Imperial Chemical Industries Limited have received the approval of the Government of India to a project to manufacture polythene in India. The manufacture will be undertaken by the I.C.I. associate, The Alkali & Chemical Corporation of India Limited in which the Indian public has a substantial shareholding. The project will involve a total investment of about Rs. 3 crores.

Polythene was first discovered in the research laboratories of I.C.I. Ltd. in the U.K. The process to be used in India will be that developed by I.C.I. and used in the manufacture of their well-known 'ALKATHENE'. The use of this product in India has been developed by I.C.I. (India) Ltd. who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. As elsewhere, the largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

Markets Depressed

WITH the release of the production figures for February, the conditions obtaining in the jute industry and trade can be discerned with a greater degree of accuracy than would have been possible a few days ago. For, the stock figures alone do not tell the whole story. Last week we have been told that stocks of jute goods with mills at the end of February have increased to 89,700 tons as compared with 78,400 tons at the end of January. The sharp rise in a shorter month engendered some misgiving among marketmen and rates in the Calcutta goods market had been promptly marked down.

Thus, the impression created by the stock figures is that, though, as compared with January, February has disclosed a smaller increase, the position continues to be rather unsatisfactory.

Now that we know that production during February has been of the order of 92,800 tons, we are enabled to see what has actually happened in the past month. As compared with January, production has gone up by 3,900 tons. For stocks to stand at 89,700 tons, despatches should have been about 81,500 tons. This will indicate that despatches in February have been about 8,600 tons higher than actual despatches in January.

The reason for the higher production is obvious. Mills have been working with all but 5 per cent of their looms with effect from 20th February.

The stock figures, considered along with production figures, do not appear to be as depressing as they seemed at first sight. It is common knowledge that the early part of the year is usually a slack period for jute goods exports. Even so, this year February seems to have fared well as far as exports are concerned. Despatches totalled only 72,900 tons in January but from the figures available, it now can be deduced that in February despatches have been over 81,000 tons. Put differently, the past month has recorded a rise of over 8,000 tons in despatches as compared with January 1956 and over 6,000 tons as compared with the corresponding month of the previous year.

There is, however, some point in the argument that the trend that is discernible from the stock position at the end of the last two months shows not a very healthy statistical position. For, as compared with the corresponding month of 1955, stocks at the end of January this year are higher by 2,000 tons. Again as compared with February of the previous year, the stocks at the end of last month are nearly 7,000 tons higher. An important difference, however, is that in the first two months of 1956, stocks are below the respective month's production. Of the two months of January and February 1955, only the former was comfortably placed while the latter showed stocks higher than production.

The conclusion that can be derived from the study of the figures as relating to production, despatches and stocks in the last two months, is that the IJMA decision to increase production has been fully justified by the trend of despatches upto February.

In this connection, it will be of interest to note that the full effect of the IJMA decision to unseal an additional five per cent of looms is yet to be felt as mills have started working with the latest quota of unsealed looms only with effect from 20th February. Hence, in all probability, March will record a production of over 100,000 tons. Adding February-end stocks to this figure, it will be seen that the industry will be having about 189,700 tons of goods at its disposal during the month. Unless the rising trend of exports continues to manifest itself at an even steeper rate, the current month will end with a substantial addition to the previous month's stock level.

It may be recalled that last year the first four months had witnessed accumulation of goods in mills godowns and in April stocks stood at 103,400 tons. Relief, however, came from May and the downward trend in stocks was well pronounced from June with stocks touching a new low for the past four years in October.

Such depletion of stocks is one of the main reasons for the IJMA's consideration of the question of increasing production. Thanks to Pakistan's jute policy since the devaluation of its rupee in August last, Indian jute goods have been enjoying greater popularity among foreign customers.

In so far as the Indian mills are concerned, the advantages to be gained from the increased offtake have been largely offset by high raw jute prices. Though they have been selling more, their profit margin has been reduced to such an extent as to render it completely invisible in recent months.

For the past fortnight, there has been hardly any sign of improvement in the rate of offtake by foreign countries except for some enquiries for heavy goods from Australia and Burma. The much-talked about Russian business seems to be still eluding the grasp of marketmen in Calcutta.

It may not be wrong to say that if by some chance the Russian business fails to materialise, the Calcutta jute goods market will be confronted once again with the problem of rising stocks in mill godowns.

The welcome development of a declining tendency in raw jute prices, noticeable in the past two days, if it gets further strengthened, may still bring about a radi-

World of Tea

Improvement in Market Sentiment

A generally better feeling has come to pervade the Tea markets; and this has been reflected at the auctions during the past two weeks. Moreover, the complete withdrawal of restrictions on shipment of teas for London auctions for the current season is a very good gesture to India's largest and most important consumer—the UK—though it came too late in the season to be of any great advantage.

The complete withdrawal of restrictions on shipments is expected to relieve the congestion in the Calcutta warehouses and to assure faster movement of teas, making possible a somewhat earlier close of the Calcutta auctions. To this extent, it is also likely to help in the clearance of unsold stocks before the new season's teas begin to arrive on the market in any quantity, thereby providing the 1956 season with an opportunity to open on a stronger note.

For obvious reasons, demand has improved at both the export and internal sales; and price rises in some grades, such as the best CTC Assams, have been quite extraordinary. Enquiry from foreign buyers, after remaining subdued for some weeks past, has now broadened. Although the exact figure of additional quantities, which will now be released for the UK market is not yet available, it is expected to be in the neighbourhood of 30 million pounds.

Again, the reduction in the export duty from As 8 to As 6 per pound for the price slab between Rs 3-4 and Rs 4 has not offered any immediate relief to the producers of Common and Low Medium teas which, for several months past, have been quoting below the cost of production; because the average price in London for good quality tea—the basis for fixing duty—was computed at Rs 2-11-4 per pound. It is, therefore, learnt that the Government of India are now considering to make a change in the basis on which the world price of tea is determined.

The present arrangement, which only takes into account average price realised in the London auctions, is regarded as highly unsatisfactory; because it has at times adversely affected the exports from this country. Tea circles, therefore, hope that an early decision will be taken by the Government to determine tea prices on the basis of the combined average of prices obtained in London, Calcutta and Cochin sales.

According to the monthly report, issued by Messrs J. Thomas & Company, well-known tea brokers, a shortage of better quality teas, especially teas of CTC manufacture, will be felt on the Calcutta market and these types should appreciate in value, while the existing gap in the price of such teas between the Calcutta and London markets should be narrowed down in the coming months. The report adds, that deliveries in the UK have been well sustained and are in line with the fairly high sales figure of 1954 and 1955 and it appears that the UK, if only to keep pace with its sale and deliveries, will absorb any additional quantities now coming forward and may even supplement its requirements on a small scale by operating on the Calcutta market for selected teas suitable for its requirements.

The report concludes by stating that the larger internal blenders have been operating regularly for the past few weeks and it is mainly by their efforts that the market has been prevented from falling lower than has been the case. There are now, however, indications that the smaller internal buyers are realising that, with the increased amount of tea which has been shipped for direct sale to London, there may only be just enough available to carry them through to August, which is the earliest any quantity of new season's tea can be expected on this market. It, therefore, seems likely that, which the UK buyers and other outmarkets operating in perhaps a limited fashion, and India's internal blenders and dealers continuing to puchase large quantities, the market will now start to rise and rather higher prices may be realised from now until the offerings of 1955-56 crop have been sold.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 52,000 packages for which there was a very strong and general demand. Whole Leaf grades, Brown Dooars and fibrous CTC sorts remained about steady; but all other sorts were As 2 to As 4 per pound dearer.

Teas with bright and autumnal liquors were keenly competed for and sold well above valuations. Stylish BPS grades were also a strong feature. Darjeelings were irregular, but any flavoury teas shared in the general rise. Following rates were quoted (per pound): Clean Black Pekoe Rs 1-14-6; Plain Bp Rs 1-8; Medium Assam BP Rs 1-9-6 and Best CTC Assam BP (not quotable).

Offerings in the Internal Sale consisted of 18,700 packages of Dusts for which there was a very strong and general demand. Teas with improved cup quality were a very strong feature of the sale and were As 2 to As 3 per pound dearer, while black Leaf teas, suitable for the Middle East, again received very good support. The very best CTC Assams with good liquors were fully firm to dearer, while the remaining types in this category were generally several annas dearer. Poor quality teas with plain liquors advanced by one to two annas per pound; but residual offerings were very irregular and sometimes easier. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-10 to Rs 1-10-6; Medium Assam Grainy Dust Rs 1-10-6 to Rs 1-11-6 and Best Assam CTC Dust Rs 2-14 to Rs 3.

Offerings of Leaf grades consisted of 3,000 packages for which there was an improved general demand at dearer rates.

In the Export Quota section, business was done at rates varying from 4 to 5 pies per pound.

In the Cochin market, offerings in the Internal Sale were just over 400,000 pounds. There was a strong general demand. Good Mediums and Clean Calicut descriptions advanced by ½ to one anna, while Low Mediums and Residuals were about steady on last rates. Best liquoring high-growns and

QUICKENING TEMPO OF ECONOMIC DEVELOPMENT IN SOUTH ASIA

By GEOFFREY TYSON

There is much evidence to show that the tempo of economic development is quickening throughout South Asia, particularly in India. The acceleration can be attributed to a number of factors: a series of good monsoons which has perceptibly eased the food position; the terms of trade have tended to favour producers of industrial fibres and such commodities as rubber; 'national plans' have overcome their initial difficulties and gained a certain momentum; and, last but not least, a steady flow of external assistance—particularly from Britain and other Commonwealth countries and the USA—has been forthcoming in the form of aid and private investment capital.

Indeed, it is one of the paradoxes of the present situation that the rate of development attained in South Asia, which is partly attributable to the Colombo Plan and other forms of Western assistance, is now beginning to create attractive business opportunities for Soviet Russia and other Communist countries, which have not been historically associated with the trade of this vast area. Naturally, they are not slow to take advantage of expanding markets and the increasing demand for industrial and other equipment which national planning brings in its wake.

But to pretend, as some Communist spokesmen do, that they are lending a helping hand to national planning, which others have refused to do, is altogether too disingenuous. The fact is—and this is particularly true of India—that technological advances are now occuring on such a wide industrial front that equipment and "know-how" are required in quantities that were not contemplated a few years ago. That, in itself, is a tribute to the effectiveness of the various national plans and of Western aid alike.

As nothing succeeds like success, we may expect this process to continue. Development expenditure in the public sector of the economies of nine recipient countries who are members of the Colombo Plan shows a progressive increase all along the line: thus actual expenditure for the administrative year 1953-54 was calculated at £542 million; revised estimates for 1954-55 was calculated at £725 million, and budgeted expenditure for 1955-56 is £827 million.

The major part of the finance required for the development programmes of the Asian members of the Colombo Plan is, of course, found from domestic sources. But it is significant that in the first three years of the Plan, capital was offered from the Western member countries for about one-third of the cost of the development programmes, and an even larger proportion was committed last year, though just how much larger it is not yet possible to calculate.

By any test this is an impressive record, particularly as the Colombo Plan is not an opportunist organisation initiating new development schemes so much as an institution which channels help in men, money and materials to the Asian governments once individual projects have been decided upon. That it has proved its immense usefulness may be inferred from the unanimous decision, recently registered, that the Plan, due to expire in 1957, should be continued to 1961.

Throughout South Asia, planning in the public sector is inevitably mainly directed towards the creation of social overhead capital, to use an economist's term. But in any assessment of the quantum of resources which the free West has committed to the region, some mention must also be made of the role of private investment and enterprise. It is not easy to collect or collate statistics, but a recent Reserve Bank of India survey of foreign capital in the country shows that in the period 1948-53 there was a net addition to private foreign investment of Rs 132 crores (£100 millions approximately), of which 82 per cent came from the United Kingdom.

Comparable figures for other countries in the South Asia region are not available, and I would not wish to hazard a guess how big or how small they may be. All the evidence shows that there was substantial foreign disinvestment in the older staple industries (control of which may be presumed to be passing into local hands) but this was more than offset by the comventures in new fields, often in mitment of fresh capital to new partnership with Asian interests. Here again, the record speaks for itself.

This further point may be noted. Whereas most South Asian transactions with the Communist countries are in the form of barter deals, Western collaboration, particularly British collaboration (outside the public sector), consists almost wholly of permanent investment of privately owned risk capital, which is irrevocably committed to the country to which it is sent.

There is not a great deal of sentiment in business; but it is clear that, despite changing pattern of trade and investment, there stands an impressive fund of goodwill for the South Asian countries in the other members of the Commonwealth, and paticularly in the United Kingdom itself.

✱

US Notes

CONTINUED economic strength at home and abroad are reflected in the high levels of trade the United States is maintaining with rest of the world. The US Department of Commerce has reported, for instance, that American exporters shipped abroad $1,278 million in merchandise in January. Although this was 9 per cent lower than in December, it was 9 per cent higher than in January 1955. Moreover, the usual export decline between December and January was less this year than in either of two preceding years.

American farmers have had cheering news on overseas shipments. The US Agriculture Department estimates farm exports in January at $310 million, about the same as in December and 13 per cent more than in Jancary 1955. For the first seven months of the current fiscal year (July-January), the Department estimates agricultural exports at $1,945 million, about 5 per cent more than in corresponding months of 1954-55. The Agriculture Department attributes gains in farm exports primarily to rising prosperity around the world with resulting increases in demand, and secondarily to Government export programmes.

Business upsurge of past year has helped American producers recapture a good part of the ground they lost a few years ago in Western Europe's huge import trade, as European countries have turned again to United States for supplies to feed their booming industries. Also, playing part in increased purchases from United States have been relaxation by many European countries of discriminatory import controls they had placed on American goods as a means of protecting their dollar balances.

American imports, meanwhile, give every sign of outstripping the record levels of a year ago. The Journal of Commerce estimates that US imports in the first four months of 1956 will run appreciably ahead of those of the corresponding period of 1955. The Journal bases its conclusion on the volume of import Letters of Credit being established with banks in New York City. These credits have proved to be reasonably accurate short-run indicators of import trends. According to the Journal, bankers report commodities in heavy volume.

These forecasts of heavy American purchases abroad are being borne out by US Treasury Department's estimates of customs receipts, reliable barometers of current import levels. Last month, the Department reported January customs receipts at $58 million, some 28 per cent above those for January 1955. And this week, the Treasury put February customs receipts at $55.5 million, about 17 per cent above collections in February last year.

Indicative of increased American interest in imported goods is the fact that merchandise from other countries is more heavily represented than ever before at the annual Variety Merchandise Fair being held in New York City. Some 80 importers of toys, novelties, cutlery and other foreign made items are among the 335 exhibitors who are showing about 40,000 articles to buyers for chain and independent variety stores. Among imported items are manicure sets from West Germany, toy trains from Japan, and painted Chinaware from Italy. Arthur Tarshis, Manager of the show, observes that American buyers are accepting foreign-made articles on a competitive basis with those manufactured in the United States.

Another good omen for a continued high level of US imports is increased demand by American households for coffee, nations largest imported commodity in terms of value. The Pan American Coffee Bureau reports that household purchase of coffee in the United States last year were 6.8 per cent above 1954. The Coffee Bureau notes, moreover, that demand is continuing to increase in 1956, as preliminary estimates show purchases running well ahead of the 1955 rate. Rise in coffee demand is attributed largely to a steady increase in population and continuing high rate of family formation in United States.

In line with high levels of business and trade in the United States and other countries, steamship operators are getting ready for the busiest year in history of the Great Lakes-overseas trade. Shipowners are marshaling the largest fleet ever of specially built ships to carry goods directly across the Atlantic between European and Mediterranean sea ports and inland US and Candian ports on Great Lakes. They estimate that in 1956 more than 400 voyages—compared with 325 in 1955—will be made in this trade during the eight-month navigation season which will start with the break-up of ice on the Great Lakes a few weeks from now. And they anticipate no difficulty in topping the 520,000 tons of export-import business they did in the Great Lakes-Ocerseas trade in 1955. Total tonnage in 1956 was about 30,000 and it has grown steadily ever since.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

To my mind, the most important fact about John Foster Dulles is that he is an elder of the brick Presbyterian Church of New York and an ex-president of the Federal Council of Churches. Offices of this sort offer an excellent vocation for temperaments that consider themselves as God's own Commissar or, to choose an American metaphor, God's own salesman. They offer the fullest satisfaction of an activity that is unexceptionable from the moral point of view and, at the same time, gives you enough scope for one's secular bent of arranging affairs. You can at once be a devout Christian and a president of a Corporation and run God's business more efficiently that God himself can perhaps do. Whether the same temperament would find the tasks of diplomacy easy to manage is an open question, but it is clear that Mr Dulles himself is quite happy about making innumerable blue prints to stratify intractable problems of world affairs into simplified moral issues that need only his own moral fervour and a little business method to set right.

✱

About Mr Dulles's moral fervour, there can be little doubt. In a sense, it accords with the American temperament which is often misunderstood by superficial observers as hopelessly "materialist". If this reading refers to the American passion for acquisition, it is an amiable foible which is no worse than similar traits found in the folks of other countries. The American is, in fact, an implacable moralist, a person who retains even today something of the calvinist intolerance of weakness of any sort. The fact that America is a young country is also responsible for its impatience at the moral "neutralism" of some of the countries of Europe and Asia: for, as is well known, the young are more fiercely moralistic than the old, who have seen too much of the world to be too certain about their own right to hold forth on moral issues. The majority of Americans are sorely puzzled how a country like India or France could be so apparently indifferent to the real nature of communism and how they could fail to see the evil at the centre of that ungodly doctrine, and seeing it, rest content until it is destroyed. That such, at any rate, is Mr Dulles's basic attitude is clear from his now famous interview with Life. The famous "brink of war" diplomacy, which profoundly shocked the rest of the world used to more conventional and more worldy diplomacy and which Mr Adlai Stevenson described tersely as a "game of Russian roulette", can come only from a man who is maniacally convinced that his side is not only materially but morally fortified against any kind of attack from the other side. That Mr Dulles is convinced of the irreproachability of his own position is clear from his statement to Life: "What we need to do is to recapture the kind of crusading spirit of the early republic, when we were certain we had something better than anyone else, and we knew the world needed it and wanted it and that we were going to carry it round the world." The self sufficiency of the puritan has been ridiculed and the spiritual pride of the calvinist has been arraigned often enough, but I think it has never been denied that there is something awe-inspiring about such an absolute conviction of the infallibility of one's moral vision. Equally undeniable is the fact that such an attitude of mind is perhaps the most dangerous one can bring to bear on the conduct of international relations, especially in the atomic age.

✱

So much for the moral fervour of Mr Dulles. Fortunately for the world, Mr Dulles has to consult others before he can drop his atom bomb, though he need not obtain anybody's permission to threaten he will drop them (I know Mr Dulles claims that the giving of the ultimatum was agreed to by his friends, but actually the others deny it). There is, therefore, some reason to hope that Mr Dulles will not be allowed to let his moral fervour run away with him and to refashion a world after his own heart's desire from out of the rubble of the old.

✱

As regards his activities of translating into concrete action the high calling that God has thrust on the United States and therefore on him, namely the leadership of the free world, they also follow the set pattern of simplifying the issues involved. Here, again, the trait is partly American, who has what has been called "the problem mind". An American is never so happy as when he has a problem to solve, and there is practically no problem that he thinks he cannot solve. Let it be at once said to his credit, that he has reason for this bouncing self confidence. Mr Adlai Stevenson refers to this American habit and says: "Fortitude, sobriety and patience as prescription for combating intolerable evil are cold porridge to Americans who yesterday tamed a continent and tipped the scale decisively in two world wars. Americans have assumed, subconsciously, that all problems can be solved, ... that the application of enough energy and goodwill can make everything come out right ..... So when we encounter problems in foreign policy, we naturally assume that it can be solved pretty quick, with enough drive, determination and red corpuscles 'The difficult we do immediately, the impossible takes a little longer.' Just pour in enough manpower, money and bull-dozers, and we can lick it". It is admirably put. This habit of mind explains a great deal in American character, including the Kinsey report (a monument to human futility) and the extremely methodical and extremely dull theses on minor English poets produced by mid-Western universities. It also explains, of course, the statue of Liberty, the Empire State Building, and Mr Dulles. To Mr Dulles. foreign policy is the devising of series of solutions for specific problems each to be neatly summed up in a number of telling phrases. Mr Dulles's contribution to this kind of "vocabulary of politics" is significant. "Collective security", "The policy of deterrents", "Massive retaliation" the concept of "the long haul" and so on. And, of course, the famous "Agonising reappraisal", with its existential overtones. It is such a pity that it has now become such a slatternly cliche that you can never use it again unself-consciously.

✱

But the problem mind has one grave draw-back: to reduce the human situation into algebra is to simplify it and therefore to distort it. God knows that such simplifications create enough difficulties in personal relationships, and in contexts where we deal with nations, each with its own particular background and special problems, the approach is totally wrong. an excellent case on paper for a policy of tiers, of an insulation tape consisting of the NATO, the MEDO and the SEATO that will make us all immune from Communist short-circuiting. But, as the present difficulties in the Middle East show, human beings are not algebraic symbols and not even members of denominational congregations where a reasonable unanimity of opinion prevails. If you do not display fortitude, sobriety, and patience as counselled by Mr Stevenson, and get merely piqued by difficulties encountered in the way, even the solutions you have devised go away. Mr Dulles's chief difficulty is his inflexibility, a concommitant of his impervious moral view of the current world situation. As I said, however awesome such undeflecting regard for what is right may be, it is not a frame of mind that solves international difficulties. Often, therefore, like the maiden aunt who brings to the problems of the grown-ups the attitude of mind that succeeds in the nursery, Mr Dulles is left high and dry to nurse his pique. This happened in Geneva in 1953 when he was on the spot sulking at the way things were arranged. So was he over the Goa issue. He is, therefore, a poor negotiator. His attitude of mind in negotiation has been aptly compared to that of an Anglo-Saxon tourist who visits a curio shop convinced that he will be fleeced and eventually leaves after an hour uncheated but empty handed. I cannot recall a single instance in which Mr Dulles has arranged a modus vivendi on his own initiative in any negotiation with people who were not of a like mind with him. That, as everybody will agree, is a serious disqualification in a Secretary of State, though it offers no difficulty for the elder of a Church.

✱

The pity of it is that Mr Dulles is outwitted by folks whose methods are more flexible but who don't deserve to succeed as he deserves. Mr Duulles is clear sighted enough to see that the Soviet offensive has taken on a new complexion, but he relates it wholly to the policy of deterrents. It does not occur to him that it may at least be partially due to the realisation on Russia's part that a nuclear war would be the end of not only America but also of themselves. One wonders sometimes whether Mr Dulles really believes that the Russians, too, have the hydrogen bombs; and, if it is too absurd a doubt, whether he really believes in nuclear stalemate. It may be true that the Chinese did not invade the off-shore islands because of Mr Dulles's threat. But does it prove that the Chinese are weak? And, in any case, why should the Russians use the atom bombs when they can use the more indirect method of extending their sphere of interest? It is true that Mr Dulles sees that the new Russian challenge must be met on its own ground, but he still clings pathetically to his pet idea of collective security even at the moment it has become obsolete and quaintly quotes Stalin in support. It is this inability to readjust his mind to changing situations that has

(Continued on page 541)

It's a BIG job....

running an oilfield

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead." For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

Bombay Review

A Great Example

EXPLAINING the concept of the "Socialist pattern of society" envisaged for our future, the Draft Outline states that "the basic criterion for determining the lines of advance is not private profit but social gain." On this basis, at least one famous business house in this country may claim to have been promoting socialism long before it became the catch phrase it today is. The House of Tatas has, almost from its inception acted on the admirable premise enunciated by the Draft Outline. It is well known how the bulk of the income of the Tata enterprises go ultimately to trusts created for the purpose of promoting objects of public utility. It is also common knowledge that there has been no industrial leadership in the country so zealously conscientious about bringing about proper relationship between labour and management as that of the Tatas. There have been few employers in the country who have more consistently acted on the Gandhian idea of "Trusteeship" than the management of the Tata group of industries.

The most recent and almost literal example of the Tatas considering themselves liable to render an account of their actions to their employees is Mr J.R.D. Tata's report to the employees of the Tata Iron and Steel Co. The idea is entirely novel, at any rate in this country, but it is in consonance of the ideal of trusteeship envisaged by Gandhiji. The law of Joint stock enterprise considers the directors answerable for the proper use of the money entrusted to them by the shareholders and therefore enjoins on them the duty to reporting annually on the way the funds of the company have utilised. But no law in the country has yet made it obligatory on the part of the management to render a similar account to the workers. Mr Tata has, of his own volition, thought it necessary to render such an account to the employees. In so doing, he was not indulging in any "stunt", for, he proposes to continue the practice year after year. Moreover, this act of his accords with the entire history of management-labour relationship at Jamshedpur. Apart from the fact that Jamshedpur has, perhaps, the most responsible labour leadership in the country, it has been the place where many ideas stemming from the concept of labour being a partner in industry have been attempted to be translated into action. I am not going to weary the reader with details of such experiments: I shall only mention as example the recent agreement between the management and labour in Jamshedpur about arrangements for the next few years of the vast expansion programme about to be put through by TISCO. This report to the employees is, therefore, a logical development flowing from the basic concept of an industrial leadership that can truly be said to place "social gain" before private profit.

The report has, apart from the striking originality of the idea, some extremely interesting and revealing features. Besides the regular report in which Mr Tata adopts the solemn attitude of a chairman reporting to his shareholders and makes, in his characteristically suasive manner, his points cogently and lucidly, there is an illustrated "story" in the manner of an American "comic" in which the "Munimji" explains to some workers how the "TISCO rupee" is spent. The illustration, I must mention, is a sheer delight: the first picture, for instance, in which the Munimji is asked by two workers to explain them what happened to the enormous profits they helped earn, is magnificently done. The munim, with his spectacles at the tip of his nose, shrewd and deceptively complacent: one of the workers, belligerent and taciturn, the other with a smirk that seems to say, "and don't put us off with any cock and bull story." The bearer in the background, shocked at such unconventional request and in some consternation lest this should develop into some unpleasantness: and, finally, the assistant behind the Munshi with the air of one who is convinced that, for once, the Munshi (who usually pushes him about as if he were a mere worm) has been had well and truly in a spot. His smile seems to say: "Now let me see how you get out of this:" The whole thing adds up to a telling dramatisation. An admirable job of work!

But let me get back to the Tisco Rupee. The details of the beneficiaries of this TISCO income that the Munshi gives will come as a surprise to many whose conception of the investor in a joint stock enterprise corresponds more to the imaginary denizens of Gothic novels than to flesh and blood human beings. Out of Rs 36 crores of earnings (after payment of Rs 6 crores to the Equalisation fund), in 1954-55, nearly Rs 13½ crores went to pay for materials. This works out at five annas eleven pies in the rupee. And then the reserve for depreciation took care of another Rs 4½ crores, which meant an anna and ten pies in the rupee. Then, in the mournful words of the Munimji, "there were taxes to pay"—a trifling matter of Rs 2 crores and 84 lakhs—a further anna and a quarter of the TISCO rupee. Then came miscellaneous expenses, after meeting which the company was left with six annas three pies to share within what the Munshi aptly describes as the "TISCO family".

How did the family spend this? First, as any prudent family would, it put by something for the future, about three pies in the rupee. (Some may consider this not very much, but the TISCO family is rich enough to make do with this. In any case the younger sons of both the branches of the family, the workers and the shareholders, are grousing all the time that the "old man" is stingy and does not even let them have their cigarette money).

Then come management expenses, which account for a mere three pies in the rupee, surely not a high proportion of the total earning. This leaves only five annas and nine pies to share between the two branches who are looking daggers at each other since each suspects that the other is mulcting him of his due share.

How was this shared in 1954-55? The workers, the Munshi explains, got five annas out of this leaving the share holder to make do with only nine pies. No wonder that, as Mr Tata reports to his workers, the shareholders "bitterly complained" that while "the employees, Government and the consumers had all earned more money from our operations during the last few years," only they are having a raw deal from the directors. The shareholders, for instance, got only Rs 176 lakhs during 1954-55 against over Rs 200 lakhs during the period 1937-42.

"All this is very well", says the canny worker to the Munimji, "but only a handful of bloated capitalists share the 177 lakhs whereas the eleven crore wage bill is shared by over thirty thousand workers leaving them a mere pittance each." The all-knowing Munshi has an answer for this, too. "Oh, no," he says, "You have got the picture all wrong. There are as many shareholders in TISCO as there are workers in Jamshedpur. And do

British Participation in Industry

There had been, over the last seven years, a net increase in foreign capital invested in India of the order of Rs 138 crores. A recent issue of The Banker points out that 85 per cent of this new investment was on British account. There need be no surer indication that Government, far from encouraging the withdrawal of foreign investment is keen on the promotion of such participation. The Finance Minister's clarification that some Rs 400 crores in foreign investment will be needed to finance the Second Plan is thus demonstrative of a consistently held governmental policy.

Mr. Malcolm MacDonald's address to the Indian Merchants' Chamber must have served an useful purpose if it has given British firms operating in India a reassurance about their changed role in the future. In fact, the field of activity has expanded, now that their co-operation is sought by the Government as well as by the private enterprise of this country. The High Commissioner recognised that new limitations and extra controls on the private sector have come to stay on account of Government's acceptance of a socialistic goal.

There is little reason why British firms should not be able or willing to adapt themselves to what Mr MacDonald calls modern requirements. "We in Britain" says he, "were among the pioneers of the modern welfare state. We have ourselves engaged in a great deal of socialistic action". More than any other foreign country Britain is supporting the development of this country not only by production of goods but also by new capital investment, by technical aid, and by providing training facilities to Indians in an everwidening range of industries.

The agreement over the new steel plant, which is to be built by a 'consortium of private firms of Britain for the public ownership of the Indian Government,' is the latest manifestation of growing goodwill between the two countries.

Official statistics recently made available show that Indianisation of British firms has been proceeding at a satisfactory rate. Industrial development on a new scale and along new directions will, however, call for the continued service of experienced British members of managerial and technical staff.

*

Rs 64 Crores for Small Industries

While welcoming the rather handsome allocation of Rs 64 crores in the Second Plan for small-scale industries, it is to be emphasised that this sector has never been a subject for controversy. The term small-scale industry in this context does not embrace handlooms or the production of khadi. Experiments in labour-intensive methods as far as possible, for the supply of consumer goods, apart from being justified both on social and economic grounds, should be regarded as chalking out a new direction in the country's economic activity. Modernisation of handicrafts, and the establishment of technical institutions, training centres, financial and marketing institutions are to figure prominently in the programme drawn up in this regard.

The Secretary of the Union Commerce and Industries Ministry Mr H. V. R. Iengar, who is also the Chairman of the All India Small-scale Industries Board, assures that the entire amount would be utilised for the production of small articles and operation of small machines.

Inaugurating a small-scale industries exhibition in Indore, Mr Iengar said that Government were making every effort to remove the hardships of small industrialists. The task of the Small-scale Industries Board will be to discover not only financial resources, but also the skill and talent that are no doubt available in the country. On Mr Iengar's admission, there are now too many institutions to help small industries. These have to be pooled together and proporly channelled. If, as he says, the State Bank under the guidance of the Reserve Bank, is to play a big and important part in providing such assistance, the State Bank should be further strengthened to this end and adequately co-ordinated with such institutions as exist under the aeges of the State Governments.

Complaints are heard frequently from other parts as well as from Madhya Bharat of the difficuty in obtaining raw materials such as iron and steel and cheap power supply. Steel imports, which are not likely to be reduced in the near future, if earmarked and diverted in part to small industries, would eliminate one handicap; but shortage or high cost of power can be countered in the present only by a judicious dispersal of the locations of the new units. The Union Government's apparent readiness to share the subsidies being given by the States would help, but not permanently. A simultaneous effort has to be made to overcome transport difficulties by co-ordinating the development of road-transport with the railways.

The industries have aired their grievances and Government have done well to appreciate them. Prompt and suitable action should now follow.

Decision on Khadi

In view of the fact that field tests and investigations under Government auspices are now in progress about the production and employment potential of the Ambar Charka, the over-anxious haste with which the All India Khadi and Village Industries Board has urged its large-scale use, though understandable, is not likely to help. Controversy in this respect, and this has reportedly reached the highest policy-making level, can be ended only with scientifically verified facts.

The present expectation is that the Committee appointed by the Government will conclude its investigations by end of April so that a final decision need not be delayed much into the Second Plan. Satisfaction is to be derived, the Khadi Board evidently shares this, from the fact that the Planning Commission have kept an open door for the Ambar Charka, in spite of the fact that it would fetch only about As 12 a day, compared with Rs 3 to 4 which a mill worker earns. But then, the employment potential, as computed by the Board, tells a different story. An absorption of some 50 lakhs from among the unemployed rightly deserves overriding importance, considering that the Second Plan would otherwise provide only 80 lakhs of new jobs as against the 150 lakhs in the employment market.

The advocates of labour-intensive methods of production thus argue a clear case which does not have a ready alternative. A measure of social compulsion and some sacrifice in consumption have inevitably got to be put up with in order that the base of the economy may be strengthened.

The Khadi Board at its meeting last week here, urged that it should be accorded statutory authority without delay. One of the welcome features of the Board's meeting was that the Chairman of the All-India Handicrafts Board and the Secretary of the Handloom Board participated. This has initiated discussions about the possibility of aids and facilities offered by the Handloom Board to the handloom weavers being extended likewise to the Khadi weaver also. The two boards have agreed to work out the details of such a scheme. The prospective co-ordination of activities of these boards which function in the same field and face problems of the same type is to be welcomed.

*

Better Counsel in Nagpur

The more than a month old strike which completely paralysed Nagpur's textile mills was viewed with grave misgiving by Government as well as by the public, for it constituted a very inauspicious omen for, and something to be rigorously eschewed during, the Second Plan. The turn of events was surprising, coming as it did after the laudable lead given by the labour and management of the textile industries in Bombay and Ahmedabad.

Neither the management of the mills nor the Government are so much to blame for allowing matters to get to an extreme, as the rivalry between the two labour unions, only one of which, the INTUC, enjoys a recognised status. The mills had given the assurance that the contemplated reorganisation would not entail retrenchment. Government followed it up with a guarantee to the same effect. But a section of the workers continued the agitation which was directed mainly against the INTUC, which had entered into a truce with the management. On February 11, the millowners were obliged to declare a lock-out. More than two thousand workers were arrested.

The position has somewhat eased with some 4,000 workers having expressed willingness to resume work. If another 3,000 would come forward, there is every possibility of the mills being reopened. It is for the labour unions to restore perspective and call workers back to work now that their original fears of retrenchment have no likelihood of materialising.

*

Saurashtra's Development

Though small in size, Saurashtra shows exceeding self-reliance that should be the envy of other States faced with similar problems, but less sure of tackling them. The Rajpramukh's inaugural address to the budget session took justifiable pride in the State having successfully realised its Rs 27 crore First Plan. Predominant emphasis was given to agricultural development and canal irrigation and this is to be continued into the Second Plan, which would bring over two lakh acres of additional land under direct irrigation, would sink some 22,000 new wells and bring about three lakh acres under control bunds. In terms of production, this would mean 90,000 extra tons of foodgrains, 1,25,000 more bales of cotton, and an increase of over one lakh tons in groundnut.

Relatively speaking, Saurashtra is well up in such industries as cement, wool and pottery. Prospects for developing fisheries are bright and a beginning has been made with foreign technical help. Small industries are particularly suited to this region and further success in this direction would seem to depend on the possibility of procuring suitable machinery for which Japan is a possible supplier.

Delhi Review

Olympus

SEATO and Kashmir

Political circles in the capital have been profoundly stirred by the maladroit (to put it most charitably) and wholly gratuitous involvement of the signatories of the SEATO in the Kashmir dispute. Apart from the incompetence of the SEATO to discuss the issue, and the impropriety of airing views, however innocuous, on a dispute on an occasion when one of the parties was not present, the incident confirms the worst fears about the so called "defensive alliances" in precisely the same manner as anticipated.

India's opposition to regional military pacts has, as is well known, been based not only on their general tendency to promote tensions in the context of the Cold war, but on the apprehensions that these pacts tend to disturb the balance of power in the regions concerned and automatically involve the distant partners in local disputes. In particular, India has been steadily opposing the American supply of arms to Pakistan and assignment of a key place to Pakistan in MEDO and SEATO in view of the fact that it has long-standing disputes with Pakistan on vital matters like the future of Kashmir, the sharing of river waters and evacuee properties.

India considers such strengthening of Pakistan as a direct threat to its security and has been stating so to all the persons concerned in these arrangements, especially Britain and America. These powers have been assuring, with some show of impatience at such obtuseness on the part of India, that these arrangements have been directed solely against possible communist aggression and that SEATO will never involve itself in any regional disputes.

As recently as a month and a half ago, Mr Macdonald, the British High Commissioner in India, attempted to reassure us on this point. And, during the period before the holding of the Karachi meeting, when apprehensions in India were mounting owing to persistent reports that Pakistan was trying to get the Kashmir dispute on the Agenda, we were told that it was not likely at all. As recently as on the eve of the conference, Mr Selwyn Lloyd, the British Foreign Secretary, said here that Kashmir was not a proper subject for a SEATO meeting agenda. But we find that, not only has the dispute been discussed formally on two of the three days of the conference, but a formal declaration on how it should be solved has been embodied in the final communique.

From the barely concealed embarrassment of the big power participants of the Karachi Conference in their subsequent attempts at explaining their conduct, it is clear that their hands were forced at the actual sessions. We shall never know what actually happened in the conference, but, by all accounts, the Government of Pakistan exerted a terrific amount of pressure on the visiting statesmen by a variety of ways, some of them of rather dubious propriety. A mixture of coaxing and mild blackmail, besides other forms of "persuasion", seems to have made the members reluctantly agree to discuss the issue. It seems leaflets were dropped from the air, over the place where the council was meeting, demanding that Kashmir should be included in the Agenda.

Each delegation was asked to state its views on the Kashmir issue informally and, when each expressed the pious platitude that it hoped that the issue would be peacefully settled either in accordance with the UN resolutions or by direct negotiations, they were asked with rather unpleasant insistence to go on record. One can fancy the sophistries that would have been employed: after all, there was nothing wrong with the statement and, surely, India could not object to what it has openly declared as its policy.

When members objected to concerning themselves with matters not related to SEATO, Pakistan is reported to have even gone to the extent of threatening to dissociate itself from the proceedings. This must have come as a shock to the participants; for, they would either have to carry on without the host or to shift the venue of the meeting to some other place and thus openly advertise the fact of disunity among the SEATO powers, much to the satisfaction of the Soviet Union. So, with varying degrees of mental reservation and with the satisfaction that they were not expressing any opinion on the merits of the dispute, the members, especially Britain and France, seem to have agreed with great reluctance to let themselves go on record on the Kashmir dispute.

While one sympathises with the embarrassment in which the SEATO delegates got themselves involved by Pakistan's not playing the game, one feels that, in an important matter like this, they should not have allowed themselves to be blackmailed in this fashion. There is every evidence that Pakistan considers this an important diplomatic gain and that it is of the view that this is only the beginning of making its parents in SEATO commit themselves as irrevocably on the issue as the USSR has committed itself. By playing up the fact that the Russian leaders have come out unequivocally on the side of India in this dispute, and by insisting on the fact that SEATO has been formed in avowed opposition to Russia, Pakistan hopes to persuade its friends that it is incumbent on them to be on its side in the dispute. They have a name in text books of logic for this kind of argument which is uncomplimentary to the methods of reasoning of the person who employs them and of the person who is convinced by them.

In any case, the Pakistan Government have not bothered to conceal their delight at the extent of their success in involving the SEATO in the Kashmir dispute. Mr Dulles, who was in Delhi immediately after the meeting at Karachi, had a difficult task convincing every one that there was nothing in the communique that need cause any apprehension in India. As the senior partner in the SEATO and as the almost sole supplier of arms to Pakistan, he had great difficulty in answering questions on the subject. Observers here attribute his vehemence in declaring that Pakistan would not be allowed to use the arms supplied against India and that the US would be on India's side if any such thing happened, to his appreciation of the depth of feeling in the country over the issue.

His attention was drawn to the increase in border violations by Pakistan in the last few months. He was also apprised of the widespread impression in this part of the world that the USA is out to "teach India a lesson" for its neutralism. The American Secretary of State answered this particular charge easily enough because the accusation is not true. But he was not able to dissipate the impression that Mr Dulles is inclined to react only too readily to any positions that the Soviet Union may take on any issue regardless of the real issues involved and the views of the parties concerned themselves.

Thus, his statement on Goa is considered simply as his reflex to the Russian's assertions on the subject and, likewise, it is believed here that what weighed most with him in deciding to agree to include Kashmir in the SEATO agenda was the fact that the Russians have taken a definite stand on the subject.

What is bothering India about the episode is not so much that the members of the SEATO had a wholly harmless view on Kashmir, as the fact that the SEATO powers may find themselves further involved, in future, in spite of their reluctance, in the Indo-Pakistani disputes. That such a contingency is not in the realms of the impossible is shown by the fact that they have allowed themselves to go on record on the issue in spite of their extreme reluctance to do so.

M. Pineau, the French Foreign Minister gave the background to the whole incident here to-day. Even after the majority of members expressed that view (it would be interesting to know for certain who constituted the minority) that the question was outside the competence of the council, they allowed themselves not only to discuss it but tell the world how it should be handled. One can fancy a similar predicament in future where the stakes may be even higher in which Pakistan may exact as its price for co-operation a more precise undertaking from its partners in regard to Kashmir.

The Punjab Budget

Punjab's Finance Minister has made an earnest effort, with commendable success, to present a well balanced budget, capable of giving the Second Plan a favourable start. Unlike several other State Finance Ministers, Mr Mohan Lal has not hesitated to introduce new taxes which, at any rate, cannot have been indefinitely delayed. It is however to be remembered that the general level of prosperity, particularly in the agricultural sector in the Punjab is higher than in most other States. tThe new levy of agricultural income-tax is thus justified by prevailing local conditions, quite apart from the sanction it derives from the broader reasons set forth by the Taxation Enquiry Commission. The tax is to be levied in terms of percentage of land revenue.

The Finance Minister has also proposed a professional tax on non-agricultural incomes above Rs 6,000, for the budget year. The graded scale shows that incomes between Rs 6001 and Rs 8000 will be taxed at Rs 120 per annum, those between Rs 8501 and Rs 13,500 at Rs 150, those between Rs 13,501 and Rs 25,000 at Rs 200 and those above Rs 25,000 at Rs 250 per annum.

Other tax proposals include levy of sales tax at double the rate, that is at Rs 6-4 per cent, on luxury goods. These three taxes, it may be noted leaves the lower economic classes severely alone.

The other tax proposals are increase on passenger tax by 50 per cent, increase on entertainment tax by 25 per cent and also an upward revision, within the ceiling already allowed, of rates of vehicles tax, both in respect of goods vehicles and State carriages.

These six taxes, between them, will bring in some Rs 73 lakhs which will enable the deficit on revenue account of Rs 47 lakhs to be converted into a surplus of Rs 26 lakhs. The revenue expenditure is estimated at Rs 3,075 lakhs and revenue receipts, before the additional taxation, at Rs 3028 lakhs.

The revised estimate for 1955-56 place revenue receipts and expenditure at Rs 2,808 lakhs and Rs 3,076 lakhs respectively thereby showing a gap of Rs 268 lakhs against the original deficit of Rs 77 lakhs.

The notable feature of the new budget is the remarkably high allocation of Rs 583 lakhs, that goes to education. This means an increase of over 300 per cent from the 1950-1951 level of Rs 187 lakhs and reflects an intensive educational drive in the rural areas.

The State enyoys a more or less comfortable agricultural position, which with the provision of perennial irrigation, is likely to improve further. The Second Plan would register an increase in food production to 40.40 lakh tons, to seven lakh bales in cotton, to 48 lakh tons in sugar cane, to 1.10 lakh tons in oil-seeds.

The industrial plan also shows a welcome departure from the First Plan with its meagre allotment of Rs 54.8 lakhs. The Second Plan provides Rs 713 lakhs in this respect.

In regard to capital expenditure, the budgeted outlay of Rs 2.748 lakhs, leaves an uncovered gap of Rs 801 lakhs. But Mr Mohan Lal seems confident that, though likely additional loans from the centre or a floating loan, together with securities of the value of Rs 121 lakhs with the Government, the shortfall would be made good.

Important among the items of capital expenditure are the Bhakra Nangal Project, Rs 286 lakhs, the other irrigation works, Rs 662 lakhs, the other electricity schemes, Rs 56 lakhs, industrial development, Rs 139 lakhs, Chandigarh capital project, Rs 350 lakhs, civil works Rs 491 lakhs and nationalisation of transport Rs 63 lakhs.

One of the major tasks confronting the Finance Minister is to tighten control on Government spending and clear the charge of financial irregularities of which Punjab's administration has not been exempt. More efficient collection of taxes, it is believed, will make an appreciable difference in the size of revenue resources.

*

The Railway Debate

No one would grudge the railwaymen the additional concessions being granted them by the Railway Minister. Indeed, it is essential to have a contented staff as a prerequisite for the success of the Second Plan's transport schemes. But one is inclined to agree with much of the criticism aired in the Lok Sabha about the low level of efficiency, the lax functioning of the personnel brasch and the unmitigated overcrowding in trains. The Railway Minister's hands are apparently full with problems of diverse character, such as reconciling an inadequate financial allocation with schemes of expansion and development, handling of unprecedented scale of goods and passenger traffic, at the same time relieving congestion and avoiding transport bottlenecks, weeding out corruption and restoring the morale of railwaymen by a judicious combination of discipline and incentive.

It is encouraging to note that Mr Shastri is well set for proper action in all these directions within the financial limits prescribed by the Planning Commission. The Railway Board has already completed the detailed plans for removal of overcrowding. Within a year, over 500 additional carriages and 50 additional engines would be brought into use on the metre gauge and 200 carriages and 30 engines on the broad gauge. In viewing the repeated promise of increased amenities to passengers it is to be remembered that sufficient space is the most basic of all passenger amenities. Priority should be given to putting more trains on the track; and to adhering to a strict time schedule, revising it wherever necessary. In the absence of such an approach, abolition of the 3rd class can mean merely a change in nomenclature. It is to be hoped that the Planning Commission will be fully appreciative of public and industrial requirements which the railways are called upon to meet and correspondingly adjust the allocation to this department in the years immediately to come.

*

Production at Bhilai by 1958

With the acceptance of the detailed project report by the Government, the Bhilai Steel Plant may be deemed to have entered the constructional stage. Two things that specially stand out, deserve to be noted. These relate to the financial terms of the agreement. The equipment for the plant and its construction will together cost about Rs 110 crores. The cost of the equipment to be supplied by the USSR is about half this amount. It is repayable in 12 equal annual instalments at 2½ per cent interest. The amounts being payable into a rupee account, they can be utilised by the USSR for paying for goods purchased in this country. This provision is likely to give a stimulus to Indo-Russian trade which already shows a welcome uptrend.

The Second aspect concerns the design of the plant. It is to be so contrived that with relatively minor additions, such as one more open hearth and a group of soaking pits, the capacity can at any time be raised from 1 to 1.3 million tons ingots. As it is, the plant is capable of producing also some 300,000 tons of saleable pig iron. The lay-out of the plant is such that an expansion in the future to 2.5 million tons ingots capacity will be possible.

The supply of iron ore, coal and power presents no difficulty. The hitherto untapped iron ore resources in the Dalhi-Rajhara Pahar area are only 60 miles to the south of Bhilai. Coal will be drawn from Jharia, Bokaro and from the nearby Korba fields currently being developed. A thermal station to be established in Korba by the Madhya Pradesh Electricity Board will help meet the requirements of power.

Rajasthan's New Budget

Rajasthan's budget for 1956-57 shows a deficit of Rs 1.70 crores even after going in for a fair measure of additional taxation under such heads as stamps, irrigation and motor vehicles tax. The possibility of this gap being reduced would depend on a revision of the amount of Central assistance for development schemes, and implementation of some of the Taxation Enquiry Commission's fiscal recommendations in the course of the ensuing year. The Finance Minister considers such possibility very real.

The total revenue is estimated at Rs 24,98,96,000 and the expenditure at Rs 26,68,97,000. The capital expenditure for the budget year is placed at Rs 14,20,92,000, which would be met by Central assistance and by public borrowing, the latter being depended upon to the extent of Rs 2 crores.

Rajasthan's Second Plan envisages an outlay of Rs 101 crores, but financial limitations make even this modest target hard to realise. In taking up schemes for the next year, the Finance Minister has shown discrimination as well as caution in the application of priority. It is to be hoped that the Centre would not be a party to this policy being stretched to the point of postponing indefinitely Rajasthan's schemes for irrigation and agricultural development.

*

The New Speaker

The unanimous choice of Mr Anantasayana Ayyangar as the Speaker of Lok Sabha is both obvious and apposite. Obvious because his long tenure as Deputy Speaker has been so distinguished for its record of faithful and competent service that his elevation to the Speakership at the appropriate time was in the nature of a foregone conclusion. Apposite because no succession to a high office has had such a long spell of apprenticeship or such success in the utilisation of the many opportunities offered in the phase of an understudy.

Mr Anantasayanam is deeply verst in the rites and ceremonies that pertain to the office of the Speaker; and it is certain that he will discharge his responsibilities with natural ease and consummate ability. He is particularly fitted by temperament to exalt and sustain the "temper" of Parliamentary work. For, as the Prime Minister emphasised, temper is the essence of the Parliamentary system.

Just decision, firm ruling and will and skill to inspire and promote good humour—these are qualities which underwrite one hundred per cent success for Mr Anantasayanam's tenure as Speaker.

Delhi Review

North Indian Markets

Prospects for Foodgrains

ACCORDING to the second estimates now available, the area under Rice in 1955-56 has exceeded 72.3 million acres as compared with 69.5 million acres in the previous year, while production is expected to amount to about 24.0 million tons as compared with 22.13 million tons. Production for the current season is expected to be well above the 1955-56 figure. This also applies to Wheat and Barley whose area, during the current season, has increased by over 2.27 million acres as compared with the previous year.

The production of Wheat in 1954-55 established an all-time record at 8.5 million tons. The crop is, therefore, expected to establish a new record in production this year despite heavy floods and deferring sowings in large areas of North India.

Meanwhile, prices of foodgrains continued to develop a hardening tendency. In the Hapur market, Wheat recorded a further advance of As 6 per maund to Rs 15-8 for average quality. Daily arrivals averaged 50 maunds.

Rice also advanced in line with appreciable advance in prices in West Bengal, rates moving between Rs 25 and Rs 33 per maund, according to quality.

Barley and Bejhar continued to rule steady, while Maize and Bajra recorded further fractional gains.

Poor stocks of the old quality and some demand from Madras accounted for steady conditions in ready Peas.

The Delhi grains market continued to be bullish, Wheat farm quality touching a high level of Rs 18½ per maund owing to poor stocks and increased buying activity. The demand for Gram and its products was also good, and the rates showed some improvement. Gewar hardened further on account of shortage of stocks and reported heavy buying by a speculator.

Prices in the Bombay grains market displayed a steadier tendency with prices recording a modest improvement on consumer demand. The stoppage of exports led to a decline of about Rs 6 per candy in the price of Rice, although the tendency in the indigenous varieties was steadier.

Business in Wheat section revealed buyers' preference for new crop supplies, which were done at Rs 170 to Rs 190 per candy.

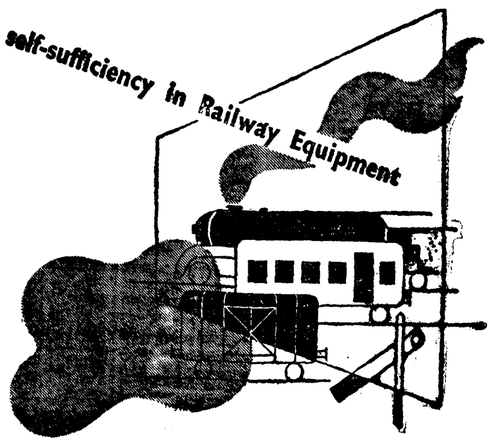
Trading in the Pulses section was highlighted by a sharp rise of about Rs 8 per candy. The rise in prices was attributed to relatively smaller arrivals of the new crop and firm trend in upcountry markets.

Among coarse grains, prices of Jowar were slighly steadier with Sholapur quality finding buyers at Rs 130 to Rs 132 per candy. Rates of Bajra kept steady, with the Uttar Pradesh-grown supplies fetching Rs 120 to Rs 125 per candy.

*

Stagnant condition prevailed in the Sugar market at Hapur; and mill-delivery rates moved within a narrow range. Following were the rates quoted per maund.—Jaswant Rs 28-8; Simbhauli Rs 28-4; Daurala Rs 29-8; Amroha Rs 28; Bijnore Rs 28, Mansoorpur Rs 29-8 and Rampur Rs 31.

Trading in the Meerut market was listless, though price movements were confined to a narrow range. Gujerat, Rajasthan, and the Punjab bought small quantities. Bold Grain was quoted at Rs 31-8; Medium at Rs 30 and Small grain at Rs 28-6, all per maund.



According to the statement made by the Joint Secretary, Union Ministry of Food and Agriculture, sugar production is expected to go up to 17 lakh tons during the current season, while consumption may even exceed 18 lakh tons. As there was a carry-over of both imported and indigenous sugar from the previous season, he says, that it will not be necessary to import any sugar from abroad.

In connection with the plan for rehabilitation of unsuitably-located and idle sugar factories, the Development Council for Sugar Industry has recommended the shifting of only two plants, and feels that 14 factories can be rehabilitated at their existing sites if measures are taken for the development of sugarcane and communications in their areas of operation.

*

The Gur market at Hapur continued to rule quiet; and the ready rate was quoted at Rs 10-4 per maund. Outside buying enquiry was slightly better; but inadequate loading facilities hampered despatches.

(Continued on page 541)

Indian Railways buy annually railway equipment worth Rs. 25 crores from abroad. The Railway Equipment Committee is now examining this problem and will suggest measures for India to become self-sufficient in railway equipment. The Show-room in Calcutta displays samples of railway equipment and stores which are not manufactured or inadequately manufactured in India and which are of particular use to Eastern Railway, South Eastern Railway and Chittaranjan Locomotive Works. It affords the industrialists an opportunity to examine these stores readily and it will help them make proposals for manufacturing these items indigenously.

The Peninsula

Travancore-Cochin Budget

THE fourth State in South India to present its budget for 1956-57 is Travancore-Cochin. Unlike his counterpart in Andhra, Mr A. J. John, the State's Finance Minister, has greatly simplified his task by deciding to leave the entire deficit of over Rs 3 crores uncovered.

The revenue for the next year is estimated at Rs 1889.90 lakhs and the expenditure at Rs 2198.38 lakhs, leaving a deficit of Rs 308.48 lakhs. The revenue estimates do not take credit for any new measures of taxation. With the sum of Rs 940.23 lakhs allotted under Capital, the total expenditure contemplated in the next year amounts to Rs 3138.61 lakhs, which is the highest ever budgeted for. The overall deficit is estimated at Rs 1000 lakhs.

The revised estimates for 1955-56 and the accounts for 1954-55 make interesting reading. As against a deficit of Rs 58. 38 lakhs provided for in the estimates for 1954-55 the actual result was a revenue surplus of Rs 483.10 lakhs on account of the lifting of food controls during the year. Better collections have helped swell revenue by Rs 87.63 lakhs to Rs 1805.99 as against an estimated revenue of Rs 1718.36 lakhs in 1955-56. On the expenditure side, the Revised Estimate is expected to fall short of the budget estimates by about Rs 208.97 lakhs. The outlay on Capital schemes is expected to stand at Rs 425.95 lakhs against Rs 621.55 lakhs originally budgeted for.

At the very outset of his budget speech, Mr John has taken up two of the most pressing problems that are confronting his state. A variety of circumstances have resulted in the steady decline in the income derived by the farmer from his land. Agricultural income is now 21.2 per cent less than what it was in 1953-1954. This has partly been brought about by indiscriminate fragmentation of land holdings, which in turn is the direct outcome of an increase in the population. It has been found that 82 per cent of the holdings devoted to cultivation of rice is below one acre, 15 per cent has area between one acre and five acres and only 3 per cent has extent exceeding five acres. In respect of garden lands, 75 per cent has area below one acre, 22 per cent between one to five acres and 3 per cent over five acres.

With the help of statistics Mr John has succeeded in bringing into bold relief the intensity of the unemployment problem in the State. Despite increased wages in almost all sectors of activity, two-thirds of the families continue to live on incomes below Rs 100 a month, for the simple reason that the number of earners compared to the total number of the population is small. Out of 61.70 lakhs of persons aged 15 years and over, only 18.63 lakhs are earners. 30.75 lakhs of able-bodied persons have no opening to earn a livelihood. A break-up of this figure shows that among the unemployed persons, 12.52 lakhs are illiterate, 13.58 can only read and write, 3.92 lakhs have high school standard and 74,000 have college, professional or technical educations.

The acuteness of the unemployment problem facing the State can be better realised if it is remembered that the number of job seekers in India as a whole in the next five years is expected to be 140 lakhs. Nearly one-fifth of this number will be from the not-too-big state of Travancore-Cochin alone.

Mr John is, therefore, perfectly justified in demanding that 'in apportioning Central outlay among the States, the degree of unemployment should be an important factor.' Mr John is naturally anxious that industries which will absorb a sizable number of people seeking jobs should be established in the state. In this connection he suggests that the proposed electrical equipment factory be set up in Travancore-Cochin.

The establishment of a shipyard at Cochin will also bring much-needed relief. The need for building a shipyard in the inland waters near Cochin Harbour has frequently been stressed in the Lok Sabha. Apart from the suitability of the backwaters, skilled labour and timber in large quantities are readily available in the region.

Other industries toward the establishment of which provision has been made in the Second Plan and which can be conveniently located in the State, are a steel processing plant, a large printing press and a railway coach factory. A strong plea is entered for a larger share of the outlay under Railways in the Central plan. Mr John has rightly stressed the urgent need for removing the disparity between the State and other developed areas in India in the matter of railway facilities. For, as against 8.4 miles per lakh of population in India, the State's mileage of railway is only 2.8.

Among the achievements during the First Five-Year Plan, in the State, pride of place is to be given to development programmes of the State's Department of Electricity. The installed capacity has been increased from 28,500 KW to 109,500 KW. An additional installed capacity of 137,000 KW is fixed as the physical target of the Second Five-Year Plan period. It is expected that when these schemes are implemented fully the per capita consumption which was 14 units in 1952 would rise to 100 units in 1960-61. During the First Plan period utmost priority has been given to works relating to rural electrification. Against the target of 50,000, 46,000 consumers have already been connected up and it is expected the target will be exceeded before the close of the current financial year.

The rapid expansion of the installed capacity of electricity is a significant gain in the context of the special emphasis laid on the development of cottage industries under the Second Plan. As it is now generally accepted that the supply of cheap power is one of the essential prerequisites to the expeditious setting up of small scale industries in rural areas, it may be confidently expected that its rapid progress in power development will stand Travancore-Cochin in good stead in coming years.

Madras Review

Ceilings on Land

Presiding over the Andhra State Farmers' Forum, Andhra's Chief Minister, Mr B. Gopala Reddi, questioned the validity of the Planning Commission's decision on the question of ceilings on land especially when that august body had not applied a similar principle to incomes in other spheres. Giving his personal view in the matter, he said that the ceilings were low and were not just either to the agriculturist or to the agricultural industry.

He expressed surprise at the rather superficial manner in which the Planning Commission had treated such an important question. Talks of ceilings on land had already done considerable harm to the industry. They had engendered a feeling of uncertainty among landholders who were becoming less and less inclined to bestow thought on improving their holdings or increasing production. Mr Reddi thought that the absence of well organised farmers' associations in the country was responsible for the disabilities of the tillers of the soil.

Apart from their important role of giving direction and guidance to reforms affecting land, the farmers' organisations can help solve the serious economic problem of the nation. The oft repeated statement that the agriculturists constitute the backbone of the community is no empty saying and so long as Government do not take full cognisance of the fact, their policies will be divorced from reality.

The farmers' organisations can be an effective liaison between Government and the cultivators. Mr M. V. Krishnappa, Union Deputy Minister for Food, who inaugurated the Andhra State Farmers' Forum, pointed out that the main function of the associations similar to the one he was addressing, was to act as a two-way channel bringing to the door of the agriculturists results of the latest methods of scientific agriculture, all types of State assistance and information on State action in the field of agriculture and transmitting to the State authorities and others the problems, the disabilities and suggestions for their removal, from the people who actually work in the fields.

*

Canning Industry

The annual conference of the All-India Food Preserves' Association held last week-end in Madras has served to focus attention on the vital role of the canning industry in the food economy of the country. Despite the fact that India is a predominantly agricultural country producing large quantities of vegetables and fruits, the food processing and preservation industry is only in its infancy. The reason is not far to seek. With the present low standard of living in our country, the preserved food is beyond the buying capacity of the vast majority of the people. It is no wonder, therefore, that an industry that is dependent on a small percentage of consumers is not able to make much headway.

Apart from its present limited scope, the industry is also handicapped in diverse ways. High price of containers, and high railway freight are two of the adverse factors that are retarding its growth.

A major obstacle is the deep-rooted prejudice among the people in the country against canned and preserved foods. Speaking at the conference, Mr Vittal Mallayya drew attention to the fact that in South India there was an abundance of fruits suitable for canning. Dr P. V. Cherian who inaugurated the conference said that if all the vegetables and fruits grown in India could be properly procured and canned, a world market could be created.

It is however gratifying to note that thanks to a growing awareness of the importance of this industry, there has been a steady increase in the demand for preserved food. But unless prices of preserved food are brought within the reach of the common man, the future of the industry will continue to remain bleak. In this regard it is essential that Government lend a helping hand to the infant industry. The repeated representation of the industry to make available to it containers at a rate which may be on a par with the prices ruling in western countries deserves the most sympathetic consideration at the hands of Government.

Mysore Budget

The Budget estimates of the Government Mysore for the year 1956-57 show a deficit on revenue account of Rs 389.06 lakhs. The State Chief Minister, Mr K. Hanumanthaiya, who presented the budget to the Legislative Assembly had not proposed any new measures of additional or fresh taration.

The estimates of Revenue and Expenditure have been placed at Rs 2,577.53 lakhs and Rs 2,966.59 lakhs respectively. Compared to the current year's Budget estimates, Revenue and Expenditure are higher by Rs 281.37 lakhs and Rs 260.56 lakhs respectively. The year 1956-57 being the first year of the Second Plan expenditure on development looms large in the Budget.

AGRA ELECTRIC SUPPLY COMPANY LIMITED

NOTICE is hereby given that the Sixty-first Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday the 29th March, 1956 at 11-05 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th September, 1955 and the Balance Sheet as at that date and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd March, 1956 to the 29th March, 1956 both days inclusive.

By Order of the Board,

Madras Review

South Indian Markets

Upward Trend in Ginger Prices

THE market for Ginger has been ruling firm and prices, in the principal markets, have been showing a steady rise during the past few weeks. This is mainly due to paucity of arrivals in the terminal markets and good foreign demand. In the Kozhikode market, Chernad variety is quoting around Rs 925 and Ernad at Rs 900 per candy, showing a gain of Rs 250 over the best price obtained in January.

Latest reports, however, indicate that Jamaica and West Africa have started offering the commodity to the US, Continental countries and the Middle East at rates about 15 per cent below the Indian rate. Shippers, therefore, fear that the export business will considerably decline in the coming months.

While the Indian price comes to about £240 per ton. West Africa's quotation is stated to be around £205 per ton. This has induced Aden, Jeddah, Saudi Arabia and some Continental countries to switch over from India to Jamaica and West Africa.

The only relieving feature is, that the crop in these countries is stated to be limited, while that, in India, is higher by about 20 per cent this season. The season is almost over in Kerala and the output is estimated at 9,000 tons—a 30 per cent increase over last season's crops.

✱

Pepper markets continue to rule steadier with Wynaad quoting Rs 890 and Country Rs 865 per candy in the Kozhikode market. Accumulated stocks—loaned or otherwise—in the primary centres are, it is reported, not moving as desired by the growers. Consequently, the market appears to be vulnerable. If no sizeable demand is coming forth during this month, prices may, it is feared, go down during April when the new Sarawak crop will begin to cast its shadow.

In the New York market, dealers remained selective buyers and were reported to have paid 31½ cents per pound for "afloat" and 31 cents for March delivery.

✱

It is learnt that the Coffee Board has recommended a proposal for fixing Coffee prices on the basis of the average price realised during the past seven years instead of assessing the cost from year to year. Although producers, who are a small minority on the Board, are divided on this issue, a section believes that the Board should at least await the report of the Plantation Enquiry Commission before arriving at a final decision.

Meanwhile, coffee prices have been showing a steady decline due to anxiety of dealers to dispose of old stocks and in view of sufficient release of new crop coffee in Pool auction.

In the Coimbatore market, there was not much activity during the past fortnight; and the following prices (per cwt) were quoted:—Plantation Peaberry Rs 251 to Rs 252; new crop Plantation "A" Rs 222 to Rs 223; old crop average quality Robusta Rs 165 to Rs 166 and old crop average Cherry Rs 184 to Rs 185.

According to New York advices, the coffee producing countries are now facing a trying year. World exportable production is estimated in the vicinity of 38,250,000 bags (132 lbs a bag) in the crop year that began on July 1. This is the largest supply in about 15 years.

With retail prices in New York having fallen sharply from the peak price in 1954, consumption is expected to recover. In this connection, the Department of Agriculture estimates world demand at 32,000,000 bags, leaving a surplus of 6,250,000 bags.

Total world imports in 1955 are expected to be in the neighbourhood of 31,500,000 bags as compared with 30,000,000 bags in the previous year and the 1953 record of 34,000,000 bags.

✱

In the Cochin market, trading in Coconut Oil, after two days' stalemate due to uncertainties in the prices of futures and pending contracts following the imposition of an excise duty of Rs 70 per ton, started toward the end of last week. The rate hovered around Rs 386-4 per candy, though rates were generally quoted exclusive of the excise duty.

The Cochin Oil Merchants' Association has decided to continue all pending contracts at the old rates.

✱

Conditions in the Madras Groundnut market remained steady, although activity was at a low ebb. The rate for superior oil-quality seeds was quoted at Rs 140 per candy and at Rs 133 for bold varieties.

Arrivals, during the week, averaged 30 to 40 tons a day, while crushers were the main buyers.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 290 per candy on 3 per cent basis. Shippers were buying only small quantities to meet their immediate requirements, while Calcutta interests took up sizeable quantities as it was profitable to buy at current Madras levels.

✱

In the Madras Tanned hides market, arrivals of Cow hides were fair and there was good clearance by shippers. Although arrivals of Buff Calf and Cow Calf were fair, clearances were somewhat slow. Arrivals of Buff hides were fair, and fair clearance was reported at three pies per pound lower.

In the export section, there were some enquiries in light weights on the basis of 48d, 45d and 42d for runs, fourths and fifths respectively. In 10-12 lbs, business was reported done on the basis of 35d, 34d and 33d for runs, fourths and fifths respectively. In general, UK buyers were found to be more confident to operate at the present levels than for some weeks past.

In the Tanned Skins section, there were only few enquiries for lower selections; but other grades were not on enquiry.

In the export section, some clearances in good class Goat skins were possible, but at fully 1sh below peak levels.

It is learnt that, as there has been no direct steamer for London, exporters have been experiencing shipping difficulties for more than two weeks. The next call is not expected before this week-end.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

Notice is hereby given that the Register of Members and the Transfer Books of the Company will be closed from Thursday, the 12th April 1956 to Thursday, the 26th April 1956, both days inclusive.

Notice is also hereby given that pursuant to the Special Resolutions passed at the Extra-Ordinary General Meeting of the Company held on Monday, the 12th March 1956, the holders of Ordinary shares on the Register of Members of the Company on the 26th April 1956, being the date fixed by the Directors pursuant to the above Resolutions will be entitled to apply for the new Ordinary shares in respect of their holdings of Ordinary shares on such date. Application and Renunciation form will be posted to the shareholders in due course.

SOORAJMULL NAGARMULL.
Managing Agents.

ORIENT PAPER MILLS LIMITED.

NOTICE is hereby given that the Thirty-seventh Ordinary General Meeting of the above named Company will be held at 8, Royal Exchange Place, Calcutta on Thursday, the 29th March, 1956 at 11 A.M. for the purposes of adopting the Directors' Report and the Audited Accounts for the half-year ended 30th September, 1955 and declaring dividends to be paid on or after the 30th April, 1956 to registered holders in the Company as on the 12th April, 1956.

The Share Transfer Books will remain closed from the 6th to 12th April, 1956, both days inclusive.

By Order of the Board,
BIRLA BROTHERS LIMITED,
Managing Agents.
8, Royal Exchange Place,
Calcutta, the 7th March, 1956.

To all the Shareholders of the above named Company and in particular to those Shareholders who have no registered address in India and have not supplied any address within India for giving of notices to them.

THE CANARA BANKING CORPORATION LIMITED

GOLDEN JUBILEE
1906 - - 1956

FIFTY YEARS OF DEVOTED SERVICE TO INDIA

March 12, 1956 is, indeed, a great landmark in the history of the Canara Banking Corporation Limited. Fifty years ago, this day, this Bank had started in the district of South Kanara in Madras State in 1906. When the wave of 'Swadeshism' was spreading far and wide in our country, a noble band of citizens endowed with vision and forethought conceived the vast potentialities for good to the country as a whole of forming a Banking Institution to cater to the needs of trade, commerce and industry as well as to inculcate the habits of thrift in all classes of people. The seed of Banking was thus sown in the district. The history of the Bank is, no doubt, a fescinating one to all interested in the growth of Banking in this great country. It started as a 'Nidhi'. Slowly, it built up its permanent capital structure. Then followed its expansion and rapid development. The result has been, the paltry resources of Rs. 38-13-3 left at the close of the first day's working on 12-3-1906 have developed into over Rs. 5.45 crores.

ORIGIN

The first President-Founder of the Bank was the late Khan Bahadur Haji Abdulla Haji Kasim Saheb Bahadur, who guided the destinies of the Bank from 1906 to 1929. He was not only a pioneer among the Bankers of our State, but also a public worker of proved ability known for his character and integrity. He was the elected representative of Madras Legislative Council and the Delhi Assembly for several years and rendered yeoman service to the country. Above all, he was a philanthropist whose princely hospitality and magnificient charities are a household word in the district.

PRESIDENT-FOUNDER

Late Haradi Keshava Pai, B.A., B.L., leading lawyer of the place was a Director of the Bank since 1927. As President of the Bank since 1929, he shaped the policies of the Bank on right lines till his premature death in 1934. This period was marked by real and rapid progress in diverse directions. In fact, no administrator could have been more sincerely interested in the affairs of the Institution of which he was the head.

DEVELOPMENT

The growth and progress of this Bank, at the beginning, was steady. Started with a small beginning at a time when people were not used to Banking habits, it was really an uphill task to educate the clientele in taking advantage of the manifold Banking services. The constitution, under which this Bank began its working, was in the form of a 'Nidhi'—i.e., a person contributing to its funds a rupee or multiples of a rupee, every month, for a period of 45 months was entitled to receive at the end of the 46th month Rs. 50/- or multiples thereof. These contributors were the first shareholders of the Bank. This system was soon found to be not helpful, in view of the fluctuating and fleeting character of the capital. In the year 1917, a radical change was brought about by amending the Articles of Association and permanent shares were issued. Till 1937, the authorised capital of the Bank was Rs. 3,50,000/- and in 1938, it was raised to Rs. 10,00,000/-. In 1943, it was further raised to Rs. 25,00,000/- which continues to be its authorised capital to this day. The subscribed and paid-up capital, in 1934, stood at Rs. 2,25,000/-. With the growth of confidence in the Bank, the deposits increased steadily and the Board, in consonance with sound canons of Banking, thought it fit to increase the capital. In 1935, ordinary shares of Rs. 50/- each were issued at a premium of Rs. 40/- and this issue was oversubscribed. In 1939, 7,000—5% First Preference Shares of Rs. 50/- each were issued and were fully Subscribed. In 1943, there was a further issue of 18,000—4½% First Preference Shares of Rs. 50/- each and this issue, too, was fully subscribed. The last issue of Capital was again made in 1947 when 9,000 ordinary shares of Rs. 50/- each were issued at a premium of Rs. 40/- per share. It may be of interest to note that all these issues had uniformly encouraging response. This is proof positive of the popularity and confidence that the Bank has been continuously enjoying both with the shareholders and the public. To-day, its entire issued and subscribed capital of Rs. 20,00,000/- is fully paid-up.

RESERVES

Trade, commerce and industry can never be the monopoly of any class or community. It has been the policy of the Directors from the very inception of the Bank to strengthen the reserves by annually setting apart a fair portion of the profits towards the reserve fund. In the case of every Institution—particularly a Banking Institution, building of its reserves is the acid test of its intrinsic stability. From a small sum of Rs. 6,864/- in 1918 by substantial additions almost every year, reserves have now reached the figure of Rs. 12,00,000/-.

It is of particular interest to note that, as far back as nearly five decades, the Bank was formed with a cosmopolitan outlook without distinction of class or creed, motivated only by a spirit of ideal Banking service. This wholesome tradition has been maintained by the shareholders of the Bank.

PRESENT BOARD OF DIRECTORS

The cosmopolitan outlook is reflected even in the composition of the Board of Directors. It consists of men of eminence and high integrity coming from all walks of life. Their business acumen, farsightedness and cautious policy have all contributed towards attainment of the present stature of the Institution in the Banking field. The Bank is really fortunate in having such devoted men at the helm of affairs from time to time. One special feature of this Bank is that there has not been any Managing Director or Managing Agent from the very inception.

PRESENT CHAIRMAN.

The mantle of presidentship of the Bank fell upon the able shoulders of Dr. U. Sunder Ram Pai. M.B., B.S., the present Chairman. If the Bank owes its progress and popularity to any single individual, more than anybody else. it is the present popular Chairman of the Bank who continues to be associated with it, since 1929. Though his jobs are not always pleasant, he works unceasingly with a pleasing word for every one. A man of multifarious public activities, Dr. Pai is still never too busy to give the Bank his valuable guidance.

CHIEF EXECUTIVE

The present Chief Executive, Shri V. R. Kamath, B.A., LL.B., the General Manager, joined the Bank in 1934. He served in various capacities and rose to his present position as General Manager in 1937. "Service with a smile" is the slogan he preaches as well as practice. It is his tact and drive that make effective fulfilment of the Bank policy possible. In him, the staff at Head Office and Branch Offices find a sympathetic and understanding Officer. By his tact and ability of control and supervision he has been able to establish smooth work of the Institution. Ably assisted by the Deputy General Manager and the Inspectorate and other Officers, he has been successful in maintaining a high level of efficiency both in the internal administration and public relations. This policy has enabled the Bank to tide over difficulties that came in the wake of Bank failures. It also enabled the Bank to face successfully the heavy economic stress and strain caused by two devestating wold wars and unprecedented inflation and slump during the last fifty years.

WORKING OF THE BANK AND PRESENT POSITION.

The Bank, at present, undertakes to make advances on approved securities and renders a variety of modern Banking services. It has got a network of 42 branches spread over the States of Madras, Mysore, Bombay, Coorg, Andhra and U.S.T.C.. It has got its own buildings at Head Office, Mangalore, Mercara and Malpe. There are Safe Deposit Vaults for the convenience of the public at Mangalore and Mercara. As the Bank accepts deposits of not more than 5 years, it has to keep its resources in as liquid a state as possible. The high liquidity of the resources of the Bank and its intrinsic strength were demonstrated in the past, when some Bank failures occurred in the country. As on 31-12-1955, the total cash-in-hand including that with Bankers and investments in gilt-edged securities, was at around 64% of the deposits. The total advances of the bank were at 52% of the deposits. 76% of total advances, including bills purchased and discounted, were fully secured. These factors indicate the Bank's policy of maintaining liquidity of its reserves and safety of its advances.

It is a matter of pride and joy that the Bank is ably served by its loyal and devoted staff who have, all along, worked with honesty and integrity, contributing their share to the growth of the Bank, both in size and reputation.

The Bank has been showing rapid progress, and the following table shows the progress made by it during the last five decades:

(Rounded off to the nearest thousand)

Year.	Paid up Capital. Rs.	Reserves Rs.	Deposits. Rs.	Cash. Rs.	Investments. Rs.	Advances. Rs.	Working Capital. Rs.	Net profits. Rs.
1906 ..	5,000	..	..	..	..	5,000	5,000	..
1916 ..	26,000	5,000	4,000	1,000	..	35,000	38,000	2,000

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1955.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

London,

The National Bank of India, Limited

Expansion Recorded in 1955 Balance-sheet

Gratifying Increase in Indian Agricultural Productivity

Prospect of Further Anti-Inflationary measures in UK

Mr. J. K. Michie, the Chairman, Anticipates Firmer money Rates

The Annual General Meeting of The National Bank of India, Limited, will be held on March 27 at 24, Bishopsgate, London, E.C.

The following is the statement by the Chairman, Mr. J. K. Michie, which has been circulated with the report and accounts for the year ended December 31, 1955:—

Since I last addressed you, we have strengthened our board by the addition to our number of the Rt. Hon. Lord Colgrain, M.C., who joined us in April last. Lord Colgrain is chairman of Grindlays Bank Ltd., and his presence on our board contributes greatly to the very necessary cooperation between the two banks.

His appointment comes up for confirmation at the annual general meeting.

Our balance-sheet again reflects expansion, the total of our consolidated figures being £168,653,013 against £162,031,432 at 31st December, 1954.

For reasons which are alluded to later this trend is much more likely to be reversed than continued during 1956.

After full provision for taxation, bad and doubtful debts and other necessary reservations our consolidated net profits are £421,839 against £385,923 for the previous year.

The two dividends declared total 15 per cent., which is the same rate as for 1954.

Of the resultant balance as last year £75,000 has been transferred to premises account and £85,000 has been allotted to contingencies reserve account against £70,000 last year. The balance carried forward has been increased by £15,892 at £342,158.

In common with other banks we have suffered a considerable fall in the value of our holdings in Government securities, but this has been taken care of internally.

INDIA

Irrigation schemes, the increasing supply of water from tube wells and improved methods of agriculture have all contributed to a most gratifying increase in agricultural productivity, particularly of foodstuffs, and imports in 1955 fell to a new "low" of just over three-quarters of a million tons. This additional production is all wanted to keep ahead of the growth of population.

Generally, the production targets set for the first five-year plan have been reached or exceeded and Government is facing its second programme with some confidence.

An outline of this has recently been published which provides for a total investment of Rs. 6,100 crores (£4,575 millions), of which investment in the public sector will be Rs. 3,800 crores (£2,850 millions) whilst investment in the private sector is placed at Rs. 2,300 crores (£1,725 millions). The ratio of public to private investment is 62 per cent. to 38 per cent. Combined development expenditure by Central and States Governments is to be of the order of Rs. 4,800 crores (£3,600 millions). The broad aims are to create 10 million additional jobs, of which eight millions will be non-agricultural, and progressively to raise national income by 25 per cent. and per capita income by 18 per cent. between now and 1961. We sincerely hope these aims will be achieved. It is proposed to finance the plan to the extent of 50 per cent. from budget surpluses and loans. £900 millions is to come from deficit financing while £600 millions is expected from foreign sources, leaving a gap of £300 millions to be filled.

In a proposed amendment to the Reserve Bank of India Act indications are given of how part of the finance for the plan is to be found. There are two proposals, one to reduce the backing of the paper currency from 40 per cent. to 30 per cent., thereby enabling the note circulation to be increased by Rs. 135 crores, the other to revalue the gold in the Paper Currency Reserve to the International Monetary Fund rate of $35 per ounce, thereby raising its value by Rs. 78 crores. The second is an entirely logical move.

The Planning Commission purposes the creation of a socialist pattern of society and that includes "a more even distribution of wealth and power" with limited ceilings for personal net incomes. Higher taxation is therefore in view.

As a part of her economic policy India has just announced her decision to nationalize life insurance so that she may channel the growing funds from this source more directly into the five-year plan than happens through the individual investments by companies in Government securities, &c.

The immediate results of Government's action have been a sharp and general fall in Stock Exchange values and a recrudescence of uncertainty in the minds of industrialists, Indian and foreigner alike, regarding Government's further intentions towards the private sector, and this uncertainty has not been relieved by the principles of policy outlined by the authors of the second five-year plan.

The Imperial Bank of India is now the State Bank of India and a controlling interest has been acquired by Government through the Reserve Bank of India. It was fore-shadowed that certain other indigenous banks would be included in the new State Bank, but so far this has not been done. The primary reason for the change of ownership and control was the provision of banking facilities in rural areas at a faster tempo than a purely commercial undertaking could justify.

A REGRETTABLE FEATURE

A very regrettable feature of the banking year has been the strikes and at times near-riots initiated by banking clerical staffs at Calcutta, Bombay, and other of the principal cities which arose out of certain provisions in the Industrial Disputes (Banking Companies) Decision Act, 1955, which laid down the general lines on which staff should be paid.

At time of writing the atmosphere is one of comparative peace, but if the Central Government is to lay down rules they should at least ensure that they are kept by both sides. The alternative is anarchy and the impossibility of banks carrying out their obligations under the Negotiable Instruments Act which in turn would mean the paralysis of business, a state of affairs which was within a hair-breadth of happening in Calcutta early in January.

Throughout our history in India we have taken pride in the good relations that have existed in our offices and we regret exceedingly that these have been disrupted—we hope only temporarily—by circumstances beyond our control. To all those who in most difficult conditions have helped to keep the machinery of banking from coming to a full stop we offer our sincere thanks.

PAKISTAN

On 31st July last Pakistan revalued her rupee at 1s. 6d. and so came into line with other sterling area currencies. This was a wise decision which has put her in a much better position to market her exports. It also opened the way for a resumption of trading with India which could be widely developed. While in some cases the products of the two countries are competitive, they are in many others complementary to the needs of each other.

Development of industry has had a high place in Pakistan's planning and both in West and East Pakistan many factories have been brought into operation during the year.

On the whole crops were good in 1955 and the economy of the country is distinctly more stable, partly as the result of an austerity campaign which cut imports very severely.

The draft Constitution is now under discussion; a major proposal is to establish the same connexion between the U.K. and Pakistan as exists between the U.K. and India—i.e., a republic within the Commonwealth.

Mr. Ghulam Mahomed, who had given devoted service to his country as Governor-General, recently had to resign because of ill-health, and his place has been taken by another national figure in Major-General Iskander Mirza.

Our fine new principal office in Karachi, a photograph of which is our pictorial feature this year, was formally opened for business in April last, and Mr. Habib Rahimtoola, Minister of Commerce, did us the honour of performing the opening ceremony.

CEYLON

Generally, the economic picture of the island is a favourable one. Lower rice prices combined with a larger internal production greatly improved her balance of trade. Rubber prices have remained at remunerative levels, but the course of tea prices has borne a close resemblance to a fever chart, and no one can yet say that it has settled

at "normal," although it is thought that the principal factors which caused last year's extreme swings have worked themselves out.

The recent rapid increase in Ceylon's rice production is a fine achievement, although at the moment a severe drought is causing a setback. The target is 650,000 tons per annum, which would go far to meet the needs of the increasing population.

The Development Finance Corporation I mentioned last year has not yet been formally constituted, but this is expected to happen in the very near future.

It has just been announced that an oil refinery is to be built near Colombo by British and American oil interests, which will be an important addition to the economy of the island.

BURMA

Falling rice prices have again troubled Burma, but this was countered to some extent by larger rice exports. Nevertheless, her sterling balances declined sharply from £41½ millions to £32 millions over the 12 months as orders previously placed for large quantities of capital goods had to be paid for.

Strict rationing of imports was put into effect early in 1955, and it is hoped that this measure, coupled with a more active rice selling policy, will bring equilibrium.

The barter transactions which have recently become a feature of Burma's trading I fear are not likely to provide a real solution of her rice problems, nor will they provide imports at the most economical costs while they are doing much damage to the established trades with the United Kingdom.

Production of mineral oil is increasing, and this means a considerable saving of foreign exchange.

Improved port facilities and internal transport remain the first necessities of further economic progress, and Burma's friends would prefer to see greater concentration on these rather than that money should be spent on projects of more dubious merit and which offer much less certain rewards.

Given successful handling of the present somewhat critical balance of payments position, there is no reason why Burma should not achieve and maintain a favourable balance of trade.

Her economic policy continues to be dominated by Socialist ideas and increasingly trading is going into the hands of State or quasi-State organizations. A corollary of this is the Government-owned State Commercial Bank to which a considerable amount of business is now directed.

THE COLOMBO PLAN

The Colombo Plan is being steadily enlarged and the tempo of development in Asian member countries continues to rise, as is indeed highly necessary, for it is estimated that the population over the area covered by the plan is increasing at the rate of 10 millions per annum.

In the not very long run, in spite of very satisfactory increases in food production in deficit countries, there seems to be a certain market for any rice Burma and/or Siam can export, particularly as per capita standards of nutrition are still estimated to be below the 1939 level.

It is only right to point out that at least two-thirds of the Colombo Plan funds are found by the countries which benefit, but outside aid is not only in money and to date 7,200 men and women have been or are being technically trained outside the area. The long-term advantages of this scheme will be very great.

EAST AFRICA

Politically both in Kenya and Uganda more stability has been achieved and the economies of the two territories have benefited accordingly.

In pursuance of our policy of providing banking services where and when justified, we have opened two branches in Kenya, at Nyeri and at Kilindini Road, Mombasa, and one in Tanganyika at Mbeya. Sub-branches have been opened at Kakamega from Kisumu, Kenya, and at Iganga and Kamuli from Jinja, Uganda.

Kenya.—The extreme phase of the Mau Mau movement seems to be over, which is a matter for thankfulness, and if this is confirmed by events it will not only give great relief to the Government financially and otherwise, but will, too, give confidence to all concerned in the development of the country. To date it is estimated to have cost £30 millions. In the circumstances progress during 1955 was good and crops on the whole satisfactory although recent unseasonable rains have badly damaged the standing wheat crop. The next problem in Kenya will be resettlement and rehabilitation of those who were not too deeply involved in Mau Mau. It will be a task calling for statesmanship of a high order.

Uganda.—Cotton and coffee are the backbone of the economy of the Protectorate. Both crops were good in 1955 and only small inroads had to be made into the Cotton Price Assistance Fund previously built up by Government in the years of high prices. The large surplus being carried by the United States is a constant cloud over the cotton markets of the world.

Recently trade has been freer than before the return of the Kabaka to Kampala, but confidence has not yet fully returned and the turnover of consumer goods is still somewhat restricted in Buganda.

Tanganyika.—Sisal prices improved during 1955 and since the turn of the year first quality has touched £90 per ton against £80 a year ago.

Cotton and coffee crops were again good and continue to expand.

The port of Tanga has been greatly improved and extensions to deep sea berths at Daressalaam are under way. Mtwara still carries only a small volume of traffic, but hopes are held that there will be a steady expansion of production in the Southern Province.

Zanzibar.—In 1955 exports of cloves considerably exceeded the figures for 1954, but as the new crop is a large one stocks held by the Clove Growers' Association have been rising.

Copra prices remained fairly steady throughout the year and exports, as also of coconut oil, were only slightly below 1954 totals.

Somaliland Protectorate.—Unspectacular but steady progress is being made in this territory and these remarks apply equally to our business there.

Aden continues to be one of the most important fuelling ports in the world.

Prospecting for Oil on a considerable scale is being carried out in Aden's hinterland and any success will add further importance to the colony. The traditional entrepot trade is being well maintained. It is hoped that our new main office premises in Crater will be completed within the next few weeks.

SUBSIDIARIES

Grindlays Bank Ltd., had a satisfactory year and higher profits are shown. Expansion in the Rhodesias continues.

Our Finance & Development Corporation made an increased profit which is being retained in the business.

GENERAL

A year ago to combat inflation the Bank of England rate was raised to 4½ per cent.; later the "credit squeeze" was ordered, but even together these measures unfortunately have been proved inadequate. As I write the Bank rate has been hoisted to 5½ per cent and other measures taken aimed to restrict spending. During 1955 production in the United Kingdom was increased by about 4½ per cent but spendable incomes rose by 7 per cent, and as by and large these incomes were spent we had inflation to at least the extent of the difference. The sharp fall in the gold and dollar reserves is another disquieting feature and is a reflection of our adverse trade balance. So without doubt we shall have further and very necessary anti-inflationary measures imposed upon us, we as a community having failed to impose them on ourselves.

In a totalitarian Society there is no comparable problem. Management and labour just have to produce prescribed "norms" and, of their production, only a certain percentage is released for internal consumption, the balance being ploughed back into development or directed into export. As only a small percentage of each annual increment in production is earmarked for domestic enjoyment, the rate—though not necessarily volume—of increase in gross national product is greater in, say, Russia, than in democratic countries.

In a free economy totalitarian methods are not permissible, and others must be used to produce similar effects. We therefore await the Budget in hope, tempered by some trepidation.

The alternatives to a policy of reducing the volume of goods for internal consumption seem to be either to make them more expensive (e.g., by purchase taxes) or to ensure through taxation that less money chases the goods available. It would be far less painful to Government and to us if individuals were to save rather than spend and thereby achieve the twin necessities of a favourable balance of trade and a surplus for investment, but we cannot have the cake of economic freedom and simultaneously eat it.

As a British overseas bank our interest in the economic measures taken by this country lies partly in the repercussions they have elsewhere. For instance, it is vital that the United Kingdom should be able to continue to make important contributions to the Colombo Plan and to other similar developments within the Commonwealth as well as to expand its investments abroad through private enterprise. If we cannot do these things we shall lose our place in the markets and in the regard of the countries concerned.

It has also to be realized that the effects of the credit squeeze do not begin and end in London or in the United Kingdom. It is true that the centre of the sterling area naturally takes the first pressure; but the effects of action at the centre necessarily work their way outwards, and it would be idle to suppose that borrowers nearer the periphery of the sterling area will remain unaffected by recent monetary measures in this country. It will be of interest to watch the longer-term effects in this wider context. Overseas banking cannot but be made increasingly aware of this aspect of the squeeze during the current year, and I would not be surprised to see firmer rates in many countries which to outward appearances so far have not been affected.

STAFF

With the qualification I have made we have had the usual high standard of service from our staff everywhere for which we offer our sincere thanks.

Our general manager, Mr. Chisholm, is nearing the end of a strenuous tour of our Eastern branches which is giving him and us an up-to-date appraisal of our business and of conditions in India, Pakistan, Ceylon, and Aden from which we shall derive great benefit.

This of all times is not one in which to indulge in prophecy, but in so far as our immediate future is in our own hands I see no reason to be pessimistic.

Sir Cowasjee Jehangir, the Chairman, reveals proposal to mark Golden Jubilee by bonus issue

Extracts from the Speech of Sir Cowasjee Jehangir, Baronet, G.B.E. K.C.I.E. of the Chairman of the Bank of India Limited, delivered at the 50th Annual Ordinary General Meeting of the Shareholders of the Bank held at Bombay on Thursday, the 8th of March, 1956.

The year saw far-reaching events take place in the direction of state ownership and the progress towards a socialist state in India. Such events included the passing of the Finance Act, 1955, with drastic, and almost penal, increases in the taxes on salaries and incomes, the nationalisation of the Imperial Bank of India and the submission of the Companies Bill which has now become an Act. To an increasing degree the actions of the Government dominate business and the commitments of traders are more and more dependent upon their assessment of the probable future policies of the Government.

The new Companies Act, which was passed on the 18th of January last and comes into force from the 2nd of April, is a gigantic and voluminous piece of legislation which, I believe I am correct in saying, goes further in a number of respects than corresponding legislation in any other country. The Act would appear to have been drafted, to some extent, with regard to considerations other than those concerning only the needs of trade and industry and the interests of shareholders and investors. The comprehensive and far-reaching character of the legislation will give rise to many difficulties and there will be inconsistencies and incongruities and I think you will find that substantial amending legislation will have to be passed before the new Act has been in force for any length of time. The ramifications of the Act will call for much tolerance on the part of those administering it during, at least, the first months of its life.

Since the end of the year there has been a further major operation on the part of the Government which cannot but cause uneasiness. I refer to the nationalisation of life insurance business throughout the country on the 19th of Januuary. It is not to our credit that the nationalisation should have been effected by the undemocratic method of an ordinance. The worst aspect of nationalisation is the unfair method of compensating shareholders for the value of their shares. This is being done under the amendments made in the Constitution on the 27th of April, 1955, by the Constitution (Fourth Amendment) Act, 1955. I know of an instance where the shares of a life insurance company have been valued by actuarial calculation at a certain amount and it is now well known that, on the basis of the compensation indicated in the Bill which has followed the Ordinance, the Government intend to pay less than half that value. I do not think it was ever intended in a country governed under democratic principles that the Government should take advantage of the amendment of the Constitution to deprive shareholders of their legitimate dues, especially to such an extent as I have just mentioned.

Banks continue to suffer from having to pay higher rates of interest on deposits without being able to charge correspondingly higher rates of interest on advances. The establishment and over-head expenses of banks, which call for a large margin between the cost of money lodged and the yield on money lent, continue to expand. The bank-rate, which has been 3½% since the 15th of November, 1951, is out of gear with the current interest rates in this country. To obtain and keep deposits, banks must pay interest to depositors at market rates of interest which are governed by the supply and demand of money. On the other hand, banks usually grant advances at rates of interest related to the bank-rate. The rates of interest charged to borrowers consequently do not rise if the bank-rate remains stationary and lags behind current upward movements in the market rates of interest. In such conditions banks are paying increasing interest on deposits and getting very little more interest from advances.

The Bank's profits for 1955 are nearly Rs. 85 lakhs against Rs. 77 lakhs for 1954. Before the profit figure has been struck, usual appropriate and prudent provisions have been made and shareholders will, I feel sure, consider the increase of nearly Rs. 8 lakhs in the profits as eminently satisfactory.

The provision for taxation absorbs Rs. 25 lakhs against Rs. 29 lakhs last year. By reason of the revised taxation proposals in this year's Central Budget introduced last week on the 29th of February, the Bank's liability for tax will now be about Rs. 5 lakhs more than the provision, but that will be met in the current year's accounts.

Your Directors propose to place to the Bank's Landed Property Account the sum of Rs. 3,00,000 and to pay an increased final dividend of 10 per cent., free of income-tax, absorbing Rs. 25 lakhs, and making, with the interim dividend of 6 per cent. paid last August, a total of 16 per cent. per annum, or Rs. 40 lakhs for the year, free of income-tax. The amount carried forward is increased at something over Rs. 13 lakhs against Rs. 9 lakhs a year ago.

I should like to refer to the Central Budget introduced in the Lok Sabha a week ago on the 29th of February. I must confess to a pessimistic view of the proposals. I might describe the Budget as one to make the poor poorer and the rich poor. Leaving aside China, about which we know little India is one of the poorest countries in the world and, taking into consideration the size of its population, it has fewer rich men than any other country. We hear a great deal about the equalisation of wealth. Since the landed classes have already been more or less wiped out, I presume that this can only refer to the industrialists. Does the Government mean that these industrialists are of no service to the country and that they do not give employment to hundreds of thousands and serve the country in many other directions of which the Government are well aware. There is now an impression that the intention of the Government is to wipe out the private sector. Every obstruction is being placed in its way and when it is unable to fulfil the targets contemplated for it in the Five-year Plans the Government may have an excuse for nationalising all industries.

The Budget has introduced the principle of double taxation. Dividends paid by companies above 6 per cent per annum on their paid-up capital are to be taxed. No distinction is made between companies recently brought into existence and companies of long standing which have been managed with efficiency and honesty and which have conserved their resources, enabling them to pay high dividends. All companies have already paid tax on their profits from which dividends are paid. This undoubtedly is double taxation, but, worse still, companies which intend to capitalise some of their accumulated profits on which they have already paid tax will have to pay tax again and companies which have already issued Bonus shares from Reserves which have been taxed will be taxed again on the dissolution of the companies. Again, the withdrawal of the rebate of one anna in the rupee on undistributed profits will cause a further drain on the resources of companies. The penal tax of 8 annas in the rupee on undistributed profits of investment companies which come under Section 23A of the Income-tax Act will preclude any ploughing back of their profits for financing the further development of the country. Also, it appears that all companies which come under Section 23A will fall within the mischief of the new dividends tax. This is grossly unfair as it means that the Government compel such companies to pay a very high dividend and then tax them for doing so.

Few outside India realise that India can claim to be one of the highest taxed countries in the world. The Government have included all sections in the orbit of taxation by increased excise duties. Formerly, deficit financing was unheard-of by financiers and economists. India has put into operation very big schemes by deficit financing. The success of these schemes will depend upon good administration and no corruption. It appears to me that the success of deficit financing mainly depends on getting value for money. Maladministration and corruption may frustrate the very foundation of deficit financing. I am only speaking aloud what I know thousands are saying in ordinary conversations.

Later in the year, the Bank will complete fifty years of its existence and shareholders may like to know the intentions of the Directors regarding commemoration of such an event.

The Directors consider that the completion of fifty years of the Bank's life should be marked by the issue to shareholders of one bonus share of Rs. 50 fully-paid for each 5 shares of the Bank. The Directors therefore propose to apply to the Controller of Capital Issues, Government of India, for the necessary sanction.

The sum of Rs. 50 lakhs would be transferred to Capital from the Reserve Fund, making the paid-up Capital Rupees three crores and the Reserve Fund Rupees three crores and two lakhs. The Bank's Capital would thereafter consist of two classes of shares, namely, the present partly-paid shares and the new fully-paid shares.

Shareholders will appreciate that with the 2% extra dividend already recommended and the further proposed increase in capital, if sanctioned by the Government, the future dividends will depend not only upon the profits of the Bank but also upon the Government's taxation policy.

Stock Exchanges

EQUITIES FORGE AHEAD

Watch-dog Writes:

STOCK markets have, on the whole, fared well during the week. The recovery movement, which started on second thoughts of the Budget proposals, has gathered considerable strength, reflecting the hopeful view of the outlook for established companies under the Second Five-Year Plan. It appears that the rally will proceed further though price movements may be irregular.

Activity on the Calcutta Stock Exchange was mostly confined to the Tea section, while conditions in other sections remained quietly steady.

The Bombay Stock Exchange presented, on the whole, a steady front with Textiles taking the lead.

A buoyant under tone and sustained buying fervour characterised dealings on the Madras Stock Exchange.

Adverse economic and political factors restricted dealings on the London Stock Exchange where prices showed an indecisive trend.

Price movements on Wall Street were rather irregular, with losses in the majority.

GILLANDERS ARBUTHNOT & COMPANY LIMITED

NOTICE is hereby given that the Preference Share Register of Members of the Company will be closed from the 22nd March to the 2nd April, 1956, both days inclusive, for payment on the latter date of a Second Interim Preferential Dividend for the year ending the 31st March, 1956 on the Preference Shares of the Company @ Rs. 2/8/- per share less income Tax.

As Dividend Warrants are sent only to Registered Shareholders or to their Mandatees, shares on blank transfer should be submitted with completed transfer deeds for registration before the Preference Share Register of Members is closed.

By Order of the Board,
J.F.E. d'A. WILLIS,
Managing Director.

Clive Buildings,
Netaji Subhas Road,
Calcutta, 6th March 1956.

MACNEILL & BARRY, LIMITED.

Notice is hereby given that payment of the Half-yearly Interest on the 5% Debenture Stock 1966-71 of the Company will be made on 2nd April, 1956 to those stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary.

2, Fairlie Place,
Calcutta, 13th March, 1956.

Calcutta

Calcutta, Thursday Evening.

THE local Stock Exchange started the week on a more confident note and, with revival of interest at lower levels, prices showed an all-round rallying tendency in an improved turnover. The change in the tone of the market was a reflection of the more hopeful view of the outlook for the various industries under the Second Five-Year Plan. There was also a general impression that the market was oversold immediately after the Budget; and the recent budla charges confirmed this view. Again, higher advices from Bombay and Madras added to the favourable influences.

Activity was, however, confined to the Tea section, where shares, particularly of the Pakistani gardens, came in for keen demand at enhanced levels. Although prices in other sections suffered a slight setback due to profit-taking at higher levels, they finished the week with modest gains on balance.

Without gaining any appreciable business, the Giltedged market improved slightly during the week. Small buyers were evident in most dated issues, 3 per cent 1986 Conversion Loan moved between Rs 77-8 and Rs 77-12, to finish the week at Rs 77-2. Among other Loans, 3 per cent 1963-65 was done at Rs 94-11; 3 per cent 1970-75 at Rs 89-8 and 3½ per cent 1965 at Rs 98-7.

Bank shares ruled steadier. United Commercial were taken up upto Rs 49 xd, in view of the strong balance-sheet position, while Punjab National changed hands at Rs 46-4 to Rs 46-12 and Hindusthan Mercantile at Rs 15.

Jute shares continued to be a neglected counter where prices developed an easier tendency due to various adverse factors such as, the continued flow of disappointing dividend announcements, the substantial increase in stocks as well as production and lower US burlap consumption during February. Howrah had sellers at Rs 22-8. National were marked down to low of Rs 25 from Rs 26, while Reliance were on offer at Rs 10-1 to Rs 10-3; Ganges at Rs 69 to Rs 69-8 and Anglo-India at Rs 186.

Despite the reports of shortage of wagons for the movement of the commodity and the accumulation of stocks at various pit-heads, Coal shares fared better. New Beerbhoom were taken upto Rs 19-11 following the increase in dividend. Bengal, after touching a high of Rs 528, finished at Rs 523. Burrakur moved narrowly between Rs 13-14 and Rs 14-2 towards the close of the week, the highest level touched for the week being Rs 14-3. Katras Jherriah changed hands at Rs 60-4 to Rs 60-12; East Indian at Rs 31-11 to Rs 32-2 and Western Bengal at Rs 6-15.

Thanks to encouraging advices from Bombay, Textiles were a steady feature. Elgins had buyers at Rs 27-2 to Rs 27-7; Kesoram at Rs 16-8 to Rs 16-13; Bowreah at Rs 307 to Rs 310 and New Victoria at Rs 2 to Rs 2-1. Cawnpore were, however, sticky at Rs 9-2.

Little or no interest was shown in the Sugar section, where transactions were very few. Following the substantial reduction in dividend, Carew were on offer at Rs 9-14 xd., while Belsund moved narrowly between Rs 11-8 and Rs 11-10. Dyer Meakins were quoted at Rs 5-12 and Ganesh at Rs 19.

The most outstanding feature of the week's trading was the revival of activity in the Tea section, where prices showed a sharp recovery from the recent low levels. The steady improvement in the prices obtained for the commodity at the last two weeks' auctions and Mr Stringfellow's optimistic reference to the question of renewing the International Tea Agreement, caused an upward trendency in prices. The rise in prices was more marked in the scrips of the Pakistani gardens due to the Government's decision to refund EPT. With the result, Patrakola jumped to Rs 250 from Rs 199; Telliapara to Rs 246 from Rs 191; Tezpore to Rs 23-10 from Rs 21-8; New Samanbagh to Rs 21 from Rs 18-4 and Hasimara to Rs 35-2 from Rs 33-10.

Among the scrips of other gardens, Brooke Bond improved from Rs 21 to Rs 22-6; Baghmari to Rs 25 from Rs 21-14; Bishnauth new to Rs 22 from Rs 19 and East India to Rs 23-8 from Rs 21-10.

Price movements in the Engineering section, were mostly influenced by the speculative activity in Indian Irons. This scrip, after opening at Rs 32-13 and touching a high of Rs 33-5, finished the week at Rs 33. After market hours on Thursday, there were buyers at Rs 33-4-6 sellers at Rs 33-5.

Among other Engineering scrips, TEXMACO touched a high of Rs 21-6 from Rs 21-2; Richardson Rs 25-8 and Jessop Rs 34 from Rs 33, to finish the week at Rs 21-2; Rs 24-14 and Rs 34 respectively. Braithwaite changed hands at Rs 26-2 to Rs 26-6 and Britannia old at Rs 18-10 to Rs 18-12.

Miscellaneous issues ruled generally quiet. Orient Paper improved at one time to Rs 34-15 from Rs 34-10, to ease off again at the close to Rs 34-6. India Pulp were, however, enquired upto Rs 24-8 from Rs 23-7, while Titaghur were cheaper at Rs 44. Shree Gopal moved narrowly between Rs 18-4 and Rs 18-9, to finish at Rs 18-6.

In Minings, Indian Copper continued to be a narrow market around Rs 6-8, while Metal Corporation finished at Rs 12-10, after touching a new high of Rs 13 early in the week. Karanpura Development were pushed further upto Rs 23-8 from Rs 21-8, to finish at Rs 23 on profit-taking.

In Oils, BBP changed hands at Rs 4-3 and Rs 4-7 and IBP at Rs 41-4 and Rs 41-8.

Among other scrips, Indian Cable had buyers at Rs 31-6 to Rs 31-10; Martin Burns at Rs 27-6 to Rs 27-9; Metal Box at Rs 26-1 to Rs 26-10; India Steamship at Rs 8-5 to Rs 8-9; Dunlop Rubber at Rs 31 to Rs 31-4; BIC at Rs 10-8 to Rs 10-11 and Rohtas old at Rs 19-14 to Rs 20-6. Jardine Henderson were quoted around par, while Gillanders were enquired upto Rs 15-12.

*

Madras

Madras, March 13.

ACTIVE dealings were noticed on the local Stock Exchange during the past week when the higher levels, that were reached in the previous week, were fully maintained.

TEXTILES:—This section continued to attract good attention and there was a further improvement in prices. Buckinghams were easily absorbed upto Rs 178; Lakshmis upto Rs 190; Vasantas upto Rs 280 and Mysore Spun Silks upto Rs 5-10. Pankajas were wanted at Rs 72-8 and Premiers at Rs 180, while Maduras ruled steady at Rs 53-8. There was support to Saradas, Vijayalakshmis and Ranga Vilas at the market rates.

PLANTINGS:—Near-boom conditions prevailed in this section, and quite a substantial number of shares were taken up at enhanced levels followig the satisfactory dividend announcements made by some companies.

There was demand for Midlands; but, in the absence of offerings, no business could be resulted. Malankaras were lifted upto Rs 28, while Valkundams improved by As 4 to Rs 27; Thamarapally to Rs 29-4 and TRTs to Rs 13-6. Cochin Malabars were quoted at Rs 8-10 and Pullangodes at Rs 4-3.

In the Tea section, Periakaramalais received better support at Rs 8-3, while there was a rise of 10 points in United Nilgiris to Rs 320. Peermades continued to be in good demand upto Rs 36-8; Chembra Peaks upto Rs 4-6-6 and Neelamalais upto Rs 7-6.

Among Coffee shares, Coffee Lands were on offer at Rs 20-5, while there was some demand for Mysore Coffees at the market rate. Shevroys met with business at Rs 2-8 to Rs 2-9-0; Consolidated Coffees at Rs 24-4 and Chandramalais at Rs 6-7.

MISCELLANEOUS:—In this section, Cement and Chemical shares met with strong buying support. Andhra Cement "B" shares had buyers upto Rs 15-10 and Travancores upto Rs 12-1. Andhra Cement "A" shares had, however, some sellers at the market rate. In the Chemicals section, FACTs changed hands at Rs 7; Mysore Chemical Fertilizers at Rs 9-3 and Mettur Chemicals at Rs 10. Among other scrips, Bangalore Transports scored half a point and were wanted at Rs 13-12. India Steel Rolling Mills were in demand at Rs 12-4. Mysore Papers were done at Rs 17-1; Rane Madras at Rs 8-14 and Standard Motors at Rs 10-8.

(Continued on page 539).

THE CENTRAL BANK OF INDIA, LIMITED

NOTICE.

NOTICE IS HEREBY GIVEN that the Forty-fifth Ordinary General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 29th day of March 1956. at 4 P.M. (S.T.) to transact the following business:—

1. To receive the Report of the Directors and the Audited Accounts for the period ended 31st December 1955.
2. To declare a dividend.
3. To elect three Directors in place of Sir Homi Mody, Mr. Cooverji H. Bhabha and Mr. C. P. Wadia who retire by rotation under Article 92 of the Articles of Association read with Regulation 78 Table "A" of the Indian Companies Act and who are eligible for re-election.
4. To appoint Auditors and to fix their remuneration.

A separate Notice dated 1st March 1956 accompanied by a Circular of the same date has been given to the Shareholders of the Company that an Extraordinary General Meeting of the Shareholders of the Company will also be held at the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay 1, on Thursday, the 29th day of March 1956, immediately after the disposal of the business at the abovementioned Forty-fifth Ordinary General Meeting, to consider, and if thought fit, to pass as Special Resolutions, the Resolutions set forth in the said Notice dated 1st March 1956 which will be proposed at the said Extraordinary General Meeting, in the circumstances and for the reasons set out in the said Circular.

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 7th March, 1956.

N.B.:—The Transfer Books of the Bank will be closed from Thursday, the 8th day of March, 1956, to Thursday, the 29th day of March, 1956 (both days inclusive).

N.B.:—Dividend Warrants for the half-year ended 31st December, 1955, will be posted to the Shareholders at their registered address on and after the 31st day of March, 1956. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

★

CALCUTTA STOCK EXCHANGE

(Continued from page 530)

London

London, March 14.

ADVERSE economic and political factors restricted business on the London Stock Exchange during the past week, when prices showed an indecisive trend. The small gains achieved, towards the end of the week, were mostly the result of some bear-covering.

Industrials developed a better trend after early falls with Textiles making a good showing. In Motors, Fords were easier following the approach of the dividend announcement. Tobacco issues declined on fears of a tax increase in the forthcoming Budget. Although Gold shares were in good tone, business done was small. Oil shares were irregular, while Rubber and Tea issues were quiet.

Giltedged issues failed to hold initial big gains; but closed with fractional gains as a result of bear-covering operations. Following were the closing rates of selected stocks and shares:—2½ per cent *Consols* £53 (£53¼—previous week); 3½ per cent War Loan £73 (£72½); International Nickel $162½ (155); British Petroleum 103/6 (101/4½); *Calcutta Trams* 23/9 (23/9); Calcutta Electric 19/3 (19/3); Ford Motors 35/3 (33/7½); and Imperial Tobacco 51/10½ (51/0).

★

New York

New York, March 13.

PRICE movements on Wall Street, during the past week, were rather irregular with losses in the majority. Although attempts were made to extend the recent advance, they met with profit-taking and other selling. Current Middle East tension was promoting caution.

The only redeeming feature was the movement of a handful of specialities, which enlivened the week's trading. Westinghouse Electrics advanced slightly over $2, reflecting revived hopes of settlement of its strike. With bright prospects in the electronic industry, some of these issues were in demand. Montgomery Ward advanced more than one dollar, backgrounded by considerations concerning the opening of new stores—the first in 15 years. Despite lessened talk of the likelihood of anther price advance, Copper issues continued to attract attention.

Following were the closing rates:—Anaconda Copper $70½ ($78½—previous week); Ford Motors $62 ($61½); General Motors $46¼ ($44¼) and U.S. Steel Common $57½ ($50½).

FOR THE INVESTOR

(Continued from page 504)

both the companies are very impressive, though the dividends on the Ordinary shares have been maintained.

With the completion of the New Weaving Shed, the power house and the progress made in the Machinery Replacement programme, production and efficiency, in the case of the Buckingham & Carnatic Company Limited, has improved during the year under review. This is reflected in sales, which have shown a rise to Rs 9.01 crores from only Rs 8.44 crores in the previous year. The net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 1.11 crores as against only Rs 88.01 lakhs.

With regard to allocations to various Funds, the Depreciation amount has been raised to as much as Rs 30.60 lakhs from Rs 19.90 lakhs, as the directors have found it necessary to cover the charge on additional capital expenditure on buildings and machinery brought into use during the year. Apart from setting aside Rs. 75,000 for Raw Materials Fluctuation Reserve and Rs 2.14 lakhs for Fire, Accident and Insurance Reserve, General Reserve has been raised to Rs 10.00 lakhs from Rs 6.00 lakhs.

The directors have considered it prudent to increase the amount set apart for Debenture Redemption Fund from Rs 5.00 lakhs to Rs 9.00 lakhs; and the transfer results in a total allocation of Rs 20 lakhs to the Fund for the four years 1952 to 1955 and is in accordance with their policy of equalising the appropriations to the final date of maturity in 1972. To the extent of the face value of Debentures cancelled during the year, the amount set aside to the Debenture Redemption Fund is no longer represented by a specific investment, and a corresponding amount has been transferred from this Fund to the Provision for Increased Replacement Costs of Buildings and Machinery.

Due to increased allocations mentioned above, the directors have found it possible to just maintain the dividend at 10 per cent on the Ordinary shares.

According to the directors' report, the company has again succeeded in exporting a substantial part of its production despite import restrictions in some overseas markets and keen competition. The income-tax assessment on the company's profits for the year ended 31-12-1954 has not been completed and, therefore, the relief from taxation on profits through the operation of the Development Rebate and Extra Normal Depreciation for that year cannot yet be determined. The usual transfer from Taxation Reserve to Provision for Increased Replacement Costs of Buildings and Machinery will be made as soon as the correct amount of relief has been ascertained.

Despite the protracted labour strike at Kanpur lasting for 80 days and its consequent adverse effects, the Swadeshi Cotton Mills Company Limited has made a net profit, before Taxation and Depreciation, of as much as Rs 53,71,838 as against only Rs 35,75,025 in the previous year. Apart from providing Rs 16.00 lakhs for Taxation and maintaining General Reserve at Rs 5.00 lakhs, the Depreciation amount has been raised to Rs 10.00 lakhs from Rs 6.00 lakhs. The dividends on the Ordinary and Preferred Ordinary shares have been maintained at 7½ and 11½ per cent respectively. The carry-forward is higher at Rs 7.09 lakhs as against Rs 5.90 lakhs brought in.

£R$

Dividend Raised by SKG Sugar

Shree Krishna Gyanoday Sugar Limited has produced excellent working results for the year ended 31st July, 1955. The quantity of cane crushed, during the year, amounts to as much as 59.91 lakh maunds as against only 32.47 lakh maunds in the previous year, and sugar manufactured amounts to 6.19 lakh maunds against 3.16 lakh maunds. The cane crush at Hathwa is the highest recorded so far by this factory.

Sales for the year, however, show a decline to Rs 1.11 crores from Rs 1.90 crores. This is mainly due to a shortfall in the production of distillery products. But the net profit, before providing for Taxation and Depreciation, amounts 18,66,708 as against 6,17,708 in the previous year. Apart from setting aside Rs 1.00 lakh for General Reserve and Rs 7.25 lakhs for Taxation, the Depreciation amount has been raised to Rs 5.67 lakhs from Rs 2.20 lakhs. Even after these increased allocations the directors have found it possible to raise the dividend on the Ordinary shares from 15 to 17½ per cent for the year.

According to the directors' report, the production of distillery products, during the first six months of the current year, amounts to 4,95,010 B.G. On this basis, with improved supplies of molasses that will be possible with higher cane crush that is expected, the production will rise.

The company has acquired about 2,500 acres agricultural farms near Lauriya factory for cultivation of sugarcane, for development and improvement of sugarcane varieties in this area.

£R$

Dividend Reduced by Carew Sugar

Carew & Company, Limited has reported a substantial decline in profits as well as in sales for the year ended 30th June, 1955. This is partly due to the loss reported by Darsana's Pharmaceutical factory. There is now a ban upon the importation of spirit into West Bengal from any outside State and this is having an effect on the present-day sales, though sales of foreign liquors are more than maintained during the year.

The crush at the Darsana factory has proved to be the highest on record, at 46.08 lakh maunds as compared with only 24.32 lakh maunds in the previous year. The recovery has, however, fallen from 8.98 per cent to 8.46 per cent due to the fact that the crushing season had necessarily to be of longer duration and resulted in crushing in the early part of the hot weather.

Sales for the year amount to only Rs 1.95 crores as against Rs 2.54 crores, while the net profit, before Taxation and Depreciation, amounts to 6,90,150 against Rs 13,37,935 in the previous year. The directors have, after setting aside Rs 3.65 lakhs (same) for Depreciation; Rs 1.31 lakhs (Rs 4.36 lakhs) for Taxation and Rs 50,000 (Rs 2.00 lakhs) for Debenture Redemption Reserve, reduced the dividend on the Ordinary shares from As 12 to As 4 per share.

According to the directors' report, the current season's anticipated crushes, at both Darsana and Rosa, have every indication of exceeding those recorded in the year under review.

£R$

Encouraging Results of Martin Burn

Thanks to a substantial rise in sales from Rs 5.00 crores to Rs 5.72 crores, Martin Burn Limited has reported a net profit of as much as Rs 73,67,418 for the year ended 30th September 1955 as against only Rs 55,91,166 in the previous year. Due to increased profits, the directors have been able to raise the Depreciation amount to Rs 2.49 lakhs from Rs 2.29 lakhs; Taxation to Rs 37.75 lakhs from Rs 25.00 lakhs and General Reserve to Rs 5.50 lakhs from 3.50 lakhs. The Capital Redemption Reserve Fund is, however, maintained at Rs 2.00 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares from Rs 1-4-0 to Rs 1-8-0 and the Cash Bonus from As 2 to As 5 per share.

During the year under review, holders of 13,14,500 Convertible Notes exercised their option to covert their holdings into Ordinary shares, resulting in an increase in the Ordinary share capital of the company by 65,725 shares and a reduction of Rs 13,14,500 in the Convertable Notes outstanding.

The directors, in their report, have stated that the new Companies Act, which will shortly come into force, may adversely affect the earnings of the company.

£R$

Orissa Minerals Maintain Dividend

The Orissa Minerals Development Company Limited has reported satisfactory results for the half-year ended 30th June, 1955. Raisings of Iron Ore were 220,283 tons as compared with 303,531 tons in the previous half-year, while despatches also showed a considerable fall from 310,450 tons to 224,788 tons. Shipments to Japan, however, showed an increase to 48,811 tons from 19,002 tons.

Raisings of Manganese Ore increased from 22,947 tons to 38,720 tons, while sales recorded a sharp drop from 27,288 tons to only 16,959 tons. Raisings of Manganese Dioxide showed a further decrease of 580 tons and were only 1,068 tons, while sales increased from 1,074 tons to 1,547 tons.

Although total sales have declined from Rs 49.28 lakhs to Rs 47.77 lakhs, the net profit, before Taxation and Depreciation, amounts to as much as Rs 6,43,773 as against only Rs 3,63,741 in the previous half-year. The directors have, after setting apart Rs 89,344 (Rs 85,447) for Depreciation; Rs 1.50 lakhs (Rs 70,000) for Taxation: Rs 1.40 lakhs (nil) for Mechanisation Reserve and Rs 50,760 (Rs 38,815) for Tax Contingency Reserve, maintained the dividend at 10 per cent.

According to the directors' report, the wagon supply position has shown further deterioration and this must have serious results on the company's trading profits.

£R$

Bengal Coal

Despite a reduction in profit, the Bengal Coal Company has maintained the dividend at Rs 17½ per share on the Ordinary shares for the half-year ended 31st October, 1955. Raisings, during the half-year ended review, were lower at 11.83 lakh tons as against 13.27 lakh tons and despatches at 13.80 lakh tons against 14.30 lakh tons in the previous half-year.

Although sales have shown a slight rise to Rs 3.42 crores from Rs 3.20 crores, the net profit, before providing for Taxation and Depreciation, amounts to only Rs 40,35,785 as against Rs 45,04,945. The Depreciation amount has been raised to Rs 14.27 lakhs from Rs 12.00 lakhs; but Taxation has been reduced to Rs 11.50 lakhs from Rs 15.00 lakhs and General Reserve to Rs 6.00 lakhs from 7.00 lakhs.

✱

WORLD OF FINANCE

(Continued from page 508)

of Rs 4.07 crores to Rs 130.23 crores —'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 4.85 crores and 'Bills Discounted and Purchased' for a drop of Rs 0.77 crores.

According to the returns of the Scheduled Banks for the week ended 2nd March, Advances have shown a further sharp rise of Rs 14.87 crores to Rs 711.88 crores. Demand Liabilities have declined by Rs 7.94 crores to Rs 623.12 crores, while Time Liabilities are higher by Rs 0.62 crores at Rs 418.70 crores. Borrowings both from the Reserve Bank and the State Bank have risen by Rs 7.65 crores and Rs 1.87 crores to Rs 48.47 crores and Rs 14.04 crores respectively. Cash and balances with the Reserve Bank are higher by Rs 1.17 crores at Rs 89.25 crores. Investments have moved down to Rs 373.54 crores from Rs 375.26 crores. Money at call and short notice stands at Rs 6.88 crores against Rs 5.52 crores.

WORLD OF JUTE

(Continued from page 512)

cal change. With lower raw jute prices, Indian mills will be enabled to satisfy overseas demand in full and without hesitation. The foreign buyer who is now holding back not because he is not in need of jute goods but only because he is not prepared to pay higher prices, may also be depended upon to increase his purchases.

✱

Prices of Jute Goods, after opening firm, developed a downward tendency toward the close of the week due to various adverse factors. Mainly amongst these were, the absence of any enquiry from overseas buyers, lack of confirmation with regard to the Russian order, a substantial increase in production of jute goods in February and reports of rainfall in all jute-growing areas. There was, therefore, heavy long liquidation and bear-selling, resulting in a sharp decline in prices. Although some interest was shown at lower levels by shippers, the undertone remained weak as will be clear from the following price trends:—

	Last Week	Week's Opening	Week's Closing
Hessian:	Rs a	Rs a	Rs a
40" x 10 Ozs.			
Ready ..	40 10	40 12	39 10
March ..	40 14	41 2	39 14
April June	41 2	40 12	39 8
40" x 8 Ozs. ..	33 12	33 12	33 2
40" x 7½ Ozs. ..	31 6	31 6	30 12
Sackings:			
B. Twills—			
Ready ..	115 12	115 4	111 6
April-June	116 2	115 4	110 8
Heavy Cees			
(Green) ..	114 12	114 8	111 8
Cornsacks ..	118 0	117 12	113 12
Cubans ..	144 0	144 0	140 0
A. Twills ..	139 0	140 8	136 8
L. Twills ..	131 8	131 12	129 0
D. W. Flours ..	136 0	135 8	132 0
Sugar Twills ..	132 0	132 8	130 0

In sympathy with the manufactured goods section, the Raw Jute market also turned quieter in the absence of any mill interest. Arrivals at mill stations were reported to be sufficiently large for this time of the season and this fact coupled with reports of rains in all jute-growing areas encouraged mills to hold off purchases for the time being though local operators took a pessimistic view with regard to the supply of the raw commodity. Only the following mill business took place during the week in:—Dhubri Bottoms at Rs 28-8; Assam Bottoms at Rs 30-0 and Daisee Mesta Bottoms at Rs 28-0, all per maund for March/April shipment.

✱

GATEWAY NOTES

(Continued from page 518)

Financing the Second Plan, size Rs 47 crores, is acknowledged to be a tough job. This explains the Rajpramukh's significant call to the legislature to take steps which would enthuse the people of the State to contribute their utmost in terms of money and labour. Considering the popular enthusiasm with which the First Plan was gone through and the restraint, dignity and levelheadedness with which the issue of States Reorgination was discussed by the people, this appeal by the head of the State is not likely to be a cry in the wilderness.

NORTH INDIAN MARKETS

(Continued from page 521)

Daily arrivals declined to 1,500 maunds, while stocks were estimated around 1.50 lakh maunds.

In the Meerut market, prices of all varities improved fractionally. An estimated quantity of 12,000 maunds was put on the market by the producers. The Punjab was the only conspicuous buyer during the past week.

✱

The Calcutta Shellac market ruled dull; and only a small business was put through at lower prices. Pure TN Shellac was done at Rs 128 per maund. Shipments during the current month till the 10th were 10,628. packages.

According to official figures released this week, foreign exchange earnings from lac exports increased further to Rs 125.9 million in 1955 as compared with 92.3 million in the previous year and Rs 75 million in 1953. In addition to higher prices realised last year, the quantum of exports also improved to about 594,099 cwts as compared with 522 522.818 cwts in 1954.

The increase in lac exports was shared by all grades; but the demand was particularly heavy for shellac, which accounted for Rs 78 million last year as against Rs 51.8 million in 1954. The quantum of shipments was also higher at 324,589 cwts as against 252.012 cwts. In addition to the USA and the UK—India's principal customers—Communist countries also emerged as substantial buyers of Indian Shellac.

✱

WORLD OF TEA

(Continued from page 513)

black grainy descriptions were the strongest features, registering advances of As 2 to As 3 per pound. The next Internal Sale "F" will be on the 20th March, 1956.

Offerings, in the Colombo market, were 4,429,904 pounds. There was again strong and active demand for all types. The quality of Nuwara Eliya teas showed improvement and substantially higher prices were obtained for all grades, particularly those with attractive flavour.

In London auctions, about 22,290 packages, including 18,855 packages of Northern India teas, were offered. There was again a very good demand for all descriptions. Bidding was brisk in the best liquoring and medium kinds, and prices realised were as much as 6d and 3d per pound respectively higher. Good Common teas and the best of the Dooars were well sought after and often showed advances up to 2d per pound. Even poor quality and stalky kinds were also strong and prices were ½ to 1d per pound higher.

Tea stocks in London, as on the 2nd March 1956, were 98.67 million pounds as compared to 98.99 million pounds in the previous week and 132.11 million pounds a year ago. Landed between 25th February and 2nd March 1956 were 11.04 million pounds, while deliveries during the same period were 11.36 million pounds.

✱

GATEWAY GOSSIP

(Continued from page 517)

not imagine that the majority of the shares are held by a handful. Nearly 17,000 persons hold less than a thousand each, and only 1,900 hold shares of face value of more than Rs 10,000. In between come people who have perhaps put the whole of their lives' savings, ranging between a thousand and ten thousand, in shares of TISCO, often bought at several times its face value. Why, some of them may be even from among you".

The Munimji's facts are eloquent, and this story, like all decent stories, has a happy ending with the workers going off satisfied that they get their fair share of the income.

Mr Tata, however, is not, unlike his Munimji, content with merely allaying the misgivings of his workers. He pays them the compliment of telling them some harsh and unpleasant truths and also of some of his problems and asks them to help him find the solutions. I have already mentioned his references to the complaints from the shareholders. He tells them, in other words, that they should, by greater production effort, make it possible for him to keep the shareholders satisfied. He also tells them of things that the workers get and the shareholders don't, the magnificent amenities of the township of Jamshedpur. He tells them also bluntly that there are far too many workers at Jamshedpur but he is human enough and imaginative enough to find a way out: the absorption of surplus workers in the new expansion programmes.

He also pays them the further compliment of sharing with them his hopes for the future. He refers to the vast expansion projected under the Second Plan and tells them that this gives them all an opportunity of serving this great country of ours. There is something incandescent about Mr Tata's references to this opportunity for service given to them all: He states in very simple terms the duties of every one in this great enterprise. "If you ask me what each of you can do individually in this joint-effort, I think I would sum it up by saying: Work conscientiously, avoid wasting time while on duty, be self-disciplined, be loyal to your Union, to your company and to your country." For his part, he "pledges" himself "to look after your interests to the best of my ability" as long as he is able to work for this company. He must be a very poor worker indeed who does not respond to such a call to high endeavour.

CLIVE STREET GOSSIP

(Continued from page 516)

made him, unfortunately, a largely unsuccessful Secretary of State.

✱

One day, last week, conversation turned to the impending retirement of Mr G. A. S. Sim, Andrew Yule's Chairman; the function was Mr K. L. Jatia's tastefully conceived and thoughtfully contrived party to wish Mr Sim farewell. Somebody drew an analogy between Mr Sim's golf handicap and his efficiency in business matters. As those that are in the habit of taking long walks after a small white sphere at Tollygunge know, Andrew Yule's Chairman is a golfer of no mean ability. Within a short while of his taking up the game, Mr Sim had succeeded in reducing his handicap to four strokes. The analogy is a most happy one: for, both literally and figuratively, Mr Sim is a sportsman. As against the few in Clive Street who have keenly followed his rise in Andrew Yules, from the post of an assistant in 1930 to his joining of the Board in 1938 and the Chairmanship that became his in 1953, there are the thousands of Calcutta citizens who kept themselves informed about his progress on the football field. At work and at play, Mr Sim has been a distinguished figure in Calcutta: if Clive Street acclaimed his election as President of the Associated Chambers of Commerce, the golf club (if I might use an Americanism) was rooting for him as he fought out his semi-final match in the All India Golf Championship. Calcutta is surely the poorer for losing a good sportsman—whether in Clive Street, or at Tollygunge, or on football's maidans—by the retirement of George Alexander Strachan Sim.

EAVESDROPPER.

✱

OLYMPUS

(Continued from page 519)

It is this possibility of being held to ransom and blackmailed that bothers India. And, since some members of SEATO are obsessed with the Communist threat, they may not reckon too finely the price to be paid when there is a pressing need for Pakistan's co-operation in their "defensive arrangements". It is very necessary for the policy makers of the SEATO powers to think deeply over such hazards of the situation.

There is evidence that the entire policy of defensive alliances are undergoing a reappraisal in Europe, in view of difficulties over the Baghdad Pact and the interesting changes in Russian postures as revealed by the 20th Soviet Communist Party Congress. The hopes that the embarrassments that the great powers found themselves in, in Karachi over Kashmir will be taken into account in the reappraisal. For, the Karachi episode is no mere temporary contretemps. It exposes the basic weakness of these alliances, for they unwittingly make enemies of friends.

GOVERNMENT OF INDIA TREASURY BILLS

Tenders for Rs. 1,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 13th March, 1956. Total amount offered was Rs. 1,06,00,000. Tenders at Rs. 99-6-0 per cent were accepted in full and those at Rs. 99-5-9 per cent allotted approximately 89 per cent. Total amount accepted was Rs. 1,00,00,000, the average rate of accepted tenders being Rs. 2-8-6 per cent per annum.

Tenders for Rs. 1,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to the close of business on Monday the 19th March 1956. Successful tenderers should make payment on Friday, the 23rd March 1956. Other conditions are as usual.

During the week ended the 9th March, 1956 Government of India Treasury Bills for Rs. 44,17,25,000 were sold in favour of the Reserve Bank of India.

The Commissioners for the Port of Calcutta

NOTICE

Repayment on the 4th October 1956 of the 5% Calcutta Port Trust Debenture loan 1926-56-86 issue on the 4th October 1926.

The Commissioners for the Port of Calcutta, in pursuance of the right reserved by them at the time of issue to repay the 5% Calcutta Port Trust Debenture Loan 1926-56-86 for Rs. 1,00,00,000/- issued on the 4th October 1926 at any time after the expiration of thirty years from the date of issue, on six months' previous notice, hereby give notice of their intention to repay the said loan on the 4th October, 1956.

The holders of debentures of this loan should tender their debentures at the Local Authorities Loan Section, State Bank of India, Calcutta, at least three weeks before the due date of repayment with the following endorsement on the back of each debenture :—

"Received payment in full of all demand for Principal and interest thereon"

.....
(Signature of Holder)

Interest on the Loan will cease from the 4th October, 1956

15, Strand Road,
Calcutta-1
The 15th March 1956.

P. C. Mitter,
Secretary.

For the Investor

Managing Agents—or . . .

Investment Gossip:

THOSE who extol the past performance of the managing agency system and enthuse over its future role will do well to ponder over current developments regarding the cornering of shares in particular companies and thereby the transferring of the managing agency of such concerns to the share-manipulating party.

If the managing agency is a prize for successful cornering or a reward for financial intrigue, the claim that managing agents are specialists in management has its bottom knocked out.

Yet, in the conditions developing over the past few years, the managing agency system stands or falls according as it furnishes a counterpart here of the newly-risen managerial class of the US industry or not.

What are these new conditions in India? They are vastly different from the conditions in which, in the early phase of joint stock enterprises in this country, the managing agents played an indispensable role in the raising of the initial capital and in the providing of finances as and when necessary.

The Industrial Credit and Investment Corporation, the Industrial Finance Corporation, the State Finance Corporations and the institutions which, though fitfully, have been engaged in underwriting new issues—all these have, to a great extent, taken on the financial services rendered by the managing agency system.

The Stock Exchanges have also grown to such effect that they have aided the emergence of a new issues market. The investment habit has spread widely; and new capital issues attract the attentions and activities of investors provided they are well-planned and they are sponsored by reliable parties.

The new conditions pertaining to joint stock enterprises have, thus, necessitated a shift in emphasis on the services to be rendered by managing agents. In this shift, the emphasis is on this simple issue: Have the managing agents in question the administrative, organising and business abilities and skills and personnel to ensure the company's management on the most economical and efficient lines?

From this point of view, managing agents can have a future if they develop into what I may describe as an institutional managerial class.

If this criterion were not correctly appreciated and firmly insisted upon by the authorities concerned, companies with a good record of honest and competent management are in danger of falling into the control of men whose speciality is share manipulation or financial jugglery.

These manipulators and jugglers capture companies, of whose vote-conferring shares they have secured a majority control; and, from then on, such companies and the remaining shareholders representing 49 per cent interest are at the mercy of their whims, caprices, ineptitudes and what not.

Let a study be made of companies which have changed hands in the past few years by virtue by big or manipulated finance, and the conclusion will emerge that most of them have fallen in the hands of a class who have none of the traditional attributes of industrialists.

The protection of the minority shareholders becomes a vital consideration. More. The change has relevance to the needs and requirements of a planned economy. In reference to the latter, there is no room for raw amateurs or rank adventurers.

Five years ago, I raised the question in this column; and, soon thereafter, a committee was set up consisting of Mr C. H. Bhabha, Mr N. Sundaresan and Mr D. L. Mazumdar to scrutinise all applications for changes in managing agency, directorates and their terms and conditions.

This was only a beginning. There has been some regularisation; but the evil thrives like the green bay tree.

The position needs earnest and competent reappraisal. Till such reappraisal is completed, the Company Law Administration must make it clear that the managing agency does not tamely follow majority control.

Investment Notes:

The most outstanding feature of the week's trading on the Calcutta Stock Exchange is the renewed buying interest shown in Tea shares. An international tea agreement is believed to be awaiting signature. The pressure of stocks in warehouses is also easing as large quantities are being shipped for auction in London. The output in Ceylon is expected to be lower due to drought conditions there. All these factors are expected to bring a less anxious market for tea this year than what existed in 1955.

For the second week in succession, Textile shares, on all the principal Stock Exchanges, are forging ahead, thanks to encouraging working results for 1955. Export offtake is good, and mills are stated to have done well with regard to sales.

It is learnt that the Kumardhubi Engineering Company has formulated a scheme of expansion, which is to cost Rs 35.50 lakhs. The initial stages of this scheme, which are on the eve of being implemented at a cost of Rs 14,28 lakhs, aim at achieving the monthly targets of 375 tons of finished castings and 450 tons of structural steel. To finance the whole scheme, the company will be Issuing Right shares at a premium of Rs 6 per share.

The working results of the Punjab National Bank for 1955 make impressive reading. A sum of as much as Rs 37.5 lakhs has been transferred from Reserve to a separate account called the Share Premium Account. This is intended to be utilised for the issue of fully paid Bonus shares, subject to the permission of the Controller of Capital Issues.

The United Nilgiri Tea Estates, Madras, have received permission from the Controller of Capital Issues for the issue of 82,240 Ordinary shares of Rs 10 each as fully paid Bonus shares at the ratio of 3: 5.

Dealings in "B" Ordinary shares of the East India Distilleries & Sugar Factories have remained suspended until further notice in view of certain difficulties apprehended in the settlement, of rights that may accrue on transactions of these classes of shares.

Impressive Results of Marshalls

Balance-Sheet Reviews:

MARSHALL, SONS & CO. (INDIA) LIMITED has produced excellent working results for the year ended 30th June, 1955. Sales for the year show an increase from Rs 1.29 crores to Rs 2.12 crores, thanks to the continued efforts being made to expand the company's activities in manufacturing and marketing indigenous products. Another contributory factor to the increase in sales was the satisfactory working of the Marshall/Britannia agreement through which the Britannia Engineering Company used every endeavour to increase output to meet the tea industry's heavy demand for replacement machinery.

The net profit for the year, before providing for Taxation and Depreciation, amounts to as much as Rs 4,99,473 as against only Rs 1,60,983 in the previous year. Apart from setting aside a sum of Rs 20,000 for Bad and Doubtful Debts, the Depreciation amount has been raised to Rs 1.03 lakhs from Rs 61,310 and Taxation to Rs 2.00 lakhs from Rs 70,000. Even after these increased allocations, the directors have found it possible to raise the dividend to 15 from 12½ per cent.

With regard to the future, the directors are confident that the company can assist in forwarding the Government policy of development and, therefore, look forward to a further period of satisfactory trading.

Jardine-Henderson Jute Group Results

The difficult conditions generally experienced by the jute industry, during the half-year ended 30th September 1955, are fully reflected

HIGHLIGHTS

Stalin was alive; and jokes then, as now, had the habit of infiltrating through the Iron Curtain; they were not very polite, no.

One of them, not too impolite, ran this-a-way.

It seems the party boss in the village was testing the peasant to discover whether the latter knew to whom he owed his prosperity (?!)

"Whom would you thank for the wheat that grows so abundantly on your fields?"

"Thank Stalin."

"Whom would you feel grateful to for the new road that your village possesses?"

"Grateful to Stalin."

"For the plentiful food you get, the easy working hours, the fine clothes you have?"

"Spaciba to Stalin."

The PB that we have referred to was satisfied; no new recruit for Siberia, but that was an unpleasant fact that could not be avoided.

The PB could not leave well alone. He wanted to have a little fun, he wanted to make the peasant feel a fool. A hypothetical question, then.

"Whom would you thank if Stalin died?"

"Thank God."

Years ago, that was a joke; and we dread to think what might have happened to the poor peasant.

Today, it is no joking matter; if the peasant did not give the answer, "Thank God," to Siberia and the mines for him.

That, at least, would seem to be the situation. According to the Soviet leaders, Stalin was no hero.

De mortuis, it is true, nil nisi bonum; but what are rules and conventions, if not made to be broken?

The "But's" about Stalin daily grow in number; the de-bunking of the hero—not that they wish to speak ill of the dead—is well apace.

The how or why of the deStalinisation are not questions for mere mortals such as we. But that is not to say it is not moot subject for Gossip.

Especially if Eavesdropper did the gossiping; which he does, this week, about Stalin a-turning in his grave. . . .

in the working results of the Jardine-Henderson group of jute mills, viz., Howrah, Reliance and Bally. All the three mills have reported losses for the half-year under review.

According to the directors' report, trading conditions presented considerable difficulties, not the least of which was the extreme shortage of suitable raw material during the months of July, August and September, caused by heavy flooding. During this period, the free movement of the purchased supplies was impeded and consequently the mills' jute stocks fell to dangerously low levels, preventing economical use being made of whatever raw material was left available. Such replacement of supplies as could be effected from very limited local sources were generally of inferior quality. As a result, the productive efficiency of the mills was seriously affected.

Coinciding with this period of acute embarrassment in the procurement of supplies, values of all grades of finished goods fell to the lowest levels, and these conditions combined to bring about the disappointing results for the half-year under review.

Despite the increase in sales, Howrah Mills Company has reported a loss of Rs 96,741; Reliance Jute Mills Company Rs 4.03 lakhs and Bally Jute Company Rs 11,498 as against net profits of Rs 9.78 lakhs, Rs 2.52 lakhs and Rs 2.99 lakhs respectively in the previous half-year. In the case of Howrah, it was possible to recommend a dividend of As 4 per share only after making a transfer of Rs 8.00 lakhs from various Reserves as against As 10 paid in the previous half-year. Reliance has passed over the dividend even on the Preference shares, while Bally has paid only the dividend on the Preference shares.

£R$

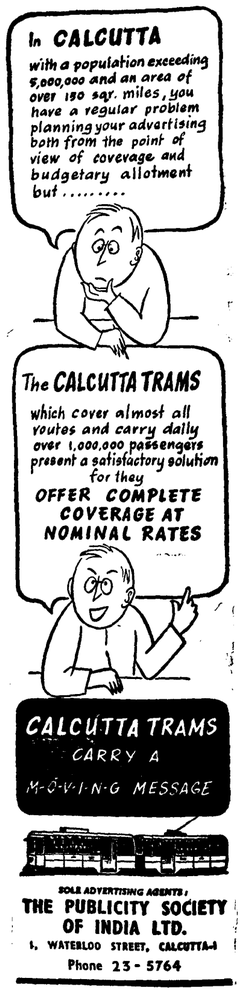
Bengal Jute Maintains Dividend

The Bengal Jute Mill Company has presented the report and accounts for the year ended 30th June, 1955. Sales have risen to Rs 1.82 crores from Rs 1.80 crores, while the net profit, before Taxation and Depreciation, amounts to Rs 15,20,500 as against Rs 14,97,548 in the previous year. The directors have, after setting apart Rs 1.89 lakhs (Rs 2.12 lakhs) for Depreciation; Rs 6.00 lakhs (Rs 6.25 lakhs) for Taxation and Rs 2.00 lakhs (nil) for General Reserve, maintained the dividend on the Ordinary shares at Rs 1-2-0 per share.

£R$

Bengal Assam Steamship

The Bengal Assam Steamship Company has reported a sizeable improvement in freight earnings from Rs 29.20 lakhs to Rs 43.07 lakhs for the year ended 31st October, 1955, thanks to carrying of more jute and coal than in the previous year.



The net profit works out to as much as Rs 13,44,199 as against only Rs 7,89,356 in the previous year. Apart from providing Rs 1.39 lakhs for Capital Reserve, the directors have raised the Taxation amount to Rs. 8.90 lakhs from Rs 3.55 lakhs, though the Depreciation amount has slightly been reduced to Rs 2.63 lakhs from Rs 2.87 lakhs. The dividend on the Ordinary shares is just maintained at Rs 7-8 per share.

£R$

Brushware Limited

Despite a reduction in profits, Brushware Limited has raised the dividend from As 8 to As 12 for the year ended 30th November, 1955. Sales are shown higher at Rs 4.22 lakhs against Rs 3.31 lakhs, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 14,780 against Rs 15,958. The directors have, apart from allocating Rs 3,500 for Rehabilitation Reserve, reduced the Depreciation amount to Rs 4,500 from Rs 6,000 and Taxation to Rs 3,000 from Rs 3,500.

(Continued on page 578)

Long-term Prospects of Jute Goods Industry

THE JUTE GOODS industry was blessed in 1955 with a year better than 1954 had been—but, in the longer term view, the prospects are far less satisfactory: this is the pith and core of the speech delivered by Mr M. P. Birla at the annual general meeting of the Indian Jute Mills Association. Those who are seized of the conditions in the World of Jute would agree with Mr Birla. At the same time, however, it needs to be pointed out that the difficulties which obscure prospects are none of them insurmountable and, for this reason, it may be possible for the industry, by action on its own initiative and with sympathetic help from Government, to secure and assure for itself a thriving, if not spectacularly prosperous, future.

The events of the last year were more than usually diverse in character; at every stage, a favourable development was offset, partly if not wholly, by another of somewhat ominous significance. Among the encouraging signs that made their appearance last year, three are of particular importance.

In the first place, the Government of India abolished altogether the export duties on jute goods. This highly desirable and vitally necessary measure was taken soon after the devaluation by Pakistan of its rupee. And yet, the need for the elimination of duties was apparent quite some considerable time before the Pakistani decision which, apparently, was responsible for the Government action. We do not suggest that what delay there was in the elimination of duties has been ruinous to the industry. For, it is today admitted in all quarters that Indian jute manufactures cannot be competed against in price by Continental mills. Earlier action in this respect may, however, have won for India a little more time in the battle for survival in the world goods industry.

Secondly, both the ready supply of the raw material and increased demand for jute goods made it possible for IJMA mills to increase production. 1955 represented the first year since 1948 when, over a full twelve-month period, mills worked a 48 hour week. In the first quarter of last year, stocks in Calcutta mounted; thereafter they steadily declined inspite of the higher level of output.

Thirdly, thus, the industry has been able to expand the sales of jute goods. Exports of all categories registered increases; and a more heartening fact was that internal consumption rose by over 50 per cent in 1955.

World prosperity and larger crops automatically call for a larger supply of packaging materials. In this sense, it may be held that India's higher production was absorbed by the increase in the agricultural and industrial activity in the principal consuming countries. But, as the IJMA Chairman implies, the expansion in jute goods can by no means be considered of a size in consonance with the increased demand for packaging materials generally. While the world production of agricultural crops has increased, in the last two decades, by more than 25 per cent, the output of the Indian mills is "still below the average of the years 1934-38." Partly, we could ascribe this to the adoption of bulk handling methods; partly, however, the reason also lies in the wider use of packaging goods other than burlap. Thus, the Indian jute goods industry has to counter competition along two fronts: the first against other producers of jute goods, and the second against paper bags and the like.

It is proper that we should be aware of the difficulties that need to be overcome; and these are not a few. But there are two factors of a basic character that are favourable enough to provide the necessary encouragement for redoubled efforts at solving the problems.

We may take it for granted, firstly, that there is not likely to be a shrinkage in world demand for jute goods so long as (1) prices of jute goods remain at reasonable levels and continue to be competitive with other packaging materials; and (2) agricultural production in the world continues to be headed in an upward direction. Neither proviso constitutes an unreasonable expectation.

We have grounds for hope, secondly, that the Indian jute goods industry will soon be well equipped to withstand competition from all other manufacturing countries save, perhaps, Pakistan. Mr Birla has estimated modernisation effected in IJMA mills at one-third of the total; and the cost involved, of Rs 15 crores, was found from internal resources. The units which could not afford to finance modernisation themselves are to be helped by Government through the NIDC. The Indian industry will, by the fact of modernisation, be enabled to achieve an economic cost of production. In the event, Pakistan alone can hope, at some future date, to offer real competition in world markets; but it will take some years before Pakistan production could reach a level when it could seriously challenge India; and, in the meanwhile, we could proceed with vigorous and active steps to place the industry on a more solid foundation.

The unfavourable points mentioned by the IJMA Chairman are the devaluation of the Pakistani rupee, the expansion of foreign jute goods manufacturing capacity and the reduction (if not the complete elimination) of the already slender profit margin. As to the first of these, India has fortunately been spared: Pakistan's decision to maintain the minimum export prices of its raw jute has ensured that we continue to be favourably placed, in the matter of raw jute prices, vis-a-vis Continental mills. On the second point, let us remember that there are limits to raw jute production. If Pakistan is to increase its output of jute goods, then Pakistan will have little jute to spare for other manufacturing countries. It is not production capacity, but the limits of raw jute availability, on which the output of jute goods will depend. Efforts and energies should be directed, on India's part, to be self-sufficient in raw jute; and it is not a forlorn hope to expect that, in the context of expanding utilisation of packaging materials, demand for jute goods will rise to the level where no surplus raw jute will be available. In the matter of the low profit margins, we suggest that the industry deserves, not merely sympathy, but every possible help from Government. Mr Birla has pointed out that the industry may have to bear a further burden in the form of labour costs. As a key exchange earner, whose capacity is being endangered by competition, authority should not permit the imposition of crippling burdens.

But, for the industry to assure itself of a future, action along three lines is necessary. Firstly, modernisation programmes must be completed as swiftly as possible. Secondly, we must do away with the dependence on Pakistan for roughly 25 per cent of our raw jute requirements. Finally, a futures market should be established without loss of time, so that prices are stable and not subject to violent speculative fluctuations. We can count on the industry to do its bit for survival. On all three desiderata, however, the impetus in no small measure has to come from Government.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

Pakistan's Federal Budget

THE Finance Minister of Pakistan has stubbornly refused to run risks while looking for increased money supply for an economy that is certainly developing. Nonetheless, there is avowed anxiety for quickening the tempo of development, for increasing agricultural and industrial production and for widening employment opportunities. But perhaps even greater is the solicitude for making the fiscal burden on the people a minimum. For the first time in nine years, Pakistan has a budget which contains no new taxes. And, what is more striking, a fair measure of reliefs and concessions, both in direct and indirect taxes, is afforded. Well-balanced, and without tall claims, the budget might well prove equal to its moderate intentions.

To the extent the country's economic condition has lately looked up, it is largely traceable to the devaluation of the Pakistani rupee. Consequently, the drag on the export of manufactured goods has been removed and the progressive reduction in the incomes of producers of raw materials arrested. The new exchange rate, though it has been in operation only for a short period, seems to have favourably influenced the country's balance of payments position, which has shown an improvement of 44 million pounds in 1955 as compared with the previous year. The foreign exchange reserves comprising gold, dollar and sterling, have been appreciably strengthened by about 19 million pounds in the course of 1955.

The estimated revenue and expenditure for 1956-57, both stand at a higher level than the revised estimates for the current year. The revenue expenditure of Rs 130.44 crores mostly relates to defence, civil administration and nation-building departments. Defence expenditure, under Revenue and Capital, will be considerably higher than in the previous year by about Rs 10 crores, at Rs 90 crores. Education, Medical, Public Health and Agriculture together claim a total provision of Rs 10 crores.

It is admitted that current resources are neither substantial nor elastic enough to finance economic development. The capital section of the budget is to be financed from loans raised internally and assistance in the form of loans or aid from abroad. Provision in this regard is Rs 127.36 crores against Rs 112.22 crores in the revis-

ed estimates. A sum of Rs 61.89 crores is earmarked for direct capital outlay by the Centre, while Rs 53.01 crores is allotted for loans to provinces. Another Rs 33.48 crores has been committed on obligations against US aid.

The two new loans floated this year together have yielded Rs 15.55 crores. Popular response to Government's borrowing is, if anything, likely to be enthused on account of the agreeable impact of the new tax proposals. As said earlier, the tax reliefs and concessions which give away all but Rs 1 lakh out of the surplus of Rs 57 lakhs, is perhaps the most satisfying feature of the new budget. In the field of indirect taxation, the import duty on drugs and medicines is reduced to 2½ per cent in the case of imports from the U.K. and to 12½ per cent in the case of imports from other countries. The excise duty on coarse cloth, reduced last year from 12½ to 6¼ per cent, is further reduced to 4 per cent, a step that will be welcomed equally by the consumer and the producer. The reduction from 10 to 6¼ per cent in rate of sales tax on yarn is intended to benefit the weaver by counteracting the concession given to mill-made coarse cloth. The jute industry and trade seem to be agreeably surprised that the fear of a higher duty on jute cuttings has not come true.

The policy of giving reliefs in direct taxes from time to time with a view to stimulating savings and encouraging production, is carried a step further in the new budget. The existing exemption from tax on profit up to 5 per cent of capital, admissible to certain industrial undertakings, is being extended. Incomes derived from new residential houses are spared. Relief is promised to educational expenses of children of persons in the lower income brackets. Tax concession to foreign technicians in industrial undertakings is a well-advised and timely gesture.

For obvious reasons, Pakistan has to place agriculture highest on the list of priority. Floods, particularly in East Pakistan, have taken a heavy toll. A determined bid to increase cash crops which alone can sustain the level of exports, is apparently, not to be delayed. Flagrant disparities, which admittedly exist in provincial economies, could constantly weaken the political as well as the economic structure. If only for this reason, Pakistan might have seriously to intensify economic planning.

*

Reassurance of liberal Compensation

THE feeling, somewhat mistakenly entertained, in the minds of foreign investors that the Government of India are, in some manner, discriminating against foreign interests operating in India, will be largely dispelled by Sir Chintaman Deshmukh's statement in the Lok Sabha in connection with the Life Insurance Corporation Bill. The Finance Minister conceded that foreign companies would be permitted to transfer to their head offices the policies of non-Indians temporarily resident in India, together with their relative resources. The second concession was in response to representations that all the Indian assets of foreign companies had not been built out of receipts in India. Foreign companies will be allowed to transfer to the head office assets which were not required to meet their liabilities to policyholders in India. Apart from these, shareholders of foreign companies will be compensated on the same basis as Indian companies. The compensation arises from the fact of foreign shareholders losing anticipated profits in an operational area now closed.

These provisions, which should be studied with care, are eminently reasonable, and meet adequately the ends of equity and justice. Foreign investors will, thus, note that Government are not, as is wrongly assumed, obsessed with doctrinaire dogmas, nor are they in any manner unsympathetic to the difficulties of foreign interests. On the contrary, their attitude is one of co-operation, giving to foreign interests the same scope as Indian counterparts. This piece of evidence of the Government of India's attitude to foreign investors is profoundly significant, and should smooth rather than hinder the pace of flow of foreign investment into India.

In the matter of compensation to shareholders, the provisions seem to have been more liberalised. The Select Committee has been empowered, following representations in this regard, to consider that compensation be based on working during a standard period applicable uniformally to all companies and that the period include 1955. Its implication should be clear. There has been, following rate reduction, employees group life insurance, accelerated bonuses and intensive competitive drive, a steep rise in the quantum and value of life insurance business in the last two or three years. Valuations for these periods have not been completed for many companies. Valuations on current business will, therefore, result in larger allocation to shareholders. This, again, shows that Government are endeavouring to meet the wishes of the shareholders even though shareholders' capital investments, in Life Insurance, had no risk bearing character in recent years.

Law for the Layman

Loss by Embezzlement—Is it a permissible deduction for tax purposes?

By K. N. VISWANATHAN

IN England, loss by embezzlement is a permissible deduction from the profits of business for tax purposes. However, such a deduction is permissible only if the embezzlement could be said to have occurred in the carrying on of the business or trade. And further, it should arise directly from the need of delegating work to the employees. The loss should be a trading loss. To constitute a trading loss, it must be either loss of the stock-in-trade or a loss incurred in the course of the business and incidental to it. It is not every loss that has some reference to trade that can be excluded from profits.

The question whether an amount misappropriated by an employee is a trading loss and permissible deduction from the profits of tax purposes was exhaustively considered in England in the case of CURTIS-V-OLD FIELD LTD. (1925) (Tax cases 319) and this case may be taken to lay down the law on this question. In this case, the Managing Director of a Company diverted the funds of the company for his personal use. Rowlatt J, who decided this case, held that on the facts of this case, the amount misappropriated by the Managing Director is not a permissible deduction from profits. The learned Judge states the legal position thus:

"I quite think, with Mr. Latter, that if you have a business (which for the purposes of to-day at any rate I will assume) in the course of which you have to employ subordinates and owing to the negligence or the dishonesty of the subordinates some of the receipts of the business do not find their way into the till, or some of the bills are not collected at all, or something of that sort, that may be an expense connected with and arising out of the trade in the most complete sense of the word. But here that is not the case at all. This gentleman was the Managing Director of the company, and he was in charge of the whole thing, and all we know is that in the books of the company which do exist it is found that monies went through the books into his pocket. I do not see that there is any evidence at all that there was a loss in the trade in that respect. It simply means that the assets of the company, moneys which the company had got and which had got home to the company, got into the control of the Managing Director of the company, and he took them out. It seems to me that what has happened is that he has made away with the receipts of the company dehors the trade altogether in virtue of his position as Managing Director in the office and being in a position to do exactly what he likes."

The foregoing observations of Rowlatt J show when a defalcation or embezzlement by an employee could be treated as a trade loss and when not. This case of Curtis Vs Old Field Ltd has been quoted with approval by the Madras High Court in the case of Venkatachalapathi Iyer Vs Commissioner of Income tax reported in Income Tax reports Volume 20 at page 363 and by the Nagpur High Court in Badridas Daga Vs the Commissioner of Income tax, Madhya Pradesh etc. reported in Income tax, reports Volume 39 at page 434. The test propounded by our courts is this: If the monies collected by the employee reach the till of the business and thereafter the funds are lost by theft or by embezzlement, such a loss is altogether outside the trade and the course of business and hence the loss is not deductable. In the Madras Case, an employee of the assessee's misappropriated a sum of Rs 36,000/- odd. He made certain payments toward his liability, leaving a sum of Rs 21,372/- unpaid. The assessees claimed to deduct this amount, as a trade loss sustained by them on account of embezzlement by the employee. The Madras High Court held that the assessee was entitled to deduct the sum as a trade loss from the profits of the business. However, the Madras High Court has approved the foregoing observations of Rowlatt J as to when an embezzlement is a permissible deduction.

The Nagpur High Court in the case of Badridas Daga Vs Commissioner of Income tax, Madhya Pradesh etc, declined to allow the sum of Rs 2 lakhs odd embezzled by the employee of the assessee to be deducted from the profits of the business on the ground that the embezzlement took place after the monies had reached the Bank account of the assessee, that is after the monies had reached the till of the assessee.

The legal position on this question is summed up by Snelling in his book on the dictionary of Income-tax and Super-tax practice, V Edition at page 231 thus ".... If a loss by embezzlement can be said to be necessarily incurred in carrying on the trade, it is allowable as a deduction from profits. In an ordinary case, it springs directly from the necessity of deputing certain duties to an employee and should therefore be allowed.'

Editorial Notes

Attracting the British Investor

OF the various distinguished visits to this country in recent months, the one that has been marked by the sincerest reception has been that accorded to Lord Mountbatten. Perhaps, there was a greater show of mass enthusiasm when the Soviet Leaders came here last winter; but there was real and unalloyed pleasure in playing host to one who, as the representative of the Crown, was the chief official of his country in the transfer of power; and this is as it should be.

The last British Governor General and Viceroy endeared himself to this country by a display of a genuine solicitude for Indian independence. Presently preoccupied as we are with planning, India is eager for constructive suggestions that will help the implementation of these endeavours. It is proper, therefore, that we take even more careful note of views expressed in this behalf by one who is known to have, as it were, a personal interest in our development.

In his brief sojourn, Lord Mountbatten found time to think aloud on Indo-British cooperation. In Bombay, where the civic address was presented to him, Lord Mountbatten spoke of specific projects on which British businessmen and Indian industry have worked togther. And he sees the future holding greater promise yet for British investment in India. As it is, "great numbers of British industrial leaders visit India annually to make or renew valued contacts." In the days ahead, "this process is likely to be intensified."

Today, the UK is the largest "external investor in India, and an investor in diversified fields."

Having regard to the fact that the development plans can be successfully attained only if a modicum of foreign investment is secured, Lord Mountbatten stated that "'Her Majesty's Government would like to see India attract such investment."

How it is that India can so attract foreign investment, and whether present economic policy is not conducive to that end, are altogether different matters. We are of the view that, largely, this country fulfills most of the conditions which are a pre-requisite to any flow of large-scale foreign investment. Lord Mountbatten voices this sentiment: "May the wise direction of affairs and the fair treatment of those coming to India to play their part with Indians in the work ahead, act as a steady and never-falling incentive for this purpose." For reasons indicated elsewhere in this issue, it would appear that the scope and flow of British investment in this country should both show a significant increase.

*

"Worst Apprehensions"

During the course of the past few days, Mr Nehru has had the opportunity of talking things over, about world affairs in general and of matters interesting India in particular, with the Foreign Ministers of the Big Three Western Powers. While there have been, from time to time, press communiques to indicate the trend of the talks, it was only last week that the Prime Minister spoke at length on the conversations. What he said at the Lok Sabha confirmed some of the earlier reports; and the statement made by the Prime Minister was strongly worded, especially when he touched on the SEATO decision to make a reference to Kashmir.

The discussions with M. Pineau were generally satisfactory; and it is expected that the de jure transfer of sovereignty of the erstwhile French possessions will be concluded without undue delay. Mr Nehru describes the French Foreign Minister as taking a "realistic view" of the situation obtaining in Algeria, and has expressed the hope that the problem will be solved "to the mutual satisfaction of the French and Algerian peoples."

Mr Selwyn Lloyd's visit to Delhi preceded the SEATO conference; and it would appear that India made its position known on the Kashmir issue as well as its attitude to the SEATO. The fact that the final communique from Karachi did include a reference to Kashmir "confirmed our worst apprehensions about the organisation" and it is a matter of regret that "three other Commonwealth countries have associated themselves with the offending declaration." Protests have been communicated to the countries concerned. It seems that Mr Nehru was disappointed that the British Foreign Minister did not bring his influence to bear with a view to avoiding a reference to Kashmir.

The US Secretary of State, Mr Dulles, arrived fresh from what has been considered to be his second major gaffe with reference to India. Mr Nehru's discussions with Mr Dulles were longer than scheduled; and, in particular, Mr Nehru "explained our views" on military aid to Pakistan in clear terms to Mr Dulles. The American statesman, for his part, reassured Mr Nehru that the joint communique on Goa did not betoken US support to Portugal against India and also gave his reasons to justify SEATO as well as the inclusion of Kashmir on the agenda.

It is to be noted that, although strongly worded, Mr Nehru's statement is also marked by restraint. The recanting of gaffes may be both a delicate and difficult task for a diplomat. But, nevertheless, the visits of the Foreign Ministers of the Big Three Western Powers may be said to have served the useful purpose of providing an opportunity for Mr Nehru to indicate personally what India's stand is: as a result, it is not too much to hope that more considerate thought will precede any pronouncement affecting India's interests. The projected trip to America of Mr Nehru is, again, to be welcomed for the lessening of tension in Indo-US relations that it is expected to achieve.

*

Considerable Extensions in A&CC

Expansion is the significant note in the affairs of the Alkali and Chemical Corporation of India Limited in 1954-55. Such was the tale that the Corporation's Chairman, Mr N. D. Harris, had for shareholders on the occasion of the nineteenth ordinary general meeting.

Production of chlorine and caustic soda was at a higher level. Sales of hydrochloric acid and zinc chloride showed "gratifying increases." Demand for Duco and Dulux paints continues to be in excess of suply; and the decision last year to double the capacity in this respect is being implemented. with "considerable extensions" being now "well in hand." Altogether, A & CC had a year in which emphasis was laid on setting about expansion of capacity to meet an increasing demand; and this is reflected in sales of products at levels "considerably greater than in previous years."

But Mr Harris is careful to note that "products do not sell themselves." Salesmanship is an art, and especially so in the highly competitive articles, at the one extreme, and in products of a pioneering nature, at the other. Since A&CC's manufactures have, some of them, faced "very severe competition", a special tribute is due to the marketing organisation. This Mr Harris pays by declaring that the Selling Agents, Imperial Chemical Industries (India) Limited, "have made a remarkably fine effort in finding new markets and uses for our products." He goes on to "ascribe our successes in this direction during the last year very largely to their (ICI's) careful planning and hard work."

Directly as a result of such a successful year of production and sales, the Corporation's profits more than doubled to Rs 19.4 lakhs in 1954-55. Prudently, a sum of Rs 12½ lakhs is transferred to Deferred Income-tax Reserve since, at present, no taxation liability accrues on the company owing to the initial allowances on new plant installed. To mark the highly satisfactory year, a dividend higher by 2 per cent at 8 per cent is proposed for ordinary shareholders.

World of Finance

Deficit Financing for Rs 35 Crores

AS was to be expected round about mid-March, the Reserve Bank returns for the week ended March 16 disclose inter-Governmental transactions pertaining to the transfer from the Centre to the States of the latter's share in the income-tax pool. This is conspiously reflected in the rise of Rs 36.40 crores to Rs 46.95 crores in the balances of the State Governments with the Reserve Bank. The magnitude of the actual transfer is larger; but the net effect is of the order of Rs 36 crores. In order to provide for this commitment, the Central Government have resorted to deficit financing to the extent of Rs 35 crores. Rupee securities in the Issue Department have, accordingly, gone up by Rs 34.78 crores to Rs 648.01 crores. While the Centre was thus had to arrange for cash replenishment, the Reserve Bank was in no such need. Therefore, as against an expansion of currency for Rs 35 crores against ad hoc Treasury Bills, there has been a contraction of currency against sterling securities for Rs 25 crores. Foreign securities held in the Issue Department have, therefore, declined by Rs 24.84 crores to Rs 672.32 crores. In the result, there has been an expansion of currency for Rs 10 crores. There has been a contraction in rupee coin in circulation, as is indicated by a rise of Rs 0.37 crorse in rupee coin held in the Issue Department. Active note circulation has expanded by Rs 4.77 crores to Rs 1,448.86 crores, which is a record. As a result of these transactions, notes held in the Banking Department have risen by Rs 5.55 crores to Rs 14.42 crores.

It is quite likely that, in the week ended March 23, inter-Governmental transactions in the reverse direction will figure prominently. That is to say, some of the States may be making payments to the Centre in respect of instalments due on debt settlements. From this point of view, it is not improbable that there may be some cancellation of created money through non-renewal of ad hoc Treasury Bills.

It is, however, necessary to add that last minute payments in respect of grants that would otherwise lapse may necessitate considerable disbursements. In other words, there is reason to expect further recourse to deficit financing till the end of the fiscal year. It is also possible that, as was the case a year ago, the overflow of disbursements into the new fiscal year may acccount for some measure of deficit financing in the first week of 1956-57. However, taken all in all, deficit financing in 1955-56 will turn out to be considerably lower than the original Budget estimate.

+

Exchange Banks & Industrial Development

EXCHANGE banks, with a pre-eminent interest in Asia, have long played a most important role in the financing of world trade with the areas that largely represented exporters of raw materials. But, consistent with the revolutionary change in the political status of most of the countries, it has become necessary for the exchange banks to imbue their activity with a fresh character—that of an organisation that provides apposite help to local enterprise for industrially productive endeavours. It has thus happened that, almost imperceptibly, the advances portfolios of exchange banks have more and more tended to include accommodation not strictly of the sort envisaged in commercial banking activity. Indeed, there are signs to indicate that exchange banks will play a more significant part in the area of their operations in the future.

Among the eastern exchange banks which count India as, perhaps, the key country of their operations, the Chartered Bank of India, Australia and China holds a distinctive position in a number of ways. Firstly, it was the first; secondly, it has the unique charteristic of owing its existence to a Royal Charter; thirdly, it is the biggest in the size of its figures; fourthly, it covers extensively exchange banking operations in countries east of the Cape of Good Hope and, finally, it can justly take pride in pioneering what must certainly be reckoned as a new facet of and in exchange banking.

In his statement circulated with the report and accounts of the Chartered Bank for 1955, the Chairman, Mr V. A. Grantham, has, in the course of a penetrating study of the economic conditions in the countries in which the bank is interested, revealed the measures being set afoot to equip the Chartered Bank to take upon itself the praiseworthy task of helping in the industrialisation of underdeveloped countries. As Mr Grantham points out, during the past 10 years, an increasing proportion of the bank's resources "has been employed in the financing of infant industries and new public works". But these are all credits that are medium term in character; and, thus, "it is not possible, from the ordinary banking point of view, to expand the dispensation of what we may call medium-term credit, that is to say, the granting of accommodation for periods extending from two to ten years".

The Chartered Bank's Chairman goes on to state that, in this view, "it has become apparent that a new type of credit institution is required to finance development, both agricultural and industrial, and and to sponsor, and perhaps under-write, the raising of capital from the public." The Court of Directors of the Bank consequently decided to form the C.B.I. Development Corporation Limited with a paid-up capital of £500,000. The new company is a wholly owned subsidiary of the Chartered Bank. Mr Grantham has expressed the hope that "the new institution will be able to play an important part in assisting those countries with whose prosperity the bank has been so long identified to modernise their economy". While organisations already exist in such countries for the provision of capital to enterprises in the public sector, "there are likely to be many projects on a smaller scale which the bank's Development Corporation could effectively support".

No doubt, the view may be advanced that the new institution merely represents an enlightened endeavour to open up fresh avenues of income for exchange banks. But we must not overlook the fact that Mr Grantham would seem to be motivated, in this regard, by the knowledge that economic assistance to the under-developed countries must be given "in ways which do not affront national pride or damage the national economies". Thus, the conclusion is clear that Mr Grantham's motivations are inspired by high purpose and reflect laudable initiative. The Chartered Bank's Chairman is quite right to suggest that "continued foreign investment in India and the promotion of industry with foreign help must necessarily depend not only on confidence but also on the ability to employ foreigners on terms that make overseas service attractive". So long, therefore, as the Indian Government are able to inspire such confidence, we may be sure that the Chartered Bank, for its part, will increasingly make available the new services of the C.B.I. Development Corporation for the financing of new ventures in this country.

Comprehensive extracts from Mr Grantham's speech are published elsewhere in this issue. Here, we should like to draw particular attention to the figures contained in the balance sheet, and would leave it to the reader to study for himself the economic conditions of South-East Asia. While British banks experienced a diminution of deposits in 1955, exchange banks enjoyed the contrary trend. The total of the Chartered Bank's balance sheet has risen by £20.3 million over the year to just £224 million. Of this balance sheet total, current and other accounts are placed at £172 million, or an increase of £12.8 million over the previous year. Fixed deposits at £30.7 million are higher by £10.2 million.

On the other side of the ledger, cash balances have increased by £6.6 million. Investments in Government and other securities have declined by £3.9 million. Bills of exchange and advances registered increases of £2.4 and £17.1 millions respectively. These last two figures indicate the ever increasing responsibilities of the Chartered Bank in financing world trade with the "eastern countries".

The profit and loss account discloses that earnings have gone up by £36,193 to £759,340. The dividend paid, inclusive of the interim of 7½ per cent, is 15 per cent. Allocations of £125,000 and £20,000, following the pattern of the last five years, are made to the pension fund and widows' and orphans' fund respectively. A sum of £200,000 has been utilised toward writing down bank premises and furniture account. After transferring £100,000 to contingency account, the carry forward is at the higher level of £405,375.

From the money market standpoint, the significance in Mr Grantham's statement lies in the promise of a new source of development funds for Indian industry. It is not incorrect to suggest that the Funds to be made available by the C.B.I. Corporation constitute foreign aid of the nature which will not affront national pride.

+

Allahabad Bank Limited

IF 1955 was a year in which Indian Banking generally benefited by a heartening expansion in business, as indicated in the figures relating to deposits and advances, it must also go on record as a period in which banks were faced by a steady decline in the margins available on interest paid and earned. This trend toward a reduction in profit margins is likely to be reflected in the accounts of many a bank in 1955.

In spite of all measures to increase the earning capacity, the Allahabad Bank Limited, for example, has reported a slightly lower balance of profit for 1955. For, although income as a whole rose by over Rs 12 lakhs, higher expenditure more than swallowed the increased earnings.

The balance-sheet of the Allahabad Bank as at the end of 1955 discloses a rise of Rs 2.89 crores in deposits. In this context, it may be remarked that this was largely in the form of fixed deposits, the relative figure being shown higher at Rs 18.93 crores against Rs 16.90 crores. With this category of deposits bearing a higher interest rate, it was inescapable that interest paid by the Bank should have risen by a substantial margin.

The capital structure is unchanged, with preference shares of the value of Rs 15 lakhs and ordinary shares to the tune of Rs 30.5 lakhs. The Reserve Fund, at Rs 1.08 crores, continues to be more, than three times the ordinary capital.

Both the contra items in the balance-sheet—bills for collection and acceptances—are at higher levels, and are a measure of the increased accommodation to its constituents by the Bank. In the result, the balance-sheet total has registered a sharp rise of Rs 4.34 crores to Rs 42.91 crores.

The unattractive return on investments is to be inferred from the fact that there has been a small decline in the relative figure. Cash balances and money at call are placed Rs 12 lakhs higher. But investments mark a decline of almost half a crore at Rs 11.59 crores.

The substantial increase in the volume of advances has a double significance. Firstly, it scarcely needs saying that the Allahabad Bank has responded with understanding and sympathy to the call for an increased tempo of finance; but, secondly, it also suggests that the bank was motivated by the need to secure a higher earning from advances—a measure necessary to offset the rising cost of establishment expenses. Advances have gone up steeply from Rs 18.93 crores to Rs 22.56 crores. The major portion of this expansion is accounted for by the rise of Rs 2.85 crores in Loans, Cash Credits and Overdrafts.

A further indication of higher operating costs is available in the balance-sheet. An item under the profit and loss account reveals that a sum of Rs 1.43 lakhs had to be appropriated for the retrospective adjustment of Staff Salaries for 1954.

Turning now to the Profit and Loss Account proper, we find that interest and discount earned is nearly Rs 10 lakhs more at Rs 1.41 crores in 1955. The income by way of exchange, commission and brokerage also rose by Rs 2½ lakhs at Rs 28.28 lakhs.

As we have already pointed out, however, the steadily mounting money rates (with the rate on advances alone as an exception) were responsible for the utilisation of the increased earnings. Interest paid has gone up by nearly Rs 8½ lakhs at Rs 60.99 lakhs; and salaries and allowances are a charge that cost the bank almost Rs 6 lakhs more at Rs 67.66 lakhs. Inevitably, the balance of profit is shaded to Rs 15.62 lakhs from Rs 16.15 lakhs.

Inclusive of Rs 14.56 lakh brought forward from 1954, and after payment of interim dividends and bonus to staff, and provision for retrospective adjustment in 1954 salaries and a transfer of Rs 1 lakh to Staff Pension Fund, the disposable balance is Rs 15.62 lakhs. The dividends are maintained, with ordinary shareholders receiving a highly satisfactory 18 per cent inclusive of bonus of 6 per cent. The carry forward is over a lakh higher at Rs 12.43 lakhs.

The Directors' Report has drawn attention to the competition for deposits and the consequent higher level of deposit rates. We repeat here the suggestions we have made in this behalf: when prices of all commodities have risen, it is but fair that the price of money—the rate of advances—should also go up. Secondly, a deposits war profits no one: it is necessary that agreement is reached as between banks for maxima of interest that may be paid on deposits.

+

Central Bank of India

The accounts of the Central Bank of India Limited confirm the two trends that, by and large, are anticipated to be reflected in Bank balance-sheets for 1955. There has been substantial increase in business; but a correspondingly large rise has also taken place in the establishment and operating costs.

Deposits are Rs 4.69 crores higher at Rs 128.66 crores, with the rise largely shared by fixed deposits and savings bank deposits. With demand for accommodation unsated, the Central Bank found it necessary to show an amount of Rs 4.54 crores as borrowings from other banking companies. With bills for collection and acceptances at higher levels, the balance-sheet total has risen to Rs 158.09 crores from Rs 144.92 crores.

Cash balances and money at call are, in the aggregate, some Rs 1½ crores lower; and investments mark a decline of Rs 61 lakhs. These paved the way for a steep rise in advances—one of roughly 20 per cent—from Rs 60.07 crores to Rs 72.21 crores. It is to be inferred that, here, too, we have the instance of a Bank which, firstly, did right by its constituents and which, secondly, also found it necessary to increase this portfolio for meeting the higher costs.

Are Treasury Bills Inflationary?

By PAUL EINZIG

A new fashion seized hold of British financial opinion during the last two months or so. It is the fashion of representing the increase in the Treasury Bill issue as the fundamental cause of inflation. The idea was first launched out by the Chairman of Lloyds Bank, Sir Oliver Franks, former British Ambassador to the United States, in his annual report to the shareholders of the bank. It was taken up in a big way by bankers, financial journalists and politicians. There is reference to it almost daily in the Press and it was repeatedly raised in the House of Commons.

The suggestion is that, since the increased volume of Treasury bill increases the liquidity ratio (the proportion of liquid assets to total assets) of banks above the conventional minimum of 30 per cent, it induces them to expand credit. Moreover, since banks are in a position to turn their Treasury bills into cash, they no longer have to worry about the decline of their cash ratio (the ratio between their cash and sight liabilities), below the conventional minimum of 8 per cent. Whenever their cash is short of requirements they can always replenish it by reducing their Treasury bill holdings. They can do so without running the risk of a decline in their liquidity ratio below 30 per cent.

The banks are placed by the Treasury in a position to disregard the Treasury's exhortation to cut down their credits for the sake of stopping inflation. In itself, the expansion of the Treasury bill issue does not automatically lead to inflation. From this point of view, the popular comparison of inflation with the aid of the printing press is entirely false. If the Government were to inflate by increasing the note issue, they would have to appeal to tens of millions of holders of notes not to use all their notes for purchases. In existing circumstances, the Government only have to appeal to a small number of bankers not to use their increased holdings of Treasury bills for an expansion of their credits. Surely, it is incomparably easier to secure voluntary co-operation from a handful of bankers accustomed to receive hints from the Bank of England and to regard these hints as commands.

In fact, since the credit expansion reached its peak in August 1955, the volume of bank credits has been reduced by 11 per cent. The volume of Treasury bills continued to expand, however, which fact shows that there is no automatic response of the volume of credits to the volume of Treasury bills. Although the liquidity ratio of banks is high, they complied none the less with the official request to cut their credits by about 10 per cent. It is true, they hated doing it, and frequently complained about the unfairness of having to do the Government's "dirty work." They naturally did not like to incur the inevitable unpopularity attached to their refusal to renew loans and their insistence on reducing outstanding loans.

What difference it would make if, instead of relying on the loyal co-operation of the banks, the monetary authorities were to compel them to reduce the volume of credit either by mopping up cash or by reducing the volume of Treasury bills? In doing so, the authorities could achieve their end, because the cash ratio and the liquidity ratio of the banks would decline below the conventional minimum. The banks would have to resort to credit restrictions, not out of loyalty to the Government, but in order to comply with their traditional principles of prudent banking. It would be just as hard on their customers, and the banks would be just as unpopular with them. Indeed, they would not even have the excuse that they are acting under Government instructions.

Under existing arrangements, bank managers are in a position to tell their disgruntled debtors or would-be borrowers that, in refusing the applications, they are acting under Government instructions. If they would reduce or refuse loans because of a decline in their cash ratio or liquidity ratio, they would have a difficult task in explaining the facts to their customers in a non-technical language. It is so much simpler to blame the Government. Everybody understands that. But not one out of ten customers would be able to follow the bank manager in the intricacies of his technical explanation of a credit squeeze due to a decline in liquidity ratio or cash ratio.

It seems, therefore, that the banks, so far from having a grievance, should be grateful to the Government for having chosen this method of credit squeeze, instead of resorting to the traditional method of compelling the banks to curtail credit by reducing their cash or Treasury bill holdings. Although this seems to be fairly obvious, a large number of otherwise intelligent people have worked themselves up into a crusading fervour denouncing the incompetence of the Treasury. The latter tried to take the line of least resistance by issuing a loan of £300 million in order to reduce the volume of Treasury bills. Unfortunately, the issue was not very successful, and there is reason to believe that the bulk of it was taken up by Government departments. So, with the best will, the Government were unable to follow with any appreciable extent the words of wisdom of their self-appointed advisers.

The only effect the campaign has produced is in the sense of stiffening the attitude of the Trade Unions. It has gone a long way toward diverting attention from their direct responsibility for the accentuation of inflation. They are now in a position to argue that the rise in prices is due, not to their excessive wages demands, but to the excessive issue of Treasury Bills. They certainly owe a debt of gratitude to the leading banker whose authority they can quote in support of their claim. Beyond doubt, Sir Oliver Franks is worth his weight in uranium to the Trade Unions.

World of Business

Life Insurance Corporation Bill—II

*

Problems of Integration

THE legacy of multiplicity of offices with differing policies, loans, conditions and varying rates and bonuses from office to office makes integration of existing policies of many offices in the frame of the proposed Corporation a complex and difficult undertaking. A simple formula which will make integration less difficult will be welcomed. The starting point of nationalised life insurance should thus be simplification of administrative complexity and decentralisation of administrative authority. All the new life insurance contracts will be made on Oriental's rates, terms and conditions with premiums reduced by rupee one per thousand. That will eventually make future business less onerous and will simplify future writings on an all India basis.

A similar basis for past contracts should be attempted and should be a subject for actuarial investigation. Assuming that Oriental's rates reduced by Rupee one per thousand are, as claimed by the Government of India, lowest, existing policyholders are not likely to object if individual policy premiums for unexpired periods are reduced and adjusted on current rates accepted by the Government of India. It will have manifold advantages. Bonuses declared by Companies have already accrued to the policyholders and they have thus earned whatever is due on the basis of past payments. In the future, on the basis of uniform rates, conditions and terms which, by notification, should be enforceable for each policy, there will be no need for differential valuations for different companies and differing sets of policyholders. One valuation on an all India basis of all the policies will thus suffice.

In the course of months, individual companies will cease to exist and the records will possibly form part of Central archives. It will be stupendously difficult to sort out records for the purpose of differential treatment nor, it is felt, will it be practicable. It will be less difficult if company custodians are immediately instructed to work out the basis of future individual premiums policywise and if individual policyholders are notified by an extra slip attached to next renewal notices. When the Corporation takes over, it will have the advantage of having one class of policies all over India with terms and conditions uniform for new or old, and therefore easily understandable to all officers everywhere, who will not have to worry in the event of an enquiry to study the records afresh.

The Select Committee will do well, with the advice of actuaries, to study these proposals with the seriousness they deserve.

The next starting point for success for the Corporation will be to work out a system of decentralisation of administrative authority. It has been suggested here that each subdivision should be taken as the unit. The subdivisional officer must have adequate powers to make acceptances within limits and to pay normal claims within limits. It has been repeatedly suggested by the Government of India that they wish to extend insurance to rural areas. The credulous rural population will hardly understand files, references and red tape. To graft them in the pattern of future insurance, understanding Branch Managers are necessary who will be able to "deliver the goods" on the spot. Rural sectors of India's population are not, generally speaking, insurable because of lack of standard of living, illiteracy, thriftlessness, and traditional prejudices. To carry the message of insurance effectively into the heart of rural populace, an overall rise in the general well-being of villagers has to be ensured. A hasty penetration will be ruinous, as it will make a large inroad on the Life Fund.

These general conditions are of profound significance for successful functioning of nationalised life insurance in India. The present handicaps arise out of uncertainties, vagueness of the future set up, and a general feeling of State incompetence to render personalised service. This feeling of distrust on Government capabilities has to be aggressively attacked and can be largely undermined by devolution of authority to those persons with whom the public will have daily contact. A clear outline of the set up with limits of powers and responsibilities, if now presented before the public, will certainly be welcome and will allay misgivings. That may quicken the pace of sale of policies, now largely atrophied for these psychological reasons.

The Bill, in any case, cannot contain all the details. When rules, which it appears will be many in number, are made, the shape and the outline will be known. Nevertheless, it would have been fairer if Chapter X—Management—would have been elaborated in greater detail. The Select Committee may profitably study this chapter carefully as it will have vast bearing on the future of nationalised life insurance in India.

In this context, the question of integration of personnel in the existing companies is important, particularly the field force. The Bill assures employment, with such modification as may be necessary in the interest of rationalisation, to all wholetime employees, who were employed wholly or mainly in connection with the controlled business. Quite obviously, wholetime field officers come in this category, but not necessarily agents, who are largely part time employees and paid on a "no cure no pay" basis.

The position of agents thus remains vague, although there is no reason why they should lose their vocation so long as they produce business. But the complexity arises from the fact that there is concenraation of efforts in urban towns, particularly in capital cities all over India. In the absence of competitive trading, such efforts by many organisers on the same prospect is a social waste. The effort has thus to be usefully dispersed and that makes the position of staff and field officers, accustomed to urban trading, somewhat difficult. A quick disposal will enable the staff to find their feet, and once an organisational set up on the basis of subdivision suggested here is finalised, it will be a mere matter of days before final postings can be made. Delay will only mean less procuration resulting, in loss of life insurance revenues.

An all India life insurance salary cadre is the first requisite. A high powered pay commission can work out the details resulting from integration of existing staff. Pay scales will have to be devised for different categories of service where employees will have to be integrated.

The rest of the Bill is devoted to the procedure of taking over assets and liabilities of existing companies. Under Section 12 the Corporation to be established has the power to modify contracts of insurance where the financial condition of the insurer calls for such revaluation. Misfeasance and misapplication of fund are the direct responsibility of the management, not policyholders. Assets of persons directly responsible are to be seized. It is to be hoped that tribunals will endeavour to seize the assets. Reduction of policy values of innocent policyholders is morally indefensible. Ends of justice will be better served if Government of India create treasury bills to replenish the lost assets, if not realisable from the guilty.

The provision in the Bill, therefore, guaranteeing the right of the Corporation to seek relief in respect of maladministration of funds and misuse of trust by an insurer before the Tribunal where all parties to the transaction shall be parties is a welcome clause whereby it is hoped unsocial elements in public life will be made to atone for waste of public money. The sacred trust of jealously safeguarding public money and putting it to constructive use, which ultimately redounds to the benefit of the fund, is more than a duty. Lapses here cannot be condoned.

Subject to such revaluation as aforesaid, the sum assured by all policies issued by any insurer and bonuses declared thereon are guaranteed as to payment by the Central Government.

The Bill, as drafted, contains only the broad principles of taking over existing assets and liabilities of companies, compensation to shareholders, and the frame of the proposed organisation. Rules and regulations will contain details and the rest will have to be devised depending upon actual requirements. Sufficient flexibility should thus be the key note. A constitution, not hidebound, but easily pliable and yet not widely divergent from place to place will ensure success to nationalised life insurance.

ALL TYPES OF BANKING BUSINESS TRANSACTED

G. D. BIRLA, CHAIRMAN — S. T. SADASIVAN, GENERAL MANAGER

Rupee Travellers' Cheques Issued in convenient denominations

World of Jute

Difficult But Hopeful

THE annual general meeting of the IJMA has served as usual to focus public attention on the affairs of the Indian Jute goods industry, whose role in the economy of the country is by no means insignificant. The conclusion arrived at by Mr M. P.. Birla, the retiring Chairman of the Association, is that, though the road to be traversed continues to be hard and uphill, there are positive indications which encourage one to hope that 1956 will witness further expansion in foreign demand for Indian jute manufactures.

Mr Birla pointed out that, though it was undeniable that the industry as a whole had won a "little more ground in world markets", there had not been a corresponding increase in mills' prosperity. As a matter of fact, there had been "a disapponting reduction, if not complete elimination, of our already slender profit margin".

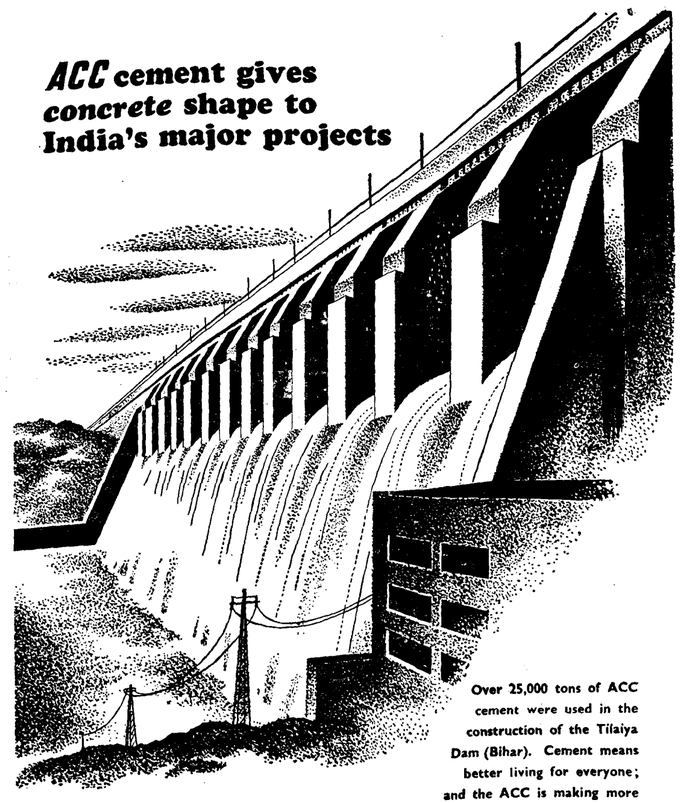
Analysing the causes underlying the unenviable position in which Indian jute mills found themselves he averred that the good effects of the several encouraging developments that had taken place were more than offset by adverse circumstances that made their appearance at the same time. The abolition of export duties had enabled Indian jute goods to regain the ability, after a good many years, to compete on equal terms with continental jute manufactures in world markets. The increase in sales had encouraged the industry to step up its output. As against those advantages, the industry was faced with increasing foreign productive capacity, increase in labour cost and an increase in raw jute prices. Mr Birla calculated that the price of the raw material, which accounted for nearly two-thirds of the total production costs of mills, had increased by 15 per cent above the 1954 levels, whereas the average for jute manufactures was slightly lower.

Admitting that modernisation, in which substantial progress had already been made, would enable the industry to meet the growing threat of foreign competition, Mr Birla, however, cautioned that the help from that direction would be slow in coming. If, therefore, the industry wanted to consolidate its re-gained positions in world markets, it had to look to raw jute for relief. In short, 100 per cent self-sufficiency in raw jute and a sizable reduction in its cost were the two most essential requisites urgently needed.

Readers of this journal may recall that it was Indian Finance that first raised the slogan of "100 per cent self-sufficiency" in raw jute. Developments since 1954 have only served to emphasise the correctness of our appraisal.

It is increasingly being realised in the Indian World of Jute that, until such time that Indian mills' dependence on Pakistan even for a small quantity of raw jute is not completely eliminated, all our efforts to push up sales of Indian jute goods will not meet with success. That is to say, 100 per cent self-sufficiency holds the key to the industry's prosperity in the full sense of the term. It is gratifying to note that Government have been taking active steps to help jute cultivators to increase the yield per acre. Dr Punjabrao Deshmukh, Union Minister for Agriculture, while speaking in Calcutta last December, had attributed the sizable part of the 1955-56 Indian jute crop to the improved methods of cultivation. It would appear, therefore, that the conditions that are devoutly wished for by the industry are not difficult of attainment.

In the course of his speech, Mr Birla acknowledged with grateful thanks the valuable help extended by Government during the past year. He has not failed to mention that, but for the timely action taken by authority, the improvement achieved would have been impossible. The continued interest evinced in the industry's affairs has also been taken note of. The only point on which criticism has been levelled against Government is as regards the apparently leisurely manner in which Government are implementing the recommendations of the Expert Committee on the quality of jute.



In the context of the present financial difficulties of jute companies, brought about largely by "the adverse change in the ratio of the prices of raw jute and finished goods", it is but meet and proper that Government pay urgent heed to the just demand of the industry in whose prosperity they themselves have not a little stake.

*

Sentiment in the Jute Goods market, during the past week, remained depressed and prices developed a sagging tendency due to heavy liquidation, being influenced by various adverse factors. Mainly amongst these were the downward trend in raw jute prices, the absence of any business with overseas buyers and the news of the

World *of* Tea

Further Rise in Prices

THE steady increase in Tea prices, during the past three weeks, has not been unexpected. A variety of new factors have emerged, which have improved the tone of the market. The rise in prices has not been confined to any particular grade; and a feature is that even such varieties as Plain Broken Pekoe, which were recently quoted at as low as Rs 1-5-0 per pound, has jumped sharply to Rs 1-10-0.

Apart from an International Tea Agreement which is believed to be awaiting signature, there are strong rumours that Russia will soon enter the market for making her purchases. Also, the pressure of stocks in warehouses is reported to be gradually easing as large quantities are being shipped for London auctions, thanks to the removal of restrictions on shipments.

Above all, the Ceylon crop during the month of January 1956 was 2.3 million pounds behind 1955-end level and a further short-fall of 5 million pounds is forecast for the month of February as a result of the unfavourabe growing weather and the severe drought conditions which have been experienced in the tea districts of Ceylon during this month. Although this deficit in Ceylon's crop may perhaps be made up at a later stage, this short-fall will have a healthy reaction on the world buyers.

It, therefore, seems likely that, with the UK buyers and other out-markets operating perhaps in a limited fashion, and India's internal blenders and dealers continuing to purchase large quantities, the market will now start to rise and rather higher prices may be realised from now until the last offerings of the 1955-56 crop have been sold.

According to the monthly report, issued by Messrs Carrit Moran and Company, it is estimated that 80 million pounds remain still to be sold in Calcutta and the quantity, to be offered at the export auctions, will be around 55 million pounds (500,000 chests). If 50,000 chests are sold each week, they expect that the export auctions to be completed around the first week of May. As for the Internal Sales, if 20,000 chests are sold at each week, these sales will also be completed by about mid-June.

In the Export Sale held in Calcutta this week, offerings amounted to 47,700 packages for which there was again a very strong and general demand. Most kinds were an irregular one to three annas per pound dearer, and any bright liquoring teas were a particularly strong feature. Whole Leaf grades, stylish BPSs and the plainest kinds also received strong support.

Darjeeling teas were irregular and, except for a few selected lines with autumnal flavour, tended to be easier.

In the Internal Sale, offerings consisted of 19,200 packages of Dusts for which there was a very strong and general demand. All descriptions were dearer, especially black leaf dusts suitable for the Middle East; and all grainy types, which were a very strong feature, were As 4 to As 6 per pound dearer. Teas of all other descriptions with improved cup quality were irregularly As 3 to As 4 per pound above last rates.

The very best CTC Assams with good liquors again received good support, while the remaining types in this category were very irregular, but generally several annas dearer.

Offerings of Leaf grades consisted of 2,200 packages for which there was a good demand at As 2 to As 4 per pound above last rates.

In the Export Quota section, business was reported done at 5 to 5½ pies per pound.

There will be no sales next week; and the next Export and Internal Sales will be held on April 2 and 3 respectivey. It is gathered that sales will hereafter be held every fortnight.

Applications for the conversion of unutilised balances of season 1955-56 Export Quota into special Export Licence must reach the office of the Controller of Licence, Tea Board, prior to April 14, 1956.

Offerings in the Cochin market were about 1,570,000 pounds. There was again quite a useful selection on offer, but quality was irregular and sometimes showed a sight falling away. There was a strong and general demand, particularly for good, bright liquoring mediums which were keeny competed for and often sold at considerably above valuations. Best high-growns, where quality was maintained, were steady; but others declined according to quality, which buyers followed closely. Low Mediums and Commons received fair support at prices which were generally about steady.

Clean, black Leaf teas were a strong feature, while there was a better enquiry for Whole Leaf grades which were often dearer.

Following were the price trends during the past three sales (prices per pound):—

At the Sale held at Chittagong, offerings were 9,420 chests of Leaf grades and 3,305 chests of Dusts. There was a further fall in the quality of Leaf, resulting in the market easing by about As 2 to As 2½ per pound. Blenders were active although Karachi buyers were rather indifferent; and the prices for all varieties of clean and liquoring teas were quoted below valuations.

There was no demand for Whole Leaf teas, and the Common teas were sold at much lower prices than last rates.

The market for Dusts opened by about As 3 to As 4 per pound below last rates. There was a withdrawal of about 2,000 chests in all.

In London auctions, offerings were 26,062 packages, including 18,232 packages of Northern India teas. The strong and active demand, noticed last week, was again in evidence this week and offerings were sold readily at dearer rates. The best liquoring sorts were in strong request and sold well above brokers' valuations. Dooars teas shared in the general advance and an increase of 1d to 2d per pound was recorded. Plain and Low Medium kinds were fully steady to a shade dearer.

Tea stocks in London, as on the 9th March, 1956, were 96.90 million pounds as compared to 98.67 million pounds in the previous week and 137.07 million pounds a year ago. Landed between 3rd and 9th March, 1956, were 9.91 million pounds, while deliveries during the same period were 11.68 million pounds.

US Notes

EXPERTS who have been examining current business trends in the United States see no slackening of economic activity. Typical is the analysis presented by Federal Reserve Bank of Chicago in its March review of the economic situation. The Bank finds that "impressive sources of strength continue to bolster American economy." It points out that business outlays for new plant and equipment have increased substantially in recent months and are expected to rise further in course of a year; that manufacturers' new orders are at peak rates, while order backlogs are substantially above a year ago and that personal income remains high and consumer spending is running ahead of year ago.

The few weak spots, the Chicago Federal Reserve Bank notes, have not spread to other segments of economy. These include chiefly automobile production, housing, and the farm situation. The bank observes that there have been noticeable signs of improvement—much stronger signs, in fact, than the experts were expecting few months ago.

US automobile production has begun to climb again after cutbacks in January and February. Production in March is expected to total about 610,000 cars, about 10 per cent more than in February. Output so far this year has been running only slightly behind last year's record pace, as auto plants have built more than 1.30 million cars—an annual rate of 6.9 million. Worker layoffs—which came to only 85,000 in an industry employing more than one million—have all but ceased; many of those laid off in past two months already have been recalled to works, and thousands more are coming back week by week. New automobile sales, meanwhile, are exceeding expectations, in February reaching a record high for the month.

Important evidence of unexpected strength in home building in the United States has been presented by the chief economist for the nation's leading construction research organisation. Dr George C. Smith of the F. W. Dodge Corporation, addressing a business meeting in Boston last week, called attention to significant upturn in residential construction. "Almost everyone", Dr Smith said, "expected the housing downturn which began late 1955 to continue for several more months at least. But residential contract awards in the first two months of this year.... actually ran six per cent ahead of same period last year. The total of 1,500 million of residential awards was a new record for any January period."

Optimism over the American farm situation was voiced this week by the head of the largest farm equipment company in United States. John L. McCaffrey, President of International Harvester Company, told company stockholders at their annual meeting the American farm situation is better than many people believe. He pointed out that while decline of some farm prices has adversely affected parts of the agricultural economy, farm debt overall is at a relatively low level. Cash income from farm marketings, he noted, is running only slightly behind last year's rate and is equal to the 1950 rate. Since 1950, he observed, the number of farms and farmers has decreased about 1/3 per cent, so that greater income of each farming unit has offset, in part at least, adverse price factors. He pointed out that in the four months beginning last November, International Harvester sales showed a 16.5 per cent increase over the same period of the preceding years.

US imports also show signs of running even higher than expected this year. The US Department of Commerce, within the past week, has estimated imports in January at $1,045 million. This was not only 20 per cent above the January 1955 total but even surpassed the high December 1955 total by 3 per cent. In fact, January 1956 marked the fourth consecutive month in which US imports exceeded the $1,000 million mark.

Healthy conditions in virtually all American industries continue to reflect the high rate of overall economic activity. Bituminous coal production, for instance, came to 90.7 million tons in the first two months of 1956, compared with 77.5 million in the same period of 1955. Steel production in February came to better than 10.1 million short tons, an all-time high for the month and the fifth consecutive month in which output exceeded the 10 million ton mark; output in February 1955 came to 8.5 million tons. New rubber consumption in January, the latest month for which such data are available, has been reported by the US Government at 133,013 long tons compared with 124,403 in December and 125,367 in January, 1955; it was a new January record, and marked the fourteenth time in the last fifteen months that a new monthly high has been established.

Underlying the high rate of economic activity in the United States is the personal situation that has never been equalled. The US Government reported this week that savings of Americans at the end of 1955 reached the staggering total of $235,000m.—about $1,420 for evey man, woman and child in the country. This includes holdings of Savings Bonds, reserves in life insurance companies, and individual bank accounts. In 1955, in the face of the biggest splurge of consumer spending in history, Americans added a net total of $13,000 million to their savings in these forms—more than in any post-war year except 1954. The 1955 increase was well over twice the increase in instalment debt, and amounted to outright cash savings of about five cents in every disposable or aftertax, dollar earned. As one observer puts it, "Americans more and more have been making the squirrel look like a spendthrift."

*

Britain

GOOD PROSPECTS FOR STEEL INDUSTRY

Optimism is the predominant mood of the West German steel industry in 1956. It is predicted that steel productiin will rise above the record-breaking 21.34 million tons of 1955 even if the rate of growth of investment in capital goods should fall off in the present year. 1955 production represents a 22.4% increase over the previous year. If credit restrictions are not tightened in 1956, the steel industry should enjoy another good year.

These are the predictions embodied in the report on the second half of 1955 by the Economic Federation of Iron and Steel Industries. The report attributes the remarkable growth of West German steel production to wise investment policies. It points out that the main feature of modern investment policies in the steel industry is the large percentage of capital ploughed back into the concerns. Rationalization all along the line has kept the West German steel industry up with world-wide developments. The policy of substantial re-investment was begun in the early Fifties and has been kept up ever since.

The nine largest steel mills in the Federal Republic account for no less than 75% of West German steel output. These nine mills are all located in the Ruhr district and are dubbed the "steel millionaires", since each turns out more than one million tons of steel a year. Each has an operating capital ranging from DM 70 million to DM 225 million.

United Kingdom steel production in February was the highest achieved in any month. Reaching a weekly rate of 417,800 tons, the February output surpassed by 9,200 tons the previous highest figure, achieved last November.

The year's production estimates have been revised as a result of the achievements in February. Announcing this in London, the Iron and Steel Board states that it should be possible to produce about 1,500,000 tons more crude steel this year than in 1955. The forecast raises the current year's production estimate to about 21,300,000 tons. Raw materials supplies, says the Board, are being arranged accordingly.

Production rate has risen from a weekly average of 381,900 tons in December last, through 405,200 tons in January, to the present average. The annual rate has gone up from 19,860,000 tons in December to 21,069,000 tons in January, with a further leap of 655,000 tons to reach the February estimate of 21,724,000 tons.

Pig iron production in February was also at the highest rate for any month. The figure was 263,300 tons a week.

A British company which plays an important part in finding oil reserves in various parts of the world is now using a 1,200 ton ship as a floating drilling platform in its search for oil at distances up to 50 miles out at sea and in depths up to 130 feet.

This is the last stage in exploring an area of 12,000 square miles of the Persian Gulf. After underwater swimmers have gathered samples from the sea bed and instruments have been used to measure the density of rock formations, the survey ship steams at speed and drops depth charges behind it. The shape of rock formations is plotted on a map with the help of radar and echo-sounding devices. Sixty miles of underwater territory can be plotted daily.

Findings about rock formations need to be confirmed, and this is done by shallow drilling. British engineers have equipped the ship with a drilling platform over the side. About 30 technicians live aboard during the investigation. It would be impossible to carry out such test-drilling over such a wide area and in such deep waters if conventional static drilling platforms were relied upon.

Geophysicists will add the information obtained from shallow drilling to the mass of data collected during earlier phases of the survey, and decide whether prospects justify building static platforms to sink deep test wells.

The oil exploration work is being done by the British Petroleum Company, and the shallow drilling by George Wimpey & Company.

Clive Street Gossip

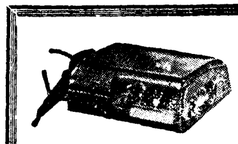
"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

MY first reaction to reports of Mr Khrushchev's sensational attack on Stalin was a certain professional caginess. For, as I shall show presently, the occupational hazards of those engaged in interpreting Soviet affairs are precisely the same as those of a tight rope walker, or of a skater on thin ice. There is no knowing when you will find yourself landing with a thud or slipping into abysms of cold discomfort. Even while the speech was, as now reported, being discussed among Soviet Communist party members, professional scribes elsewhere who did not know that Mr Khrushchev had made a second speech were attributing all manner of reasons for Mr Khrushchev's reticence. Thus, it was reported that Mr Khrushchev did not speak because he agreed with the attack on Stalin made by Mr Mikoyan. On the other hand, Mr Isaac Deutscher made, in The Times, an elaborate point of the fact that Mr Khrushchev did not personally attack Stalin in his earlier speech whereas Mr Mikoyan specifically mentioned Stalin by name. He suggested that there was some disagreement between him and Mr Mikoyan on the extent to which the attack on Stalin as part of the attack on the personality cult should be carried on. According to him, Mr Khrushchev was for soft-pedalling the attack while Mr Mikoyan was for letting the people know straightaway. If reports now current regarding the actual terms in which Mr Khrushchev had attacked Stalin in the party Congress are true, then Mr Deutscher would appear to have been let down rather badly by Mr Khrushchev. For, Mr Khrushchev's attack is bitter with a sense of unrequited personal humiliation, whereas Mr Mikoyan's attack was purely ideological. In a freer country, Mr Mikoyan's attack would have hardly caused a ripple whereas, if Stalin had been alive and in a free country, he could have easily had Mr Khrushchev convicted of libel of the most damaging sort.

*

In fairness to Mr Deutscher, it must be said that the actual details of what Mr Khrushchev is supposed to have said in the three-hour speech are still largely a matter of surmise. The report originated, it must be remembered, in Bonn and since then there has been confirmation from Moscow of only the fact that Mr Krushchev did make a speech, that he did attack Stalin as part of the attack on the cult of personality, that the question is being debated widely among the party members, and that decisions are now being taken on how much of all these disclosures should be made available to the ordinary Soviet citizen. The only indications of the actual terms in which Mr Khrushchev attacked Stalin are Reuter's censored message. The first was to the effect that he "sharply criticised the practice of the cult of personality practised during Stalin's time." The second message stated that the Communist Party Secretary gave delegates a "vivid description" of the mistakes which had been result of the practice of the "cult personality" during the later years of Stalin's life. He is reported to have said that great harm was done to the Soviet Union because of this and he is also stated to have "cited a series of examples to prove his claim." In the circumstances, I think it would be fair to assume that the Bonn reports were substantially correct, though whether or not we shall have complete confirmation of it from Moscow would depend upon the final decision on how far the attack on personality cult should be made synonymous with attack on Stalin. Since promises of setting the records straight have been made, we may yet get the fullest confirmation.

*



Meantime, practising Communists and fellow travellers are having a most embarrassing time though, with a brazenness not surprising in people given to continuous intellectual legerdemain, they have put a brave face on it. For instance, the Indian party secretary, Mr Ajoy Ghosh, who came away to India before a final decision of how much to make public was taken, committed himself to the view that it was a mistake to think that the current goings on are anti-Stalin. One should dearly like to know what he has to say now. The Communist paper, the Daily Worker of London, prints a despatch from its correspondent in Moscow in which he refers to the "various perversions of history which took place during the twenty years when Stalin placed himself above the party." One wonders the Daily Worker considers itself so far as a serious recorder of history as to keep a file of its back numbers. (If it were Pravda, I should make a shrewd guess that it did not, for embarrassments of such "equivocal" possessions are considerable). Anyway, if the Daily Worker consulted its file of back numbers of even as recent a date as the death of Stalin, it would not be so lofty about perversions of history by Stalin. Mr Harry Politt is more acutely aware of the need for continuity in these matters and, therefore, his view of Stalin's errors is more charitable, though, of course, he uses the familiar device of the "total denial" in dealing with the situation in Georgia following the reports of anti-Stalin speeches in the Communist Congress in Moscow. In a sense, the embarrassment of fellow travellers should be even more acute than that of active Communists as the latter have certain built-in shock absorbers and semantic advantages of closed systems that are denied the former. Thus, a fellow traveller as a professed onlooker has to explain Soviet actions in terms and language that make sense to the outside world. Many eminent men, including Bernard Shaw, have committed themselves to views about Stalin, which, though they were known to be perverse even at the time they were given, are now shown up to be even more naive than suspected. Less exalted men, who were willing to accept Communist professions at their face value, have committed themselves to views that read very odd today. I know it is a mug's game hunting for inconsistencies and bad prophecies in the views of students of affairs. But, when a person like Alexander Werth, who is known to be a close student of Soviet affairs, commits himself as recently as the 28th January to the view that "what we witness today is a certain rehabilitation of Stalin," we may be pardoned for indulging in a bit of extremely human schadenfreude at his probable discomfiture when he reads the current reports.

*

It would be foolish to venture to guess at precisely what had happened. But it seems reasonable to suppose that the concept of the collective leadership has become firmly established only now, and the present leaders of the Soviet Union are now confident enough of their strength, both within and without, to be able to let the country and the world know of Stalin's almost paranoid tyranny. Observers, who had been noticing the diminution of Stalin worship ever since his death, did not seem to be able to make up their minds whether or not the phenomenon represented merely the lull before the emergence of a new tyrant. It is quite conceivable that there was real uncertainty on the point during the last three years, and something of a struggle must have taken place about the time that Mr Malenkov was demoted. But it is clear that, whoever was the ambitious man, he found that

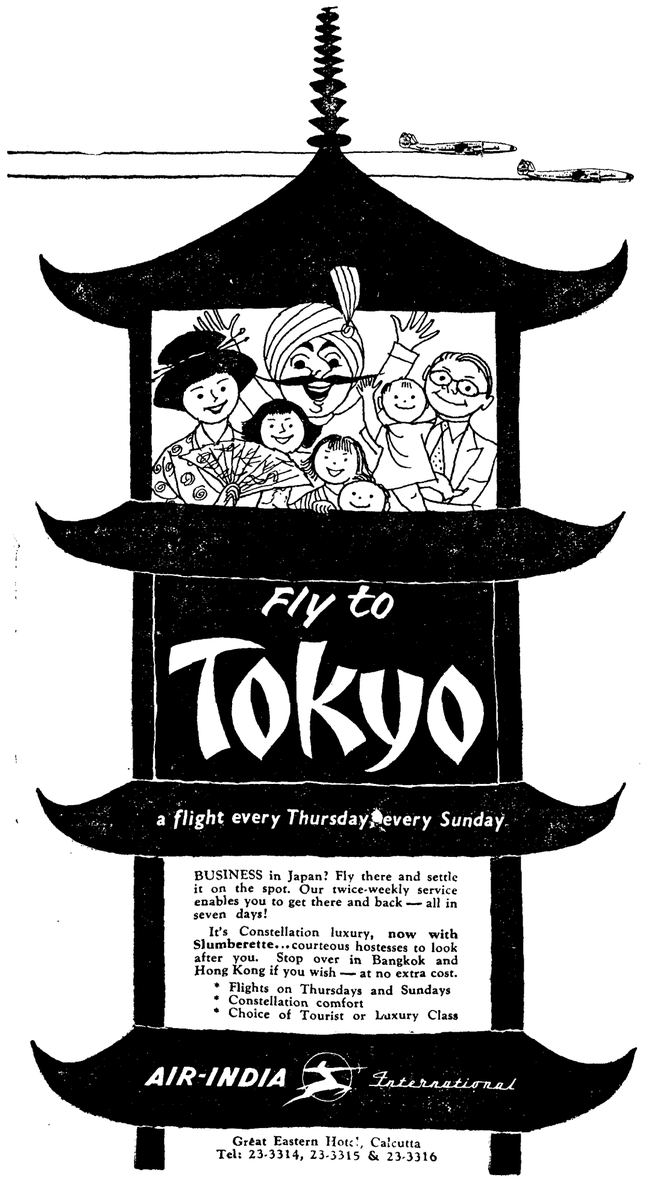
he simply could not succeed against the combined strength of the rest. Though there appears to have been, all these years, genuine recoil from the Stalinist excesses, none considered that the time was ripe for a sensational tearing to bits of the Stalin Myth until this month. Why, as recently as December 1955, Stalin's birth anniversary was reported to have been marked by some highly laudatory articles on the services rendered by Stalin to the Soviet Union and world Communism. In fact, a half-hearted attempt seems to have been made to try to find a Stalinist sanction for attacking the cult of personality. It was, as is now evident, a foredoomed enterprise, though the Literary Gazette of Moscow dug up and quoted in its issue of December 22 a letter written in 1938 by Stalin to the State Publishing House of Children's books, in which he vetoed the publication of a soupy squashy book called "Stories from Stalin's childhood". The objection is worked in typical Soviet claptrap about people creating heroes with the oblique suggestion that he was such a hero. (Incidentally, the disgusting depths of sycophancy to which intelligent men, both inside and outside the Soviet Union, descended in their 'odes', 'folk tales' and biographies of Stalin is an interesting question in literary psychology)

✱

From the fact that the journal was obliged to go as far back as 1938 to find an exiguous bit of evidence of Stalin's opposition to his deification is a measure of the difficulty of destroying the cult of personality and still leave Stalin's reputation in tact.



✱

In any case, it was soon abundantly clear that any such attempt at letting Stalin lone in his mausoleum and, at the same time, displacing the cult of personality could not succeed. Therefore, the Soviet leadership decided to come into the open and declare the errors of Stalin and thus smash the halo that surrounded this "father symbol". I do not claim anything more substantial than the status of a plausible hypothesis to this theory of mine. Of course, the possibility that this explanation may simply be a rationalisation of what really is a manifestation of deep seated personal injuries that have been smouldering all along within the present leaders cannot be ruled out at all. This is particularly so in the case of Mr Khrushchev who, being an extrovert, could not even give a plausible ideological colouring to his complaints. His speech, as reported, is a long and whining catalogue of a series of personal snubs suffered by him and others. How he was asked derisively to dance the gopak: how others were asked in a voice of doom why they could not look at the tyrant in the eye: how a summons to the great presence was dreaded more than anything else, for, one knew not whether it was for a friendly prod of the rib or a deadly stab in the back. Other symptoms of the present denigration being the result of an amour propre continually assaulted, are the somewhat odd suggestions that Stalin was no better than a coward and moron: that he conducted war with a school globe. This part of the story is indeed difficult to swallow even for palates as indiscriminate as Communist ones with the result that Mr Harry Politt has gently demurred from it.

✱

To liberals all over the world, the revelations and confessions did not come exactly as a surprise: but that does not mean that they are unmoved by this further confirmation of the terrible deeds of a near mad tyrant who was pathologically surrounding himself with the symbols of his power. There was at least a certain attractive informality of the ancient tyrants like the robust Harun Raschids of the fables: these despots, in the words of the Arabian nights, went straight from the bed chamber to the court hall, where they promoted some and beheaded certain others and returned with maximum speed to their Scheherazades and their tales. There was no malice in their casual cruelty; but the problem of political cruelty posed by Hitler and Stalin is incapable of being dismissed as a piece of attractive aberration in a gay monarch. The regime of

Bombay Review

Explaining the Figures

STRENGTHENING the good and eliminating the malafide in the corporate sector may be said to be the primary objective upon which has been based the new Company Law. While it is easy enough to make such a definition, the task of giving examples as to what constitutes the good and what the molafide proves to be a difficult one. For, first we have to be clear in our mind that, while the transitory stage in the enforcement of the new Act will evoke a number of problems, the test of nationally minded management will lie in whether or not the intents and actions are bona fide in character and whether, by and large, they seek, as speedily as it may lie in their power, to bring their affairs within the letter as well as the spirit of the law. Here, again, it would be an arduous task to discover where it is that a particular company strays from the straight and narrow of the new company Law. Moreover, this is a matter that should engage the attention, not of the scribe in Bombay, but of the administrative machinery that has been set up for this purpose. Nevertheless, it is feasible, and therefore a chore worth undertaking, to indicate the symptoms in company affairs which are suggestive of a course of action being adopted that is in line with the spirit of the law.

Take, for example, the Kohinoor Mills Company Limited. Whether it is the accounts, or the statement made by the Chairman at the ordinary general meeting, one sees in them clear evidence of a desire to offer every available and relevant figure to the shareholders. This, it seems to me, is the crux of good management: provided all the relevant and necessary information is available, surely, in the event that shareholders are not satisfied, methods are open to them of seeking redress or bringing about any desirable change.

As I said, judged from these viewpoints, the Kohinoor Mills have the admirable habit of keeping nothing hidden from the shareholder. Let us analyse the accounts of the balance sheet and study the statement of the Chairman from this particular point of view—is the shareholder kept adequately informed about his company?

First, the balance sheet. The paid-up capital of the Kohinoor Mills is Rs 1 crore. As against this, the reserves and surplus are Rs 1.34 crores; and the balance sheet indicates the several heads under which the reserves exist. At a glance, one sees that the undistributed profits, which may be said to belong to the shareholders, are Rs 1.22 crores. The corresponding figures in all cases are given for the previous year.

On the other side of the ledger, the various assets are listed. The gross block of Rs 3.57 crores has a net value of Rs 88.7 lakhs. The current assets total Rs 2.89 crores, with the bulk of this in the form of stock-in-trade and stores, fuel and grains. As far as the stock-in-trade is concerned, the basis of evaluation is shown to be cost or market rate, whichever is lower. As far as the investments are concerned, the company in which shares are held is mentioned. The deposits with various entities are similarly listed.

Let us pause here to cast what may be the shareholder's eye on the accounts. In the first place, the investor knows that the investments of his company are in National Machinery Manufacturers Limited not in some vague, unnamed (and perhaps doubtful) corporate body. Secondly, a little perception will suggest to him that, under stock-in-trade, there lies some small hidden reserve. For, the cotton and fibre, the silk and other yarns, are all shown in the balance sheet at cost or market rate whichever is lower. It matters little on which basis the balance sheet figure has been arrived at. For, in the months since December 1955, there has been a substantial improvement in prices; and the size of the rise is roughly equivalent to the minimum of the hidden reserve.

The Schedule of fixed capital expenditure reveals that additions to block during the year total Rs 7.42 lakhs. The provision for depreciation in 1955 was Rs 21.33 lakhs—of which Rs 6.33 lakhs constituted the charge against profits and Rs 15 lakhs the appropriation from machinery reserve.

The profit and loss account is formidable in the number of items that comprise it. There is no clubbing of two or three sets of figures. The agents' remuneration is shown under three heads—the office allowance, the commission on profits and the commission under the last item does not form part of the total of expenditure in the profit and loss account. It is, nevertheless, shown in this account for the information of shareholders.

The appropriation account shows a transfer of Rs 3 lakhs to development reserve and one of Rs 1.50 lakhs to the employees' pension and gratuity fund. The provision for taxation is roughly Rs 3 lakhs higher at Rs 8½ lakhs. The dividend, unchanged, absorbed Rs 18 lakhs.

The Directors' report itemises the figures in the appropriation account, states a few relevant facts on trading conditions, informs shareholders that the mill property as at the end of December was insured for Rs 10.51 crores, and indicates that the agreements with the sole selling agents have been renewed and require shareholders' confirmation.

Let us proceed with the speech of the Chairman, Mr E. D. Sheppard. First, as fas as national affairs impinged upon the prospects of any industry, Mr Sheppard notes gratifyingly that "there have been no major flare ups" and that, largely, "peace has been maintained throughout the year" except for a foray here and a skirmish there.

Next. Indian affairs, and the visits to our country of the Heads of States of some foreign nations. As the Kohinoor Mills' Chairman puts it, "there is nothing which can be more conducive to bringing about peace and harmony in the world than such visits of leaders of nations to each other".

Then, logically, the next point to be considered is the conditions in which the particular industry was operating in the year past. The power position was satisfactory; and there should be no danger of a further shortage of power at any rate for two or three years. The Second Plan has been formulated but Mr Sheppard is not quite happy about the decision to freeze the capacity of the mill industry because, he feels, the framers of the Plan could "have permitted reasonable expansion in your industry to enable it to supply the potential demand for mill-made textiles in India and, at the same time, retain its markets overseas." The mill industry had a reasonably good year. As the year progressed, prices of cloth improved somewhat. Yarn prices remained very low, but they now show some signs of improvement. Here, Mr Sheppard interjects the fact that, in the case of Kohinoor Mills, with half its spindles working constinuously on the making of yarn and sewing threads, the company's profits in 1955 were not quite so good because of the poor state of yarn prices.

It is apposite that Mr Sheppard in his capacity as the Chairman of a premier cotton mill in India, should give his views on the budget proposalls and taxation policies. In this regard, Mr Sheppard points out that the higher excise duty will mean that Kohinoors would have to pay Rs 9 lakhs more under this head. Secondly, the proposed tax on dividends would cost the company Rs 2 lakhs per annum, asuming that the present rate of dividend distribution remains unaltered.

We go on to read of the cotton market, of the cotton crop and of foreign cotton, after which Mr Shepherd turns to the accounts. And, in this regard, there are two or three points to which Mr Sheppard draws the particular attention of the shareholders. Firstly, in the 1955 accounts, it became necessary to provide an amount of Rs 4.43 lakhs under the head of bonus for the year 1954. Secondly, Mr Sheppard explain why the changes in the balances sheet figures have taken place. For example, he says that the liability for expenses is lower by Rs 6.63 lakhs "as no provision for arrears of D.A. was necessary this year". In similar fashion. the Kohinoor Mills' Chairman analyses the ups and downs in the profit and loss account figures.

After all this, Mr Sheppard comes to what is perhaps the most important part of his statement. In referring to the agreement with the selling agents; which came up for renewal, Mr Sheppard relates all the relevent considerations that shareholders should be apprised of. Both the cloth and yarn selling agents have held their offices for 44 and 29 years respectively, "and I can say without any hesitation they have served your company exceedingly well throughout this period". In keeping with the times, says the Chairman, the new agreement would call upon the selling agents to receive rougly 25 per cent less than hitherto.

Finally, as far as the prospects of the company were concerned, Mr Sheppard emphasises that a comprehensive programme of expansion and rehabilitation has been practically completed. With the outlook for cloth goods and the yarn market improving, with the company up-to-date in its bonus provision and the substantial reduction in the commission to selling agents, it is clear beyond doubt that the company's profits should be market substantially higher. But Mr Sheppard does not profess himself as soothsayer. "I myself," are his last words, "leave you to draw your own conclusions."

If the detailed figures in the accounts and the detailed explanations in the Chairman's statement were not enough to prove my point that the Kohinoor Mills are representative of that good management which has a concern for the spirit and the letter of the law,

Gateway Notes

Saurashtra Budget

The Saurashtra budget for 1956-57 shows a deficit of Rs 106 lakhs, the revenue being placed at Rs 14.30 crores and expenditure on revenue account at Rs 15.36 crores. Some attempt has been made to cover the gap by a duty of half an anna per unit of domestically consumed electricity and, in a manner now familiar, an increase on the motor vehicles tax. These two increases will yield an additional income of Rs 7.5 lakhs.

The revised estimates for 1955-56 reveal expenditure at a higher level than in the budget year while revenue is lower at Rs 13.65 crores, leaving a deficit of Rs 2.82 crores. In the current year, there has been a spurt in rate of development expenditure. Corresponding rise in expenditure on administration is less than proportionate and this bespeaks practice of economy.

The Second Plan envisages a gross outlay of Rs 56.4 crores. Past expenditure in floating loans might have prompted the Finance Minister to decide upon loans amounting to Rs 2 crores to be floated every year during the Second Plan period. In addition, it is proposed to rely on market borrowings to the extent of Rs 2 to Rs 2.5 crores and on small savings to the extent of Rs 1 crore.

The progress achieved by the State in the field of agriculture and irrigation was detailed in these columns last week. Equally satisfactory are the strides taken in road building and education. Over 150 miles of asphalt roads and 2,000 miles of village roads are being laid. By the end of the current year, the number of pupils in schools will be about 430,000, with more than 4,400 schools functioning. Expansion at the secondary stage is a pressing necessity but Government seem to be unable to go about it alone. An equal contribution of Rs 25 lakhs from the public is counted upon by the Finance Minister.

Most of the new industrial projects, costing Rs 70 crores, pertain to the private sector. With the continuing increase in industrial output, the pressure on Saurashtra ports has been increasing and many of these will be converted into all-weather ports.

*

Taxes in M. P.

Betterment levy for making irrigation works partly self-financing is becoming the accepted policy of more and more State Govtrnments. Opposition to this measure has been considerable on the ground that it amounts to skimming the cream off the benefit accruing to the people. But the inevitability of having to pay a fair price for the Welfare State seems to have the final say.

Madhya Pradesh is the latest State to impose the levy. The Finance Minister should nevertheless consider the suggestion that the tax should not be collected from such regions where people have made contribution toward the building of irrigation works. The fact that large areas of cultivable land lie fallow should emphasise the danger of putting a possible curb on voluntary popular enthusiasm for building dams and canals. Satisfaction may be derived that the levy would be payable in easy instalments spread over 15 years. It would come into operation on April 1.

Together with an increase in taxation on motor vehicles and a duty on sales and consumption of electrical energy for purposes other than home consumption, the levy will fetch some Rs 1.64 crores. The Taxation Laws Amendment Bill introduced in the Vidhan Sabha last week has been defended by reason of the contribution of about Rs 32 crores which the State will have to have to make to its Second Plan of the size of Rs 123 crores.

The new taxes proposed make up only for a part of the budgetary gap. It is possible that the Finance Minister may disclose new tax proposals in the coming months.

*

Trade Controls

The Indian Merchants' Chamber had occasion recently to discuss with the Chief Controller of Imports and Exports the immediate and long-term impact of controls on trade interests.

Procedural matters in the administration of policies have lately improved and this, in itself, is a considerable gain, remembering that divergence of opinion between Government and traders would otherwise have assumed damaging shape.

The Merchants' Chamber contends that the innovation of canalisation of imports of indusrial raw materials like raw silk, caustic soda, soda ash, etc through official and officially-sponsored agencies has not been an unmixed blessing. It has led to the displacement of the normal established trade channels. Nevertheless, the innovation seems to have a strong raison d'etre because it ensures building up of adequate stocks and enabling Government to maintain prices at reasonable levels.

There seems to be greater validity for the argument that internal distribution of imported supplies of such raw materials should be entrusted to the existing trade channels. Barring the practical difficulty in calling in an unwieldy number of private agencies, it should not prove hard for the Government to utilise such services in fair measure.

The complaint of lack of coordination between the Import Trade Control and the Customs authorities is not new. By attending to the difficulties of individual traders in isolated cases, it is not likely that Government will be able to put such complaints finally at rest. The question is to be solved at the policy making level through deeper structural readjustments in the administration.

The complicated procedure of transfer of quota rights has legal implications which will have to be respected while attempting to simplify it. But, to the extent possible, early action is expected.

According to the Chief Controller, Mr S. N. Bilgrami, the present policy of progressive liberalisation in the sphere of import trade control will, sooner or later, have to be reversed, in view of the increasing requirements of foreign exchange for development activities.

*

The State Co-operative Bank

The administration report for 1954-55 of the Bombay State Co-operative Bank reveals that, with its 69 branches spread all over the State, it has done justice to its role as the balancing centre of the entire co-operative movement of Bombay. An Apex Bank in main, the Bank continues to function as a central financing agency in co-operatively underdeveloped districts.

The authorised share capital of the Bank is Rs 1.5 crores including contribution of Rs 1 crore from the Central and State Governments. During the year under review the paid-up share capital has increased by Rs 76,600 to Rs 61,23,7000. The proportion of co-operative institutions in the total membership has slightly increased to 58.7 per cent during the year.

A gratifying feature of the year is the substantial increase in deposits in spite of the closing of some of the branches following the transfer of business to district central financing agencies and the higher interest rates on savings and fixed deposits offered by commercial banks and Postal Savings Bank. Deposits have swelled from Rs 911.81 lakhs in 1953-54 to Rs 1,093.58 lakhs in 1954-55. The deposits from cooperative institutions alone show a rise of Rs 159.89 lakhs.

*

Labour Minister on Unemployment

Bombay's Labour Minister, Mr Shantilal Shah was heard to remark in the legislature that the unemployment problem in Bombay was not so serious as was sought to be made out by some of the Opposition members. It is surprising that a difference of opinion should have at all occurred over an issue which is not going to be solved, at any rate, by verbal propositions.

The most disturbing feature of the unemployment situation in Bombay is, as elsewhere, the uncontrolled migration of people to urban areas. This drift toward industrialised cities can be countered only by securing jobs nearer home. The employment exchanges report that several categories of jobs such as stenographers, midwives, policemen, and engineers were left unfilled due to shortage of qualified hands. What is needed is an even distribution of industries as far as possible and equal development of all regions of the State.

Secondly, Government should offer sufficient attractions for persons to take up jobs in the mofussil. The reluctance of medical practitioners, for instance, to leave towns continues to be very real.

Mr Shah has admitted his inability to give any high promises and he is right in his view that unemployment can be tackled only on a national scale. But this is not to say that the responsibility of State Governmens is reduced to any extent. As it is in Bombay, there is a steady increase in the number only of factory jobs which has risen from 7.4 lakhs in 1953 to 8 lakhs in 1955. But this, of course, bears little comparison to the number obtainable in the employment market. The situation remains as serious as ever.

The Finance Minister Replies

The greater part of Sir Chintaman Deshmukh's seventy-minute reply to the general debate on the budget proposals was taken up with technicalities of national accounting and theoritical discussion of deficit financing. The esoteric nature of the subject was clearly demonstrated by the regular and gentle snoring from a member whom an unkind amplifier refused to leave alone in his (possibly) well earned repose. When Finance Minister reeled off technical terms like 'linear programmes', 'metrices', etc. (knowledge of which he handsomely attributed to Mr Ashoke Mehta also), one baffled innocent was naive enough to confess that all this was Greek to him. The Finance Minister, ever a courteous man, reassured the member that it was nearly the same to him too. On the subject of deficit finance, Sir Chintaman was able to dispose of the theritical objections to his proposals in an easy professorial manner. He also put to good use the strategy he had evolved during the debate on Company Law amendment—that of quoting diametrically opposite views and suggesting, with a barely perceptible air of ironic detachment, that perhaps the exponents of the two views would talk it over and let him have the benefit of a slightly more unanimous advice. Thus, on the subject of Controls, he said: "Certain members like Mr Ashoke Mehta had recommended imposition of controls to prevent inflation while others had strongly opposed controls. I have no doubt that, if and when we reach a stage for making a judgment, probably there will not be this gap in the thinking of the various members." 'Gap in thinking' indeed! The Finance Minister had learned his parliamentary tricks all right!

In his reply, Sir Chintaman clarified once again Government's attitude to the tasks in front of the nation. He was dealing with a rather childish complaint that he was trying through this budget to 'claim credit' for the present Government for evolving a Socialist pattern of society. Now there is no reason why he should not; but, as the Finance Minister pointed out tartly, it was time that they in the country realised that they were now engaged in an effort which could be regarded as truly national. Disavowing any 'mental awareness' of this kind of desire to appropriate credit, he pointed out that some of his other critics took him to task for not being more explicit in his avowal of the Government's commitment to Socialism. Pointing out probably for the hundredth time the strictly pragamatic nature of the present Government's approach to the whole subject, he said: "I am more concerned with the practical problem of giving effect to the first phase of the Second Five-Year Plan." What he probably thought and left unsaid was that his critics were, on the other hand, either pouting platitudes about the socialist pattern or querulously complaining that they had been cheated out of their good conduct prize, the while he was grappling with this problem.

Regarding deficit financing, the Finance Minister sensibly refused to divulge at this stage details of the steps he proposes to take to deal with possible inflationary pressures emerging as its consequence. Welcoming the general support to his thesis that such financing was necessary and even desirable in a developing economy, he agreed readily that there were limits to this and that we were running a certain amount of risk. He, however, rejected the rather despairing suggestion of Dr Krishnaswami that the size of the Plan should be reduced. He pointed out how, in discussing particular allotments various members had asked for increases: and, in any case, the consensus of opinion was against the reduction of the total size of the Plan. The dangers, of course, were there, but they should not allow themselves to be daunted by them. To an extent, inflationary pressures are implicit in any big-scale developmental effort. There is no use closing our eyes to this difficulty. But I think, on the whole, development with inflation is better than a stagnation with stability."

Dealing with the familiar criticism about deficit financing that it is an indirect tax, he pointed out that the only real protection against inflation is the ability of increased production to take care of the additional purchasing power. He drew the attention of members to certain other points in the national economy on which also inflationary pressures make themselves felt, the balance of payments, for instance. To a Communist suggestion that imports of consumer goods should be stopped, he pointed out that, in dealing with inflationary pressures. import of consumer goods can be of vital significance. He, therefore, refused to commit himself dogmatically beforehand on the steps he would take to deal with the difficulties that are likely to arise as a result of deficit financing. The important thing, he said, was to prevent the price of primary necessities from rising excessively because that is likely to create precisely the kind of vicious circle that has been the nightmare of all Finance Ministers all over the world.

The truth is, it is difficult to discuss, except in very general and largely useless terms, weapons that ought to be employed against inflationary pressures likely to arise as a result of deficit financing. The exact action to be taken would depend upon the circumstances actually obtaining. After all, as the Finance Minister pointed out 'the main weapons' are well known: fiscal policy, monetary policy, import and export control, physical allocation, and controlled distributions used in various combinations and at appropriate time depending upon the manner in which the situation unfolds itself. The Finance Minister gave the assurance that the position could be watched closely, and appropriate steps taken at the right moment.

In a vital but passing reference, Sir Chintaman mentioned the possible need for further taxation in order to meet defence commitments and the requirement to subsidise and experiment on labour incentive modes of production like the Ambar Charka. Its extent, he put in the order of about Rs 200 crores in addition to what has already been provided for. Examining several suggestions about additional sources and modes of taxation, Sir Chintaman had some sensible things to say. Explaining why he did not adopt straightaway all the taxes mentioned in the Taxation Inquiry Commission's report he said: "My simple answer is: I am not budgeting for five years, nor is this a Finance Act that is recommended for passing for five years. All we are dealing with now is the first phase the first year's phase—of this Five Year Plan and I have already adumbrated the possibility of having to review this question from year to year, find out what our revenue requirements are, what our capital requirements are, and then order out resources accordingly."

The Finance Minister then gave a number of involved calculations about 'taxable capacity'. About the scope still open for direct taxation, he expressed an opinion which should have made many people feel relieved. He estimated that the utmost the present system of income-tax could be stretched to yield would be a mere thirty crores more. And this would involve the lowering of the maximum exempt from income-tax a measure hardly likely to be popular. The fact is, as Sir Chintaman put it, in a country of nearly 400 millions, hardly half a million are even technically income-tax payers. So if the entire propertied class was expropriated, we would still have to sustain the development programme principally from the exactions from the others. "This is a country of poor people and it has to pull itself up with the help of the poor people" even when all that the rich have are taken away from them.

Sir Chintaman also referred to the expenditure side of his budget and said that no 'massive savings' were possible from administrative economy. Most people have by now come to accept as inescapable a proliferating and self-perpetuating bureaucracy; and one hears less these days about the need for pruning administrative expenditure. Moreover, in the context of vast developmental expenditure, appropriations for civil administration loom less large than in the old days. The real economy, therefore, is to be achieved by avoiding waste in expenditure on big projects and schemes. On this, the Finance Minister reiterated big assurance. given in his budget speech, regarding getting the matter examined by an expert body.

Search for a Leader

DEEP interest and genuine concern over the fortunes of the Praja Socialist Party will be shared by many more than its active supporters. The rise and growth of a strong Opposition is an accepted necessity, but still far from an assured prospect.

The embarrassment which the Party Executive evidently feels is both on practical and ideological grounds. Practical, because the search for forceful and decisive leadership has not been very fruitful. Ideological, because the party in power has veered unmistakably to the left and has, to use a familiar parlance, stolen much of its thunder. That the Party does possess men of wide political experience and unquestionable sincerity is the more cause for surprise that the Chairmanship should be so hard to be suitably filled. But it seems to be generally believed by the top leaders that on taking up the reins, one also gets inevitably tied to a doctrinaire post. It will unfortunate if the freedom-loving Praja Socialist unwittingly lets party solidarity to founder.

The National Executive of the party here last week took a very correct decision on an important question, by directing party units *to refrain from organising or* participating in satyagraha on the States Reorganisation issue. But whether this would influence the intemperate leftist agitations, particularly in east and west India, remains to be seen, for, individual members of the Party will presumably be still free to take part in any satyagraha move.

The National Executive has also done well to have decided actively to utilise the Party's influence to fostering good relations between the language groups in Bombay and elsewhere. But how far these directives will filter down is a matter of opinion.

Under the circumstance, one can only hope that the General Council at its next meeting, will decide how best it can function as a political body, which will have great opportunities to co-operate in national reconstruction. The approach of the general elections gives an air of urgency to such a step.

*

Kashmir's Progress

Kashmir's 1956-57 budget evidently stands in a category of its own. In three years, revenue receipts show an increase of over 22 per cent. Instead of a progressive swell in the tax burden, the Government could claim to have divested the fiscal system of some unpopular levies. No new item is proposed for the budget though a slight increase is made on road tolls and stamp duty. The percentage of tax revenue to gross revenue works out to be only a little over one-fifth. The per capita revenue is perhaps the lowest for all States.

The revenue receipts for 1956-57, at Rs 673.67 lakhs, are a record for the State. In part, this is the effect on the financial resources of the State as a result of the implementation of development schemes. Central aid is also a substantial contributory.

Revenue expenditure at Rs 706.17 lakhs again is an all-time high. The increasing cost of administration are is an aspect requiring tighter control. Corruption and red-tape are alleged. Increase in expenditure is, of course, more easily explained by more spending on education, medical schemes, agriculture, animal husbandary, N.E.S., panchayats and rural development, roads and buildings, electricity, irrigation and forests, on all of which solid progress has been registered.

The First Plan, which at best was a three-year plan, has helped a visible, if not spectacular, rise in the per capita income and some relief on the unemployment front. Cottage industries and tourist trade may be picked out as two factors on which the State pins justifiable hope. For the revival of cottage industries, including the State's traditional handicrafts, a sum of Rs 71 lakhs has been spent out of a target of Rs 83 lakhs.

The attainment of self-sufficiency in food will continue to be foremost aim in the Second Plan. Arrangements with the Reserve Bank for proper credit facilities will be of vital help. Prospects for further taxation are far from unpromising.. Among development schemes, the provision of larger facilities for communication with the rest of India seems to deserve priority.

*

Ministerial Report

The annual reports of the Ministries of Commerce and Industry and Production for 1955-56 contain little by way of fresh information. But between them they highlight, in epitome, the growth of an expansionist economy. The year 1955 saw the foundations of the Second Plan being laid and, therefore, the scope and tempo of industrialisation have been considerably increased. The general index of industrial production averaged 159.4 during the first ten months of 1955 against 146.4 during 1954. The demand for consumer goods as well as for basic commodities like steel and cement has shot up and is rising. And in the case of the latter, acute scarcity was a frequent feature.

The output of finished steel was 1.260 million tons compared to 1.248 million tons in 1954. Production of mill cloth, at 5,087 million yards, was 89 million yards more than in the previous year. Handloom cloth touched the highest level since 1947 at 1,37 million yards. Cement production also reached the peak of 4.5 million tons. Output of jute goods rose by 90,000 tons. Sugar was more by 5.90 lakh tons at 15.90 lak tons.

An even swifter pace will have to be taken in the case of steel and cement and expansion programmes will have to be put through expeditiously. Modernisation of the jute and textile industries poses a formidable task to which the National Industrial Development Corporation will have to make sizable contributions, largely through supply of loans.

Foreign trade has taken a favourable trend, the deficit trade balance being reduced from Rs 53 crores to Rs 40 crores. A larger number of countries participated, but diversification with respect to commodities was less satisfactory. The formation of a statutory State Trading Corporation has been practically settled. A more pronounced application of strategic controls by the State on foreign trade may be expected. This is the more likely because the influence of economic planning, though real, might relatively be least felt on the pattern of overseas trade.

The Production Ministry could boast of having exceeded the target of 3,20,000 tons a year for ammonium sulphate from Sindri. The Hindusthan Shipyard has started the building of modern diesel engine ships. Another achievement was the turn-out of the Hindustan Cables Factory which reached its full capacity of 470 miles of cables per annum, in the very first year of its existence. The penicillin factory at Pimpri after reaching the targeted production of 9 million mega units, is being geared for a further 60 per cent expansion.

Raisings and despatches of coal have been better than in the previous year at about 38.2 million tons and 32.9 million tons respectively. But exports shrank rather badly from 2.02 million tons to 1.6 million tons. Reduced demand from Japan and South Korea provides the explanation.

The refinery industry was established on a firm footing with the Trombay refinery reaching full capacity by the middle of 1955.

In the sphere of khadi and village industries, no projected scheme has been left unimplemented.

On the whole, the performance of the two Ministries is to be considered satisfactory. The bifurcation in distinct terms of certain responsibilities between the two, seems to have made for greater efficiency. State-owned industries have made, comparatively speaking, a commendable showing.

*

Confectioners Meet

Mr. P. Mohanlal, in his presidential address to the tenth annual general meeting of the Indian Confectionery Manufacturers' Association on Thursday, effectively tried to counter the view that the confectionery industry is a luxury industry. An important ancilliary of the sugar industry, it has just reason to be perturbed over the downward trend in the rate of production, due to lack of adequate demand, over the last four years. Some factories have been forced to close down. Against the rated capacity of 4,000 tons per month, of the members of the Association, they produced an average of 700 tons per month in 1952, and in 1952 only 550 tons per month. Even when sugar supplies were restricted, the production rate was considerably higher.

The earlier position, when there existed a promising oversea market for the industry, has been progressively lost due to the relatively higher cost of the basic raw materials in this country.

Anxiety over the situation is fully justified considering that the indigenous industry is equipped, in a large measure, with up-to-date machinery for production, wrapping and packing, as also with technical knowledge and skill. But to quote Mr Mohanlal, machinery is lying idle, labour laid off, and capital tied up in stocks whch do not move.

The almost critical situation will improve only by the ability of the industry to quote competitive prices. In this matter Government can possibly help. Firstly, the possibility of enforcing a total ban on the import of confectionery should be favourably reconsidered. Secondly, it is the accepted policy of Government to allow concessions in the case of certain raw materials when used for industrial purposes.

North Indian Markets

Mixed Trend in Foodgrains Prices

THE second all-India crop estimates have already revealed that, while it is difficult to say whether food production in 1955/56 will exceed the record established in 1953/54, the prospects of larger production are extremely bright. The wheat crop is confidently expected to establish a new record this year.

Following the Government's determination to check the rising trend of Wheat prices by releasing enough wheat from their reserves, the commodity price at Hapur and other centres has recorded some fall during the week under review. Moreover, the first consignment of more than 6,500 tons of "golden wheat" has reached Calcutta from the Soviet Union. This shipment is part of 15,000 tons of wheat Russia has agreed to give India in last January. The balance is expected to arrive in Calcutta by the end of this month. Another consignment of 40,000 tons is also expected to come from the USA and Australia.

For obvious reasons, the demand for wheat has been slow and the offtake has been only to meet immediate requirements. At the Hapur market, average wheat is quoted at Rs 15-4 per maund as against Rs 15-8 quoted in the previous week.

Rice prices have, however, recorded a small rise wtih Basmati quoting Rs 25 to Rs 33 per maund, according to quality. Gram hardened further on Madras and the Punjab advices and fast decreasing stocks.

The upward trend in other coarse grains has now halted owing to the approaching new crop arrivals. Maize and Bajra prices showed further minor gains due to poor stock position.

Arrivals of new crop Peas have begun, but the quality was poor. New Peas were transacted at Rs 9-12 per maund. Arhar prices continued to rule steady at Rs 11-12, while Urad advanced further to Rs 18-8 per maund.

A mixed trend was in evidence in the Delhi grains market. Though arrivals of Wheat were poor and advices from the Punjab and PEPSU markets were higher, farm Wheat ruled quiet. After showing a slight setback in the early part of the week, Gram rates recorded modest gains on good buying interest from Madras and Uttar Pradesh. Maize recorded modest gains on better enquiry against slackened arrivals, while Bajra was quiet. Jowar moved up by about As 12 per maund due to increased buying activity.

The Bombay grains market presented a firm front with prices recording an all-round rise on account of broader buying interest in the face of continued small arrivals from upcountry centres. The continued shortage of seasoned Rice and comparative arrivals of even the new crop accounted for an upward tendency in the prices of this grain. Old crop realised about Rs 10 per candy more than the prices prevailing in the previous week.

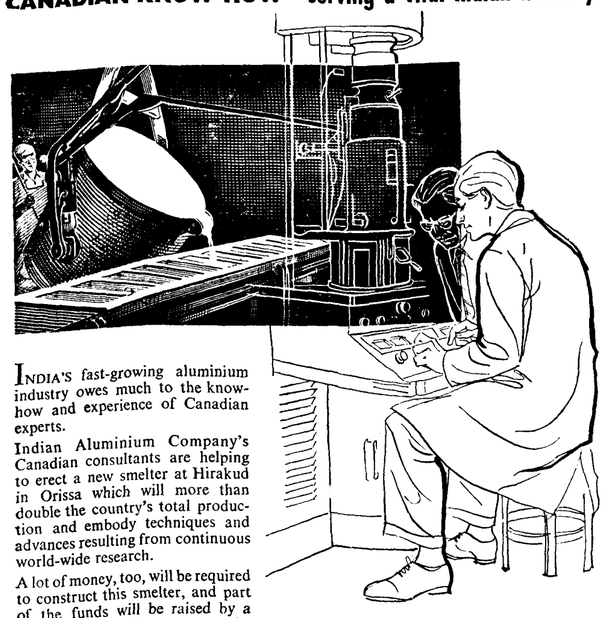
Trading in Wheat was marked by fresh strength in forward deliveries. Old stocks were indicated at Rs 135 to Rs 160 per candy. The higher levels for forward deliveries were attributed to trade support and sustained short-covering.

Among coarse grains, prices of Bajra hardened further by Rs 5 per candy with the Uttar Pradesh quality realising Rs 125 to Rs 130 per candy. Cheaper supplies from the Deccan were reported to have been taken at Rs 100 to Rs 110 per candy.

*

Sentiment in Sugar markets continued to remain depressed in the face of easy supply position and on expectation of overall increased production of indigenous variety. In this connection, the Food Minister has already stated that there is no proposal to import any further quantity of sugar during the current year, except some quantity already received in January/February.

Following are the latest mill-delivery rates (per maund) quoted in the Hapur market:—Jaswant Rs 28-10; Simbhauli Rs 28-8; Daurala Rs 29-8 to Rs 30-8; Amroha Rs 28-0; Bijnore Rs 28-0; Mansoorpur Rs 29-4 to Rs 30-8 and Rampur Rs 31-0.



*

Thanks to easy loading facilities in the form of gur special to consuming areas of Gujerat, conditions in the Gur market turned a shade steadier and prices improved by As 6 per maund to quote Rs 10-11.

Daily arrivals have declined to an average of 1,000 maunds, stocks are estimated around 1.25 lakh maunds.

CANADIAN KNOW-HOW — serving a vital Indian industry

INDIA'S fast-growing aluminium industry owes much to the know-how and experience of Canadian experts.

Indian Aluminium Company's Canadian consultants are helping to erect a new smelter at Hirakud in Orissa which will more than double the country's total production and embody techniques and advances resulting from continuous world-wide research.

A lot of money, too, will be required to construct this smelter, and part of the funds will be raised by a proposed issue of new capital by the Company.

The Peninsula

Mysore Budget

FACED with increased expenditure of a recurring nature on the one hand and the absence of resources on the other, Mysore's Chief Minister, Mr Hanumanthaiya, who is also holding the Finance portfolio, has been left with no other alternative but to leave the large deficit of Rs 389.06 lakhs, disclosed in his budget estimates for the year 1956-57, entirely uncovered.

The estimates of Revenue and Expenditure for 1956-57 have been placed at Rs 2,577.53 lakhs and Rs 2,966.59 lakhs respectively with a deficit on Revenue Account of Rs 389.06 lakhs. Compared to the current year's Budget estimates, Revenue and Expenditure are higher by Rs 281.37 lakhs and Rs 260.56 lakhs respectively. They are also higher by Rs 178 08 lakhs and Rs 298.33 lakhs respectively than the revised estimates of the current year.

The Budget provides for a net capital expenditure of Rs 1,450.97 lakhs, a net disbursement under Loans and Advances of Rs 266.62 lakhs outside the revenue account and Rs 120.15 lakhs for the repayment of Central Government loans falling due next year. Adding to this the anticipated deficit on Revenue Account of Rs 389.06 lakhs the total of the State's commitments during 1956-57 will be of the order of Rs 2,226.80 lakhs. Against these the Budget assumes Public borrowings Rs 500 lakhs, Unfunded debt Rs 76.07 lakhs Central assistance Rs 1.200 lakhs and net incomings from deposits, surpluses remittances etc. Rs 325.17 lakhs making a total of Rs 2,101.24 lakhs and leaving a shortfall of Rs 125.56 lakhs which is proposed to be met from the opening cash balance.

It is, however, to be noted that the above calculation is based on the assumption that Central assistance to the tune of Rs 12 crores will be available whereas a firm indication of assistance has been received so far to the extent of about Rs 3 crores only. Mr Hanumanthaiya has pointed out that in the event of the failure of the State Government to prevail upon the Central Government to sanction the assistance assumed in full, there will have to be a proportionate scaling down of the outlay on development schemes. In other words, the ability of the State to implement schemes under the Second Five Year Plan depends directly on the quantum of funds made available by the Central Government. The extent of the dependence of the State on Central assistance will become clear from the fact that the Chief Minister does not expect more than a crore of rupees from out of the state's resources throughout the entire period of the Second Five Year Plan.

That the tempo of developmental expenditure has considerably increased while revenue resources have comparatively remained inelastic will be evident from the following. The net revenue of the State which was about Rs 15 crores in 1951-52 now stands at Rs 18 crores. Public expenditure which stood at Rs 14.28 crores in 1952-53 has now increased to Rs 20.77 crores. The maximum increase has taken place under development expenditure.

Though as noted earlier, the State has been obliged to look to the Centre for substantial aid toward implementing development schemes, it is in the happy position of looking back with satisfaction on its achievements in the past five years. As against an expenditure of Rs 36 crores envisaged at the beginning, the outlay subsequently had been raised to Rs 48 crores. Out of this Rs 41.84 crores are expected to be spent by the end of 1955-56, the last year of the First Five Year Plan. In other words 87 per cent of the total outlay under the plan is expected to be absorbed. Had it not been for the difficulties in procuring imported materials such as copper wire and machinery, the percentage would have been exen higher.

In line with the pattern of the Central Plan, the Mysore Plan also had laid emphasis on the development of agriculture, irrigation and distribution of electric power for irrigation. At the same time projects designed to provide greater irrigational facilities in scarcity areas were given special attention. The importance attached to agricultural development in the First Plan will be evident from the fact that Rs 24.35 crores or 50.8 per cent of the total outlay have been allotted to schemes under that head. The next in importance has been power which gets Rs 11.42 crores or 23.80 per cent. Other heads are Transport 11.21 crores or 5.37 per cent, Industries Rs 2.16 crores or Rs 4.50 crores, and Education, Health and other social services Rs 4.65 crores or 9.70 crores.

(Continued on page 593)

How strong must the foundation be for 43 lakh houses?

In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.

In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

South Indian Notes

Second Thoughts on New Imports

While some States continue frantically the search for new sources of taxation, others have shown the welcome tendency to review and reconsider the possible repercussions of taxes proposed for the ensuing year. This is a procedure which the Union Finance Minister has never hesitated to follow. The Madras Finance Minister need not therefore feel qualmish about the assurances he gave in his address to the annual general meeting of the Madras Chamber of Commerce.

The 2¼ annas sales tax on diesel oil proposed in the Madras Budget is likely to impair both transport and agriculture, considering that the Central Budget makes a provision for the levy of a four anna excise duty on the same oil. The position also spotlights the lack of co-ordinating authority between the Centre and the State, in the formulation of budget proposals.

The increase in electricity rate for small consumers and licencees in hydro-electric areas is perhaps more justified. For, the older and established industries may normally be expected to be able to share this additional burden. Should any real difficulty crop up, Government have promised to re-examine the proposal.

Regarding inter-state sales tax, Mr Subramaniam disclosed that the Government of India were bringing forward a Bill 'under which perhaps it might not be necessary for the States to collect tax from a non-resident of the State.'

The Minister expressed concern over the congestion in the Madras Port. Steps were apparently being taken to expand the harbour. A simultaneous expansion and development of internal transport is also called for. The President of the Madras Chamber, Mr T. Rogers, pointed out that unless the movement of raw material to factories and of finished goods to consumers is ensured in time, the production targets are quite likely to be missed. He also warned of a possible dearth of managerial and technical hands in the coming years unless steps are taken to attract and retain qualified men, Indian and non-Indian.

★

Power Production and Supply

"In the matter of power development and administration of the electricity supply business in this state, the Government machinery has proved to be quick, resilient, and efficient, as evidenced by the power development achieved in the State and the steady return on the capital outlay with very reasonable rates charged to consumers"; there is genuine satisfaction and legitimate pride in these words of the Madras Minister for Public Works, an addition of an installed capadity. He was moving a demand for a grant of Rs 48.76 crores under 'Electricity'.

Achievement in the First Plan outstripped targets. It registered an addition of an installed capacity of 110,000 Kw to the State grid. 250 villages were electrified and power was supplied to 3000 agricultural pump-sets on an average per year. The State may well claim to lead the rest of the country in rural electrification. The total outlay in the current year on rural electrification is Rs 5.14 crores.

In the Second Plan, provision of Rs 61.10 crores has been made for power schemes. Important among them are the Kundah Hydro-Electric Scheme with a capital outlay of Rs 200 lakhs; the Periyar Hydro-Electric scheme, Rs 322 lakhs; the Madras Plant Extensions Rs 161 lakhs and rural electrification, Rs 490 lakhs. During the Plan, 400 additional villages will be electrified and 4,800 pump-sets will be connected up each year.

One aspect which worries the Electricity Department is the extreme vulnerability of the State grid to the vagaries of the monsoons. Currently it has become necessary to enforce a power cut, on account of the low water storages in the hydro-electric reservoirs. The situation is proposed to be tackled in the long run, in two ways. The lignite burning thermal station to be set up as part of the Lignite Mining Scheme of the Union Government will make available some 200,000 Kw of power. Secondly, the chance of tapping power from across the Travancore-Cochin border is considered to be fair.

The highly satisfactory functioning of the department renders the setting up of an Electricity Board, under the Electricity Supply Act, 1948, almost superfluous. Improvements, co-ordination and nationalisation of production and bulk transmission and distribution, which are the main objectives to be served by a Board, are being competently and confidently effected by an unified and co-ordinated control.

★

Madras Civic Budget

A small budgetary surplus after successive years of serious deficits might offer some satisfaction for the civic authorities of Madras City. Revenue has risen but shows no trend to rise further. No fresh avenue for taxation is in sight. But, in contrast, expenditure has gone up and still shows signs of shooting up. It may be claimed that the civic needs of the City are being fairly satisfied, but it is less certain if this can be said with equal truth a year or two hence. The extension of many of the existing amenities is urgently needed. For instance, the watersupply is yet to cover the whole of the City. Over Rs 50 lakhs have been spent during the First Plan on water supply schemes. The new budget also makes provision for certain non-recurring expenditure under this head. Further improvement seems to depend entirely on the extent of Government's financial assistance.

The maintenance cost of roads, sewage system, etc., is likely to absorb a sizeable share of the revenue. Many roads are in a poor state and stinking sewers are not uncommon. There is a lot more to be done in the field of medical attention and public health, where the dispensaries and child welfare centres run by the Corporation are proving popular and quite valuable. Again, there is scope and need for widening the educational facilities at present offered by the Corporation.

The Finance Committee of the Corporation estimates that a minimum of Rs 1 crore more in income would be necessary for the Corporation's services to become fuller. There seem to be two ways of covering the gap. One, of course, is greater direct financial assistance from the Government. This argument is strengthened because Government have greater responsibility in the matter now that they have nationalised road transport. Second, Government should take over such institutions, currently run by the Corporation, as are likely to prove unduly onerous to the latter. The Corporation's request to Government to manage the tuberculosis hospital and other clinics is an instance to the point. The duties and responsibilities of the civic body are increasing and it is only just that a stronger hand should relieve it of some.

The revenue for the budget year is estimated at about Rs 2.74 crores and expenditure at Rs 2.73 crores, leaving surplus of well over a lakh. There is no proposal for new taxes and the tax on cycles is to be abolished.

★

NORTH INDIAN NOTES

(Continued from page 564)

A strong case can thus be made out that the excise duty on sugar and the cane-cess improved by State Governments should be refunded when the consumer is the confectionery factory. Again, the existing procedure for refund of excise duty on sugar used in the production of confectionery for export, is proving unworkable, because, it amounts to the provision of a separate bonded factory for the exclusive production of export confectionery. On this question, the Association and the Government seem to be agreed on the basic formula, and it only remains to work out a practical scheme for its application.

NORTH INDIAN MARKETS

(Continued from page 565)

The Government of India have set apart Rs 5 crores for sugarcane development schemes in the Second Five-Year Plan. They have accepted certain principles of assistance in consultation with the Planning Commission. The schemes are expected to cover the entire area under the crop including gur areas which have not been attended to properly so far. The tempo of research work, both on cane and gur, is going to be intensified along with the work on cane development, including the intensive cane campaign.

South Indian Markets

Futures Trading in Pepper

IT might be recalled that the Government of India had applied Section 17 of the Forward Contracts (Regulation) Act 1952 to Pepper throughout India except the State of Travancore-Cochin. As a result, while the ban imposed under the Essential Supplies Act 1946 on transferable specific delivery contracts for the purchase or sale of pepper was continued, no restrictions were placed on forward trading in Travancore-Cochin State.

The Forward Markets Commission has since examined the question of regulating futures trading in pepper and has come to the conclusion that a futures market should be established at Cochin. The Commission has recommended "inter alia" that recognition be granted in due course for a period of three years to an Association that may be constituted for the purpose. The Commission has recommended that the recognition should be granted on the condition that the Association carries out such modifications in its Articles of Association, trading byelaws and working procedures as may be suggested to it by the Commission. These recommendations have now been accepted by the Government.

Meanwhile, the market for pepper ruled quiet during the past week when prices developed a slightly easier tendency. In the Kozhikode market, Wynaad quality was quoted at Rs 850 to Rs 875 per candy. In the Alleppey market, the rate was quoted at as low as Rs 800 per candy.

In spite of fair-sized accumulation of floating stock in the primary centres, bulls among growers and traders were reported to be trying to support prices with a view to attracting American buying. New York buyers were, on the other hand, reported to be stiff and refusing to pay anything more than 30 cents per pound for March shipment.

Despite small export during February from India, New York is persisting in hand-to-mouth buying. This is making Indian growers all the more nervous. Refusal by bankers at Port markets to give futher loan on pepper is also reported to be forcing holders to liquidate their stocks at best prices.

The latest crop estimate of Sarawak pepper is placed at about 16,000 tons with prospect of exportable quality coming in much earlier than usual during April. If it is so, Malabar shall have to mark down its price for selling pepper in quantity in USA and European markets. Otherwise, Malabar has to look to the USSR for support which, in the present circumstances, looks doubtful.

*

Conditions in the Madras Groundnut market remained active with crushers showing good interest in their purchases. Due to the advance of the season, prices of seeds in several centres in South India were ruling higher and kept parity with Madras. Arrivals averaged 30 to 35 tons per day, while the rate for superior oil-quality seeds improved to Rs 150 from Rs 141-8 per candy.

In the Groundnut Oil section, sizeable quantities were taken up by Calcutta interests, resulting in the price of the ready position improving to Rs 310 from Rs 291 per candy.

*

In the Madras Tanned Hides market, arrivals of Cow Hides were fair, but clearances were slow in the absence of any buying support. Arrivals of Cow Calf and Buff Calf were fair, but clearances were reported to be difficult; and the market for these qualities was in doldrums. Clearances of Buff hides were, however, fair although prices showed a weaker tendency by three pies per pound.

In the export section, business was restricted despite many enquiries. Business in Cow Calf was very discouraging; and the UK buyers' ideas of prices were so unjustifiably low that Madras operators were at a loss to find any relation to prices of other descriptions of kids. For instance, Cow Calf was bid at 18d to 21d lower as compared to peak levels, while Buff Calf was bid 12d lower. Inferior fifths Cow hides were steady; and London buyers showed some interest in 10/12 lbs at 29d though some operators were reported to have accepted contracts at 30d.

Prices of Raw Hides in all centres ruled steady.

In the tanned Skins section, arrivals of both Goat and Sheep skins were on the same basis as in the previous week; but clearances were small on account of London auctions. Prices were, therefore, nominally unchanged.

Following were the results of the London auctions. On the first day, selected best tannages were unchanged compared to January, while others were 9d to 1sh per pound down. The auctions continued on the same basis on the second and third days; and good clearance was reported. On the fourth day, however, inferiors below 9 lbs fell by 1sh 6d to 2sh per pound.

In the Raw Skins section, prices of Goats in Bangalore and Mysore were quoted higher by Rs 10 to Rs 15 per 100 skins, while other centres reported no change in price levels. Sheep skins prices were weaker by about Rs 15 per 100 skins.

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

Calcutta.

The Chartered Bank of India, Australia & China

Last year's Restrained Optimism Justified

Larger Net Profits Despite Increased Costs

Mr. V. A. Grantham's Review of Far East Conditions

The One Hundred and Second Ordinary general meeting of The Chartered Bank of India, Australia and China will be held on April 4 at 38, Bishopsgate, London, E.C.

The following are extracts from the statement by the chairman, Mr. V. A. Grantham, which has been circulated with the report and accounts for the year 1955:

INTRODUCTORY

The report I have to present will be found to justify the note of restrained optimism upon which I concluded my statement last year. Political relations between the Peoples Republic of China and the Atlantic countries are less strained but fundamental differences remain unsolved. The volcanic situation in the Formosa Channel continued surprisingly quiescent and towards the end of the year its menaces were obscured to some extent by new crises in the Levant and the Middle East. The tide of Asian nationalism continues to flow strongly and it is inevitable that this should follow emancipation from colonial rule. No harm can emerge from this provided that as the new Asian regimes become more mature politically they realize that in the modern world no country, however well endowed in material resources, can live in isolation.

Since the end of the War it has been assumed that the achievement of political independence would liberate hitherto submerged reserves of zeal for the public good and impart a new sense of responsibility to labour. To some extent this has happened but the redistribution of power, both political and economic, may be gravely imperilled by the pressure of population. It is useless to attack poverty by political and economic measures if hardly won improved living standards are submerged by an infinite multiplication of mouths to feed. This is not a problem which can be remitted to the third and fourth generations; in several eastern countries it already exists.

ANSWER TO COMMUNISM

It is often said that the answer to Communist propaganda and infiltration in the East is largely to be found in the granting by the Atlantic countries, of generous economic assistance. And aid must be given, however, in ways which do not affront national pride or damage the national economies, particularly those which are necessarily still based upon agriculture. No constructive purpose can be served by unloading upon Southern and South Eastern Asia export surpluses of agricultural produce and of consumers' goods that the recipients wish to grow or manufacture themselves.

The eastern lands needs technological assistance most of all and of that there would not appear to be a large export surplus in the United Kingdom. Of the making of five-year plans there seems no end. Some of them are soundly conceived and they should do much to provide productive employment in countries where large reserves of man-power are dissipated in endless divisions of labour. But there is a limit to what the world can consume in relation to its population and the ultimate success of these plans must depend upon a balanced economy where the increase in population, which is bound to take place, is more than matched both by increased production and internal consumption.

THE CONSTITUTION OF THE BANK

A year ago I said that the Directors felt that in consequence of the closing down of the branches in China which had for many years constituted an important part of the Bank's oversea establishment there must be expansion elsewhere. To facilitate expansion when opportunities offer it is desirable to obtain a revision of those provisions of our Royal Charter which circumscribe our oversea organization. The Court of Directors have accordingly petitioned Her Majesty the Queen for the grant of a consolidating Royal Charter. I am pleased to say that Her Majesty's Treasury have intimated that they approve of the changes proposed. In a letter to the stockholders which accompanies this report I have explained in detail the constitutional and administrative changes proposed by the Court of Directors.

THE C.B.I. DEVELOPMENT CORPORATION LTD.

For many years the business transacted by the Bank was related almost wholly to the financing of oversea trade and to the provision of banking facilities and services for a clientele which consisted mainly of merchants. Between the wars the merchant communities became increasingly associated with local enterprise throughout the East and the industrialization of hitherto undeveloped countries was accelerated. These tendencies have been accentuated by the upsurge of Asian nationalism since 1945.

The Bank has achieved a good deal of success in adapting its operational technique to changed political and economic conditions and during the past ten years an increasing proportion of its resources has been employed in the financing of infant industries and new public works. Many of the credit operations that the Bank is now being asked to undertake are likely to extend over periods longer than those for which banking accommodation is usually granted. I am sure that the Bank's continuing to operate in the East can be justified only for so long as it is willing to associate itself with the economic development of the territories it serves.

EXPANSION OF CREDIT FACILITIES

Nevertheless, it is not possible, from the ordinary banking point of view to expand the dispensation of what may be called medium-term credit, that is to say, the granting of accommodation for periods extending from two to ten years and it has become apparent that a new type of credit institution is required to finance development, both agricultural and industrial, and to sponsor, and perhaps underwrite, the raising of capital from the public. To meet these requirements within the Bank's sphere of activity the Directors have formed The C.B.I. Development Corporation Ltd., which has been registered with an authorised capital of £2,000,000, of which £500,000 has been paid up.

The new company is a wholly owned subsidiary of The Chartered Bank of India, Australia & China and I am pleased to say that Sir John Tait, Sir Henry Richardson and Sir Arthur Bruce are associated with me as Directors. I am hopeful that the new institution will be able to play an important part in assisting those countries with whose prosperity the Bank has been so long identified to modernize their economies. Medium-term credit institutions have been formed under the aegis of the governments of several of the countries of Southern and South-Eastern Asia. It must be presumed that these government-sponsored institutions will undertake the financing of major industrial enterprises and public works schemes but there are likely to be many projects on a smaller scale which the Bank's development corporation could effectively support.

COURT OF DIRECTORS

I record with deep sorrow the death on 26th May, 1955, of Mr. James Leslie Milne, who was elected to the Court of Directors in 1942 and served as Deputy Chairman from 5th April, 1950 to 1954.

In the place of Mr. Milne the Directors have elected to the Court Sir Charles Watt Miles, O.B.E., a partner in Messrs. R. G. Shaw & Company. Mr. Cecil Robbins Cherry who became a Director in 1948 resigned in July last on his retirement from business in the City of London. Mr. Cherry has been succeeded by Sir Kenneth Brand Harper, Chairman of the Burmah Oil Company Ltd.

THE STAFF

At home and abroad the Bank is served devotedly by the staff of all ranks and it is impossible to speak too highly of the work they do in their various capacities and in their different spheres.

THE BANK'S BALANCE SHEET

The total of the Bank's Balance Sheet has this year risen to £223,968,987, an increase of £20,283,292 over last year's figure. This is due partly to an increased volume of international trade in those Eastern countries in which the Bank is represented and partly to the higher prices of some of the staple Eastern commodities, notably rubber and tin.

On the left hand, or Liabilities side of the Balance Sheet, Current and Other Accounts, Fixed Deposits and Bills Payable show increases of £12,782,807, £10,175,189, and £485,423 respectively. Inflation has undoubtedly contributed to these increases. Acceptances on account of customers are down by £3,282,066, which is accounted for by the higher Discount Rate in London compared to other centres and partly due to the larger holding of sterling by Japanese Banks.

On the right hand, or Assets side, Cash in Hand, at Call and at Bankers shows the substantial increase of £6,591,069, the ratio to our "demand and time" liabilities, excluding Notes in Circulation against which security has been

lodged, being 21.86 per cent against 18.54 per cent last year. The figure for Government and Other Securities apart from those lodged against Note Issue, is lower by £3,898,420. As usual these have been taken into account at Market Value and we have made full provision for depreciation out of our internal reserves. Stockholders will be glad to know that all holdings are dated and in large proportion mature within ten years. Bills of Exchange and Advances to Customers and Other Accounts show increases of £2,439,731 and £17,133,312 respectively, once again indicating the extent to which we are assisting our customers and taking our share in financing World trade with Eastern countries.

Considerable expenditure continues to be incurred in meeting the cost of expansion and modernisation of our offices in the East. Without suitable premises and accommodation for our staff it is clear that our business cannot operate and we must expect to have to continue to set aside substantial amounts each year in the writing down of this item.

PROFIT AND LOSS ACCOUNT

The net profits for the year at £759,340 are higher by £36,193 than last year, in spite of increasing working costs in all countries where we operate. Fortunately these increased costs have been more than covered by increased business.

The scale on which world trade has increased during the last two years is due partly to the intense effort being made by each country to become self-supporting and partly to inflation. On either count it is vulnerable and liable to setbacks, and I would ask Stockholders not to lose sight of that fact.

The Bank paid an interim dividend in September last of 7½ per cent, less Income Tax, absorbing £150,937 10s. 0d. and it is proposed that out of the balance now available a final dividend of 7½ per cent should be paid, costing £150,937, making the total distribution for 1955 15 per cent.

It is proposed to repeat the allocations made in each of the past five years to the Pension Fund and Widows' and Orphans' Fund of £125,000 and £20,000 respectively. The sum of £200,000 has again been applied towards writing down Bank Premises and Furniture Account. It is proposed to transfer £100,000 to Contingencies Account and to carry forward the increased balance of £405,375.

ADEN

Our branches in Aden, in highly competitive conditions, have continued to extend their connexions with the commercial community.

INDIA

It is satisfactory to record that the country has continued to progress in the economic field during the past year. Since the first five year plan was drawn up in 1951 the Indian economy has steadily gained strength and it now seems likely that whereas the plan was originally designed to expand the national income by 11 per cent over the period 1951|1956, the actual increase will be about 18 per cent. This increase is a result of the expansion of both agricultural and industrial output.

India's capacity to increase production of cereals and industrial raw materials such as cotton and jute has brought about an improvement in the country's balance of payments in the last few years, since food imports have virtually ceased and there has been a substantial reduction in imports of raw cotton. The rise in agricultural production owes much to favorable monsoons, but is also due to the wise planning of development expenditure in extending irrigation, to the increased use of fertilisers and to the general improvement which is gradually being effected in agricultural technique. In the industrial field production has also expanded following increased investment in industry and a more efficient use of existing productive capacity.

FALL IN PRICES

It is a remarkable fact that increased national income and substantial government expenditure in connexion with the first five year plan has not been accompanied by inflation. Indeed, prices have tended to fall during the past year and the decline has been sufficiently marked to cause the government to support agricultural prices in certain areas. Fears have been expressed in the past that to implement the plan the authorities would be forced to resort to deficit financing on a considerable scale.

In fact it has not proved necessary to adopt this potentially inflationary expedient to anything like the extent envisaged when the plan was first drawn up, and there has been little difficulty so far in maintaining the country's foreign exchange reserves at a comfortable level.

SECOND FIVE-YEAR PLAN

We now have the draft outline of the second five year plan. The Government's proposals are to stimulate rapid economic development and to create employment, commendable objectives which it is not easy to reconcile in a predominantly agricultural country like India, where an improved agricultural technique may cause unemployment rather than create jobs.

It is clear that the resources available fall far short of the expenditure envisaged under the second five year plan, viz., Rs. 4,800 crores in the public sector and Rs. 2,300 crores in the private sector.

Consequently a far larger measure of assistance from abroad will be necessary than has been the case under the first five year plan. Although foreign capital has been entering India in recent years, it has been doing so only on a modest scale. The Indian Government has received grants and loans from abroad and there has been investment from abroad in co-operation with Indian capital in particular industries. A substantial proportion of the foreign investment that has been made has been of the form of profits ploughed back by British firms already established in India. It is hoped that these sources of foreign funds will continue to assist the Indian economy but investment in particular must largely depend on confidence in the future of private enterprise. Export earnings will no doubt help to swell the country's foreign exchange resources but even so it is not clear how sufficient foreign exchange is to be found to implement the new plan.

NEED FOR FOREIGN CAPITAL

In this connexion I expressed hope last year that nothing would be said or done which would have the effect or discouraging individual effort or frightening away potential investors. Notwithstanding ministerial assurances it must be admitted that certain trends are disquieting. The nationalisation of all Life Assurance companies, many of which are shareholders in the private sector of industry, is not a happy omen, and from the point of view of oversea firms that employ specialised foreign staff the rates of taxation on income, which are in no sense discriminatory, do pose a major problem.

There are still many fields in the private sector of Indian industry where the capital, skill and enterprise of foreign firms could be of invaluable assistance to the Indian economy, but continued foreign investment in India and the promotion of industry with foreign help must necessarily depend not only on confidence but also on the ability to employ foreigners on terms that make overseas service attractive.

PAKISTAN

The outstanding event in the banking field in Pakistan during the past year was the devaluation of the Pakistan rupee to parity with the Indian rupee last August. When the United Kingdom devalued its currency in terms of dollars in 1949, Pakistan was the only country in the sterling area that did not follow suit. At that time Pakistan's balance of payments was in a favourable position owing to strong international demand for its staple exports, cotton and jute. Subsequently, and in particular since the collapse of the Korean war boom, the country's exchange reserves have been on more than one occasion under severe strain and the competitive power of the country's exports was not assisted by the overvaluation of the currency. For these reasons it had been expected for some time that the authorities would take advantage of a favourable opportunity to devalue the currency to a more realistic level.

In previous Statements I have referred to the aim of the government of Pakistan to change the basis of the country's mainly agricultural economy by pressing forward with a policy of industrial development. Efforts to accelerate this process have been intensified during the past year.

BURMA

Last year I mentioned that Burma's exchange reserves were being drawn upon at a rapid rate to finance government purchases of capital goods and equipment required for the country's economic development schemes. From their peak in the middle of 1953, when they stood at K.114 crores the external assets drained steadily away until last June when they totalled K.40 crores (£30,000,000).

They have lately increased slightly, a reflection of the drastic steps taken by government last March to restrict the volume of imports and of better overseas sales of the current rice crop.

CEYLON

Ceylon has enjoyed a prosperous year and the island's oversea trade surplus in 1955 reached record figures. Month by month throughout the year exports exceeded imports and in consequence, except for a small deficit in April, the external reserves continued to rise once again to the levels at which they had stood at the height of the boom which followed the outbreak of the Korean War.

The measure of the progressive improvement that has taken place in the economic situation in Ceylon is that little more than two years ago, as a result of changes in the terms of trade following the collapse of the Korean War boom the external assets had been reduced to their lowest level since 1943, whereas during the past two years a combination of sound financial policy by government and the effective exploitation of remunerative markets abroad for rubber and tea has had the effect of almost doubling the external assets.

In order to assist development in the private sector of the economy the authorities are anxious to encourage foreign capital to enter local industry. Assurances have been given that nationalisation is not a general aim of government policy and that oversea investors will enjoy the same tax concessions as are extended to local capital entering new industry in Ceylon as well as unrestricted facilities for the remittance of profits and repatriation of capital. The stability of the balance of payments during the past two years strengthens the country's chances of obtaining additional capital from abroad at a time when it is on the threshold of an important phase in its economic development.

MALAYA

The past year has been a notable one for both the Federation of Malaya and Singapore. In the economic field, rubber and tin have fetched remunerative prices in the international market and both territories have enjoyed considerable prosperity. Great interest has been aroused by the publication of the long-awaited report of the World Bank mission on the economic development of Malaya, a report which since it recommends the establishment of a central banking system, is of particular concern to this bank and the exchange banks in general.

Politically, 1955 has seen the accession to office of the first governments to be elected by popular vote under the new constitutional arrangements in both territories. In Singapore a successsion of strikes caused much trouble and concern following the election but the new government showed commendable firmness in dealing effectively with a dangerous situation In the Federation the Alliance party gained an over-whelming victory at the polls and the new government felt its position sufficiently strong to declare an amnesty for all those who had taken up arms against the Federation government.

COMMUNISTS IN INVIDIOUS POSITION

Although the amnesty failed to have the desired effect in bringing the Emergency to an end, the meeting which took place at the end of the year between the Chief Ministers of the Federation and Singapore and the Communist leader has put the Communists, in view of their decision not to surrender, in the invidious position of deliberately choosing to continue a revolt, directed now not against the British authorities but against a government which has been freely elected by the people of Malaya and to which, as far as can be judged from reports of the recent constitutional discussions in London, virtually complete control of its own affairs will be transferred within a comparatively short time.

The governments of both the Federation and Singapore have accepted in principle the recommendation of the World Bank mission that a central banking system should be established and it was recently announced that inquiries were being hastened forward with the object of implementing the proposal. It is a source of satisfaction that, in connection with the project, the two governments have sought the assistance of the Bank of England which has made available the services of a senior official to help with the preliminary inquiries.

SELF-GOVERNMENT

Any review of Malaya, however short would be incomplete without mention of what may be the outcome of self-government and independence. It seems to me that economically it would be to the obvious advantage of both the Federation and Singapore to unite. The World Bank report on Malaya is based on the assumption that the Federation and Singapore will be one economic entity with one Central Bank and one currency. At the moment I fear the indications are that such is not to be and it seems not improbable, should both the Federation and Singapore proceed with the idea of a Central Bank, that they will have separate currencies. Should this be the case, and I sincerely hope it will not be, it is difficult to foresee the future of Singapore, which, with its labour troubles in no way facilitating its industrialisation plans, may have only its entrepot trade to maintain its large and growing population.

It was reassuring to hear from the High Commissioner for the Federation of Malaya, when he spoke on the budget for the present year, that it remains the present government's policy to encourage investment from abroad and to foster conditions in which the oversea investor can continue to assist the Federation's economic development without fear of discrimination or unfair treatment.

NORTH BORNEO

Although trade figures are not yet available for the year there are indications that the aggregate value of North Borneo's exports increased substantially during 1955. This is mainly due to the prosperity enjoyed by the territory's principal industry, rubber. Shipments of rubber from North Borneo rose in volume by 17% to 20,068 tons during the year and owing to the remunerative prices ruling in the international market for this commodity, have been of more than proportionately greater value compared with 1954. The rise in the aggregate value of exports has been reflected in increased imports but it is likely that there was a comfortable trade surplus for the year as a whole. In any case the additional expenditure oversea was largely concentrated on capital equipment and other necessities and should thus prove beneficial to the territory's economy in the long run.

As you are doubtless aware the currency in British Borneo is the Malayan dollar. With self-government, independence and central banking on the Malayan peninsula it is possible that Borneo may not desire to have a currency outside its control and a solution may have to be found in having Currency Commissioners for a British Borneo dollar. A different dollar will in no way facilitate the large trade existing between the three colonies and Singapore and indeed, unless transfers are free and the separate currencies kept at the same level, it may be positively detrimental

SARAWAK

This rise in rubber prices in the international market has been of benefit to the economy of Sarawak. Shipments of rubber from the colony show an aggregate increase of approximately 50% in volume and although final trade figures are not yet available for the whole of last year all indications are that rubber exports have more than doubled in value.

Exports of timber have almost certainly reached record levels and the timber trade has continued to have the benefit of remunerative markets in the United Kingdom, Australia and on the Continent of Europe. On the other hand pepper, which excepting refined petroleum, was Sarawak's most valuable export in 1953 and 1954, had a less favourable year.

INDONESIA

It is gratifying that the underlying optimism which has sustained our operations in Indonesia and our faith in the Republic's ability to overcome its economic and other troubles are seemingly more warranted now than at any time during the last two years. The deterioration, almost continuous during that period, has been halted and the process of recovery has started and bids fair to continue.

This recovery, which is evidenced in financial, economic and political fields, dates from the replacement in July of the communist supported coalition government by a strong Masjumi-led care-taker government determined to suppress malpractices, combat inflation and restore governmental authority.

THAILAND

The successful outcome of Thailand's decision last year to restore the rice trade to private hands paved the way for one of the most interesting post-war experiments in the Far East—a country returning to a free economy. When it was seen that private traders would succeed in disposing of the whole of the previous season's rice crop, the government, who are to be congratulated on the smooth and sensible manner of the transfer, introduced further measures to remove unnecessary restrictions on exports and followed this by freeing imports.

It is expected that adjustable customs duties will make luxuries expensive and keep imports generally within an acceptable pattern.

VIETNAM

Seldom can there have been more divergent views on the political and economic future of a country than those existing in Vietnam at the moment. Nevertheless, following the initial confusion resulting from the withdrawal of the French and the handing over of power to young and inexperienced administrators, order and stability have begun to appear.

To that extent conditions have improved but stability, economic and political, is dependent upon American aid which will have to continue on probably an undiminished scale if the nation is to survive and make progress.

CAMBODIA

Cambodia is celebrating its independence with marked restraint and the young country's cautious approach to its monetary and economic problems has much to commend it.

Our own business in Phnom Penh has received fair treatment and encouragement from the authorities and the newly- formed central bank and is developing along sound and conventional lines.

THE PHILIPPINES

For some years now in these reports I have been able to point to the Philippines as one of the few countries in South-East Asia having political and economic stability and I have more than once cited the Republic's successful struggle against inflation and its achievement in maintaining its international reserves at about U.S.$300,000,000, or roughly equal to its note issue. Unfortunately 1955 has seen a very rapid deterioration in these key factors and at the end of the year the foreign holdings had dropped to a figure close to U.S.$200,000,000.

As there were too, no signs that exports, including the invisibles from American aid, were sufficient to cover imports it is not surprising that distrust of the peso was generated. Business circles for the most part are of the opinion that only the determined stand of the Governor of the Central Bank has prevented devaluation and fears are expressed that unless a substantial loan is obtained from the United States there is the possibility of a change in the external value of the unit of currency.

HONG KONG

Although the external trade of Hong Kong during 1955 increased by almost five per cent in value from its level in the previous year, the figures indicate no fundamental improvement in the position of the entrepot trade, which has always been the mainstay of the colony's economy. Exports to the China mainland declined drastically in value, a depressing indication that China prefers to import the limited range of goods and commodities which it is able to obtain from the free world direct from the countries concerned rather than through the entrepot facilities of Hong Kong.

On the other hand Hong Kong's imports from China increased substantially particularly in respect of textile yarns and piece goods, in the international markets from which China shows signs of becoming an increasingly important competitor.

CHINA

During the year we finally vacated our premises in Shanghai and transferred outstanding ac-

counts and securities, as called for under the agreement with the representatives of the People's Government.

JAPAN

In commenting last year on the encouraging results in Japan following the introduction of the deflationary policy and other austerity measures I said that the country was by no means out of the wood as much of the improvement was due to artificial restrictions and stimulants rather than to genuine economic improvement. It is with pleasure therefore, that I am able to report that a further twelve months have seen such continuous improvement in industry and overseas trade that the Japanese economy is now nearer to achieving genuine stability than at any time since the war.

NEW YORK

The value of our New York office in our branch system has again been apparent this year, although we did not reap all the advantages which might have been expected from our having branches in countries receiving American Aid and an office in New York. In fact, as imports under aid programmes usually cause an equivalent reduction in imports through ordinary trade channels, our turnover in some Eastern countries is adversely affected. Nevertheless, this is often more than offset by the stability brought to those countries and in the areas in which we operate the generosity of the Americans is most marked

CONCLUSION

The money markets of the Sterling Area are of necessity highly sensitive to policy pursued in the City of London and we have therefore to pay close attention to the policy of credit restriction now in operation in this country.

While it is obviously proper for us to observe the official directive so far as it applies to customers who deal and trade exclusively in this country, it will be clear that our operations oversea must, in the end, be related to the policies and needs of those countries in which we operate, where we have obvious responsibilities to the governments concerned, some of which are outside the Sterling Area.

The rates of interest imposed in the United Kingdom must to some degree affect the cost of finance of new projects in the undeveloped countries, but the extent to which finance for those projects should be provided is properly a matter for the countries themselves to determine and our main concern must be to see that our own operations are carried out on sound lines in each country in relation to local conditions.

The Sterling Area has far-flung ramifications and it is only too clear that uncertainties as to the results of the Credit Squeeze in this country could have far reaching results not only in this country but also in the many countries in which we operate. It must be hoped that the policy that is now being put into effect will counteract those uncertainties without undue delay.

Copies of the full text of the Statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E.C.2.

The Kohinoor Mills Company Limited

*

Reasonably Good Year for Industry

*

Outlook for Cloth Good, Yarn Market Improving

*

Mr. E. D. Sheppard, the Chairman, Analyses Company's Prospects

Extracts from the speech delivered by the Chairman, Mr. E. D. Sheppard, at the sixty-first ordinary General Meeting of The Kohinoor Mills Company Ltd., held on 19th March 1956:—

Gentlemen,

I am happy to address you again at the close of another year of your Company's working. The year has been an eventful one and I would like to mention to you some of the more important events.

First of all, it is gratifying that there have been no major flare-ups in international affairs. Peace has been maintained throughout the year with the exception of an occasional foray in China, and periodic skirmishes on the Israel-Arab State borders. As far as the latter is concerned, although the fighting has been confined, the atmosphere in the Middle East has in recent months become explosive and might, if it is not brought under control, lead at some future date to a conflagration which might engulf the whole world. The United Nations are sparing no effort to bring about a peaceful solution of the problems that confront the differing parties. India, as usual, is in the forefront.

One feature which is most encouraging is the increasing number of visits that are being paid by the Heads of all countries to others. Here in India, during the course of the year, we had visits from Marshal Tito of Yugoslavia, the Egyptian Prime Minister, the Head of the Peoples Government of China, Marshal Bulganin and Mr. Krushchev from Russia, H.M. King Saud of Saudi Arabia, and since the beginning of the year, Their Majesties the Shah and Queen of Iran. Before long we hope we may have with us the President of the United States. Our Prime Minister has himself paid visits to China, Egypt, Russia, Poland, Great Britain and Yugoslavia, and has been invited to go to the United States as the guest of President Eisenhower. In my opinion there is nothing which can be more conducive to bringing about peace and harmony in the world than such visits of leaders of nations to each other, during which they can see for themselves and understand the problems which confront each one of them and which, to some extent, govern the policy that they follow in international affairs. As in the affairs of individuals so with nations, a sympathetic understanding is an essential for the fulfilment of our aspirations for world peace and the advancement of humanity.

Very serious efforts are also being made by all the major powers to bring about the limitation of armaments and the complete banning of atomic and other weapons which, if ever utilized again, can only mean the complete destruction of man.

It is most unfortunate that it has not yet been possible for us to arrive at an understanding on outstanding differences with our closest neighbour—Pakistan. Let us hope that this will be brought about in the near future.

The power position, so far as we are concerned, continued to be satisfactory during the year. Tatas thermal station should be in operation about the end of this year and then there should be no danger of a further shortage of power at any rate for two or three years, or even for considerably longer if the Koyna dam scheme is completed according to schedule. The Second Five-Year Plan has now been formulated and, although very much larger than the First in its scope, it is to be hoped that it will be as successful as its predecessor. It is unfortunate that the sponsors of the Plan have 'frozen' the mill industry at its present capacity and have decided to rely on the cottage and handloom industries to produce the additional cloth which the country will require. I feel that they could, without in any way prejudicing the position of the latter, have permitted reasonable expansion in your industry to enable it to supply the potential demand for mill-made textiles in India and, at the same time, retain its markets overseas.

The Mill industry has had a reasonably good year. The demand for cloth has been steady throughout the year. Earlier in the year prices of cloth, though steady, were not quite at the levels they should have reached to permit of a reasonable profit, but as the year progressed they improved somewhat. Yarn prices I am sorry to say remained very low throughout the year making this part of your Mills' business much less remunerative. This is the reason why your Mills have not shown the improvement in the profits one would have expected because of the good offtake and higher prices of cloth. It must be borne in mind always that, although your Mill has 1,20,000 spindles, half this number is working continuously on the making of yarns and sewing threads for which a special plant has been installed. In view of this 'dual personality' of your Mill, there may be times when as compared to balanced spinning and weaving mills the profits may not seem very large, but there have been times in the past and they will surely come again in the future when with a rise in the prices of yarn and sewing thread your Mill will be in a position to show better progress than others.

The Budget proposals as announced on the 29th of last month provide for the enhancement of the Excise Duty by 6 pies per square yard on all categories of cloth. This will mean that your Company will have to pay Rs. 9 lacs more to Government under this head. It remains to be seen how much of this it will be possible to pass on to the consumer. The proposed penal tax on Dividends declared at a rate of more than 6 per cent on the paid-up capital will cost your Company Rs. 2 lacs per annum if it reaches the Statute Book in its present form—assuming that the present rate of Dividend distribution remains unaltered. This proposed

tax operates most unfairly against companies such as yours which have prudently accumulated substantial reserves from the taxed profits of past years. Just as disturbing, to my mind, as the actual tax itself is the manifestation of the fact that the "6 per cent mentality" persists in New Delhi. In conditions as they exist to-day—for example, the Bank Rate in the U.K. is now 5½ per cent—it does not seem reasonable that Risk Capital should only be allowed a return of 6 per cent without a heavy penal tax, and particularly at a time when it is hoped to attract such capital to enter this country.

As regards the Government's policy on personal taxation, I gave you my views on this last year and also reviewed the matter at some length in my address to the shareholders of your Agency Company. I do not propose to indulge in repetition and would only say that my views are unchanged. There is a saying in England that "all work and no play makes Jack a dull boy". It remains to be seen what effect the Government's present policy of "all work and no pay" will have in this country.

Trading in Indian cotton remained free of all restrictions during the whole year as, on account of ample availability, there was no reason for Government to reimpose the quota system. Prices of cotton remained steady throughout the year but weakened with the approach of the new season because of reports that the crop would be 55 lacs of bales. This position was, however, short-lived as unseasonal rains caused damage to several of the growths and prices started to rise. Towards the close of the year there had been a very large appreciation and the forward market which had been moving around the 600 mark went up to 740. At this point Government decided to step in and take a hand. The contract was frozen at 700 and futures trading came to a stop. However, in the spot market prices continued to rise and some of the growths very nearly reached the ceilings fixed by Government. The position remains the same to the present time and it would seem that because of the statistical position there is little chance of any appreciable recession.

Foreign cotton prices remained reasonably steady for most of the year but during the last quarter there was a definite upward tendency. Alexandria particularly recorded a steep rise. African and American growths remained fairly steady, but because of a recent announcement by America of the impending release of further large quantities of loan cotton at competitive prices, these have tended to weaken.

I will now turn to the report and accounts. The amount of Rs. 8.50 lacs provided for taxation is made up of Rs. 5.01 lacs for income-tax, Rs. 2.97 lacs for Corporation tax and Rs. 0.52 lacs extra for contingencies.

To meet the statutory depreciation of Rs. 17,62,477 and to set off the initial depreciation of Rs. 3,70,175 allowed in previous years, your Directors have set aside a sum of Rs. 6.33 lacs from the profits of the year and have appropriated a sum of Rs. 15 lacs from the Machinery Reserve Account. A sum of Rs. 3 lacs has been appropriated from the profits of the year to the Development Reserve, being the amount of benefit derived from the Development Rebate. A sum of Rs. 1.50 lacs has been put to the Employees' Pension & Gratuity Fund bringing this to Rs. 12.50 lacs which represents a full provision for present liabilities under this head.

In view of the Millowners' Association's Bonus Pact with the Rashtriya Mill Mazdoor Sangh on the lines of the Ahmedabad Millowners' Association's agreement, it is calculated that your Company will be required to pay 3 months basic pay as bonus for all the three years 1953, 1954 and 1955. It became, therefore, necessary to provide in the accounts of the year 1955, Rs. 4.43 lacs in respect of 1954 in addition to Rs. 16.57 lacs for the current year.

The insurance value of your Mills' property and stocks on the basis of their reinstatement value now stands at Rs. 10.51 crores which is higher by Rs. 36 lacs. This is due to an increase in machinery valuation by about Rs. 25 lacs and to higher stocks of cotton.

The Balance Sheet figures show that your Company continues to be in a strong position as the current assets at Rs. 2.88 crores exceed the current liabilities and provisions by Rs. 1.45 crores. Secured loan of Rs. 38.84 lacs is lower by Rs. 2.52 lacs. The liability for expenses is down by Rs. 6.63 lacs as no provision for arrears of D.A. was necessary this year. The liability for Other Finance is up by Rs. 11.27 lacs due to the carry-over to the current year of the bonus unpaid for the previous year.

On the assets side of the Balance Sheet the value of stocks of cotton and staple fibre is higher by Rs. 15.66 lacs mainly due to the increase in the stock of cotton. Art silk and other yarns are up by Rs. 2.40 lacs due to increase in the stock of art silk yarn. The stock of cloth, yarn and waste, is lower by Rs. 3.66 lacs due to good deliveries during the concluding period of the year. The stocks of stores, fuel and grain are lower by Rs 2.36 lacs. Book debts at Rs. 3.88 lacs are up by Rs. 2.46 lacs due to bills for cloth, yarn and cotton being outstanding at the close of the year. Advances at Rs. 10.27 lacs are lower by Rs. 10.66 lacs mainly due to cotton advances being down. Taxation under Advances is down by Rs. 1.39 lacs due to adjustments in the advance tax payments.

Now I will give you some salient features of the Profit & Loss Account.

Cotton and fibre consumption is down by Rs. 13.37 lacs due to the consumption of a larger proportion of cheaper cotton. Muccadumage is up by Rs. 0.80 lacs due to the increase in the muccadumage rate and also in the quantity of cotton received. Yarn and cloth commissions are slightly down due to the lower yarn and cloth values. The stores consumption, etc. is practically the same. Electric power is higher by Rs. 0.32 lacs due to increased consumption of energy. Salaries and wages are up by Rs. 9.99 lacs due to the adjustment in the quantum of bonus as already explained. Dearness allowance is down by Rs. 11.89 lacs compared to the previous year when Rs. 13.98 lacs including arrears were paid according to a Court Award. Rents and taxes are up by Rs. 0.47 lacs due to the increase in water rate by 2 annas per 1000 gallons. Although stocks were higher, insurance is down on balance by Rs. 1.18 lacs as the Company's contribution to the Employees' State Insurance amounting to Rs. 1.89 lacs has been debited to Salaries and Wages this year as this item has been considered as a part of wages being the compulsory contribution to the Government Fund. Interest is higher by Rs. 0.68 lacs due to larger purchases of cotton. General charges are up by Rs. 0.58 lacs on account of the Indian Industries Fair, Delhi, where your Company's products were exhibited. Trade subscriptions are down by Rs. 1.98 lacs, as a sum of Rs. 2 lacs was paid as the Company's contribution to the Bombay Textile Research Association Fund in the previous year. Donations are up by Rs. 0.15 lacs due to a contribution to the Prime Minister's Relief Fund for flood-stricken areas in Bihar, Orissa and the Punjab.

On the credit side of the Profit and Loss Account, the sales of cloth, yarn and waste show a decrease of Rs. 9.89 lacs mainly due to the production of a large proportion of the cheaper qualities. Yarn and cloth expenses are lower by Rs. 0.39 lacs in consequence. Miscellaneous receipts are up by Rs. 0.22 lacs due to a refund of excise duty.

You will have seen from the notice that we have for confirmation by you at this meeting the renewal of the agreements of both our cloth and yarn selling agents. Messrs. V. S. Apte & Son and Messrs. Nahalchand Laloochand Ltd., have been your selling agents for 44 and 29 years respectively, and I can say without any hesitation that they have served your Company exceedingly well throughout this period. In keeping with the times they have agreed to reduce their commissions and from the 1st of April they will both be receiving about 25% less than hitherto. Our association with them has always been a very pleasant one, and I am confident that it will continue for many years to come.

You will expect me to say something about the future. As far as your Company is concerned, it has practically completed a comprehensive programme of expansion and rehabilitation in the last ten years and a pause must now be made to consolidate the position it has attained. The outlook for cloth continues to be good and the yarn market is showing signs of improvement. We are now up-to-date with our bonus provision and the current year's accounts will not have to bear any additional burden in this regard as was the case in 1954 and 1955. Further your selling agents have agreed to a substantial reduction in their commissions. Against this, the year has got off to a bad start due to the disturbances in the city in the latter part of January, when several working days were lost and the Bombay Cost of Living Index figure has not come down as much as was hoped. I must leave you to draw your own conclusions.

THE BENGAL PAPER MILL CO. LTD.

The Directors have decided to recommend to the forthcoming General Meeting of the Shareholders dividends for the half-year ended 31st December 1955, as follows:—

(a) Dividend on Cumulative Preference Shares at 7 per cent per annum, free of Income-tax.

(b) Dividend on "A" Cumulative Preference Shares at 7 per cent per annum, free of Income-tax.

(c) Dividend on "B" Cumulative Redeemable preference Shares at 6 per cent per annum (subject to deduction of Income-tax).

(d) Dividend on Ordinary Shares at 20 per cent per annum, free of Income-tax.

By order of the Board,

BALMER LAWRIE & CO. LTD.,
Managing Agents.

21, Netaji Subhas Road,
Calcutta.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

At a Meeting of the Board of Directors held on the 15th March, 1956, the following Dividends were recommended to be paid for the half year ended 30th September, 1955, without any deduction for Income Tax paid by the Company:

On 1st Preference Shares 8 per cent per annum.

On 2nd Preference Shares 4½ per cent per annum.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Allahabad Bank Limited, as at 31st December, 1955, and also the foregoing Profit and Loss Account of the Bank in which are incorporated the audited Returns of Calcutta and Bombay Branches and the authenticated Returns of the remaining Branches for the year ended on that date, and report that:

(a) We have obtained all the information and explanations which we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the Returns received from Branch offices of the Bank have been found adequate for the purpose of the audit.
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the twelve months;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and
(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

A. F. FERGUSON & CO.,

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December, 1955, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 70 Branches and the authenticated Returns of the Pay Offices and other Branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) Such Profit and Loss Account shows a true balance of profit for the year;

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank; and

(g) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

FOR THE INVESTOR

(Continued from page 548)

Coal Results

Of the three coal companies, who have presented their balance-sheets this week, New Beerbhoom has raised the dividend from As 6 to As 8 per share for the half-year ended 31st October 1955, while Bharat Collieries Limited has maintained the dividend at As 10 per share. Union Coal has passed over the dividend for the half-year 30th June, 1955 as against As 4 per share paid in the previous year.

In the case of the New Beerbhoom Coal Company, raisings are lower at 232,011 tons as compared to 247,076 tons in the previous half-year, while despatches have risen to 250,908 tons from 230,691 tons. Sales are shown at Rs 41.79 lakhs against Rs 36.69 lakhs, while the net profit amounts to Rs 4,22,716 against Rs 5,39,072. A sum of Rs 1.58 lakhs (Rs 1.66 lakhs) has been provided for Depreciation; Rs 1.10 lakhs (Rs 2.10 lakhs) for Taxation and Rs 60,000 (Rs 50,000) for Development Reserve.

The Union Coal Company has reported raisings at 32,891 tons and despatches at 27,757 tons as against 42,779 tons and 39,759 tons respectively in the corresponding period of 1954. Sales have declined to Rs 4.11 lakhs from Rs 5.26 lakhs, while the accounts show a profit of Rs 161 after making sundry adjustments as against a loss of Rs 9,076 in the previous half-year. A sum of Rs 4,195 (Rs 2,572) has been provided for Depreciation.

Bharat Collieries Limited has reported a substantial decline in earnings for the year ended 30th June 1955; and this was mainly due to considerable losses suffered in respect of shipments of coal to South Korea, contracted for in early 1954. Raisings are higher at 560,579 tons as against 547,725 tons in the previous year and despatches at 573,680 tons against 534,424 tons. Despatches, during the year, have been the highest on record. The net profit for the year amounts to only Rs 6,65,145 as against as much as Rs 12,59,768 in the previous year. After making a transfer of Rs 9.31 lakhs from Capital Resrve, the directors have been able to set apart Rs 2.38 lakhs for Depreciation and Rs 6.79 lakhs against debts unrealised. The dividend on the Ordinary Shares is, however, maintained at As 10 per share.

£ R$

Arthala Estates

Despite increased profits, Arthala Estates have again passed over the dividends, both on the Ordinary and Preference shares, for the year ended 30th June 1955. The net profit amounts to Rs 1,69,429 as against only Rs 49,849 in the previous year. After setting part Rs 1.20 lakhs for Taxation, the Depreciation amount has been raised to Rs 11,954 from Rs 10,624.

The directors have, in their report, stated that the present financial resources of the company, in spite of the profit, do not warrant payment of arrears of dividend till the tax and the financial requrements for the company's business and development are provided for.

The crop harvested, during the year, was 340.520 lbs as against 262,164 lbs in the previous year. To cope with the increased crop, the directors have taken suitable steps; and the factory extensions and erection of new machinery are nearing completion.

Owing to the sudden drop in tea prices during the later part of the accounting year, the company's activities in London unexpectedly sustained heavy losses. The directors, however, hope that future market prices will leave an adequate profit on future sales.

The Alkali & Chemical Corporation of India Ltd

Production and Sales of All Products Considerably Greater

Mr. N. D. Harris, the Chairman, Expresses Confidence of Increasing Demand

The Nineteenth Ordinary General Meeting of the members of the Alkali & Chemical Corporation of India, Limited was held at the Registered Office of the Company, 34, Chowringhee, Calcutta, on Wednesday, the 7th March, 1956. at 3-30 p.m.

Mr. N. D. HARRIS the Chairman, presided.

Gentlemen,

The Audited Accounts and Directors' Report for the year ended 30th September, 1955, have been in your hands for some time and with your permission I propose to take them as read.

Your Company has had another successful year in which production and sales of all its products have been considerably greater than in previous years.

Production of Chlorine and Caustic Soda was higher than during the previous year. Caustic Soda sales improved but there was very severe competition in Liquid Chlorine. We were able to sell the entire amount produced but only at a considerably reduced price. An interesting factor and one of deliberate policy has been the growth in the quantity of Chlorine consumed internally for the manufacture of other profitable products. Investigations in this direction continue with vigour.

Sales of Hydrochloric Acid and of Zinc Chloride, the latter a relative newcomer to our range, showed similar gratifying increases. In spite of very great competition from other manufacturers' products the demand for our well known range of "Gammexane" B.H.C. formulations has been difficult to satisfy. To meet this your Company installed greater formulating capacity during the year and sanctioned extensions, now being constructed, to the plant making Benzene Hexachloride (B.H.C.), the basic product.

Our "Dulux" and "Duco" range of paints and allied products continue to be very popular indeed and we have been unable to meet the full demand for them. Your Directors have great confidence that the need for these high quality products will continue to grow as India develops industrially, and because of this they decided last year to double the factory's capacity. These considerable extensions are now well in hand. An important new introduction is the range of metal-pretreatment products which, under the name "A.C.P.", have already proved popular.

I wish to mention here the introduction after the last Budget of an excise duty on Paints. This sudden imposition on a range of manufactures very different from previously excisable products caused great dislocation to ourselves and to all others in the paint trade.

Relations between the Company and its employees continued to be most cordial and the Works Committee set up at Rishra five years ago again proved its value by acting as a friendly and effective link between the management and the workers. I wish to express the thanks of the Company to all our staff and workers whose loyalty and hard work helped so much in achieving the year's good results.

I have talked primarily about what we have produced. Products do not of course sell themselves and I would like to pay a tribute to the Technical and Sales Staff of our Selling Agents, Imperial Chemical Industries (India) Ltd. They have made a remarkably fine effort in finding new markets and uses for our products. This applies in particular to our paints and "Gammexane" products. I ascribe our successes in this direction during the last year very largely to their careful planning and hard work.

The nett profit for the year, after providing for depreciation, amounts to Rs. 19,39,845. This is more than twice that of the previous year. The sum available for distribution is Rs. 22,93,168 which includes a balance of Rs. 1,13,627 brought forward, and a reserve for exchange losses previously held but now no longer required.

Once again there is no liability to taxation for the year due to initial allowances on the new plant installed, but a sum of Rs. 12,50,000 has been transferred to Reserve for Deferred Income Tax Liabilities. This brings this Reserve to Rs. 23,21,000 which equals the total tax, payment of which has been deferred by the operation of initial allowances. A sum of Rs. 2,73,000 has been transferred to Dividend Equalisation Reserve. The dividends on the Preference Shares for the year absorbed Rs. 1,55,000 and your Directors recommend the payment of a dividend of 8 per cent on the Ordinary Shares, 2 per cent higher than that for last year. If you agree to this, a balance of Rs. 1,19,168 will be left to carry forward.

You will be pleased to hear that we hope shortly to receive Government's approval to a project to manufacture polythene in India. Imperial Chemical Industries Limited, your technical advisers, have agreed to supply their process and continuing "know-how" on very favourable terms. Polythene was discovered by I.C.I. Ltd., who now manufacture large quantities in the U.K. and have licensed its manufacture in several other countries. The production, actual and projected, and consumption of polythene throughout the world have during recent years increased to a remarkable extent, and give every indication of continuing to do so.

The process will be that used by I.C.I. in the manufacture of the well-known "Alkathene" brand of polythene. The use of "Alkathene" in India has been developed by I.C.I. (India) Ltd. who have operated a plant at Calcutta for the manufacture of film imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. The largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

The project will involve a total investment of about Rs. 3 crores for which additional capital will have to be found. Methods of raising this are being studied by your Board at the moment, but I wish to take this opportunity of telling you that it will take two to three years at least to bring the plant into economic production. Although the project should ultimately prove profitable, capital invested during the construction period will earn no return and it may, therefore, be difficult for your Company to maintain the higher rate of dividend declared on the Ordinary Shares this year.

The Directors retiring by rotation are Mr. B. R. Goodfellow, Mr. K. W. Young and Dr. E. C. Fairhead and my collegues and I have pleasure in recommending their re-election.

The Auditors, Messrs. Lovelock & Lewes, also retire and you are requested to re-appoint them for the current year. They have however asked for an increased fee of Rs. 7,500 as against Rs. 6,000 sanctioned for the previous year. As you are aware the new Companies Act, which will come into force on the 1st April this year, imposes certain additional duties on Auditors for which we must necessarily pay. In my opinion the increased fee is justified and I recommend its acceptance.

WORLD OF JUTE

(Continued from page 555)

decline in US burlap consumption from 72m yards to 67m yards in February. Although shippers made some covering purchases at lower levels, they were not sufficient enough to arrest the steady decline in prices. Mills were also keen sellers for the ready position. The following table shows the trend of prices:—

Hessian:	Last Week Rs. a.	This Week Rs. a.
40" x 10 ozs. Ready	39 9	38 8
40" x 10 ozs. July/Sept.	39 8	38 10
40" x 8 ozs. ..	33 0	32 6
40" x 7½ ozs. ..	30 10	30 0
Sackings:		
B. Twills Ready ..	111 4	108 12
B. Twills (July/Sept.	109 8	108 12
Hy. Cees (Green) ..	110 8	108 4
Cornsacks ..	113 8	110 8
Cubans ..	140 0	137 0
A. Twills ..	136 8	134 0
Liverpool Twills ..	128 8	126 8
D. W. Flours ..	131 8	130 0
Sugar Twills ..	130 0	128 8

Prices in the Raw Jute market suffered a sharp setback on account of the news that there had been rains in most of the upcountry agencies. Sellers, therefore, began to offer jute freely, while mills did not show any interest even at lower levels on expectation that prices would suffer a further setback from the current levels.

With the result, very little business was put through although mills had to still to buy fairly substantial quantities to cope with their plans of increased production. They were perhaps encouraged by the fact that large quantities of the Old Crop were still being held by stockists. Only the following mill business took place during the week in:—Assam and Indian Northern Bottoms at Rs 28-4; Dhulian Tossa Bottoms at Rs 28-8 and Daisee Mesta Bottoms at Rs 26 per maund for March-April delivery.

In Pakistan, too, markets remained depressed due to daily rainfall in most areas.

Stock Exchanges

BRILLIANT PERFORMANCE

Watch-dog-Writes:

AFTER a promising start, stock markets have generally forged ahead during the week under keen speculative enquiry. There has also been a certain amount of investment interest as the feeling has been gaining ground that investment in shares is now beneficial, both in respect of yield and safety, as the working of companies has been uniformly good during last year, and the dividend declarations by some of the companies have reflected a confident trend.

Conditions on the Calcutta Stock Exchange remained very firm and prices were marked up on a broad front.

On the Bombay Stock Exchange, prices steadily forged ahead in the absence of any selling pressure.

The Madras Stock Exchange continued to remain active with sustained buying in Plantings, Textiles and Miscellaneous issues.

The London Stock Exchange was in a cheerful mood, establishing a widespread list of gains.

Prices on Wall Street ruled generally firm.

THE SAMNUGGUR JUTE FACTORY COMPANY, LIMITED

The Directors of this Company regret that they are unable to recommend payment of any further dividend on the ordinary shares for the year ended 31st December 1955.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half year ended 31st December 1955. This dividend will be paid on 29th March 1956, less Income Tax at 8|6d per £. and the Transfer Books will be closed from 22nd March to 29th March 1956, both days inclusive.

It is not yet possible to make a reliable estimate of the results for the past year as the amount of certain debits has not yet been finally agreed. It is, however, known that on the most unfavourable outcome the adverse balance for the past year after providing for the full dividend on preference shares and the interim dividend already paid on the ordinary shares will be amply covered by the amount carried forward at the credit of Profit and Loss Account from the previous year.

P. WILLIAMS,
Secretary.

DUNDEE,
20th March, 1956.

Calcutta

Calcutta, Thursday Evening. SENTIMENT on the local Stock Exchange continued to be cheerful and the improvement in prices, noticed last week, was carried a stage further during the week under review due to renewed bull support. Bulls appeared to be squeezing the market as floating contracts were reported to be in short supply.

The main incentive was the continuous flow of good corporate news from many textile and engineering firms. Under the lead of the speculative counters and the Tea sections, prices were marked up on a broad front, resulting in a marked expansion in turnover.

The improvement, noticed in the Giltedged market toward the close of the previous week, became more pronounced this week, thanks to a revival of demand from some of the institutions. 3 per cent 1986 Conversion Loan, after touching a high of Rs 77-8 and a low of Rs 76-8, finished the week at Rs 76-15. Among other Loans, 3½ per cent 1964 changed hands at Rs 98-8-6; 3 per cent 1966/68 at Rs 92-8 and 3 per cent 1963/65 at Rs 94-9.

With the dividends and profits continuing to be attractive, there were more enquiries for Bank shares. Punjab National were a special feature having buyers upto Rs 49-2 following the proposal to issue bonus shares, subject to the sanction of the Controller of Capital issues. United Commercial were easily absorbed upto Rs 49-8 from Rs 49-0, while Hind were enquired upto Rs 34-8.

Jute shares continued to be a neglected counter and prices developed a downward trendency in the absence of any enquiry following the sharp fall in jute goods prices. Toward the close, however, there was a slight improvement in sympathy with the general trend of the market. Howrah touched at one time a low of Rs 22-10 and National Rs 24-8, to finish the week better at Rs 23-0 and Rs 25-12 respectively. Kelvin met with some enquiry at Rs 237 to 239; Birlas at Rs 16-2 to Rs 16-8 and Barnagore at Rs 143 to Rs 146. Ganges moved between Rs 67-8 and Rs 71-0, while Reliance were on offer at low as Rs 10-2.

Coal shares ruled fairly steady though price movements were confined to a narrow range. Burrakur, after touching a low of Rs 14-2, recovered at the close to Rs 14-12. Bengal changed hands at Rs 529 to Rs 555 and East Indian at Rs 33-6 to Rs 34-10. New Beerbhoom were taken upto Rs 19-13 following the recent increase in dividend. South Karanpura moved between Rs 9-11 and Rs 10-0; Raneegunge between Rs 11-2 and Rs 11-11 and Bharat between Rs 7-10 and Rs 7-13. Central India better at Rs 7-7 against Rs 7.

Thanks to encouraging advices from Bombay, Textile shares continued to rule firm with selected scrips receiving good support. Elgins were taken upto Rs 27-10 from Rs 27-8; Kesoram upto Rs 18-3 from Rs 17-9 and New Victoria upto Rs 2-9 from Rs 2-3. Cawnpore were, however, a narrow market around Rs 9-0. Dunbar, after opening at Rs 310, turned sellers at Rs 301 at the close.

The most outstanding feature of the week's trading was a further sharp rise in the prices of Tea shares, resulting in a marked increase in turnover. Operators were inclined to extend their commitments in view of certain favourable factors such as, the International Tea Agreement which was believed to be awaiting signature, the steady improvement in the prices obtained at both the London and Calcutta auctions, the recent withdrawal of restrictions on shipments to London and the reports of the decline in output in Ceylon due to drought conditions there. The following table shows the extent of the rise in prices of a few selected scrips:—

	Week's Opening	Week's Closing
	Rs. a.	Rs. a.
Banarhat	340 0	358 0
Baghmari	24 12	27 4
Brooke Bond ..	22 5	25 12
Bishnauth (New) ..	24 0	25 12
Bishnauth (Old) ..	22 2	23 2
East India	23 8	26 12
Grob A	35 0	37 10
Hasimara	34 12	37 0
Hantapara	267 0	286 0
Jayshree	12 0	12 12
Patrakola	245 0	209 0
	cd.	xd.
Killcott	20 2	25 4
Tezpore	23 10	27 5
Tukvar	12 11	15 0
Teliapara	246 0	191 0
	cd.	xd.

Conditions in the Sugar section remained dull on quieter advices from the commodity market. Carew were offered at Rs 9-8 to Rs 9-13 following the substantial reduction in dividend, while Ramnugger Cane met with some enquiry upto Rs 24-4. Belsund moved narrowly between

(Continued on page 593)

DUNCAN BROTHERS & COMPANY LIMITED.

DIVIDEND ON ORDINARY SHARES

NOTICE is hereby given that the Board of Directors has sanctioned payment on 27th March 1956 of an Interim dividend on Ordinary shares for the year ended 31st December 1955 of 5 per cent without any deduction for income-tax paid by the Company.

The Ordinary share register will be closed from 23rd to 27th March 1956, both days inclusive.

Warrants will be issued to shareholders whose names appear on the Company's register on 27th March 1956 or in accordance with their registered mandate instructions.

DUNCAN BROTHERS & CO., LD.
31, Netaji Subhas Road,
Calcutta, 15th March, 1956.

THE VICTORIA JUTE COMPANY, LIMITED

The Directors of this Company regret that they are unable to recommend payment of any further dividend on the ordinary shares for the year ended 31st December 1955.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half year ended 31st December 1955. This dividend will be paid on 29th March 1956, less Income Tax at 8|6d per £. and the Transfer Books will be closed from 22nd March to 29th March 1956, both days inclusive.

It is not yet possible to make a reliable estimate of the results for the past year as the amount of certain debits has not yet been finally agreed. It is, however, known that on the most unfavourable outcome the adverse balance for the past year after providing for the full dividend on preference shares and the interim dividend already paid on the ordinary shares will be amply covered by the amount carried forward at the credit of Profit and Loss Account from the previous year.

P. WILLIAMS,
Secretary.

DUNDEE,
20th March, 1956.

THE TITAGHUR JUTE FACTORY COMPANY, LIMITED

The Directors of this Company regret that they are unable to recommend payment of any further dividend on the ordinary shares for the year ended 31st December 1955.

The Directors have declared on the preference shares the dividend at the rate of 6% per annum for the half year ended 31st December 1955. This dividend will be paid on 29th March 1956, less Income Tax at 8|6d per £. and the Transfer Books will be closed from 22nd March to 29th March 1956, both days inclusive.

It is not yet possible to make a reliable estimate of the results for the past year as the amount of certain debits has not yet been finally agreed. It is, however known that on the most unfavourable outcome the adverse balance for the past year after providing for the full dividend on preference shares and the interim dividend already paid on the ordinary shares will be amply covered by the amount carried forward at the credit of Profit and Loss Account from the previous year.

P. WILLIAMS,
Secretary.

DUNDEE,

PUNJAB NATIONAL BANK LIMITED.

After audit, the working of the Punjab National Bank Ltd., Delhi, for the year ended 31st December, 1955 has resulted in a profit of Rs. 69,40,108-2-3 including Rs. 4,99,039 13-6 brought forward from the previous year's account.

Provision for Income-tax ..	Rs. 11,00,000
Transferred to Contingency Reserve ..	Rs. 24,00,000
Transferred to Reserve Fund ..	Rs. 5,00,000
Transferred to Bonus to Staff Account	Rs. 13,50,000
Transferred to Charity Account ..	Rs. 80,000
Transferred to Gratuity to Staff Account	Rs. 50,000
Ad-interim dividend @ Rs. 1-8 per share	Rs. 5,25,000

The Directors have further recommended to the shareholders that out of the balance of Rs. 9,35,108-2-3, a sum of Rs. 7,00,000 be paid as dividend at the rate of Rs. 2 per share, free of income-tax, making the total of 14 per cent per annum for the year ended 31st December, 1955.

A sum of Rs. 37,50,000 has been transferred from Reserve Fund to a separate account called Share Premium Account and is intended to be utilized for issue of fully paid Bonus Shares after necessary permission of the Controller of Capital Issues has been obtained and other legal and procedural formalities have been completed.

EDITORIAL NOTES

(Continued from page 551)

The main reason for the investor's satisfaction will, however, be found to lie in the Corporation's project, for which Government sanction is expected shortly, to manufacture polythene in India. Polythene is described by Mr Harris as a "tough, flexible, thermoplastic material with outstanding electrical insulating properties"; and its uses are manifold, the primary one being for packaging purposes. While the new product will undoubtedly go to swell profits, and while its quaiity is assured by virtue of the technical know-how to be provided by ICI (who discovered Polythene), it needs to be realised that the project will call for a total investment of Rs 3 crores and that some two or three years may elapse before the plant is brought to economic production. Thus, the investor has every reason to hope for a higher return, long-term; but he must reconcile himself to the fact that, for the reason that "capital invested during the construction period will earn no money", it may, as Mr Harris warns, "be difficult for your Company to maintain the higher rate of dividend declared on the Ordinary Shares this year."

★

FOR THE INVESTOR

(Continued from page 547)

A further batch of textile mills has announced the following dividends for 1955:

	1955 Per	1954 Share
	Rs	Rs
Dawn ..	15	6
Gaikwar ..	10	10
Gokak ..	15	13
Navsari Cotton	14	13½
R. B. Motilal Mills ..	6	6
Shriniwas ..	12*	14
Svadeshi ..	8	12
Tata ..	4	2½

*On increased capital.

Anil Starch Products have maintained the dividend at Rs 10 per share for 1955.

Atul Products have recommended a maiden dividend of Rs 5|4|0 on Old shares and Rs 3|8|0 on New shares for 1955.

Burma Mines have recommended a maiden dividend of 2½d per share, which works out to As 2 per share, for 1955.

The following Electric Supply companies have announced dividends for 1955: **Broach As 12** per share (As 12 for 1954); Poona Rs 10 (Rs 10) and Nasik Deolali Rs 9|8 (Rs 10|0).

Orient Paper has raised the dividend from As 8 to As 10 per share for the half-year ended 30.9.1955.

Vijayalakshmi Mills, Madras, have maintained the dividend at 10 per cent for 1955.

Modern Housing Construction has passed over the dividend on the Ordinary Shares for the year ended 30.6.1955.

Andhra Bank has announced a final dividend of 3½ per cent, making 6½ per cent fcor 1955.

GATEWAY GOSSIP

(Continued from page 561)

the discussion at the annual meeting provides fresh evidence in this direction.

Through the good offices of Mr Arvind Mafatlal, an understanding so the report goes, was reached between the company and shareholders' interests on the selling agency agreement. This would be based on profits after, instead of profits before (as hitherto), depreciation and, after certain special discounts had been discontinued, the saving to the company would increase by Rs 3 lakhs. Mr Sheppard revealed that a special meeting would be held on April 9 to consider the supplementary agreement.

If Indian companies had been in the habit of taking shareholders in their trust in manner similar to the Kohinoor Mills, it would appear that there would have been little need for the drastic revisions in the law that becomes effective as from 1st April, 1956.

★

WORLD OF FINANCE

(Continued from page 553)

The total of income has risen by over Rs 28 lakhs to Rs 5.69 crores. The two major heads each account for Rs 8 lakhs odd of the rise. The balance of the increase came from net profit on sale of investments, etc., not credited to Reserve or any particular fund.

But interest paid absorbed Rs 4 lakhs more at Rs 1.70 crores; and salaries and allowances went up steeply by Rs 23 lakhs to Rs 2.61 crores. In the result, the balance of profit is more or less unchanged at Rs 77.76 lahhs.

The transfer to Bank's investments is Rs 15 lakhs; and here we may note that, in the balance-sheet, the shortfall of the market value of giltedged as compared with the book value has been reduced to Rs 1.69 crores from last year's Rs 2.52 crores.

Taxation receives Rs 5.5 lakhs; a similar amount is transferred to Staff is Rs 13.5 lakhs. The dividend is at 12 per cent for the year; and the carry forward is half a lakh higher at Rs 18.4 lakhs.

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on March 20. Total amount offered was Rs 1,02,25,000. Tenders at Rs 99-6 per cent were accepted in full and those at Rs 99-5-9 per cent were allotted approximately 96 per cent. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-6 per cent per annum.

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs. a. p.
March:			
1st	1,36,00	1,00,00	2 8 5
8th	1,06,00	1,00,00	2 8 6
15th	1,02,25	1,00,00	2 8 6

+

The returns of the Reserve Bank for the week ended March 16 show a net expansion of currency for Rs 10 crores, expansion of Rs 35 crores against rupee securities being partially offset by contraction of currency for Rs 25 crores against foreign securities. Rupee securities have gone up by Rs 34.78 crores to 648.01 crores, the increasing being accounted for by ad hoc Treasury Bills. Foreign securities have gone down by Rs 24.84 crores to Rs 672.32 crores, the decline representing securities transferred to the Banking Department. Rupee coin shows an increase of Rs 0.37 crores to Rs 102.93 crores. Active note circulation is higher by Rs 4.77 crores at Rs 1,448.86 crores. In the result, notes held in the Banking Department at Rs 14.42 crores are higher by Rs 5.55 crores.

The deposits of the Central Government show a small rise of Rs 1.33 crores in spite of deficit financing for Rs 35 crores. Most of the created money has been used up in payment to the States of their share in the income-tax pool. Due to this factor, the deposits of the Provincial Governments are higher by Rs 36.40 crores at Rs 46.95 crores. The strong seasonal demand for credits is reflected, firstly, in the decline of bank deposits from Rs 47.41 crores to Rs 46.54 crores, and, secondly, in the increase in "Other Loans and Advances" from Rs 68.25 crores to Rs 76.26 crores. As a result of the transfer from the Issue Department, foreign balances held in the Banking Department are higher by Rs 30.10 crores at Rs 70.72 crores. The net accrual of foreign assets in the week is, therefore, of the order of Rs 5.26 crores. Investments are more or less unchanged.

+

The statement of the State Bank of India for the week ended March 16 show a rise of Rs 4.02 crores in deposits to Rs 233.20 crores. Borrowings from other banks remain unchanged at Rs 1.50 crores, while other liabilities, including inter-office adjustments, are higher by Rs 1.31 crores at Rs 9.72 crores.

On the assets side, cash balances are shown at Rs 15.09 crores against Rs 15.85 crores and Investments at Rs 107.78 crores against Rs 107.67 crores. Advances have risen by Rs 5.36 crores to Rs 135.59 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 5.15 crores and "Bills Discounted and Purchased" for Rs 0.19 crores.

+

The consolidated statement of the Scheduled Banks reflects seasonal influences at or near the peak. Deposits show a considerable shrinkage; borrowings from the Reserve Bank and the State Bank show a big jump; cash balances have shrunk; and "Loans and Advances" have registered a sharp increase. Investments have also declined appreciably.

According to the returns of the Scheduled Banks for the week ended March 9, both Demand and Time liabilities have declined, the former by as much as Rs 10.84 crores and the latter by Rs 1.93 crores to Rs 612.28 crores and Rs 416.77 crores respectively. Borrowings from the Reserve Bank have risen by Rs 5.23 crores to Rs 53.70 crores and those from the State Bank by Rs 1.47 crores to Rs 15.51 crores. Cash and balances with the Reserve Bank and Investments show sharp declines from Rs 89.25 crores to Rs 82.00 crores and from Rs 373.54 crores to Rs 364.74 crores respectively. Advances have registered a further rise of Rs 9.26 crores to Rs 721.14 crores. Money at call and short notice stands at Rs 4.41 crores against Rs 6.88 crores.

★

STOCK EXCHANGES

(Continued from page 580)

Rs 11-6 and Rs 11-9 and SKG Old between Rs 11-10 and Rs 11-13.

Engineering shares ruled generally firm on encouraging Bombay advices. Indian Irons opened the week at Rs 33-15 and steadily advanced to Rs 35-9 to finish the week at Rs 35-7. Among other Engineering scrips, TEXMACO were pushed upto Rs 22-12 from Rs 21-4 and Richardson upto Rs 25-12 from Rs 25-0. Burn were marked upto Rs 371 from Rs 334. Braithwaite ruled remarkably steady at Rs 28-2 and Britannia Old at Rs 18-8. Jessop changed hands at Rs 34-6 to Rs 35-0 and Kumardhubi at Rs 10-7 to Rs 10-9.

The Miscellaneous section continued to provide a few firm spots. Demand for Paper shares continued to be in evidence with India Pulp being marked upto Rs 25-5 from Rs 24-14; Orient upto Rs 35-12 from Rs 34-10; Titaghur upto Rs 44-8 from Rs 44-2 and Shree Gopal upto Rs 19-5 from Rs 18-12, to finish the week at Rs 25-4; Rs 35-12 Rs 44-5 and Rs 19-5 respectively.

In Minings, Indian Copper met with renewed speculative support upto Rs 7-3 from Rs 6-8, quoted last week. Karanpura Development, after touching a high of Rs 24-0 and a low of Rs 23-7, finished better at Rs 23-8.

In Oils, BBP were a narrow market around Rs 4-2 with IBP moving between Rs 43-4 and Rs 43-8.

Among other scrips, Rohtas were wanted upto Rs 21-4 from Rs 20-4. Martin Burns changed hands at Rs 26-0 to 26-6 x.d.; Metal Box at Rs 27-8; Dunlop Rubber at Rs 31-3 and Anglo Brothers at Rs 21-4. BIG hardened again to Rs 11-1 from Rs 10-11 with India Steamship steady at Rs 8-6. Indian Cable were a shade quieter at Rs 31-9, while Jardine-Henderson hovered around par.

★

Madras

THERE was spirited trading on the local Stock Exchange during the past week, when further improvement in prices was recorded.

TEXTILES:—Rates in this section were generally on the higher side, thanks to the reports of satisfactory working results of the mills; and the proposed power-cut in hydro-electric areas had no effect on market sentiment. Coimbatore Pioneer improved to Rs 260 and Janardhanas to Rs 114 buyers. There was support for Kotharis upto Rs 18-8; Loyals upto Rs 47; Ranga Vilas upto Rs 90 and Vasantas upto Rs 287-8. Travancore Rayons ruled steady at Rs 15-8, while Venkatesas were marked higher at Rs 166. Bangalore Woollens, however, met with some liquidation, receding to Rs 580 from Rs 590. Maduras were quoted around Rs 55 c.d.

PLANTATIONS:—This section continued to forge ahead due to all-round enquiries. In some scrips, sellers were not forthcoming even at the higher prices.

In the Rubber section, Cochin Malabars improved to Rs 9; Rajagiris to Rs 22 and Anandams to Rs 22-8; TRAs changed hands at Rs 13-10 to Rs 13-12; Malankaras at Rs 29-8 to Rs 29-12; Vaikundams at Rs 28-8 and Thamaraiallys at Rs 29-8.

Among Tea shares, there was sustained buying of Mlamallays, Nilgiris, Nonsuch, United Nilgiris and Highlands at market rates Chembra Peaks were absorbed upto Rs 4-13; Periakaramalais upto Rs 8-9 and Coonoors upto Rs 28-8. Blue Mountains were in keen request with few sellers in evidence.

In the Coffee section, Coffee Lands were taken upto Rs 21-4 and Consolidated Coffees upto Rs 26-4. Puthuthottams were marked at Rs 4-14-6 and Shevroys at Rs 2-9

MISCELLANEOUS:—In this section, Cement and Chemical shares continued to be in good demand. India Cements had buyers upto Rs 33-14; Travancore upto Rs 12-8 and Dalmias upto Rs 14-12. FACTs changed hands at Rs 7-8 to Rs 7-8-6; Mettur Chemicals at Rs 9-15; Mysore Chemicals at Rs 9-8. Among other scrips, Indian Steel Rolling Mills were in enquiry at Rs 13-10 and Mysore Papers at Rs 17-6. Forest Industries were quoted at Rs 2-11-6 and Mysore Tobaccos at Rs 12-0.

London

THE London Stock Exchange was in a cheerful mood last week, when the Industrial section established a wide-spread list of gains. Business, however, did not show much expansion as buying was selective.

The new peak levels touched on Wall Street, the record steel output at home and some good dividends contributed to the firmness of Industrials. Engineering and Steel shares recorded widespread gains Oils made an early advance, but reacted from the best levels. Copper shares ruled firm with Tins making headway under the influence of satisfactory dividends.

New York

PRICES on Wall Street ruled generally firm. While buying was spurred by new inflationary pressures and the favourable prospects of Corporations, occasional increase in selling brought a reversal of the earlier tendency. Toward the close, however, firmness developed again in some specialities and spread to a few sections.

The outstanding feature of the week's trading was the advance made by International Business Machines, which showed a rise of $10 following the five-for-four stock-split and intentions to declare one-dollar dividend for the second quarter. This gain was extended to $11 at the close.

★

THE PENINSULA

(Continued from page 566)

The State's Second Plan, like its first has followed the all-India plan in its broad outlines. It may be remembered that first draft prepared by the State Government had fixed the target of expenditure as high as Rs 251.72 crores. The size has been cut nearly to one-third its original proportions on the advice of the Planning Commission. The draft outline of the Second Five Year Plan has fixed the figure at Rs 76 crores. The multipurpose Bhadra Reservoir project is expected to be completed during the plan period. The total cost of the project is Rs 17.75 crores. Industrial development has made rapid strides during the First Plan period. Production of pig iron and cement has increased threefold. During the Second Plan, steel production in the State is expected to increase from 40,000 tons to 1,00,000 tons.

new light on your overheads

Actually its good lighting. Fluorescent lighting—Philips. Cutting overhead costs, and giving you over 3 times the light on the job. All workers, office employees and factory labour, who have had experience of this new light correctly handled, will agree that they can work a lot better over a length of time under fluorescent lamps. Less eye-strain, fewer mistakes, quicker work, and an improved general atmosphere, these are the results of better lighting. And working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have a burning life of 7500 hours, which is just about 4 years. These are a few reasons why Philips Fluorescent Lamps & Fittings are being installed in homes, offices and factories throughout the world.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it. Philips Electrical Co. (India) Ltd.

For the Investor

Poised for Confident Outlook

Investment Gossip:

AS the financial year draws to its close, Stock Exchanges in India are poised for more confident trading. In the next fortnight, an important factor will be the magnitude of deficit financing.

In mid-March, there was deficit financing for Rs 35 crores. At the time of this writing the returns of the Reserve Bank are not yet to hand. My own impression is that, due to payments by the States to the Centre in respect of instalments on debts due by the former, the Centre might not have found it necessary to have recourse to created money so far as the week ended March 23 was concerned. On the other hand, there could have been some deficit financing in the reverse.

But, in the week ended March 30, as well as in the first week of April, the Reserve Bank returns may disclose deficit financing of considerable size.

Operators in shares have come to regard deficit financing as a bullish factor. The bigger the dose of created money, the more powerful is the bullish fervour released.

Thus, Stock Exchanges face the prospect of exceptionally strong bullish forces in the next ten days.

It must, however, be added that the immediate consideration is the lethargy induced by the impending closure of the markets for three days on account of Easter. From Friday, trading will be narrow, and price-fluctuations may be rather erratic.

Should there be any setback on account of the holiday climate, investors should hail it as a welcome opportunity to buy at what should prove extremely attractive levels.

The most heartening feature both in Dalal Street and in Lyons Range is that the professionals are markedly restrained in their activities; and that such price-advances as have taken place are in response to genuine investment buying.

£R$

UCO Bank

Robust expansion marks the accounts of the United Commercial Bank Limited for 1955. As Mr G. D. Birla, the Chairman, pointed out at the annual general meeting, the United Commercial has been able to gain for itself a share in the increased business which is much higher than the average for Scheduled Banks generally. It is apposite that we take note of the relevant figures in respect of UCO Bank.

There is a strident increase of over Rs 7 crores in deposits and other accounts; and the bulk of this is accounted for by an increase under fixed deposits.

As against the capital of Rs 2 crores, the reserve fund, at the end of 1955, was placed at Rs 95 lakhs. Deposits are at Rs 47.69 crores. Substantial increases are to be found in the two contra items. Bills for collection are marked Rs 1.1 crores higher at Rs 5.27 crores. The rise in acceptances is a steep one from Rs 8.89 crores to Rs 19.04 crores. The balance sheet total is up by nearly a third from Rs 62.16 crores to Rs 81.69 crores.

As an Indian Scheduled Bank, which can claim to have the largest amount of foreign exchange business, it is to be expected that UCO Bank's advances, as such, should not have gone up substantially, for the reason that acceptances have risen by the margin we have indicated. Cash balances figure at Rs 6.21 crores. Investments are marked fully Rs 5 crores higher at Rs 22.17 crores, wholly accounted for by a rise in giltedgel securities to Rs 19.56 crores.

The advances portfolio shows a modest increase of just under Rs 3 crores to Rs 27.59 crores.

The income of the bank has shown a substantial rise of Rs 26 lakhs odd to Rs 2.44 crores.

Income by way of interest and discount has registered a rise of Rs 21½ lakhs to Rs 1.64 crores. Commission, exchange and brokerage are higher by Rs 5.36 lakhs at Rs 78.53 lakhs.

In line with the higher level of deposits, interest paid marks a rise of nearly Rs 10 lakhs to Rs 86.29 lakhs. Salaries and allowances have also gone up by Rs 8.76 lakhs to Rs 78.93 lakhs. But with other expenses showing no substantial increase, the balance of profit has gone up sharply from Rs 31.06 lakhs to Rs 36.69 lakhs.

The Directors' report indicates that the transfer to reserve fund has been raised by Rs 2 lakhs to Rs 8½ lakhs. Taxes absorbed Rs 1½ lakhs more at Rs 14 lakhs; simiarly, provision for bonus has also gone up by Rs 1½ lakhs to Rs 4 lakhs. The dividend has been raised to Rs 2-12 per share from last year's Rs 2-8.

The Directors' report notes that 'the bank's business has shown a gratifying expansion during the year'. Remarkable, perhaps, would have been the better word; and, if the current trends are maintained by the United Commercial Bank, of showing much more than a proportonate increase in business, UCO Bank will, we may be sure, progress even more stridently in the next decade than the almost incredible position it has attained in the 13 years of its existence.

£R$

The Hind Bank Limited

Remarkable progress has been achieved by The Hind Bank Limited in 1955. If the trend for banks was one of higher deposits, the Hind Bank reports that its liabilities in this regard moved up in sharper proportion; if the balance of profit was wont to be higher, the Hind Bank, again, reports that its balance of profit had risen even more sharply; and if, finally, banks were generally able to disburse a larger dividend, the Hind Bank could claim that it was in a position to double the distribution to shareholders. Deposits have improved by over 25 per cent to Rs 5.12 crores from Rs 4.07 crores. The Reserve Fund has been added to by Rs 2½ lakhs to Rs 26 lakhs; and this last figure compares with the paid-up capital of Rs 50 lakhs.

The Hind Bank has, obviously, been expanding its activities in the financing of foreign trade. Acceptances, endorsements and other obligations show a smart rise of nearly a crore of rupees to Rs 2.51 crores, and, among the contingent liabilities, we find that outstanding forward exchange contracts, under which head the bank had a liability, were placed at Rs 3.53 crores at the end of 1955 against Rs 2.61 crores at the end of the previous year. By 3rd March 1956, Rs 1.88 crores had been delivered. The balance sheet total registers a rise of Rs 1.86 crores to Rs 8.66 crores.

How did this bank utilise such increased resources? Cash balances and money at call are placed roughly Rs 18 lakhs lower. Investments have risen by Rs 14 lakhs to Rs 1.27 crores, with holdings in giltedged marked higher by Rs 9 lakhs at Rs 1.18 crores. Investments, of course, are shown at below market value.

The Hind Bank Limited has significantly increased its accommodation to constituents, with the figure for advances mounting to Rs 3.80 crores from Rs 2.63 crores.

The income of the bank has gone up by nearly Rs 7½ lakhs to Rs 31.30 lakhs Of this rise, the larger proportion, of Rs 4.27 lakhs, is accounted for by the rise in interest and discount. Meanwhile, commission, exchange and brokerage have fetched Rs 3.22 lakhs more.

Of course, expenses, too, show some rise. But the increases on this side of the account have been kept well within control. Interest paid absorbs Rs 2.13 lakhs more; and salaries and allowances have gone up by Rs 76,000. Thus, the happy result has been that the bank has been able to effect a sharp and substantial improvement in its balance of profit from Rs 6.56 lakhs to Rs 10.86 lakhs—an improvement over the previous year that works out to an astonishing 65.5 per cent.

Inclusive of the brought forward of Rs 1.13 lakhs, the disposable balance was Rs 11.99 lakhs. The provision for taxation has been increased from Rs 2.8 lakhs to Rs 4 lakhs; the transfer to reserve fund is Rs 1 lakh higher at Rs 2.5 lakhs; the bonus to staff has been more than doubled to Rs 83,000; and the balance, in the 1955 accounts, was placed at Rs 4.66 lakhs against Rs 2.63 lakhs in 1954.

It is hardly surprising that the Bank should have decided to double its dividend to Rs 3 per share. In spite of the fact that dividends have absorbed Rs 3 lakhs, against Rs 1½ lakhs last year, the carry forward is over half a lakh higher at Rs 1.66 lakhs.

Medium banks are, today, fortunately placed. They are not sore affected by problems of unremunerative branches or a surplus of clerical force. Thus, given the apposite mixture of an enterprising policy mingled with a due regard for sound banking principles, the medium bank of today can take great strides forward. The report and accounts of The Hind Bank Limited for 1955 offer ample evidence of initiative seized and action adopted on correct lines with a view to swifter consolidation in a position of strength by a well-managed, enterprisingly run medium bank.

£R$

The Mercantile Bank of India Limited

In his address at the annual general meeting of the Mercantile Bank of India Limited, Sir Kenneth W. Mealing, the Chairman, starts his statement with the sentence: 'the expansion recorded last year in the Bank's general business continued during 1955'. That this expansion was a substantial one, can be seen from the balance sheet of the Bank

HIGHLIGHTS

Holidays have a way of punctuating the work week in Calcutta. It happens sometimes that, in the seven day period, one may keep away on four of them—and spend the other three at the office (no work, of course, but recuperation from....)

To put it another way, work has a way of punctuating the holiday week in Calcutta. Markets desultorily open; no business passes, in anticipation of the holidays still to come.

Which explains the peculiar position we find ourselves in. Saturday a holiday, so, too, Monday; and, for market purposes, the same with Tuesday. The end of the week, both Friday and Saturday are holidays—so the issue had to be got ready earlier.

The result of this plethora of holidays is this abbreviated issue of Indian Finance: the various market reports have been omitted.

This brings us to the question: What is the highlight of this issue? Banks, we would say; and Chairman's Speeches, we might add.

Fitting fare for holidays: statements made by Company Chairmen are published elsewhere in this issue: and they deserve the careful study of the reader.

at the end of 1955 compared with the previous year. The current, fixed deposits and other accounts are at a figure of just under £67 million against £63.2 million. The reserve fund continues to be placed at £1.75 million against the capital of £1.47 million.

The balance sheet total, thus, marks a rise of £3½ million to £72.1 million.

Cash balances are shown to be sharply reduced by £4 million at £10.0 million. Two heads, on the assets side of the balance sheet, registered substantial increases. Investments are up by £4½ million at £21.1 million, and all the increased holdings were in respect of investments quoted in Great Britain, the relevant figure having risen by £5 million to £14.9 million. Secondly, loans receivable and advances are marked higher by £2.3 million at £23.4 million.

The profit and loss account discloses that the profit for the year improved substantially, from £194,324 to £235,423. The amount transferred to the Officers' Pension Fund is maintained at £13,000; the amount written off free-hold banking premises and property is unchanged at £35,000; and the additional allocation to contingency account is also at the same figure of £50,000.

The two dividends, totalling 14 per cent, were on the basis of an increased capital and, consequently, the amount absorbed rose from £97,020 to £118,335. The carry forward is marked some £19,000 higher at £219,372.

In his statement, Sir Kenneth has drawn attention to the general prosperity in the countries in the economies of which the bank plays a substantial role. Sir Kenneth has dwelt at length on the Indian conditions; and has remarked that some of the measures in India, such as the nationalisation of life insurance, 'must inevitably cause some speculation as to how far the nationalisation of existing business and industry is to be carried on in India.' In emphasising the importance of the Second Five-Year Plan, which the Mercantile Bank Chairman describes as a 'massive project', Sir Kenneth very significantly wonders whether the successful implementation of the Plan could better be achieved by Government concentrating their energies 'on creation of the new, rather than the acquisition of the old and well tried.'

For our part, we should stress that, if we are desirous of attracting foreign capital in steadily increasing flow, it is necessary for Government to give more of an assurance in regard to nationalisation policy. Within the country, there is sufficient confidence that Government are not dogmatically addicted to the State taking over control of established industries. But recent events, specifically the insurance nationalisation, must have raised doubts in the minds of foreign investors which it is in Indian interest to dispel. A reiteration by Mr Nehru of his firm intention not to fritter India's resources in appropriation of existing industries, where those resources could better be utilised in new productive ventures, would be most helpful.

£R$

Polychem

IF an American were writing this column, he would say that the new capital market was jiving; which means no more than that it is quite, quite active—the market, we mean.

News came last week of an important new issue. Enterprise and Indo-American co-operation, with benevolent and suitable help from organisations befitted for the purpose, have combined to make possible an offer of shares which should greatly interest the investor.

The enterprise came from Kilachand Devchand and Co. Ltd.; the co-operation, from the Dow Chemical Company of America; the apposite aid, from the ICIC and the Bank of Baroda.

Polychem, Limited has been formed for the manufacture of polystyrene; and it is the only unit sanctioned by Government in this country.

The prospects can be gleaned from the fact that the Indian Plastic Manufacturers' Association has estimated requirements of polystyrene at 10 million lbs annually in the next five years; and the new company's rated capacity is to be but 6 million lbs of moulding powder.

Dow Chemicals will provide know-how and the formulae; the promoters, Kilachand Devchand, have secured necessary permission and signed the necessary agreements; the ICIC and the Bank of Baroda have underwritten the issue.

The issued capital is to be Rs 80 lakhs. The directors and friends are to be allotted Rs 20 lakhs of ordinary shares, to which they have agreed to subscribe. Preference Shares, which are redeemable and cumulative carrying a taxable 7½ per cent, of the value of Rs 40 lakhs are offered to the public, as well as Rs 20 lakhs worth ordinary shares. Both classes of shares have a nominal value of Rs 50 each.

Need I say that the success of the issue is assured?

Prospects for Sugar

Indian Finance
Established 1928
March 31, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

DURING the course of the First Five-Year Plan, many a target has been attained, some have been exceeded, and some few are yet to be touched. The sugar industry may be said to come under all three categories, with production having reached stated objectives, exceeding them, falling well below the figure aimed at, once more stridently to revive and pierce the target figure. But, by and large, this has been true of commodities generally, and both in regard to sugarcane and raw jute, it has happened that, at the mid-way mark of the First Plan, extremely satisfactory levels of production were reached. Since the output of sugar is determined by the crop of sugarcane as well as the length of the crushing season, it has happened that production has been by no means stable. We had a period during which internal demand could be fully met without resort to imports; followed a period of such bleak production that a substantial quantity had to be obtained from sources overseas. It is, however, of auspicious significance that, in the last year of the First Plan, sugar production should have risen to a level substantially in excess of the planned target.

Thus, as far as the present and the immediate future are concerned, the sugar manufacturing industry is not troubled by doubts or diffidence. There is confidence that, provided the weather is reasonably good, a sufficiency of cane will be available to produce that quantity of sugar necessary to meet the internal demand. Moreover, it is also taken for certain that there is not likely, in the near future, to be an excess of production over demand. But it is in respect of the not so near future, of the end of the Second Plan, that the sugar industry is anxious about prospects.

This problem was brought to the fore at the 23rd annual general meeting of the Indian Sugar Mills Association held at New Delhi last week. In his presidential address, Mr Charat Ram made some suggestions in this behalf. His starting point was that an expansion in sugar production was being impeded by high Government taxes, on the one hand, and low cane yields, on the other. It is true that the per capita consumption of sugar in India, at 11 lbs, is insignificant when compared with the relative figures in other countries. But his central thesis is that, at present prices, it would be difficult to effect any large sized increase in sugar consumption.

As determining the scope for expansion in consumption, prices are, undeniably, the key factor. But, when we come to the question of how reduction in prices can be enabled, we find ourselves on somewhat difficult ground. The ISMA Chairman apparently seeks a reduction in taxes on sugar. But it would be difficult for Government to take any steps in this direction. Government policy is today aimed at exploring every avenue of resources, especially in the field of indirect taxation. Secondly, Government also view the ethics of indirect taxation as being eminently correct in a country which has for its aim a socialistic pattern of society. The second suggestion of Mr Charat Ram's is, however, one which can, and should, be studied carefully and implemented energetically.

The crushing yields in India have tended to be poor, and the quality of the cane has been responsible for a low volume of sugar extraction and for an unduly high cost of the manufactured commodity. In the second place, the yield per acre is also by no means at a level that can be considered a fair yield to the cultivator. If the yield per acre could be improved, with a larger amount of sugarcane available, there could be prospects of some decline in the price of the raw material. Similarly, if it were possible to raise the quality of the cane, the better extraction should enable sugar mills to reduce their production costs and to pass on the benefit, or some portion of it, to the consumer.

In this context, the Union Food Minister, Mr A. P. Jain, was able, in inaugurating the meeting, to extend some re-assurance. The experience in India seemed to indicate that the provision of adequate irrigation and manuring facilities could themselves be sufficient to effect a satisfactory, if not remarkable, improvement in the quality of sugarcane. With regard both to irrigation and manuring facilities, it is known that Government are offering all help possible; it remains to be seen, however, how far these measures will succeed in bringing about the growth of a better quality cane.

Another suggestion by Mr Charat Ram is that sugar should be priced on the basis of its quality. Obviously, such a method of paying for cane by quality could help in making the cultivator quality conscious, and might provide him with the incentive necessary to improve the quality of his cane. In fact, this consideration is much more important than the secondary consequence that, for the sugar mills, sugarcane would be available at a more economic price. Mr Jain was able to inform the gathering that the question of pricing sugarcane on the basis of quality would be examined by an expert committee set up by the Development Council for Sugar. There are bound to be some practical difficulties in working out such a scheme. We should, however, bear in mind the fact that, ultimately, both the cultivator and the nation would benefit by the process, in that the cultivator, by growing better cane, would earn for himself a better price, on the one hand, and in that the country, on the other hand, would reap the benefit of an increase in sugar production without any addition to the acreage under sugarcane. We commend this suggestion of Mr Charat Ram's; and we would urge Government to examine and, if possible, speedily to implement a scheme of this nature.

Finally, a resolution passed by the ISMA voiced the misgivings of the industry in that Government might licence surplus capacity. The resolution "....recommends that due care should be exercised in sanctioning new units so that no indiscriminate and unplanned expansion is effected." Mr Jain set these fears at rest by revealing that licences issued were for a total of 810,000 tons, and that the capacity by the end of the Second Plan would rise to 2.5 million tons. Estimated demand for sugar at the end of the Second Plan is expected to be around 2.25 million tons. But, since capacity has usually exceeded production, Mr Jain would seem to feel that there is little danger of excessive production resulting in 1960-61.

To our mind, there need be no controversy on the possibility of India being faced with the problem of a surplus in sugar production. The increase in purchasing power released by the Second Plan is, in our view, almost certain to be utilised primarily in such basic commodities as sugar.

Appointments in the Private Sector

By K. V. IYER

TILL some years ago, appointments in subordinate Government service were generally made at the discretion of the heads of offices or departments and though the selections were made from among candidates having the prescribed qualifications, there is no doubt that a certain measure of favouritism crept in and that sometimes men with better qualifications were passed over.

Nowadays every appointment in Government service is required to be made on the recommendation of a Public Service Commission based on the recommendation of a competitive examination. With the thousands of candidates who apply for these examinations, the winnowing of the grain from the chaff has grown difficult and the results of the examinations appear to have become more or less a matter of chance. The reports of the Public Service Commissions have also disclosed the poor quality of the material from which selection has to be made.

Such being the success of the Government in their own sphere of direct authority, they have in the Companies' Act recently legislated in regard to appointments in the private sector in order to curb favouritism and nepotism. Accordingly Sec. 314. (1) prescribes that except with the previous consent of the company accorded by a special resolution no relative of a director shall hold any office or place of profit under the company. Does it mean that if a relative of a director is to be appointed in however low a capacity, such appointment should be held over till a special resolution is passed? Can the day to day working of a company be held up like this? Even if such appointments are presented to the share-holders for sanction as a special resolution, what are the chances of the share-holders objecting to any of them or of their having any known and reasonable grounds for objection? Will it not be more practical to prescribe that such sanction is necessary in the case of appointments on a certain rate of pay per month or over?

If on the one hand, the Section of the Act referred to looks impractical in working, we are already getting evidence how some of the companies will observe it in practice. The intention of the Government apparently is that persons without the necessary qualifica-

tions should not be appointed on unreasonable or extravagant rates of pay or remuneration merely by virtue of their relationship to a director or other person in authority.

Here are a few specimens to indicate how some of the companies propose to satisfy the requirement of the Act. The special resolution is proposed

(i) to accord sanction to the appointment of A....., son, or nephew etc of B. a Director,

(ii) to accord sanction to the remuneration paid so far and to the remuneration payable up 31st March '56.

(iii) to accord sanction to some 16 appointments as per list attached wherein are given:

(a) the names of the appointees,

(b) the names of the directors to whom each one is related

(c) and the nature of the relationship.

If the qualifications of the parties and the rates of remuneration are not disclosed in the notice communicating the draft resolutions to the share-holders, how can a share-holder give a thought to the subject? Is it the intention of these companies to leave it to the share-holder to ask for the information at the meeting when each resolution is taken up for consideration probably in an unsympathetic atmosphere, then make up his mind on the spot and canvass the support of his neighbours for his point of view? Any one who has attended such a meeting in similar circumstances will realise what this means and what poor result attends his effort.

Law for the Layman

Subscribers of Shares in Public Limited Companies

By K. N. VISWANATHAN

WHAT are their rights in regard to monies paid by them along with their applications for the issue of shares, in the event of allotment becoming impossible for one reason or other? Are they merely creditors of the Company with reference to these monies, along with other creditors of the Company, or do they have a lien on these monies so as to be able to attach them for payment of their debts in preference to other creditors of the Company? This question of immense practical importance arose for decision before the High Court in England in NANWA GOLD MINES LTD In re: BALLANTYNE -v- NANWA GOLD MINES reported in (1955)-1 W.L.R. at page 1080. HARMAN J who decided this case held on a construction of the application form for shares and other documents in the case, that the monies subscribed by the applicants for allotment of shares, are repayable to them and that they do not form part of the general assets of the Company.

The facts of this case taken from the aforesaid report namely (1955) 1 W.L.R. 1080 are:—

"The subject-matter of the present application was a sum of £3.472 18s. now standing to the credit of a joint account with Barclays Bank Ltd., in the joint names of the company, Nanwa Gold Mines Ltd., and Messrs Buckley Hall Devin & Co., their registrars. The question was whether this money ought to be treated as part of the general assets of the company, and could be validly claimed by the debenture holders' receiver, or whether it was the property of do this very thing. No doubt that was those who paid it to the company and ought to be repaid to them. Nanwa Gold Mines Ltd., was an old established company, which by 1953 had come to the end of its resources, and had, for the time being, abandoned its workings. It still had, however, considerable concessions on the Gold Coast which appeared to promise a return, and the company's directors wished to make a last effort to turn those assets to profitable account. During June or July, 1953, the directors realized that the greater part of the company's capital had been lost and proposed therefore to write it down drastically; but they also concluded that they would need some fresh money to be able to embark again on the operation of extracting gold. Consequently, on July 28, 1953, three documents were sent out to the shareholders, one a notice for a reduction of capital, combined with the usual increase to follow immediately upon it, the second a circular letter containing the views of the board, and the third a form of application for new shares. The circular letter signed by the chairman explained to the shareholders that the company proposed to resume operation and must have money for the purpose, and went on: "We have therefore decided to resume surface mining as soon as possible and propose to raise the £50,000 needed by issuing 1,00,000 shares of 1s. each at par. I and my co-directors feel that we would not be justified in proceeding with our proposals unless we have that sum behind us and everything depends upon our being able to raise it at once. We must warn you therefore that unless this issue is fully supported we shall be unable to prevent the return of the mine to the jungle. A form of application for shares is enclosed. You will note that your application is conditional upon the passing of the resolutions at the extraordinary general meeting and the sanction of the court to the scheme because such resolutions donot take effect legally until approved by the court . . . . We have been advised that the likelihood of the court's refusing to sanction the reduction . . . . . is very slight . . . . Should the above conditions not be satisfied your money will, of course, be refunded."

"The form of application which shareholders were urged to fill up accompanied this letter. On the front of the form were these words: "The accompanying circular letter of the chairman should be read in conjunction with this application form. It will be noted that this issue is conditional on the passing of the resolutions at the extraordinary general meeting of the company to be held on August 20, 1953, and the subsequent sanction of the court to the reduction of the company's capital. Should either of these conditions not be fulfilled, application moneys will be refunded in the meanwhile will be retained in a separate account. As soon as the above conditions are satisfied, the shares now offered will be allotted and issued and will then be converted into stock . . . and will rank pari passu in all respects with the stock now issued of the company . . . . Application will be made to the council of the Stock Exchange, London, for permission to deal in and for quotation for the stock, into which the shares now being offered will be converted." "On the back was a form of application to be filled in by a shareholder, who had to send with it payment in full for the shares which he desired to obtain. There was a poor answer to that proposal, and nothing approaching a million shares were applied for, although the lists were held open until September 21, 1953, a month longer than had been originally advertised. Some 91 persons did apply, however, and the money which they sent with their application forms was the subject-matter of the present dispute. Before they sent out their circular and form of application the board took the precaution of consulting the council of the Stock Exchange about the issue, and were advised by that body that the money sent with the forms of application should be put into an account in two names: i.e., that not only should it be put into a "separate account," but that the separate account should have a name attached to it other than that of the company. The writ in the debenture holders' action was issued on September, 17, 1953, and the receiver was appointed on September 23, 1953. The scheme was formally abandoned by resolution of the board of January 7, 1954, because it was clear that nothing in the nature of £50,000 had been forthcoming, and having regard to the appointment of the receiver the scheme could not be carried out. Permission to deal was never obtained from the Stock Exchange, and the conditions of the offer were not fulfilled and, in accordance with the express terms of the application, the moneys were refundable. There was no doubt that the subscribers were entitled to a refund if they could obtain one, and the only question was whether those persons were entitled to a refund out of this separate fund, or whether they were mere creditors of the company."

The learned Judge finally clarifies the legal position in regard to this question thus. Says the learned Judge, "There are some strangely conflicting observations on this subject in the books. Stiebel (3rd ed., p. 166) refers to it, and the author makes some rather ex cathedra observations, which he supports by STEWART -v- AUSTIN which, with every respect to that most learned and painstaking author, does not really support his proposition. Palmer's Company Precedents (16th ed., Part I. pp. 11 and 144) mentions the matter, but a cursory reading of those passages makes them appear to have been the work of two separate authors who held diametrically opposite views on the question. I leave it there, it does not help, because one cancels the other out. It is not, in my judgment, anything more than a question of construing the application form. But I ought not to leave the matter without mentioning the statutory provision which covers this kind of ground. Section 51 of the Companies Act, 1948, is (according to the side-note to the section of the statute) concerned with "Allotment of shares and debentures to be dealt in on stock "exchange"; and it refers to statements in prospectuses about applications for leave to deal with shares proposed to be allotted, and provides that the company shall repay the money where permission is refused. Sub-section (3) provides that where money is sent in on a provisional application: "All money received as aforesaid shall be kept in a separate bank account so long as the company may become liable to repay it under the last foregoing sub-section; and, if default is made in complying with this sub-section, the company and every officer of the company who is in default shall be liable to a fine not exceeding five hundred pounds." That appears to be an attempt to erect, so to speak, by statute a kind of trust for applications in a case of this sort. It is irrelevant here, because in this case the directors promised to

Editorial Notes

Banking Trends

One of the important if long-recognised considerations for the progress and prosperity of Indian Banking is that the existing competition between Scheduled Banks and the Exchange Banks should be such as would encourage the former to venture in to fresh fields and new business. Mr C. H. Bhabha, Chairman of the Indian Banks Association thinks, for apparently sound reasons, that the relative position as aggravated by current trends in the pattern of deposits is no cause for satisfaction. The total deposits of the Indian Scheduled Banks, including the Imperial Bank of India, rose by Rs 35 crores from Rs 797 crores at the end of 1948 to Rs 832 crores at the end of 1955. The total deposits of Exchange Banks increased by Rs 45 crores over the same period from Rs 166 crores to Rs 211 crores. The increase in deposits to the Exchange Banks was thus much larger though the total deposits were only one-fourth of those of the Scheduled Banks.

There is also a noticeable trend toward gradually increasing rates of interest on deposits, arising out of unhealthy competition among banks in general. Mr Bhabha says, 'it appears that the Exchange Banks, owing to the peculiar and more profitable nature of their business and to the higher bank rates prevailing at their head offices, have with advantage to themselves, been able to maintain a pace which Indian Banks cannot keep up with any margin of profit'. This is certainly a matter to be carefully watched and suitably dealt with.

Mr Bhabha subjects the relevant figures to closer scrutiny. The time deposits with Indian Scheduled Banks have increased by 33 per cent since 1948 to Rs 349 crores at the end of 1955, while those of Exchange Banks correspondingly rose by 114 per cent to Rs 75 crores. This is attributable to the present day tendency of converting demand into time deposits. The large drop of Rs 52 crores in the demand deposits of the Indian Scheduled Banks has resulted partly from diversion to time deposits and partly from diversion to other investments and avenues. A comparative study of deposits secured in 1954 leads to the conclusion that the percentage of deposits of Exchange Banks, at the level of interest over 1 per cent to 2 per cent, to their total deposits is double that of major Indian Scheduled Banks.

Another disturbing factor which seriously eats into the profits of Indian Scheduled Banks and handicaps the building up of adequate reserves is the steeply rising establishment expenses, which seems strongly to counteract the heartening uptrend in gross earnings. Establishment costs mounted by about 50 per cent during 1948-54 against which the total volume of business, measured through gross earnings, rose only by 25 per cent. At the same time, there was a shrinkage in the net profits of Scheduled Banks from Rs 8.7 crores in 1948 to Rs 7 crores in 1954.

There is little reason, why the complaints which Mr Bhabha has against Exchange Banks should engender, for that reason, a pessimistic view. If account is taken of the rather abnormal post-Partition circumstance, and if the camp arison with Exchange Banks is confined to relatively later years, it will not be surprising if a much brighter picture, than Mr Bhabha paints, emerges. Meanwhile, it is incumbent on Indian Banks to strive for arresting the rise in borrowing rates and to stimulate private investment for purposes of the Second Plan.

Coal Transport

The problem of transport in coal continues to engage the serious attention of the industry's spokesmen. Scarcely a few weeks ago, we commented upon the importance of coal to the national economy and noted that the transport situation was most disquieting. Since then, there would seem, unfortunately, to have taken place little of improvement in the position.

At the annual general meeting of the Indian Mining Federation, the Chairman, Mr G. D. Daga, felt constrained to devote the major portion of his speech to this most urgent and vital problem. In 1956-57, the daily wagon requirement for Bengal and Bihar is stated to be 3,675 in number; as against this, Mr Daga reports that "no more than 3,075 wagons" were made available. While the IMF Chairman has every confidence that the industry can be relied upon to fulfil the tremendous task of attaining the coal production target, he is apprehensive that development would be impeded by an insufficiency of wagon availability.

Mr Daga has stated that the increase in the movement of goods is one of 7.8 per cent in 1955; in coal, the percentage is only 3.5; and this, he charges, is due to the fact that the Railways "have given preference to other goods solely with a view to increasing the earnings from traffic in more freight paying commodities."

It is a matter for regret that Mr Daga should have sound reason to come to such a conclusion. For, it would indicate that there is an insufficient awareness of the importance of coal to the economy. Apart from the fact that wagon shortages hinder current working of industries dependent on coal for their fuel, there is the more important consideration that mounting stocks at pitheads prevent and delay work of a developmental nature. Unless early steps are taken to ensure that coal will not lie at pitheads for lack of wagons, we have to steel ourselves to the posisibility that targets of coal production will me impossible of achievement.

*

A New Republic

The birth of the Republic of Pakistan will be a matter of special satisfaction for a nation which took to a similar path earlier in its independent life. While extending their goodwill to the sister Republic, the people of India renew their hope that mutual relations may take a happier turn. Like India, Pakistan too has chosen to remain within the Commonwealth. That Pakistan has also chosen to call herself an Islamic Republic is no concern of people of this country, if President Mirza'r assurance to minorities is followed up by concrete action. The migration from East Pakistan is still continuing and upto December last, more than three and half millions have come over across the eastern border. Not only should Pakistan stop the exodus, but it should demonstrate willingness to take back those who have left. Such a step is necessary for restoring among the minority community confidence in the present regime and faith in the Republic's future.

*

Varied Reactions

The new anti-Stalinist move in Moscow seems to have had a mixed reception at the hands of European Communists, some of whom have been thoroughly unprepared emotionally for so wanton a bit of iconoclasm. Scanty reports of the first reaction trickle in from European capitals. It might not be unrewarding to watch closely the extent to which the history of Communism will be rewritten.

Reportedly, Moscow's new line was subjected to bitter criticism at a closed meeting of leaders of Italy's Communist Party, which, incidetally, is Europe's largest. But the resentment seems to be not so much that the Stalin cult was dethroned as that the Party was kept utterly in the dark about the unanticipated move. Signor Togliatti could quite possibly have fumbled before his Communist compatriots in explaning what precisely is the ideological make-up of Mr Khrushchev.

Rather in contrast, the French Communist Party blandly announced its agreement with the Soviet 'new look' on Stalin. A Paris report says that the Party's Central Committee passed a resolution, concurring with 'the 20th Congress criticisms about certain of Stalin's theories as well as about his methods of Government over a period.'

The German wing of the Cominform seems to have preferred to mark time and did not mention at all the name of Stalin at its meeting last week. The portraits of Marx, Engles. Lenin and Stalin, which traditionally adorned its conference hall, were conspicuously absent.

We are yet to know what the CPI thinks of developments in the home of Communism and it would be interesting indeed if its attitude is any different from those we have just seen.

Arguments on the Bank Rate

THIS week also, as in the last, our comment has to be made while the money market is grappling with the question: Bank Rate Rise or No, with no official information released up to the time of writing. The current week is cut into by holidays both at the beginning and toward the end; and the review has got to be made ready by mid-week. This accounts for the absence in this issue of the usual market reviews; and this also explains the need to base our comment on assumption rather than on information. Our assumption, then, is that, for the time being, the Bank Rate will remain unchanged. And, if there is no change this week, a change next week and in the weeks thereafter is less and less likely as we are progressively getting farther and farther away from the peak of the busy season.

In the past few days there have appeared pronouncements positively inclined in favour of a rise in the Bank rate. Two sets of arguments have been advanced in support of such a view. The first line of reasoning pertains to the behaviour of prices. Gold and silver have registered sharp and substantial price-increases. Commodity markets have also displayed considerable strength in sentiment and a strong upward surge in prices. Stock exchanges have hummed with activity; and a large part of the ground lost in February has been recovered. The advocates of a higher Bank Rate point to all these developments, and ask: Is this not inflation? Should not the authorities take this warning and adopt corrective measures right now? By corrective measures, they mean an immediate rise in the Bank Rate.

If the boomlet that we are witnessing in the Stock Exchanges in March is inflation, was the outright slump which afflicted share-prices in February deflation? If our pundits prescribe higher Bank Rate for the inflation they conjure up currently, why did they not agitate for lower Bank Rate for the contrary phenomenon of a month ago? Mere rise in prices of shares or bullion, of commodities or manufactured goods does not spell inflation. Let us be precise about the import of inflation: Has the supply of money exceeded the supply of goods and services? It is true that, thanks to deficit financing and thanks to the logical and anticipated developments following the higher tempo of expenditure in the implementation of the Plan; the money supply is being progressively accelerated. But it is also true that production, too, is being as sharply stepped up, thanks to further potential margins in existing capacity and thanks to the steady addition of new capacity. The productive apparatus continues to be ready and able and alert to deal with the challenge of the printing press.

It is futile and beside the point to seek to link the current price advances with worked-up fears of inflation. If the back-ground circumstances pertaining to each of the commodities in which there have been sharp advances were carefully studied, the producer at the one end and the ultimate consumer at the other end will turn out to be less involved in all these vicissitudes and gyrations than the professional gladiators that infest the market places. It is not the tenor of genuine business, but the orgies of the gamblers, that explain most of the recent and current happenings.

The second argument commonly urged in favour of a rise in the Bank Rate is that the present rate of 3½ per cent is out of tune with the other relevant interest rates. Sir Cowasji Jehangir, speaking at the annual general meeting of the Bank of India, described the 3½ per cent rate as out of gear. In his wide-ranging and clear-headed statement presented at this week's annual gathering of the share-holders of the United Commercial Bank, Mr G. D. Birla, the Chairman, has effectively rebutted this argument. For one thing, it is idle to talk of a recognisable structure of money rates in India as there is hardly any integration between the interest rates in the money market proper and the interest rates in what is vaguely described as the bazaar. For another thing as Mr Birla has correctly pointed out,—and his judgment in this regard must be deemed to be authoritative and based on experience—industry and commerce in this country have been able to secure all the required finance in relation to a Bank Rate of 3½ per cent. What matters most from this point of view is that the flexible and competent operation of the Bill Market scheme has taken full care of all seasonal requirements. There is no reason to fear that, in the remaining few weeks of the current busy season, the bill market scheme will prove unequal to the strain.

So long as banks are able to replenish their cash balances by rediscount of usance bills; so long as the rate for such advances on usance bills is maintained at 3½ per cent; and so long as banks continue to secure the requisite funds by this simple, sensible and self- liquidating device, without resorting to unseemly bids for the term money that is scarce, and without causing the deposit rates to rise to unwarranted and unprofitable levels, the 3½ per cent Bank Rate serves the interests of internal finance admirably and appositely.

As for the implication of a 3½ per cent Bank Rate in the context of the financing of foreign trade, Mr Birla is the first Bank Chairman to deal with this question squarely and to prove his case convincingly. So far as the financing of exports is concerned, the incidence of a higher Bank Rate in some of the foreign countries has already been provided for through an upward adjustment in the rates quoted for export bills. The banks who buy such export bills are in a position to sell the bills in the London market, if they need to convert a moiety of their bills into cash.

As for the financing of the import trade, Mr Birla admits that the pressure for finance in this respect will be squarely transferred to the Indian money market, and adds that "the expansion of resources resulting from the operation of the Second Five Year Plan appears to be adequate to take care of such increased responsibility as might devolve on the Indian money market."

As has been recurrently emphasised in this column, Mr Birla urges that the main criterion applicable to the question of the Bank Rate is the necessity to ensure the success of the borrowing programmes envisaged for the Second Plan. It is of paramount importance, that stable and healthy conditions are maintained in the money and giltedged markets. The continuance of the Bank Rate is a sine qua non for the fulfilment of the borrowing programmes and, therefore, for the triumph of the Second Five-Year Plan.

+

The statement of the Reserve Bank for the week ended March 23 reveals no substantial changes. Notes in circulation are marked Rs 4.92 crores higher. With notes held showing a decline to nearly the same extent, total notes are almost unchanged at Rs 1463.62 crores. A fall of Rs 3.97 crores in Rupee Securities suggests "reverse ad hocs" for a like amount. This, however, has been counterbalanced by a rise in Foreign Securities by Rs 3.97 crores.

The Central Government's deposits are nearly Rs 3 crores lower at Rs 52.69 crores; those of State Governments' are higher by Rs 1½ crores; banks' deposits show a rise of more than Rs 3 crores; and other deposits are negligibly changed. In spite of the transfer of Rs 3.97 crores from Foreign Balances in the Banking Department to Foreign Securities in the Issue Department, the former figure has risen by Rs

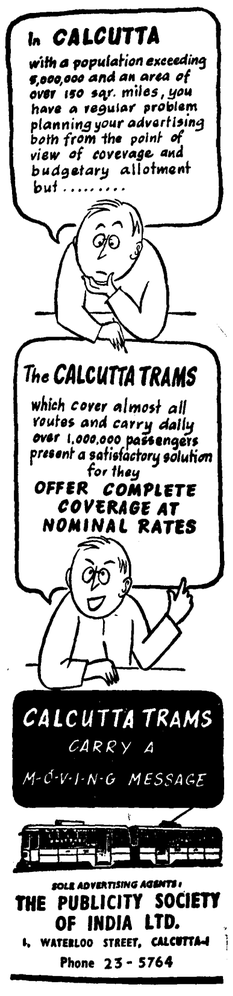
Voluntary Action Against Inflation?

By Paul Einzig

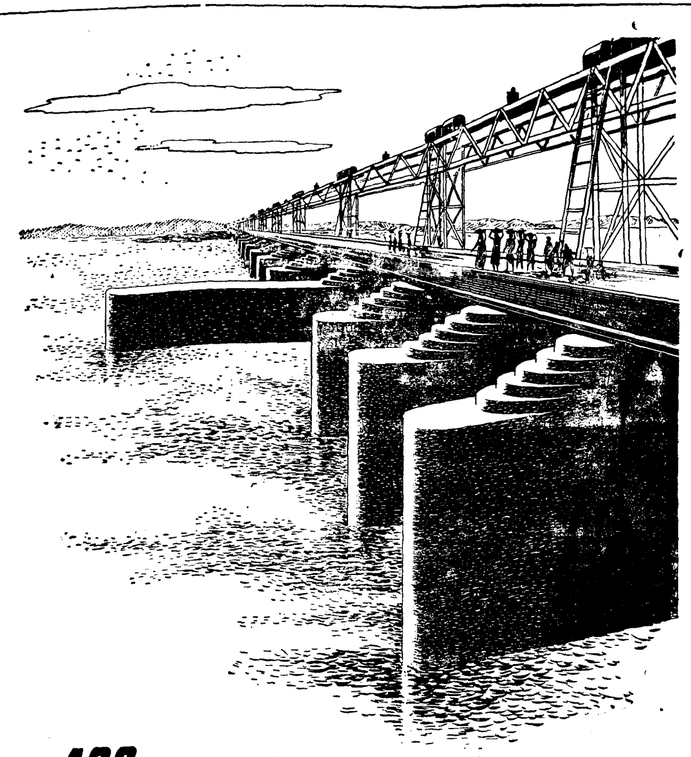
The British Government has just issued a White Paper entitled "The Economic Implications of Full Employment". In thus the new Chancellor of the Exchequer Mr MacMillian gives an account of the circumstances leading to the present inflationary situation in Britain. It is pointed out that increased costs of imported goods, taxation and the removal of subsidies between them only accounted for about one third of the rise in prices that has taken place during the last nine years. The remaining two thirds was due to an excess of the increase of incomes over the increase of the output. In other words, although the volume of goods has increased during that period the volume of money chasing these goods has increased to a much larger extent.

Although there have been in recent years some substantial increases of dividends, the extent to which their amount was higher than before the war is only about half the extent to which wages and salaries increased compared with their pre-war level. This fact in itself is sufficient to indicate the main cause of British inflation. It effectively disposes of the favourite argument of the Trade Unions that wages increases are the consequence of the rising cost of living and not its cause. As a matter of fact the Government White Paper grossly understates the extent to which wages increases have been responsible for the rise in prices. It lumps together wages and salaries. Since the salaries of Government employees, bank employees and most other an excess of the increase of income risen considerably less than the categories of clerical workers have average, the wages of factory workers and mine workers have risen considerably more.

On the other hand, the figure of dividends increases does not allow for the considerable increase in the taxation of unearned incomes, especially those of the higher income groups since the war. It is doubtul whether the total amount received in dividends after deduction of taxation at the source and payment of surtax by many recipients was higher in 1955 than in 1938 . And after all from the point of view of consumer purchasing power it is taxed incomes which really matter. The White Paper is anxious, however, to avoid antagonising the working classes by making out a too strong case against the role they played in bringing about inflation. Its main object is not an allocation of blame but the initiation of a campaign in favour of voluntary action to check inflation. Since the Government wants to appeal to the Unions and its members to moderate their wages claims, it was considered expedient to handle them very tactfully, so that no offence should be taken by the presentation of the Government's case.



Indeed the Government has carried tact so far as to ommit to give a definition of full employment, and the hated word "overfull employment" does not even appear in the text. At the Press Conference following on the publication of the White Paper, Mr MacMillian explained that in his opinion it would not matter if employment were excessive, so long as industry produced for the right purpose. By this he meant that overfull employment would not be harmful if a sufficiently large proportion of the goods produced were exported.



Unfortunately, this is not the case in Britain. Consumer purchasing power has increased to such an extent that industry has been producing overwhelmingly for the domestic market. That this need not necessarily be the case is shown by the experience of Western Germany, where the expansion of production during recent years was accompanied by a more than proportionate expansion of exports. In Britain, on the other hand, the increase of the output was absorbed by the increase in domestic purchasing power due to unwarranted increases in wages.

If necessary, the Government is prepared to take firm action to check inflation even if in doing so it is bound to hurt business firms and their employees alike. At the same time the Government is anxious to uphold its policy of full employment. The Chancellor of the Exchequer would then be in a position to break the wages spirill by carrying the credit squeeze even further. But this would necessarily mean a number of bankcruptcies and an increase of unemployment. Up to now the increase has been quite negligible, and the number of unfilled vacancies is still well in excess of the number unemployed. Nevertheless, the Opposition is determined to put up the utmost resistance to any reduction in his extent of employment, no matter how slight, and no matter how fully it is justified by the need for checking inflation.

In a recent Debate in the House of Commons critisism of the Government's policy in connection with the dismissal of a few thousand workers gave rise to hysterical scenes on the part of some Members of Parliament representing the Constituencies directly affected. They have used up their whole vacabulary of invective, so that now they would not be able to be adequately rude to the Government even if the number of unemployed should rise to millions. The Government fully realises the political implications of this resistance to unemployment. For this reason before resorting to further is making an attempt to enlist drastic disinflationtry measures, it the co-operation of both sides of industry to obviate the necessity for drastic action. It remains to be seen whether this plea for co-operation will lead to the desired effect. Failing that Mr MacMillan will have no choice but to wield the big stick notwithstanding the consequences. He warned the country that, even though the Government is against unemployment, it might develop unless those concerned are prepared to practice self-restraint.

World *of* Business

General Insurance in the Perspective of Life Nationalisation

By A. C. GUHA RAY

IT is now common knowledge that by virtue of the nationalisation of life insurance, Government of India have assumed control over the investments of life fund. Business has not yet been nationalised; it cannot be so long as there are shareholders. Government of India have merely taken over, in the public interest, management of life insurance business. Ownership of liabilities and assets will vest when shareholders are compensated.

Ownership of assets and investments of life companies will mean a large inroad by the Government in the domain of private sector. Thus, quite a few general insurance companies, now in the private sector, will be owned by the Government. In again quite a few, Government will become a large shareholder. In composite offices with common ownership, vexatious scrutiny of ownership, assets and liabilities will have to be made. The disgruntled aggrieved party may even seek the protection of Courts.

These are significant issues. They have given rise to many speculations. It has been posed that as an escape from complexities of unintended ownership Government of India may take over general insurance business despite Sir C. D. Deshmukh's clear disavowal. Employees Federations and Unions for *reasons* best known to themselves are reported to be submitting memoranda to Government of India to take over general insurance. Their preference for Government ownership arises mainly from their political leanings. It is also based on the security arising from institutional employment. It is least based on understanding of the character of general insurance.

These many issues are apt to find favour and officials who little know general insurance may be carried too far. The confusion is creating uncertainty in the minds of insurers both Indian and Foreign. It is in public interest, therefore, that the confusion should be satisfactorily resolved.

The starting point for a study of this nature must be Sir Chintaman's broadcast where he is reported to have made the following significant statement:

"I would like also briefly to explain why we have decided not to bring the general insurance business into the public sector. The consideration which influenced us most is the basic fact that general insurance is part and parcel of the private sector of trade and industry and functions on a year-to-year basis. Errors of omission and commission in the conduct of its business do not directly affect the individual citizen." The emphasis of the Government of India in their many statements has always been the welfare of the individual. It is the basis of their socialistic leanings and it is the connotation they attach to the meaning of welfare state. In their policy of redistribution of wealth, they have seized upon life insurance which, to them, is more a social issue and a community service than a fiscal weapon. By their own professions they can possibly find ideological justification for taking over life insurance as concerning the common citizen. This justification is entirely absent in fire, marine and accident insurance which directly concern trade and industry and not the individual. It must be remembered that neither life nor general insurance figured in 1948 policy resolution. If despite that life insurance has been nationalised, the reason is that since 1948 the character of the State has undergone large changes. The ideological transformation does not affect general insurance. If ideological justification is the fulcrum of State policy there can be no basis for the view that general insurance is likely to be nationalised.

There is no demand from the trade and industry that Government of India should take over general insurance nor have any one of them ever expressed the view that in Government hands they will be better serviced. Nor is revenue any consideration for after discharging all liabilities the surplus that remains is hardly ten per cent.

International trade is a sensitive instrument. It functions effectively, despite its sensitive character, because it is securely cased in the fabric of insurance and reinsurance. If the confidence in the security of the casing is disturbed, the sensitive international trade will be unbalanced. There is no demand from people who operate international trade that its interests will be better served by insurance going in somebody else's hand.

In the absence of any demand from any quarter barring the reported preference of employees federations, and in the face of clear disavowal from the taker itself, there is hardly any scope to think that general insurance will be nationalised.

The positive issues which may force the hands of the Government of India to take over general insurance despite disavowal remain to be considered.

The first positive issue is, of course, political. Should the character of the Government of India so change that it becomes entirely acquisitive, there will be no escape for general insurance or indeed for any other major trade. This issue at the moment does not loom large. The mixed character of Indian economy is general insurance's first defence. There is hardly any fear that Government of India will be so aggressively acquisitive particularly in domains which do not concern the average citizen or which do not figure in 1948 policy declaration.

The second issue arises from Government control of some companies following nationalisation of life insurance. As stated earlier in a few of them Government become the owner and in a few others part owner. The ownership, it must not be overlooked, is unintended and purely accidental. It is indeed difficult and surely embarrassing to thrash out a policy in respect of many commodities you did not wish to have but which, you nevertheless, have. The answer to the problem is to be found in the fact that ownership has been foisted and that it was never the avowed objective to have the ownership. The primary issue with the Government of India is security of investments. So long as investments are secure and share fortunes of the business, the purpose of Government is served. It will be unwise for Government to assume any more obligations for many investments out of life funds. Their role should be like a banker who makes many advances but yet does not control and regulate the trade on which advance plays an important part.

Unintended ownership or holding of a large block of shares of general insurance company does not clothe the ownership with social value. Ownership of general insurance business is not socially necessary nor is general insurance a community service in the way Government of India seem to interpret the content of life insurance. Therefore, if Government of India's pronouncements are valued in the way they can be valued, this ownership is entirely unnecessary. The correct course for the Government of India would thus seem to be in the way of offering the shares that have unexpectedly come to them to the existing holders both in respect of part and full ownership. For that market value of shares will be a reasonable starting point.

Nationalisation of life sector of insurance has made insurance shareholders so jittery and shaky that the proposed step, though theoretically justifiable may not be feasible in practice. There is hardly any market now for insurance shares from the investing public although there may be some support for the view that existing shareholders may take, at a price to be agreed, the holdings of the Government of India. This should be publicly offered and in the event of there being no material response to such gesture there will be justification for Government to remain owner of a few companies and shareholder in some. This may mark the beginning of state trading in general insurance and that constitutes for private sector in general insurance a real danger.

After amplifying that nationalisation of life insurance is "socially necessary", Sir Chintaman went on to say in one of his many statements in Lok Sabha that Government did not intend to give up the general insurance concerns they would gain control of as subsidiaries to life insurance companies. This he stated would give them experience in the line. In referring the Life Insurance Corporation Bill to Select Committee, the Finance Minister said that he had no doubt that once the Corporation got into its stride, "it would cast its eye on any other form of insurance which could be taken over". He added "But I do not wish to threaten and I do not wish to prognosticate. It will be for the Corporation to find out what its strength is and what its capacity to bear other kinds of business".

These are significant statements. It seems that Government of India despite their emphasis on social content of insurance as the ground of nationalisation are casting eyes on other sectors although not "socially necessary". Nor is it proper to trade in general insurance in three companies without first offering the shares publicly to existing shareholders of the investing public. There is an element of inconsistency in the present move of the Government of India, which for their own sake, requires to be resolved. "General insurance is part and parcel of the private sector of trade and industry", said the Finance Minister in his broadcast, and that influenced him, he said, not to take over general insurance in public sector. It does not seem logical to state trade or to encroach upon the domain of private sector and to gain "experience" when professionally the Government do not want to nationalise. It is not dignified for Sir C. D. Deshmukh that his profession and practice should differ.

Malpractice is the next positive issue which may force the Government to embark on a course of taking over general insurance business. Sir Chintaman, according to a press report, warned general insurance companies that the Government were aware of malpractices among them and may re-examine the question of nationalisation if they did not improve. This is, however, a new issue and may, in some ways, be brought under the purview of social necessity. This has been argued threadbare in the past and it is now not necessary again to cover the past ground. Suffice it to know that machinery to enforce good practice is being continually tightened, so that the

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THE difference between a mere politician and a genuine statesman is no journalist invention of our age. Other eras in history (18th century England, for instance) have had their measure of rabble-rousing careerists with their eye on the main chance. But what makes this difference so very much more important in our times is the almost endless opportunity for perversion of democratic values provided by engines of mass suggestion that have been the bane of our times. Any plausible adventurer like Hitler or Peron can bring into being the most abject kind of slavery by systematically undermining liberal values even while being loudest in professions of concern for the people. Less spectacularly, exigencies of the power game may drive many a practitioner of this invidious sport to things that would make MCC frown with displeasure. It takes a real statesman to see steadily the fundamental moral basis of all democratic values and never to allow temporary expediency to cloud his vision of the basic values.

*

These reflections are occasioned by a re-reading of Mr Nehru's "intervention" in the debate on Defence estimates last week. At the time he spoke, there existed in the country a set of circumstances that could almost be said to have contributed laboratory conditions for finding out whether he was a statesman of the highest calibre or a mere political parvenu. It is well known that the ruling party is not exactly at the peak of its popularity at the moment. Deep-seated passions aroused over the States Re-organisation proposals sponsored by it have made it the target of criticism from almost all quarters. In the Parliament itself, there was the furore over the budget leakages and, though the matter was talked out, minor rumblings were still to be heard among the Opposition. The whole country, like Mr Nehru, had been deeply exercised by a series of border incidents which Pakistani army units have been precipitating during the last few weeks. There has also been widespread resentment throughout the country at the uncalled for interference of the SEATO in the Indo-Pakistan dispute over Kashmir.

*

If Mr Nehru were a mere politician in search of temporary shelter from political rough weather, here was a splendid haven. All he needed to do was to indulge in an intemperate attack on Pakistan and play up the undoubted anxiety over recent goings on in the border and the involvement of big powers in Indo-Pakistani disputes.

*

This sort of escapism is the classical ruse of all hard-pressed politicians. Pakistani leaders repeatedly set an example in this matter. Every time they were in the throes of an economic or political crisis. Pakistani leadership and the press used to work themselves up into a state of synthetic frenzy over the wickedness of Bharat. If Mr Nehru had chosen to follow their example, he could have easily played up the border incidents as a 'great affront' to our sovereignty and diverted popular feeling, now dissipating itself over States Re-organisation squabbles, into channels that would, to say the least, be less embarrassing to him.

*

But Mr Nehru austerely refused to be seduced by any such temporary advantage. For, firstly, he believes that each issue, whetever the inconveniences, must be decided on its own merits; secondly, such conscious manipulation to personal advantage of political emotion is absolutely foreign to his nature. Many in the country were perhaps disappointed at his moderation toward Pakistani provocaton: there were others who thought him unduly complacent over the real meaning of the border incidents which he dismissed as the pranks of trigger-happy soldiers. But no serious student of affairs can fail to be grateful to the providence that has given us a Prime Minister with such a fine sense of relative importance of events.

*

It was not only in his having a sense of proportion over the border incidents that Mr Nehru showed his political sanity; his answer to the more substantial question of what should be done on our side for defence purposes in the face of constant Pakistani provocation from "positions of strength" recently acquired by it was equally informed by political maturity. He resolutely drew the attention of the country back to fundamental tasks instead of taking the line of least resistance in following (or directing) the popular feeling in dangerous anti-Pakistani channels. He posed the real problem in its restricted as well as in its broader terms.

*

In the restricted military sense, he pointed out the comparative futility of an arms race with Pakistan into which, he rightly said, he had not the slightest intention of entering. It is true, he said that the defence of India has been very much affected by the military aid given to Pakistan by a "great country". But the problem of keeping pace with developments in defence technology was extremely complicated. Apart from the obsolescence of much of conventional arms because of nuclear arms, unless you develop your own industrial strength, you are all the time at the mercy of others who were more technologically advanced. In other words, you can have only the kind of defensive strength that your own economy can support, and therefore, even from the narrowest military point of view, it is essential that the economic development of the country, especially its heavy industry base, should come first in the list of priorities.

*

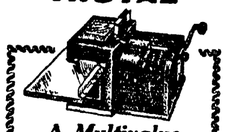
All this, of course, is the merest commonplace, but there is a general tendency to suppose that all we need is to fill our garrisons with arms bought elsewhere, preferably from Russia, since Pakistan gets its supply from America. The naivete of the suggestion is breath-taking.

*

In its broader terms, the problem is the familiar one of a choice between butter and guns. Given the choice, there is no doubt what all right-thinkng men will choose. But the choice is not so automatic, since internal conditions make it necessary to balance various factors before making your choice. Even so, there can be little doubt that, in the long run, butter is infinitely better than guns. Normaly, economic development should, even when there are external factors pressing you to devote your attention to defence, get preference in any valid scheme of priorities.

*

As was argued earlier, this is so even from the military point of view since every country has the kind of technical defence its economy deserves. But, in a larger sense, it is the spirit of the people, the will to survive as a nation, that really determines the real strength of any people. If that will is not there, no amount of arms can save us. So, even in the larger interests of the giving the people a stake in the country, and a focus of patriotism, it is necessary that our economy is rapidly developed. That is the meaning of Mr Nehru's somewhat cryptic statement that the Five Year Plan is the defence plan of the country.



*

All this, of course, does not mean that the immediate defence needs of the country should await the complete fruition of our development plans. However rapidly you industrialise, there is a limit determined by the ability of the people

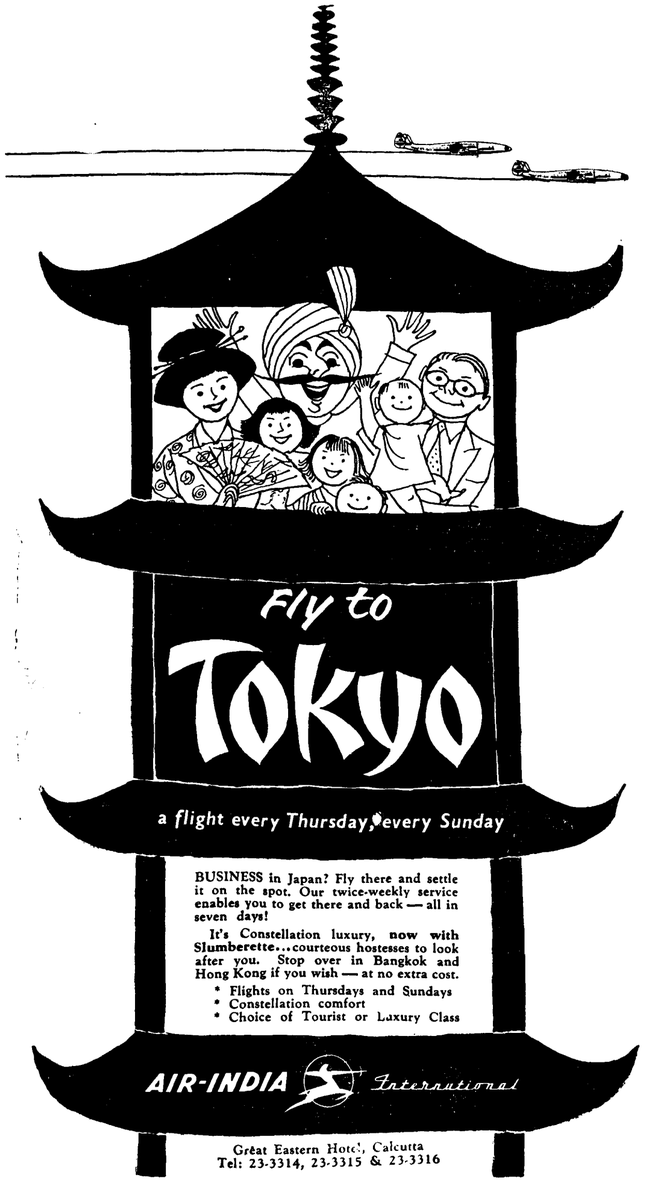
to carry the burden of present denial beyond which it is not possible for even a totalitarian country to go. In a country like India, where everything has to be achieved by consent freely given by the people, and where so much is already denied them, the elasticity of self denial is even less. Thus development, especially of the heavy industrial base, is bound to take time and you may be ready, say, in ten years' time to support a modest defence programme. But, meantime, you may not be left alone, and this is what present the real dilemma.

✱

How to balance immediate security against the need for a real lasting security based on the inherent strength of one's own economy is a question that is not easily answered, especially by a practising politician. In a sense, these difficulties are to be found in the economies of even developed countries where, owing to other factors, the economy is obliged to support a defence expenditure that is pitifully inadequate to the needs postulated and, at the same time, constitutes a heavy drain on the real resources of the country. Our problem is complicated by the further fact that our economy is comparatively undeveloped.

✱

The choice is not easy. But, subject to unforeseen emergencies that might arise in the near future, Mr Nehru does not appear to have any present intention of diverting the resources of the Second Five-Year Plan toward the unproductive channels of defence. The successful pursuit of this policy depends entirely on Pakistan's good sense and the ability of its friends in the SEATO, especially America and Great Britain, to keep a steadying hand. Pakistan, by all indications, is about to embark on an intense diplomatic offensive to force the issue of Kashmir. It is reported that it is getting the Baghdad Pact nations to discuss the Kashmir issue. There is also the series of border incidents which have been so far nothing more serious than a mere nuisance.



✱

Whether it will remain so is to be seen. It is to be hoped very much that Mr Dulles is able to persuade Pakistan to follow a policy that makes good his assertion that India's fears are imaginary. None would be happier to have been proved so wrong in his premonitions that Mr Nehru himself, not only because he is a gentleman who likes to confess that he is wrong when proved to be so, but because that is precisely what he desires. The fact that he is not at present contemplating any diversion of the Second Plan's funds toward greater expenditure on defence shows that he has taken Mr Dulles's assurances at their face value. It is up to Mr Dulles and Pakistan to justify this faith.

✱

In the thirty odd years that I have wielded a pen, I have been largely content to use a pseudonym with which to clothe myself with a, as it were, semi-anonymity. Wherever possible, I have avoided the so called signed article. I ought to explain to the reader that the motivation for this action did not spring from any desire to shrink the responsibility for the views I have expressed. On the contrary, there are few in Clive Street who are not aware of Eavesdropper's identy. But, essentially, a column such as Clive Street and a journal such as Indian Finance can neither of them properly utilise a signed article. Moreover, it seems to me that the thinking aloud which I have indulged in in this column, subject as it has been to changes in mood, was the better for having been written by one who, simply, could call himself "Eavesdropper". Strangely, I have not felt tempted in all these years to achieve the eminence, if you want to call it that, of one who has a book to his name. After all these years, I must confess that this right to be called author has been thrust upon me. How this came about, might be of some interest to those who have followed Eavesdropper through the years. It began innocently enough with the passing by Parliament of what was then the new Companies Bill. The more time I spent in leafing through it, the more I was struck by the awesome difficulties that its interpretation would pose for those who would have to fall in line with the new law. An old friend, esteemed in company circles, dropped in to see me about that time. When I expressed my fear that grave complications would be

Bombay Review

The Fruition of a Prophecy

INDO-BRITISH relations are discussed, especially in New Delhi, almost always in political terms. While this is perhaps inevitable, it may be well to remind ourselves once in a way that even before the political links between the two countries were forged, Englishmen came to this country as traders and that, today, despite special political bonds that bind us, there is a general desire on both sides to re-establish firmly the earlier relationship to the mutual advantage of both.

Faith confirmation of this desire was available in Bombay during the last fortnight. First of the confirmatory indications was, appropriately enough, given by Admiral Mountbatten, in his reply to the civic reception held in his honour in the Kamala Nehru Park here. In a remarkable speech, Lord Mountbatten re-established this historical nexus between current opportunities and the earliest period of Indo-British relations. He quoted the entry for 17th May 1818 in the private journal of the Marquis of Hastings, the then Governor General of India, which was to the following effect: 'A time, not very remote, will arrive when England will, on sound principles of policy wish to relinquish her domination which she has gradually and unintentionally assumed over the country and from which she cannot at present recede. In that hour, it would be the proudest boast and most delightful reflection that she had used her sovereignity towards the enlightenment of her temporary subjects so as to enable the native communities to walk alone in the paths of justice and to maintain with probity towards her benefactress that commercial intercourse in which we should then find a solid interest'.

Though this interesting thought is dripping with the kind of sole righteous unction that no Anglo-Saxon is free from when discussing politics, it is a remarkable piece of prescience. Certainly, it showed greater sense of history than the more recent Churchillian refusal to assist at the obsequies of the Empire. As Lord Mountbatten pointed out, there has always been a section of the British ruling class which has seen this completion of the circle as inevitable. The transfer power 'was no new sudden thought but a logical conclusion' to the views expressed by one of the earliest Governors-General.

This restoration of the original relationship but without the exploitational nexus associated with the earlier period is a task that must be dear to the hearts of all those who would like to see the firm establishment of friendly relations between the two countries. As a person who, more than any other Englishman, deserves this description, Lord Mountbatten has assured us that he would do whatever was in his power to promote such a consummation. He also indicated that the British Government shared his view.

Quoting the now familiar figures given by the Reserve Bank of India about the break up of foreign investments in India between 1947 and 1953, he pointed out the familiar fact that the United Kingdom was the largest single investor from abroad and an investor in diversified fields. This is not surprising because of historical reasons; but new enterprises, mostly under joint auspices like the Durgapur Steel plant, the electrical equipment factory in association with the Associated Electricals and the proposed expansion by the ICI Ltd., are further examples of post independent co-operation between the two countries. These latter could be said to be truly representative of enterprises that are motivated by a new outlook which is also as old as Indo-British relations.

Indications of anxiety to associate themselves with India's development plans came also from British business interests in the city represented by the Bombay Chamber of Commerce. At the annual general meeting of the Chamber, Mr Milne said certain things that were refreshingly free from cant. He indicated clearly that the new situation and opportunities in India today called for a radical change of attitude on the part of every one. Doctrinaire prejudices, including prejudices in favour of 'the outdated Laissez-faire economic beliefs' should, he said, be abandoned without a tear. He pleaded for adaptability and flexibility and deprecated all talks of sectors, even when they were qualified somewhat hypocritically as 'complementary'.

Refreshingly different from most speakers on such occasions, Mr Milne declared: 'Whatever is felt about the merits of the division of industrial activity established under the Plan, there can be no doubt of the wealth of opportunity for private business expansion that will be offered in progressively wider measure and over expansive fields'. It is true that he qualifies this by a proviso. But the very recognition that the Plan does afford significant opportunities for private enterprise is so hard to come by from private business circles, who are obsessed by the nightmare of the 'socialist pattern of society' that when one hears a businessman avow it, it comes as a breath of fresh air.

Secondly, the proviso is unexceptionable in that it requires of the Government nothing more than the logical corollary of saddling private business interest with a wealth of opportunities and therefore with the corresponding responsibilities: that corollary is, in Mr Milne's words, 'the recognition without reservation that private enterprise is thoroughly equipped to develop these opportunities.'

Mr Sinclair, the incoming president of the Chamber, was even more forthright in the ability of the private sector to deliver the goods. He interestingly suggested that the planners' imagination flagged when they fixed a target of only a hundred crores of private foreign investment, for, he was convinced that 'given a proper place for free enterprise, a minimum of encouragement, and a blunting of the sharper disincentives, our friends and associates overseas would consider it a privilege to be allowed to assist, to a far more substantial extent on terms honourable and rewarding to both sides in the vast and stimulating task that lies before us all.

Mr Sinclair did not specify what the sharper disincentives were; but, if he is referring to loose talk about the socialistic pattern and the vague fear of nationalisation of almost everything, he ought to know better than any one else that the present Government have no doctrinaire affiliations of any sort to these panaceas. In fact, their notions on the subject are far more flexible than that of the Labour Party in England, who are committed to nationalise the Steel industry the moment they are back in power—a contingency much less remote than, say, a Communist Government at the Centre here.

If he is referring to taxation, I think there, if anywhere, is a case of raising a false trail, which, incidentally, the Chief Minister of Bombay, who presided on the occasion was only too ready to pursue. It can hardly have escaped the notice of anyone that there are few countries which offer such vast incentives for creating new enterprise as India, by its liberal depreciation allowances and development rebates. It will be a safe assumption that new industrial enterprises in India today would not be paying income-tax for at least some ten years to come and that, not because they will not be making any profit, but because the various allowances will dig deep into the profits actually made. It is not as though the benefit is not passed on to the shareholder. As for new technicians and experts from abroad, liberal provisions have been made in the income-tax act for exemption.

The Government of India are willing to look at the special problems connected with foreign interests in India. When the Fourth Amendment to the Constitution was discussed in Parliament, the Prime Minister made it a point of honour that we should not expropriate foreign interests without proper compensation. More recently, concessions to foreign insurance companies in the matter of transfer of certain of their policies and the relative resources and compensation clearly show that Government have no desire, both on grounds of equity and expediency, to do anything that would make anyone feel that India is not a suitable place to invest one's savings or to make available one's fund of technical skill. All in all, nothing need stand in the way of the fulfilment of Lord Hastings' desire, voiced, nearly a hundred and fifty years ago, that India and Great Britain should find in the field of commerce and industry a basis for a relationship that would be honourable to both.

Air Fares and Freight Rates

Proper co-ordination between the different systems of transport, road, rail and air, presupposes, to some extent, the progressive elimination of the disparity in fares and freight rates which now exists between them. Obviously, this can be done only within limits. But such should be the main endeavour of the Air Transport Council, which is assigned the task of studying the general problem of fares and freights to be charged by air services operated by the Indian Airlines Corporation. The composition of the nine-man Council leaves one thing to be desired, namely a greater non-official representation of the travelling public.

In the past, the high fares and freight rates caused concern, if at all they did, only to the few who took to air. But now the position has changed and the pressure on the airlines is increasing. The Indian Merchants' Chamber have addressed themselves to the problem of reorienting the pattern of air charges, admirably in their memorandum to the Air Transport Council.

The twin consideration that should guide the formulation of a policy in this regard are the need for running air services on a commercial basis, without deviating from the canons of sound business and, secondly, encouragement to the public to resort to air travel to a greater degree. The Chamber goes on to suggest a classification of air services into two categories, fixing a differential basis of service rates for the two types. Firstly, there should be a de luxe service made of the finest equipments possible, for which fares have to be fixed at a higher rate. A more austere nature is prescribed for the other service which would carry not only passengers but could also provide mail-cum-freight service.

When the tendency on the railways is toward abolition of class, the Chamber's suggestion might look retrograde. But, there is a difference, in that what is here pleaded for is a separate service, to subserve a distinct need. The innovation is also likely to influence the spread of tourism.

The growth of air transport would also call for feeder services linking up towns and cities with centres like Delhi, Calcutta, Bombay and Madras. The institution of an airline user's consultative committee and the injection of commercial experience into IAC's Board of Directors are two factors that help. The fact that the IAC still works at a serious loss reinforces the last-named suggestion.

*

New Land Act

The Bombay Tenancy and Agricultural Lands (Amendment) Act 1955, as published last week in the Gazette, is expected shortly to come into force. The Act may rightly be claimed to have taken the first correct step in the realm of agrarian reform. The most important provision may be nutshelled as that no tenancy is liable to be terminated merely by efflux of time.

Rents payable in cash are to be fixed by the 'mamlatdar' of each village or group of villages. An important responsibility is, however, transferred to the tenant, who will have to pay land revenue, local fund cess and irrigation cess. But this provision has a corollary that, if in any year, the aggregate of the rent, land revenue and local fund cess exceeds the cash value of one sixth of the produce for the year, the excess can be deducted by the tenant from the rent.

Before any tenancy can be terminated on such grounds as specified in the Act, the landlord must give a three months' notice intimating his decision as also the reasons for it. The tenant will have the opportunity to remedy the breach for which the tenancy is sought to be terminated, within the period of notice, in which case, the Tenancy will not be terminable.

Again, the power of eviction of the landlord is limited by the provision that the land was required by him for bonafide personal cultivation or for non-agricultural use.

The tenant can purchase the site on which he or his predecessor in title has built a dwelling house and in case the landlord fails to accept his written offer to that effect, within three months, the tenant can get a reasonable price fixed by the Tribunal.

Sub-letting or subdivision of land as also the assigment of any interest held by a tenant in land is prohibited as a rule but certain exceptions are provided for.

Now that the protection of tenant rights is achieved in main the logical next step should be the fixation of ceilings on agricultural land, a step that will have to be taken sooner rather than later.

*

Mr Milne Speaks Out

For many months, one has not heard the 'case' of the private sector argued with such distinction as when Mr K. G. Milne, the outgoing President of the Bombay Chamber of Commerce called upon the Government to show sympathy, understanding and confidence in the much-assailed private enterprise. His approach was not one of comparing the relative merits of the two sectors of industry, but, on the other hand, he viewed them as inextricably connected parts of the same structure. Nor was he very much perturbed over the sectorial division of industrial activity in the Second Plan. Whatever the dividing line be, there is bound to be a wealth of opportunity for private business expansion affered in progressively wider measure and over expansive fields. But this is conditional on governmental recognition, without reservation, that private enterprise is thoroughly well-equipped to develop these opportunities. It should be allowed the chance to respond, hand in hand, never in conflict with Government and its complementary public sector.

It is essential that whatever suspicion and disapprobation over malpractices in the private sector should not be allowed to be exaggerated. Private sector is the larger sector and must always remain so 'unless a totalitarian State is to be created'.

"There are very many businessmen in India whose standards of integrity challenge the best anywhere in the world." said, Mr Milne. "It is not surprising that the feelings of those associated with these organisations should be wounded by attacks which they regard as entirely excessive, and that they foresee with anxiety that such attitudes, whilst imposing growing burdens upon organised commerce and industry, are placing a premium upon individual dishonesty."

The President-elect, Mr J. F. Sinclair pleaded that the special skills of foreign businessmen should be equally respected and sympathetically directed to the attainment of common objectives.

The address of Chief Minister Moranji Desai has served an useful purpose in having unambiguously clarified matters. In taxation and other policies, there will not be any discrimination between Indians and now-Indians. A fair treatment to all is to be the guiding principle.

*

Electric Supply Plan

The programme drawn up by the Bombay Electricity Board for the Second Plan has been heavily clipped by Planning Commission's financial revisions. Against the original request for Rs 43 crores, only Rs 14 Crores has been sanctioned. This apart, the Board is currently unable to cover up the expenses and is running in a loss of about Rs 22 lakhs. Unremunerative schemes like rural electrification, diesel nurseries, etc. provide the explanation, but the absence of other compensatory revenues or aid poses a serious problem which, if unsolved, is likely to aggravate the danger of a prospective power shortage in Industrial Bombay.

In the next Plan, the Board will be able to supply additional power of 90,000 Kw to the State, bringing the total power supply distributed, excluding Bombay City, to 210,000 Kw. As against 140 villages covered in the First Plan, the next Plan envisages to electrify a further 500 villages.

At present, Bombay City is receiving 3,36,000 Kw from the Tata Hydro-Electric Grid. By 1960, the Bhira Power House is expected to be commissioned and then greater Bombay would receive 50 per cent more power.

The Board has sanctioned the extension of the Tata Grid to Bhira Power House, by installing one turbo-generator of 60.000 Kw at the power house. The project would cost the Tatas about Rs 5.95 crores. The speedy electrification of the central Railway area up to Bhusawal will thus be ensured.

Last, week, the Board entered into an agreement with a Czech Firm to establish three thermo-generation centres at Utran, near Surat, so as to enable regions in South and North Gujarat to be covered. The extension of supply lines from Koyna will look after the growing needs of industries in Maharashtra.

Delhi Review

Olympus

Mr Nehru Reviews Foreign Affairs

REPORTING to the Parliament on his talks with the Big Three Foreign Ministers who visited New Delhi recently, Mr Nehru passed in comprehensive review recent events in the international scene. As usual, he covered a wide ground, from matters of immediate concern to us to possible changes in Soviet policy evidenced by the proceedings of the Twentieth Congress of the Communist Party. Inevitably, the SEATO Conference in Karachi and its wholly gratuitous involvement in the Kashmir dispute came in for sharp and pertinent criticism in his hands'. He also dealt, almost on the spur of the moment, with certain suggestions made by the Pakistan Prime Minister the previous day in the Pakistan Parliament regarding a joint declaration by India and Pakistan abjuring solemnly war as a method of settling their disputes. For the rest, his statement was a reiteration of our well known views on military alliances, cold war belligerence, and trouble spots in South Asia, the Middle East and Africa.

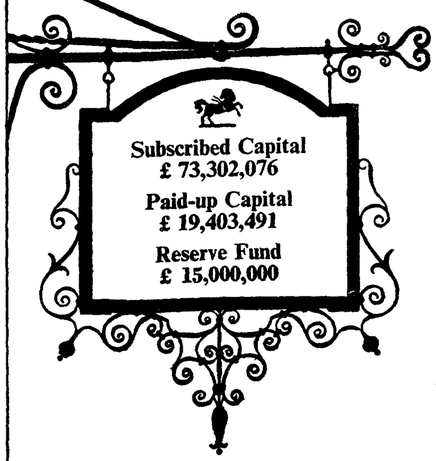
Mr Nehru recalled that the occasion that brought these foreign ministers to this part of the world was the meeting of the SEATO Council in Karachi. He referred to their 'offending statement' which confirmed our worst apprhension about these so called defensive arrangements. He expressed his 'regret' that three Commonwealth countries should have persuaded themselves to be parties to an action that offended every principe of diplomatic conduct. Pointing out that the avowed purpose of the SEATO is to increase the defensive strength of the parties to the treaty against external aggression and internal subversion, he asked how discussion of Kashmir could be fitted in with such an object. Does this imply that the SEATO considers that India is an aggressor? It is a suggestion which is so ridiculous in this, as indeed in any other, instance as to be laughed out of hand. In any case, as Mr Owen Dixon pointed out long ago, the boot is on the other leg, though Mr Dulles pretends not to have heard of it.

In this connection Mr Nehru referred to the frank discussion with Mr Dulles on the subject of US military aid to Pakistan. He told the American Secretary of State how the atmosphere in Pakistan was one of 'menaces and threats towards India', how the Pakistani Press were continually using warlike expression against India he also told him of the increase in the number of border incidents in recent weeks, whose frequency and dispersal over a wide area made them more than usually significant. Whatever the American intention in giving arms aid to Pakistan, it is clear that Pakistan herself welcomes this acquisition of strength as a means of settling her disputes with India from, 'Positions of Strength', a phrase and concept clear to Mr Dulles himself in other contexts.

Mr Nehru aso reported that he discussed with Mr Dulles the whole question of military pacts, especially in their relation to the South East Asian region. He pointed out that it was regrettable that at a time when the nations of this region should be bending their energies to the tasks of development, a new factor making for tension and instability should be introduced in these region by the creation of military alliances.

From Mr Dulles statements immediately after his talks with Mr Nehru and his subsequent pronouncements in Colombo, it was clear that a deep dent had been made in his probably unexamined assumptions that India was merely magnifying the difficulties caused by the American supply of arms to Pakistan. Mr Dulles also must have been impressed by the fact that the entire nation is solidly behind the Prime Minister in this as in almost every other aspect of the present Government's foreign policy.

Discussion of the SEATO must naturally have led to the discussion of other regional pacts on which also Mr Nehru had a great deal to say to Mr Dulles. He referred to the increased instability in the Middle East region brought about by the Baghdad Pact and said that these pacts defeated the very purpose they sought to promote by sowing the seeds of discord in the regions concerned, by increasing mutual suspicion and setting in motion a competitive arms race. He also pointed out to the hypocricy of talking about disarmament and at the same time forming military alliances and referred to such actions as 'a mockery of avowed purposes' and pleaded for their abandonment in favour of the Pancha Shila.



Mr Nehru also referred to the nuclear stalemate which has made nonsense of the 'logic of the cold war'. How far Mr Dulles went away convinced of the validity of these arguments is difficult to say, but it is undeniable that he would have taken with him a better appreciation of the motives of uncommitted Asian leadership now that he has had the advantage of frank discussion with Mr Nehru. This would be a gain in itself for Mr Dulles would be able to convince that powerful section of his countrymen who always make the irritating assumption that those who do not agree with them are either knaves or communist dupes.

Mr Nehru reported that he discussed Goa also with Mr Dulles. Mr Nehru placed on the table of the house the correspondence between the Government of India and the Government of the United States on the notorious Dulles-Cunha declaration. This correspondence has made it clear that the United States Government was hard put to it to justify what is now acknowledged on all hands as an act of indiscretion on the part of its Secretary of State and that it has merely taken shelter under the plea that they were not pronouncing on the merits of the case at all and merely using, for the sake of convenience, the Portuguese description of the status of Goa. Mr Dulles has repeated these assurance to Mr Nehru and there the matter stands as far as the policy of the present government of the US is concerned. As far as the Government of India is concerned, Mr Nehru reiterated the view that there can be no compromise on the question and hoped that friendly countries would impress upon Portugal the anachronism of her claims to Goa.

Mr Nehru's appraisal of the changes likely to folow the ferment of idea currently taking place in Russia is that it foreshadows a more realistic appreciation of the present world situation and that it represents a significant process of adaptation and readjustment. One wonders whether Mr Nehru's own visit to Russia last June and the subsequent visit to India and other

Defence Needs

The lead which Mr Nehru gave to the Defence Debate in the Lok Sabha was admirable. He gave the quietus to those inclined to make blustering speeches. He emphasised that the needs of the immediate future have to be reconciled with the demands of long-term economic prosperity. His evaluation of defence as being made up of the defence forces plus the industrial and technological background and the economy of the country and the spirit of the people could have hardly been more thoughtfully expressed.

In the production of conventional weapons, India's ordnance factories are self-sufficient, according to Dr Katju. But modernisation of all the three defences is, admittedly, a necessity. Earl Mountbatten only last week cautioned against their hasty integration. Each has to proceed on its own lines. The creation of a second line of defence is equally important and the response to the National Cadet Corps, the Territorial Army and the National Volunteer Force may be considered good. In the development of civil air and naval services, as well as in the expansion of heavy industries, defence requirements should be prominently kept in view.

It seems little purpose will be served by merely increasing the production targets of arms and ammunition, for, war technology is changing faster than perhaps any other science. Our defence forces should be made to acquaint themselves with and imbibe the latest in warfare. The need for a far more efficient intelligence service was rightly stressed in Parliament.

Defence already absorbs the largest single slice in the Union budget. It is very unlikely that this will be pruned in the foreseeable future. We have to attune this heavy spending, as far as possible, with our planned development. The quality and morale of the defence personnel are good, on reliable authority. But the amenities and facilities given the bulk of the armed forces seem to have scope for improvement. This is an aspect that should not be overlooked while planning defence.

✱

Cautious expansion of Sugar Industry

While the sugar industry can derive just satisfaction from its performance in the First Plan, a like bid in the next five years is fraught with serous problems. Sugar production is targeted to increase from 1.7 million tons to 2.5 million tons a year by the end of the Second Plan and few will question the wisdom of fixing this scale of expansion. As many as 52 new licenses have been issued to establish factories with a total installed capacity of 810,000 tons. The Indian Sugar Mills Association has called upon the Government, at its annual meeting here last week, to reassess the present overall capacity of the sugar industry, so as to avoid indiscriminate and unplanned expansion. With the licensing of new units in deficit areas outside UP, it is feared that the industry in that State might face a crisis.

The question of promoting sugar exports was very much in the discussions at the annual meeting. The Union Food Minister, Mr A. P. Jain, however, refused to be enthused. In the present circumstance, any export from India at world prices would mean the raising of the price of sugar for internal consumption so as to reimburse the price concessions given for export. Thus, the only way of entering the export market is to reduce the cost of production. Irrigation and manuring facilities, which are made accessible on an increasing scale, might bring about an improvement in the quality of sugar-cane. An allied question, which is yet to be satisfactorily settled, is that of pricing sugarcane on the basis of quality.

Arising out of the prevailing system of zoning and reservation of sugar cane for factories in UP, there is currently some hesitation in purchasing sugarcane from co-operative societies. This year a large number of factories in Western UP has refused to enter into contracts with these societies, presumably thinking that they would be in a position to buy at a lower rate based on sugar recovery, after a certain date. This attitude, which, without question, goes against broad policies already laid down, seems totally unjustified. It can only be hoped that wiser counsels will prevail and current discussions will bear fruit.

The question of imposing ceilings on sugar cane farms seems premature to be taken up now. A disturbance in the pattern of farm-structure is likey to impair cane production.

That the country will shortly become self-sufficient in most of sugar machinery, is a hopeful factor.

SOUTH INDIAN NOTES

Irrigation reaches limits ?

As much as 48 per cent of the Second Plan outlay in the public sector will be absorbed by industrial and mineral development together with transport and communication. The percentage of expenditure on social services is not sought to be increased. This pattern is roughly reflected in the Madras State Plan which, after allowing for additional allotments likely to be made for urban water supply, housing, labour welfare, etc., may tentatively, be expected to be of the order of about Rs 190 crores. The State's share of the all-India provision of Rs 200 crores for village and small-scale industries in accordance with the recommendations of the Karve Committee, is expected to be Rs 26 crores.

In spite of the considerable reduction of the original State Plan outlay, it is claimed that production targets would compare favourably with the all-India figures. But one exception, which stands out, is in respect of major industries. This is explained by the fact that there is little scope for further extension of irrigation under river projects in the State. This assumes a disturbing implication, considering that pressure on land has reached a limit and rural unemployment shows no sign of easing. If the Planning Commission have envisaged any special measure to meet the situation, it is known not even to the State Government.

Outside the lignite project, there is no proposal to develop industries on any appreciable scale. The National Development Council has decided that whenever there is room for choice, the location of new industries should be dictated by the need for securing a balanced economy in different parts of the country. In spite of many representations for the establishment of a heavy electrical factory, among others, in the State, such prospects seem more and more to fade out.

While information regarding the State Plan has been trickling in, bit by bit, for sometime now, an authoritative statement giving the amounts actually agreed to by the Planning Commission under the various heads, is not yet available. The absence of such information considerably handicapped last week's discussion of the Plan in the State Assembly.

✱

Legislation in the Making

Far-reaching labour legislation will be introduced in the State Assembly, in all probability, during the ensuing financial year. Compulsory recognition of a single trade union in each industry is one of the measures which has the explict and unanimous support of the Labour Advisory Committee. Events in the past few months have unmistakably shown that rivalry between more than one union is the bane of sound trade unionism, that it fritters away labour's power of collective bargaining and that it leads to 'blackmailing, muddling and politics'.

The interests of labour in general are consistent with the primacy of the objective of higher productivity. The Madras Labour Minister referred to the recent illegal strike in the T. I. Cycles Factory and regretted that labour should have succumbed to unscrupulous leadership.

Forthcoming legislation would also seek to regulate the conditions of workers in hotels, restaurants and boarding houses. The Madras Shops and Establishments Act is proposed to be re-enacted in the light of the experience gained and along the lines indicated by the draft Bill circulated by the Central Government. Beedi workers will be another beneficiary whose working conditions are being currently investigated.

There were criticisms that Government was reticent in referring industrial disputes to adjudication. But neither in the textile mill dispute in Coimbatore nor regarding the agitation for bonus of plantation labour had Government shirked their responsibility to bring about a solution. All disputes need not invariably be referred to adjudication.

✱

Aid to Private Industry

The State policy to encourage small-scale private industry through loans, aids, servicing facilities, improved equipment, technical advice, factory accommodation, supply of machinery on hire-purchase system, etc, will take a significant step forward in 1956-57. Eighteen schemes anticipationg an expenditure of Rs 67 lakhs will come up for implementation during the year. These ing workshop, hand-made match factory, carpentry workshops, and footwear servicing centres.

Another Rs 52 lakhs goes to development of village industries. Two cottage-type metal factories costing Rs 12 lakhs, handicraft emporia at Bombay, Delhi and Callutta and handicraft production-cum-training centres are to be opened.

There is also a proposal to start five new industrial schools to meet the demand for skilled workers. It is to be hoped that these schools will function in close liaison with industrial establishments so that the number of trainees as also their training might be adapted to the needs of existing or prospective industries.

Madras Review

The Peninsula

Binnys Mills

THE distinction of being the premier city in the cotton textile industry belongs to Bombay or, perhaps, Ahmedabad. And if, in the few recent decades, the mills aspect of cloth making in the South has taken on an importance not only to equal but to exceed the traditional eminence of South India's hand woven products, people in the know will attribute the growth to the purchase of used machinery by Coimbatore interests. But, while this last fact is significant as indicating the peculiar circumstances which enabled a rapid increase in mills capacity, we must remember, firstly, that not a few of our units are long established and secondly, that some of the mills have, by dint of hard work and solicitous management, earned the just reputation of being among the best run Indian mills whose products measure up to the highest of Indian standards and quality.

All of which, as the South Indian reader will have been quick to gather, is by way of a preface to my remarks on the annual general meetings of the two Binnys mills. An important event in the corporate calendar of this part of the country is comprised in these meetings; and the proceedings are both important and lively, the one because they relate to highly esteemed companies, and the other because the Chairman's addresses are delivered, with authority and precision, by Mr R. E. Castell.

Shareholders of The Buckingham and Carnatic Co Ltd could quite have anticipated what Mr Castell had to say last week at the company's thirty-fifth annual general meeting: their portion has consistently been one which is described by the Chairman as "another successful trading year." Today, cotton textiles by no means suffer from surfeit of production; but, even if such had been the case, the Buckingham quality has always meant that production could be easily absorbed by demand.

As far as the last year is concerned, Mr Castell has reported "a useful increase in the production of yarn and cloth" which was enabled by "further progress made with the Company's rehabilitation programme and the continuing efforts to improve efficiency in all processes." There is also an implicit indication of prospects: "the very considerable transfer from Capital Works in Progress to Machinery account" are due "to completion of the New Weaving Shed, the Power House and the progress made in the Machinery Replacement Programme"; and we can safely infer that, by reason of the new plant and equipment thus installed, a commendably satisfactory level of earnings has been assured to the shareholder.

At this juncture, I should like to leave Madras for a quick visit to Bangalore; where, the next day, the seventy-third annual general meeting of the shareholders of The Bangalore Woollen, Cotton and Silk Mills Co Ltd was held. On this occasion, too, Mr Castell could refer pointedly to "the further progress" in the efforts to increase efficiency by "rehabilitation and replacement of machinery." But here, in spite of an increase in sales and production, the profit was a mite lower—the reason therefor being the woollen aspect of the company. The new cess and excise duties imposed in 1955 on woollen goods could not quite be covered by higher selling prices; and, in the result, "the working of the woollen section made a bigger subtraction than in the previous year from the profits earned by the other departments of the mills."

The construction of the "Cotswol" mill has been completed; and all of Bangalore Woollen's products found a ready market. In particular, the silk section "has made good progress" and its productive capacity has been increased. As textile units whose products are of high quality, the Binnys mills figure importantly as exporters. But competition in overseas markets is sterner; in spite of that, says Mr Castell, "your Company will make every effort to maintain, and if possible increase their exports, and they have reasonable hopes of success particularly as they can rely on good connections with many active and substantial constituents and representatives overseas."

It may be recalled that Bangalore Woollen had obtained sanction for the capitalisation of reserves, and that a meeting for the purpose of issuing bonus shares had been called. In the meanwhile, Sir Chintaman Deshmukh's Budget announced the tax on these issues. Bangalore Woollen have decided to defer action on the proposed bonus issue; and the Chairman has stated that it is in the interests of the Company "to delay matters until we are in a position more fully to understand the somewhat complicated provisions of the 1956 Finance Bill." Mr Castell's remarks at the extraordinary general meeting, which considered the bonus issue, reflect the difficult position in which a company like his is placed. (Note: "Watch-dog" will study this question in a subsequent week.—Ed).

I may tersely summarise the dilemma that a company with a large reserve faces. On the one hand, because of the substantial amount represented by undistributed profits, the rate of dividend is more often than not at a level that attracts and is affected by the new dividend tax. On the other hand, the desire to bring the paid up capital in line with the working capital employed has to take account of the tax to be paid on bonus issues. At present rates of dividend and bonus taxes, and on the basis of current dividend distributions, it has been calculated that, for Bangalore Woollen, capitalisation will effect savings only after a period of ten years. Should the bonus tax be changed in the 1957 budget, it may mean that the company will have an even higher liability than now applies. It is to be expected that decisions of a similar nature to defer bonus issues will be made in the next few weeks and months.

Returning to Madras, we might note that the hub of the speech made by Mr Castell centres round "a difference of opinion between Government and the Textile Industry both regarding the size of the demand for cloth in India during the period of the Second Five Year Plan, and regarding the methods by which this demand can best be met." Now, this controversy about the relative roles of cottage industry and organised industry in textiles production has been raging for a considerable time. While the attitude of authority is today flexible, in that it envisages, should the need arise, an expansion in mills' production to make good any shortfall in the hand sector, Mr Castell has drawn attention to a basic danger that lies in postponing expansion of mill capacity.

Present thinking indicates that, if necessary, the mills' sector could produce the requisite extra quantity by working a third shift. Mr Castell has urged, logically and with force, the unsuitableness of third shift working. At Madras he said, "in my view the increase which is desirable cannot be achieved substantially by the introduction of a third shift. Our own experience during the last war definitely showed that in all processes but particularly weaving, the third shift is severe on machinery, discomforting to labour and harmful to quality. The need for a change of policy is urgent not only because signs of a cloth shortage are already apparent, but also because as time goes on, the difficulty of planning and executing any expansion promptly is bound to increase."

And, on the same point, his remarks were even more pithy at Bangalore: "In my opinion third shift working could not offer a proper solution for meeting a cloth

(Continued on page 631)

SOUTH EASTERN RAILWAY

SALE OF

125 Condemned Wagons

WITH WHEEL SETS

The General Manager invites Tenders for the Sale of 125 condemned wagons with wheel sets stabled at ex-Military Siding, Salua, South Eastern Railway, Kharagpur.

Tender No. S4/S/3/1 in this connection is obtainable from the office of the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23 on production of Cash Receipt for Rs. 5/- from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta—23, by local firms and on remittance of Rs. 5/- by Money Order to the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta—23, by outside firms. The cost of Tender is not refundable.

The Wagons may be inspected on any working day before the closing date of the tender. The closing date and time of the Tenders is 12 Noon on 17th April, 1956.

General Manager,
SOUTH EASTERN RAILWAY

THE HIND BANK LIMITED

DIRECTORS' REPORT

To

The Shareholders of

THE HIND BANK LTD.

Gentlemen,

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1955.

	Rs.	A.	P.
The Profit and Loss Account after deduction of all working expenses shows a profit of	10,86,457	9	1
to which must be added the amount brought forward from previous account	1,12,820	6	9
Total Rs. ..	11,99,277	15	9
which the Directors have disposed of as follows:—			
Provision made for taxation	4,00,000	0	0
Amount transferred to Reserve Fund	2,50,000	0	0
Bonus to Staff	83,000	0	0
Balance	4,66,277	15	9
Total Rs. ..	11,99,277	15	9

Out of the balance of Rs. 4,66,277-15-9 the Directors recommend to the shareholders payment of Dividend at Rs. 3/- per share free of Income Tax which absorbs Rs. 3,00,000-0-0 leaving Rs. 1,66,277-15-9 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved have shown an all-round progress. Banks in general have had a good year in 1955 and your Directors are glad to report that your Bank also had its full share in the general improvement. The deposits show an increase of about 25% over last year and the profits have been marked up from Rs. 6.55 lacs in 1954 to Rs. 10.86 lacs in 1955. About 93% of the Bank's Investments are held in Government of India and State Government Bonds of which 87% mature within the next 9 years. The Bank's Investments in the Balance Sheet stand at below market value as at 31st December, 1955.

Due to general increase in business, the Head Office of your Bank was shifted on 4th July, 1955 to more spacious premises at 4, Brabourne Road, and we are glad to report that your Bank is now in an improved position to offer better service to its clientele.

During the year under review Mr. Surottam P. Hutheesing of Ahmedabad, at the request of your Board, joined the Board of Directors. You are requested to confirm his appointment on the Board as a Director.

Under the provisions of the Articles of Association of the Company Mr. B. L. Jalan, Mr. N. D. Bangur and Mr. N. L. Kanoria retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the shareholders at the last General Meeting, Messrs. K. N. Gutgutia & Co. and Messrs. Dalal & Shah retire, but offer themselves for re-appointment.

The Directors express their gratitude to the shareholders and the constituents for their support in the growth of the institution and also to the members of the Local Advisory Boards at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and branches.

For and on behalf of the Board of Directors,

K. P. GOENKA,
Chairman.

Dated, Calcutta, the 7th March, 1956.

Balance Sheet as at 31st December, 1955

CAPITAL AND LIABILITIES.	Rs.	A.	P.	Rs.	A.	P.
1. CAPITAL:

(This is not a Prospectus but only an Announcement of Prospectus. The Prospectus dated 17th March 1956 has been filed with the Registrar of Companies, Bombay, and a copy thereof can be inspected at the Registered Office of the Company on any working day during business hours. Copies of the Prospectus may be obtained from the Head Office and branch offices of the Bank of Baroda Limited mentioned below).

(Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them).

An application will be made to the Native Share and Stock Brokers' Association, Bombay, in due course for a quotation of the shares.

The subscription list will open on Saturday the 31st day of March 1956 and will close on Thursday the 12th day of April 1956, both days inclusive, or earlier as may be decided by the Directors, but not before the 6th day of April 1956.

POLYCHEM LIMITED

(Incorporated under the Indian Companies Act, 1913)

SHARE CAPITAL

AUTHORISED CAPITAL		
80,000	Redeemable 7½% (taxable) Cumulative First Preference Shares of Rs. 50/- each.	
80,000	Ordinary Shares of Rs. 50/- each	
1,40,000	Unclassified Shares of Rs. 50/- each	Rs. 1,50,00,000
ISSUED CAPITAL		
80,000	Redeemable 7½% (taxable) Cumulative First Prsference Shares of Rs. 50/- each ...	Rs. 40,00,000
80,000	Ordinary Shares of Rs. 50/ each	Rs. 40,00,000
		Rs. 80,00,000

There are no Founders' or Deferred shares nor any Debentures or Mortgages.

Out of the above issue the promoters Kilachand Devchand & Co. Ltd., the Directors of the Company and their friends including Dow Chemical Company of Midland in the State of Michigan, U.S.A. have agreed to subcribe for:

Ordinary Shares of the nominal value of Rs. 20,00,000-0-0 which will be alloted to them.

ISSUED TO THE PUBLIC

Preference Shares of the nominal value of Rs. 40,00,000-0-0

and

Ordinary Shares of the nominal value of Rs. 20,00,000-0-0

The whole of the issue to the public has been underwritten.

TERMS OF ISSUE

PREFERENCE SHARES

The Redeemable 7½ per cent (taxable) Cumulative First Preference Shares (hereinafter called the "Preference Shares") shall entitle the holders thereof to a fixed cumulative preferential dividend at the rate of 7½ per cent per annum (taxable) on the capital for the time being paid up thereon, and the right in the winding up to the payment of capital and arrears of dividend (if any), whether declared or not, up to the commencement of the winding up in priority to all other shares in the capital of the Company, but shall not confer any further right to participate in the profits or assets of the Company, nor confer any right to the offer or allotment of further shares whether issued by the Company or by the Directors.

The Company shall have the right after 15 years from the date of issue of the Preference Shares to redeem at par all the said Preference Shares or such of them, by drawing lots, as the Directors may from time to time decide, after giving six months' previous notice in writing in that behalf addressed to the holders of the Preference Shares so to be redeemed. All outstanding Preference Shares will be redeemed within 20 years from the date of issue.

The Preference Shares shall confer no right of voting at any General Meeting of the Company except,

(i) When resolutions are placed before the Company which directly affect the rights attached to preference shares (and for this purpose any resolution for winding up the Company, or for the reduction of its share capital shall be deemed directly to affect the rights attached to preference shares); or

(ii) When the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of the commencement of the meeting and for the purpose of this clause dividends shall be deemed to be due on preference shares on the last date specified for the payment of such dividend in the Articles or other instrument executed by the Company even though no dividend has been declared by the Company on such capital.

Under the Articles of Association of the Company, no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or as proxy for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

No person as the bearer of a Share Warrant in respect of the shares mentioned therein shall be entitled to attend or vote at any General Meeting of the Company.

BUSINESS OF THE COMPANY

The Company has not yet obtained Certificate to commence business.

The Company has been formed for carrying on all or any of the objects mentioned in its Memorandum of Association. One such object is to carry on the business of manufacturers of and dealers in styrene, poly-styrene, vinyl chloride, polyvinyl chloride, polyethylene, cellulosic plastics and other thermosetting and thermoplastic materials (synthetic and natural origin), oxygen, nitrogen, hydrogen, hydrocarbon gases including ethylene, and acetylene, reagents, agricultural chemicals, insecticides, fumigants, weedicides, pesticides, colouring materials, pigments and lakes, paints, varnishes, lacquers, finishes, dyes, toners, perfume and flavouring chemicals, rubber chemicals, plastic and resinous materials, elastomers, gums, glues and adhesive composites, plasticizers, surface active agents, tanning agents, coating resins, drugs and pharmaceutical chemicals, solvents marine chemicals, synthetic fibres, fertilisers and all types of industrial chemicals acids, alkalies, hormones, trace elements.

The promoters of the Company have entered into an agreement with Dow Chemical Co. of U.S.A., one of the foremost chemical concerns in the world and a leader in the world production of polystyrene for the exclusive grant to the Company of the formulae for the manufacture in India of polystyrene moulding powders by the continuous technique of polymerisation and for other technical assistance.

The principal raw material required is styrene monomer, the supply of which has been provided for over a period of five years by an Agreement entered into with Dow Chemical International Ltd. of U.S.A. and the Promoters.

This is the only unit sanctioned by the Government of India for the manufacture of polystyrene in India.

Polystyrene is at present used in India by the plastic moulding industry for the manufacture of numerous articles of industrial and domestic consumption. Polystyrene has many other uses which have hardly been touched upon in India.

Polystyrene has been consumed in India, so far for manufacturing articles of domestic use such as toys, combs and toilet articles and articles of personal use. The importance of polystyrene in the industrial field is now being recognised. The consumption of polystyrene in India has grown from below 2,000,000 lbs. in 1948 to about 5,000,000 lbs. in 1954, almost all in the consumer items alone, some of which are finding export markets at present. Its future potentialities can be judged from the fact that the Indian Plastic Manufacturers' Association has estimated a consumption of 10,000,000 lbs. annually during the period of the Second Five-Year Plan and has requested the Planning Commission to plan accordingly.

The Company's plant has been designed to a rated capacity of 6,000,000 lbs. of moulding powder per year with a margin for expansion which will meet the requirements of the moulding industry. Further provision will be made for the manufacture of 12,00,000 lbs. of modified polymer. The unit will be expanded with appropriate additions to take care of increased consumption by the plastic moulding industry. There is also a very wide scope for development of many other products of considerable commercial value such as Styrofoam (insulating material), Styroflex (Electrical insulating film and sheet), Synthetic resins (Co-polymers, synthetic rubbers), Paints (Styrinated alkyd resins), Films and Sheets based on Styrene as well as other important chemicals and plastics.

Negotiations are in progress for obtaining suitable site for the Company's factory at Goregaon in the Bombay Suburban District.

CAPITAL OUTLAY

Import licence for the greater part of the plant has already been obtained, the designing of machinery has also made much progress and orders will be placed for equipment without delay. The capital outlay for the plant will be about Rs. 39,30,000/- made up as under:—

	Rs.
Land and buildings	7,00,000
Machinery and Equipment	20,00,000
Utilities and other expenses	3,00,000
Issue of stock to Dow Chemical Co. for exclusive grant of formulae	6,00,000
Brokerage & underwriting	1,80,000
Preliminady expenses	1,50,000
	Rs. 39,30,000

Working capital required per year is expected to be approximately as follows:

	Rs.
Technical fee to Dow Chemical Company $25,000 for each of 5 instalments	1,20,000
Raw materials (about 3 months' stock)	22,00,000
Finished goods (about 3 months' stock)	25,00,000
	Rs. 48,20,000

The capital outlay and the working capital will be provided for the greater part from the present issue of capital totalling to Rs. 80,00,000/-. Any balance will be provided by borrowings.

On the basis of existing prices and after allowing for all costs, overheads, depreciation and a margin for contingencies, the Directors are confident that the Company will be able to pay an attractive dividend on the Ordinary Shares after meeting interest on loans and Preference Shares.

UNDERWRITING AND BROKERAGE

The issue of 40,000 Ordinary Shares and the 80,000 Preference Shares has been fully underwritten by the Industrial Credit and Investment Corporation of India Ltd. and the Bank of Baroda Ltd. In the opinion of the Directors the resources of the said Underwriters are sufficient to discharge the underwriting obligations.

The Company will pay brokerage at the rate of one per cent. to recognised brokers or banks on allotments made in respect of applications bearing the stamp of such brokers or banks.

DOCUMENTS OPEN FOR INSPECTION

The copy of the Prospectus Memorandum and Articles of Association of the Company, Consent of the Government of India for issue of capital, permission to allot shares to Dow Chemical Company, agreements between the Promoters and the Dow Chemical Company and Dow Chemical International Limited, Promoters agreements and the underwriting agreements contained in correspondence are available for inspection during office hours at the Registered Office of the Company until the subscription list is closed.

GENERAL

Copies of the Prospectus and Application Forms may be obtained from the Company or from the Head Office of the Bank of Baroda Ltd. at Baroda and its branches at Baroda, Ahmedabad, Bangalore, Bhavnagar, Bombay, Calcutta, Coimbatore, Delhi, Dhulia, Hyderbad, Jalgaon, Jamnagar, Kanpur, Madras, Mehsana, New Delhi, Patan, Poona or Rajkot.

Application forms should be delivered before the closing of the subscription list to the Head Office or any of the above offices of the Bank of Baroda Ltd. accompanied by payment of the application money. Where no allotment is made. the deposit will be returned in full less the money order charges (if any) and where a partial allotment is made, the unutilised balance will be applied towards the further amount due. The Directors reserve the right to refuse any application wholly or in part without assigning any reason.

Applications from the Public for the shares described in this announcement will be received only on the footing of the full prospectus and in the printed forms of application accompanying such prospectus. This announcement is not to be regarded, for the purposes of the Companies Act, as an invitation to the Public to subscribe.

The Bangalore Woollen, Cotton & Silk Mills Co. Ltd.

Improved Processing Methods Lead to Increased Sales

Need to Encourage Mills' Expansion

Mr. R. E. Castell, the Chairman, rebuts 3rd Shift Working as Proper Solution

Presiding at the Seventy-third Annual General Meeting of the Shareholders held at the Registered Office of the Company, Agraharam Road, Bangalore City, on Saturday 24th March 1956, Mr. R. E. Castell said:

Gentlemen,

The Directors' Report and Accounts for the year ended 31st December 1955 having been with you for some time, I propose with your permission to take them as read, but after my speech I shall be glad to answer any questions members may wish to ask.

Although further progress in the Company's efforts to increase efficiency by the rehabilitation and replacement of machinery, and the improvement of processing methods has led to a useful increase in production and sales, the profit for the year is lower than the high level attained in 1954. Nevertheless I hope you will regard the result as satisfactory having regard to all the circumstances.

As was expected, the cess and excise duties newly imposed on woollen goods by the 1955 Finance Act had an adverse effect on the Indian Woollen Industry. In the case of your own Company it was found impossible to raise selling prices to cover the new taxes on these goods so that the working of the woollen section made a bigger subtraction than in the previous year from the profits earned by the other departments of the mills.

The cess and excise duties also affected the Company's Union fabrics and reduced the profit margin thereon. The construction of the 'Cotswol' Mill was completed during the year and in addition to this well-known fabric, a heavier cloth, 'Angola' is now being produced for the Armed Forces and is also being sold for general consumption.

The Company's cotton goods continue to be in good demand, but the margin of profit on fine cotton varieties was reduced to some extent by competition.

By the 1956 Finance Bill the excise duties on all mill made cotton cloth, with certain exceptions which do not concern your Company, were increased by 6 pies per square yard. Although there has been a good demand for cloth

generally and this may well continue and even increase, I doubt if consumers can afford to meet this extra indirect taxation now, and perhaps for some varieties a part of the additional excise duty may have to be borne by the Industry for the present.

As you may know, there is a difference of opinion between Government and the Textile Industry both regarding the size of the demand for cloth in India during the period of the Second Five Year Plan, and regarding the methods by which this demand can best be met. I will not worry you with all the figures connected with this matter, but would like to say that whatever increase in production may arise from encouragement of the handloom industry, including the replacement in the course of time of some of the handlooms by powerlooms, it is vital that a considerable expansion of the present capacity for producing mill cloth should be permitted. and indeed encouraged. I hope that this encouragement will soon result from a change of policy and so prevent any serious shortage of cloth arising.

Along with other mills, your Company is still precluded by regulations from expanding its installation for the manufacture of cotton cloth, and as it would take some time to arrange any addition to existing plant, I hope that Government will not wait until an emergency arises before deciding upon a change of policy. In my opinion third shift working could not offer a proper solution for meeting a cloth shortage, for as is widely known in the industry, continuous operation shortens the life of machinery, reduces its efficiency, is disliked by the workers and lowers standards of quality.

The Mills' silk section has made good progress during the year and its productive capacity has been increased. We now use much raw silk and spun silk produced in Mysore State, and as the local filature makes headway in its efforts to improve quality, we hope to use still more indigenous silk products without any sacrifice in the quality of our well-known silk sarees and other fabrics.

Owing to competition in overseas markets, and in some of them to import restrictions imposed for economic reasons, our export sales suffered a setback in 1955. It seems likely that competition abroad will increase, but in spite of that your Company will make every effort to maintain, and if possible increase their exports, and they have reasonable hopes of success particularly as they can rely on good connections with many active and substantial constituents and representatives overseas.

There is not much for me to comment on in the published accounts. The figures in the Balance Sheet show little material change from the previous year and in the Profit & Loss Account there have been increases in manufacturing costs commensurate with the higher production but, as explained in the Directors' Report, profit margins have been reduced in order to cover to some extent the cess and excise duties which were imposed earlier in the year on woollen and union fabrics.

I have still no further news to give you on our application to the Commissioner of Income-tax under Section 23A of the Indian Income-tax Act but I trust it will not be necessary for us to make a further distribution from the profits made in the calendar year 1954.

It is possible that you will have been disappointed at our decision to defer action on the proposed bonus issue, but I hope you will all agree with your Directors that it is in the interests of the Company to delay matters until we are in a position more fully to understand the somewhat complicated provisions of the 1956 Finance Bill regarding the proposal to impose taxes on bonus issues and dividends in excess of 6 per cent of the Issued Ordinary Capital.

The financial interest of the Shareholders in this Company is approximately Rs. 2½ crores, being the total of our Capital and Reserves, and though the Balance Sheet shows that practically the whole of this amount was employed in the business, it is important to bear in mind that the figures as at 31st December show the working capital required at its minimum amount, as at the close of the year raw material stocks are generally at their lowest and normally the Company has by that time disposed of its 'seasonal' finished products of the Cotswol and Woollen departments. For nine months of the year 1955 we were indebted to our Bankers, the highest point being reached in June when the overdraft stood at over Rs. 66 lacs.

It is most unfortunate therefore, that the Budget proposals may prevent us from carrying out the very necessary rationalisation of our Balance Sheet by the increase of the Issued Capital so as to bring it more into line with the capital actually employed.

The imposition of a heavy octroi duty on all raw materials entering the City limits and also on many other items essential to the operation of the mills, announced by the Bangalore Corporation in December 1954 is still sub judice, but I repeat now what I said in my speech last year, that if this duty be implemented it will add materially to the costs of the local industry and place it at a disadvantage in relation to mills elsewhere in India.

As mentioned in the Directors' Report, a final settlement was reached with the employees whereby a sum amounting to 12½ months basic wages has been paid for the four years 1952 to 1955.

Whilst I am glad to say that during the year under review no major industrial disputes have arisen, we have unfortunately been involved in long drawn out and vexatious proceedings on certain issues most of which can scarcely be described as of major importance. Much time which could more usefully have been devoted to the development of our manufacturing business has therefore been sacrificed, and I cannot but feel that many of these minor differences could be more easily and more happily resolved were the Labour Association to accept our offer to introduce in these Mills an Industrial Disputes Settlement Procedure on the lines of that in force in our sister Mills in Madras, where it has proved most beneficial to both parties.

We shall continue to do our utmost to settle our differences with labour by direct negotiation as problems arise, for your Directors remain convinced that it is in the best interests of industrial harmony and progress that whenever possible, differences should be settled without reference to a third party.

Your Directors propose to set aside Rs. 3 lakhs to cover the estimated expenditure on Workpeople's Housing during 1956.

The Workpeoples' and Employees' Provident Funds do not appear in the published accounts of the Company as they are vested in Trustees. The liabilities of these Funds as at 31st December 1955 amounted to Rs. 51,88,956 and Rs. 5,59,908 respectively, and corresponding amounts are invested in Trustee Securities. ,

In conclusion you will no doubt wish to join me in recording appreciation of the wholehearted cooperation which we have received from the executive and supervisory staff both of the management and of the mills. We should be grateful to the Manager and his staff who by their enthusiasm and skill have contributed so much towards the increased efficiency and production to which I have already referred.

The Buckingham & Carnatic Co. Ltd.

Another Successful Trading Year

Need to Permit Expansion of Mills' Capacity

Mr. R. E. Castell, the Chairman, Explains Disadvantages of 3rd Shift Working

Presiding at the Thirty-fifth Annual General Meeting of the Shareholders held at the Company's Office, 7 Armenian Street, Madras, on Friday, 23rd March 1956, Mr. R. E. Castell said:

Gentlemen,

The Report of the Directors and the Accounts for the year ended 31st December 1955 having been in your hands for some time I propose with your permission to take them as read, but I will be glad to answer questions later.

Your Company has closed another successful trading year and I am glad to report that a useful increase in the production of yarn and cloth has contributed towards this result. This increase in production arises from the further progress made with the Company's rehabilitation programme and the continuing efforts to improve efficiency in all processes.

The position remains unchanged to the extent that your Company cannot expand its manufacturing installation because of the regulations affecting the cotton textile industry. I feel it is my duty to add my voice to the warnings so often uttered lately by other representatives of the industry about the danger of continuing to limit mill cloth production to the present level which is about 5,000 million yards, it was in fact 5,094 million yards in 1955. Government estimates that by the end of the Second Five Year Plan in 1960, 7,200 million yards of cloth will be needed to provide for 400 million people at the rate of 18 yards per capita, in addition to which it is hoped to produce 1,000 million yards annually for export. Of the total target production of 8,200 million yards, 3,200 million is planned for the handloom-cum-powerloom sector: this is almost double the present output from handlooms and powerlooms and it is open to serious doubt whether anything like such an increase can be achieved.

I might add that the estimated consumption of 18 yards per capita may well prove to be inadequate in view of the plans which are in train for India's further agricultural and industrial development, and the reasonable expectation that the per capita income will materially improve.

I earnestly hope, and I am sure that you will join me in this, that Government will soon revise its present policy of limiting the production of the mill industry and so guard against a shortage of cloth and its consequent inflationary results and probable counter-measures in the form of controls which, as past experience has shown, are costly and generally vexatious.

Whatever may be the true potentialities of the handloom industry and the powerlooms, including partial substitution of the latter for handlooms, I do think that Government would be well advised to examine the possibilities of considerably increasing the present production of mill cloth. In my view the increase which is desirable cannot be achieved substantially by the introduction of a third shift. Our own experience during the last war definitely showed that in all processes but particularly weaving, the third shift is severe on machinery, discomforting to labour and harmful to quality. The need for a change of policy is urgent not only because signs of a cloth shortage are already apparent, but also because as time goes on, the difficulty of planning and executing any expansion promptly is bound to increase.

For the information of those of you who do not already know, I would mention that your Company operates an India-wide system of distribution of its cloth and its policy of controlling the selling prices of the mills' dealers continues. We often receive complaints from various parts of India that our cloth is not readily available, but that I can assure you is not the Company's fault. Apart from the statutory limitation of our capacity which we suffer along with the rest of the industry, we continue to fill two responsibilities which to us are traditional, the first being to supply large quantities of cloth to the Defence Services, and the second being to make our contribution towards India's export trade and her foreign exchange resources: we also supply increasingly large quantities of cloth for the needs of other Indian industries, particularly the coated abrasives industry. These responsibilities, although it is important in the national interest that we should continue to discharge them, handicap us in our effort to meet the needs of the general public. As I believe there are other mills in a somewhat similar position, here is an additional reason why Government, in the interest of the ordinary consumer, should encourage without delay an expansion of present mill cloth production by permitting the installation of more machinery.

In 1955 your Company exported nearly one-fourth of its total production of cloth. As you may know, there was a considerable shrinkage in the world trade in cotton textiles last year: India was not affected quite so much by this decline as the U.K. and Japan, but nevertheless her exports of Mill cloth fell from 898 million yards in 1954 to 816 million yards in 1955: exports of handloom cloth from India were also lower in 1955, being 55 million yards against 61 million yards in 1954. I do not feel hopeful about this shrinkage in the world trade in cotton goods being reversed since other cotton-growing countries will undoobtedly continue to develop their own textile industries, and competition from those countries foremost in the export field is likely to become keener than ever. In the past India's exports of cotton textiles have at times been restricted by controls and as a result some part of overseas demand has been permanently lost to her. I hope that no restrictions of any kind will ever be imposed again on exports of cotton textiles, but on the other hand, I hope that Government will do everything it reasonably can to encourage such exports. Here again is a strong reason for allowing the expansion of mills' productive capacity, as when cloth is not enough for domestic needs, mills and traders will be less inlined to export, particularly when increasing competition overseas makes export less attractive. Even now your own Company and their representatives overseas have to exercise constant energy and vigilance, and prices have to be kept strictly competitive in order to maintain the mills' exports.

You will know that by the 1956 Finance Bill, the excise duties on all kinds of mill made cotton cloth (except coarse and medium dhoties) were increased by 6 pies per square yard. In spite of the current generally good demand for cloth I doubt if consumers' present purchasing power can absorb this increase in cost on all varieties, and to some extent it may have to be borne partly by the industry, at least for the time being.

Your Company's installation is so designed that in ordinary circumstances almost all its spinning production would be woven in its own looms, but in order to fulfil its obligations to Government and to assist the handloom industry, your mills have for some years by adjustment of their manufacturing programme contrived to supply fairly substantial quantities of yarn to the handlooms: in 1955 over 8,400 bales were supplied, this being more than one and a half times the previous year's supply.

I now propose to comment on the publihed accounts and draw your attention to the very considerable transfer from Capital Works in Progress to Machinery account due to the completion of the New Weaving Shed, the Power House and the progress made in the Machinery Replacement Programme.

You will notice that our current assets have been reduced when compared with the previous year by approximately Rs. 38,00,000 and this is mainly accounted for by the reductions in Stores and Stock in Trade of approximately Rs. 11,00,000 and Rs. 48,00,000 respectively, offset to the extent of Rs. 22,00,000 by an increase under the heading 'Book Debts'.

On the Liabilities side there is a reduction of Rs. 3,50,000 on our Debenture Debt, Rs. 27,00,000 in the overdraft from Bankers and Rs. 5,00,000 on Taxation account. There is also a reduction of approximately Rs. 24,00,000 in our Liability for Acceptances as, owing to the recent increase in the Bank rate in the United Kingdom, we have temporarily discontinued our practice of paying for the purchases made in that country by means of Exchange Bills. This last reduction however, is offset to the extent of approximately Rs. 11,00,000 appearing under a new heading 'Loans Unsecured' and this has been lent to us by Binny & Co. Ltd., London, on favourable terms.

The Directors' Report has drawn your attention to the increase in sale proceeds of cloth, yarn and waste and I think the only other item calling for comment in the Profit and Loss Account is the increase in the depreciation charge resulting from new buildings and machinery brought into use during the year.

Section 23A applies to this Company for the financial years 1954 and 1955, but the dividends already respectively declared or proposed comply with the provisions of that Section in that they exceed 60% of the assessable income less the tax thereon.

For the greater part of the year difficult administrative problems referred to in my last speech on account of inter-state sales tax continued, but although some relief resulted from the Supreme Court's decision in September 1955 that the levy of this sales tax was ultra vires, additional problems arose from the many demands which were received from our customers for refund of the inter-state sales tax collected from them. We, in our turn, demanded refunds from the various State Governments and it was not until the Ordinance was issued in January 1956, legalising the levy and collection of inter-state sales tax from 1st April 1951 to 6th September 1955 that the position was clarified to some extent. There are, however, several important points still to be decided and I fear that it will be many months before the unhappy history of this unfortunate taxation measure, which has caused the business community so much harassment and expense, will be concluded.

The Mill Labour Advisory Organisation has continued to function in a most satisfactory manner, but this year I regret I cannot say that there has been no loss of production from stoppages of work by labour. In common with many other workers throughout India. our employees joined in the Hartal called in memory of those who lost their lives in the Goa incidents. They also participated in an unwarranted strike on the 24th November 1955. The issues which were the pretext for this second stoppage will shortly be the subject of arbitration by the Hon. Mr. Justice Ramaswamy Gownder.

In November 1955 the Employees State Insurance Scheme was implemented in Madras City and its immediate effect in these Mills was a considerable increase in absentation. The position has lately improved somewhat but it is clear that absenteeism on account of sickness is likely to prevail in future to a greater extent than before the Act came into force.

Shareholders will be interested know that at the request of the workers, Sunday 29th January 1956 was treated as a normal working day and the wages earned by the workers for that day and the profit earned by the Company will be given to the Madras Cyclone Relief Fund. An advance payment of Rs. 50,000 has already been made.

It will also be of interest to you to learn that the liabilities of the Workpeoples' and Employees' Provident Funds, the accounts of which are now maintained by the Trustees, amounted at the 31st December 1955 to Rs. 1,31,87,122 and Rs. 14,48,932 respectively, and corresponding amounts have been invested in Trustee securities.

The lot of those concerned with the management and operation of industry in these days is by no means enviable. In addition to the complexities of recent legislation covering all aspects of their work, there is the burden of severe personal taxation and uncertainty about the future.

I hope you will gladly join with me in expressing appreciation of the cheerful and determined manner in which the executive and supervisory staff of the Management and the Mills have carried out their duties. I think we should be particularly grateful to the Manager and other Officers of the Mills who have worked so hard and intelligently in implementing the Company's aim to attain the maximum improvement in efficiency.

THE UNITED COMMERCIAL BANK LTD.

(INCORPORATED ON 6th JANUARY, 1943)

THIRTEENTH REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit & Loss Account for the year ended, 31st December, 1955.

	Rs.	A. P.
The net profit for the year, after providing for all known and anticipated charges and including Rs. 1,03,724-8-9 brought forward from the previous account, amounts to	37,77,761	2 0
The Directors have made the following appropriations out of the net profit:		
1. Transfer to Reserve Fund	8,50,000	0 0
2. Provision for Taxes	14,00,000	0 0
3. Provision for Bonus to Staff	4,00,000	0 0
4. Balance	11,27,761	2 0
	37,77,761	2 0

Out of the balance of Rs. 11,27,761-2-0 the Directors recommend to the shareholders payment of Dividend at Rs. 2-12 per share, free of Income-tax, which will absorb Rs. 11,00,000 leaving Rs. 27,761-2-0 to be carried forward to the next year's account.

The Bank's business has shown a gratifying expansion during the year. The profit for the year 1955 is higher than that of the preceding year due largely to the fact that the deposits of the Bank had shown a substantial increase during the year. Your Directors consider the working of the Bank and the porfits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year your Bank took over the business of the Pondicherry branch of the Banque de L'Indochine

On his appointment as a Director of the State Bank of India, Mr. R. G. Saraiya resigned his seat on the Bank's Board. The Directors wish to place on record their appreciation of the valuable services rendered by him as Director since the inception of the Bank.

The Directors have to report with great sorrow the death in August, 1955 of Mr. Navinchandra Mafatlal who was a Director of the Bank since its inception and had contributed greatly to the building up of the Bank. He was held in high esteem and respect by his colleagues and the Directors desire to place on record their high appreciation of the great service rendered by Mr. Navinchandra Mafatlal during his long period of office

In the vacancies caused by the resignation of Mr. R. G. Saraiya and the death of Mr. B. N. Jalan and Mr. Navinchandra Mafatlal the Directors have appointed Mr. Yogindra N. Mafatlal, Mr. G. D. Kothari and Mr T. S. Rajam respectiveiy as Directors of the Bank.

The Directors have also to report to you changes in the general management of the Bank. Mr. B. T. Thakur, who was the General Manager since the inception of the Bank, resigned, on grounds of health, from the chief executive charge of the Bank in April, 1955 and requested that he be allowed to go on long leave preparatory to retirement. In view of the medical advice received by Mr. Thakur the Directors accepted his resignation with reluctance and regret. The Directors place on record their high appreciation of his service in building up the Bank to its present position, size and strength within a comparatively short period and wish him happiness and restoration to normal health.

The Directors have appointed Mr. S. T. Sadasivan as General Manager in succession to Mr. B. T. Thakur and promoted Mr. R. B. Shah and Mr O. H. Gheewala as Deputy General Managers of the Bank

The Directors place on record their appreciation of the services of the General Manager and the officers and staff of the Bank during the year.

Under Article 95 of the Bank's Articles of Association four of your Directors,

Shri M. L. SHAH
Shri G. L. BANGUR.
Shri P. D. HIMATSINGKA.
Shri M. L. DAHANUKAR.

retire by rotation, and, being eligible, offer themselves for re-election.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

CALCUTTA, 15th February, 1956.

By Order of the Board,
I. P. GOENKA. Vice-Chairman.

Balance Sheet as at 31st December, 1955

CAPITAL AND LIABILITIES	Rs.	A. P.	Rs.	A. P.
1. CAPITAL:				
Authorised Capital: 8 lacs shares of Rs. 100 each	8,00,00,000	0 0		
Issued and Subscribed Capital: 4 lacs shares of Rs. 100 each	4,00,00,000	0 0		
Amount Called up: 4 lacs shares at Rs. 50 per share			2,00,00,000	0 0
2. RESERVE FUND AND OTHER RESERVES: Reserve Fund (including that under Sec. 17 of the Banking Companies Act) ..			95,00,000	0 0
3. DEPOSITS AND OTHER ACCOUNTS:

(i) Payable in India 4,77,63,064 5 3				
(ii) Payable outside India .. 4,96,24,681 7 7			9,73,87,745	12 10
			27,59,19,172	3 3
PARTICULARS OF ADVANCES:				
(i) Debts considered good in respect of which the banking company is fully secured ..	22,50,39,496	9 11		
(ii) Debts considered good for which the banking company holds no other security than the debtors' personal security ..	1,95,94,738	6 4		
Carried over ..			55,97,08,850	15 7

THE UNITED COMMERCIAL BANK, LIMITED, BALANCE SHEET (Contd.)

CAPITAL AND LIABILITIES—(Contd.)	Rs.	A. P.	Rs.	A. P.
Brought forword ..			81,68,74,401	11 11
10. CONTINGENT LIABILITIES:				
(i) Claims against the banking company not acknowledged as debts Rs. 4,71,107-10-0.				
(ii) On Foreign Bills Re-discounted Rs. 2,21,913-7-0 of which upto 23-2-56 Rs. 2,11,961-5-4 have run off.				
(iii) Forward Exchange Contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers Rs. 23,26,05,097-9-2 of which upto 23-2-56 Rs. 12,22,64,526-9-9 have been delivered.				
(iv) Bonus claims by employees for 1950, 1951 and 1952 not acknowledged as debts and disputed by the Bank before the respective Tribunals.				
(v) There is a liability for outstanding bills not certified by the architects in respect of construction work of Bank's building at New Delhi.				

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The United Commercial Bank Limited, as at 31st December, 1955, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the Branch returns audited by the Statutory or Local Auditors, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory; (b) the transactions of the Bank which have come to our notice have been within the powers of the Bank; (c) the returns received from branch offices of the Bank have been found adequate for the purpose of the audit; (d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; (e) such Profit and Loss Account shows a true balance of profit for the year; (f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and (g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

Difficulties to be Solved for Implementing 2nd Plan

*

Mr G. D. Birla, the Chairman, Lucidly Analyses the Bank Rate controversy

Gentlemen,

Before I proceed with the ordinary business of this Thirteenth Annual General Meeting of the bank, I should like to refer with great sorrow to the loss sustained by the bank in the premature death, in August 1955, of Mr. Navinchandra Mafatlal, who was a Director since its inception and had contributed greatly to its growth. He was a staunch friend of the bank and was held in the highest personal esteem by us all who miss his genial presence and wise guidance. The sorrow is tempered by the fact that his son has joined our Board and the connection of the bank with the House of Mafatlal will continue unbroken.

I have also to report to you the resignation from the Board, on his appointment as a Director of the State Bank of India, of Mr. R. G. Saraiya, who as a Vice-Chairman guided the affairs of the bank, particularly in Bombay, since its inception.

In the vacancies which had arisen in the Board the Directors have appointed Mr. Yogindra N. Mafatlal, Mr. G. D. Kothari and Mr. T. S. Rajam. I am glad to welcome them on your behalf and I am confident that the bank will benefit greatly by their wide experience in their respective spheres of industry and trade.

Reference has been made in the Directors' Report to the changes which took place last year in the general management of the bank. Mr. B. T. Thakur who was the General Manager of the bank since its inception resigned, on grounds of health, from the chief executive charge of the bank in April 1955 and has gone on leave, preparatory to retirement. I take advantage of this occasion to pay a tribute, on your behalf, to the ability and zeal with which he had served the bank during his period of office and built it up to its present position as one of the leading banks of the country, and to place on record our high appreciation of his valuable services.

Mr. S. T. Sadasivan has been appointed to succeed Mr. B. T. Thakur, as General Manager and I extend to him our good wishes for success during his period of office. Mr. Sadasivan was the Dy. General Manager of the bank since 1945 and has also acted as General Manager. I have every confidence that the progress of the bank will continue with great vigour under his zealous care and able guidance.

I also take this opportunity to thank the members of the staff in India and abroad for their devoted service to the bank and for their valuable contribution to the satisfactory results achieved during the past year.

I now turn to the ordinary business of the meeting. The Balance Sheet and the Profit & Loss Account have been in your hands for some time and they bear testimony to the continued improvement of the bank's business in the past year.

BANK'S BUSINESS

DEPOSITS

You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1955 stood at Rs. 47.69 crores as compared with Rs. 40.42 crores at the end of 1954. The increase in deposits of Rs. 7.27 crores represents a rise of 17.9 per cent which is a much higher rate of increase than 7.1 per cent recorded in 1954 and is higher than the rise of 9.7 per cent in the deposits of scheduled banks as a whole. The rise in deposits, which is common to all banks, should be attributed to higher production and an expanding economy which are the results of successful implementation of the First Five-Year Plan.

CASH

Cash on hand, balances with banks and money at call and short notice accounted for Rs. 6.21 crores and represented 13.02 per cent of our total deposit liabilities.

INVESTMENTS

The investments of the bank in Government and other approved securities stood at Rs. 22.17 crores crores showing a rise of Rs. 5 crores as compared with the figure at the end of 1954. The bulk of the increase in deposits has thus gone into Government Securities. During the year, as a result of the nationalisation of the Imperial Bank of India, we received compensation for our holding of shares in the Imperial Bank of India in the form of Government Securities. We have, however, made a fresh investment of Rs. 23,93,200 in the shares of the Industrial Credit and Investment Corporation of India Ltd., which was incorporated in the beginning of last year with the assistance of the Government of India by way of interest free advance, for the purpose of carrying on the business of assisting industrial enterprises in the private sector of industry in India by providing finance in the form of long and medium term loans or equity participation and for sponsoring and underwriting new issues of shares and securities. The ratio of our investments to our deposits, after deducting the amounts borrowed thereagainst is 37.60 per cent as compared with 33.6 per cent at the end of 1954. Cash resources and unencumbered investments together amount in the aggregate to Rs. 24.14 crores, giving a liquidity ratio of 50.62 per cent to total deposits. The bank's investments are shown in the balance sheet, in accordance with our usual practice, at below the prevailing market rates.

BILLS

The amount of bills discounted and purchased has increased during the year from Rs. 8.57 crores to Rs. 9.74 crores. You will be gratified to note that this self-liquidating asset forms 20.42 per cent of the deposits of the bank.

LIQUIDITY RATIO

The total of our most liquid assets—cash on hand and with banks, money at call and short notice, unencumbered investments and bills—represents 71.04 per cent of our deposit liabilities. This is a very high liquidity ratio and enables us comfortably to expand credit during the busy season.

FOREIGN EXCHANGE BUSINESS

Our foreign exchange business continues to improve. It forms an important part of our banking operations and the turnover in this department has increased during the past year as a result of the rise in the value of the foreign trade of India and the neighbouring countries. We are constantly

expanding the network of our foreign correspondents and overseas connections in order always to be ready to handle any business that might be offered to us.

ADVANCES

Our advances showed a moderate increase from Rs. 16.07 crores to Rs. 17.85 crores. This gives a ratio of 37.43 per cent to our deposits against 50.58 per cent for the banking system as a whole.

BANK'S PROPERTY ACCOUNT

The additions to the bank's property account during the year were Rs. 10.03 lacs. This is due to the purchase of the premises of the Banque de L' Indochine at Pondicherry in connection with the acquisition of their business and to the construction of our own premises at Parliament Street, New Delhi. We hope shortly to commence the construction of the Head Office building at Calcutta at the site which we have acquired for this purpose at the corner of Brabourne Road and Royal Exchange Place Extension.

PROFIT & LOSS ACCOUNT

Turning to the Profit and Loss Account you will notice with satisfaction that the profit for the year 1955 is Rs. 36.69 lacs as compared with Rs. 31.06 lacs for the year 1954. This satisfactory result has been achieved in spite of heavy increase in expenses and in interest paid on deposits. As stated in the Directors' Report, the total profit including the sum of Rs. 1,08,724-8-9 brought forward from 1954 accounts is Rs. 37,77,761-2-0. Out of this amount the Directors have already transferred Rs. 8.50 lacs to the Reserve Fund which now stands at Rs. 95 lacs and have made a provision of Rs. 14 lacs for taxation and Rs. 4 lacs for bonus to staff, leaving a balance of Rs. 11,27,761-2-0. In view of the improved working results the Directors feel justified in recommending a slight increase in the dividend from 5 per cent paid last year to 5½ per cent per annum, free of incometax.

THE BANK AWARD

Since we met last, the Bank Award Commission which was appointed by the Government of India to go further into the dispute between banks and their employees in the matter of salaries, dearness allowance etc., gave its decision which the Government of India accepted in toto. By its decision, the Commission restored with slight alterations the Award of the Labour Appellate Tribunal which the Government had previously modified. It also decided that no employee should be asked to refund any excess paid to him under the then existing scheme over what he would be entitled to under its Award. In order to lighten the burden on banks imposed by the higher salaries and allowances recommended, the Award permitted banks to pay the employees any arrears that may be due to them in three instalments. Favourable to the employees as such recommendations were, the banks went further and waived their right to pay the arrears in three instalments and paid the entire amount due to each employee in one lump sum. The banks also waived their right to recover the excess dearness allowance paid during the period July to November 1955. Notwithstanding such generous concessions the employees were not satisfied, instead they carried on an agitation culminating in the refusal to work overtime for the purpose of the annual closing of accounts which was consequently delayed and also finally resorted to a two days' strike in January this year. It is extremely regrettable that they should adopt such an attitude and go on a strike which was clearly illegal. It is to be hoped that the employees will take the provisions of the Industrial Disputes (Banking Companies) Decision Act as final and devote themselves to strenuous and harmonious work in close co-operation with the management. Needless to say, such co-operation will naturally produce better working results for the bank which, in turn, will enable the management further to improve the conditions of service of the employees.

BANK RATE

The Bank Rate in India remained unchanged at 3½% throughout the year 1955 though the Bank of England rate was raised from 3 to 3½% on the 27th January 1955 and again to 4½% on the 24th February 1955. Notwithstanding the fact that the year 1955 saw an upward revision of bank rates in varying degrees in different parts of the world, it is a matter of gratification that the bank rate in India remained unchanged and adequate finance could be secured by commerce and industry on the basis of 3½% official bank rate. The increase in the Bank of England rate on the 16th February 1956 from 4½% to 5½% has raised the question whether it will be necessary or desirable to effect any change in the Indian Bank rate.

On a superficial assessment of the situation it would appear that the Indian Bank rate is unrealistic in the light of the competition for deposits which has carried the deposit rate almost to the level of the official bank rate, but there has never been any integration with the official rate of the various interest rates quoted in the market and the money rates prevailing in the bazar have never had any relation to the official bank rate. The impact of the rise in the Bank of England rate has so far been confined to a rise in the deposit rate and a sporadic increase in the rate of interest charged by some banks on certain classes of advances but has had no significant influence otherwise.

The problems facing India are wholly different from those of the United Kingdom and the prevalence of unemployment and the existence of a steady level of prices which have characterised Indian economy are in sharp variance with overemployment and inflation which are the features of British economy. We are now engaged in bringing into fruition a planned economy which has for its objects increased production, increased national income, the provision of employment on a large scale and the maintenance of stable economic conditions. In the financial sphere the operation of the first five-year plan has resulted in increased bank deposits, a larger note circulation and enhanced bank advances without any appreciable increase in commodity prices or the cost of living. This was because increased money supply has been matched by increased production.

One result, however, of the rise in the Bank of England rate is that more and more of the foreign trade of India will have to be financed out of Indian resources. But these resources are expanding and the stage has not yet been reached when they may be said to be inadequate. The bill market scheme inaugurated by the Reserve Bank of India in 1952 is a sufficient guarantee that seasonal expansion of credit could be effected without a change in the bank rate, and the recent announcement of the Reserve Bank of India that advances under the scheme will be made at 3½% interest instead of at 3% as hitherto is not to be interpreted as a measure of dearer money. Moreover, the export trade is financed on the basis of the higher money rates prevailing in London through an adjustment of the exchange rates applicable to usance bills and in an emergency the bills could be rediscounted in the London market. It is only in the case of imports that the pressure for finance will be squarely transferred to the Indian money market but the expansion of resources resulting from the operation of the second five-year plan appear to be adequate to take care of such increased responsibility as might devolve on the Indian money market.

It is necessary for the success of the borrowing programmes associated with the second five-year plan that stable and healthy conditions should be maintained in the money and gilt-edged markets and the continuance of the Indian bank rate unchanged at its present level is a necessary condition for the fulfilment of our development plans. From this point of view it is regrettable that the authorities have allowed the price of 3% Conversion Loan to go below Rs. 80. A little support to this loan will inspire confidence in the stability of the gilt-edged market.

The question of an upward revision of the bank rate will arise in the event of the spectre of inflation raising its head or the scramble for deposits developing to the extent of a run-away rise in deposit rate to a level higher than the bank rate. The authorities will, no doubt, keep a close watch on the situation and act without hesitation when the contingency arises.

Before proceeding to review the economic conditions in India, I shall briefly comment on the conditions prevailing in the countries where we have branches.

BURMA

At the beginning of the year, Burma was faced with the problem of rapidly dwindling balance in Foreign Exchange. As a corrective measure the Government imposed a 50% moratorium on all outstanding import licences in March 1955 and this action was followed by the complete suspension of the Open General Licence. This had the inevitable repercussions on business and commerce. The prices of imported consumer goods such as textiles, toilet requisities, tinned provisions etc. shot up to a very great extent. As a result of these corrective measures, the position improved somewhat in the latter part of the year and since then the Government has been issuing a few licences for import, mostly from countries like China, Hungary, Yugoslavia, and U.S.S.R. with whom agreements for payment on barter basis have been concluded. As a result of these and of severe restriction on private remittances, the shrinkage of foreign holdings of the Union Bank has been arrested and a moderate improvement has set in. The Government's policy in recent months has shown a tendency towards the scaling down of capital expenditure which is not considered as wholly essential or immediately productive.

During the year the Government of India granted a loan of Rs 20 crores to Burma to assist her in financing her development plans. The loan is repayable in half-yearly instalments of Rs. 2.5 crores beginning from March 1959. The rate of interest on the loan is 4 per cent.

The prospects of Burma's most important export crop—rice—seem to be bright this year. It is reported that out of an exportable surplus of about 1.5 million tons, agreements have been practically concluded for disposal of very nearly the entire quantity.

MALAYA

The total value of Malayan trade last year was ST$ 7,977.1 million—a rise of 27.61% over 1954. With imports at ST$ 3819.4 million and exports at ST$ 4,157.7 million, the adverse balance of trade of 1954 was turned into a favourable balance of ST$ 338.3 million. This improvement was largely due to better prices of tin and rubber. The exports of these commodities registered a rise of 8% and 1% respectively. Rubber production was highest since 1950 at 637,463 tons and the average price during the year was $ 1.14 per lb. as against the average of 67 cents during the previous year. Tin production at 61,244 tons was in fact a post-war record and the average price during the year was ST$ 365.50 per picul compared to the average of $ 353.59 in the previous year. As a result of improved

trade with Indonesia, the conditions in the textile market showed signs of improvement. On the whole the year 1955 can be considered as the second best year, the best so far being 1952.

The Colony of Singapore and the Federated States of Malaya had their first measure of self-Government when the General Elections were held. The general conditions in Malaya were still disturbed and the "Amnesty" proposals made by the Government were unsuccessful. There were also signs of industrial unrest resulting in a number of strikes in industrial organisations, rubber mills, transport etc.

The prospects for 1956 would be bright if the prices of Rubber and Tin are sustained even at their present levels.

HONG KONG

The industrial production of the Colony continued to rise and the number of registered factories as well as the number of workers employed showed an appreciable improvement over the previous year. This has enabled Hong Kong to stabilise her economic position and to a certain extent has made up for the loss in her trade with China after the Embargo. The Colony was able to compete with certain amount of success with the industrialised countries in finding markets for its industrial products in South East Asia, U.K., and other British Colonies. The export of industrial products registered an increase of HK$ 48 million—an increase of nearly 7% over the last year's exports.

A significant feature of last year was the continued influx of a very large amount of Chinese capital into the Colony from countries in South East Asia. As a result of this from conditions were prevalent on the Stock Exchange and in Real Estate markets.

PAKISTAN

Our next door neighbour, Pakistan, continued during the year to show resilience and progress. The important development on the economic side was the devaluation of Pakistan Rupee. The Pakistan Rupee which had a higher value than its Indian counterpart since September 1949 was brought on a par in July 1955. The need for obtaining capital goods from abroad and the peculiarly monopolistic nature of the country's export goods combined to stave off devaluation. These two factors, however, could no longer continue to support the artificially inflated rupee.

The economic progress as a whole was maintained. The trade position also showed an improvement. Exports rose fom 190.5 million Rupees to 371.1 million Rupees, during the three months August/October 1955 and instead of trade deficit on private account of 53.5 million Rupees there was a surplus of 131.5 million Rupees. During the year an Agreement was also signed between the United States of America and Pakistan providing the use of 20 millon dollars of U.S. Assistance Fund for the improvement of Pakistan ports, highways, air-bases etc. Industrial output also continues to rise and it is hoped that she could look forward with confidence to a year of good development.

On the political side a Constitution for the country has just been drawn up and Pakistan has been proclaimed as an Islamic Republic within the Commonwealth.

ECONOMIC CONDITIONS IN INDIA

THE CAPITAL MARKET

During the year under review the Government of India floated a 3½ per cent 10 Year Loan at an issue price of Rs. 98.8 and secured Rs. 103.7 crores. Collections from Small Savings, to which more attention is now being devoted, yielded Rs. 65 crores. The previous year's experiment of floating a combined loan for the requirements both of the Central Government and the State Governments was scrapped and the States came out with their own loan issues —all 4% loans maturing in 1967 but at different issue prices—and gathered in all Rs. 47.50 crores. The expansion of treasury bills—the measure of deficit financing—is expected to be Rs. 240 crores.

The Industrial Credit and Investment Corporation of India Ltd. issued its share capital of Rs. 5 crores of which Rs. 3½ crores were privately placed and Rs. 1½ crores were successfully offered for public subscription. Two big debenture issues and quite a number of preference and ordinary shares floatations met with satisfactory response. Altogether the capital market had an active and successful year.

During the year State Financial Corporations were floated in Madhya Bharat, Andhra, Uttar Pradesh and Rajasthan.

FOREIGN TRADE AND BALANCE OF PAYMENTS

The foreign trade of India during 1955 registered a significant growth both in exports and imports and the visible trade deficit has been reduced. The relative figures are as follows:—

FOREIGN TRADE—JANUARY-NOVEMBER.
(In crores Rs.)

	1953.	1954.	1955.
Exports ..	477.84	499.90	539.85
Imports ..	530.13	559.29	577.47
Balance ..	—52.29	—59.39	—37.62

Import policy is now designed to allow an increase in import of industrial raw materials and capital goods while extending further the principle of protection to Indian industry. The large internal demand for steel has necessitated its import from wherever it is available but the loss of foreign exchange has been offset by the cessation of imports of foodgrains and sugar and the saving of exchange arising from the import of crude mineral oil in place of refined petroleum products. Imports of chemicals, drugs, electrical goods, newsprint and rayon have remained steady, while import of iron and steel, non-ferrous metals, vehicles and wagons have begun to show a rising trend. The growth of Indian industry is making itself felt in the pattern of our import trade.

In exports most of the major commodities with the significant exception of tea, have been doing well. Exports of jute manufactures showed expansion.

The Jute Industry's success last year is attributed partly to the Government's prompt abolition of the export duty on jute goods in the wake of the devaluation of the Pakistan Rupee. The prices of Indian jute goods, thus lowered, enabled the industry to compete on better terms with Pakistan and other jute manufacturing countries. Exports of cotton textiles in 1955 were slightly lower than in 1954 and may again decline in 1956 due to the growth in domestic demand. The decline in export earnings on this account has been more than made good by the large increase in exports of raw cotton so that the total value of raw cotton and textile amounted in the eight months April-November 1955 to Rs. 67 crores as compared with Rs. 55 crores in the corresponding period of 1954.

The continued weakness of the tea market is an adverse factor likely to offset the increased export earnings in 1956 from other commodities.

With reference to our export trade the emphasis has shifted in recent years from sending raw materials to sending manufactured goods abroad. The rapid pace of industrialisation has enabled some of our industries to produce manufactured goods which can find an outlet into the world market on a competitive basis both as regards quality and price. On the export side all restrictions which were necessary in earlier years have been removed as a result of the improvement in the internal supply position. In fact, except for a few isolated commodities, exports of most major items are being allowed without any control. About 80 to 85 per cent of the country's export is to-day free from control.

In order to secure adequate foreign exchange resources for the Second Five-Year Plan efforts have to be made to stimulate exports and the recent announcement of the Commerce Ministry on this subject gives hopes of considerable develement in this field in the near future. This Ministry is thus anxious to canalise all measures of rationalisation so that foreign trade can be regulated properly. Similarly the Government of India is taking all possible steps through Export Promotion Councils to promote exports of cotton textiles, silk piecegoods, engineering goods, plastic manufactures, cashew and pepper. With adequate financial assistance these bodies would be able not only to help the normal flow of export trade but will also conduct research, propaganda and publicity in foreign markets. Export Credit Guarantee Scheme is sure to give added confidence.

During the first nine months of 1955 trade with the Dollar area resulted in a surplus of Rs. 31 crores against a deficit of Rs. 3 crores in the corresponding period of 1954. By reason of this satisfactory position, the outstanding loan from the International Monetary Fund was repaid to the extent of Rs. 19.3 crores, leaving only a small balance of Rs. 6 crores still due to the Fund at the end of 1955. The country's net balance of payments on current account for the same period showed a surplus of Rs. 25 crores and the year as a whole is expected to show a surplus of about Rs. 35 crores as compared with a deficit of Rs. 4 crores in the previous year.

AGRICULTURAL PRODUCTION

Progress in the field of agricultural production was satisfactory. The output of foodgrains during the year amounted to 65.8 million tons, which, though a little lower than the previous year, was yet in excess of the Plan target by just over four million tons as a result of implementation of irrigation and power projects in the First Five-Year Plan, now drawing to a close. By the end of 1954-55, fresh irrigation facilities and increased water supplies were provided to over four million acres of virgin and irrigated soil. The easy supply position of foodgrains enabled the Government to remove the last remnant of control on foodgrains.

The production of commercial crops showed further improvement during the current year. Oilseeds output at 5.9 million tons and raw cotton at 4.3 million bales have exceeded their targets under the First Five-Year Plan by four lacs tons and about one lac bales respectively. The production of sugar touched the record level of 15.9 lacs tons as compared to 10.01 lacs tons in 1953-54, while that of jute which remained depressed during the last two years has shown a significant increase of about 12 lacs bales during the 1955-56 season as compared to the last.

The general crop prospects for 19555-56 are considered to be satisfactory. They would have been better still but for the calamitous floods in the North and the devastating cyclones in the South that occurred during the year.

INDUSTRIAL PRODUCTION

Industrial production has made commendable progress during the year under review. The upward trend in industrial production persisted through 1955. A revised index of industrial production is now available. According to this series the index of industrial production (Base: 1951-100) for the first ten months of 1955 works out at 125.7 as against 112.9 for the whole of 1954. This represents an increase of over 11 per cent over the preceding year. This increase in production was shared by almost all the major industries. The output of finished steel at 1.26 million tons was higher than the record achieved in 1954. The production of mill made cloth at 5,087 million yards in 1955 was 89 million yards higher than the production of 1954 and exceeded the target fixed under the First Five-Year Plan by 387 million yards. Cement production during the year reached 4.5 million tons. In jute, chemicals and paper too the performances were very high. Considerable strides have also been made by the engineering industry. Licences for manufacturing jute mill machinery have been given. Progress in the modernization of jute mills has already been made.

Further in terms of expenditure, the position in respect of the centrally financed multi-purpose projects—The Damodar Valley Corporation, Bhakra Nangal, Hirakud and Harike—is that, against a provision of Rs 224 crores, about Rs. 238 crores will be spent by the end of the Plan period. In regard to State projects, the outlay will be Rs. 352 crores against the Plan figure of Rs. 378 crores. Against a provision of Rs. 30 crores, a total of Rs. 20.8 crores has so far been spent on the new projects undertaken during the last two years of the Plan—Kosi, Koyna, Chumbal, Rihand, and Nagarjunasagar.

SECOND FIVE-YEAR PLAN

It is some time now since the draft outline of the Second Five-Year Plan has been published; the total amount of expenditure envisaged, the departmental allocations, the State-wise distributions, the various targets aimed at, etc., have now been so widely publicised that it is hardly necessary to repeat them here. But the lapse of time has also enabled us to get over our first emotional enthusiasm and to take an objective and dispassionate view of the Plan.

The Plan has been variously criticised as either too optimistic or too ambitious. There is nothing wrong about being too ambitious. In the present condition of India to aspire to progress at as quick a pace as possible cannot but be a laudable object. But to be too optimistic is certainly a danger if in that mood we ignore realities and base our hopes on mistaken calculations and emotional approaches. Failure to reach the goal would mean disaster of the severest kind and, therefore, to shut our eyes to the realities and create difficulties by our own actions would be, to put it at the mildest, a first-rate blunder.

In the first place I wish to emphasise that higher employment, though a very desirable objective, cannot be as important as creation of greater wealth. It may sound a little unorthodox, but I wish it to be realised that increased employment cannot in all cases result in greater prosperity. Only such employment as is highly productive can create prosperity. On the other hand prosperity can definitely be a precursor to greater employment. A highly productive employment alone can create prosperity, and once we have the effective means, we can create all kinds of employment. The main problem, therefore, is not so much to create any kind of employment as to create such employment as would yield higher production and greater waelth. With wealth a large number of tertiary employment would grow automatically. Higher production is thus the objective which really matters.

Judging from this angle, Ambar Charkha is not the answer to the problem. It has a place, no doubt, provided it is proved that the most efficient methods of production within our resources are already fully utilised and that the only resources, potential or otherwise, left for us is the utilisation of Ambar Charkha in which case it functions in a supplementary capacity. Since this is not the position, Ambar Charkha is likely to obstruct rather than pave the path to progress, if by progress we mean higher standard of living. This stark reality, if fully realised, should stop us from toying with ideas likely to take us on a backward march. If Ambar Charkha could have solved our problems, it would have done so centuries before.

Again, the relative treatment accorded to cottage industries vis-a-vis the factories seems to be based on fallacious grounds. There would be no conflict between the two if they could be supplementary to each other. Cottage industries can only follow the large scale industries and not vice-versa. If one plans that the large-scale industry shall follow the cottage industry, then one might as well plan that Railways shall progress only through the bullock cart. The fact of the matter is that more bullock carts will be in the streets to feed Railways if the latter expand. Paradoxical as it may sound, Railways alone can support more bullock carts. In more economically advanced countries cottage industries play a much bigger role than in India because there is such a great task for them for feeding the lrge-scale units.

REAL DIFFICULTIES

The real difficulties that must be faced and solved if the Plan is to be successfully implemented are:

1. Inadequacy of internal resources;
2. Inadequacy of foreign exchange;
3. Inadequacy of technical personnel;
4. Inability of transport systems to keep pace with the development in other fields; and,
5. Rigidity of Government machinery.

AVAILABILITY OF INTERNAL RESOURCES

How is the money to be invested in the public sector to be raised? The means suggested are: additional taxation, loans, small savings and deficit financing. I wonder whether it is fully realised that additional taxation, savings and loans come into play only after production and wealth have increased and cannot precede them. We have to begin with deficit finance. The criterion of its success would be that by raising the purchasing power of the people we create greater demand for goods which stimulates higher production. If higher production of goods is suppressed, then what follows is inflation and failure. In other words, we should rely on much larger production of essential goods to absorb the newly created purchasing power that would come into being through deficit financing. This is one aspect of the question. The other aspect is that if we begin with additional taxation and compulsory savings, then we fail to create the new purchasing power which is expected to create increased demand for goods. The resultant decrease in consumption would lead to lower production and to decrease of employment and of wealth. These two aspects must be kept in mind.

From the way in which the Budget is planned, it looks as if it is believed that taxes and savings could precede increased wealth and that savings could take place before earnings materialise. If a house is taxed before it is built, the result would be that no house would be built to pay the tax. To appreciate this sequence is very important. In a car the brake is as useful as the accelerator. But one does not start the car with a brake. The brake is useful only after the car is started. If you tax a person and compel him to save before increasing his earnings you, in reality, restrict his consumption and give a set-back to production, which is obviously not the goal in view.

AVAILABILITY OF FOREIGN EXCHANGE

Whatever may be the method of estimating our requirements of foreign exchange, I personally feel we shall need anything like Rs. 1600 to 2000 crores.

Even accepting the figure of Rs. 1600 crores as correct it might be difficult to get all this amount. Sterling balances Rs. 350 crores, trade surplus Rs. 300 crores on the basis of Rs. 60 crores per year (this assumption is justified by cessation of food imports) and invisible exports Rs. 150 crores make up Rs. 800 crores leaving Rs. 800 crores still to be found.

Of this amount, Government expect to raise Rs. 400 crores by way of foreign aid; but total American aid to India from July 1955 to June 1956 is $50 million, i.e., Rs. 25 crores. On this scale foreign aid will amount only to Rs. 125 crores in five years.

I fear the seriousness of the paucity of foreign exchange is not fully realised. With proper efforts foreign exchange should be available. And we have to work for it. But the Planning Commission seems to have under-estimated its importance and has abruptly ended the chapter after pointing out that there is a gap of Rs. 800 crores. I fear the gap would be much more, but even if we accept the figure of Rs. 800 crores, its direct effect would be on the productive industries and transport leading again to less wealth and less employment.

AVAILABILITY OF TECHNICAL PERSONNEL

The dearth of technical personnel is admitted on all hands. It is one of the main reasons for the country's inability to make spectacular headway. State-owned steel plants alone require 5000 engineers and 10,000 skilled personnel. This shortage of technical personnel will be a serious handicap in the working of the Plan.

The private sector today can command a large number of technically qualified experts. In its search for technical talent, it has gone far and wide and has, with great difficulty, built up at least a nucleus of expert administrators. The public sector has nothing like this and has to start the training of its staff right from ABC. But if we talk in terms of austerity for the technicians, then neither the public nor the private sector will have enough technical knowledge at its disposal. We should not restrict the incentives that go to stimulate technical education and knowledge.

AVAILABILITY OF TRANSPORT

Under transport, specially with reference to railways, the allotment in the Second Five-Year Plan has been cut down very substantially. If the railways do not bear the strain that is proposed to be put on them, the whole edifice of the plan will collapse.

RIGIDITY IN GOVERNMENT MACHINERY

Experience has shown us again and again that Government machinery is dilatory, hide-bound by rules and unaccustomed to take quick decisions. While this machinery is eminently qualified to deal with long-range questions of policy, it can hardly meet the needs of day to day industrial expansion when rapid decisions are necessary. A thorough overhaul is needed.

I have mentioned all these difficulties not that they cannot be solved—but that they must be solved. I fail to see any sign of awareness on the part of the authorities of these hurdles and, therefore, I give expression to my misgivings. What I have said is not by way of criticism. We need to make the Plan a success. But we cannot do so by minimising or underestimating the difficulties and by starting in a complacent mood. Fore-warned is fore-armed and what I have suggested is a constructive note of caution in order that we may meet the difficulties squarely in the face and solve them and not create more difficulties by our own actions. We have enough troubles on our hand to engage our thoughts and energies, and it would be unwise to create avoidable problems.

The Central Bank of India Limited

Pronounced Growth in Banking Business

The Problem of Establishment Costs

Sir Homi Mody, the Chairman, Pinpoints Importance of Second Plan

The following is the speech delivered by the Chairman, Sir Homi Mody at the Annual General Meeting of The Central Bank of India Ltd held on 29th March 1956:—

Ladies and Gentlemen,

In presenting the Directors' Report and statement of Accounts for 1955, I would like to say a few words on some of the important developments in the country during the year. The volume of trade, both internal and external and industrial and agricultural production, continued to rise, and if it had not been for some of the measures undertaken by Government to expand their sphere of operations and tighten their control over the Private Sector, economic activity might have shown a still greater buoyancy.

The growth of banking business during the year was very pronounced. In consequence of the impetus to production provided by increased public expenditure on development, the demand for bank credit showed a sharp rise and Advances made and Bills discounted by banks went up from Rs 554 crores to Rs 642 crores at the end of 1955. In relation to Deposits, the proportion of Advances and Bills which was already high increased to 62% at the close of the year. Simultaneously, the ratio of cash in hand and balances with the Reserve Bank declined from 11% to 9.5%. All this activity is reflected in the amount of currency in circulation, which went up by about Rs 160 crores.

The expansion of economic activity which should result from the sharp increase in the tempo of investment under the Second Five Year Plan must create an enormous demand for bank credit, and if a profitable margin can be maintained between the rates of Deposits and of Advances and if establishment charges do not get out of hand, the future growth of banking would seem well assured.

The tremendous role which the Second Five Year Plan must play in the economy of the country cannot be exaggerated. The Commission has published its proposals in the form of a Draft Outline. According to it, the total investment during the period would be of the order of Rs. 6,100 crores which is Rs. 500 crores higher than what was envisaged in the Plan Frame. The view that the size of the Plan should be curtailed in order to make it more realistic has not found favour with the Planning Commission. The pattern of investment has, however, undergone a slight change and larger amounts have been allocated to transport. Since the size of the Plan has been enlarged, the question of securing the resources needed for its fulfilment has naturally become more difficult. Even after estimating on a liberal scale, the resources that could be obtained through taxation, borrowing, deficit financing and external assistance, the Planners have left a gap of Rs 400 crores, which presumably will also have to be met from internal resources.

Though the investment in the Second Five Year Plan is to be much larger (6,100 crores) than that in the First Plan (3,500 crores), the share of the Private Sector has been greatly reduced. As against a more or less even division under the First Plan 62% of the investment in the Second Plan is to be in the Public Sector and 38% in the Private Sector. The shift in emphasis on the development in the Public Sector becomes more significant when it is realised that the increase in investment from Rs 1,700 crores in the First Plan to Rs 3,800 crores in the Second represents an increase of the order of 124% in the Public Sector, as compared to an increase of only about 28% in the Private Sector. In the interest of the Plan itself, a much larger scope should have been given to the Private Sector. The wide and varied experience which it possesses and the managerial personnel it commands should have been utilised to the fullest possible extent. With a much larger number of complicated schemes involving enormous amounts of capital investment, the administrative problems in the Public Sector are bound to present considerable difficulties and, if they had been shared with the Private Sector to a greater extent, the successful implementation of the Plan would certainly have been more assured.

As things are, the Plan must involve enormous burden being placed upon the community, even so, through the over-emphasis it places on household goods industries, acute shortages of essential articles of consumption might come about, involving a risk of serious inflation which it would be difficult to control.

The Budget proposals for the year have to be viewed in the light of the needs of the Plan for additional resources by way of taxation. Between the Centre and the States, the figure laid down is Rs 450 crores, and as if that was not sufficiently drastic, the Finance Minister has hinted at the possibility of raising another Rs 200 crores to finance the heavy defence programme which the situation on our borders is deemed to have rendered necessary. In the face of all this, detailed criticism of particular aspects of the Budget proposals, however valid and relevant, is not likely to receive much attention, but it is necessary to state all the same that the process of disincentives has been carried several steps further, and the future can only be viewed with serious misgivings. There is, however, a ray of hope, and that is to be found in the assurance that has been given that our Planners contemplate periodic reviews of the situation with a view to making such adjustments as are found necessary, and if that happens, we should see a more realistic approach to the problems of our under-developed economy.

I shall now pass on to matters of more direct interest to the Shareholders and refer to some of the important features of the Statement of Accounts which has been presented to you.

The working results of the year showed substantially higher earnings, but the net profit has been about the same as that of the previous year. This is accounted for almost entirely by an increase of as much Rs 23 lakhs in our establishment charges which now stand at the huge figure of Rs 2.60 crores. The effect of this will become clearer if I point out that the ratio of Establishment charges to total expenses has gone up to over 82%. Your Board is giving very close attention to this situation and is doing everything possible to retrieve it by effecting greater efficiency in working and by closing down unremunerative Branches, wherever that can be done without detriment to the Bank's business.

The improvement in earnings to which I have just referred was brought about largely through a more active pursuit of business possibilities. Our figure of Advances recorded an increase of over Rs 12 crores and stood at Rs 72.20 crores at the end of the year. The average during the year, it must be pointed out, was not as high—the bulk of the increase occurring during the last quarter of the year—but showed a definite improvement over the figures of the previous year. To enable us to cater to the growing needs of business, we had to resort to borrowings against our Securities and under the Bill Market scheme. In that connection, it is somewhat unfortunate that the Reserve Bank should have found it necessary to raise the rate of interest on Advances under the scheme from 3% to 3½% and, further, to discontinue the practice of sharing the cost of stamps.

On the income side, there has been an increase under the item of "Interest and Discount". There has also been a substantial improvement under the item of "Commission, Exchange and Brokerage"; apart from an expansion of our Exchange business, this result has been due to no small extent to the devaluation of the Pakistan currency.

Deposits of scheduled banks showed a marked increase during the year on account of the monetary conditions that prevailed. We have shared in the increase to the tune of Rs 4.69 crores. Our deposit figure of Rs 128.66 crores might easily have been larger had we participated in the growing scramble for deposits at steadily rising rates of interest. With the bank rate being somewhat out of alignment with the prevailing interest rates in the country, the margin between the rate at which working funds are obtained and that at which they are lent out tends to be not sufficiently remunerative and I hope you will agree that the policy we have been pursuing is right in the circumstances of the case. It has been responsible for the comparatively small rise of Rs 4.24 lakhs in the item of interest paid on deposits, borrowings, etc.

Our investment portfolio shows a reduction of Rs 62 lakhs and stands at Rs 56.71 crores. During the year, the Bank had to take up sizeable blocks of the Central and the State Governments loans and, in addition, a large allocation of 3½% National Plan Bonds, 1965, was received in lieu of Shares of the Imperial Bank of India held in the portfolio. While the total figure shows only a small reduction, profits have been secured wherever possible and there has also been a shift towards better yielding securities. It may be mentioned here that while the reduction in the portfolio may appear small, the ratio of Investments to Deposits has come down from 50% in 1953 to 44% in the year under review. A special Committee of the Board has been looking after our investments, and you may be sure every effort will be made to effect reductions in the portfolio.

At the end of the year, the difference between the book value and the market value of our investments was substantially narrowed. It now stands at Rs 1.62 crores. When we recall that, at the end of 1953, the gap was of the order of Rs 3 crores and 13 lakhs, we can appreciate the improvement in the position that has taken place.

During the year, the Report of Mr Justice Gajendragadkar's Commission was published. All the recommendations made by it were accepted by Government and embodied in a Bill which was passed on the 22nd of October. This enactment is to continue in force for a period of five years. The Act provides a suitable machinery for dealing with matters arising from the interpretation of the recommendations made by the Commission. It is very unfortunate that this liberal measure of amelioration of working conditions should not have been adequately appreciated by those in whose interest it was conceived. The adjustments made in accordance with the terms of the Award occasioned disturbances and dislocation of work in a number of banks and it would appear as if a section of the employees had made it its business to perpetuate the unhappy relations subsisting for so many years and which the Commission's recommendations had done their utmost to remove. I am glad that the majority of the members of our staff have given no countenance to such activities which are calculated to react very adversely on the fortunes of themselves as well as of the bank they serve. I am sure no one who has any understanding of the conditions under which banking business has to be carried on will fail to appreciate the great advance that has been made in the working conditions of employees, and realise the close identity of interest between Managements and Staffs. I reiterate the hope I expressed last year that a new era of closer and happier relations will be ushered in and that all of us who are engaged in the service of banks, from the highest to the lowest, will do all in their power to promote the growth of the industry and enable it to make its full contribution to national development.

The Directors' Report has referred to the great loss suffered by the Bank by the passing of Mr H. C. Captain within a very few days of his retirement from service. Mr Captain, in spite of ill health during the closing stages of his life, had continued to devote himself unstintedly to the interests of the Bank and it was a matter of great regret to the Board that his long connection of 34 years had come to such a tragic and abrupt end. The Board and the members of the staff have severally placed on record their appreciation of all Mr Captain had done for the Bank and I am sure the shareholders share their sense of loss and wish to convey to the members of his family their heart-felt condolences.

On the retirement of Mr Captain, the Board appointed Mr N. K. Karanjia as General Manager of the Bank. It was a fitting recognition of his long and meritorious service, and during the few months in which he has been working as Chief Executive of the Bank, the Board have every reason to be satisfied with the wisdom of their choice.

To strengthen the organisation of the Bank and to exercise greater control over the day-to-day working, the Board appointed Mr C. H. Bhabha, Vice-Chairman, and delegated certain powers to him under Article 107 of the Company's Articles of Association. Mr Bhabha has since been devoting a great deal of his time and energies to the affairs of the Bank and I cannot speak too highly of the work he has been doing.

To Mr N. K. Karanjia, General Manager, and Mr F. C. Cooper, Deputy Manager, our acknowledgements are due for the zeal and efficiency with which they have been discharging their responsibilities. I would also like to thank other members of the Staff at the Head Office and the Branches and the members of the Local Committees at various centres for the services they are rendering.

I now move the adoption of the Report and the Audited Statement of Accounts for the year ended 31st December, 1955.

KANKNARRAH COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Forty-sixth Annual General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 11-45 noon on Friday, the 27th April, 1956, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1955, and the Balance Sheet as at that date.

(2) To declare a Dividend on the Preference Shares.

(3) To elect a Director.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 13th April to 27th April, 1956, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, Clive Row,
Calcutta-1.
27th March, 1956.

NOTE:—

(a) A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a Member of the Company.

(b) Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 27th day of April, 1956, or to their Mandatees. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

CLIVE STREET GOSSIP

(Continued from page 608)

faced by company managements in respect of the new law, Mr G. Basu—for, it was he—began to think in terms of how Indian Finance could help in the matter. It was no sudden brilliant thought, but an almost inevitable result of our discussions, that his mastery of company law could fruitfully combine with my intimate familiarity with the Indian corporate scene over a period of 35 years. Thus was born the idea to publish a book on the new company law. The tasks of publishing a weekly journal are, I soon found, nothing as compared to the rigours of publishing a book! Checks and counter-checks, revisions and rewriting have taken a good deal of the meagre time that Mr Basu and I have had in recent weeks. The book—rather, the first volume of The New Company Law, published by Oxford Book and Stationery Company,—is to be released early next week. Thus do we attain, Mr Basu and I, authorship.

EAVESDROPPER

WORLD OF FINANCE

(Continued from page 604)

82 lakhs. The net accrual to foreign balances over the week must, therefore, have been of the order of Rs 4.79 crores.

+

There is a sharp increase of Rs 8 crores in borrowings from other banking companies in the statement of the State Bank of India for the week ended March 23. At the same time, deposits have risen by Rs 2.3 crores to Rs 237.5 crores. Cash balances, including money at call, are higher by roughly Rs 2½ crores. Investments show little change at Rs 107.33 crores. Advances are substantially higher by Rs 5½ crores at Rs 141.15 crores—and this would account for the sharply increased borrowings.

+

Tenders for Rs. 1,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, the 27th March 1956. Total amount offered was Rs. 1,00,00,000. Tenders at Rs. 99-5-9 per cent and above were accepted in full. Total amount accepted was Rs. 1,00,00,000 the average rate of accepted tenders being Rs. 2-8-6 per cent per annum.

Tenders for Rs. 1,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres up to the close of business on the 2nd April 1956. Successful tenderers should make payment on Friday, the 6th April 1956. Other conditions are as usual.

LAW FOR THE LAYMAN

(Continued from page 868)

do this very thing. No doubt that was only a compliance with the statute; but they did promise to do so, and I think that their promise is of contractual effect, so I need not consider whether, if there was no promise but only the statutory obligation, the position would be the same. I incline to think it would be so, and that the object of section 51(3) was to provide protection for persons who pay money on the faith of promises of this kind."

In the result the learned Judge holds that the monies in questieon are repayable to the persons who subscribed in answer to the circular and that they do not form part of the general assets of the Company.

KAMARHATTY COMPANY, LIMITED

NOTICE is hereby given that the One Hundred and Fifty-sixth Annual General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12-00 noon on Friday, the 27th April, 1956, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December, 1955, and the Balance Sheet as at that date.

(2) To declare a Dividend on the Preference Shares.

(3) To elect a Director.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 13th April to 27th April, 1956, both days inclusive.

By Order of the Board.
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the annexed Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1955, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

The Mercantile Bank of India Limited

*

Expansion Continues in Bank's General Business

*

Steady and Satisfactory Progress in India

*

Sir Kenneth W. Mealing, the Chairman, Surveys South East Asian Economies

The Sixty-third Annual General Meeting of The Mercantile Bank of India Limited will be held on April 17 in London.

The following is the statement by the chairman, Sir Kenneth W. Mealing, which has been circulated with the report and accounts:—

The expansion recorded last year in the Bank's general business continued during 1955. The balance-sheet total is £72,065,153 against £68,594,152 on 31st December, 1954. Deposits are higher by nearly £4 million, whilst on the assets side there are increases of over £2 million in Loans and Advances, nearly £1 million in bills receivable whilst the holding of Government securities is £4½ million higher.

There has been a considerable fall in the value of our holding of Government securities, for which full provision has been made. Of those quoted in Great Britain 77 per cent. are due to mature within the next five years, whilst the remainder mature on fixed dates beyond that period. Similarly with securities quoted on overseas Stock Exchanges 50 per cent. mature within the next five years.

The net profit at £235,423 is higher by £41,099. The two dividends declared total 14 per cent. payable on the increased capital and cost £118,335 compared with £97,020 for 1954. From the balance the usual allocations have been made to the officers' pension fund, premises account and contingencies reserve account, leaving the balance carried forward at £219,972, against £200,284.

The year 1955 produced high hopes of a relaxation of international tension following the "summit" talks at Geneva in the month of July. These hopes, however, were shattered at the ensuing Foreign Ministers' conference when it became clear that the Soviet bloc had no intention of permitting free elections in east Germany as a preliminary to German re-unification, nor of paying more than lip-service to the principle of international disarmament. This reversal of the Geneva atmosphere, coupled with the provocative references made by the two Russian leaders in India and Burma to "colonalism," crystallized the opinion that there is little or no prospect of a real relaxation of tension or of ending the "Cold War" until a real disarmament agreement can be brought into effect.

In England the freedom from all economic physical controls, the very full employment and increased internal consumption reflected in a higher standard of living for the majority, set up a rising spiral of wages and costs. As a result, the country was importing and consuming more than it was exporting and this economic unbalance resulted in a weakening of sterling in the world's markets. The initial remedial steps were to raise the Bank rate to 4½ per cent. and to place certain restrictions on hire purchase terms. In October an autumn Budget increased purchase tax on most consumer goods whilst further steps were taken to restrict credit. It is to hoped that these steps and those subsequently taken, including a 5½ per cent. Bank rate with further restrictions on hire purchase, together with restraint by all sections of the community will remedy the situation without necessitating the reimposition of economic physical controls, such as limitation of imports, price fixation and rationing.

In the United States of America industrial activity continued under boom conditions. President Eisenhower suffered a severe illness and politically thoughts are turning towards the Presidential Election to be held towards the end of 1956.

INDIA

1955 was a year of steady and satisfactory progress for India. Agricultural and industrial output continued to rise and the standard of living of the people has also risen. The average monthly earnings of workers is calculated to have risen by nearly 50 per cent. since 1947. Although the first Five Year Plan which is due to be completed by March, 1956, has not in all respects achieved its targets, it has been a success as far as the economic life of the country is concerned and it appears that deficit financing has produced a higher rate of development expenditure without causing inflation.

By constitutional amendments, by a drastic revision of the Indian Companies Act and by the Finance Act 1955 as well as in numerous pronouncements, some of the proposed steps towards a "socialistic pattern of society" were promulgated during the year. With the third successive good monsoon there was no food problem, notwithstanding the normal increase in population; and this again resulted in a large saving in foreign exchange expenditure on imported food. During the year the Imperial Bank of India was nationalized and became the State Bank of India, thus terminating a long and honourable chapter of banking history. The State Bank has been created largely in order to extend banking facilities widely throughout rural India to an extent which it would be impossible for other than a State Bank to undertake.

In January, 1956, an Ordinance took the first step for the nationalization of all life assurance business in India, both Indian and foreign. The disappearance of some of the fine old Indian life companies and the prohibition of this field of business to private enterprise in the future will be regretted by many and must inevitably cause some speculation as to how far the nationalization of existing business and industry is to be carried in India.

The second Five Year Plan is now under consideration. It is a massive project and, bearing in mind its great objective of raising the standard of living of the people and providing for the rapidly increasing population, it must be hoped that it will meet with at least the same measure of success as the first Five Year Plan. Whether or not, however, this can best be accomplished by Government concentrating its energies on creation of the new, rather than acquisition of the old and well-tried, is a matter of opinion.

In July the first reading was given to a Bill to decimalize the coinage and it is understood that at a later date it is Government's intention to bring in a metric system of weights and measures.

A disturbing feature of 1955 has been the numerous strikes of various kinds by the clerical staff of banks in the principal cities of India owing to the discontent of the banking trade unions with some of the provisions of the Industrial Disputes (Banking Companies) Decision Act of 1955. In Calcutta especially they were of such magnitude that the clearings had to be suspended for 22 days and it became almost impossible for banks to fulfil their legal obligations.

The good relations that have existed in our branches have always been a source of satisfaction to us and we regret that in some of our offices in India these should have been disturbed, we trust only temporarily. Our thanks are due to those who by carrying on during this very difficult period helped to enable our Indian branches to carry out at least some of their functions.

PAKISTAN

Mr. Gulam Mahomed, the Governor-General of Pakistan, retired through ill-health in the month of September, 1955, and General Iskander Mirza (the then Acting Governor-General) became Governor-General in his place. Mr. Mahommed Ali was replaced as Premier by Mr. Chaudri Mahommed Ali, the Finance member, and the new Government proceeded to enact the One-Unit Bill which has amalgamated all the provinces and states of West Pakistan into a single province, from which only the Federal capital, Karachi, has been excluded. Thus the way is clear for a new Federal Constitution with equality between the two states of East and West Pakistan.

The framing of the new Constitution is making progress, but problems in regard to the allocation of powers between the centre and the provinces and on the question of joint electorates still present some difficulty.

Pakistan has decided to become a Republic and it is good to learn that it is her intention to remain in association with the Commonwealth.

The second event of major importance was the devaluation of the Pakistan rupee to its old level of 1s. 6d. One effect was to assist Pakistan's exports, but another was an immediate rise in the internal price of imported goods.

The country's shortage of foreign exchange remains a problem, although there has been some improvement during the year. As a result the control of imports has been somewhat relaxed and the internal finances of the country are considered to be reasonably sound and the budgetary position satisfactory.

Pakistan's industrialization programme has made great strides. In the textile industry the number of spindles increased from 923,875 in June, 1954, to 1,565,552 in June, 1955, whilst the number of looms increased from 14,484 to 22,633 in the same period. The country is now self-sufficient in coarse and medium varieties of textiles. In the jute mill industry the target for 1957 of 6,250 looms is expected to be achieved shortly. Two new cement factories, a sugar mill and

mills for the manufacture of paper and paperboards are in or nearing the production stage.

The completion of the 330-mile pipeline from the gas field at Sui to Karachi via Hyderabad, Sind, and the gradual replacement of imported coal and oil by gas and gas-generated electricity opens a new era in West Pakistan's industrial economy.

CEYLON

With a record tea output for 1955 of 380 million pounds the industry generally has not done badly, but has understandably been hampered in that overseas buyers especially have been handicapped by the frequent administrative changes in the export duty.

The rubber industry has had a reasonably successful year but the generally higher external prices for the commodity have resulted in the China/Ceylon Trade Agreement not being so beneficial to Ceylon as in 1954.

Coconut oil and the copra industries have also had a reasonably successful year, whilst the cost of food imports fell substantially. It is therefore not surprising that the Ceylon Government had a net cash operating surplus of Rs. 128.7 million, which compared favourably with the figure of Rs. 33.7 million at the close of the previous financial year and is one of the biggest surpluses ever recorded in Ceylon.

The United National Party under the leadership of Sir John Kotelawala, the Prime Minister, remained firmly established in office throughout the year. Parliament has now been dissolved, and new elections will take place in April, 1956.

BURMA

There has been some improvement in the internal security situation of Burma during 1955. The insurrection still continues but successful operations by the army and security forces have reduced its effectiveness to hit-and-run raids carried out by gangs of bandits supported by the Communist Party. Nevertheless, the Government is optimistic of achieving internal peace before the General Elections which are due to be held in April, 1956. At these elections the Anti-Fascist People's Freedom League, the party which controls the present Government, expects to be re-elected with a large majority. Their political creed is the socialist state and the complete nationalization of Burmese trade, and in furtherance of this policy the Civil Supplies Management Board which has hitherto imported 12½ per cent. of the country's consumer requirements, will in future import 50 per cent. The department will have the sole monopoly for the import of most forms of textiles, cement and a number of other necessities. All this and much other business has to be channelled through the Government owned State Bank. Nevertheless, there is much goodwill towards the British and there may well be mutual advantage in a new growth of industrial and trading relations with Burma.

During the year the Government realized that the country was running into financial difficulties. These were caused by heavy overseas capital expenditure, combined with a sharp fall in foreign exchange earnings from the export of rice. In 1954 Burma sold rice forward in quantity with a "fall clause" whereby should they make subsequent sales at lower prices, then these contracts would also have to be fulfilled at such lower prices. In order to dispose of the large surplus of rice on hand without the "fall clause" operating. Burma has entered into "barter" agreements with the Communist bloc of countries. Barter agreements are, of course, never satisfactory, and there is little doubt that Burma will return to normal trading practice as soon as possible, particularly if the western Powers are prepared to assist.

MALAYA

1955 has been an eventful year for the Federation of Malaya and for Singapore. Economically it has been a prosperous year, prices for rubber, tin and other commodities produced in these territories having maintained reasonable and, indeed, profitable prices. The export figures for 1954 (including re-exports) proved to be considerably lower than had been estimated and, in fact, only reached the figure of $2,985 million. The export figure to the end of November. 1955, however, amounted to $3,698 million, so that the year 1955 should show a balance of somewhere in the neighbourhood of $230 million in favour of Malaya compared with a deficit of $154 million in 1954.

The main events of the year, both in Malaya and in Singapore, were the general elections followed by the setting up of the new Governments with, in the case of Malaya. Tengku Abdul Rahman as the Chief Minister and in Singapore with Mr. David Marshall as Chief Minister. In Malaya the transition to a measure of self-government was achieved remarkably peacefully, but in Singapore there were disturbances and setbacks and a considerable amount of striking by labour.

In Malaya, although there may have been some measure of improvement in the emergency, unfortunately there are few signs of this coming to an end. Towards the end of the year talks were held between the Chief Ministers and the leader of the Malayan Communist Party, but these talks were fruitless and the "status quo" of the emergency continues. In Singapore political uncertainties and the attitude of labour brought about a good deal of nervousness and there was a general and substantial marking down of share prices. In due course confidence began to return and prices again improved, and this was assisted by an assurance by the High Commissioner on behalf of the Government in Malaya that a square deal would be given to foreign investors by permitting them to continue to remit reasonable profits abroad. It is quite certain that unless an assurance of this nature regarding both capital and profits is implemented fully in the future there will be little inducement to ensure the flow of overseas capital required for Malayan development in the future.

The inauguration of a new self-governing democracy is always liable to be attended with some risk, dependent upon the wisdom of the newly elected Government and the cooperation they receive from their electors and their experienced predecessors, and the manner in which they receive this cooperation. In the context of the multi-racial Federation and Singapore these problems are enhanced by the emergency and Communist infiltration, and the extension and receipt of friendly cooperation in the building up of stable and sound government is therefore the more necessary.

THAILAND

Overseas trade improved considerably during the year 1955. As I told you a year ago, the rice export trade was given back to commercial enterprise and, as a result, total shipments of rice amounted to 1,223,937 metric tons compared with 993,719 in 1954. The largest individual purchaser was Japan who took just under 350,000 tons. Singapore and Malaya between them took 400,000 tons, Hongkong 170,000 tons and the Philippines 66,000 tons. In September the Government announced that imports and exports were in balance and removed the requirement that part of the proceeds of rice, rubber and tin exports should be sold to the Bank of Thailand at the official rate. The various steps taken to free trade were bold in conception but have been proved successful. On the other hand, the teak industry of Thailand appears to be in decline and there seems little doubt that the quantity of teak available for export will decrease considerably in the next few years.

During the year several important events occurred in Thailand. The first conference of the South East Asia Collective Defence Treaty commenced in February in Bangkok. In September an even bigger international conference took place in Bangkok when delegates from over thirty-five countries met at the tenth World Assembly of the World Federation of United Nations Associations. During May and June the Prime Minister, Field Marshal Pibulsonggram, made a world tour. On his return he inaugurated a number of reforms and made changes in his Cabinet. It is believed that general elections will be held in two years' time so political activity may be expected to commence during that period.

HONGKONG

The total value of imports and exports in 1955 amounted to $6,253 million against $5,852 million for the previous year. Imports at $3,719 million were up by $284 million, whilst the value of exports at $2,534 million recorded an increase of $117 million. There was a substantial increase in the value of imports from China, but this was rather offset by a very large decrease in the value of exports to that country.

Hongkong continues to make great strides in industrial expansion and the establishment of new industries, no less than $663½ million of Hongkong made goods were exported in the first 11 months of 1955, the principal buyer being the United Kingdom which absorbed $125 million. This helped to replace the heavy decline in exports to Burma, Indonesia and Pakistan. The airport is being reconstructed and a tunnel between the Island and Kowloon is under consideration. The squatter problem of refugees from China continues to be a major headache for Hongkong.

Hongkong continues to be an oasis of good government and law and order, unencumbered with political problems and able to concentrate on industrial growth and commercial activity of high quality and resultant prosperity.

MAURITIUS

The cane sugar industry had another profitable year in 1955. The crop proved to be an all-time record with a total of 523,200 metric tons produced at the high average extraction rate of 12.61 per cent. In November the British Ministry of Food agreed to purchase 351,000 long tons of the 1956 crop on the same terms as for 1955. Under the terms of the international agreement the export quota from Mauritius is fixed at 470,000 long tons and the balance of 119,000 tons in excess will therefore be offered for sale in the preferential markets of the United Kingdom and Canada. The outlook, therefore, for the sugar industry in Mauritius in 1956, given reasonable weather, should be very satisfactory. The cyclone and drought insurance fund has now risen to a total of approximately Rs. 87½ million.

The population of the island is increasing rapidly. It is estimated that the natural increase of the population is in the neighbourhood of 31 per thousand per annum and this must represent very nearly the highest birthrate in the world. This is largely due to the much improved health conditions prevailing in the island and it may be noted that something like 24 per cent. of the Governmental expenditure goes on education and health services. The finances of the Colony are in sound condition and the year to the end of June, 1955, provided a surplus of some Rs. 6 million of revenue over expenditure. On the revenue side 34.6 per cent. is budgeted for from direct taxation with a further 24 per cent. from Customs duties. The Government of Mauritius found it expedient to float a loan in October on the London market for £2,090,000 at 97 and carrying interest at 4½ per cent.

JAPAN

A General Election took place on the 27 February, 1955, as a result of which the Democrats and Liberals (who subsequently merged) secured between them 297 seats and the Socialists and others 170 out of a total House of 467. Mr. Ichri Hatoyama continued as Premier with a substantial majority: but not quite sufficient to make the revisions in the Constitution he desires, for which a majority exceeding two-thirds is required. Thus, for the first time, Japan has a two-party Parliamentary democracy.

The anti-inflationary policy has continued and the balance of overseas trade further improved: exports rising substantially (some 24 per cent. over 1954) whilst imports remained approximately unchanged, the balance is expected to yield a surplus of some 360 million U.S. dollars. Japan enjoyed record food crops which resulted in lower prices and a reduction in food imports, which saved much foreign exchange. The anti-inflationary policy is expected to continue, and although the standard of living is rising many difficulties still lie ahead of Japan. The population continues to increase by nearly one million a year, labour unions are becoming more active in demanding higher pay and better working conditions and the uncontrolled hire-purchase system is increasing facilities for buying on credit which may some day have serious repercussions.

Japan's economy continues to be based on trade with the free countries and on American offshore procurement, but as the countries of South East Asia increased their own industrial potential, trading conditions may become more difficult for Japan. Trade with the Chinese mainland, her natural market, continues to hold political dangers which Japan cannot safely ignore.

Japan became a member of G.A.T.T. during the year, but unfortunately her admittance to the United Nations was vetoed by the Communist bloc. This was a considerable disappointment to Japan and is a matter which all well-wishers must hope will be rectified at an early date.

During the year arrangements were made to open branches of the Bank in New Delhi and in the West End of London and these two branches commenced operations on 2nd January, 1956.

Our branches and offices throughout South East Asia and the Far East continued to give good service in every department of banking and particularly in our main function in financing overseas trade, and our thanks are due to Mr. Drake, our chief manager, Mr. Hawkins, our deputy chief manager, and to the managers and staff in London and at our branches for their hard and successful work during the past year.

WORLD OF BUSINESS

(Continued from page 606)

trade is one of the most rigidly controlled in India today. Nationalisation of life insurance, the ugly disclosures, and the continuous threats emanating from the Government of India are bound to have a sobering effect. On behalf of the trade it can be argued that there has been all through an exaggerated emphasis on malpractices. Compared to totality of business incidence cannot but be small.

It will thus appear that unintended ownership has constituted for the Government of India a problem which they are endeavouring to resolve by the device of state trading. It is to be hoped that if the domain of life investments bring to Government of India ownership of a, say, cotton mill or a shop, it would not be seriously suggested that Government of India would be a professional shop trader or a cotton mill owner manufacturing clothes. Such ownership confers no social benefit. It is, on the contrary, an indefensible encroachment on what little is left to private sector. It is thus a matter of surprise that Government of India should take such a positive attitude towards the control on a few general companies which unexpectedly has come to them. It would have been fairer and more consistent if ways were examined to relinquish control to private sector rather than to retain for active trading in competition with private sector. In the present and in many more years, there will be endless enlargement of insurance business directly or indirectly under Government control. Government imports will be enormous. A vast repository of insurance is already in Government hands. They need not canvass, nor have they to appoint agents and field officers. The vast influence they wield and the business which they are now passing to the Indian Insurance Companies' Association Pool are of such sizeable value and will be such a serious encroachment on business of private sector, that the existing companies will find it difficult to make out an existence. Unequal competition is not healthy and is likely to lead to more scramble amongst private insurers for what little is left. That will bring in again more malpractice against which companies have been warned. The vicious circle thus ushered can only spell doom to private sector in general insurance.

*

OLYMPUS

(Continued from page 611)

countries by the Soviet leaders had not something to do with the almost revolutionary changes in attitudes now taking place in Rsssia.

About Pakistan, Mr Nehru was both temperate and firm. He referred to the Statement made by the Pakistan Prime Minister the previous day about Indians responsibility for the border incidents. Mr Nehru's comment that it was a little difficult to deal with statements which have litle connection with truth was surely a triumph of understatement. He referred to the Newokal incident in which impartial observers put the responsibility for the trouble squarely on Pakistan's shoulders and on which Pakistan is still to make good its solemn assurance of punishing the guilty. There is hardly any doubt that inquiry into the other and more recent incidents too would yield the same result.

On the suggestion of No War Declaration, which Mr Mahammad Ali produces with every appearance of one who had conceived a brilliantly original idea, Mr Nehru mildly reminded that the idea was originally his and that the late Liaquat Ali Khan would not consider it at all. Mr Nehru however, has assured Mr Mahammad Ali he is willing to discuss the idea further with the Pakistan Prime Minister. He also made a passionate appeal to Pakistan to abandon her military posturings and accept the principles of Pancha Shila 'offered in all earnestness and goodwill' by him. How far this friendly gesture would evoke a similar response is problematical. If current goings on in Pakistan are any indication, it looks as though we are in for a long period of exasperating unfriendliness from her.

THE PENINSULA

(Continued from page 613)

shortage, for as is widely known in the industry, continuous operation shortens the life of machinery, reduces its efficiency, is disliked by the workers and lowers standards of quality."

To my mind, we are on the wrong track if we continued to think in terms of the two sectors juxtaposed against each other. Secondly, I also think that we are underestimating, on the one hand, our ability to export our cottage industry products and, on the other hand, the demand that is likely to be obtaining for cloth within the country in the next five years. I urge, in this view, a more intensive effort at building markets for handloom products in foreign countries. And, having regard to the disadvantages of third shift working, I find myself in agreement with Mr Castell when he asks that "it is vital that a considerable expansion of the present capacity for producing mill cloth should be permitted, and indeed encouraged." With India able to provide indigenously no small portion of the machinery required for the industry, we stand to lose little by authorising an increase in mills' capacity; on the contrary, failure to do so may mean the disaster implied in an inflation which will inevitably follow a shortfall as between demand for and supply of cloth.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

NOTICE is hereby given that the One Hundred and Forty-sixth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3-00 P.M. on Wednesday, 25th April, 1956, for the following purposes:—

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1955.
2. To declare Dividends.
3. To transact any other ordinary business that may be brought before the Meeting.

The Share Transfer Registers of the Company will be closed from the 11th April, 1956, to the 25th April, 1956, both days inclusive.

By order of the Board,
F. W. Heilgers & Co., Ltd.,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 15th March, 1956.

Printed copies of the Report and Accounts will be despatched to Shareholders on or about 29th March, 1956. Dividends will be paid to Registered Shareholders only.

BHARAT NIDHI LIMITED

Notice is hereby given that the Annual General Meeting of the shareholders of Bharat Nidhi Limited will be held at the Constitution Club, Curzon Road, New Delhi on Thursday, the 26th April, 1956 at 11 A.M. to receive and adopt the Directors' Report and the Audited Statements of Accounts for the year 1955, to declare dividends @ Rs. 6 per share on Preference Shares, As. 10 i.e., 6¼% on fully paid Ordinary Shares and As. 2-6 i.e. 6¼% on partly paid Ordinary Shares, to elect Directors in place of the retiring ones and to appoint auditors for the current year and fix their remuneration.

Share Transfer Books of the Company shall be closed from the 11th April, 1956 to 26th April, 1956 both days inclusive.

By Order of the Board,
J. B. JAINI,
Manager.

New Delhi,
29th March, 1956.

N.B.—A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

THE NEW COMPANY LAW

By

C. S. RANGASWAMI

and

G. BASU

The New Company Law, which is intended to be a practical handbook for company managements and commercial students, will contain detailed commentary on the new Act. The first volume has an exhaustive introduction, while the second will include a number of relevant appendices.

Pre-publication price is Rs. 25 for a set of 2 volumes.
Post-publication price is Rs. 30 plus postage.

Advance orders at pre-publication price may be booked with "Indian Finance", 116 Lower Circular Road, Calcutta—14. Orders must be accompanied by a cheque to cover the price.

Publishers: Oxford Book & Stationery Co.

Printed at the Dorchester Printing Works, 116, Lower Circular Road and published for Indian Financial Journals Ltd. and Edited by C. Swaminatha Rangaswami Jr. 116, Lower Circular Road, Calcutta. Bombay Publisher: P. R. Venkatesan, Navsari Chambers, Outram Road, Fort, Bombay.

don't chase shadows...

An attempt to combine economy with efficiency is often like chasing shadows. Planned Lighting, however, is a sure road to success. Planned Lighting means greater output, fewer accidents, less absenteeism. It's Fluorescent Lighting—by Philips—which will help you reduce overheads by giving you three times as much light for the same amount of electricity consumed.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it.

Philips Electrical Co. (India) Private Limited.

PHILIPS

Philips Fluorescent Lighting ensures diffused, glare-free light, without hard shadows. It is the illumination for ideal working conditions, less fatigue, less eye-strain, hence higher efficiency and increased production. Why not try it out yourself? Ask Philips Lighting Service Bureau to examine your existing installations and submit recommendations for any improvements required.

PHILIPS

For the Investor

The Four Scare-mongering Issues

Investment Gossip:

THE present tempo and temper in the Indian Stock Exchanges provoke the question: Has there been any justification for the spells of panic which have recurrently occurred in the past many months?

Corporate earnings, as judged by balance-sheets issued in recent weeks, are substantial and may be considered most satisfying to the lucky shareholders. The latter will have no difficulty in realising that the alarm signals frequently hoisted by the professional operators have been proved to be false alarms.

The scare-mongers and the doom-prophets have relied principally on four issues for spreading panic. The four issues are: (1) Threat of nationalisation; (2) Stringency of Company Law; (3) Onerous taxation, and (4) Government's unhelpful attitude. According as the one question or the other could be pressed into service precipitating a price-debacle, the gloom-traders have forecast all manner of dire happenings to the detriment of the interests of shareholders.

It is profitable to examine each one of these questions in the broad perspective which it is possible to take in current conditions.

First. Nationalisation has been used to conjure up a nightmare and to frighten shareholders out of their wits. What exactly are the facts? It is true that the Imperial Bank of India has been brought under State control. But, the point to note is that this has been done solely for the purpose of strengthening its resources and diversifying its services. Now that the controversy has received a quietus, the realisation is dawning that the State Bank of India will be ever so much stronger, will render ever so much more important service, and will prove to be an ever so much more useful instrument of national economic policy. Was it a bad thing that the Imperial Bank was nationalised? The answer is an emphatic No.

It is true that life insurance companies have been nationalised. But is it not also true that most managements of life companies have hanged themselves with the long rope that was vouchsafed to them?

It is true that the new units for steel manufacture will be State-owned and State-managed. But why turn a blind eye to the varieties of assistance, financial and otherwise, which Government have rendered to the steel producers in the private sector for their expansion plans?

It is true that the coal industry has not been given the categorical assurance that it wanted to the effect that existing coal companies will not be nationalised. But, why overlook the simple fact that, if coal production in the future is to be increasingly secured from State-owned and State-operated mines, the reason is that the State will, in five years' time, be consuming over a third of the expanded coal output? Is it prudence for the State, being the largest single consumer of coal, to place itself at the mercy of private producers, not all of whom have a record for public spirit or probity and many of whom have been known to be rapacious when rapacity pays?

We may pose a few more significant questions: The shipping industry depends on the Government for a great deal of the finance required for its expansion programme; have the Government nationalised the shipping industry?

The cement industry sells the bulk of its production to the Government; has it been nationalised?

The lesson which all this experience suggests is that, if industry behaves itself, it has no need to be working under a constant threat of nationalisation.

The second weapon in the armoury of the gloomy prophets is the rigours of the new Company Law. To the extent that managements dislike the law, to the proportionate extent shareholders should welcome it with open hands. Even the most partisan advocate of the managing agency system will admit that abuses have been piling up at an alarming pace in recent years. The evil doers among this tribe are to be held responsible for provisions that restrict and for penalties that will hurt. They have invited all this on all the companies. The good type of managing agents did nothing, and perhaps could do nothing to distinguish themselves from the black sheep and to isolate the latter. Here, too, it is a case of hanging with the long rope. And, changing the metaphor, of being tarred with the same brush.

The third plank in the alarmist propaganda is onerous taxation. In this respect, there is the utmost need for a due sense of proportion. In a country whose population is over 350 million, there are hardly 8 lakhs of people who pay income-tax. Of these 8 lakhs of people, there can hardly be 10,000 persons from whom tax for any worth-while amount is collected. If taxes affecting so few are stepped up—and that, too, in line with what obtains in most advanced countries—how is the economic condition of the countless masses jeopardised?

Has it ever been that income-tax is accepted in the spirit and sense suggested by Judge Holmes? There will always be grouses against any rise in this tax. The remedy is in the hands of the tax-payers themselves. Let the honest tax-payer see that the many dishonest ones pay up as due under the law; and there will be, then, a good case for tax-reduction.

Around India with Brooke Bond

The Todas of the Nilgiris...

A handsome pastoral people, the Todas live on the Nilgiri Hills. The men are tall, bearded and brownish in complexion; the women are fair and comely, and dress themselves in colourful homespun garments. The Todas dwell in huts, low in height and circular in shape. As in the case of other tribal peoples, the life of the Todas is governed by their own totems and taboos. Their festivals are many, and in the communal dances held on such occasions men and women participate freely.

Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

HIGHLIGHTS

One vogue of statements by Bank Chairmen has caught on to an amazing extent in this country. Every important scheduled bank has adopted the practice of utilising the influential forum offered by the annual general meeting by means of an address by the Chairman.

That address, more often than not, takes great pains to assess the economic conditions and trends. But, largely, the analysis relates to the past; and, almost invariably, specific Government measures are seized as yardsticks by which to calculate the pace of development in the future.

But what is not undertaken, or so it would seem from the current year's crop of speeches, is analysis with a constructive tinge.

With, certainly, one exception, it would appear that bank chairmen have largely been content to record Government policy in the recent twelve-month period, and to pass their opinions on such facets of it as they considered harmful to the fashioning of investment and development climate.

The Leading Article this week takes up the subject of what it would be fitting and appropriate for Bank Chairmen to deal with in their annual statements: and, in so doing, it suggests that they could, from their experience and knowledge, both authoritatively and constructively indicate the lines of action which would enable the best investment climate to be secured to the country.

The fourth argument used to broadcast alarm is that the Government are unsympathetic. It is time that this lie is nailed to the counter. Have not the Government given all the financial assistance that the private steel industry asked for? Are not the Government giving to shipping companies large loans on superlatively easy terms? Have not the Government strengthened the Industrial Credit and Investment Corporation in every way possible? Are not the Government doing everything to facilitate the Industrial Finance Corporations rendering apt aid? The record of the present Government is that, while demanding good behaviour from private enterprise, such elements of private enterprise as have proved themselves worthy and deserving have received every manner of help in a sympathetic and understanding spirit.

There is a real, vital and vivified national economic policy for the first time in India's history. Let us be truly grateful for these many favours and blessings that distinguish the present national government from the past alien government.

At any rate, the shareholders have every reason to appreciate the beneficence of measures that stimulate industrial expansion and, at the same time, safeguard their interests.

Whatever Big Business may think of present economic policies and measures, the large body of shareholders could gratefully hail the national government's proposals and achievements as being conceived in the best and highest interest of the nation.

£ R$

Tata Textile Results

Balance-Sheet Reviews:

BOTH the Tata textile units, which last week reported on their working for 1955, have been able present to their shareholders accounts which show a remarkable improvement over 1954.

By virtue of an increase of Rs 39½ lakhs in sales, the Svadeshi Mills Company Limited has been enabled to treble its profits and more. While sales mounted from Rs 2.43 crores to Rs 2.83 crores, the net profit soared from Rs 11.03 lakhs to Rs 34.13. lakhs.

Prudently, and having regard to the substantial additions to block, the provision for depreciation has been raised from Rs 3 lakhs to Rs 19 lakhs. The transfer to the Dividend Equalisation Fund totals Rs 14.89 lakhs against Rs 8 lakhs.

Shareholders have their dividend raised by 50 per cent: The distribution at 12 per cent absorbs Rs 12 lakhs, leaving Rs 67,611 to be carried forward.

The balance-sheet of Svadeshi discloses Preference share capital of Rs 15 lakhs, and ordinary share capital of Rs 1 crore. There is a Reserve Fund of Rs 25 lakhs besides the Dividend Equilisation Fund of Rs 25 lakhs, and other funds to the tune of Rs 32 lakhs.

As against the gross block of Rs 2.29 crores (this figure being higher than the relative figure for 1954 by Rs 36 lakhs), there is a Depreciation Fund of Rs 1.19 crores as well as an amount of Rs 30 lakhs to the credit of the Rehabilitation of Buildings and Machinery Fund. On this basis, the block has a net value of Rs 80 lakhs.

A sharp fall of Rs 35 lakhs in stocks, and a decline of Rs 20 lakhs in investments, reduce the level of liquid assets to Rs 1.62 crores from Rs 2.21 crores.

This, however, has been matched by equally substantial declines in sundry liabilities. Loans are shown lower by Rs 36 lakhs at Rs 37.71 lakhs, and other liabilities have fallen by Rs 9 lakhs to Rs 45.75 lakhs.

In the case of the Tata Mills Limited, sales are merely Rs 6½ lakhs higher at Rs 2.61 crores. But the net profit is more than three times better, having risen from Rs 8.80 lakhs to Rs 27.40 lakhs.

As with Svadeshi, Depreciation benefits substantially, the provision having been raised from Rs 5.75 lakhs to Rs 20 lakhs.

Shareholders get a steeper increase in dividend, from 10 per cent to 16 per cent. This absorbs Rs 5.25 lakhs, the carry forward being Rs 43,485.

The ordinary capital of Rs 32.77 lakhs is buttressed by a Reserve Fund of Rs 30 lakhs, and other funds totalling Rs 18.74 lakhs (including the increased transfer of

Wanted: a lead from Bank Chairmen

Indian Finance
Established 1928
April 7, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

AN inescapable impression created by the speeches of Bank Chairmen in India is that the addresses at these important annual functions are yet to develop a distinctive personality of their own. Most of them are hardly distinguishable from the addresses of the presidents of chambers of commerce or the speeches of the chairmen of industrial concerns. It is the voice of Big Business, rather than the pronouncement of a veteran leader in the banking world. The same old grouses about onerous taxation, the same old complaints about mounting staff salaries, the same old pessimism about the resources for financing the Second Plan.

The deficiency in this respect is brought out in unflattering relief if we compare these speeches with, say, the statements of the Chairmen of the Big Five in London. It may, perhaps, be argued that the comparison is not fair. For, in the first place, bank chairmen in England are full-time executives, while, in India, they are more or less decorative figures. In the second place, bank chairmanships in India seem to be a monopoly of Big Business, while, in the UK, the choice is from a different class and calibre of men. Men like Reginald McKenna or Lord Linlithgow or Sir Oliver Franks did not rise to bank chairmanship by the ladder of Big Business.

A comparable figure in the Indian banking domain is Dr John Matthai, Chairman of the State Bank of India. For our part, we are hoping that, in the coming years, Dr Matthai will introduce in his addresses the sweep, the insight and the constructive approach of a McKenna. As it is, Mr G. D. Birla is the one bank chairman to whom belongs the credit of a wide-ranging and clear-headed lead in matters that are germane to the money market and its functioning.

Yet, the meetings held in this season of the annual foregathering of the shareholders of banks could have been purposefully utilised for significant suggestions bearing on many a pressing problem of the day. The occasion is momentous: The First Five-Year Plan has ended on a note of triumphant achievement: and we have embarked upon a Second Plan of wider range and more fundamentally important objectives. This conjuncture of the two Plans poses questions which those whose main business involves continuing contact with the money market are most qualified to tackle.

Firstly, a factor of crucial importance in the Second Plan's programme of financing is market loans. Bank chairmen could usefully have indicated the directions in which gilt-edged policy and borrowing techniques must be improved so as to maximise the flow of subscriptions for new loans. Have the open-market operations of the Reserve Bank been conducted to such effect that the giltedged outlook is rendered increasingly confident? Is the present pattern of giltedged yields dynamic enough? Which is to be preferred—the Centre and the States borrowing separately or the Centre and the States issuing a combined loan? Was it a wise policy on the part of the Reserve Bank to let 3 per cent 1986 loan slip below Rs 80? For the borrowing programme in this quinquennium, what lessons could be drawn from the experience of defence loans in the first six years of the forties?

Secondly, it is admitted that the magnitude of deficit financing could be reduced if the Treasury Bill sales to the public are expanded. Have the bankers any concrete suggestion to make for stimulating the response to Treasury Bills? On their part, what are they prepared to do to enhance the usefulness and status of Treasury Bills? Are they at all considering measures to the bringing of practices regarding cash and other ratios to some kind of approximation to the practices in advanced countries? Now that the facilities for advances against usance bills have been in increasing vogue for over five years, what steps do the banks propose to take to accelerate the logical next steps in this process? Though it is called the bill market scheme, we are yet far from a bill market. Bills are only of seasonal importance now. What do the bankers propose to do whereby a bill market could be brought into being and made to function all the year round?

Thirdly, it is gratifying to record that the expanding economy has had the expected repercussions in the shape of rising bank deposits. Is the expansion in deposits adequate to the magnitude of disbursements on account of the Plan? If not, what are the obstacles in the way? How are such obstacles to be removed? What are the banks prepared to do to shorten this lag in the most effective way?

Fourthly, it is expected that, with the acceleration of the Plan, the demand for bank credit will be likewise accelerated. How are the banks preparing and equipping themselves to meet the demand as it grows? What facilities do they themselves need in order that they may discharge their responsibilities competently and adequately?

Fifthly, while bank deposits have gone up appreciably, why is there this scramble for deposits? Why this unseemly bid and this unprofitable raising of rates? Cannot the banks come together and agree upon a ceiling for deposit rates and a floor for advance rates? If they are not able to do so, should they not request the good offices of the Reserve Bank?

Sixthly, while all costs have gone up and all prices, should the cost of money and the price of money remain unchanged? Bankers should frankly discuss the incidence of the cost of borrowed money in relation to trade and industry; and they could, possibly, have made out a good case for the raising of the minimum rate on bank loans and advances. Their case in this respect goes by default.

Seventhly, it does not suffice for a bank chairman to declare that the 3½ per cent Bank Rate is out of gear or out of alignment. Except for Mr Birla, no bank chairman has furnished a detailed analysis of the pros and cons. The Bank Rate is essentially a matter on which bank chairmen are in the position to provide a careful exposition and an authoritative lead.

Finally, what about the foreign exchange resources for the Second Plan? To dismiss the question with a curt assertion that there will be a big gap, does not help us in any way. Have the bankers any special advice to give whereby the hoarded gold could be pressed into service?

From all of which it is arguable that the bank chairmen in India have not so far realised that they have a special status in the money market; and that they have both the authority and responsibility to give a lead in matters that concern the money market and that impinge on the broad pattern of national economy. It is to be hoped that, when the 1957 season begins, they will feel the call and urge to rise to the occasion and give an impressive and inspiring lead.

Re-appraisal Suo Motu

CURRENT indications are that Sir Chintaman Deshmukh is not disposed to have a re-appraisal of his budget proposals. Parliament's reception to the Budget may be cited as an argument that no such reconsideration is called for.

We cannot, however, help thinking that, on his own initiative, the Finance Minister will do well to modify his stand in regard to (a) tax on bonus shares, and (b) tax on dividends.

In regard to (a), the point to emphasise is that, after detailed and careful consideration, the Taxation Enquiry Commission came to the conclusion that a tax on bonus shares could not be recommended. It is also significant that a tax of this nature was introduced in the British Budget while Sir Stafford Cripps was the Chancellor of the Exchequer but was withdrawn after a brief trial.

Nor should it be overlooked that the only country which has presently a tax on bonus shares is Canada and that, too, because of special reasons and for special issues of bonus shares.

If Sir Chintaman was convinced that a departure from the Taxation Enquiry Commission and from universal practice was justified in this case, he must have set out, in detail, the arguments that led him to such a view. As it is, this tax is being brought forward without so much as an explanation.

The Finance Minister is always at pains to carry conviction in such matters. Either he must uphold the tax with reasons that convince or he must withdraw the measure.

In regard to the tax on dividends, there can be no doubt that this tax particularly penalises the companies which, hitherto, had pursued a conservative financial policy. Such, surely, could not be the intention of Sir Chintaman.

Even at this late stage, careful consideration should be given to our suggestion (made in our Budget Bulletin) that each company should be allowed to choose a standard year; that the dividend paid on the working of that year should be considered the standard rate; and that any dividend paid in excess of that standard rate must be liable to the tax.

The issues connected with the bonus shares and dividends affect, not a few big capitalists, but a large number of middle-class investors. So, the re-appraisal we propose should be undertaken in a spirit of sympathy. "Soaking" the middle-class can be no help in fostering and sustaining a healthy stock exchange outlook.

Editorial Notes

Ensuring Economy

The steady and rapid growth of the public sector in industry calls for a complete review of the administrative machinery which exists for the control of expenditure. Almost every report of the Estimates Committee is a wail over indiscretions, extravagances and, not infrequently, fraud. In the Punjab, the Government have now appointed a committee to enquire into the justifiability of expenditure incurred on the Bhakra Canal Works.

The step has been impelled by the impression that in the execution of these works there has occurred considerable waste. Whatever be the amount of waste in Bhakra, it is by no means an exception. Authcritative scrutiny has detected irresponsible expenditure in a number of major projects. General public impression may be prone to exaggerate the dimensions of such recklessness. The present procedure is to scrutinise expenditure after it is incurred. Extreme punitive steps against the officers concerned will undoubtedly be a general deterrant; but it can never be a substitute for control in time.

The only effective and adequate safeguard, therefore, lies in the direction of instituting a machinery capable of understanding the detailed problems of current expenditure on different projects and offering guidance on the most economic way of spending money. Under the new Companies Act, auditors are privileged to attend Directors' meetings, even when such meetings are not intended for the discussion of accounts. The aim is to familiarise the auditors with the general administration of a concern, from which the accounting side is not wholly inseparable. The auditor is thus enabled to secure an insight into affairs, which in turn helps him to recognise the anomalies and waste in expenditure, wherever they occur.

The same principle can profitably be introduced into the public sector also and with equal force in the regular Government Departments. The powers of the auditing departments should be correspondingly enlarged. This, by itself, may not be sufficient. In industrial projects, the engineers should be given some training in business methods, as in most cases, they are virtually the purchasing officers as well. When contracts worth huge amounts are involved, the engineer who is a novice in business is likely to be either befooled or influenced by temptations.

When the State is drawing on an increasingly large proportion of the engineering and business talent in the country, it is worth while exploring how far the prevailing system of doling out actual work to contractors should be continued. It is well-known that public works contracts are one of the most alluring sources of patronage for persons in authority. A number of evils could be rooted out, if the practical responsibilities of the supervisory officers are enlarged and the principle of elimination of middle-men introduced into a sphere, where it is found to be notoriously wasteful and productive of corruption.

*

A Significant Offer

The angry and picturesque repudiation of Stalin by Marshal Bulganin and his associates is finding a few distant echoes. The British Communist Party has offered its co-operaton to the Labour Party. Mr Palme Dutt, Vice-Chairman of the Communist Party speaks of the need to end the cold war within the British labour movement, as a logical consequence of the thawing of the international cold war.

Presumably, the British Party chief has not derived any extraneous inspiration for this daring suggestion. He is just projecting certain ideas into a new political landscape. In the British Parliament, Communist representation is negligible. The Party, therefore, "cannot speak with strength." The Labour Party, in its turn, may also recall the fate of the 'common fronts", through which more than one East European State slid into the other side of the Iron Curtain. As far as Britain is concerned there is a bulwork against a similar prospect. Both the leadership and the rank and file of the Labour Party know what they stand for and the temptations to which they could be exposed.

Labour and Conservative Governments coming in mutual succession have been careful to see that continuity even in the matter of industrial policy, is preserved to the maximum extent possible. British faith in political democracy forms an inviolable common bond. Even in respect of the regard and affection to the royal family, the Labour Members are not behind the Conservatives, In this situation, the Communist Party's offer is bound to be suspect. Its significance lies more in the possibility of the Communists themselves attempting modifications in doctrines and imparting a new tolerance and catholicity to their outlook. The two brands of socialism, between which Europe is at present divided, are the product of a historical evolution. Perhaps a new phase is dawning.

*

No Going Back from Facts

The statements made by the Prime Minister in the Lok Sabha and in Monday's Press Conference have far-reaching implications. There was a certain finality about the clarification he gave of the Indian Union's stand on Kashmir. Though slightly embarrassing, he found it necessary to accept the analysis of the situation as rendered by the Soviet leaders.

Pandit Nehru has unhesitatingly endorsed the statement made by Mr Bulganin and Mr Krushchev that the Kashmir issue had been decided by the people of the State and that the State formed an intergral part of India; the Russian leaders statement was described as " logically, constitutionally and practically, completely correct." This time, Pandit Nehru went a step further and declared that he did not want a plebiscite to be held in Kashmir now.

Having indicated his attitude in terms more forcible than at any time before, he proceeded to examine some of the resulting implications. Pakistan, which, of late, has assumed a bellicose attitude, would lay no stone unturned in its search for allied support. Already some of its leaders have issued frantic calls to the Medo and Baghdad Pact Powers. For both Pakistan and India, it will be a test of US professions. In spite of the apparent artlessness in the behaviour of a few of US top diplomats, it is not wise to underestimate the fund of statesmanship which is available for that country. Under no circumstance, can Britain be expected to approve of any headlong step.

Some disillusionment over foreign military aid can well occur and in all probability India will not be the victm of it. But that prospect should not disable India for being prepared for any emergency. The Prime Minister has not challenged the suggestion that funds might be diverted for military expenditure from the Second Plan or, in the alternative, new sources found. India has taken a firm stand on the issue and is fully aware of the responsibilities implied.

Jobs Calling

A recent official Note issued by the Central Labour Department conveyed the impression that for certain categories of jobs, the supply of applicants was lagging behind demand. Among such categories were mentioned draftsmen, fitters and turners, civil overseers, nurses, midwives and stenographers. The magnitude of the deficiencies is indicated by further figures.

During the last quarter of 1955, 193 vacancies were cancelled in all the Employment Exchanges together for stenographers, 129 for overseers 74 for draughtsmen, 59 for midwives and 56 for general skilled fitters. As only fractions of the vacancies occurring under private employment and governments are referred to the Employment Exchanges, total figures should be bigger.

While assessing the scope for jobs under these categories, it should, however, be remembered that mobility of labour is being impeded by a number of factors. A total All-

World *of* Finance

Deficit Financing for Rs 45 crores

THE Reserve Bank returns are noteworthy as reflecting the large-scale adjustments usual to the closing days of the financial year. On the face of it, it appears that there has been deficit financing for Rs 34.78 crores. On closer scrutiny, however, ad hoc Treasury Bills additionally sold to the Reserve Bank in the week under review for the Centre's ways and means requirements are nearer Rs 45 crores. It is to be noted that Investments in the Banking Department show an increase of Rs 9.77 crores. This is, presumably, due to transfer of rupee securities from the Issue Department. This transfer from the Issue Department to the Banking Department may be considered the reversal of an operation put through a few weeks ago for the purpose of increasing the cash in the Reserve Bank's till.

What has happened is somewhat like the following. With a view to meeting extra-governmental commitments of various kinds and with a view to providing for the disbursements which are exceptionally heavy in the last week of the fiscal year, all the heavier this year because it was the closing week of the First Five-Year Plan, the Central Government had recourse to deficit financing to the extent of Rs 45 crores. Ad hoc Treasury Bills for this amount were sold (in addition to the renewals) to the Reserve Bank. The additional currency, which this operation would have necessitated, would have meant super-plethora in the Reserve Bank's till. So, from the point of view of its own cash position, the Reserve Bank had to offset the expansion against ad hoc Treasury Bills. The offsetting operation has taken the form of contraction of currency against foreign securities for Rs 20 crores, and contraction of currency against rupee securities for Rs 10 crores. In other words, the expansion of currency through deficit financing was Rs 45 crores; and the contraction of currency was Rs 30 crores. In the result, there was net expansion of currency for Rs 15 crores.

Thanks to the aid of deficit financing on a scale larger than immediate requirements, the Centre's balances with the Reserve Bank at Rs 67.34 crores show an increase of Rs 14.65 crores. This excess of Rs 17.34 crores over the conventional minimum may, perhaps, suffice to meet the payments on the last day of March and in the first week of April. The Centre's balances as on March 30 seem to provide an adequacy for margin for these disbursements, which means that, so far as 1955-56 ways and means budget is concerned, no further deficit financing may be necessary.

On April 1, 1955, Rupee Securities in the Issue Department stood at Rs 533.75 crores. The corresponding figure on March 30, 1956 is Rs 678.82 crores. It may, therefore, be inferred that total deficit financing in 1955-56 is of the order of Rs 145 crores. This compares with Rs 240 crores indicated in the Revised Estimates as the magnitude of deficit financing in 1955-56.

The returns of the Reserve Bank for the week ended March 30 show the combined effects of the closing week of the financial year and the closing week of the First Five-Year Plan. The Central Government's disbursements have been considerable; but recourse to created money has been on an even more considerable scale. Rupees Securities have risen by Rs 34.78 crores to Rs 678.82 crores, while Foreign Securities have declined by Rs 17.87 crores to Rs 656.42 crores. Rupee Coin has shrunk by Rs 0.12 crores to Rs 103.16 crores. Active note circulation has expanded by Rs 12.68 crores to Rs 1466.64 crores. As a result, cash held in the Banking Department shows a rise of Rs 1.93 crores to Rs 11.77 crores.

In the Banking Department, the balances of the Central Government, the State Governments and Scheduled Banks have increased by Rs 14.65 crores, Rs 13.51 crores and Rs 3.52 crores to Rs 67.34 crores, Rs 62.03 crores and Rs 53.24 crores respectively. Thanks to transfers from the Issue Department, foreign balances have increased by Rs 18.17 crores to Rs 89.71 crores, and investments by Rs 9.97 crores to Rs 47.19 crores.

The suspension of Treasury Bills auctions was indicated in this week's communique. It may be taken as certain that sales will be resumed at the earliest slackening of monetary stringency. The continued poor response in recent weeks may well have been the chief reason for the temporary withdrawal of weekly sales. It is quite possible that, even for the kind of response that Treasury Bills evoked in the past few weeks, the Reserve Bank

Capital Investment in Britain

By PAUL EINZIG

DURING the weeks that precede the Budget an immense volume of statistical material is published each year, indicating the trend of trade, income, expenditure, etc. during the previous year. The material covering 1955, which was published during the course of March, had been awaited with particular interest in view of the economic difficulties due to inflation, and the partial setback in business resulting from the Government's disinflationary measures. As soon as the figures became available, experts set out to examine them with care to discover in them indications about the nature and extent of the effects of the disinflationary drive during 1955.

If there was one fact which emerged forcefully from the mass of figures it is that capital investment in Britain has remained unaffected by the disinflationary measures. An independent investigation carried out by the Financial Times in March showed that in this respect the situation has not changed during the first three months of 1956. The industries primarily affected are those producing consumer durable goods. As far as capital goods industries are concerned they continue to work to capacity and have many unfilled vacancies.

The explanation of this fact is partly that the order books of capital goods industries have been sufficiently full to keep them fully occupied even if new orders were to cease altogether and partly that industrial firms are proceeding with their capital investment plans in spite of the setback caused by the disinflationary measures. In this respect British experience has now confirmed the conclusions based on American experience during post-war trade recessions. While before the war demand for capital goods fell sharply at the first sign of a trade recession, since the war industrial firms have adopted the policy of proceeding with their investment plans regardless of the temporary ups and downs of business fluctuations.

To a large extent this change of attitude has been due to the increased confidence of entrepreneurs in business prospects. They are now convinced that their Governments will now be both able and willing to go to any length to prevent a slump; so that taking the long view, they are safe in proceeding on the assumption that any recession is bound to be followed before very long by a fresh expansion. Another reason for this change of attitude lies in the peculiar character of capital investment connected with automation. If an industrial firm places an order for a number of conventional machine tools, it can always cancel that part of the order on which work had not yet been started. On the other hand if the order is for huge automatic transfer-machine, it cannot be cancelled when it is half finished, without wasting the cost incurred to date. Since a large proportion of capital investment by industries in Britain now consists of automatic equipment, this consideration in itself goes a long way towards preventing a setback in the capital goods industries.

Post-war developments in this respect have a very important bearing on economic theory. The fact that demand for capital goods is now steadier than demand for consumer goods makes it necessary to reconsider the basic principles of Keynesian economics. According to Keynes, consumer demand obeys well-established and predictable rules and the ups and downs in business trend are almost entirely the result of fluctuations in demand for capital goods. This principle may have been in accordance with pre-war experience but it is certainly not in accordance with post-war experience. As we pointed out above, the demand for capital goods is now much steadier than before the war. What is equally important, the demand for consumer goods is now subject to much wider fluctuations. This is due in part to the increase in the consumers' discretionary incomes which enables them to decide whether to spend large amounts on things other than necessities. Decisions of consumers whether to save or spend now affects much larger amounts than before the war. Moreover, the post-war development in the sphere of instalment selling provided additional scope for the fluctuations of consumer demands.

The significance of this change does not appear to have been sufficiently realised. This at any rate is indicated by the measures taken by the British authorities to check inflation. These measures were directed overwhelmingly against capital investment. As a result of a change in the attitude of industrialists the measures are not likely to produce their full effects for sometime to come. Capital investment is likely to continue almost unabated for many months in spite of the decline in consumer demand.

In order to produce immediate effect disinflationary measures have to be concentrated mainly on consumer purchasing power. This in fact has been done to some extent in the form of additional restrictions on instalment credit and additional increases in Purchase Tax. Both these measures have produced their effect rather unilaterally on consumer durable goods. There has been so far no perceptible decline in the demand for non-durable goods. Yet it is the prices of the latter which respond the most quickly to inflationary buying pressure. It is the rise in the prices of non-durable goods which has been mainly responsible for the rise in the cost of living. In order that a disinflationary drive should be effective it should be focussed on consumer purchasing power. Taking a long view it is not to our interest to curtail our producing capacity. And from that point of view, disinflationary measures directed against capital investment are harmful. Nor is the harm they cause offset by any immediate benefit in the form of a curtailment of excessive productive activity. By the time disinflationary measures can produce their full effect on the capital goods industry, quite probably there would no longer be any needs for disinflation.—(Copyright).

Evolution of Company Law in India

By S. N. LAHIRI

Under-Secretary, Ministry of Finance, Department of Company Law Administration

FROM time immemorial, India had trade intercourse with foreign countries. Ancient and flourishing trade routes lay between our country and Tibet, China and Central Asian countries. There is also abundant evidence of trade over-seas with Babylonia, Syria, Egypt, Greece and early Romans. An equally prosperous trade did exist with Indonesia and the Far Eastern countries now known as Cambodia, Laos and Viet Nam which passed through the famous commercial ports of Tamralipti and Saptagram on the Eastern Coast and the ports of Bhrigukachcha (Broach) and Suparaka (near Bombay) on the West Coast. Organisations of Trade and Crafts into guilds were also known from the earliest times. These were known as 'Srenis' or 'Ganas' and were presided over and managed by officials of different ranks, such as 'Pramukha', 'Jyesthaka' or 'Sresthin'. Most of the prosperous overseas and inland trade was, however, carried on through individual enterprise and although it had the backing of enlightened rulers, joint stock enterprise in its present form was almost unknown.

EARLY HISTORY

The modern system of joint stock enterprise in this country owes its origin to the West and the Indian Joint Stock Companies thus developed on a pattern very similar to that in the UK. The name 'company' was first applied to the organisations adopted by English merchant adventurers for trading overseas. Indeed, the growth of joint stock companies in the UK and other western countries is closely associated with the history of colonial expansion and exploitation in the East. The industrial revolution accelerated the pace of development by providing fast transport both by land and sea and by mechanising the means of production. As the capacity of the individual or small groups of persons was insufficient to finance these great ventures, the resources of many had to be pooled together. In fact, the very name 'joint stock company' owes its origin to the common ownership of stock-in-trade in such joint ventures.

Naturally, the ownerships of companies were dispersed among a large number of persons. In the subsequent growth of the enterprise, however, the original legal conception of ownership slowly disappeared and the owners got their money's worth in the form of shares. They became thus the members or shareholders of the company and, to provide liquidity, the shares were made transferable. But no business enterprise could thrive if such a conglomeration of persons as the shareholders constituted, were allowed to take part in its management. The ownership of the company was, therefore, gradually divorced from its management. As a sequel, the risk of the owners was limited to the value of the shares held by them and statutory safeguards had to be offered for protecting their rights and interests in the enterprise in the management of which they had little or no voice. Hence, the need for company law and, upto recently, company legislation has been more or less a piece of enactment for regulating the relationship between the owners and the management of the company. The principle of 'laissez faire' governed internal working of the company and safeguards featured only to the extent necessary to ensure flow of capital needed for the development of commerce and industry.

The first joint stock companies under the English Law were formed by Royal Charters or Letters Patent or special statutes of Parliament, which conferred on the company separate legal existence. In 1826, an Act of the British Parliament enabled joint stock banking companies to acquire the privilege of suing and being sued by filing certain returns with officers of the Crown. In the year 1844, this privilege was extended to other joint stock companies. The liabilities of the members, however, continued to be regulated by Royal Charter or special Acts of Parliament. The right of limited liability was conferred on the members only in 1855, when the Statute enabled the companies registered under the Act of 1844 to obtain a Certificate of Incorporation with limited liability and this marked a great landmark in the development of joint stock enterprise.

PROGRESS OF LEGISLATION

The first Company Law in India was passed in 1850. The Joint Stock Companies Act of 1850 was based on the English Statute of 1844 and the Indian Company Law has ever since closely followed the English model. The Act of 1850 enabled unincorporated companies and also companies formed for literary, scientific and charitable purposes to be registered under the order of the Supreme Courts of Judicature at Presidency Towns of Calcutta, Bombay and Madras. This Act also provided for the winding up of bankrupt companies. The Companies registered under the Act of 1850 had the right to sue and be sued; they had to prepare balance sheet and Profit and Loss Account and to get them audited but the liability of the members was not limited. The benefit of limited liability of the shareholders was first conferred by the Joint Stock Companies Act of 1857. It was not until the year 1866 that a comprehensive code for incorporation, regulation for winding up of trading companies and other associations was passed. This was followed by the Companies Consolidation Act of 1882 and rather comprehensively later when the Act of 1913 was passed. These laws generally followed the UK model.

A major departure from the English Act was made in 1936 when important provisions were made by the Indian Companies (Amendment) Act of that year to regulate the terms and conditions of the managing agencies, to prevent the formation of mushroom companies, to investigate the affairs of fraudulent companies and to protect the provident fund money and securities of employees.

UNHEALTHY TRENDS

The impact of the second world war, however, deeply affected the management and development of companies in India. The so-called war efforts resulted in unprecedented expansion of Joint Stock Companies in India. The hectic activities and easy profits made by war time business, followed by the comparative lull in after years, left in their trail many unhealthy trends in company formation and management. Large scale interlocking of funds and shares of companies and other malpractices became rampant. Powerful industrialists, possessing controlling interests in large group of companies, both trading and industrial, were in a position not only to control production and marketing of consumer goods and to manipulate prices in a manner prejudicial to the interest of the public but also to ignore, with virtual impunity, the interests of the shareholders. Insistent demands were voiced by the public and the shareholders' organisations for more governmental control in the formation and the conduct of the affairs of the Joint Stock Companies to ensure honesty and efficiency in the management of companies. This, together with the controls established in almost all spheres of economy, altered substantially the outlook towards joint stock companies and called for reform.

Following the overhauling of the English Companies Act in 1947, the Bhabha Committee was appointed in October, 1950, after some departmental spade work. As the situation demanded urgent remedy, the Indian Companies (Amendment) Act, 1951, was passed consequent on some interim recommendations of the Bhabha Committee. The 1951 Act required the terms and conditions of appointment and remuneration of managing agents, managing directors, directors and managers to be approved by the Government in case of any change in the existing arrangements or in the case of new appointment. The main deliberations of the Bhabha Committee which continued and culminated in the passing of the Companies Act of 1956 is a matter of contemporary history.

BASIC CHANGE IN CONCEPT

Meanwhile, the concept of Company legislation had undergone an almost radical change. The protection of the interests of shareholders which was the original objects of company legislation ceased to be the sole objective of Company Law reforms and important provisions were designed as much with a view to preventing concentration of wealth and economic power in the hands of a few as to curb the unhealthy activities of the management. It is not within the scope of this article to deal at any length with these measures but the special trends of the new Act are noticeable in the measures providing for governmental control over terms and conditions of appointment, and powers of the management, such as, the restrictions on the remuneration of the managing agents, managing directors, managers and the secretaries and treasurers and the overall managerial remuneration, on the number of managing directorships that can be held by individual persons or bodies, the age limit of directors, the prohibition on the holding of selling and purchasing agencies by managing agents. The abolition of deferred share, the provision for proportionate voting rights of equity shares and the large number of powers vested in the general body of the shareholders indicate an attempt to restore to the shareholders of the companies their share of control over the management of the companies. In some cases, even the power of the management to make appointments have been subjected to the control of the shareholders.

Among the other notable features in the new Act may be mentioned the provisions requiring greater disclosures to be made in the prospectuses and the balance sheets, those for improved methods of investigation to ensure quick and efficient investigation, restrictions in interlocking of companies, and, the greater powers of control of the directors and shareholders. The provisions regarding review of the managing agency system, coupled with the legal recognition given to the institution of Secretaries and Treasurers marks a significant departure which is of great import in the field of company management. The provisions of the 1951 Act requiring all forms of management and managerial remuneration to be approved by the Government have been incorporated in the new Act. Powers have also been vested in the Government for ordering the amalgamation and reconstruction of companies in national interest and to exercise adequate control over liquidation proceedings.

At the same time the need for freedom of action on the part of entrepreneurs and captains of industries has not been lost sight of; and Parliament has, in its wisdom, pro-

World of Jute

Week Closes on Quiet Note

CONDITIONS in the jute goods market were irregular with overseas buyers showing little interest. Opening on a quietly steady note, the market steadied up further in earlier sessions, sentiment having been helped by interest shown by shippers in forward positions. The steady undertone continued for a couple of days with prices making moderate gains. At the higher levels, mills came out as sellers which fact led to bull unloading in the fatka. The cumulative effect of mill selling and bull unloading was well reflected in the closing rates for the week which were, as is to be expected, below the opening levels, especially in the sackings section. The market closed the week with a quiet undertone.

Rumours about the reported Russian enquiry for Indian jute goods continue to have considerable influence on price movements in the Calcutta jute goods market. The market opened the week under the weight of tired long liquidation on the eve of due date. Price decline which first started in the heavy goods section later on spread to the hessian section as well. As a result, prices all along the list were marked down. Hessian Ready was placed at Rs 38 with B Twills marked at Rs 108. In the next twenty-four hours confidence was badly shaken as the expected announcement regarding the Russian business did not materialise. That was a signal for bears to depress prices and sacking prices touched a new low. Hessian Ready was unchanged at Rs 38, but B Twills declined sharply to Rs 107-4. However, toward close of the day prices rallied on shippers coming into the market to cover their sales. Speculative bullish activity in the fatka due to renewed rumours about the Russian business also aided the recovery.

Developments in the very next day proved that the bullish influences that were at the back of the rally were not strong enough to withstand the bear attack. Hessians, however, were fully steady. Hessian Ready was done at Rs 38-2 but B Twills ready showed a loss of another eight annas at Rs 106-12. The pattern of trading on Wednesday this week was again irregular. The market opened very steady on fresh rumours about the impending purchases by Russia of Indian gunnies. Bears were also active and in earlier dealings succeeded in depressing price levels. With shippers buying fair quantity B Twills April-June and July-September positions, sentiment once again rallied. Hessian also gained in sympathy. Hessian Ready moved up by three annas to Rs 38-5 while B Twills made a smart recovery to Rs 107-10 from Rs 106-12.

Conditions continued to be steady on Thursday, but toward close with mills selling July-September position, prices declined. The market closed the week on a quiet note with Hessian Ready at Rs 38-4 and B Twills at Rs 107-14.

In the raw jute market small business was reported done in the beginning. Afterwards conditions had been dull with mills showing little interest at prevailing levels. The market closed the week with a quiet undertone. During the week business had been reported done in Indian Northern Bottoms at Rs 27-8 per maund, Assam Bottoms at Rs 27-8 per maund, Local Daisee Bottoms Rs 28-8 per maund April-May delivery, and Ready Pakistani N. C. Cuttings at Rs 122 per bale of 400 lbs.

The following table shows the price trends during the week.

	Week's Opening Rs. a.	Week's Closing Rs. a.

✱

JUTE OUTPUT MAY EXCEED TARGET

According to Mr M. S. Randhawa, Vice-Chairman, Indian Council of Agricultural Research, it may be possible to raise the jute production in India during the Second Five-Year Plan period to 51.2 lakh bales from a target of 50 lakh bales recommended by the Planning Commission.

Presiding at the plenary session of the Indian Central Jute Committee in Calcutta on March 23, he said that the revised target was to be made up as follows: West Bengal 23.25 lakh bales; Assam 12.25 lakh bales; Bihar 11.50 lakh bales; Orissa 2.50 lakh bales; Uttar Pradesh 1.10 lakh bales; and Tripura 60,000 bales. It was the intention of the Government to fix the ultimate figure for all-India production in consultation with the State Directorates of Agriculture.

The current season's output, Mr Randhawa said, was 41.4 lakh bales compared with 29.3 lakh bales in the last season and 30.9 lakh bales in 1953-54. The ground lost in the preceding years was thus considerably recovered with the average yield of jute registering an increase of nearly 14½ per cent per acre. This was possible due to effort made through research work and improved methods evolved at the Committee's Agricultural Research Institute.

Although the Jute Committee was doing research on all aspects of jute —agricultural, economic and technological—the emphasis was on intensive cultivation by way of improved agricultural methods, which ensured better quality with higher outturn. These methods as well as other research results of immediate practical value such as new high-yielding strains, double and triple cropping after the harvest of jute, and scientific manurial practices, all of which had been found to lower costs and bring in an additional income to the cultivators, were being demonstrated in actual field performance by the Extension Wing of the Jute Agricultural Research Institute.

The Institute was maintaining a close contact with jute growers in the neighbouring areas by holding a "Farmer's Week" every year, by convening meetings and by arranging exhibitions. The field staff of the Committee's Economic Research Section were also demonstrating the efficacy of improved methods and implements under cultivators' conditions.

World of Tea

Good Demand for Quality Teas

Recent developments in the world of tea have once again focussed attention on the prospects of Indian tea in the near future. The Financial Times has expressed the view that higher prices for the best kinds of tea are now a reasonable expectation. In support of this conclusion the paper points out that despite the congestion of surplus tea in Calcutta godowns, 'the overall statistical position is not heavily out of balance.' Secondly, the prospective purchases of Indian tea by Russia are another favourable factor which will inevitably result in higher prices for good quality tea. The paper, however, points out that the prospects of plain tea are not very bright though it is quite within the realm of possibility that the present low prices will give a fillip to internal consumption.

It may be recalled that one of the reasons for the good demand met with in the auctions in recent weeks is the reported decline in Ceylon's tea crop. It has now been confirmed that the country's tea crop in February this year amounted to 27.22 million pounds as against 31.35 milion pounds in the corresponding month of last year. The big drop in production this year is attributed to adverse weather conditions.

In the sale held in London on March 26, there was very strong demand for coloury fannings and rises upto 6d a pound were recorded. The demand for medium quality also continued to be good but poorer descriptions were not much fancied. Out of a total of 32,880 packages offered, 24,161 were from North India and 2,615 from Pakistan. The stock of Tea in London at the week ending March 23 was 95,364,830 lbs. as compared with 149,968,060 lbs. at the end of the corresponding week in 1955.

That buyers are beginning to show, a preference for good quality teas was evident in this week's export sale in Calcutta. Whole leaf grades and stylish B.Ps met with strong demand and sold at three to four annas above previous rates. Price rises were recorded in almost all teas with autumnal character. Fannings were also in good demand especially those types suitable for the Middle East. Initial firmness could not be maintained by Common and plain liquoring Brokens which, toward the close, were occasionaly even easier. Quotations are: Clean Black Pekoe Rs 2-2; Plain B.P. Rs 1-9-6 to Rs 1-10; Medium Assam B.P. Rs 1-11; Best C.T.C. Assam B.P. not quotable. Approximately 60,000 chests were on offer in the Sale.

In this week's Internal Sale, offerings totalled 21,700 packages and demand was fair at lower levels. Only a few selected lines, especially Dooars, were firm at about last rates. Others opened half to one anna lower and declined further, closing one-and-a half to two annas easier. Quotations are: Medium Dooars Dust Rs 1-11 to Rs 1-12; Medium Assam Grainy Dust Rs 1-12 to Rs 1-14; Best Assam CTC Dust Rs 2-14 to Rs 3. Leaf: offerings consisted of 2,600 packages and conditions were generally easier.

Firm conditions were noticeable in last week's sale in Chittagong. Being the last but one auction of the season, the quality of the teas offered for sale was not very good. Even so, all sorts met with strong demand in the initial stages though toward the close a slightly easier tendency was noticed.

World Overseas

US Notes

THE extent to which Americans favour increase in the United States trade with rest of the world has been revealed in special surveys conducted in mid-western states of Illinois and Minnesota usually considered remnants of isolationism. The Illinois survey released last week by the League of Women Voters, non-partisan public service association, shows that of 714 manufacturers polled, 85.4 per cent believe higher level world trade would be in best interest of the United States. Of this group, 84.2 per cent support increase in imports as well as exports.

The League also polled 438 farmers. This group is somewhat less trademinded than manufacturers. Nevertheless, 76.2 per cent of the farmers favour increase in trade and almost 62 per cent believe that both imports and exports should be expanded.

Minnesota study specifically recommended continuation and extension of US reciprocal trade policies and other trade liberalisation measures. The survey released this week was prepared by Business Research Committee in co-operation with University of Minnesota and League of Women Voters. The committee, on the basis of the study's findings expressed the view that continued tariff liberalisation will help strengthen the community of interests between the United States and other free nations. It proposed liberalisation be carried out gradually to limit economic dislocations and tariff cuts be sufficient to encourage freer exchange of goods so that free nations can earn dollars

Carew's XXX RUM No. 2
3 YEARS IN WOOD

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Carew's XXX RUM No. 2
3 YEARS IN WOOD

RAJA BALDEVDAS BIRLA, whose demise last week I read about with sorrow, has been something of a legend for nearly three decades now. As a result, his passing away has not come to many with the vivid shock that is the case when some one more conventionally in the public eye dies. To most people, the inevitable and almost only association with the name was that of the famous industrial and business house of Birla Brothers. But very few were aware of the extent to which the personality of that house was really determined by the Raja. They had, of course, heard of the countless charitable and religious institutions that had benefited by the Birla instinct for philanthropy; but few had any idea that the guiding spirit and inspirational source of these acts were those of Raja Baldevdas. As years rolled by since his retirement from active business in 1921, he became more and more of an institution and less of a person, a depersonalised source of good works. The consequence is that his death affects even those who knew him with a mellow sorrow that one feels at the disappearance of a well-beloved landmark.

But Raja Baldevdas was more than a mere legend and an institution. His was a life remarkable in a number of reckonings, all of which are perhaps not known to the public of the last three generations. Conventionally, his life was a 'success story' in the best American form: when he was barely six, his father left him in charge of his business at home and went away to Bombay. At twelve, Baldevdas was already a businessman on his own account in Bombay; and, at fifteen, he had founded the business that later came to be considered among the first few of Indian enterprises. An epidemic of plague in Bombay made Baldevdas shift his business to Calcutta and since then, the fortunes of the house of Birla are being directed from Calcutta. In 1901, when he was hardly 37, he handed over his business interests at Calcutta to his eldest son Jugal Kishore; and, already, his interest in active business had started waning. In 1920, soon after his mother's death, he retired to Banaras completely dropping every vestige of his former interests. Since then, till his death, his life was dedicated to quiet contemplation and active philanthropy.

*

It would, indeed, be difficult to enumerate the countless beneficiaries of the Raja's generosity. But one can hardly move about in the country without running into some evidence of the Raja's gifts. In the Capital itself, there is the famous Lakshminarayan temple which has inevitably, (though distressingly to me, for reasons of piety), come to be referred to as the 'Birla Mandir'. And in Banaras, the Raja's munificence to objects dear to his heart are to be seen in abundance. The Banaras Hindu University, in particular, has drawn freely on his altruism, and has found in him a ready source of succour in time of distress.

*

It was not only his personal charity that has been remarkable, though, in itself, it has an impressive record. Raja Baldevdas has, in addition, been instrumental, through his sons (to whom his lightest wish was verily a command), to bring into being a whole series of educational and charitable trusts which are rendering the most significant service to the country. There can hardly be anyone in India who has not heard of the Birla Educational Trust, or the Pilani Educational Colony. Pilani, the ancestral village of the Birlas in Rajasthan, where a remarkable experiment in education is going on, is even now difficult of access. The train journey from Jaipur to the station (I forget its name now) from which you motor to Pilani, offers an excellent opportunity for assessing your inner resources; for, externally, it is an excruciatingly trying and boring journey. But once in Pilani, you see evidence of a concerted effort to bring into being an intellectual oasis in that barren part of the country. Here, there is a college teaching arts, science and commerce including post-graduate curricula among their tasks. There is also an engineering college with well equipped workshops and laboratories; here are also a Montessori school and a progressive middle school, which shows that the college is not just a stunt but part of a well thought-out educational programme for this area. Again, it is not just an act of piety for one's own village, though, of course, it is that too. On the other hand, it is a deliberate attempt to create in a relatively backward area the entire apparatus of education which will be accessible to people of that area. It is a deliberate attempt at reversing the general tendency to crowd cities already comparatively well provided with educational facilities with more institutions. This tendency has been making the backward areas more backward since folks of these areas can never get to distant cities without incurring almost prohibitive expenses in travel and hostel charges. The deliberate choice of a village in backward Rajasthan as the seat of Birla educational effort, is motivated by the desire to take educational facilities to the people and not the other way about. As a result, Pilani is today prominently in the educational map of India as a place of a remarkable experiment. The people of the areas have now the undreamed of luxuries of progressive children's education and higher technological education. Kingsley Martin of the New Statesman, surely no friend of "Capitalists", paid a remarkable tribute recently to the educational efforts at Pilani, which he described as the turning of the desert into an experimental educational establishment!

It is this deliberate dovetailing of altruistic effort with national purpose that distinguishes the Birla philanthropic efforts from other acts of a casual charity.

*

In this, as in so many other of the activities of the House of Birlas, it is possible to discern the wise guidance of Raja Baldevdas. But it is not merely his phenomenal success as a business man first and an equally remarkable career later of constructive philanthopy that is striking about him. Rather, it is not the success in isolation in these two contrasted spheres of activities that is remarkable. It is not even that they were found in the same man that is noteworthy. It is the fact that the one began when the other was renounced, the fact that they were not simultaneous in any significant extent that is truly significant. This pattern accords well with the Hindu view of the best manner characterising the course of one's life. Within the overall framework of one's characteristic Dharma, a man has certain prescribed stages of one's life, each of which gives the freest scope for the characteristic urges of that parti-

cular stage and yet permits the evolution to a wiser reckoning of the real ends of life on this planet. Thus, Brahmacharya, or the age of acquisition of knowledge and the necessary skills is followed by Garhastya or the stage of active life, the period in which you put all your ability to the fullest use to your best advantage. This is followed by the next transitional stage when you gradually shed all your worldly attachments and try to fix your gaze inward and think more specifically about the problem of your salvation. Then comes the final stage of irrevocable renunciation of the world.

This pattern of ideal conduct is not a perfectionist's archetype, but a realistic code within limits, and may even be considered another instance of the Hindu passion for stratification of the observed facts of human conduct into a rigid pattern. It takes account of the elasticity of human nature and may even be said to provide cynically for the indulgence of desires appropriate to the age. Thus, the permission to give the fullest and freest rein to one's characteristic gifts may conceivably lead to narrow aggrandisement without too fine a regard for rules since the stage of self-knowledge is yet to come. Western observers have often been irritated by the apparent sanctimonious humbug of a man pretending to a life of renunciation after a career of the most rapacious selfishness. Though, of course, none can extenuate the earlier rapacity, the Westerner is quite conceivably mistaken in thinking the present mood of renunciation as entirely hypocritical.

*

Thus, the Ahsrama Dharma allows you not only to find your particular vocation and pursue it, but it also provides you with different vocations for different stages of your life. To the individual, the Vanaprasta discipline shows the relative unimportance of his achievement, however wonderful, in the larger scheme of, shall we say, God's purpose, which he is about to explore. From the social point of view, acceptance of this principle as a general code of conduct has the unique virtue of dealing with the problem of power in a remarkable way. The paradoxical obligatory-voluntary relinquishment of power enjoined by this scheme solves the problem of power corrupting the individual and becoming a social problem. No century in history has a greater awareness of the corrosive and corruptive propensities of power than ours. To us, therefore, the advantage of a social code that insists on a man shedding absolutely every vestige of power when he reaches a particular stage must be most attractive.

*

There are, perhaps, not very many instances in modern times of the voluntary renunciation of power acquired by strenuous personal effort. Of those few, Raja Baldevdas is one. Here was a man who was a most remarkable business man when he was a businessman. And when he ceased to be one, he ceased to be so absolutely and devoted himself entirely to pursuits that were as far removed from business as you can imagine. Another example that occurs readily to me is that of Sir P. S. Sivaswami Iyer. Here, again, was a man who seems to have conscientiously ordered his life according to this principle. A most successful lawyer while he was a lawyer,

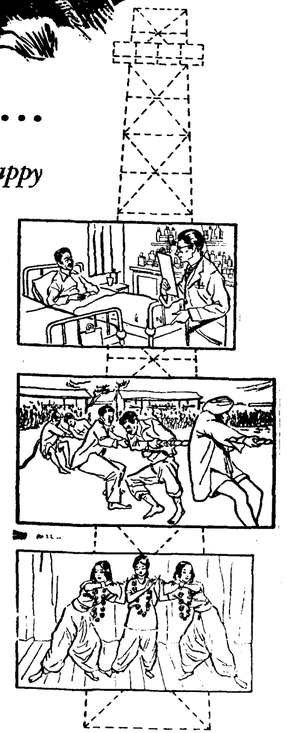
it's a GREAT job...



keeping thousands of workers fit and happy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

Bombay Review

Central Bank of India

THOUGH politically Bombay has slumped for a brief while, the City has not forfeited in the least the traditional privilege of being always in the forefront, in informed and authoritative discussons of economic and financial issues. With the growing concentration of financial institutions in the City, its voice in the counsels of the nation has tended to become more and more compelling.

IN his address as Chairman at the Annual General Meeting of the Central Bank of India, held on 29th March 1956, Sir Homi Mody divided his attention almost equally between the affairs of the Bank and banking problems on the one side, and the Second Five-Year Plan and some of its problems on the other. The speech rejects the Bank Chairmen to delve deeper into the issues which concern more intimately the banking world.

Until greater emphasis is paid to banking problems as such, Bank Chairmen's speeches cannot hope to secure the special economic value and interest which they invariably enjoy in other advanced countries of the world. In Sir Homi's case it is perhaps, excusable that the future of industry in general provided as much appeal as the immediate problems of Indian Banking, of which the organisation he represents forms a distinguished part.

In the course of his reference to the First and the Second Plans, he made mention of a few pleasing aspects. The volume of production and trade has recorded a buoyant rise in 1955. It is however felt that but for the tightening of controls over the private sector, economic activity in general might have shown an even more impressive expansion. The expansion in economic activity was reflected in the sharp rise in the demand for bank credit. During the year, the proportion of advances and bills increased to 62 per cent; and the ratio of Cash in hand and Balances with the Reserve Bank declined from 11 per cent to 9.5 per cent.

On this basis, Sir Homi could envisage a much steeper rise in the demand for bank credit under the Second Five-Year Plan. The prospect has posed the question as to how far the Indian Banking system could rise to the occasion. The Central Bank Chairman has properly laid his finger on the crux of the problem which confronts the banks of the country at this critical stage in the national economy. Unfortunately, he did not proceed beyond indicating the problem and mentioning one or two details relevant to its examination.

Just now, the banks are confronted with a situation in which the demand for credit is larger and increasing, but their own margins of profit do not enable them to satisfy this demand adequately. Reasons are familiar. In respect of interest rates, the Exchange Banks are better placed; and consequently, have of late been attracting more deposits. There has been a general increase in the deposit rates of the Scheduled Banks as well; but this increase in turn has only disabled them on the side of advances. With establishment charges also going up, the margins to profit are bound to be narrow.

Sir Homi apparently wants a revision of the Bank Rate, which he describes as 'somewhat out of alignment with the prevailing interest rates in the country." While, the banks have reason to feel afflicted, the question of the revision of the bank rate is not so simple; it can only be viewed as part and parcel of the wider issue of the cost of credit for the economic development of the future.

From the bank rate to the price levels of innumerable raw and manufactured products, there is a range of mutual impacts without reference to which a sound policy of interest rates cannot be formulated. Though we have had some deficit financing, price levels have been kept under control. In fact, it is time that bank and business heads start examining the various issues involved and give a lead.

In certain respects, Reserve Bank practices and alterations therein have also contributed to the difficulty of the Scheduled banks. Sir Homi has pointed out one instance. The Reserve Bank has raised the rate of interest from 3 to 3½ per cent on advances under the bill market scheme and has discontinued the practice of sharing the cost of stamps. Such changes in policies and practices could be periodically reviewed. National policy, will, however, have to be formed with reference to the wider requirements of the economy.

The Central Bank's working results for the year 1955 have shown substantially higher earnings, though the profit has remained more or less where it stood in the previous year. A potential increase was wiped out by the absorption of Rs 23 lakhs in establishment charges; advances increased over Rs 12 crores to Rs 72.20 crores; the bulk of the increase, however, was concentrated in the last quarter of the year. Deposits increased by Rs 4.69 crores to Rs 128.66 crores; the bank will have shown a better record, had it not shown restraint in the matter of increasing the interest rates.

The investment position is sound and a special committee of the Board is putting forth every effort to make it as lucrative as possible. The Chairman was in a position to disclose an appreciable improvement in the relation between the book value and the market value of the bank's investments. The difference between the two stands at Rs 1.62 crores as against Rs 3.13 crores two years before.

*

Bank of Baroda

The charge of undue emphasis on general economic questions appears to have even greater validity for Mr Tulsidas Kilachand's speech at the 47th annual general meeting of the Bank of Baroda. In this speech the spokesman of the private industry is far more conspicuous than the Chairman of the Bank; again, a circumstance which looks rather inevitable when industry and banking are so closely linked through common heads. Mr Tulsidas starts with pointing to the rather disappointing performance of the Indian Banking institutions in the matter of providing working capital to industries and under the First Five Year Plan. Against Rs 158 crores expected of them their contribution is not likely to exceed Rs 100 crores. When the actual performance of Indian industry is also taken into consideration the inference appears correct that the gap has been filled up almost wholly by the internal funds raised by the industries themselves. The Chairman of the Bank of Baroda has also touched the problem created by the situation in which the banks are expected to provide larger credit for industrial purposes in the years ahead. He has drawn attention to the competitive role of the State as an absorerber of public funds and the impact of this circumstance are the volume of sources which the banks could attract and its cost. But there he has left it. The coordination of terms offered by the Government for private savings and and those offered by the banks from another important aspect of future credit policy. Occasions such as the annual meetings of banks should therefore be utilised for a fuller examination of such problems and to indicate all practical steps by which such coordination would be achieved and strengthened.

Gateway Notes

Unimaginative Policy toward Mills

It seems to be little realised by Government that their present attitude toward the cotton textile mill industry, though not openly antagonistic, entails a state of unmitigated suspense for the industry. Few would dispute the positive suggestions made by the Karve Committee regarding the development of the khadi and the handloom. The long-drawn-out controversy between these and the mills seemed a little while ago to have abated on the tacit admission that it was meet and proper that the stronger partner of the cotton industry should lend a helping hand to the weaker, but certainly not in a way prejudicial to its own interests or prospects.

But now, it appears that it is Government's intention to stop any further installation of looms and spindles. According to Mr Madan Mohan Mangaldas, Chairman of the Ahmedabad Mill Owner's Association, no mill is allowed to increase a single loom nor replace old looms by automatic looms.

This aspect of modernisation and expansion was earlier sought to be clarified through an all-India textile survey. The progress of this survey is not known. Certainly, its findings cannot endorse the maintenance of the status quo. Under the circumstance, Governments' decision, which is implicit in their action referred to by Mr Mangaldas, seem to be hastily conceived and solely inspired by the claims of the Ambar Charka. If Ambar Charka can provide the handloom with an adequate and economical supply of yarn, it would certainly be an achievement. But to curb mill production will amount to putting the brake on the progress of India's largest organised industry. It will be a penalty on competitive efficiency and a drag on India's cotton exports.

Cotton textile exports during 1955 were lower than in the previous year and it is imaginable that 1956 will do no better. Whatever be Governments' ultimate aim regarding the pattern of the cotton textile industry, common sense suggests that uneconomic units, which admittedly and disturbingly exist in the organised sector of the industry, should be allowed to be converted into economic units capable of producing cloth at competitive prices, by installing the necessary additional looms.

The current offtake of mill cloth within the country seem to indicate that the rise in domestic consumption during the coming years has been grossly under-estimated. While on the one hand, the excise duty on mill cloth is increased, it is dangerous to plant, on the other, physical impediments in its way. The policy is also likely to turn a very poor incentive for cotton textile exporters to seek fresh fields and new pastures. The possibility of shortage of cloth, the consequent spiral of high prices and shrinkage in exports and foreign exchange earnings cannot be dismissed either as unreal or remote. To avert it, it is necessary that the industry should not be bound hand to foot.

*

Restrictions and Disincentives

There is every indication that the Union Government will shortly announce a comprehensive and unambiguous statement of their industrial policy. That this has not been done so far, except to the extent covered by the 1948 Congress Resolution, only indicates that the mutual adjustment between the private and public sectors was delayed by the special circumstance of a major economic transition. From the point of view of the private sector, its freedom of choice of means and range of activity have been curtailed by an increasing quota of governmental restrictons and a progressive reduction of incentives. This may or may not be an over-statement in a general context; but it is definitely not in the case of specific industries. One such is the electricity supply industry. Mr K. G. Milne, Chairman of the Ahmedabad Electricity Company Limited tells us how such a situation has come about, and why.

"Above all" says, Mr Milne, "we must be given the freedom to adjust our rates to the economic level necessary to produce a steady commercial yield."

The past year has been one of continued growth and consolidation for the industry, culminating in the peak demand on the plant of 100,000 Kw. This has been the natural result of rapid investment and expansion since 1946. But this is accompanied by high annual capital charges and rising expense levels, so that even the 'modest' return permitted under the Electricity (Supply) Act, was not achieved for several years past. In the year under review, the return fell short of the permissible level by Rs 27 lakhs.

It needs no lengthy analysis to know that the industry's pressing demand is to raise finance for expansion. How far does the Electricity (Supply) Amendment Bill, introduced in the Lok Sabha in September 1955, and awaiting reference to a Joint Select Committee, subserve this paramount need? From the financial point of view, the new Bill envisages three changes; first, to link the Standard Rate to the Bank Rate with a differential of two per cent, instead of the present fixed overall level of five per cent; Second, to provide for the electricity supply industry, the benefits of the Development Rebate permitted in the 1955 Finance Act; third, to disallow Debenture and loan interest as an expense in the computation of permissible 'clear profit.'

While the industry is not enthused by the proposed revision of the Standard Rate, it is suggested that the appropriation to the statutory Development Reserve should be made optional, within a limit, so that the danger of an encroachment on the Resonable Return may be removed.

Nationalisation of Electicity Undertakings will, without solving any of their problems, only add to the possibility of hardships to consumers as is the current experience in Madras.

Asian Development

Mr. Eric A Johnston is not only the Chairman of the International Development Advisory Board and and President of the Motion Picture Association of the US, but reputedly, also a man of wide political and diplomatic experience, wielding considerable influence with the Government of that country. If his unofficial visit has been more of a success than that of the American Secretary of State, it is partly explained by the fact that he left controversial issues severely alone. And, it is hardly necessary to say that the genuine goodwill of the American people which constructively found expression in one of Mr Johnston's suggestions, is reciprocated in unstinted measure by this country.

Mr Johnston's proposal for the creation of an Asian Development Board with a capital of one billion dollars reflects a viewpoint held in some from or other by other equally eminent Americans. Mr Walter Reuther, Vice-President of the American Federation of Labour-Congress of Industrial Organisations, has recently called upon the US Government to contribute to a new fund to help people in under-developed countries. He calls it a 'world fund for peace, prosperity, and progress.'

The suggestion stems not merely from American affluence and philanthrophy but from the recognition of the inadequacy and the somewhat unsavoury political associations of inter-Governmental economic aid. The UN Agencies are certainly an answer. The Development Board of Johnston's vision does not seek to interfere with the existing international loan organisations or technical co-operation bodies. It is not to replace world organisations like the World Bank, the International Finance Corporation, the Export and Import Bank or the Colombo Plan. Though it is suggested that 80 per cent of the fund should come from the US, Asian countries will also be its contributory members. Subscriptions are to be worked out on the basis of the gross national production of a member country.

How the Asian countries will react to the suggestion remains to be seen. But the chances of its being carried through will depend on the success with which the objective of economic progress is recognised and demonstrated as its one and only concern. That a multiplicity of agencies should work in the same field should be viewed rather as a matter for satisfaction than for disapproval, provided each knows its province and works in consultation with the others. The Asian Countries might perhaps be wanting to see how Mr Johnston's proposal is greeted in Washington.

THE

BANK OF BARODA, LTD.

Established 1908

Capital Authorised - Rs. 2,40,00,000
Capital Issued & Subscribed „ 2,00,00,000

CURRENT DEPOSIT ACCOUNTS.—Interest on daily balances from Rs. 500 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS.—The Bank grants accommodation and undertakes on behalf to its constituents the Safe Custody, of Shares and Securities and the collection of dividends and interest thereon.

It also undertakes the sale and purchase of Government Paper and all description of Stock at moderate charges. Terms on application.

Sterling and Dollar credits arranged and foreign bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILLS AND SETTLEMENTS and undertakes TRUSTEE business generally.

N. M. CHOKSHI, General Manager. WALTER RIBEIRO Manager, Calcutta

RESERVE BANK OF INDIA

Applications are invited for the following posts in the various departments of the Reserve Bank of India:

(A) Posts and Scales of Pay:

1. Research Officers, Rs. 375-55-815 E.B. 55-925-60-1045.
Department of Research & Statistics

The appointments to the above posts will be made on a temporary basis in the first instance but are likely to be made permanent.

Note: Candidates possessing exceptionally good qualifications and experience may be given a higher starting salary in the prescribed scale.

2. Probationary Assistants Rs. 250-25-450 E.B. 25-650
Note: Promising Probationary Assistants will be eligible for promotion as officers in the scale of Rs 375-55-815 E.B. 55-925-60-1045.

(B) Additions to Pay

1. *Local Pay*: 10% of pay with a minimum of Rs 10/- per mensem rounded up to next higher complete rupee to the staff working at Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad.

2. *House rent allowance*
Research Officers: 15% of pay with a minimum of Rs 60/- and a maximum of Rs 300/- per mensem.
Probationary Assistants: 10% of pay with a maximum of Rs 50/- per mensem.

3. *Dearness Allowance*: At prescribed rates.
Research Officers: The present rate is 16⅔% of pay with a maximum of Rs 125/- per mensem.
Probationary Assistants: Rs 65/- per mensem for pay (including local pay) upto Rs 300/- per mensem.
(The rate of Dearness Allowance is subject to revision from time to time).

(C) Age Limit as on 1st May, 1956

Research Officers: Candidates should not ordinarily be over 30 years of age. The age limit may be extended upto 35 years in the case of candidates with exceptional qualifications and/or research experience of value to the Bank.

Probationary Assistant: Candidates should not ordinarily be over 24 years of age.

Age limit may be extended but not beyond 30 years in the case of candidates possessing special qualifications and experience of value to the Bank and also in the case of

(i) candidates with approved war service.

(ii) ex-employees of Banking Institutions whose services have had to be terminated for reasons of economy or as consequence of the closure of unremunerative branches or as a result of the Banks going into liquidation.

(iii) personnel retrenched from Government offices after at least one year's service, applying through the Employment Exchange, and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(D) Qualifications

1. *Research Officers, Department of Research and Statistics*:

First or high second class Master's degree in Economics, or Commerce or Statistics/Mathematics of an Indian or foreign University or a Doctorate degree in Economics or Statistics of an Indian or foreign University and a period of research work in one or more of the subjects, viz., (a) monetary economics, (b) banking theory and practice, (c) international finance, and (d) sampling theory and econometrics etc.; a period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a) and (b):

2. *Probationary Assistants*:

Applicants should have had a brilliant academic record and must possess a first or very high second class Master's degree or a first class Bachelor's degree of a recognised Indian or foreign University in Economics, Commerce, Banking, Accountancy, or Law as a special subject of study.

THE BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY CANDIDATES WHO POSSESS GOOD ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees.

The selected candidates for the posts of Research Officers will ordinarily be on probation for period of 3 years which may be reduced or extended at the Bank's discretion. Candidates selected for the Probationary Assistants' posts will also be on probation for a period of 3 years during which they will be liable to be discharged at one month's notice or pay in lieu thereof. Candidates selected for the Research Officers' posts will ordinarily be stationed in Bombay but those selected for the Probationary Assistants' posts must be prepared to serve in any office of the Bank in India.

Applications should be in a special form to be obtained from any office of the Reserve Bank. All the applications should be accompanied by copies of two testimonials (originals should not be sent: the Bank does NOT accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before 1st May, 1956. Candidates already in service must sumbit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications.

Applicants for the above posts must remit application fees of Rs 7-8-0 per application by Postal Order, Cheque or Bank Draft on a SCHEDULED BANK PAYABLE AT BOMBAY along with the application. The application fee is in no case refundable. Bonafide refugee candidates who are NOT IN EMPLOYMENT applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of Scheduled Castes/Scheduled Tribes candidates the fee will be reduced to ¼th.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should enclose a stamped self-addressed envelope or a post-card. Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them

Canvassing in any form will be regarded a disqualification.

WORLD OVERSEAS

(Continued from page 642)

with which to purchase goods in United States.

Department of State credits liberal foreign trade programmes of US government with playing significant part in broadening international commerce. In recent study, prepared for Congress and released last week, the Department lauded the progress made by other countries in gradually removing restrictions against US goods. While attributing much of this progress to improved financial conditions around the world, the Department mentioned particularly General Agreement on Tariffs and Trade under which the United States and 34 other nations co-operate to reduce trade barriers. The Department also paid tribute to United Nations International Bank for Reconstruction and Development and International Monetary Fund Organization for European Economic Co-operation.

In its survey, the State Department points out in 1953 among European countries only Belgium, Switzerland and Britain had liberalized dollar imports to any significant degree. Since then 15 European nations have in varying degrees freed US goods from administrative control. In addition, the Department says many of these countries have become more liberal in licensing those imports from United States still quantitatively controlled.

The Organization for European Economic Co-operation has reported recent moves to liberalise dollar import restrictions which have had no adverse effects on intra-European trade. On the contrary, OEEC finds regional European commerce soared to new records in late 1954 and has been maintained at high levels ever since. The report issued this week also indicates further liberalisation of European restrictions can be expected if economic and trade conditions remain favourable. It noted that at the beginning of 1956 more than half of all private dollar imports by the 17 OEEC countries were free of quantitative curbs, compared with only 11 per cent three years earlier.

he retired but was available when the country needed his services. He became a member of the Legislative Assembly and his remarkable independence and insight in defence matters were acknowledged on all hands. And then a short period as Vice-Chancellor of a University, equally remarkable for its quiet efficiency. And then the final stage of a serene contemplative life, except for his continuous interest in the educational institutions of his creation. And, before he died, he sold all his properties and gave away the major portion of his wealth to the schools dear to his heart and left just enough to cover the cost of his obsequies. And when the funeral was over, nothing was left at all. A remarkably tidy life, full of honour and fulfilment.

✱

Raja Baldevdas's life was characterised by a similar felicity. A life, rich in acquisition, rich in fulfilment and rich in renunciation and when the time came, he dropped like a ripe fruit. To few has such fortune been vouchsafed of being both a Raja and a Thyagaraja.

—EAVESDROPPER.

GATEWAY GOSSIP

(Continued from page 645)

For the latest accounting year the bank could show progress in all directions. With profits higher at Rs 29.85 lakhs against Rs 28 lakhs; working funds standing at Rs 56 crores against Rs 46 crores; deposits at Rs 40.51 crores representing an increase of Rs 5.66 crores; and advances including bills discounted, show an increase from Rs 25.50 crores to Rs 30.41 crores. While the deposits are up by 16 per cent the advances show a rise of 20 per cent. A final divdend of 14 per cent the directors enables an annual free of income tax recommended by dividend of 12 per cent.

The Ahmedabad Electricity Company Limited

*

External Factors Nullify Careful Planning

*

Severe Handicaps of Electricity Supply Industry

*

Mr. K. G. Milne, the Chairman, refers to continued Growth of the Company

Presiding at the 43rd Ordinary General Meeting of The Ahmedabad Electricity Company Limited, held on 29th March 1956, Mr. K. G. Milne, the Chairman said:

Gentlemen,

The year under review has been one of continued growth and consolidation, culminating in the peak demand on your Power plant reaching 100,000 kW. Your Directors have always adopted a progressive policy coupled with a spirit of initiative and as a result the expansion of your Company's power facilities is ahead of the demand, which affords the City of Ahmedabad an enviable position when compared to many other places in India.

Unfortunately the fortunes of few industries today are conditioned solely by their own foresight, howsoever astute. External factors intervene to nullify the most careful planning, and the Electricity Supply Industry has come in for more than its share of such intervention. It is solely on account of this that your Directors have thought fit to propose to you a cut in the year's dividend from 6½ per cent to 5 per cent, and as you may well be very disappointed at this, as your Directors are also, I will discuss at some length the factors which have influenced your Directors to come to this decision and about which I gave you warning at this time last year.

In 1946-47 your Company's plant capacity was of the order of 37.5 MW. This rose to 97.5 MW. in 1950-51, and in 1954-55 the plant capacity had reached 142.5 MW, when the combined subscribed Share Capital and Debentures stood at Rs. 10,75,00,000. A further 15 MW. Turbo-Alternator Set has recently been placed on order to meet the ever-increasing demand, a demand which in your Company's area of supply is increasing by an average of more than twice the accepted world average of 7 per cent. It is this very magnitude and pace of expansion in recent years, which, paradoxical though it may seem, has reacted to penalise the investor.

During these years of rapid investment and expansion with high-cost plant and attendant high annual capital charges, and with rising expense levels generally, even the very modest return permitted under the Electricity (Supply) Act has not been achieved for several years past. For the year under review we are short of it by the calamitous figure of Rs. 27 lacs. We have been caught by the continued necessity to expand even within the by no means adequate level of return prescribed under the Electricity (Supply) Act what time our charges for Electricity have been conditioned by politics and by the contradictions inherent in diverse provisions of the Electricity (Supply) Act versus the Indian Income Tax Act, as repeatedly stressed from this Chair at former Annual General Meetings. Hence it has only been possible to keep up our moderate dividend level at all by drawing subsistence from the tax relief resulting out of accelerated Depreciation Allowances given under the provisions of the Income Tax Act, but which properly should have been made additionally available for us to place in Reserve to meet the corresponding future tax liability which must arise when the Allowances decelerate in their turn.

The proposal of the Company in April 1954 to put its house in order by a 15 per cent increase of its rates, was overtaken by the imposition by Government of a Rating Committee whose Report is common knowledge to you all. This was followed by the freezing of the Company's old rates where they stood, and until circumstances changed. In the meantime the Company referred for arbitration by the Central Electricity Authority the long-standing dispute with the State Government over the admissibility of interest on Loan and Debenture Capital as an item of operating expenditure for purposes of determining the Clear Profit. The Award of the Central Electricity Authority in the Company's favour was not announced until April 1955, but when it came it proved a fundamental change in the circumstances as viewed by the Rating Committee, and there followed at once a resumption of negotiations with the State Authorities for an upward revision of rates. Unfortunately even then these negotiations were prolonged, and it was only at the beginning of the current year that an 8¾ per cent surcharge on supplies to Industrial and Commercial H.T. Consumers could be effected. No benefit to the Company's finances could therefore accrue during the year ended 30th September 1955. The delays and curtailments inherent in these developments, which have been entirely beyond the Company's control, have culminated in the diminution in the Company's disposable surplus to the point we have reached in the proposal for a lower dividend.

It might be asked whether we could not have availed of the Dividends Equalisation Reserve to a greater extent than Rs. 6 lacs to maintain the Dividend level, in the hope that earnings hereafter would equal the return permitted under the Electricity (Supply) Act. I may say that your Directors have given most careful consideration to this point, but a number of factors have influenced them to come down on the side of austerity. Our liability for payment of Tax at present deferred is gathering momentum. The final verdict on the liability of the Company for Additional Income Tax in respect of past years, and to which I will refer later, is still unresolved. The margin of profit allowed by the law makes it likely that, even in the best years, subsequent replenishment of free Reserves will be possible only in meagre amount, if at all. In the circumstances it has been thought best to conserve our resources, already drawn down to a level incommensurate with the size and position of the Company, so that we may be better able to meet contingencies which might arise. I feel confident that in the light of the circumstances you will be in agreement with this policy.

The Electricity (Supply) Amendment Bill introduced in the Lok Sabha in September 1955 still awaits reference to a Joint Select Committee of both the Houses of Parliament. If this materialises during the current Budget Session of Parliament, the Bill might find its place in the Statute Book before the close of the Company's current financial year. From the financial point of view the principal changes sought to be made to the Electricity (Supply) Act are three. First, the proposal to link the Standard Rate to the Bank Rate with a differential of 2 per cent (instead of the present fixed overall level of 5 per cent). Second, to provide for the Electricity Supply Industry to "avail of the benefits of the Development Rebate Permitted under the Finance Act, 1955". Third, to disallow Debenture and Loan Interest as an expense in the computation of permissible Clear Profit, on the ground that Debentures and Loans find their places in the Capital Base upon which the Standard Rate of return is already allowed.

Much has already been said about the need for greater incentive to sustain and promote investment in the Electricity Supply Industry, and it is most unfortunate therefore that the proposal regarding the Standard Rate as outlined in the Bill will not positively ease the Industry's difficulty in raising finance for expansion. The situation calls for a differential over the Bank Rate of 2½ per cent at least. Even with that, there will be no scope for providing that measure of internal finance which the extensive Capital development programmed for the Industry in the Country's Second-Five-Year Plan could absorb. With the disappointment prevalent regarding "Electrics" amongst the investing public, approaches to other agencies, e.g. Banks and Investment Corporations, for the necessary finance will become imperative more often than not. What the fate of such approaches will be, and on what terms of interest and security such agencies might lend, if at all, gives much food for thought; especially when viewed in contrast with the very low rate of statutory return delimited for equity capital itself in this Industry. In this connection I should like to say how grateful we are as a Company to the Bank of India Limited for the confidence they have always shown in us, and for the great volume of assistance they have rendered to us on most fair terms over the last few years.

While the proposed revision of the Standard Rate does not enthuse the Industry, the provision in the Bill with regard to a Development Reserve is extremely unwelcome as it stands. Any compulsory appropriation to Development Reserve ranking as a prior charge in the calculation of the Clear Profit would create a perilous position indeed, for who could be sure of being able to earn enough Clear Profit in every year both to meet this prior charge and the full Reasonable Return! An appropriation based, not on revenue surpluses of any year, but on 25% of capital expenditure during that year, must give rise to fluctuations with which the tariff structures of a tightly regulated and capital intensive Industry, such as ours, could never adequately cope. Moreover, the creation as proposed of the Development Reserve visualises no benefit to shareholders, since the Reserve would have to be deducted from the Capital Base and ultimately passed on to any purchasing Authority. The authorities have been specially apprised of the dangers, and the suggestion has been made that at least appropriations to any statutory Development Reserve should be made optional within a limit, so that the virulent threat of such a Reserve encroaching upon the Reasonable Return would be removed.

The proposal to negative the allowance of Debenture and Loan Interest as a charge before arriving at permissible profit, will remove an advantage which played its part in helping us to maintain a level of return sufficient to attract new Capital during all the years of heavy capital expenditure since 1948—the year the controlling Act was passed. During these years we raised and invested in Electric service Rs. 5¼ crores of equity capital and Rs. 1½ crores of debentures. Now in fact your Company stands to lose more from disallowance of interest figures than it stands to gain from the proposed upward revision of the Standard Rate of return. Thus when we asked for bread in the shape of greater incentives to attract more Capital, we are in fact likely to be offered a stone, as the proposals before Parliament are framed at present.

The draft outline of the Second Five-Year Plan refers to the need for a re-statement of the Industrial Policy Resolution formulated by Government in April, 1948, so as to indicate "fresh fields to be reserved for public enterprise, the fields in which public enterprise is to take on larger responsibility and the fields in which private enterprise is to function subject to overall regulation and control". Until this re-statement has taken place it is difficult to foresee what the future of the Electricity Supply Industry will be, but considering that the Industry is subject to rigorous financial control by the Electricity (Supply) Act there is no reason why the place at present occupied by the private enterprise of the Industry in the country's power development should not be maintained. There have recently been discordant notes about the respective roles of the Public and Private Sectors, but the Planning Commission has stated that the "two sectors have to function in unison and are to be viewed as part of a single mechanism. The Plan as a whole can go through only on the basis of a simultaneous and balanced development in both sectors". I am entirely in agreement with this view.

To those who repeatedly advocate nationalisation of Electricity Undertakings, the unfortunate position of consumers in Madras State should stand as a warning. For several years, this State has been repeatedly hit by droughts which seriously curtailed Hydro-Electric Supplies, and yet after all these years, the State Authorities, which control 98% of the Generation, have not been able to put their house in order by firming up the Hydro-Electric Plant by suitable additions to the Thermal capacity of their inter-connected system. Once again, this year, consumers are being subjected to drastic rationing in their electric supplies.

The first Budget of the Second Five-Year Plan, if nothing much else can be said in its favour, promises to diminish some of the difficulties arising out of the contradictions between the Electricity (Supply) Act and the Income Tax Act in respect of depreciation. The withdrawal of the Initial Depreciation Allowance will assuage the problem of Deferred Taxation to a certain extent; but only to a certain extent, and that in respect of the future. The abolition of Additional Income-Tax in its past form relative to Dividend will mean that in future this vexed question will no more plague the Electricity Supply Industry. The Sword of Damocles, however, in the shape of the contingent liability for this Additional Income Tax in respect of the past years still bangs over us, as you will see from one of the footnotes to the Balance Sheet. High hopes were entertained recently that this note would no longer be required, with the Company's from the Tax definitely established when the High Court pronounced its decision in favour of a Company whose position was similar to ours. Since then, however, the Income Tax Department have gone in appeal to the Supreme Court, with the inevitable delay and uncertainty which this entails. Linked closely with the ultimate ruling by the Supreme Court will be the right or otherwise to "gross up" your dividend from your holdings in this Company; so you will still have to wait some time yet to have the long overdue answer to this question. I have told you previously that the Agency Company itself is also involved in this complicated matter and will contest its case at the opportune time.

In November, 1955, the Government of Bombay in the Public Works Department issued a directive to Licensees in the State that "the consent of the State Government is necessary to declare dividends in excess of 3% until all arrears of depreciation are cleared off". The Central Electricity Authority has since ruled that so long as the depreciation for the year and any instalments in respect of arrears are appropriated there can be no bar to payment of dividends above 3 per cent. This Company never admitted to having any arrears in any case, but the general result is satisfactory and solacing to investors, who had been much worried. This ruling settles one more controversy between the State Governments and the Undertakings in favour of the Industry. Another matter recently settled in the Industry's favour is the right of an Undertaking to increase its rates to enable it to reach the Reasonable Return under the Electricity (Supply) Act although the rates will thereby be brought into excess of the maxima laid down in the Company's Licence.

We have through constant and successful effort so increased the efficiency of the Company's operations as to have been able to counteract a number of those increases in cost which are beyond our control. With coal in particular, a substantial saving, counted in lakhs of rupees, has been effected during the year under review by reason of an average coal consumption of 1.5 lbs./kWh being attained, and this despite deterioration in quality of the coal received. There is a limit, however, to our ability to absorb rising costs, and nowadays much of the increased cost arises from burdensome levies of the State or of Government monopolies, the latest being the Surcharge to be imposed by the Railway Ministry from the first of next month.

No one can cavil at Government's policy of intervening to shield its citizens at large, whether industrialist, businessman or householder against obviously undue burdens being placed on them by monopolists or others. It is, however, exasperating in the extreme for us to see so much time and effort being given by Rating Committees to the examination of the affairs of Electricity Supply Undertakings whose books show they need to increase their rates, and where the necessary actions by and large will have a very small effect on a manufacturer's production cost or on a householder's budget, while State monopolies literally by a stroke of the pen impose much more far-reaching economic burdens on us all, without the public knowing anything about any investigation into their affairs. At least one feels entitled to ask that Rating Committees should not reject the swift and accurate results which may be had from a study of the audited accounts, that normally satisfy everyone else, in favour of bringing in much more delayed findings derived only after pondering a labyrinth of complex calculations in which all but the specialist will certainly be misled.

To the Resident General Manager and his Staff I must express my high appreciation of their service and the standard of efficiency maintained during the year. A competent staff is one of a Company's biggest assets, and we are very fortunate in that. The Company's welfare facilities at Sabarmati Power Station, at Shahpur Road, and at the Office at Lal Darwaja, continue to keep pace with the needs of the situation. As the great need of the day is more and more emphasis on education at all levels, I would like to make special reference to the opening in June, 1955, of a Kindergarden School at Sabarmati, which will supplement the other educational arrangements already assisted by the Company in the locality.

Having commented earlier on the circumstances leading up to the recommendation of a lower dividend for the year under review, an on other aspects of the situation affecting or likely to affect your Company, there is I think nothing of particular interest for me to add in respect of the Accounts which are before you, and which, together with the notes appended to them, are sufficiently informative.

To conclude—in spite of the set back reflected in the proposal for a lower dividend for the year under review, I feel that the future can be viewed with a modest degree of confidence, and certainly so far as those difficulties are concerned which are within our control. The recent additions to the plant have given the Company an instrument of high technical efficiency which should enable it to earn the statutory Standard Rate prescribed under the Electricity (Supply) Act, given no undue re-application of external pressures. The question of dividend which should thereby result will of course also be dependent upon the terms of the controlling legislation from time to time, and possibly therefore upon the Bank Rate. Given no change in the latter, however, and other things being equal, I would hope to be able to aim for about 6 per cent for future years.

The creation of Maha Gujerat, with possibly Ahmedabad as the Capital, should open up to this Company still further opportunities of growth and service; and I can only hope that before long the law will be so amended as to afford the future investor in our Industry sufficient incentive to remove the least doubt about its ability to fulfil its great task throughout the country. But we must be afforded incentive, and not increasing restrictions, if we are to maintain that balance between the consumer and the investor and the worker which would be ideal. Above all we must be given the freedom to adjust our rates to the economic level necessary to produce a steady commercial yield commensurate with the cost of the development capital we need for ourselves and, through us, for the service of so many others.

*

WORLD OF JUTE

(Continued from page 641)

has a resale or reuse value which means lower net cost per ton.

The Burlap Council in New York is studying prospects of a planned effort to satisfy demand for smaller size bags. Some initial resistance to change to a new size is not discounted, but the savings on breakage and handling costs as well as customer satisfaction to result from the change-over are expected to establish a sound sales argument.

*

With prices on all jute commodities holding at firm levels and tending higher, production by the jute mills in Belgium continues to advance. In December last year, the output of yarn was 7,751 tons, up 1,200 tons on November and 1,500 tons on December 1954. The production of cloth also showed an increase from 3,696 tons in November to 3,799 tons in December, compared to 3,565 tons in December 1954.

The Eastern Bank Limited

Satisfactory Figures in 1955 Balance-sheet

Middle East and South-East Asian Conditions Reviewed

Statement of the Chairman, Sir Evan M. Jenkins

The Forty Sixth Annual General Meeting of the Bank will be held in London on April 18th, 1956. The following is an extract from the Statement by the Chairman, Sir Evan Meredith Jenkins, G.C.I.E., K.C.S.I. which has been circulated with the Report and Accounts:

The Balance Sheet for 1955 shows an increase of £5,597,291 in Current, Deposit and other accounts, and of £548,316 in Bills Payable. On the assets side there is an increase of £1,482,400 in Cash on Hand, at Call and at Bankers, of £1,968,783 in Bills Receivable, and of £2,862,434 in Advances and other accounts. With these and other less important changes the Balance Sheet total stands at £43,558,711 as against £37,352,355 at the end of 1954. These figures are satisfactory, but since the end of the year certain assets held by one of our Branches have given us concern. Provision has been made in the accounts for the diminution in the value of these assets as at 31st December last, and if necessary further provision will be made in 1956. The further increase in our resources has been useful and profitable, but, as I said last year, it may not be permanent. Competition is increasing almost everywhere, and in the countries which enjoy a revenue from oil large fluctuations in balances are not unusual.

Bank Premises, Furniture and Equipment now stand (after the appropriation of £35,000 referred to below) at £720,953, against £538,474 at the end of 1954. Our Baghdad building is at long last nearing completion. The main new commitment of 1955 arises from the acquisition of the John Little Building in Kuala Lumpur, which we are converting for use as Bank premises and business offices.

The published profit is £132,536 against £129,011 for 1954. The appropriations from profit are £50,000 to Contingencies, £35,000 to Premises, and £28,750 to the final dividend of 5s. per share, which with the interim dividend already paid of 3s. per share, makes a total dividend of 8s. per share for the year as before. The carry forward is increased from £111,120 to £112,656.

The year has from the trading point of view been a good one. Branch working as usual discussed briefly in the paragraphs which follow.

During the year we opened a Branch at Mukalla in the Hadhramaut, 280 miles east of Aden, and a Sub-Branch in Rashid Street (Southgate) at Baghdad. Arrangements were also made to open a Branch at Beirut; we entered into occupation of premises there early in the New Year, and it is expected that the new Branch will be ready for business within a few weeks.

The attention of Shareholders is invited to the Resolution concerning the number of Directors to be moved at the General Meeting. The present maximum number under Article 81 of the Bank's Articles of Association is seven (reduced from twelve during the War). Your Directors are satisfied that this maximum of seven may not in all circumstances be sufficient for the Bank's purposes, and it is proposed to increase it to nine. The two new Directorships will not be filled immediately, but will be available when required.

There is also for consideration by the General Meeting a Resolution proposeed by a Shareholder concerning the Bank's Auditors.

IRAQ

The Government of H. E. Sayid Nuri-as-Said remained in office throughout the year, with a rearrangement of Cabinet portfolios in December. A new agreement between the United Kingdom and Iraq to replace the Anglo-Iraqi treaty of 1930 was signed in April, and the R.A.F. bases in Iraq were handed over to Iraqi Command in May.

Oil Royalties were fully up to expectations, and in his budget speech the Finance Minister announced that owing to increased revenue from this source the foreign currency assets of Iraq had risen from ID.94½ million in September, 1954, to ID.131½ million at the end of October, 1955. A surplus of ID.11 million on the 1955 budget is to be carried forward to the new fiscal year. The Development Board has published a five-year programme of expenditure amounting in all to ID.303 million. The programme includes about ID.107 million for irrigation, ID.54 million for roads and bridges, ID.15 million for railways, and ID.43 million for industrial projects. Several important tenders for development works, and in particular for roads and irrigation projects, were accepted during the year, American contractors being specially prominent.

The grain harvests were much below average. It was necessary to import wheat and rice, and there was little barley for export. Distress was averted by the activities of the Development Board; a great deal of work is now available in Iraq. The yield of dates was normal, but with a considerable carry-over from 1954 marketing has not been easy.

Business conditions were on the whole good, but the poor harvests have had some effect, and markets for imported goods tend to be overstocked. Iraq is, however, progressing fast and given stability in the Middle East her economic prospects are excellent.

The Bank's new building in Baghdad, work upon which was delayed by the floods of 1954, is expected to be ready for occupation by the late spring or early summer of this year. Our new Sub-Branch in Rashid Street (Southgate) was opened on 1st December and has made a satisfactory start.

BAHRAIN

The improvements at Muharraq Airport have been completed, and the facilities there are now regarded as first-class. Other Government projects are progressing. The use of natural gas to provide electric power was delayed slightly by difficulties encountered in the second half of the year, but it is expected that the plant will be taken over by the Bahrain Government shortly. The dredging of the channel to serve the proposed deep water pier is proceeding. Among building projects is a large new Women's Hospital south-west of Manama which is under construction.

The production of oil in 1955 was higher than in 1954, and efforts to find new sources of supply continue.

Business conditions were on the whole rather better than in 1954, but markets are still well stocked and merchants are cautious in giving credit.

For some time a group of Bahrain merchants have been discussing the formation of a new local Bank. The scheme has now taken shape and the new Bank, probably under the name of the Bank of Bahrain, is likely to be established within the next few months.

DOHA

The development of the supply of electric power and water continues steadily, and modern facilities will soon be available at the Airport. Much building, both public and residential, is in progress, and roads are being improved. Doha has already changed out of all recognition, and changes within the next few years will be even greater.

Oil revenue is still rising, and marine drilling continues.

ADEN

The trade of Aden was well maintained during 1955. But there is a tendency for countries which formerly traded through Aden on a large scale—in particular Ethiopia—to do their business direct with their foreign customers and suppliers, and Aden's entrepot business may accordingly diminish. As I indicated last year the Banking facilities now available in Aden are more than adequate for the Colony's needs.

There is a boom in building, partly due to excellent development projects undertaken by Government which will within a few years provide Aden with a first-class hospital and modern school buildings in addition to other amenities. Unfortunately, speculative builders are also at work and the results are in many cases poor.

The Abyan cotton-growing scheme in the Western Protectorate some forty miles from Aden is of considerable interest. Here 25,000 acres of land are irrigated by water from the adjoining hills, and Sudan-type cotton is grown as the principal money crop. The yield of cotton from this scheme, and from similar but smaller schemes elsewhere is estimated in 1956 at about 35,000 bales. His Excellency the Governor kindly invited me to see the Abyan scheme during my recent visit to Aden. The progress made under expert supervision in a comparatively short time is impressive, and there is no doubt that the extension of schemes of this kind could make a very great difference to the prosperity of the tribes in a poor area.

MUKALLA

Our new Branch was opened early in November. Mukalla and the ancient towns in the Wadi Hadhramaut have old trading connections with the East, and, though progress may at first be slow, we hope that merchants will welcome a Banking service.

INDIA

The most important political events of the year were the publication of the Report of the States Reorganisation Commission, and the extensive tour of the Soviet Leaders. Both were fully dealt with by the Press in this country, and need not be further discussed here.

On the economic side, the objectives of the first five-year plan have, in general, been achieved. The second five-year plan, which is now taking final shape, is understood to require an expenditure of between Rs. 4000 and Rs. 5000 crores in the public sector, and of over Rs. 2000 crores by private enterprise. The "gap" between the resources now available and the finance requires will evidently be wide, and must be filled largely by external aid and new taxation. The Indian Budget for 1955-56 adopted some of the recommendations of the Taxation Enquiry Commission, which reported about a year ago, and income tax and surtax on the higher levels of income (in which, it must be remembered, nearly all perquisites and amenities are included) are now more onerous than they have ever been. The Commission advocated an absolute maximum for net incomes, and whatever the ultimate fate of this proposal may be, it is clear that income tax and surtax are likely to be increased still further. This is an important matter for foreign concerns established in India, whose imported staff are now increasingly anxious about the future.

The Companies Bill, which makes important changes in the Managing Agency system, was passed into law in November.

India is shortly to have a decimal coinage instead of the traditional rupees, annas and pies. The change may take effect from 1st April, 1957.

There were serious floods in the autumn in the Punjab and Orissa, but the damage to crops was rather less than was originally expected.

Except for tea, which after recovering from the slump of the spring lost ground again at the end of the year, commodity markets were on the whole fairly steady, and business was good. There was some further liberalisation of import policy, with the emphasis on the needs of Indian industry rather than on consumer goods. The continued shortage of steel will ultimately be covered by the expansion of existing plants, and the establishment of new plants, of which two are being set up with Russian and German co-operation, and a third may be set up with British co-operation.

There was a good deal of labour unrest during the year, especially in Calcutta. The Bank Staffs (including our own) throughout India have been restive over the long-drawn-out enquiries arising from the original Award of the Bank Disputes Tribunal. The Government of India's final decision on the Report of a Special Commission appointed to advise on the Award of the Labour Appellate Tribunal was not acceptable to the Bank Staffs, and there has been a long period of unsatisfactory working including three one-day strikes. The situation is still far from normal

PAKISTAN

In August Mr. Ghulam Mohammed relinquished the office of Governor-General and was succeeded by Major-General Iskander Mirza. Pakistan owes much to the devotion of Mr. Ghulam Mohammed, who had held high office since 1947, and in particular to his indomitable courage during the latter part of his term as Governor-General when his health broke down.

The new Province of West Pakistan was officially constituted in October, and the constitutional discussions which had been proceeding with varying fortunes throughout the year were facilitated by this change. By the end of December it seemed certain that an agreed constitution could be embodied in a Bill for the Constituent Assembly.

The Irrigation Barrage at Kotri in Lower Sind (now known as the Ghulam Mohammed Barrage) was opened by Mr. Ghulam Mohammed in March. Another large Barrage at Guddu in Upper Sind is projected. This will also irrigate over 2 million acres.

Very serious floods occurred in West Pakistan in the autumn. There was widespread damage to irrigation works and channels. That these floods were less disastrous than was at first feared is due to extraordinary efforts by District Officials and villagers who are reported to have carried out spontaneously a great deal of repair work. East Pakistan also suffered from floods but the damage was less than in 1954.

The Pakistan Rupee was devalued to the old parity of 1s. 6d. on 31st July. The trade balance for the year was favourable, but the total volume of foreign trade is relatively small and imports are still held at an austerity level. In the commodity markets wheat and cotton suffered from the floods, and jute and tea did not do very well. There is no reason to doubt the long-term economic position of Pakistan. In the absence of natural disasters, such as the recent floods, she grows her own food; she is already self-sufficient in the cheaper cotton-textiles and has a surplus of yarn (though these developments reduce the amount of her export cotton); there has been impressive progress in the manufacture of jute goods and paper; the Sui Gas project, completed well ahead of time and officially opened in November, is already supplying gas to Karachi industry through the new Karachi Gas Company and many important engineering and industrial schemes are in hand or projected. The immediate economic difficulties are due to over-rapid industrial development, which has strained foreign exchange reserves to breaking point. American aid, including continuing aid for 1955-56 is now estimated at about $.100 million.

Relations with India were unchanged during the year.

CEYLON

Ceylon had another prosperous year, with a large favourable trade balance and, in consequence, a further increase in external assets. The financial year ending 30th September, 1955, yielded a cash surplus of Rs. 129 million.

During the second half of the year tea prices recovered from the very severe fall which occurred in the spring, and until September the improvement was continuous. There was a slight set-back in October, and by the mid-December sales of the average price per lb. had declined to Rs. 2/15 as compared with Rs. 2/19 in mid-July and Rs. 3/36 in mid-December, 1954. Shipments to the United Kingdom totalled 75.7 million lbs., a considerable increase as compared with 1954.

The shipment of all sheet rubber to China continues, and in October a Trade Delegation from Ceylon negotiated an increase in price for all shipments made during the second half of 1955 and during 1956 (the fourth year of the five-year rice-rubber agreement). During the second half of the year the price payable to the producers was gradually increased from Rs. 1/10 to Rs. 1/50 per lb. The demand for crepe rubber was strong throughout the year.

The market for copra was, on the whole, steady.

The Government's second six-year plan (1954-55 to 1959-60) provides for a total expenditure of Rs 2529 million, compared with an expenditure of Rs. 1600 million recommended by the International Bank's Mission in 1952. The aim is to spend about Rs. 400 million on the social services; the rest of the plan covers public utilities, agriculture, irrigation and fisheries, requiring between them nearly Rs. 1800 million, and industries requiring Rs. 112 million. A Ceylon Development Finance Corporation is being established by Statute, and the Exchange Banks will participate in the finance of this new institution. The Taxation Commission to which I referred last year, has reported. It seems that no radical changes in the taxation system of Ceylon are considered necessary. Several of the Commission's recommendations were adopted in the budget for the current financial year.

MALAYA

The results of the elections in Singapore and the Federation were fully reported in this country, as were also the recent visits of the two Chief Ministers, Mr. David Marshall and Tunku Abdulrahman, to London to discuss further constitutional advance.

The emergency continues; efforts to end it by an amnesty combined with discussions with the principal Communist leader have not been successful, and full-scale operations against the terrorists have been resumed.

Singapore had an uneasy year, with much political excitement and industrial unrest.

The prices of rubber and tin increased, and markets were firm at the year's end. Trade was good, and the favourable balance for Malaya as a whole may well exceed $300 million for the year.

The International Bank's report on the economic development of Malaya recommends an expenditure of $775 million in the Federation and $610 million in Singapore during the five years 1955-59. The most important projects in the Federation are likely to be for the replaning of rubber areas with high-yielding strains, and for other agricultural enterprises. In Singapore public utilities and housing will have a high priority. The establishment of a Central Bank of Malaya is also recommended, and is being seriously considered by the Governments of the Federation and Singapore.

During the year we acquired at Kuala Lumpur the property known as the John Little Building fronting on Embankment Street. This is being remodelled to house our Kuala Lumpur Branch, and for use as business offices, and it is hoped that it will be ready for occupation within the next few months.

GENERAL

In November and December I visited the Bank's Branches at Aden, Mukalla, Karachi, Calcutta, Chittagong, Bahrain and Doha, and Mr. Leigh-Wood is now on a tour of our Branches in Iraq and Beirut. Sir Thomas Strangman has spent some months on business in Singapore, and has been able to see something of our Singapore and Kuala Lumpur Branches.

The year has been a busy one, and we have every reason to be grateful to our Staff both in London and in the East for its satisfactory results.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ended 31st March, 1956.

The Preference Share Registers will be closed from the 16th to the 21st April, 1956, both days inclusive. Payment will be made on after the 1st May, 1956, to those Preference Shareholders whose names are on the Company's Register on the 21st April, 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
T. Leslie Martin,
Governing Director,
Managing Agents.

12, Mission Row,
Calcutta,
2nd April,, 1956.

THE BOMBAY DYEING & MANUFACTURING CO., LTD.

NOTICE

The Eighty-fourth Ordinary General Meeting of the Shareholders of The Bombay Dyeing & Manufacturing Co., Ltd., will be held at the temporary Registered Office of the Company, State Bank Buildings, Bank Street, Fort, Bombay, on Thursday, the 26th April 1956 at 5 p.m. (S.T.) to transact the following business:—

1. To adopt the Directors' Report, the audited Balance Sheet and Profit & Loss Account for the year ended 31st December 1955.
2. To sanction the declaration of a Dividend.
3. To elect a Director in place of Mr. J. D. Choksi who retires by rotation, but is eligible for re-election.
4. To elect a Director in place of Mr. N. M. Wagle who retires by rotation, but is eligible for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

AND for the purpose of considering, and if thought fit, of passing the following Resolutions as Special Resolutions and/or Ordinary Resolutions as specified below:

SPECIAL RESOLUTIONS

I. RESOLVED that in accordance with the provisions of Section 261 of the Companies Act, 1956, the Company hereby consents to and approves of the appointment, as a Director of the Company, of Mr. H. R. Batlivala, a Director and employee of Nowrosjee Wadia & Sons (Private) Ltd., the Managing Agents of the Company.

II. RESOLVED that in accordance with the provisions of Section 261 of the Companies Act, 1956, the Company hereby consents to and approves of the appointment as a Director of the Company, of Sir Jamsetjee Jejeebhoy, Bart., an employee of Nowrosjee Wadia & Sons (Private) Ltd., the Managing Agents of the Company.

III. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of all sales, purchases, or supplies or tranactions already entered into or to be entered into by virtue of or under a contract dated the 22nd day of March 1956, between the Company and the Managing Agents, Nowrosjee Wadia & Sons (Private) Ltd., in respect of goods in which the Managing Agents regularly trade or do business in such as Rings, Ring Travellers, Lubricating Oils, Hair & Leather Beltings, and other Leather Goods such as Pickers, Picking Bands and Buffers, Sprinklers and Sprinkler Equipment, Machine Cloths, Ginning, Pressing and Delintering Machinery, and Machinery spare parts, and Mechanical Handling Equipment or in respect of which they may trade or do business in as well as in respect of sales to the Managing Agents by the Company of sundry stores, petrol, tubular banding, cloth and such other ancillary items and in respect of the supply or rendering of any service by either to the other, other than that of Managing Agents, including receiving loans or deposits at interest not exceeding the State Bank of India's rate of interest from the Managing Agents, for all of which payment shall be made to the Company within one month from the date of such transactions.

IV. RESOLVED that pusuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of all purchases or supplies from or transactions already entered into or to be entered into by virtue of or under a Contract dated the 19th day of March 1956 between the Company and Spin-Weave Textiles, an associate of the Managing Agents as defined under the provisions of the Companies Act, 1956, in respect of Bobbins, Pirns, Skewers, Wood, Wooden Cases, Wooden Articles such as Sleys, Hand Tops, Rollers, Picking Sticks, Leather Goods such as Beltings, Picking Bands, Pickers, Buffers, Loom Straps, Ram Rings, Castings and Machinery spare parts and other sundry mill stores, at rates fixed by the Directors from time to time.

V. RESOLVED that the Company hereby approves of the purchase, on 29th March 1956, from Mr. Neville N. Wadia, an associate of the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., of the reversionary rights in the lands admeasuring about 1,27,924.6 square yards previously leased by the Company (and in the occupation of the Spring Mills) at or for the price of Rs. 10,50,000 by Indenture of Conveyance dated 29th March 1956.

VI. RESOLVED that the Company hereby approves of the purchase, on 29th March 1956, from Mr. Neville N. Wadia, an associate of the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., of the reversionary rights in the lands admeasuring about 44,460 square yards previously leased by the Company (and in the occupation of the Textile Mills) at or for the price of Rs. 4,50,000 by Indenture of Conveyance dated 29th March 1956.

(EXPLANATORY STATEMENT UNDER SECTION 173 (2) ANNEXED IN RESPECT OF THE ABOVE RESOLUTIONS NOS. I TO VI).

The Agreements referred to in Resolutions Nos. III and IV and the Indentures of Conveyance referred to in Resolutions Nos. V and VI are open for inspection by any shareholder at the temporary Registered Office of the Company on working days except on Saturdays from 11 A.M. to 4 P.M. (S.T.).

ORDINARY RESOLUTIONS

VII. RESOLVED that pursuant to the provisions of Section 359 of the Companies Act, 1956, the Company hereby authorises Nowrosjee Wadia & Sons (Private) Ltd., the Managing Agents of the Company, to retain the commission or other remuneration earned or to be earned by them in the business of principal agents of Insurers, and in the business of Agents or Representatives of other principals for supply of goods to the Company. such as, Rings, Ring Travellers. Lubricating Oils, Hair & Leather Beltings, and other Leather Goods such as Pickers, Picking Bands, Buffers, Sprinklers and Sprinkler Equipment, Machine Cloths, Ginning. Pressing and Delintering Machinery and Machinery spare parts. Mechanical Handling Equipment, and also the interest in respect of any loans or deposits made to the Company.

VIII. RESOLVED that pursuant to the provisions of Sections 372 and 373 of the Companies Act, 1956, the Company hereby confirms the investment made by the Company in National Peroxide Ltd. [of which the Managing Agents are Nowrosjee Wadia & Sons (Private) Ltd.,] of 15,000 shares of the face value of Rs. 100 each, amounting to Rs. 15,00,000 (Fifteen Lakhs) and authorises its continuance.

IX. RESOLVED that pursuant to the provisions of Section 294 of the Companies Act, 1956, the Company hereby approves of the continuance of the appointment as sole Selling Agents of the Company under the existing terms and conditions of:—

(1) Messrs. Chaturbhuj Gordhandas & Co., for Cloth for the whole of India.

(2) Messrs. Doongersey Gangjee & Sons Ltd. for Yarn for the whole of India.

X. RESOLVED that the Company hereby approves of the continuance of the present arrangements of the Company with:

(1) Messrs. G. & R. Wills & Co. Ltd., Adelaide.

(2) Messrs. G. B. Warne Corporation, New York.

for the sale of the Company's products in Australia and New Zealand, and Canada, United States of America, Central and South America, respectively.

By Order of the Board,
NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA
Director,
Managing Agents.

Bombay,
31st March, 1956.

A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

The Transfer Books of the Company have been closed from 19th March to 5th April, 1956, both days inclusive.

The Dividend when sanctioned will be made payable at the National Bank of India Ltd., Bombay, on or after the 27th April 1956, to those shareholders whose names stand on the Register of the Company on 5th April 1956, and the Dividend Warrants will be duly posted to them.

The Shareholders are requested to immediately notify any change of address to the Company.
To,

The Shareholders of The Bombay Dyeing & Mfg. Co Ltd., and in particular to:—

Mr. Abdullah Rahimtullah, Mr. Ahmed Ismail, Miss Beatrix E. Alston, Capt. John S. Alston, Miss Ethel B. Ashby, Mr. Ebrahim Mamoojee Badat, Mr. P. J. Chinoy & Mrs. Arnavaz P. Chinoy, Mr. I. C. Chopra, Mr. V. M. Clerk & Mrs. Rasila V. Clerk, Mr. Gerald Percy Cooke & Mr. Alexander Sim Murray Young, Mr. M. H. Crowder, Mrs. Goolcher F. Dadachanji & Mr. Faridun K. Dadachanji, Dr. L. Das. Mrs. Allu F. Dastur & Mr. Fredun P. Dastur, Mr. Eruch E. U. Dinshaw & Mrs. Naja E. E. Dinshaw, Mrs. Meherbanu P. Dubash & Mr. P. S. Dubash, Mr. J. Armando Fernandes & Mrs. Henriqueta Fernandes, Mr. Mark Frankfurt, Mrs. Eileen Gomes & Mr. Arthur Louis Games, Mr. A. F. Gonsalves, & Mrs. Eslinda Gonsalves, Srimati Grihya Kumari, Mr. Manohar Raghavendra Hosangady, Mr. Ismail Essack, Mr. Saifudeen I. Jafferji, Mr. T. 1. Jafferji, Mrs. Nan Ellis Jones, Mr. W. Ellis Jones, Mrs. Dorothy M. H. Maclean, Mr. Pravin V. Madhvani, Mr. Vrajlal G. Mehta & Mrs. Savitri Vrajlal, Miss Khorshed Jehangirji Merchant, Miss Dhun Mancherji Khambata, Miss. Motiwalla & Mr. M. P. Wania, Mrs. Shireen Phiroze Mulla, Mr. Syed M. Muslim, Mr. Pestonjee E. Pader, & Mrs. Perin P. Padar, Mr. Jalbhoy P. Panthaky. Mrs. Fatima A. Parak & Mr. Ahmed H. Bamath, Mr. Ahmed M. Parak, Mr. Kantilal P. Patel, Mr. Arthur G. Powell, Mr. Govindji V. Radia, Comm. Gen. Sir Baber Shum Shere Jung Bahadur Rana & Maj. Gen. Mrigendra Shum Shere Jung Bahadur Rana, Comm. Gen. Sir Baber Shum Shere Jung Bahadur Rana, Rani Beda Bhakta Laxmi Devi; & Maj. Gen. Mrigendra Shum Shere Jung Bahadur Rana, Mrs. Premila J. Saraiya & Mr. Jayantilal C. Saraiya, Mr. Theodore O. Schmid, Mr. G. M. D. Seedat, Mr. Ismail A. Shaikh, Mr. James Arnott Thomson, Mr. W. E. S. Thomson, Mrs. Elizabeth S. Thomson & Mr. J. Henderson, Dr. John M. Thomson, Mr. Hansraj Ebji Velji & Mrs. Chandubai Hansraj.

Delhi Review

Olympus

A momentous Press Conference

THE Press Conerence which the Prime Minister addressed last Monday, is likely to assume extraordinary significance, if the sentiments expressed on the occasion augur a material change in India's foreign relations. Pandit Nehru spoke on a number of exciting topics, the future of Bombay, the Bengal-Bihar merger, the exodus from East Pakistan and the future of Kashmir. His observations on the two domestic issues, that is Bombay and the merger of States, must have contributed to pour some oil over the troubled waters of the politics of the States of Bengal and Bombay.

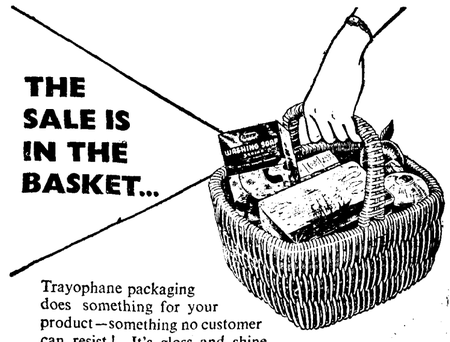
The tone and content of the statements were persuasive, conciliatory, and very correctly democratic. One thought that the decision over the city of Bombay which developed a tragic situation was being robbed much of its finality. On more than one occasion in the course of the debates in parliament, the Prime Minister had indicated the possibility of a reconsideration when the present antipathies and bitterness subsided.

At the present conference, he spoke more or less in the same terms and gave the assurance that he was not at all anxious that Bombay should enjoy any particular status or that it should form part of this or that State. What he really was solicitous about was the restoration of complete and sincere good feeling between the Maharashtrians and the Gujeratis, without which neither could prosper. On the question of West Bengal-Bihar merger, he explained that the omission of the subject in the States Reorganisation Bill reflected the desire of the Central Government not to do anything without ascertaining the wishes of the people concerned. The process was now going on; and as far as the Central Government were concerned, they have taken a position of interested neutrality. It was left to the people of the two States to decide whether they should merge or continue separate.

The Conference was, however, noteworthy not so much for what was said on these two domestic issues, but for the unambiguous indications of policy on Kashmir and the comparatively strong language employed to picture the problem of the exodus from East Pakistan. Even if the Prime Minister were only dotting the I's and crossing T's of his earlier statements made in Parliament, it was a very important and delicate piece of job.

For a long time, the Indian Union was facing the charge levelled against it by Pakistan and its friends that the issue of plebiscite on Kashmir was being dodged. Pakistan was consistently posing as an injured party with wounds all over its body. It needed a firm and relentless reappraisal of facts to expose the real situation and to show to the world where the blame lay. That was what was done by the Prime Minister at this Conference.

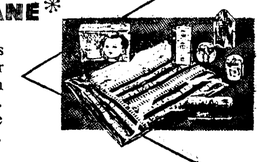
In the process, some interesting new information on Pakistan's hopes and manoeuvres was also made available. There was mention of a customs declaration form issued by Pakistan in 1953 which contained a reference to "Portuguese Pakistan". Certain developments which were noticed after the termination of diplomatic relations between the Indian and the Portuguese Governments should assume a sinister significance in the light of this revelation.



Still more amusing was the disclosure that the vehicles which brought raiders to Kashmir contained the inscription "to Delhi, via Kashmir." The Prime Minister was disposed to dismiss it as not more than a mere flight of imagination of the persons who had put it there. He claimed possession of unassailable proof to the fact that Pakistan forces were in Kashmir soil as early as November 1947—a fact which would repudiate at one stroke the bland assertion by the Pakistan Premier that his country's soldiers went into Kashmir only in May 1948.

It was easy for the Prime Minister to meet the argument advanced by the Pakistan Prime Minister that the accession was a fraud and a secret manoeuvre. There was the unchallengable fact that for several days together Srinagar and other towns were defended by the civilian residents, without any help from the military and against a mounting assault by the invading forces. This heroic defence formed a new starting point for the political association of Kashmir with the Indian Union and all that has happened subsequently could be understood only in relation to that fact.

The logic of India's stand that a plebiscite was now neither necessary nor possible was elaborated, with reference to the two main relevant points. India had always insisted that Pakistan should withdraw its forces from the occupied portions of Kashmir. Even if Pakistan now agreed to withdraw the forces, as far as the military situation went, that would not make any difference; for with the substantial military aid from US which Pakistan has acquired in recent months, there would be a much heavier fighting potential just behind the border. For India, the withdrawal of Pakistan's regular forces would not imply much material difference. If at all the position will have to be regarded as much worse.



The intrusion of military pacts and alliances in this and in the South-East Asian area, Pandit Nehru pointed out, has created risks amidst which it would be foolish for the Indian Union not to review its commitments in regard to the Plebiscite. The economic and political developments in Kashmir during the last eight years also unmistakably pointed to the justice and fairness of the Indian Union's stand. The shadow of uncertainty over its future has already thwarted the economic progress of the State. It would be a crime against the people not to attempt to lift that shadow.

How Pakistan would respond to this Press conference was to some extent foreshadowed in the Prime Minister's speech. There was no concealing the fact that more expenditure on military preparations might become necessary, though the Indian Union, on its part, was in no way seriously disturbed by the prospect.

North Indian Notes

Indo-Yugoslav Trade

The Commerce Minister's confident anticipation that India's Foreign Trade will record a thirty to forty per cent growth in the next five years was fittingly heralded by a major bilateral trade pact between India and Yugoslavia. The proportion of trade with East European countries to our total trade is negligibly small. The more than doubling of our trade with some of the Communist countries is partly explained by this low proportion. There is one difference, however, which makes the latest trade accord specially significant; unlike several others, it is not in the nature of merely an isolated transaction covering some surplus commodity: but it lays the foundation for the normal and sustained growth of bilateral trade, consistent with the economic needs and potentialities of both countries.

In fact, Yugoslavia does not suffer from a superabundance of such commodities like cement, rolled steel products, Diesel locomotives, rolling stock and ships, all of which she has agreed to sell India under the three-year trade and mutual technical assistance pact. Items listed as India's exports to Yugoslavia include iron and manganese ore, mica, shellac, tea, coffee, tobacco, spices, hides and skins, cotton textiles, raw wool, jute goods, handicrafts, and cottage industry products.

India's dependence on a limited number of markets particularly in the case of manganese ore and mica has been the cause of distress and unemployment in our mines. The diversion of American demand to markets nearer home was clear proof that it was time for us to think in terms of diversifying our export market for such commodities. The Indo-Yugoslav pact is a step in this direction.

The agreement envisages the extension of 'most favoured nation' treatment subject only to limitations imposed by certain territorial contiguity or traditional affinities. It also provides for closer scientific and technical co-operation between industrial organisations of the two countries through the sharing of technical skill, exchange of technical missions, provision of technical experts and training facilities and supply of equipment and machinery.

Besides the items already mentioned, Yugoslavia will export to India dyeing and tanning substances hardboards and insulating boards, insulators, rails and wagons, non-ferrous metal products, steam boilers, tractors, turbines, motors electrical transformers and instruments, surgical apparatus, metal-working machnery, etc., The payments will the selected either in Indian rupees or pound sterling according to convenience.

The above is indeed a long list for any bilateral trade agreement. Yugoslavia's 61 items for export are matched by India's 38. Of these, the supply of Yugoslav ships may be picked out as of paramount importance, especially if Yugoslav shipyards are inclined to give the necessary priorities for deliveries, etc. Mention may also be made of the probably large participation of the projected State Trading Corporation in the implimentation of the pact.

Bilingual Punjab

Barring certain initial hurdles, the Plan for a bilingual Punjab has had a smooth passage till now. The chances of its coming through in the Lok Sabha are more or less assured. Pandit Pant was able to assert in Parliament that it had the support of all those who were not swayed by political considerations. But then, as recent events in the country have shown up, political motives are often arrayed on the front line of reorganisation moves.

Of the several schemes for large multi-lingual States which have come and gone from time to time, the scheme for the Punjab seems to be the most soundly conceived. It does not, at any rate, seek to gloss over the sharp edges of differences in outlook between the two linguistic groups, nor does it exaggerate the resilience of 'common ties.'

The Punjab will have two regions which take fully into account the lingual division. The common legislature is to be the sole law-making body. The two regions will have a common Government and Governor. The M.L.As belonging to the Hindi and Punjabi speaking regions will separately form regional committees empowered to tender advice to the Government, which are normally to be accepted. The Governor can arbitrate in case of a clash of opinion. The necessity for having two official languages is not sought to be escaped but is squarely faced. Below the district level, the two languages will be recognised as the respective regional language.

This formula should be considered fair and just in the present circumstance. It provides the necessary foundation for fostering goodwill, unity and welfare of the people. The matters which the regional committees can separately consider and advice upon are by no means restricted or unimportant.

Difficulties, organisational and administrative, are bound to crop up under the new set-up. That the Governor will have the final and binding decision, in case of dispute, can make for the undelayed implementation of vital schemes, but, equally, it can provide the cause for continuing dissension. The path of the future can be smoothened only by some magnanimity on the part of the legislators. That the Punjab and Pepsu Legislatures have accepted the plan is a hopeful angury.

SOUTH EASTERN RAILWAY TENDERS

The closing date of the tender No. CSI/56/K6/9 1 (56) for Fabri-No. CSI 56 K6 9/1/(56) for Fabrication of garments during 1956-57 has been extended to 11-4-56 at 12 noon.

CONTROLLER OF STORES

NEW CENTRAL JUTE MILLS COMPANY LTD.

NOTICE is hereby given that the Annual General Meeting of the shareholders of the company will be held on Monday, the 14th May, 1956 at 4.30 P.M. at the Company's Registered office, 11 Clive Row, Calcutta to receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended December, 1955, to declare final dividends, to elect a Director in place of the retiring one and to appoint Auditors for the current year and fix their remuneration.

The Share Transfe Books of the Company will be closed from 5th May, 1956 to 14th May, 1956, both days inclusive.

By Order of the Board,
SAHU JAIN LTD.
Managing Agents.

Calcutta,
29th March, 1956.

N.B.—A member entitled to attend and vote at the General Meeting is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

NORTH INDIAN MARKETS

Bearish Trend on Harvest Eve

AFTER many weeks of bullish activity price of foodgrains generally showed a bearish trend during last week. In the Hapur Market, wheat average quality prices fell to Rs 14-8 per maund and khati prices to as low as Rs 13-6 as against Rs 15-8 and Rs 14-8 respectively quoted earlier. There is evidence of anxiety on the part of stockists to part with the stocks before the advent of the new crop within a couple of weeks and this explains the increased heavy arrivals at Hapur and other centres. Large-scale releases of the government in consuming areas has been another depressing factor. Last week's off-take at 4 khatles was mainly to meet local requirements and wheat stock at Hapur is now put at 6 khatles

Reportedly, North Indian wheat crop which has so far been favoured by healthy conditions, seem now to have suffered heavily due to hailstorms.

In the Delhi Market ready foodgrains prices after witnessing a sharp decline were ruling quiet by the middle of the week. The tendency during the last week of March was generally downward: wheat decreased from Rs 15-8 and Rs 18-8 to Rs 14-12 and Rs 17-8. A similar fall was, as said earlier, reported from Hapur also. At Ludhiana and Jagraon in the Punjab, wheat was quoted at Rs 15-12 per maund against Rs 16-12 a few days ago. In PEPSU also wheat prices have eased appreciably.

The current easiness is mainly attributable to the approach of harvest season for rabi crop. Actually new crop grams and barley have started arriving at centres in UP. In Rajasthan and PEPSU harvesting will begin in full swing in about a little more than a week's time. The bearish trend has been helped by the opening up of cheap grain depots by various States and this has discouraged hoarding tendency.

In the Delhi Market, gram and its products also turned bearish on good arrivals of new crop gram from the Punjab and in spite of the good demand in South India gram prices eased from Rs 10-12 and Rs 11 to Rs 10-8 and Rs 10-10 per maund

In sympathy, gram prices in Hapur fell due to easy advices from the Punjab and local gram was transacted at Rs 10-12. Barley and bejhar prices declined owing to better supply position. Maize and bajra were not in demand due to off-season and prices ruled quiet.

Jowar prices showed a different trend for reason of good demand for seed purposes and poor local stocks. Latest prices were—barley Rs 9-12, bajhar Rs 9-8; maize Rs 11; bajra Rs 10; jowar Rs 13 per maund

The increased overall production of indigenous sugar in the country aggregate 10,73,049 tons by the end of February as agains 9,82,600 tons during the corresponding period last year. Consequent easy supply position generated depressing conditions in ready sugar market during the week. The total off take in Hapur during the first four months of the current season was rather heavy at 6,15,000 tons compared to last year's figure at 2,75,400 tons. Mill delivery prices eased slightly on slack outside buying enquiry. The latest price were Jaswant Rs 28-9, Simbhauli Rs 28-10; Mowana Rs 28-15; Daurala Rs 29-8; Amroha and Bijnore Rs 28-2 each; Mansoorpur Rs 29 to Rs 30; Rampur Rs 31; Khandsari Rs 23 to Rs 26-8.

Due to better loading facilities to the consuming areas of Gujarat ready gur prices in Hapur recovered from early fall at Rs 11-4 Daily arrivals have receded to average of 800 maunds and local stock has gone down to 1,20,000 maunds. Gur Basiakh recorded a reversal of the downward trend improving to Rs 11-12

S.R. Bill in Madras Legislature

THE Draft States Reorganisation Bill has emerged unscathed from the Madras Legislative Assembly. A few official amendments were carried; but these were relatively of a non-controversial character. One of the amendments sought to raise the strength of the Legislative Council to 51, *from 48 as provided* for in the Bill. Another amendment recommended that, notwithstanding the dissolution of the Travancore-Cochin Legislative Assembly, the members representing the area to be transferred to the Madras State should be deemed to have been duly elected to the Legislative Assembly of Madras. The purpose of this recommendation is to enable the members concerned to enjoy the privileges of their transferred status unaffected by the uncertain course of events in their original State.

None of the Opposition amendments to the Bill could secure majority support, which, incidentally, was a foregone conclusion. But one or two of these amendments did indicate a state of opinion which has many supporters both inside and outside the legislature. For instance, there was a demand for renaming Madras as Tamil Nad. The issue got mixed up with the controversy over the two North-Eastern Taluks of the Travancore State. When the States Reorganisation Bill was discussed in the Assembly the protoganists of the Tamil Nad slogan staged a demonstration. Within the legislature one influential member moved an amendment seeking a change of name for the State; but it was voted out.

The controversy over the two taluks in Travancore was carried to the House in the form of another amendment; and four further amendments in the name of different members sought a Boundary Commission to go into border disputes between the States of Madras and Kerala, Andhra and Mysore, laying down the basis on which these disputes were to be dealt with. As an earlier amendment to the same effect was rejected by the House, the Speaker had no difficulty in ruling it out of order, in spite of a technical objection raised by the leader of the Communist Group.

Mr C. Subramaniam, the leader of the House, acquitted himself creditably in the debate on the Bill. While sympathising with the demand for transfer of more areas to the Madras State than was provided for in the Reorganisation Bill, he sought to convince the Assembly that there was no use in reopening controversies and putting forward demands which had already been examined threadbare by the Commission and decisions taken by the Central Government. He argued that by allowing these controversies to linger, they would only distract the public mind from more useful preoccupations. At the present juncture, the Second Plan and industrial development under the Plan were far more important than the transfer of this or that border taluk. Mr Subramaniam's appeal had its effect not only as shown by the verdict of the House but by the suspension of demonstrations outside.

It was also his task to bring to the notice of his colleagues in the House how some of the demands voiced by them were illogical. One member, for example, claimed that Palghat should have its future decided by a Boundary Commission simply on the ground that the people of the Taluk claimed to be Tamilians. The Finance Minister reminded him that the Taluk as a whole had a clear majority of Malayalam-speaking population. Another member wanted to give the name of Vijayanagar to the Mysore State. It was curious that the Speaker permitted the very introduction of the suggestion and there was a digression on the culture of Mysore and the Old Vijyanagar Empire. It was left to the leader of the Opposition to point out that the question of naming Mysore properly belonged to the Mysore Assembly and not to the Madras legislature.

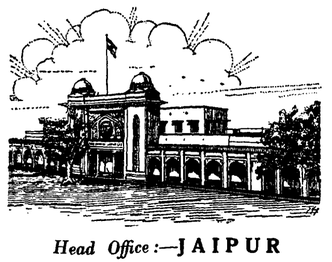
Another less frivolous amendment sought the transfer of the Nilgiris District to the Mysore State; this amendment was turned down by the House, after the Finance Minister quoted the 1951 Census figure to show that the district had a predominant Tamil majority.

There was one powerful advocate of large multilingual States. This member pointed out how pigmy States like Kerala would be swept off the national focus when there were giant States like Uttar Pradesh and Madhya Pradesh. Such vast differences in area between States would undermine democracy and States formed purely on linguistic basis would mar the future of the South. He held that the regrouping of the States was premature and would certainly stand in the way of the economic rehabilitation of the country, a matter in which the common man was much more interested. Regretting that the words of wisdom of C. Rajagopalachari were not listened to by the Congress, he also charged the Congress units in the South of lukewarmness in their effort to popularise the desire of the Working Committee for larger States. He could never imagine conditions in which mixture of population could avoided. "The grave diggers were the linguistic fanatics in alliance with petty politicians".

Outside the legislature, Sir A. Ramaswami Mudaliar in the course of a public address spoke persuasively for the postponement of reorganisation. The Finance Minister referred to this speech but said that already things had gone too far and the best course possible was to go ahead with the realignment of boundaries and to hope that the new set-up would induce a revulsion of feeling against narrow linguism.

Zonal Councils had both fierce enemies and warm enthusiasts. On the whole, one gained the impression that the real character of the Zonal Council was missed by many members, who thought that it would be either a useless appendage or a powerful intruder on State autonomy. Again, Mr Subramaniam corrected false impressions with regard to the Zonal councils. He explained that the zonal council would function only in an advisory capacity and would have no statutory powers, adding that no one should think that it was the ghost of Dakshina Pradesh.

As for the Dakshina Pradesh proposal, it is now fairly clear that the idea has to be ruled out at least for the immediate future. The Madras Chief Minister was from the outset sceptical of public support. Even in Congress ranks, opinion seems to be sharply divided, though it must be admitted that in the Madras State no clear lead was given to the people. If the advantages of a larger political unit were to have been more sincerely canvassed on a broader front, the proposal would certainly have evoked much wider support.



As it is, only in Mysore, there is some enthusiasm for the proposal. The Mysore Assembly when it considered the recommendations of the States Reorganisation Commission, adopted a Resolution expressing the view that, if the people of other areas, of their own accord, wanted to join Mysore for administrative purposes, the people of Mysore would welcome them; and it was also made clear that Mysore would be willing to join any one of the neighbouring States or all of them. Unfortunately this enthusiasm has not transcended Mysore.

In Madras, the Finance Minister was found to give support to Dakshina Pradesh; but even he had to confess in the Assembly that the proposal was neither popular nor practicable in the view of the public. Opinion in Andhra is not more helpful.

With the suspension of Cabinet Government in Travancore-Cochin, it is impossible to ascertain the formal view of the Assembly. But, if the speeches of public men and

Madras Review

South Indian Notes

A Realistic Approach

The Madras Government's White Paper on Education, particularly the memorandum touching the medium of instruction might probably be viewed with raised eyebrows in certain powerful quarters. All the same, Government have done well rather to reflect popular opinion and refuse to sidestep vital issues that will have to be faced, if not now, in the near future. The outstanding feature of this statement of policy is its unambiguous clarity.

English must be the second language and Hindi the third language for the following reasons: English has to be, and Hindi cannot be, the medium of scientific and professional education in colleges. Opinion is not likely to be divided over this argument. Secondly, English gives, and Hindi does not give, direct access to creative modern thought. Hindi protagonists, to be distinguished from those who vote for Hindi as the official language, will be disturbed by this suggestion. They will argue that the way to raise Hindi to the status of English is to make it a compusory medium in schools and colleges. The White Paper ably answers this point. Hindi cannot be made the subject of compulsory study in secondary schools in the State, because failure to attain minimum standards in that language—and this in the normal course, will not be an exception—will result in a loss of prospects for admissions to colleges and, therefore, to all professions limited to college-educated persons. The object of making a larger number of students learn Hindi more diligently will not only be not secured, it will be defeated, if it is made a subject for compulsory study.

The way to spread Hindi is to raise the efficiency of instruction and to make it easy to learn, consistent with its optional character. To a certain extent, Union Government's stipulation of Hindi as essential for employment under them, will automatically provide the inspiration and incentive for students to make proper use of added facilities for its study in schools. The use of simplified, as distinct from Sanskritised Hindi will immensely help.

As the Madras Government point out this situation will be reflected in its main aspects in every non-Hindi State. The priority of the mother-tongue as a medium of thought and expression in school and out of it, is nowhere disputed. The Madras Government think that English should be available as a subsidiary official language even after 1965, the time limit set by the Constitution for the transition to Hindi This viewpoint was presented in identical terms before the Official Language Commission. All the South Indian Universities are agreed on continuance of English as the medium of higher education. And when a slightly contrary view is put forth as in the solitary instance of the late Travancore-Cochin Government, it is not accompanied by any understandable reason.

*

Responsibilities & Opportunities

The Chartered Accounts' profession was given statutory recognition forty years ago, though it received its formal 'charter' only seven years ago. These have been years of growth and consolidation not only in number and status but also in the statutory provisions for safeguarding its rights and privileges Like members of the Bar and the Press, the Chartered Accounts have an Act passed for their benefit.

The period that has gone by may thus be considered to have prepared the profession for a task different in scope and importance from the one they had shouldered in the past. What the implications of current developments are for the profession and how best it can gear itself to the new role, Dr C. P. Ramaswami Aiyar has expressed, tersely and effectively, while inaugurating the first Regional Conference of Chartered Accounts in Madras last week. New opportunities are opening up for the accountancy and audit services. They had advanced, says he, far beyond the days when they were undersigning and underwriting the Directors' reports of companies. Today, they were part of the industrial and commercial make-up of the country and are introduced into almost every branch of national enterprise.

Dr Aiyar thinks that the possibility of a tax on expenditure beyond a certain level prescribed by the State, over and above to that on incomes, cannot be entirely ruled out. Thus the position of Chartered Accountants as tax consultants is likely to become more real and more responsible with the years. Government's projected entry, into foreign trade represents another major development impinging on the work of Chartered Accountants and Auditors. It would be within their purview and jurisdiction to scrutinise Government transactions, pull up the concerned Government, wherever necessary, and to see that Governments, as well as individuals, observed all conventions of accounting. Dr Aiyar estimates that the sum total of State activities would be to the tune of Rs 20,000 crores a year. This gives an idea of how much the profession has to do, guard against, watch and scrutinise.

It is a matter for satisfaction that the profession enjoys a great measure of autonomy. But Dr Aiyar thoughtfully points out that 'no profession which is not entirely and consciously, as well as conscientiously, self-regulating and self-disciplined can properly vindicate its autonomy.' The value of moral standards could not nave been better underlined.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN that the 30th Ordinary General Meeting of the Company will be held at the Registered Office of the Company, "Dunlop House", 57B, Free School Street, Calcutta, on the 25th day of April, 1956 at 12-15 p.m. for the following purposes:—

(1) To consider, approve and adopt the Directors' Report and Statements of Account.
(2) To declare Preference and Ordinary Dividends.
(3) To elect Directors.
(4) To elect Auditors and to fix their remuneration.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 9th April, 1956 to 28th April, 1956, both days inclusive.

By Order,
P. B. SEN GUPTA,
Secretary.

Dunlop House,
57B, Free School Street,
Calcutta,
29th March, 1956.

N.B.—As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register them prior to 9th April, 1956.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the Meeting. A Debenture Stockholder as such is also not entitled to attend the Meeting.

SOUTH INDIAN MARKETS

Spurt in Foodgrains Prices

LAST week there has been a sudden spurt in prices of foodgrains in the Virudhunagar market. The steep increases have been to the extent of 45 per cent in the case of rice and 30 to 60 per cent in the case of oils and pulses. Rice which sold at 9 annas a measure two months ago now sell at 13 months a measure. Groundnut oil is sold in retail at Rs 2-6 per measure against Rs 1-10. Gingelly oil has risen from Rs 2 to Rs 3-4. Several quarters have urged government to take steps to arrest the prices.

Rice prices in Andhra centres, after the recent advances following the purchase of raw rice by Government, has somewhat eased. News that Government would sell 36,000 tons of rice in the Hyderabad area has been responsible for the fall in prices by about Rs 1-8 per maund. Meanwhile, prices of raw and boiled rice in Madras have been ruling steady during the last week

*

The only change in the hides and skins market was a slight increase in prices in certain cases. The arrivals of tanned cow skins in the Madras market might be described as normal. The demand was better all round but the intervention of Easter Holidays has caused a temporary set-back in the enquiries from the UK. But, by the end of the week this trend is expected to be reversed with the enquiries for orders coming from in the UK. Locally, Inferior vs continued to be in better demand but UK prices was more or less steady, recording actually an advance of 1d. in 5/5½ lbs. average. The steady price levels explains the subdued climate in tanned buffalo hides. In the case of tanned cow calf demand from the UK continued to be poor.

During the last week of March about 30,000 tanned goats skins and 75,000 tanned sheep skins were cleared from the local market leaving stocks in the bazar at 30,000 and 50,000 respectively. No change is reported either in raw skins or in tanning materials.

Fresh c.i.f. business with the UK appeared to be difficult to negotiate but it was relatively easier to confirm a certain amount of business with the Continent in tanned goats skins. Shippig difficulties, which exporters have been experiencing, it is a factor seriously to be reckoned with.

*

In the Aleppey Market, cocoanut oil was fairly active and the undertone was easy, and turn-over comparatively weak. Opening at Rs 405 per candy, activity in spot oil, passed through Rs 403-12 and Rs 402-8. Oil cake was quoted nominally at Rs 92-8 per candy on the buyers side for spot delivery. Generally speking the trend was reactionary, due to heavy copra arrival and want of new incentive.

Due to the higher advice in Malabar, prices of copra in the South Kanara Market rose by Rs 51 per candy. Price of cocoanut ruled slightly weaker. Copra was done at Rs 275 to 295 per candy of 700 lbs. Raw cocoanuts ruled at Rs 120 to Rs 155 per thousand, and dry variety at Rs 150 to 200.

At a meeting of the Copra Merchants Association at Badagara, a strong case was made out that the Union Government should exempt cocoanut oil from excise duty and direct the levy of sales tax at a single point.

Stock Exchanges

IRREGULAR TRENDS

Watch-dog-Writes:

STOCK exchanges in India displayed an irregular trend during the past week. The undertone, however, continued to be fully steady.

In the Calcutta market, equities started the week on a strident note, but soon encountered profit-taking and lost considerable ground. With the settlement passing off satisfactorily, prices once again resumed their upward movement under the leadership of the forward scrip. The higher levels, however, could not be held and the week closed on a quiet note.

In Dalal Street conditions were bright at the start but deteriorated in subsequent sessions due to profit-taking.

Active conditions were witnessed in the Madras Stock Exchange with Planting and Textile shares meeting with brisk demand

Renewed firmness of sterling coupled with favourable company statements induced selective buying in the London Stock Exchange; but the undertone continued to be cautious.

Firm conditions prevailed in Wall Street with interest centring round Aluminium company of America and rails.

Calcutta

Calcutta, Thursday Evening.

IRREGULAR conditions were noticed in the Calcutta Stock Exchange during the past week due to alternate bouts of buying and selling. With consecutive weeks of currency expansion, conditions seemed to be conducive for an upward revision of prices and when the market reopened after the holidays, both operators and investors evinced keen interest in selected shares all along the list. But soon settlement considerations curbed enthusiasm and rates declined shround. That the undertone however, continued to be steady became evident before long. In later dealings on Wednesday, equities regained their lost ground and closing prices for the day were generally higher on balance. The rally was pronounced in the earlier part of Thursday when the forward shares made considerable headway. By the time the market closed for the week, the upward movement had not only been halted but most shares were moving in the opposite direction under the leadership of Indian Irons.

Dull conditions were noticed in the coal section with prices where marked generally unchanged from previous markings. Bengal Coal opened at Rs 543 and gained five points to be finally placed at Rs 548. Burrakur after moving within narrow limits, closed at Rs 14-10 which was the same as the opening rate. Central India started at Rs 7-7 and ended the week at Rs 7-5. New Beerbhoom showed a loss of fifteen annas at Rs 20 at the end of the week

Though the undertone remained fully steady, price movements in the Engineering section traced an irregular pattern. Indian Irons opened eleven annas higher at Rs 35-13 but on the eve of settlement reacted to Rs 35-7. On Thursday, the scrip developed a firm trend opening at Rs 36 but failed to make further headway closing for the day at Rs 35-15. Presumably the company's output figures for the first quarter of 1956 which were released on that day were responsible for the renewed interest evinced in the scrip by operators.

Production figures of the Indian Iron and Steel Co., Ltd., for the quarter ended March 31, 1956 as reported by Messrs Martin Burn Ltd., the Managing Agents of the Company are as follows:

	Tons approximate
Pig Iron ..	184,450
Steel Ingots ..	141,846
Semi-finished steel for sale	37,193
Finished steel ..	82,667

The figures make encouraging reading, and are quite contrary to market expectations. For it was generally taken for granted that because of the expansion programme currently in progress at the company's works, output in the last quarter would have diminished considerably. But the figures now made available tell an entirely different story. Evidently marketmen have omitted to take into consideration the possibility of maintaining high production while the expansion programme is executed. The figures relating to production in the quarter ended March 31, 1956 have shown that it is not only a possibility but an accomplished fact. Compared to the previous quarter (quarter ended December, 1955), Pig Iron production has gone up by 23,700; Steel ingots by 17,150 tons; Semi-finished steel by 10,318 tons and Finished Steel by 3,790 tons. A comparison of the production figures for the company's financial years of 1954-55 and 1955-56 also shows that the expansion programme has not seriously interfered with the working of the company. As against 715,601 tons of Pig Iron produced during 1954-55, the company's output during 1955-56 has totalled 706,986 tons; and that of Steel ingots totalled 531,505 tons in 1955-56 as against 528,118 in 1954-55.

Among other engineerings Texmaco was Rs 24-5 from Rs 22-13. Richardson & Cruddas made steady headway closing the week at Rs 26-9 as against Rs 25-9 a week ago. Jessop, though active in later dealings, was not able to gain much ground, opening at Rs 34-2 and closing at Rs 34-6. Indian Standard Wagon attracted attention towards close and improved to Rs 191 while Burn & Co. moved upto Rs 370.

What with the continued neglect of jute goods by foreign consumers and the prevailing unprofitable conditions in the trade and industry, it is no wonder investors are chary of buying jute shares. Even so, a few shares recorded fractional improvement toward close in sympathy with the rest of the market. Howrah which opened at Rs 22-12, moved upto Rs 23-4. National, however, was listless and at the end of the week was three annas lower at Rs 25-3

Selected shares in the Miscellaneous section received considerable attention throughout the week at daily advancing prices. The most outstanding had been Burma Mines which spurted to Rs 3-10 before finally placed at Rs 3-5 as against Rs 2-8 a week ago, presumably due to interested buying. Among paper mills Titaghur Paper in later dealings gained one rupee to Rs 45-12 from Rs 44-12. Orient Paper was also a bright spot improving to Rs 35-12 from Rs 35-6. Another feature had been Rhotas Industries which was steadily pushed upto Rs 23-1 from Rs 21-10 earlier in the week. Sustained interest was also evinced in Dunlop Rubber which firmed upto Rs 31-13 from Rs 31-10; Metal Box at Rs 27-8; Indian Cable at Rs 31-13; Sone Valley which moved upto Rs 7-15 from Rs 7-12; and India Steamship which hardened to Rs 8-12 from Rs 8-10.

The continued good demand in the auctions, imparted renewed confidence in the tea section where selected shares were sought after at advancing rates.

The following table shows the trend of prices in some of the popular counters.

	This week	Last week
Banarhat ..	378 0	368 0
Bantapara ..	326 0	280 0
Hasimara ..	41 8	38 10
Methoni ..	26 2	25 14
Tezpore ..	29 0	28 0
Sungma ..	12 4	11 10
Gungaram ..	338 0	330 0
Dufflagur ..	50 0	48 8
Margaret's Hope ..	18 2	17 14
Nagaisurre ..	300 0	232 0

*

Madras

AFTER initial hesitancy, sentiment in the Stock Exchange improved considerably with selected shares in the Plantings, Textiles and Miscellaneous sectons coming in for active support.

In the Textile section, selected shares met with good enquiry and finished the week with handsome gains. Among the outstanding features was Kaleeswarar which moved up sharply to Rs 332-8 from Rs 315. Khotharj was a steady spot improving to Rs 20. On sustained support Bangalore Woollen advanced to Rs 570 from Rs 560. Buckingham was also in request and gained two points to finish the week at Rs 186. Mettur Industries were, however, on offer at Rs 147-8.

Active conditions prevailed in the Plantings section where rubber and coffee shares continued to be in good request. Coffee Lands met with sustained enquiry and improved to Rs 23 from its previous level of Rs 22-8. Blue Mountains improved from Rs 5-9-6 to Rs 5-12. Midlands advanced from Rs 21-6 to Rs 21-11. United Nilgiris firmed upto Rs 360.

In the Miscellaneous section, India Cements was a bright feature improving to Rs 35-4 from Rs 34-8. Andhra Cement was a steady spot at Rs 156. Aluminium Industries was well maintained at Rs 19-8.

THE BELSUND SUGAR COMPANY LIMITED

NOTICE

The Annual Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company 14, Netaji Subhas Road, Calcutta—1, on Monday, the 30th April, 1956 at 3 p.m. for the purpose of receiving the Directors' and Auditors' Report for the year ended 30th September, 1955, passing the Accounts, declaring Dividend, electing Directors and Auditors in place of those retiring and transacting any other business that may be brought forward.

BALANCE-SHEET REVIEWS

(Continued from page 656)

Rs 6.52 lakhs from 1955 profits). After transfer for payment of dividend, the Dividend Reserve Account is placed at Rs 3.51 lakhs.

The gross block marks a rise of nearly Rs 18 lakhs to Rs 1.77 crores; against this, there is a Depreciation Reserve of Rs 68.44 lakhs—a net block, in other words, of Rs 1.09 crores.

There is a substantial rise of nearly Rs 14 lakhs in cash balances, with deposits in banks placed at Rs 9 lakhs. In the result, liquid assets mark a rise of Rs 8½ lakhs to Rs 1.10 crores. On the other side of the ledger, there is a small rise in sundry liabilities. The increase of Rs 25½ lakhs under other liabilities is largely offset by a decline of Rs 24 lakhs under loans.

£ R$

Titaghur Paper:

Although the Titaghur Paper Mills Company Limited raised its sales by Rs 52 lakhs to Rs 3.21 crores in the half year ended September 1955, the incidence of excise duty—to the extent of Rs 30.89 lakhs—has been chiefly responsible for a fall of Rs 4½ lakhs in the net profit to Rs 52.87 lakhs.

The provision for taxation is maintained at Rs 17 lakhs. Depreciation received Rs 1.07 lakhs more at Rs 7.84 lakhs. The transfer to the Reserve Fund has been shaded to Rs 1 lakh (Rs 6.25 lakhs). The Reserve for tax contingences gets slightly more at Rs 1 lakh against Rs 90,000. The benefit accruing from Development Rebate is Rs 2.75 lakhs against Rs 3.40 lakhs. Finally, transfers to Other Funds are Rs 2½ lakhs lower at Rs 11 lakhs.

The dividend and bonus on ordinary shares is maintained at the rate of 20 per cent per annum.

The ordinary capital of Titaghur Paper is placed at Rs 1.12 crores; Preference capital is Rs 26.50 lakhs, and preferred ordinary capital is to the tune of Rs 4.37 lakhs.

Undistributed profits are made up of Rs 76.30 lakhs as capital Reserve, Rs 47.04 lakhs as Reserve Fund, Rs 1.99 crores in the form of other Funds and Rs 95,684 being the carry forward.

The gross block of Rs 5.80 crores marks a rise of Rs 41 lakhs in the half-year and is shown at a net of Rs 2.59 crores. Both outstandings and cash balances have risen with the result that liquid assets are higher by Rs 37 lakhs at Rs 3.33 crores.

On the other side of the ledger, the Taxation Reserve is placed Rs 5 lakhs higher, loans are more or less unchanged, and other liabilities have risen substantially—by Rs 24 lakhs—to Rs 1.10 crores.

Bengal Paper:

The latest report and accounts of the Bengal Paper Mills Company Limited should put an end to the controversy: Are Balmer Lawries efficient managing Agents or not?

With a rise of Rs 16½ lakhs in sales to Rs 1.07 crores, the net profit of the company for the second half-year in 1955 has risen sharply by nearly Rs 4 lakhs to Rs 16.90 lakhs.

Taxation receives Rs 5.95 lakhs (nil in the previous half-year). Depreciation gets more at Rs 4.35 lakhs against Rs 4.03 lakhs. The Reserve Fund benefits by a transfer of Rs 1 lakh. And the higher profits have enabled the company to raise the dividend distribution from a rate of 17½ per cent per annum to 20 per cent per annum.

The capital of Bengal Paper is Rs 71 lakhs, of which Rs 45 lakhs is in ordinary shares. Undistributed profits, includng the carry forward of Rs 2.02 lakhs, are placed at Rs 38.74 lakhs.

The gross block of Rs 2.03 crores has a net value of just Rs 53.18 lakhs. With outstandings higher by Rs 15 lakhs at Rs 40.63 lakhs, liquid assets show a smart rise of Rs 11.61 lakhs to Rs 1.08 crores. On the other hand, the Taxation Reserve is Rs 6 lakhs higher at Rs 8.30 lakhs; and other liabilities are roughly Rs 4 lakhs higher at Rs 34.50 lakhs.

THE PENINSULA

(Continued from page 657)

Press comments are to be a guide, opposition is by no means insignificant. It may be overwhelming. The inevitable result is that for the moment Dakshina Pradesh will not take shape. Those who visualise it as a boon hope that sooner or later there will be a swing of opinion to their side. Beyond this hope, there is scarcely any factor favourable to the idea.

In the Legislative Council, the Bill was approved with two important amendments, both moved by Dr A. Lakshmanaswami Mudaliar. Dr Mudaliar's speech has been the most outstanding feature of the discussion. He recalled how he was the solitary opponent of linguistic division, when the dea was first mooted in the Madras Assembly and he characterised the whole step as a blunder. He expressed himself indubitably in favour of larger States, but only when conditions were more favourable. In this connection, he took Mr C. Rajagopalachari to task for having given expression to certain sentiments and opinions. He drew particular attention to the statement made by C. Rajagopalachari that there was wide Anti-Malayali feeling in Madras and to 'the burden of the song' in one of CR's speeches that it was Madras which was anxious to get rid of Malabar and South Kanara.

The central aim of Dr Mudaliar's speech was to convince the House of the supreme need of absolute fairness in this matter of redistribution and of complete tolerance of other language groups. Referring to the agitation for inclusion of Devicolen and Peermade in Madras, he pleaded that the agitation must be given up and that the people of Madras should cultivate indifference to the whole issue.

One of his amendments sought to include common cultural interests among the subjects that might be discussed and recommended by the Zonal Council. The other sought to protect the pay, prospects of promotion and pension of officers who will have to be transferred from one State to another, in consequence of the reorganisation.

WORLD OF BUSINESS

(Continued from page 640)

vided for relaxation of various control measures, where such relaxation will be needed in the interests of development of trade and industry, so that the main arteries through which trade and commerce of this country will flow may not wither.

No study of the growth of Company Law in India will be complete without a reference to the company form or organisation of trade and industry in the public sector. Large Government companies are being set up to organise and manage State enterprises in different fields. Problems thrown out by the increasing use of this new form of company management will require careful consideration in future.

WORLD OF FINANCE

(Continued from page 639)

had to make special efforts. Be this as it may, this week's suspension of Treasury Bills gave rise to the speculation that it may be a precursor to a rise in the Bank Rate. As we go to press, we understand that there is to be no change in the Bank Rate. The attitude of the Reserve Bank in this matter deserves to be applauded.

+

Tenders for Rs 1,00,00,000/- (Rupees one crore only) of 91 days Government of India Treasury Bills were opened on Tuesday, the 3rd April 1956. Total amount offered was Rs 1,03,25,000/- (Rupees one crore, three lakhs and twentyfive thousand only). Tenders at Rs 99-6-0 per cent were accepted in full and those at Rs 99-5-9 per cent allotted approximately 94 per cent (Ninetyfour per cent). Total amount accepted was Rs 1,00,00,000 (Rupees one crore only) the average rate of accepted tenders being Rs 2-8-6 (Rupees two, annas eight and pies six only) per cent per annum.

During the week ended the 30th March 1956 Government of India Treasury Bills for Rs 59,25,00,000/- (Rupees fiftynine crores and twentyfive lakhs only) were sold in favour of the Reserve Bank of India.

+

The statement of the State Bank of India as at March 30, 1956, discloses changes that are largely minor in character. Deposits are marked higher by Rs 55 lakhs at Rs 238.06 crores. Borrowings have been substantially reduced by Rs 4½ crores to Rs 4.99 crores. This, however, is offset by a rise in bills payable to Rs 11.24 crores from Rs 6.76 crores. With other liabilities marked down by Rs 3 crores, the balance-sheet total shows a decline of Rs 2.43 crores to Rs 2.12 crores. Cash balances and money at call are lower by Rs 2.16 crores. Investments have also been pruned by Rs 67 lakhs to Rs 106.66 crores, giltedged being shown almost exactly a crore lower at Rs 96.35 crores. Advances are shaded by Rs 1 lakh to Rs 141.14 crores.

+

A sharp rise of Rs 10 crores in Demand Liabilities is to be noticed in the statement of the position of Scheduled Banks as at 23rd March. Time Liabilities are lower by Rs 1 crore at Rs 412.92 crores, demand liabilities being placed at Rs 625.20 crores. Moreover, borrowings both from the Reserve Bank and the State Bank are shown higher. Borrowings from the central banking institution rose by Rs 5.34 crores to Rs 66.93 crores, while those from the State Bank are Rs 2.29 crores higher at Rs 19.66 crores. Again, investments have declined by Rs 1.71 crores to Rs 362.71 crores. The additional resources so available have been utilised to increase advances, including bills purchased and discounted, from a figure of Rs 735.01 crores to Rs 749.73 crores.

JENSON & NICHOLSON (INDIA) LIMITED.

NOTICE.

Notice is hereby given that the 39th Ordinary General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, 27th April, 1956, at 11.00 A.M. for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the year ended 31st December, 1955.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other competent business.

The Share Transfer Books of the Company will be closed from the 17th to 27th April, 1956, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, Fairlie Place,
Calcutta, 29th March, 1956.

Note:—A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

EDITORIAL NOTES

(Continued from page 639)

India picture may not always afford sure practical guidance for candidates. The bulk of employment, except in Central and all-India organisations take a more or less rigid regional pattern. Guidance data could be enriched by furnishing some facts about why certain jobs fail to appeal to sufficiently qualified candidates. Such facts have been all too rare in the usual official data available.

More Looms for Mills

In his speech at the annual meeting of the Southern India Mill Owners' Association, Mr R. Venkataswami was able to argue a good case for increasing loomage in textile mills. His case is built mainly on two arguments. It is not reasonable to expect the handlooms to meet all the surplus requirements of cloth in the immediate future. For the time being, those in authority may be tempted to think otherwise; but even they will have to admit that there is a rigidity in handloom production which disables it not only for meeting unexpected emergencies but for ensuring supplies large enough to meet the rapidly increasing demand. Among the mills there are a number of uneconomic units, which are so mostly because of their size. If their loomage can be expanded, they could be converted into efficient units and existing waste avoided.

Through the forcible restraint on a number of economic units in the different sectors of the industry, the entire industry is affected, directly or indirectly; A penalty is paid by the consumer too. In a situation in which the mills are asked to provide succour to the handlooms, there is all the more reason to cut every form of waste and secure the maximum efficiency on all sides.

For the Investor

. . . Exit the Investor

Investment Gossip :

Enter the gambler: Exit the investor.

This is the danger that threatens the Stock Exchanges in India. A properly functioning and economically useful stock exchange is one in which the predominant interest is that of the genuine investors, and a subsidiary interest and diversion is provided by intelligent and disciplined speculation.

Speculation is not something to be banned. It needs to be controlled.

Unbridled speculation is gambling; and, once a stock exchange becomes a gambling den, the genuine investors are scared away.

An exchange in the grip of the gamblers becomes less and less able to assess the relevant economic factors calmly and dispassionately, and to gauge the prospects with a balanced judgment.

A gambler's den is jerked up and down in momentary and hurried response to this news or that or the other.

This kind of jerky behaviour converts a stock exchange into a nervy business. No shrewd calculations, no scientific study, no intelligent appraisal of pros and cons. Flash news evoke flash reactions.

This is not the first time I have to refer to this adverse development. On earlier occasions, I had dwelt upon the havoc caused by the teleprinter's 'flash' despatches.

Early this week, the teleprinter caused another havoc of this nature. Flash—read the teleprinter message—diamond and copper mines to be nationalised.

In a flash, the share operators argued that this must adversely affect Indian Copper. They all rushed to the Stock Exchange Hall and released an avalanche of selling orders in Indian Copper.

The price collapsed.

In a short while, the same teleprinter served the explanation that an unworked copper mine in Rajasthan was to be nationalised. The operators woke to the realisation that Indian Copper was not affected. So, the exchange was flooded with buying orders.

The price rebounded.

Many thousand shares changed hands; so also, many thousand rupees changed hands.

Lucky are the fellows who, in a brief hour or so, found themselves in possession of hefty profits. Profits which may escape tax, too, thanks to perfected stratagems in this respect.

But, the question is of wider and more serious import. Does the private sector desire to reap the benefit of a well-planned and well-functioning Stock Exchange? If the answer is yes, the leaders in the private sector must take positive measures and active initiative to arrest the transition of stock exchanges into gambling dens.

Investment Notes :

Messrs. Tata Industries Private Limited, Managing Agents for the Tata Iron and Steel Company Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of March 1956 was:—

	(Tons)	(Tons)
Pig Iron		103,300
Steel Ingots		96,200
Saleable Steel:		
Semis	17,600	
Finished	52,300	69,900

The mailing of allotment letter against National Carbon Company's share offering is reported to have been completed and the posting of share certificates is now in progress. It is understood that allotment was made against all valid applications which had been completed in accordance with the instructions contained in the application form. As a result of this distribution, the Company now has more than 27,000 share-holders which makes it one of the most widely-held companies in the country.

J. K. Chemicals Ltd., Bombay have announced the issue of 15,000 6 per cent Free of Income-tax Fixed Cumulative Preference Shares of Rs 100 each and 25,000 Ordinary Shares of Rs 100 each amounting to Rs 40,00,000. Out of above issue 5,000 6 per cent Free of Income-tax Fixed Cumulative Preference Shares have been allotted to Messrs Krebs & Co., Limited, Zurich and 10,000 Ordinary Shares have been allotted to the Directors and their friends. The remaining 10,000, 6 per cent Free of Income-tax Free Cumulative Preference Shares are offered for public subscription. The amount payable in respect of both the Preference and Ordinary Shares is as follows: On application Rs 50; on allotment Rs 50 per share.

The present lines of manufacture include the productions of Acids Sulphuric, Hydrocholoric and Nitric. Epsom Salt, Superphosphate etc. The directors have decided to set up additional lines of manufacture of chemicals some of which are not manufactured in this country so far. The capital outlay of the expansion programme is expected to be about Rs 67 lakhs. The working capital is expected to be approximately Rs 15 lakhs out of which Rs 8 lakhs will be obtained from the present offer. The subscription list is open as from 31st March 1956 and will close on 26th April 1956 or earlier as may be decided by the directors but not earlier than the 17th April 1956.

The recent sharp rise in Burma Mines is attributed to large buying in London by American interests who are said to be already in possession of more than 40 per cent of the shares. The optimistic appraisal of future prospects of the company by its directors has also aroused especial interest in the scrip.

The revenue of the company increased from £54,227 to £215,382 in 1955. The company has declared a maiden dividend of 2½d per share. It is pointed out that since Burma Corporation, in the first six months of the current financial year has made a net profit that is almost double that of the corresponding period of the previous year, the next dividend may be higher.

A factory for the manufacture of Cellulose Acetate Moulding Powders and P.V.C. Compounds will be established shortly at Kalyani, West Bengal. These plastic compounds have been manufactured previously in India.

The manufacture of these moulding compounds will be in collaboration with the East Anglia Plastics Limited of London, under a scheme approved and sanctioned by the Ministry of Commerce and Industries. The company, which has been registered, will be known as the East Anglia Plastics (India) Limited.

The factory is expected to have a rated production capacity of over 3,360,000 lbs. annually, though initially about 1,680,000 lbs will be manufactured. India's annual requirement of Cellulose Acetate Moulding Powders and P.V.C. Compounds in the immediate future has been estimated at 1,792,000 lbs. and 3,584,000 lbs.. respectively.

The factory will provide employment to refugees settled in the neighbourhood of Kalyani and will also feed a number of small moulding factories run as cottage industries in the locality.

Hongkong & Sanghai Banking Corporation

The Hongkong & Shanghai Banking Corporation is, perhaps, the only Banking institution which can boast of a Reserve Fund which is more than five times the Share Capital. As against the Share capital of HK. $25 million, the Reserve Fund is placed at $128 million. Currency notes in circulation have increased, by the end of 1955, to a level of $675.7 million from $645.7 million. The Current and other accounts are at the somewhat lower level of $2,557.4 million as against $2,672.6 million.

In the result, the balance sheet total shows a shrinkage of $44 million to $3,427.2 million.

The main changes on the assets side of the balance sheet relate to cash balances and advances. Cash in hand has been reduced by 70.7 million, and Money at call is shown lower by 386.9 million at $189.8 million. Secondly, since the additional resources made available by a shrinkage in cash balances largely offset the decline in the balance sheet total and since, also, Other sundry declines are noticeable on the assets side, Advances to Customers have been increased by $240.2 million to $1,069.7 million.

Thus, in view of the higher level of advances, it is to be presumed that the profit has been enabled to be increased to $20.6 million from

HIGHLIGHTS

The bugbear of the unwilling schoolboy who reluctantly wends his way to school is arithmetic: and the multiplication tables are, more often than not, his pet peeve.

Especially is this so, say, in the UK. Since calculations for monetary purposes have to take note of four farthings in a penny, twelve of the last mentioned variety in a shilling, and so forth, there is one set of tables that is "required" study.

Little wonder that Shakespeare characterised the schoolboy as one who unwillingly bore his satchel to the temple of learning. For, another set of tables had to be learnt—if one was to know anything at all about weights.

By the time one reached distances, the complexities of chains and rods were just about the last straw—as far as the schoolboy was concerned: later day frustration could always be traced by the psychiatrist to the wounds inflicted on the sub-conscious by the tortures of studying multiplication tables.

This system of measures is known as the FPS—the foot pound system.

The Frenchmen like more leisure. If one's energies were to be dissipated in reckoning all sorts of measures, whence the time for amour? Consequently, then, the metric system.

Here in India, our development plans can ill afford delays, cannot possibly overlook a system that will save time and energy. So, says Mr P. E. Mehta in a Special Study (the first of a series of articles), it would advantage India if we adopted the metric system of measures.

A MEETING OF MINDS

AT HIRAKUD

CANADIAN KNOW-HOW will help Indian industry at Hirakud, Orissa, to build a new 10,000 ton aluminium smelter—India's biggest.

Canadian technicians will guide Indian engineers in the design and construction of the smelter.

Canadian and Indian capital will share equally in a proposed issue of new capital by Indian Aluminium Company to help finance the cost of the project.

At Hirakud, Canadians and Indians will work together to promote India's progress in a vital industry.

$19.3 million. The amount written off bank premises is $4 million against $6 million.

During the year, a sum of $5 million to the credit of the Reserve Fund was capitalised; and that fund has been re-imbursed by the transfer of an equavalent amount from inner Reserve. On the increased capital, and interim and a final dividend totalling £5 per share are being paid, absorbing £1 milllion—we may recall that the capital of Hongkong & Shanghai is, in terms of sterling, 1.566 million. The balance carried forward shows little change from the amount brought in.

If such is the state of the affairs of the Hongkong & Shanghai Banking Corporation at the end of 1955, there is much in the speech of the chairman, the Hon. C. Blaker, which presents an interesting review of conditions in the Far East. Mr Blacker's analysis is especially useful for the light that it throws on new China's activiites. The Chairman admits that, even in Hong Kong, "close as we are to the Chinese Scene we find it hard to keep pace with and to evaluate the day-to-day economic and industrial changes and developments which are so rapidly being evolved."

Hong Kong's trade to some considerable extent depends upon the exchange of goods with China. Mr Blaker suggests that, in this matter. "British policy should be re-examined in colloboration with other friendly Governments."

Thus, the vexed question of trade with China has been importantly raised by one whose experience in such trade with China is undoubted. Of course, there are difficulties inherent in reducing the number of items that are embargoed for trade with China. Mr Blaker is surely right in his view that we should welcome the day when such embargo is abolished; but that, "as total abolition cannot be quickly brought about, linked at it with numerous problems, we contending ourselves for the time being with advocating the reduction of the Chinese embargo list to make it similar to the Russian list."

While there is striking evidence that the Hongkong & Shanghai Banking Corporation is sparing no efforts at increasing its activity, as an Exchange Bank, in the underdeveloped areas of the East, its greatest prospects of assured and expanding prosperity would seem to depend upon the reopening and extension of trade lines with China. The current state of International affairs, indicating as it does a lessening tensions, augours favourably for such improvement in trade possibilities with Red China.

£ R$

The Eastern Bank Limited

Profitable and useful increases have been registered in the balance sheet of The Eastern Bank Limited as at the end of 1955. The Current and other accounts marked a smart rise of £5.60 million, and bills payable are higher by £548,316. With such additional resources, The Eastern Bank has improved its cash balances by £1.48 million; Bills receivable are marked higher by £2.0 million and advances and other accounts have risen by £2.86 million. As a result of these changes, the balance sheet total has gone up by roughly 1|6th to £43.56 million.

It is, therefore, scarcely surprising that the published profits should be shown higher at £132,536 against £129,011. After the payment of dividend at shillings 8 per share, the carry forward is placed slightly higher at £112,656.

As one of the Exchange Banks which play a key role in the financing of world trade with India, the accounts of the Eastern Bank are worthy of careful study; and, of even more importance is the comparative study of trading conditions and economic prospects in this part of the world as interpreted and analysed by Eastern Bank's Chairman, Sir Evan M. Jenkins. In his statement circulated with the accounts for 1955, Sir Evan M. Jenkins has tersely summarised the situation as it attains in those countries in which the Eastern Bank plays a useful role. While his remarks on the Middle East hold more acute interest for the investor in the UK, there is reason to take particular note, in this country, of what the Eastern Bank Chairman has to say about India. For, it is like Sir Evan, and the opinions and attitudes of such men, which will influence the flow of foreign investment. Although the Eastern Bank Chairman is content to be as objective in his remarks as a reporter, we can, nevertheless sense some inferences. For example, he may gather that there is every friendly desire to help India in its development plans. But there are two points made by Sir Evans which we need to put our mind to. Firstly, the Indian taxes the surtaxes, the levies on perquisites and amenity are described as onerous. We should like to take this opportunity of suggesting that the socialistic pattern of society will be difficulty to achieve in if it is sought to create greater wealth among the less well to do by the over simplified process of soaking the rich. In fact, the increased imphasise of a social welfare activity and the resources therefore, can be found, not by further raising rates of taxation, but by stricter enforcement of the tax law that we have. Indeed, at one stage, the law of diminishing returns sets in—higher the tax rate, the more profitable the tax evasion.

The second point made is related to onerous taxation. There has been too much said about the way intention of setting a ceiling on incomes. The taxation enquiry

Dunlop Rubber's Accounts for 1955

Balance-Sheet Reviews:

TYRE manufacturers in India were not particularly enthused over the Government decision last year to effect further reductions in selling prices; the extent to which such reductions in selling prices have affected the profit margin of important companies in this regard can be discerned clearly in the latest report and accounts of the Dunlop Rubber Co. (India) Limited.

True, Dunlop Rubber has reported a sharp increase in sales from Rs 13.70 crores to Rs 15.09 crores. But, during the same time, the cost of goods sold, including depreciation, rose from Rs 11.13 crores to Rs 12.39 crores. A rise in selling expenses is one of just over Rs 11½ lakhs to Rs 1 crore. In the aggregate, administration and operating salaries and office and operating establishment have together accounted for increased expenses to the extent of Rs 2.38 lakhs. In the result, it is hardly surprising that the net profit, before taxation and depreciation, should have been eaten into to the tune of Rs 7 lakhs odd. The net profit for 1955 has dropped to Rs 1.19 crores from Rs 1.27 crores.

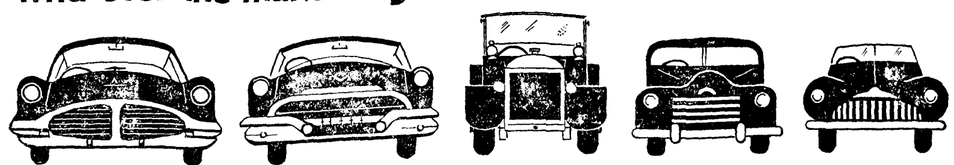
In spite of the lower volume of profit, the taxation liability is somewhat higher, being placed at Rs 42.32 lakhs as against Rs 37.75 lakhs. This is because the 1955 provision for taxation had to have regard for Rs 2.50 lakhs in respect of the additional tax on the ordinary dividend exceeding 6 per cent.

Depreciation receives a provision which is Rs 2.68 lakhs lower at Rs 27.51 lakhs. It was, accordingly, found possible to transfer Rs 22 lakhs to the reserve fund as against Rs 30 lakhs in 1954. The ordinary dividend has been maintained at 15 per cent, and takes up Rs 24 lakhs. The carry forward is more or less unchanged at Rs 11.72 lakhs compared to Rs 11.89 lakhs brought in.

The Directors' report includes an analysis of profits which clearly indicates the manner in which the profit margin stands reduced. The profit margin in relation to turnover has gradually diminished from a level of 7.7 per cent in 1952 to 6.4 per cent in 1955: these figures are on the basis of profit margins calculated before deduction in respect of taxation. Correspondingly, the ratio of profit margin to turnover has been eaten into gradually from 4.8 per cent after taxation, in 1952, to 3.6 per cent in 1955.

It will, thus, be seen that tyre manufacturers in the country have largely been sapped of their incentive to greater development efforts. While we appreciate that it is in Indian interest to provide goods to the consumer at as reasonable a level as possible, we wonder whether a solicitude for Indian development and industrial advancement does not require that selling prices should be so based as to provide a return to the manufacturer of something, certainly, that is better than 3.6 per cent net which accrued to Dunlops in 1955. This, however, is a parenthetical paragraph: in our view, the tendency of authority to fixing prices, in the case of industries subject to some form of control or other, which do not have a proper regard for the return to the manufacturer is to be regretted in that, in the short as well as in the long run, Indian development would be hampered and would suffer.

Returning to the Dunlop accounts, it is proper that we study the balance sheet position of the company. Dunlop Rubber has a capital of Rs 2.3 crores, of which Rs 1.6 crores is in ordinary shares and the balance being cumulative preferential capital carrying tax free interest of 6 per cent. Moreover, there are debentures outstanding to the value of Rs 1.30 crores. As against this, the reserve fund, inclusive of the transfer from 1955 profits, stands at the very comfortable level of Rs 1.90 crores. There is a very sharp increase of Rs 1.14 crores in other funds to Rs 1.25 crores. This is merely the result of the transfer from depreciation account, on the asset side of the ledger, to a new account on the liability side under the head of 'Special Depreciation Reserve'. This adjustment has been made to bring the balance sheet position in accordance, as the Directors' report points out, 'with the principle laid down in Schedule VI of the Companies Act, 1956.'



Of the balance sheet total of Rs 9.20 crores, the net block is placed at Rs 2.95 crores. This marks an increase of almost exactly Rs 1.20 crores over the relevant figure in the 1954 balance sheet. The sharp rise is accounted for by 2 reasons: Firstly, the increase is largely due, as we have explained, to the transfer from depreciation account of a sum that is now credited to the special depreciation reserve. In the result, the total depreciation provided by Dunlop Rubber is shown to be reduced from Rs 3.09 crores in the 1954 balance sheet to Rs 2.21 crores. Secondly, Dunlop Rubber has steadily been adding to block: the 1954 gross block marked an increase of a little under Rs 28½ lakhs; and the latest figure of the gross block marks an improvement of over Rs 32 lakhs as compared with the balance sheet for 1954.

Of the other items on the asset side of the balance sheet, we may note that stocks and stores are lower by Rs 4 lakhs to Rs 3.92 crores; outstandings have risen by roughly Rs 16½ lakhs to Rs 1.96 crores; investments are marked higher by Rs 4 lakhs at Rs 20.23 lakhs; and cash balances stand reduced by Rs 6.89 lakhs at Rs 13.16 lakhs.

The balance sheet total marks a substantial expansion from Rs 7.89 crores to Rs 9.20 crores—for the reason that transfer from depreciation again increases the total by a corresponding amount. In the result, in spite of the higher balance sheet total, liquid assets are not, changed by any significant extent, being placed at Rs 6.25 crores against Rs 6.14 crores. Similarly, the sundry liabilities, in the aggregate, do not reflect change of size. The taxation reserve is higher by Rs 14.25 lakhs at Rs 20 lakhs; secondly, sundry liabilities are marked higher at Rs 9 lakhs to Rs 1.13 crores; but these are, for the most part, offset by a reduction of Rs 17½ lakhs in loans to a figure of Rs 1.11 crores.

Such, then, the accounts of Dunlop Rubber. One aspect of it—the profit and loss account—merits the serious study of authority, with a view to framing a more realistic policy for working out selling prices and the return that these should offer to the manufacturer. The

other aspect—the balance sheet—indicates once again a company which, by dint of efficient management and prudent expansion, presents a picture of impregnable strength.

£ R$

Indian Aluminium

Expansion plans, with which the Indian Aluminium Company Limited has been busy in the past two years, are now paying off: sales and profits have both increased significantly: a maiden dividend is paid to shareholders; transfers to funds are of size and substance; and, in the meanwhile, the balance sheet has been carried to a position of strength and stability.

In its accounts for 1955 Indian Aluminium reports an improvement of over 50 per cent sales to Rs 3.66 crores from the 1954 level of Rs 2.38 crores. In the meanwhile, the net profit has risen more than three fold, from a level of Rs 14.66 lakhs to Rs 48.64 lakhs. Correct corporate management ensures that, as profit rises, some part of it is ploughed back; and this, Indian Aluminium does, by transferring Rs 10 lakhs to fixed assets replacement reserve.

From the available balance, the maiden dividend of 9 per cent on the ordinary shares absorbs Rs 14.40 lakhs, with a carry forward at the substantial level of Rs 4.71 lakhs against Rs 3.49 lakhs.

Indian Aluminium's capital is Rs 2 crores, with Rs 1.60 crores of it in ordinary shares. Reserve fund is placed at Rs 15 lakhs, and other funds total Rs 31.78 lakhs.

The balance sheet total is placed at Rs 4.72 crores. The gross block of Rs 4.17 crores has a net value of Rs 2.42 crores. Stocks are risen by a little less than Rs 5 lakhs to Rs 96.85 lakhs. But stores are reduced by Rs 1¼ lakhs to Rs 47.28 lakhs. Outstandings mark a steep rise of Rs 30.66 lakhs to Rs 71.52 lakhs. As against liquid assets of Rs 2.30 crores, there are loans of Rs 1.61 crores and other liabilities to the tune of Rs 59.55 lakhs.

£ R$

Jute Results

THE Kanknarrah Co Ltd and the Kamarhatty Co Ltd have both published their accounts for the second half-year in 1955; and these confirm that, in the latter part of last year, the jute mills industry experienced a period of no little strain. With raw jute prices subject to substantial fluctuations, and with simultaneous sales of jute goods rendered increasingly difficult, it has happened that the jute goods industry has, confronted as it was with the problem of a reducing margin as between the prices of manufactured goods and of raw material, the unenviable report to make of sizeably reduced earnings.

The sales of Kamarhatty fell from Rs 1.76 crores to Rs 1.49 crores. Meanwhile, the manufacturing expenses could be reduced only by Rs 12½ lakhs to Rs 1.09 crores. With other expenses showing a negligible change, Kamarhatty is able to disclose a book profit of Rs 1.60 lakhs only after a transfer of Rs 4.08 lakhs from general reserve and of Rs 55,000 from provision for taxation no longer required. This figure compares with the net profit of Rs 2.91 lakhs in the half-year to June 1955.

After providing Rs 50,000 for depreciation (Rs 1 lakh in the previous half-year) the preference dividend has been paid but the ordinary dividend has been passed over as against a dividend at 5 per cent per annum in the first half-year of 1955.

Kamarhatty has a preference capital of Rs 16 lakhs, ordinary capital of Rs 43.20 lakhs and debentures of the order of Rs 11.84 lakhs. The reserve fund is placed at Rs 12 lakhs and other funds at Rs 4.50 lakhs.

The gross block is worth Rs 1.38 crores, but has a book value of no more than Rs 13.48 lakhs. An indication of the modernisation programme taken on hand is available in the balance-sheet under the head: "Capital Expenditure in Progress". This figure is placed at Rs 25.08 lakhs. Of the balance sheet total of Rs 1.31 crores liquid assets—including stocks at Rs 50.70 lakhs—are shown at Rs 92.15 lakhs. This is substantially more than double the sundry liabilities, which are composed of Rs 1.85 lakhs as taxation reserve, Rs 17.28 lakhs as loans and Rs 23.17 lakhs as other liabilities and provisions.

Similarly, the accounts of Kanknarrah disclose that sales have declined by more than Rs 19 lakhs to Rs 1.26 crores, and the manufac-

Shock-mongering in high places

Indian Finance
Established 1928
April 14, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

THE first annual general meeting of the Industrial Credit and Investment Corporation (ICIC, for easy reference) was held in Bombay last week; and the speech of the Chairman, Sir Ramaswami Mudaliar, is significant as reflecting the experience and viewpoint of an institution which has a vital and continuing interest in the smooth functioning and confident outlook of the Stock Exchanges.

Banks are, in the main, preoccupied with the state of the giltedged market. On the other hand, ICIC, as the underwriter of new capital issues on a scientific basis and on a considerable scale, has a stake in the fortunes of industrial shares and in their behaviour, present and prospective.

Whatever disturbs the even tenor of the sentiment that animates and shapes the destiny of industrial stocks, is, therefore, a matter which has a direct concern for the authorities of ICIC. From this point of view, Sir Ramaswami Mudaliar makes a pointed reference to the "continuing series of shocks to the investing public", and says:

"Since this Corporation came into being, there has been, I think it is fair to say, a series of measures which have produced a feeling of some uncertainty. But even more serious than the measures which Government has adopted are the constant suggestions, proposals and recommendations made by persons holding leading positions but not directly responsible for the enactment of fiscal measures regarding how the private sector should be altered, modified or even abolished."

By this, Sir Ramaswami intends no criticism of the pattern of society which has been decided upon. His complaint is, in effect, that this philosophy is being expounded by a few who are competent and authorised, which is right and proper, but also by many who have neither the competency nor the authority in this regard. All and sundry set themselves up as spokesmen for the fiscal and economic policies of the Government; and, apart from this transgression into the domain of the Prime Minister and the Finance Minister (and one or two other concerned Ministers like the Minister for Industry), the recurrent irritation unsettlement, uncertainty and impetus to instability and insecurity can do no good to national economy, nor certainly to the philosophy of the socialistic pattern of society.

The Prime Minister must be aware of the damage thus caused; and it is for him to issue a directive whereby the proclivities of the Ministers and of the minor gods to hold forth on any and every subject may be curbed.

It is time that Government spokesmen cultivate a horror of "words, words, words", and direct their energies to "action, action, action".

While fully agreeing with Sir Ramaswami Mudaliar in his mild rebuke on this matter, we cannot help feeling that he should, at the same time, have administered an equally pointed rebuke to those elements in the private sector who have, for their own ends, been fomenting and conjuring shocks in recurrent style.

On Monday this week, we have a clear instance of such a manufactured shock. Stock Exchange operators have now equipped themselves with the teleprinter service of Reuter and PTI; and transactions are increasingly based on "flash" news. First came the flash: Diamond and copper mines to be nationalised. In less time than it takes to write this sentence, the speculators flooded the Stock Exchange with selling orders on Indian Coppers.

The price tumbled from Rs 6-8 to Rs 5. A parcel of 50,000 shares is said to have changed hands at the lower level.

Further elucidation came on the teleprinter. It came to be known that it was an unworked copper mine in Rajasthan which was to be nationalised. The price of Indian Coppers recovered sharply. Rs 6-8-0 was again touched.

The Stock Exchange, as it functions now, has no one to absorb shocks; and it abounds in operators who create and administer shocks.

The past year has witnessed a recurring series of shocks from these quarters. The ICIC Chairman could, usefully, have administered a warning to the Stock Exchange authorities for tolerating such operators and operation.

He should also have expressed strong disapproval of such industrialists as have a prominent place in the business world and as stoop to wild gambling transactions in shares. He should have recommended a convention whereby businessmen, connected with industrial houses, should stand aloof from the share markets except for genuine investment purposes. Is it conceivable that the Chairman of Imperial Chemical Industries will dabble in Throgmorton Street or the President of General Motors in Wall Street?

Great industrialists allowing themselves, directly or indirectly, to be involved in pure speculative deals on the Stock Exchanges will soon realise that it is a suicidal policy; and that it is fraught with danger to themselves, their concerns, and the industries with which they are concerned.

The Finance Commission

IN providing for the appointment of a Finance Commission every five years, the Constitution anticipated periodical changes affecting the economic and financial relationships between the Union and the States. The first Finance Commission holding its enquiry in 1952, was called upon to report on more or less stable conditions; and to deal with issues which have already become part and parcel of similar enquiries undertaken under the British regime. State Governments on their part were inclined to concentrate on the proportions to be allotted on the divisible items of revenue, and to plead for the maximum grants from the Centre. They did not seem to be equally concerned with the wider issues of their own economic development or changes in the Constitution which would permanently alter basic financial allotments to their advantage.

To some extent the Neogy Commission was also disabled by having had to proceed on lean data about taxable resources and the prospect and direction of fiscal effort in the future. Under the first Five-Year Plan, the States were committed to undertake development and welfare expenditure in proportions corresponding to certain ideas of State responsibilities.

During the last five years, many developments have taken place to transform this picture; the most outstanding among these is the reorganisation of States involving the extinction of differences in status, a substantial reduction in their number and the consequent increase in average area and resources. For the Union dealing with 15 States, the majority of which bid fair to be economically viable sooner or later, presents problems far simpler than distributing financial succour between 29 States ranging from Uttar Pradesh to Coorg. A fewer number of States is itself a factor toward a smoother acceptance of general principles for uniform application.

But there has to be a fresh survey of resources of individual States in the new set up, which the States Reorganisation Commission ought to have undertaken but did not except in a very casual manner. Such a survey might even point to the need for changes outside the financial sphere; whether changes indicated for sound financial reasons secured political acceptance or not, it is a function which should, at this juncture, properly come within the purview of the Finance Commission. In many ways State and regional economies are bound to show new trends; in the First Plan the development of industry enjoyed only a subsidiary place and even irrigation and land development projects had not started yielding full fruit. The Second Plan hopes to proceed with industrialisation in a balanced way and with particular reference to undeveloped regions. Even in the case of expenditure on new projects, the economy of the industrially backward States will start registering beneficial impacts, with the result that the disparities in industrial income between one State and another would tend to narrow.

The determination of administrative costs as a result of reorganisation may also present delicate problems. For several States, the addition of districts with higher grades of emoluments for officers would necessitate large-scale reshuffling and possibly considerable additions to expenditure on the Services. While provincial disparities cannot at one stroke be swept off, especially when some States are comparatively puny, either in area or in resources, there is an unmistakable trend toward uniformity in pay-scales. In Madras, the emoluments of non-gazetted officers has been converted into a political issue, and comparisons with those of Union Government officers are utilised for the agitation for an increase. There is an incipient trend toward uniformity in wages between different sectors of employment. For many State Governments, it will mean sooner or later, an upward revision involving hefty additions to expenditure.

Meanwhile, efforts of State Governments to increase tax revenues do not show the same level of enthusiasm all round. There may be strong political reasons, especially when the next general elections are only a few months ahead, for State cabinets to show restraint in the matter of adding to the burden on the people.

India and the Metric System—I

By P. E. MEHTA

An Indian Finance Special Study

INTRODUCTION

HUMAN progress has been influenced by things made by man to serve his conveniences: and, in primitive times, due to lack of any scientific approach or terminology, the first dimensions were adopted from the different parts of the human body. The limbs of human beings, thus, became the natural basis of their measuring standards. Even today, we are accustomed to say that so many times the height of a man, or so many arms long, so many feet wider or so many heads bigger. Even weights of human beings are used as a measure: and, even nowadays, we know that the contribution to be paid to the Aga Khan by his followers, for charity purposes, is measured in terms of silver or gold or diamonds equivalent to his own weight.

NEED FOR STANDARDIZATION

With the increase in international trade between nations, the need arose for standard measures and weights. Originally, every tribe had its own measurements, as the human limbs differed from place to place. The Phoenicians, Carthaginians, Persians, Indians, Greeks and Romans imposed their measurements on those nations with which they traded. As time passed, the English nation was predominant in world trade, and its measures and weight system was widely introduced in the world. The English System, which is known as the Imperial or FPS (Foot, pound and second) System, was more or less based arbitrarily on tradition and local customs. The industrial revolution in England and the invention of the Steam Engine and of the jenny brought out the necessity for a scientific and standardised system. The Imperial or the FPS system was not found very suitable for the expanding technology and industrialisation; and, furthermore, science required an internationally valid system of greater simplicity and accuracy. The spread of the industrial revolution in Europe and the necessity for a Scientific International Standard System was felt. The Metric system, which originated in France, was found to be the answer. Thus, the introduction of the Meter and the Kilo, which are at present used by more than two thirds of the human race, has fulfilled the need of an International Standard System.

THE EXISTING MEASURING AND WEIGHT SYSTEM IN INDIA AND THE NECESSITY FOR A NEW SYSTEM

Perhaps there is no country in the world where there is so much diversity of weights and measures as in India. There are, at present, over 150 different weights and measures in use in the country, and the Maund varies in weight from 280 to 8,320 tolas. In central India, when a person purchases a seer of butter, a seer of ghee and a seer of wheat, he gets three different types of weights, and we could not get any explanation why this was done. Such chaotic diversity in weights and measures, which are constantly used in our daily life, is a source of terrible confusion. It hits at the basic root of the unity of the country as a whole, and is the biggest obstacle to a planned and quick development of the country. Thus, the necessity for a new system of measures and weights for the country cannot be overemphasized. We feel that India should adopt the Metric System as it is a Scientific, International Standard System. It may be argued by some that instead of introducing a foreign system such as the Metric, we should bring in a uniformity in weights and measures existing in the country; but, it must be remembered that the seer, bigha, bath, chhatak are all arbitrary units, based on local tradition or accident, and they generally vary in value from district to district. Furthermore, there will be objections from the other parts of the country, if the weights and measures of one place are made as the basis for a countrywide standard, and provincial and regional jealousies will be aroused. The Metric System has been acknowledged even by its opponents as the most scientific in the world; and, except for the USA, the UK, and some of the Commonwealth countries, the rest of the world has adopted it. Even in countries with non Metric measures, the Metric System is recognised under law and the decimal system of coinage is used in the USA.

The Lok Sabha has accepted the principle of introducing the Metric System in India; and legislation with regard to decimal coinage has already been passed. Even in the Philippines and in South Korea, which have strong links with the USA when the question of a new system of measures was taken up, the US experts recommended the Metric System, which was adopted. Thus, Korea and the Philippines, Russia and China, Norway and Argentina, Sweden and Brazil, Greece and Egypt, Germany and Turkey and many other countries, did not consider the Metric System as a foreign system when they adopted it, but as the most scientific and easy system from the viewpoint of day to day transactions. It is inevitable that, unless we adopt a modern scientific system of measures and weights, the tempo of our industrialisation and progress will suffer. The adoption of the Metric System in India will not only facilitate the work of the engineer and the scientist, but also the peasant and the worker, the housewife and the school teacher and will promote our basic unity and all round progress.

THE METRIC SYSTEM AND ITS DERIVATION

The Metric System was introduced at the time of the French Revolution in 1789; and, in the course of the 19th century and 20th century, it has been adopted by over fifty countries in all parts of the world.

By selecting three fundamental units from the absolute quantities, most of the other physical quantities may be derived from them, thus making a single uniform system in which all quantities can be expressed in terms of some function or combination of three fundamental quantities. When a definite amount of each of these fundamental quantities is taken as a unit, such a system is called an absolute system of units. Various systems of this kind have been devised, differing in the three quantities which have been selected as the fundamental ones. The most important one, and the only one in general use, is based on the three quantities, length, mass and time, and the unit amounts are taken as the centimeter, the gram (mass) and the second (mean solar) and the system is called the Centimeter-Gram-Second System, usually denoted as the CGS system and popularly known as the Metric System. This system uses decimals based on the scale of numeration and is a consistently defined system of related units which has the great merit of simplicity.

ADVANTAGES THAT WILL ACCRUE TO INDIA IF THE METRIC SYSTEM IS ADOPTED

The advantages that will accrue by the adoption of the Metric System are summarised below:

(a) It will remove the disabilities arising from the diversity of the current weights and measures.

(b) Facilitate the widening of trade and commerce and rationalise the progress of industries.

(c) Strengthen national solidarity.

(d) The Metric system is superior to other systems as it has a symmetrical structure, based on the ratio of 10 and corresponding to the decimal place value notation in the representation of numbers.

(e) It is entirely a decimal system whereas, in the Imperial or the FPS system, we have to work in such numerical steps as 14 pounds to a stone, 16 ounces to a pound, 480 grains to an ounce, etc., etc.,

(f) It is very easy to express.

(g) Scientists throughout the world use the Metric System. The Research Institutes even in the USA and in the UK all use the system. It is uniformly used by the Electrical Engineers all over the world.

(h) In day-to-day transactions of trade and business, the Metric System has the advantage of easy comprehensive and more convenient practical application.

(i) In the Metallurgical and Engineering Industries, which are the basis of the industrial progress of a country, the Metric System has three basic advantages;

  (i) in calculation, where at least 30 per cent of the time is saved;

  (ii) in the preparation of drawings, where also 30 per cent of the time is saved as compared to the FPS system; and

  (iii) Far better tolerances and limits can be observed in the Metric than in the FPS system.

(j) The measures of area and volume are obtained by squaring and cubing measures of length;

(k) The system is universally recognised under the guidance of an international body consisting of representatives of all countries subscribing to its activities. There is no internationally recognised body, responsible for the FPS system, which can in any way compare with the International Metric Conference, as there has been virtually no tendency for the countries using the FPS system to come together to establish and maintain a greater degree of uniformity;

(l) The advantages accruing to the Engineering industries are as follows:

  (i) Machine Tools: The cost of change-over from the FPS to the Metric system will be negligible. The average cost of change-over will be under 1 per cent of the total cost. The uniformity and standardisation and greater precision and tolerances will be the advantages;

  (ii) Drawings: The difficulties that are encountered in giving certain dimensions in fractions and decimals could be avoided by the adoption of a uniform decimal dimensioning in millimeters. The drawing scales can be given as 1 in 100, 1 in 200 etc., etc. At present, there is no uniformity in giving fractional and decimal dimensions.

The standardisation of papers for drawings, writing, books and all other purposes is absolutely necessary. The standardisation of paper sizes will bring in a standard filing system, uniformity of office furniture and the sizes and folding of engineering drawings. The standard under the Metric system is as follows. The biggest size of the paper is called A_0 which is a size of paper with one side equivalent to .841 meter and the other side 1.189 meter which comes out as square meter. By halving the A_0 and the subsequent sizes we get the following sizes which are the standard for all purposes.

A_0 = 841 × 1189 mm (millimeters)
A_1 = 549 × 841 mm
A_2 = 420 × 549 mm
A_3 = 297 × 420 mm
A_4 = 210 × 297 mm
A_5 = 148 × 210 mm
A_6 = 105 × 148 mm
A_7 = 74 × 105 mm
A_8 = 52 × 74 mm
A_9 = 37 × 52 mm
A_{10} = 26 × 37 mm
A_{11} = 18 × 26 mm
A_{12} = 13 × 18 mm

Drawing papers, writing papers, technical journals, preferably all books, post cards, card indexes should all be made according to the above dimensions. The advantages accruing from adoption of standardised papers are far reaching and can be vividly realised only after its adoption.

(iii) Fabrication of Capital Goods and Precision Machines:

The tolerances in machine fabrication and metal working industries at present is expressed in thousandths of an inch. In the Metric System the accuracy will be far better than that in the FPS system. This will have a far reaching effect on our growing Engineering Industry.

OBJECTIONS AGAINST THE METRIC SYSTEM

It is said that, in matters concerned with retail trade and distribution, the Metric System may have certain shortcomings. To some, the decimal and the number ten as the base of our number system is found less convenient as the present base 12 can be split into halves, thirds, fourths, sixths, whereas ten can be split up into 5 and two only. This, to our mind, is not an important shortcoming.

No doubt, there will be certain difficulties during the transition period in adopting a new system but the advantages will be so far reaching that any flimsy objections can easily be overcome.

SUGGESTIONS FOR THE CHANGE OVER TO MINIMISE THE DIFFICULTIES DURING THE TRANSITION PERIOD

There are no two opinions in the matter that weights and measures in our country need standardisation, and that we should adopt the Metric System as a change-over. We offer the following suggestions for the change-over:

(1) The Government of India should enact a Bill in Parliament some time this year to adopt the Metric System. In our opinion, the maximum transition period allowed should not be more than 10 years, as persons who suggest a slow transfer in the view that it will take sometime for the people to get accustomed to it do not see the real interest of the country. A speedy change-over will be far more beneficial than a long transition period.

(2) A high power committee of experts should decide about the nomenclature for the new system. We think that we should adopt the Metric nomenclature with any peculiarity in pronunciation under Indian conditions. The nomenclature should be tried out for three years in the country and reports collected from all district officers as to how the new terms are used at village level.

(3) An officer on special duty should be appointed for the change-over to the Metric System; and he should be given adequate staff. He will look after and co-ordinate the work in the several central ministries and in the State Governments.

(4) All Community Project officers and officers at village level should be given a refresher course in the new system, so that they can work for it at the village level.

(5) During the transition period, the weighing machines should be marked in Kilos and Pounds, and the measuring instruments in feet and centimeters.

Participating Preference Shares

By K. V. IYER

WHEREAS the old Companies' Act left the classification of the shares of a company entirely to the whims and fancies of the individual entrepeneur save for a single clause viz: 105.B which laid down the procedure relating to the redemption of redeemable preference shares, the new Act is a great improvement in this respect. Deferred shares, Founders's shares, etc have been ruthlessly cut out and only two classes of shares are recognised, viz: ordinary shares or equity shares as they are now named and preference shares and these latter are divided into two categories viz: (i) shares which carry a preferential right, as regards dividend, to a fixed amount or an amount calculated at a fixed rate and as regards capital, in the event of winding up, to the refund of capital paid and (ii) participating preference shares which are entitled to either or both of the following:—as regards dividend, in addition to the dividend already referred to, a right to participate whether fully or to a limited extent with equity shares and as regards capital a right to participate fully or to a limited extent with equity shares in any surplus which may remain after the entire capital has been paid up.

Participating shares are somewhat of an anomaly and not to have recognised it in the new set up would have been better. This type of shares is intended to appeal to the class of investors who desire to have the best of both the worlds namely the certainty of a definite dividend and the speculative feature of the equity shares.

From among the varieties of participating preference shares, some of them very complicated, to be found in the Articles of Association of Companies prescribing the manner in which they are entitled to participate in the fortunes on the company pari passu with the equity shares, it is proposed to take a rather simple case for consideration. Let us suppose that a company has an authorised capital of Rs 2 lakhs worth of preference shares entitled to a dividend of six per cent and a further dividend of two per cent when the equity share capital receives a dividend of ten per cent or more and Rs 5 lakhs worth of equity capital and that in the first instance capital is called up and paid up to the extent of Rs. 1 lakh and 2 lakhs respectively. The concern flourishes and the preference capital continues to receive the higher dividend of 8 per cent for some years. Subsequently the balance of the authorised capital is called and paid up with the result that the preference capital receives only six per cent. When this event happens the share-holder may complain but not on legitimate grounds, for when he entered the field he knew what the authorised capital was and that the balance of the authorised capital may be called up at any time. The concern continues to flourish and the company reverts to the payment of the higher rate of dividend to the preference share-holder.

Years later the company desires to expand its operations, following the present day trend for expansion. Additional capital is required, sanction is obtained to an increase of the authorised capital and the company proceeds take steps to issue the new capital in which according to the new Act the holders of equity shares only are entitled to participate. The first result of this will be that the higher rate of dividend which the preference share holder had been receiving will disappear at any rate for the time being, though the total profits may be larger consequent on the expansion the benefit of which accrues entirely to holders of equity shares. This is no consolation to the former, for what he has lost in the intervening years is lost for good in so far as he is concerned.

In the above circumstances the participating preference share holder has a genuine grievance and what is the remedy? The new Act has given a variety of powers to the equity share holders which they can exercise assembled at a general meeting and is thus intended to usher the millennum. If a share holder so situated can collect a number of people of his frame of mind and proceed to a court of law, he may attempt to put a spoke in the wheel and retard the increase of capital. This is only the beginning of his trouble and the court may ultimately be unable to help him. The solution lies perhaps in a compromise.

Indian Finance's Indispensable Services for Company Managements

JUST RELEASED

First volume of

THE NEW COMPANY LAW

by

RANGASWAMI & BASU

Publishers :
Oxford Book & Stationery Co.

Pre-publication Price Rs. 25 per set of two volumes.

NEW SERVICE

Particular questions relating to the new law will be answered by the Indian Finance Company Law Advisory Service.

Questions should be submitted in typewritten form, and will be treated confidentially.

Write to Indian Finance for terms of this priceless service.

ESSENTIAL READING
INDIAN FINANCE'S
COMPANY LAW INAUGURATION NUMBER

The provisions of the new Act call for action within specified periods by company managements, private companies and foreign companies. These provisions and the action to be taken are examined in three exhaustive articles, among others in this Special Number.

Price: Rs. 3 per copy

Information in respect of these services and publications is available from

Telephone: 24-4732

Editorial Notes

Ceylon Elections

The overwhelming victory of the MEP party in the Ceylon elections can lead to a major change in the political landscape of South East Asia. The ruling party leader, Sir John Kotelawala, has always been hard put to play the deft neutral in the international game. A warm friend of the British, who have never ceased to think of the tiniest Dominion as an inalienable strategic foot-hold, Kotelawala, at the same time, found himself compelled to dance to the tunes of neighbours whose sympathy for the West remained dubious.

In fact, the United National Party was playing its cards so clumsily that it could not retain the full sympathy of either Ceylon's immediate neighbours or its distant friends. Ceylon did not join the SEADO. It felt compelled to negotiate a rubber deal with China. Britain could not be happy over such acts of omission and commission. The harsh and even inhuman way in which the question of Indian settlers was being handled has naturally estranged the Indian Union.

Western Powers are disagreeably surprised over the fate of the United National Party. Ceylon links with the West would be weakened when a leader with pronounced communist sysmpathies takes charge as Premier of the Government. Mr Bandaranaike, the leader of MEP Party, has promptly sought to disabuse misgivings by a clear avowal of his intention not to join any international political bloc or expropriate property without fair compensation. On the other hand, he has assured that under his regime Ceylon will observe strict neutrality and will strive to be more or less a Switzerland of the East. Where a breach with the past will be certain is in respect of the recognition of Peking and Moscow, which his predecessors successfully avoided. This leader's past must impart to his policy much more compactness than any that Ceylon has had since its emergence as a Dominion. How the future of the Indian settlers will be decided no one can predict; there is one favorable circumstance. The MEP leader and Pandit Nehru like each other well.

*

Peasant Convention

The National Convention of Farmers, which held a long sitting in the Capital last week, has demonstrated that Indian peasantry is getting more and more actively interested in its problems and is ready and able to cooperate with a critical mind in tasks which the State has set for itself. The proceedings of the Convention should have very largely destroyed the feeling still entertained by authorities that the average farmer in India is not easily susceptible to new ideas.

Even after making allowance for the core of well-informed leadership which was noticeable in the Convention, it is clear that there is a widespread knowledge of modern trends and, what is even more remarkable, of the points where the peasants' and the State's interests collided. One of the recommendations made was for the enactment of a fertiliser law, which should prevent malpractices in the fertiliser industry.

The Seminar on agricultural taxation has offered an elaborate set of suggestions for revision of the fiscal system to the extent it touched the producers. One of the demands made was that taxation should be related to yield and not to area. While this demand has its obvious justification, it does not represent any violent departure from existing practice in many places. Land revenue settlement is often on the basis of the yields of individual plots, though area is recorded as the formal basis. Too fastidious an attention to yield will have to take stock of annual and even seasonal variations and the vagaries of the weather etc. and will become a well-nigh impossible task.

Politically, we can read into these demands an incipient challenge to State policies from a section which through advancing literacy and organisation may soon assume a dominant status in political life. The criticism of blind machanisation springs from a deep-seated convention born of long experience as much as of careful calculations of future consequences.

An Economic Probe

The findings of an enquiry into the life insurance and provident fund problems of low income urban employees, published by the Indian Institute of Economics, Hyderabad, provides tantalising material for the State as the monopolistic insurer of the future. The enquiry covered a cross section of the shops and establishments employees in Hyderabad and Secunderabad area. Out of a total of 19,439 employees, 4,302 were interviewed on a sample basis. Of these, not more than 407 had insured their lives; only 344 contribute to providend funds; those who have both taken insurance policies and are contributing to provident funds number 136.

These proportions are disturbingly small. What is worse is that 578 employees confess ignorance of any knowledge of life insurance as such. As many as 14,44 do not contribute, just because they like to avoid the unintelligible techniques. No fewer than 520 have no saving margins at all.

It is pointed that 43.7 per cent of the employees draw less than Rs 54 per month. Administrative formalities are so rigid and complicated that advances against insurance policies and provident fund credits remain much too small.

These findings provide both a warning and hope for the future of insurance. Even in a comparatively organised section, income levels are far from satisfactory. Insurance can thrive only on the basis of a steady and regular margin of savings; where this is available cumbrous rules and regulations scare away prospects. In compact areas such as the City of Hyderabad, it is easy to tap like sections, in a programme of expansion of business.

*

Cottage Industries

The official report on the functioning of cottage industry in 1955-56 will naturally be read with eager interest both by those who believe that the economic future of the country lies, if partly, by way of cottage industries and by those more equivocal in their opinion. The report covers the working of The Khadi and Village Industries Board, the Handicrafts Board and the Silk Board. All these may be deemed to have passed the incipient stage of vaguely defined functions and duties, of poor co-ordination with ministerial departments and lack of a practical bend in approach. The recommendations of the Karve Committee, last year, gave a powerful stimulus to those bodies and this is reflected in the general tone of the report.

The Khadi and Village Industries Board has some 23 auxiliaries in the States, on an analogous set-up. The function assigned it include preparing and organising programmes for production and development, training of personnel, manufacture and supply of equipment, supply of raw material, marketing and research and study of relevant economic problems. With such a formidable range of functions and so wide a field of operation as the whole country, one wonders if the organisation and administrative machinery of the Board is at all equal to the task. Presumably, the Second Plan is expected to work a change. But the report gives no sure indication if a start has been made on building up an adequate administrative structure. That the output of Khadi has risen during the year is not a matter for rejoicing considering that Government subsidy and loans have correspondingly been greater. In 1955-56, total funds budgeted for the Khadi Industry were Rs 516 lakhs of grants and Rs 187 lakhs of loans. The year saw the birth of Ambar Charka.

Qualitative Control Versus the Credit Squeeze

The returns of the Reserve Bank for the week ended April 6 are of intriguing interest for the student of money market statistics, and of topical interest for the participants in money market activity. We may study the returns, in the first place, from the point of view of the Central Government's ways and means adjustments. The week under review covers the last-minute year-end payments and the usual month-early disbursements. The drain on the Centre on these two accounts was known to be exceptionally heavy. It is noteworthy that the Centre could depend upon a variety of avenues for securing the needed resources. To start with, to the extent that the Central deposits on March 30 were Rs 67.34 crores, the Central Government had, so to say, Rs 17.34 crores up their sleeve. Secondly, the last day of the financial year must have accounted for an accelerated rush of tax revenue. Thirdly, the Centre was in a position to help itself to the tune of Rs 5 crores by taking advantage of the statutory provision to tender Rupee coin in the amount of Rs 5 crores, and get credited with the proceeds. Fourthly, the Central Government could count on the States making payments in respect of the interest and instalments due on the loans and advances made by the Centre to the States. The amount thus due to be paid was shown in the Revised Estimates at Rs 26.61 crores. It may be presumed that this payment has been effected; for the balances of State Governments with the Reserve Bank show a decline of Rs 26.32 crores. Fifthly, there is always the handy recourse to deficit financing. We find that created money accounts for Rs 10 crores. After the replenishment thus provided under these five heads, the Centre closes the week with a balance of Rs 57.10 crores, which is comfortably in excess of the conventional minimum of Rs 50 crores.

We may analyse the Reserve Bank statement, in the second place, from the point of view of the cash in the Reserve Bank's till. In a week which involved year-end payments of Government and month-early payments of salaries, the Reserve Bank had to be prepared for a very large demand for currency. But aid was available in this respect from the expansion effected against Rupee coin and Rupee securities for the purpose of the Centre's ways and means requirements. But this was not adequate to the demand. So, the Reserve Bank had recourse to expansion of currency against Foreign Securities to the extent of Rs 30 crores.

The returns can be studied, in the third phase, from the point of view of the Scheduled Banks. While banks in general would have had to meet the requirements of constituents for tax payments and month-early commitments, they must have, on balance, benefitted substantially from the considerable Government disbursements which should, in part, reach the coffers of banks via their constituents. The improvement in the position of banks has enabled them to reduce their indebtedness to the Reserve Bank as much as Rs 15.12 crores.

On the assets side in the Banking Department, the two noteworthy changes are a decline of Rs 26.63 crores to Rs 62.09 crores in balances held abroad and a decline of Rs 15.12 crores to Rs 64.82 crores in Other Loans and Advances; and the reasons for these changes have been explained earlier.

Early this week, it came to be known that the Reserve Bank had circularised banks to furnish information with regard to loans and advances made by them; and it was obvious that this enquiry was mainly concerned with an assessment of the part which bank advances could have played in the recent price-rises in certain commodities. In the alert watch which it is the responsibility of the Reserve Bank to maintain and keep maintaining, in a regime of deficit financing, on prices and the factors relevant to prices, the present action in calling upon banks to furnish information of this nature must evoke no special comment; it is part of the routine which is expected of the central banking institution. Again and again, Sir Chintaman Deshmukh has emphasised both the range and the limitation of deficit financing; and, while resorting to deficit financing on a planned basis, the search for the limiting boundary has to be continuous and, in this process, eternal vigilance is the price for this mode of securing finances for a developing economy.

In the words of the Finance Minister, reliance on this mode of raising resources to the extent proposed involves considerable risk.. (and) there must be readiness on the part of the community and the public authorities to adopt the necessary safeguards, correctives and controls as the situation may require." It is admitted that prices in several spheres have shown a strongly rising trend in recent weeks; and it is incumbent on the Reserve Bank to initiate an immediate and thorough-going analysis of the forces that are behind the price-rises, and, on the basis of such an investigation, to adopt such corrective measures as will nullify the particular cause or causes which have stimulated this disquieting development. If it is found that banks have been too free with their advances against commodities, the Reserve Bank may feel inclined to issue a directive on banks to discourage new loans on commodities and to call upon the present borrowers to reduce their loans. As we said, all this enquiry, and any action that may be taken on the findings of such an examination, are an essential feature of a Plan which seeks to raise over a quarter of the needed resources from deficit financing.

The professional scare-mongers in the Sock Exchange chose, however, to give a sinister interpretation to the Reserve Bank's circular to the banks. The nightmare of a "credit squeeze" was conjured up; and there was a landslide in prices. This proved short-lived, as was to be expected. But, it is of vital importance for the money market interests to learn to take a correct perspective with regard to measures taken, from time to time, by the Reserve Bank in pursuance of its responsibility for undiminished vigilance. If, let us grant, the Reserve Bank feels obliged to direct banks to reduce their advances against bullion or oilseeds or foodgrains, this should in no way be interpreted as a programme of credit squeeze. In planned money, which is a corollary of planned economy, qualitative control of bank credits is a correct and essential technique. Even if the Bank Rate be raised, it is not necessarily tantamount to credit squeeze so long as the Reserve Bank is ready and willing to make advances, at a concessional rate, on usance bills.

Even in regard to advances against usance bills, there has been qualitative control from the time the scheme was launched. The Reserve Bank has informed each bank of the parties approved and the limits for each, so far as the facilities available for that particular bank are concerned. This qualitative control has been in force for five years; and whoever has suggested that it is another name for credit squeeze'

+

Currency Expansion for Rs 45 Crores

The returns of the Reserve Bank for the week ended April 6 show currency expansion to the extent of Rs 30 crores against Foreign Securities, Rs. 5 crores against Rupee coin and Rs 10 crores against Rupee securities. Foreign securities in the Issue Department have gone up by Rs 30 crores to Rs 686.42 crores, thanks to transfer from the Banking Department. Rupee securities have gone up by Rs 9.93 crores to Rs 688.75 crores, thanks to ad hoc additionally issued by the Central Government. In spite of a gain of Rs 5 crores in Rupee coin, thanks to the statutory tender by the Central Government, the public demand for the week has been substantial and is reflected in the fact that Rupee coin shows a rise of only Rs 3.12 crores to Rs 106.28 crores. Active note circulation has risen by Rs 40.65 crores to Rs 1506.67 crores—again, an all-time high. In the result, notes held in the Banking Department are Rs 3.01 crores higher at Rs 14.78 crores.

For reasons already explained in an earlier paragraph, the Central Government's deposits have declined by Rs 10.24 crores to Rs 57.10 crores; State Governments' deposits by Rs 26.32 crores to Rs 35.70 crores. Balance of banks are higher by Rs 0.18 crores at Rs 53.42 crores.

The Statement of the State Bank as at 6th April reveals an increase in deposits to Rs 241.43 crores from Rs 238.06 crores. At the same, time, borrowings from banks have been reduced from Rs 4.99 crores to Rs 0.41 crores. With other liabilities higher by Rs 3.87 crores,

Gentlemanly "Credit Squeeze"

By PAUL EINZIG

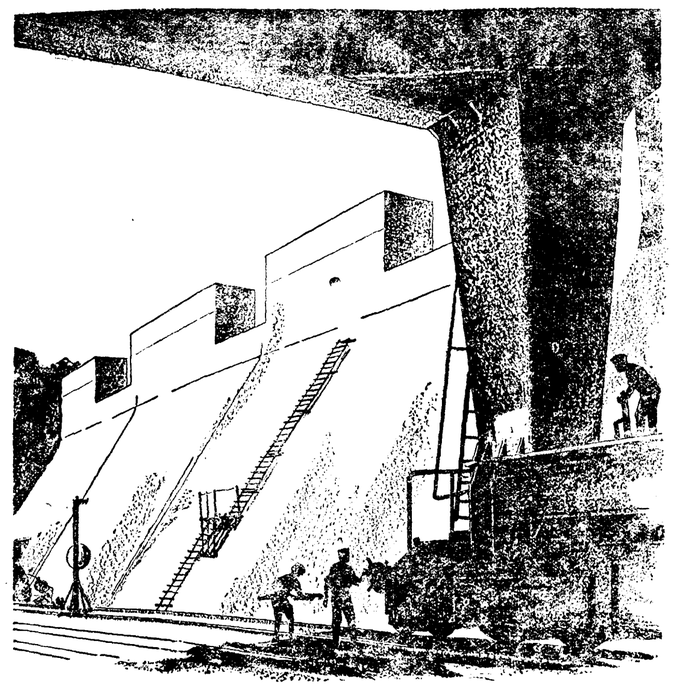
THE vocabulary of economics has become enriched by a new term. For years we have now been talking about "creeping inflation"—by which we mean a slow but persistent inflation, resulting in a gradual rise in prices barely perceptible in the short run, but highly damaging in the long run. The chairman of one of the industrial firms, in his annual report to the shareholders, has now coined the term "creeping disinflation". By this he meant the prolonged but moderate credit squeeze experienced in Britain ever since the beginning of 1955. Sir Oscar Hobson, City Editor of the "News Chronicle" referred to the same thing as a "gentlemanly" credit squeeze. Both terms seek to convey the idea of an unduly timid approach of task of disinflation.

That politicians want to make disinflationary ommelette without breaking too many eggs at a time is fully understandable. They naturally wish to avoid a dramatic deflationary drive which would correct the situation in a matter of weeks or months, but which would be a painful and risky process. Instead, they prefer to inflict on the country the prolonged inconvenience of a gradual process involving dear money over a period of years and chronic scarcity of credit. In retrospective it now appears evident that the correct solution would have been the application of a very drastic credit squeeze early in 1955 as soon as the need for disinflation became evident. Had Mr Butler caused the Bank Rate to be raised to, say, 8 per cent a year ago, in all probability he would have been in a position to restore it to 3 per cent within a month or two. As it is, British business had to settle down to dear and scarce money throughout 1955 and during the first quarter of 1956. And the chances are that dear and scarce money will continue during the greater part of this year.

The worst of it is that there is very little to show for the disinflationary effort exerted to date. The wages spiral continues unabated. The disinflationary drive is not sufficiently dramatic to frighten the Trade Unions into postponing their wages demands for better times, Nor is it sufficiently drastic to force employers to abandon their attitude of taking the line of least resistance in face of wages demands. The implied conspiracy between employers and employees to put up wages, prices and profits at the expense of the long-suffering consumer continues unabated. The extent of the credit squeeze has not been sufficient to induce employers to resist wages demands for fear that they may not be able to pass on to the consumer the additional costs.

It is true, there has been an appreciable decline in the volume of bank credit since it reached its peak level last summer. What has been happening to a large extent is that large firms which, find it difficult to obtain increased bank credits have been making public issues instead. The volume of loans and shares issued during the first quarter of this year shows a considerable increase compared with any previous corresponding post-war periods. In many quarters this is held as evidence of the success of the credit squeeze. It is argued that this method of financing production is less inflationary, since it does not lead to an increase in the volume of bank deposits, and since it means drawing on the savings of the public instead of creating additional credit.

Those who argue in this sense fail to appreciate the fact that subscriptions to new issues almost invariably involve a conversion of idle deposits into active deposits. Although it is just conceivable that some subscribers decide to invest funds which they would otherwise have spent, the overwhelming majority of subscriptions is financed with the aid of liquid funds which would otherwise have been kept idle. In many instances the subscribers themselves have no idle deposits but have to sell existing investments in order to subscribe. In that case it is the idle deposits of those who buy their investments that become active.



The net result of the transactions is that, even though the total value of bank deposits remain unchanged, the velocity of their turnover increases. In other words the same amount of deposits is financing a larger amount of business by changing hands more frequently. The effect is fully as inflationary as if the additional amount of business had been financed through the creation of an additional amount of deposits.

The fact that British firms find it so easy to place an increased amount of stocks and bonds in the market is itself an evidence that the credit squeeze has not been really effective. A really effective credit squeeze would be accompanied not only by a scarcity of funds which would make new issues difficult but also by a feeling of pessimism which would discourage owners of funds to subscribe to new issues. This at any rate was always the effect of dear money and tight money in the past. It seems, however, that the general assumption that in the post-war world no Government is able or willing to carry disinflation too far has made a fundamental difference. This optimistic assumption is largely responsible for the lack of response of the British economy to the disinflationary drive.

The fact of the matter is that owing to this optimistic atmosphere nobody is inclined to take disinflation too seriously. It has failed to induce the Trade Unions to moderate their wages demands. Equally it has failed to induce employers to put up a stiff resistance to wages demands. Finally it has failed to induce investors to obtain from subscribing to new issues the result of which largely nullifies the disinflationary effect of the credit squeeze.

Needless to say everything is largely a matter of degree. If the credit squeeze were more brutal and less "gentlemanly", everybody —employees, employers, and investors—would be made to take notice. Sooner or later the British authorities may have to realise this. But at the moment they still appear to believe in the possibility of making an ommelette without doing more than cracking eggs.

Revised Industrial Policy

THE new industrial policy of the Government of India of which, short of an official announcement, every major detail is already known, is based on an approach which should extinguish all the misgivings entertained in the private sector. One of the most important aspects of the new policy will be that the State will utilise the country's resources for the expansion and development of new units in basic industries rather than in changing the ownership of existing ones.

The demarcation of spheres between the State and private industry proceeds largely on the ground that the latter is not interested in investment where capital resources called for are very large and the returns are not quick. There will be a large sphere in which both the State and private industry have scope to march ahead and expand.

A wide field will be left exclusively for the private sector and, though the Government are in possession of comprehensive powers of direction and control, actually interference will be limited to cases where anti-social trends are in evidence and private management fails to satisfy the requirements dictated by the new social outlook. In other words where and how the State interferes will mostly depend on the character and outlook of the private ownership concerned. Again, no water tight compartments are envisaged between the public and private sector. On the contrary, there will be an extensive area of mutual dependence; for instance, the heavy industries run by the State will be looking to the privately owned industries for machinery parts, components etc.

It would also be the general policy of the Government to provide financial assistance to industries in the private sector and to extend special assistance to co-operative enterprises. Only where an industrial unit asks for assistance amounting to more than Rs 7 crores, the State would put its funds in the form of equity capital. There is the assurance that where the public and the private sectors co-exist in the same industry, there will be no discriminatory treatment whatsoever.

Though generally it is a re-statement of what was given in the 1948 April Resolution, the new industrial policy embodies a few material changes. It is proposed to divide industries into three categories on the basis of the part the State would fill in each of them.

The first category will consist of industries whose further development will be the exclusive responsibility of the State. The 1948 Resolution listed six items under this category, viz coal, iron and steel, aircraft manufacture, ship-building mineral oil and the manufacture of telegraph, telephone and wireless apparatus excluding radio receiving sets. The manufacture of arms and ammunitions, the production of automic energy and the ownership and management of railway transport were to be the exclusive monopoly of the Central Government. It is now proposed to include these three items also in the first category.

Four new items in the list and for which private enterprise has not shown any interest are heavy castings and forgings of iron and steel, heavy electrical plants including large hydraulic and steam turbines, copper, lead zinc, tin molybdenum and wolfram bearing minerals and heavy plant and machinery required for iron and steel production for mining, for machine-tool manufacture and for some other basic industries as may be specified by the Central Government. All the new units in the above industries, except where their establishment in the private sector has already been approved, will be set up only by the State, either directly or through agencies like the National Industrial Development Corporation. The expansion of existing privately owned units or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when national interest required it, are not ruled out.

The second category of items will consist of industries in which the State will increasingly take the initiative in establishing new undertakings but in which it will be open to private enterprise also to expand and to undertake new projects.

Aluminium, machine tools, ferro alloys, basic and intermediate products required by chemical industries such as the manufacture of drugs, dye-stuffs and plastice, synthetic rubber carbonisation of coal, chemical pulp, generation and distribution of electricity and sea transport.

The remaining industries will be left to the initiative and enterprise of the private sector.

*

British India Corporation:

The acquisition of a very substantial holding in the British India Corporation by the Mundhra brothers deserves to be mentioned before reviewing its performance in the past year. Messrs Hardas Mundhra and Tulsidas Mundhra are expected soon to join the Corporation's Board of Directors.

With its wide range of interests, the fortunes of the Corporation naturally depend on a varity of factors affecting in main, the cotton, sugar, wool and tanning industries. They are also bound up with the contenment and productivity of the labour force. The picture which the Chairman Sir Robert Menzies points at the Thirty Sixth Annual General Meeting, is inevitably tinged with certain disappointing trends. There was a disastrous 82 day strike in Kanpur's Cotton Mills which told badly on the textile units of the Corporation. Almost simultaneously the Cawnpore Woollen Mills went on strike on a different issue. Lack of unity among labour has itself handicapped direct negotiations; the consequent loss incurred by the Corporation was ripping.

Sir Robert has as only to be expected, a list of grievances based on Government's taxation policy. While the excise duties already existing on leather, wool and sugar reflected rather severely on the Profit and Loss Account of the Corporation, it has just cause to be perturbed over the latest increase in the quantum of excise duty on cotton cloth. From the industrialist's point of view the excise duty is a direct tax on him, rather than a tax on the consumer.

The impact of excise duties aggravated by low productivity of labour has caused disappointing results in spite of best efforts on the part of the various units. The Capital replacement programme of the cotton mills are waiting upon the recommendations of the Rationalisation Committee.

Looking to the future, Sir Robert has though it fit to emphasise the urgency of strengthening the managerial and technical cadres. The success of this task would depend, according to him, on reliefs from measures of personal taxation for foreign officers who should be induced to stay on and train younger men.

STATE BANK OF INDIA

Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be—can be made to run more smoothly with the help the Bank can offer.

Why not talk things over with your nearest bank agent, or write for information?

Encouraging Figures

THE continued uncertainty about the Russian purchase of Indian gunnies coupled with the paucity of overseas enquiry in the past several weeks has engendered a feeling among marketmen that the state of affairs in the industry as would be revealed by the relevant figures at the end of March may not be quite satisfactory. But when the figures have been released, it has been found that the calculations have gone wrong. The fact of the matter is that conditions in the jute trade and industry during March have been good.

In the first place stocks of jute goods at the end of March 1956 are only 5200 tons higher than the previous month at 94.600 tons. It has been generally anticipated that since March is the first month in which mills have worked with full quota of looms so far unsealed, stocks at the end of the month would show a bigger increase than in February.

STOCKS OF GUNNIES.

('000 tons)

1955-56	Hessian	Sackings	Others	Total
July	42.1	36.5	2.9	81.5
August	41.6	34.4	3.2	79.2
Sept.	34.4	32.3	3.0	69.7
October	29.7	29.0	3.6	62.3
Nov.	27.9	30.8	4.3	63.0
Dec.	23.5	34.4	5.6	63.5
January	25.6	45.3	7.5	78.4
February	28.2	52.5	9.0	89.7
March	30.2	54.9	9.5	94.6

Of the total of 94.600 tons, Hessian Cloth and Bag account for 30.200 tons representing an increase of 2000 tons over February; Sacking Cloth and Bag 54.900 tons representing an increase of 2700 tons; and others 9.500 tons recording an increase of 500 tons.

With the release of the production figures for the month, the position has become clear. Production of gunnies in March 1956 has totalled 99,300 tons—an increase of 6500 tons over February.

Production of hessian has increased from 32.000 tons to 34.800 tons; that of Sackings from 54.700 tons to 57.800 tons and that of other varieties from 6.100 tons to 6.700 tons.

PRODUCTION OF GUNNIES.

('000 tons)

1955-56	Hessian	Sackings	Others	Total
July	34.3	45.0	4.8	84.1
August	33.2	43.7	4.5	81.4
Sept.	35.4	47.2	4.8	87.4
October	30.7	43.5	4.6	78.8
Nov.	34.6	49.9	6.0	90.5
Dec.	34.0	56.6	6.7	97.3
January	30.3	52.6	6.0	88.9
February	32.0	54.7	6.1	92.8
March	34.8	57.8	6.7	99.3

The two sets of figures will enable us to arrive at a fairly accurate picture regarding despatches during the month. Since the month has begun with a stock of 89,400 tons with the production during the period amounting to 99,300, it is to be inferred that despatches during the month should have been in the vicinity of 94,000 tons. In other words offtake during March should have been about 14,000 tons higher than the previous month. The resulting position is very encouraging indeed. Stocks are not only below one month's production but are keeping level with the volume of despatches.

Dull but steady conditions prevailed in the jute goods market during the week. In the early part of the period, sentiment was helped by the smaller-than-anticipated increase in stocks. But in subsequent days trading came under the influence of speculators. The bull-bear tussle resulted in irregular price movements. On Tuesday earlier attempts by bulls to push up prices were thwarted by bears who succeeded in depressing prices on the strength of lack of information about the long-awaited Russian order. However, it became evident in later dealings that both sides were equally matched with the result prices did not show much change on balance.

Except for a fair quantity mill business reported done early in the week, the raw jute market ruled unchanged with no mill business reported done in subsequent days.

*

DIFFICULTIES OF THE PRESSHOUSE INDUSTRY

Speaking at the Annual General Meeting of the Calcutta Hydraulic Press Association, Mr M. S. Chunder, the Chairman said:

"The rate of jute production at the time the ban on the export of jute from India was imposed was about 20 lakhs of bales per annum but the situation has changed considerably since the implementation of the First Five-Year Plan. The total production of jute and mesta in India during the current season is expected to be in the region of 50.5 lakhs of bales, to which must be added the estimated Pakistan production of 72.5 lakhs of bales. This gives a total of 123 lakhs of bales, and after adding the opening stocks in India and Pakistan, at about 17 lakhs of bales, you get a total availability of 140 lakhs of bales.

The current rate of consumption of the Indian mills is approximately 64 lakhs of bales per annum and the domestic consumption is about 2 lakhs of bales, making a total of 66 lakhs of bales. Pakistan exports 35-40 lakhs of bales overseas and her domestic consumption, including that of her mills, is approximately 7 lakhs of bales, giving a total of 47 lakhs of bales at the outside. If you combine these Indian and Pakistan distribution figures you get a total of 113 lakhs of bales, leaving a surplus at the end of the season of 27 lakhs of bales as against 17 lakhs of bales during the season 1954-55. The above figures reveal, among other things, that India has increased her jute production by 150 per cent since 1949 and as the Second Five-Year plan comes into operation it can be reliably expected that the production of raw jute will record a further substantial increase.

I feel, therefore, that the time has come for the Government of India to review its jute policy in the light of the rapid progress made in increasing the country's raw jute production. The position, gentlemen, is not as gloomy as it may appear on the surface. What is required is a concerted effort by the presshouses and balers to convince Government that the time is ripe

(Continued on page 693)

World *of* Tea

Decline in Exports of Northern India Tea

FIGURES relating to distribution of Northern India tea during the 12 months ending 31st March 1956, now available, reveal that the trend of exports from this area continues to be downward.

It may be recalled that from a total of 388,719,733 lbs. exported during 1953-54, the figure has declined to 369,687,460 lbs. during 1954-55. There has been a sharper decline during the year 1955-56 as exports during the period have totalled only 323,270,437 lbs.

Except for a few countries which have increased their offtake all others have continued to show lower figures. The biggest fall has occurred in the case of Britain which accounts for 32.71 million lbs. out of the total decline of 46.42 million lbs. Among the countries that have increased their offtake, Istanbul is prominent with 5.32 million lbs. as against 2.00 million lbs. in 1954-55. Egypt's imports have increased to 11.48 million lbs. from 8.44 million lbs., those of New Zealand to 1.01 million lbs. from 838,423 lbs. Hamburg and Bremen have maintained a steady trend at 4.55 million lbs.

Next to Britain, the country that has recorded a sharp decline is Australia with an offtake of only 2.20 million lbs. against 7.04 million lbs. in 1954-55. Canada's imports are also lower at 10.93 million lbs against 14.09 lbs., United States' at 18.26 million lbs. againsst 22.50 million lbs., those of South America, Central America and West Indies at 32,600 lbs. against 1.22 million lbs., those of the Irish Republic at 19.08 million lbs. against 22.79 million lbs., those of Amsterdam and Rotterdam at 3.33 million lbs. against 4.87 million lbs., Iran's at 1.69 millllion lbs. against 2.95 million lbs., those of Persian Gulf at 1.17 million lbs. against 2.92 million lbs., those of Red Sea ports at 3.95 million lbs. against 5.37 million lbs, those of Burma at 302.564 lbs, against 633,266 and those of Pakistan at 64.772 lbs. against 162,453 lbs. The share of all other ports also has declined from 1.21 million lbs. to 802.231 lbs.

At this week's export sale in Calcutta the selective buying that was noticed last week was again the main feature of the transactions. For, demand was much less general with plain and medium brokens with ordinary liquors full one anna below previous markings. A similar tendency was noticeable in the case of Fannings and whole leaf grades, poorest among the former showing an easier tendency and the ordinary among the latter displaying a weaker undertone. Quotations: Clean Black Pekoe Rs 2-2; Plain B.P. Rs 1-8-6; Medium Assam B.P. Rs 1-10; Best CTC Assam B.P. not quotable.

The undertone in the week's Internal Sale where offerings totalled 18,000 chests, has also been quiet. Demand was less general than in recent weeks. Even at the start prices were 1 to 1½ annas lower than previous markings. The easier trend strengthened further and by close rates had declined by 2 to 2½ annas. Demand for better quality black leaf suitable for Middle East continued to be good but poorer qualities among them shared the conditions of other varieties. Quotations are:—Medium Dooars Dust Rs 1-9 to Rs 1-10; Medium Assam Grainy Dust Rs 1-10 to Rs 1-12; Best CTC Assam Dust Rs 2-12 to Rs 2-14.

Conditions in this week's sales in London, however, have been very firm with very strong bidding for all descriptions. Though good quality teas have been eagerly sought after, all kinds have recorded price advances. Good quality teas have recorded gains from 6d to 1s per lb. while medium and common kinds have gained from 2d to 3d.

World Overseas

US Notes

THE high level of economic activity in the United States is reflected in the record output of electric power to run American industrial plants. The US Federal Power Commission has reported that production of energy by electric utilities reached nearly 48,000 million kilowatt hours in February, a record for the month and an increase of 19.3 per cent over February 1955.

In setting the new record, power plants consumed some 13.5 million tons of coal, 7.1 million barrels of fuel oil, and 67,800 million cubic feet of gas. The coal consumption figure was a record for February. Power plants reached the highest production total in history—626 million kilowatt hours. This was 1.5 per cent above the previous high, set in April 1955.

An indication of the growing demand for electric power in the United States is furnished by the Consumers Power Company, which has outlined an ambitious five-year programme to meet the expanding needs of its service area in the north central state of Michigan. The utility company expects to spend $500 million in the next five years and to add a million kilowatts to its generating capacity.

While these and other utility expansion plans progress, power from atomic energy will begin to play an increasingly important part on the American industrial scene. The First National City Bank of New York predicts that, by 1980, nuclear plants will make up about 20 per cent of installed electric generating capacity, representing a total investment of $25,000 million. At the same time, the Bank emphasises that nuclear energy will be a partner rather than a competitor of conventional fuels.

The Bank's report, prepared by the business research firm of Arthur Little, of Cambridge, Massachusetts, sees some difficulties to be overcome however. To achieve the projected rate of growth, it says American research and development outlays in the atomic field will have to reach $500 million a year by 1965. It considers research manpower one of the most critical problems in the future of nuclear technology.

Besides promising an adequate energy reserve over the next few centuries, the Bank's survey points out, 'nuclear power may also bring about changes in industry location and labour markets on a global scale. It may make available adequate and economic power in isolated regions where heat and electricity have not hitherto been available because of high transporation costs of conventional fuels.'

Of more immediate interest to economists and businessmen, perhaps, are unofficial reports from the Commerce Department that the gross national product of the United States—the nation's total output of goods and services—hit a new high in the first quarter of 1956. On the basis of data currently at hand and admittedly incomplete, the Department estimates the first quarter's gross product at an annual rate of $397,500 million, a rise of $200 million over the previous record rate set in the fourth quarter of 1955.

*

Britain

FIGURES given in the Balance of Payments White Paper published last week by the British Treasury show that the United Kingdom had a deficit on current account of £103,000,000 in 1955, compared with a favourable balance of £205,000,000 in 1954. The £103,000,000 was made up of a deficit with non-sterling countries of £318,000,000 and a surplus of £215,000,000 with the oversea Sterling Area.

The oversea Sterling Area secured a surplus with the non-sterling world of £137,000,000, against £164,000,000 in 1954.

The gold and dollar reserves fell by £229,000,000 during the year, but the sterling balances were reduced by £166,000,000, so that there was a net drawing on assets of £63,000,000.

American aid receipts, which amounted to $139,000,000 in 1954, fell to $94,000,000 in the first half of 1955 and $31,000,000 in the second half. Offshore orders from the USA rose from $105,000,000 in 1954 to $120,000,000 in 1955.

The £103,000,000 deficit for last year must be set against a total turnover of something in the region of £10,000 million. It must also be considered in relation to the magnitude of Britain's commitments overseas, as well as its defence programme (writes a London correspondent).

The White Paper gives for the first time round figures of the UK's annual net investment abroad since 1952 and shows that it has averaged £160,000,000 a year—much of this in the Sterling Area. In 1955, it was £125,000,000. At the same time, military expenditure has averaged £150,000,000 a year and reached £160,000,000 in 1955. Colonial grants, too, have shown a steady average of £30,000,000 annually.

Between 1954 and 1955, the balance of visible trade worsened by £160,000,000, accompanied by a worsening of £148,000,000 in the invisible balance (including defence aid). Net earnings from shipping were £30,000,000 less, largely because of the employment of extra foreign tonnage to carry the country's increased imports, the attraction of British tramp shipping into the UK import trade and away from foreign employment, and the rise in tramp shipping rates.

The remaining worsening of £118,000,000 was due, as the recent Economic Survey pointed out, to a fortuitous combination of a number of factors. It did not, in fact, represent a permanent weakening of the UK's position, but rather a sudden expansion of payments which expanding receipts may be expected to overtake in time. The main element was lower net oil receipts. These were largely due to a sharp rise in oil companies' expenditure following the resumption of operations in Iran, and to increased payments of royalties and taxation to Middle East countries.

Payments of interest, profits and dividends were also higher, partly because of increased interest payments on sterling balances. There was also some increase in travel expenditure and in transfers to emigrants following the relaxation of restrictions.

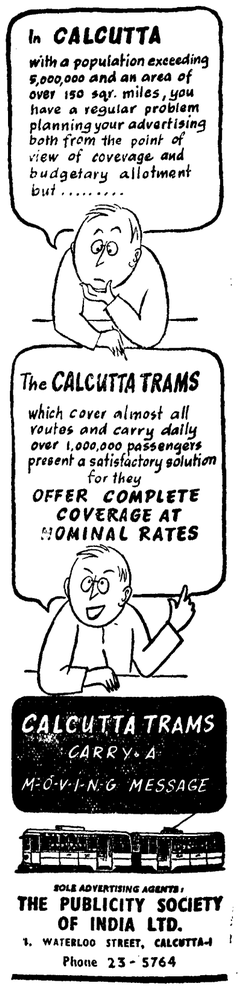
Although the year's deficit of £103,000,000 was made up of a surplus of £15,000,000 in the first six months and a deficit of £118,000,000 in the second half of the year, it seems probable that the deterioration between the two half-years was not a true reflection of the trend of the balance of payments.

There was, for example, a fortuitous increase in export receipts in the early part of the year due to the delays caused by the dock strike of October 1954. Receipts are also seasonally at their lowest in the autumn and early winter, and invisible payments are higher on account of the interest paid on the North American loans. It is also worth noting that special receipts of American defence aid reached a low point in the second half of the year.

When all these factors are taken into account, it seems likely that the real position of the UK's current balance of payments was little, if any, worse in the second half of 1955 than in the first.

The Sterling Area's gold and dollar reserves rose by $67,000,000 during March, and on the last day of the month stood at $2,277 million. The March increase compares with a rise of $61,000,000 in February and $29,000,000 in January.

On the provisional figures for March, Britain had a deficit of less than £500,000 with the European Payments Union, compared with £8,000,000 in February.



Defence aid received from the USA during March was estimated at $5,000,000. A sum of $8,000,000 was paid as the quarterly instalment on the Canadian interest-free loan; $16,000,000 was paid in gold or dollars to the European Payments Union for February; and $2,000,000 was paid to creditors of the Union in bilateral settlements.

The Financial Times comments: "At the beginning of the year there was every reason to feel anxious about the movement of the reserves in 1956. The experience of 1955 had been very serious and in the summer there were two major crises of confidence. The last quarter had shown a welcome stability, but that had not sufficed to offset the December repayments on the American and Canadian loans. In any case, the seasonal improvement had done no more than bring the position back into balance.

"Looking forward, it was possible to see that another year like 1955 would be more than the reserves and foreign confidence could stand. In order to provide for the seasonal downturn in the late summer, it was clearly essential that substantial recovery should be achieved in the first quarter.

"At the time we set the figure of $150,000,000 as the minimum that would be satisfactory. It was not pretended it would be an easy figure to reach, and many people thought it would not, in fact, be achieved. In fact, the first quarter of 1956 has produced an increase of

FOR the first time in several years, it has become possible to discuss the real issues involved in the Indo-Pakistani dispute over Kashmir's future. For this, we have to thank Mr Nehru's lucid survey of the history of the problem in the Lok Sabha recently and subsequent clarifications in his press conference at Delhi and his speech at Allahabad. Reaction in Pakistan has been swift and of precisely the sort anticipated—the same old attempt at baulking the real issues by the importation into the discussion of matters not germane to the point under discussion, repetition of old lies, bluster and threats incongruously accompanied by appeals to world opinion. Elsewhere, however, a sense of clearing of the atmosphere should make possible a more sober appraisal of the facts. Now that Mr Nehru's forthright speech has cleared the moral and political smog that has been obscuring the real situation, the first step toward a realistic solution of the problem has been taken.

*

Now, what are the facts? These have been persistently obscured, firstly, by ignorance; secondly, by the pathetic hope of some powers that the problem would solve itself if they attempted to ccax both parties into some sort of face-saving compromise; and, thirdly, by the later day assimilation of this dispute into the pattern of cold war postures. It is necessary, therefore, to restate them. The first fact in chronological order is the invasion of Jammu and Kashmir through Pakistan and by Pakistan in October 1947. The fact of this aggression was first denied by Pakistan but later admitted in a gingerly fashion by post-dating its actual occurrence. This clumsy attempt to hide the truth involved Pakistan in a whole series of pitiful lying and fabrication, whose unseemly details are there for all who care to read the ten fat volumes referred to by Mr Nehru. Much to the embarrassment of everyone, Pakistan went on brazenly lying about its aggression and finally admitted it with an equal disregard to appearance. Mr Nehru says that he has with him indisputable evidence of Pakistan's aggression in 1947, and refers to military vehicles in Kashmir with slogans like "On to Delhi" and so on. He also refers to certain statements made by prominent men in Pakistan during the last year giving details of how they organised the raid from Pakistan, and of details of payments made for the purpose in any case, the UN has come to a clear finding that Pakistan has committed an act of aggression on Kashmir. In its resolution of August 13, 1948, the UNICIP clearly recognised this fact, and Pakistan agreed to the finding of that body to the following effect: "The Commission recognises that as the presence of troops in the territories of the Jammu and Kashmir State constitutes a material change in this situation since it was represented by the Government of Pakistan before the Security Council, the Government of Pakistan agree to withdraw its troops from the State."

*

There is a tendency among many persons abroad to baulk this inconvenient issue. Considering the anxiety shown by certain powers to define precisely who the aggressor was in the Korean and other disputes, this reluctance to name the aggressor in a similar situation here is rather curious. The most charitable interpretation that one can put on the matter is that these well-meaning persons are anxious to solve the problem, if possible, without the embarrassment of public knowledge of the rights and wrongs of the issue.

*

The second basic fact about the Kashmir tangle which again is constantly baulked, is the legal and constitutional validity of the accession to India of the State. Very often, one runs up against an undercurrent of irritation in foreign comment when this fact is mentioned. It is thought that this is a narrowly legalistic way of looking at the problem and, in any case, since Mr Nehru had made the accession conditional to the ascertainment of the wishes of the people and has also committed himself before the UN to such a procedure, this insistence was unnecessary. On the other hand, there are people inside the country who consider such commitment ill advised. It is, of course, easy to be wise after the event and, in any case, there is nothing wrong about ascertaining the wishes of the people. But the fact of accession is important since that is one more reason why Pakistani troops had no business in Kashmir.

*

The third essential fact relates to the long drawn out negotiation regarding the holding of the plebiscite. The greatest amount of confusion prevails on this point since Pakistan has been posing as the injured party, pretending that India is resisting the holding of plebiscite. Though Kashmir was legally and constitutionally part of India, and though the fact of Pakistani aggression was clearly established, India was still willing to have the matter settled by a reference to the people. What prevented this happening? It was Pakistan's unwillingness to this day to honour its commitment under the very resolution of the UNICIP which it is constantly quoting to prove Indian intransigence. According to this resolution, Pakistan was to withdraw from Kashmir all its armed forces which had no business to be there. Only after this was done was India to withdraw the bulk of its forces. Pakistan has been deliberately misrepresenting this part of the resolution by stating that the Commission intended the withdrawal to be simultaneous. Even as recently as after Mr Nehru's statement in Lok Sabha, the Prime Minster of Pakistan claimed that the Commission had stated in a communication addressed to Pakistan that the withdrawal must be simultaneous. This stand is of a piece with the rest of its misrepresentation of the truth. Here is what the August resolution of the Commission says: "When the Commission shall have notified the Government of India that the Pakistani forces are being withdrawn from the State, the Government of India agree to begin to withdraw the bulk of their forces from the State in stages to be agreed upon with the Commission." Rejecting Pakistan's subsequent contention that the withdrawal on both sides should begin at the same time, the Commission quoted the above clause in their resolution. They drew a clear distinction between the two withdrawals and stated unambiguously, "Pakistani troops are to begin withdrawal in advance of the Indian troops and their withdrawal is not conditional on Pakistan's agreement to the plan of the Indian withdrawal. The Pakistan Government could not in reason expect, nor could the Commission have granted, a synchronisation which would have been incompatible with the terms of the resolution of August 13. The resolution does not suggest that Pakistan should be entitled to make her withdrawal conditional upon the consultation envisaged between the Commission and the Government of India having led to an agreed schedule of withdrawal of Indian troops."

*

It is difficult to find a clearer statement of the real position, especially in a dispute one of whose principal characteristics has been the enormity of equivocal pronouncements by all and sundry. In the face of this, who has been preventing the holding of a plebiscite for the last seven years? If Pakistan was really earnest about

the plebiscite idea it should have started withdrawing its troops long ago.

*

This is not the only reason for the protraction of the solution of the issue. The UN resolution was based on the facts as they existed then. Since then, Pakistan has applied for and obtained large scale military assistance from a big power with the result that the relative military strength of the contending parties has ceased to be what it was. It is in this context that Mr Nehru desires a completely new approach to the problem. It is no use mouthing cliches about "ascertaining the wishes of the people." For seven long years, India has been waiting for Pakistan to make plebiscite in the State possible by taking the necessary preliminary steps. These have not been taken. Meanwhile, time has not stood still, and a number of factors have completely changed the situation. Inside Kashmir, people have settled down to a life of comparative normalcy and, for the last two years, the State has been enjoying prosperity unparalleled in its history. Apart from that the wounds inflicted on us by communal politics have only recently healed, and we have no intention of opening them up by giving a fresh opportunity for the deliberate whipping up of communal frenzy under a plebiscite that Pakistan, having no inhibitions in the matter, is sure to conduct on communal lines.

*

As for external factors affecting the situation, the most important are the series of military pacts in which Pakistan is a member and the continuous flow of military aid from the US. Whatever may be the motive of the US in giving this aid,—and we accept their word of good faith in the matter—we are quite convinced that, as far as Pakistan is concerned, its sole motive in obtaining it is its hostility to India. At his press conference, Mr Nehru referred to bases in the Pakistani-held Kashmir—a

Bombay Review

The Tribulations of a Vital Service

FEW, if any, of the millions that take electricity for granted, have any idea of the fantastic amount of restriction placed in the way of those trying to provide us with this vital necessity. Few of us think of them at all, except when the current fails or when the bill arrives. Even if we did think of them in other contexts than these, we saw in a vague sort of way the point of the arguments in favour of regulating this vital public utility: standards of safety are to be ensured and the consumer taken care of from the cupidity of monopoly suppliers of vital necessities. One has been, therefore, imagining that all that various pieces of electricity legislation have been doing was to ensure this desirable minimum. (One also knew, of course, that, by these acts, the hard pressed Government made a little money by surcharges which hurt terribly when the monthly bill came around.)

From a different angle, one remembered the friendly advice given by pundits on investments who told you to put your spare cash in Electric Supply Corporations for ensuring a more or less steady income. Therefore, it was something of a metaphorical shock to one (to continue the useful impersonal pronoun) to realise from a perusal of Mr K. G. Milne's address to the shareholders of the Ahmedabad Electricity Company Ltd., that there was perhaps no industry which was so hamstrung with restrictions as the one that provided one with an indispensable necessity.

Mr Milne, whose admirable speech at the annual meeting of the Bombay Chamber of Commerce I commented upon in these columns sometime ago, has unfolded in his speech a tale that is both depressing and paradoxical. Here is an industry whose story in the last few years has been one of gratifying expansion. According to the draft Plan, the private sector has increased its installed capacity during the first Plan period by about 1.5 million K.W. In the case of the company for whose fortunes Mr Milne is responsible, for instance, the installed capacity of the plant rose from 37.5 MW in 1947 to 142.5 MW in 1955. This is to be increased by a further 15 MW in the near future when the plant ordered for is received and installed. The demand for power in the area is increasing by an average that is twice the world average of 7 per cent. And yet, as far as the shareholder is concerned, this has also been the period of progressively diminishing return on his investment. Mr Milne's analysis puts the paradox in even sharper contours, for, he says that "the very magnitude and pace of expansion has reacted to penalise the investor".

This unhappy state of affairs is attributed by Mr Milne to the difficulties arising out of the need for expansion to get even the "modest return permitted under the Electricity (Supply) Act" while the charges for electricty have not been allowed to be raised. The proposal of the company in April 1954 for rationalising the whole thing by a 15 per cent increase in rates was turned down. Meantime, a reference to the Central Electricity Authority —incidentally, the multiplicity of authority to which this industry is subject is another depressing factor —on its long standing dispute with the State Government over the admissibility of interest on debenture capital as an item of operational—as distinguished from a charge relating to the financial and capital structure of the enterprise—expenditure in determining the 'clear profit' was decided in April 1955 is favour of the company.

This new situation made the original pegging of rates at the old level obsolete; and the State Government so far relented as to permit recently a 8¾ per cent surcharge on supplies to industrial and commercial undertakings. But, even before the company could start gloating over this comparative success, the Electricity Supply Amending Bill was introduced in the Lok Sabha in August 1955, which nullifies in effect the award of the Central Electricity Authority ragarding the admisibility of the interest on debentures and loans as a deduction for purposes of determining permissible 'clear profit'. It is small wonder that Mr Milne sounds so frustrated. In an industry so 'capital-heavy' as an electricity undertaking, to quibble, in the manner of text books on cost accounts, on the proper place to charge interest on borrowed capital is to show a remarkable lack of appreciation of the realities of the situation.

Two other important provisions of the proposed bill that Mr Milne referred to in his speech were those relating to the linking of the standard rate to the Bank rate (with a differential of 2 per cent) and the arrangements regarding the disposal of the benefits accruing from the development rebate allowed on new installations under the Finance Act of 1955. One fails to understand the logic behind the linking of the standard rate which, on the face of it, is to be a semi-permanent affair with the Bank rate, which by its very nature is flexible and variable, depending upon the vagaries of the money market and the fiscal and financial exigencies of the Government. Why an essentially long-term criterion should be linked up with an essentially short-term standard, is something that is difficult to see. After all, when it comes to taxation, Government are not so anxious to avoid arbitrary standards. For the tax on excess dividends envisaged in the Finance Bill of 1956), Government have chosen an entirely arbitrary basis of 6 per cent on the capital as the limit escaping taxation. Here, however, Government have allowed themselves to be misled by doctrinaire arguments that link return on investments with the bank rate as though it were something sacrosanct.

As regards the restrictions imposed on the appropriation to a development reserve of the development rebate allowed for purposes of income-tax as a prior charge in determining clear profit, Mr Milne has very properly pointed out the anomaly of determining appropriation to reserve, not on revenue surpluses of the year, but on a percentage of the capital expenditure of the year. I do not know if similar restrictions on the disposal of the benefits of development rebate have been placed in the case of other industries entitled to the benefits of this concession. If not, it would be most invidious treatment, which may even be capable of successful judicial challenge on constitutional grounds. Another iniquitous aspect of this arrangement is that this statutory reserve will have to be deducted from the capital base of the company with the result that, ultimately, its benefit will go, not to the shareholder, but to any purchasing authority.

The cumulative effect of all these restrictions and the mental attitude behind them is to appear to treat the shareholder in these enterprises as one entitled to the least consideration. I cannot, offhand, lay my hands on figures of the capital structure of the electricity supply undertakings in the country, but there can hardly be any doubt that, high among the preferences of the small investor, is the electric supply corporations. Government, who profess themselves solicitous of the small man, should not, in their abstract concern for the consumer, on the one hand, and in their anxiety about 'regulating a basic utility service', on the other, forget the legitimate expectations of the small investor. It is very much to the be hoped that, when the time comes for taking final decisions on the Electricity Bill, Parliament and Government will bear this aspect of the matter in mind.

Gateway Notes

States Bill Passed

The passing of the Draft States Reorganisation Bill in the Bombay Legislature, instils the hope that a dark and unedifying chapter may at long last be closed. The Bill provides for the creation of three separate States, Maharashtra, Gujarat and Centrally administered Bombay. One hundred and forty eight members voted for and twenty five against. Seventy two Maharashtrian Congress members have remained neutral. Their neutrality is not disturbing but significant. It rests on the belief that, sooner or later, the city will go to Maharashtra. Mr Nehru's repeated statement that no administrative pattern can have the attribute of permanence in a democratic set-up has gone a long way in fostering a dispassionate discussion of a problem distorted by passion and confused by clashing loyalties.

The nine-day debate in the Assembly was, however, not totally devoid of intemperate flights of opinion. Congress members took advantage of the freedom given by the Party to express freely.

Of the two amendments made, only one is of major importance. It relates to the creation of three separate High Courts instead of the Common High Court envisaged by the Bill. This is an amendment which cannot be wholeheartedly endorsed. Can it mean that the enthusiasm for zonal councils has died down? If such be the correct reading, it is to be regretted. It should be clear that it is practically impossible to ensure the maximum measure of industrial and economic development if planning is undertaken in terms of narrow regional strips. In this view, a progressive economic integration of contiguous areas is to be devoutly wished for. Western India forms a single unit in almost every respect other than language. The problems of the two linguistic regions are similar. Anyone to whom national interest is of greater import than that of Maharashtra or Gujerat, cannot but view the present arrangement as temporary. Meanwhile, the transition to a more co-ordinated and enduring set up cannot and need not be artificially hastened.

*

Dhebar on Decentralisation

The spirited advocacy by Mr U. Dhebar of decentralisation of economic production reflects a point of view never seriously disputed by any Indian economist. But as the Congress President points out while all are agreed, intellectually, on the question, the current tendency appears to gravitate more and more toward a centralised system of production.

The most important factor sustaining and promoting this trend which the Congress President evidently deplores, is the economy generally inherent in large-scale production. This, when introduced into a set-up formerly composed of small, decentralised, independent and often uneconomic units of production, appeared like a staggering impact to those to whom the large monolithic industrial organisation of the Western type was unacceptable for valid social reasons. However, it is admitted that at least in the case of certain basic industries, it is ineluctable to retain and develop centralised organisations. But it is sought to weave around basic industries a net work of decentralised production units. Much depends on how this is achieved.

Mr Dhebar picked out the Ambar Charka an instance of how decentralised production is being organised by Government. Though Government's stand in this regard appears to be correct in the face of the overriding criterion of employment potential, the emphasis seems to be misplaced.

The Ambar Charka is essentially a temporary device pressed into service to meet the exigency on the employment front and it has to be recognised as such. It is to be kept going by continuous and substantial governmental subsidy. These crutches will have to be done away with in the long run, if only in the interests of investment in sturdier and more competitive limbs of industry.

The emphasis, even in a decentralised system, should be on self-sustaining units. The revival of old-type village industries might ensure decentralisation but will not secure economic strength and viability. The introduction of new and modern techniques into the realm of small and medium industries will alone enable them to function and develop on a commercial scale. Such techniques have not yet permeated into the rural areas and until they have, the large-scale drift to urban areas for employment is likely to continue, aggravating the imbalance already grossly existing in the economy.

*

Increase in Rents?

Bombay's Housing Board, in its annual administrative report has recommended an increase in rent of tenements in colonies. This view is supported by the Estimates Committee as well as the Public Accounts Committee. The reason is that the present rates are uneconomic from the Government's point of view.

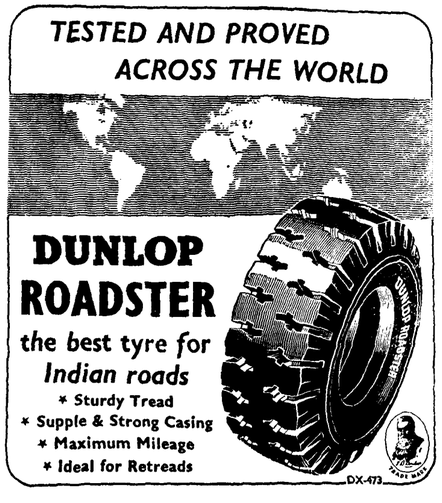
According the Bombay Ministry there is no dearth of funds for building industrial houses for workers. The Central Government are prepared to divert as much money as is possible to be fruitfully utilised. The difficulty seems to be in procuring suitable land to build on. Instances are not wanting where workers in factories have kept finished houses vacant due to difficult accessibility. If the problem is not one finance, there seems to be little justification for an upward revision in rents. The occupants are mostly of the lower income brackets and according to a section of opinion in the Legislative Council, any increase will be beyond the means of the tenants. Such a step if at all necessary, should be deferred for the time being.

The increase should be to spread the industrial housing scheme to small towns like Baroda, Navsari, etc., where industrial population is growing almost at the same pace as in Bombay City.

The part which private industry will be able to play in the housing scheme is bound to be limited unless suitable legislation is introduced to enable land to be procured at reasonable prices. A simplification of rules and procedures in respect of house building will also help.

*

Prohibition's Progress



Bombay has just celebrated the Prohibition Week. It marked the seventh birthday of prohibition in the State. Housewives came forward to testify the salutary effects of the measure on their husbands and households. The Union Minister of Planning came down to inaugurate the week. In a strong speech at Surat, the Congress President made it abundantly clear that prohibition has come to stay and that the sale of liquor will be stopped all over the country in the not distant future.

There is doubt in some quarters whether the measure has been a success in the Bombay State. But if it has been a failure to any extent, the State Government are not so much to blame as the leaders of social opinion. There is a small but influential section of the public which has throughout been unreconciled to Government policy. Propaganda should now be focussed on this section.

Mr Gulzarilal Nanda was able to list several factors lending support to the success of prohibition. There was a deep impression in the minds of the people in India that drinking was harmful to health. All religions forbade drink and women were wholeheartedly for prohibition.

The important task facing the Government is to enlist the full support of the people. The public, for its part, should know that the nation can ill afford to lose a substantial part of the revenue and at the same time not to make the project a success. The prohibition week should have driven home the need for an objective stock-taking of past methods and their implementation, which should form the basis for the plan of work for the next twelve months.

A social issue with a deep moral tinge, prohibition does not lend itself to any compromise. This should mean that it is to be enforced rigidly and on a national scale.

Delhi Review

Olympus

Master Plan for Location of Industries

BUDGET demands of particular ministries continue to be debated in the Lok Sabha in a listless fashion except where members have their knife in particular departments which are sometimes indistinguishable from particular ministers. The Health Ministry was assailed from almost all quarters; but the Rajkumari replied to the criticism with both adroitness and savoire faire. Discussion on the demands of the Ministry of Production was of more than usual interest because of the key position assigned to basic industry in the Second Five-Year Plan. It is well known that the Government of India are having under consideration a revised industries policy statement, which is expected to dot the 'i's and cross the 't's of the famous 1948 statement. Mr Satish Chandra, Deputy Minister for Production referred to this and stated somewhat cryptically that he hoped that the revised policy resolution now under preparation would "recognise the existing state of affairs". An indication of the way the wind is blowing may perhaps be had from his further hope that "the new policy would expand the scope of the public sector considerably". Whether this merely is the recognition of inroads into the private sector made so far by the State since the 1948 statement, or whether more is yet to come, will be clear only when the promised resolution is made public.

During the debate itself, the urgent need for another shipyard was repeatedly stressed by members. As was to be expected, there was hardly any difference of opinion about this need, though it is necessary to remember that shipyards cannot be produced by the wave of a magic wand. Mr Satish Chandra could not, therefore, go beyond the already announced decision of the Government to start training technical personnel during the Second Plan to build the second shipyard later. He indicated, however, that important ancillary activities like the manufacture of propellers for ships would be taken on hand soon. Some measure of the Government's anxiety on the question can be had from the reported assurance given by the Prime Minister at a meeting of the Congress Parliamentary party that the subject was engaging "the very serious" attention of the Government. Modification of the Plan in this regard cannot, therefore, be ruled out.

Among the other industries that figured prominently in the discussion was coal. This is not surprising in view of the background of recent debates on the subject and the crucial role assigned to it in the Second Plan. Two diametrically opposite views on the correct solution of the problem were offered by Mr Somani and Mr Ashoke Mehta. Mr Mehta referred to the coal industry as the "fairly disorganised coal industry", though what he meant by that curious expression was not very clear.

Replying to the debate, Mr K. C. Reddy, Minister for Production, covered a wide ground. He sensibly rejected the suggestion made during the debate that all the industrial undertakings in the public sector must be the responsibility of a single Minister. He pointed out that the coming years would bring under State management a large number of diverse undertakings, and that no one single Minister can adequately deal with the problems arising out of them. Since, in the ultimate analysis, it is the Cabinet as a whole that was responsible to Parliament, further devolution of responsibility was inexpedient.

Dealing with the pattern of State undertakings, he refused to be dogmatic and stated that, in his view, the best pattern was that which made Government a shareholder in companies registered for specific purpose. He did not elaborate the point, of course, but his view would appear to gain support from the latest phase in the thinking of the official theoreticians of the British Labour party. Mr Hugh Gaitskell has elaborated his views from entirely different premises from those of Mr Reddy in a recent article in the Socialist International. He has come to the interesting conclusion that the best way of achieving socialism would be to give the State greater stake in the industrial life of the country, not by nationalisation, but by the conventional method of making it a majority shareholder. He even goes to the extent of suggesting that death duty and other forms of capital levy should be collected in kind so that the State may become a majority shareholder in a number of undertakings, using the power this gives it only when the needs of the community require the behaviour of an industry in a particular way. People who clamour for more nationalisation would do well to ponder over the interesting possibilities envisaged by this kind of organisation, which is not only more truly representative of the mixed economy we are supposed to be pursuing, but has other practical attractions like keeping competition alive.

Mr Reddy indicated progress achieved in several of the State undertakings and the plans for expansion in certain others. He also dealt with the criticism of agreements with foreign firms for expansion of particular industries like oil. He pointed out that one must take into account the circumstances in which such agreements were entered into and the technical backwardness of the country which made it difficult for us to dictate all the terms. Members, who were critical of the terms, did not appear to be sufficiently aware of the difficulty of attracting foreign interests in investing large sums of money for our industrial development.

Apart from these, two questions of the utmost importance were dealt with by the Minister. The first related to Government's plans regarding the popularisation of Ambar Charka. The other was the vexed question of location of industries.

On the Ambar Charka, Mr Reddy gave details of a number of decisions that Government have already taken. They have, for instance, decided to replace the traditional charka progressively by the Ambar Charka and have directed the All India Khadi and Village Industries Board to proceed with the manufacture of 10,000 Ambar Charkas. The report of the field tests carried out under the pilot project for Ambar Charka would be available by the end of this month or early next month. This report would then be considered by a committee of experts consisting of members of the Planning Commission, a representative of the Commerce and Industries Ministry and the Secretary of Ministry of Production as the Chairman. A final decision on the Ambar Charka would be taken after the committee submits its views.

Mr Reddy considered the financial implications of the adoption of the Ambar Charka on the scale envisaged. He pointed out that

Poor Progress in Housing

If housing schemes in the First Plan have not been carried through to any creditable extent, the reason is surely not lack of appreciation on Government's part of their importance to the individual's health and fitness or to national economic development. In fact, Government spokesmen have been most vocal in extolling the gainful employment that would spring from a large-scale house-building programme and the fillip it would give to many other industries. From the financial point of view the approach of Government was not altogether disappointing, since projects costing in total Rs 22 crores had been drawn up. But real achievement, or for that matter, even actual expenditure incurred appear to be negligible. Employers and cooperative societies were no doubt given the call to participate in the schemes, but for some reason, this contribution has been jejune.

The bulk of Government allocations went to the States which in most cases have fallen short of utilising the full quota of allotted money. In fact comprehensive statistics in this regard is not forthcoming; presumably a gap exists between targets and achievements. The election of a Central Housing Ministry about four years ago might have helped at the planning level but seemed to have had little influence or Central control at the implementation stage. Except for a few States like Bombay, PEPSU and Hyderabad progress has been singularly poor.

Particular industries can always resort to plausible excuses in delaying industrial housing schemes which they themselves might have drawn up. Housing facilities for employees remain insufficient in most factories, not to speak of coal miners who on the Production Minister's admission, are in a sorry plight.

The Housing Minister has claimed in the Lok Sabha that the First Plan has fulfilled its housing allocation of Rs 35 crores. As is usual in official pronouncements, the only criterion applied while evaluating the programme seems to be the expenditure target.

A comparative and close study has to be made of the schemes envisaged, the money sanctioned and actual results achieved, with a view to ensure that the allocation of Rs 120 crores under the Second Plan might mean a major step forward. That a sum of Rs 20 crores earmarked for slum clearance is far too inadequate, calls for a substantial upward revision of allocation in this respect.

Satisfaction may be derived that employers in industries have offered financial assistance on a liberal scale to housing schemes; but it seems that the Planning Commission are currently thinking in terms of compelling employers to build houses for their industrial labour. Indiscriminate compulsion will have adverse repercussions not only on the progress of the scheme itself but also on the cost of manufactures.

*

Excellent Showing of Engineering Industry

The Engineering industry is one of those which has shown the biggest progress under the First Plan and again, one of those on which the impact of the Second Plan will be greatest. The spectacular results of 1955 are the direct effect of large sums spent in the modernisation of equipment. The fruits have now begun to show. The setting up of new factories and the expansion of existing ones will be the chief note of activity in the next plan.

1955 was a milestone on the road to self-sufficiency in engineering and metallurgical products. Earlier statements by the Prime Minister and the Industries Minister that India should manufacture most of the machinery needed, say, in another ten years, stand to be reinforced by the latest available figures of production. The country will soon be manufacturing jute mill machinery, lathes, windmills, road rollers, agricultural tractors, automobiles ancillaries, according to the official review published recently. The production of ring spinning frames, electric winding wire, machine screws, duplicators, automobiles, sparking plugs, fuel injection equipment, electric house-service motors, incandescent lamps carding engines and small tools rose from 50 to 100 per cent in 1955 compared to the previous year. The year also saw several items manufactured for the first time in the country: such are typewriters drilling machines, lathes, hypodermic needles, tea dryers, self-doffing silver spinning frames, clinker breakers, and vertical multicylinder diesel engines.

Bicycle manufacture recorded an increase from 3.7 lakhs in 1954 to 5 lakhs. The Second Plan target of 1 million will be more than realisable if this rate is maintained. Sewing machines were more by 25 per cent; steel structures by 30 per cent and ball bearings by 11 per cent. Progress in production of textile machinery was satisfactory. Steps have been initiated for the manufacture of sugar, cement and printing machinery. It was thus a year of all round progress and sustained growth.

Encouraging as all this is, it remains that the level of engineering production in the next plan-period needs to be far in excess of what is being achieved today. This would depend on the removal of certain impediments now in the way of the industry and the fulfilment of certain of its essential requirements.

If the past year has been one of general progress it has also been heaviiy interspersed with labour unrest and strikes. This apart, the dearth of skilled labour might throw up a serious problem. Extensive provision of short-term training facilities could counteract the danger. Less tractable, but not impossible, will be the procurement of supervisory staff in adequate measure. As the Chairman of the Indian Engineering Association of Calcutta recently pointed out, engineers are in short supply all over the world.

NORTH INDIAN MARKETS

Stabilising Foodgrains Prices

Mr Ajit Prasad Jain, Food Minister, expressed his anxiety over the fluctuating levels in food-grains prices. Stabilisation of the market is the need of the hour. The Government propose to do it by building up a substantial buffer stock with imported wheat and rice. But is pointed out in knowledgeable quarters that stability in this front can be achieved mainly through internal effort rather than through imports.

Food grains prices continued to record a fall in the Hapur market. On slack outside support and eagerness on the part of stockists to sell away their stocks on the advent of the new crop. April 15 is the date on which new wheat crops are expected to flood the market.

Wheat average quality was quoted at Rs 14-4 and Khatti at Rs 13-14, a fortnight ago. But since then, ready food grains and pulses market is closed as a protest against the imposition of sales tax on commodities by the UP Government. Arrivals from villages were not lifted and consumers experience great difficulty in getting their daily quota of food grains. The multiple point tax was very much criticised and producers are hit badly. Arrangements are made however to ease the difficulty of small consumers.

As traders continued the hartal Government rushed wheat supplies to be sold on their account to big cities. Although ready grain and pulses market was closed, futures were allowed to work in restricted hours. Pulses recorded a fall during the week on bear pressure interested by poor offtake in the ready section. Prices were as follows: Peas jeth 873; Peas white Jeth 980; Arhar Jeth 10-8; Urd Baishakah 17-8.

The sugar market ruled quiet and depressed in the face of easy supply position; and poor outside enquiry. Most factories in West UP are getting sufficient cane to work to maximum capacity, whereas in the eastern part, some of the factories may have to close down due to the non-availability of cane. Total production of indigenous sugar by March 7 was 11,48,828 tons as against 1,063,183 tons during the corresponding period last year. Production this year is expected to reach the peak figure at 1.7 million tons.

Despite heavy offtake and despatches at 6,09,259 tons upto March 7 as against the corresponding low figure at 2,67,298 tons last year, the closing stock with the factories on this date was 951,550 tons as against 8,37,454 tons last year. Mill delivery prices recorded modest fall during the week to be quoted at: Jaswant Rs 28-9 Sinbhauli Rs 28-7 Mowana Rs 28-12. Daurala Rs 29-6. Amroha Rs 28, Bijnore Rs 28, Mansoorpur Rs 29-8. Rampur Rs 31, Retail Rs 30.4, Khandsari Rs 23 to Rs 26-8 per maund.

Ready gur market is also closed since Monday, as a protest against the imposition of sales tax by the State Government. Arrivals from villages were not lifted and the despatches to outside destinations were very small. The local stock is put at 1,20,000 maunds.

Future prices of gur have recorded fall during the week, influenced by depressed conditions in the ready section and continued bear pressure from big speculators. Opening at Rs 12 for Baisakh delivery on Friday 30-3-56 and touching the highest same day at Rs 12-1 it is quoted at Rs 11-4-6 on April 6. On Thursday, Gur Fagun also started during the week and is quoted at Rs 9-12-6 on the 6th.

The Peninsula

Pandit Nehru in Mysore

IN the course of a couple of months, Mysore has the good fortune to play host to the Prime Minister twice. He visited Mysore in connection with the ECAFE Annual Meeting; on that occasion his activities could not extend beyond the immediate purpose of the visit.

This month, though the Prime Minister's visit to Mysore was announced early, there was no indication of any specific purpose. His itinerary includes a visit to the Kirloskar Company and an address to the working men of the Kirloskar machinery tool factory, a public meeting there and the inspection of Mahatma Gandhi Hydro Electric Works at Jog. Altogether the Prime Minister spends about four days in the State.

One does not like to attribute any special political significance to this visit; but it will be remembered that in the reorganisation of States, the Mysore Cabinet is the only one which has stood by the idea of multi-lingual states and, in the discussion of associated questions, endeavoured to eliminate emotionalism of any kind. Politically, therefore, Mysore holds a special appeal for the Prime Minister, who evidently, is growing more and more disgusted over the way in which people have been behaving, to push their demands for boundary adjustments.

There is no doubt that this question has tended to remain uppermost in the mind of the Prime Minister during his visit to Mysore. With the poignance, which is becoming painfully more frequent in his language, he has again started imploring every Indian to discard all separatist tendencies and remember that it is now the duty of all the people to fight for the country's economic salvation. Without united effort adequate economic progress could not be attained.

Beneath every sentence he uttered at Gokak and Hubli, there lurks profound misgivings about the future of national unity. The more intense the misgiving, the more impassioned the appeal to the people not to forget the lessons of history and to bury their petty feuds once and for all. To the Mysorians he could phrase this appeal in rather felicitous terms. "I appeal to you not to overlook the national unity of India in the immediate joy of having your own State"

Throughout the speech, Pandit Nehru was endeavouring to emphasise the paramount lesson of Indian history that whenever separatist tendency became powerful, the nation got weakened and ultimately disrupted. He appealed to the people to think of the country as one, irrespective of what the internal political set-up was and warned that if we again pushed up differences of language or caste to the fore they would only be weakening further and working for the downfall of India.

In his address of Bijapur, he described the agitation over reorganisation of states, as self-inflicted injuries which would have only one result, further disunity and disruption, finally affecting the very existence of the nation. He compared these agitations between one group and another to one hand beating the other and inflicting pain on the common body. "We are all part of one body. If a single finger is cut, the entire body suffers; India is the body and the States are its fingers". He condemned in unmistakable terms, Satyagraha of the type now witnessed. Expressing abhorence for Satyagraha or agitation in the name of language, he said that when it reached a certain stage it caused general unhappiness and had to be severely condemned.

After all, Pandit Nehru reminded the audience that there was no finality about the decisions made by the Government; some of their conclusions might be wrong and this could be brought home to them through representation and pursuasion in a democratic manner. The Government were responsible to the people; and there was no room for pressure tactics, like the present kind of satyagraha. He drew attention to the fact that while he himself was personally against the dissolution of Hyderabad he could not stand in the way of such a development when he found that the people wanted it.

At Hubli, the Prime Minister directed a vehement attack against the cry for the establishment of a Hindu Rashtra. Professing disgust with the mentality of Hindu communalists, he accused the Hindu Mahasabha for attempting to revive a mentality which in the past had caused ruin to the country. The cry for Hindu Rashtra was condemned as rather out of date and that something which could only take them back to strife, misery and slavery. He said that the Hindu Mahasabha was trying to undermine national unity and bring about disruption among the various communities in the country.

Hindu casteism came in for equally forceful criticism. Pandit Nehru could not understand how those who raised the cry of Hindu Rashtra subjected their own community and kept them in serfdom. Having created and perpetrated disunity in their own ranks, they have spread hatred between one community and another.

In these speeches the Prime Minister referred to the significance of the Second Plan and the priority the Plan should enjoy in the attention of the general people. He reaffirmed that within a short period of time, every village in India would be covered by Community Projects; in the task of economic building up and social reconstruction, he appealed to women to play their part fully. It was his hope that women could set aright many things more easily than men.

*

Rajajis Retirment

There will always be a few men in the world for whom the word 'retirement' can have no meaning. Rajaji is easily one among them. Often, he has tried to retreat from the din and fury of public life and withdraw unto himself. Even these withdrawals have not been opportunities for inaction. When he is not actively engaged in politics, he is deeply immersed in creative literature or some all absorbing study.

The vicissitudes of his public life are a matter for some-what gloomy retrospect. Some great frustration has invariably been the cause of this temporary retreats, and almost every time the cause which he stood for or the idea he propagated was vindicated by subsequent developments.

Of late, this resourceful and farseeing statesman has been pointing out with all the vehemence he could command that the country was going astray in some vital respects; and that the leadership was not playing its part correctly. He will himself be the first man to hope that his own version of contemporary events is wrong; but somehow he is unable to cherish that hope. His own voice has ceased to count in big no less than in small matters, either in his Province or in the wider all-India sphere. For that, he may not be sorry. What he is really sorry for is that on one else either seems capable of arresting trends which in his opinion are clearly ruinous to the country.

In such a mood, continuance in his public life, even association with it in a half-hearted manner will be irksome, profit-less and self-stultifying. It is a great misfortune that a person who could find a solution for very awkward situation, who could provide counsel on any intricate question and who could see things very much beyond what most of his compeers are capable of, has become a lone and ineffective voice. His retirement is a great political sun-set; the pity is that it is scarcely recognised as such.

South Indian Notes

Recurrent Complaints

That several points made out by Mr M. A. Chidambaram in his address from the Chair at previous general meetings of the South Indian Chamber of Commerce, should have similarly recurred, is a reflection not altogether flattering to the co-operation obtaining between Government and the mercantile community. In spite of Mr Chidambaram's anxiety that Chambers of Commerce should not become mere protesting and petitioning bodies, he has found it necessary to restate the disapproval of businessmen over several Government measures.

The rigorous taxation policies are severely criticised. The new Company Law is viewed as restricting the initiative of directors and managers in promoting new industries. Nationalisation of life insurance with its drastic compensation proposals is considered as a blow to the confidence of the private sector.

An altogether different category of complaints is represented by the neglect of the South in respect of industrial development. Location of a heavy electrical industry and a ship-building industry have been specially pleaded for. The importance of better transport facilities is underlined.

The State Trading Corporation and the multipoint sales tax have been two other prominent, if familiar, targets of criticism. In this rather long list, there are issues, like industrialisation, on which Government and the private sector can co-operate. Over others like State Trading and Insurance Nationalisation, ideological agreement is difficult but it would be in the interests of private industry and trade interests to come round and reconcile themselves to policies which unquestionably have the solid support of public opinion. And, on questions like the abolition of multipoint sales tax and introducing the levy at single point, it is upto Government to appreciate the genuine grievances of traders, to eliminate unnecessary procedures and to simplify complicated ones.

In his inaugural address, the Madras Chief Minister said that Government have no hesitation to adopt the single point levy provided it did not involve a loss in revenue. So far as this statement goes, it is to be welcomed. But it remains to study the issue closely in relation to its possible effects on revenue. Such a step seems to have been overdelayed.

News that the Planning Commission propose to draw up a master-plan of industrial location was received with comfort and satisfaction in this part of the country. The State Government as well as the Chambers of Commerce had long to put up with specious arguments about the dearth of natural mineral resources in the south. But continuous goading of the Central Government seems to have paid.

The visit of Mr K. C. Reddy to Salem provided the occasion for an authoritative statement confirming the immediate possibility of starting several basic industries in this region. An aluminium plant with a capacity of 10,000 tons is likely to be set in Salem in the near future. Bauxite deposits at the Sheveroy Hills are reported to be plentiful. Investigations have actually shown that there is scope for setting up a bigger unit. The supply of power offers a serious problem and the vagaries of monsoons changing the water levels in reservoirs will have soon to be countered by suitable action. However, according to experts, it might be possible to secure from the Madras grid about 35,000 KW for the aluminium plant.

*

Steel & Aluminium Plants

The proposal for a steel plant at Salem was at one time officially flouted as a flight of imagination. A re-appraisal has now taken place. One hindrance, namely the lack of coal in the vicinity will be removed when the Neiveli Project gets going. Another was that the iron content of ore in this region was small at only 45 per cent. But it is pointed out that countries like England and Germany have long been engaged themselves profitably in exploiting ore of lower iron content. There is little doubt now left that, if proceeded on the right lines, it would be possible to run a steel plant on a commercial basis. The President of the District Chamber of Commerce has proposed that the capacity of the plant can provisionally be fixed at 20,000 tons. Mr Reddy was sympathetic to the suggestion.

There is also a strong case for allowing Mysore Government's steel plant at Badravati to instal up to date plant and equipment for the manufacture of specialised steels. The special advantages obtaining in Mysore for such expansion apart, the need for ending the present dependence on imports for such varieties is an argument in support of the Mysore Government's plea.

SOUTH INDIAN MARKETS

Hides Prices Look up

THE hides and skins market showed steady and marked improvement during the last week. Arrivals of tanned cow hides were fair and brisk clearance was reported at 6 pies per pound higher than in the previous week. There was moderate clearance in the case of tanned buff hides; and arrivals were fair. Prices remained unchanged; there was steady clearance of cow hides and buff calf and prices were firm.

During midweek, enquiries from importing houses of London established confidence in Madras sellers. This made the seliers to prefer to mark time. Arrivals of premium goods were restricted and enquiries for run parcels were unsatisfied. Madras selling prices were 50d basis for 5/5½ lbs. 40d basis for 8/8½ lbs and 36/37 basis for 10/12 lbs. premium standards were on quotation of 55d, 45d, 35d respectively. Market faq. in some instance were sold on 75d basis for 1/1½ lbs. run.

Inferior fifths cow hides were firm. London enquiries continued to be encouraging; and light weight inferiors were in demand at 34d. But Madras sellers, thinking in terms of 35d, turned down the offers. Trading in tanned sheeps skin was quiet. Small business in pemium class was reported at unchanged levels. Raw goats were firm with some advances in prices in certain centres. Raw sheep rates were steady. The following are the figures of exports of hides and skins to the UK during the month March 1956 in bales: cow hides 3301; cow calf 373; buff calf 558; buff hides 26; and tanned goat 1240; sheep 569.

Prices of seed and oil declined during the week in the absence of buying interest. Arrivals of seeds averaged from 30 to 40 tons a day with local commission houses increased. The quotation in superior qualities declined from Rs 160 to 156/157 per candy; and bold varities trom Rs 154 to 147 per candy.

Rotary oil was bought at Rs 5-6 per candy. There was no buying interest from shippers in the absence of export quota. Quotation for ready declined from 317 to 311 per candy and for April delivery from 318-8 to 312. Thus the sensational advance in prices noticeable in past week was arrested; but, on the whole, the price movement was erratic.

Easiness continue to prevail in the Alleppy cocoanut oil market. Spot demand stood low; and advices from neighbouring markets lacked stimulation. The undertone was easy and turnover comparatively poor. Commencing at Rs 395 per candy spot oil gradually looked up at Rs 400. It closed with reaction to Rs 397-8 for sellers. April and May futures opened at Rs 399 and Rs 401 per candy and sustained, on balance, loss of Re 1 each, after midsession drop to Rs 397 and 399. Trading was listless and operative and speculative interest poor. Oil cake spot delivery was done around Rs 87-8 per candy while May delivery hovered around Rs 85 in steady front. Mills absorbed faq. copra at round Rs 272-8 per candy; Rai Whites were dealt at Rs 287-8 and Rai Moong at Rs 277-8.

*

EDITORIAL NOTES

(Continued from page 675)

The report recounts at some length the findings of the Rice Milling Committee. Except for some isolated facts regarding Government grants for promotion of hand pounding, no comparative inference is possible between the position of the rice-pounding industry before and after the enforcement of the policy of freezing the rice-mill capacity.

A regular flow of subsidies has enabled several village industries like oil-pressing, hand-made paper, palm, gur, etc. to show better results. Lack of trained men continues to obstruct the development of cottage match factories. 20 match factories have been established and more are under way.

A more specialised activity like sericulture, naturally presents harder problems. The high level of prices in 1954-55 has been arrested by import restrictions through the agency of the Silk Board which also undertook distribution. Planned development was possible with the stabilisation of the market for raw silk. It is claimed that it has been possible to ensure a steady and fair remuneration to silk-work rearers and cottage reelers. Production has recovered from the disastrous fall in 1952. In 1954, the figure was 2,398,498 lbs. 1955 figures are expected to be better.

The Hongkong and Shanghai Banking Corporation

Progress Achieved in Economic Development

Need for Steady and Ever-Increasing Supply of Skilled Aid

Review of Far East Conditions By the Chairman, The Hon. C. Blaker, M.C., E.D.

The following are extracts from the Statement of the Chairman, the Hon. C. Blaker, M.C., E.D., of the Hongkong and Shanghai Banking Corporation:

In my statement last year I was able to record that an improvement in the cold war had been noticeable. I am now able to say that this trend continued during the summer of 1955 when the climate in international relations became distinctly milder with the meeting of the heads of governments and the feeling that a new spirit had been generated—the spirit of Geneva. Unfortunately the meeting of the Foreign Ministers in the autumn, with the deadlock over Germany, brought a lowering of the temperature which recent events in the Middle East have done nothing to improve.

Looking at the year as a whole, however, there seems to be ground for hope that the danger of war has been lessened, both as a result of the various discussions that have taken place and the growing feeling that the power of modern weapons has produced a form of stalemate. In the Far East there has been a period of quiet—as Mr. Macmillan put it in a speech in Parliament in December—"A sort of de facto stabilisation had been secured in the Far East at the expense of varying degrees of partition." Thus, although there remain a number of difficult international questions on which agreement has not been reached, these have not developed to such an extent as to give rise to any fresh disturbances.

Agreement was reached on the introduction of sixteen new members to the United Nations in December, thus ending a deadlock which had existed for many years. We particularly welcome the membership of Ceylon, whose influence in world affairs continued to increase, and the two new states of Cambodia and Laos. It is, however, most regrettable that Japan was not elected at the same time and I hope that during the next session some settlement will enable this important country to be represented.

Amongst the many conferences that were held during the year, the one at Bandung last April of Asian and African powers was of particular significance to this area. As has frequently been the case recently, it was not the decisions reached which gave this conference its importance but the fact that twenty-nine nations, many of whose sovereignty is of comparatively recent date and with different political forms of government, were able to discuss their common problems in a spirit of compromise.

In the economic sphere considerable industrial expansion continued and in many of the more highly developed countries there were indications that the economy was becoming over-strained. A growing industrial demand for materials and labour, coupled with a high level of employment, resulted in active or threatened domestic inflation which, in some countries, was having an adverse effect on the balance of payments.

In the Asian countries in which most of our branches are situated progress continued to be made in the carrying out of the various development plans, but in many cases second thoughts had to be given to the targets and the speed at which they could be reached. The restricting factors here were, however, mainly lack of capital and shortage of trained technicians. These continued to limit the improvement in agriculture and industrial development which expanding populations make so necessary. Although dearer money was resorted to and had a limited effect in urban economies such as Hong Kong's, it was not in these countries the real answer to the problem. This was not to restrict demand in an over-expanded economy, but to improve the productive resources quickly enough to provide work for the growing population and at the same time to increase the supply of food and consumer goods to meet the requirements arising as a result of industrialisation.

AID FOR UNDER-DEVELOPED COUNTRIES

The Colombo Plan has been referred to from this Chair on numerous occasions and the importance of it has been stressed not only because of the continuing need for economic assistance in South East Asia, but also for the reason that this Plan has generally found favour with the countries in the area. The report by the Council for Technical Co-operation in South and South East Asia for 1954-55 shows that continued progress has been made in providing assistance in training technicians and supplying experts to aid development schemes. It was encouraging to see that while much of the assistance came from outside the area considerable progress was made in mutual aid. The report lays particular stress on the need for "a steady and ever-increasing supply of skilled administrators and technicians" who should be given "full opportunities to use their newly acquired skill at home." It recommends that "counterparts or understudies should be assigned to the expert on continuing projects so as to ensure continuity" and that new projects are "allotted the right priority". The shortage of trained personnel is probably the most serious limiting factor in the plans of these countries for greater industrialisation and the recommendations in this report deserve serious consideration. The meeting of the Consultative Committee was held in Singapore in October and made the welcome decision that the Colombo Plan would be extended from July 1957 to 30th June, 1961, and that the future of the Plan would be considered in 1959. Considerable increases in aid were promised and although certain of the members felt that larger amounts of external capital were required the meeting appeared generally satisfied with the progress made. In addition to the Colombo Plan, assistance continues to be granted by the U.S. International Co-operation Administration, various United Nations agencies and the International Bank for Reconstruction and Development. A new corporation, an affiliate of the International Bank, the "International Finance Corporation", to which I referred last year, is in process of formation. This organisation will have power to invest in productive private enterprises without the necessity of a government guarantee, which is a prerequisite of all International Bank loans. The total capital proposed is U.S.$100 millions, but the Corporation cannot be brought into existence until at least thirty countries, with subscriptions amounting to U.S.$75 millions, have given their formal acceptance. Several countries have already taken this step including the United States and the United Kingdom, and it seems likely that there will be no difficulties in the establishment of this new organisation, which should be of considerable benefit to under-developed area.

CHINA.

Shareholders of the Bank who knew China in the days prior to the establishment of the Government of the People's Republic of China must surely find it difficult to adapt their minds to the real meaning of the official Chinese policy on present day rural, industrial and sociological matters in that country. There are many pessimists just as there are many optimists in regard to the future of China but lack of information, other than official pronouncements, leaves many with a feeling of uncertainty. Even here in Hong Kong, close as we are to the Chinese scene, we find it hard to keep pace with and to evaluate the day to day economic and industrial changes and developments which are so rapidly being evolved. Nor do we know, neither can we judge, how the Chinese people as a whole —and particularly the agricultural population—are reacting to the kaleidoscopic events which have affected their lives and livelihood so closely in the last few years.

Collectivization is certainly proceeding with ruthless vigour: at the same time almost the whole range of agricultural production is being directed and controlled from above in a way which has had no previous parallel in Asia. This line of policy is, of course, tied up with the current Five Year Plan and with industrialisation. The whole picture reveals remarkable speed of development. There is special concentration on heavy industries with extensive Russian help. Railway and road communications are being opened up at an astonishing pace, even if allowances are made for some work of a rough and temporary nature.

The key point in the economic policy of China has been summarized as follows: to build a socialist society, which cannot be raised on the foundations of a small-peasant economy: its foundations must be based on large-scale industry and large-scale collective farming.

Such being the fixed policy of the Chinese Government, if British merchants are to retain a share in the China trade and take advantage of the situation, it is important that British policy should be re-examined in collaboration with other friendly governments. No action of the kind we have in mind can however be taken until there is a considerable reduction of the items on the embargo list. The

question of the embargo has raised so much controversy in recent years that it has not been easy to discuss it objectively and there are still no signs of any narrowing of the gap between the two points of view. Although we have done our best to carry out not only the letter but the spirit of this embargo we make no secret of the fact that, like almost all British merchants and bankers interested in the China trade, we will welcome the day it is abolished but as total abolition cannot be quickly brought about, linked as it is with numerous other problems, we are contenting ourselves for the time being with advocating the reduction of the Chinese embargo list to make it similar to the Russian list. This would seem to be the logical solution as it is idle to suppose that China is not able to obtain goods shipped from the West to Russia. Instances have in fact occurred where China has exported to Hong Kong goods which are not permitted to be sent into China under the embargo. We had hoped that at the recent talks in Washington some form of agreement of this nature would have been reached but it appears that all that was decided was that a review of the control of trade with China would be made.

Both Hong Kong and Malaya have suffered greatly as a result of this embargo and there is the danger, particularly for Hong Kong and to a lesser degree for Malaya, that, if no substantial relaxation comes soon, the trade lost may never be regained. China is already leaning heavily on supplies from Eastern European countries and this trend is likely to increase so long as the emphasis on all arrangements for exchange of goods with China is on bilateral agreements. With the overall control of the economy which the Chinese Government now exercises, bilateral and barter agreements may be difficult to avoid but under freer conditions the advantage of dealing with Hong Kong merchants, experienced as they are in supplying the China market, would no doubt be appreciated. The Sino-British Trade Committee have recently been informed by the Chinese Government that they see no object in any further visits until there is a considerable relaxation of the embargo. This may be so as far as large parties are concerned but I am sure that a great deal of good would result if it were made easier for individual merchants to visit China to discuss their own particular business problems.

Negotiations regarding the winding up of our affairs in China have made considerable progress during the year and we have been able to reach a settlement of our local currency position but there have been no further developments in respect of our foreign currency liabilities. This settlement has not been made without cost to the Bank but under the circumstances no other course was open to us. Mr. Yoxall, our Manager in Shanghai, who bore the brunt of the negotiations, finally obtained permission to leave and has now retired.

HONGKONG

Hong Kong has not featured much in world news during the last year but this lack of publicity has not meant that progress has not been made but only that it has been steady rather than spectacular.

The development of local industries, which has been such an important feature of recent years, continued and 372 new factories were registered during the year while the production of electricity increased by 15%. Energetic efforts were made to develop new markets and there are welcome signs that the importance of maintaining uniform standards of quality is being more readily understood. The formation of the Hong Kong Exporters Association, with a committee composed of many of our leading merchant houses, should greatly assist the marketing of the products of our industries. An invisible export is provided by the large numbers of tourists, both service and civilian, who visit Hong Kong each year. It has been proposed that a Hong Kong Tourist Association should be formed to develop our tourist trade and a working committee of representatives of the interests concerned was appointed in August to look into the question.

TRADE OF HONG KONG.

Hong Kong's trade in 1955 increased by 7% in value while volume showed a rise of 14%. It is encouraging that the rise has been steady over the last few months of the year and that exports of Hong Kong products continue to increase. Exports to the United Kingdom increased by H.K.$89 millions. This will not cause any surprise to shareholders, who will no doubt have seen many references to this subject in the press, but imports from that country also rose by H.K.$72 millions which is given considerably less publicity there. Even now our exports to the United Kingdom are still only 57% of our imports from there. Trade with China in total was about the same as in 1954 but the drop of just over H.K.$200 millions in exports was offset by a rise in imports of a similar amount. This decrease in exports was caused by a considerable reduction in each of the three largest groups of commodities—namely dyestuffs, fertilizers and pharmaceuticals—which we have recently been shipping to China. Trade with other East Asian countries showed an overall increase and it was encouraging to see the steady rise in exports to Indonesia, Indo-China and Thailand in the closing months of the year.

FINANCES OF HONG KONG

The Financial Secretary, Mr. A. G. Clarke, in his speech in the Legislative Council at the end of last month, when he presented the Budget, was able to show that the Colony's finances are in a very healthy state. A surplus of over H.K.$16 millions was expected for the current year which was brought about by both higher revenue and lower expenditure than was estimated. Salaries and Profits tax showed a fall but this was more than made up by rises under other headings, a large part of which was due to the active conditions in the property market and building trades. For the financial year 1956/57 a deficit of H.K.$43½ millions is estimated but this includes expenditure of H.K.$30 millions for the Tai Lam Chung scheme and H.K.$32 millions for the air-port. Both these items are public works of a capital nature which are essential to the future of the Colony and for this reason the size of the deficit should not give cause for alarm.

At the conclusion of his address Mr. Clarke took stock of the Colony's financial position ten years after the re-establishment of civil government. This showed that, in spite of the heavy programme of rehabilitation, the cost of housing the large number of refugees and general post-war development, Hong Kong has built up a reserve of a year's revenue with a public debt of less than two months' income. When it is remembered that the Colony started with no surplus funds after the war this happy state of affairs I think reflects great credit on Mr. Clarke and his predecessor as well as on the industrious people of Hong Kong whose energy and adaptability have made it possible.

JAPAN

Japan's population is likely to pass the ninety million mark during 1956 and any analysis of economic and political developments in the country cannot ignore the steadily increasing pressure which a rising population makes on available resources. Economically 1955 was a good year and the visible adverse trade balance was reduced by U.S.$300 millions while foreign exchange receipts, which include invisibles, exceeded payments by nearly U.S.$500 millions. This improvement has been achieved in the face of a gradual but nevertheless steady decrease in the foreign currency obtained from the U.S. Forces. The deflationary policy which we mentioned last year continued during 1955 and commercial banks' borrowings from the Bank of Japan reached the lowest level since 1946; but helped by a lively export demand, no serious restriction in business activity was apparent although unemployment figures gave cause for concern. Good crops of rice and cereals contributed to the improved balance of payments position. The draft budget, which is at present before the Budget Committee in the Diet, shows little change from last year and although the note issue rose by 8% this is considered to be a reasonable reflection of the general expansion in production, including the bumper rice crop. The Anglo-Japanese Sterling Payments Agreement of January 1954 was extended until 30th September 1956 with Japan agreeing to remove certain restrictions on imports from the sterling area. This agreement will be reviewed again this year. During the year Japan became a full member of GATT but her satisfaction was tempered by the fact that a number of nations invoked Article 35 against her.

Three agreements have been made with the United States Government covering the sale to Japan of agricultural produce against payment in Yen while part of the Yen proceeds is available as a long term loan for capital development. Considerable assistance is also being given by the United States Government in providing technical training and the International Bank for Reconstruction and Development has recently agreed to grant a loan of U.S.$8 millions for the modernization of heavy industry. All these arrangements should greatly benefit Japan's productive resources.

On the whole Japan has recently made much progress but the rising population makes a continuing expansion of the export trade essential which is likely in the long run to influence political decisions.

INDONESIA

The political situation in Indonesia is extremely complex and it is often difficult for foreign merchants and Bankers, occupied as they are with their day-to-day tasks, to follow the trend of events. The rivalry of political and military leaders has been a deciding factor in the composition and policies of recent governments and the elections have on that account been repeatedly postponed. It is therefore a matter of considerable importance that these elections were finally held towards the end of the year and that polling day passed off without major incident. Provisional results show that no one of the four major parties obtained sufficient seats to form a government on its own and some form of coalition seems probable. The government, which has been in office since August, under the leadership of Mr. Burhanuddin Harahap, appears to have tackled the many problems which faced it with vigour and, aided by the rise in the price of rubber, it has greatly improved the economic position of the country. We have more than once quoted from the Bank Indonesia Report, as this always gives an objective view of conditions in the country, and in the Report for 1954/5 published last year the Governor gave warning of the dangers of the continuing increase in the supply of money and went on to show the necessity of weakening the effect

of inflation "which should primarily be brought about by reducing the cash deficit of the government". The need for such action is made apparent from a study of the current advance to the government by the Bank Indonesia. This rose from Rupiahs 1433 millions at the end of 1953 to Rupiahs 4477 millions at the end of 1954 and Rupiahs 5959 millions in June 1955. During the second half of the year a generally tighter money policy was adopted and an overhaul of the systems of import and export control was carried out. These measures have resulted in a drop in the advance to the government to Rupiahs 4074 millions at the end of 1955. Gold and foreign exchange reserves have increased and the estimate for the 1953 budget shows a deficit of Rupiahs 1,000 millions—a considerable reduction. The improvement in the free market rates for gold and foreign currencies shows that there is increased confidence in the economy.

Relations with Holland have unfortunately deteriorated in recent years and discussions over a number of outstanding matters were held recently at Geneva. Although at one time there seemed to be hope of some form of agreement being reached the conference ended in failure and Indonesia subsequently abrogated the Netherlands Indonesian Union and the financial and economic agreements entered into in 1949.

THAILAND

Reports from Bangkok indicate that there has been a considerable improvement in both the political and economic fields since my statement was issued last year. For this a great deal of the credit is due to the Prime Minister, Field Marshal Pibul Songgram who, on his return from a successful overseas tour, introduced measures aimed at stamping out corruption in the administration and permitting freedom of speech both at public meetings and in the press. It is too early to judge how permanent these reforms will be, as personalities play a large part in politics in Thailand, and already there are signs of restriction in public discussion, but the immediate outlook is encouraging. So also is the economic position, as exports were well maintained and in particular the tonnage of rice exported was greater than in 1954 although prices were lower. During the year all the regulations which necessitated surrender of part of the foreign exchange proceeds of exports at the official rate were withdrawn but rates of duty were raised to compensate. Import licence requirements were abolished in September for the majority of goods and customs duties were raised at the same time which should have a beneficial effect on the revenue.

Exchange rates during the first half of the year showed wide fluctuations but in July a Stabilization Fund was set up which is operated by the Bank of Thailand. This Fund seems to have been successfully managed and since its formation the market has been much more stable. Ordinary expenditure in the budget was balanced by revenue but appropriations for improving transport and irrigation resulted in an overall deficit which will be financed by loans and from treasury balances.

The above are a few of the many developments that have taken place in Thailand in 1955, and while last year I opened this paragraph with a reference to "cautious pessimism" I think it would be reasonable to close it this year with the words "cautious optimism".

VIETNAM

The partitition of Indo-China left behind many political and economic problems to be solved by the State of Vietnam. Amongst these was the settlement of the many refugees who poured in from the north, and the challenge to the authority of the government by several warring factions, each with control over private armies. Economically there was the task of rehabilitation after the ravages of war and the building up of viable economy—deprived as the state is of the industries and rich coal fields of the north. In these circumstances progress must inevitably be slow but a great deal has already been achieved with the help of substantial aid from the United States of America and the government has considerably strengthened its internal position by successful military action. At a plebiscite in October Mr. Ngo Dinh Diem was elected Head of State, in place of Emperor Bao Dai, and he has been recognised as such by the French and other governments. The loosening of the ties with France has resulted in a gradual switch of trade from the Franc area and the economic and financial agreement with France was allowed to lapse at the end of 1955. Elections have recently been held to a Constituent Assembly for the purpose of considering the new Constitution but the problem of the joint elections with the north, which were part of the Geneva agreement to decide the future government of the whole country, remains.

CAMBODIA

Our Office in Phnom-penh got off to a satisfactory start and will I think prove to have been worth while. The port itself is, however, far from satisfactory due to the shallowness of the river but the scheme for the deep water port of Kompong Som is being pushed forward. Prince Sihanouk, the Prime Minister, had a sweeping success in the elections in September and the political situation appears stable.

MALAYA

Singapore is our largest office in the East after Hong Kong and in the Federation of Malaya we have a greater number of offices than in any other territory. The recent constitutional developments are therefore of great interest to the Bank and although it is always difficult to assess the importance of contemporary events, until the passing of time enables a more detached view to be taken, it appears probable that 1955 will be considered a most significant year. Elections were held in both territories and a great part of the responsibility for the day-to-day government passed to the ministers whose parties held majorities in the newly elected legislatures. As the months moved on however, it became clear that the desire for a more rapid transfer to these ministers of such powers as had been reserved was becoming more insistent and that to a considerable extent this desire would be satisfied. Shareholders have no doubt been following the course of events in these territories, as this has had a great deal of publicity in the British press, and they will therefore be aware of the way matters have developed. I sincerely hope so as it is not possible here to do more than touch on one or two of the more important items.

Arrangements were made during the summer for delegations from both territories to visit London during 1956 to discuss future political developments and the visit of Tengku Abdul Rahman and his ministers took place in January. At this meeting it was decided that every effort would be made for the Federation to have full self-government and independence within the Commonwealth by August 1957 and a Constitutional Commission would be appointed immediately to draw up a constitution. Britain would continue until that date to be responsible for foreign affairs and external defence but there would be changes in the administration of internal defence arrangements and the Chief Minister has recently taken over the portfolio of Internal Defence and Security. Responsibility for all financial matters, at present discharged by the Financial Secretary, would be transferred at once to an elected minister and Colonel H. S. Lee has taken over this portfolio. The Federation recognised "the important part which overseas capital must continue to play in the economic and social development of Malaya" and that "membership of the Sterling Area was to the common advantage of the Federation and the other members". The talks with the Singapore Government will take place in April but Mr. Marshall, the Chief Minister, with two of his colleagues, visited the United Kingdom in December when the agenda was agreed.

The discussions in London set the course for constitutional developments in these countries and I should like to wish them every success in the days that lie ahead; and to hope that their approach to the many difficult problems, both political and economic, with which they are likely to be faced will be of advantage to them both and to the Commonwealth as a whole. One of the most important of these problems will be the relationship between the two territories, as a measure of agreement on many matters of policy will be to their mutual benefit.

Economically, both have had a good year due to the rise in the prices of rubber and tin. The price of rubber was fairly steady during the first half of the year but there was a considerable rise during August and September and the average for the year increased by over one shilling per pound. Exports from Malaya were 994,000 tons compared with 915,000 tons the year before. The challenge by the synthetic industry, however, is always present and it is encouraging that a scheme to foster replanting, both for estates and smallholders, was finally put into operation. This scheme has been drawn up after consideration of the recommendations of the Mudie Report and the Rubber Producers' Council and is in the nature of a compromise aimed at assisting replanting where it is most needed.

The price of tin rose slowly during the major part of the year but there was a jump in December due to a shortage of stocks for spot delivery. Indonesia's recent decision to ratify the International Tin Agreement will enable the International Tin Council to be inaugurated but the building up of the buffer pool may take some time so long as prices remain at present levels. Tin production in Malaya was a post-war record while exports were 71,150 tons compared with 70,333 tons in 1954. Production of iron ore has been increasing in recent years and the total for 1955 was 1,466,184 tons as compared with 1,212,780 tons in 1954.

The Malayan trade figures show a favourable balance of M.$335 million with imports at M.$3,821 millions and exports at M.$4,156 millions.

The budgets of both territories showed few changes in taxation but this was mainly due to the fact that the Federation Government, having been in office for only a few months, decided to introduce a "standstill" budget for the time being and Singapore decided not to act on their own. From a study of the speeches however it would seem that some increases cannot be long delayed. Due to the rise in the price of rubber the Federation expected to turn an estimated deficit of M.$148 millions into a surplus of M.$42 millions. For the forthcoming year estimated expenditure shows an increase of M.$86 millions, including a grant of M.$23 million to the rubber industry for replanting, leaving a deficit of M.$50 millions. Singapore estimated a surplus of M.$2 millions for 1955 with a deficit of M.$15 millions for 1956.

The report of the International Bank Mission, which visited Malaya early in 1954, was published in September 1955 and gave a com-

prehensive survey of economic conditions in the Federation and Singapore and made numerous recommendations for increasing the territories' productive resources. This useful report is, I understand, being studied by the two governments and no doubt action on some of its recommendations will be taken shortly.

Although considerable successes have been achieved in the eight year old war against the terrorists, incidents continue to occur at frequent intervals and the terrorist organisation is still a very active force. In the hope of hastening the end of the fighting the Federation Government declared an amnesty in September offering freedom from prosecution to those who surrendered, but response to this offer was disappointing. Arrangements were, however, made for a meeting between the two Chief Ministers and the Communist leader, Chin Peng, which was held at the end of December. This meeting proved a failure and the amnesty terms were withdrawn on the 8th February and in broadcasts to the people of Malaya, Tengku Abdul Rahman has made it clear that action will continue against the terrorists until they surrender. Disappointing as it is that no tangible results have been achieved as a result of the amnesty, it has been clearly shown that the intention of the terrorists is to overthrow the elected government of the Federation and this has strengthened the government's hand. Tengku Abdul Rahman has been resolute in his approach to this problem and Mr. Marshall showed considerable political courage in his successful effort to place certain of the emergency regulations on the statute book.

I should like to pay tribute to the Commonwealth Forces who have served in Malaya since the Emergency began. To their courage and devotion to duty the progress so far made is due. Never knowing where or when the enemy would strike their task has not been an enviable one and many have lost their lives.

In Singapore there have been considerable labour disputes and unrest resulting in a wave of strikes which has had a disturbing effect on the economy. According to statistics issued by the Labour Department, nearly 950,000 man days were lost during the year. The danger of labour disputes to a free port, dependent to such a large extent on its entrepot trade, is so evident that the finding of an early solution to this problem would appear to be one of the most urgent questions which faces the Singapore Government.

Before I leave Malaya I would like to mention the new air-port at Paya Lebar in Singapore which was opened by Mr. Lennox-Boyd in August. This is one of the largest in the East and will maintain Singapore's position as an important junction on the international air routes.

INDIA

India has made no secret of the fact that she is moving towards "a socialistic pattern of society" and this goal has been generally accepted by the public. Until recently the movement in this direction has been gradual under the first five year plan, but the pace is likely to be increased with the introduction of the second five year plan, a much more ambitious programme. Evidence of this can already be seen in the revision of Article 31 of the Constitution, to which reference was made last year, the Companies Act 1956, with its restriction on the activities of Managing Agents, and the recent decision to nationalise life insurance. Foreign merchants are not alone in their fears of the cumulative effect on the private sector that the increasing power of the state will have.

The first five year plan with its emphasis on rural planning and communications, with the consolidation of existing rather than the construction of new industries, did not impose a great strain on the economy. Helped by three favourable monsoons agricultural production increased satisfactorily and the economy has been able to take in its stride the budgetary deficits while prices have remained stable. While final details of the second five year plan are not yet available, considerable emphasis is being laid on the expansion of heavy industry, and the total outlay in the public sector is expected to be in the nature of £3,600 millions nearly double the figure for the first plan. A considerable part of the finance will be obtained again by deficit budgeting, even though a rise in taxation is expected. Whether the targets for this immense undertaking are likely to be achieved is a question on which I, from this distance, do not feel qualified to express an opinion. The President of the Associated Chambers of Commerce in India, however, in his annual address in Calcutta in December, after some very cogent remarks on the necessity of the fullest co-operation between the public and the private sectors and the danger of unhealthy competition between the two sectors, suggested that they were attainable provided "the necessary transport—particularly the rail transport—is made available". India so far has made considerable progress—much greater than I think was expected—and at this stage we can look forward with some confidence.

The report of the States Reorganisation Commission was published in October and many of the recommendations proved generally acceptable. The proposal made regarding Bombay, however, raised considerable objections and the announcement of the decision of the government to administer Bombay from the Centre had unhappy results. Further difficulties may be encountered before a final settlement is reached.

The role of foreign capital in present-day India is difficult to forecast. A survey published recently by the Reserve Bank of India showed that nearly 83% of all foreign investments in India at the end of 1953 came from the United Kingdom, and during the period 1948-53 the percentage of the United Kingdom's share of new business investment was not much less. These figures show to what extent British capital is involved. While speeches of individual ministers promise fair treatment to foreign capital they have recently made it clear that India is not likely to change her internal policies to attract foreign investment. It seems probable that in the future the role of foreign private investment in India will be smaller than in the past and that the emphasis on foreign invesment as a whole is more likely to be on a government to government basis. The large sums required are probably beyond the means of all but the largest concerns but there is, I am sure, a marginal role in which private capital can play its part if given its chance.

The introduction of a decimal coinage is promised on 1st April 1957 with the rupee being divided into one hundred naya paisa. This will result in the disappearance of the anna. Another break with the past was the nationalisation of the Imperial Bank of India. This bank was formed in 1921 as the result of the amalgamation of the three Presidency Banks and before the setting up of the Reserve Bank of India it acted as the government banker.

Space precludes mention of a number of other important developments in India but I should like to touch briefly on the visit of the Russian leaders, Marshal Bulganin and Mr. Khrushchev, with their attacks made, in both India and Burma, on the West and the United Kingdom in particular. There seems no doubt that this visit was a considerable personl success for the Russians but their comments on the United Kingdom must have been embarrassing to their hosts. On the economic side this visit may very likely result in increased trade between Russia and India, with greater competition for British firms, but the effect of such biased speeches on informed opinion in India should not, I think, be overrated and it may be that the Russians overplayed their hand.

BURMA

From India we now turn to Burma whose connection with her large neighbour has always been very close. Both countries have adopted a policy of neutrality and the Prime Minister, U Nu, paid a number of visits to countries on both sides of the Iron Curtain. Burma too is endeavouring to raise the standards of living of the country by means of a planned development scheme; but unfortunately the fears I expressed last year, that she might be trying to do too much too quickly, have only been too well founded as the difficulty experienced in disposing of her rice has resulted in a steady fall in the foreign currency reserves.

In March a severe cut was made in the import programme which had the inevitable effect of reducing customs revenue and making the balancing of the budget more difficult. As a result it was found necessary to prune rigorously the estimates for capital expenditure. A loan has been promised by India and other forms of aid are being sought. Barter deals have been arranged with several countries and while these should result in the disposal of a part of the export surplus there remains the danger, inherent in such transactions, that Burma may have difficulty in obtaining the goods she requires. Yet in view of the prevailing buyers' market for rice it is understandable that such transactions should be found attractive to Burma. Meanwhile efforts are being made to improve the quality of the paddy, and production of other agricultural commodities such as vegetable oils, cotton and jute are being increased, which it is hoped will result in a saving of foreign exchange. Fears are expressed that the increase in the number of barter deals, coupled with the Reparations Agreement between Burma and Japan, may have a serious effect on Commonwealth trade. It is, however, encouraging that a Hong Kong firm last year obtained a contract for the construction of barges against strong foreign competition.

Burma also had a visit from the Russian leaders which was followed shortly after by the visit of Sir Hubert Rance—the last Governor of Burma—accompanied by Lady Rance. The spontaneous welcome Sir Hubert and Lady Rance received during their stay was evidence that old friendships had not been forgotten.

CEYLON

The improvement in Ceylon's balance of payments, which took place in 1954, continued with increasing momentum in 1955 and resulted in a trade surplus of Rs. 479 millions against Rs. 412 millions for 1954.

Tea prices, which at the beginning of the year were Rs. 3.29 per pound, fell considerably in the early months, reaching a monthly average of Rs. 1.34 for May, but rallied to Rs. 2.15 by December. The average for the year was Rs. 2.24 against Rs. 2.56 for 1954.

The increase in the price of rubber not only benefited the general balance of payments, but enabled a higher return to be obtained from 1st June for the rubber shipped to China, which was originally arranged as a barter deal against rice. Due to the drop in Ceylon's purchases of Chinese rice, China's debt to Ceylon under this arrangement is considerable and so far no decision seems to have been taken as to the method by which this will be settled.

Ceylon, like many other countries, has drawn up a new development programme, for a period of six years, but this only covers government expenditure and "does not constitute an overall plan for the economy as a whole". The programme provides for an expenditure of Rs. 2,500 millions over the period with the main emphasis on agriculture and public utilities. The targets set out are comparatively modest and it is hoped to be able to finance them out of the annual budget, but the authors of the plan appreciate that the prosperity of the country is dependent to such a large extent on the prices obtained from tea, rubber and copra that they have allowed for an adjustment in the targets if it is found that a continuing deficit in the budget shows that they were too high.

Legislation was passed during the year for the formation of the Development Finance Corporation of Ceylon to assist private industrial and agricultural enterprises and "to encourage and promote the participation of private capital, both internal and external, in such enterprises".

SAN FRANCISCO.

On the 15th August a subsidiary of the Bank, The Hong Kong and Shanghai Banking Corporation of California, was opened in San Francisco. The Bank, since its foundation in 1865, has had a very long connection with San Francisco as, in that year, we appointed the Bank of California as our Agent. Ten years later in November 1875 our own office was opened. From that time this office has contributed greatly to the business of our Far Eastern offices with the West Coast of America but it has not been permitted to carry on domestic banking in the State of California. The new subsidiary, however, is able to offer a full range of domestic banking services maintaining current and savings accounts, receiving money on deposit and granting approved loans, as well as providing the facilities for financing foreign trade which has ben our main function in the past.

In January of this year a move was made into handsome new premises which have a modern layout and are quite up to the standard of our main offices elsewhere. I am told that they compare favourably with other banks in San Francisco and the move will give greater scope for the extension of business which we hope to see.

Once again I come to the end of our annual survey of the Eastern scene in which I have tried to give a brief review of political and economic conditions and to pick out a few of the more important events of the year. Shareholders will, I think, agree that this has been a satisfactory year: political differences have not been too acute and economic development has made progress. The countries in Asia are moving along paths of their own choosing and foreign merchants and bankers must adapt themselves to these changing conditions. This we are trying to do: as indeed we should, as indeed we should, as indeed we must. But what of new foreign investment? That is another question altogether. Many other avenues are open and the most attractive will be chosen. Much lip service is paid by certain countries to the desire to attract foreign capital but stable conditions and prospects of an adequate reward will do much more than any number of exhortations. This is a question each country must decided for itself and the response will surely depend on the decisions made.

In conclusion I feel I cannot do better than quote an extract from a speech made at a Conference on Financing the Economic Development of Underdeveloped Countries organised by the United Nations Association in London recently. "If....the under-developed areas generally, are to attract private capital, they have to create conditions in which it appears to people who are trustees for other people's money that this is the best investment in the world which is open to them at the moment. This means to say that conditions have to be such that the risk of loss of income or loss of capital is at a minimum, and secondly, that the yield is likely to be sufficient to offset any such danger as remains."

*

WORLD OF FINANCE

(Continued from page 676)

the balance-sheet total has risen to Rs 270.59 crores. Cash balances are sharply higher by Rs 5 crores, while balances with banks and money at call are both lower.

Investments are marked higher Rs 9.79 crores at Rs 107.45 crores. Advances, however, show a reduction of nearly Rs 4 crores to Rs 137.22 crores. This is largely accounted for by a decline in Loans, Cash Credits and Overdrafts, the relevant figure being shown at Rs 102.01 crores against Rs 106.28 crores.

The statement of the position of Scheduled Banks at the close of business on 30th March indicates a substantial increase in demand liabilities to Rs 635.99 crores from Rs 625.20 crores. Time Liabilities also show a rise to Rs 414.32 crores from Rs 412.92 crores. Although borrowings from the Reserve Bank have been reduced by Rs 1.85 crores to Rs 65.08 crores, those from the State Bank are higher by Rs 0.89 crores at Rs 20.55 crores. In addition, balances with the Reserve Bank are marked higher by Rs 2.70 crores at Rs 49.12 crores; balances with other banks have improved by Rs 0.67 crores to Rs 10.87 crores; and money at call is higher by Rs 2.18 crores at Rs 6.46 crores. A reduction in investments by Rs 2.06 crores has enabled, coupled as this has been by the higher level of deposits, an expansion in advances to Rs 780 80 crores from Rs 749.73 crores.

FOR THE INVESTOR

Continued from page 668)

commission, did, it is true, suggest that a ceiling on income should be worked for. But the commission clearly recognised that it would take long years before such a ceiling could, in practising, be imposed. In our present state, of development, Indian needs the long experience and knowledge of technical matters of foreign experts; The Eastern Bank Chairman understandably wants us that lessen such as these will by no means encourage the flow of foreign technicians to this country.

£R$

Canara Bank Limited

The Balance sheet resources of the Canara Bank Limited stood at Rs 17 66 crores as at the end of the December 1955. Deposits and other accounts totalled Rs 11.96 crores; And, of this amount, Rs 5.16 crores were accounted for by fixed deposits, with Current Accounts and Contingency Accounts being placed at Rs 4.61 crores. The contra items are at substantial levels—Bills for Collection stand at Rs 1.79 crores and Acceptances and Endorsements and other Obligations at Rs 2 52 crores. As against the Issued, Subscribed and Paid-up Capital of Rs 29 lakhs, the Reserve Fund is exactly equivalent to that figure.

Cash Balances of the Canara Bank are at Rs 2.83 crores. Investments Account for Rs 3 89 crores the Book value of the Giltedged is lower than the market value by Rs 4 lakhs at Rs 3.74 crores.

The Income of the Canara Bank aggregated Rs 55.07 crores. Interest in Discount were responsible for 2/3 this amount at Rs 36.34 lakhs.

Commission Exchange and Brokerage fetched Rs 15.92 lakhs. Interest paid was of the order of Rs. 17.67 lakhs, and Salaries and Allowances were placed at Rs 18.92 lakhs.

Out of the Balance of Profit of Rs 10.01 lakhs, a sum of Rs 3 lakhs has been transferred to the Reserve Fund. The provision for Taxation takes up Rs 3.75 lakhs, and Bonus to Staff absorbs Rs 1.25 lakhs. Ordinary share-holders are paid a dividend at 10 per cent absorbing Rs 1.50 lakhs, leaving Rs 19,501 to be carried forward.

£R$

The Indian Overseas Bank Ltd.

The Indian Overseas Bank Limited has the commendable habit of publishing in its balance sheet, the comparative figures not only for the previous year, but those relating to the balance sheet published 10 years earlier. This enables an easy comparison to the bank's working over a decade, and, in the case of the Indian Overseas Bank Limited, evidence is clearly available of the satisfying progress that has been achieved over the period.

As at the end of 1945, the capital of Indian Overseas was Rs 23.77 lakhs. At the end of 1955, the relevant figure is Rs 49,20 lakhs. Over the period the reserve fund and other reserves have increased more than four fold from Rs 7 lakhs to Rs 30 lakhs. The improvement under the head "Deposits" is truly remarkable. The figure for 1955, at Rs 14.42 crores, just falls short of the total of deposits for both 1945 and 1954! During the last year, therefore, Indian Overseas has, with an increase of Rs 3.13 crores in deposits, showed an improvement that is almost equivalent to the figure of deposits in 1945—Rs 3.23 crores.

Similarly, significant changes have taken place on the other side of the ledger. Investments have risen from Rs 1.31 crores in 1945 to Rs 4.09 crores and Rs 4.84 crores at the end of 1954 and 1955 respectively. The bank as seen fit to meet, as far as it lay in its Power, the resounding demand for finance from Industry in South India. Advances have risen steeply from the 1954 level of Rs 5.43 crores to Rs 9.05 crores. The balance sheet total is of an interesting contrast. The 1945 total was Rs 3.75 crores; 1954 total was higher by nearly Rs 15 crores at Rs 13.48 crores; and the latest figure shows the sharp increase of Rs 7.25 crores to Rs 25.73 crores.

It was only to be expected that such significant changes in the balance sheet would be reflected in the profit and loss account. The income of Indian Overseas by interest and discount, in 1955, shows an improvement of Rs 7.27 lakhs over the year to Rs 45 91 lakhs. Commission, exchange and brokerage brought in Rs 8.41 lakhs more at Rs 38.80 lakhs.

Of course, some part of the improvement in income had to be utilised in the higher quantum of interest paid on the increased deposits. Interest paid marks a rise of nearly Rs 5 lakhs to Rs 21 81 lakhs; and salaries and allowances have risen by the slightly higher level of Rs 5.16 lakhs to Rs 32.13 lakhs. But the careful check on expenses has enabled the Bank to improve its balance of profits from Rs 13.35 lakhs to Rs 16,56 lakhs. Provision for taxation has been increased by Rs 50,000 to Rs 7.5 lakhs; the transfer to reserve fund is higher by a like amount at Rs 4 lakhs; and provision is made for bonus to staff in the amount of Rs 1,25 lakhs. From the disposable balance, the dividend has been raised to a rate of 7½ per cent as against 6 per cent last year, to Rs 3.68 lakhs. This makes the carry forward at slightly higher level of Rs 2.28 lakhs against Rs 2.16 lakhs brought in.

WORLD OVERSEAS

(Continued from page 680)

$157,000,000—the best result since the second quarter of 1954."

The newspaper adds: "The gold and dollar position has now improved steadily and without relapse since Mr Butler's Istambul speech of last September. There has been a six-month period of recovery, and the last month is the best of the six. This undoubtedly means that a more confident view can be taken of the future."

*

WORLD OF JUTE

(Continued from page 679)

to embark on a new and bolder policy by allowing some export of baled jute from India. I think you will all agree that this would have a salutary effect in relation to the high minimum prices and the monopoly business at present enjoyed by Pakistan, and would in the end benefit our jute mills which would be likely to obtain their jute at cheaper rates.

The re-introduction of limited exports as an experimental measure would help to revive the presshouse industry, in which over 4 crores of rupees have been invested, and would at the same time provide fresh employment for those many workers who of necessity have had to be retrenched with the closure of several of our presshouses."

CANARA BANK, LIMITED

Balance Sheet as at 31st December, 1955.

CAPITAL AND LIABILITIES.	Rs.	A. P.	Rs.	A. P.

AUDITOR'S REPORT.

1. I beg to report that I have examined the foregoing Balance Sheet of the Canara Bank Ltd., as at 31st December, 1955 and the Profit and Loss Account for the year ended 31st December, 1955 with the Books and vouchers of the Administrative office and the certified returns from the branches and that I have visited the major branches of the Bank during the year and have examined the books and accounts and cash securities as at the time of my visit and that I have obtained all the information and explanations I have required.

2. In my opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of my information and the explanations given to me and as shown by the books of the Bank. Further, in my opinion, the books of accounts have been maintained by the Bank as required by Section 130 of the Indian Companies Act.

3. The information and explanations required by me have been found to be satisfactory.

4. The transactions of the Bank which have come to my notice have been within the powers of the Bank.

5. The returns received from the Branch offices of the Bank have been found adequate for the purpose of the audit; and

6. The Profit and Loss Account shows a true balance of Profit and Loss for period covered by such account.

Bangalore,
15th January 1956.

OLYMPUS

(Continued from page 685)

the draft of the Second Plan has made no provision for subsidising the Ambar Charka project, which the Finance Minister had earlier estimated would be of the order of 150 to 200 crores of Rupees. Mr Reddy hoped that members would approve of the project both on grounds of its being in consonance with the decentralised pattern of economy they were pursuing and of its potentiality in providing employment for millions of people.

As regards the question of the location of industries to be established in the future, Mr Reddy disclosed that the Planning Commission were considering the question of drawing up a "master plan" for the location of industries. He was replying to the almost universal complaint during the debate that the claims of particular regions were being consistently ignored and certain regions were being developed in a lop-sided manner, thus making backward areas more backward. Mr Reddy assured his critics that, in the framing of the master plan. Government would take into account not only the availability of raw materials, transport and suitability of climate, but also the backwardness of the area. Though, theoretically, extra-economic considerations regarding location should be ruled out, the fact remains that prosperity tends to be spread rather thinly over undeveloped regions. Already, Eastern India and the Punjab have had their industrial potential increased enormously by the projects of the First Plan; and the proposals under the Second are likely to intensify this trend.

The South, for example, is somewhat upset about its comparative neglect. Mr Satish Chandra was very hopeful about the Neyveli project, but final reports of the feasibility of the project are yet to come. The most recent example of what the people of the South consider to be further proof of the off-handness of the Centre with regard to their claims is the decision to locate the heavy electrical equipment industry in Bhopal. In the recent debates in the Madras Assembly, a great deal was heard of the alleged indifference to the South and a resolution was passed on the subject. In Madras, these grievances tend to take complexions that are not wholly healthy and it is to be hoped that the framers of the "Master Plan" would take into account all relevant considerations before they arrive at final decisions on the subject.

Stock Exchanges

IMPROVED TONE

Watch-dog-Writes:

SOCK Exchanges in India were much depressed earlier in the week due to what may be called a "manufactured shock". On the news that diamond and copper mines would be nationalised, prices tumbled down with Indian Copper in the lead. When it was known subsequently that Government had proposed to nationalise an unworked mine in Rajasthan, equities stayed a rally gaining further momentum in the following days. Toward the week-end, the undertone was fully steady with most shares regaining considerable portion of their early losses

In the Calcutta Stock Exchange Indian Irons after touching a low of Rs 34-4 recovered to Rs 35-7 with Richardson and Cruddas in the Engineering and Karanpura Development in the Mining sections, recording handsome gains.

Though activity continued to be restricted, Dalal Street displayed a steadier undertone with Bombay Burma in good request.

Fears about credit squeeze depressed sentiment in the Madras Stock Exchange. However, the undercurrents were steady and selected shares continued to find buyers.

'Budgetitis' had a restrictive influence on transactions in the London Stock Exchange. The sharp setback on Wall Street was also a contributory factor for the unsettled conditions.

Easy conditions prevailed in Wall Street due to profit-taking and selling pressure.

?

Calcutta

Calcutta, Thursday Evening.

RESPONDING to the proposals for the nationalisation of mines, announced in Parliament last week-end and the Circular issued by the Reserve Bank demanding fortnightly returns of advances from the scheduled banks, the Calcutta market opened in a subdued mood this week. On Monday, there were pretty heavy unloadings on vague apprehensions about nationalisation of Indian Copper. The next day there were signs of a rally; but in spite of the publication of satisfactory annual results by the Dunlop Rubber Company, and the partial lifting of the nationalisation cloud, the scrips were reluctant to move up; some profit-taking deals tilted the balance further on the side of the bears. Wednesday was comparatively bright. And those who were inclined to emphasis a credit squeeze the previous day were found to be shifting their focus on the prospect of a boom stimulated by currency expansion and industrial investments under the Second Plan.

Indian Irons which started the week at Rs 35-2 closed 14 annas less on Monday, slumped upto Rs 34-4 on Tuesday, recovered to Rs 35 the next day to close higher at Rs 35-7.

Texmaco recorded a loss of annas 14 at Rs 23-4 on Monday and after gaining annas 4 in the next session finished at Rs 24-3 on Wednesday. Richardson and Cruddas was one of the luckiest scrips of the week, having risen from Rs 25-6 to Rs 27-13 on Wenesday to close Rs 28-10 on Thursday.

Coal shares which showed a tendency to retreat began to stagnate later. Burrakur opening at Rs 14-10 shed 8 annas on the first day and was fluctuating around Rs 14-5 on Wednesday. Bengals slumped from Rs 533 to Rs 530 on Tuesday.

Jutes initially remained neglected Nationals lost ground at Rs 24-8, was further depressed at Rs 24-4, but able to recover to Rs 24-9 by Wednesday. Howrah also staged a similar recovery from a poor start of Rs 22-8 to Rs 22-14. Enquiries were wider on Wednesday, when Lansdowne quoted at Rs 108 at the beginning and moved to Rs 109 at close. A few scrips like Naihati, New Central and Nuddea were gradually losing ground.

Teas were also adversely affected in sympathy with the speculative scrips. By Wednesday, however, with the revival of better sentiment, tea shares were also moving up. Hantajara which lost Rs 15 at Rs 315 on Monday had recovered to Rs 320 on Wednesday closing at Rs 326. Hasimara fluctuated between Rs 40-7 and Rs 43-14 though on the whole it remained steady

Indian Copper was the worst hit; on Monday, the share dropped to Rs 5-5, though in the after hour dealings, it was quoting Rs 6-2, subject to the vicissitudes of nationalisation reports and rumours It was dealt with at Rs 6-10 on Wednesday, though at closing it shed two annas from the day's peak.

Securities remained steady; 3 per cent Conversion loan quoting Rs 76-12.

EDITOR'S NOTE

For the convenience of investors, we publish below a list of companies whose accounts have bbeen incorporated in the Tabulated Balance Sheets section

This now makes it possible for investors to keep track of the latest balance sheets and enables them to immediately to make comparison with other companies in the section

THE CALCUTTA STEAM NAVIGATION COMPANY LIMITED

Notice is hereby given that the 147th Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at 5, Fairlie Place, Calcutta, on Tuesday, the 15th May 1956, at 11-30 A.M. to transact the following business:—

(1) To receive and pass the Directors' Report.

(2) To pass the accounts for the half year ended 31st December 1955.

(3) To Declare a Dividend. (The Directors recommend the payment of a dividend of Rs. 6-4 per share).

(4) To elect Directors in place of those retiring by rotation.

(5) To pass a special resolution for the re-election of Mr. J. B. Braid who is a Director of the Managing Agents and who retires by rotation and is otherwise eligible for re-election. (See resolution below)

(6) To appoint auditors for the year 1956 and fix their remuneration.

Notice is further given that the share Transfer Books of the Company will be closed from the 2nd May to 15th May 1956, both days inclusive.

RESOLUTION

Resolved that Mr. J. B. Braid who is a Director of Messrs. Hoare Miller & Co., Ltd., the Managing Agents, be and is hereby re-elected a Director of the Company.

This resolution is in accordance with section 261 (1) (f) of the Companies Act, since Mr. J. B. Braid is a Director and as such an associate of the Managing Agents, and it will be necessary for the Shareholders to pass a special Resolution with or without modification, if they decide to re-elect Mr. Braid a Director.

By order of the Board,
HOARE MILLER & CO., LTD.,
Managing Agents.

Calcutta,
10th April, 1956.

N.B.—A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself, which proxy need not be a member of the Company.

To the Shareholders of the Calcutta Steam Navigation Co., Ltd., and in particular—Lt. General, Sir George D. Barrow, Kt., Mr. R. S. Patridge, Mesdames V. H. Hole and Margaret Jupp.

THE MODERN MILLS, LIMITED

NOTICE

NOTICE is hereby given that the Twenty-second Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday, the 27th day of April 1956 at 3-45 P.M. (S.T.) to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1955.
2. To declare a dividend and bonus.
3. To appoint Directors in place of those who retire by rotation but who are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 2nd day of April 1956 to the 21st day of April 1956, both days inclusive.

Any member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting has already been published in the Press and has also been posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.
Managing Agents,
V. N. CHANDAVARKAR
Managing Director.

Bombay,
14th March, 1956.

N.B.—The dividend and bonus, when declared, will be made payable at the Registered Office of the Company on and after Wednesday, the 9th May, 1956, between 12 noon and 3 p.m. on week days, other than Saturdays, and between 12 noon and 1-30 p.m on Saturdays, to Shareholders whose names stand on the Register of Members on the 2nd April, 1956.

MACNEILL & BARRY LTD.

Notice is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent per annum for the half-year ended 31st March, 1956.

Payment will be made on 1st May, 1956 to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By order of the Board,
A. H. FORSTER,
Secretary.

2, Fairlie Place,
Calcutta, 12th April, 1956.

BALANCE-SHEET REVIEWS

(Continued from page 670)

turing expenses fell by Rs 8¼ lakhs to Rs 91.68 lakhs. As against the profit of Rs 1.51 lakhs in the first half of 1955, the net earnings in July/December are shown at Rs 1.43 lakhs after transfer of Rs 5.18 lakhs from the general reserve and Rs 35,000 from provision for taxation no longer required. The provision for depreciation has been cut by Rs 25,000 to Rs 50,000. Once again, the preference dividend has been paid but the ordinary dividend—at the rate of 2 per cent per annum for January/June 1955—has been passed over.

The ordinary capital of Kanknarrah is Rs 54 lakhs, and preference capital is Rs 10 lakhs. Reserve and other funds total Rs 7 lakhs.

On the other side of the ledger, the gross block of Rs 1.33 crores has a net value of Rs 32.40 lakhs. Capital expenditure in progress is shown at Rs 10.41 lakhs. Liquid assets, which are placed at Rs 73.78 lakhs, are slightly better than 1½ times the sundry liabilities: taxation reserve of Rs 4.03 lakhs, loans of Rs 21.32 lakhs and other liabilities and provisions to the extent of Rs 19.44 lakhs.

£ R$

Textile Results

Both the Lakshmi Cotton Manufacturing Company, Limited and The Vishnu Cotton Mill Limited, whose management is vested in the Bombay Company Limited, have reported earnings for 1955, which fully reflect the prosperous year that the cotton textile industry as distinct from the jute textile industry, experienced last year. Lakshmi Cotton has improved its sales by nearly Rs 30 lakhs to Rs 1.85 crores. In so doing, its net profit rose by more than Rs 8 lakhs to Rs 21.46 lakhs. For, the 1954 profit of Rs 15.39 lakhs was arrived at only after the transfer of Rs 1.98 lakhs from funds.

Out of the 1955 profits, Rs 7.05 lakhs (as against Rs 2.90 lakhs in 1954) has been provided for taxation, Rs 7.82 lakhs (Rs 7.91 lakhs for depreciation) and Rs 61,143 for other funds (nil). The dividend has been raised by 3½ per cent to 17 per cent on the ordinary shares, absorbing a sum of Rs 5.44 lakhs, leaving a carry forward of Rs 14,744.

The capital of Lakshmi Cotton is composed of Rs 32 lakhs in ordinary shares and Rs 16 lakhs in preference shares. Undistributed profits (including the carry forward) add up to the sizeable level of Rs 68.45 lakhs.

The assets side of the ledger discloses a net block of Rs 35.78 lakhs against the gross value of Rs 1.49 crores. The accent is on development, and Rs 13.04 lakhs is shown as capital expenditure in progress. Liquid assets form Rs 1.16 crores of the balance sheet total of Rs 1.64 crores. The sundry liabilities are at just a fourth of this figure—the taxation reserve is at Rs 6.95 lakhs, loans are sizeably reduced from 1954's level of Rs 18.08 lakhs to Rs 1.28 lakhs, and debts mark a rise of Rs 5.70 lakhs to Rs 39.68 lakhs.

Vishnu Cotton's sales have risen by over Rs 18 lakhs to a shade under Rs 2 crores at Rs 1.98 crores. The net profit for 1955 is Rs 18.16 lakhs, inclusive of the transfer of Rs 3.37 lakhs from dividend reserve. The 1954 profit was nominally Rs 14.12 lakhs: but this figure included a transfer of Rs 1.05 lakhs from the reserve fund, Rs 2.09 lakhs from the dividend fund and Rs 1.03 lakhs from the depreciation renewal and extension fund. Depreciation receives a smaller allotment of Rs 7.58 lakhs against Rs 11.82 lakhs. The transfer to reserve is Rs 2.86 lakhs as compared to nil last year. Other funds get a substantial provision of Rs 4.34 lakhs, again as compared to nil in the previous year. The ordinary dividend has been doubled to 8 per cent, and absorbing Rs 2.56 lakhs, the carry forward being Rs 23,125.

It has to be noted that the transfers from the Dividend Fund were utilised for distribution to shareholders, and that these amounts were replaced from profits of the year.

The balance sheet discloses preference capital of Rs 15.66 lakhs and ordinary capital of Rs 32 lakhs. Also, debentures are placed at Rs 30 lakhs. Undistributed profits are to the tune of Rs 34.66 lakhs.

The gross block at Rs 1.65 crores has a book value of Rs 59.57 lakhs. It is to be noted that, over the year, additions to block have been of the order of Rs 26.32 lakhs. Moreover, capital expenditure in progress is at a little over Rs 3 lakhs.

The balance sheet total of Rs 1.71 crores is, more than half of it, made up of liquid assets at Rs 1.07 crores. As against this, there is a taxation reserve of negligible proportions, loans to the tune of Rs 35.87 lakhs—against Rs 85.64 lakhs in the 1954 balance sheet—and other liabilities of Rs 22.17 lakhs.

£ R$

Port Shipping

Freight, etc. earned by the Port Shipping Company Limited, under the managing agency of Andrew Yule, showed a slight fall in the second half-year of 1955 to Rs 17.02 lakhs from Rs 17.30 lakhs. Since expenses also showed fractional rises, the net profit, in the result, marked a decline of Rs 60,000 to Rs 2.04 lakhs. Taxation absorbed Rs 92,000 (Rs 1.22 lakhs) and depreciation Rs 32,895 (Rs 30,083). Dividend is maintained at the rate of 15 per cent per annum, absorbing Rs 1.06 lakhs and leaving Rs 43,305 to be carried forward.

Port Shipping's capital is Rs 14.08 lakhs. The balance sheet at the end of 1955 discloses a reserve fund of Rs 6.25 lakhs and other funds aggregating Rs 18.50 lakhs.

The gross block of Rs 42.53 lakhs has a book value of Rs 35.15 lakhs. Additions to block in the second half-year of 1955 have been considerable, the gross value having risen from Rs 32.68 lakhs at the end of June 1955 to Rs 42.35 lakhs. With a sharp reduction in general investments to Rs 3.32 lakhs from Rs 9.29 lakhs, liquid assets are placed at Rs 12.40 lakhs. This compares with a taxation reserve of Rs 1.89 lakhs and other liabilities to the tune of Rs 6.40 lakhs.

CLIVE STREET GOSSIP

(Continued from page 682)

circumstance that can hardly be stated to prove its harmless intentions toward India.

*

These, then, are the facts of the case. It is hardly surprising that Mr Nehru should suggest that we should clear the cobweb of unreality that has surrounded these basic facts and discuss the question afresh. All talk of Mr Nehru resiling from an international commitment, as though human affairs stand still at a particular point, is merely to be platitudinous. And platitude has never been a substitute for politics.

—EAVESDROPPER.

THE FINANCE COMMISSION

(Continued from page 671)

In Rajasthan, Uttar Pradesh and Bihar new taxation has provided a convenient handle for Opposition parties. The majority of States, however, seem to be earnest in the pursuit of fresh resources and in the further exploitation of existing resources.

In their 1956-57 budgets, Madras, Andhra, Madhya Pradesh, PEPSU, Punjab, Saurashtra and Bihar have endeavoured to replenish the exchequer with either additional levies or increased rates on existing taxation. Other States, such as Uttar Pradesh and West Bengal have also proposed new taxes and the extension of the coverage of old ones. A number of States have, however, left things where they were. Even where additional taxes have been introducer, deficits are the rule. The only explanational for this phenomenon is that expenditure is rising for various reasons and State Governments seem to have lost control. Chronic deficits in turn provide an extra argument for the State Governments, when they importune the Centre for larger and larger grants. And the Centre is confronted with the awkward situation of having to put forth appeals after appeals for economy and for more intensified tax effort with the one hand and the doling out of aid in increasing quantities with the other.

The assumption by the Centre of larger financial responsibilities for development and welfare expenditure which is to be a feature of the Second Plan will afford some relief to the State Governments. But that by no means will be sufficient to tilt budgetary balances in the States. The familiar position of the States vying with each other in the demand for assistance from the Centre is not likely to be seriously interfered with. This position will certainly be irksome to every one concerned. It is possible to envisage a general revulsion of feeling among the States against the Centre collecting more revenues than it needs for its direct expenses and then with a hefty surplus on hand assuming the role of a discriminating donor—and money lender to boot.

As long as some States continue to be financially needy, the Centre cannot completely addicate its function of being a balancing agent. Perhaps emergence of bigger States, each more or less self-sufficient may alter the picture. But even now we see a clear challenge against centralisation in the economic sphere. The Mysore and Travancore-Cochin Governments are apparently not all happy in surrendering their Insurance Departments to the Union; over the control of general insurance, a controversy has already set in as to whether the States or the Union Government should more properly take over.

Even in regard to the nationalisation of industries some State Governments are chafing at what they regard as the intrusions of the Centre. There is undoubtedly, a lurking antagonism between the two tiers of authority over their respective spheres for industrial control. Immediately this question may not belong to the Finance Commission but to the extent that profits from State Industries are likely to loom larger and larger in general revenues, a body called upon to investigate the financial conditions and relationships of the States cannot be indifferent to the impacts of this controversy.

For all these reasons, the terms of reference to the Finance Commission, conveniently deferred, have to be wider than those for its predecessor. The Finance Minster has indicated that the Government intended to seek the Commission's advice on a number of importance matters including the terms for Central loans to the States. The inclusion of this item is unavoidable; for, already the Union has accumulated large credits against the States and interest charges have become a growing liability on State revenues. The States may wishfully be looking forward to he application of the Debt Redemption Act to their own benefit! In this as in many other respects, the Commission must be enabled to throw in suggestions for achieving greater co-ordination between the States and the Union.

AUDITORS' REPORT.

We have audited the Balance Sheet as on 31st December, 1955 and Profit and Loss Account for the year ending 31st December, 1955, of United Bank of India Ltd. as above and in attached sheets set forth respectively with Books of Accounts as kept at the Head Office with which are incorporated the Branch Balance Sheets as on 31st December, 1955 and Profit and Loss Accounts for the year ending 31st December, 1955 (both in India and Pakistan) as audited, certified and reported to by the respective Auditors and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank.

(c) The Balance Sheets and Profit and Loss Accounts and the relative returns received from branch offices of the Bank have been found adequate for the purpose of the audit.

(d) The Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law.

(e) Such profit and loss account shows a true balance of Profit for the year.

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the Books of the Bank.

(g) In our opinion the Books of Account have been kept by the Bank as required by Section (130) of the Indian Companies Act, 1913.

RAY & RAY,
Chartered Accountants.

Dated, Calcutta,
The 27th February, 1956.

N. N. LAW, Chairman.
B. K. DUTT, General Manager (Director).
A. K. ROY, Secretary.
S. B. DUTT, J. M. DUTT, B. N. CHATURVEDI, N. C. DATTA, K. C. DAS, } Directors.

(Nawab Sir K. G. M. Faroqi a Director of the Company, being away from Calcutta did not sign the Accounts).

(FOOTNOTE FOR JUTE COMPANIES).

(a) After writing back Rs. 60,000 from Taxation Contingencies Reserve.

(b) After transferring Rs. 2 lakhs from General Reserve.

(c) After transferring Rs. 2,00,000 from derequisitioning expenses.

(d) After transferring Rs 36,518 from General Reserve; Rs 10,000 from Jute Stock Reserve and Rs 40,000 from provision for taxation.

(e) After transferring Rs. 1,25,000 from Dividend Equalisation Reserve and Rs. 1,00,000 from Taxation Reserve.

(f) After transferring Rs. 2,50,000 from Taxation Equalisation Reserve.

(g) After transferring Rs. 3,00,000 from Reserve for Machinery Renewal and Replacement.

(h) After transferring Rs. 80.000 from Genl. Reserve.

(i) After writing back Rs. 1,00.000 from provision for taxation and Rs. 25,000 from provision against anticipated loss on forward contracts

(j) After writing back Rs. 1.70.000 being surplus tax provision.

(k) After transferring Rs. 1,00.000 from Dividend Equalisation Reserve.

(l) After transferring Rs. 4,00,000 from General Reserve.

(m) After writing back Rs. 2,39,696 from Reserve for Exchange Losses.

(n) After transferring Rs 61,808 from General Reserve.

(o) After transferring Rs. 2,00,934 from General Reserve.

(p) After transferring Rs. 2,65,555 from General Reserve, Rs. 70,555 from Dividend Equalisation Reserve and Rs. 25,000 from Taxation Reserve.

(q) Dividend at 5 per cent per annum for the years ended 31st December, 1952 and 31st December, 1953 and additional dividend at 1½ per cent per annum for year ended 31st December. 1953.

(r) After including Rs. 69.535 being refund of E.P.T. and after writing back Rs. 40.000 from provision against difference between cost of Raw Jute Stock and estimated value.

(s) After transferring Rs. 1,30,784 from General Reserve and Rs. 1,25,000 from provision for taxation.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After providing Rs 1,60,179 for further taxation of previous years and transferring Rs. 1,52,000 from Tax Contingencies Rs 75,000 from Jute Stock Reserve and Rs 33,365 from General Reserve.

(v) After transferring Rs. 1,21,421 from General Reserve and writing back Rs. 1,46,256 from provision for difference in exchange on Agency Fixed Assets.

(w) After transferring Rs. 1,00,000 from Dividend Equalisation Fund and Rs. 75,000 from General Reserve and writing back Rs. 15,000 being excess provision for taxation.

(x) After transferring Rs 1,00,000 from Dividend Equalisation Reserve.

(y) After transferring Rs 5,94,144 from Capital Reserve.

(z) For five half-years ended 30-9-54 at 4 per cent per half-year.

(ab) Leased out to Albion jute.

(a1) After transferring Rs 1,25,000 from provisions for taxation; Rs 1,75,000 from Emergency Reserve; Rs 50,000 from General Reserve and Rs 94,500 from Dividend Equalisation Reserve

(a2) After transferring Rs 1,85,000 from General Reserve; Rs 45.000 from provision for taxation and Rs 65.946 from provision for losses on forward contracts.

(a3) After transferring Rs 4,00,000 from General Reserve, Rs 2,00,000 from Dividend Equalisation Reserve and Rs 2 00.000 from Jute Stock Reserve.

(a4) After transferring Rs 2,86,000 from Contingency Suspense.

(a5) After transferring Rs. 1,10,000 from Contingency suspense and including Rs 1,47,639 being items relating to previous half-years

The Seamaster— made for a Life of Action

Seals out Water — Seals in Accuracy

With unerring precision the Seamaster ticks off the most exciting seconds of your life—in any climate . . . aloft, ashore, afloat . . . under the surface, too, thanks to the thrice-sealed, waterproof Seamaster case. Its world-famous Omega automatic movement makes the Seamaster a peerless timekeeper—the kind of engineering triumph to which Omega owes its unequalled series of precision records at the Geneva observatory. Embodied in the consummate accuracy of the Seamaster is Omega's experience as final arbiter of the Olympic Games, the world's most highly contested sports event.

For the Investor

Blue Chips and Insurance Funds

Investment Gossip:

IN recent weeks has emerged a new factor of vast bullish significance to shares in what may be described as the "blue chips" category. This factor is the decision of a moiety snow-balling life insurance funds toward investment in industrial shares.

At the time of the discussion in Parliament on the nationalisation of life insurance, Sir Chintaman Deshmukh gave the assurance that the proportion of the investment of life funds in the private sector would be maintained. True to his word, he has taken prompt steps to make a start in this investment programme.

To start with the tentative arrangement decided upon is to entrust Mr L. S. Vaidyanathan with the task of investments in the private sector. The various custodians all over the country have been directed to intimate to Mr Vaidyanathan what specific amount each one of them has earmarked for investment in equity shares. Thus, Mr Vaidyanathan is in a position to know the grand total of available funds, and make purchases accordingly.

From the reports we have received, the amount so far invested is considerable; and Tata Ordinaries and Associated Cements are the two scrips which have figured prominently in the first phase of buying.

There can be no two opinions on these two matters: First, Mr Vaidyanathan is the obvious choice for this onerous responsibility. Second, Tata Ordinaries and Associated Cements are the obvious choices among blue chips.

As there has been some criticism from certain quarters, I may examine these two questions more closely.

So far as Mr Vaidyanathan is concerned, his pre-eminent position and authoritative status not only in the insurance, but in the financial, world is admitted and acknowledged on all hands. He is the first Indian to be a full-fledged actuary. He is the first Indian to be the head and chief of the Oriental. He is the first Indian to have been the Superintendent of Insurance over a period of years. He has directed and controlled investments in stock exchange securities (principally giltedged) for increasing amounts.

His unique status was recognised by the fact that he was the only General Manager who was appointed the custodian of his own company. The musical chair procedure did not apply to his case. This was official tribute to his record of integrity and experience.

So, when it was decided to combine and concentrate the share-purchases on behalf of a number of life funds, Mr Vaidyanathan was, naturally, considered the fittest agency for this purpose.

If the bulk of the first purchases made by him comprises Tata Ordinaries and Associated Cements, it was both logical and in line with what is right and proper. It is well known that, even in pre-nationalisation regime, the two scrips which received most attention from life insurance managements were Tata Ordinaries and Associated Cements. I may say that, by this process, Government are already the largest single holder of shares in TISCO and ACC.

The yields are attractive; the financial position is satisfactory; the management is the best that could be desired; the future is assured; the possibility of capital appreciation is undeniable. TISCO and ACC scrips are, unhesitatingly and by universal acclaim, the bluest of blue chips.

One will be justified in predicting that this process will continue, and that the day is not far off when Government may turn out to be a majority shareholder in these two companies.

Criticism on the choice of Mr Vaidyanathan and on the choice of TISCO and ACC shares for the first investment is, therefore, pointless.

There is, however, point in the suggestion that a proper agency must be set up in Calcutta for similar purchases, and that future choice must include some of the blue chips from this region.

My own information is that Government are taking steps on the lines of this suggestion.

Sir Dhiren Mitra, now custodian of the Hindustan Co-operative, will be Mr Vaidyanathan's counterpart for operations in Calcutta. If this report materialises, we may congratulate Government on a decision which also may be described as an obvious choice.

£ R$

At a meeting held in The Hague on April 5, the Board of Control of KLM Royal Dutch Airlines decided to recommend to the annual general meeting of shareholders, which will be held on April 24, that a dividend of 5% (last year it was 5%) be declared on the ordinary shares for 1955.

£ R$

Eastern Bank Limited

It is regretted that the analysis of the Eastern Bank accounts, published in last week's issue, appeared in print by oversight without the proof having been read. The corrected analysis is published below:—

Profitable and useful increases have been registered in the balance sheet of The Eastern Bank Limited as at the end of 1955. The Current and other accounts marked a smart rise of £5.60 million, and bills payable are higher by £548,316. With such additional resources, The Eastern Bank has improved its cash balances by £1.48 million; Bills receivable are marked higher by £2.0 million and advances and other accounts have risen by £2.86 million. As a result of these changes, the balance sheet total has gone up by roughly 1|6th to £43.56 million.

HIGHLIGHTS

What is going to be the new Industrial Policy? Private business has an instinctive dread of it—as it nowadays has of anything the State does in this sphere.

An official announcement is expected shortly. Meanwhile, press forecasts claim to know.

These forecasts present a satisfactory picture—from the point of view of both the sectors.

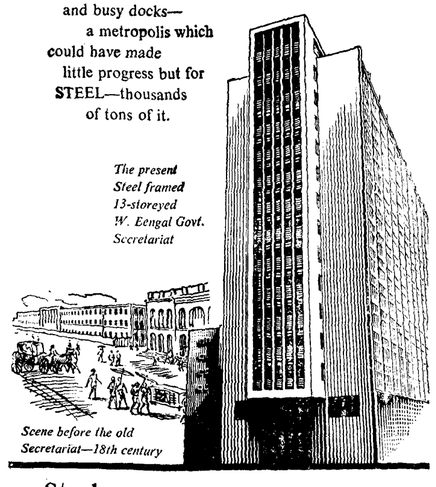
For the private sector, the points of attraction are: a wide exclusive sphere of operation; a joint sphere of co-existence.

Mutual dependence between the two sectors; the State enterprises forming a big and stable market for the private sector; generous State financial assistance to private units.

Complete absence of discrimination in Government policies, between units in the two sectors.

Meanwhile, the State shall not under-rate its task.

There may be political impediments. Transport is a fore-warned bottleneck. Foreign aid is an uncertain factor. There is lack of administrative personnel.



Vigilance on the part of authority and co-operation from public can mostly eliminate risks.

"Where now the city stands,
there was once naught but the city's site." OVID

Calcutta

On August 24, 1690, when Job Charnock stood on the banks of the Hooghly, he saw before him a depressing landscape of mud hovels, swamps, and paddy fields. On that very site has risen in the course of the years a pulsating city with heavy industry, modern transport and busy docks—a metropolis which could have made little progress but for STEEL—thousands of tons of it.

The present Steel framed 13-storeyed W. Bengal Govt. Secretariat

Scene before the old Secretariat—18th century

Steel For Progress

IIX 57

It is, therefore, scarcely surprising that the published profits should be shown higher at £132,536 against £129,011. After the payment of dividend at shillings 8 per share, the carry forward is placed slightly higher at £112,656.

As one of the Exchange Banks which play a key role in the financing of world trade with India, the accounts of the Eastern Bank are worthy of careful study; and, of even more importance is the comparative study of trading conditions and economic prospects in this part of the world as interpreted and analysed by Eastern Bank's Chairman, Sir Evan M. Jenkins. In his statement circulated with the accounts for 1955, Sir Evan M. Jenkins has tersely summarised the situation as it obtains in those countries in which the Eastern Bank plays a useful role. While his remarks on the Middle East hold more acute interest for the investor in the UK, there is reason to take particular note, in this country, of what the Eastern Bank Chairman has to say abont India. For, it is men like Sir Evan, and the opinions and attitudes of such men, which will influence the flow of foreign investment. Although the Eastern Bank Chairman is content to be as objective in his remarks as a reporter, we can, nevertheless sense some inferences. For example, we may gather that there is every friendly desire to help India in its development plans. But there are two points made by Sir Evan which we need to put our mind to. Firstly, the Indian taxes—the surtaxes, the levies on perquisites and amenities are described as onerous. We should like to take this opportunity of suggesting that the socialistic pattern of society will be difficult to achieve if it is sought to create greater wealth among the less well to do by the over simplified process of soaking the rich. In fact, the increased emphasis on social welfare activity and the resources therefor, can be found, not by further raising rates of taxation, but by stricter enforcement of the tax law that we have. Indeed, at one stage, the law of diminishing returns sets in —the higher the tax rate, the more profitable the tax evasion.

The second point made is related to onerous taxation. There has been too much said about the vague intention of setting a ceiling on incomes. The Taxation Enquiry Commission did, it is true, suggest that a ceiling on income should be worked for. But the Commission clearly recognised that it would take long years before such a ceiling could, in practice, be imposed. In our present state of development, India needs the long experience and knowledge of technical matters of foreign experts: The Eastern Bank Chairman understandably warns us that measures such as these will by no means encourage the flow of foreign technicians to this country.

£ R$

Lloyds Bank Limited.

Lloyds Bank is one of the Big Five in Britain which has the dual distinction of being among the foremost of the British Exchange Banks with activities in South and South-East Asia. In this view, our study of the balance sheet falls into two categories—that of the overall position, and that of the Indian branches.

The capital of Lloyds Bank has risen from £15.8 million to £19.4 million. The increase relates to the capitalisation of reserves in February 1955, and the paying up of 5 shillings per share on the "A" shares. In the result, the reserve fund, which was placed at £17 million in 1954, stands reduced to £15 million. The figure for 1955 includes £1.09 million transferred from contingency account. There is a small decline in current, deposit and other accounts from £1.245 million to £1.191 million. With these, and some minor changes, chief of which is a fall of £6.33 million in endorsements, guarantees and other obligations, the balance sheet total is lower at £1350.9 against £1,410.5 million.

Cash balances are lower by £5.7 million at £166.1 million; money at call has declined by a little more than £5 million to £68.8 million; but balances with banks abroad have, on the other hand, risen by nearly £4 million to £10.8 million. There is a fairly substantial decline in investments from £424.5 million to £387.5 million. This, we may take it, is an index of the credit squeeze as it operated in Britain.

The margins available in Britain have, however, continued eminently satisfactory and the profit for 1955 marks a rise from the previous year's £2.19 million to £2.32 million. The appropriations in respect of the general reserve and future contingencies are maintained at £500,000 each. And, on the increased capital, dividends have been paid which absorbed the higher amount of £1.28 million against £1.23 million last year. The balance carried forward is also higher by £42,000 at £558,006.

The Indian branches fared satisfactorily well in 1955. Deposits are higher by nearly Rs 2 crores at Rs 41.70 crores. Cash balances have been reduced: cash in hand with the Reserve Bank is Rs 7.69 lakhs lower; balances with other banks are more or less unchanged; and money at call has declined by Rs 81 lakhs. Investments also show shrinkage, though a nominal one, of Rs 68 lakhs to Rs 19.76 crores. Lloyds has participated fully in the meeting by Indian banks of the additional demand for funds. Advances have risen by a level of Rs 2½ crores to Rs 20.04 crores.

The profit and loss account discloses that the income of the bank has risen by Rs 19.16 lakhs to Rs 1.80 crores. Interest and discount account for the bulk of the increase, being placed Rs 14 lakhs higher at Rs 1.40 crores.

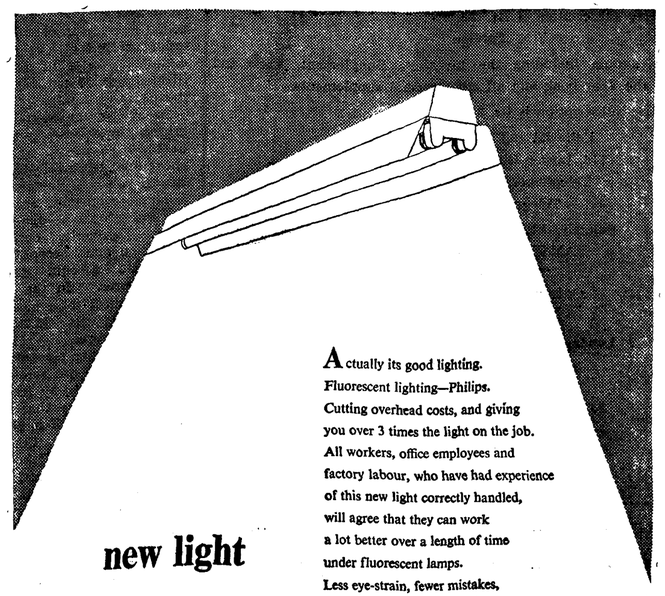
Interest paid is Rs 7.27 lakhs higher; and salaries and allowances have absorbed Rs 2½ lakhs more. The fine performance of the Indian branches is indicated by the fact that the balance of profit shows a smart rise of over Rs 5 lakhs to Rs 21.42 lakhs from Rs 16.39 lakhs.

*

Punjab National Bank Ltd.

We are used to getting accounts from the Punjab National Bank which, each year, disclose that substantial progress has been achieved in the year under review. Deposits and other accounts are, at the end of 1955, Rs 14½ crores higher at Rs 90.12 crores. And, with both the contra items marked higher, the balance sheet total passes the Rs 100 crore mark to be placed at Rs 112.89 crores—a rise of over Rs 21½ crores during the year. Such was the demand for accommodation from the Punjab National Bank, and such the readiness of the Bank to help its constituents, that, over and above the additional resources made available, the Bank has reduced its cash balances. Investments have been added to by over Rs 10 crores to Rs 45.65 crores; giltedged held by the Bank incidentally, has a market value which exceeds the book value by Rs 33 lakhs. Advances are marked up by Rs 9.62 crores at Rs 42.02 crores.

The income of the bank rose by Rs 76 lakhs to Rs 4.50 crores. The bulk of this was contributed by interest and discount, the relative figure having risen to Rs 3.43 crores from Rs 2.76 crores.



Interest paid marks a rise of Rs 36½ lakhs to Rs 1.61 crores. Also, salaries and allowances absorbed Rs 26 lakhs more at Rs 1.63 crores. In the result, profits are higher by nearly Rs 11 lakhs at Rs 64.41 lakhs.

Provision for income tax is reduced by Rs 5 lakhs to Rs 11 lakhs. The transfer to the contingency reserve has been raised sharply from Rs 12½ lakhs to Rs 24 lakhs. The transfer to the reserve fund has been more than doubled to Rs 5 lakhs. The bonus to staff absorbed Rs 4 lakhs more at Rs 13½ lakhs. The interim dividend at Rs 1-8 per share, against Re 1 per share in the previous year, took up Rs 1.75 lakhs more at Rs 5.25 lakhs. The final dividend has been maintained at Rs 2 per share. Thus, the dividend distribution has been raised by 2 per cent per annum to 14 per cent in 1955.

United Bank of India Ltd.

IN our analysis of the accounts of the United Bank of India Limited for 1955, we have to take due care of reading between, as it were, the lines presented by the figures. For, a superficial assessment might seem to indicate that the progress achieved during the year under review is insubstantial. But, as Dr N. N. Law, the Chairman, points out, the comparative figures are "somewhat distorted by the fact that, last year, all Pakistan

figures were embodied in the balance sheet at the rate of exchange prevailing on the last day of the year"; and, subsequently, with the devaluation of the Pakistani rupee, the 1955 figures are based on a rate of exchange that is par—and not, as in the previous year, Rs 144 for every Pakistan Rs 100. In this light, therefore, we shall parenthetically add the extent to which the comparison is distorted.

Deposits and other accounts, as shown in the balance sheet, have risen by the bare margin of Rs 78 lakhs to Rs 31.27 crores. Dr Law points out in this context that the actual increase in deposits is of the order of Rs 2.60 crores. And, certainly, a rise in deposits of a little under 10 per cent is by no means insubstantial.

As against the capital of Rs 2.67 crores, the reserve fund is placed at Rs 70.95 lakhs. The balance sheet total has swelled under other heads also. Borrowings from banking companies are shown at Rs 1.91 crores as against nil last year. Secondly, both bills for collection and acceptances in the aggregate account for a rise of Rs 2 crores. In the result, the balance sheet total has risen from a level of Rs 38.22 crores to Rs 43.40 crores.

On the other side of the ledger, cash balances are somewhat lower —lower, in sum, by Rs 1.10 crores. It would appear that investments are lower by sum of Rs 18½ lakhs at Rs 14.41 crores. But it is necessary to note that Pakistan Central and Provincial Government securities stand, in the latest balance sheet, at Rs 2.78 crores—that is, Rs 12 lakhs less than in the previous balance sheet. This reduction, of course, is due to the changed basis on which Pakistan assets figure in the balance sheet. Thus, far from there having been a decline in the value of investments held, there has, as Dr Law points out, actually been an increase of Rs 74 lakhs in the portfolio.

The United Bank of India was called upon to shoulder the responsibility of extending advances to its constituents in a manner befitting the increased tempo of activity under the Second Plan; and the balance sheet faithfully records the noble manner in which the bank has risen to the occasion. Advances have gone up sharply from Rs 13.87 crores to Rs 18.13 crores.

Such expansion in the advance portfolio makes itself felt, as was to be expected, in the profit and loss account. The income of the bank has risen by Rs 9 lakhs to Rs 1.43 crores. The problem of establishment expenses has been one that had to be tackled courageously by the management; and the accounts reveal that, again, the management has spared no effort to keeping down expenses. The rises in interest paid and on salaries and allowances are small: Rs 3½ lakhs in interest paid to Rs 33.13 lakhs; and a bare Rs 79,000 to Rs 68.24 lakhs in salaries and allowances.

As a consequence, the balance of profit is Rs 1.57 lakhs higher at Rs 14.61 lakhs. The amount transferred to the reserve fund is Rs 2.95 lakhs; taxation receives Rs 3.50 lakhs; and, after the payment of the dividend at 3 per cent, the carry forward is Rs 1.70 lakhs.

The accounts offer evidence that the arduous task of consolidation, which was so necessary in the case of the United Bank of India, representing as it does the amalgamation of four Bengali banks and their countless branches, is being tackled with zeal, with energy and, most importantly of all, with success.

A Pre-Natal View of Industrial Policy

Indian Finance
Established 1928
April 21, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

FROM the few Press forecasts available, the new industrial policy, expected to be announced shortly, should be highly satisfactory, both in its general outline and in its main details. One of the major key-notes of the new policy is continuity; there is not going to be any violent break from the past. In essentials, most of the features embodied in the Resolution of April 1948 are to be retained. It cannot be denied that the transition which is being witnessed today involves radical changes in the economic set-up. The Government of India are determined to see that these changes are carried out in a smooth and gradual manner. In spite of pressure from a section of opinion for accelerating the pace of changes and for making a clean sweep of certain vested interests, the new policy represents a compromise, giving full recognition to the existing state of affairs on the one hand and incorporating deviations and methods which current social aims call for, on the other.

Turning to the broad features of the revised policy, it is on the whole a restatement of what the Government have been pursuing for the last eight years. To the public sector, a few more industries are added. Most of them are those over which the State was already exercising a wide measure of direct control. Their future has been pre-determined. These industries are either those, which by their very nature ought to be under the control of the State or those which private enterprise has found it uneconomic to manage. Against the two broad divisions of industrial spheres, the public and the private, under the old policy, in the new, there is a clearly defined third sphere including a large number of basic and other important industries where the public and private sectors are to function side by side. In this sphere, the State's role will be determined by the extent to which private enterprise is able to contribute capital and develop the industries in a spirit conforming to the broad social aims which the State has prescribed.

Otherwise, far from being keen on intruding into the orbit of the private sector, the State is to be content with starting or taking over industrial units where private interests are reluctant to come in or are guilty of anti-social behaviour. In other words, the motive for unpremeditated extensions of the State sector will be not so much the dictate of doctrine or ideology as the functional incapacity of private enterprise. It is generally felt that private enterprise is shy toward industries whose capital requirements are large, and where the yields are relatively delayed.

It is specially emphasised that there will not be any rigidity in the actual application of principles within this mixed sphere and even between the three principal orbits. No water-tight compartments are envisaged. On the contrary, mutual dependance will be the rule. For, the basic industries, run by the State will mostly depend for their machine parts and implements on the smaller and medium-scale industries under private ownership. There would always be a regular reciprocal flow of products, services, and probably in a smaller measure of skill. The private owned units are expected to function as the main feeders of the State enterprises.

Nor is the private sector being relegated to a wholly subsidiary role in the economy. Subject to the requirements of ultimate direction and control which the State has necessarily assumed under the planned economy, interference with the management of privately owned units will be limited to the minimum. The avowed disinclination to take over established concerns is reinforced by the paucity of resources. It is specifically stated that the available resources should be utilised to build up new enterprises rather than in the purchase of old ones. The State has thus virtually given a fresh charter, guaranteeing the free development of established concerns. Whatever extension of public sector is contemplated will, in the ordinary course, belong to new development. Those enterprises which are already in the field and which are soundly managed will be left untouched.

The inexorable widening of the public sector should not therefore be a cause for concern to private enterprise. For, the new extensions will not be at the expense of any existing interest. Mostly it is virgin ground which is going to be covered. Private enterprise, on the contrary, is being offered adequate scope, wide facilities and eventually conditions of stable profits. The policy towards foreign capital would remain unchanged. In the new situation, as is already seen in the case of the steel concerns, the flow of foreign capital can become easier under State guarantees.

One of the significant features of the new policy is that up to Rs 7 crores, a private industrial unit can borrow direct from the State or any of the State-sponsored financial institutions. Even beyond Rs 7 crores, State assistance, would be available but only in the form of equity capital. If the private sector thinks that it be being starved of finance, here is a ready answer to that fear. Actually, the task of assembling finances is being undertaken by the State. A hard-pressed private business has only to show its credentials to be able to secure the needed funds. The development of the general economy on a colossal scale, the extension of social services, the establishment of large-scale industrial units under State auspices and the linking of production between such units and those managed by private enterprise together represent, for the goods produced in the private sector, a domestic market which, by virtue of its size and stability, should be deemed an inestimable boon.

Complaints are frequently raised that industrial units in the public sector have certain inherent advantages over and above which they also enjoy preferential treatment at the hands of the Government. There is to be a specific assurance in the new industrial policy declaration that in no respect whatsoever would there be any discriminatory treatment between the same type of units in the public and the private sectors. Until uniform methods of costing are adopted for both the sectors, there will be some room for charges of discriminatory and invisible preferences. But once the Government decide to give thoroughly impartial and equal treatment as between the two sectors, it will be of advantage to both sides. A competitive toning up is bound to follow. The privately managed units can develop themselves without any sense of frustration.

It is also unfair to argue that the private sector is being denied legitimate scope under the Second Five-Year Plan and the industrial policy which will guide it. The annual investment in the private industrial sector during the last five years has been roughly of the order of Rs 100 crores. The average annual investment envisaged under the Second Plan is considerably higher at Rs 122 crores.

The expectations are therefore not less but more than its performance under the First Plan. Against this irrefutable fact, the allegation of neglect cannot stand. We have already mentioned a number of points about the new industrial policy which will have the effect of strengthening private enterprise in many ways.

For the State, the expansion envisaged vastly adds to the magnitude of familiar problems. Even in relation to the much more modest scale of industrial investment under the First Five-Year Plan, there were difficulties with regard to technical and administrative personnel, glaring lack of co-ordination and instances of scandalous waste. To some extent, this can be excused as being incidental to a period of breaking new ground. There is also some compensation in the experience gained; but the range of responsibilities, the scale of expenditure and the extent of co-ordination necessary in the new set-up are incomparably vaster.

The State is not only becoming the biggest, the most powerful and, in respect of a large number of important industries, the monopoly producer of goods and services, it has also assumed intricate functions for the supervision and control of the entire economy. No other democratic nation has attempted to do so much in so short a time. Politically too, it is a testing time and there are a number of untidy knots which the Government have to disentangle. The Commerce Minister has revealed how there are vital difficulties in the way of securing machinery and technical advice for the steel plants, unless the Government take quick decisions. The state of India's international relations being what it is, perplexities are not unlikely to arise in the matter of foreign technical and financial aid. The Prime Minister used to think that the reorganisation of States could be postponed in deference to the needs of the Second Plan. The pressure of events proved too much for it. Unsuspected difficulties may well lie that way. Experts, including those of the Railway Ministry, have pointed out that there is a disturbing lag in the development of transport. It is good to be aware of all the risks and deficiencies in time. Knowing them, it should be possible for the Union and States Governments acting in perfect unison to avert them. As far as the private sector of industries is concerned, it can go forward with satisfaction and confidence. Judged by the experience of the First Plan, public co-operation, wherever it is necessary and intelligently sought, will also be forthcoming. It is with this realistic and hopeful note that the new industrial policy has to be welcomed.

India and the Metric System—II

By P. E. MEHTA

An Indian Finance Special Study

Designing of all things for Human use with the Human being as the Measurement and Target.

IN the introduction to our first article, we mentioned that the first measures were adopted for the convenience of human beings to serve their needs. This is specially valid for houses, furniture, instruments, and tools—all connected with their life and day to day work.

Opponents of the Metric System sometimes say that it is unnatural to force an artificial system on the naturally grown standards; but this is not true, and it has been proved by scientists that the building of houses, furniture and other aspects of human convenience may be standardised by systematically adopting the Metric standards. The classical work on this is "Bau-Enturfslehre" by Professor Ernst Neuffert. The book finds basis, standards, rules and regulations, for planning, designing and erecting of all kinds of buildings, rooms, fixtures, furnitures etc., "WITH THE HUMAN BEING AS THE MEASUREMENT AND TARGET." Mr Neufert points out that, in the building of houses, standardisation of units has been in force for centuries. In Japan, after the great fire in Tokyo in 1657, the style and sizes of houses and especially their basic dimensions have been adopted according to the Kiwariho method. Here, the basic measurement is a Ken equal to 6 Japanese feet equal to 1.818 Meter. The centre lines of walls had a distance of full or half Ken, and windows and doors have all been arranged according to this dimensions.

Before the introduction of the Metric System in Europe, similar standardisation had been in use in Denmark, Holland and Germany. The basic dimension in use was 4 feet and this has been changed over, in all these countries, to the Metric System by 1.25 meters.

The British basic dimension of 4 feet comes to 1.219 meter, which is very close to the European dimension of 1.25 meters. Even the USA follows similar dimensions in its sky-scrapers and pre-fabricated houses.

A standard series of dimensions can be obtained by doubling the basic dimension of 1.25 meter, and thus we arrive at the progression of 2.5, 5, 10, and so on, always a multiple of the basic dimension. The standard dimensions of the basic building elements have been adapted to the system, specially bricks, hollow blocks and other materials.

The International Meter and Kilogram:

The idea of adopting scientific measures was thought of by many in the middle ages: it was the astronomer Jean Picard who proposed to take as unit the length of a pendulum beating one second at sea level and at a latitude of 45°. It was not, however, till 1799 that the meter was introduced in France by law.

At that time the basic unit Meter was defined as 40 millionth part of a full earth meridian. Later on, when more exact measurements were possible, a deviation from the original by 0.01 per cent was found. The International Prototype Meter is a bar of an alloy of 90% platinum and 10% iridium in an x cross section in order to eliminate the influence of bending.

As the Prototype of the meter may have uncontrollable changes because of ageing of the metals, a new norm was introduced by the International Metric Convention in 1927. It is the red Cadmium line in the spectrum which at 15°C and 760 mm pressure in dry air (Co_2 content 0.03 per cent) the wave length 6438, 4696 Å. By this the meter is equivalent to 1553164,13 **wavelength of the light of the red** cadmium line. This can be reproduced in any laboratory, so we can check up the length any time in Delhi, Bombay, Calcutta, Madras and other places where laboratory facilities are available. As a contrast, the length of the foot or the yard cannot be derived in a scientific manner.

The Prototype of the Kilogram is a cylinder of an alloy of 90% platinum and 10% iridium of 39 millimeter height and 39 millimeter diameter. Both the prototypes of the Meter and the Kilogram are kept at the International Measures Laboratory at Sevres (near Paris) in France, which was established by the International Metric Convention in 1875.

Easy Expressibility of the Metric System:

In our first article, as one of the advantages of the Metric System, we mentioned that it is very easily expressed, which we would like to illustrate below:

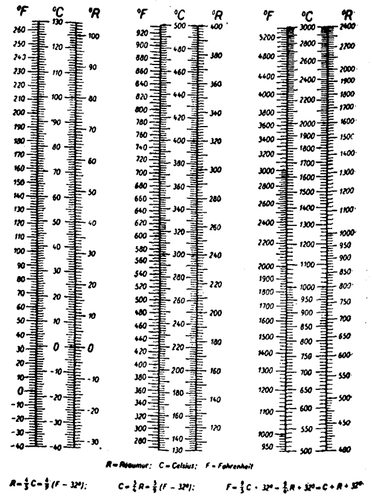
The Metric System uses the decimal subdivision of units, either multiple or part of the basic unit, and are denominated by prefixes of the units, which are usually the positive or the negative potence of ten. Thus, the units are expressed as:

Terra (T) = 10^{12} Units
Giga (G) = 10^{9} Units
Mega (M) = 10^{6} Units
Kilo (K) = 10^{3} Units
Hecto (H) = 10^{2} Units
Deca (D) = 10 Units
Deci (d) = 10^{-1} Units
Centi (c) = 10^{-2} Units
Mili (m) = 10^{-3} Units
Micro (μ) = 10^{-6} Units
Nano (n) = 10^{-9} Units
Pico (ρ) = 10^{-12} Units

The following example may be useful: 10^{3} =1/1000 of a meter, which may be written as 1 mm (one millimeter); and this avoids all fractions and, from the prefix, we can find out whether the number is a fraction or a multiple power of the Unit. The same prefix can be used for units of length, weight and time proof of the easy expressibility of the Metric System.

Temperature Measurement:

It is somewhat astonishing that, as late as the 16th century during the Rennaissance period, scientists felt the necessity of measuring temperatures. In 1592, Gallilei made a primitive thermometer whereby expansion of the air indicated the degree of heat. The inventor of an improved air thermometer was Amontons (1702). The first thermometer using mercury was constructed by Fahrenheit (1686-1736) a German physicist who also worked out the scale named after him. This scale has been adopted in the UK and the USA and is valid there since then.



In France, Mr Rene de Reaumur introduced in 1790 the Reaumur scale of the thermometer which has as its zero point the freezing point of water, and the boiling point of water at 80° of the Reaumur scale.

The third and the most scientific nomenclature in temperature measurements was suggested by A. Celsius, a Swedish physicist, in 1742. It is remarkable that he subdivided the boiling and the freezing point of water into 100 grades, i.e., on the decimal system, about 50 years before the Metric System was introduced. It is rather strange that, in the UK and the USA, the German subdivision made by Fahrenheit is valid, and in France the Reaumur system has been abolished and the Celsius system adopted. The Celsius system is now used by all countries using the Metric System.

The Metric System of temperature measurements has its lowest point at minus 273.16°C, called the absolute zero point, at which the movement of the molecules comes to a stand still. There is no limitation in the upward temperature scale. The use of mercury as the indicator for temperature is due to its stability: it can be used between—39°C, the freezing point of mercury, and 356°C, its boiling point. For temperatures below minus 39°C, alcohol is used and for temperatures over 356°C, special thermometers filled with gases which prevent the mercury from boiling are used. Temperatures over 750°C are measured electrically.

We give below a scale showing the conversion of the different systems:

TEMPERATURE SCALE ACCORDING TO FAHRENHEIT, CELSIUS AND REAUMUR.

Pressures:

Steam or gases under pressure are measured according to the Imperial System in pounds per square inch. In the Metric System, the pressure is indicated in kg/cm2 called one atmosphere. Here, again, we find in both Kilogram and centimeter square the Metric System with all its advantages in calculation.

The atmospheric pressure which is very closely the same as the technical atmosphere (at) is equal to the weight of 760 mm mercury column.

Precision Measurements in Industry:

Precision measurements in industry are made by reading micrometer calipers. The inch micrometer is rather clumsy in that each turn of the screw does not give the same measurement whereas, in the Metric Micrometer, each reading of the turn is tuned to 0.5 mm and readings can be made to within 0.01 mm,—an accuracy rather difficult on the inch micrometer.

(Continued on page 769)

Editorial Notes

A Generous Gesture

Prime Minister Nehru's disclosure that he had suggested to Pakistan the settlement of the Kashmir dispute by demarcating the borders of the State on the basis of the present cease-fire line, has given an unpleasant jolt to public opinion in India. Having always considered Kashmir "morally, politically and legally" an integral part of India, the proposal to concede to Pakistan any portion acquired by her by force of arms could well be interpreted as a piece of surrender. Indian opinion has always been decidedly opposed to any solution smacking of appeasement.

Memory, however, is short. Though, to the over-whelming majority, Nehru's disclosure has come as a surprise, the fact remains that the suggestion has been informally discussed many a time since 1948.

The apprehension that Pakistan is likely to draw wrong conclusions is proved well-grounded by her summary rejection of the renewal of the proposal to divide Kashmir. The Pak Premier has categorically refused to accept partition as the basis of settlement. Pakistan obviously has judged Nehru's gesture as a sign of weakness. Sabre-rattling and cries for Jehad have revived in Pakistan.

A satisfactory solution of this formidable dispute is at present unforseeable. A plebiscite is now completely unrealistic; it should never have been proposed by India at all. Pakistan's adherence to the Baghdad Pact and the SEATO has wiped away the basis of a free plebiscite. Sir Owen Dixon himself had warned against the risks involved in holding a plebiscite in Kashmir. Refusing Mr Nehru's extremely generous offer Pakistan stands exposed in all her intransigence before the bar of history.

✱

War Clouds over Middle East

The Middle East, simmering so long, has now reached the point of boiling over; the rumblings are ominous and the least spark might set aflame a conflagration. In the light of the conflicting interests involved in this strife-ridden area, discerning observers are apprehensive of the tragedy of Korea being repeated here. The Arab world united as never before and bolstered up by Communist arms, seems ready for a final showdown with Israel. The Jews, relying on Western support, seem equally convinced of the inefficacy of means other than war.

Hitherto, of the Western Powers, Britain was the most concerned with the Middle East. The growing influence of Soviet Russia among the Arab nations and the possibility of Red domination of the entire region has now focussed US attention on the situation. America's position with regard to the Middle East is obviously delicate. She has sympathy for the Arabs and she has no relish to offend them, especially as they possess huge resources of oil.

This is precisely why America has not so far come out openly in favour of Israel, despite Moslem alacrity to accept aid from the Reds. She is at the same time anxious to protect the UN-created State of Israel from extinction. Britain and France have the tacit approbation of the USA in their efforts to aid the Jews. Till now, she has resisted all pressure to render direct aid. Time is running short and Russia is gaining unprecedented prestige in the Middle East.

Present developments might force the US to pursue a more active policy which might extend even to direct intervention in the Arab-Israeli dispute. President Eisenhower has pledged that America would oppose any aggression in the Middle East. This unequivocal declaration might yet prevent an all-out war. The UN Secretary-General's mission to the Middle East is also significant. It may put a check on precipitate action at least when he is engaged in negotiations with the disputants.

Britain is anxious to secure the participation of America in the Baghdad Pact. Unless America agrees to put her prestige and resources at the disposal of the participants, the Pact is likely to remain barren. Determined, wise policy on the part of the USA alone will save the situation from further deterioration. Some of the Arab grievances like the plight of refugees are genuine. Some sort of a workable compromise to the mutual benefit of the Arabs and the Jews remains the only hope, off war.

✱

Sadhus and the Plan

The Second Five Year Plan is likely to have a conspicuously novel feature, if the Union Finance Minister's appeal to the Sadhus receives due response. At the Bharat Sadhu Samaj Convention held recently at Rishikesh, Mr G. L. Nanda made a sincere and solemn request to this fraternity who are estimated to be about 7 million in the country, to share with the Government a few of the responsibilities connected with the Second Plan.

It is reported that an eleven-point programme has been placed before them, in which are included the spread of literacy and social education, the organisation of collective prayers and singing, the imparting of spiritual training, prevention of disease through indigenous systems of medicine and yogic exercises, promotion of Bhoodan and prohibition, fight against corruption and adulteration, uplift of backward classes and better care of milching cattle and rural industries.

There are inspiring examples of organisations composed solely of persons who have renounced the world doing excellent humanitarian work. The Ramakrishna Mission is a reputed instance. If the more cultured among the few millions of Sadhus known to be available are helped to organise properly on a convenient territorial basis, it is possible to provide a second line of disciplined effort behind the administrative machinery.

In many villages, the Sadhus command instinctive respect and are able to enforce virtues and practices which the government official may fail to do. It is unquestionably advantageous to enlist unexploited social authority of such vast magnitude.

But in doing so both the leaders among the Sadhus and the Government authorities should guard against two dangers. One is the likelihood of the Sadhus gradually beginning to discard the outlook and conduct on which their claim for social respect solely depends. They should not be converted into a new corps of officialdom. It is even more necessary to see that their intrusion into the sphere of social work does not reduce the scope for employment. Sadhus, after all, attach little value to comforts or even to regular livelihood. They should not be allowed to displace others to whom the normal requirements of life are unavoidable. The Planning Minister, presumably, has carefully considered these aspects before he announced his request at Rishikesh.

✱

A Delicate Task

Financial assistance to small-scale industries presents problems of a delicate character. Hitherto, it was believed that sufficient assistance could not be given by the State owing to rigidity of rules. Interest rates were also high. Henceforward the rules will be greatly relaxed and both for individual borrowers and cooperatives the rates of interest will be brought down, the co-operatives enjoying a small beneficial difference. It would appear that the Central Government are contemplating 3 per cent for the individual borrower and 2½ per cent for the cooperatives.

The financial requirements for the purpose will be found by the States and the Union Govern-

World *of* Finance

Revenue Deficit: Overall Deficit: Deficit Financing

THE phrase "deficit financing" came into popular currency in the mid-First Plan period. Since then, no question connected with the Plan has been discussed so frequently, or so vehemently, or so controversially. When suggestions in this regard were first put forward, there was an implicit recognition that, while it may not be a very good thing, recourse to this method of financing could be tolerated in certain circumstances. Subsequent thinking established the conviction that deficit financing had a positive and beneficial role to play in a developing economy. The sense of resignation to an unavoidable evil yielded place to a spirit of joyous welcome to a procedure which was particularly suited to the conditions created and induced by the very forces released by the Plan. This new attitude accounts for the decision to secure over a fourth of the Second Plan's resources from this source.

At the threshold of the Second Plan, it is profitable to examine the experience and lessons of this experiment in the First Plan period. Much useful data is presented in a well-informed article appearing in the March issue of the Reserve Bank Bulletin under the authorship of Mr N. A. Sarma. In the light of the facts adduced and the figures cited by Mr Sarma, we may draw a distinction between (a) revenue deficit; (b) over-all deficit; and (c) deficit financing. An appreciation of this question under these three heads is calculated to assign to deficit financing a proper place in the perspective of national economy.

It is not as well known as it should be that, in no year of the First Plan, there was a deficit on revenue account; and that, on the other hand, there were substantial surpluses, the actual surplus in the first four years being considerably larger than the original estimates, and appreciably larger than even the revised estimates. For the last year of the Plan, the actuals may not be known till next February; but it is equally noteworthy that the Revised surplus at Rs 12.31 crores compares with an original deficit of Rs 17.35 crores. Below are given the relevant figures for 1951-52 to 1955-56:

(Crores of rupees)

	Budget Estimate	Revised Estimate	Accounts
1951-52 ..	+26.10	+92.61	+128.09
1952-53 ..	+ 3.73	— 3.79	+ 38.93
1953-54 ..	+ 0.45	—16.96	+ 8.50
1954-55 ..	—15.36	— 5.00	+ 33.51
1955-56 ..	—17.35	+12.31	

The realised surpluses in 1951-52 to 1954-55 are of the order of Rs 209 crores. The Revised estimate for 1955-56 provides for a surplus of Rs 12.31 crores. If history can be depended upon to repeat itself, the actual surplus for 1955-56 may turn out to be anything like Rs 45 crores. On this assumption, the total revenue surplus in the five years of the First Plan will exceed the high figure of Rs 250 crores. This is a most heartening feature of the First Plan's financing.

Taking the revenue and capital accounts together, there emerges an estimated deficit of Rs 443.5 crores. This represents what is generally described as the over-all deficit of the Government of India. At this stage, we may give the relevant figures bearing on the over-all deficit.

Year	In crores of Rs. Deficit or Surplus
1951-52	+ 55.3
1952-53	— 30.8
1953-54	— 87.0
1954-55	—145.4
1955-56 (Revised estimate) ..	—235.6
1951-56	—443.5

The Revised Estimate of the 1955-56 deficit is based on the assumption that ad hoc Treasury Bills are to be created to the amount of Rs 240 crores. From the analysis which was furnished in a recent issue of Indian Finance, the actual creation of ad hocs in the past year may not exceed Rs 140 crores. That is to say, the over-all deficit, assumed in the Revised Estimates to be Rs 235.6 crores, may prove, in the final accounts, to be no more than Rs 135 crores. Correspondingly, the over-all deficit may stand reduced to Rs 350 crores. This, again, is a heartening feature of the First Plan's finances.

The next question we may address ourselves to is this: How much of this over-all deficit was financed by deficit financing? The gap in the over-all accounts has been filled partly by drawing down the cash balances, partly by selling securities held in the Cash Balances Investment account, and largely by increase in the floating debt. How the over-all position stands with regard to these three categories in each of the five years of the First Plan is indicated in the following table:

(Crores of rupees)

	1951-52	1952-53	1953-54	1954-55	1955-56 (R.E.)	1951-56 Total	1956-57 (B.E.)
Decline (—) or increase (+) in cash balance	+ 0.9	—63.5	—61.3	— 5.5	+ 18.1	—111.3	+ 0.4
Increase (+) or decrease (—) in floating debt	—32.2	—17.1	+19.5	+136.8	+240.0	+347.0	+355.8
Sale (+) or purchase (—) of securities ..	—22.2	—15.6	+ 6.2*	+ 3.1	+ 13.7	— 14.8*	..
Overall surplus (+) or deficit (—) ..	+55.3	—30.8	—87.0	—145.4	—235.6	—443.5	—355.4

*Estimated. The holdings in cash balance investment account in 1953-54 declined by Rs 46.2 crores, of which Rs 40 crores held in the 3 per cent Loan 1953-55 matured during the year.

Mr N. A. Sarma thus explains the significance of the figures disclosed in the table:

It will be seen that the deficits of 1952-53 and 1953-54 were financed principally by drawing down cash balances, but by the end of March 1954, cash balances of the Government reached the low level of Rs 37 crores, and were reduced further to Rs 32 crores during the next year. Since 1954-55, therefore, the deficits have been financed almost wholly by expansion of treasury bills; in fact, in 1955-56, a small part of the treasury bill issues is intended to replenish cash balances, as a minimum balance of Rs 50 crores is deemed necessary. Again, there are now only nominal holdings in the cash balance investment account; as at the end of March 1956 cash and securities held on Treasury account are placed at only Rs 50.33 crores. Therefore, the over-all deficit in government accounts is reflected in the increase in floating debt, largely during 1954-55.

Between cash balances and securities in the cash balances Investment account, the contribution to the First Plan's finances is Rs 125 crores. Increases in floating debt are expected to be of the order of Rs 347.0 crores.

This figure of Rs 347.0 crores is on the assumption, made in the Revised Estimates, that the ad hoc Treasury Bills to be issued in 1955-56 would be Rs 240 crores. As we have already stressed, the actual figure may turn out to be Rs 100 crores lower. It follows that the increase in the floating debt in the First Plan period may prove to be no more than Rs 250 crores. This is the magnitude of deficit financing in the First Plan period.

The results of this study for 1951-52 to 1955-56 may be summed up as follows:

Revenue Surplus ..	Rs. 250 crores
Over-all Deficit ..	Rs. 350 crores
Deficit Financing ..	Rs. 350 crores

According to the returns of the Reserve Bank for the week ended 13th April, notes in circulation are up by Rs 9.29 crores, notes issued have risen by Rs 4.56 crores, foreign securities have gone down by Rs 4.97

Automation and Disarmament

By PAUL EINZIG

EVEN though the disarmament discussions with the Soviet Government are making but slow progress, there is a possibility that some understanding may be reached for a limitation of armaments, and possibly even for a reduction in the armed strength of the leading Powers. Before the war, and even much more recently the prospects of any such agreement would have carried the possibility of an economic recession. As things are at present, however, such is the degree of inflationary pressure in most countries that their economies could easily absorb a reduction in the activities of industries concerned with arms production. Men released from the fighting services could easily find employment in industry working for the satisfaction of apparently unlimited consumer demand, and for the production of capital goods.

Our present problem is not so much the economic effect of disarmament as the possible effect of recent economic developments on disarmament. As a result of the progress made by automation in recent years, a new situation has been created, and it would be well if the Governments of the democratic countries were to take the change into consideration before making their final decisions on disarmament.

As a result of the adoption of labour-saving automatic equipment, the conflict between civilian and military requirements has become less acute than it was before the development of automation. It has become possible to divert more productive capacity and manpower to military requirements without unduly reducing the output for civilian requirement. Indeed, judging by the experience of the years that followed the Korean War, it has become possible fully to maintain and even to increase civilian production in spite of the use of more manpower and productive capacity for military production. The chances are that automation will make further considerable progress within the next few years, so that it should be possible to increase civilian production materially even in the absence of any drastic cuts in military production. Needless to say, such cuts would greatly facilitate the raising of the standard of living. But the standard of living would increase even if the Governments concerned were to find it impossible to come to agreement about a substantial reduction in armaments.

The main significance of automation from the point of view of war potentials lies in the fact that it has greatly speeded up the pace of arms production. Thanks to automatic machinery it is now possible to produce arms in large quantities in a much shorter time than it was a few years ago. It is true, the development of designs and prototypes necessarily takes time. Even from that point of view, automation has accelerated progress because the use of electronic computors has speeded up military research. Once the prototypes are ready it is now possible to equip the armed forces with the latest weapons in short time. Had Hitler assumed power in 1953 instead of 1933, he would not have needed six years for completing his preparations for war.

This means that it would now take relatively little time for a disarmed nation to rearm. The industrial capacity is there, and once it is switched over from military to civilian production, rearmament could be accomplished in a remarkably short time. In theory, all industrial countries would be in a position to rearm rapidly. In practice the advantages would be overwhelmingly on the side of the totalitarian potential aggressor. Even on the assumption that the reduction of armaments is carried out faithfully and that international inspection of armed strength is reasonably efficient, Soviet Russia would be in a better position to rearm at short notice than either the United States or Britain. Parliamentary control, free Press and the presence of a large number of Communist sympathisers with access to information would make it impossible for a democratic country to rearm in secret to any considerable extent. Soviet Russia is well in a position to do so, especially since, as a result of automation, the time required for rearmament has become much shorter.

It may well be that, since disarmament has become an emotional issue the democratic Governments will find it necessary to consent to a material reduction in their armed strength as part of an agreed international scheme, even though they are aware of the risk involved. What matters is that reduction in the size of armed forces and in the volume of their weapons should be accompanied by intensified military research prototypes of modern weapons. In no circumstances must this branch of military preparations be neglected or abandoned under any international agreement. Also the industrial war potential of the country should be maintained and kept up to date even if the actual arms output does not justify the maintenance of such a producing capacity.

Over and above all, it is of vital importance for the democratic countries from the point of view of their national security, to press ahead with automation. Considerable progress has been made in that sphere in the Soviet Union and in some of its satellites, and their progress is certain to continue at an accelerated pace. It is of the utmost importance for the democratic countries to possess an industry fully equipped with the latest labour-saving machinery. This is necessary in order to be able to rearm at short notice. The advantage of taking the initiative for rearmament in violation of disarmament agreement, will be on the side of the totalitarian States. They will have the additional advantage of secrecy, at any rate during the early stages of their rearmament. These advantages could only be offset by the democratic countries if they were to maintain the superiority of their industrial war potential. With the aid of a superior producing capacity they might be able to catch up with the potential aggressor before the latter's preparations have secured him a decisive superiority. Even so, in the light of the new situation created by automation, it would be advisable for democratic statesmen to think twice before consenting to an unduly heavy reduction in their actual armed strength, even if it were possible to come to agreement on an international control of disarmament. They must remember that the safety margin of time between the decision to break such agreement and the achievement of a decisive superiority in the armed strength has been cut too short by automation.

Life Insurance under Government Management

Anomalies in Recent Directives

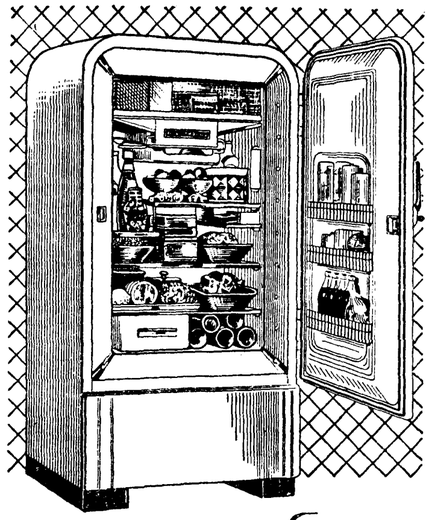
It is but common prudence to view the custodianship of life insurance companies, pending nationalisation of the companies in terms of the Life Insurance Corporation Bill, more on a caretaker basis than as a Department of the Government of India controlled by Departmental Secretaries. This was the view intended to be taken, for, the Ordinance and the Emergency Act 1956 replacing the Ordinance provide for the taking over, in the public interest, of the management of life insurance business pending nationalisation thereof. The Emergency Act 1956, therefore, did not contain any provision regarding the future set up, its main burden being regulatory in character, prohibiting the companies from doing certain acts considered prejudicial to the interest of policyholders.

The custodians have thus been empowered to seize all relevant documents and securities and to take control of funds to prevent misuse in the interim period. There was, therefore, no endeavour to evolve in the interim, new patterns of organisation, or a new set-up appropriating the domain of the Life Insurance Corporation when it comes into being. Custodianship is thus nothing more than caretaker government to maintain the existing tempo of business, as far as possible, unhindered, and to prevent malpractices said to be prevalent in many of the Indian Companies.

There seem to be insufficient realisation of this basic role of custodians in the controlling Finance Department of the Government of India. Long circulars to custodians are being issued, all of which are for guidance and immediate implementation. Many of the directives are innocuous in the matter of collation of many statistical material, which will be necessary for the Life Insurance Corporation to function effectively. There are, however, quite a few directives in which the Central Government seem to overreach themselves, appropriating for themselves the functions which should be the business of the Corporation. This encroachment on the functions of the Corporation constitutes a danger and unless effectively checked now can render the autonomy of the Corporation and the respect it should hold, to mere a paper formality.

Thus, in one of the recent circulars, the qualifications for new agents have been laid down. Agents working in cities with population of one lakh and over must complete at least ten policies on ten different lives ensuring a total sum assured of Rs 40,000. All other agents must complete at least ten policies on ten different lives assuring a total sum assured of Rs 20,000. Failure to complete the minimum annual business as stipulated above in two successive years would result in automatic termination of the agency. The above conditions regarding minimum business should apply to existing agents as far as possible and custodians have been enjoined to implement the provisions immediately.

There are also varying scales of commission. Briefly, the commission is 25 per cent in first year and 5 per cent renewal as against the existing scale of 35 per cent and 7½ per cent renewal in the first two years followed by 5 per cent renewal commission thereafter. The leeway is sought to be made up, in the new provisions, by a scheme of "new business bonus". Agents completing at least Rs 25,000 annually will be entitled to bonus bringing the total rate of commission to equal the current practice which is also the maximum allowed under the Insurance Act.



These provisions are of far reaching character and cannot obviously be intended for the period of custodianship. If the Ministry of Finance commence, in this manner, to encroach upon the contemplated purview of the Corporation, the Corporation intended to act on "business principles" will largely be a glorified rubber stamp. Nor can there be any cogent ground to enforce the regulations, in all haste now, for the Corporation will come into being in the course of a few months. Such centralised dispensation of regulations having far reaching effect on life insurance in India does not augur well for nationalised undertaking of life insurance whose success will depend on the standard of service that can be dispensed. That cannot be dispensed if regulations like these continue to pour in from the heights of Simla or Delhi.

The effort of the Government of India to evolve a status and a standard for agency business is understandable and theoretically sound. Thus they seem to have acted on a theoretical basis in enforcing with immediate effect the rigid tests. Most of the agents in India are part time workers and a very large percentage produces a business much below the qualifying level to maintain the agency or even to earn the "new business bonus".

The result will be that a very large agency force will shortly go out of existence. Their exit from the field of insurance service will have upon totality of new business, a vital bearing particularly when life insurance remains and will continue to remain for many years a forced sale. It would have been fairer ot nationalise insurance to allow it to find its feet first in a confused medley of offices, policies with differing terms and conditions, rather than embark on plans of reform. A scheme of priorities should be evolved.

Such hasty reforms will only silt up the flow of new business and will mean enormous loss in premium income. It will also mean loss in purchasing power to many thousands of part-time insurance agents. That will again dry up a possible source of savings. The correct course would have been to allow the Corporation time to introduce the reforms by a gradual process, spread over a period of, say, three years. That would have possibly enabled the agents to adjust themselves in new conditions and might not have significantly affected the flow of business.

Another curious piece of legislation relates to investments. It has been laid down that zonal Committees of Custodians will submit lists of suitable investments in industrial securities in their respective zones for consideration and approval by the Government. Actual investments will be arranged by Shri L. S. Vaidyanathan. It is to be hoped that here again the Central Government is not legislating for posterity but only for the interim period. Even then the proposal has far reaching implications for Eastern India or indeed for other parts apart from Bombay which seems, for the present, to be headquarters for Mr Vaidyanathan.

THE FLAME THAT FREEZES

VULCAN TRADING COMPANY PRIVATE LTD.
19, British Indian Street Calcutta-1
Indian Mercantile Chamber Bombay
8/9 Thambu Chetty Street, Madras

VTX-15B

The proposal virtually makes Bombay the financial centre to the detriment of Calcutta or Delhi. This issue was raised forcefully by Bharat Chamber of Commerce the other day. There would have been less pother about this, had not in Government dealings precedents played so significant a part. Therefore, although Bombay is the centre for the interim period, it is likely to be permanent and that is the point where significance has to be attached. For Eastern Indian investments, Calcutta can be the centre. Indeed it has been the centre for life investments for many years. Calcutta Stock Exchange is a capable body. There is no reason why it should be starved to the benefit of its counterpart. A zonal custodian can easily make the requisite investments for Calcutta area under Central Government directives.

The third important directive relates to general insurance. All general insurance cover required by the controlled business of insurers should be obtained only from the 'National Fire', 'Oriental Fire' and 'Asiatic Government Security of Madras'. Renewals of existing covers should be arranged with these insurers only. The three enumerated companies are owned by Life Companies whose management has not vested in the Government. Ownership of these companies has not yet vested in the Central Government. That will vest only when life shareholders have been compensated. In the meanwhile the three companies technically remain under private management and therefore are at par with other private general insurers. The selection that is being exercised in favour of these companies is thus indefensible. The directive again anticipates largely the discretion of the Corporation and is thus once more an inroad on its authority.

On other grounds the decision can be questioned. It is time that any corporate body or any individual has the right to sell its wares through its own shops and from that point of view, the Government of India have possible justification to obtain general insurance covers from the companies which they will eventually own. But Government as a body corporate stand on different grounds than other private traders or business houses.

A Government is nothing more than a machinery governed by the people and sustains through their consent. It is paid for by the people and is accountable to the people. It is therefore open to question, whether Government, as such, have the right to exercise selection in favour of a few to the detriment of others equally in the trade. The ethical basis of passing general insurance business to Indian Insurance Companies' Pool is absent in such selective trading. Pool business is distributed among all Indian general insurers. That is ethically correct as Government business, in last analysis, is nothing more than people's business which thus should go equally to companies in the country. From that point of view the selective trading is somewhat indefensible.

*

Partners from Overseas

INDIA has yet to build up a strong indigenous automobile industry. The serious handicaps with which it started and the heavy odds which continues in the shape of high vehicular tax, half-hearted internal demand for automobiles, and the rather unremunerative business conditions of motor transport, might explain the tardy rate of progress. If the situation has changed any bit in the recent past, and the prospects of the automobile industry have begun to look up, it is in no small measure due to the patience and determination of Indian manufacturers to put up with years of deterring losses. While adhering to the strict practice of economy, they were obliged constantly to go in for the most up to date methods of production and keep abreast of development elsewhere. Success in both these directions has ensured a change for the better in the fortunes of several manufacturing units. We have presently to hand the Chairman's report of one of the Automobile Products of India Limited which staged a gallant retrieval in the past year from the serious losses in the year previous.

To deal with the accounts first, the company earned a net profit of Rs 4,17,979 during the year under review. This leaves a sum of Rs 1,19,241 to be carried forward as profit in the current year after deducting the loss in the previous year to the extent of Rs 2,98,738. The Chairman Mr M. A. Chidambaram is not unduly disturbed either because the profit margin does not allow for payment of dividend or because depreciation for a previous year has not been provided for.

The main plank of the Director's policy has been diversification of the manufacturing programme through the pursuit of new avenues. From this point of view, the past year was particularly heartening. An agreement was reached with Messrs Firestone Tyre and Rubber Company of Akron for the manufacture of Brake Linings. Trial operations of the new plant are scheduled to commence by the end of this month. The internal demand for Brake Linings is expected to increase, as more and more commercial and other vehicles are put on road. The prospects for exports are also considered reasonable. This section will contribute significantly to the revenue of the company.

Another collaborator of the company has been Messrs Innocenti S. G. of Milan. The progressive manufacture of motor scooters carrying the famous name of Lambretta, is to be undertaken in India. The demand for this 'common man's vehicle' has been far in excess of expectations. The advertisement and sales promotion apparatus has been adequately geared to assist in exploiting the immense market potentialities.

The popularisation of the vehicle will however, depend on the possibility of bringing down its selling price. At the moment it is difficult to forecast if, as more and more parts are made locally, the production cost will also correspondingly decrease in the short run.

Yet another associate the company found in Messrs Henry Meadows Limited. Britain, the manufacturers of the well-known Meadows Deisel engines. In India, a growing volume of demand for Deisel engines has emanated from the primary manufacturers of trucks as well as the conversion of existing vehicles on the road. In another six months the company will be able to cater to bulk orders of the road vehicular type of deisel engines.

A fourth agreement has been finalised with the Automotive Products Company Limited of the UK for the manufacture of Borg and Beck Clutches and Lockheed Brake systems, both as original equipment for vehicles or as replacement material.

In almost every engineering industry the tendency to partner manufacturing houses abroad is dominant. This reliance is inevitable on account of local dearth of equipment and technical skill. How far and how soon individual units by themselves will be able to assure the adequate supply of technical data and know-how remains to be seen.

The procurement of necessary finance for development and expansion seems to be less knotty. The Industrial Finance Corporation has sanctioned a loan of Rs 12½ lakhs toward the Brake Linings plant. The Company has asked for a reduction of this loan to Rs 9 lakhs, but also an additional Rs 25 lakhs loan for machinery for other programmes. It is the policy of the Corporation to grant advances for the fixed capital, but not toward the working capital. The company's programmes in all will, when in the process of full implementation, give an annual turnover of over Rs 3 crores. This would mean that the liquid position of the company will have to be strengthened by at least another Rs 25 lakhs.

The shareholders for their part, can have the satisfaction that they are subscribing to a project which is of proven strength to withstand great strain, which is going to be extremely worthwhile in probably very short time, and which has as assured a long-term prospect as perhaps any other Indian industry.

*

SKF Roller Bearing

Railway axlebox bearings have always had a vital importance for the reliability of railway vehicles: prevention of bearing overheating has been a pre-requisite for the development towards greater speeds and axleloads—a possibility offered by roller bearings. Naturally, the bearings also have a considerable influence on the running economy of the railways.

As far back as 1911 axleboxes incorporating self-aligning ball bearings were fitted experimentally by SKF to passenger coaches and steam locomotives, but the restricted space available for the axleboxes did not permit the fitting of ball bearings with sufficient carrying capacity. However, SKF succeeded in designing the spherical roller bearing, which has since proved suitable in many other cases as well. The first significant installation was carried out in 1921 on the Pennsylvania Railroad.

Over the years the demands made on the performance of the axleboxes have become more and more severe: greater importance is attached to security; axle loads, speeds, and mileages have increased: and the railways demand axleboxes with larger carrying capacity in spite of reduced dimensions, and boxes still more economic in use.

SKF have met this challenge through many new designs, the latest of which gives the bearings as much as 40% higher carrying capacity or double the length of life.

Among the customers—to be found practically all over the world—may be cited the large American, Canadian. Argentine and Brazilian railways, all important European railways, Indian State railways, and railways in South Africa and Australia. And new and old rolling stock in other countries as Egypt, Ethiopia. Saudi-Arabia, Siam, Indonesia, and New Zealand rolls on SKF bearings.

WORLD OF FINANCE

(Continued from page 746)

crores: there is a fall of .41 crores in rupee coins held in the issue department while rupee securities have gone up by 9.94 crores.

In the Banking Department Central Government deposits are down by Rs 3.82 crores and other Government deposits by Rs 3.33 crores. Dep sits of Banks have also followed suit to the extent of Rs 2.46 crores.

On the Assets side notes are down by Rs 4.73 crores, rupee coins by 1 lakh and subsidiary coin by .61 lakh. Bills purchased and discounted remained the same. Government Treasury Bills have risen by .57 crores. Bills held abroad are down by Rs 3.36 crores. Other loans and advances are down by Rs 1.75 crores.

*

The statement of affairs of the State Bank of India for the week ending April 13th discloses a fall in *Deposits and Other Accounts* to the extent of Rs 5.4 crores. Borrowing from Other Banking Companies', Agents etc., have risen by Rs 1.66 crores. Bills Payable are down by Rs 0.3 crores. Other Liabilities show a fall of Rs 3.10 crores. Total capital and liabilities stand at the reduced figure of Rs 263.66 crores against Rs 270.59 crores for the previous week.

On the assets side, Cash in hand and with the Reserve Bank has fallen by Rs 3.3 crores, Balances with Other Banks are also down by Rs 0.26 crores. Money at call and short notice has risen by Rs 0.4 crores. Securities and investments held show a fall of Rs 2.12 crores. Likewise, Advances have also fallen by Rs 1.72 crores.

World of Tea

Bright Outlook

THE latest stock position of tea in London confirms the trade's re-appraisal of prospects of Indian tea in the 1955-56 season. As against 159.7 million lbs on April 6, 1955, stocks as on April 6, 1956 are only 95.9 million lbs.

Better quality teas continue to meet with keen demand in the London Tea sales. At the auction held on April 18, a total of 25,359 packages of tea including 19,247 from North India were on offer. Quality teas were higher by 2d per lb. Clean Black leaf teas and good medium kinds met with a steady enquiry. There was good demand for Coloury Dooars.

It is said that UK imports from all countries upto the end of February 1956 are over 90 million lbs short of 1955. It is, however, to be noted that there has been a sharp increase in shipments from Northern India during March this year. Total shipment from Northern India in March amounted to 40.67 million lbs as against only 8.79 million lbs during the corresponding month of 1955, with the UK increasing its offtake from 5.89 lbs in March 1955 to 31.5 million lbs last month.

It is pointed out that the poor offtake by the UK till recently is to be attributed to the credit squeeze and the imposition of restrictions on direct tea shipments from India to London. With the withdrawal of the restrictions coupled with a strong demand in in the UK, tea exports are expected to record a sizeable improvement. Moreover, the fact that the domestic consumption has considerably increased, has imparted fresh confidence and it is expected that the closing sales of the season will witness some considerable competition.

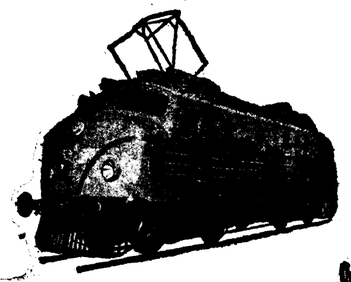
Another factor that has strengthened the position of Northern India is the possibility of smaller crops both in South India and Ceylon. The crops in these two areas for the first two months of the new season are reported to be 11 million lbs less than the corresponding period of the previous season. It is estimated that when figures for March are available a further deficit of 8 million lbs in Ceylon will be added.

For the above reasons, it is confidently expected that instead of a heavy surplus, the season 1955-56 will end with very little carryover. Apart from the radical change in the trend of trade particularly in UK, the increase in the domestic consumption in India has imparted fresh strength to Indian tea. Rough estimates put the figure for domestic consumption in India around 220 million lbs a year. A similar increase in the domestic consumption in Pakistan is also reported.

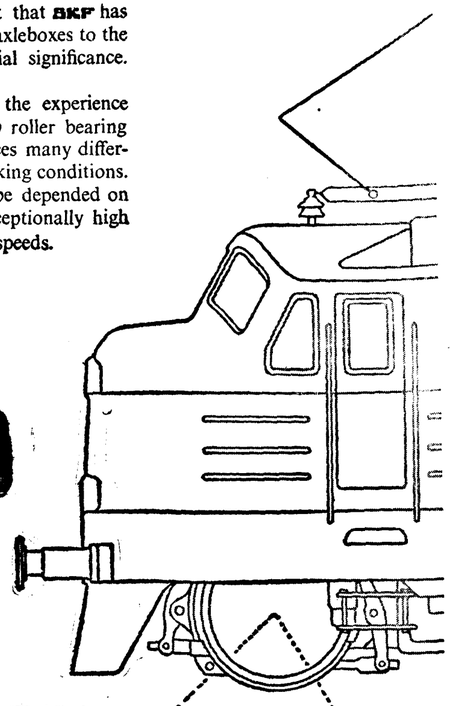
Discussing the outlook for tea, Messrs. Carrit Moran & Company observe: "Increased consumption within India and Pakistan may therefore have reduced available supplies to overseas markets by 40-50 million pounds and this combined with the smaller production in Ceylon and South India in the first quarter of this year, will have gone a long way to absorb the surplus which it was anticipated would be carried into the next season."

Over and above the advantages that have been gained in recent weeks as a result of a decline in the crop in South India and Ceylon and the increase in domestic consumption in the producing countries, there have emerged other entirely new factors. The various trade agreements concluded between India on the one hand and Russia and other East European countries on the other may open up new outlets for Indian teas in the coming season. The trade expects that approximately 20 million lbs from the next season's crop will be absorbed by Russia.

With the estimates of stocks revised downwards it is expected that sales both in Calcutta and London will close earlier than expected.



Demand at this week's export sale in Calcutta was again good though prices realised indicated that an increase in the price level would have reduced offtake. The offerings consisted of 59,000 packages. Most description were half to 1½ annas lower with poor stalky kinds a full two annas lower. Fannings and a few liquoring autumnals were, however, strong features. Among whole leaf grades only the most stylish kinds met



(Continued on page 769)

1000 000 SKF AXLEBOXES

To the railway engineer, the fact that SKF has supplied 1,000,000 roller bearing axleboxes to the railways of the world is of special significance. Why?

Because only SKF can draw on the experience gained from the use of 1,000,000 roller bearing axleboxes—experience that embraces many different designs and widely varying working conditions. That is why SKF axleboxes can be depended on to give complete reliability for exceptionally high mileages—whatever the loads and speeds.

World of Jute

Big Rise in Despatches

WITH the release of the figures relating to despatches in March by the Indian Jute Mills Association, it is confirmed that during the last month the jute trade has done well.

As against 79,996 tons in February, despatches in March have totalled 92,764 tons recording a sharp increase of 12,768 tons. Despatches of hessian increased from 29,109 tons to 32,396 tons, Sackings by 8,250 tons to 55,581 tons and other varieties by 1,231 tons to 4,787 tons. Of the total despatches, those for export are higher at 72,356 tons. Internal consumption shows a slight increase to 20,408 tons from 19,400 tons.

TREND OF DESPATCHES OF GUNNIES (000 tons)

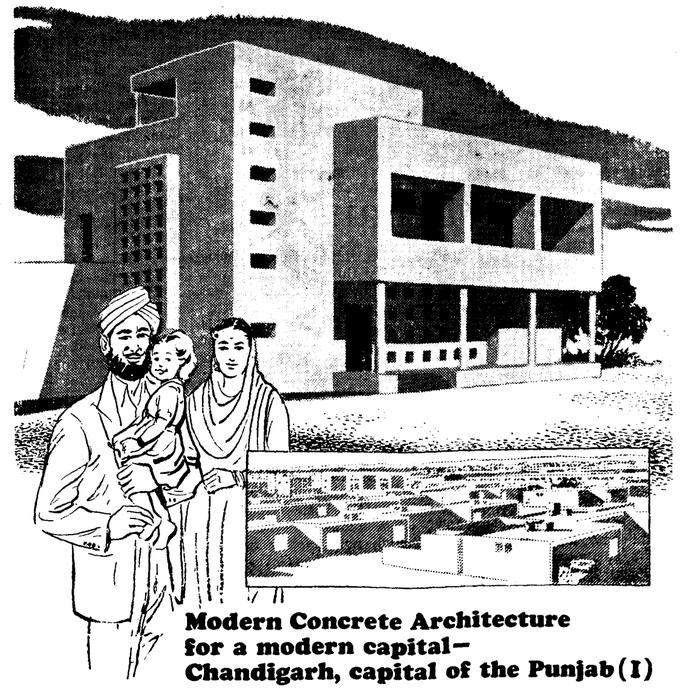
1955-56	Hessians	Sackings	Others	Total Despatches
July ..	40.7	45.8	5.1	91.6
Aug. ..	33.5	46.0	3.2	82.7
Sept. ..	42.2	49.4	4.2	95.8
Oct. ..	36.3	47.3	3.3	86.9
Nov. ..	36.0	48.1	4.1	88.2
Dec. ..	38.5	52.9	3.9	95.3
Jan. ..	28.3	41.5	3.1	72.9
Feb. ..	29.1	47.3	3.6	80.0
March ..	32.4	55.6	4.8	92.8
July-March, 1956 ..	317.0	433.9	35.3	786.2
July-March, 1955 ..	302.7	417.1	18.9	738.7
July/March, 1956—Exports ..				643.5
July/March, 1955—Exports ..				646.3
July/March, 1956 Int. Consumpn.				142.7
July/March, 1955 Int. Consumpn.				92.4

From the above table, it will be evident that despatches during the 9 months ending March 1956, are higher at 786.200 tons as compared with 738,700 tons in the corresponding period of the previous year. A further analysis of the figures will yield more interesting facts. In the first place it will be found that total exports during the period under review have been actually slightly lower at 643,500 tons than those during July-March 1955, (646,300 tons) and that the increase in the total has been mainly accounted for by the impressive rise in internal consumption which stands at 142,700 tons in July-March 1956 as compared with only 92,400 tons during the corresponding period of the previous year.

During the nine-month period Hessian despatches have increased to 317,000 tons as compared with 302,700 tons during the same period of last year. Sackings are also higher by 16,800 tons at 433,900 tons while other varieties have gone up sharply to 35,300 tons from 18,900 tons.

*

Conditions in the jute goods market were better toward close than at the opening. Though foreign business was conspicuous by its absence, sentiment had been helped by persistent rumours about the gunny business from Russia. The steadiness of the raw jute market brought about by the fact that raw jute arrivals in March had declined also contributed to the better undertone in the goods section.



After a steady opening on Monday prices firmed up with Hessian 40"×10 oz Ready improving by five annas to Rs 38-14. The improvement in B. Twills was more pronounced as it spurted from Rs 108-4 to Rs 110. July-September Hessian 40"×10 oz gained quarter point to Rs 39-4 while B. Twills for the same position recorded a gain of 2 rupees to Rs 109-12.

The trend was reversed on Tuesday when in the absence of foreign business certain mills came out as sellers in both hessian and sackings for near and forward positions. Hessian 40"×10 oz Ready as a consequence turned quiet at Rs 38-13 while B. Twills receded to Rs 109-8. July-September Hessian also suffered a setback to Rs 39-2 with B. Twills dropping 12 annas to come back to Rs 109.

Irregular price fluctuations marked trading on the last day of the week under review. In earlier dealings due to speculative manipulation prices moved both ways. Toward close shippers showed interest both in hessian and sackings and prices steadied up. Hessian 40"×10 oz Ready closed one anna higher at Rs 38-14 but B. Twills recorded a further loss of 12 annas on balance at Rs 108-12. July-Sept. firmed up to Rs 39-6 but B. Twills showed a further loss of 4 annas at Rs 108-12.

The Raw Jute market opened steady and firmed up on reports of unfavourable weather conditions in the growing areas. As mills also showed interest fair mill business was reported done in Assam, Dhubri and Indian Northern basis Bottoms at Rs 28 per maund for April-May shipment. With mills continuing to evince interest the market ruled firm toward close. Business reported, however, was small.. Assam Bottoms was done at Rs 28 with Daisee Mesta Bottoms quoted at Rs 25-8 per maund.

US Notes

THE strength lately showing in some key sectors of the economy continues to surprise many of the experts. The Commerce Department has estimated the value of US imports in February at $1,078 million, an all-time high for the month and a monthly total second only to the record of $1,098 million set in March 1951. What makes the February record more impressive is the fact that it is set in a short month, when the import total can be expected to decline. But this year, February imports actually outstripped those of January by a slight margin besides being a full 27 per cent above those for February 1955.

Also, these are preliminary data and finalization of statistics often results in upward revision of the import total. When final figures become available they may well show the February total to be a new all-time high. January is a good example of this tendency. Preliminary import estimates for that month showed a total of $1,045 million compared with a final figure of $1,073 million.

The rise of 4 per cent in January's eight imports over December's three resulted from increased receipts in all classes of goods. The Commerce Department's figures show an increase in manufactured foodstuffs led the way, reflecting principal gains in imports of cane sugar. The increase in finished manufactured items was due largely to greater imports of automobiles, automotive parts and agricultural machinery and implements. Other products showing significant import increases included cocoa beans, crude rubber, unmanufactured wool, nickel and nickel alloys, and fertilizer materials.

Another economic sector in which performance is better than expected is the steel industry. Steel production in the United States in March came to 10,921,000 short tons (9,338,000 metric tons), breaking all monthly records and bringing the total for the first quarter of 1956 to a new high of 31,868,226 short tons (about 29 million metric tons). March, by the way, was the sixth consecutive month in which in nation's steel mills poured more than 10 million tons (9.1 million metric tons)—showing that an early-year decline in automobile output is being more than offset by continuing strength in other industries.

The value of new construction in the United States followed seasonal trends in March, adding another source of economic strength. The March total, according to estimates of the US Departments of Commerce and Labour, was $2,980 million. For the first three months of 1956, construction activity amounted to $8,500 million—the same as for the first three months of 1955. Included in the total was a new March record in private non-residential building.

Significantly, contract awards for future construction last month constituted a new record for March, according to reports of the F. W. Dodge Corporation, construction and marketing specialists. The total for the month was a full 12 per cent above March, 1955 and the highest for any month in the Company's 65 years, except for May, 1951 when government building contracts for the Korean War were exceptionally large. Contracts awarded so far this year are confined largely to civilian projects and indicate that the actual construction in 1956 may forge ahead of earlier expectations.

Interestingly enough, residential contract awards were the highest in March for any month in history, 12 per cent ahead of March, 1955. This development supports the thesis that home building in 1956 will not be the drag on the economy that some people feared when the year began. Also at new highs were heavy engineering awards and private non-residential awards.

*

Britain

THE aim of United Kingdom economic policy throughout 1956 will be to limit home demand so that more production can be exported and that the growth of imports is moderated. If the measures so far taken by the British Government to achieve this goal are slow in producing results, they will be reinforced.

These points are made in the British Government's Economic Survey for 1956-57, published in London on March 27. Wide ranging and realistic, they Survey shows that the basic trouble in 1955, when industrial production rose though not rapidly enough, was excess demand. Government policy was, therefore, increasingly directed to restraining this demand.

Turning to prospects for the coming year, the Survey states: "The course of economic developments will depend on the speed with which the disinflationary measures taken by the Government overcome the existing momentum of the boom. The effects of these measures will make themselves increasingly felt as the year proceeds. It is difficult to foresee the timing of this change in the economic climate; but if the measures so far taken are slow in producing results, they will be reinforced".

Consumer expenditure, which has formed the largest part of the total demand, will be affected by the measures already taken by the Government—among them the cut in food subsidies, the tightening of hire-purchase terms, and control on terms on which consumer goods can be rented.

But the present main expansionary force is seen as the increase in fixed investment in industry. The Survey says: "Large programmes of modernization and development are in hand in most branches of industry, both private and public, and these will, in time, greatly improve the country's productive capacity". But, meanwhile, this pressure, added to a rapid increase in stock-building, is imposing a strain on the economy and claiming too large a share of these types of industrial products most in demand for export.

Work in hand shows that this rate of expenditure on fixed investments is still likely to be higher in the year as a whole than it was last year, though increased interest rates, stringency of credit and reduction of public programmes will bring about a change in business expectations and a revision of plans.

"A higher rate of productive investment remains an important national objective", declares the Survey. "Other demands on our resources must be restrained to make room for a higher rate of home investment and an improvement in the balance of payments.

"Some fall is expected in the current expenditure on goods and services (at constant prices) by the Central Government and local authorities".

Setting out the goal of Government policy—to limit home demand so that exports can be increased and imports moderated—the Survey states: "An easing of the pressure of demand will also contribute to the stability of costs and prices. This programme of disinflation is disagreeable, but necessary: carried through with determination, and with the understanding of the country, our economy will emerge stronger and safer and we can look forward to a steady advance in the standard of living thereafter".

Taking a world view, the Survey states there are few indications of any slackening in world demand for manufactured goods which would lead to a fall in output appreciably below full-employment levels. The Survey reaches the tentative conclusion that world markets for manufactured exports will expand during 1956, though more slowly than in 1955.

Within Britain itself the picture of 1955 is drawn thus:

The total increase in fixed investment is estimated at £185,000,000, a rise of 7½ per cent. Investment in plant, machinery and vehicles is shown as reaching a 14 per cent. increase. The increase in stocks and work in progress was also substantial. Current expenditure on goods and services by public authorities fell somewhat in real terms. Consumers' personal expenditure rose by £300,000,000, or by comparison, three per cent. Net bank deposits fell—advances themselves, having risen by £289,000,000 in the first half of the year, declined by £335,000,000 in the second half under the credit "squeeze". Money incomes rose, varying in various sections, from 2 to 8½ per cent gross before payment of tax. Personal savings are estimated at 7 or 8 per cent higher.

Industrial production is shown to have increased by 5 per cent, much of this early in the year. The metal and metal-using industries accounted for two-thirds of this increase. Increased exports and fixed investments both accounted for about one-third of the total increased production, and consumer expenditure for just under a quarter. Higher output was due both to increased employment and to higher productivity per man. Over a quarter million more people were in employment. Unemployment was lower than at any other time since the war. Most of the increased employment in manufacturing industry was in the metals, engineering, and vehicle industries.

*

In the vital section on balance of trade, the Survey states that the estimates now published for the first time show that in the second half-year there was a deficit on the current account of £118,000,000 (including defence aid), compared with the first half-year's surplus of £15,000,000. But it is pointed out that, allowing for a number of factors, "the real position of the UK's current balance of payments was little, if any, worse in the second half-year than in the first half".

Import spending rose by £404,000,000—the extra supplies being mainly for industrial materials and fuels. Export earnings (also on a balance-of-payments basis) rose by £424,000,000. Making a proper allowance for some earlier delays in shipments, the increase (on a trade-account basis) was about 4½ per cent.

The Survey says that in relation to the opportunities, this position is not satisfactory. It is pointed out, however, that sales to the USA reached a new record. Exports to the Sterling Area did not keep pace with other developments. But the worsening of the balance-of-payments position was largely with non-sterling countries.

The Survey, is a frank and factual statement of the UK's economic position, neither disguising the unfavourable elements in the situation nor seeking to over-emphasize the more favourable aspects.

Although output in 1955 rose substantially—by something over 5 per cent—consumption, particularly of durable consumer goods, such as cars, television sets, and domestic equipment demanding large quantities of steel, rose faster. Coupled with this was a heavy defence programme, plus a greater dependence on engineering exports.

It is pointed out that the Government's credit "squeeze" measures, especially the tightening of hire-

(Continued on page 769)

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

THERE was a certain inevitability about Mr Nehru's announcement at a public meeting in Delhi the other day that he was willing to have the Kashmir question settled by demarcating the borders of the State on the basis of the present cease-fire line. Many even among those who did not know of his 'offer' more than a year ago to Pakistani leaders, felt that the entire logic of his Lok Sabha speech and subsequent press conference led to this as the only solution of the problem and were somewhat surprised that it was not specifically mentioned. He has now made good the omission. Throughout the long-drawn out discussion on the question, this solution has been canvassed privately by many persons who thought that this was the only practical solution of the problem. Indian Finance, if I remember correctly, had suggested that this was perhaps the most satisfactory solution under the circumstances and among the foreign advocates of the idea, the most persistent was the New Statesman and Nation. The logic behind this solution as suggested by foreigners was somewhat different from what Mr Nehru has now supplied: the way they looked at it was that India and Pakistan having swallowed the camel of the Partition of India were straining at the gnat of a much smaller partition. The Indian objection to that argument was that they had never accepted the Two-Nation Theory of Mr Jinnah and that the partition of India was agreed to as the best that could be had under the circumstances and that did not settle once and for all the mode of settling all indo-Pakistani disputes over territories. Whatever may have been the merits of the suggestion and the objections to it some years ago, the compulsion of events in the last seven years has led to this as the only solution of the problem now.

*

Mr Nehru has indicated in all his recent utterances on the subject the factors that have made it meaningless to discuss the question with the old postures. His survey of the history of the dispute has clearly shown that from the beginning the conditions that were necessary to make good the desire to ascertain the wishes of the people were not brought about by Pakistan. As indicated in these columns last week. Pakistan has not so far fulfilled the direction of the UNICIP asking her to withdraw all her troops from the State of Jammu and Kashmir. This withdrawal was the first step to bring into being conditions propitious for the holding of the plebiscite and that condition has not been fulfilled with the result that nothing further can be done along those lines. Meanwhile time has not stood still. Many things have happened which have made the whole idea impractical and what is worse, capable of creating more harm than good. The accusation of Pakistan that India is 'wriggling out' of her international commitments is either incredibly naive or brazenly disingenuous. Taking the partition of India in 1947 as an analogue, on Pakistan's logic, Britain was guilty of breach of faith in her 'going back' on the earlier decisions based on the Cabinet Mission's proposals of a unified India. If Indian leaders had chosen to take the position that now Pakistan has taken, in regard to Kashmir, the Indo-British problem would have been as far from solutions today, as the Kashmir problem will become on the present attitude of the Pakistani government. It was not that the Indian leaders were not aware that the Mountbatten proposals were very much less than what they asked for and even much less than what they already had under the Cabinet Mission proposals. But the logic of the realities of the situation, the need to choose as an alternative of a settlement prevailed by the sullen nonco-operation of the Muslim League made partition inevitable. In a similar spirit of realism, India is willing to accept the status quo as the only practical solution of the problem, though she is quite convinced that legally, constitutionally, and morally, her stand on Kashmir is unassailable. As Mr Nehru put it, "I told the Pakistani leaders clearly: 'I think you have committed a lot of excesses and zoolum in Kashmir. You have no right to sit on a part of Kashmir that is under you. But since my desire is only this that there should be no clash or upheaval, I am willing to accept that the question of the part of Kashmir which is under you should be settled by demarcating the border on the basis of the present cease-fire line. We have no desire to take it by fighting."

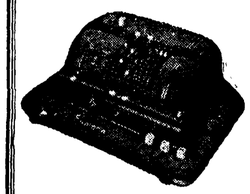
*

The most important fact that has made the old postures on the Kashmir question obsolete is the acquisition of immense military potential by Pakistan. Again and again it is asked by Pakistan what the American military aid has to do with the Kashmir dispute.

*

As Mr Nehru puts it,: "This aid has changed the entire pace of the problem because even if the Pakistani armies left the soil of Kashmir and entrenched themselves twenty or thirty miles frim the border, their increased strength would give them greater striking power to attack even from there."

*



Now, it is true that Indian objection to Pakistan's membership of collective security pacts and receipt of American military aid has other aspets unconnected with Kashmir. Again, since Pakistan has not removed from the soil of Kashmir even the troops already there, and the question of plebiscite can on that account not even start to be discussed the additional power acquired from American aid is, theoretically, irrelevant. But practically, it becomes most important since Pakistan has so much more arms to send to Kashmir, that being the only conceivable place where she can send it. In the background of Pakistan past behaviour which has been the starting point of this dispute, it would be naive to ask India to pretend that the new military strength has no relevance to the discussion of the problem.

*

Apart from the difficulties in the way of holding the plebiscite which Mr Nehru's suggestion by passes, what are the other advantages of the present suggestion? The most important of these is the continuation of such normalcy as has already been achieved. Seven years may be, in the words of the immemorial and in some respects immoral cliche, a short period in the life of a nation. But it is a sizable chunk in the three score and ten vouchsafed to mortal men. (It is the forgetting of this fact that makes the cliche about a nation's life immoral.) Many people on both sides of Kashmir must

have ordered their lives as best as they can and what they would most like would be to be left alone and not made guinea pigs for the experiment to find out whether or not Hindus and Muslims are two nations. This is the human aspect of the situation which, if Governments knew their real jobs, should be their most important, if not the only, consideration. Administratively, the colossal problem of a two way refugees trekking is not one that any one who retains any memory of 1947 would care to take on. And as far as India is concerned, memory need not even extend as far back as that since even to day the Hindu exodus from East Pakistan is, whether connected with the Kashmir dispute or not, a problem that is straining to breaking point our administrative resources. One recalls Mr Owen Dixon's words commending the idea of partition of Kashmir for this very valid reason. He said, 'If as a result of an over all plebiscite the state in its entirety passed to India, there would be large movements of Muslims and another refugee problem would arise for Pakistan. If the result favoured Pakistan, a refugee problem, although not of such dimensions, would arise for India because of the movement of Hindus and Sikhs. Almost all this would be avoided by partition. The interest of the people, the justice as well as permanence of the settlement as well as the imperative necessity of avoiding another refugee problem, all point to the wisdom of adopting partition as the principle of the settlement and abandoning an overall plebiscite."

✱

Pakistan's rejection of the proposal out of hand is rather unfortunate and can only be attributed to her finding herself a victim of her own earlier tactics of finding in Kashmir the sole scapegoat for the comparative barrenness of her achievement in the political and economic sphere. When the idea was first mooted a year ago in Delhi, maps were reportedly brought in and the matter was discussed in some detail. But Pakistani leaders wanted time to think it over and went back to Karachi and no one at that time was sure enough of his position to have accepted the idea. But one had imagined that a new chapter had dawned in Pakistan's history with the expeditious adoption of a Constitution and her possessing at the moment a comparatively stable and purposeful government. But

(Continued on page 758)

turning oil into petrol

The crude oil that comes out of the well is no use to anybody until it is refined. Then it has a thousand uses. All over India, all through the year, people are using the hundred-and-one different products that come from the Assam Oil Company's " oil town " at Digboi, the site of India's first and most highly developed oil refinery — and the only refinery which processes crude oil produced at India's only oilfield.

You probably think first of petrol when oil products are mentioned. But don't forget that the food you eat was obtained with the help of oil — in the shape of tractor fuel and lubricants. Even the carpet in your house was made with the assistance of oil — the oil that keeps the mills running smoothly.

Oil is vital in the modern world. Though small by world standards, the Assam Oil Company's refinery at Digboi every day produces over 250,000 gallons of high quality products to help to meet India's ever-increasing needs. The Assam Oil Company is looking to the future, too. The company's extensive technical and financial resources are being used to the full to find new sources of oil and to bring into operation new methods of production and refining. If this is successful, the flow of Indian oil to Indian industry, transport and agriculture will increase year by year. The Assam Oil Company will make sure of that.

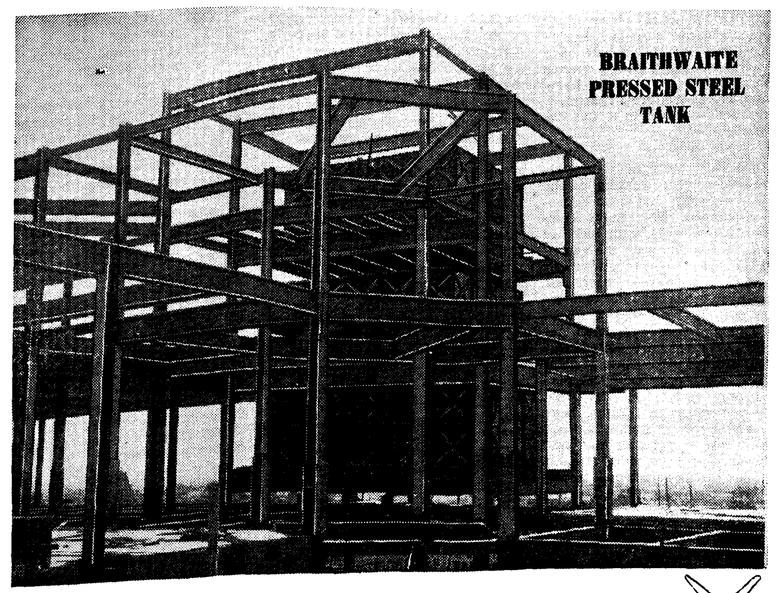
Steel in the News Again

THOUGH the news on Steel I am discussing comes really from Delhi, steel itself has for some reason become so conventionally a matter of interest for the Gateway City that I do not propose to apologise for poaching on the preserves of my colleague in the Capital. The Debate on the demands of the Ministry of Iron and Steel which took less than three hours was, nevertheless, both informed and interesting. Mr T. T. Krishnamachari gave some news which made folks here feel gratified. For, in the expansion of production planned in the near and not so distant future, the hope that the existing units in the private sector would get a share did not seem unreasonable. And that is a piece of good news for folks to whom steel has always meant share values.

Mr Krishnamachari's hopes for the future were that at the end of the Third Plan the country would produce about 18 million tons of ingots and 15 million tons of finished steel. For this purpose he proposes to ask the Planning Commission that the target should be fixed for ten years instead of for five years. This seems a sensible idea because of the deficiencies especially on the personnel side that are inescapable in the earlier phase of the programme.

Opening the debate, Mr Krishnamachari explained that in the matter of buying of steel plants, we are now in a sellers market compared to even as recent a time as 1953. Almost all countries in the world have their order books full: for the blast furnace at Rourkela, for instance, there was only one tender. The kind of package deal that has been entered was, therefore, the best that could be had under the circumstances.

Mr Ashoke Mehta, who spoke immediately after the Minister, was obviously in sympathy with the desire to accelerate the pace of expansion of production. He, however, drew attention to the need for over all planning and indicated that it would be necessary to be reasonably certain about the performance of the coal industry in order to be able to achieve the targets envisaged for steel. He also pleaded for coordination between the Ministries of Production, Railways, and of Iron and Steel.



Criticism was for the most part confined to comparatively minor details. One major criticism, however, related to the arrangement for financing the Durgapur plant and interest to be paid on the loan from the U.K. for financing the Durgapur plant. This drew a sharp reply from Mr Krishnamachari who chose to consider it a reflection on the financial acumen of the Finance Minister and himself. His plea was that in a plan in which the foreign exchange gap was of such yawning proportions as Rs 1,000 crores, it would be improvident to use such resources of foreign exchange as we have for purposes for which alternative sources are available. Moreover, by the time we need draw on this advance from the British Government and banks, a substantial portion of the sterling balances would have been spent. It was, therefore, inescapable that the Government should enter into the agreement for this loan. If our foreign exchange position improved by 1958, we may reduce our loss from the British Government for the option is left to us to draw as much or as little as we like from the £15 million loan.

Mr Krishnamachari defended vigorously the action of the Government in the appointment of the International Construction Company as their consultants and special consultants for the British Steel plant on a fee of roughly Rs 6 lakhs a year. He denied that this company had any relation with the British Steel Consortium that was putting up the Durgapur plant. He maintained that the firm, especially its Swedish managing director has rendered valuable service and the fee paid them must be considered moderate.

But the really important bit of information that interested people here was the one relating to the increased target of production envisaged by the Minister. By the nature of the case, it would be reasonable to assume that the existing units would get a share of the extra production planned. It is necessary that final decisions on the overall allocation are reached after consultation with the parties concerned, so that the necessary steps for expansion may be taken by the private sector well in advance of the beginning of the Third Plan.

The picture given by the Commerce Minister of the increase in steel production in the next ten years is alluring. The steel plants are undoubtedly capable of automatic expansion in production and there is also no reason to question the Commerce Minister's estimates of the profits which this industry, particularly in the private sector will fetch when all these steel plants now contemplated go into full swing. Rs 60 crores of net earnings a year will form a substantial contribution to State revenues.

What is even more significant about the steel industry is the automatic stimulus it provides to the growth and development of associate industries, both those which feed it and those which are fed by it. It was certainly wise on the part of the Government to have set up a separate Ministry for Steel. At least as far as expenditure is concerned, this Ministry is amply justified. When it is remembered that it was a controversy in the Union Cabinet which led to the formation of this Ministry, one is tempted to think that Ministerial crises can also be a blessing in disguise.

Picture of Irregularities

To say that some of the States have lost control over their finances might be an overstatement. But instances are not wanting to infer that, in more than one State, governmental hold on expenditure is lax and the canons of sound public finance do not fully enter into the preparation of budgets. Earlier reports from non-official sources have indicated that part of the money allocated by the Centre for development projects in Travancore-Cochin was unspent during the First Plan period, while, of course, the State was pressing the Centre to sanction larger grants under the Second Plan. The Public Accounts Committee of the Madhyabharat Assembly tells as that somewhat similarly anomalous is the case with their own State.

Locking up of large sums of grants due to official neglect is the negation of planning and will surely put a brake on welfare programmes. Official irregularities are also reported. At the time of the framing of the budget, departmental heads are alleged to inflate their requirements of finance, and later on, indulge in extra expenditure without legislative sanction. Explanations given on this behalf have not been satisfactory. It is a matter for particular regret that the Harijan and Tribal Welfare Department suffered seriously due to money remaining unused.

The Public Accounts Committee lists in detail other equally deleterious practices. The working of the Food Department has been admittedly unplanned. The State Government is charged with lack of vigilance while filling up the vacancies in district courts and many superfluous posts have been created. The exchequer has been put to heavy loss as medical stores were reinforced beyond proportion of actual requirements which led to accumulated, but unserviceable stocks. The Famine Relief proposals were accepted only belatedly, but that apart, savings on the grants were not surrendered. Implementation of co-operative schemes was held in abeyance for no valid reason. The Industries Department is accused of over-budgeting. The Printing and Stationery Department and the M. B. Roadways are two other branches picked out for sharp criticism.

It would be interesting to know which department, if at all, functioned satisfactorily and true to the public trust reposed in it. It should by now be clear to Authority that these irregularities and embezzlements cannot be dealt with at the departmental level. There should be no hesitation in launching a full-scale judicial enquiry and in setting up a permanent statutory body which will have tight control not only on financial matters, but also on the policies and practices of departmental heads.

✱

Cotton Textile Exports

A review of India's cloth export trade in 1955 is not a very flattering reflection on the textile industry's endeavour to reach out to higher levels and wider spheres of business. The industry can conveniently put the blame on Government who have, undoubtedly, been unrealistic in their attitude toward modernisation and expansion of existing mills.

1955 registered a fall of 9 per cent below the 1954 level of exports, though the fall was not bad enough for India to lose her position as the second largest exporter of cotton textiles. Observers might try to link up the general decline in world trade in cotton textiles during 1955 by over 11 per cent from the 1954 level, with the similar turn in the fortunes of the Indian trader. The world trend might be explained by the setting up of textile mills in several cotton growing countries, the larger volume of world trade in synthetic fabrics like rayon, and the dock strikes in India and the UK.

One cannot be equally sure if the same causes apply in India's own case. The restrictions put on mills in this country undoubtedly acted as a disincentive and a consequent drag on exports. The fact that, unlike exports, the actual production in 1955 was not worse than in 1954 is a counter argument, but not when the stimulus currently received by domestic consumption is taken into account.

During 1955, India shipped 815 million yards of cloth against 898 million yards in 1954 and 652 million yards in 1953. It is pointed out that roughly 50 per cent of the exports were unprocessed grey cloth. If these can be exported after processing, so much the greater will be the employment opportunities created in India.

✱

Bhavnagar Port

The diversion of a major slice of Bombay Port to Bhavnagar port is apparently in the offing. Bombay Port authorities might conceivably be disturbed over the action of some of the prominent groups of textile mills in Ahmedabad. In a detailed statement, the Bhavnagar Chamber of Commerce has set out the economic advantage of the switch-over, which can be defended purely on its own merits.

On an average, the importer of foreign cotton in Ahmedabad stands to save Rs 9 per candy by importing through Bhavnagar. Actual figures are quoted: Through Bombay it costs Rs 23-5 per candy while through Bhavnagar the cost is only Rs 14.

That Bombay is farther away (310 miles) from Ahmedabad than Bhavnagar (only 160 miles) is a major reason for the relative advantage but not the sole reason. The railway freight rates work out to show as large a difference as Rs 6 per candy. But there are other factors in favour of the smaller port.

Labour, mukadami, and pass charges, scale fees, etc, are appreciably lower at Bhavnagar than at Bombay. The levy of Rs 1-2 of octroi duty per candy in Bombay is non-existent in Bhavnagar. Again, the number of free days allowed to importers in Bombay is five, whereas in Bhavnagar 15 days are given for clearing goods. The congestion of the Bombay Port is a thing unknown at Bhavnagar.

Now, Ahmedabad's textile mills import annually some 300,000 bales of cotton. There is no reason why these should not pass through a nearer port if shipping, warehousing and transport facilities are adequately stepped up. The Saurashtra Government are keen on developing Bhavnagar into a major port. It is estimated that the Saurashtra ports, between them can handle annually one million tons. The first step toward assuring sufficient traffic is to build a broadgauge link between Bhavnagar and Tarapur near Ahmedabad. When Gujerat separate from the rest of Bombay and Ahmedabad becomes its capital, the need for such a link becomes the more imperative.

✱

A.I.M.O.

Holding their 16th annual conference in New Delhi, the All-India Manufacturers' Association of Bombay, had the Prime Minister for inauguration. At this meeting of industrialists drawn largely from the ranks of medium and small entrepreneurs, Mr Nehru thought it fit to emphasise the priority that should be given to the development of heavy industry.

Mr Morarji R. Vaidya, the Chairman devoted his speech partly to a general analysis of economic progress in 1955 which led him to strike a very encouraging note. The index of industrial production has risen from 108 in 1948 to 159 in 1955. During the period, the output of coal has been up by 28 per cent, steel by 41 per cent, cotton manufactures by 16 per cent, sugar by 61 per cent, paper by 91 per cent and cement by 184 per cent. The general agricultural index has moved up from 95 in 1948 to 121 in 1955. Electricity generated at 7,436 million kwh. is more by 25 per cent over the 1948 level. National income has risen 25 per cent to Rs 10,800 crores. The index of wholesale prices has gone down by 3 per cent. All this has heightened expectations and planted confidence in workers and businessmen. The Second Plan could not have had a more propitious start.

Mr Vaidya also applauded the paramount emphasis which industrialisation currently receives. But he is careful to add that medium scale industries suffer comparative neglect as most of the financial help and technical assistance which is in Government's power to give is divided between heavy industry, on the one hand, and cottage industry, on the other. A special plea was made for the setting up of industrial co-operatives as in Japan.

✱

EDITORIAL NOTES

(Continued from page 745)

ments. It is clear that Governments borrowing at 3½ and 4 per cent cannot lend at 2½ and 3 per cent. The lower lending rates are explained only by the existence of non-commercial aims. There is a general anxiety to promote small industries and to encourage the cooperative method as far as possible.

But the potential borrower frequently comes up against a kind of red tape which could be negotiated only with the help of tips proportionate to the amount borrowed. As such tips come into general vogue, the advantage of the low rates of interest is more than offset. The fact that the organisers of small scale industries are more often than not unacquainted with the official procedure and have to go and stay in distant Capitals to secure sanction for their loans and payment thereon only facilitates the growth of corruption in this sphere. A special check has therefore to be maintained against leakages of this kind.

Another difficulty arises in the selection of borrowers. Once easy money is offered by the Government, every passing adventurer and crook will be tempted to have a try. It is often difficult to detect such persons amongst a large company of honest applicants. On the other extreme, there will always be persons with some definite practical skill but lacking in ability to convince the authorities. While in the one case public funds are likely to go astray, in the other they will fail to reach the most deserving hands. The administration of financial assistance to small industries is a fairly complicated human problem calling for insight, discrimination and sympathy.

Olympus

Stones and Glass Houses

SATURDAY'S debate in the Lok Sabha on Mr Somani's resolution for the appointment of a competent committee to go into the cost structure and efficiency of industries in the public and private sectors was perhaps the least constructive deliberation so far this session. But what it lacked in purpose and direction, it more than made up by liveliness, though, of course, it was only liveliness of a sort. It is true that our Parliament could do with a little more sprightliness and wit. But it is doubly depressing that while much of the really valuable discussion in the Parliament is really heavy, a comparatively entertaining debate should be barren of any real wisdom.

Not that the resolution as worded could have produced anything of value at the end of two hours or twenty hours discussion. Indeed one may wonder with the Finance Minister without attributing any kind of ulterior motive what the mover of the resolution hoped to gain by moving the resolution. Was he really so naive as not to realise that the composition of the House, not to mention the mood of the country made it unlikely that members would consider with any sympathy anything that looks like a criticism of the public sector if that criticism came from one who was so obviously connected with the private sector? As it turned out, Mr Somani gave the members another opportunity to go for the private sector which they were not slow to seize. It was plain that Mr Somani had really stirred a hornet's nest with this resolution and had been so badly stung as a consequence that his reply to the debate with its air of My lady-protesting-too-much—we are all really proud of the fine work that has been done by Government officials—was a barely concealed retreat from the confident and puissant charge that he had earlier somewhat cavelierly intended it to be.

As it turned out, the occasion was turned zestfully into an opportunity for making detailed comparisons of the efficiency of the two sectors—mostly unfavourable to the private sector. Mr Somani himself could hardly complain at this turn the debate took since such a comparison was implicit in his resolution though he wanted the question to be determined by a committee. It was therefore a free fight without too fine a sense of the rules of the games. Not a few blows were well below the belt and though the Finance Minister talked of the need for circumspection in throwing stones by dwellers in Glass Houses, very few bothered to remember that the Government itself had a few crystal palaces of its own and therefore its friends should not, by the same token be free with the wayside missiles. But, as I said earlier, it looked very much as though Mr Somani simply asked for it.

Of the most telling of the opposers of the motion was Mr Feroz Gandhi who is fast becoming one of the most compelling debaters in the House. He cited facts and figures to show that the various enterprises under State auspices have done much better than many similar enterprises in the private sector. Talking about the remuneration to directors and so on through which the cost of production is notoriously inflated in the private sector, he referred to the practical absence of such items in the enterprises run by State. The Sindri Fertilizer Factory of which Mr Gandhi was very encomiestic, for instance, spent only Rs 4,650 on directors out of a total outlay of Rs 12.22 crores a year and that amount was paid to the directors who came from the private sector. He mentioned many figures to show that the Sindri Fertilizer and the Chittaranjan Locomotive were both cheaper than those produced by concerns in the private sector.

The Finance Minister who replied to Mr Somani began by saying that he did not wish to attribute any but the loftiest motives to the mover of the resolution. His anxiety as that of everyone in the house was, the Finance Minister imagined, to make the most profitable use of the available resources. His quarrel with Mr Somani, he said, was that he does not recognise that resources could be wasted or mis-directed as much in the private sector as in the public sector. It was in this spirit that he suggested that the performance in the private sector should be investigated. Three factors may presumably have been at the back of the mind of the mover of the resolution. First: the accountability of the enterprises in the public sector in the manner they acquit themselves. On this point Mr Deshmukh made the point that the so-called control exercised by shareholder the absence of which was cited as one of the reasons of the poor performance of the public sector was really illusory. On the other hand, the control exercised by the Parliament over the various public enterprises was close and the scrutiny thorough. Thus the notion that these public enterprises are run by people who are unaccountable to anyone is quite wrong.

The second consideration in this context was that of the need for avoidance of possible waste and the detection of any irregular utilisation of the funds. For this purpose, the Finance Minister has already announced the appointment of a committee to go into the actual working of the various projects and to find out whether the funds are being properly utilised and to suggest ways and means of economising. Sir Chintaman assured that the proposed committee would go into not only partially completed projects but also those that are already completed. In view of this there is no need for the committee of the sort suggested by Mr Somani.

A third aim of the committee proposed by Mr Somani would presumably be to determine the cost of production in the public sector and to see how it compares with the performance in the private sector. As was to be expected this was the aspect of the suggestion that gave rise to the almost universal condemnation on the private sector. But even if the private sector's record in this regard was not something very encouraging or edifying, there is no reason at all why an absolute, and not relative evaluation of the performance in the public sector should not be undertaken. The elaborately sarcastic references to many malpractices in the private sector in which even the Finance Minister joined does not in any way invalidate the claim that everyone whether in the public or private sector could do with advice on how to reduce his cost. Many of the malpractices that the Finance Minister referred to in some humorous detail do undoubtedly exist. But that is no reason why the public sector should lay the flattering unction to its soul. That the kind of inflation of cost that Sir Chintaman referred to does not take place in the public sector is undoubtedly one of its virtues and one of the reasons why we want to have it, despite its many disadvantages. But that the public sector has defects of its own which go to swell cost will be denied only by those who know nothing of the history of nationalised enterprises in this and other

State as Trader

THE formidable bunch of arguments put forth from many a platform by the mercantile and business community against the setting up of the State Trading Corporation, could not have been entirely in vain, if, as the Commerce Minister assured, the Corporation will seek only to supplement the existing normal trade channels and not encroach upon them. Short of a detailed official pronouncement of its structure, organisation and functions, practically all details about it are reliably known.

The chief raison d' etre of the Corporation will be its function to handle the growing volume of trade with countries with state-controlled economies or where trade in particular items is regulated on monopolistic lines. The Corporation will be a private limited company under the New Companies Act, with a share capital of Rs 1 crore the shares being held by the President. Rigidity in procedure is sought to be eschewed by making the Corporation an autonomous body with sufficient flexibility to adapt itself to the changing needs of the country and the pattern of foreign markets. It is true that those markets with which the Corporation would deal with might not be susceptible to wild fluctuations, on account of their highly integrated economies. But nevertheless, trade policies and trends might change and only a cent per cent commercial enterprise, not hidebound by tight prescriptions, can profitably act up to them

Another function of the Corporation will be to act as a liaison between Indian trading interests and monopolistic foreign trading organisations. Not only will procedural differences and difficulties be minimised but it will also promote agreements on an equal basis. The competition inter se among Indian exporters and importers has in the past considerably weakened our bargaining power. There has been also no agency to smooth out commercial disputes arising out of contracts with foreign agencies. The Corporation is expected to intervene in ironing out such difficulties.

A third important context in which the Corporation might figure is in relation to maintaining a steady price level and sustaining a stable equilibrium between supply and demand. Fiscal measures or quantitative restrictions on imports and exports, as they operate today, are recognised to be successful to a fair extent. But in years immediately to come, when the pace of industrialisation gets accelerated, the possibility of temporary gaps between supply and demand is real. Shortages, price upsets and black marketing are conceivable. How far the State Corporation will be an effective instrument in regulating supplies and influencing prices remains to be seen.

The decision that the Corporation will keep away from internal trade is to be welcomed as also its non-participation on any large scale in the distributive process.

✱

Atomic Energy and the Second Plan :

The development of atomic energy is to receive substantial help and emphasis under the Second Plan. It needs no saying that nuclear development would release new and immeasurable energy sufficient to revolutionise methods of production, and modes of transport. But the most important task which faces a Government that is set to raise the living standards of millions in the quickest time, consistent with a variety of limiting factors, is necessarily to strike a balance between development of alternative sources of energy. For instance, the tapping of atomic resources will take time, as the report of the Department of Atomic Energy points out. It is true that India possesses enviable potential in the shape of raw materials for use in reactors. The monozite sands of Travancore-Cochin are being currently processed in the research of rare earths factory at Alwaye and the resulting material containing thorium and uranium is sent to the plant at Trombay. Canada has offered an atomic reactor which will shortly be installed at Trombay. Some help may also be expected from the International Atomic Energy Agency.

All these will make possible advanced research into a subject hitherto untouched by scientists of this country. Equipment and facilities apart, the training of technically qualified operators and engineers will be not achievable in a short period. In short, the Second Plan can only hope to make a beginning and lay the foundations for large scale future exploitation of nuclear energy. To think and plan in more magnified terms can only lead to a disastrous neglect of the development of the conventional sources of motive power.

The programme for the immediate future would consist of building the Indian designed "swimming pool" reactor, on which has already started. The second reactor, to be built with Canadian assistance, will go into operation in mid-1958. Though the fuel element and heavy waters (moderator) are being imported from the UK and the USA., it is hoped that they can be produced at the projected plants at Nangal and at Sindri. Other projects include the expansion of Rare Earths Limited, Alwaye and, the thorium-uranium plant at Trombay and the erection of a pilot plant for extracting uranium ore from copper tailings.

NORTH INDIAN MARKETS

Foodgrains Quietly Steady
Rice Estimates

FOODGRAINS after ruling quietly steady with minor fluctuations declined slightly during the week due to waning demand and new crop arrivals. Arrivals of wheat increased from producing centres and dispatches from Delhi and the Punjab but were fair, prices remained unchanged. Later arrivals of new crop wheat from Uttar Pradesh were reported.

The ready average quality wheat prices eased in Hapur market by about 8 annas touching Rs 13-8 per maund, but farm quality prices were maintained at about Rs 15. The Government's decision to build buffer stock of wheat and rice also acted as a dampening factor. Other coarse prices ruled quiet and small new crop arrivals found ready demand for meeting local requirements. Good outside buying enquiry was the cause for improvement by 12 annas per maund in Dara peas price to Rs 8-8. Other peas ruled quiet. Wheat gram prices were unchanged due to poor arrivals; barley eased somewhat. Good demand from Madras was the factor sustaining peas prices.

Ready grains and pulses: Wheat Rs 13-4 to Rs 14-8; Gram Rs 10 to Rs 10-12; Barley Rs 8-4; Bejhar Rs 8; Jowar Rs 11-8; Gowar Rs 10; Rice basumati Rs 24 to Rs 32 coarse Rs 14-8; peas dara green Rs 8-8 white Rs 10-8; matar dal Rs 10-8; Arhar Rs 11; Arhar dal Rs 15-8 Urad 16 to Rs 17-4 Oates Rs 11; Methi Rs 16-8.

According to the Directorate of Economics and Statistics, Union Ministry of Food Agriculture, the all-India final estimate of rice for 1955-56 puts the current year's area and production of the crop at 76,253,000 acres and 25,474,000 tons, as against the partially revised estimate of 75,949,000 acres and 24,531,000 tons respectively for 1954-55. This shows an increase of 304,000 acres or 0.4 per cent in area and 943,000 tons or 3.8 per cent in production during the current year.

The increase in acreage under the crop during the current year has been shared mainly by West Bengal, Bihar and Hyderabad and is due to favourable weather conditions at the time of sowing. This increase in area has, however, been offset to a considerable extent by the decreases reported by Uttar Pradesh, Orissa, Saurashtra and Andhra due generally to the prevalance of unfavourable weather at the time of sowing.

The increase in production has been shared mainly by Madhya Pradesh, West Bengal, Uttar Pradesh, Bihar, Mysore and Vindhya Pradesh and is mostly due to the comparatively better climatic conditions during the growing period in the current year. This increase in production has been offset to some extent by the decreases in Andhra, Madras, Assam, Orissa and Hyderabad due to unfavourable weather conditions, such as heavy and incessant rains at some places an inadequate rainfall at certain other places during the growing period.

Gur futures initially recorded as strident advance due to support from Delhi, Kasganj and Punjab; but most gains were erased on profit realising. Prices of gur and sugar were as follows: Gur Pansera Rs 11; Crystal sugar wholesale mill delivery, Jaswant Rs 28-7 Simbhaolli Rs 28-6 Mawana Rs 28-10, Daurala Rs 29-4, Amroha Rs 28 Bijor Rs 28, Mansoorpur Rs 29-8, Rampur Rs 31, Retail Rs 30, Kandasari Rs 22 to Rs 26-4.

✱

CLIVE STREET GOSSIP

(Continued from page 754)

it would appear that even now there is no one in Pakistan who could and refuse to allow themselves to be pushed about by every changing wind of opinion and give a lead to the people manufactured at newspaper offices. One hopes that by the time the matter comes up before the Security Council, Pakistan's friends abroad would persuade her to see the practicality of a suggestion that would remove once and for all the greatest single distraction from the real tasks of both India and Pakistan.

Madras Review

The Peninsula

Co-operative Committee Report

THE Cooperative Enquiry Committee, set up by the Madras Government fourteen months ago, has now submitted its report. The Committee was presided over by Mr T. M. Narayanaswami Pillai, Vice-Chancellor of the Annamalai University and contained a representative group of persons, who are experts, either in the theoretical or in the practical field of cooperation. The Committee was asked to enquire into the working of the cooperative movement of the State and to make recommendations regarding its consolidation, reform and development.

Madras, being one of the most advanced States in the field of both credit and non-credit cooperation, the report of this Committee, which is likely to run into a few hundreds of pages and contains over three-hundred recommendations, may become a source for not only Provincial but all-India reference.

In making its recommendations, the Committee has proceeded on the general basis of reform which the Reserve Bank Rural Credit Survey had indicated. The principal themes of this Survey that the State should come into more active partnership with the cooperative organisation has found enthusiastic support from the Committee. One of its main suggestions is that the National Cooperative Development Board, envisaged by the Rural Credit Survey and which is to be in charge of the allotment of funds for the various States, must accept the basis of population for determining the share of each State and delegate the responsibility of administering the funds wholly to the State Boards.

This is inherently a sound recommendation, though States where the development of cooperation has not proceeded to the same extent as in Madras may well plead for modifications of this basis. One may expect to hear more of this controversy when the Central agencies recommended by the Rural Credit Survey come into full swing and actual grants are distributed.

The Committee has gone into considerable detail with regard to the constitution of the State Cooperative Development Board; the Minister for Cooperation is to be its chairman and its members are to be drawn from the representatives of all cooperative institutions, village credit societies, marketing societies and from the ranks of those who have distinguished themselves as non-official cooperators. The official block is to consist of a representative each of the Board of Revenue and the Finance Department, the Director of Agriculture, the Director of Animal Husbandry and the Registrar of Cooperative Societies.

The Committee attaches great importance to expansion of facilities for cooperative education, both on the theoretical and practical side. The Central Cooperative Institute is to blossom into a college and one of its main responsibilities will be the training of subordinate staff. The Vice-Chancellor of the Madras University, the Registrar of Cooperative Societies, the President of the Central Cooperative Bank, the Secretary of State Cooperative Union, the Professor of Economics, Madras University and a representative of the Central Committee for Cooperative Education and Training, together with the Principal of the College, are to form the management of the new institution.

The State Cooperative Union is also expected to organise study circles so that knowledge of cooperation and associated subjects may acquire a wider vogue. Institutions such as the Central Bank and the bigger urban banks may also organise similar study circles. The intention of the Committee is to make knowledge of cooperation as widely pervasive as possible and cooperative institutions themselves are looked upon as the main purveyors of this knowledge.

One fundamental change in the administrative set-up, recommended by the Committee, relates to the issue of agricultural loans. According to the Committee, the Government should withdraw from this field, except in times of grave emergency. Just now, the Government incur substantial expenditure on special staff maintained for the issue of land improvement loans. While this special staff could be scrapped, an equivalent contribution could be made toward the expenses of the Central Land Mortgage Banks.

Detailed recommendations have been made for the issue of subsidies and loans to landless persons and loomless weavers. The Government are asked to under-write such loans for weavers without looms. For example, 50 per cent of the cost of the looms should be given as subsidy and the remaining 50 per cent as loans, repayable in a period of three years. Part of the Cess Fund could be utilised for this purpose. Like-wise, for landless tenants loans may be advanced on the security of the crops to be raised on their plots.

The Committee has given serious thought to the question of safeguard against indiscriminate borrowing and lending. There are a number of suggestions which are intended to ensure that the loans are not abused and are repaid in proper time. In this connection the Registrar of Cooperative Societies is to be invested with the power to fix the maximum borrowing limit for individual members of employees societies. At present the tendency to over-borrow is rampant and the Committee thinks that some high authority should put his hand firmly on this matter. A committee consisting of the President of the State Cooperative Bank and the Registrar of Cooperative Societies and a President of the Central Bank is also recommended to perform the function of an appellate authority on the question of punishments by the Central Bank of its chief officers. This committee should also arrange transfers of officers between one bank and another but not without consulting the concerned banks The Committee thinks that through such transfers the outlook of the Central Banks would widen without any adverse reaction on their autonomy.

✱

Among the earliest decisions taken by the Government of Madras in connection with the Second Five Year Plan, an important one has already been unofficially announced. The Government propose to establish four industrial estates. Their location at Madras, Coimbatore, Sivakasi and Kozhikode represents a keeness to disperse new industries as much as possible, provided there is already some background in the form of industrial development, the presence of raw materials and the supply of regular labour.

It is planned to establish one estate every year. By 1959-60, all the four will have dome into existence. The estate at Madras is expected to contain 140 factory units and the others 100 each. All modern amenities will be provided in these estates with a special eye on the needs of small scale industries. To each estate will be attached a servicing corporation. This corporation will be in charge of purchasing operations and the procuring of raw materials when these are available in relatively distant places. The Purchasing Corporations will get a Central Government loan up to 75 per cent of their expenditure including non-recurrent items. It is gathered that a large number of small industrialists are considering schemes which will fit in with the requirements of the Government and the estates proposed to be set up.

✱

The Sethusamudram project is estimated to cost approximately Rs 10 crores, according to the Committee which has reported on it. The Committee, headed by Sir A. Ramaswami Mudaliar, explored the possibility of this project for linking the gulf of Munnar with the Palk strait. The Committee has suggested the establishment of a new navigation route by cutting a ship canal across the mainland a few miles to the west Pamban Bridge. This canal can function as an alternative to the existing route which is much longer.

It will also help the simultaneous development of Tuticorin into a 26' deep harbour. The proposed canal will be three miles long and involves an incision of a fairly wide gap to the west of Dhanushkodi in the reefs reaching from the mainland. From there it will have to be taken to Talaimannar on the Ceylon coast. Though ordinarily the canal will provide passage to vessels having a draft up to 26' even bigger vessels could navigate the waters by suitable adjustment of load.

A number of small islets dotted in the deep waters in between is a very favourable factor from the point of view of navigation. The Central Government are unlikely to delay final sanction for the scheme. Though in its present form it has come out as a new project, actually this scheme is nearly 40 years old and was first proposed by a British Engineer who was attracted by the superior facilties it offered for navigation in that area.

JESSOP AND COMPANY, LIMITED

Notice is hereby given that the Directors have declared the payment, on 1st May, 1956, of the Dividend on the 5 per cent Cumulative Preference Shares of the Company, as existing immediately prior to 6th February, 1956, for the half year ended 30th April, 1956, without any deduction in respect of Income Tax payable by the Company.

The Preference Share Transfer Register will be closed on 30th April, 1956.

Dividends will be paid only to Members registered on that date, or their Mandatees.

By Order of the Board,
G. M. ROBBINS,
Secretary.

63, Netaji Subhas Road,
Calcutta,
18th April, 1956.

Madras Review

South Indian Notes

On Nationalisation Eve

Centre's reaction to Mysore Government's rather controversial proposal to nationalise the Kolar Gold Mines, was known to be at first unsympathetic, then yielding, but on the whole, it is far from clear. If Press reports are to be taken as the guide, the issue is to be finally settled according to the wishes of the State Cabinet. But, reportedly again, there seems to be opposition within the Central Cabinet on two counts: that the financial resources of the State should be diverted to new enterprises rather than to the nationalisation of existing industries. Secondly, the supply of high grade ore in Kolar Gold Fields is rumoured to be nearly exhausted. Both these arguments cannot be easily passed over.

The Mysore Ministers—a deputation of three of them have been to Delhi last week—wait for nothing but the green light from the Central Government for a Bill to be introduced in the State Assembly. Those who have followed, from time to time, the arguments aired on the floor of the Assembly and arrayed in official correspondence with the mining companies will know that it would be rather difficult, if not impossible, for the State Government to retrace their steps. They are determined to carry their policy through, even if it involves initial losses.

If this be the last word on the issue, then that which remains of it is two-fold: the quantum of compensation to be paid to the Kolar Gold Mining Companies has to be fixed; and secondly, the technical problems involved in gold extraction has to be worked out. The financial risks involved in the venture has also to be thought out before hand. Depending on the principles of compensation to be accepted, it is calculated that the nationalisation move would cost the State Government between Rs 2 to Rs 5 crores.

The State Government think that the market value of the shares of the companies prior to the announcement of the final decision will be fair compensation, while, it is learnt, that the companies' view is that fair compensation would be the book value of assets minus the liabilities.

On the basis of prevailing prices of refined gold, there is little reason to expect any high profits. It is sometimes necessary to go to a depth of 10,000 feet below the surface. Among the assets of the company may be listed refrigeration and other plants for pumping cold air into mining pits, drilling equipment, schools, hospitals, water and electricity supply installations for the Kolar townships.

Quickness, Safety and Comfort

The Railway week will have served its purpose if it paves the way for an appreciable rise in the operational efficiency of the railways with a total route milage of 34,705. The argument that paucity of finance, for development and expansion, can be countered by increased efficiency has borne many an official repetition. Last week, the Chief Commercial Superintendent of the Southern Railway made an interesting broadcast giving a list of measures taken by the Railways, incidentally bringing to the fore, in sharp relief, the causes for delay, 'bottlenecks', and accidents. This is not a question connected as such with the Railways' bid for self-sufficiency on which front remarkable progress has been claimed. The development of railways on principles of quickness, safety and comfort calls for an approach guided by practical experience and an intimate retrospective study of the causes of past shortcomings.

The relaying of old and light tracks to permit the running of modern faster types of engines has helped in accelerating passenger services. It is claimed that bottlenecks have been considerably eased by the doubling of congested sections and by improving signalling methods. Of late, noticeable improvement has been effected in running time of mail and express trains. It is hoped that a return to slackness will not be permitted.

A special scheme for the quick transit of goods has been introduced on April 1, on certain specified routes and between specific points. It is too early to judge how it has worked. The special machinery has been created to watch the transit of consignments within the prescribed time target.

Among the causes for the delay in transit of parcels are listed the limited capacity for clearance of normal passenger trains, a shortage of suitable vans for the loading of parcels, the lack of adequate facilities at junction stations. All this would indicate the need for a complete rationalisation of loading and unloading arrangements which evidently is not to be undertaken in the course of the Railway week. While making due allowances for the almost intractable dimensions of the job involved, the tendency to exaggerate the extent of record progress is to be deplored.

*

Hyderabad Plan Breaks up

The redrawing of political boundaries of States cannot but have an unfavourable impact on the nice calculations on which financial allocations under the Second Plan rest. These will have to be re-distributed on a regional basis; the benefits derived from a larger coverage for for economic programmes might possibly be lost.

The Hyderabad Plan, for instance, has been re-allocated on the following drawn basis: Telengana Rs 53.7 crores; Karnataka Rs 19.7 crores; Marathwada Rs 25.6 crores. The State Planning Board has to work out the details on this basis which is however, subject to the approval of the Planning Commission.

It is important to remember the advantage in case the taluk-wise allotment of work and finance is prepared and finalised ahead of the political shake-up; the shock will then be a minimum.

Regional allocations, as they stand, should be considered fair. After deducting the cost of the major projects, the money is dispersed on the basis of population. This is a procedure different from that of the First Plan.

There is strong opinion in the State that the present over-all outlay of Rs 100 crores is inadequate considering the extreme industrial backwardnews of the area. Even the Second Plan, it is alleged, is dominantly agricultural in character. Though this is not undesirable as such, it is rather harsh to postpone industrialisation or the vigorous exploitation of the State's mineral wealth.

SOUTH INDIAN MARKETS

Cow Hides Firm

PRICES of tanned cow hides during the last week remained more or less firm. Arrivals were slightly less and clearance were also less; but this was due to the intervening of two consecutive holidays. On the whole, the market was steady with holders asking higher prices. London buyers were trying their best to counter any increases; but, inevitably, slight advance were made following urgent demand for goods. The local demand for Inferior Vs continued and prices remained steady and firm and in tanned buffalo hides arrivals were as usual, but demand was moderate with only few transactions.

Cow calf arrivals were poor in quantity and selection. Increased prices were demanded but transactions were few. Clearances of tanned buffalo calf were less, compared to the previous week. The prices were steady with some inquiries from the UK for premium quality.

Arrivals of goat and sheep skins were fair and there was moderate clearance at prices unchanged. In the export section there was little change in the trading conditions. Restricted enquiries for goods dribbled in. Latest advices from London indicated that quantity of goat and sheep skins for May auctions will be larger than that catalogued for March sales. In sheep skins demand was poor except for light weight fifths and inferior fifths. Premium class maintained former levels. Raw skins prices were unchanged.

In the Tiruchi Market a downward trend was noticeable in the prices of coffee seeds ranging from Rs 2 to 6 a cwt compared to the previous month. The Monthly coffee auction for Tiruchi and Pudukotta was conducted on April 11. About 22.5 tons of coffee seeds were put on sale and 17.5 tons were sold. There was no demand for Arabica Cherry. The following prices per cwt were realised. Plantation PB 239-9 to Rs 241; Plantation A Rs 212-8 to Rs 217. Robusta PB Rs 162 to 165. Flats Rs 155-2 to Rs 158-15.

Summer crops sowings of groundnut have concluded in all centres of the South Arcot except at Kallakurchi. The area sown is about 50,000 acres which is below the normal area of 55,000 acres. Arrival of winter crops at Vridachalam were fair and at all the other markets poor. Prices of kernals and oil declined slightly. Arrivals of gingelly oil at Vridachalam declined last-week. Prices slightly improved. There was an increase in Cocoanut oil prices in the Kozhikode market following improved rates at Cochin copra prices also advanced in different varieties. The price quoted were as follows. Copra office Rs 285, Dilpasand Rs 295; Gol Rs 320; Rajpur Rs 335/340; Nottam Rs 305; Multi Rs 320. Cocoanut oil was dealt at Rs 445/450 per candy of 700 lbs and 24 per ton of 37½ lbs gross.

In the Alleppy market steady conditions prevailed as fresh incentives were absent. Though activity was moderate, values did not show any noticeable change. Buying inclination was noticeable round about Rs 397-8 per candy for spot oil.

May futues hovered between Rs 406 and 409; oil cakes was

Indian Paper Makers' Association

Record Performance in the 1st Plan

Transport Difficulties—Shortage of Raw Materials

Mr. U. Mehta's Survey

Speech delivered by the Chairman, Mr. V. Mehta, at the Annual General Meeting held on April 12th at 11 a.m. in the Bengal Chamber of Commerce & Industry.

Gentlemen:

On behalf of the Committee I welcome you to this Annual General Meeting of the Indian Paper Makers' Association. The deliberations of the Committee during the past year are summed up in the Report of the Committee already circulated to the members and I trust the members noticed that the office of the Association and the Committee carried out their duties with traditional faithfulness and promptitude.

Almost four years ago speaking here in this very capacity I had the pleasure of welcoming the inauguration of the First Five Year Plan. By a coincidence my second term of office marks the conclusion of the First Five Year Plan and inauguration of the Second Five Year Plan. This naturally gives me an occasion to record with satisfaction that the Paper Industry played very well the part assigned to it during the First Five Year Plan and hopes to repeat its performance with credit during the Second Five Year Plan. Against actual installed capacity of about 1,36,000 tons and production of 1,14,000 tons the 1st Plan fixed targets of 2,11,000 tons installed capacity and 2,00,000 tons of production. Authentic figures for the year ending March 1956 are not yet available but from production reports it would appear that the targets set for production and installed capacity have been nearly achieved.

On analysis it is revealed that almost the entire increase in installed capacity or actual production has come about on account of completion or part completion of expansion schemes of the units existing at the beginning of the plan. A significant fact which emerges from this analysis is that very little new capital had to be raised for bringing into being the increased capacity and production. This speaks volumes of the very healthy and commendable policy of the Industry of ploughing back the earnings into Expansion Schemes. It remains to be seen how the new Tax proposals relating to undistributed profits react on this policy which is certainly not worth rejection.

During the period of the Plan a number of new licences were granted but I am not aware of any new project having actually gone into production. In fact, I would not be surprised if some of the schemes covered by new licences may remain fated to be still-born.

It will not be out of place here to make a mention of progress, or shall I say the lack of it, on two important recommendations made by the Planning Commission in respect of Paper Industry. The one related to the formation of a Development Council for Paper Industry and the other related to survey of Raw materials vis-a-vis the requirements of the Industry so as to ensure harmonious development both of the existing units as also new units.

Although as far back as October, 1952, the Government announced their intention and the Associations were asked to submit the names of their nominees on the Council, no Council was actually constituted. Your Association highlighted this omission in its memorandum submitted to the Planning Commission in June 1955 and emphasised the importance of setting up the Council without further delay. Probably as a result of this representation a Paper Panel was constituted and although the names originally mentioned included some eminent persons connected with the Industry neither of the Associations were consulted and asked to nominate their representatives and in fact no member of our Association appeared to be included in the list at all. On a further representation the Government extended an invitation to Mr. P. H. Sykes to serve on the Panel and because this excellent choice was fully acceptable to the Association he has since been adopted as the Association's representative. Though belated, I still welcome the formation of this Panel but I fully share the feelings of my colleagues that the Government should recognise the representative character of the two Associations and accept their nominations on the Panel in a normal way. Ignoring both the Associations in a matter like this is a poor and thoroughly undeserved compliment to the spirit of utmost cooperation that has always existed between the Government and the Industry. It is also felt that representatives of the Industry guided by mandates from the Associations will ensure correct and dispassionate view on many ticklish problems on which this Panel will have to deliberate.

With regard to the survey of Raw material again, I welcome on behalf of the Industry the formation of an Ad hoc Committee with exactly the aims and objects which were outlined by the Association in its letter to the Planning Commission in June last. Here again, I am sorry that the Government are unable to appreciate the necessity of associating on this Committee representatives of the Industry. While we admit that the Committee consists essentially of technical experts, it is to be realised that on the findings of this Committee will depend a good deal the question of licensing new projects or expansion schemes of the existing units.

It cannot be doubted that people in the Industry are bound to have a thorough familiarity with all the important raw material sources of the country and their practical experience and commercial knowledge as also their understanding of the problems of the Industry should be immensely useful in compilation of the survey report intended by the Ad hoc Committee. Instances are not wanting in the past when over-enthusiasm for forest revenues or parochial outlook tended to disregard practical views on a project. In any case the existing units have a fully justifiable right to make sure that no new projects are planned at the cost of their present production and reasonable aspirations for future expansions. Robbing Peter to pay Paul is not going to achieve targets of the Plan. Personal and Provincial considerations must be vetted by impersonal and National considerations. In short, importance of taking representatives of the Associations on the Ad hoc Committee cannot be over-emphasised.

The targets fixed for the Second Five Year Plan look for a rated capacity of 4,50,000 tons and production of 3,50,000 tons. The existing licences already cover 3,50,000 tons and capacity of only a lakh of tons still remains to be licensed or planned during the course of the second Plan. Out of the existing licences 45,000 tons are covered by new projects, and the balance is contributed by the existing plants and their expansion schemes.

It is too early to comment on the figure of 4,50,000 tons set as target for installed capacity but there is no doubt in my mind that if industrialization in the country were to proceed according to the plan and if spread of literacy gathers greater momentum, the demand is bound to rise and the Industry will make every attempt to catch up with the demand. What is, however, agitating the mind of everybody in the Private Sector is a very apparent lack of emphasis placed on development of transport. I am not aware of any large size industry which may not be complaining against transport bottlenecks. The trouble has been of a chronic nature in so far as the Paper Industry is concerned, and hardly a year can be spotted when a pointed mention of transport difficulties may not have been made either in the Annual Report or in the Presidential Address. It can be well-imagined, therefore, what anxiety must have been caused to those in the Paper Industry when the Railway Minister while presenting the Railway Budget this year stated clearly that transport will not be able to cope adequately with expanding trade and output except in the case of Steel Industry and to some extent in the case of Cement and Coal. This statement of the Railway Minister is bound to raise a big question mark before anybody about to engage himself in putting up additional plants to cover the targets set by the Planning Commission. It cannot be gainsaid that adequate development of transport is an essential pre-requisite to development planned in other sectors and a serious note should be taken of it by the Government.

Another retarding factor which might be in achieving the new target is the levy of Excise Duty. To me it appears irreconciliable in principle that any attempt should be made by the Government to enhance the customers' cost of any commodity, the use and production of which are sought to be increased twice over by the Planning Commission. Whatever attempts were made by the Industry to keep their selling prices low in order to encourage greater consumption of paper, have suffered a serious setback by the levy of Excise Duty. People in the Industry did pass through anxious days on account of pre-budget rumours that all Excise Duties were going to be enhanced. Many of us heaved a sigh of relief when the final budget proposals of the Finance Minister showed that there was no enhancement of Excise Duty on Paper. I would like to state that the Excise Duty already levied has not been without repercussions on trade and industry and any further enhancement is likely to have serious adverse effects on any attempts made to achieve either the target of consumption or of production in respect of paper. While on the subject I would like to state that in applying the present levy to actual items of production a certain amount of rationalisation and uniformity is badly needed. The Association are continuing to make attempts in this direction, but perhaps satisfactory solution will not be available without a conference between the Central Board of Revenue and the representatives of the Industry.

Members would have already received new contracts from the Government and I would like to record that negotiations took place in a very pleasant atmosphere of mutual good will and trust. There has been no serious change in the market trend because the low selling prices maintained throughout served as a substantial cushion to the impact of Excise Duty. A notable feature, however, has been the sale of Indian newsprint commenced by NEPA a short while ago. I congratulate the Management of NEPA on their success in their initial bout with difficulties. It is a new experiment and it has a great importance from the national point of view. I am sure, the Management will continue to fight the difficulties and succeed ultimately in producing good newsprint at a reasonable cost.

LLOYDS BANK LIMITED

(INCORPORATED IN ENGLAND)

BALANCE SHEET AS AT 31st DECEMBER 1955

LIABILITIES			ASSETS		
Capital:—			Cash, in hand, with Bank of England and Eastern Reserve Banks	£97,748,910

Notes:

I. Investments in British Government Securities amounting to £342,117,328 are taken at or under cost and below redemption price. The market value of these investments at the 31st December, 1955 was £333,678,617. Provision for this difference has not been made and is regarded as unnecessary as all the securities are redeemable at fixed dates, the majority within 10 years.

II. Other Investments: the market value of the quoted investments at the 31st December, 1955 was greater than the balance sheet figure.

III. Securities and Other Investments totalling £1,030,000 (1954: £1,036,666) nominal are lodged for Public and Other Accounts and for the Note Issue in the Isle of Man.

IV. In February 1955 the sum of £3,593,239 was capitalised from General Reserve for the purpose of paying-up 5s. per share on each of the 14,372,956 issued "A" Shares of £5 each and a sum of £1,093,239 was transferred to General Reserve from Contingency Account.

V. Foreign Currencies have been converted at the rates of exchange ruling at the 31st December, 1955; in the case of Eastern branches as at the 31st October, 1955.

PROFIT AND LOSS ACCOUNT FOR THE YEAR 1955

Dr.		*Cr.*	
To Interim Dividends, less Income Tax	£ 640,495	By Balance brought forward	£ 516,557
„ General Reserve	500,000	„ Profit brought in, after providing for taxation on the profits of the year and after making transfers to the credit of contingency accounts, out of which accounts full provision has been made for any diminution in value of assets (subject to Note I on the balance sheet)	2,322,439
„ Reserve for Future Contingencies	500,000		
„ Final Dividends, less Income Tax (subject to confirmation by the Members)	640,495		
„ Balance to be carried forward	558,006		
Note.—Directors' emoluments amounted to £75,613 (1954: £74,886), including £7,774 (1954: £7,188) paid to certain Directors by Subsidiary and other Companies and £2,500 (1954: £417) pension to a Director in respect of past services as Chairman.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED.

In our opinion and to the best of our information and according to the explanations given to us, the foregoing accounts of the Bank, with the annexed statements relating to the Bank's subsidiaries, The National Bank of Scotland Limited and Lloyds Bank (Foreign) Limited, give in the prescribed manner the information required of banking companies by the Companies Act, 1948 and on the basis therein authorised give, subject to Note I and to the corresponding note on the accounts of The National Bank of Scotland Limited, a true and fair view of (a) the state of the Bank's affairs as at 31st December, 1955 and of its profit, ascertained as indicated in the accounts, for the year ended on that date, and (b) the state of affairs and the profit, ascertained as indicated in the accounts and annexed statements, of the Bank and its subsidiaries so far as concerns members of the Bank.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit. In our opinion the Bank has kept proper books of account and obtained proper and adequate returns from the branches and the above accounts of the Bank are in agreement therewith. The accounts of the Eastern branches are included therein as at 31st October, 1955 and the accounts of the subsidiaries are made up to 1st November and 30th September, 1955 respectively.

LLOYDS BANK LIMITED—(Contd.)

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited, dated 31st December, 1955 and above set forth and the annexed Profit an Loss Account for the year ended 31st October, 1955 with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books at Calcutta and the certified returns from the Branches. In our opinion books of account have been kept as required by law.

Calcutta, 28th March, 1956. PRICE, WATERHOUSE & CO., Chartered Accountants.

BALANCE-SHEET REVIEWS

(Continued from page 742)

of ensuring for companies that he takes under his management.

Last week, the accounts of Bowreah Cotton and Dunbar, for the half year ended 31st December 1955, were released; these reveal that, in the first instance, the best that could be done was to reverse the trend of continuing loss. In the other case, a substantial profit has been made such as to wipe off the loss carried forward from earlier years and to resume the payment of a dividend.

In its accounts for the second half year in 1955, Bowreah has reported an increase in sales of a little under Rs 4 lakhs to Rs 55.10 lakhs. This enabled a profit of Rs 84,028; and, at the same time, the impact on the balance sheet was no more than to reduce the debit carry forward from Rs 24.31 lakhs to Rs 23.47 lakhs.

The balance sheet as at the end of December 1955 discloses preference capital of Rs 12 lakhs and ordinary capital of Rs 6 lakhs. The reserve fund, at Rs 22.72 lakhs, roughly balances the debit carry forward of Rs 23.47 lakhs. Loan capital is at the high level of Rs 82.49 lakhs—but the latest figure marks a drop of Rs 3.62 lakhs. Other debts also stand reduced by Rs 2.63 lakhs at Rs 6.31 lakhs.

The assets side of the balance sheet discloses that additions during the half-year have increased the value of the gross block by Rs 5.70 lakhs to Rs 89.03 lakhs. The fixed assets have a net value of Rs 37.54 lakhs. Stocks are substantially reduced by nearly Rs 12 lakhs to Rs 41.31 lakhs; and outstandings have also been marked down from Rs 7.25 lakhs to Rs 3.71 lakhs. Liquid assets are placed at Rs 68.43 lakhs.

In the case of the Dunbar Mills, the improvement recorded in the brief period of a half-year is remarkable. Sales are better by more than a third at Rs 85.03 lakhs against Rs 62.56 lakhs in the first half of 1955. The net profit of Rs 10.92 lakhs compares with the previous year's Rs 2.20 lakhs. Out of the profits, a provision of Rs 1 lakh is made for depreciation and the reserve fund receives an allotment of another Rs 1 lakh. After these provisions, and after the debit brought forward of Rs 7.07 lakhs had been fully covered, it was still possible to pay the ordinary dividend at 5 per cent per annum and to carry forward Rs 1.38 lakhs.

The balance sheet of Dunbar discloses a capital of Rs 19 lakhs against which the reserve fund is placed at Rs 26.17 lakhs. The Gross block of Rs 1.05 crores has a net value Rs 34.12 lakhs. There is a rise of over Rs 17 lakhs in stocks and, consequently, liquid assets are placed at Rs 93.49 lakhs against Rs 77.76 lakhs. This rise of Rs 16 lakhs in liquid assets is largely offset by increases in the liabilities under loans and sundry debts. Loans are placed nearly Rs 7 lakhs higher at Rs 70.55 lakhs, and debts have risen by Rs 3 lakhs to Rs 9.96 lakhs.

£ R$

Modern Mills

Further evidence of the prosperity of the cotton textile industry is available in the accounts of the Modern Mills Limited for the year ended October 1955. An improvement of Rs 16 lakhs to 1.87 crores in sales, coupled with the fact that expenses have been kept under control, has been responsible for an improvement of nearly 100 per cent in the net profits of Modern Mills. The 1954 profit of Rs 8.29 lakhs included the transfer of Rs 1.80 lakhs from the reserve fund. The 1954-55 profit is a clear Rs 12.63 lakhs.

After providing Rs 5.28 lakhs (Rs 6.03 lakhs for 1953-54) for depreciation, and transferring Rs 30,000 to the reserve fund and Rs 3 lakhs to other funds, the directors have still found it possible to increase the dividend by 6 per cent to 16 per cent, absorbing a sum of Rs 3.54 lakhs. The capital of Modern Mills is Rs 22.13 lakhs and debentures are to the tune of Rs 12 lakhs. The reserve fund is placed at Rs 20 lakhs, othe funds total Rs 23.35 lakhs, and the carry forward is Rs 31,670.

The gross block of Rs 1.19 crores has a book value that is slightly less than half at Rs 58.75 lakhs. With stocks reduced by over Rs 13 lakhs, the liquid assets show a shrinkage of Rs 15 lakhs at Rs 89.30 lakhs. But the liabilities are reduced by steeper amounts: Loans have declined from Rs 53.54 lakhs at the end of October 1954 to Rs. 43.63 lakhs; and other debts marked a fall of a little more than Rs 10 lakhs to Rs 25.66 lakhs.

£ R$

Kettlewell Bullen

The hum of industry and the consequent rise in margins of profits are reflected in a substantial increase in the earnings of the managing agency house of Kettlewell Bullen and Company Limited in 1955. The two important heads of revenue have both contributed in larger measure. Commissions and allowances fetched Rs 12.30 lakhs against Rs 7.91 lakhs; and interest and dividends were placed somewhat higher at Rs 3.56 lakhs against Rs 3.19 lakhs. In the result, the net profit is more than double than the 1954 figure and more than 3 times the 1953 level. The net earnings in 1955 are placed at Rs 12.97 lakhs against Rs 5.44 lakhs and Rs 4.01 lakhs in the two previous years.

The main beneficiary, immediately at least, is Government. Taxation receives Rs 5 lakhs more at Rs 7.40 lakhs. There is a transfer of Rs 2 lakhs to the reserve fund, the ordinary dividend is maintained at 4 per cent and absorbs Rs 1.60 lakhs and the carry forward is slightly higher at Rs 1.77 lakhs.

Out of the Kettlewell Bullen capital of Rs 70 lakhs, Ordinary shares account for Rs 40 lakhs. Against this, undistributed profits are of the order of Rs 26 lakhs. There is a capital reserve of Rs 5 lakhs; reserve fund Rs 9.03 lakhs, other funds total Rs 10 lakhs, and the carry forward Rs 1.77 lakhs. The investments of Kettlewell Bullen are shown at Rs 72.13 lakhs —a rise of a little under Rs 2 lakhs over the figure in the 1954 balance sheet. The market value of these investments was, at the end of 1955, Rs 1.42 lakhs better than the book value. Liquid assets are at the substantial level of Rs 1.23 crores. Liabilities included Rs 13.14 lakhs as taxation reserve, Rs 10.98 lakhs as loans and Rs 3.62 lakhs as sundry debts. It seems safe to predict that Kettlewell Bullen profits for 1956 will improve further upon the 1955 accounts.

countries. A knowledge of how these can be avoided can and should be an object of serious study. Though whether the task can be best performed by a committee of the sort suggested by Mr Somani is of course open to question. But the issue was clouded even before it could get started to be discussed by the wholly unnecessary assumption that this was a debate to determine the relative merits of public sector and private sector and that a choice was obligatory. In such an atmosphere, it is hardly surprising that anything of real value emerged.

The Punjab National Bank Limited

Directors' 109th Report to the Shareholders for the Year ended 31st December, 1955

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1955. The transactions for the year under report have resulted in a profit of Rs. 69,40,108-2-3 (including Rs. 4,99,039-13-6 brought forward from the previous year's account). The following amounts have been appropriated for the under-mentioned purposes:—

	Rs.	A. P.
1. Transferred to Income-tax Provision	11,00,000	0 0
2. Transferred to Contingency Reserve	24,00,000	0 0
3. Transferred to Reserve Fund	5,00,000	0 0
4. Transferred to Bonus to Staff Account	13,50,000	0 0
5. Transferred to Charity Account	80,000	0 0
6. Transferred to Gratuity to Staff Account	50,000	0 0
7. Ad-interim Dividend at Rs. 1/8/- per share free of Income-tax paid	5,25,000	0 0
	60,05,000	0 0

The Directors recommend that the balance of Rs. 9,35,108-2-3 be disposed of as follows:—

	Rs.	A. P.
(a) Dividend at Rs. 2/- per share free of Income-tax making the total at 14 per cent per annum	7,00,000	0 0
(b) Carry forward to the next year's account	2,35,108	2 3

The Bank rate remained unchanged at 3½% p.a.

A sum of Rs. 37,50,000, being the aggregate amount of premium received on shares issued in the past, has been transferred to an account called 'Share Premium Account'.

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,
S. P. JAIN,
Chairman.

Delhi, 15th March, 1956.

Balance Sheet as at 31st December, 1955.

Auditors' Report

TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, DELHI.

We have audited the annexed Balance Sheet of the Punjab National Bank Ltd., Delhi, as at 31st December, 1955 and the annexed Profit and Loss Account for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the Returns of the Bank's Branches in Indian Union, Pakistan and Burma certified by the respective Branch Managers. We report that:

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) the Returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit;

(d) in our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with Law;

(e) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true balance of profit for the year, according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office and

(f) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

V. SANKAR AIYAR & CO.,
DELHI, 15th March, 1956. Chartered Accountants.

Stock Exchanges

MARKETS DEPRESSED

Calcutta

IN the unofficial week-end dealings, the Calcutta stock market was tending to retrieve the setbacks of last week. Speculative scrips in particular were slowly climbing up, though at every stage, bear pull was conspicuous. With the commencement of the new week, a new psychological freeze was evident. The Union Finance Minister's unfriendly comments on the private sector, which a prominent representative of the latter, provoked through a Resolution in the Lok Sabha came as the first cold wave. Another, one more formidable, followed when he spoke of annual increases in taxation of the order of Rs 50 crores.

It is a pity that the Finance Minister's whole speech, which also contained references to increases in prices and expansion of production consequent on it, did not receive any critical appreciation. It was a listless pessimism which sent prices down without even the usual attention to sectional trends.

On Monday prices were generally lower. A few tea shares remained the exception. On Tuesday the same trend more or less continued, and even the substantial currency expansion, which is proceeding or the satisfactory status for private industry envisaged in press forecasts of the new industrial policy could not offer any compensating impulse. Wednesday's closing quotations only confirmed the general tone of depression for the week.

Between the three days Indian Irons after oscillating between Rs 35-5 and Rs 35-4, on Monday dropped to Rs 35-1 on Tuesday and reduced further to Rs 34-14 by Wednesday afternoon. Texmaco starting lower at Rs 23-14 went down to Rs 23-10. Rohtas Industries fell from Rs 22-9 to Rs 22. Orient Paper had fallen to Rs 35-1.

Neither coal nor jute shares held any attraction. Nationals fell from Rs 24-10 on Monday to Rs 23-12 on Wednesday. Burrakur, which maintained at Rs 14-3 till Wednesday morning lost ground during the day to close at Rs 13-14.

In the Engineering section Indian Irons steadily declined to Rs 34-14 from Rs 35-7 a week ago. Bhartia Elec. Steel showed sharp improvement to Rs 17 from Rs 15-6 this time last week. Burn & Company was unchanged at Rs 360. Marshalls moved within a narrow margin to close steady at Rs 6-8. Jessop & Company developed a reactionary tendency and was marked down to Rs 33-10 from Rs 34-4. National Iron was slightly better at Rs 6-13. Richardson & Cruddas were on offer at Rs 27-9 as against Rs 28-5. An easier tendency prevailed in the case of TEXMACO which was 10 annas lower at Rs 23-10. Braithwaite was a steady feature at Rs 28-1 while Britannia Building was easier at Rs 8-11. Britannia Engineering was a shade better at Rs 18-4.

In the Miscellaneous section Burma Mines was a steady counter at Rs 3-4. Consolidated Tin was well maintained at Rs 2-10 while Orissa Mineral was 2 annas lower on balance at Rs 24-10. Karanpura Development receded further to be finally placed at Rs 25-8. Among Cements Sone Valley reacted to Rs 7-15 while Alkali Chemical among chemicals was unchanged at Rs 18-11. B.I. Corporation came back from Rs 11-1 to Rs 10-7. Clive Row Investments was quiet at Rs 11-5 but Electric Construction Equipment was 8 annas lower at Rs 13-6. F & C Osler was marked down from Rs 12-8 to Rs 12-1, but Imperial Tobacco was a steady feature at Rs 14-4. Indian Wood Products gained more than a point to be done at Rs 40 Rohtas Industries was quiet at Rs 22. National Carbon changed hands from Rs 26-7 to Rs 26-10. Among Oils B.B.P. was three annas lower at Rs 4-1 while Indo-Burma was unchanged at Rs 43. In the Paper Mills section India Paper Pulp was almost unchanged at Rs 24-13 while Shree Gopal was three annas lower at Rs 18-14.

Selected Tea shares continued to meet with good demand. Banarhat advanced by six points to Rs 376, Choonabhuti spurted to Rs 381 from Rs 305. Hantapara gained 14 points to Rs 340 Hasimara firmed up to Rs 41. Gungaram improved from Rs 331 to Rs 345. New Dooars lost ground to be placed at Rs 350. East India was a steady feature at Rs 27-6. Brooke Bond was lower at Rs 24-12.

TEZPORE TEA COMPANY, LIMITED.

Notice is hereby given that the period for submission to the Company of Fractional certificates for allotment of fully paid Ordinary Shares in lieu thereof in regard to the issue of Bonus Shares on 12th December 1955 has been further extended to 11th June 1956.
