Rs 33 crores, for the Durgapur plant. All this adds up to Rs 170 crores. This leaves Rs 630 crores still to be obtained from abroad. It is not possible, in the nature of things to predict how exactly this will be obtained but if the concept of competitive co-existence obtains more adherents, we should be one of the beneficiaries thereof.

As far as the private sector is concerned, an inflow of foreign capital of the order of Rs 100 crores has been envisaged. Out of this, a sum of Rs 22 crores is already available as the undisbursed portion of the loans granted by the International Bank for Reconstruction and Development to the Indian Iron and Steel Company, Tata Hydro-Electric Company and the Industrial Credit and Investment Corporation of India. New loans from these sources, not to mention private capital from abroad are expected to make available the rest of the amount needed.

As regards the balance of payments position during the next five years, the aggregate deficit on current account is estimated to be Rs 1,120 crores. A large part of this deficit is expected to occur in

CALCUTTA STOCK EXCHANGE
Official Year Book 1956
An encyclopaedic work of reference for Businessmen and Investors
(More Comprehensive than others)

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of referencc on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

The information given about each Company relates to its date of registration, nature of business carried on, managing agents and their remuneration, Directors and their share qualification, details of capital and shares, capital history, share registration fee, name of Auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to Reserves, net profit, amount carried forward, dividends, highest and lowest prices etc. for ten periods.

CONTENTS: A Review of 1955; Statistics of Second Plan, Investment of Trust Money; Approved Investments; Attestation of Lady's Signature; Income Tax & Stamp Duty, Estate Duty Act & Rates, List of Liquidated Companies (1939-55); Preference Dividends in Arrears; Rights of Preference Shareholders; Stock Exchange Committee; Stock Exchange Members; Stock Exchange Holidays; Stock Exchange Rules; Central and State Government Loans; Municipal & Port Trust Loans; Banks & Railways; Tea Companies—Rupee & Sterling; Malayan Rubber Companies; Cotton Mills; Coal Companies; Jute Mill Companies; Mining & Engineering Companies; Sugar & Electric Companies; Insurance Companies; Miscellaneous Companies; Interest Table; Exchange Calculator. Price Rs. 12/8/- Postage Rs. 1/13/- extra.

North Indian Notes

New Aids to Farmers

The cooperative movement in India is largely a conundrum. If the villagers are left to themselves, they will make a mess of it; if the Government officers hold the strings it means a sacrifice of the true principles of cooperation. Out of this conundrum, the Reserve Bank Rural Credit Survey offers a remote escape. For the present, there is no alternative but the State coming in with greater authority and pull.

The Agricultural Produce (Development and Ware-housing) Corporations Bill, which Parliament has taken up for discussion is the forerunner of a gigantic effort in the direction suggested by the RCS Report. Under the Bill, the Government proposed to form agricultural productive co-operative societies with a membership of 50 to 100 farmers each; each society would have a few hundred acres within its jurisdiction. It is the Government's intention that the bulk of agricultural produce raised in India should be marketed by such societies, with the help of the ware-housing and other facilities envisaged in the proposed measure.

During the discussion in the Lok Sabha, members pointed out some of the glaring drawbacks of the existing system of ware-housing. The intentions of the Government are defeated by the fact that often it is not the producer but middle men who first make the purchase and utilise the ware-housing and marketing facilities provided by the quasi-official bodies.

On the other side, there is the recalcitrant farmer, who refuses to cooperate with his neighbours.

The Food and Agriculture Minister says that the primary rural credit societies would be members of the cooperative marketing societies and any person to whom loans are advanced by the Rural Credit Society would be obliged to sell his produce through that society. It is not difficult to rope in the bulk of the produce coming into the market through such means, provided the officials on the spot are earnest and incorruptible.

That leads on to another problem, which a vast new organisation like the Ware-housing Corporation cannot avoid facing. The majority of the producers will continue to be illiterate for a long time. The middle-men will be there, either openly or in the sly, and the officers of the Government, particularly in the lower ranks, will not be above temptation. That the agricultural produce is easily susceptible to false weighing and deterioration, opens extra opportunities to the lax official. Among all the administrative problems pertaining to this organisation, it is this which will be found to be most intractable. The success of this organisation therefore will be determined largely by the reputation for integrity established among the officers on the spot.

An independent member suggested that middle-men should be eliminated if the co-operative venture is to succeed. He pointed to the example of China, where no middlemen existed and the Government were the sole wholesale purchaser of grains from the peasants. He wanted that the Government should insist on sales being made only through cooperative societies.

Mr A. P. Jain promptly announced that he was sending some officers from India for training in China. The Prime Minister is also enthusiastic about such a step. The proposal might, however, create misgivings in the minds of the more conservative sections of the population. For, the success of the Chinese experiments owe to State compulsion. As to, by what means compulsion could be substituted, the Government do not as yet seem to have any idea.

At the moment, the Government would be reluctant to commit themselves on this point. But willy-nilly, a kind of new pressure will emerge which cannot certainly be called compulsion, but which in actual effect will be a first cousin to it. With the Reserve Bank, the Ministry of Food and Agriculture, the States' Governments and a semi-official Board in charge of the Agricultural Produce Corporation, which in turn will control the financing, storing and marketing of produce, it needs no special powers of prediction to say that the agricultural economy will imperceptibly pass more and more within the official grip. The concessions and facilities offered by the State-controlled organisations will be very real and there will be few individual small farmers who will be so suicidally courageous or aloofish as to defy the attractions of these facilities. That is how the Governmental ring would get tighter and tighter till it comprehends every aspect of production and distribution.

The proposed measures are estimated to entail an expenditure of about Rs 30 crores. How much of it will be of the category of capital expenditure is not known. It is inevitable that recurring expenditure will grow in volume as the facilities become increasingly popular. Along with the expenditure, the income through fees charged to the public must also grow.

Behind some of the suggestions made in Parliament, there seems to lurk a fear that the producers may not adequately respond from the start. One leftist member has suggested the compulsory formation of cooperative societies in every village. That would mean a radical departure from the present policy of the Government, which, as far as it goes, is based more on persuasion and indirect pressure than on direct compulsion.

An organisation, in whose direction several tiers of authority enter, is bound to create delicate problems in coordination. That a large measure of autonomy should be conceded to the State authorities goes without saying, at least in view of the wide regional differences obtaining.

The organised inroad of the State into this new sphere will not lead to any change in agricultural methods. Mr A. P. Jain has assured that the cooperative societies would be carrying on farming with cattle power. Mechanised mehods will not be favoured. The preference is admittedly linked to the aim of not aggravating the unemployment situation in rural areas.

NORTH INDIAN MARKETS

Sugar Markets Depressed

SUGAR markets continue to rule dull and depressed as the supply position is reported to be very easy and outside buying support is very slack. Markets, in general, have remained immune from bullish influences of other commodities in view of the occassional sales of imported sugar by the Government as well as larger production. Thus, stocks of foreign sugar lying with the Government have been responsible for checking the upward tendency in prices. Following are the rates quoted (per maund) in the Hapur Market:—Jaswant Rs 27-13; Simbhauli Rs 27-14; Mowana Rs 28-1; Daurala Rs 29-0: Amroha Rs 27-5: Bijnore Rs 27-6; Mansoorpur Rs 28 to Rs 29 and Rampur Rs 30-8.

Factories in the Uttar Pradesh State are still crushing cane; and it is now almost certain that the indigenous sugar production in the country, during the current season, will beat all previous records. It may be noted that production upto 22nd April has reached 15.97 lakh tons, which is already higher by about 10,000 tons as compared to the production of the whole season 1954-55. About 109 factories were still working on the 15th April; and it is expected that production, during the remaining period of the season, will at least amount to about 1.25 lakh tons. Thus, the total production for the whole season 1955-56 will come to well over 17.20 lakh tons.

In the Bombay market, sugar prices have remained fairly steady during the past few months. The rumour is, that five or six merchants have struck a deal to buy about one lakh bags of foreign sugar from the Government. If this rumour is correct, it will give a fillip to the market. These buffer stocks should have been used, as it has been done so far, to dump on the market in small lots to curb any rising tendency whenever the situation so demanded.

Arrivals of Indian sugar in Bombay, during the week ended May 8, were around 9,000 bags and those of foreign sugar around 12,000 bags. Stocks were estimated around 56,270 bags as against 59,180 bags in the previous week.

At Kanpur, prices in the mill-delivery section reacted bearishly to the announcement of a new quota release by the Centre. Mill deliveries of the Central and Western Uttar Pradesh were priced lower on balance by As 4 to As 6 per maund. Buyers from Assam and the Deccan evinced keen interest in the mill deliveries of Northern India.

The crushing season has come to an end in most parts of the country, but some factories of the Central and Western Uttar Pradesh are still busy with their operations.

Meanwhile, the minimum price of sugarcane, supplied to the sugar factories in Bihar, has been reduced with immediate effect by As 3 per maund. The minimum cane price now payable to the cane-growers will be Rs 1-4 at the factory gates and Rs 1-2 at rail-heads instead of Rs 1-7 and Rs 1-5 per maund respectively.

*

Better buying enquiry, improved loading facilities and fall in daily arrivals accounted for a slight improvement in ready Gur prices

Madras Review

South Indian Notes

Mahatma vs Marx

The Mysore Chief Minister is apparently perturbed by the thought that Indians today are going more after Karl Marx than Mahatma Gandhi. He suspects that the phenomenon is not good for the country. Mr Hanumanthayya voices a feeling shared by a considerable body of intellectuals.

Pandit Nehru makes no bones about ideological compromises. In fact, he is, possibly without being aware of it, trying to build an eclectic body of methods to achieve a socialistic society. To this mixture, he is willing to admit freely whatever is good in any country. He asks India to take good things from Russia, from China, from Yugoslavia, from the United States and European countries. As the Prime Minister, he is concerned more with the suitability of doctrines and methods than with their origin and associations.

It is a sound practical approach, especially when many conflicting interests have to be reconciled, and the country itself cannot boast of a surfeit of experience in the field of material achievements. The Gandhian impress is unmistakable in the strict adherence to non-violence and to gradualness, which are not forsaken even in the implementation of the most radical ideas.

The Mahatma shunned Communism, for that matter, totalitarianism of every sort. A country dedicated to parliamentary democracy and eschewing violence rigorously, will not plead guilty to the charge of having forsaken Ghandiji for Marx. Both these two great men thought on largely similar lines as regards the ideal society. Both accepted general economic equality as indispensable for a healthy society.

In these circumstances, it would appear that there has not developed any widespread antipathy to the means or methods prescribed by the Mahatma. The bias for Marxism discernible in contemporary Indian outlook is largely the result of the overlapping of the two ideologies, with the confusion it creates. What the country is in just now for is for Marxism strongly amended by the Mahatma.

This statement holds true in a very general way. It may not bear the scrutiny of those who revel in the obscure nuances of modern political thought. Amidst all the apparent confusion one fact is outstanding. The dignity of the individual to which Marx attaches little importance, is, theoretically at least, jealously guarded by the Indian Constitution and its present protectors.

*

Educational Problems

There does not seem to be another State where the intimate problems of education are so fervently discussed as Madras. Till lately, educational changes were unpleasantly mixed up with politics. To some extent this association still lingers. But the direct impact of the domestic politics of the State is no longer visible in educational discussions. Many changes are still in the melting pot.

In his Presidential address at the 46th Madras State Educational Conference, Mr S. Natarajan, Director of Field Services, Government of India, referred to basic education and explained how some of its fanatic exponents were trying to follow the letter of the scheme, ignoring its real spirit. Basic education does not permit of any regimentation in method, organisation or administration. The whole trouble has arisen because the scheme conceived by Gandhiji had often to be worked by individuals brought up in an entirely different set of traditions and outlook.

Mr Natarajan was critical of the comparatively low allotment in the second Five Year Plan for education. He said there was no use being impatient over a problem which was colossal in magnitude. He, however, felt that the Planning Commission could have made a bigger allotment against the Rs 1,000 crores demanded by the Union Ministry of Education.

But finance, according to him, should not be a source of anxiety for us.

Decentralisation in the matter of financial resources could offer some help. As in the UK, local taxes or rates could be raised to contribute to educational expenditure. Likewise, there could be a parallel decentralisation of authority, the local bodies coming into the picture in a more effective role.

The Minister for Education has given the assurance that the Government would not contemplate taking over the recognised private institutions for at least another ten years. Mr Natarajan evidently wants a much longer, if not a permanent, lease for the private institutions. He believes that creative efforts in education will be stimulated in the atmosphere of freedom obtained in the private institutions. A rigid and inflexible pattern will undoubtedly be less suitable, from that angle.

SOUTH INDIAN MARKETS

Prospects for Pepper

PEPPER markets have been developing a weaker tendency during the past few weeks, and very little interest is being shown by American buyers. In the Alleppey market, the rate is hovering idly around Rs 737-8 per candy.

As arrivals of New Sarawak are reported to be increasing at Singapore, holders there are becoming nervous. They are anxious to sell, but both dealers and grinders in the USA and Europe have been showing little or no interest.

Though the stock position in the US market is very low at present, dealers there are content to wait for the Sarawak new crop, the pressure of which is likely to force down prices further. In Indonesia, prices of both black and white pepper are kept at a high level. Holders are, therefore, in a hurry to liquidate their stocks before the new season begins.

According to the latest estimate, the Sarawak crop will amount to anything from 11,000 to 16,000 tons and will start coming into the market shortly. Such a heavy crop, therefore, makes dealers abroad more cautious in their operations. If the Food and Agricultural Ministry's estimate is correct, India's pepper crop for the season will be above normal. But its accuracy is questioned in trade circles whose estimate places the crop at about 24,000 tons as against the Government's estimate of 27,200 tons. A larger surplus can, however, be expected this year in view of the bigger crop and the small chances of an appreciable increase in export and internal consumption.

There is fear that, if India stays out of the American market in the hope of forcing up the price, Americans may get used to Sarawak and Java pepper and might not return to Malabar. Moreover, proximity of monsoon has made the technical position of the Malabar market vulnerable, particularly in view of the sizable floating stock in the hands of both exporters and growers.

Russian interest in Indian pepper is now an important factor in deciding future market trends. There is a rumour that she will enter the market shortly for another 1,000 tons, apart from 3,000 tons she has taken so far. In case if Indian prices are pushed up, Russian purchase cannot sustain the Malabar market. A section of the trade is, however, bullishly inclined and is trying to resist, as it thinks that, at the current low levels of prices, demand should develop.

Meanwhile, dealers in the American market are very reluctant to raise their bids, being anxious to await further developments. In the New York market, Malabar and Lampong spot were quoted at 28 cents per pound, while Sarawak spot is quoted around 26 cents per pound.

(Continued on page 945)

Stock Exchanges

MARKETS IN GOOD SHAPE

Watch Dog Writes:

DESPITE corrective realizing pressure, stock markets appear to be in good shape, due largely to be in good shape, due largely to renewed bull support and bear-covering. Investors as well as professional operators are now trying to view the prospects more from the point of view of appreciation in values than the yield patterns. In general, the morale has been better since the announcement of the Government's industrial policy.

Prices on the Calcutta Stock Exchange displayed generally a firmer tendency although attention was mostly confined to Engineering and Miscellaneous sections.

After a measureable shake-out due to long liquidation, equities on the Bombay Stock Exchange showed a partial rally toward the close, thanks to short-covering following firmer advices from Calcutta.

The Madras Stock Exchange ruled fairly active with attention mostly confined to selected Planting issues.

The London Stock Exchange, after ruling dull during most part of the week, made a better showing toward the close.

Wall Street closed barely steady with losses ranging mostly to one dollar or more.

*

Calcutta

WITH an exceptional strength displayed by Indian Irons and renewed demand for selected Miscellaneous scrips, the local Stock Exchange presented a firm front. Apart from a constructive interpretation on the revised industrial policy of the Government, the recent speech made by the Commerce and Industry Minister at the opening of the India Exchange imparted further strength to the bulls who lent continued support to the market despite intermittent profit-taking at higher levels. There was a general feeling that, even under the new industrial policy, the field left for the private sector was enormous and that the stock markets could permit their functions in the normal manner.

The Giltedged market remained steady and it seemed that the market was preparing for absorbing the new loan for which announcement is expected next month. 3 per cent 1986 Conversion Loan, after touching a high of Rs 77-12 and a low of Rs 77-4, finished the week at the latter level. Among other Loans, 3 per cent 1970/75 changed hands at Rs 89-12 to Rs 90-3; 3½ per cent 1965 at Rs 98-9 to Rs 98-13 and 3 per cent 1957 at Rs 100.

In sympathy with the giltedged section, Bank shares ruled generally steady. Punjab National were enquired upto Rs 51-8 from Rs 49-6, while United Commercial moved narrowly between Rs 50-5 and Rs 50-7.

There was very little doing in the jute section where prices initially developed an easier tendency though, toward the close, they made a slight recovery, thanks to a spectacular rise in India Irons. Howrah touched a low of Rs 22-14 and National Rs 24-8, to finish better at Rs 23-6 and Rs 25-0 respectively. Reliance closed better at Rs 10-12 against Rs 10-8, while Nuddea were marked at Rs 40-0. Among higher-priced shares, Anglo-India were maintained around Rs 168 and Delta at Rs 202.

Price movements in the Coal section were confined to a narrow range as operators were found to be reluctant to extend their commitments, pending the announcement of the Industrial Tribunal Award. Burrakur changed hands at Rs 14 to Rs 14-5 to finish at the latter level, while Bengal were well held at Rs 531. South Karanpura were done at Rs 9-8; Pench Valley at Rs 22-4 and Central India at Rs 7-5.

Except Darghanga which met with good support upto Rs 22-12 from Rs 22-2 and SKG which remained firm at Rs 12-0, other Sugar shares were generally dull. Champarun changed hands at Rs 29-9 to Rs 29-12 and Carew at Rs 8-11 and Rs 8-13.

Although the Tea section was again neglected, prices of selected scrips were kept firm on the feeling that the new season would be particularly rewarding for those who produced the best quality teas. Amongst the few transactions recorded were Brooke Bond changing hands at Rs 24-2 to Rs 24-4; Baghmari at Rs 28-12 to Rs 28-14; Huldibari at Rs 37-0 to Rs 37-4; Batli at Rs 24-4 to Rs 24-8 and Banarhat at Rs 360.

In the Engineering section, the steady and sharp rise in Indian Irons was mainly due to the renewed support given by one prominent operator. Despite the Stock Exchange Committee's decision to impose a margin system and the approach of the settlement day, the scrips was gradually pushed upto Rs 37-12 from a low of Rs 36-7. The settlement rate was fixed at Rs 36-11 as against the previous settlement rate of Rs 34-9. After market hours on Thursday, however, there were sellers at Rs 37-10 with buyers at Rs 37-9-6.

Among other Engineering scrips, Jessop moved up, in sympathy, to Rs 35-2 from Rs 34-8; TEXMACO to Rs 24-7 from Rs 23-9; Richardson to Rs 27-2 from Rs 26-8 and Kumardhubi to Rs 10-15 from Rs 10-6. Burn changed hands at Rs 363 to Rs 365 with Braithwaite nearly maintained at Rs 28-0.

The Miscellaneous section provided a few firm stops. The outstanding feature was Indian Copper which forged ahead to Rs 7-1 from Rs 6-9 following the news that the company had won the litigation with the Bihar Government. Karanpura Development met with renewed speculative support upto Rs 25-8, while Orissa Minerals moved narrowly between Rs 23-14 and Rs 24-2.

In the Paper section, Orient were a feature, having sustained support upto Rs 37-4 from Rs 36-6. India Pulp changed hands at Rs 25-1 to Rs 25-4; Shree Gopal at Rs 18-10 to Rs 18-14 and Titaghur at Rs 43-8 to Rs 43-10.

Among other scrips, India Steamship were in demand upto Rs 8-11 from Rs 8-8 following the news of the increase in coastal freight rates. BIC were nearly maintained at Rs 11-5; Rohtas at Rs 22-9; Dunlop Rubber at Rs 30-9; Rallis at Rs 33¾; Martin Burns at Rs 25-6 and Metal Box at Rs 27-8. National Carbon touched a high of Rs 26-12 and a low of Rs 26-4, to finish the week at Rs 26-10. IBP moved between Rs 40-14 and Rs 41-8 to close at Rs 41-2.

*

In Briefs

Andhra Cements have maintained the dividend at Rs 10 per share for 1955.

Mysore Chemical Manufacturers have maintained the dividend at 20 per cent for the year ended 31.3.1956.

Vijaykumar Mills have raised the dividend from 7½ to 10 per cent for 1955.

Radhakrishna Mills have raised the dividend from 16 to 20 per cent for 1955.

Palani Andavar Mills have maintained the dividend at 24 per cent for 1955.

*

WORLD OVERSEAS

(Continued from page 934)

The need is to create a sufficiently large annual surplus on the balance of payments. In the last six years there has been an average surplus of £70,000,000, but that has included £55,000,000 of defence aid. This surplus is, in any case, much too small. The Treasury wants to achieve a surplus of at least £300,000,000 to £350,000,000.

To attain such a surplus will not be at all easy. It means that Britain must expand exports faster than imports. And that will affect the home economy.

Some relief is expected from higher oil earnings this year, but there is little prospect of reaching an adequate surplus in 1956.

*

Many people seem to suppose that oversea investment is an optional policy which Britain can pursue or forego according to choice. That is not so. In the first place, the Sterling Area countries require considerable sums of capital and traditionally look to Britain as the source of supply. If that supply were to be cut off, it would damage the whole system.

During the war there were built up large sterling balances. These are being used by the Sterling Area countries in the financing of their development projects. In this way Britain is like a banker who can foresee that depositors will be drawing on their accounts.

This is not, therefore, a voluntary commitment which can be set aside. The question is how to meet it. The Government's immediate answer was shown in the Budget. A large Government surplus and incentives to private saving should provide the extra savings which will allow an adequate rate of investment both at home and in other Commonwealth countries.

FOR THE INVESTOR

(Continued from page 924)

duced. Also, to meet the ever-increasing demand for steel castings in the home market, the Government have issued licences for eight new foundries to be set up, which will nearly double the output of the industry in about two to three years' time.

Further capital investment in the Khardah Works, during the year under review, amounted to about Rs 11 lakhs; and total investment in fixed assets, as on 31.12.1955, approximates Rs 39½ lakhs. In view of the growing pace of industrialisation of the country, especially of the steel industry, the directors are carrying out certain technical modifications to the new plant at Khardah, which will ensure a monthly output of 10,000 tons of finished products per month.

£ R$

Sitalpore Sugar Works

The Sitalpore Sugar Works Limited has reported a loss again for the year ended 30th June, 1955. Although the supply of cane improved during the year to a certain extent in comparison to previous year the cane available for crushing was only 1,114,900 maunds, which was much below the normal requirements of the factory.

Sales for the year have declined to Rs 18.39 lakhs from Rs 38.54 lakhs in the previous year, while the Profit and Loss Account shows a loss, before providing for Depreciation of Rs 67,024 (Rs 60,644), of Rs 72,491 against a loss of Rs 1,48,443 For obvious reasons, the dividend has been passed over. The debit balance carried over amounts to Rs 5.38 lakhs as against a debit balance of Rs 3.98 lakhs brought in from the previous year.

CLIVE STREET GOSSIP

(Continued from page 936)

At first sight, it might appear that there is an inconsistency in Mr Galbraith's suggestion that one set of persons should take on several industries and at the same time suggesting that a man who proved himself successful as "Captain" of one Industry may fail in another. It may be argued, in that case we must decide upon the particular industry in which a particular person will prove successful and let him stay there for ever. But this line of argument misses the essence of Mr Galbraith's suggestion that it is the organisation that counts and not the man at the top. Once that is conceded, it will be realised that it is wasteful to create several sets of organisations for several industries. In a sense, in the highly developed industries of the sort contemplated for the public sector, apart from technical complexities of the jobs—which is the job of the specialist and not the administrator—the problems of administration are likely to be more or less identical. Therefore, there is the economy involved in such pooling of the wisdom, experience and even physical resources of the organisation. The idea roughly corresponds with the much derided managing agency system of private enterprise. These corporations will, in effect, be the managing agencies of Government enterprises. All advantages canvassed by the supporters of the managing agency system will be had by a corporation of this type.

The truth is a steel mill cannot be run by the Government in a way different from that run by private enterprise. The maximum efficiency must necessarily be ensured in both. Likewise, no private entrepreneur is today free to run his business without regard to the claims of labour: and, to that extent, Mr Galbraith's assumption of room for manouevre in private enterprise is misleading. By the nature of the case, Government have to run industries on "business lines": on the other hand, there are executives in private firms who are as punctilious about "rules" as any pettifogging superintendent in a Government office. It looks as though the time is not far off when, at least organisationally speaking, the talk of private and public sectors will become anachronistic nonsense.

NORTH INDIAN MARKETS

(Continued from page 941)

to Rs 10-8 per maund. The past week's offtake was mostly to Gujerat side and stocks at Hapur were estimated around one lakh maunds.

In the futures section, rates moved irregularly. Phalgun delivery touched a high of Rs 9-13-9 and a low of Rs 9-3-3, to finish at Rs 9-12-6 per maund.

Conditions in the Hapur Foodgrains market remained steadier and appreciable gains were recorded in the prices of coarse grains on continued bull support from East Uttar Pradesh where prices spurted to new higher levels due to poor arrivals. Wheat average quality was transacted at Rs 13-2 and farm quality at Rs 14-8 as against Rs 12-10 and Rs 14-4 per maund respectively quoted in the previous week. The small daily arrivals, averaging 1,200 to 1,500 maunds, contributed to the hardening of prices. Outside buying enquiry for farm quality continued from Gujerat.

Rice prices continued steady and were quoted at Rs 25-3 to Rs 33 per maund, according to quality, for Basmati.

Firmness in Gram prices continued on poor local arrivals, the daily average being 50 maunds. Local quality was quoted at Rs 10 and the Punjab quality at Rs 10-12 per maund as against Rs 9-4 and Rs 10-0 respectively.

Barley and Bejhar prices also registered gains of As 8 per maund and were quoted at Rs 9-6 and Rs 9-4 per maund respectively. Jowar prices ruled steady due to good demand for seed.

Hardening in Pulses prices was more pronounced during the week, Peas dara quality being quoted at Rs 10-4 and white quality at Rs 12-8. Arrivals were, as usual, small at about 1,000 maunds daily. Arhar prices also recorded modest gains despite arrivals in heavy quantity.

Steady conditions were witnessed in the Delhi grains market where Wheat dara quality registered a rise of about As 12 per maund in the wake of better buying against small arrivals. There was a good demand for Gram from Uttar Pradesh and other areas. Arrivals were meagre, with the result the rates advanced by about Rs 1-4 per maund. Barley improved by about As 10 per maund in line with the steadiness in wheat price. Maize hardened by about As 8 on account of better enquiry. In the Pulses section, Moong, Urad and Masoor strengthened by about As 8 to Re 1 per maund following heavy purchases.

✱

GATEWAY GOSSIP

(Continued from page 937)

Flexibility is to be the keynote of Government's implementation of that policy. There is recognition that nationalisation is not an essential element in socialism; at the same time, it is realised that, in a developing economy, and with private enterprise in India being in a particular predicament and of a particular calibre, nationalisation in certain fields and under certain circumstances is inescapable.

Dr Matthai and Mr Nehru, in sum, agree more than disagree.

SOUTH INDIAN MARKETS

(Continued from page 942)

Thanks to good showers in mid-March, the production of Coffee is expected to show an increase in the coming season. It is generally believed that the Robusta crop will be better than the one picked this year and that Arabica will be quite a good one.

It is reported that, in the second week of April, there were over 27,000 tons of coffee in stock; and only eight months' supply is required in the internal market before the new crop comes in. Even taking 2,000 tons of release per month, which is not usually taken up, the coffee required in the country is only about 16,000 tons, leaving 11,000 tons for disposal.

✱

In the Madras Groundnut market, conditions remained steadier with prices moving within a narrow range. Arrivals, during last week, averaged 30 to 40 tons a day, crushers being the main buyers. The rate for superior oil-quality seeds was quoted around Rs 158 per candy.

New summer peanuts have been coming in at a few South Arcot centres and are being brought around Rs 168 to Rs 170 per candy. Small quantities were sold in Madras at Rs 159 per candy.

In the Groundnut Oil section, the rate finished at Rs 327 per candy after touching a high of Rs 330 in mid-week. Calcutta interests were the main buyers, while consuming interests in the City were taking up for their requirements from small 'chekku' crushers. Calcutta vanaspati interests had bought about 100 candies of oil for month-end delivery at Rs 327 per candy.

Conditions in the Madras Tanned Hides market turned a shade quieter during the past week. Arrivals of Cow hides were fair, but clearances were rather restricted due to poor sales in the UK and prices were marked down by 12 to 15 ples per pound for all weights. Prime 5/5½ lbs and 8/8½ lbs were done at 47/48d and 38/38½d respectively, while 10/12 lbs were neglected.

Arrivals of Cow Calf and Buff Calf were normal, while clearances, particularly of the latter, were small. Prices were generally lower by about As 2 per pound. In the export section, only a negligible volume of business was reported done in Buff hides. In Cow Calf, certain premium quality marks were on enquiry for 1½/1¾ lbs and 1½/2 lbs at prices varying from 85d to 88d. In Buff Calf, main demand was for 'seconds' alone.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were on previous week's levels, while prices were nominally unchanged. In the export section, there was little or no trading as London auction was in progress.

In London auctions, best quality Primes advanced by 3d to 6d, while semi-Prime descriptions were sold at March rates. Elsewhere, the market declined by 3d to 6d. Although the brokers, on the first day, gave out an unchanged market to 6d per pound higher, actual sales made were reported to be considerably lower and, in many cases, as much as 1sh per pound lower. Light weights were neglected with inferior fifths registering the largest decline in prices.

According to the first and final forecast report, the area sown with Maize crop in the Madras State in 1955-56 is estimated at 15,800 acres as compared with the corresponding area of 15,900 acres in the previous year, showing a decrease of 0.6 per cent. The estimated area in the current year is higher than the average area during the five years ended 1953-54, at 13,700 acres.

The crop has been or is being harvested. The yield per acre is expected to be normal in the district of South Arcot and below normal in other districts of the State. The total yield works out to 6,700 tons of unhusked grain as against 6,900 tons, estimated for the corresponding period of the previous year, representing a decrease of 2.9 per cent.

✱

OLYMPUS

(Continued from page 940)

the middle period of the Plan—the second and third years and is due to the expectation of heavy import of steel, machinery and other equipment. The expectation is that exports will increase to Rs 615 crores in 1960-61 from Rs 573 crores of 1956-57. Imports will rise substantially in the first four years resulting in a negative trade balance of Rs 1,375 crores for the whole period. If allowance is made for invisible surpluses, the deficit would be, as already stated, of the order of Rs 1,120 crores. Part of it is to be met by drawing on foreign exchange reserves, but by the nature of the case, this can only be to a small extent. The major portion of the deficit—about Rs 900 crores—will have to be through the inflow of foreign capital or loans and grants from international agencies and foreign government. It is thus clear that the foreign exchange requirements of the Plan are quite large. This can be met only by the maximization of export earnings, since economies in imports have a definite limit, in view of the vast programme of industrialisation planned in the near future.

THE CALCUTTA STEAM NAVIGATION CO., LTD.

A dividend of Rs. 6-4 per share for the half-year ended 31st December, 1955, has been declared payable at once in the Indian Union.

ENCOURAGING CENTRAL REVENUES

(Continued from page 927)

maining gap of Rs 200 crores might be left uncovered as the difficulty will arise, if at all, only at a later stage. It has been amply proved by the experience of the First Plan that original apprehensions were generally exaggerated. In spite of the best efforts made to speed up work, the actual expenditure on the Second Plan might fall short of the target by 5 to 10 per cent.

In a period of rising tempo of expenditure both in the public and private sectors, the need for larger savings cannot be over emphasized. But it has also to be borne in mind that taxes cannot be levied in advance of the times and that, already, the burden is crushing in many directions. In respect of personal incomes above Rs 1 lakh, income and super taxes heavier than even in the UK are being paid. Thus, on a personal income of Rs 1 lakh as much as 55 per cent has to be parted with against 53.6 per cent in the UK, on Rs 2 lakhs 72.3 per cent against 69.3 per cent on Rs 5 lakhs 84 per cent against 83.2 per cent and on Rs 10 lakhs 88 per cent against 87.9 per cent. In Japan, Sweden and the USA, the tax burden is much lower. In Japan, the net worth tax was levied in 1950 and repealed in 1953.

When commodity taxation also is fairly heavy, it would, therefore, be advisable if the various issues involved are properly considered and due note is taken of the extremely favourable budgetary position of the Centre and States.

GATEWAY MARKETS

(Continued from page 938)

of business will be 100 candies and there will be provision for weekly clearings.

*

Metals

Under the influence of firm foreign advices and continuous bear-covering, the Copper market ruled firm. In view of the scarcity of ready material and the fact that producers of ICC copper were not able to offer earlier than July delivery, sellers got reserved. Ready electrolytic ingots were placed at Rs 262 per cwt, while Jeth delivery was quoted at Rs 243-8.

Zinc, however, witnessed an easier tendency following weak London advices. Ready was quoted at Rs 69 and Vaisakh delivery at Rs 68-4.

Lead remained steady and demand was reported to be moderate. *Ready* was quoted at *Rs 82*, while Vaisakh delivery was done at Rs 81.

There was no fresh feature to report with regard to Tin, which was quoted at Rs 128 for ready and Rs 126-12 for Vaisakh delivery.

On the London Metal Exchange, copper spot was quoted at £351 per ton; Tin at £751, Lead first half May at £111 and Zinc first half May at £94¼.

*

Art Silk Yarn:

After lapse of over ten months, forward trading in staple fibre yarns was resumed on Wednesday this week. Although trading was not officially suspended during this period, business was at a stalemate following a scarcity of tenderable goods. The stock position in the tenderable varieties has now considerably improved due to poor spot demand during the past several months. The tenderable varieties, which were formerly confined to 11 mills, have now been extended to 15 mills with the inclusion of the Pankaja, Venkatesh, Coimbatore Spinning and Dhanalakshmi mills.

The Government of India have decided to allow the import of acetate yarns of 120 and 150 deniers against actual user-licences during Jan-June 1956 period to the extent of 5 per cent of the face value of the licence. Despite this decision, indigenous qualities have continued to rule firm. Indian yarn of 150 deniers has been holding on to the high level of Rs 5 per pound, while 120 denier quality has kept steady at Rs 4-7 per pound.

Traders have pointed out that a sizable portion of licences issued were already utilised before the relief was announced. They also point out that, even in the case of remaining licences, imports of acetate yarn are hardly likely to be of the total permissible quantity. Those requiring acetate yarn will have to augment their supplies from the available stocks in the market. Stockists are not, therefore, in a hurry to sell. 120 denier June delivery was quoted at Rs 806 and Rs 120 spot Japan at Rs 3-13 (per pound) and 150 spot Italy at Rs 3-14 (per pound).

*

WORLD OF FINANCE

(Continued on page 930)

the continued pressure of the busy season. Investment are lower by Rs 13.44 crores at Rs 33.75 crores. Most of this decline is, we believe, due to the sales of securities to the States. It is noteworthy that Investments held by the Reserve Bank in the Banking Department are now at the low level of Rs 33.75 crores—a level not known for many a day. We also believe that securities held in the Centre's cash balances investment account are now negligible. This means that the Reserve Bank is in a strong position to make open market purchases of securities having early maturities.

The statement of the State Bank of India for the week ended May 11 show a decline of Rs 2.69 crores in deposits to Rs 223.89 crores. Borrowings from other banks have risen by Rs 9.94 crores to Rs 20.50 crores, while other liabilities, including inter-office adjustments, are lower by Rs 3.47 crores at Rs 4.57 crores.

On the assets side, cash balances have risen by Rs 3.45 crores to Rs 17.17 crores. Investments are shown at Rs 103.79 crores against Rs 104.51 crores. Advances have moved up by Rs 1.27 crores to Rs 140.61 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 1.58 crores and "Bills Discounted and Purchased" for a drop of Rs 0.32 crores.

According to the returns of the Scheduled Banks for the week ended May 4, total demand liabilities have shown a sharp decline of Rs 7.88 crores to Rs 637.89 crores, while time liabilities have risen by Rs 2.31 crores to Rs 429.60 crores. Borrowings from the Reserve Bank have moved up by Rs 6.78 crores and those from the State Bank by Rs 1.36 crores, to Rs 62.68 crores and Rs 10.55 crores respectively. Investments are slightly higher at Rs 355.34 crores against Rs 355.09 crores. "Advances in India" have risen by Rs 6.36 crores to Rs 611.37 crores and "Inland Bills Purchased and Discounted in India" by Rs 0.68 crores to Rs 106.29 crores. "Foreign Bills Purchased and Discounted in India" are shown at Rs 45.51 crores against Rs 47.15 crores. Money at call and short notice stands at Rs 8.38 crores against Rs 9.15 crores.

MORE POWER TO OUR VILLAGES

The achievements in power and irrigation under the First Five Year Plan are actually the first phase of a long-term expansion. Within 15 years our total irrigated area will be doubled, production of electricity will increase from 2.3 million KW to 15 million KW !

During the Second Plan 21 million acres of fallow land will be irrigated, per capita consumption of electricity will rise from 25 units to 50. Over 80% of all villages of over 5,000 population will be electrified.

In these vast power and irrigation projects paper will play an important part. Wherever plans and estimates have to be made, paper will supply the means of record and communication.

For the Investor

The Second Beacon

Investment Gossip:

ONE

CURRENT and prospective developments have the effect of erecting two beacon lights for the guidance of bonafide investors. The first refers to the shares which, from time to time, engage the affections and induce the activities of the State Life Insurance Authorities for the investment of such portion of the accruing funds as is earmarked for utilisation in the private sector. I dilated on this question in the issue of May 12; and, on May 19, I added a postscript in order to emphasise the importance of reforming the satta system in Calcutta, so as to maintain a favourable climate for the holders of shares.

I may now deal with the second beacon light. This has reference to the particularly advantageous conditions which the Second Plan in the progress of execution will confer on certain industries.

While it is true that industry in general will be beneficially affected by the Plan's colossal disbursements and the consequent general rise in purchasing power of the population, there are various industries which will be favourably affected to a marked extent. It is to these fortunate industries that I desire to draw the attention of investors.

It is undoubted that steel will be, and continue to be, in heavy demand; and that steel companies will be able to sell all that they produce. Mr T. T. Krishnamachari is reported to have given the hint that the steel units will have to launch further expansion programmes as part of the Second Plan. The Third Plan's target for Tata Iron and Steel Company and the Indian Iron and Steel Company may conceivably aim at bringing the total output to 3 million tons ingot at Jamshedpur and 2 million tons ingot at Hirapur.

TTK's hint in this respect suggests the implication that the two companies will be given every facility and every inducement to build up a reserve of retained profits on a scale adequate to expedite and accelerate the liquidation of the loans incurred in the Second Plan period. That is to say, the record of TISCO and IISCO in regard to repayment of loans must be such as to make them superlatively credit-worthy for the loans which will be needed for the Third Plan's expansion.

TISCO and IISCO are, therefore, stocks of highest "growth" significance not only in the context of the Second Plan but also in that of the Third Plan. The investors who put their trust and their moneys in these two scrips will find their trust well-rewarded and their moneys well-doubled.

Next to steel, from the point of view of the favourable repercussions from the Second Plan, are scrips of well-managed Engineering companies.

Braithwaites are an obvious first choice in this list. A bird whispers in my ear that Tatas may be acquiring an interest in Braithwaites. Be this as it may, Braithwaites have orders for as long ahead as they care to book orders; their works are in excellent condition; and their reputation from every point of view is the highest. Braithwaites is a "must" in a well-planned investment portfolio.

By the same token, Jessops are also a "must". They are expanding stridently and diversifying shrewdly. The Jessop tradition dominates the company's production, expansion and administration.

Texmaco has already paid handsomely to those who put their trust in this stock. Here also, expansion and diversification are the keynote; and those who guide its destinies are keen as mustard to take every possible advantage offered by a rapidly expanding engineering industry.

Alcock Ashdown on Bombay side has a meritorious past, a very active present, and a very promising future.

Richardson and Cruddas has ensured its future basing its future expansion on diversification.

Burn and Company, a rather high-priced stock, is decidedly under-priced in relation to current performance and in relation to the large share which as of right it gets in the thousand and one subsidiary orders released by the major units as they are set up or as they are expanded. In the Engineering Section, Burn and Company is reckoned the bluest of blue chips.

Indian Standard Wagon is, in every respect, on par with Burn and Company.

Marshall and Company has its specialities whose future is brighter and brighter. Britannia Engi-

Investment Gossip:

TWO

Birlas have always shown an uncanny sensing of the investment climate in the Indian capital market. Once they recognise favourable influences, they do not allow grass to grow under their feet. They are alert and act with promptitude.

It is not only the timing, but the fashioning of the new issue, that is a vital condition for success. The Birlas have a correct hunch whether market conditions favour the issue of equity capital or of debentures or of preference shares—what rates of interest and what other terms and conditions are most appropriate in the case of the debentures and preference shares.

Guided by an infallible judgment, they have, in recent months, made substantial new issues by way of additional capital for the expansion or diversification of their well-established concerns.

This week, the Birlas have come on the market for a large-sized preference shares issue for the Hindusthan Motors Limited.

The description of the preference shares now proposed, is in itself an important factor favouring—almost guaranteeing—success for the floatation. The new issue is thus described: 500,000 cumulative, convertible, redeemable preference shares of Rs 100 each, carrying a fixed cumulative preferential dividend of 6 per cent free of income-tax.

Let me explain and embellish each one of these distinguishing epithets.,

Firstly, the number of shares to be issued (in the first instance, they are in the nature of a "rights" issue on the footing of one preference share of Rs 100 each for every ten ordinary shares now held by the present shareholders) amounts to 500,000; that is to say, the additional capital, thus to be raised, will come to Rs 5 crores—admittedly, one of the major new issues of recent times in point of magnitude.

Secondly, it is cumulative. The dividend at the fixed rate, if passed over in one or more years, will continue to be a charge on the profits of future years. The ordi-

HIGHLIGHTS

Decades ago, the cry that one heard about the country was Buy Swadesi.

Recurrently, on the Calcutta Stock Exchange, the slogan could be caught by a keen ear: Buy Indian Irons.

Three years ago, Watch-dog counselled in this column: Buy Indian—the trinity of Irons, Copper and Cables.

Investors who heeded Watch-dog's advice can pleasurably calculate the substantial appreciation that has taken place in the scrips they bought

To-day, once again, as our Stock Exchange scribe sees it, the time is opportune to raise the cry: Buy Indian.

Irons, if you will, because no other share is likely to see an equal appreciation in intrinsic worth.

Copper, if you desire, because the bonus issue will surely be the forerunner of an increased capacity for earnings.

Cables, if you have the wherewithal to spare, because this is an industry on which must depend all industrialisation—unless it is the electric powerless, hand-made sort.

Aluminium, we may add, if you are keen to keep on hand some of the stuff to buy the scrip, because expansion in the industry is to be stupendous.

In short, Watch-dog would seem to say 1 his Investment Gossip this week, buy Indian—buy Engineering, and the investor will not go wrong.

nary shares become entitled to dividend only after the current, and the arrears, if any, of, preference dividend has been paid.

Thirdly, the preference issue is convertible. While the expansion programme is in process of execution, the capital thus put out may not yield any return. During this period, a cautious investor may seek "Safety First". This "Safety First" requirement is satisfied by the preferential dividend at a fixed rate. Once the expansion is completed, and the new plant starts production at the scheduled rate, the earning capacity will grow and increase; and the equity in such conditions will be valuable. When that transition takes place, the investor in the preference shares is given the option to convert his preference stock into equity stock usually referred to as ordinary shares.

Thus is an investor in these preference shares provided with an opportunity, at his own discretion, to have the best of both the worlds.

Fourthly, the preference shares are redeemable. The relevant clause in this respect reads: The preference shares shall be redeemable at par at any time after 30th June 1963 at the option of the company by giving three calendar months' notice.

Fifthly, the dividend is on the basis of 6 per cent free of tax. On a "Safety First" stock, the investor will, thus, get a return of 6 per cent net or 7½ per cent gross. In the case of the small and medium investor, the refund of tax will be greatly prized.

The terms attached to the new issue of preference shares are carefully framed, so as to inspire confidence in, and make an appeal to, bonafide investors. The purpose to which the issue's proceeds are to be put are equally reasuring. The purposes are as follows:

(1) To enable the company to meet the increased demand for vehicles anticipated as a result of the considerable purchasing power released by the Second Plan, and also for direct use in the execution of the Plan.

(2) To provide for the expanding activities of the company.

(3) To ensure the manufacture of a larger number of parts and components.

(4) To make the factory increasingly self-sufficient.

(5) To diversify production.

(6) Generally to equip, and to provide resources to such effect that this important company may fulfil its allotted role in the era of India's expansionist economy.

£R$

Dividend Maintained by Surat Electricity

Balance-Sheet Reviews:

THANKS to the expansion scheme, the Surat Electricity Company has done well during the year 1955. Net revenue from sale of energy amounted to as much as Rs 54.37 lakhs as against only Rs 46.65 lakhs in the previous year, while the gross profit amounts to Rs 12.05 lakhs as against Rs 9.91 lakhs. With the final dividend of Rs 4-8 per share on Ordinary shares, the total dividend for the year comes to Rs 7—same as in the previous year.

In respect of allocations to various Funds, a sum of Rs 3.36 lakhs (Rs 2.77 lakhs) has been provided for Depreciation: Rs 1.02 lakhs (Rs 1.71 lakhs) for Taxation; Rs 56,000 (Rs 25,000) for Contingencies Reserve; Rs 1.40 lakhs (Rs 60,000) for Dividend Equalisation Reserve and Rs 42,000 (nil) for Tariffs and Dividends Control Reserve.

In this connection it might be recalled that new capital was raised last year for the expansion scheme. With the result, the paid-up capital of the company has now increased to Rs 60.69 lakhs from Rs 56.24 lakhs shown as on 31st December, 1954. The gross block has gone up from Rs 1.02 crores to Rs 1.13 crores. Depreciation provided so far amounts to Rs 32.93 lakhs, leaving a net block of Rs 81 lakhs. Reserves and surplus amount to Rs 17.62 lakhs.

According to the directors' report, continuity of supply to the company from the Bombay Electricity Board's Thermal Station was satisfactory. After the commission by the Board of their third 7.5 MW set at Ultran, the company started taking its entire supply from the Board from

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

New Attitude to New Expenditure

ANALOGOUS to the need, which we stressed in the last issue, for a new attitude toward new taxation, there is, we suggest, an equal need for a new attitude toward new expenditure. As we shall show presently, the two are inter-related.

Our case is that, to the extent and in the sense that the plans, which are to engage our thoughts and energies for many years to come, are to be people's Plans, the common man should be inspired with the urge and pride to do his bit in the accomplishment of the Plan's financial tasks; that the new taxes should be so designed as to provide continuous and satisfying elation that the pie which he contributes out of his poor earnings is as valuable as the rupee which the millionaire pays out of his plethora; that the noisier section of our politicians should shed their stereotyped habit of opposing any tax which seeks to bring the entire population within its range; and that, from this point of view, we should examine the potentialities of a Development Duty on salt, Development Surcharge on railway fares and fertilisers, and, we may add, a Development Sambavana on the occasion of marriage and festivities, being the investment in savings certificates of the savings accruing from self-imposed austerity.

The essential condition for the successful translation of these concepts into concrete measures is the assurance to the common man that taxes are enforced without fear or favour; that the collection system is fool-proof and knave-proof; that, in short, tax-dodgers can no longer circumvent the law and hoodwink the taxing authorities.

Yet another condition is that the common man must have the assurance that the expenditure being incurred in the name of the Plan produces full value for the money spent. This is very much more than the vigilance of the audit watch-dogs.

In the sphere of the gup and gossip of the rural folks, and in the contacts and dealings with officials at the levels which mean the Government or Sircar to him, the common man must hear from the talks and know from the experience that the new Government, the Nehru Government are intent on making his lot happier, his life brighter and his living more comfortable; and that this spirit to serve his interests is genuine and is to be seen in the way things are done, officials behave and help is rendered to him at every point.

The earnestness and solicitude of the Planners to transform life and living in rural India are undoubted; their plans are bold and their projects are comprehensive. But, there has to be constant and competent appraisal of the schedules, targets and performance, a continuing application of the test: Are the objectives in process of attainment? Are the values in the process of realisation? In short, we need a high-powered and top-level agency which may suitably be yclept The Schedules, Targets and Performance Committee, which must comprise members who (1) work whole-time and all the time, (2) embody ripe judgment and apt expertness in the spheres of activity which are to be kept under close review, and (3) are the kind of persons whose pronouncements and opinions will convey conviction to, and inspire confidence among, all sections of the population.

The task of such a committee is simply stated: In the first place, are the schedules for the various projects rightly framed and are they being fulfilled as proposed? Are the targets being achieved as scheduled? Is the performance in conformity with the objectives laid down and the values sought to be achieved?

The aims and purposes thus proposed for this committee are better appreciated if they are discussed in the light of the achievement of a State project where schedules and targets have worked with notable success. Such a State project is the Chittaranjan Locomotive Works, where the work was completed within the scheduled time and within the estimated expenditure, and whose capacity for performance is proved by the repeated increases in production. From this point of view, the Chittaranjan Locomotive Works serves as a model to study, as an object lesson, as a pattern that can be copied elsewhere with suitable modifications.

Chittaranjan comprised four phases: (1) a model town, clean, compact, with comforts of an irreducible minimum guaranteed to the lowest paid member of the staff, with maximum amenities provided for the community; (2) a model workshop for a kind of manufacture altogether new, yet absolutely vital, to India, and so phased as to provide for increasing production of parts as well as increasing production of the final product; (3) collaboration with a foreign firm of manufacturers for equipment and training for the domestic manufacture of components and for purchase and procuration of such components as have still to be imported; and (4) recruiting and training the technical personnel for the supervisory staff, for "middle engineers" and for skilled labour.

In all these four phases, the men who were in charge of the project performed their task with such superb excellence that, on the production stage being reached, those who had to run the business could proudly claim for their Works the enviable record of completion on schedule, fulfilment of targets and performance bettering promise both for the present and the future.

The builders of Chittaranjan are the men who are best fitted to advise the Government on the what, how and who of the Schedules, Targets and Performance Committee; and some of them should be invited to man the Committee, once it is decided to set it up with a clear-cut plan and programme of work.

The need for some manner of assessment of the nature and extent of progress in the limited context of community projects has already been realised by the Government, who have set up, for this purpose, an agency under the leadership of Professor D. G. Karve. But the continuing assessment, for which we have raised a plea here, is for wider purposes and on a more comprehensive scale. It is much more than what audit can do, much wider in range than what Dr Karve is doing. The title and description as suggested by us is self-explanatory. Once the public know that there is authoritative and independent appraisal proceeding all the time, of every project through all the stages of progress and completion, and that all new expenditure will produce the anticipated values, tangible and otherwise, the Second Plan will become not only in name, but in reality, a People's Plan. It will be one of the tasks of The Schedules, Targets and Performance Committee to release, from time to time, popular versions of their appraisals of the Plan in progress.

The Second Plan—I

Employment Potential

IN the statement of the principal objectives of the Second Five Year Plan, increase in national income is given the pride of place; industrialisation comes next, then the expansion of employment opportunities and lastly the reduction of inequalities in income and wealth and a more even distribution of economic power. The final Report recognises that these objectives are inter-related and that the attainment of one will involve the realisation of others also in varying degrees.

It may be argued that a country can grow wealthier without a reduction in the inequalities in income and wealth. This argument can indicate only a theoritical possibility. Under Indian conditions it would be practically difficult to ensure a social environment indispensable for orderly material progress, unless the existing glaring inequalities are narrowed down and the masses are made to feel a new sense of dignity and status as participants in national efforts and national welfare. In a democracy based on adult franchise, and struggling to uplift a population, the majority of whom are on bare subsistence level, inequalities of the kind prevailing face automatic challenge. Thus three of the four objectives mentioned above are largely interlinked and do not involve any conflict in considerations.

The fourth, namely expansion of employment opportunities, in the peculiar circumstances of India, does not cohere so well with the other three objectives and projects considerations which do collide with some of those which are otherwise paramount. The skill of the planner is therefore put to its severest test in reconciling the conflicts between the requirements for the creation of large-scale employment opportunities and the optimum utilisation of material and financial resources for achieving the increase in national income and the expansion in economic activities it implies. The Report does not overlook this conflict. The underlying problem and to some extent the answer to it are indicated in these words:

"It is only a truism that the problem of unemployment of an endemic kind is acutest not in the countries in which productivity is high because of the use of machinery and new techniques, but in those in which low productivity limits the overall size of incomes, inhibits the use of labour on works which do not add immediately to the supply of currently needed consumer goods and keeps down the size of the market. While it is imperative that in a country with an abundant supply of manpower, labour-intensive modes of production should receive preference all along the line, it is nonetheless true that labour-saving devices in particular lines are often a necessary condition for increasing employment opportunities in the system as a whole.

The Commission has modestly limited expected achievement in the sphere of em-

ployment to the mere prevention of the situation aggravating further; this is largely the result of the legacy of the First Plan; or rather due to the contrary relation which had developed between the progress of the First Plan and the development of employment opportunities. Between March 1951 and March 1956, the number of unemployed who were on the live register of the Employment Exchange rose from 3.37 lakhs to 7.05 lakhs. The National Sample Survey estimates urban employment in 1954 at 2.24 million. All the expenditure incurred on rural development during the last five years does not appear to have contributed to any improvement in rural employment. The result is that on the eve of the Second Plan, the country has been left with a back-log of urban unemployment of the order of 2.5 million and rural unemployment of about 2.8 million. The partial and disguised unemployment in rural areas remains outside these figures.

To this number, according to the Commission' calculations, will be added 3.8 million of urban employment-seekers and about 6.2 million of new entrants to the rural labour force, coming to a total of 15.3 million by the end of the Second Plan Period. This figure represents the employment task for the next five years. The Commission do not delude themselves by the hope that all these 15 million and odd persons could be provided with suitable jobs. The Plan's employment potential is more modestly rated at 10 million. The back-log which the First Plan left will remain so at the end of the Second Plan.

In other words, the second Plan will be an improvement on the first to the extent that instead of permitting a deterioration, it will see that at least the status quo is maintained. Even this target is not confidently held. While the continuous assessment of the additional employment obtained through the Plan is suggested, as many as two million jobs are left to be created through the new irrigation facilities, land reclamation and the expansion schemes for plantations pepper and horticulture. For the rest, in view of the fact that the development outlay in the last year of the first Plan had already reached the level of the average annual outlay for the Second Plan, at Rs 620 crores,— a rather misleading comparison—and of the relatively smaller employment content of a great proportion of the expenditure contemplated on transport and heavy industries, the direct employment potential of the Second Plan is not considered likely to be very much in excess of what the First Plan secured. It is calculated that nearly 52 lakhs persons will be directly employed as a result of the Second Plan expenditure in the different fields, including government services. Stimulated employment will be of the order of 27½ lakhs, the two together amounting to about roughly 80 lakhs. With the 2 million increase in the field of agriculture, the 10 million jobs required to meet the new demand during the five years are expected to emerge.

The experience of the First Plan has exposed the unwisdom of ignoring the basic difference between self-annihilating employment and employment of a relatively enduring character. A large part of the construction works including the multi-purpose projects belongs to the first category. The same can be said of a part of the employment created by other sources also, even cottage and small scale industries. In the Second Plan, the biggest single item, from the point of view of employment, is construction, which accounts for 21 lakhs jobs against the total of 60 lakhs to be directly created through the Plan expenditure. The Report does not conceal the apprehension that large displacements of labour will take place as each work nears completion. Only a part of it will be absorbed by the consequential development within the area. The rest must await employment opportunities elsewhere.

The prospect indicated in irrigation and power NES and allied schemes is also open to this handicap, though not to the same extent as in construction works.

The overall figures of supply and demand for new jobs given in the Report have to be understood with reference to certain limiting factors. The intensity of the demand for employment is not uniform over all regions. Educated unemployment has become more intractable than the unemployment in manual labour. Regional differences are to be studied in great detail. One of the suggestions put forward in the Report to cushion regional disparities is migration. It is to be wondered how far migration could be stimulated in a social invironment which is growing incresingly antipathetic to the free movement of people between States in search of work. There is also a limit to industrial regionalisation.

But discussions on these points are rather premature. What looks unavoidable is that a considerable percentage of the educated persons will continue to be without jobs. A Planning Commission Group has estimated the total job-seekers in this group at 2 million including the hang-over of the past amounting to 5.5 lakhs. The Group estimates total employment potential in the Plan period at 14.4 lakhs. The number of unemployed will therefore remain where it was.

The Report also makes it clear how limited is the scope for choice between labour-intensive and capital—intensive investment. On the one hand, there are the heavy industries where consideration of science and technology should prevail. Even in the construction of roads, housing, railways etc, there is no question of going back on the methods which have eliminated arduous human labour. Again technical considerations largely determine the methods of construction in mining, irrigation and power projects. The field of transport and communications other than railways is also more or less similar. In agriculture, mechanisation can of course be ruled out wherever it touches manual labour severely.

It is only in the production of certain consumer goods and in construction activity that there is a really wide choice for preference between man and machine. But even here, as the Report points out, traditional techniques have to be put on a more efficient basis. When everything is said and done, there is no escaping the fact that the conflict between labour intensive techniques necessary in a country with a high population pressure and the need to raise adequate savings out of current output for increasing the rate of investment, cannot easily be resolved. It is good that the Planning Commission has recognised this, though reluctantly

BALANCE-SHEET REVIEWS

(Continued from page 960)

1st October 1955, retaining its Diesel Plant as stand-by. The maximum load on the company's system, as a whole, was 9,000 KW as against 7,600 KW during the previous year.

£ R$

Assam Financial Corporation

The working of the Corporation, during the year ended 31st March 1956, has resulted in a net profit, after payment of expenses of administration and other charges, of Rs 2,73,103. The sum set aside for Taxation amounts to Rs 1.08 lakhs, while the Reserve Fund receives Rs 14,500.

The Government of Assam have guaranteed the payment of dividend at 3½ per cent on the share capital. The total amount of dividend payable for the year comes to Rs 3,49,312. It is proposed to utilise the remaining balance of Rs 1,50,603 toward payment of the dividend to the shareholders for the year and to request the State Government to give a subvention for the balance of Rs 1,98,709 to make up the total amount of the guaranted dividend payable for this period.

The directors have, in their report, stated that, during the year under review, 175 enquiries for financial accommodation were received by the Corporation. Of these 34 enquiries did not disclose the purpose for which accommodation was required. Of the remaining, 30 enquiries were not found prima facie eligible for accommodation in terms of Section 2C of the Act. Of the remaining 104 enquiries, 59 materialised into regular loan applications.

The enquiries mostly related to manufacture of black tea, saw mills and furniture-making, rice and oil mills, flour mills, brick kilns, manufacture of tea garden requisites and implements, engineering workshops, generation and distribution of electricity, manufacture of plywood and tea chests, dairy farming, bread, biscuits and confectionery making, etc.

The total sum involved in the 60 application forms was of the order of Rs 1,19,63,000: and sanction was accorded in the case of 26 applications up to a total extent of Rs 53.95 lakhs. Sixteen applications, involving a total amount of Rs 17.52 lakhs, were rejected, nine applications aggregating Rs 19.90 lakhs deferred for fulfilment of certain conditions and another nine applications involving a sum of Rs 17.47 lakhs held up for want of additional information.

The Government of India have circulated a proposal detailing liberal terms for financing small-scale industries in the States. According to this proposal, loans will be available, both for working capital as well as for fixed capital requirements, up to 75 per cent of the value of the security offered, including raw materials and stock-in-trade. The rates of interest have been fixed as follows:—3 per cent per annum for one year; 3½ per cent per annum for five years and 4 per cent per annum for ten years. The maximum amount, that could be lent at concessional rates, has been fixed at Rs 50,000 to any party and the total amount of loan at Rs 1 lakh.

£ R$

Punjab Financial Corporation

The working of the Punjab Financial Corporation, during the year ended 31st March 1956, has resulted in a net profit of Rs 3,06,847 after payment of the expenses of administration and other charges. Out of this amount, Statutory Reserve Fund absorbs Rs 20,000 and Taxation Rs 1.30 lakhs, leaving a balance of Rs 1,56,847.

The State Government has guaranted a dividend of 3 per cent per annum on the paid-up capital of Rs 1 crore. This dividend liability is proposed to be met by supplementing the aforesaid balance of Rs 1,56,847 with a subvention of Rs 1,43,153 from the State Government.

The amount of loans sanctioned shows an increase from Rs 20.77 lakhs in 1954-55 to Rs 39.57 lakhs in 1955-56. Disposal of loan applications, during the year under review, has been expedited as far as possible, there being only 17 undisposed loan applications on the 31st March, 1956.

It is gratifying to note that, during the third year of its functioning, the Corporation has experienced no difficulty in realising the instalments of principal and interest. The progressive increase in the disbursement of loans is as follows: Rs 8.84 lakhs in 1953-54: Rs 15.20 lakhs in 1954-55 and Rs 10.33 lakhs in 1955-56.

Editorial Notes

After one Failure

The London talks on Singapore have tapered into failure. At first it appeared that Mr David Marshall and Mr Lennox-Boyd were going to find a solution agreeable to both countries. The British proposal conceded the status of a State for Singapore, the conversion of the Governor into a High Commissioner, a fully elected Assembly and a popular Council of Ministers to be in charge of internal affairs.

These came very near the substance of what the Singapore delegation asked. From his side Mr Marshall was willing to accept Britain's overall control of external affairs and defence and was not averse to the British retention of the military bases. It was a question of ninety per cent agreement on both sides. Unfortunately the remaining of ten per cent turned out to be decisive. Britain claimed final say on matters pertaining to internal security. The logic of this claim was derived from the multi-racial character of the island's population, the political heterogeneity it represented and the suspected presence of a potential and powerful fifth column, in the event of any serious flare-up in the none too friendly areas around.

It has to be presumed that Mr Marshall himself understood the British point of view and was anxious to accommodate it without compromising his own demand. The Singapore delegation also could not speak with one voice. Perhaps no appropriate formula was offered from either side. Disagreement on this point broke the talks and Mr Marshall had to return with a heavy heart.

The consequence of failure on the fortunes of the Government may well be unfriendly; already he is not thoroughly safe on the saddle. Two parties are ready to plump for office, and both have secured more talking points against the ruling group. Instead of coming back under the hallow of a political triumph, Mr Marshall is now under the shade of a personal defeat. Britain knows too well that they could not secure a better ally in Singapore than the discomfited Premier. Britain also feels equally strongly that if internal security were to be entirely transferred to the new State, chaos will be inevitable.

Britain's dilemma is all the more greater in view of the active interest which Australia has shown over the future of the island. In an otherwise gloomy picture the Government of India's invitation to Mr Marshall has to be read as a silver lining. Already, the Singapore leader seems to have been acquainting Pandit Nehru with his problems. As a third party friendly to both Britain and Singapore, India may be able to handle the situation with that amount of deftness necessary for the discovery of a new and positive approach to a question, which both the sides concerned will be only too glad to reopen as quickly as possible.

*

In true Perspective

The non-official Resolution in the Rajya Sabha, urging fixation of a ceiling on individual incomes and a maximum for civil servants as the first step, brought forth from the Prime Minister a digression on the concept of socialism, which must remove many current misunderstandings and illusions. The wide disparities in income and expenditure in India, the need to reduce them, the present obligation cast on the wealthy to give up offensively ostentatious ways of living and the equally pressing obligation cast on the State to improve the lot of the poor, all these are unassailable facts.

Pandit Nehru recognised them as such but he refused to succumb to the suggestion that all these obligations should be pressed by legislation; nor was he willing to concede that socialism was equivalent to a dead level of poverty. Much of what he said in Parliament in reply to this Resolution could be regarded as trite, but all that needed saying again, particularly by him. The proneness to equate socialism with a complete levelling down and nothing else has become widespread and has tended to seep into the emotions of the people.

It is very much necessary for a person of the Prime Minister's standing to shake the idea out of the people's minds and to fill them with the realistic notion that socialism under present conditions in India was mostly a matter of production of new wealth and only to a small extent redistribution of existing wealth. He emphatically denied that salaries for Government servants were as a rule high. He was disposed to believe, on the contrary, that they were comparatively low.

It may be necessary to regulate and control big incomes. But in doing so, the nation cannot afford to lose perspective or its sense of balance. Pandit Nehru has appropriately pointed out that lowering the people at the top was psychologically satisfying but it did not make much difference financially. He has done a great service by exposing the real material content of a strong psychological bias which infects the present general outlook.

Having said this much, we should at the same time guard against the impression that hard work could be exacted from the poor, by the offer of sheer non-monetary incentives while the minority at the top continues to enjoy enviably high incomes. The disparities will have to be narrowed because psychology does have a big place in social life and in individual happiness. Only, there must be a general awareness of what the mere reduction in disparities could secure and could not.

*

Stagnation in per Capita Income

The national income figures supplied by the latest Annual Paper released by the Central Statistical Organisation reflect a disappointing measure of improvement between 1953-54 and 1954-55. In real terms, the increase between the two years has come to only 1.3 per cent as against 6.1 per cent between 1952-53 and 1953-54. When the increase of population is also taken into account, the improvement in total national income represents scarcely any addition to the per capita income.

This is in striking contrast to the per capita increase of Rs 5.5 between 1951-52 and 1952-53 and the increase of Rs 12-4 per capita between 1952-53 and 1953-54. The CSO has based the latest estimates on tentative material; its calculations are subject to revision. But more than marginal alterations are unlikely; the figures can be regarded as very near approximations to a final estimate. The explanation afforded for the comparative slackness in the rise in national income for the latest year under review is that agricultural production has been more or less at a stand-still.

It is rather disquieting to note that the tempo of rise for agricultural production in the first three years of the First Five Year Plan was not maintained subsequently. No wonder that a shift away from agricultural and other primary production is recorded in the national income estimate. The secondary and tertiary sectors have gained in the proportion of their contribution to the national income at the expense of the agricultural sector. As agricultural production tended to stagnate nearly about the previous year's level, there is no use trying to obscure this fact by focussing attention on the disproportionately large fall in agricultural prices. That this fall has been mainly responsible for deflating the income under current prices is obvious.

Toward Planned Money

PLANNED Money is a corollary to, and an integral part of, Planned Economy. Even in countries where has dawned the wistful longing for a regime of "no controls", the apparatus of planned money exists in substance; and the central banking authority represents the core and centre of planned money. Its edicts may not take the shape of directives given in formal fashion; all the same, edicts in spirit are inescapable, and they are passed on to the money market interests in ways consonant with well-understood traditions and conventions. Besides, the bill market and the short-dated Bonds market are live institutions, and respond readily to official policy and suggestions. By these means, Authority is able to enforce, and make effective, its policy based upon the concept of an integrated and flexible money market. In India, with a bill market non-existent and with a short-dated Bonds market existing only in name, formal directives become necessary and are, from this point of view, to be regarded as a sign and symbol of the alertness of the Central Bank.

It is in this light that last week's directive of the Reserve Bank with regard to advances on rice and paddy is to be understood. A month ago, the Reserve Bank called upon the banks to supply specific information bearing on the credits extended to the financing of commodities. The information in this respect was in the possession of the Reserve Bank within the stipulated time; and this was subjected to a quick and competent scrutiny. This study confirmed the suspicion: advances against rice and paddy showed a marked rise, and this extended accommodation was one of the reasons for the spurt in the prices of rice. The decision followed that, by controlling the advances against rice and paddy, the prices of the latter could be restored to more reasonable levels. The procedure adopted by the Reserve Bank in enforcing this control has been fashioned on correct lines, and executed in expeditious style. The results will be awaited with interest; for, if the measures now taken have the desired effect of releasing rice from hoards and of bringing down prices, this should be gratifying evidence of the effectiveness of qualitative credit control.

Over a period of years, the Reserve Bank has been grooming its personnel, and improving its machinery, for making its control and guidance effective in relation to needs from time to time. The statutory inspection of banks places in the hands of the Reserve Bank valuable data with regard to the affairs of each and every bank; and such data are constantly being brought up to date. The weekly returns which scheduled banks submit are closely scrutinised; and, wherever necessary, further enquiries are taken on hand in pursuance of the figures disclosed in the weekly statements. The Reserve Bank is also kept informed of the major lines of credit extended by banks. In the last five years, the functioning of the bill market scheme has strengthened the relations between the central banking institution and member banks, and provided further access to detailed information about the major credits extended by banks. Thus, the Reserve Bank and the member banks are in closer touch; and the opportunities for mutual understanding are plentiful, and are being fully utilised. The money market mechanism in this country has still many gaps; but the banking system has progressed far toward functioning in the spirit and style of planned money.

The Reserve Bank's directive is precise and, at the same time, comprehensive. Attention is drawn to the increase of 111.5 per cent in the advances against paddy and rice between March 31, 1955 and March 31, 1956 (from Rs 11.64 crores to Rs 24.62 crores). The produce of rice in the country is slightly higher; yet, prices have risen sharply in recent months. The general increase in paddy and rice loans must, therefore, be considered one of the causes for the price-rises. It is imperative, the directive reiterates, that banks should refrain from excessive lending against commodities and should not assist in the speculative holding of stocks.

The directive deals with existing credit limits, fresh credit limits and margins. No increases in existing credit limits extended against paddy and rice must be sanctioned by any scheduled bank. As regards composite loans, the advances against paddy and rice, together with the relative limits, should be segregated and the above restriction made applicable to such segregated accounts. Fresh credit limits should not exceed Rs 50,000 in each case. Margins are to be raised by 10 per cent. An endeavour should be made to achieve a reduction in aggregate advances against paddy and rice. In order to keep itself appraised of the action taken, and of the tangible effect of such action, the Reserve Bank has, in its directive, called for the relevant information to be supplied along with the next fortnightly statement to be submitted by scheduled banks.

This energetic and sharp action should serve as a warning to those who are disposed to hoard commodities, thereby hoping to create a shortage for a levering-up of prices. If the steps now being taken do not prove adequate, it will be for the Government to consider the desirability of requisitioning hoarded stocks.

+

The returns of the Reserve Bank for the week ended May 18 reflect the usual mid-month trends. Rupee securities and foreign securities held in the Issue Department remain unchanged, while there is a small return of silver coin from circulation. Rupee coin held in the Banking Department is higher by Rs 0.11 crores at Rs 104.62 crores. Active note circulation has declined by Rs 9.60 crores to Rs 1,516.28 crores, as a result of which notes held in the Banking Department have gone up by Rs 9.72 crores to Rs 18.50 crores.

The changes in the Banking Department are also of a more or less routine character. The deposits of the Central Government have increased by Rs 2.46 crores to Rs 67.84 crores; of the Provincial Go-

Economic Aspect of Disarmament

By PAUL EINZIG

THE decision of the Soviet Government to reduce considerably the armed strength of the Soviet Union was followed by an appreciable setback on the London Stock Exchange. This was almost entirely due to the psychological influence of the setback on Wall Street. For, even on the assumption that the Russian move would be followed by a reduction of armament in Britain, there would be no cause for anticipating a business recession in Britain. Admittedly it would mean the cancellation of orders, which might affect unfavourably certain industries. The fact is, however, that most of those industries are heavily overloaded with orders so that even substantial cancellations would leave them enough work to keep them fully occupied. For instance, if orders for war planes are cancelled, the aircraft industry could concentrate on the production of airliners and transport planes for which delivery dates are rather long. There may be, of course, temporary unemployment in some factories pending the readjustment of production to changed requirements. The chances are, however, that the economy as a whole will remain fully occupied.

It is no longer possible to argue against disarmament on economic grounds. Before the war any large-scale reduction of armaments would inevitably have aggravated the prevailing mass unemployment. In the meantime the situation has undergone a fundamental change. The problem is not how to keep up consumption in order to avoid deflation, but how to keep down consumption in order to avoid inflation. The economic argument is now definitely in favour of disarmament instead of being against it.

Indeed one of the main reasons why the Government intends to cut down defence expenditure is that it is necessary to relieve pressure on manpower and materials. The extent to which consumer demand has responded to the disinflationary measures adopted in recent months has been so far negligible. Any reductions brought about by curtailments of credit facilities and restrictions on instalment credit operations have been more than offset by the use of the additional purchasing power created by wages increases. Nor has capital investment responded to the disinflationary pressure. The output of machine tools continues to increase and the Government expects that during 1956 the amount of industrial capital investment projects initiated will exceed the corresponding figure for 1955. Evidently a much more severe degree of credit squeeze would be needed to reverse this trend or even to halt it.

The alternative to an increased credit squeeze would be a substantial reduction in defence expenditure. This would release manpower and industrial capacity for civilian requirements. It is indeed very tempting for the Government to go very far in that direction. The fashionable argument is that "the cold war no longer assumes the form of military threat but a contest in the economic sphere". Beyond doubt if the Communist bloc increases its production as a result of large-scale rearmament it would be able to produce large exportable surpluses with which to flood the markets of the free world. If the Democratic countries continue to spend on arms at the present rate the resulting domestic inflation would necessarily reduce exportable surpluses and keep up prices. It would provide the Communist countries with an opportunity to capture many markets.

Unfortunately there is no means of knowing to what extent the Soviet Union genuinely intends to disarm. In the absence of international control it is impossible to ascertain whether there is going to be a really substantial reduction of the Red Army's strength. Moreover, even if the announced reductions were to be carried out to the letter, the armed strength of the Communist bloc would remain superior to that of the Democratic countries. In the circumstances the extent to which the latter could afford to disarm without running grave risks must necessarily be limited. After all, freedom from fear is even more important than freedom from want.

Nor can we afford to overlook the fact that as a result of automation it is now possible to rearm in a much shorter time than before. Provided that the industrial capacity is there, it is possible to produce large quantities of the latest weapons in a very short time. This is an advantage to both sides, but it is much more advantageous to the Soviet bloc because they are in much better position to rearm in secret.

The choice lies between two different kinds of risk. If the Soviet bloc should disarm on a large scale while the free countries refrain from doing so, we may have to face a trade offensive of considerable importance. The success of such an offensive is liable to initiate an economic crisis in democratic countries. Should it result in large scale unemployment it would greatly facilitate subversive activities by Communists. Even in the absence of armed invasion it might lead to the establishment of Communist or near-Communist regimes in some democratic countries.

On the other hand, should the democratic countries embark on large scale disarmament they would be exposed to a series of minor military encroachments by the Communist forces in various parst of the free world. The nuclear weapons would provide an adequate deterrent to major aggression, but there would be ample scope for the Soviet forces in Asia and elsewhere to achieve penetrations of an extent that would not justify retaliation with the aid of nuclear weapons. It is to prevent such action that the military strength of the Western Powers should not be reduced below the safety level. And it is very difficult to know where that safety level lies.

The solution lies in a more equal distribution of the economic burden of the defence of the Free world. At present that burden rests on too few shoulders. Germany, Italy and Japan could and should bear a larger proportion of it. Nor is it fair that neutralist countries should rely for their freedom almost entirely on the economic sacrifices made by other nations. Should the Western Powers yield to the temptation to reduce greatly their armed strength for economic considerations it is the neutralists who would be the most likely victims of a revival of aggressive policy by the Communist bloc.

Life Insurance Corporation Bill

Select Committee's Proposals

SOME changes, mainly aimed at trimming the lacuna discovered in closer consideration of the Life Insurance Corporation Bill and for giving effect to certain issues arising in consequence of nationalisation of life insurance business, have been proposed in the recommendations of the Select Committee appointed to report on the Life Insurance Corporation Bill, now before the Lok Sabha. The Select Committee was due to report on the 16th of the last month. Its deliberations continued beyond the designed period till the 30th, in the afternoon of which the report was presented by the Chairman, Mr G. B. Mehta.

The most important of the recommendations is in respect of companies registered in India to have the permission to carry on life insurance business in respect of persons ordinarily resident outside India. By this new clause the Central Government may, by order, permit any persons who have made an application in that behalf to carry on life insurance business in India in respect of the lives of persons ordinarily resident outside India subject to such restrictions and conditions as may be specified in the order and any such order shall be deemed to have effect as if it were a certificate of registration under the Insurance Act.

The Life Insurance Corporation Bill stipulated for nationalisation of entire life insurance business. It was realised, however, that Government of India, as a political entity, can hardly have the competence to engage in active trading in foreign territories and so suggestion was made that one general insurance company will act as agent of the Government of India for custody and servicing of insureds ordinarily resident outside India. There was no question of active trading, nor was it at the time contemplated.

This scheme of transferring the custody and servicing of assureds overseas of quite a number of Indian life companies operating outside India, to one or more companies could involve legal complications and might have amounted to breach of rights, constitutionally guaranteed. Safer course would thus be to permit the operating companies to trade overseas, not only for servicing the existing assureds, but also for new business if the companies so wish. Therefore, notwithstanding the provisions of Section 30 (giving exclusive privilege to the Corporation to carry on life business in India) this new clause permits the shareholders to maintain their own companies, for such permissive foreign insurance on lives of persons ordinarily resident overseas, as they may wish to have.

The new clause permits "any persons", not necessarily only life insurance companies. Thus, should the Articles of Association of general insurance companies operating outside India permit trading on life business, they will be quite competent to apply for such permission and the Government of India will be quite entitled to pass the order. It can be assumed, however, that ordinarily only life companies, who used to trade overseas, will seek such permission in respect of their own life business overseas, and Government of India will ordinarily grant the requisite permission to them only. It may be that shareholders of some companies may not desire to continue their own business overseas after appropriation by the State of life business and assets in India, in which case presumably, by arrangement, the operating company or companies will take over as agents of the Government of India, custody and servicing of such assureds overseas.

It can be assumed, however, although there is no clear indication that Government of India will release the business and assets of foreign business although they clearly come within the ambit of "controlled business", as defined in the Life Insurance Corporation Bill to operating companies to enable them to trade actively overseas. This constitutes for private insurers a concession. This concession is only on grounds of administrative convenience and on the general consideration of earning foreign exchange by such trading overseas as may be possible. The ideological concept of socialisation of life insurance remains unchanged. The concession is only for practical convenience.

The quantum of compensation to shareholders of companies who should have back foreign business and assets thereof in foreign lands, must necessarily be reduced by the measures of profit that actuarial investigation of such business may reveal. In the regulations guiding compensation this will necessarily be provided.

The Select Committee has recommended the formation of an investment Committee to advise the Corporation in matters relating to investment of funds.

A new clause relating to provident fund has been inserted by the Select Committee. It is aimed at integration of many provident, superannuation or any other fund for the benefit of the employees. It has been suggested that the monies standing to the credit of any such fund in respect of the employees who had become employees of the Corporation should vest in the Corporation and the Corporation might constitute one or more trusts with similar objects in respect of such transferred funds.

Following forceful representations by the employees of the Chief Agents who will no longer exist under the State ownership of life insurance business, the Select Committee has suggested that employees of Chief Agents be absorbed in the Corporation. A new clause with certain restrictions has been proposed to be inserted to give effect to this recommendation.

Another amendment of far reaching consequence proposed by Select Committee relates to investigation by the Tribunal. Under the Bill, it was provided that where an insurer whose controlled business has been transferred to and vested in the Corporation has at any time within two years before the January 19, 1956, entered into certain transactions without consideration or inadequate consideration or excessive consideration, the Corporation would have the right to seek relief by referring the matter to a tribunal. The Committee has suggested that the period be increased from two to five years. This is born of the suspicion, widely held by the Government of India, that life funds of many Indian insurers have been mishandled purposely for selfish ends by designing persons having control of such funds who, by the ordinary process of law, cannot be brought to book.

With a view to promoting harmonious good relations between the employer and the employee, the Committee has proposed constitution of Employees and Agents Relations Committee in each zone.

Equally important are some of the minutes of dissent. They are eight in number.

One of the most important contributed jointly by Mr M. D. Joshi and Mr B. D. Chaliha relates to limitation of expenses. Section 40(B) of the Insurance Act provided for limitation of expenses of insurers. It has been suggested

Need for Clear Thinking

THE meeting of the Export Advisory Council in New Delhi early this week has served to focus attention on the affairs of an industry which, in spite of its being one of the largest foreign exchange earners, has been languishing for some considerable time now. Winding up the discussions, Mr T. T. Krishnamachari, Union Minister for Commerce and Industry has drawn attention to the undercurrents of instability in the Indian jute goods industry.

Though exports last year have increased by 22,000 tons, earnings have declined by about Rs 4 crores. The obvious conclusion is that compared to the previous year, export prices of jute goods have been considerably lower. It is common knowledge that the industry has been finding it hard to make both ends meet, with the smaller units in it recording losses. This state of affairs has been the result of the high prices mills have been obliged to pay for the raw material which constitutes nearly 67 per cent of the cost of production of jute manufactures. Apart from the manipulations of the Pakistani Government, the high price of raw jute has been brought about by the fact that India is not self-sufficient in this commodity.

The position has been summed up by Mr Krishnamachari in the following words. "While in the past we heard complaints from the raw jute producers that the industry was making huge profits, the position now is the reverse. The gap between the price of raw jute and the price of the finished article is getting shortened and certainly would result in losses to uneconomic mills. I do not know whether the Council has any answer."

If rumour is to be believed, the export Advisory Council has found the answer and what is more, it is already under consideration of the Central Government. The solution seems to be the fixation of a minimum export price for jute goods. In other words, Indian Jute goods will not be allowed to be exported below prices, which, in the opinion of the Government, will ensure a fair return to mills. Apparently there is nothing wrong with the proposal.

But the question arises whether such a measure is proper in the present context of the jute goods trade. In common with many commodities, jute goods are confronted with a buyer's market. Though jute goods by virtue of their cheapness have a good demand in overseas countries like the USA, Argentine, Australia etc, consumers in these countries are by no means entirely dependent on jute goods for their packaging needs. Thanks to the high prices of jute goods during the war years, the swing toward substitutes and bulk-handling methods, not to speak of the growth of indigenous jute mills industry in some of these countries has been well pronounced in the post-war period. It is by dint of hard work that the Indian industry has been able to regain part of its lost ground in these markets in the past two, three years. Even so, it is generally accepted that unless strenuous efforts are continued, progress will be retarded.

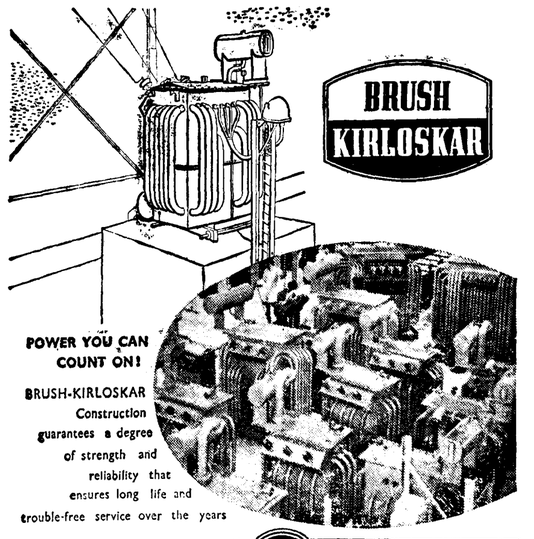
If, as is now rumoured, Government decide to fix minimum export prices, the psychological effect on foreign consumers would be disastrous to the Indian industry. Any attempt to increase the prices paid by them is unlikely to be welcomed by our overseas buyers.

Considering the growing competition from Pakistan, the paramount need of the hour is the holding of old markets and the winning of new ones, if the expanding productive capacity of our mills, as a result of the modernisation programme now under way, is to be utilised fully. In this view, it would appear, anything that is likely to prejudice the foreign buyers against Indian mills, is to be carefully ruled out.

If Government are really concerned about the financial position of our mills, they must find some remedy other than fixation of minimum export prices.

*

Prices in the jute goods market displayed a steadier tendency after midweek in response to bear covering. Sentiment had also been helped by the interest shown by shippers in forward positions at lower levels. On the closing day of the week in earlier dealings there had been further bear covering as rumour had it that the Central Government were considering the fixation of minimum export prices for jute goods. In the absence of confirmation of the report, prices developed a sagging tendency by close.



The week began with prices both in the Sacking and Hessian Sections recording further losses over previous week's closing rates. After midweek, however, prices recovered. Hessian 40"×10 oz Ready which began the week at Rs 37-8 was steadier at Rs 37-10. B. Twills closed the week 8 annas higher at Rs 104-12.

World of Tea

Proposal to Restrict Offerings

IT has been finally decided to hold the opening sale of the New Season's teas on June 11, 1956. It is believed that the small quantity of export teas from the Old crop, now remaining, will be disposed of well before that date and that the sale of the new season's teas will get a good start though the dominant factor thereafter will, naturally, be the quality and quantity of Northern India teas.

In this connection, it is mentioned that the Calcutta Tea Traders' Association has proposed to restrict offerings at the first three sales to between 15,000 and 20,000 packages for export, depending on the rate of arrivals, and is ascertaining the views of its members. This restrictive measure has been suggested with a view to prevent any one sale from becoming unduly large.

The Tea Traders' Association of Ceylon has also decided to fix a ceiling on the total offerings of tea at the Colombo auctions during the next month. The effect of this decision will be the restriction of offerings for each weekly sale to 2,720 lots or 6,500,000 pounds whichever is reached first. Teas unsold at previous auctions and at auctions to be held in the future will be catalogued separately within a 500,000 pounds limit and sold after the main sale.

The above steps have been decided on by the Association, because the recent steep drop in prices of Ceylon teas has been attributed largely to an excess of offerings at the Colombo auctions. The trade, however, predicts a pick-up in the price levels for all teas, as buying in the next week or two is expected to be stepped up as there will be no auctions at the end of May due to 'Buddha Jayanti' festival.

In general, consumption prospects are encouraging. Not only has the domestic market expanded, but also deliveries in London are continuing at a high level, the latest figure indicating a weekly offtake of around 10 million pounds as against only 9¼ million pounds last year. Also, stocks in that country are about 55 million pounds less than a year ago. In other words, stocks, as on the 11th May 1956, were only 105.1 million pounds as compared to 102.0 million pounds a week ago and 160.9 million pounds a year ago. For obvious reasons, Messrs J. Thomas & Company, in their latest monthly report, have pointed out that 'although much will depend on the size of the North Indian crop, prospects in the 1956-57 season can be considered more optimistic than at this time last year'.

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of only 22,200 packages for which there was a good general demand. Black-leafed Medium Assam Brokens and stylish Orange Pekoes were the strongest feature of the sale and were one to two annas per pound dearer. Fannings grades remained about steady, but poor liquoring stalky kinds were generally easier. No rates were quoted as most of the offerings were end-of-the-season types.

In the Internal Sale, offerings were 21,500 chests of Dusts which met with a fair general demand. Commons and Low Mediums were 1 to 1½ annas per pound easier, while poor liquoring sorts were generally selling 2 annas per pound below last rates. Medium Dusts with good liquors, however, were dearer.

There was a selective enquiry for black-leafed exportable types, while CTC Assams received fair support at irregular rates. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-8-0; Medium Assam Grainy Dust Rs 1-9-0 and Best Assam CTC Dust Rs 2-13-0 to Rs 2-14-0 (nominal).

Also, 3,300 chests of Leaf grades were on offer, and these met with fair demand at prices which were generally easier.

In the Export Quota section, Special Licence was quoted at 7 pies per pound. The Export Quota for New Season's teas was quoted at 36 pies sellers with buyers at 32 pies per pound.

In the Cochin market, a total of just over 1,275,000 pounds was offered last week. The quality of all teas, on offer, again showed the customary seasonal decline. There was a fair demand for most grades and descriptions, Fannings being again the strongest feature. The small quantity of best liquoring Nilgiris met with quite strong demand at rates which were irregular following quality.

Lesser high-grown Brokens were up to As 4 pound easier, while their Fannings met with quite keen competition at about last rates. Good Medium Brokens declined by As 2 to As 4 per pound with Medium and Low Medium Brokens quoting one to two annas per pound easier. Black Leaf Brokens followed the general downward trend of the market, but Fannings, suitable for the Middle East, were again in keen request and sold at firm to dearer rates. Whole Leaf grades were easier following limited demand from internal buyers. Following were the rates quoted (per pound):—Plain BP Rs 1-11 (nominal); Low Medium BOP Rs 1-15-0; Medium BOP Rs 2-1-0; Good BOP Rs 2-10-0 to Rs 2-12-0 and well-made OP Rs 2-5-6. Export Sale No. 13 will be held on the 29th May, 1956.

In the Colombo market, offerings were about 8,220,220 pounds. In spite of the quality again being worse, there was much better demand at generally dearer rates. There was good demand for Nuwara Eliya teas, but prices were generally lower following a decline in quality.

The quality of high-grown teas generally showed a further decline, but demand was much improved, brighter liquoring Uva Brokens advancing by about 10 to 20 cents per pound. The quality of low-grown teas also showed a decline, but there was much better demand at an advance of about 10 cents per pound. A better demand caused low-grown Leaf Brokens to advance by 7 to 10 cents per pound. High and medium-grown Fannings were dearer following the corresponding BOPs. Tippy kinds were in very strong demand at substantially dearer rates.

World Overseas

US Notes

THE industrial production in the United States, after receding slightly in the first quarter of the year, picked up a bit in April. The US Federal Reserve Board reported this week that its seasonally adjusted index of industrial output rose to 142 per cent of the 1947-49 average, compared with 141 per cent in March of this year and 136 per cent in April 1955. The all-time high was reached last December, when the index stood at 144.

✱

April developments were mixed, with ups and downs in different segments of industry—a kind of 'rolling readjustments'—contributing to the net gain of one index point. The durable goods, as a whole, showed a twopoint gain, largely the result of substantial increases in the production of all types of machinery. The output of consumer durables held at March levels, with increases in appliances sets offsetting heavy cutbacks in automobiles. Production of non-durables, after a decline in March, remained steady in April. Outlays for new construction rose slightly from March, and the value of contracts for future building continued its upward trend.

✱

Housing starts in April, meanwhile, were at an annual rate of 1.11 million, up one per cent from March on a seasonally adjusted basis, the US Department of Labour has announced. The total private housing starts in the first four months of 1956 reached nearly 350,000. This is higher than the comparable total in every year since 1951, with the exception of last year's extraordinary 418,500.

✱

Reflecting strong construction activity, American building materials producers are enjoying brisk business, with many reporting more orders than they can handle. Even though housing starts are a bit lower than last year, backlogs of orders exist in such items as gypsum insulation board, cement, structural steel, and aluminium. The industrial expansion and modernization programmes and new commercial construction have more than offset the somewhat reduced rate of residential building.

✱

Some experts see a shortage of building materials, a relative scarcity of skilled labour and tightness in mortgage funds as limiting factors in the housing field this year. They estimate that 1.2 million new dwelling units will be the top figure that can be reached in 1956, mostly because of the pressure of demands being exerted by other producing segments of the American economy.

✱

The extent of that pressure, as revealed in the latest survey of new plan and equipment expenditures planned by American industry, is considerable. The ninth annual survey by the McGraw-Hill Publishing Company, released this week, shows that planned capital equipment outlays in 1956 now aggregate $39,000 million. This is some 30 per cent more than in 1955—an increase even greater than was expected earlier this year. Last March, the US Government projected plant and equipment outlays for this year at $35,000 million

It is noteworthy, moreover, that American business intends to invest more in the next four years than in any similar period—an indication of both countries confidence and emphasis on long-range programmes. Outlays for every year from 1956 through 1959 already are projected at higher levels than was the level of actual spending in 1955. This type of expansion cannot help but provide a strong support for general economic activity, even though—as McGraw-Hills chief economist Dexter Keezer points out—shortages of material and labour may prevent business from spending all it is now planning to invest.

✱

The high level of prosperity in the United States is reflected in revised budget estimates issued by the Treasury Department and the Budget Bureau this week. Instead of the small surplus of $1,800 million is now in sight for the 1956 fiscal year ending June 30 despite an increase in government spending. With both personal and business income—and consequently treasury tax receipts—outrunning earlier estimates, government revenues now are placed at $67,700 million, compared with the January estimate of $64,500 million. Expenditures are put at $65,900 million, as against $64,300 million in January.

"Insist for your containers on "BHARAT". They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 "BHARAT BARRELS" price is Rs. 25-8 ex-factory. If you do not get BHARAT BARRELS, Write to Box No. 247, BOMBAY."

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

PROFESSIONAL scribes are conventionally supposed to be a hard-boiled lot, cynically unimpressed by events and thoughts they describe glibly as earth-shaking or heaven-defying. This is one of the popular fallacies that the professional journalist does not bother to destroy because of the obvious advantages of such a reputation. In sober fact, however, he is as human as his neighbour, capable of being moved by remarkable examples of greatness in whatever sphere they may be found. For over a year now, for instance, I have been reading and commenting upon papers connected with the Second Five-Year Plan: these have, in a sense, never been far from my consciousness, and arguments and controversies on the assumptions behind them have become part of the very air I breathe. At a moment's notice, I can discuss it almost mechanically. In theory, therefore, the final draft of the Plan, just issued to the public, must leave me cold. And yet, as a matter of fact, I have just emerged from a perusal of the Plan full of excitement and a profound sense of high adventure. It was not as though the Plan's language was deliberately heightened and I was seduced by highfalutin. Indeed, the Plan is throughout written in deadpan of officialise, and is liberally larded with the kind of jargon that experts delight in and I detest. And yet, behind the sober and even uninspired recital of the tasks, risks, dangers and opportunities of the next five years, there shines the determination of a people fortified by sober patriotism and a bouncing confidence in their ability to carry it out.

✱

The tasks set are of epic proportions, and the challenges are Herculean; but the confidence, despite misgivings on details, is serene. To me at any rate, the recall of Milton's words was irresistible: "Methinks I see in my mind a noble and puissant nation rousing herself like a strong man after sleep and shaking his invincible locks. Methinks I see her as an eagle mewing her mighty youth and kindling her undazzled eyes at the full midday beam." There are, as I said, very many question marks, very many imponderables on the details; and the demands that the Plan is going to make on our wits, energy, determination and ability to sacrifice are prodigious. There are very many areas in the Plan where the expectations are largely in terms of hope; and there are in detail so many things to be explored further, and so many preliminary tasks, especially in the matter of organisation, to be completed, and on which detailed thought has been postponed: but there is enough in the Plan to know the broad tasks that are set for the nation in the next few years. These tasks are of a sort that are in the main unexceptionable, and the means to achieve them are equally above reproach. Consequently, the draft of the Plan has succeeded in what after all should be the object of any kind of national planning: the giving of the shape to purposive activity and a sense of direction for the progress that ought to be attempted. There is now no excuse for any reasonably worldly Indian (the other-worldly have no need of secular help in finding their vocations) having no purpose in life.

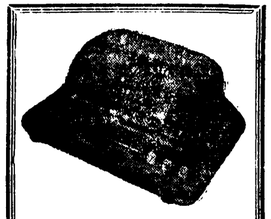
✱

Inevitably, I will not be able to deal in detail with all the interesting questions that arise from the Plan. Mapping as it does the entire area of not only our economy but, by implication, the social contours of our life, it cannot be commented upon usefully in a single Gossip. But there are some general observations on the Plan that I wish to make, and these, again, are not new. First among these is something that is only implied and never stated in so many words in the Plan. Since the Plan is supposed to be concerning itself with the nation's economy, it probably takes it that this general consideration is outside its scope of formulation. But it is nonetheless a basic consideration; and, to my mind, clarity on what constitutes a desirable pattern of life for our people must precede any detailed formulation of mere development plans. In other words, economic policy is no more than an instrument of social objectives, and it is necessary to be clear in mind as to what constitute desirable social objectives. As far as I am concerned, no economic policy that does not promote the kind of human organisation that is governed by a "reverence for life", the almost continuous preoccupation with the sanctity of personal life and human relationships, is worth pursuing. This is the basic consideration that ought to govern all our acts.

✱

There is every evidence that the Planning Commission have been inspired by a passionate devotion to the fundamental human values implied in the phrase "reverence for life." The phrase they use in context is "democratic method of approach" in the pursuit of "socialist pattern of society." "Socialist pattern of society" and "democratic approach" are both phrases that have so many overtones and associations that they do not clearly indicate the precise emphasis on the inviolability of the human soul that I have in mind. Socialism, for instance, is a phrase used to describe the economy of certain totalitarian countries whose lack of regard for the sanctities of personal life is notorious. Democracy, again, is a word that has become something of a platitudinous claptrap these days. And yet, socialism, as sought to be practised in India, would be avowedly directed at the elimination of the exploitation nexus between man and man; and, to that extent, it is something that conforms to the idea of reverence for life. Democratic methods imply the pursuit of a particular course of action that gives the individuals in the country a reasonable freedom of choice in the ordering of their lives. It also implies that any particular social or economic measure will be imposed only with popular consent. This, again, is a projection of the idea of reverence for life.

✱



The second point that is worth making about the assumptions behind the Plan is that, in the working out of our national well-being in the next few years, we have an historic opportunity to shape our economy in such a way as would avoid the mistakes of other nations similarly engaged in the past. These mistakes were mostly—even entirely—those that flowed from acts that offended the principle of reverence for life Wether they were man's inhumanity to man in the industrial revolution of the nineteenth century, or the more appalling cruelties of totalitarian planning in this century, these are mistakes that we can and should avoid in our development. It should also be our aim to avoid the less gruesome mistakes of our contemporaries elsewhere, where a too-exclusive preoccupation with the material well-being and standards of living have distorted basic human values. This implies, in concrete terms, the creation of a balanced economy in which the village and the town, the small unit and the big unit, are governed by a co-operative instead of by an exploitational relationship to the benefit of the entire community.

✱

Once these basic assumptions about the kind of life we desire for

ourselves are conceded, no other a priori considerations ought to prevail against the best way to achieve these ends. The approach should be a severely practical one, which considers each question as a problem to be solved in the light of reason and experience. There should be considerable room for manoeuvre, and the Plan should be flexible and capable of adaptation to new situations as they unfold themselves. There is plenty of evidence that the planners have these considerations dominantly in their minds.

The most striking confirmation of this fact is the rather jargon-ridden discussion of "perspective planning" and "physical planning" and "disposition of real resources." All that this discussion and the conception of annual plans really boils down to is that one should have a long range view of what one wants to make of one's life; and one should have, at the same time, a detailed knowledge of the immediate tasks and how they will affect the economy. This severely practical and continual appraisal of the work to be undertaken under the Plan would enable us to make the necessary changes to suit any shortcomings in technique, availability of materials and, above all, finance The detailed discussion of other aspects of the Plan, I shall hold over for subsequent weeks.

*

As I write this, there begins all over the world the commemoration of one of the most important events in world's spiritual history. On this Baishak Purnima two thousand five hundred years ago, Gautama, the Buddha, attained Enlightenment under a Bodhi tree. Since that memorable day, the message of that gentle spirit has spread over the whole of Asia, and entered the very texture of the spiritual and ethical traditions of the people of that region, whatever be their nominal faith. In India itself, Buddhism did not apparently have any influence, if such things were to be reckoned in the terms appropriate to the census enumeration measures. But the intangible influence of Buddhism is to be seen in a hundred little things. One of the greatest names in ancient Indian history, Asoka, was also the man whose steady and unflagging zeal took the faith beyond the high mountains and across the wide seas. To the pattern of India's cultural and artistic life, the contribution made by the powerful Buddhist influences has been of permanent importance. And, nearer our own time, Gandhiji's cult of Ahimsa was in direct line of succession to Buddha's ideal of love for all beings. What is the contemporary relevance of this gracious spirit who preached compassion, tolerance, harmony and freedom from strife? Even as one frames the question, one realises the inescapable significance of his teachings to this age. The record of sanguinary violence and hatred of our age, and its ingenuity in devising weapons of destruction to further the indulgence of these passions are notorious. If the spontaneous enthusiasm for the commemoration of Buddha's Paranirvana is indicative of, or will lead to, a revival of faith in his basic teachings, then the terrors of the Atom Bomb will be less nightmarish.

Bombay Review

A Welcome Lead

A WELCOME lead has been given by Mr C. R. Srinivasan in the matter of the correct reaction by the private sector to the enunciation by Government of their revised industrial policy statement. In addressing the annual general meeting of the Bharat Lines Limited, Mr Srinivasan, in his office of Chairman, has utilised the opportunity offered of indicating in clear terms the private sector's satisfaction with the reassurance of its future as explicitly given in the policy statement.

The extent to which the attitude of spokesmen of the private sector has changed since the time when the Avadi resolution, proclaiming the achievement of a socialistic pattern of society, was enunciated would superficially appear to be of incredible magnitude. But the fact is, that the enlightened businessman has never had any quarrel with the basic objective: what has been troubling him—and, to some degree, it bothers him still—are contradictory avowals of official policy by some in authority who have no voice in such matters. It is the uncertainty that has been the cause of such doubt and diffidence as the private sector can be charged with displaying in the last sixteen months or so.

Mr Srinivasan has given expression to the enlightened businessman's attitude in remarkably pithy words. As he put it, "It is not so much the socialistic pattern of society to which our course is set that alarms the business community; they are realities and can appreciate the impact of new forces in a changing world. Everywhere these forces are at work; only in India additional momentum has been imparted because these forces had been dammed for decades past; but our political propagandists, in their anxiety to show that they are in the vanguard of the new movement, have unfortunately laid more stress on the break with the past than the build for the future."

This stress on the break with the past has unfortunately been all to the fore in the rantings of those with pseudo-authority. The unseemly hurry to rename streets, to re-letter station name-plates and to remove statues have relegated, in the minds of such people, the really important tasks of constructive activity to a relatively neglected position in the agenda of work. It may be good politics, and votes may thereby be bought, by emphasising the achievement of such infructuous deeds. But it most certainly is not good business: the resultant uncertainty has been responsible for diminished enthusiasm and a less keen response by those afflicted by diffidence to calls for enterprise.

Happily, we have left behind the stage when we allowed ourselves to be distracted in such useless directions. There is also the indication that Government are aware of the need to dispel the uncertainty that has troubled the private sector, and that they are anxious as well to move in the matter with all the possible speed they are capable of.

For, that is the sum and substance of the industrial policy statement. As Mr Srinivasan remarks, industrial progress is to be attempted and achieved on what he calls a "three tier basis." There is, firstly, the tier at the bottom that relates to enterprises in the public sector; and these could be undertaken only by the State "for reasons of security and scale of investments". Next, we have the composite sector, "where private enterprise is intended to supplement Government efforts'". Finally, at the top, there is to be the private sector wherein "private enterprise will have full play though subject to regulation in public interest". Will any businessman who is a realist, and therefore enlightened, find in these scheme of affairs a devolution of responsibility that he thinks is incorrect Mr Srinivasan answers the question thus: "Rightly understood, interpreted and administered, few will be disposed to quarrel with this distribution of responsibilities in a country's economy if the international forces unleashed in the 20th century are properly appraised and assessed."

As we have seen, the private sector, and its spokesmen, have been enheartened by the revised industrial policy statement. But it will not be sufficiently conducive to enterprise by the private sector, if Government were to believe that their task of encouraging activity has been ended by their pronouncement of policy. Bharat Lines' Chairman has drawn pointed attention to matters which should now be attended to by Government.

What, then, is necessary? It seems to me that Mr Nehru has repeatedly been stressing that it would be Government's responsibility to ensure that the atmosphere would be created in which the private sector would be enabled to put through the development plans which may be allotted to it for implementation. Mr Srinivasan puts it this way: "They (Government) must also create and maintain conditions under which industry, howsoever placed, can thrive and give of its best." A primary requisite in this regard, and especially as relating to the shipping industry, is a "period of industrial peace."

Here, if I may, I would like to suggest that the restatement of industrial policy is tantamount to declaring that there shall be, in this country, co-operative co-existence as between the two sectors. This journal has emphasised the need for such co-operation, suited and necessary as it is to the peculiar conditions of the Indian mixed economy. But there is another aspect of this co-operation and co-existence, that which has regard to the relationship between labour and management. It is sad to relate that an industry that suffers because of a continuing lack of close cordiality between the partners in industry is shipping.

In particular, the "go-slow" movement hinders prospects for and the earning capacity of shipping companies. The coastal trade has been feeling the pinch: costs have risen substantially, but representations for an increase in freight rates have been phlegmatically received. If it is admitted that the private sector has a place in India's future; if it is stated that shipping belongs in this sector; and if it is recognised that this industry is important to the Indian economy, then, may I suggest, it is up to Government either to ensure that costs are regulated by a more responsive and less recalcitrant labour or to permit the raising of freight rates.

Goods Transport by Road

The success claimed for the operation of the State Transport in Bombay has now opened the door for the suggestion for nationalisation of the goods department. At the third Annual Conference of the Federation of Bombay Motor Transport Operators, the State Deputy Minister for Transport has put forward a strong plea for it, irrespective of the reorganisation of States and the uncertainty of Bombay's future. His plea is not unimpassioned as he is convinced that this nationalisation might affect the operators; the necessity is brought out by the fact that this might profit the Government, the workers and the consumers.

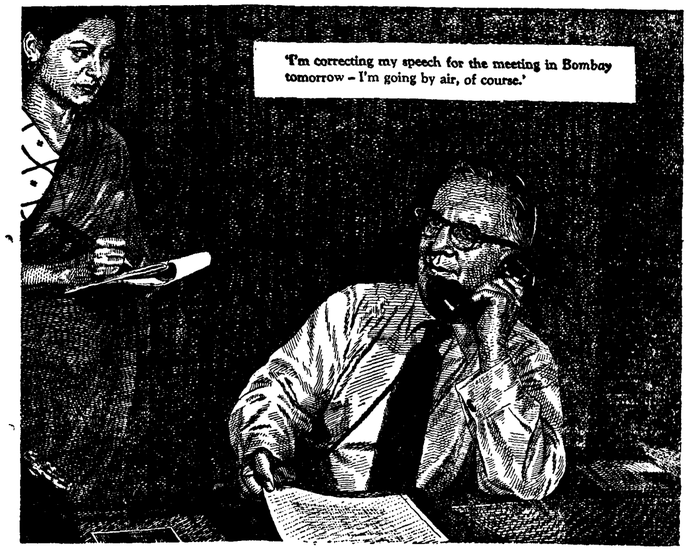
Another claim put forward by him in this regard is that it would be in accordance with the avowed policy of the Central Government. The Government of India have decided on the nationalisation of goods transport, although the Planning Commission have favoured the move to be kept out of the compass of the Second Five-Year Plan. Perhaps, the go-slow policy of the Government of India would be sponsored by the steps to be taken in the Bombay State.

How far this would affect the operators has not been taken into account. In fact, there has been no unanimity at the Conference since a few are inclined to feel that the operators would not be affected in the least. Whether or not it is convincing, many are agreed on the necessity of disbursing the operators' profit, in the interests of the public.

The Deputy Minister, while stressing the importance, does not seem to have reckoned with the profitability or otherwise of the new undertaking in the State. In the ordinary circumstances, the liability of uneconomic units can be hardly welcome to a State such as Bombay. It would appear that goods transport could be left with the private enterprise. But Mr Patel's realisation of the present need has not left any room for such calculation.

The Over-crowding Committee

The Railway Suburban Over-crowding Committee has made a number of suggestions to overcome a situation which to the layman looks almost impossible to deal with. In Bombay, inspite of all the staggering in office hours, the railways have to pick up intolerable loads during peak hours. The Committee suggests queueing in order to relieve the confusion now witnessed when people enter the train. In bus stands, queues are the order of the day. There is, however, a difference in that the crowd waiting for a train is incomparably larger, and the frequency of trains considerably less than that of busses.



The Committee has advised the authorities in Calcutta, Bombay and Madras to undertake space—time—speed studies to obtain reliable data for ascertaining the requirements of suburban railway traffic. From these studies it is hoped to achieve a maximum intake of the incoming and outgoing traffic. Such studies have been undertaken in the United States and cover investigations on innumerable points such as the height and width of platforms where the trains stop, the location of benches and vendor's stalls, and entraining and detraining facilities. The assumption is that small adjustments in these things would result in the maximum intake of passengers in the minimum time and travel at the maximum speed. It remains to be seen how far the application of methods in vogue in the U.S.A. and would be effective in India.

World *of* Cotton

Good Demand in Spot Section

THANKS to the revival of mill demand and the Government's decision to abolish the export duty on coarse cloth, conditions in the spot market remained steadier. Mill interest was centred generally on Surti, Jharilla, Vijay and Laxmi varieties: and the tendency was for the prices to harden all round. Prices of foreign cotton, however, declined sharply following the reports that American cotton would be sold one per cent below the last auction price. Following were the rates quoted:—Bengal Rs 640 to Rs 710; Oomra Rs 725 to Rs 760; Jharilla Rs 750 to Rs 830; Vijay Rs 990 to Rs 995; Bushoga Rs 1,660 to Rs 1.665; Karnak Rs 2,700 to Rs 2,800 and American 1⅛" Rs 1,350 to Rs 1,355.

In general, the trend in the spot section remains firm with prices ruling well above the ceiling, fixed by the Government. It is feared that the current buoyancy in the market may soon lift other growths above the ceilings, thereby creating a more difficult situation for the authorities. The main factors contributing to the present difficult position are, no doubt, the recent announcement of the abolition of the export duty on coarse cloth, shortage of popular domestic styles and the eagerness on the part of the mills to augment their stocks of raw material.

It is learnt that almost 70 per cent of this year's indigenous cotton has been marketed, and fresh arrivals of Jarilla, 320F, 216F. Vijay. Surti, NT and other varieties have declined considerably. It is also reported that the marketing of Laxmi, Jaydhar and Westerns will be over before June 15. With the result, mills, who are now in need of the raw material, seem to be prepared to pay even higher prices for desirable lots.

According to available figures, cotton pressed in the country, till the end of April, is estimated around 25 lakh bales as against 34 lakh bales in the corresponding period last season. This indicates that the indigenous crop will be in the neighbourhood of 40 lakh bales this season. Imports are estimated at 7 lakh bales, but mill consumption is expected to exceed 52 lakh bales. Thus, the carryover for the next season may show a fall of about 5 lakh bales.

But, it is believed that the crop in the 1956-57 season will be higher due to better irrigation facilities in the Punjab, Madras and Andhra States. As the acreage is likely to show a rise of at least 5 to 7 per cent, the crop may well exceed 50 lakh bales under normal conditions although the Deshi crop is expected to be smaller due to Government's interest in producing only longer-staple varieties. In this connection, shippers seem to have suggested that less output of Deshi varieties will adversely affect India's exports and that the production of longer-staple varieties should, therefore, not to be stepped up at the cost of short-staple growths.

Meanwhile, cotton traders hold the belief that forward trading in 1956-57 crop, if permitted earlier, will help current spot prices to decline. They also appear to have almost agreed to the suggestions of the Forward Markets Commission for the resumption of futures business in the commodity. As a matter of the fact, the authorities are interested in starting trading as early as possible—possibly before July 15—since they feel that the higher cotton crop next season will have a psychological reaction on the current high prices of cotton.

×

NEW YORK MARKET:

Values in the New York Cotton market fluctuated irregularly in slow and largely professional dealings, finishing at the week's best levels. Commission houses were credited with buying near-July and selling forwards, while part of the selling was attributed to reports of slackening in mill enquiry for spot cotton and talk in Atlanta area of mill curtailment.

Old July was the only month that sagged on scattered liquidation and some selling in that delivery against purchases in forward months. July, after touching a high of 34.48, finished the week lower at 33.99. New Orleans July was quoted at 34.47.

×

LIVERPOOL MARKET:

Trading on the Liverpool cotton market remained slow with small hedging, mostly offset by some trade and commission house buying. The Egyptian contract was inactive, while the Sudan contract was quiet and slightly easier on small hedging offers. May/June Old contract was quoted at 26.45: New contract at 30.60. Egyptian Karnak May/June at 59.29 and Sudan July/May at 50.80.

×

KARACHI MARKET:

The Karachi market ruled steadier, Sind Deshi quality quoting Rs 100; Punjab Deshi at Rs 94; 4F Punjab Rolling at Rs 86: LSS Punjab Rolling at Rs 91 and NT Rolling at Rs 91-8.

×

COTTON AND PIECEGOODS:

The steep rise in cloth prices, both before and after the announcement of the abolition of the export duty on coarse cloth, have created doubts among trade circles as to whether foreign buyers will enter the market in a big way around the present levels. There is also a feeling that, if the benefits of the abolition of the duty are not passed on to the overseas buyer, there may not be any handsome improvement in exports.

Mills, however, continue to quote higher prices in view of the increased rates for raw cotton—both foreign and indigenous—and they are said to have booked their output right upto August. There are suggestions to step up production in order to meet any shortage of cloth, although condition in the export sector may be said to be unsatisfactory. Exports have been continuing to decline and, at this rate, the overall exports, during the current year, will show a heavy fall.

In this connection the following statistics of exports of cloth (in million yds) during the first four months of the current year and as well as during the corresponding months of the previous two years will prove interesting.

		1956	1955	1954

Setback in Oils and Oilseeds Prices

SENTIMENT on the Oilseeds market, during the past week, was adversely affected due to some adverse factors. Mainly amongst these were the Reserve Bank's direction to the Scheduled Banks to restrict credit facilities against stocks of paddy and rice and that this might be extended to other commodities as well, and the apprehensions that the Government might extend the ban on the exports of oils, such as Kardi and Nigerseed oils.

With the result, prices, after opening firm and touching new higher levels on favourable advices from abroad, suffered a sharp setback in mid-week on selling pressure. Although there was a slight recovery in mid-week due to bear-covering at lower levels, the trend at the close was rather quiet in view of the Export Advisory Council meeting in Delhi. Traders preferred to avail of the trend of discussions at the meeting and were, therefore, not in a mood to extend their commitments.

The upward trend in Castor futures gathered fresh momentum with the 1956 delivery crossing the Rs 160 level on hectic covering and consistent bull support. Buyers appeared to have derived additional strength from reports indicating the conclusion of business in castor oil with Japan. Reports were that this country had bought between 600 and 1,000 tons of commercial oil at £134 to £137 per ton.

Castor May, after touching a high of Rs 155-6, declined at one time to Rs 152-0, to finish better at Rs 152-10. Castor September, after crossing the Rs 160 mark, came down to Rs 157-4 due to selling pressure, before closing at Rs 157-14.

Although Groundnuts looked steadier due to internal considerations and also in sympathy with castor futures, higher levels could not be maintained till the close due to stale liquidation. Groundnut ready essed off to Rs 34-12 from Rs 36-0. Groundnut Oil finished the week at Rs 18-14, while June delivery was bought at Rs 19-5.

Linseed prices also suffered a small decline, mainly due to the fact that shippers were expected to incur heavy losses with regard to their advance commitments. Linseed ready, after moving up to Rs 34-0, closed at Rs 33-8, while Linseed Oil was quoted at Rs 20-7.

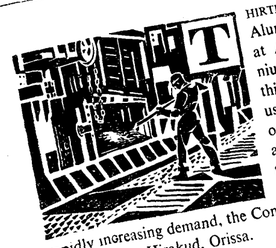
Recently, 3,800 tons of linseed oil have been shipped to the UK; and another shipment of 2,800 tons are expected to be completed soon. In the first week of June, about 4,000 tons of oil are expected to be shipped.

Kardi and Niger seeds ready were quoted at Rs 20-2 and Rs 28-4 respectively.

*

Gold and Silver

The bullion market presented a curious pattern of trading during the past week. With the approach of settlement, bulls were initially inclined either to carry over their transactions to the next settlement or preferred to unload their loadings. The result was a further decline in the prices of both the metals.



The decision to permit imports of silver coins from Tibet has been effectively working as an automatic check on the recent rise in prices. The long position, built by bulls during the past several months, was therefore shattered, not only by the Government decision referred to above, but also due to steadily increasing arrivals of fine and unrefined metals in the face of dwindling demand. Also, the Association was compelled to fix a special interim clearing in both the metals in Jeth and Baisakh settlements, the decline being more than five points over the previous clearing rates. The clearing rates were fixed as follows:—Rs 171-4 for Baisakh silver; Rs 166-12 for Jeth silver; Rs 101-8 for Baisakh gold and Rs 99-4 for Jeth gold.

Arrivals of silver amounted to 15 bars as against an offtake of 12 bars, while unrefined metal receipts amounted to 80 bars. Baisakh silver, began the week at Rs 173-14 and Jeth delivery at Rs 172-9, quoting at the close at only Rs 171-0 and Rs 165-4 respectively. Ready silver finished at Rs 175-2.

Arrivals of Gold amounted to 2,000 tolas. Unrefined receipts totalled 4,000 tolas, while offtake was 4,000 tolas. Gold Baisakh, after opening at Rs 103-10, declined at one time to Rs 101-4, to finish

(Continued on page 981)

A NEW CHAPTER IN CANADIAN-INDIAN CO-OPERATION

THIRTEEN years ago, when Indian Aluminium Company's smelter at Alupuram produced aluminium for the first time in India, this versatile metal was being used mainly in the manufacture of cooking utensils. Today, aluminium has become important in a variety of industrial applications, and to meet the rapidly increasing demand, the Company is installing a new 10,000 ton smelter at Hirakud, Orissa.

Here, as at Alupuram, the Company's Canadian associates will help not only with their technical know-how and world-wide experience, but they will also share the costs of the project, to finance a part of which the Company proposes to issue fresh capital.

Export Problems

ADDRESSING the meeting of the Export Advisory Council here on Sunday last, the Union Minister for Commerce and Industry, Mr T. T. Krishnamachari, enumerated in pitiless detail the dilemmas of the situation. Though the occasion was nominally one that concerned itself with export, it was the necessity of finding the wherewithal for the heavy import bill of the next few years that invested the deliberations with a certain special urgency. The financial assumptions of the Plan, especially in relation to foreign exchange earnings, were discussed at some length by Mr Krishnamachari, who said, in effect, that the Plan's targets are largely in terms of hope rather than of any precise assessment of possibilities. This was inevitable to a certain extent, because you can hardly calculate precisely on future events, much less on future events that rest, to some degree, on other people's decisions.

Discussing the trend of export trade of the last few years, Mr Krishnamachari saw in it many encouraging features and, in the light of these data, considered the Plan's expectation of exports as on the cautious side. Export figures have shown a steady increase after 1953-54, and the figures for 1955-56 were approximately Rs 600 crores. The Planning Commission's expectation of exports for 1956-57 is modestly placed at Rs 573 crores. If you go into further detail, you will find the Commission even more conservative in their estimates: The annual average for tea, for instance, has been put at Rs 127 crores—that is, Rs 4 crores less than in 1954—and that for jute goods has been fixed at Rs 122 crores, or the same level as was attained in 1954. Increases envisaged in export of other articles are equally modest, with the result that the annual average of exports anticipated by the Plan is of the order of Rs 593 crores as against the actual of Rs 573 crores for 1954-55.

In a sense, it is just as well that the estimates of export earnings are on the modest side and conceived in terms of efforts put forth in the First Plan period. The Plan, as Mr Krishnamachari explained, "gave a complete picture of our hopes and aspirations and of the needs and directions in which we had to proceed in order to fulfil them. Such gaps as we find when the full picture is presented have got to be fulfilled."

The modest estimates of export earnings are advantageous, firstly because knowledge of it makes the gap in external balance less awesome; secondly because it makes the estimates of achievements to be attempted as the minimum that will be acceptable rather than the maximum that is possible; and lastly, and perhaps most importantly, the import bill has been, considering the targets and the tempo of development envisaged under the Plan, equally under-estimated. Mr Krishnamachari is quite unambiguous on this: "It is quite on the cards that the import schedule in the Plan would have to be increased perceptibly with the result that the balance on current account at the end of the Plan might show formally a bigger deficit balance than Rs 1,120 crores. The development of the economy at the rate at which the Plan envisages would need a tempo of activity which cannot be adequately met by the utilisation of resources that we have in this country plus what we have estimated would be imported by way of capital equipment and raw materials, foodgrains and consumer goods." The last two, especially, are unpredictable, depending upon such imponderables like the monsoon and the extent of the inflationary pressure consequent on deficit financing and the inadequacy of the small scale industries in their assigned tasks of producing consumer goods.

So, there is no room for complacency on the part of those engaged in the tasks of promoting exports: our wits and energies must be bent to the task of increasing exports in every direction. The situation is not as immediately desperate as is implied in the expression "Export or Perish" that the hard-pressed British people once coined as the motto for themselves: but it is very nearly so, if we take our over-all development as a matter of life and death.

Among the steps taken by the Government in this connection are the trade treaties that they have entered into with various countries. These treaties are primarily directed at obtaining things we need for our development, and therefore the export earnings from the agreements, though important, are of secondary importance. Mr Krishnamachari was unable to estimate the precise increase in exports from these treaties, but in so far as they took care of part of the imports, they have served a useful purpose.

But the principal effort at boosting export earnings must be through the conventional channels of international trade. The problems that face this enterprise are well known, and it is equally well known that they are not capable of blanket solutions. The fact that our export pattern is changing brings fresh problems: for, we are, so to speak, neither here nor there. Mr Krishnamachari spoke feelingly about it: "Any scientific approach to the problem based on the experience of other countries is not always valid in the case of a mixed export economy where the mixture is of raw materials and manufactured goods. A mixed export economy of this nature is doubly cursed in that it has in it the features of a dependent and unstable economy common to countries exporting raw materials and it lacks the structural flexibility that is necessary for the purpose of keeping up exports of manufactured articles."

Of the difficulties of conventional export trade, some are of our making and others are those that arise out of other peoples' decisions. Let us deal with the latter first: Taking textiles as an example, from a long-term point of view, the export market for cotton textiles is, even without competition from others, a steadily shrinking one. Almost every country on its career of industrialisation thinks first of the cotton textile industry. Those of us who are inclined to take a malicious delight at the current difficulties of Lancashire may do well to remember that a similar fate can conceivably overtake our own textile industry sooner or later. On a shorter range point of view, competition from others, especially from the "extraordinarily aggressive competitor, Japan, trying to take bits of trade from you here and there", is a source of constant worry. Further complications arise from the almost habitual divergence in practice from the piously platitudinous homage to multilateral trade. It is not only the under-developed countries which resort to bilateral arrangements. Highly developed countries depart from professions of multi-lateral trading, with much less of a case for doing so.

Formidable as these problems are, our principal difficulties, as Mr Krishnamachari pointed out, are of our own making. First, in the matter of coping with competition, our record in conformity to standards and quality control has been notorious. Sharp practices in evading responsibilities in conforming to specifications have made us one of the most suspect of trading nations.

Secondly, the promotion of exports depends not only on the production of the commodities but also on a reasonable price flexibility. This counsel of perfection, of course, is easier given than accomplished in practice. For, it is really part of the central dilemma of all attempts at the creation of a welfare state in a world in which everyting has got to be paid for by some one at some point. If we are to assure a reasonable standard of living for our people, then a certain amount of taxes should be collected, but these taxes put up the prices of goods to

SALE OF 68 CONDEMNED WAGONS

The General Manager invites tenders for the sale of 68 Condemned wagons stabled at Mailurakati Scrap Yard, South Eastern Railway, Kharagpur.

Tender No. S4/5/3/3 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, on production of Cash Receipt for depositing Rs. 5/- with the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta-23, by local firms and on remittance of Rs. 5/- by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta-23, by outside firms. The cost of the tender forms is not refundable.

The wagons may be inspected on any working day before the closing date of the tender. The closing date of the tender is June 12, 1956 at 12 noon.

North Indian Notes

Oil Resources

The final report of the Soviet oil experts who investigated prospects in India does not show any substantial difference in conclusions from the interim report. As most of the recommendations made in the interim report have already been adopted by the Oil and Natural Gas Directorate and the Government, the final report does not call for much fresh thinking or new lines of effort. The Soviet experts see good prospects in the Punjab and Rajasthan area, where they advise concentration of work in the next five years.

As a matter of prudence, simultaneous geological and geophysical investigations along with deep test drilling in the Ganga Valley, West Bengal and similar activities with suitable modifications in Cambay and Madras Coast have been recommended. In the event of failure in the Rajasthan area, there would be some compensation in the form of results obtained elsewhere. Speaking on the final report, Mr K. D. Malaviya said in the Lok Sabha this week that the Government were considering the establishment of a plant for the manufacture of drilling mining machinery.

Extensive explorations for oil would soon be undertaken and in several areas a Commission with wide financial and administrative powers is proposed to be set up. The exploration of non-ferrous metals is also to be undertaken. On Monday, the Governments of India and USSR signed an agreement, *under which India would be* purchasing from USSR two oil drilling rigs complete with spares accessories etc at a cost of Rs 74 lakhs.

*

Another Rice Deal with Burma

The previous Indo-Burma rice deal was marked by extreme generosity on the part of India. India paid a price which by any token was liberal and a good part of the debt owed by Burma was liquidated through adjustment and the balance written off in the form of financial aid. At that time Burma was having great difficulty in the disposal of her rice. Just now, Burma finds herself in a different position; she has made heavy commitments on her rice production and has secured new customers. She also seems to have fixed a minimum price for the sale of rice.

In the current negotiations for a rice deal between the two countries, it appears that the main cause of delay is the question of price. At the rate offered by Burma, Burmese rice may still be cheaper than rice from Thailand, the other nearest source of import for India. But this rate is about £4 higher than the internal ruling price in India. A difference of this order would involve a serious loss to the Government. Another point on which agreement is getting delayed is the mode of payment. While the Burmese representatives insists on cash, the Indian team is persuading Burma to accept equivalent imports in kind, in the form of coal, textiles jute, oils and other manufactured consumer goods such as cycles and lanterns. Burma's foreign exchange position has improved of late; she has not cared to draw on the credit of Rs 20 crores which the Government of India placed at her disposal last year. Opinion in Parliament which was critical of the previous year's rice deal is not likely to be blind to any condition which works financially against India.

*

Revenue from Sales Tax

That the flexibility of the sales tax is likely to be utilised to the maximum in tapping financial resources for the Second Plan could be inferred from the statements made by the Union Minister for Revenue and Expenditure in the Rajya Sabha, when he was moving for reference of the Constitution (Tenth Amendment) Bill to a Joint Select Committee. The Minister said that the Second Plan has provided for an additional revenue of Rs 112 crores through this tax.

To some extent this addition will accrue in the form of larger collections. There is going to be an all-round expansion of production, which should yield considerably more revenue through the sales tax. But the prospective increase from this source may not be confined to an automatic extension of collections. The Union Government have not yet decided whether there should be an uniform level of tax or not. In Parliament the plea for uniformity was again heard. Uniformity, as pertaining to sales tax, has two aspects one implies the same rate of level for all commodities; the other is a uniform level as between the various States, with or without uniformity as between commodities. The same rate for all commodities will be unjust and

NORTH INDIAN MARKETS

Firmer Tendency in Shellac Prices

PRICES in the Calcutta Shellac market have been developing a firmer tendency during the past two weeks. Pure TN quality being quoted at Rs 130 as against only Rs 114 quoted a fortnight ago. This steady rise in price is attributed mainly to covering business by shippers on the view that the supply from upcountry centres has fallen below expectations.

Shipments, during May until the 18th were 18,197 packages comprising 11,325 packages of shellac; 3,919 packages of seedlac; 546 packages of buttonlac and 2,407 packages of other grades.

The crop for this year has been estimated at 750,000 maunds against last year's 600,000 maunds; but the decreased flow of lac to Calcutta is causing some anxiety among trade circles. Although enquiry from foreign buyers is running at a low level, good business has been reported done in the forward positions, especially May and June. It looks, therefore, that a large portion of the crop has already passed into the hands of stockists who may not probably be in a hurry to sell at present. The outlook for the commodity remains, however, fairly good and prices are expected to be maintained around the current levels until September when the Siamese crop will begin to arrive.

Following were the rates quoted (per maund) for other varieties of shellac:—Pure Buttonlac Rs 145; Lemon No. 1 shellac Rs 147; No. 1 Kusmi Seedlac Rs 143; Fine Bysakhy Seedlac (CP) Rs 128 and Kirrelac Rs 49-8.

*

The sugar season is nearing its end. Half the number of factories has stopped crushing, while the remaining is expected to close down in the coming few weeks. Normally, the season ends on May 10 but an extension has been made this year on account of the plentiful supply of cane at many places in the Deccan, Uttar Pradesh and Bihar.

According to the Union Ministry of Food and Agriculture, the production of white sugar, on the basis of the final estimate for 1955-56 season, is estimated at 18.48 lakhs tons as compared with 15.90 lakh tons during the 1954-55 season. This shows an increase of 16 per cent over the previous year's production. The increase has been shared by all sugar-producing States, prominent among which are Uttar Pradesh, Bihar. Bombay, Hyderabad and Madhya Bharat.

The total output, during the current season, is estimated at 18 lakh tons, just sufficient for the country's requirements. The production outlook for the 1956-57 season is considered to be bright in vew of the good cane crop expected. Preliminary reports indicate that the area under cane will show a rise of at least 5 per cent.

Meanwhile, conditions in sugar markets at various centres continued to remain depressed mainly due to the comfortable supply position and the slack outside buying enquiry. Following mill-delivery rates were quoted (per maund), in the Hapur market:—Jaswant Rs 27-14; Simbhauli Rs 28; Mowana Rs 28-0; Daurala Rs 29-0; Amroha Rs 27-8; Bijnore Rs 27-8 and Mansoorpur Rs 28 to Rs 29.

*

The Hapur Gur market ruled quiet in the absence of any driving force. The season has come to a close;and the small arrivals, at an average of 150 maunds daily, were from the stocks with the producers. Small offtake was to Gujerat and East Uttar Pradesh. Stocks were estimated around 95,000 maunds.

While Gur Baisakh ruled featureless and quiet, Phagun delivery prices eased on bear pressure, influenced by good prospects of the next crop.

*

Prices in the Hapur Foodgrains market developed a slightly hardening tendency during the past week, average quality Wheat quoting Rs 13-6 and farm quality Rs 15-2 as against Rs 13-2 and Rs 14-8 per maund respectively in the previour week. Rice prices also recorded fractional gains in sympathy with wheat Basmati moving between Rs 28 and Rs 33-9 per maund, according to quality.

Poor arrivals and firm Punjab advices accounted for a further improvement in Gram to Rs 10-12 per maund for local quality and Rs 11 for the Punjab quality. Barley and Bejhar recorded gains, to be quoted at Rs 9-10 and Rs 9-8 respectively. Jowar was in request for seed purposes and, due to poor stocks, prices registered gains to Rs 13-4 per maund.

Pulses ruled quiet. Peas was in request from Madras side, Dara green having touched the highest level of Rs 10-6 per maund. Daily arrivals averaged 1,500 to 2,000 maunds. Arhar continued to rule steady at Rs 11-3 per maund.

A quietly steady trend prevailed in the Delhi grains market. Wheat dara quality improved by about As 8 per maund, while farm quality lost As 8 in the absence of marked buying. After early softness, Gram rates recovered toward the close, induced by better demand from Madras side. Masoor recorded a gain of As 12 per maund due to shortage of stocks.

Madras Review

The Peninsula

Preaching a New Balance in National Outlook

IT would be too modest to describe Acharya Vinoba Bhave's tour of the South as a mere Bhoodan endeavour. This can be said of his tours everywhere. His own habits, the methods he has chosen and the ideas he propounds together represent a certain philosophy and outlook which is rooted in the Indian tradition, but it has ceased to evoke due enthusiasm amidst the urban, modern-minded population.

The impact of the latter on the villagers, which has now become universal and which is getting strengthened in several imperceptible ways, breeds a subtle antipathy to the virtues of their own past. The huge mechanised industry, the tractor, the unending additions to the day-to-day necessities and the uncompromising and blind materialism which suppresses non-material urges and which indirectly enlarges the arena of conflict between man and man, all these are ranged on the opposite side. Of late the colossus of the State has also emerged.

If we follow Acharya Bhave closely, we can say that he is trying for the restoration of the lost balance in the individual's outlook to make him content with a simple, unostentatious life and consequently not to compare his condition with the irrelevant prosperity of others, and to impart a general outlook which while satisfying one's personal dignity, does not obscure its real character or load it with exotic trappings.

The Acharya does not see good in a concentration of power in the hands of the State. Even too much of legislation he does not approve. In one of the meetings he addressed at the Madras City, he recalled how in Japan caste was abolished by law and one of its by-products was the creation of three million outcastes who were having the worst of time even now. Likewise, the distribution of land through legislative compulsion in Japan has not contributed to social welfare. Bickerings and quarrels between landlords and tenants have increased.

Acharya Vinoba Bhave does not want the people to look to the Government for every thing though he admits it has become a general habit. Social reforms, according to him, must come out of the real strength of the people. Initiative and support for reform must be sought from the people themselves. He claims for the *Bhoodan movement a spiritual* force because it is a movement which is the result of a change of heart in the people.

As could be expected of him, he places faith in God as a paramount personal necessity; work and worship are the two great complementary factors for joy and peace of mind. He points out that even great sadhus are not content with worship of God; they also do a quota of physical work. To fit in with this thesis, the Acharya suggests that everyone in India, Ministers not excepted, who draw a salary of Rs 15,00 and above should work for two hours daily in the fields to produce wealth. He says that two hours' work in the fields wou'd also help them to avoid medical bills, which in turn will enable them to set apart one sixth of their monthly earnings for Sampattan. The Acharya is careful to add that even the Prime Minister is not excluded from this obligation.

In principle, the suggestion sounds good. Practical difficulties will be many. If all the salaried persons in Delhi were to work two hours in the field, there will be no end to the dislocation it would cause both in the field and in the office. If it is granted that all the officers devote their full time usefully the innovation will also involve a large-scale addition to their number which in turn means considerably more expense for the Government. Possibly, the transport load also will go up.

Perhaps, this suggestion stems out of the Acharya's deep dissatisfaction with the official world in Delhi. He takes the elite of Delhi to task for leading an artificial life reflecting the fashions and cultures of other countries more than the honour and culture of their own country. Presumably, he thinks that some regular physical labour for the highly paid officials would create in them a general emotional sympathy for the Indian masses and a desire to correct the ways which the Acharya sternly disapproves. But it is not the officials alone, who have fallen in his estimation: he points that even the Congress workers are betraying a deterioration in outlook from that which obtained in the pre-freedom days. Though people are willing to participate in social work, they are invariably expecting some return either individually or as a group.

The Acharya turns his face against State-capitalism as he calls it. To a question as to whether land distribution would not lead to fragmentation and nationalisation of land was therefore not a better alternative, he pointed to the State-managed Railways and asked how far the people were statisfied with railway travel. He does not believe that people will necessarily be happy, if everything is done by the State. He is anxious that the power for doing things, good or bad should not be concentrated in the State. Centralisation he condemns unequivocally.

Even the discipline involved in political organisation does not secure his approval, for the reason that it stifles the expression of individual opinions; he would vote for a change in which parties formed on ideological differences could meet and decide on a common minimum programme acceptable to everyone of them, so that the country can make progress through their joint efforts. Here also, the Acharya's suggestion implies to an unrealistic degree the basis on which rival political parties are formed and function.

In one of the meetings at a village near Madras, he was asked about Dakshina Pradesh. He replied that the merger of Kerala and Madras was not only impossible but desirable. The two languages could be made compulsory after the basic education stage under a programme of five or ten years. He describes Malayalam as Tamil simplified plus Sanskrit. Personally linguistic provinces have no terror for him: all that he insists on is that every one should feel an Indian first and anything else afterwards.

Madras Review

South Indian Markets

Coffee Production & Consumption Estimates

IT is generally believed that Coffee production, during the current season, will exceed estimates by a substantial margin. Production has, so far, amounted to 31,286 tons against an estimated crop of 26,800 tons, while the trade thinks that another 2,000 tons may be produced before the end of the season.

Present stocks have been estimated at 26,000 tons, and consumption will absorb 15,900 tons by December next when the new crop is expected to come into the market. It is learnt that the Coffee Board has proposed to carry forward 5,400 tons and to export the remainder.

Present indications are, that world supply has overtaken demand, which is being discouraged, particularly in Western Europe, by high duties. The prospects of increased consumption in East European countries are also poor, mainly due to reports of larger production in Brazil and Columbia—the major suppliers. In India, the next year's crop is also expected to be big after the excellent blossom showers.

Some trade circles, therefore, feel that such a large carry-over of 5,400 tons is not necessary and the Government should take immediate steps to increase exports. There is, however, a proposal by the Government to hold open auctions for the export as a trial measure for one year to start with: and these open bids are expected to fetch higher prices for coffee than at present.

Meanwhile, coffee prices fetched higher prices at the Pool auction held recently at Mysore. This was mainly due to the fact that there had been no auction in Mysore during April and on consideration of the better quality exposed for sale. Following prices (per cwt) were realised:—Plantation "A" Rs 215 to Rs 220; Plantation "B" Rs 205 to Rs 210; Plantation PB Rs 238 to Rs 245; Triage Rs 202 to Rs 210; Cherry Rs 180 to Rs 185 and Robusta Rs 155 to Rs 158.

*

Prices in Pepper markets have been showing a declining trend during the past two or three weeks on nervous unloading by bulls and on easier advices from the USA. In the Kozhikode market, the rates were quoted lower at Rs 800 per candy for Wynaad quality and Rs 775 for the Country variety.

In general, buyers from the USA, who were showing keen interest in Indian pepper till a month ago, are now adopting a "wait and watch" policy. With Sarawak pepper arriving in the market, the situation in India is naturally worsening. As a matter of fact, shipments during April were the lowest in seven months and unusually low for April. Russian buying, during April, did not materialise, while American buyers preferred to buy from Sarawak than from India on account of price considerations. To make matters worse, the Indonesian crop is expected to arrive after June 20.

With the result, traders feel that this season's exports cannot be better than last season's figure of 11,186 tons. With about four months to go before the present season ends, they feel that exports will be around 10,000 tons. The markets are, therefore, listless with very little hope in the way of immediate business on a sufficiently large scale.

*

Also, in the case of Rubber, the market is not expected to strengthen unless something unexpected happens in the meanwhile. For, the world price of the commodity has already dropped further in recent weeks, the rate quoting 83 Straits dollars per pound at Singapore or about Rs 125 per 100 pounds.

In view of the declining trend in prices, the Ceylon Government have announced a reduction in the price of rubber from Rs 1.50 to Rs 1.40 per pound. Although the Government had been paying producers Rs 1.50 per pound for sheet rubber since October last year, the present revision is designed to adjust local prices to world market movements. It is also learnt that the Government may be required to draw from the Rubber Stabilisation Fund in order to maintain even the new price.

*

Conditions in the Madras Groundnut market remained generally steadier though there were minor setbacks in prices. Arrivals averaged 70 to 80 tons a day, while small crushers continued to evince buying interest at all levels. Big crushers were, however, reluctant to extend their commitments in view of the present power cut. The rate for superior oil-quality seeds was quoted Rs 2 better at Rs 166 per candy, while bold variety was quoted at Rs 159 per candy.

Arrivals of new summer crop kernels have begun in Madras. Reports from Tanjore and South Arcot District centres indicate that the arrivals are small though some improvement is expected in a fortnight.

In the Groundnut Oil section, buying was mostly confined to Calcutta interests, while some consuming interests in Madras were also buying to meet their immediate requirements. The rate for the ready position improved to Rs 335 from Rs 328 per candy, quoted in the previous week.

*

In the Madras Tanned Hides market, arrivals of Cow hides were moderate and clearances were slow during the past week. Enquiries from the UK were limited. Prime 5/5½ lbs was quoted at 47½d and 8/8½ lbs at 38d. UK importers expect a further decline in prices. Further, Whitsun holidays will begin in Britain next week and no business in any volume is, therefore, possible. Prices of all light weights were generally lower by one anna per pound.

Arrivals of Cow Calf and Buff Calf were fair, but clearances were restricted. Although Buff hides were available in fair quantities, prices ruled somewhat easy. In the export section, UK was not showing interest and trading was generally restricted to small quantities of primes. In Buff Calf, enquiries were mostly for top selections, which were not obtainable.

OLYMPUS

(Continued from page 975)

be sold. We have again to ensure a certain acceptable wage level, which can only be done at the expense of the consumer. On the other hand, export earnings—equally vital for the promotion of the welfare state—shrink, if prices are high: for, no one abroad will be altruistic enough to pay dearly for our welfare.

The truth is, that there are conflicts even among the several sets of means that each individually attempt the same end. This is more clearly brought out in the other dilemma in regard to textiles that is afflicting us—the conflicting claims of the handlooms and the organised textile industry. Mr Krishnamachari stated that we cannot 'reconcile our export ambitions with a restrictive policy in regard to textiles.'

Admittedly, the problem is not capable of any easy solution, and involves a whole series of readjustments from time to time. But trends in exports are not easily reversed, and once certain markets are lost by the pursuit of a wrong policy, they cannot be automatically regained by the reversal of the policy. It is necessary, therefore, that the reasons for the decline in exports are more precisely ascertained. At the moment, the issues are far too clouded by prejudices of extreme sorts to enable any one to come to a clear finding on the balance of advantage in the pursuit of the rival policies advocated. If it is found, on an impartial appraisal, that the restraints on the industry are the dominant reason for the fall in export earnings, there would be a case for the re-examination of the whole question.

NORTH INDIAN NOTES

(Continued from page 976)

will militate very much against the socialistic concept which is also behind current fiscal policies. There is a great deal to be said for some slight increase here and there on necessities but barring these it would certainly be the category of goods falling within comforts and luxuries to bear the higher rates. Uniform rates as between States would mean immediate deprivation for some and wind-falls for others, unless the rates of all the States are brought to the level of the lowest now prevailing, in which case there would be an appreciable reduction in the proceeds of the tax. The Union Government are not financially involved except in a remote way, as the entire proceeds would be collected and enjoyed by the States. The question of distribution on a per capita basis, as one of the Rajya Sabha Members suggested, does not therefore arise at all.

*

NATIONALISATION OF OMNIBUS TRANSPORT IN CEYLON

The Government of Ceylon is urgently in need of the services of a General Manager to organise a scheme of nationalisation of the omnibus services in the Island and launch the undertaking. The applicant should have had considerable experience in a managerial capacity of the operation, control and management of an omnibus transport undertaking with a fleet of about 3,500 buses.

The selectee should be a person of outstanding ability, capable of preparing and putting into execution a plan to take over the services now provided by eighty private operators, and of effecting the transfer in a smooth, efficient and orderly manner.

Background information on the problems involved will be supplied by the Ceylon High Commission, on request.

Remuneration, leave, passages and other terms and conditions of employment will be determined by negotiation with the Ceylon Government through the High Commissioner in India.

Applications should be addressed to the Ceylon High Commissioner, 2, Scindia House, Queensway, New Delhi, and should contain the fullest possible information regarding the qualifications and experience of the applicant.

Applications close on 16th June, 1956.

HINDUSTAN MOTORS Ltd.

NOTICE TO SHAREHOLDERS

Issue of 5 lakhs cumulative preference shares *with shareholders' right to convert* them into ordinary shares

SHAREHOLDERS are hereby informed, in continuation of the previous notice dated 7th May, 1956 that the Directors of the Company, in view of the expanding activities of the Company and to meet the increased demand for vehicles anticipated in the next Five-Year Plan as also to ensure manufacture of a larger number of parts and components of vehicles of various types and to make the factory increasingly self-sufficient as well as to diversify manufacturing activities of the Company, have decided to raise the capital of the company by issue of five lakh cumulative convertible redeemable preference shares of Rs. 100/- each forming part of the unissued capital of the Company **with right to convert them into ordinary shares** on the following terms and conditions :

(a) That the preference shares shall be issued for cash at par.

(b) That the preference shares shall carry fixed cumulative preferential dividend @ 6% per annum free of income tax payable on the capital for the time being paid thereon from the date of allotment and such preference shares in winding up shall rank both as regards capital and dividend (up to the commencement of winding up whether declared or not) in priority to the ordinary shares and shall not confer on the holders thereof the right to any further participation in profits or assets and shall not confer on the holders thereof the right to vote either in person or by proxy or by attorney at any general meeting, except as provided in Section 87 of the Companies Act 1956.

(c) That the holder of any of the said preference shares may by notice in writing left, together with the certificate for the shares therein referred to, at the company's registered office not earlier than 1st July 1961 and not later than 30th June 1966 if the same remain unredeemed at that time, elect to convert the preference shares, specified in the said notice into ordinary shares, whereupon such shares shall become ordinary shares, and shall rank in all respects pari passu with the ordinary shares of the company and shall cease to have any preference or priority as above mentioned, and a new certificate shall be issued to the holder thereof free of charge.

(d) That the preference shares shall be redeemable at par at any time after 30th June 1963 at the option of the company by giving three calendar months' notice.

(e) That the preference shareholders will be entitled, in priority to and before any dividend is distributed on ordinary shares, to payment of the arrear dividend (whether declared or not) if any, which may have accrued in respect of all financial years ending before the date on which a shareholder elects to convert the preference shares into ordinary shares.

The shareholders of the Company whose names shall appear on the Shareholders' Register of the Company on the **25th May, 1956** will be entitled to one such preference share for every ten ordinary shares held by them ignoring fractions, if any. The shareholders may also apply for additional shares which will be allotted to them, if available, at the discretion of the Directors. The amount payable on application has been fixed at Rs. 25/- per share as application money which must be paid along with the application. Rs. 25/- per share shall be payable on allotment, and remaining Rs. 50/- per share shall be payable by one or more calls as may be made by the Directors by giving three calendar months' notice for each call.

Necessary circular along with applications for right shares (in terms of Section 81 of the Companies Act 1956) and additional shares and also forms of renunciation will be sent to the shareholders on or about the **25th May 1956.** If, for any reason, any shareholder is not in receipt of the circular and the said forms, etc. he should apply to or contact the Company and secure the requisite forms and copy of the circular.

Necessary consent of the Central Government has been obtained to the aforesaid issue.

*

Presiding at the Tenth Ordinary General Meeting of Shareholders, of the Bharat Line Ltd., held on the 21st, May 1956, at the Registered Office of the Company, at Kundan Kunj, Bhavnagar, the Chairman, Mr. C. R. Srinivasan, said :—

Gentlemen,

It gives me great pleasure to welcome you all to the Tenth Ordinary General Meeting of the Company. The Directors' Report and the audited Balance Sheet and Profit & Loss Account have been in your hands for some time now. I trust I have your permission to take them as read.

You will notice in the agenda for the meeting there are several items included which have not hitherto found a place there. The Companies' Act I of 1956 came into force in April last and under the provisions of the New Act, much that was assumed in the past, now requires formal affirmation by shareholders after due notice. The intention obviously is to associate shareholders more intimately in the affairs of the Company; the need to do so arises not merely because there have been instances where their interests have been neglected for lack of sufficient and suitable safeguards; it arises also in the context of our expanding economy which depends in part on joint stock enterprise wisely directed and watchfully supervised for the service of the country's interests. It may be that some of these provisions of watch and ward impose needless and vexatious burdens on the freedom of enterprise, but so long as they are administered with understanding and sympathy, those who are moved and motivated by an identity of interest between the Company and the country should find little difficulty in adjusting themselves to the new conditions and if an informed and instructed body of shareholders emerge in consequence, it is all to the good and none may gainsay its value and importance. Incidentally it may help the private sector to recover its proper place in public economy.

The economy that we recovered from the foreign administration was one of shreds and patches and its reconditioning called for care and caution, especially with the limited mobile resources at our disposal. The First Five Year Plan was drawn up with emphasis on the agricultural sector and by all accounts a very good job of work has been done in the First Plan period. The Second Five Year Plan commences with the current official year and though its contours are yet to be defined with precision, it is common knowledge that this time the accent is on the industrial sector. The need to create a balanced economy with a view to widening the range of employment and raising the standard of living is now increasingly recognised and means and methods to this end are now vigorously canvassed in all informed circles. Considering the size of the plan frame and the prospect of recourse to deficit financing to service substantial parts of it, it is obvious that the success of this adventure turns largely on the measure of willing and wholehearted co-operation forthcoming from the community; in particular, wisdom lies in enthusing the private sector to engage in the task ahead, without doubts or misgivings.

It is not so much the socialistic pattern of society to which our course is set that alarms the business community; they are realists and can appreciate the impact of new forces in a changing world. Everywhere these forces are at work; only in India additional momentum has been imparted because these forces had been dammed for decades past; but our political propagandists, in their anxiety to show that they are in the vanguard of the new movement, have unfortunately laid more stress on the break with the past than the build for the future. The business community is naturally exercised over recent developments and a restatement of Government policy in the context of the socialist pattern was clearly indicated. This has now been clearly enunciated by the Prime Minister in Parliament and should serve to enlighten concerned interests where they stand in the new economy. Industrial programme and progress will be attempted and achieved on a three tier basis. There will be at the base a public sector comprehending industries which, for reasons of security and scale of investments, can best be run on Government ownership and control; in the middle, there will be a composite sector where private enterprise is intended to supplement Government efforts; at the top there will be a private sector where private enterprise will have full play though subject to regulation in public interest. Rightly understood, interpreted and administered, few will be disposed to quarrel with this distribution of responsibilities in a country's economy if the international forces unleashed in the 20th century are properly appraised and assessed. It cannot, however, be denied that what is being attempted is a controlled economy with facets of freedom.

It is not enough, however, if Government restate their policy in clear terms. They must also create and maintain conditions under which industry, howsoever placed, can thrive and give of its best. The primary requisite in this direction is a period of industrial peace. In my address last year I have dealt at length with the problems posed by labour and by way of illustration cited facts and figures to establish that neither in their own interest nor in the interests of the country could the way they had reacted to the needs of the situation be justified. Government is not unaware of what is happening; but the machinery of Government moves so slowly that oftentimes it serves but to illustrate the juristic maxim that justice delayed is justice denied. I am sorry that so far as our experience goes the position has, if any thing, aggravated and the infection has begun to spread to higher ranks also. Not merely is the weapon of strike indulged in on the smallest provocation as the recent dockyard strike in Calcutta illustrates, but the 'go slow' virus seems to have lodged itself deeply in the body politic. The output is steadily falling and the turnover per man hour has declined in every industry. Apart from standard wages, incentive bonuses have been offered by way of additional inducement, but it is early days yet to assess how far this will stop the rot. In marginal industries working under competitive conditions the strain on enterprise is beginning to sap all enthusiasm for expansion. That this should happen when the country is being called upon to co-operate with a large scale expansion in the industrial sector is a tragedy too deep for tears. I hope those who are framing the plan will turn their attention to this festering sore in the system and see their targets are not defeated by it.

In a rapidly developing economy where progress on many fronts is contemplated there is one danger that farsighted men should guard against well in advance. I raise this note of warning because I am afraid in the frame work of planning sufficient attention has not been paid to the multifaced problem of transport. As it is, with the limited objectives we have achieved under the First Five Year Plan, transport has already become difficult, seriously upsetting production and distribution programmes of industrial units. Traffic on the railways has become so congested that it is seriously suggested that propaganda should now be taken on hand for discouragement and not encouragement of traffic. There has also been large scale diversion of coal traffic to coastal shipping; but with rising costs on the one hand and avoidable delays at the ports on the other the rates offered are so uneconomic that shipping companies find little enthusiasm in a situation that should normally stimulate enterprice. The turnover of every shipping company engaged in the coastal trade has registered a fall and the margin of profit is fast coming to vanishing point. More ships should be commissioned to cope with the coastal traffic, but frankly the incentive is not there.

Nearly a year back shipping interests applied for raising the freight rates, but after repeated representations a token 5% increase was allowed in October last year. During the interval the costs of replacement, services and materials, have kept on rising with the result that the original increase, which the Indian Ship-owners considered a year back as barely sufficient to meet their liabilities, is out of date to-day, and suitable representations have been made to the Government in the matter. Whereas the Coastal Trade saw the last increase as far back as in 1951, the other Trades with which India is intimately connected have seen increases ranging from 21% to 45% during the same period. Examples are not uncommon where the Conferences concerned have increased their freight rates by 21% within the last twelve months. The Coastal Trade has meanwhile been compelled to suffer heavy losses. The Government of India would appear to be cognisant of this position because at the Meeting of the Consultative Committee of Shipowners held in Bombay in November last the Hon'ble Minister for Transport stated:

"One of the matters which have of late agitated the Indian Shipowners is the question of suitable increase in the coastal freight rates. The Shipowners had proposed to put up the coastal freights by 10%, but Government have found it possible to agree to an increase of 5 per cent only. I know this has not been generally appreciated, but Government are committed to review the matter after the Rail-Sea Co-ordination Committee has submitted its report. If that report is not received by March 1956, Government would take up the matter again on their own with a view to examining whether any further modifiation in the freight rates could be justifiably made."

The Rail-Sea Co-ordination Committee have not been able to bring out their Report so far. In the meantime, the second interim increase, which was contemplated by the Hon'ble Minister for Transport to be effective soon after 1st March, materialised only some time during the current month. Even this increase is to the extent of 5% only on general cargoes effective 1st April last. The freight rates on Railway Coal will be revised with retrospective effect from 1st April this year only after the Government receive the recommendations of the Rail-Sea Co-ordination Committee. On the other hand the freight rates on coal moving on private account or for bunkers will continue at the present level till the Government take decision on the recommendations of the Rail-Sea Co-ordination Committee and will have no retrospective effect as on Railway Coal. This piecemeal treatment takes no cognisance of loss in earnings already suffered by the ship-

owning community, nor does it take into account the changed circumstances of the case which have been duly represented to the Government and which call for higher increases in the freight structure, nor even is the present increase in any way commensurate with the increase effected by foreign shipping on foreign trade routes with some of which the Government themselves are associated.

Unless, therefore, further substantial relief is forthcoming without loss of time. I am afraid, there is little prospect of improvement in coastal traffic. A modest target is fixed under the Second Five Year Plan for the expansion of shipping raising the total tonnage to less than a million tons in 1961 and shipping companies have been asked to frame programmes of expansion during the Second Planning period. I wonder, however, if in the conditions that prevail today the response will be adequate. Government is no doubt anxious to help with credit facilities; but unless the prospects of making both ends meet are visibly improved, few will come forward to take advantage of the credit facilities offered. Earlier experience is not calculated to enthuse enterprise either. Shareholders are aware that we were induced to enter the Persian Gulf trade with promise of Government co-operation and assistance. Though two years have passed, a lot of spade work had been done, and quite a sizable trade had been built up, at a considerable sacrifice, we still await concrete proposals as to the manner and measure of help that Government intend to extend to stabilize this new line of traffic. Another matter, which is likely to affect the financial side of the Company's operations, is the recent strike of the Company's floating staff officers, the arbitration award in respect of which imposes considerable additional financial burden on the Company. It seems that the time has come when, as in the case of the ships' crews, the emoluments of the officer staff should also be standardised: and it will be in the interests of the Shipowners that they seek immediate appointment of a Commission to examine the subject from all angles and evolve fair standards of emoluments for the officer staff linked with the Country's cost of living index. I am afraid that unless a ministry of shipping is separately organised to study and service the interests concerned, the shipping industry will not develop as much as it should if the expanding needs of the situation are to be adequately met. At the request of Government we have diverted two of our ships to the Russian Service, but it will be possible to assess its potentialities only after an initial proving period.

All that I am concerned to stress in this context is that there is no lack of enterprise provided fair conditions and fruitful co-operation are assured.

The Report of the Directors gives a comprehensive picture of the year's work and though earnings have fallen and the margin of profit reduced, we have been able to maintain the dividend at the previous level. I do not propose to make any detailed comments. My thanks are due to my colleagues on the Board and the Management for the cordial co-operation they have extended and I bear testimony also to the good work of the staff both ashore and afloat. With these words I now formally move that the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1955, already duly sent to the Shareholders be and are hereby adopted.

WORLD OF FINANCE

(Continued from page 964)

vernments by Rs 0.49 crores to Rs 7.16 crores and of banks by Rs 1.36 crores to Rs 51.09 crores. Other deposits are lower by Rs 0.20 crores at Rs 12.66 crores. Balances held abroad have declined by Rs 1.08 crores to Rs 35.46 crores. 'Other Loans & Advances' have shown a drop of Rs 5.91 crores to Rs 82.17 crores, which includes Rs 46.11 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 112.26 crores. Investments have risen by Rs 1.31 crores to Rs 35.06 crores.

The one feature, which is of some interest, is that, in spite of the Scheduled Banks effecting repayment to the extent of Rs 5.91 crores to the Reserve Bank, their deposits show an increase of Rs 1.36 crores. It is too early to infer from this that the return of funds from produce finance has started in right earnest. It is usual, round about the middle of the month, for some of the month-early disbursements to seek their way back to the banking system.

+

The statement of the State Bank of India for the same week shows an increase of Rs 2.47 crores in deposits to Rs 225.86 crores. Borrowings from other banks have declined by Rs 3.94 crores to Rs 16.56 crores, while other liabilities, including inter-office adjustments, are slightly lower at Rs 4.22 crores against Rs 4.57 crores.

On the assets side, cash balances are lower by Rs 0.29 crores and Investments by Rs 1.59 crores, at Rs 17.48 crores and Rs 102.20 crores respectively. Advances have declined by Rs 1.14 crores to Rs 139.47 crores—'Loans, Cash Credits and Overdraftes' accounting for a drop of Rs 1.55 crores, and Bills Discounted and Purchased' for a rise of Rs 0.42 crores.

+

According to the returns of the Scheduled Banks for the week ended May 11, total demand liabilities have declined by Rs 5.52 crores to Rs 632.37 crores, while time liabilities have risen by Rs 2.27 crores to Rs 431.87 crores. Borrowings from the Reserve Bank have risen by Rs 10.78 crores to Rs 73.46 crores, while those from the State Bank of India remain almost unchanged, at Rs 10.56 crores. Cash and balances with the Reserve Bank are lower by Rs 3.47 crores at Rs 84.62 crores and Investments by Rs 0.14 crores at Rs 355.20 crores. 'Advances in India' have risen by Rs 5.70 crores; 'Inland Bills Purchased and Discounted' by Rs 0.28 crores and 'Foreign Bills Purchased and Discounted' by Rs 0.04 crores, to Rs 617.07 crores Rs 106.57 crores and Rs 45.55 crores respectively. Money at call and short notice stands at Rs 8.99 crores against Rs 8.38 crores.

*

GATEWAY MARKETS

(Continued from page 974)

better at Rs 101-9. Gold Jeth opened at Rs 101-15-6 and, after fluctuating between Rs 100-9 and Rs 99-0, finished at Rs 99-12. Sovereign was easy at Rs 66-0.

*

Yarn Market

For the third week in succession, the Yarn market presented an easy trend, sentiment being adversely affected by renewed reports of heavy accumulations of stocks at the consuming centres. Also, there have been heavy arrivals of imported yarn in recent weeks. The Government decision to permit users to import 150 and 120 deniers acetate yarn to the extent of 5 per cent of their licences, also acted as a damper.

Spot yarns were, however, firm. In the staple-fibre yarn section, indigenous yarns met with renewed buying support, while foreign yarns were subjected to further selling pressure. 120 Dall Cone June delivery was quoted at Rs 798 and August at Rs 794. 120 spot Japan was done at Rs 3-13-6; 120 spot Italy at Rs 3-12-6 and 40×2 staple yarn June delivery at Rs. 691.

WORLD OF BUSINESS

(Continued from page 966)

that an identical provision should be incorporated in the Bill providing for limitation of expenses of the Management of the Corporation if Section 40(B) of the Insurance Act cannot be made to apply. This seems to be entirely defensible. Such a clause is necessary not only to guard against traditional thriftlessness inherent in a red tape administration, but also to eliminate the charge that could be levied that Government as a trading concern proposes to trade in a climate less onerous than it was for private insurers. This clause, by implication, provides for a larger quantum of premium income to sustain expenses and will thus be an automatic propeller for accelerated business.

Another interesting suggestion provided for seven or eight autonomous corporations all owned by the Government. Monopoly cuts against competition and is thus not conducive to service. Insurance undertaking thrives in personalised service and that can only be ensured by a climate of competitive trading. This line of thought led Mr C. P. Mathen to propose multigiven organisation. There may be some force in this train of argument, but to have seven or eight autonomous corporations under one ownership may lead to unnecessary expenses and may introduce more complications than the proposal serves to resolve.

Quite a few of the minutes of dissent relate to the controversial compensation regulations. They range from "the percentage to be taken in the case of any company should be that at which it fixed the shareholder's portion of the valuation surplus in the last valuation" to Mr Sadhan Gupta and Mr Nambiar's rejoinder that ten years' earning was more than generous and "actually tends to be unconscionably high".

Objections have been registered not without force, against provisions for appointment of auditors by the Corporation in the Bill. Mr Feroz Gandhi and Mr T. N. Singh remark "we hold that wherever Government monies are invested, the right of the Comptroller and the Auditor General of India to audit the accounts of such concerns could not be taken away by any provision in any law whatsover". Objections have been taken by the Comptroller and Auditor General himself. In a note circulated to the members of the Financial Committee of Parliament, it has been specifically pointed out that "the agency provided in the Constitution for the specific purpose of securing public accountability is not only not being made use of to the proper extent but "is not even consulted in regard to audit provisions in the legislation prescribed to the House". The note makes a specific reference to the absence of a provision in the Life Insurance Corporation's Bill for the appointment of auditors in consultation with and subject to the direction of the Auditor General.

SOUTH EASTERN RLY, TENDERS.

The General Manager, South Eastern Railway, Garden Reach, Calcutta—23 invites tenders for the following:—(1) Tender No. GM5/56/221A(56) for supply of 114 Nos. Tents Kabul Pal 10'—0" by 10'—0" to DG (S & D)'s Specn: G/Tex-42D. (2) Tender No. GM6/56/1373B (56) for supply of 61,100 Nos. each of Ellis' Patent Lock Spring and Cotter-Universal for wagon locking to Eastern Railway's Sketch No. 22123 Item F and 3/28 respectively.

Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta—23 (IB Section) on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date of tender for item (1) is 21-6-56 and that for item (2) is 22-6-56 at 12 noon. Firms not on the Railway's list of approved Contractors must enclose a valid Income-tax Clearance Certificate with the Tender.

THE HINDUSTAN COMMERCIAL BANK LTD.,

The following is an extract from the speech delivered by Sir Padampat Singhania, Kt., Chairman of The Hindustan Commercial Bank Ltd., on the occasion of the Annual General Meeting held on 10th May, 1956:

Gentlemen,

It is only once in a year that we have the occasion to meet in the General Meeting, when it is customary for the Chairman to review and comment on the trend of working of the Bank in the previous year, he also offers his views with regard to the economic conditions prevailing in the country, particularly in the context of financial matters.

BANK'S BUSINESS

DEPOSITS

From the Balance Sheet already in your hands, you must have noticed an appreciable increase in the deposits of the Bank, which rose to Rs. 4.92 crores as against Rs. 4.22 crores in the previous year —an increase of Rs 70 lacs, which represents a rise of 16 per cent and indicates our being able to have our share in the deposits of all the scheduled banks. Total deposits of scheduled Banks rose from Rs 945 crores to Rs. 1,035 crores within the year 1955, indicating a rise of 10 per cent. While on this subject, I cannot help expressing myself, that but for the various hindrances the Deposits of the scheduled Banks should have increased much more than what they have been. The biggest competitor in this connection is the Government of the country who by constantly making and introducing schemes cater to themselves the maximum of the savings of the investing public by offering several types of attractive terms and yields. Mention has to be made of the Government's policy of forcing the State-aided and Quasi Government institutions to keep their deposit accounts with the State Bank of India. These actions do not help to create a confidence in the minds of the investing public in favour of the Indian Banks and on the contrary give an idea of withdrawal of Government patronage, which prejudices the people's mind and works against our credit institutions.

CASH

As at the close of the year 1955 the cash-in-hand including cash with the Reserve Bank of India, the State Bank of India and other banks available on demand amounted to Rs 62 lacs representing 26 per cent of our Demand liabilities. If we add to this the unencumbered securities, the total funds available will amount to Rs 2.40 crores which represent 49 per cent of the Bank's total deposits, which is far above of the statutory requirement of 20 per cent. This liquid cash position is a very essential feature for sound banking, and should commend depositors' confidence.

INVESTMENTS

Operations in the security market by the sale and purchase of securities is one of the main business of a Bank. During the year 1955, we invested a sum of Rs. 20 lacs in 4% State Development Loan 1967 at the time of its issue, and had sold 3½% National Plan Loans of the face value of Rs. 12 lacs. Whereas the former action helped in the improvement of the yield by half-percent, the latter resulted in a nominal profit.

Our total investments amount to Rs. 2.52 crores, which position is, no doubt, out of proportion to our deposits and requires mention. This has been due to our having made investments of the surplus funds in the floatations of the Government securities in our beginning stages when the money was plenty and the avenues of sound advances were lesser. As a result of the continued depression in the securities market combined with the subsequent floatations at the higher rate of interest, we were not able to sell off our surplus holdings to our advantage. The Government agency, the Reserve Bank of India, though attempting to keep up prices by market operations could not check the fall in them. The balance sheet would reveal a deficit between the book value and the market value of these holdings, but the book value is fully covered by the face value thereof and the small difference has been provided for. From the point of view of the maturity dates of the investments, it is revealed that the bulk of the securities will be repaid within six years from now and the whole position will be fully well adjusted without any loss to the Bank.

One of the fundamental functions entrusted to the Reserve Bank of India is the floatation of the loans of the Central and State Governments. The new floatations which they have to arrange almost every year are being successfully conducted and fully subscribed, but the credit thereof would go to the patriotic sense of duty in response to the national leader's call to the financial institutions and the community. It is gratifying and creditable to note that inspite of heavy visible losses caused to the various investors in the past years due to the fall in the market prices, they still rise to the occasion in response to the national call made on them. I would humbly suggest that if nothing else could be done, the appropriate authorities should consider the desirability and fairness of such advances to be made at the interest rate allowed by the Government on these floatations and at their face value and not the market value again with 10 to 15 per cent margin as at present.

ADVANCES

With regard to the advances in India, there has been a modest improvement and increase from Rs. 2.41 crores to Rs. 2.57 crores as at the close of the last year. The ratio of advances to the Bank's deposits works out at 52.2 per cent.

ADVANCES IN PAKISTAN

In the matter of old outstanding advances outside India, i.e. Pakistan, the same have been reduced from Rs. 26 lacs at the close of the year 1954 to about Rs. 18 lacs at the close of the year 1955. The important feature of the Pakistan devaluing their currency on 31st July 1955, forced us to make heavy provisions as the official exchange rate has got to be followed in the matter of the preparation of the balance sheet. The partition took place in 1947 when our Bank was only three years baby and we were hit hard by the consequential results, but have been able to write off several lacs of rupees during these years from out of the profits made by the Bank. We are now nearing the salvation and expect that a major portion of the present outstandings will be recovered.

PROFIT & LOSS ACCOUNT

On the income side, a comparison between the years 1954 and 1955 would reveal a stationary position, but on the expense side there has been an increase by Rs. 2 lacs. The application of the L.A.T. (Modified Award) given in the course of the year 1955 necessitated our payment of arrears, resulting in increase in the recurring expenses, and including our losses on the sale of investments and loss on the sale of dead stock and stationery lying in the Pakistan branches, amounting to about Rs. 2½ lacs necessitated our transferring a sum of Rs. 2,70,000 from the General Reserve Fund account. Prudence required to clean up all these matters and consolidating our position. I have no doubt the working of the current year, which has made a good beginning and the resultant effect of the increase in deposits and also advances will make an appreciable improvement on the income side and cover the unusual expenses imposed on us in the last year.

RESERVE FUND

Circumstances arising out of devaluation of the currency by Pakistan in July 1955, we had to devalue our assets in the shape of outstanding advances in that Dominion and also to completely write off items outstanding against dead stock and stationery in respect of the Pakistan branches, which resulted in a total loss of Rs. 6,29,684-13-4, which have had to be provided. I may state here for your information that under Reserve Bank's pressure, we were called upon in the year 1952 to show the Pakistan assets at the official rate. The appreciation that we got at that time was utilised towards the reduction in the outstanding advances in Pakistan and the balance of about Rs. 2 lacs was held in a suspense account with the Bank. This amount had, therefore, to be provided and that necessitated our re-adjustment of our General Fund account. This explains for the difference in the Reserve Fund amounting to Rs. 15,43,000 as at the close of 31st December, 1954 and Rs. 6,93,000 as at the close of 31st December, 1955.

STAFF RELATIONSHIP

I have said on previous occasions that harmonious relationship between the management and the staff is necessary all over, but in the case of bank, which is a credit institution, such a relationship is of a very vital importance. The Government placing the Banks in the category of industrial institutions gave lead to the formation of the Unions followed by the issuing of charters of demands and threatening strikes. During the year the report of Mr. Justice Gajendragadkar Commission was published. All the recommendations made by him were accepted by the Government, and enforced by an Act of Parliament. Against every body's expectations, even this did not satisfy the Bank employees. Some of the conditions imposed on Banks of an All India character are such which largely hinder to regulate proper control and management, and the results are all the more crucial when even those provisions are not strictly adhered to by the employees. The staff administration in the banks has become a problem and I would once again appeal to those working on our staff to rise up to their duties to the institution and always keep the institutional interest above everything else, which will be beneficial not only to the Bank, but to them also.

I am indeed thankful to my brother Directors in the Board for the keen interest they have been uniformally showing in the affairs of the Bank. Shri Kishen Chand Puri, our Managing Director, deserves a special mention in this context, for his untiring services to the Bank with a keen interest in its day to day affairs. My thanks are also due to the officers and the staff of the Bank for the services rendered by them, even at personal inconvenience and under severe strain and stress.

Before, I conclude, it is my pleasant duty to welcome all those who are present here, and to thank all our shareholders, depositors, customers and well-wishers and particularly those who are present in this Meeting.

I now propose that the audited accounts of the Bank for the year ending 31st December 1955 which have been in our hands for more than three weeks, be adopted.

Stock Exchanges

HECTIC BUYING

Watch-Dog Writes:

STOCK markets have generally made a bold effort at consolidating their recent gains and making further headway during the week. The recovery in values has been very impressive, especially against the background of the selling pressure noticed in mid-week. There is still evidence of speculative buying, influenced by the hope that all industries will be faring well.

Activity on the Calcutta Stock Exchange was mostly confined to speculative scrips, which recorded new higher levels for the year.

Steady conditions continued to prevail on the Bombay Stock Exchange though price movements were rather irregular.

Prices on the Madras Stock Exchange continued to move up although the volume of business was conditioned by the availability of scrips.

The London Stock Exchange made a satisfactory showing, interest being mainly centred in Industrial shares.

Wall Street closed barely steady.

Calcutta

THE local Stock Exchange presented a distinctly firmer trend during the past week when almost all scrips, despite intermittent profit-taking, scored handsome gains on balance. The main inspiration was provided by Indian Irons which rose by more than a rupee on bout of speculative buying. There was a general feeling that the private sector, with the necessary regulation and control, had good scope for expansion under the second Five-Year Plan and that, if the Government's economic policy remained practical, there would be enough flow of funds. Thus, the share values showed no signs of weakness despite selling pressure at every bulge.

Prices in the Giltedged section remained firm with 3 per cent 1986 Conversion finishing at Rs 77-11 from a low of Rs 77-4. Among other Loans, 3 per cent 1970/75 changed hands at Rs 90-2; 4 per cent 1960/70 at Rs 101-10 and 3½ per cent 1964 at Rs 98-12.

Bank shares ruled steadier, Hind quoting Rs 31-8 and Hindusthan Mercantile at Rs 13-4.

Although operators in the Jute section were reluctant to enter into commitments following the uncertain conditions prevailing in the jute good market and the renewed firmness of raw jute prices, they lent some support toward the close on a proposal to impose a minimum rumours that the Government had price for the export of jute goods. Howrah were pushed upto Rs 24-0 from Rs 23-3; National upto Rs 25-14 from Rs 24-14; Nuddea upto Rs 43-0 from Rs 40-8; Anglo-India upto Rs 176 from Rs 170 and Champdany upto Rs 162 from Rs 155. Hooghly spurted to Rs 36-10 from a low of Rs 30-0 following the news of the resolution against the present managing agencyship being passed by a large majority.

Although turnover in the Coal section remained restricted pending the official announcement of the Industrial Tribunal Award, prices showed a slight improvement in sympathy with the general trend of the market. Burrakur were at one time taken up to Rs 14-6 from Rs 14-2, to finish at Rs 14-3. Bengal had buyers upto Rs 544, the closing rate being Rs 538. East Indian scored As 12 at Rs 33, while Raneegunge moved narrowly between Rs 11-6 and Rs 11-8.

Prices in the Textile section showed only minor changes over last levels, but the tendency remained firm due to continued favourable reports from the cloth and piecegoods markets. Kesoram were enquired upto Rs 18-4 from Rs 17-14, while New Victoria hovered narrowly around Rs 2-9.

Once again, the Tea section recorded only moderate business as operators were now assessing the prospects for the commodity in the background of demand and supply. Selected scrips, however, continued to receive support on the hope that the sale of the New Season's teas would get a good start. Amongst the few scrips dealt with were Baghmari changing hands at Rs 29-3 to Rs 29-6; Brooke Bond at Rs 24-1 to Rs 24-4; Hasimara at Rs 39-12 to Rs 39-14; Hantapara at Rs 229 to Rs233 and Jayshree at Rs 12-4 to Rs 12-13.

In the Sugar section, the only bright feature was SKG, which forged ahead to Rs 14-0 from Rs 12-5 on renewed buying from interested quarters. Darbhanga met with support at Rs 22-13 to Rs 22-15 and Belsund at Rs 11-0 to Rs 11-12. Champarun, however, lost half a point at Rs 29-4.

Engineering shares ruled generally firm in view of the bright prospcts for the industry. Most of the activity was, however, confined to Indian Irons which made hectic advance within such a short time as one week. The scrip, after opening at Rs 37-10, touched a low of Rs 37-4 in mid-week, when renewed bull support coupled with bear-covering pushed up the rate again to Rs 38, finally closing at Rs 37-15. After market hours on Wednesday, there were, however, sellers at Rs 37-8 with buyers at Rs 37-7-6.

Among other Engineerings, Jessop were in demand up to Rs 35-6 from Rs 34-11 on reports of lock-out at the company's factory being ended. TEXMACO were taken up to Rs 25-12 from Rs 24-12; Richardson upto Rs 27-2 from Rs 26-12 and Britannia upto Rs 15-14 from Rs 15-6. Braithwaite were nearly maintained at Rs 27-14 and Burn at Rs 362.

In the Miscellaneous section, Indian Copper, after beig offered at as low as Rs 6-11 following the disappointment caused by the announcement of the bonus issue, firmed up again to Rs 7 on expectation of an increase in the final dividend. Karanpura Development met with some speculative buying upto Rs 26-3 from Rs 25-4.

Paper shares shared the general trend of the market, Orient were a special feature, having advanced to Rs 38-6 from Rs 37-5 on renewed bull support. India Pulp improved to Rs 25-7 from Rs 25-2, while Shree Gopal and Titaghur were well maintained at Rs 18-11 and Rs 43-8 respectively.

Among other scrips, India Steamship forged ahead to Rs 9-4 from Rs 8-13 following the recent announcement of the increase in coastal freight rates, Rohtas were pushed upto Rs 23-14 from a low of Rs 22-14 while Dunlop were wanted upto Rs 30-14 from Rs 30-7 and Indian Cable upto Rs 33-12 from Rs 32-3 on investment considerations. Martin-Burns changed hands at Rs 25-8 to Rs 25-10; Metal Box at Rs 27-6 to Rs 27-10 and BIC at Rs 11 to Rs 11-4. National Carbon were a firm feature at Rs 27-6.

★

Bombay

Bombay, May 23.

THANKS to encouraging Calcutta advices, conditions on the Bombay Stock Exchange remained, on the whole, steadier although price movements were rather irregular due to alternate bouts of buying and selling. The main inspiration was provided by Indian Irons, which showed a steady and sharp rise on renewed speculative buying. Despite profit-taking at higher levels, the market showe signs of weakness.

TEXTILES:—Textile sares displayed some easiness during the initial part of the week. The steep rise in cloth prices before and after the announcement of the abolition of the export duty on coarse cloth, created doubts among some operators whether foreign buyers would enter the market in a big way unless the abolition of the duty was not passed on to the overseas buyer. Toward the close, however, the encouraging reports from the cloth and piecegoods markets, the reported inclination on the part of the Government not to take any precipitate action on the issue of Amber Charkha and the reports of the finer-count mills earning bumper profits, caused a remarkable recovery in prices.

Bombay Dyeing were concerned in a buying spree and, after moving up to Rs 668-2, declined at one time to Rs 657-8 on profit-taking, to finish better at Rs 662-8. Kohinoor, after recording a sharp rise to Rs 381, receded to Rs 376. Century scored more than Rs 8 at Rs 551, while Svadeshi finised at Rs 230-8 after touching Rs 234. Finlays were quoted nominally at Rs 340. Central India were done at Rs 142; Simplex at Rs 222 and Tata Mills at Rs 53.

STEELS:—The details of the new issue were well received and hopes were entertained that the transition from cum-right basis to ex-right basis would not present any major difficulty.

Tata Steels responded well to the rise in Indian Irons though higher levels could not be maintained till the close due to some selling pressure. Opening at Rs 252-8, Tata Steels moved up to Rs 254 in sympathy with Iodian Irons, declined again to Rs 249-8 on hectic selling wave, to finish the week better at Rs 251-12.

HYDRO-ELECTRIC:—In this section, Ahmedabad were a week feature and the date after drifting down to Rs 95-15, finished at Rs 96-14 Andhra Valley changed hands at Rs 1,193-12 to Rs 1,195 Tata Power at Rs 1,301-4 to Rs 1,306-4 and Tata Hydro at Rs 125-9 to Rs 127.

MISCELLANEOUS:—Shares in this section moved in sympathy with the general trend of the market. Among Cements, Digvijay displayed a steadier feeling, quoting around Rs 123. ACC met with realising pressure and, after dropping down to Rs 217-12 from Rs 217-12 from Rs 219-12, closed steady at Rs 219.

In the Shipping section, Bharat Line were steady at Rs 96. Scindias, after touching a low of Rs 18-4, moved up to Rs 18-9-6.

Sugar shares ruled fairly active with Belsund in demand upto Rs 234. Phalton, after recording a rise to Rs 152-8 on bonus issue rumours, receded at the close to Rs 150-8 on lack of confimation.

Among other scrips, Alcock changed hands at Rs 350 to Rs 452-8; Tata Locomotive at Rs 155 and Premier Construction at Rs 175-8 to Rs 180. Premier Automobiles recorded a small improvement to Rs 90-8, while Hindustan Motors changed hands on the ex-rights basis at Rs 9-11. National Rayon ruled firm at Rs 246. Tata Chemicals moved within a

✱

STOCK EXCHANGES

(Continued on page 983),

narrow range around Rs 18-6. Tata Oils were done upto Rs 49 on expectation of encouraging working results for the year ended 31st March, 1956.

✱

Madras

Madras, May 22.

ACTIVITY on the Madras Stock Exchange, during the past week, was fairly well spread in the Textile and Planting sections. The volume of business, however, showed a shrinkage, mainly due to the absence of sellers.

TEXTILES:—This section gave an encouraging performance with rates improving in selected scrips. Coimbatore Spinnings and Janardhanas improved to Rs 117 and Rs 115 respectively on good buying support, Kotharis, Sri Krishna Rajendras Ranga Vilas, Saradas and Vasantas continued to be in good demand at market rates. Buckinghams and Bangalore Woollens had, however, sellers at Rs 20; and Rs 575 respectively. Maduras hovered around Rs 51-14 with Loyals changing hands at Rs 49-8 to Rs 50.

PLANTINGS:—Shares in this section, came in for a fair volume of business, although most of the scrips were not freely available.

Tea shares enjoyed good activity, Devasholas were marked slightly higher at Rs 30-12, while Periakaramalais changed hands at Rs 9-6 to Rs 9-8; Chembra Peaks at Rs 5-7 to Rs 5-8; United Nilgiris at Rs 386 to Rs 388-8 cr.; Nilgiris at Rs 14-10 and Coonoors at Rs 32-6 cd. Highlands, however, met with some sellers at Rs 19-0.

In the Rubber section, Cochin Malabars were absorbed upto Rs 9-6 and Anandams upto Rs 25-8. TRTs were done at Rs 13-12 cr.; Nilamburs at Rs 17-4; Rajagiris at Rs 26-2 and Thamaraipallys at Rs 31-14.

Among Coffee shares, Ouchterlonys moved narrowly between Rs 5-8-6 and Rs 5-9, while Chandramalais were a shade cheaper at Rs 7-1. Mysore Coffees were done at Rs 2-13-6; Coffee Lands at Rs 24-2 Consolidated Coffees at Rs 20.

MISCELLANEOUS:—In this section, Madras Safe Deposits moved up to Rs 50 buyers, while Standard Motors had sellers at Rs 12-8 following the reclassification of the company's authorised capital. There were some buyers of Binnys and Rallis at the market rates. FACTS were steady at Rs 7 and Travancore Cements at Rs 12, Brunton Engineerings were enquired at Rs 7-11 and Aluminium Industries at Rs 20-6. In the Sugar section, Parry's group of shares continued to remain active.

✱

London

London, May 23.

IN the absence of incentives, the London Stock Exchange, ruled quiet although the undertone remained satisfactory. Operators were found to be cautious in their commitments in view of the recent behaviour of Wall Street.

There was, however, a good sprinkling of useful gains in Industrials although it was the leader which attracted the most attention. Rubbers held steady, but Teas were weak following some disappointing dividend announcements,

Gilteaged had a quiet week and failed to establish a decided trend. Following were the closing rates of selected stocks and shares:—3½ per cent Consols £53¾ (£53-11/16—previous week); 3½ per cent War Loan £71-15/16 (£72½); British Petroleum 142/4½ xd, (152/6); Calcutta Trams 22/9 (22/9); Calcutta Electric 19/9 (19/3); Dunlop Rubber 19/6 xd. (21/0) and Indian Copper 10/3 (10/3).

✱

New York

New York, May 22:

PRICES on Wall Street developed an irregular tendency during the past week, although the entire list showed a better trading pattern at the close.

Kennecott Copper featured the week's trading by gaining about $4 on reports of the company's quarterly distribution of special payment of $1. At one time, this issue was $4½ highed, International Nickel advanced by $3, influenced by the US Government plan for nickel production expansion. Saint Regis Paper gained about $2 on dividend hopes and reports for rising earnings,

Following were the closing rates:—Anaconda Copper $77¼ ($79¼—previous week); General Motors $41¼ ($41¼); Ford Motors $54½ ($54½) and US Steel Common $54½ ($56¼).

GATEWAY NOTES

(Continued from page 972)

national Fisheries Corporation of New York. The company has planned exclusive cold storage facilities along the Western Coast, particularly in Saurashtra. One fishing plant in Bombay is already complete. A warehouse at Cochin is nearing completion. Jamnagar will become an important cold storage centre for fish. The company has already outlined co-ordination between the freezing vessel, steamers going into the ocean destined for foreign ports, and the various freezing and cold storage plants being established on the coast. Quick despatch of frozen fish to foreign countries and the preservation of temporary surpluses in the coastal warehouses is sought by the scheme of co-ordination.

FOR THE INVESTOR

(Continued from page 960)

Premium Issue—First Phase

Investment Gossip:

THREE

Interest in Bombay is turning around the consequential changes that will have to be attended to in respect of dealings in Tata Ordinaries on Dalal Street. The latest bout of attention was derived from the announcement by TISCO of the details of the premium issue.

As already known, the first instalment to be called from shareholders is to be Rs 35 per share, of which Rs 10 will represent premium.

It has been decided that no call will be payable on allotment, but that the balance of Rs 70 per share would be payable as and when called by the directors.

Unless application forms are received by TISCO's bankers by July 2, accompanied, of course, by a cheque, will be presumed that the respective shareholder has declined the offer.

Meanwhile, the Dalal Street authorities have made it known that exright dealings in Tata Ordinaries are to commence from June 4; and official trading in letters of renunciation have already made their appearance, being quoted around Rs 60.

The present position is that, for the two settlements in June, trading will be on a forward basis for the ex-right scrip and on a cash basis for the letter of renunciation: and, for this reason, it has happened that sales have been in evidence of cum-right shares.

On the footing that, on the eve of ex-right quotations, Tata Ordinaries quote at, say, Rs 260, and letters of renunciation are transacted at Rs 60, the ex-right price, after June 4, may be around Rs 200.

With scarcely ten days to go before ex-right quotation, and with but a bare 5 weeks to the time when first instalment moneys shall be payable, Bombay opinion—at this distance of time—seems to have it that, by and large, the premium issue, first phase, will be a success.

Investment Notes:

Indian Coppers, after being marked down from Rs 7|1 to Rs 6|11 following the bonus announcement, have steadied up again to Rs 6|15. Although the announcement regarding the bonus issue in the ratio of 1:1 has not come up to market's expectation, there is a general belief that the final dividend will be substantially stepped up.

Clive Row Investments have been ruling very firm at Rs 11|10. Hopes are held that the company's past earnings from tea holdings will enable a good dividend to be paid.

Jessops have recovered to Rs 35|8 from a low of Rs 34|11, touched earlier in the week. Reports have come to the effect that the lockout at the company's factory has ended.

Hooghly Mills have spurted to Rs 36|10 from Rs 30|0 following the news that the resolution, sponsored by the opposition group of members, has been carried by a large majority. A section of the market operators holds the view that this rise in price will prove to be only temporary on the feeling that the Central Government may not agree to the resolution being implemented.

Tata Oils, in Bombay, are well held at Rs 48|4. There are reports that the company may acquire a factory in Calcutta and that the results for 1955|56 will make impressive reading.

Emerald Valley Estates, Madras, have called an extraordinary general meeting on June 7 to accept the offer for the sale of the estates at Rs 6.55 lakhs.

Standard Motors have reclassified their authorised capital. The Ordinary capital has been reduced by Rs 30 lakhs by cancelling 3 lakhs shares of Rs 10 each, while the Preference capital has been increased to Rs 50 lakhs in shares of Rs 100 each.

£ R$

Investment Briefs:

Shree Ambica Jute has maintained the dividend at As 8 per share for the half-year ended 31.3.1955.

Larsen & Toubro Limited has recommended a dividend of 10 per cent on Old Ordinary shares and As 4 per share on new Ordinary shares.

For the Investor

Prospects of Cement Shares

Investment Gossip:

In an examination of the industries which are affected particularly favourably by the Second Plan, and which, thereby, provide a beacon-light to investors, I dealt, in the last week's issue, with steel shares and engineering shares; and I now propose to study the performance and prospects of cement shares.

By all tokens, the cement industry is, to a notable extent, a substantial beneficiary from the kind of Plan that the First Plan was, and from the kind of Plan that the Second Plan (and subsequent plans) are designed to be. The cement industry is well-poised to take the fullest advantage of the opportunities.

Since India's independence, no other major industry has achieved the expansion in plant and machinery and the increase in production which the cement industry has to its credit. Production has doubled. Even so, the domestic demand far out-strips domestic supply; and, the Government are planning to import foreign cement. Domestic producers of cement are assured of a remunerative and rapidly expanding market for many years to come.

While productive capacity in the case of every cement factory has been increased in easy and abundant fashion, there is yet greater scope for enlarging existing factories and for setting up new ones. The cement industry has the green signal to go full steam ahead. It has the resources and facilities, too.

First, resources. In the expansion expenditure of recent years, most cement concerns have depended upon inner reserves. The current and future phase of capital expenditure requires the raising of additional capital to supplement internal resources. The issues for additional capital have been accorded a good response; and it may be confidently stated that the cement industry has no problem of finance so far as the pending and prospective expansion plans are concerned.

In this regard, the cement industry enjoys an enviable status. The cotton textile and the jute industries are early entrants in the field of Indian Industry; and they have had long spells of abounding prosperity. But their present plans for rationalisation pose financial problems for the solution of which Government assistance may be required in a considerable measure.

The steel industry in the private sector has successfully financed the heavy outlay needed for doubling production and for diversifying products; but, in its case, State assistance and World Bank loans have been found necessary.

The shipping industry is called upon to increase tonnage and to multiply services; and a large part of the finance required has to come from the State.

Compared to these, the cement industry has shown a remarkable capacity for self-sufficiency and for self-help. In broad terms, it may be said that, of the funds required for quadrupling the 1947 capacity, the cement industry has found 80 per cent from inner sources, leaving 20 per cent to be put in by shareholders who are only too happy to oblige.

Next, facilities. The Prime Minister is, recurrently, emphasising the importance of the domestic manufacture of the machinery needed for India's industrial expansion. The Associated Cement Companies has, long ere this, successfully proved that it can, in its workshops, fabricate a complete cement plant. A good part of the machinery in the current expansion programme will be of domestic manufacture; and, apart from the question of cost, the point to note is that the foreign exchange problem posed by the cement industry's expansion is easily solved.

Yet another advantage which the cement industry has enjoyed is that it could attend exclusively to its own business of going ahead, without the distraction of nationalisation threats. The largest single consumer of the industry's production is the State; and, yet, there has been no hint or suggestion that cement is one of the industries suitable for nationalisation. In structure, the cement industry is simplicity itself. The raw material supply is within its own control; and it has no problem in selling its production. No ups and downs, no manipulation by middlemen in the case of the raw material. No accumulating stocks in the case of the manufactured product.

Blessed is the Indian cement industry; twice blessed are those in charge of its destiny; thrice blessed are the shareholders who have put their trust and money in its fortunes.

From the point of view of the investors, ACC is illuminated by two-beacon lights. The custodian's choice of this stock was a well deserved tribute to its role as a blue-chip of the highest class. Its pre-eminence in the cement industry serves as reinforcement of its claims in the affections and preferences of investors.

For nearly two decades, it may be said of ACC: Expansion! Thy name is ACC.

Rohtas Industries, a composite enterprise, owes a substantial proportion of its profits to the cement factories. Cement production has progressively increased; and Mr Shanti Prasad Jain is alert to opportunity and thorough-going in execution. Rohtas Industries are already established as a scrip which is rewarding to those who have consistently reposed faith in

HIGHLIGHTS

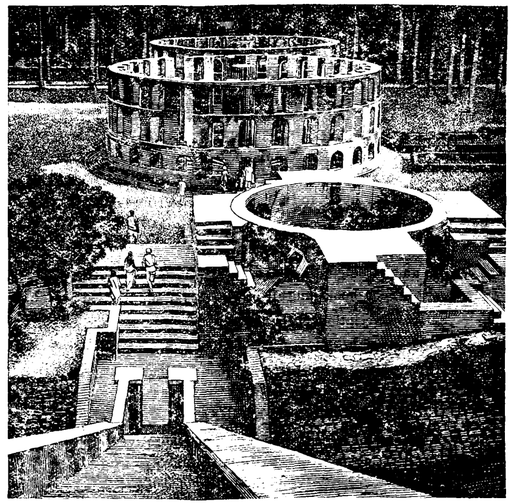
What is the extent of evaded tax? Answers are always in guestimates. As such, there apparently is no way of confirming any available figures.

There is, however, one method by which we can work back a bit. And that is, to estimate the income that must have escaped tax. But, obviously, here, too, figures are guestimates.

What do the Government think? Tax lost to the exchequer is a maximum of Rs 40 crores, or roughly 20 per cent or so of the evaded income.

A British economist feels differently. He puts the evaded tax at Rs 200 crores to Rs 300 crores on hidden income of roughly double that amount.

See the leading Article as to the ways in which the "black" currency can be remobilised.



Indian Finance's practice is that, during Budget week, the implications are discussed in a number of sections.

If anything important happens, as for example the publication of the Draft Frame of the plan last year, its significance is similarly interpreted in various columns.

This week, thoughts are appreciably on New Loan Prospects; and this is the topic discussed in three different sections.

Read Eavesdropper for reminiscences: Gateway Gossip for the view point from Bombay; and World of Finance for constructive thoughts.

Around India with Brooke Bond

The Jantar Mantar at Delhi ...
Of great interest to astronomers the world over is the Jantar Mantar or the observatory at New Delhi. It was built in 1725 by Maharaja Jaisingh II of Jaipur, who was also responsible for the observatories at Jaipur, Banaras and Ujjain. To the ordinary man, the structures inside the Jantar Mantar would look a little puzzling, but certainly not uninteresting because they possess a simple, geometric beauty of their own. These structures were devised to study and observe celestial phenomena—the location and movements of the sun, the moon and the stars.
Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.
Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.
Interesting facts: More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

Dividends Raised by Indu and Minerva Mills

***Balance-Sheet Reviews*:**

THE recent rise in the quotations of India United shares, which was prompted by favourable dividend expectations, has proved justified. The directors have decided to recommend a final dividend of As 5 per share on Ordinary shares and a final dividend of As 2 on Deferred shares for the year ended 31st December, 1955. The total dividend for the year comes to As 15 on Ordinary shares and As 7 on Deferred shares as against no dividends in the previous year.

It is understood that the gross profits of the mill for the year under review have amounted to about Rs 87 lakhs. Provision for Depreciation is likely to be around Rs 30 to Rs 35 lakhs. There is, however, no tax liability in view of the arrears of depreciation. It is also understood that the directors have to provide some amount for bonus in terms of the agreement entered into by the Mill-owners' Association.

With regard to the conversion ratio, nothing has been finally decided, and it may take some time before the issue is thrashed out.

The working of the Minerva Mills Limited, during the same year, has resulted in a profit of Rs 5.14 lakhs after providing Rs 40,822, being bonus to certain sections of the staff of the mills for the years 1953 and 1954. The company suffered a loss of Rs 1.62 lakhs in 1954 and had to draw Rs 5.45 lakhs from Reserve.

Out of the above profit, the directors have provided Rs 3.16 lakhs for Depreciation and Rs 13,677 for General Reserve. Dividend on Ordinary shares has been raised up from Rs 5 to Rs 6 per share, which will absorb Rs 1.77 lakhs. Sales of cloth and yarn, etc., have been higher at Rs 1.32 crores as against Rs 1.27 crores.

According to the directors' report, agreement has been reached with workers regarding the standardisation scheme increasing the wage cost involving the new workloads on the basis of normal efficiencies. It points out that the full benefit of this standardisation is expected to accrue to the mills only from the commencement of this year.

£R$

Dalmia Cement (Bharat)

This company has decided to step up the dividend to 12½ per cent on both the Ordinary and Deferred shares for the year 1955 as against 10 per cent paid in the previous year. After providing for Depreciation, the profit for the year comes to Rs 56.57 lakhs as against Rs 48.86 lakhs. Taxation provision has been made at Rs 26 lakhs as against Rs 24 lakhs. The shareholders have been given the option to receive Orissa Cement Ordinary shares up to 75 per cent of the ordinary and deferred dividends.

New Attitude to Tax Evasion

WHAT is the magnitude of tax-evasion in India? An eminent economist of the UK has given his opinion that the Treasury has been cheated of Rs 200 to Rs 300 crores of evaded tax. The Finance Minister, with all the authority which he enjoys in a special measure for special reasons, gives an estimate of Rs 30 to Rs 40 crores. Without the eminence of the British economist and without the authority of the Finance Minister, Indian Finance ventures the view that tax-evasion is nearer *Rs 200* crores than Rs 40 crores.

There are one or two points which we may stress in this connection. The Tax Investigation Commission, whose endeavours to deal with law-breakers in this respect were cut short by the Supreme Court of Law in this country. The Commission were set up in reference to tax-evasion committed in the war years. This circumstance is likely to foster the impression that tax-evasion was confined to the war years.

Such an impression will be totally erroneous. If anything, tax-dodging was more virulent and more widely rampant in the years immediately following the termination of the war. Tax-dodging is as much in vogue today, though, with the removal of controls, the opportunities are less and the magnitude smaller.

That is to say, tax-evasion, as an anti-social evil, continues to have its roots firmly embedded and to thrive like the green bay tree. It mocks at and taunts Authority. It spreads the contagion of corruption and accentuates the ugliness of disparities. It was not a problem confined to yesterdays. It is a problem to be tackled now and here.

The second point we would like to make is that, whether the evaded tax is *Rs* 300 crores or Rs 40 crores or Rs 30 crores, all these are only "guestimates." The only difference is that the Finance Min'ster may have a natural disposition to under-estimate the extent to which the Treasury has been defrauded. For, if he were to find himself with the higher estimate, it would amount to an admission that the amount of which the Treasury was cheated is much in excess of the amount which the Treasury now collects every year.

This will be a most damaging admission. In the first place, it means that the Finance Ministry is either unwilling or unready, unable or unequipped, to eradicate this evil, root and branch. The heroic measures, taken from time to time, must be considered to have failed so far as the major and principal evil-doers are concerned. The smaller fry are thus exposed to greater harassment, while the big ones enjoy immunity as heretofore.

In the second place, even on the very much lower estimate of the Finance Minister, it is obvious that, if we exclude the big-sized assessments, the rest of the collection comes out of hundreds of medium and upper-medium income groups who are paying much more then they need pay because the Government are powerless to collect the lawful dues from certain classes of (more or less known) tax-evaders.

It is humiliating that a Government headed by Mr Nehru—universally hailed as the embodiment of integrity and the pattern of incorruptibility—should thus be pathetically impotent to bring to book the thrice-puissant perpetrators of tax-evasion, the gravest corruption and crime of all; and that this Government must, thus, allow themselves to be hood-winked, thwarted, cheated and, in the bargain, brought into contempt.

In a country which acclaims Mahatma Gandhi as the Father of the Nation, tax-evasion must not be allowed to sully its fair face for a day longer. It is urgent and imperative that the right solution must be found.

It may well be that the practitioners of tax-evasion are not moved by the name of Gandhiji, or by respect for Mr Nehru, or by regard for the reputation of their motherland. How, then, are we to deal with them?

By coaxing? Admitting that all measures so far taken have not touched the fringe of the problem, the Government may decide that compromise is the better part of valour; and that the only solution is to frame a scheme which will make it worth while for hoarded money, black currency notes and illicit accumulations to be brought out into the open, and to merge with legal money.

Such a scheme cannot be brushed aside as compounding with evil. When Mr Mahavir Tyagi launched his drive for facilitating the emergence of concealed incomes, it was some manner of compounding with evil. But in a small way. And with unimpressive results.

Let us have some such scheme fashioned in a big way and designed to produce substantial results. Let the Government declare that disclosures of all concealed incomes will be accepted without question or other consequences provided a third of the incomes so disclosed is promptly paid as tax, and provided further the disclosure is accompanied by a solemn undertaking that no tax-evasion of any kind will be committed in the future by the party concerned.

In this way, anything like Rs 500 crores of furtive hoards may become integrated with the monetary system. Thus, anything like Rs 200 crores of currency notes which are kept guarded in dark but uneasy recesses will go to swell active note circulation. Thus, Rs 100 crores of currency notes, which are circulating in a black world of their own, will be added to the notes in lawful circulation. Thus, the Treasury may benefit through tax payment of the order of Rs 100 crores.

If not by coaxing, should we have recourse to coercion? Coercive measures have so far failed to impress those who have perfected anti-social activities as a fine art. The only measure of this description, which remains to be tried, is the publication of the names of tax-evaders and the particulars of tax-evasion.

Such publication has produced salutary results in Sweden and Italy. Can you beat this for a juicy bit of news:

"Babu Rupeemull Moneylall has been found guilty of evading taxes on incomes ranging up to Rs 4.30 crores. The tax now levied on him is Rs 3.10 crores. He is also to pay a penalty of Rs 1.55 crores. His plea that all this money represented gold left to him by his great grand-mother has been rejected."

After this juicy bit of news appears in the press, how will Babu Rupeemull Moneylall show his face in his neighbourhood? How will his colleagues on this Committee or that Board react to his presence? What welcome will he receive at this reception or that party? What members of his community will care to marry into his family? What classes of people will find it proper to honour his parties or accept his invitations?

We may root out this evil by compromise or by taking coercion to its logical conclusion. What we cannot afford any longer is the present phase of unconcern, fussy passivity and spreading belief that, if one is rich enough, one can ride a coach and four through any law.

After Sir Chintaman Deshmukh's indication of even the modest Rs 40 crores as the extent and measure of tax-evasion, the assessees in the middle-income groups will clamour for relief specially designed for them: and, if they do not get the relief, it will be the turn of the worm to turn.

The Black Market

By "ESKEROY"

DISCUSSION on black-marketing from the viewpoint of an economic analyst is rare. But for A. F. W. Plumtre's 'Theory of the Black Market", I can scarcely think of another important study on the subject. In my discussions with a noted economist of the Calcutta University, I have been told that black-marketing as a trend of industrial entrepreneurship does not as yet come within the purview of economic generalisations and that it is only an abnormal and short-period exception to the general economic laws. That being so, I have been given to understand, an analytical discussion of the subject may not be worthwhile... But how far we can rely any longer on the time honoured economic laws as to their perfection and accuracy under all circumstances is debatable.

"An economic law is a natural law so far as it states that given conditions will lead to given results. An economic law is not a natural law so far as it implies that human effort is important in modifying the conditions which lead to the results" (Seligman). In fact, these laws, Hansen elaborates, "hold for aggregates and not for individual instances. They set forth the average relationship between phenomena. They are approximations or tendencies." It, therefore, seems wise to admit that, whenever business dealing and industrial entrepreneurship in any particular direction assume sufficient importance as to their nature and extent, there should be special examination of the same in Industrial Economics. And, viewed from this angle, 'black-marketing' certainly deserves an analysis regarding its nature, extent and social repercussions.

Clark in his 'Social Control of Business' (1939) has written about 'social prerogative' and 'individual prerogative' among businessmen. He has observed that by 'moral suasion' businessmen should be made inclined to 'socialize' their business endeavours. Clay in his 'Economics for the General Reader' has defined Economics as the study of business in its 'social' aspect. He bifurcates Economics into private and social. So he says, 'every business transaction has more than one aspect; economics is concerned with its social aspect, which may be a different thing.' Clay, therefore, advises businessmen and entrepreneurs that 'it is to society's interest that they should reflect on and realise the social effects of their private actions...."

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

But despite this eulogy of a 'social approach to business' industrial or business enterprise has manifested itself not infrequently in unsocial, private and individualistic tendencies. Thus we have experienced how legitimate speculation has been reduced to illegitimate gambling, stock of merchandise has been hoarded in order to create artificial scarcity, and prices have been pushed up by sterilising the age-old economic laws. By 'artificial manipulation' of consumption-propensity and thereby affecting the level of demand, the spiralpotential of prices has been tapped by entrepreneurs and businessmen to accumulate inflated profit.

According to Plumtre, a theory of the black market may take shape in the wake of the Robinson-Chamberlin-Triffin sequence of the theories of monopolistic competition. The remark is significantly important, and deserves a critical examination. Stigler's analysis is competent in this connection. Before the Depression of 'thirties, it was believed by economists that available economic theory was able to analyse the then patterns of industrial entrepreneurship which were either prefectly competitive or monopolistic. 'Individual economists varied considerably in the relative importance they attached to these two groups of industries, of course, but they varied surprisingly little in the type of analytical system... This is not to say that the details of the analytical system were, or were thought to be, definitive: indeed certain portions of the system, such as, duopoly, admittedly were (and are) in wretched shape."

But gradually it was felt that different types of industrial entrepreneurship (including duopoly, monopsony, oligopsony and say, the black market) were intricate enough to be analysed by the available outlines of theory. Available theory was of the 'patent' type, and failed to ramify the intricacies of a growingly complex entrepreneural set-up. At this point came the works of Mrs Robinson and Professor Chamberlin, demanding a radical orientation of approach and outlook. But, in the fundament, Mrs Robinson's volume, according to Stigler, 'marks no break with the tradition of neo-classical economics; indeed it contains too uncritical an acceptance of the substantive context of orthodoxy".

But Chamberlin's *magnum opus*, 'the Theory of Monopolistic Competition', was, we believe, in spite of Stigler's all-too-critical remarks, quite revolutionary in character. Indeed, it was Chamberlin who brought home to us the point that 'no simple dichotomy does justice to the rich variety of industrial oryanization. True, there are (a very few) industries that closely resemble those studied by the economist of perfect competition. True, there are (perhaps more) firms that partake of the nature of monopoly as this concept was used in neo-classical economics'. But vastly more often, the firms display a mixture of insulation from competitors or consumers, by real or fancied product-differentiation, or by hoarding and other devices of the black market. 'As a result, there are important—in fact, typical phenomena which cannot be explained, or can be explained with serious error, if economic reality is forced into neo-classical category' (Chamberlin).

And there is no good reason why the black market should not be considered as an instance of such a typical phenomenon. There is need, therefore, for a thorough analysis of it. Here, of course, it is obvious that an inductive approach is expected to yield better results; and there is nothing wrong with an inductive analysis. Dr Triffin sounds a very rational note on this point. 'Instead of drawing its substance from arbitrary assumptions, chosen for their simplicity and unduly extended to the whole field of economic activity, our theory may turn to more pedestrian, but more fruitful methods. It will recognize the richness and variety of all concrete cases, and tackle each problem with due respect for its individual aspects. More advantage will be taken of all relevant factual information and less reliance will be placed on a mere resort to the pass-key of general theoretical assumptions,' (Triffin—'Monopolistic Competition and General Equilibrium Theory', page 189.

The organisation of the black market is more or less vertical. It consists of several stages—successive, allied and inter-linked. Illegitimate speculators, price-pullers, hoarders, direct black market retailers, and many others directly or indirectly conform to its various stages. But more will later be said about its technique and operation.

The guiding criterion, of course, is profiteering. There is, to be sure, a difference between 'profiting' and 'profiteering'. 'Profit is a particular species of monetary gain—monetary gain secured in a particular way... To make a profit, in the sense here relevant, implies performing a middleman's or an entrepreneur's function hiring the services of other men or buying goods from other men and selling the product of the services or the goods and obtaining as a reward, the difference between outlay and receipt". (Pigou—Socialism *versus* Capitalism, page 3.) But when this difference between outlay and receipt is made to exceed a socially acceptable limit, and that by questionable methods, it is a case of profiteering.

There is a belief that profiteering is possible only at the height of a boom. That, of course, is not necessarily the case. The necessary margin between cost and price required for profiteering may be kept by artificial contraction of supply in relation to demand through hoarding or 'sealed' production or by tapping the inflationary fever of purchasing power through manipulation of supply. In either case, there is an 'artificial' scarcity of supply—the black market supply curve lying to the left is conspicuously "steeper" than the more sloping normal supply curve lying to the right. There ensues a serious 'gap' between 'normal' demand and the 'steep' black market supply—unchanged demand chasing after a much contracted supply. This 'gap' accounts for the level of profiteering in the black market. Plumtre points out in this connection that the black market demand curve may rise more sharply than expected and cross the regular demand curve. In such a case, the black market price might well be markedly higher than the original price. (Plumtre—'The Theory of the Black Market: Further Considerations', Canadian Journal of Economics and Political Science, Vol. 13, No. 2, May 1947, page 280).

A pushed-up price-level is, therefore, often an earmark of the black market. But, it is a fluctuating price-level that is more important to a blackmarketeer, for, this enables him to initiate price-gambols and not infrequently to intensify consumption-propensity or contract the tendency to liquidity preference, all of which add to his capacity for profiteering. A fluctuating price-level may be attained by spreading false reports as to the state of supply or, more frequently, of demand: or more probably by buying or selling in direct opposition to one's forecast of price-movement in order to twist the price-spiral upward or downward. This may also be attained by "hoarding".

Hoarding takes place when the suppliers purchase out the entire or a considerable portion of a commodity, and 'block' the same, without there being any fall in demand (or, in Plumtre's view, in the face of an increasing black market demand). This sagging in of supply in relation to demand results in a serious up-turn of the price-spiral. At this point, the commodity is 'smuggled' to the black market, where it is 'unsealed' little by little, and an artificially inflated profit is thereby secured. Hoarding becomes most malignant to the society when necessaries and other inelastics are hoarded.

With the gradual breakdown of aesthetic values in the trial of the two wars, black-marketing became notoriously popular, the fever of inflation providing it with further impetus...The damages caused by the black market slowly become highly pestering in as much as a successful black-marketeer often tends to secure a monopolistic grip over the market, thereby imparting to the black market some sort of a perpetuity. The necessity, therefore, arises for effectively crushing this market. But, while economists are loud against the black market, there is little unanimity of views as to the ways of its winding up. There are some economists who hold that 'diffusion of a moral sense of justice' is an appropriate remedy (cf. Clay—Economics for the General Reader; Clark—Social Control of Business; Bye and Hewett—Applied Economics). Others suggest Government control as the possible cure—'the economics of control is the countercheck of the economics of the black market'. (cf. Lerner—The Economics of Control; Keezer and Associates—Making Capitalism Work; Plumtre—The Theory of the Black Market).

While we have little faith in 'moral suasion", Government control, we believe, deserves serious examination. Control does not simply indicate a vigilance over the market, and for that matter, over the black market, but a 'participating' type of economic policy that is able to counteract effectively the tendencies in the black market. Price-control and rationing are suggested as two offhand instances of such participating policy. But though rationing might have some justification in time of 'shortages', it has some inherent difficulties. First, the system is bound to be very crude; secondly, the more extended the system is, the more complicated and unworkable it becomes; and lastly, the system of 'points' rationing with 'points prices' is likely to initiate all the uncertainties of a fluctuating price level. About price-controls, Boulding is least enthusiastic. According to him, any attempt to fix a price by authority, 'without control of either production or consumption', is doomed to failure unless, of course, the price fixed happens to be the price which would have been established in the black market. The almost invariable result of price fixing by law is either an evasion of law or a 'blocking' of trade in the commodity controlled. The only possible alternative is a drastic intervention on the part of the Government into the production or consumption of the commodity.

We should take note of another point. Price-control and rationing, which are taken resort to in order to curb the black market, will, once established, lead to further development of this market. Boulding's analysis is illuminating on this point. (Boulding—Economic Analysis, pages 140-142). He postulates a 'black market supply curve' which is likely to be steeper than the normal supply curve, in as much as operation in the black market involves a certain cost and risk. That being so, 'suppliers are not to be found willing to supply as much at each price in the black market as would be done in the free market." There ensues a contraction of supply in relation to demand, and the price-level jumps higher... For obvious reasons the black market is likely to be most successful in the case of inelastics, for there the rising price-level is not likely to damp down demand.

Thus, Government control is not likely to be of much avail, unless, as pointed out by Boulding, Government venture to control either production or consumption in its entirety. It has been pointed out by some that the alternative method of economy offers a better solution, but here we do not intend to make a comparative study.

The economics of the black market is still in the nascent form, and the need for research on this subject requires little emphasis. Since 'price theorists' are inscrutably silent in this connection, maybe Boulding and Plumtre will throw new light on this subject—at least parts of their recent researches are pregnant with such a possibility. But will they ever come out of their fond preoccupation with 'marginal analysis' to take up a serious study of 'black market economics'?

Political Impact of Buddhism

The Buddha Jayanti, celebrated with unusual pomp and ceremony throughout India on the initiative of the State, was ostensibly intended to focus world attention on a spiritual message capable of redeeming man from misery. How far this message, emphasised by Buddha 2500 years ago, has succeeded in regulating the outlook and conduct of its professed devotees cannot be easily answered. In the land of its birth, Buddhism was first ousted to a large extent and then conveniently absorbed by the senior faith, Hinduism, which could claim as its own almost all that the new religion preached.

In the various countries where Buddhism was able to establish itself as the principal religion of the people, its effectiveness as an inspiration for individual conduct has been on the wane. If the celebrations which took place last week in many South East Asian countries were the outcome of a genuine urge in the people concerned to revitalise themselves with the active principles of this faith, it is indeed an excellent augury for the future of this continent and possibly for the world. Buddhism is the only religion which does not positively recognise God, and which, at the same time, insists on all the virtues which are associated with godliness. It is possible to attribute a remote political significance to an event in which all the non-Muslim and non-Communist Asian countries participated.

There is a great deal in common with the Panchshila and the Buddhist tenets, as guidance for international relations. The purposeful re-acceptance of the fundamentally peaceful and non-violent principles of Buddhism may strengthen the foundations of Panchshila. How far Buddhism as a creed can become a unifying force for any region is another matter. The present powerful sponsors of the faith must also feel obliged to rediscover the real part Buddhism had played in the shaping of national destinies in the past and examine whether it was on the whole a strengthening and solidifying force from the political stand-point, or one which betrayed weaknesses.

Editorial Notes

The Formula for Algeria

To strife-torn Algeria, the formula for peace suggested by Pandit Nehru must offer hope. Though the Prime Minister put forward his solution in a rather casual manner, its nature reflects deep and earnest thinking on all the major ingredients of the Algerian situation, which, incidentally, is exceptionally complicated and incapable of responding to any neat formula. The essence of Pandit Nehru's recipe is that both parties should recognise what he describes as the "national entity and personality of Algeria"; this pregnant phrase is used to remind both the French and the Algerian Muslims that Algeria does not wholly belong to any one community or race. On the contrary, it is a multi-racial unit.

There are about one million Frenchmen in Algeria today, a fact which renders a purely "colonial" treatment impracticable and inequitous. The non-European elements in Algeria's population must accept the European settlers as part and parcel of a common nation. Possibly, French opinion will also resile once the rebel leadership accepts this point and expresses its readiness to negotiate on that premise. The negotiation and accommodation which Pandit Nehru advises, cannot succeed, if either party were to overlook this special factor.

The Nehru formula does not go into details; but it speaks of the equality of the people of Algeria irrespective of races. It is not clear whether he thinks of parity of status between the two races or of equality between individuals belonging to two races. For the present, it is too early to explore details of this character; it may even be advantageous to suppress the urge till the broad formula itself gains the necessary measure of acceptance on both sides, cools tempers and prepares the ground for mutual discussion in a cordial atmosphere. While the French Government have not welcomed Pandit Nehru's suggestion, they have assured due consideration for it. On the other side also, a willingness to examine the formula at closer quarters must emerge. There is scarcely an alternative to the prevailing chaos and bloodshed.

*

The Coal Award

The coal industry has had the misfortune to be affected adversely at a time when it appeared that, conceivably, it might have prospects that were not too bleak. The latest Award on wages to colliery workers has been made public, but its details and full implications are as yet difficult to ascertain. What, however, is known is that workers are to benefit quite substantially by the terms of the Award; the industry, too, will derive some relief from the abolition of the practice of sale of foodgrains at concessional prices.

What is also certain is that the cost of raising coal will go up—the extent is difficult to guage—as a result of the Award. It is quite clear that the industry will not, at the current prices of coal, be able to afford the present increases in cost. In consequence, an upward revision in coal prices is inescapable and inevitable. But, in this matter, expeditious action is of the essence. Delay in this regard can lead only to deferred consideration and postponement of development plans. Since an increase in coal production is a primary requisite to the successful implementation of the Second Plan, we trust that Government will soon complete investigation into a long felt want of the industry—coal selling prices, and the return they afford (if any, on the basis of the Award) to the collieries.

*

Crisis in Foundry Industry

A memorandum submitted by the Indian Foundry Association to the Commerce and Industry Minister describes the current difficulties of the industry. If the statistic given in the memorandum point to anything, it is that this industry is already in the grip of serious crisis and the situation may well become worse if the Government do not listen kindly to its major demands. Sixty per cent of the industry's capacity was found lying idle, when the Engineering Capacity Survey Committee investigated. The most important reason for this idle capacity is the almost chronic shortage of pig iron and scrap.

Against an estimated annual demand for these materials at 5 to 7 lakhs tons from 1953 to 1956, the industry was actually getting only around 3 lakhs tons since 1952. Starved of the basic raw material, the factories are compelled to work below capacity. The vast increase in the demand for pig iron for casting purposes, notably by the Railways, is partly responsible for the drying up of the flow of pig iron to the foundries. Even scrap is not available in sufficient quantities and of late when the shortage of pig iron has aggravated, the price of scrap has more than doubled. Against a range of Rs 115 to Rs 130 in 1953-54, the present price of scrap is between Rs 250 and Rs 270 per ton.

The basic problem arises from the fact that while the total availability of pig iron has remained more or less constant for the last five years, the demand has been steadily on the rise, from various sources. It is surprising that in spite of a categorical warning by the Tariff Board in 1951-52 that "within a period of 2 to 3 years the entire general foundry industry will be forced to face a complete cessation of operations or else be compelled to import pig iron from foreign countries at three to four times the price of

World of Finance

Some Manner of Grooming

EAVESDROPPER has, in this issue, stolen the thunder from the money market commentator, and holds forth on the virtues of pre-loan grooming of the market. He has no great opinion of the kind of grooming which we have seen in the last few years; and he suspects that this is because of adherence to a static pattern of giltedged yields. He is not quite correct; for, the pattern of giltedged yields was readjusted recently to a higher yield on 3 per cent conversion loan. This may, perhaps, be part of the grooming for the impending New Loan. So far as the timing of the Loan is concerned, the continuing conditions of stringency in the money market make forecasting a difficult task. Even if a rapid return of funds locked up in sugar production were to take place, it will take the whole of June and the first two or three weeks of July for the market to be convinced that the slack season is truly and firmly established. So, we, for our part, do not anticipate the announcement of this year's New Loan before mid-July.

This does not mean that, between Bombay and New Delhi, exchange of notes on the shape of the New Loan could not have already begun. Nor that some manner of grooming could not have already been inaugurated. We believe that, what time the Reserve Bank allowed the 3 per cent undated stock to slip below Rs 80 some three months ago, there was an active purpose behind the seeming passivity of the central banking authority. It is our view that, roundabout that time, the proposition under active consideration referred to the possibility of issuing, this year, a long-term loan in addition to a medium-term loan. For some years, New Loan planning had been simplicity itself; if it be a Central Loan, a 3½ per cent ten-year stock at about Rs 98-8; and if it be a State Loan, a four per cent ten-year issue at Rs 99 to Rs 100. Why not effect a change in this tame procedure?—Authority might have asked itself. To its own question, an answer on the following lines was not unlikely.

In the first place, the Centre and the States will borrow separately as they did last year. In the second place, so far as the Centre is concerned, the medium-term loan will, this year also, be a 3½ per cent ten-year stock at Rs 98-8. In addition—this is where the innovation comes in—there will be a 4 per cent twenty-year stock issued, possibly, at par. Between the life insurance funds, provident fund accumulations, and modest subscriptions from institutional investors, a target of Rs 35 crores could, with luck, be reached for the 4 per cent loan.

If official thinking has run on these lines, it is a logical next step that the price of 3 per cent conversion loan should no longer be kept pegged at over Rs 80. It must be allowed to sink to a level which works out to a 4 per cent yield.

In thus expounding the likely lines of official reasoning, we must not be understood as being in agreement with the policy of a 3½ per cent ten-year loan at an unvarying issue price of Rs 98-8 or with a 4 per cent twenty-year loan. The mere addition of a long-term loan to the new loan programme and the up-grading of the yield on the undated stock do not add up to the essentials of a planned borrowing programme. New Delhi continues to be wedded to the theory that, the higher the yield, the greater the flow of subscriptions for a New Loan. Our own view, whose efficacy has been demonstrated over the past two decades, is exactly the opposite.

*

The returns of the Reserve Bank for the week ended May 25 disclose the pattern to be expected in the penultimate week of May. There is an increasing return of funds from the mofussil, enabling the banks to effect further liquidation of their indebtedness to the Reserve Bank. Government disbursements have not caused any great strain; and the level of Centre's deposits exceeded the conventional minimum so substantially that it has been possible to effect a reversal in the process of created money. Notes in active circulation have recorded an appreciable decline. Further evidence of the return of funds from produce finance is provided by the inflow of rupee coin.

There has been another operation of reverse ad hoc Treasury Bills to the extent of Rs 10 crores. Rupee securities held in the Issue Department at Rs 698.75 crores show a fall of Rs 9.94 crores. Rupee coin at Rs 104.89 crores shows a rise of Rs 0.27 crores. Active note circulation at Rs 1,506.13 crores shows a contraction of Rs 10.15 crores. In the result, notes held in the Banking Department show a small rise of Rs 0.48 crores to Rs 18.98 crores.

Because of the cancellation of ad hoc Treasury Bills for Rs 10.00 crores, the Central Government's deposits have declined by Rs 11.15 crores to Rs 56.69 crores. The balances of the State Governments are higher by Rs 1.97 crores at Rs 9.13 crores. In spite of reducing their borrowings from the Reserve Bank by Rs 3.64 crores, the balance of the Scheduled Banks show a small rise of Rs 0.12 crores to Rs 51.21 crores. Other deposits are shown at Rs 12.53 crores against Rs 12.66 crores. Balances held abroad have declined by Rs 4.77 crores to Rs 30.69 crores. Investments are higher by Rs 0.31 crores at Rs 35.38 crores.

+

The statement of the State Bank of India for the same week reveals a rise of Rs 1.95 crores in deposits to Rs 227.81 crores. Borrowings from other banks have declined further by Rs 1.06 crores to Rs 15.50 crores, while other liabilities, including inter-office adjustments, are lower by Rs 1.31 crores at Rs 2.91 crores.

On the assets side, cash balances show a small rise of 0.12 crores to Rs 17.60 crores. Investments have moved down to Rs 101.52 crores from Rs 102.20 crores. Advances have risen by Rs 0.73 crores to Rs 140.20 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 1.90 crores and "Bills Discounted and Purchased" for a rise of Rs 2.63 crores.

+

According to the returns of the Scheduled Banks for the week ended May 18, both demand and time liabilities have increased by Rs 5.61 crores and Rs 2.85 crores to Rs 637.98 crores and Rs 433.72 crores respectively. Borrowings from the Reserve Bank have declined by Rs 5.87 crores to Rs 67.59 crores and those from the State Bank by Rs 0.92 crores to Rs 9.64 crores. Investments are lower at Rs 353.55 crores against Rs 355.20 crores and "Advances in India" at Rs 614.76 crores against Rs 617.07 crores. "Inland Bills Purchased and Discounted" have risen by Rs 1.03 crores and "Foreign Bills Purchased and Discounted" by Rs 0.17 crores, to Rs 107.60 crores and Rs 45.72 crores respectively. Money at call and short notice stands at Rs 9.06 crores against Rs 8.99 crores.

+

Equalitarianism in Britain

By PAUL EINZIG

AN increasing pressure in favour of more equalitarian distribution of incomes in Britain appears to be in progress. It seems that the British Labour Party intends to concentrate on that aspect of Socialism rather on public ownership of the means of production. Nationalisation has not been an outstanding success in Britain, and the Labour Party lost two general elections with a programme of further nationalisations. Labour leaders hope that the battle cry of equalitarianism may meet with a more favourable response. While they are paying lip service to extending national ownership, they are likely to concentrate on soaking the rich and the middle classes with the aid of more equalitarian taxation.

There is very little scope for a further increase in the maximum rates of Income Tax, Surtax and Death Duties. As it is, these rates, are very near 100 per cent, and even a Socialist Government could not raise them above 100 per cent. What the Labour Party is aiming at is to reduce further the scope for lawful exemptions from the prohibitive taxation. In recent speeches, various Socialist leaders demanded the tightening of fiscal legislation, and the Opposition tabled a number of amendments to the Finance Bill to that affect.

The Conservative Goverment is subject to much criticism on the part of its supporters among businessmen and investors who feel that this latest equalitarian drive is the logical outcome of the Government's undue timidity in granting relief to the long-suffering taxpayer. It is argued that, had substantial concessions been given to the middle class taxpayer, the Opposition would be able to seek popularity among its own supporters by simply pressing for a repeal of such concessions. As it is, the only way in which the Opposition can be different from the Government in the fiscal sphere is by demanding further measures to increase the burden of taxation.

The trend towards equalitarian taxation is not confined to Briatin. It exists in other democratic countries, even if its extent is more moderate. On the other hand, there is no such thing in the Communist countries. The contrast between the prohibitive direct taxation in Britain and the very moderate direct taxation in Soviet Russia is striking. While in Britain the maximum rate of Income Tax and Surtax is over 90 per cent, in the USSR it is only 65 per cent on for recipients of unearned incomes and for such traders and artisans as exist, 55 per cent for professional people, and only 15 per cent for wage-earners and salary-earners, even though some wages and salaries are very high. The bulk of the Soviet-Government's revenue is derived from the Sales Tax, levied on bread and other necessities—a most reactionary tax.

There is more equalitarianism in the democratic countries than in the Communist countries. The latter seem to use financial incentive to a much larger extent. Yet the profit motive—or is supposed to be—is the principal characteristic of the capitallst eystem, while the absence of a profit motive is the basis of communism. It seems, therefore that, while the system in the Soviet Union is one of totalitarian capitalism, that of Britain is one of democratic communism, or something very near to it.

It may well be asked how it is that the excessive degree of equalitarianism has not altogether stifled initiative in Britain. The answer is that the system is workable

(Continued on page 1029)

World of Jute

No Solution Yet

THOUGH the past week has not been productive of any tangible solution to the Indian jute mills industry's dilemma of expanding business with increasing loss, there are seemingly authentic reports that New Delhi has taken a keen interest in the matter and that Authority is bent upon finding a way-out of the impasse.

Earlier in the week it has been reported that Government have suggested that the industry should evolve a formula and submit it to them in order to enable them to take suitable measures.

In this connection, it has been mentioned that the IJMA are studying the proposal regarding fixation of minimum export prices for jute goods and that they will be announcing their decision they have arrived at, at a meeting to be held on Tuesday this week. Tuesday has come and gone without producing any result.

Meantime, there have been fresh reports from New Delhi. They have said that the Central Government continue to be in favour of fixation of minimum export prices while they are also closely examining other alternative proposals.

From the trend of discussions on the subject, the following proposals seem to enjoy considerable support:

(1) Fixation of Minimum export prices.

(2) Fixation of Internal selling prices.

(3) Re-imposition of export duty with a view to pass on the proceeds to the industry to cover the gap between production cost and selling price of goods.

(4) Curtailment of production.

The argument adduced in favour of fixation of internal selling prices is that when once internal prices are pegged at a particular level, export prices will also automatically get adjusted to the desired levels.

The third proposal amounts to an indirect form of Government subsidy which will, however, not touch the State Exchequer but will be collected from the foreign consumer.

The fourth proposal will amount to a retreat from a position reached after careful deliberation.

It will be seen, therefore, that none of the proposals mentioned above offers the ideal solution.

The delay in arriving at a decision by the IJMA who are vitally interested in the matter is indicative of the serious repercussions that may ensue from hasty action.

*

Steady conditions prevailed in the jute goods market during the past week, sentiment having been helped by recurrent rumours about minimum export prices for goods. Quite early in the week there were reports that the matter was under consideration of the IJMA and that the proposal regarding minimum prices would be discussed at a meeting to held on the 29th May. Though prices developed a sagging tendency when it was known that the meeting of the IJMA had ended inconclusively, renewed reports about the Central Government's determination to set matters right helped prices regain their lost ground.

The market opened the week on a steady note but due to selling pressure prices at close of the day were somewhat shaded. While Hessian 40"×10 oz was a couple of annas higher at Rs 37-12, B Twills was a couple of annas lower at Rs 104-10. In the forward position, Oct-Dec 40"×10 oz Hessian firmed up to Rs 38 with B Twills also gaining ground to Rs 104-12.

Fairly steady conditions were noticeable on Monday when due to bear covering, prices were pushed up in early dealings. The fact that there was some foreign enquiries for Sugar Bags was also a contributory factor. Mills, however, showed little interest at quoted rates. Hessian Ready was finally placed at Rs 37-15 but B Twills closed 12 annas higher at Rs 105-6. Oct-Dec. Hessian moved up to Rs 38-4 with B Twills marked at Rs 105-4.

After a steady opening, the market turned quiet by close on Tuesday on reports of postponement of the IJMA meeting to discuss fixation of minimum export prices for jute goods. With mills also selling small quantities of sackings for May/June shipment, prices were shaded toward close. Hessian Ready receded to Rs 37-12 and B Twills was pushed down to Rs 105. Oct-Dec. Hessian was also lower at Rs 38 with B Twills coming down by 12 annas to Rs 104-8.

Prices on Wednesday developed a rising trend though the day's high levels became untenable by close due to renewed selling pressure from bears. Earlier steadiness was brought about by reports that the Central Government were still thinking in terms of minimum export prices and that they were even considering the fixation of minimum prices for goods sold for consumption within India. Hessian Ready closed higher at Rs 38-1 and B Twills gained 10 annas to be placed at Rs 105-10. Oct-Dec. Hessian recovered partly to Rs 38-2 with B Twills higher by 8 annas at Rs 105.

The following table shows price trends during the week:

		Weeks Opening		Week's Closing	
Hessian:					
40"×10 oz	Ready ...	37	12	38	1
,,	June ...	38	0	38	5
,,	Oct.-Dec.	38	0	38	2
40"× 8 oz	May ...	31	10	31	8
40"×7½ oz	,, ...	29	6	29	8
Sackings:					
B. Twills	Ready ...	104	10	105	10
,,	June ...	105	0	106	0
,,	Oct.-Dec.	104	12	105	0
Hy. cees	May ...	102	10	103	12
Corn sacks	,, ...	104	10	105	4
Cubans	,, ...	129	0	130	0
A. Twills	,, ...	128	0	128	8
L. Twills	,, ...	117	0	117	0
D. W. Flour	,, ...	119	0	118	8
Sugar Bags	,, ...	118	8	119	8

The raw jute market ruled steady. There had been, however, no marked increase in the volume of mill business. During the week mill business was reported done in Assam and Indian Northern Bottoms at Rs 26-8, Daisee Mesta Bottoms at Rs 25 per maund for May/June shipment, and New crop Jungli Bottoms at Rs 24 and Assam Bottoms at Rs 25 per maund for August/September shipment.

World of Tea

Continued Improvement in Exports

TEA exports from India, since the beginning of the year, are going ahead of last year's. Although foreign exchange earnings from exports declined sharply to Rs 108.69 crores during the year ended 31st March 1956 from the record level of Rs 147.22 crores in the previous year and the quantum of exports from 456.69 million pounds to 401.1 million pounds, shipments for the period from 1st January to the 5th May, 1956 are higher at 138 million pounds as against only 84 million pounds in the corresponding period of 1955. This increase in the outflow of tea from India can be attributed to the Government of India lifting restrictions on exports as well as improvement in the world tea situation.

Similarly, total tea shipments from the Cochin Port, during the four months ended April 1956, were higher at 21.58 million pounds as compared with 19.37 million pounds in the corresponding period of last year. Also, exports of tea from East Pakistan to both Karachi and foreign countries were higher in April this year than in the same month of last year. While shipments to Karachi rose from 33,191 pounds in April 1955 to 1,003,188 pounds during the month under review, exports to the UK totalled 1,766,615 pounds as compared to nil in April last year.

Although the stock position in the UK is much lower than what it was last year, there seems to be confidence in the market that whatever supply is needed is available. The still fairly tight supply position, however, might serve as a caution to any further easing in prices. Total warehouse and landed stocks in London, as at May 18, amounted to about 116.60 million pounds as compared with 117.60 million pounds as at May 11. A year ago, stocks totalled about 164.10 million pounds. Quantity of tea afloat from the main producing countries has also fallen steadily in recent months from over 50 million pounds to around 26.70 million pounds for the week ended May 18.

Moreover, as a result of the advertising campaign carried out in the USA, tea sales in that country have climbed to 0.75 pound per person from only 0.50 pound per person in the past four years. Though enthusiastic over the success, the US Tea Council feels that the industry has a long way to go before the level of tea consumption in the USA can be brought in line with that in the UK.

Meanwhile, in the special Export Sale held this week, offerings amounted to 10,280 packages of New Season's Darjeeling teas. Buyers were showing keen discrimination, and the very best flavoury invoices were keenly competed for and realised high prices. There was, however, considerably less demand than in the previous sale, and the more ordinary kinds were generally sold at As 6 to As 8 per pound below valuations. Many teas were, however, withdrawn without bids.

In the Internal Sale, offerings were 21,700 chests, which met with fair general demand. The market for most descriptions was one to two annas per pound easier at the start of the sale; but, at the close, was As 2 to As 3 below last rates with buyers showing preference for smaller grainy sorts.

Black leafy types, suitable for the Middle East, were fully firm but there was a rather restricted enquiry for UTC Assams which were again

(Continued on page 1028)

World Overseas

US Notes

Reflecting the rising levels of international trade, merchant shipbuilding tonnage now under construction or on order throughout the world scored one of the biggest advances of the post-war period during the year ended April 1. The Shipbuilders Council of America, a private trade organization, has disclosed that vessels now under contract or under construction aggregate nearly 20 million gross tons. This is an increase of about 65 per cent compared to April 1, 1955. Notable shipbuilding gains have been scored in the past year by the United Kingdom, Japan, the United States, Germany, Sweden, Netherlands, France and Italy.

Indicative of the growing importance of trade—particularly trade with the Far East to the US West Coast is a new world trade centre opened in San Francisco, California, this week. The office space already is occupied by companies dealing in international commerce. The centre offers exporters rooms, a trade library, the services of interpreters, and a clubroom.

Evidence that US trade is likely to remain voluminous, is found in the latest report by the US Commerce Department. The report discloses that American exports in April reached an estimated value of $1,551 million this is only 1 per cent below the March total, and 23 per cent above the 1955 total. If the experience of New York City Banks with Import letters of credit is any criterion, US trade can be expected to remain high at least through the summer. According to the Journal of Commerce, these credits, usually indicative of the trends some 90 days ahead, have been running well above the levels of the corresponding periods of 1955.

Most of banks report that their import letter of credit business remains well diversified, Coffee, the largest single U.S. import commodity, continues reasonably, though not outstandingly, active. But interest is reported strong in a wide variety of industrial materials, including steel, rubber, ores, and non-ferrous scrap.

Consumer expenditures for services in the United States in the first quarter of this year equalled an annual rate of $95,000 million. This compares with $91,000 million in 1955 and continues the uptrend which has been uninterrupted for 18 years. The U.S. Department of Commerce points out that these expenditures make up more than one third of total personal spending by American consumers. Expenditures for services during the expansion of the post-war American economy have risen even more steadily and sharply than has spending for goods.

Among the (spending) areas showing the greatest growth were housing services which have more than doubled in the past eight years. Up significantly too were expenses closely related to the great post-war increase in home ownership, such as electricity, gas, water and telephone. Also rising were expenditures for medical care and for banking, insurance, brokerage and other financial services to individuals. Showing less than average gains, however, was spending on public transportation, due largely to the increase in automobile ownership and use. Also, the growing use of home appliances had a somewhat retarding effect on spending for commercial laundry services and domestic servants.

*

Britain

BRITISH exports to North America reached a new high level of nearly £34,000,000 in April, it was emphasized in the final trade figures for the month issued in London on May 22 by the Board of Trade.

The figures show that the United Kingdom's visible trade deficit in April was at £57,300,000. No significant change in the underlying trends of oversea trade can, however, be discerned from the fact that this was rather higher. The increase was due chiefly to the effect of the short working month of 24 days on the value of exports, while imports were slightly lower than in March.

In the first four months of 1956, the average monthly deficit of £56,000,000 was £16,000,000 less than the rate for 1955 as a whole, though £6,000,000 higher than in 1954.

The value of United Kingdom exports in April was £256,400,000, as shown in the provisional figures—only £15,000,000 less than the record figure for March, which had two more working days, and less than one per cent. below the monthly average for the first quarter. April maintained the gain of 4½ per cent. over the corresponding period of 1955 which had been shown in the first quarter.

Allowing for a carry-over of delayed shipments in early 1955, the underlying increase in value in the first four months of 1956 was approximately nine per cent., rather more than half being due to the rise in volume, and rather less than half to higher prices.

EDITORIAL NOTES

(Continued form page 1003)

indigenous metal", the Government have been permitting the export of pig iron. An experiment in free sale of pig iron to the foundries in 1954 seems to have been short-lived and somewhat mismanaged.

The memorandum bemoans the shipments of pig iron going abroad when local foundries are crying for every ounce of this material. At the same time, the Government are also negotiating for the import of pig iron at three times the Indian price. It is reasonably feared that unless something is done immediately to reverse policies, the position will deteriorate further in the years to come. The domestic demand for pig iron is bound to go up. The Association estimates that by 1960-61 the total demand will at least be of the order of 7½ lakhs tons. The Association has made a number of suggestions to overcome the present crisis. A complete stoppage of the export of pig iron is regarded imperative. If for any reason this is not found possible, it is demanded that the difference between the local and imported prices should be subsidised by the Government. Among other suggestions figures an overhaul in the distributive system.

The Comptroller's Cudgels

It is the painful obligation of the Comptroller General to draw attention once a year to the financial irregularities occurring in Government Depatments. The annual chronicle will be dull and insipid if the officials always take care to observe the rules and keep within their powers. Actually, many of them fail to do so, in spite of the general homilies and reprimands issued by the Comptroller General every time he puts out his report.

Tea parties contribute most to relieve the tedium of the latest narrative. A feminist leader had the honour of receiving one official party and another non-official party at State expense. The two parties cost Rs 2,000 to be stood by the Finance Ministry. A batch of students were hosts at four parties, one given by an Under Secretary to the Government, another by a Joint Secretary and the remaining two by a Parliamentary Secretary. These were rounded off by yet another farewell-party given by the same Joint Secretary.The cost of all these treats were as a matter of course debited to the Treasury. No less defensive are certain items of expenditure incurred by officials of the Foreign Department.

In one case, a building was taken on a contracted lease for ten years on a rent of Rs 10,000 a year. An expenditure of over Rs 65,000 has been incurred on the building, which has yet to secure an occupant. In another instance a house reserved for an ambassador was found unsuitable after a good deal of money was spent on it. Then there is the story of the purchase of a vacant plot of land at Rs 3 lakhs plus a brokerage of Re 1 lakh and the subsequent discovery of an obstinate technical difficulty in the way of putting up a suitable building on the plot. One case relates to suspiciously frequent purchases of motor cars by an official, and his profitable exchange of silver sets from an embassy.

The Central Board of Revenue itself is charged with having shown undue generosity in the matter of taxing the emoluments of the Union Ministers. The Report gives the impression that the Departments have yet to acquire a fuller sense of accountability to the public, and even to the rules which govern their conduct.

*

European Housing

The broad features of Europe's housing situation as obtaining in 1954 are outlined in a special UN Survey. Twenty-three countries representing 94 per cent of the total European population as estimated at the end of 1953 are covered by the Survey. On certain criteria, the Continent is divided into three regions, Western and Central Europe, Southern Europe and Eastern Europe, including USSR. In the first region, there are 270 dwellings for every 1,000 inhabitants. For Southern Europe, the corresponding figure is 204, and for Eastern Europe it is 219. These figures convey only a general impression. To a limited extent, the regional variations are balanced by the greater proportion of children in the populations of East and South Europe compared with Western and Central Europe. In Austria and France, the dwellings are relatively small and the number of rooms per 1,000 inhabitants is slightly below the regional average. Western Germany is worse in this respect. The close link between the proportion of married adults to the total population and the number of dwellings to the number of inhabitants is reflected in most of the countries. The proportion of children to the total population and of widowed people forms another interfering factor.

In Ireland the number of dwellings per 1,000 married couples is comparatively large, but that country has a high proportion of unmarried adults and widowed people. The opposite is the case with the Netherlands and UK, where unmarried adults and widowed people are less in proportion, as also the proportion of dwellings in relation to married couples. Generally the ratio of houses to population in terms of quantity is worse in rural areas. Even the urban areas do not fall into a uniform pattern. Usually the average age of houses is much higher in rural areas than in the urban. On the whole, the survey concludes that the level of house-buildings during recent years is far too low to cover current demographic and replacement requirements in a number of countries. In a few, some improvement is noticeable.

"Insist for your containers on "BHARAT". They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 "BHARAT BARRELS" price is Rs. 25-8 ex-factory. If you do not get BHARAT BARRELS, Write to Box No. 247, BOMBAY."

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THIS is the end of May; and, in normal conditions, the various issues connected with this year's New Loan should, by now, be the subject of active exchange of views between the Finance Ministry in New Delhi and the Reserve Bank in Bombay. In the context of the implications and assumptions of the Second Plan, the borrowing programme should be on the basis of an annual plan within the frame-work of the Five-Year Plan. This "plan within a plan" concept is a recent innovation; and it is claimed that this ensures for the Plan the virtues and benefits of flexibility. The Prime Minister, in moving the resolution in Parliament on the Second Plan, dwelt at some length on this special feature, and promised the early publication of the 1956-57 Plan as an integral, but distinctive, part of the Five-Year Plan. It may be surmised that the 1956-57 Plan will furnish greater details with regard to projects, resources and targets as they have reference to the current twelve-month period; but I doubt if, beyond a general indication of the target for this year's New Loan effort, there will be an examination of borrowing techniques and procedures relevant to 1956-57 in particular, and progressively designed to the requirements of 1956-61 in general.

*

I cannot help feeling that the borrowing programmes in the First Plan period have been haphazard rather than purposive; and that Authority is yet to avail itself of the favourable opportunity to seize the initiative and assert its mastery. As Mr Nehru has rightly emphasised, the essence of planning is that the Government progressively acquire the power to shape and influence events, where, formerly, they were at the mercy of events. The giltedged situation in this country, during the past two years, has developed features and forces which could have been pressed into service for effecting the transition from urge and goading by events to initiative and determined action by the Government. Judged by this criterion, the experience of the quinquennium which ended last March was unimpressive; and its record and the lessons to be drawn therefrom are uninspiring. It will be far-fetched to apply the description "planning" to the borrowing activities of 1951-56. If it be a New Loan issued by the Centre, the process consisted of adopting a ten-year currency, a 3½ per cent type, and an issue price roundabout Rs 98/8; and, if it be a State Loan, the period was to be the same, that is, ten years; the interest rate, however, was to be hiked to 4 per cent; and the issue price was to be determined by some manner of credit-rating.

*

Neither for the pre-Loan grooming of the giltedged market, or for aplomb and originality in the devising of terms and conditions, nor for the promotion of a post-Loan climate of splendid achievement and strident health has any of the New Loans during the Plan period been conspicuous. Preparing the ground for the New Loan is an essential element for success. The credit for evolving suitable techniques in this respect belongs to Sir Basil Blackett; and the New Loan issues in the four-year period 1923-26 merit close study from this point of view. In the type of the New Loan, the change effected was from the basis of 6 per cent free of tax to 4 per cent subject to tax. 1923 and 1926 are important land-marks in the borrowing plans of the Government. Let me recall some of the circumstances connected with the New Loan issue in 1923. I do not have the references ready at hand; and my reminiscences may have a faltering quality as my memory is liable to play me false now and then. But, on the main features, my account may be trusted to be mostly faithful, as some of the events I speak of brought me into the picture for their execution.

1923 was an important year in the annals of giltedged in India. The boom which followed the First World War brought equity shares into great prominence. There was a corresponding decline in the popularity of fixed-interest-bearing stocks like giltedged and preference shares. The boom in equities was also marked by the worst slump in giltedged. The market for even the best preference shares abounded in sellers; and buyers were few and far between. This state of affairs prevailed until the end of 1921. Then came the terrific slump in equity shares. Prices of shares collapsed, as industry reported rapidly declining margins of profits. The debacle overtook the Stock Exchanges by surprise. Investors never dreamt that the halcyon days would come to such an abrupt end. 1922 was a year of bewilderment, shock and confusion. It was in these conditions that I evolved the view that a change-over from "risk" capital to "Safety First" scrips was imminent. Thus was forecast the revival of interest and activity in giltedged and preference shares. It was not to be supposed that my view would find acceptance.

*

There were not many to place credence in the prophecy; but there were some to recognise the prophet. It was, perhaps, this recognition that led to my firm (I was in Bombay at that time in a firm of stock-brokers) being given a hint in the spring of 1923 that the Imperial Bank of India would be willing to make loans on giltedged securities for a fixed period and at a specially attractive rate. If I remember right, the bank rate was then 8 per cent or slightly over; and, on further enquiry, it transpired that the Imperial Bank would make advances on Government securities for a fixed period of six months and at a fixed rate of 4½ per cent and with a margin of 5 per cent. Quite a number of credit-worthy institutions saw the possibilities of substantial profit in this transaction. A number of loans on this basis were fixed up with the Imperial Bank; and what followed was, I believe, fully up to the expectations of Mr R. A. Don, the Imperial Bank's Secretary and Treasurer who took the initiative in this matter.

Giltedged prices rose sharply, thanks to the considerable purchases made by some of the institutions which had contracted these loans with the Imperial Bank. Above all, the impression gathered volume that the stringency of March-April would be replaced by a marked abundance in June-July. Why was the Imperial Bank lending at 4½ per cent what time its official minimum was 8 per cent or over? —this question invited excited comment in money market circles; and the answer was that the slack season would, in the opinion of Authority, prove to be particularly slack; and that, as a consequence, it would provide a most favourable setting for a spectacular recovery in giltedged prices. Thus was the stage set for the New Loan of 1923; and thus was the transition effected in the affections and activities of Stock Exchange interests from equities to Bonds.

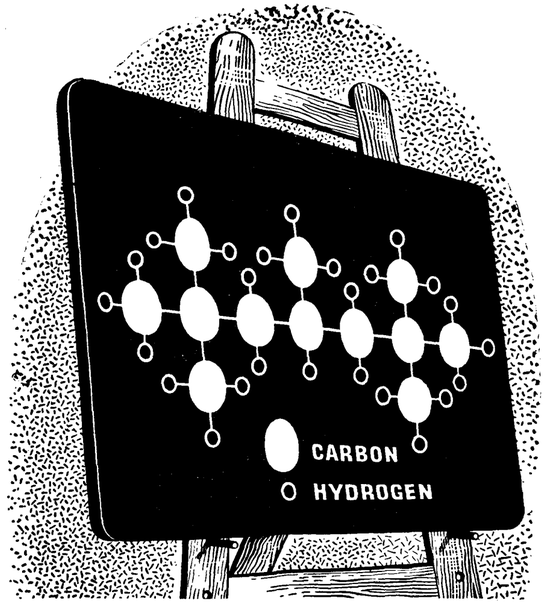
Railway finance was separated from general finance, and audit from accounts; the fund for the avoidance or reduction of debt was set up, with a suitable formula for annual appropriation in the Budget. Sir Basil was on top of the market with increasing self-assurance; and he achieved unquestioned supremacy by the summer of 1926. The early months of that year witnessed exceptionally active trading and conspicuously rising prices in the Indian giltedged market, so much so that 3½ per cent Rupee Paper, which hitherto had always lagged a good few points behind its sterling counter-part, forged ahead with defiant confidence. I may also refer to another sensational event in the spring of 1926.? Late in the autumn of 1925, the Calcutta Port Trust had invited tenders for a 6 per cent thirty-sixty year loan. The full amount was not subscribed for; and, broadly speaking, the issue was a flop. The same public authority offered a 5 per cent thirty-sixty year loan in March-April 1926; and the issue was 80 times over-subscribed—an all-time record, I believe, from the point of view of over-subscription. The story behind the miraculous change is a fascinating one; but I must resist the temptation of narrating it here. The essential point, however, is that Mr E. J. Parks, who was the Chief Accountant, was so dismayed by the disaster of 1925 that he prepared the ground in 1926 with an expert's skill.

✱

The giltedged forces in 1926 attained their crescendo in May, when, in the last week, was announced the New Loan, which was a 4 per cent 1960-70 stock at an issue price of Rs 88. Until 1926, the Government had fancied tax-free loans. Except for 3½ per cent and 3 per cent undated stocks, all the securities quoted in the giltedged section were tax-free loans. The four per cent loan 1960-70 made a significant change, and inaugurated the regime of taxable loans. The New Loan invited subscriptions both in cash and by conversion. The cash loan was limited to Rs 25 crores; and, on the appointed day, a long queue had collected well ahead of the time. Rs 25 crores was over-subscribed in three hours—a memorable achievement for those times.

✱



As I said, the four-year period, 1923-26 has an important place in the annals of giltedged in India, as (1) planning of New Loans on a scientific basis was first initiated in this country during that period, and (2) the Finance Member, thereby, established his unquestioned sway and authority over the trends and events in the giltedged situation. The Monetary Research Division of the Reserve Bank would, I am sure, find an investigation of the stirring events and live forces of that period an exciting and rewarding task.

There are two other periods which could, with like usefulness, be studied. They are: the five-year stretch from 1932 to 1936; and the seven-year stretch from 1940 to 1946. I would fain undertake such a study in this column; but it must be on the rare occasions when current topics do not make a peremptory call.

✱

In the death of Naren Mukherji, Indian Finance losses a valuable member of the trinity who cared for and nursed it through its infantile ailments. Mr Mukherji has not been actively associated with us for over 10 years; but we have been greatly sustained and supported by his firm faith in the mission and destiny of Indian Finance and by his abiding confidence in those who worked for the realisation of this mission. We will all miss his gracious weekly visits and his graceful solicitude.

AN EDUCATION IN Oil

This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

Bombay Review

Speculations on New Loan

APPROPRIATE to this time of the year, Dalal Street has started speculating on the what, when and how much of the New Loan. The general impression, created by this discussion partly a conjecture and slenderly an inside knowledge, is that there may be two loans this year—a ten-year issue and a twenty-year issue, the former being a 3½ per cent stock and the latter a 4 per cent stock. End of June or early July is indicated as the likely time-schedule. If there be both medium and long-dated stocks, the target may be more than the estimate given in the ways and means budget. Since the end of February, there has, definitely, been a change in the official estimates of the capacity of the market to subscribe for loans. The realisation from market loans during the Second Plan period have been stepped up. It follows that the target for this year will, likewise, be raised.

Let me repeat that this is all, at the moment, in the realm of gup and gossip. How much of it is shrewd anticipation and how much of it has its source on efficient assault on well-guarded secrets, it is difficult to say. In both these respects, the gents of Dalal Street have always shown superlative skill. So, these rumours, such as they are, should be understood in the spirit of the saying which says that there can be no smoke without a fire.

That the New Loan announcement is a matter of a few weeks, is the firm opinion in stock exchange in spite of money being in strong request. Short credits continue to command full rates; and term money is as keenly bid for. Purely in relation to the sentiment and rates in the money market, it is unthinkable that conditions will be ripe for the New Loan for, say, another two months. It is not always that the money markets set the pace for he giltedged market. Often-times, giltedged prices have their behaviour shaped by anticipatory, rather than by current, developments.

Such, in fact, is the present phase of the giltedged market. While credits have been stringent, giltedged has been very steady. Prices are well maintained; and there is a stream, if not a spate, of buying orders. The paucity of floating stocks is periodically felt; and it is realised that the investment portfolio of the Reserve Bank is at an unusually low level. In other words, there is a very strict limit to the capacity of the central banking institution to indulge in open market sales.

Of the Investments shown at Rs 35 crores, a moiety must be in the form of Industrial Finance Corporation shares, State Loans, State Bank of India shares etc. Another moiety must be in securities maturing in 1957 and 1958. The Reserve Bank will not be disposed to sell any of these stocks. This means that the Reserve Bank's disposable stock in securities which the market would ordinarily buy should be on the low side.

In the present predicament, the Reserve Bank is more likely to figure as a buyer of securities in its open market operations. From this point of view, it may be said that the Reserve Bank is in a position to subscribe for the New Loan to the extent necessary, and thus ensure its success. The Cash Balances Investment account of the Centre also appears to have a greatly emaciated portfolio of securities. So, from the side of the financial authorities, the capacity to respond in a big way to market's demand for securities is non-existent.

All of which is of bullish import for the New Loan. It is also being increasingly appreciated that the accumulations in the extended and expanded provident fund institutions are becoming an aggressively dominant factor not only with regard to subscriptions for four per cent loans, but also in regard to day-to-day transactions in the giltedged market. Provident funds have developed into perennial tributaries for the giltedged market The Finance Ministry, in its operations connected with accumulating life insurance funds, is now a substantial influence. All circumstances taken into account, the resources available, in one way or another, to the Reserve Bank enable this institution to plan and pilot the New Loans with a great degree of confidence and with the power to guarantee the achievement of any reasonable target.

If, then, one were to judge from the present behaviour of the giltedged market, there is nothing unpropitious or untoward so far as the New Loan is concerned. If the target is Rs 100 crores, it will be reached in confident style. It is possible that the New Loan is issued in two stages—the first stage with a target of Rs 100 crores, and the second stage with a target of Rs 50 crores. If, in this way, the New Loans realisations in the first year of the Second Plan prove to be of the order of Rs 150 crores, it is a most heartening augury for the financial success of the Plan from the point of view of market loans.

If this forecast of a central 20-year 4 per cent loan proves correct it is to be seen how the State Government react to it. The four per cent State Loans have established a special clientele for themselves; and the States may consider the Centre's four per cent loan as poaching in their preserves.

The rivalry in this respect is no light matter. Those who are now attracted by the four per cent interest on State Loans will be interested in a twenty-year loan as in a ten-year loan. If so, the Centre's status will give its loan a decided preference. To this extent, the State Loans are likely to meet with a welcome less marked than was the case last year. It will be a pity because, if the State Governments are required to borrow in their individual capacities, the facilities available to them must be increased, not reduced.

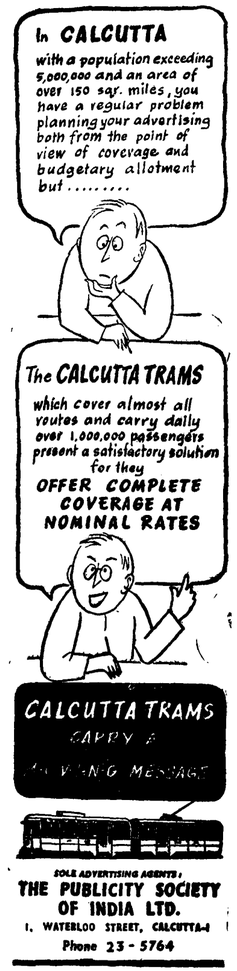
BALANCE-SHEET REVIEWS

(Continued from page 1000)

view, have fallen to 45,843 tons from 46,615 tons in the previous half-year, while despatches have shown a rise to 46,080 tons from 37,515 tons. The net profit is about Rs 9,000 higher at Rs 1,08,075. The provision made for Taxation is higher by Rs 12,000 at Rs 60,000. According to the directors' report, the electrification of the company's colliery is expected to be completed by July, 1956. The company has also applied to the Government for sanction to develop Kenda seem by sinking two pits to increase its output.



£ R$

Ashok Leyland Limited

It might be recalled that the name of Ashok Motors had been changed to Ashok Leyland Limited last year. The company has entered into an agreement with Austin Motors of England for the assemblage of Austin cars in India and trades in motor cars, buses and trucks and components and spare parts. Moreover, in May 1955, the company submitted a programme of the progressive manufacture of Leyland commercial vehicles and got this approval from the Government of India.

According to the reports and accounts presented for the year ended 31st December 1955, the sale of Leyland chasis increased satisfactorily, and the total sales for the year were more than double those of 1954. The turnover amounted to Rs 1.50 crores as against only Rs 97.37 lakhs in the previous year.

The net profit for the year is Rs 1,79,519; and this would have been shown still at a higher figure, but for the abnormal expenditure. This amount, together with Rs 1,970 brought forward from last year, amounts to Rs 1,81,490. Out of this amount, the directors have set aside Rs 1,19,525 for Taxation, leaving a balance of Rs 61,965 to be carried forward.

Financial aid for Industry

Institutions set up for providing financial aid to industry in India have come up against a situation created by the absence of co-ordination. When it is a State-sponsored institution, the difficulty is all the greater, because unlike private bodies, a quasi-official institution is obliged to take a more rigorous view of the credit-worthiness of an industry, big or small. In his address at the annual meeting of the Saurashtra Financial Corporation, Mr. K. Gangopadhyay points to this difficulty. As a credit institution, it has to make some allowances for risks. It cannot expect cent per cent security for all the money loaned to industrial units. If it were to expect it, it ceases to be useful to the maximum degree. At the same time, it cannot afford to take such risks as a purely private concern can. Some workable via media has to be discovered. Lately another problem has cropped up. There used to be a rough demarcation of spheres between the Corporation and the Industries Department. The Corporation confined itself to loans above Rs 20,000, the Industries Department issuing smaller loans.

Now that the Department has decided to the advance up to Rs 1 lakh and its interest rate is lower than the rate charged by the Corporation, a kind of competition has developed. Situations such as this are not confined to Saurashtra. In all probability, the initiative taken by the State Bank of India toward the co-ordination of financing activities in the field of small industries will turn out to be helpful. The State Bank has decided to undertake pilot projects in association with the Reserve Bank staff. These projects are intended to assess the credit requirements of different industries and the methods of satisfying them. Unless sufficient co-ordination is secured between the State Bank, the Financial Corporations, the State Governments, co-operatives and the commercial banks, the effective utilization of the finance available for industry will be hampered.

✱

The Prospective A.I.C.C. Meeting

Never in the history of the Congress has the All India Congress Committee had to meet in an environment as embarrassing as it is likely to face on June 2nd in Bombay. The State Government have wisely lifted the ban on public meetings; but there is unconcealed nervousness everywhere. The elaborate preparations for affording special police protection for the AICC meeting reflects this nervousness. The Workers and Peasants Party of Maharashtra has decided to offer satyagraha in front of the AICC pandal and it is reported that more than a thousand volunteers have been enlisted for this purpose.

Maharashtrian Congressmen are undoubtedly in a dual mind. It is tortuous for them to be hosts to an organisation, their own of course, which has invited local antipathy by its stand on the future of Bombay. It would be idle to pretend that the atmosphere in Bombay is calm or peaceful. No group or individual would like to indulge in violence especially of a premeditated kind, when the AICC meets and the Prime Minister is in the city. The Government, however, are obliged to reckon with every possibility.

The Pataskar formula, by which Bombay will be automatically transferred to Maharashtra after two years in the event of Parliament not taking a decision to the contrary, is likely to be discussed by the AICC. But this would not be received as anything more than a mere gesture. The least that the Samyukta Maharashtra group demands from Pandit Nehru and the Congress is an unequivocal assurance that Bombay would form part of Maharashtra within a reasonable period of time. As yet, there is no indication that either the party or the Prime Minister would willingly give such an assurance.

✱

Satyagraha in Democracy

The thesis put forward by the Praja Socialist Party leader, Mr S. M. Joshi, that satyagraha provided a means to prevent a dead-lock of liberal philosophy from deteriorating into dictatorship is one which could drive democrats of the orthodox brand desperate. The essence of democracy, as normally understood, is the inviolable sanctity of majority decisions expressed through the vote. How this feature can co-exist with satyagraha which is a form of pressure against the majority decisions has not been explained either by Mr Joshi or anyone else among the advocates of satyagraha. Mr Joshi claims that satyagraha conducted peacefully will supply the lever for moral regeneration and intellectual renaissance. Satyagraha may well be efficacious in this respect but the result will depend on who does it, against whom and for what purpose.

Mr Joshi pleads that in India, democracy lacks very much in its true content. He may be right but the answer lies not in the acceptance of an awkward and irrelevant method, but in strengthening the roots of the institutions which, the PSP leader himself concedes, are the normal forms of democratic expression. That a method like the satyagraha is always exposed to indiscriminate use is itself the main reason why it should be held out of court in a democracy.

GATEWAY MARKETS

Reactionary Trend in Castor Futures

THE Government of India have at last decided to bring under regulation forward contracts in Castorseeds throughout the country, except Hyderabad State for the time being. The immediate effect will be that forward trading, which was in operation in some form or other in various parts of the country, will no longer be allowed, and that such contracts entered into before May 23 shall be deemed as closed at the rate prevailing at the time the forward markets in the said commodity closed on May 23. This decision by the Government had a bearish effect on the market since those, who held long positions, found it difficult to square up their positions at the closing rate.

Prices of ready castorseed and castor oil as well as those of other oilseeds and oils also moved down substantially in sympathy with the break in the futures section. The consistent weakness in castorseed was attributed to nervous unloading by the local as well as upcountry bulls. Buyers in Gujerat alone were estimated to have liquidated nearly one lakh candies. The weakness was accentuated by the withdrawal of support by exporters, whose enthusiasm was adversely affected by the unfavourable developments on the export front.

The US interest in castor oil was less active with the rate for the commercial quality declining by half a cent to 15.75 cents per pound following the reports of the forthcoming auction of the US Government-old stocks. This induced buyers to keep out of the market until the sales were effected, and hence offers of Indian castor oil failed to evoke a positive response from them. Although there were some enquiries from other overseas buyers, persistent talks of lack of shipping space for the export of castor oil brought about a selling wave.

Castor September declined sharply to Rs 148—the highest level touched being Rs 160-4 and the lowest Rs 147-4. May delivery closed at Rs 144. Castor Oil was, however, better by As 2 at Rs 16-0 per quarter.

The landslide in castor futures served to precipitate a fall in the prices of other oilseeds and oils. The Groundnut section, which was already lacking strength, fell an easy victim to the bearish influences. Groundnut June-July, which was quoted at Rs 35-6 earlier in the week, finished at Rs 34-3, while Groundnut Oil ready was quoted at Rs 18-4 and July delivery at Rs 18¾ per quarter.

Sentiment in the Linseed section was adversely affected by the liberal supplies of linseed oil resulting from the lack of demand from shippers, some of whom were obliged to settle their overseas commitments following the imposition of export duty. Although the ready seed moved up to Rs 33, Linseed Oil was quiet at Rs 18-10. Kardi seed was steady at Rs 20.

✱

Gold & Silver

Trading in the bullion market was highlighted by a tussle between bulls and bears. Bulls were very much shaken by recent developments and particularly by the reported heavy arrivals and waning spot demand. Although a partial recovery developed toward the close, operators lost confidence in the market.

Gold recovered some ground from the recent low levels due to a broadening in demand, but subduedness of the counterpart caused a mild erosion into the advance. In contrast, silver continued to give an uninspiring performance with small, but persistent bear pressure acting as a damper. Fears of Tibetan arrivals were the main discouraging factor.

The arrivals of silver coins from Tibet, now a part of Communist China, have given rise to speculation in certain quarters that gold from Russia may be offered for sale in India. Some quarters feel that this is most unlikely. For, it will be a problem for India to find the means of paying for these imports, especially when India is expected to have an adverse balance with Russia owing to import of steel, steel plant and other machinery, etc. They also hold the view that, even if Russia is keen on selling gold in the Indian markets, the Government of India, which are quite alive to the foreign exchange

World of Cotton

Controversy over Resumption of Futures Trading

WITH the proposed visit of the Union Minister for Commerce and Industry to Bombay in the first week of June, Cotton circles are hopeful that resumption of hedge trading in cotton, which remained suspended for the past five months, will be expedited. The newly-elected president of the EICA is expected to take this opportunity to meet the Minister and apprise him of the situation obtaining in cotton today.

A majority of members of the Hedge Contract Committee of the EICA is reported to have favoured two contracts running simultaneously—one for medium-staple and the other for lower-staple growths. The two contracts, if agreed to by the Government, are likely to be of the staple lengths of 26|32″ and 24|32″ respectively as these will cover most of the indigenous varieties for the purpose of delivery and will offer little scope for cornering by bulls. Minority members of the Committee are, however, sceptical about the success of the move and feel that it will make the present confusion worse confounded. According to them, the successful functioning of the two contracts depends on the free market conditions. With the result, they seem to have advocated the removal of the present "floors" and "ceilings" before trying the new experiment.

Meanwhile, conditions in the spot market are expected to remain unchanged till the end of the season in view of the growing mill demand for the commodity and the scarcity of supplies, although mills are found to be reluctant to pay high prices. The number of varieties piercing the ceilings unofficially is reported to have gone up as a result of the abolition of the export duty on coarse cloth and the Government's decision not to impose any ban on export of Zoda and Yellow Pickings. Trade circles feel that there are good prospects for the exports of these varieties on the basis of the past performance. Export figures country-wise, since the beginning of the current cotton season till the 24th May, are given below:—

Country:	(In Bales of 400 lbs)
Japan ..	65,584
Continent ..	10,901
U.K. ..	4,494
Hongkong ..	5,216
China ..	53
U.S.A. ..	86
Others ..	412
Total ..	86,746

From these figures, it will be seen that Japan accounts for nearly 80 per cent of the exports of Zoda Cotton and Yelling Pickings, while the Continent, which comes second on the list, has taken only 10,901 bales as against Japan's share of 65,584 bales.

Comparatively, the turnover in the foreign cotton section has not broadened. This is mainly due to the fact that many mills are reluctant to augment their stocks of high-priced Egyptian, Sudanese and East African varieties. The report, that the USA President has signed the Farm Bill, is also a contributory factor.

The textile industry recently purchased about 70,000 bales of Californian Strict Middling 15|16″ for after-August shipments; but no further purchases are reported to have been made during the past few days. The Commodity Corporation in the USA is reported to have reduced its minimum acceptable price by one cent, but the main difficulty appears to be that all the purchases will arrive in October-November when new indigenous crop will be available at much cheaper rates.

Since private organisations in the USA are pleading for an acceptance of still lower rates, importers and textile mills in India consider the possibility of a further cut in American cotton prices in the coming months. The demand for Egyptian varieties is also not expected to broaden owing to the current boom conditions in Alexandria. Above all, imports of foreign cotton this season are expected to be in the neighbourhood of about 7 lakh bales, which will be sufficient for the country's requirements.

Latest market quotations will give an idea of the present conditions in the market. Bengal were placed at Rs 645 to Rs 710; Oomra at Rs 720 to Rs 750; Dhollera at Rs 770 to Rs 780; Jharilla at Rs 760 to Rs 830; Vijay Broach at Rs 990 to Rs 1,000; Bushoga at Rs 1,630 to Rs 1,635; Karnak at Rs 2,800 to Rs 2,850; Sudanese at Rs 2,300 to Rs 2,600 and American Good Middling 15|32″ at Rs 1,370 to Rs 1,375.

×

STATISTICS:

The following figures will show the exports, mill consumption and stocks of cotton during the period from 1st September 1955 to the 24th May, 1956:—Exports by Rail 308,561 bales; Estimated Mill Consumption in Bombay 929,339 bales; Same period last year 940,093 bales; Estimated stock held by exporters, dealers and mills on the 24th May, 1956—665,573 bales and Same time last year 698,400 bales.

×

NEW YORK COTTON:

Price fluctuations on the New York cotton market were rather erratic due to alternate bouts of buying and selling by New Orleans and Memphis brokers. Small CCC export sales against bids, opened on May 22, was believed to reflect extensive bidding for cotton below the CCC present-indicated minimum of 27.50 for Middling 15|16″ cotton. As the new Farm Bill has been signed by the President, it is believed, that the CCC May have to accept bids for export cotton as low as 25.50 cents per pound. The July position closed at 34.59 cents and October at 32.47 cents.

×

LIVERPOOL COTTON:

The market in Liverpool ruled quiet with prices showing an easier tendency on some American selling in distant deliveries. The Sudan contract remained unchanged, while the Egyptian contract improved to permitted maximum with trade buying, which found limitation of offerings. Trade circles believe that, as figures are already quoted below parity with the last CCC selling prices, that the market will regain the earlier losses.

×

KARACHI COTTON:

The Karachi cotton market ruled quiet. The recent rise in prices led to consumers' resistance, which was reflected in slackness in overseas enquiries for Pakistan cotton. Consequently, traders, who had hoarded stocks in anticipation of still higher prices, began liquidating their holdings, resulting in a setback in prices. Following were the rates quoted:—Punjab Deshi Rs 95; Sind Deshi Rs 101; 4F Punjab Rs 87; LSS Punjab Rolling Rs 98.

×

CLOTH:

The demand for cloth has tended to broaden, due partly to seasonal expansion in the home trade for summer-weight cloth and a general feeling of greater confidence in raw cotton prices. Commonwealth markets have been moderate buyers of standard and continuation

Last Word in Clarification

IN moving the Resolution on the Second Plan, the Prime Minister, with his unerring instinct for what is apposite, devoted his speech less to an exposition of the Plan than to a clarification of the issues on which controversial opinion has been expressed. Over the past many months, the Plan has received adequate exposition; and Mr Nehru rightly sensed that this redundancy might be avoided. In the comments which have emanated from an influential section in the country, criticism has centred on a few pointed questions like the predominance of the public sector, pattern of State management, ability of the Government to find the resources, financial and otherwise, and organised industries versus cottage industries. Mr Nehru has, comprehensively and satisfyingly, dealt with each one of these questions.

So satisfyingly, indeed, that the critics of yesterday have hailed Mr Nehru's speech as showing an appropriate sense of realism. In particular, the Prime Minister's explicit declaration on the role of technology in the world of today and the large field in which free enterprise can play a notable part has pleased and heartened the business community whose co-operation in letter and in spirit has thus been firmly secured and doubly assured. Thus have faint hearts been won over.

Whatever the critics may say about this detail or that detail, whether our achievement on the Second Plan exceeds expectation as was the case with the First Plan or falls short, there will be complete and reverent agreement with regard to the spirit and attitude we should all evince on the Government undertaking this Historic task. Mr Nehru, thus, describes the place which belongs to the Second Plan in India's history:

> It is an exciting subject because it deals with the future of 360 millions of people, and, to some extent, that future will affect the future of other countries and even of the rest of the world. Therefore, it becomes an enthralling and exciting subject. We read the history of India. We have a long history with many ups and downs. Now, we are concerned with the shaping of the future of India. Surely, there could be fewer more exciting subjects than this. It is, therefore, with a sense of the burden of history upon me, upon us, upon this House, that I face this problem. It is also with a great sense of humility, because, however great, however competent we may consider ourselves, we are small in relation to this mighty theme, that is, the building up India, taking this country and its millions of people forward during the next five years.
>
> In this historic enterprise, we need both confidence and humility. Humility because of the Himalayan character of the responsibilities we thus assume and of the great deal of skills we have to learn and the great mass of resources we have to mobilise. In all these respects, there is much that we have to learn, and much that we have to acquire, from other nations. Confidence because, granting that we are successful in these respects, the Plan has to be an Indian-made plan; it is the nation's efforts, its capacity for self-help and its resolve to give the Plan a characteristic Indian personality —it is these which will make the difference between real success and superficial success.
>
> The enterprise, nominally began five years ago and really inaugurated this year on an intergal basis, is in no sense limited in time or in range. Mr Nehru describes India as a nation on the march: and there is no end to the journey of a nation on the march. This is a country of vast potential wealth. Planning, correctly understood and dynamically executed, means the transformation of this potential wealth into kinetic wealth, wealth not only in material terms, but also wealth in moral and spiritual terms. All of which means firstly a series of Five-Year Plans, and, secondly, planning on all fronts.
>
> It is true that planning, like education, must aim at bringing out the best in the nation. It has to take full note of latent talents, of inherited skills, of traditions handed down through the ages, of environmental influences and natural advantages as well as of natural disabilities. But, we should not make the mistake of thinking that an isolated India can live, thrive, and flourish. It has to live and get on with the rest of the world. It has to live and get on in conformity with the spirit of the times.
>
> What, then, is the present-day world? This is a world which has been revolutionised by technological advances. Backward though we may be, we cannot stand aloof from it. The alignment of planning to a technology-transformed world is a basic obligation. In Mr Nehru's words:
>
> It is this growth of science and technology that has enabled man to produce wealth which nobody could ever dream of. It is that which has made other countries wealthy and prosperous, and it is only through the growth of this technological process that we shall grow and become a prosperous and wealthy nation; there is no other way. Of course, there are many other things to be done, too. But I want to lay stress on this. This is basic.
>
> When a country stands, for any reason, aloof or apart from this progress in technology, its economy is static, stagnant. Such was the plight of India, say, a decade ago. The First Plan is notable for the significant change it has wrought in this static and stagnant economy. Like the nation, its economy, too, is on the march.
>
> Situated as India is, the state has to take on more responsibilities; it has to undertake more and more enterprises. Therefore, the public sector is growing and will grow. While Mr Nehru recognises the inevitability of the public sector's expansion, he urges that there need be no clash with the private sector. He reiterates his own (that is, Government's view) in these words:
>
> While I am for the public sector growing, I do not understand, or, at any rate, I do not appreciate the condemnation of the private sector. The whole philosophy lying behind this Plan is to take advantage of every possible way of growth and not by doing something which fits in some doctrinaire theory and imagine we have grown because we have satisfied some text-book maxim of a hundred years ago.

Holding this view about the co-existence of State enterprise and free enterprise, Mr Nehru has no simple faith in nationalisaton being a magical cure for all economic ills. The impression continues to prevail in certain quarters that this Government are wedded to nationalisation for its own sake. It is nothing of the kind, avers the Prime Minister, who sets out Government's policy unambiguously:

> I believe that the means of production will be owned by the nation; I believe that ultimately all the principal means of production will be owned by the nation, but I just do not see why I should do something today which fixes my progress, my increasing production, simply to satisfy some theoretical urge. I have no doubt that at the present stage in India the private sector has a very important task to fulfil provided always that it works within the confines laid down, provided always that it does not lead to the creation of monopolies and the other evils that the accumulation of wealth gives rise to. I think we have enough power in our laws, in our rules etc., to keep the private sector in check. We are not afraid of nationalising anything. The House knows that even during the last few months we have taken some big steps. Only just a little while ago, the House was dealing with the Bill concerning insurance. These are all big, mighty steps that we have taken and we are not afraid of taking them, but we do not propose to take any such step merely to nationalise, unless we think it is profitable to the nation. On the other hand, we will much rather build up national industries, new ones, rather than pay compensation to all and sometimes rather decrepit industries in order to take charge of them. Why should we, in this growing age, in the changing technology and changing techniques, take possession of any old technique? I must rather have the latest technique and have new factories or new plants and not an old plant unless that old plant happens to serve some strategic purpose, which is a different matter; and in that case I do it because I want to hold the strategic points in our economy. Therefore, I should like the House to appreciate that the philosophy behind this report is, the public sector and the private sector are made to co-operate within the terms and limitations of this Plan.

lines, and a fair trade has been done in fine and speciality goods for Scandinavian markets.

Meanwhile, exporters are watching with interest the entry of Pakistan into the competitive overseas markets. According to the latest reports, Pakistan has shipped to Singapore over 40,000 yards of cloth—the first consignment of a substantial quantity ever to be shipped to Malaya.

SOUTH EASTERN RLY, TENDERS.

The General Manager, South Eastern Railway, Garden Reach, Calcutta—23 invites tenders for the following:—(1) Tender No. GM5/56/221A(56) for supply of 114 Nos. Tents Kabul Pal 10'—0" by 10'—0" to DG (S & D)'s Specn: G/Tex-42D. (2) Tender No. GM6/56/1373B (56) for supply of 61,100 Nos. each of Ellis' Patent Lock Spring and Cotter Universal for wagon locking to Eastern Railway's Sketch No. 22123 Item F and 3/28 respectively.

Tender Forms are obtainable from the Controller of Stores, Garden Reach, Calcutta—23 (IB Section) on remittance of Rs. 5/- per copy (not refundable) by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach by local firms. Closing date of tender for item (1) is 21-6-56 and that for item (2) is 22-6-56 at 12 noon. Firms not on the Railway's list of approved Contractors must enclose a valid Income-tax Clearance Certificate with the Tender.

Delhi Review

North Indian Notes

A Dangerous Pattern

The strike of railway-men in Kharagpur had not exposed its worst features when the Railway Minister expressed his feeling that the strike was possibly taking a dangerous pattern. Since then, the strikers have been behaving more irresponsibly. A train carrying employees of the railway workshop and stopping at a passenger halt was attacked by the strikers, who after man-handling the driver and his associates, gave the engine a fresh start and left it to seek its own destination. The train before coming to a stop dragged the first bogie off the track, injuring nearly sixty people thereby. At another place a crowd of women armed with brooms and stones joined the strikers to punish loyal employees. The parade of troops in the town seems to have assisted the subsequent improvement in the situation. The last of the strike which commenced on a frivolous pretext has yet to be heard. Enough mischief has already been done. Without heavy police and protection, dislocation of traffic would have been more extensive and the loss to railway property heavier. Viewed in retrospect, it appears that if the Government had intervened more promptly and more effectively, whether with an offer of conciliation or with a show of strength, the strikers might have retracted earlier. When the railway Minister himself is admittedly upset, public concern is understandable. It is not only in the railways but in many other essential services that labour is being controlled by groups unfriendly to the ruling party. The implications of this fact are not pleasant. If a crisis like the one which took place in Kharagpur were permitted to recur frequently, irreparable damage would be done to Government prestige. It would be worthwhile for the Government to explore the possibility of an understanding with the union leaders under which frivolous stoppages of work could be regarded as anti-national and dealt with on that basis.

*

State Trading

The State Trading Corporation of India, coming in the garb of a "private" limited company, has provoked misgivings in the minds of the private sector even before the institution is a day old. The Government have left the Corporation's sphere of activities conveniently undefined; its memorandum describes the aims as "to organise and effect exports from and imports into India of all such goods and commodities as the company may from time to time determine and to purchase, sell and export or do general trade in such goods and commodities in India or anywhere else in the world and to do all such other things as are incidental or conducive to the said objectives".

The wording, in its literal interpretation, does offer an extensive and limitless scope for the Corporation. It is, perhaps, for this reason that the representatives of the private sector in the Import Advisory Council which met at New Delhi on May 19, sought from the Government a clarification of the limits beyond which the Corporation would not encroach on the domain enjoyed by the private trader. One of the Council members pointed to the example of Japan, Britain and France which did have trading connections with Communist countries but were content to carry on trade through the normal channels at any rate without the assistance of a State Trading Corporation. Another member wanted a demarcation of spheres for imports between the two sectors, just as the Industrial Policy Resolution has done in respect of production.

It is unlikely that the Government would commit themselves to even a tentative definition of spheres; if they do, they will be going against the spirit of the memorandum which leaves the Corporation's scope of activities extensively flexible and to be adjusted according to requirements from time to time. In practice, however, some understanding must evolve and the private sector must be made to feel that it is not exposed to incessant and whimsical encroachments; perhaps, it is better

NORTH INDIAN MARKETS

Mixed Trend in Foodgrains Prices

THE Government of India have agreed to enter into a five-year arrangement with the Burmese Government for the purchase of two million tons of Rice from Burma. The purchase will be spread over a period of five years commencing from June 1, 1956. But this deal has failed to have any significant effect on the Rice market as the traders rule out the possibility of these supplies being much cheaper than the prevailing rates. It is pointed out that Burma rice may not be sold in the country at much less than Rs 19 per Bengal maund on the basis of the Government's purchase price of £34 per ton and transport and handling charges of about £3 per ton. The equivalent Indian coarse varieties, sold at present between Rs 18-0 and Rs 18-8 per Bengal maund, are, therefore, not expected to be adversely affected by imports unless the Government sells Burma rice as a loss.

As far as wheat is concerned, prices continue to rule firm with average quality quoting Rs 13-10 and farm quality at Rs 15-2 per maund in the Hapur market. The prevailing high price is mainly attributed to large-scale wheat being exported from Ferozepore district o other States.

Gram recorded a firm trend on the Punjab and Madras advices. local quality being quoted at Rs 10½ and the Punjab quality at Rs 11-2 per maund. Barley and Behar recorded fractional gains to Rs 9-14 and Rs 9-12 per maund respectively. Peas dara quality was quoted at Rs 11 and the white variety at Rs 12-8 per maund. Other Pulses recorded small gains, Urad quoting Rs 17 to Rs 18-12 and Moong Rs 14-12 per maund.

In the Delhi market, prices developed a rising tendency. The only exception was Rice which registered a fall of Rs 2 to Rs 3 per maund due to increased arrivals against slackened offtake. Wheat prices showed gains of about As 8 per maund following small supply against increased buying activity. Jowar and Bajra improved by about Re 1 to Rs 2 per maund on reports of meagre stocks.

In the Bombay market, the rice deal failed to have any significant effect on the trend of prices. In fact, prices of Burma rice moved up further by Rs 5 per candy to Rs 180 on good demand, while several Indian varieties also gained Rs 2 Rs 4 per candy.

The announcement, that the Government had bought 3 lakhs tons of Wheat from the US and they were negotiating purchases of another 3 lakhs tons, did little to affect trading in this grain. There was a general inclination on the part of traders to wait for better rates in view of the continued strength displayed by the Punjab. Pissi quality May delivery was quoted at Rs 15-2.

Business in coarse grains was dull with retailers inclined to buy only their immediate requirements. Supplies of Jowar and Bajra of good qualities, however, continued to be tight due to smaller arrivals. Jowar Sholapur quality was quoted at Rs 135 to Rs 148 per candy, while Bajra Uttar Pradesh quality was quoted at Rs 130 to Rs 150 per candy.

According to the official figures released this week, the all-India final estimate of Jowar for 1955-56 puts the current year's production at 6,940,000 tons as against the partially revised estimate of 9,093,000 tons for 1954-55. The present estimate shows a decrease of 2,153,000 tons in production.

The all-India second estimate of Gram for 1955-56 puts the current year's production at 4,702,000 tons as against the adjusted second estimate of 4,535,000 tons for 1954-55, showing an increase of 167,000 tons in production.

*

After ruling dull for the past several weeks, Sugar markets displayed active conditions during the week under review. Demand was better, and mill-delivery rates also recorded slight gains, Jaswant being quoted at Rs 27-15; Simbhauli at Rs 28-2; Mowana at Rs 27-14; Daurala at Rs 29-0; Amroha at Rs 27-8; Bijnore at Rs 27-8; Mansoorpur at Rs 29 and Rampur at Rs 30-8 (all per maund).

In connection with the allotment of indigenous sugar to the trade from the sugar factories in 1954-55, the Government of India have decided to allow a refund of the difference between the original issue price of sugar and the reduced prices which came into force on May 15 and June 16, 1954. August August 31, 1955 was fixed as the last date for receiving claims on that account from the allotees. In response to the large number of representations received then, the Government have now decided to extend this date to July 31, 1956 after which no claims will be entertained.

*

In the Hapur, the Gur market ruled quietly steady following better loading facilities to Gujerat, the offtake to that centre aggregating 12 wagons during the past week. Rates moved narrowly between Rs 10-4 and Rs 10-8 per maund.

Arrivals of Gur at Hapur, from stocks retained by producers, averaged 150 maunds daily. Stocks were estimated around 90,000 maunds.

In the Delhi market, Gur rates showed no important changes over the previous week.

At Kanpur, gur futures ruled steady on short-covering by Delhi and local operators. The rate for Falgun delivery, after opening at Rs 9-15, finished at Rs 10-1-6 per maund.

Madras Review

The Peninsula

Sarvodaya Sammelan

THE Buddha Jayanti and the Sarvodaya Sammelan have nearly coincided. For one, who is inclined to respond to the somewhat non-material significance of these two events, identical strands of ideas could be discerned from both. President Rajendra Prasad opened the Buddha Jayanti Exhibition at the museum theatre in the City. In the course of his address, the President tried to recapture certain forgotten aspects of India's history. He recalled how our whole history, tradition and culture bore witness to the fact that we have never relied upon mere physical force.

India never led a conquering army to another country. The spread of Buddhism in the continent of Asia was a great triumph of peaceful and non-violent methods. There was no physical force at all behind the expansion of Buddhism outside India. The President pointed out that this was the message India could offer to the world at any time. Unfortunately, he said that there had been a fall in standards and that was why the nation could not bring the full impact of its spiritualistic message, on a materialistic world. He hoped that we would regain the unsullied status of the past and again be able to spread the message of peace in an effective manner.

In this respect he saw a special mission for India in an age harrassed by militarism and such devastating weapons as the hydrogen bomb. The world was bound to come back to spiritual values, recoiling from the materialistic concept which dominated life. A reawakening is already being witnessed; and the Buddha Jayanti acquires a special significance from that point of view.

Dr Rajendra Prasad also explained how the fundamental teachings of Buddhism were not alien to Hinduism. As for instance, importance attached to life, to the control of the senses, to renunciation and yama and niyama. It is for this reason that Hinduism could claim Buddhism as part of itself and to look upon Buddhists as in no way different from the Hindus—a sentiment which he wanted the Buddhists to reciprocate.

When one moved to the Sarvodaya Sammelan which opened at Kanchi one seemed to imbibe an almost identical atmosphere, a mood in which the materialistic world looked puny and unimportant. The elders assembled at the Sammelan were people who accepted simple living and high thinking as a matter of unquestioned faith and practice. Apart from Vinoba Bhave there were Mr C. Rajagopalachari, Mr Sankar Rao Deo, Sardar Vedaratnam Pillai, Dr Sushil Nayar, a bunch of personalities who were the living symbols of an active unostentatious and dedicated life.

Mr C. Rajagopalachari delivered a touching and passionate address; this time it was a narrative of one disappointment after another. Turning to the present state of public life in India, particularly in the South, he was pained to say that atheism was being preached with vehemence by a section of the people, that there was a craze for extravagance and pomp which impelled individuals to live beyond their means, and often undermined their virtues, and led to a general deterioration in moral standards. He took the Government also to task for incurring a vast expenditure on defence, which in turn was a sign of the absence of national courage. C. Rajagopalachari pleaded for reduction of army expenditure, and for an attitude of indifference to such circumstances as American military aid to Pakistan, to balance which the Government of India were also inflating their defence bill.

He hoped that Acharya Vinoba Bhave would start a campaign against extravagance in the country. He interpreted his visit to Kanchi as a move of liberation to wipe off atheism, now sweeping over parts of South India. The Acharya endorsed whole-heartedly C.R's plea for reduction in defence expenditure. It is well-known that the Acharya does not approve careless spending of any sort.

On the subject of atheism, however, the two leaders chose to look at it from different angles. The Acharya felt that the existence of atheists was not anything to worry about; such men have existed during other periods of history and in other parts of the world. He said that there was no reason to think that though these people were not inclined to believe in God, God had forsaken them. Ultimately, it was a person's deeds that mattered, one could do good acts, his faith in god is comparatively unimportant. According to the Acharya those who claimed right to property, when God alone could claim ownership of anything in this world, were the real enemies of God.

Appasahib Patwardhan, who presided over the Sammelan, envisaged an extension of the Bhoodan movement into such spheres as the promotion of rural industries, the stimulation of co-operative self help in different branches of life, particularly in rural areas, and the establishment of Gram Rajya with all its ramifications.

Nearly eight thousand delegates from all over the country participated in the Sammelan, the largest contingent numbering 1029 drawn from Tamil Nad itself; the next biggest quota came from Bihar; the State sent 900 delegates. There were a few visitors from foreign countries, who were already in Gandhi Gram to study social education and labour welfare programmes.

✱

WORLD OVERSEAS

(Continued from page 1006)

April exports included a higher proportion of metal and engineering products. Iron and steel shipments were particularly high, and aircraft were exported at nearly double the monthly rate of 1955.

Re-exports at £13,700,000 maintained the high level of the first quarter, and have run so far this year at over one-third above their average level in 1955. Shipments of rubber, which fell off in March, increased again to over £4,500,000, but this was offset by the seasonal drop in trade in furskins.

Food imports as a whole were rather lower in April, but imports of industrial materials, which were relatively lower in the first quarter, rose. Imports of meat and dairy produce fell sharply, but fruits and vegetables again rose with the further heavy increase in potato imports. There was a further rise in imports of steel.

In comparison with the first quarter, trade with the non-sterling world in April moved in an opposite direction from sterling trade. Imports from the non-sterling area were below the January-March level, while exports rose and the visible trade deficit declined. The reverse was true of the Sterling Area.

CALCUTTA STOCK EXCHANGE

Official Year Book 1956

An encyclopaedic work of reference for Businessmen and Investors

(More Comprehensive than others)

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

The information given about each Company relates to its date of registration, nature of business carried on, managing agents and their remuneration, Directors and their share qualification, details of capital and shares, capital history, share registration fee, name of Auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to Reserves, net profit, amount carried forward, dividends, highest and lowest prices etc. for ten periods.

CONTENTS: A Review of 1955; Statistics of Second Plan, Investment of Trust Money; Approved Investments; Attestation of Lady's Signature; Income Tax & Stamp Duty, Estate Duty Act & Rates, List of Liquidated Companies (1939 55); Preference Dividends in Arrears; Rights of Preference Shareholders; Stock Exchange Committee; Stock Exchange Members; Stock Exchange Holidays; Stock Exchange Rules; Central and State Government Loans; Municipal & Port Trust Loans; Banks & Railways; Tea Companies—Rupee & Sterling; Malayan Rubber Companies; Cotton Mills; Coal Companies; Jute Mill Companies; Mining & Engineering Companies; Sugar & Electric Companies; Insurance Companies; Miscellaneous Companies; Interest Table; Exchange Calculator. Price Rs. 12/8/- Postage Rs. 1/13/- extra.

South Indian Notes

Tiruchirapalli

Last week in Tiruchirapalli Mr O. V. Alagesan Union Deputy Minister for Railways laid the foundation stone for a second bridge across the Cauvery, further down than the exising railway bridge. This bridge is intended to facilitate the transport of heavier vehicles by-passing Tiruchirapalli and the bridge forms an important item in the development of National Highways programme in the South. Under the First Five-Year Plan similar by-passing bridges were started across Palar in North Arcot Pennar in Villupuram and Vaigai in Madura Districts. A bridge across the Cauvery near Pugalur under the Second Plan a sum of Rs 4 crores is allotted to the National Highways programme in Madras State. The amount includes a cost of schemes which hang over from the First Plan Period.

Among the new schemes proposed were the reconstruction of the Gadilam bridge on Madras-Tiruchirapalli-Dindigul Road and the construction of a road bridge across the Pamban channel, the widening of the Madras-Bangalore and Madras-Tiruchirapalli roads to make them suitable for two lane traffic.

Under the Central Aid Programme for the development of inter-State roads or roads of economic importance, 54 miles of existing roads in the State of Madras had been improved in the First Plan period.

On the West Coast road, construction of bridges over the Nileswar, Perumbai, Puchumugar, Kariangode Kuppam, and Kubja rivers and the improvement of about 20 miles of existing roads were in progress. Under the Central Aid schemes for roads of inter-State or economic importance the Government of India had sanctioned the construction of bridges across the Pavajim Julki and Udayavar rivers on the Cuddalore-Chittor road. Work is also in progress on the construction of about 56 miles of new roads and the improvement of about 70 miles of existing roads under the same programme.

It will be recalled that since the commencement of the financial year 1947-48 the development and maintenance of highways in States has been under the charge of the Government of India. These highways for which the Centre is responsible are provisionally accepted by the States as national Highways.

BALMER LAWRIE & COMPANY LIMITED.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 10% for the year ended 31st December, 1955.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
O. T. JENKINS,
Director.

21, Netaji Subhas Road,
Calcutta, 23rd May, 1956.

✱

Synthetic Food Products

When the nutritional experiments conducted in the Coonoor Laboratories pass through the final stage, one of the greatest national maladies will have secured at least a partial solution. In Madras, protein mal-nutrition is common among children, mostly after breast-feeding is stopped. Experts at Coonoor are experimenting with a synthetic protein food which will do duty for skimmed milk powder, now generally being given to the babies at the post-lactation stage.

Skimmed milk powder being costly and not yet manufactured in India on a large scale, the new experiment will offer a cheap and at the same time equally effective substitute. It is made of roasted Bengal gram powder, a little of skimmed milk powder and jaggery. Fairly extensive trials on children suffering from mal-nutrition have demonstrated the usefulness of this product. A larger pilot experiment is now proposed with the help of funds supplied by the World Health Organisation.

Vitamin A is another common deficiency, frequently leading to blindness among children. The Laboratories are doing propaganda through the Public Health Board of the State for the consumption of foods rich in Vitamin A content. Similar work is being done in the Central Food Research Institute at Bangalore on a more extensive scale. It is hoped that once the synthetic food products get popularised, the problem of nutritional deficiencies will be largely got under control.

✱

The Hyd'bad Strike

When resort to strikes has become the vogue, railway firemen at Kayipet can hardly fail to avail of this advantage. The firemen's strike is based on a grievance, the gravity of which has made itself felt in the Lok Saba. That it is reasonable has been attested to by the General Manager. At this stage it has only met with his whole-hearted sympathy. Whether their demand, among other things, for stoppage of direct recruitment of the majority of firemen to class B and the payment of acting allowances to class C category would be met with is still a matter of discussion.

Provision for the recruitment of 80 per cent of class B firemen has been the bone of contention among the marginal workers awaiting promotion. In the circumstances a quicker decision is called for. Transportation of coal from Singarani mines has been affected and shortage of coal in industrial centres is feared. Inconvenience to trade has been considerable. In view of the possible acuteness, an equitable percentage of say fifty-fifty could be the solution, so far as concerns the promotion to and recruitment of class B firemen.

SOUTH INDIAN MARKETS

Rubber Statistics

ACCORDING to the figures released by the Indian Rubber Board, the working of the Rubber industry has shown an all-round improvement in April 1956 as compared with the previous month. While production has risen from 1,279 tons in March to 1,826 tons, consumption has also improved from 2,341 to 2,402 tons. Stocks at the end of April has shown an increase of 202 tons at 5,276 tons. Out of the total stocks, 2,934 tons were with the estates and dealers, and 2,342 tons were held by the manufacturers.

The estimated gap between indigenous production and requirement of the manufacturing industry, during the current year, is over 8,000 tons, while the Import/Export Committee of the Rubber Board has decided to recommend the import of 3,600 tons for the first six months of the current year.

The Government of India have approved, with some modification, the replanting scheme submitted by the Rubber Board. The implementation of the scheme will be started next year and this will be subsidised by the Government.

✱

Coffee planters are of the opinion that the current 1955-56 season does not hold out brighter prospects, the crop having already exceeded the original estimate. The quantity received up to the middle of April was 31,286 tons as against the Coffee Board's estimate in June last of 26,800 tons. Stocks, as on April 15, amounted to 26,680 tons —26,537 tons of the current crop and 143 tons of the 1954-55 crop. With internal sales in the second half of April having been only 371 tons, a supply of over 26,000 tons is now available. The following figures show the tremendous build-up in the initial months of the season and the strain on storage and finance (figures in tons):—

As on	Stocks
15th January, 1956 ..	10,094
31st January, 1956 ..	13,388
15th February, 1956 ..	17,541
29th February, 1956 ..	20,363
15th March, 1956 ..	24,318
31st March, 1956 ..	26,473
15th April, 1956 ..	26,970

According to the Coffee Board, internal consumption, during the eight months to December 1956 when the new crop arrivals will commence, will require 15,900 tons. Taking into account the balance, of 2,950 tons out of the quota of 4,100 tons sanctioned by the Government for export, a surplus of 7,459 tons will be left. Of this, 5,400 tons have been earmarked for carry-over to 1957, leaving an exportable surplus of 2,050 tons.

It may not be out of place to mention here that, when a record quantity of 29,410 tons was produced in 1953-54 and consumption was only 21,000 tons, the Government allowed export of as much as 9,400 tons. But the actual permission for exports was given so late that the country lost some of the traditional markets abroad and substantial quantities of Arabica variety had to be sold much below the basic price.

Meanwhile, in the Pool auction held at Bellary last week, a total quantity of 540 cwts were exposed for sale and 438 cwts were sold. Forty-four bidders participated in the auction, while 43 were successful. Following were the prices (per cwt) realised:—Plantation PB Rs 229-2 to Rs 236-14; Plantation "A" Rs 212-8 to Rs 216-8; Arabica Cherry Rs 189-2 to Rs 190; Robusta PB Rs 161-8 to Rs 163-6 and Robusta Flats Rs 155-3 to Rs 158-3.

✱

The Groundnut market in Madras ruled slightly easier, as buyers were showing interest only for small quantities. The rate for superior oil-quality seeds declined from Rs 166 to Rs 163 per candy, while the bold variety was quoted at around Rs 157 per candy.

Arrivals averaged 30 to 40 tons a day. Arrivals of the new sum-

Stock Exchanges

IRREGULAR TREND IN PRICES

Watch-Dog Writes:

ACTIVITY in stock markets, during the week, has generally been restricted and price movements have been irregular with profit-taking at higher levels and scattered support at declines. With the approach of the AICC session, professional operators as well as investors are generally cautious in following the sharp rise in prices and are inclined to book profits on the feeling that the yield on most of the scrips is not attractive around the present high levels.

In contrast to last week, trading on the Calcutta Stock Exchange was somewhat limited with prices showing an irregular tendency.

Generally listless conditions prevailed on the Bombay Stock Exchange where dealings were thin in the absence of any fresh influence.

The Madras Stock Exchange was fairly active, and attention was mostly directed to Planting and Textile sections.

Conditions on the London Stock Exchange remained generally dull due to lack of support.

Wall Street closed firm with the entire list holding around the week's best levels.

*

Calcutta

TRADING on the local Stock Exchange was generally dull during the past week when prices, except for a few selected scrips in the Engineering and Miscellaneous sections, developed a slightly easier tendency due to profit-taking at the recent high levels. Apart from settlement adjustments, there was a general lack of initiative in the market, while investment enquiry had also been small. The closing, on balance, disclosed a moderate recession all round.

Despite tight money conditions, conditions in the Giltedged market ruled remarkably steadier, thanks to sellers' reserved attitude. There were small buyers in short and medium-dated loans. 3 per cent 1986 Conversion Loan, after touching a low of Rs 77-0 and a high of Rs 77-11, finished the week at Rs 77-10. Among other Loans, 3 per cent 1959/61 changed hands at 98-1-6 and 4 per cent 1960/70 at Rs 101-3.

Bank shares ruled quietly steady with United Commercial changing hands at Rs 50-8 to Rs 50-12 and Punjab National at Rs 52-8 to Rs 53-0. United Bank of India were steady at Rs 4-10.

Sentiment in the Jute section, after remaining depressed earlier in the week following the uncertain conditions prevailing in the jute goods market, turned a shade better toward the close on reports that the Government had a proposal to control the internal selling prices of jute goods. Howrah improved at one time to Rs 24-1 from Rs 23-12 and Reliance to Rs 11-14 from Rs 11-11, to finish at Rs 23-15 and Rs 11-6 respectively. National changed hands at Rs 25-6 to Rs 25-10; Ganges at Rs 71-8 to Rs 73-8; Chitavalsah at Rs 15-1 to Rs 15-4 and Delta at Rs 210 to Rs 214. Anglo-India, after touching a high of Rs 186, receded at the close to Rs 182 with Belvedere ruling steady at Rs 184.

The announcement of the recommendations made by the All-India (Colliery Disputes) Tribunal had adversely affected sentiment in the Coal section where prices were sharply marked down. The decline in Burrakur was more pronounced, mainly due to rumours that the company had undertaken the liabilities of the Standard Coal Company following amalgamation. The scrip, which had been ruling steady at Rs 14-3 for the past few weeks, was quoted down to Rs 12-10, finishing the week better at Rs 12-13. Bengal lost six points at Rs 539, while East Indian were marked back to Rs 32-4 from Rs 33 and Equitable to Rs 30-4 from Rs 30-8.

Textiles were a steady feature on better advices from the cloth and piecegoods markets. Kesoram had buyers upto Rs 18-5 from Rs 18-1; Jayshree upto Rs 7-2 from Rs 6-14 and Bowreah upto Rs 163 from Rs 158. New Victoria were, however, unchanged at Rs 2-8.

Sugar shares, which had been ruling dull for the past few weeks, turned better following better advices from the commodity market. Carew were taken upto Rs 8-12 from Rs 8-9; Cawnpore upto Rs 20-1 from Rs 19-11 and SKG upto Rs 13-11 from Rs 13-6. Darbhanga were nearly maintained at Rs 22-14 with New India being enquired at Rs 33-0.

The Tea section continued to record moderate business as operators were generally awaiting the results of the first sale of the New Season's teas. Baghmari changed hands at Rs 29-5 to Rs 29-8; Dhelakhat at Rs 21-6 to Rs 21-8; Hasimara at Rs 39-8 to Rs 40-4; Hantapara at Rs 226 and Tezpore at Rs 26-4 to Rs 26-12.

In the Miscellaneous section, prices, after developing a firmer tendency in mid-week, eased off again toward the close due to profit-taking. Orient Paper touched a new high of Rs 40-7 from Rs 39-6, to finish the week at Rs 38-13. Titaghur and India Pulp, however, ruled firm having buyers upto Rs 44-12 and Rs 25-12 respectively. Shree Gopal were maintained at Rs 18-13 with Bengal quoting around Rs 121.

In Minings, Indian Copper were rather quiet at Rs 6-11, pending the announcement of the final dividend. Orissa Minerals changed hands at Rs 23-12 to Rs 24-4, while Karanpura Development were maintained at Rs 26-0.

In Oils, BBP moved narrowly around Rs 4-1, while IBP had support upto Rs 42 from Rs 41-8.

Among other scrips, Indian Cable were pushed up at one time to Rs 36-10 from a low of Rs 33-6 on renewed investment buying, to ease off at the close to Rs 35-10. Dunlop Rubber met with good support upto Rs 30-12 from Rs 30-6; India Steamship upto Rs 9-11 from Rs 9-2; Rohtas upto Rs 25 from Rs 24-4, to finish the week at Rs 30-8; Rs 9-5 and Rs 25 respectively. BIC were sticky at Rs 11-2, while National Carbon changed hands at Rs 27-3 to Rs 27-8; Martin Burns at Rs 25-2 to Rs 25-8 and Metal Box at Rs 27-5 to Rs 27-12.

*

Bombay

Bombay, May 30

ACTIVITY on the Bombay Stock Exchange, during the past week, was generally restricted. Price fluctuations were irregular due to alternate bouts of buying and selling. Some operators took a bearish view of the likely policy to be pursued by the Stock Exchange authorities regarding the transition in Tata Steel shares from cum-right to ex-right basis. Moreover, they were disinclined to extend their support to most of the speculative scrips on the feeling that the yield was not attractive around the present high level of prices. A few selected scrips, however, attracted wider attention and

THE UNITED INDUSTRIAL BANK, LIMITED, BALANCE SHEET—(*Contd.*)

AUDITORS' REPORT TO THE SHAREHOLDERS:

We report that we have examined the foregoing Balance Sheet of the United Industrial Bank, Ltd. as at 31st December, 1955, and the Profit & Loss Account for the year ended on that date, in which are incorporated the certified returns from the Bank's Branches. (1) We have obtained all the information and explanations we have required and have found them to be satisfactory. (2) The transactions of the Bank which have come to our notice have been within the powers of the Bank. (3) The returns received from Branch offices of the Bank have been found adequate for the purposes of our audit. (4) In our opinion such Balance Sheet and Profit & Loss Account are drawn up in conformity with the law. (5) The Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank and the Profit & Loss Account shows a true balance of loss for the period covered by such account. (6) In our opinion books of account have been kept by the Bank as required by law.

recorded moderate gains on balance due to dividend and other considerations.

Textiles:—Buying interest in this section was selective to the extent that it was concentrated upon very few issues only. In general, sentiment remained rather affected by the ideas that the prevailing high cotton prices would wipe out the increased gains which the mills would derive from increased exports following the abolition of the export duty on coatrse cloth.

Bombay Dyeing, after opening at Rs 661-0, gradually receded toward the close to Rs 647-8. Kohinoor moved within a narrow range of Rs 3, to quote at Rs 371-8. Century, after touching a low of Rs 549, finished better at Rs 554. Similarly, Simplex, after being marked up to Rs 221-8 from Rs 218, closed steady at Rs 219-8 on dividend prospects. India United Ordinaries and Deferreds were in good demand up to Rs 13-6-6 and Rs 2-5-3 respectively following increased dividends. Central Inda were done at Rs 138-8 to Rs 139-8; Svadeshi at Rs 228-0 to Rs 228-8; Gokak at Rs 230-8 to Rs 231-0 and Tata Mills at Rs 52-8 to Rs 53-8.

Hydro-electrics:—Prices in this section staged a minor recovery in the absence of any selling pressure. Tata Power changed hands at Rs 1,307 to Rs 1,308-12 and Ahmedabad at Rs 97-3 to Rs 97-8. Andhra Valley and Tata Hydro were well maintained at Rs 1,205 and Rs 131-8 respectively.

Steels:—This section showed marked irregularity and activity fell off appreciably, mainly due to considerable weariness on the part of professional operators following the uncertain outlook for ex-right prices for Tata Steels. There is still considerable confusion over this issue and it is expected that it will take some more for the operators to get adjusted to the full implications of the transition.

Meanwhile, Tata Steels, after opening steady at Rs 251-12, receded at one time to Rs 247-8 due to heavy selling pressure. A modest recovery lifted the rate to Rs 249-4 at the close. Similarly, Indian Irons, after touching a low of Rs 37-5 from Rs 37-13, finished better at Rs 37-8.

Miscellaneous:—Although prices in this section followed the general trend of the market, a few selected scrips continued to receive good support and emerged with minor gains on balance. Amongst these might be mentioned Tata Oils which were easily absorbed upto Rs 52-8 from Rs 49-12 on favourable indications regarding profits. Scindia Steams were another feature, having sustained support up to Rs 18-6 from Rs 18-3 on expectation of better results for 1955-56 in view of the increase in coastal freight rates. Shivrajpur Syndicate were better at Rs 101 on hopes that the contemplated bonus share issue scheme might be put through.

Cement shares developed a slightly easier tendency due to profit-taking at recent high levels, ACC closing at Rs 216-4 as against Rs 218-0 in the previous week and Digvijay at Rs 189-12 against Rs 193-0.

Changes were small in the Sugar section, thanks to better advices from the commodity market. Belapur changed hands at Rs 230-8 to Rs 231-8 and Phalton at Rs 148-8 to Rs 150-8.

Automobile shares were marked down slightly on lack of support. Hindustan Motors were pressed down to Rs 9-4 from Rs 9-14 following the proposal to issue convertible Preference Shares, while Premier Automobile were rather sticky at Rs 91.

Engineering shares evoked fair enquiry, though higher levels could not be retained till the close due to profit-taking. Alcock were taken up to Rs 352-8 from Rs 350 on expectation of good results, while Premier Construction relapsed to Rs 176-12 from Rs 179-0. Tata Locomotive were a shade better at Rs 153-12 against Rs 152-12.

Among other scrips, National Rayon ruled quiet at Rs 244 on lack of interest. Bombay Burmah, after touching a low of Rs 528-12, finished better at Rs 635. Tata Chemicals were a steady feature at Rs 18-2.

*

Madras

Madras, May 29.

THE local Stock Exchange was fairly active during the past week. Planting issues displayed a mixed trend, while Textiles gave an encouraging performance. Business in other counters was rather restricted.

Textiles:—Selected scrips in this section attracted the attention of the investors. The most outstand-

ORIENT PAPER MILLS LIMITED

NOTICE is hereby given that an Extra-ordinary General Meeting of the above-named Company will be held on Friday, the 29th June, 1956 at 3 P.M. at 8, Royal Exchange Place, Calcutta, to consider and, if thought fit, to pass, with or without modification, the following resolutions:

AS ORDINARY RESOLUTIONS:

1. RESOLVED that Messrs. Birla Brothers Private Limited, the managing agents of the company and/or their associates be and are hereby authorised to retain any commission or other remuneration earned or to be earned by such agent or associate as the managing agent, secretaries and treasurers, manager, agent or selling or buying agent of any firm, body corporate or other concern including insurance companies, in respect of the goods, power, freight, repairs or other services, for the sale, purchase, supply or rendering of which a contract has been, or is to be entered into by such firm, body or concern, including insurance companies with the company, provided the prices or amounts charged to, or received by the company are at rates which are not less favourable to the company than the market rates or which are otherwise reasonable.

2. RESOLVED that consent of the company be and is hereby given to the borrowings by the Board of Directors from time to time of all monies deemed by it to be requisite or proper, for the carrying on of the business of the company notwithstanding that the monies to be borrowed together with the monies already borrowed by the company (apart from temporary loans obtained from the company's bankers in the ordinary course of business) will exceed the aggregate of the paid up capital of the company and its free reserves, that is to say, reserves not set apart for any specific purposes.

3. RESOLVED that consent of the company be and is hereby given to the Board of Directors to contribute and/or subscribe to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the company or the welfare of its employees, from time to time, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year will exceed Rs. 25,000/- or 5% of the company's average net profits, as determined in accordance with the provision of the Companies Act, 1956 during the three financial years immediately preceding, whichever is greater.

AS SPECIAL RESOLUTIONS:

4. RESOLVED that for a period of five years from the 1st April, 1956 payment of commission upto one per cent as may, from time to time, be decided by the directors, on the net profits of the company in respect of each financial year, as determined in accordance with and subject to the provisions of the Companies Act, 1956, be and is hereby sanctioned to all the directors of the company including its managing directors and the directors in its whole time employment and that the same be distributed amongst such directors and in such manner as may, from time to time, be thought fit by them.

5. RESOLVED that the Articles of Association of the company be amended as under:

(a) The word "two" appearing after the word "exceeding" and before the words "per cent" in Article No. 117 of the Articles of Association of the company be substituted by the word "one".

6. RESOLVED that consent of the company be and is hereby accorded to Shri B. L. Nemani, A.C.A., a Chartered accountant, who is a relative of Shri A. L. Goenka, a director of the company, to hold an office or place of profit under the company and/or under any of its subsidiary companies.

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, Royal Exchange Place,
Calcutta, the 28th May, 1956.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and that a proxy need not be a member.

DALMIA CEMENT (BHARAT) LIMITED

DALMIAPURAM

NOTICE

IS HEREBY GIVEN THAT THE FOURTH ORDINARY ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT DALMIAPURAM (DIST. TIRUCHIRAPALLI) on FRIDAY the 20th July 1956 at 12 Noon to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December, 1955.
2. To declare dividend.
3. To elect Director in place of the retiring Director Shri M. Satyanarayana who retires by rotation and is eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., the retiring Auditors are eligible, for re-appointment.

STOCK EXCHANGES

(Continued from page 1018)

ing feature were Mettur Mills which forged ahead to Rs 500 from Rs 482-8 on expectation of a higher distribution. Vasantas were taken upto Rs 285: Dhanalakshmis upto Rs 370 and Asher upto Rs 180. There were, however, some sellers for Buckinghams, Cambodias and Coimbatore Pioneers at the market rates. Alagappas were quoted at Rs 10-8; Loyals at Rs 51-4 and Trichinopolys at Rs 31-12.

Plantings:—With the exception of a few Rubber shares which showed hesitant tendency, all other scrips in this section recorded good business, thanks to favourable crop reports from various estates.

In the Tea section, Coonoors were marked upto Rs 32-6 from Rs 31 12 cd., while United Nilgiris were done at Rs 25-2. Devons were higher at Rs 24-2 due to better enquiry. Peermades continued to attaract buyers at the market rate. Highlands were, however, neglected around Rs 18-14.

Among Rubber shares, Cochin Malabars were offered at Rs 9-5, while some business was reported done in Malankaras at the improved rate of Rs 33. Gokuls were done at Rs 2-10; TRTs at Rs 13-14 cd., Vaikundams at Rs 28-8 and Udayagiris at Rs 21-4.

In the Coffee section, Coffee Lands and Consolidated Coffees were active, improving to Rs 20-8 and Rs 20-6 respectively. Business was done in Ouchterlonys at Rs 5-7-6 and Mysore Coffee at Rs 2-12-6.

Miscellaneous:—There was restricted activity in this section. India Cements changed hands at Rs 36-2 to Rs 36-4; Travancores at Rs 12-15 and Andhra "B" shares at Rs 16-14 cd., FACTs moved narrowly between Rs 6-12 and Rs 6-15, while Spencer Ordinaries were firm at Rs 17-2 following the interim dividend announcement. Mettur Chemicals were enquired upto Rs 9-11; Parrys Confectionery at Rs 3-0 and Aluminium Industries at Rs 20-8.

✱

London

London, May 30.

GENERALLY dull conditions prevailed on the London Stock Exchange during the past week when fears of rising costs in industry, following the increased coal prices, were unselling influences. Although the market made a good response to the advance on Wall Street, the gains were either reduced or replaced with small losses at the close on lack of buying support.

Industrials were dull, but losses were limited to a few pence. Durham Steels made only a small response to the big Canadian Pipe Line order. Oil shares went ahead following the good quarterly statement from the Royal Dutch Shell group. Copper shares were marked lower, the fall in the metal price being a depressing influence. Rubbers remained unsettled due to the low commodity price, while Tea shares showed a mixed trend.

The behaviour of the Giltedged section was particularly disappointing, the setback in sterling being the dominating influence. Following were the closing rates of selected stocks and shares:—2½ per cent Consols £52⅝ (£53⅞—last week): 3½ per cent War Loan £71¼ (£71⅝); British Petroleum 145 (144-8); Calcutta Trams 22-9 (22-9); Calcutta Electric 19-9 (19-9); Assam Tea 19-3 (19-9); Indian Copper 1-7½ (10-0) and Imperial Chemicals 44-9 (45-3).

✱

New York

New York, May 29.

AFTER an early rallying attempt, Wall Street extended its declines in prices in mid-week following the uncertainty over the business outlook. Some quarters even felt that unless better support entered the market in the remaining days of the month, May would record one of the largest declines in the history of the market averages. A technical rally, however, developed toward the close when a revival of demand pushed up prices to new high levels.

Rails failed to attract better support despite the previous week's new 1956 high in freight loadings. Some brokers noted that, in addition to soft sports industry which promoted buying caution, reports were coming in from steel industry leaders that orders for some types of steel had slipped more than seemed likely several weeks ago. Among the leaders, Coppers were on the decline, reflecting continued pressure against the metal price. Rubbers also gave ground. Following were the closing rates:—Anaconda Copper $77⅜ ($74½—week's opening): General Motors $52⅜ ($41⅛): Ford Motors $40⅞ ($54⅛) and US Steel Common $54¼ ($53⅞).

WORLD OF TEA

(Continued from page 1005)

selling at irregular rates. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-6-6 to Rs 1-7-0; Medium Assam Grainy Dust Rs 1-8-0 and Best Assam CTC Dust Rs 2-11-0 to Rs 2-13-0 (nominal).

Also, 3,350 chests of other grades were offered. These were mostly end-of-season residue teas, which were irregularly As 2 to As 3 per pound easier. The few clean teas, on offer, were well supported and sold usually at valuations.

In the Export Quota section, the rate for Old Season's teas was quoted at 7 pies per pound and for New Season's teas at 36 pies with sellers at 41 pies.

In the Cochin market, offerings totalled just under 775,000 pounds. All teas on offer showed a further decline in quality. Fannings grades met with strong enquiry, but Brokens came to an easier market. The few best liquoring Nilgiri Brokens met with strong demand at rates which were irregular following quality, but their Fannings were sold at dearer rates. Lower high-grown and good Medium Brokens declined by As 2 to As 3 per pound, while similar Fannings were about steady. Medium and Low Medium Brokens were fully As 2 per pound easier, but similar Fannings met with strong demand at about last rates.

Black Leaf Middle East types came to an easier market, but suitable Fannings again met with keen competition at firm to dearer rates. Prices of Whole Leaf grades were easier, and the only exception were a few selected lines of Nilgiri description, which met with good support. Following were the rates quoted per pound:—Plain BP Rs 1-10-0; Low Medium BOP Rs 1-13-0; Medium BOP Rs 1-15-0; Good BOP Rs 2-6-0 to Rs 2-8-0 and well-made OP Rs 2-3-6. Sale No. "K" will be on the 31st May, 1956.

At last week's auction held in Colombo, offerings were 7,730,000 pounds. Except for light liquoring and weathery teas, there was a strong general demand and prices developed a firmer tendency. The demand for Nuwara Eliya teas was good, but prices were generally lower following a further decline in quality.

There was a good demand for high-grown teas and all teas with useful liquors, particularly colourv sorts, were very firm. Among medium-grown teas, there was good demand for all useful liquoring Brokens, and colourv sorts in particular were dearer. Much improved demand was also noticed for low-grown teas, Persian Gulf types being sold at substantially dearer rates.

The quality of New Season's teas, which will be offered on June 13, 1956 at the Chittagong market, is described as satisfactory with bright colour. In the meanwhile, outturn of tea in Pakistan is estimated at 3,000,572 pounds in April 1956 as compared to 2,000,658 pounds in the corresponding month of last year, showing an increase of over a million pounds.
