For the Investor

The Loud Decibels

Investment Gossip:

NOT so very long ago, on the Royal Exchange and in Dalal Street, any passer-by, if he were Eavesdropper-minded, would have overheard conversation that ran on more or less the following lines:

"Kya bhav?"

The reply would be given in terms of Tata Ordinaries or of Indian Irons.

That was provocation enough. I am not sufficient master of the intricacies of the language used as to attempt a verbatim translation. But the gist of the outburst that might have been thundered at you would lie in the asseveration that the up-trend in markets had been overdone.

Talk of dog eat dog! It was the speculator (bear species, it is true) that was now waxing indignant, because there was too much "speculation"!

Since this is the beginning of a fresh new year, I think a quick recapitulation of the 1955 stock exchanges would be useful For the Investor.

Until very nearly the end of 1955, prices were headed only one way—and that was not downward. With thumping profits in every balance-sheet, and dividends of like dimensions, the steady appreciation in share prices was inevitable.

And then, as I said at the beginning of this Gossip, those that were the bears (and they could have been misled, as I reported last year, by their pet astrologers) started to grumble. The decibels so used became the louder.

But it was not such plaints that was the cause of the reactionary trend that set in thereafter. The markets weathered such storms as were whipped up by the sometimes powerful winds of rumour.

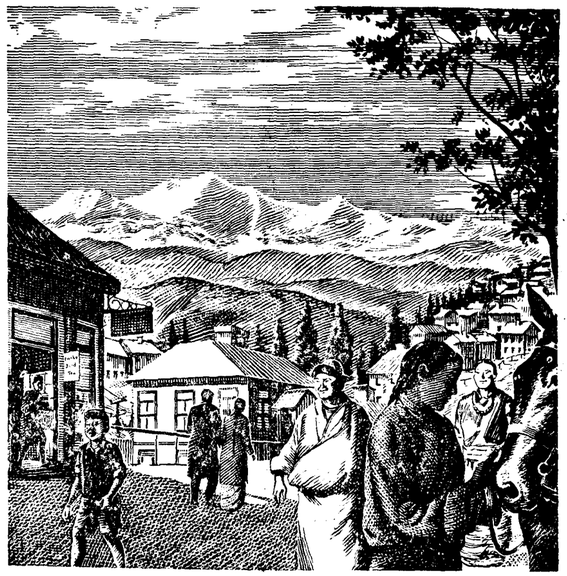
Quite sensibly, it seems to me, market operators began to prepare for the budget much earlier than is the norm. And, in line with the necessity to have more of an open position, commitments were sought to be "squared"; profits were booked.

Now, eight weeks away from the Budget, cautiously is the future viewed. There is the knowledge that the Second Plan, encompassing as it does an ambitious programme of development, must release expansionist forces.

That knowledge, however, is tempered by the realisation that, for the very implementation of the Plan, Government would need to discover means of securing additional revenues.

Thus, the share market knows that the Budget for 1956-57 will not be devoid of fresh taxes. But the big question is: Will Government, cognisant of the danger of killing the golden goose of incentive, be doubly careful to see that no new impost is intolerably harsh?

I shall not try to look beyond the Budget; till which time markets may be expected to rest easy; any fluctuations may be downward rather than upward; eight weeks more, and we shall know what the pattern of stock exchange prices for another year will be.



£R$

Investment Notes:

According to the figures released by the Indian Iron & Steel Company for the quarter ended 31st December 1955, production of all categories, except Finished Steel, has shown a decline as compared to the previous quarter. The production of Pig Iron has decreased to 160,750 tons from 176,180 tons; Steel Ingots to 124,696 tons from 130,630 tons and Semi-finished Steel to 26,875 tons from 30,292 tons. The production of Finished Steel has, however, risen to 78,877 tons from 78,422 tons. The following table shows the total production for 1955 as compared to 1954 (in tons):—

	1955	1954
Pig Iron ..	738,590	687,640
Steel Ingots ..	512,920	533,480
Semi-finished Steel	145,695	132,170
Finished Steel ..	312,220	315,710

Around India with Brooke Bond

The Five Treasures of the snows . . .

Kangchenjunga, which in Tibetan means 'the five treasures of the snows', is according to a hill legend the abode of the Almighty God. It is not difficult to understand this sentiment. The grandeur and mystery of this tremendous peak, soaring to over 28,000 ft., creates in the observer an overwhelming sense of awe and reverence. Kangchenjunga is the only Himalayan giant that displays its majesty to the world at large. Any visitor to Darjeeling can enjoy from his hotel balcony the glory of this magnificent peak.

Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

Brooke Bond Tea

FRESH and GOOD

BB 105

Textile mills are generally expected to show excellent results for 1955; and the leading units can be relied upon to maintain the dividends. The Government's measures to check cotton prices will be of special benefit to the industry

Associated Cements are quoting around Rs 213. The working results for the year ended 31st July. 1955, have more than justified the market's optimism. The company, it is learnt, has submitted to the Government a planned programme of large-scale expansion within the orbit of the Second Five-Year Plan; and the Government have already granted most of the licences applied for. By this expansion programme, the company's installed capacity is expected to exceed 5 million tons.

The prospects of the automobile industry appear to be more hopeful.

HIGHLIGHTS

When the New Year comes along, it brings its harvest of dainty diaries and captivating calendars.

And the trend is toward more and more informative diaries; these are no longer the odd note-book in which one meticulously jots down an engagement he must not miss (of course, later quite certainly to forget it).

The Diary today (and we are tempted to talk in capital letters) is an Invaluable Handbook that contains all Important Information.

Fashion, consequently, favours the not-so-slim; embonpoint is here admired.

Well ensconced in leather (with a golden-looking pencil, if ACC remembered you), the diary of the present day is found to be a mine of information.

We may go so far as to say that, in the case of the New India master-piece, the effort may be likened to a small encyclopaedia.

It is by no means our intention to poach on such preserves; important information, we shall leave to the diaries.

But we have been of the view that, just as the diary may be next to the businessman's heart, the first issue of Indian Finance each year should be the indispensable ready-reference for his mind.

In this light, we have been presenting a comprehensive review of the year just past, as well as a projection of current conditions and trends into the future, in the important sectors of the Indian economy.

The Annual Reviews that are published in this issue are not merely a record of 1955 in industry; they can be usefully studied as holding a clue to 1956 prospects.

In taking this opportunity to wish our readers a Happy New Year, we may add that **Indian Finance will be even more invaluable** in 1956: the rising economic tempo needs correctly to be interpreted—and we undertake that task most conscientiously.

The Premier Automobiles Limited has been making steady progress in the production of parts and components. During the current year, the company has plans to produce axles and some of the sheet metal parts, which will complete their programme on trucks. To meet the requirements of finance, the Industrial Finance Corporation of India has already approved of the additional loan of Rs 50 lakhs.

National Carbon—New Issue

Investment Special:

The New Year has got off to an auspicious start, with the announcement of the important issue relating to the National Carbon Company (India) Limited.

The present issue is one of 4 lakhs shares of Rs 10 each at a premium of Rs 9-8 per share..

In addition, the Union Carbide and Carbon Corporation of America is also putting on offer a further 4 lakhs shares.

The new shares are to rank for dividend as from 26th December 1955.

These are the bare facts; how welcome the news was to markets can be gathered from the phenomenon of National Carbon unofficially quoting at a premium—while the market generally is none too cheerful.

The Prospectus discloses financial information that could not have other than enthused intending investors. The Auditors' Report that forms a part of the Prospectus is replete with relevant figures.

Sales of National Carbon in 1953 amounted to Rs 3.89 crores; in the following year, they declined to Rs 3.70 crores. In the latest year, for which figures are available only for nine months, the sales, computed at an annual rate, work out to Rs 4.41 crores. The actuals for 9 months in 1955 are Rs 3.31 crores.

The net profit before taxation improved from Rs 80.45 lakhs to Rs 84.00 lakhs in 1954. For 9 months in 1955, the net profit was Rs 64.98 lakhs—in other words, an annual rate of Rs 86.57 lakhs.

The provision for taxation was Rs 33.47 lakhs and Rs 34.99 lakhs for 1953 and 1954 respectively; for the nine-months' period in 1955, an amount of Rs 27.35 lakhs has been provided for taxation.

Thus, the net profit after taxation was Rs 46.98 lakhs in 1953, improving to Rs 49.01 lakhs in the following year, and placed at Rs 37.63 lakhs for the nine months of 1955. This last figure, in terms of an annual rate, works out to Rs 50.17 lakhs.

It has been pointed out that the cost of materials in 1955 includes Rs 19.68 lakhs representing excise duty. Thus, but for the new impost in 1955, the net profit would have been even higher.

Investors are, therefore, being given an opportunity to have a finger in the National Carbon pie. It may be asked: What exactly is the purpose for which this new issue is being made?

The Prospectus answers this question succinctly: 'The objects of the present issue are to afford an opportunity for the participation of Indian capital, and to provide additional capital for the expansion of the Company's business.'

The first object requires no discussion, and is in every way to be hailed. The second is one on which the investor might like some additional information—and this, the Prospectus provides.

Firstly, a zinc rolling mill for the production of high quality zinc alloy strip is being constructed. Expected to be in operation during the first half of 1956, the Prospectus points out that, of the proposed issue, "Rs 55 lacs will be required for the purpose of equipping and establishing the zinc rolling mill."

Secondly, plans have been formulated (and the Company is proceeding with) the establishment of a fully equipped factory for the manufacture of flashlight cases—presently almost wholly imported. When completed, "the factory will be the most modern of its kind in Asia."

Thirdly, chemicals are to dry cells and batteries what water is to fish: inevitable. In this view, "plans for a modern chemical plant are now nearing completion and it is hoped to go into production in 1958."

The Prospectus cites the prospects before the company; may I suggest that the prospects of National Carbon on the Calcutta Stock Exchange are already assured—if we go by the esteem with which the shares are being held by investors?

1955—1956

CONFIDENT expectations that 1955 would prove to be a prosperous year have not been belied by actual performance of both industry and business in the 12-month period that has just ended. If, at this time last year, it appeared useful to undertake an analysis of economic conditions and prospects in other countries, such has been the trend of economic conditions that, today, the important developments in the domestic sphere overshadow any significance that news from abroad might have. Nevertheless, it might be proper to take note of two facts in the world economy as they impinge upon future prospects.

In America, almost every sector of industry was able to attain new records of achievement. The relevant figures in this regard have been given in two despatches from America which are published elsewhere in this issue. Mainly, the steel industry and the automobile industry were both able to reach phenomenal levels of production. There has been hardly any economic thought with a pessimistic tinge to it. Year-end surveys disclosed that an assessment of prospects for 1956 possessed the same confidence. In Western Europe generally, business conditions continued to be as favourable as in the year previous. It must, however, be recorded that the "odd year crisis" once again affected Britain, and its then Chancellor of the Exchequer, Mr R. A. Butler, felt it necessary to issue a supplemental autumn budget which, not surprisingly, was unpopularly received. But Britain's crisis was peculiar to that country. For, it is now known that the countries of Western Europe are today scarcely in a position to accept any orders, for delivery in the near future, for capital goods. German industry has resurgently asserted itself, and such has been its salesmanship that it is not now able to think in terms of expanding capital exports in the next two years or so.

The second noteworthy event of 1955 was the entry of Soviet Russia into the lists of nations which are making available surpluses for aid to under-developed countries. The cold war, thus, entered a new phase, with Russia vying with the West to proffer technical assistance and aid of other sorts to the needy regions of the East. Although the significance of Russia emerging as a source of foreign aid was, as it related to 1955, limited in its repercussions on economy in that year, its impact may be greater in 1956 and the other years to come. For, battle has impliedly been joined on the field of foreign aid. The change in emphasis from military assistance to economic aid is likely to be accentuated in 1956. In the result, it may be that under-developed areas of South-East Asia may find their tasks of industrialisation greatly facilitated by the competition in economic aid as between the West and Soviet Russia.

But neither the American prosperity of 1955 nor the emergence of Soviet Russia in a new role had its immediate significance for India in the year just past. 1955 marked an important year in India's contemporary history. It was the last year of the First Plan, and it was also the time during which thoughts were increasingly turned to the formulation of the Second Plan. It is not intended, at the moment, to undertake an analysis of what the Second Plan should be, or to make an assessment of the resources that will be available for implementing that Plan. In this review of 1955-1956, it is sufficient if we are able to see the conclusions clear that the consolidation of achievements and signs of an expansionist economy are both fully reflected in the various Indian economic indices.

In 1954, the achievements in Indian economy that had been pin-pointed were largely limited to the contributions represented by improved exports in jute goods and tea and the savings accruing from achievement of near self-sufficiency in a number of our agricultural products. The indices for 1955, however, are not thus restricted in scope or significance. A much broader picture of the consolidation and attainments of the First Plan is now available. Moreover, we repeat, each index suggests that an expansionist economy is today at work in India. It is from these two viewpoints that the Indian economic indices should be studied.

The statutory statement of the Reserve Bank of India is, in this context, of primary importance. The fact that the tempo of economic activity has generally risen is indicated by the rise in notes in circulation by a figure of Rs 161 crores to Rs 1361.98 crores. Since 1955 represented the last lap of the First Plan, it is hardly surprising that Government disbursements should have contributed, in large measure, to this heightened tempo. As between the end of 1953 and 1954, the Central Government's deposits with the Reserve Bank show hardly any change. In the meanwhile, the Centre took recourse to deficit financing for replenishment of its resources. Rupee securities in the Issue Department have risen by Rs 121 crores to Rs 538.67 crores. It is, however, noteworthy that Government are using the instrument of deficit financing with flexibility and elasticity. During the past four or five weeks, Government found it possible to reduce commitments under rupee securities by the process of "reverse ad hocs." For, rupee securities, standing presently at Rs 538.67 crores, had touched as high a level as Rs 563.52 crores in the week ended 9th December.

Thus, the expansion in note circulation has largely been effected against an increase in rupee securities. But some part of the expansion, to the tune of Rs 23.73 crores, has been effected against foreign securities. As regards India's foreign balances, this rise in holdings in the Issue Department has been offset to the extent of Rs 19.34 crores in balances held abroad as shown in the Banking Department. In the result, it is to be observed that, although 1955 entailed heavy imports, India's foreign balances, far from having been run down, actually showed some improvement. It should be recalled, in this regard, that we suggested, some weeks ago, that, in the recent past, both foreign balances and the resources of the Central Government had possibly been helped by receipts of foreign aid. It would appear that, but for such receipts, India's foreign balances, on the one hand, would have been run down and the Central Government, on the other hand, might have found it necessary to take greater recourse to created money.

'The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right.'—The Analects of Confucius.

Investments held by the Reserve Bank of India stand reduced by Rs 24.80 crores at Rs 50.54 crores. This also suggests that, with competent handling of open market operations by the Central Banking authority, the amounts realised from the Central and State Government loans were supplemented by the sale of giltedged by the Reserve Bank. Finally, the Reserve Bank's facilities were availed of in greater measure by Indian Scheduled Banks in 1955. Advances against usance bills, a facility that was not accorded immediate popularity, are shown to have totalled Rs 225.44 crores in 1955 as against Rs 147.52 crores in the previous year. In the first place, this indicates that the new method (introduced early in 1952) by which banks could replenish their resources, was fully utilised in 1955. Secondly, it also suggests that banks were called upon to play their due role in the increased industrial and business activity.

The statement of the position of Scheduled Banks also confirms the expansionist forces at work in the Indian economy. The demand liabilities of Scheduled Banks rose by Rs 31.70 crores to Rs 606.68 crores, and time liabilities increased by Rs 53.02 crores to Rs 420.28 crores. Also, Scheduled Banks increased borrowings from the Reserve Bank by Rs 16.26 crores and from the State Bank by Rs 4.35 crores. Thus, the resources of Scheduled Banks rose by approximately Rs 105 crores in 1955. These were utilised for making available to constituents Rs 85.8 crores more by way of advances and loans, the relevant figure having risen from Rs 537.14 crores to Rs 622.22 crores; secondly, for adding to the investment portfolio by Rs 39 crores to Rs 387.93 crores. At the same time, balances with the Reserve Bank declined by Rs 9.93 crores to Rs 55.70 crores, and money at call and short notice also fell by Rs 10.39 crores to Rs 12.00 crores.

Apprehensions that bouts of deficit financing might be productive of inflationary tendencies have been proved false. Prices largely remained stable. The general index of wholesale prices rose only by 0.8 to 367.4 over the year. This stability in prices could possibly be attributed to the smart rises registered in industrial production. The index of industrial production in selected sectors, with the base year as 1946, indicates that the advances, in some cases, are hearteningly remarkable. (All figures relate to the end of September 1955 as compared to the end of September 1954). Jute goods production rose by 9.3 points to 97.5 points. That in an industry, in which India has faced untold difficulties and problems, we should actually have been able to increase production, is a sign and symbol of the general improvement in industrial activity. Coal production rose by 8.7 to 142.2. Cement fell by 9.0 to 276.1. Sugar production showed a phenomenal increase, almost doubling itself from 293.8 to 543.8. A similar increase is discernible in soda ash, whose index of production has sharply risen from 337.5 to 609.8. Dry cells and electric lamps are two other sectors in which the increase is no insubstantial one.

It is pertinent to quote from the article that was published at this time last year. In that article, we had indicated that the case for

Annual Reviews

Calcutta Stock Exchange :

1955—Irregular Price Pattern

WITH an irregular price pattern due to alternate bouts of buying and selling, the Calcutta Stock Exchange wound up the year on a cautious note. Activity was mostly confined to the Engineering and Miscellaneous sections. Jute shares ruled barely steady, while Coal shares resisted the downward trend in prices. Tea shares, after showing a steady rise till August, met with renewed offerings.

The majority view among market circles was that the change in economic policy for eventual establishment of a socialistic pattern of society would not prove beneficial and whatever expansion schemes were envisaged in the private sector would receive a setback in the event of nationalisation. Certain circles, however, were inclined to take a constructive view about the future on account of the speedy expansion of industrial activities under the Five-Year Plan. Also, they felt that the private sector would be allowed as wide and a free field as possible if the pace of economic progress was to be quickened and, on that assumption, the whole climate of investment would have to remain favourable. With the result, price movements, during most part of the year, were rather irregular and the higher levels, that were reached during the second half of the year, could not be retained till the close due to the cautious attitude adopted by investors as well as professional operators.

From the beginning of the year, the market enjoyed hectic activity and gently rising prices, resulting in a further improvement in sentiment that was noticed toward the closing stages of 1954. Although the advent of February brought a trend which was quite in keeping with the state of things that would generally prevail in the pre-Budget period, the market was in a constructive mood on expectations that the Central Budget would not turn out to be discouraging from the stock market angle. As a matter of fact, the market gave the Budget a good reception, operators being enthused over the announcement of the 25 per cent Development Rebate on new plant and machinery, the provision to carry forward losses indefinitely and the inflationary potential of deficit financing to the extent of Rs 318 crores. Thus, the bullish forces generated by the Budget proposals, continued to assert themselves on the market and the upward movement in prices gathered further momentum in March.

During most part of the second quarter, the market had a dull and listless passage in the absence of any fresh influence. There was a general lack of enthusiasm to go in for any further buying due to certain adverse factors. Mainly amongst these were, the approval by Lok Sabha of the Constitution Amendment Bill, reports that the extra profits earned by steel companies from higher retention prices would not go to shareholders, tight conditions in the market, a continuous fall in the prices of agricultural commodities and the abrupt development of an ominous outlook for the tea industry. But trading in June was highlighted by some buying of the most popular scrips, being influenced by dividend announcements, the proposal by the Stock Exchange Committee to include two more scrips—Indian Copper and TEXMACO—in the forward list and the cornering activity in certain scrips.

The market's performance, during the third quarter, was impressive though price moments were rather irregular. Prices did not make much headway in July following the announcement of the Goverment decision to nationalise Kolar Gold Field and Mining companies and the consequent fears in some quarters that other industries would also be nationalised. Brisk trading was, however, noticed in August following two important announcements—the devaluation of the Pakistani Rupee and the total abolitition of the export duties on Indian jute goods. The Finance Minister's announcement that the Government had decided to permit the issue of bonus shares provided an added fillip. But activity, in September, was of a squaring-up nature due to the anxiety with regard to the size of the forthcoming dividend by Indian Irons.

The market presented an uncertain front during the last quarter of the year and the little enquiry, that was noticed, was mostly confined to the Engineering and Miscellaneous sections. The announcement, in October, of the maintenance of the dividend by Indian Irons was, at first, expressed by a sharp setback in share values; but there was a subsequent recovery due to the excellent performance made by the company during the year 1954-55. The IJMA's proposal to increase the production of jute goods and the news of the Tata-Kaiser pact also aided the bullish sentiment. But this was only short-lived and the market took a nose-dive at the beginning of December due to heavy bear pressure. The Finance Minister's speech about the proposed measures for regulating share trading, the anxiety whether the issue of new shares by the TISCO would be at par or premium, persistent suggestions of cuts in foreign aid, talks of increased taxation, a discouraging coal policy and the uncertainty regarding the outlook for the tea industry—all these factors gave sufficient ground for bears to dominate the market and push down rates, while bulls were unable to stem the tide of selling pressure. Thus, conditions, at the close of the year, remained uncertain as operators were indulged in stone-walling tactics.

Of all the sections, Engineering shares commanded a good deal of genuine investment attention throughout the year under review, although the price movements in Indian Irons were subjected to speculative activity. Companies, which were mainly engaged in construction, structural and fabricating jobs, were mostly favoured. It was believed that the setting up of steel-making units, buying of domestic products by the Railways and various schemes for manufacturing machinery, would increase the scope of engineering concerns, which must expand and modernise their plant and equipment to keep pace with rising demand for their products.

Jute shares ruled barely steady, suggesting that the competitive position of the Indian jute industry in world markets was not yet satisfactory. Although prices touched the highest levels in November, they could not be retained till the close due to quieter advices from the jute goods market and the growing disparity between raw jute and manufactured goods prices.

A notable feature of trading, during the year, was the impressive performance of the Coal section where prices, despite the Government decision not to give up the idea of nationalisation, resisted any downward trend due to selling pressure. There was a general feeling that the production of metallurgical and high-grade coals would have to be increased due to the rapid expansion of the steel industry and consequently the ceilings on the output of these grades would have to be removed. It was also felt that the fears regarding nationalisation and increased Governmental intervention had been exaggerated to a certain extent and that the industry would have its share in the general level of prosperity.

Tea shares showed a steady rise till the end of August from when they were subjected to renewed selling pressure due to various adverse factors. Mainly amongst these were, congestion of stocks at the Calcutta warehouses, over-production, falling trend in auction prices both at London and Calcutta, reports of labour demanding higher wages and the Tea Board's recommendations to the Government to restrict the transfer of Export Quotas.

Sugar shares ruled generally quiet on reports of the serious turn in the industry's situation due to glut of stocks. In spite of increased output during 1954-55, the profits of mills were adversely affected by the fall in the commodity price. Transport difficulties were also a contributory factor.

Textiles, after remaining depressed during most part of the year, gave a better performance during

Annual Reviews

the last quarter following encouraging advices from the cotton and piecegoods markets. Despite the controversy over the Amber Charkha, shares met with a good support at every decline in view of the excellent profits reported to have been made by most of the mills during the year under review.

The Miscellaneous section continued to be the most popular counter of the market, mainly due to expansion and modernisation schemes planned by a few companies in order to meet the increasing demand for their goods.

The market for Giltedged securities ruled quietly steady on lack of sustained support from institutional investors.

Bank shares improved substantially from the low levels, touched in the beginning of the year, on reports of satisfactory working results.

Bombay Stock Exchange :

Rise in Prices not Fully Held

THE Bombay Stock Exchange presented a picture of health during the year under review though it was not able to sustain the best levels due to uncertainties over vital policy matters that arose during the fag end of the year.

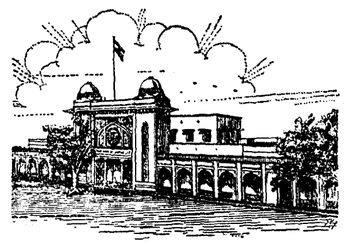
The general wholesale price index was more or less steady having declined from 368.5 at the end of last year to 367.4 toward the end of the year. Food articles hardened slightly from 317.4 to 320.4. Industrial raw materials went up from 438.4 to 440.7, of which Oilseeds accounted for the major rise, having gone up from 390 to 430. Semi-manufactured articles declined from 348.3 to 345.9, while manufactured articles index tapered from 375.1 to 372.8. Government and semi-Government securities appreciated from 90.4 to 91.0 and Preference Shares from 100.7 to 101.0. Debentures went down from 88.1 to 87.8. Variable Dividend Shares Index for all-India jumped up from 114.2 to 131.7, for Bombay from 118.5 to 138.7, for Calcutta from 107.5 to 121.2, for Madras from 110.4 to 125.7 and for Delhi from 113.7 to 144.6. Also, in New York, Dow Jones compositive average for 64 stocks improved from 151.31 to 172.2, while the Industrial average on the London Stock Exchange moved up from 219.8 to 233.1, thus showing that boom in share markets was not confined to India only, but was a feature that was shared by all world markets during the year.

The major factors that contributed to the boom conditions were, no doubt, the appreciable rise in industrial and agricultural production under the first Five-Year Plan and the much wider expansion envisaged under the Second Five-Year Plan. The bullish sentiment was also aided, to some extent, by the Government's policy of deficit financing and the expectation that, during the period of the next five years, it would be to the tune of over Rs 1,000 crores. Again, the main reason for the happy frame of mind of the investors and the industrialists was the large volume of good corporate news which more than offet set the fears endangered in the private sector by the ruling party's slant toward socialism, the Constitutional Amendment governprivate property and the new Company Law. Another step in the right direction was the decision of the Stock Exchange authorities to revise their listing policy in the light of the Company Law Act.

Besides, some of the measures, introduced by the Government to usher in a socialistic pattern of society, had turned out to be bullish factors for the share markets. The restriction placed on the cotton mill industry to support handloom presented a closed market for mills and was chiefly responsible for a boom in the cloth market. The restriction on managing agency commission and directors' profit-sharing arrangements under the new Company Law and the new Section 23A of the Insurance Act led to expectations of higher dividends. The nationalisation of the Imperial Bank, though creating fears of further nationalisation in other spheres, diverted larger sums of money got by way of compensation into other industrials.

Although the year started well and prices showed good improvement from the 1954-end levels, business done was not large due to the cautious attitude adopted by operators. The Congress resolutation at Avadi in January on 'socialistic pattern of society' afforded many-sided interpretation and consequent uncertainty among industrialists and investors alike. But there was a revival of confidence in the market in February when the Government decision to give a Rs 7½ crores interest-free loan to the Industrial Credit and Finance Corporation made operators to feel that the private sector had not after all been neglected entirely.

In February, the Budget was well received and operators were enthused over the Development Rebate of 25 per cent on cost of new plant and machinery, the provision for carrying forward losses indefinitely and the proposal to penalize those companies who failed to distribute atleast 60 per cent of their profits as dividend. The market did not even appear to have paid much attention to the Taxation Enquiry Commission's report. During April and May, there was a slight decline in prices on reports of labour trouble in the docks and fears that shipping conferences might increase freight as a sequel to the slow clearance in Indian docks. The main causes that helped the bears to dominate the market were the uncertainty regarding the proposed amendments to Section 31 of the Constitution and the future of the managing agency system as a result of the drastic changes in the Companies Bill, recommended by the Select Committee.



The increase in retention prices of steel was announced in May; but, with the provision that this should not be passed on to the profits for dividend purposes, this did not have much effect on market sentiment. A flow of good corporate news from various companies, however, helped to keep the tempo; and the following months saw speculators take firm control over the situation in total disregard of the bearish factors that had kept the market dull in earlier months.

In June and July, the capital market responded magnificently to the new series of 3½ per cent Government of India National Plan bonds and the various State Development Loans. Hopes of a higher dividend for Indian Irons, prompted by the fine working results and the news regarding TISCO expansion plans with the successful conclusion of an agreement with an American firm, pepped up the market throughout August, September and October. Toward the end of November, however, tired bulls started liquidating on a large scale, resulting in a downward tendency in prices. The main depressing factors were, fears of nationalisation of Insurance companies, fears of taxation on bonus issues and the over-bought position in the market.

The following table shows the highest, lowest and closing rates of selected shares during the year:—

	Highest	Lowest	Closing
Engineerings:	Rs a p	Rs a p	Rs a p

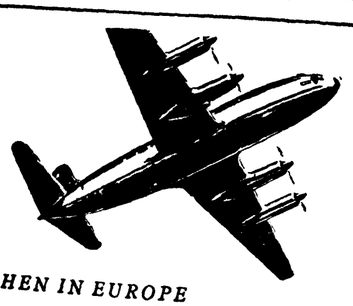
Jute

In the Grip of Speculative Activity

THE year 1955 was not very satisfactory for the Jute industry, which experienced both favourable and unfavourable developments. Price movements in both Jute and Jute Goods markets were mostly influenced by the speculative activity in the Phatka market. The year's highest levels were touched in February and the lowest in September and October. The market finished the year on a firm note.



Apart from other factors, it was the renewed firmness in raw jute prices which brought about renewed strength to the manufactured goods section during most part of the year. Mills, however, could not take full advantage of the ruling high prices as the prices of both raw jute and jute goods were almost on par with each other. When foreign buyers were not willing to pay high prices, mills found themselves in a very embarrassing position. It seemed as if foreign buyers were inclined to live from hand to mouth until the raw material supply position improved and manufactured goods became cheaper. Moreover, the instability in prices gave them very little encouragement to do much business.

Jute Goods:

Let us take Jute Goods first. Market circles believed that, in as much as enquiries from overseas buyers had remained rather indifferent and slow toward the closing months of 1954, the stored-up demand would materialise itself to stimulate both turnover and prices in the New Year. While, on the one hand, there were reports that Burma had called for tenders for the supply of sacking goods for January-February delivery, on the other, the decision of the Philippine Government drastically to curtail imports of sacking with a view to protecting the indigenous jute industry had the effect of reducing total exports to the Philippines. There were also reports that Pakistan was making rapid progress in increasing her jute manufacturing capacity; that the Middle East countries were setting up jute mills; and that Turkey and Egypt had asked Pakistan to assist them in establishing jute mills. It was thought that these new mills and the increased output in Pakistan would raise consumption of Pakistani jute. Thus, price movements, during the first quarter, were rather irregular due to speculative manipulations, although the undertone remained firm.

Trading, during the second quarter, remained generally dull and the market developed a weaker tendency. Although there was a recovery in mid-May following the news of the Argentine Order for 59,500 tons, higher levels could not be retained for long due to the absence of any real business following certain adverse factors. A major bearish factor was, no doubt, the prospect of a very large crop, both in India and Pakistan. Foreign buyers were generally inclined to enter into commitments only to the extent of their immediate requirements in expectation of a bumper crop. Also, fears were entertained that the political developments in the Argentine might delay shipments of hessians, contracted for by that country.

But the industry did not seem to be alarmed by the lack of buying by foreign consumers in view of better statistical position of jute goods. Moreover, the crop reports, issued at the end of June, provided sufficient ground for the belief that there would be adequate supply of raw jute in the 1955-56 season. Conditions, therefore, turned brighter in the beginning of the third quarter. The reports of floods in Assam and the Government announcement of the total abolition of the export duties on jute goods had a bullish effect on market sentiment. It was felt that, with the abolition of the export duties, the industry would have the chance of competing effectively with the rest of world. It was also expected that it would help the production of raw jute and enable the mills to share the financial benefit accruing to them with the raw jute producers. Thus, the news of the abolition of the export duties, the devaluation of the Pakistani Rupee and the continued strength of the commodity markets, induced speculators to boost up prices till the first week of August from when the market turned again weak with prices developing a downward trend.

WHEN IN EUROPE

fly BEA

IN EUROPE'S FINEST AIR FLEET

For business, for pleasure—you'll do far more and see far more . . . if you fly BEA on your next trip to Europe. BEA's famous—and ever-expanding—network offers passengers fast and frequent services to over 50 of Europe's main business and holiday centres. BEA have more of the best airliners—more VISCOUNTS, for example, than any airline in the world. And BEA's long experience in air transport means you enjoy comfort on all routes, and personal service second to none.

BEA links LONDON with most of the principal cities of Europe, including —
PARIS · NICE · BRUSSELS · VIENNA
AMSTERDAM · OSLO · STOCKHOLM
COPENHAGEN · HAMBURG · GENEVA
ZURICH · BARCELONA · ISTANBUL
MADRID · LISBON · PALMA · MILAN
ROME · NAPLES · ATHENS *and further afield, for example, to* GIBRALTAR
MALTA · CYPRUS *and* CAIRO *as well as* WITHIN BRITAIN

...and fly on the BEA CAR HIRE PLAN

BEA's new Car Hire Plan now makes the rest of your travel smooth as clockwork—in France, Holland, Belgium, Switzerland, Norway, Sweden, Denmark, Italy, Germany, Cyprus and in Great Britain. No deposit; full insurance.

BRITISH EUROPEAN AIRWAYS

Full details of air reservations from your local Travel Agent or any office of B.O.A.C. All arrangements for car bookings at BEA Offices in Europe ; or BEA, Dorland Hall, 14-20, Regent Street, London, S.W.1. Gerrard 9855.

Annual Reviews

The downward trend, noticed from the middle of August, was mainly due to conflicting opinions expressed with regard to the outlook for the Indian jute industry. A certain section of the operators felt that mills would be able to put increased challenge in foreign markets. Another section, however, felt that Pakistan would be able to underquote Indian jute goods very substantially in addition to offering goods made of superior quality raw material. As a matter of fact, overseas buyers were reluctant to enter the market, especially when Pakistan started underquoting hessians in the UK and the Continent. Also, restrictions imposed by Australia on imports of jute goods and the recurrence of trouble in the Argentine enabled bears to dominate the market and push down rates toward the end of the third quarter when the lowest levels for the year were touched.

While the market, in October, was thus reduced intrinsically weak, bulls had neither the capacity to stop the rot nor the power to stem the tide by holding on to their stocks. The recommendations made by the Industrial Tribunal regarding mill-workers' wages also caused some worry to the mills. But for the relative steadiness of raw jute, manufactured goods prices might have shown a further decline from the September-end levels. Conditions, however turned brighter in November when prices developed a firmer tendency as operators began to corner Sackings in view of the low stock position. The only restraining factor were the rumours that the industry might soon decide to increase production by the unsealing of looms. But, when it was announced, in the middle of December, that the IJMA had decided to unseal only 2½ per cent of the looms, bears had to rush in to cover their sales, resulting in a steady recovery in prices toward the end of the year. The improvement in prices was, however, more pronounced in Hessians than in Sackings, thanks to expectation of a squeeze in the former class of goods, the revival of interest shown by the Argentine and rumours of business with Russia.

Raw Jute:

There was considerable speculative activity in the Raw Jute market during most part of the year due to frequent talks of shortage of the commodity. There was speculation as to whether the mills would, in the 1954/55 season, obtain all the jute they would require. It was believed that the total world supply of jute was far beyond the actual requirements. This factor induced Pakistan to make a bid for as much gain out of the situation as it was possible for her.

The renewed strength of the market and the persistent rise in

Annual Reviews

prices in January and February presented a problem to the mills. Imports into local markets fell considerably, while stock-holders were pushing up prices on continued shortage of the raw material. There was a growing feeling that the industry would not be able to maintain the 48-hour week in view of the persistent widening of the disparity between raw jute and jute goods prices. Also, there was a feeling that imports of Pakistani jute might fall short of their requirements due to the ban on exports in Kutcha bales. In March, however, all the stories about shortage were gradually fading out and prices reached a level which had a better relationship with the prices of manufactured goods, thanks to the cautious handling of the market by the mills. Sellers also showed some anxiety to dispose of their holdings; and their apprehensions with regard to the fall in prices were based mainly on three factors: (1) preference shown by mills to Pakistani jute than to Indian jute in view of the small difference between the prices of the two fibres; (2) reports of rain in some of the jute-growing areas and (3) steady increase in arrivals into Calcutta and mill stations.

Except for a steep decline in prices in September, the market ruled generally steady during the second and third quarters of the year. Although there was not much demand, sellers resisted any cut in prices on reports of the virtual stoppage of imports, the detention of jute in flats and the decision by the Pakistani Government to destroy sowings in excess of 55 lakh bales. Despite the increase in the export duty on raw jute from Rs 3 to Rs 4 per maund, announced by the Pakistani Government, and the limited interest shown by the mills, rates continued to rule steadier in August on reports of floods in Assam, Cooch Bihar and many upcountry centres. There was, however, a steep decline in prices in September when the lowest levels for the year were touched. This was mainly due to the complete absence of any buying by mills on prospects of a large supply of crop in the coming months .

The market again firmed up in October due to various factors. Although there were reports of a substantially large crop in Pakistan, the supply to India was made difficult by various regulations. The reports of the depleting stocks of raw jute with the mills, lower arrivals into mofussil centres and the decision to maintain minimum prices by Pakistan, were also factors, contributing to the firmer tendency in prices till the end of November. One of the main reasons was that a number of mills made substantial purchases and, in making these purchases, they specially asked for very early delivery. This gave the impression that they needed fibre quickly. Sellers, in consequence, felt that their own bargaining position was to that extent stronger.

In December, however, sellers again showed some keenness for business and prices, as a result, displayed a slightly easier tendency. This change in sentiment was attributed to the increase in arrivals. Also, there was a general feeling among the mills that ample supplies were available and it would not be difficult to get additional supplies to meet increased production by the unsealing of 2½ per cent of the looms. Toward the closing stages of the year, the market displayed a steadier tendency following the reports of the transport difficulties and the lack of booking facilities to bring jute from the upcountry centres. One notable development in the market was the large price difference in the prices of Indian and Pakistani jute. Due to the reluctance on the part of stock-holders of Indian jute to reduce their rates, mills were compelled to divert their attention to Pakistani jute which, at the then ruling price, was considered to be a more attractive proposition.

On the whole, the outlook for both Hessians and Sackings in the coming year is considered to be bright. Despite the fact that the instability in prices have been giving very little encouragement on the part of overseas buyers to do large business, the industry does not seem to be alarmed by the lack of buying in view of the sound statistical position of jute goods. There is already evidence that shipments of both classes of goods, during the first three weeks of December 1955, have been encouraging. This larger demand for jute goods shows that the pending demand from overseas buyers for Indian jute goods is now steadily manifesting itself; and this demand is expected to broaden up during the next few months. It is also hoped that, with the gradual modernisation of her jute industry, India can ultimately be successful in maintaining her dominant position in world markets. Again, the effectiveness of the switch-over from hessian to sacking production and vice versa is welcome evidence of the industry's flexibility in meeting periodic fluctuations in the pattern of demand.

Of course, the decision to keep the remaining 10 per cent of the looms sealed for the time being is evidence of the IJMA's anxiety with regard to the availability of the raw material. It is true that there has been little or no improvement in the import position: but there is still a feeling that ample supplies are available, that it will not be difficult to get the additional requirements and that supplies will have to reach the mills sooner or later in the coming months when once the transport problem is solved. One factor, however, which may restrain a rise in the price of Indian jute is that, at the present levels, Pakistani fibre has come to attract more interest.

Tea

Reversal of 1954 Boom

THAT the year 1954 was a year of phenomenal prosperity for the Indian Tea industry is a well-known fact; and this prosperity was almost unprecedented. With increased consumption throughout the world, attended with shortages of and consequent high prices for other competitive beverages, tea commanded a very strong market. In that year of booming tea prices, Common tea touched the high level of 7sh per pound at Mincing Lane. In brief, conditions witnessed were in sharp contrast to those prevailed in 1952 when the market slumped heavily.

The swing of the pendulum is now to the other extreme; and the boom disappeared as suddenly as it had appeared. In 1955, prices rocketted to such heights that consumers in overseas markets particularly in the UK—the mainstay of the India's tea exports—began clamouring for relief. Consumers' reaction was so strong that British housewives even started a campaign for reduced consumption of tea. They raised their voice of protest against the high prices of tea in the wake of Ceylon Prime Minister's pricking the bubble of it, while the trade in the UK saw no other alternative left than to become responsive to it. They clearly perceived the growing signs of rot imminent in a buyer's mar-

ket for tea. Initiated by the Typhoo Tea Company, a host of leading units in the British trade such as the Lyons, the Brooke Bond, etc., volutarily brought about a cut in the retail prices of tea. The impending slump in tea prices was too soon confirmed by tottering prices of tea at the auctions in both Mincing Lane and Mission Row.

Between January and mid-April prices of tea had heavily slumped in London auctions. The fall in three months was as much as 33 per cent. Toward the end of April, tea had almost become unsaleable at the auctions and as such auctions had to be suspended for a week or so. When auctions were resumed from May, the results were extremely disconsolating. There was absolutely no demand for Common sorts of tea; and the prices of qualities that were taken up recorded a fall of one shilling per pound, that is to say, by another 14 per cent over the price of January or 25 per cent over the price of April. Thus, there was a gradual systematic fall of prices with a little halt in the month of October due to artificial restriction of offerings.

Thus, during the year under review, the trend of the market had been so very different to that of the previous year. There were four main causes responsible for the fall in prices:

1. Increased export duty as against the comparatively lower duty prevailing in other countries which put Common and Low Medium teas at a disadvantageous position in world market;

2. Larger offerings in Calcutta auctions due to limitation of direct exports for sales in London auctions without corresponding increase of buyers at Calcutta or elsewhere;

3. Absence, up to end of October, of even the normal operation on behalf of the UK buyers who generally start buying in Calcutta from August; and

4. Anticipated larger production in India and Ceylon.

Possibly, the primary cause of the troubles was the fact that production by all countries, last season, was a record; and this was not sufficiently appreciated until the middle of the year under review. Coupled with this uncomfortably full supply position the Government of India restricted the amount of Northern India teas, for offer in the London auctions, to a total of 140 million pounds. It was also unfortunate that the credit squeeze in the UK had a considerable effect on buyers' purchasing powers in the Calcutta market. In consequence, the UK buyers were more inclined to expend the resources at their disposal on the better qualities of tea and adopt a hand-to-mouth policy.

Thus, out of the likely total from the 1955 crop, the Calcutta market was able to dispose of only 45 per cent of the estimated Dust offerings and 50 per cent of the remainder, while, last year, as much as 52 per cent of the Dust offerings and 70 per cent of the remainder were absorbed. In fact, to date this season, over 200,000 packages had to be reprinted against some 60,000 up to a similar period last year. This emphasised the absence of demand which had been experienced and the need for restricting the weekly offerings to a figure which the buyers might be able to absorb.

Another important innovation, introduced by the Government of India during the year, was the "slab system" of duties on teas exported from India, under which the rates fluctuated from As 4 to As 14 per pound according to the weighted average of the London sale price for Indian teas in the previous month. The application of this slab system influenced shippers and buyers for outmarkets to regulate their activities toward the end of a particular month to take advantage of a fall or to avoid a rise in the export duty. While, therefore, the slab system was preferable to a fixed duty, it also introduced fresh complications.

Although it is difficult to forecast the future with any precision, it may well be necessary to make some alteration in the pattern of marketing our teas if we are to prevent this becoming worse. When a world surplus of tea is visualised, it is only reasonable for the buyers to stand waiting for the bottom. With ample world supplies, it appears that our auctions cannot absorb 60,000 to 65.000 packages of export teas weekly. If, however, such a quantity is not absorbed weekly in Calcutta, not only will the warehouses have to carry capacity stocks, but much of the crop, still on the gardens, will have to remain stored there for a considerable time in the New Year. Again, if offerings at the auctions require to be reduced, the position will get even more difficult and ultimately we should find 1955 teas in competition with new season's next June.

The ultimate strength of the Indian tea industry lies mainly in its vast expanding home market. As such, production programme should be framed with greatest circumspection and also greater attention is to be paid in the direction of improvement in quality. The improvement in quality together with regulated offerings at the principal auction centres will go a long way in maintaining stable conditions in the industry. The immediate need of the hour is to reach International Agreement on the widest scale for the regulation of exports. Once this is achieved, and if the Government of India decide to increase, if only temporarily, the direct shipment quota, the tea market will regain that measure of confidence that it so badly lacks today.

The following table shows the trend of auction prices for various grades of tea during the year (price per pound):—

Rubber

Increase in Consumption over Domestic Output

THE buoyancy of the Rubber market, during the most part of the year under review, was mainly due to a strong statistical position, though prices showed a slightly easier tendency toward the close. The market had, in general, been sensitive to small changes in the balances of supply and demand; and this was scarcely a matter for surprise. One contributory reason for the sustained strength of the market lay in the progress made in selling US synthetic plants to private enterprise and the consequent feeling among American consumers that they might have to pay higher prices for synthetic and to face some uncertainty about the continuity of supplies.

As far as the Indian Rubber industry was concerned, it faced a challenge—a challenge to increase its natural rubber output to meet the increasing demand within the country for the commodity. There was a gap of over 3,000 tons between production and consumption. Although production showed some improvement over 1954, it failed to keep pace with the steady advance in consumption. There was the problem as to how production should be increased to meet the growing demand. It was pointed out that small growers of rubber, who accounted for about 40 per cent of the output, did not get the benefit of the fair price fixed by the Government; because their circumstances compelled them to sell the rubber to local dealers at whatever price was available. The commodity passed through several dealers before it reached the consumer. With the result, the price secured by the small producers was far less than the price allowed by the Government. To make things worse, the Sales Tax on Rubber, which was formerly collected only at two points, was then collected at all points of dealings. Thus, dealers and small growers had neither the chance of selling their stocks directly nor the benefit of a fair price.

In the middle of February, the Government decided to increase the price of Group I rubber by Rs 12 per 100 pounds with suitable adjustments for other grades. This decision was made, partly to meet the increase in the cost of production and partly to enable producers to put by adequate funds for the replanting of rubber, which had to be undertaken on a considerable scale and for new plantings, if necessary. The price increase was considered substantial; and the Government's eagerness to encourage replanting was also evident from the fact that they were considering a scheme for assisting growers in the matter. It was, however, stated that the price increase was valid for three years, but could be revised if the cost of production during this period showed a variation of 10 per cent over the ex-factory price of Rs 85 per 100 lbs.

The first quarter of the year witnessed a further widening of the gap between production and consumption. While production dropped to 3,464 tons, consumption went up to 6,771 tons as compared to 3,524 tons and 6,344 tons respectively in the corresponding period of the previous year. This low rate of production was, however, due to increased rate of felling of old and worn-out trees for replanting, labour troubles in some of the rubber plantations early in the year and dry weather conditions.

During the second quarter, however, a considerable rush in planting was going on throughout Travancore-Cochin, and more lands were brought under rubber. Also, it was satisfactory to note that production showed a slight increase in the first five months of the year at 7,826 tons as compared with 7,561 tons in the same period last year, while the gap between production and manufacturers' offtake widened further. As production was not expected to exceed 26,000 tons, the question arose as to how such a wide gap was to be covered. Certain manufacturers even suggested establishment of synthetic plants in this country to produce what was needed to cover the shortage in production.

Despite the improvement in output in July, the stocks with the growers and dealers went very low, at 1,887 tons by the end of the month as against 3,352 tons in the corresponding month of 1954. Also, with the world price of rubber ruling over Rs 225 per 100 pounds by that time, there was a scramble for available supplies; and, as a matter of fact, the manufacturers were vying with one another in courting rubber-growers.

Toward the end of the third quarter, prices in foreign markets displayed an upward trend, which was attributed to the rumours that Russia would buy more natural rubber and that the ban on deliveries to China, imposed by the United Nations, was to be lifted. Against this background of higher prices ruling for world rubber, the price at Rs 150 per 100 pounds, fixed for Indian rubber in February, was considered unsatisfactory. The Government of India, therefore, again decided to raise further the price by another Rs 5-12 to Rs 155-12 per 100 pounds, while the growers demanded a further revision of the statutory price to the extent of the increase in excise duty to Rs 6-4 per 100 pounds levied in early August. Also, the Government decided that the import policy of raw rubber, during the July/December 1955 period, would continue to be the same as during the licensing period January/June period.

Although the unusually heavy rains affected production in September, production in October showed a marked increase and the total for the ten months ending October 1955 amounted to 17,015 tons, showing an increase of about 550 tons over the same period in 1955. Also consumption, during the same period, rose by over 5,200 tons, or an advance of 3,200 tons over the increase in production.

Toward the end of the year, there was a sharp fall in world prices, mainly due to a higher estimate made by the Rubber Study Group. From a peak of Rs 281 per 100 pounds, the price of sheet rubber dropped down to around Rs 210 in London. With the sharp fall in world prices, there was again some questioning as to production facts.

Recent developments in international markets indicate the growing popularity of synthetic rubber. The fact that world production of natural rubber has been consistently running below consumption levels appears to have necessitated increased output of the synthetic material. It is estimated that world production of man-made rubber will, within the next five years, have to be increased by 50 per cent over the present level, because consumption of all kinds of rubber is expected to exceed 3 million tons by 1960, whereas no expansion in the production of natural rubber from the present level is considered likely.

The secret of the success of the synthetic product lies in its price advantage. The domestic price of synthetic product in New York is about 24.10 cents a pound as against 44 cents a pound for natural rubber. Naturally, many programmes for the expansion of synthetic rubber production have now come up.

The gap between the production and consumption of raw rubber in

PACKAGING HEADACHES FOR MANUFACTURERS

Production of

Moisture – Proof Transparent Cellulose Film commences in India!

The Travancore Rayons are pleased to announce that they are now in a position to supply manufacturers with moisture-proof transparent cellulose film, hitherto imported from abroad.

Attractive packaging plays an important part in the sale of a product. Cellulose film offers all the advantages of good display, combined with maximum protection against soiling or deterioration. Thus cellulose film has become the first choice of manufacturers with goods to sell.

INCREASING USE BY INDIAN MANUFACTURERS

Moisture-proof transparent cellulose film is being put to increasing use by Indian manufacturers. This unique film 'seals-in' perishable goods against the weather, preserves their freshness. It also protects them against dirt and soiling.

The Travancore Rayons will manufacture a special "Heatsealing Moisture-proof" transparent cellulose film. This film can be sealed by the simple application of a warm iron along the seam. Goods packed in this film will not get stale.

The Travancore Rayons Ltd., would be pleased to answer queries on the advantages, uses and characteristics of the various types of transparent cellulose film manufactured by them, as also on all other aspects of packing involving the use of transparent cellulose film.

THE TRAVANCORE RAYONS LTD.

TRAYONS

India is estimated at around 8,000 tons per year and as such the Indian rubber goods industry will, for the first time, be importing synthetic rubber in January/June 1956 period. Imports of 4,600 tons are allowed for that period and are divided on an equal basis between natural and synthetic rubbers. Thus, the balance of about 3,500 tons is likely to be imported in the second half of 1956.

*

Pepper

1955—A Trying Period

THE year under review was a dull one for the Pepper trade with prices showing steep declines at times, the only bright features being the total abolition of the export duty and the shipment of 1,000 tons to Russia during April and another 1,000 tons during November.

Although the announcement, made in the beginning of the year, of the reduction in the export duty from 30 per cent to 15 per cent induced some demand from overseas buyers, pepper circles did not seem to be enthusiastic about the improvement in export outlook. They felt that the cut in the export duty was not adequate enough to restore the confidence of foreign buyers; and shipments during the first quarter of the year amounted to only 3,905 tons as compared with 5,612 tons in the corresponding period of 1954. Again, total exports from the start of the season (November) to June 1955 were only 185,175 cwts as against 215,449 cwts shipped in the corresponding period of the previous year. Exporters believed that this deficit of 30,374 cwts might increase to nearly 70,000 tons by the end of the season, if business conditions did not show appreciable improvement. There were even fears that it might be difficult to maintain a level of 6,000 cwts during the remaining months of the season. This was largely attributed to the increasing competition from Sarawak and Lampong.

In August, black pepper from Sarawak was quoted at a discount of 5 cents per pound from the Indian price. Besides, Indonesia reduced the export duty from 15 to 5 per cent from July 1, 1955, with a view to stimulating exports. This, it was felt, would affect India's exports adversely. Moreover, business with the USA dwindled considerably; and the buyers were not interested in buying even at the then prevailing favourable prices in view of the heavy shipments of about 2,500 tons received there from all sources in July against the monthly average consumption of about 1,500 tons. Holders of stocks, therefore, became nervous about the situation and were inclined to dispose of their stocks even at a fair discount before the advent of the new season.

Thus, the pepper markets in Cochin, Alleppey and Kozhikode entered a trying period during August with Sarawak and Lampong offering enough to meet immediate needs below Malabar quotations, while Indonesian crop had been coming in. The resultant effect had been a mood of reluctance on the part of buyers to stock heavily against a possible fall in prices, which was countered by the growers with a reluctance to sell. Thus, the cause for the total abolition of the export duty remained strong from September.

In accordance with their policy of keeping export duties under constant review, the Government of India decided to abolish the export duty on black pepper with effect from the 20th September. This news was greeted by a rise in prices by 50 points per candy. Shippers felt happy that exports would be speeded up as the total abolition of the export duty should bring forth enquiries from the Continent and the USA. But the spurt in prices proved only temporary, mainly due to strong competition from Indonesia and Sarawak. There was a heavy liquidation of Sarawak pepper stock at lower prices; and, with the arrivals of the new crop into the market, prices were expected to go down further. Thus, the sustained fall in prices was carried up to the end of November, though there was a slight recovery toward the end of the year on better advices from New York.

The quantity shipped from the country, during the season ending October 1955, were estimated at only 11,186 tons as compared with 14,763 tons in the previous season. This decline in exports was attributed to the smaller demand from the buyers in spite of the sharp decline in prices. The new season starting from November, however, began on a fairly promising note. There was a substantial revival of buying interest toward the closing stages of the year which enabled the exporters to book business for about 1,000 tons with the US. The improvement in the New York market also considerably helped exporters, as it tended to offset the bearish impact of the arrivals of the new crop. Again, there was a feeling that a response from the Continental buyers might become a little more active early in 1956. Another favourable factor was the general belief that Indonesia and Sarawak—India's main competitors in the world markets—would not be able to offer severe competition during the first four months of 1956 owing to their very low stock position. Also, enquiries from the New York spice market showed that the outlook for Indian black pepper was indeed bright.

The United States consumes, on an average, 1,500 tons monthly; but dealers here are reported to have only about 200 tons in stock as against about 2,000 tons they had in December 1954. Another factor contributing to a favourable outlook for Indian pepper is that speculators in New York are understood to have sold over 2,000 tons short (that is for forward delivery) and to fulfil this they will have to buy from India. There has already been evidence of increased buying; and trade estimates are that shipments to the USA, during December, must be in the neighbourhood of 1,000 tons as against a mere 200 tons in the previous month. Russia was also said to have bought 1,000 tons during November.

Above all, the Government of India have already set up an Export Promotion Council with a view to expanding the sale of pepper. It is said that pepper consumption has reached almost the optimum level in the USA. In that case, the export promotional activities are not likely to expand the consumption of pepper in that country substantially. So, the best that one can expect the Council to do there is to maintain India's share at the current level. On the other hand, the Council can do much in some other countries where ample scope for increasing pepper consumption exists. Also, side by side with the export promotional activities, efforts should be made at expanding the consumption of pepper in India.

*

Sugar

Whimsical Policies Retard Expansion

IN perhaps no other industry does one come across such wide disparities in the figures of production and consumption from year to year as in the case of the Indian Sugar industry. Everyone talked of the sudden jump in the consumption of sugar by 50 per cent from 12 lakh tons a year in 1952 to 18 lakh tons in 1954. And now, again, one hears that consumption may not be not only anywhere near 18 lakh tons, but will fall sharply to around 16 lakh tons, if not less.

The history of sugar of the last few years shows that surpluses and shortages alternate, and seldom has the industry been able to keep pace with the actual demand. Production during the 1953-54 season was estimated at 14 lakh tons. Only in 1951-52 was this figure exceeded by a small margin. In that year also, a heavy surplus was expected to arise; and the Government made efforts to export some of the produce. In actual fact, however, the estimated surplus was turned into a deficit, forcing the Government to make extra purchases from abroad.

But the pendulum of sugar production swung violently to register a large surplus during the 1954-55 season. Thus, with the sudden increase in supplies and the prospect of a greater increase in production of both gur and sugar, sugar interests began to canvass the desirability of asking the Government to stop further imports, failing which, they urged, the Government might be actually called upon to find an export outlet for sugar and even to subsidise it. As it was, practically every sugar factory in the country was brimming with unsold stocks of sugar. In all cases, the storage capacity was exceeded and the tempo of accumulation had been accelerated. It was, therefore, natural that considerable concern was being expressed by the mills about the disposal of the huge accumulated stocks.

The position, especially of factories in Bihar, was more serious as their cost of production was higher. Moreover, demand for the commodity even at reduced prices continued to be low. The industry, therefore, felt concerned at the possibility of a large carry-over which would affect crushing in the next season. This decline in sugar consumption resulted from wide disparity between the prices of sugar, gur and khandsari. Besides, the Government's policy of large-scale and the unrestricted sale of imported sugar added further to the industry's difficulties. To make matters worse, the Government themselves became large sellers of sugar at competitive prices even in the heart of the sugar-manufacturing area, thus further jeopardising easy liquidation of the existing stocks by the mills.

In the month of July, it was estimated that carry-over of sugar from the 1954-55 season to the next would be about 7 lakh tons, which was over 40 per cent of the total production. Imports up to the end of May had also been higher at 4.45 lakh tons. With the result, total supplies, including opening stocks, imports and sugar refined from imported raw sugar, were estimated at over 23.7 lakh tons, while consumption was not expected to exceed 17 lakh tons.

In the circumstances, the Indian Sugar Mills Association rightly requested the Government to divert for resale the quantity of imported sugar which was still to arrive in the country, lest the accumulation of stocks should aggravate. The Association also suggested the Government should stop the sale of imported sugar which should be held as a buffer stock, so that disposal of indigenous production was facilitated. The Association also made it clear that, if effective measures were not adopted to reduce stocks, there would be no incentive for factories to start crushing early in the 1955-56 season.

It was, however, interesting to note that, despite the Government announcement that there would be no imports during the current season, the falling trend in sugar prices was not fully arrested. Another bearish factor was provided by reports that the huge carry-over of stocks had been hampering production. As against a normal carry-over of about 2 lakh tons, stocks of sugar with the mills at the beginning of the 1955-56 season (November 1, 1955) were estimated at around 4.5 lakh tons. Added to this, the Government were said to hold about one lakh tons of imported sugar at various Ports. Imports against contracted quantities were not yet complete and about 4 lakh tons were expected to arrive in the immediate future. These made a total carry-over of about 6 lakh tons.

It may be added here that production during the 1954-55 season, which terminated on October 31, 1955, set up a new record. The production was 5.86 lakh tons more than that of 1953-54 and exceeded even the record production of 1951-52 by 87,000 tons. The total production for the 1954-55 season was 15.86 lakh tons.

As in the past three years, the Government of India decided not to exercise any statutory control on the price or distribution of sugar, gur and khandsari during the 1955-56 season. But 25 per cent of the sugar production will be kept in reserve with the factories from which, if need arises, the Government will requisition sugar at fair ex-factory prices, to be fixed for controlled distribution. Releases of sugar from factories will also be regulated by the Government as in the past.

On the whole, the import programme of the Government has not followed any planning and the markets have, therefore, from time to time been subjected to a glut, creating unnecessary fluctuations in the price structure. The price fixed by the Government for imports also varied from time to time unexpectedly and made the disposal of indigenous product more difficult. And the method of spasmodic releases from factories from time to time without any prearranged programme tended to make the marketing of sugar complicated than it used to be in the past.

It is now imperative on the part of the Government to devise a suitable plan for the development of the sugar industry in this country. Such a plan must aim at: (1) limiting importation of sugar only to the quantity actually needed to bridge up the gap in domestic supply; (2) enlargement of the domestic industry to attain a capacity of 25 lakh tons to do away ultimately with the importation of sugar; (3) adoption of active measures for expansion of cane cultivation and improvement of quality thereof; (4) introduction of a more rationalistic and planned system of release of sugar for sale from factories; and (5) progressive diminution of the excise duty, so that the common man may have sugar at cheaper prices. Only an integrated plan covering all these aspects can help solve the problem of sugar in this country.

The installed capacity of a normal season of the Indian mills was, until recently, 13 lakh tons. The Government have increased, this year, the production capacity by 5.5 lakh tons by granting licences for the establishment of 35 new sugar factories. The new sugar factories are expected to give an additional production of 3.3 lakh tons.

During the period of the Second Five-Year Plan, about 22.5 lakh tons of sugar will be produced annually. At present, there are 158 units engaged in production and, last year, all these together contributed to 15.83 lakh tons, which is an all-time record so far. Steps will now be taken to raise the installed capacity of the sugar industry to 25 lakh tons a year; and this will be achieved through establishment of new units and substantial expansion of existing mills. Besides these, measures will also be taken for intensive cultivation of sugarcane to obtain higher yields through better irrigation facilities, construction of roads in factory areas and use of manure and fertilizers.

The new sugar season, 1955-56, has started well. Though floods and heavy rain have damaged cane plantings, particularly in North Bihar, the total supply of raw material is expected to exceed last season's. Production of sugar is, therefore, not expected to be less than 16 lakh tons. Including a carry-over of about 4 lakh tons, the supply during the current year will thus be adequate.

The following table shows the month-end rates (per maund)::—

PRICE TRENDS—1955.

Foodgrains

Price Support Rescues Producers

THE food position is now sound as progressive trends in Indian agriculture appear to have steered the country past its goal of self-sufficiency. According to an official review of production for the agricultural year ended June 1955, there was an increase in the production of Cereals in India as compared to 1949-50. Total production was 55.3 million tons, representing an increase of 9.3 million tons over that of 1949-50. This exceeded not only the quantity aimed at for the fourth year of the Five-Year Plan, but even crossed the target fixed for 1955/56 by 2.8 million tons.

Wheat production established an all-time record of 8.5 million tons, exceeding the target for 1955/56 by about 0.2 million tons. Production of millet and other cereals reached 22.5 million tons, which was 5.6 million tons more than the target.

The yield of Rice, during the year, was 24.2 million tons. This, however, fell short of the calculated target for the fourth year of the Plan by 2.2 million tons. Set against the background of 1953/54, when production of rice reached its peak at 27.6 million tons, the setback appeared more pronounced; but production in 1954/55 is still about a million tons higher than that of the base year.

Following were the production figures (in tons) in respect of individual "rabi" cereals:—

	1954-55.	1953-53.
Wheat ..	8,539,000	7,873,000
Barley ..	2,786,000	2,904,000
Pulses (other than Gram and Tur ..	1,977,000	2,089,000

Meanwhile, the markets for various foodgrains ruled quiet with prices showing an easier tendency during most part of the year, thanks to a satisfactory supply position. At the beginning of the year, it was even feared that prices would register a sharp fall, thereby putting the rural economy out of gear. But, the Government decided to enter the market and make purchases in order to stabilise prices at an economic level. But their idea of filling the gap between supply and demand yielded place to anxiety about disposing of the surplus stocks.

For, the supply position in June was so satisfactory that a large quantity of Burma rice was pouring in, while the Government also purchased about 350,000 bags of US wheat. Despite the decision to allow rice exports up to the end of March, the market continued to rule weak with prices showing a steady fall on account of poor trade enquiry following reports of arrivals of foodgrains still reaching the country. Moreover, traders had the apprehension that there would be a substantial fall in prices on expectation of the arrivals also of the new crop from April, thus, no improvement in market sentiment was noticed till the end of March.

The Government, therefore, decided to enter the market to purchase Wheat at Rs 10 per maund for specified periods in selected centres if the prices would decline below this level. They also proposed to take other measures, which included the advance of money for the purchase of wheat on their account in case the prices tended to decline to the uneconomic level, the decision to stop the sale of imported wheat in Calcutta and Bombay, allowing the flour mills to buy as much as they required and the financial aid assured to the State Governments to begin purchasing wheat if the price fell below Rs 10 per maund. Despite these assurances and the measures taken by the Government, wheat prices registered a downward trend, touching at one time Rs 9-10-0 per maund in May from Rs 13-4-0 quoted earlier in the year. This appreciable fall in price was mainly due to pressure of heavy arrivals and the slack outside demand. The market, however, developed a slightly steadier tendency in the middle of June from when prices showed a gradual recovery.

Thanks to the steady purchases made by the State Governments, the market ruled firm during most part of the third quarter. Up to mid-June, total purchases made by the Government exceeded 49,000 tons out of which the purchases in Utter Pradesh totalled 34,000 tons. The Punjab Government bought 1½ lakh maunds, though purchases in other States continued to be on a restricted scale in view of the fact that stabilisation in prices had been achieved.

The Government came to the conclusion that there was no more need for making fresh purchases on their account, as prices had gone up to the floor price, fixed at Rs 10 per maund. As a matter of fact, the rate for Wheat showed a steady advance, except for a break in mid-September. Want of rains in Uttar Pradesh and other parts of the country was the main stimulating factor. Various States suffered from failure of monsoon, while, in some portions of East Uttar Pradesh, heavy floods affected the crops. Apprehensions were, therefore, entertained that the total output of foodgrains, during the year, would record a substantial fall as compared to the previous year.

Again, the Government decided to introduce the price support scheme for Jowar, Bajra and Maize. Purchases of these grains were made from the cultivators at the following rates (per maund):—

Rs 5-8 for Jowar and Maize and Rs 6 for Bajra. Also, the State Governments were asked to make advance arrangements for the purchases of these grains in selected areas, so that the arrangements might be completed before the New Crop would come into the market. The cultivators were, therefore, able to take full advantage of the price support scheme. Moreover, crop reports revealed that the damage to the crops in Assam was not much; and West Bengal was expected to show better crop results than in the previous year. In Uttar Pradesh and Bihar, there was, no doubt, some loss to the crops. Andhra, Madras, Mysore and Hyderabad sent, however, encouraging reports.

With the result, the Government did not apprehend any difficulty in meeting the food requirements of the country, as the Central reserves, as at the end of September, were also heavy, at about 1.2 million tons of rice and 0.35 million tons of wheat. Moreover, some wheat was still on its way to India from abroad under pre-arranged contracts. Thus, the maket continued to rule steady and prices, except for a slightly easier tendency noticed in October on expectation of increased "rabi" sowings, showed a hardening tendency toward the close of the year under review.

The following table shows the all-India first estimates of Bajra, Jowar and Ragi for 1955-56 as compared with 1954/55 (in acres):—

	1955-56.	1954-55
Bajra ..	23,720,000	25,230,000
Jowar ..	25,723,000	26,708,000
Ragi ..	4,693,000	5,049,000

American Business

Prospects in 1956

Surveys by US Secretary of Commerce Weeks, the Commerce and Industry Association of New York, and by labour economists indicate that 1955 record production levels will be maintained in the US during the first half of 1956.

The Commerce Secretary, in a year-end survey made public last week, says that the iron and steel industry, regarded as the barometer of the American economy, will carry into the new year the momentum of the last half of 1955. This will make the first half of 1956 one of the best six months in its history. The order books are solid through the next six months, the survey says, and have had to be readjusted to permit catching up with 1955 commitments. Aluminium shipments are expected to be at a rate of 4,600 million pounds a year, which will set a new record about 18 per cent above the figure for the same period this year.

A survey of other industries shows that the production of automobiles for the first half of 1956 is expected 4,250,000 units, a rate that will continue the record levels established this year. Aircraft, the survey shows, has a backlog of orders amounting to $13,500 million. Work in progress and on order for ocean-going ships, in gross tons, is 18 per cent higher than a year ago. The beginning of 1956 also shows about 145,000 freight cars on order.

New construction for 1956 is estimated at $44,000 million, five per cent above the indicated record for 1955. The manufacture of electrical equipment is expected to continue at a high level, and the production of electronic products in 1956 is expected to reach an all-time high of about $6,800 million at factory prices. Machine tool manufacture is expected to reach an estimated $430 million compared with $409 million in the same period this year.

Because of the record-breaking total of 57,000 oil wells drilled in 1955, and plans for further records in 1956, the manufacture of drilling and production equipment is running about seven per cent ahead of a year ago. Chemical sales for the first half of 1956 are expected to be close to $12,000, compared to $11,500 million in the same period this year. In lumber, production that set a twenty year record in 1955 is expected to continue in the next six months. An output of 19,000 million board feet is expected. A production of about 2,600 million square feet of plywood also is foreseen, about 13 per cent above the production in the first six months of 1955.

The Commerce and Industry Association survey reflected the opinions of 224 New York city executives. Of these, 29.4 per cent looked for even better business in the first half of 1956; 42.8 per cent expected business to continue at present high levels, only 7.8 per cent expected any decline.

Administrator Wendell B. Barnes of the Small Business Administration, said a survey of more than 600 small business representatives indicated a further rise in the earnings of small manufacturers in 1956.

Interviews with labour economists reveal that, in terms of jobs for American workers, they regard the economic outlook for 1956 as good.

Stanley Ruttenberg, Director of Research for the American Federation of Labour—Congress of Industrial Organizations (AFL-CIO) said that he looks for no decline in 1956, but expects a levelling off.

Otis Brudaker, of the United Steel Workers said:—'The first half of 1956 is going to be very good.'

W. L. Ginsburg, of the United Rubber Workers said:—'I see 1956 economic activity continuing at levels achieved during the second half of 1955.'

Gearge W. Brooks, of the Paper Mill Workers said:—....No change seems to be in prospect for 1956... even if industry as a whole didn't continue its upward movement, we would expect the paper industry to do so, anyway.'

Al Epstein, of the International Association of Machinists said:—'We ought to continue at about the same level...'

As an indication of the level of industry during the year now ending, Radio Corporation of America announced that the sales of its products and services this year will exceed $1,000 million. This will set a record high for the company. Of this record total, only about $220 million was accounted for by Government contracts.

General Motors Corporation reports that its sales this year will exceed $12,000 million and that its net income will exceed $1,000 million this year compared to the firm's previous high in sales of slightly more than $10,027 million, and net earnings of slightly more than $834 million.

The steel industry announces that it will close the year with an ingot output of about 116 million tons, which is about 4.5 million tons above the previous high.

Machine tool orders for the first eleven months of 1955 stand at more than $809 million, the industry reports, as compared to $500.4 million in the same period last year.

The *Aircraft Industries Association* expects its sales in 1956 again to exceed $8,000 million. The estimated sales in 1955 are $8,400 million.

The Department of Commerce also reports that US trade with other countries broke all records during the third quarter of 1955. The overall balance of payments showed that countries abroad received $5,321 million in the third quarter, an increase of $500 million over the same period a year ago. Nations abroad also spent $4,753 million for goods and services in the United States, the highest amount since 1947.

(See US Notes for American Business: Performance in 1955).

1955-56

(Continued from page 5)

Indian prosperity in 1955 was most strongly based.

"The trend of improving deposits may be relied upon to continue as vast sums of money are expended in these last few months of the First Five-Year Plan. The money so available to banks will be doubly beneficial; a moiety may expected to be free for banks to finance industry in their plans of expanding trade, business and development. At the same time, the other moiety would, if there is sufficient impovement, constructive improvement, in giltedged policy, be available, as it were on a silver platter, for Government securities. A steadily increasing industrial production and a steadily mounting level of bank deposits should both ensure that 1955 will, even as it marks the last phase of the First Five-Year Plan, be a year to remember in new India's new history."

All these expectations have been fulfilled. But it is not enough to be complacent about past achievements, especially at a time when we are busy about beginning on the Second Five-Year Plan. The fact that there is now a consciousness about the importance of planning, the fact that the Draft-Frame as published has given rise to intelligent discussion, both augur well for India. In past weeks, we have indicated that the Second Plan need not founder on the rock of insufficiency of foreign exchange. Nor, we added, need we rely upon created money as the instrument by which the Second Plan will be implemented. We suggest that foreign aid is the negation of self-help. We suggest that created money is self-help without effort. Methods are not lacking by which we should be able constructively to help ourselves, both in regard to finding internal resources for implementing the Plan and in regard to earning the foreign exchange with which to finance our imports. If we succeed in approaching the Second Plan from this viewpoint, we may say, as we said last year, that a case will have been made for Indian prosperity for the next five years which cannot be doubted even by the most pessimistic of Jeremiahs. Each year of the next five years should mark successive improvements in industrial production. All the present signs are that India will be blessed, in the next quinquennium, by the virtuous circle represented by an expansionist economy.

The Scientists' Task

THE proceedings of an august body like the Indian Science Congress have to be approached with bated breath and whispering humbleness. Most of the deliberations which took place at Agra over the week-end are clearly out of bounds for the layman. Such profound topics as the prospect for peaceful utilisation of atomic energy, the combinations and mutuations which lead to cancer and the birth of the Himalayas were discussed in a background and largely in a jargon rather forbidding to the uninitiated. Even the experts must have been struck by the immensity and variety of the problems which the world, and to a more limited extent, India have taken on hand. The frontiers of human knowledge are steadily widening.

This process, has of late, generated issues which are not uniformly of a pleasant kind. As Pandit Nehru chose to point out, we are at a time when efforts are needed as much to control the utilisation of scientific knowledge as to pursue it further. The world itself has been brought to a cross-road, when the future of the entire humanity lay on the wisdom and restraint which the possessors of the latest advances in the knowledge of material power would care to display. It is by no means a very desirable situation. In India, we are not abreast of the rest of the world in the control of the latest sources of power and the techniques of using them. Fortunately that does not seem to be much of a handicap. Because keeping off the arena of international political tensions, India can hope to concentrate its efforts on the peaceful use of the new forms of energy.

In its own way, this country has also been contributing to the creation of a world situation in which the leading powers are getting increasingly repellant to the destructive use of this energy. There is no doubt that the alarm over the possibility of large scale annihilation of human beings through atomic energy has clearly receded, though there is yet no room for complacency on this score. It is enough to be able to think that at least in India the harnessing of atomic energy could be pursued without the dreadful preoccupations present in many other countries. By necessity and by choice, we have concentrated exclusively on constructive, material progress and enlisted the scientific knowledge available for that purpose.

Even this is a very tall order. Dr M. S. Krishnan, the General President of the Congress, has reminded us of the immense work which lies ahead, even in the matter of exploring India's underground wealth. He has warned against the expectation that the mere expansion of Survey could automatically bring about new discoveries, and that it was quite possible that the yield of results might be disappointingly out of proportion to the labour and money spent. Under the present state of knowledge of India's mineral resources, there is a sufficiency or surplus in coal, iron ore, manganese, aluminium, titanium, magnesium, mica, barytes, kyanite, sillimanite and various types of clays. Its chief deficiencies are in copper, lead, zinc silver nickel, cobalt, molybdenum, tungsten, tin, antimony, mercury, sulphur, phosphates, flour-spar, petroleum, potash, and graphite

The periods for which the resources already discovered are expected to last are often the subject of controversy, largely inevitable, in view of the changing pattern of utilisation and the replacement of one form of energy by another for particular uses. Even on the question of replacement, eminent scientists have not found it possible to see eye to eye. The doyen of Indian geologists refers to the miscarriage of prophesies concerning the replacement of coal by petroleum, hydro-electricity and, most recently, by atomic energy. The old materials seem to have considerable staying power! Authoritative estimates say that for the world as a whole, the known iron ores would be sufficient for another 200 years, aluminium for a similar period of time, manganese ore for 350 years; potash could see the world through 1,600 years and phosphate rock for an extra 200 years, coal and lignite for as long as 2,200 years. The period of expectation for petroleum is comparatively most disappointing, at not more than 22 years. But, on the whole, the world's mineral potential enables us to look confidently beyond centuries and millennium. This confidence is further reinforced by the fact that vast areas in Asia, Africa and South America remain wholly unexplored.

India has passed the stage of unplanned and wasteful extraction of minerals which usually accompanies the first phase of industrialisation. In the present second stage, a more careful husbanding of the resources is in prospect. Attention will have to be devoted as much to proper methods of mining as to the most economic utilisation of the minerals recovered. Dr Krishnan points to the wasteful uses of coking coal, for instance. During the last four or five years, a few steps have been taken to arrest this unfortunate trend.

Conservation should necessarily extend to much else. Farm waste and wood still constitute sixty-five per cent of the fuel consumed in India. In the absence of alternative supplies, the situation does present, for the moment, an insuperable problem. The conservation of trees and biological manure is unquestionably one of the greatest needs of Indian agriculture and we have seen only the beginnings of a new direction of effort in this vital sphere.

Nor is the problem of optimum utilisation confined to materials. At the Silver Jubilee Session of the National Academy of Sciences, Professor M. N. Saha repeated the complaint

(Continued on page 30)

A Communist Trade Offensive?

By PAUL EINZIG

THE recent Russian offers of undertaking various capital projects—such as the building of the Assuan Dam in Egypt or the construction of a steel plant in India—in countries outside the Communist group have attracted much attention in the free world. The prospects of a Communist trade offensive in the Middle East and elsewhere is causing concern in London and Washington, where it is feared that the execution of such major capital projects would greatly increase Russian economic and political influence in the countries concerned. Yet the menace of a Communist trade offensive lies not so much in such capital projects as in the possibility of large-scale export of consumer goods by Soviet Russia and the satellite countries.

Any Russian commitment involving the export of capital goods to countries outside the Communist group would present considerable advantage from the point of view of the free world. In spite of the spectacular increase of Soviet Russia's producing capacity, capital equipment is none too plentiful. There is not enough of it even to meet the requirements of Soviet Russia's own ambitious plans of industrialisation, let alone the insatiable appetite of Red China. The more capital equipment is exported outside the Communist world, the less will be available for the Communist world. Export of capital equipment on a substantial scale would slow down the expansion of the productive capacity of the Communist world. The gain of "neutral" coontries would be the loss of the potential enemy.

Even though individual British or American engineering firms would naturally deplore the loss of contracts as a result of the Soviet trade offensive in the sphere of capital equipment, the western world as a whole would not lose by it. Generally speaking, the demand for such equipment exceeds the producing capacity of the western countries. If India, Egypt, etc., were to buy less capital equipment from the western countries, more would be available for the development of the resources of the countries which are politically in their camp.

The danger lies in the possibility of a Soviet trade offensive in the form of dumping consumer goods on the free world. As a result of the increasing industrial producing capacity of Soviet Russia and some of its satellites such as Czechoslovakia, Poland and Hungary, the Communist block may soon be in a position to export manufactures on a large scale. It is true, demand for such consumer goods within the Communist group is virtually insatiable. But a totalitarian Government is in a position to continue to keep the consumers short of essential goods. In a Democratic country, any Government which starves its own public of much-needed goods for the sake of exporting them in pursuing its power-politics would be defeated at the election. Not so in Russia.

Already, under the Tsarist regime, it was an understood thing for Russia to over-export its grain for the sake of maintaining the service of the external loans contracted for financing military preparation and the construction of strategic railways. The result was that the Russian people were kept in a state of semi-starvation. This was possible owing to the existence of a despotic regime which did not depend on a majority vote.

Since the end of the Second World War, history has repeated itself, in the sense that the Communist group exported timber, oil and grain, in spite of the great domestic need for these goods. It will, therefore be possible for the Soviet Government, should they wish to do so, to export large quantities of textiles or other consumer goods, by simply continuing to deprive the domestic consumer of the supplies of such goods.

While it is natural that the Communist countries would wish to obtain the highest possible price for their manufactures, if Moscow should decide that large quantities of them should be thrown on any particular market, then considerations of price would play a secondary part. There is no need for the official Soviet exporting organisation to show a profit on such transactions. If they are instructed to export, in pursuance of a trade offensive, they will cut prices until they can export the required quantity.

The exporters of the democratic countries will be exposed to the risk of being undersold by Communist exports undertaken in the pursuit of imperialist power politics, without regard to commercial considerations. If Moscow wants to create unemployment in the Lancashire textile industry, or in some other industry in a democratic country , it will order the dumping of the goods in question in the export markets of the industry in question.

Under system of free trade, the democratic countries would be defenceless against such a trade offensive. Fortunately for them, even though considerable progress has been made toward the liberalisation of trade during the last few years, most countries have retained some degree of defence in the form of import restrictions, quotas, etc. They are, therefore, in a position, unless they should weaken such defences, to resist the Soviet trade offensive to some extent.

Taking a short view, it may appear to suit the interests of countries which have to import manufactures for meeting their consumer requirements, to buy them from the sellers who offer them at the lowest prices. Taking a broad view, however, this appears to be a very short-sighted policy. The gains achieved in the form of cheap goods would have to be paid for through the weakening of the economic power of the democratic countries. Any substantial decline of their exports would cause a deterioration of their balances of payments. Unemployment in the industries directly concerned would spread on other industries, causing discontent, and weakening the political position of their Governments. Surely, this would be against the vital interests of the very existence as independent countries.

In view of the possibility of a Communist trade offensive, it is essential that the trend toward trade liberalisation should be halted if not reversed. This is not the time for ideological free-trade dogmatism. The Communist world would be the chief beneficiary through the continuation of such a policy. It is to the interest of the democratic countries to take every possible defensive measure against such a trade offensive, and to make their preparations well before it actually materialises.

A great deal is to be said for an expansion of East-West trade in non-strategic goods, provided that the Communist group observes the rules of the game and is guided by purely commercial considerations. But, if Russia should embark on a trade offensive in the form of dumping large quantities of consumer goods on the markets of the industrial exporters of the West, then the democratic countries must tighten their economic defences against such an act of economic aggression. It will be remembered that Hitler's wars of conquest were preceded, during the 'thirties, by such trade offensives in South Eastern Europe and elsewhere. From this point of view alone, Russian trade policies are well worth watching.

Law for the Layman

Liability of Servant to his Master for Negligence and Breach of Contract of Service

By K. N. VISWANATHAN

IN this branch of the law, two principles are firmly established by judicial decisions. Firstly if a Master is injured by the negligence of his servant he can certainly recover from the servant damages for the injury. This principle was laid down in that famous case Digby V General Accident Fire and Life Assurance Co., (1942—2 All Eng 319.) In this case the celebrated Cinema Actress Merle Oberon, who suffered injujries from the negligent driving of her Motor Car by her Chauffuer recovered £5000 damages against him. Now it is indisputable that an employee is generally as much liable, if he causes his employer damages by negligence, as anyone else. Secondly, if a servant by his negligent act inflicts an injury on a third person and that third person recovers damages thereof from Master, the master may recover from the servant damages, in an action for breach of duty.

These two principles aforementioned, came for discussion and application in Romford Ice Co. Ltd., v. Lister reported in (1955) (3) All Eng Reports at 460. This case is of particular importance to Insurance Companies in as much as the Insurance Company concerned in this case, was able successfully to recover the damages paid by it to the injured workman of the Ramford Ice Co., under the employers liability policy granted by it to the Company, from the fellow employee of the Company, whose negligence caused the injury. In other words the Insurance Company got back what it paid under the policy from the workman responsible for the accident.. In view of the obvious importance of this case to Insurance Companies in particular, it is proposed to set out briefly the facts of this case hereunder. The facts of this case taken from the juidgment of Lord Justice Denning one of the Learned Judges who decided this case are:

"Two men named Lister, father and son, were employed by the Ramford Ice & Cold Storage Co. Ltd., the plaintiffs. Their task was to collect waste and take it to the factory. On January 26 1949, the son, the defendant, drove the lorry from the plaintiffs' premises to a slaughter house in Oldchurch Road, Romford. The father went with him. The defendant drove the lorry through the main gates into the yard of the slaughter house. His father got off to go to the office. The defendant backed the lorry to get it into position and unfortunately ran into his father and injured him. The reason was partly because the engine was defective so that the defendant had to keep it going fast and therefore, reversed more quickly than he need have done: partly because the son did not take sufficient steps to see that all was clear: partly because the father did not keep a proper look out. The father sued the plaintiffs for damages for negligence. The case was tried by McNair J on January 29, 1953. He found that the father was one third to blame and the plaintiffs two thirds. He assessed the total damages for the injuries at £2,400 and gave judgment for the father for £1,600 and costs."

"The plaintiffs were insured against this liability and the insurers have paid the father the £1,600 and costs. Now the insurers seek to recover that sum from the son, the defend-

Editorial Notes

Splintered Socialism:

The Praja Socialist Party of a year ago is now speaking with many voices, the Party itself having split into two, one baring the same name and led by Acharya Narendra Dev and the other functioning as the Socialist Party of India with Dr Lohia at the helm. The greatest problem for both these parties is to discover a policy not only with mutual shades of differences but sufficiently distinguishable from that of the Congress wedded to a socialist pattern of society, on the right, and of the Communist party with its belief in class war and violent revolution, on the left.

This problem has arisen, because political ideologies in India have not shaped on quite the same fashion as in the Western countries; they have not run on familiar, orthodox lines. To a large extent it is also the creation of the party in power which has shown disarming adaptability in the choice of phrases, no less than programmes. The orthodox Indian socialist can well be depicted as one who has been robbed by his hefty rival of much of his political sustenance, nomenclature and jargon.

It really goes to the credit of the leaders of the Praja Socialist rump that at their recent meeting at Gaya, they have been able to draw up a statement of policy which is sufficiently distinctive. That the party does not choose to accept the communist line is indicated by its faith in democratic socialism and parliamentary democracy. Violence is eschewed for the fulfilment of its aims. A possible confusion with the ideology affirmed by the Congress is avoided by a careful denunciation of the Congress Government of having failed to fulfil the legitimate aspirations of the people and to some extent even to understand and define them properly.

It is a pity that even this statement of policy might turn out to be no more than tentative. Acharya Kripalani and Purshotamdas Tricumdas have demanded the postponement of its acceptance. The Acharya looks upon it as an ill-digested amalgam of the ideas of several persons, mutually remote in time and place and as such failing to create any impression as a statement of party policy.

Meeting simultaneously at Hyderabad, the All-India Socialist Party has announced another blue print, whose principal item is a "seven-year plan to power". In this plan, the recruitment of five lakh members in the first year and carrying it forward to three million by the end of the period is the most conspicuous item. The doctrinal side has not been positively defined, though a few glimpses are available, as, for instance, "men are equal not only within the nations but also equal among all nations". Perhaps, we will never get a complete definition of the Party's ideology, as Dr Lohia seems to believe that a total picture is not necessary at all.

Peace Retreats in Malaya:

Negotiations between the Malayan Communists and the Government are at least six months old. The establishment of an autonomous government and the recession of the British power have cleared the way for a settlement which not all the valiant efforts of Mr Malcolm Macdonald could achieve. After eight years of guerilla war-fare with authority, the Communist leaders can now have the satisfaction of being in a position to tackle Malayan nationals at the seat of the Government.

Preliminary parleys led to an open meeting of the out-lawed communist leader, Chin Peng, and the two spokesmen of the Governments of Malaya and Singapore, Tengku Abdul Rahman and Mr David Marshall. These two spokesmen have assured Chin Peng that there was no room for the suspicion that the British Government were pulling the strings from behind.

This is not an empty assurance. Because, already through conventions have taken place some abrogation of the residual authority exercised by Britain. Both Mr Marshall and Tengku Abdul Rahman are openly seeking to wipe out whatever remains of imperial domination in Malaya and Singapore. It is clear that Britain herself is an invisible third party to these negotiations; at least, she would have undertaken to underwrite the Malayan and Singapore leaders' political commitments.

While the Government spokesmen's hands are thus strengthened and the Communist leader recognises the salutary character of the changes which have taken place over the year, he seems yet unwilling to dissolve his party unconditionally.

On the contrary, at the first meeting which took place on December 28, he insisted on the recognition of his party. This demand has not found compliance on the opposite side.

Yet, a settlement was possible. For one thing, there was no outright refusal on the part of the Government to allow freedom of movement and of association to Chin Peng's followers; only, they have to wait for a period during which their bonafides could be tested. For another, the Communist leader himself should be impressed by the need for a re-orientation of outlook, in answer to the gesture from the first nationalistic Government of Malaya. The talks failed, for want of this much of realism.

Birth of a State:

The New Year has dawned auspiciously for the Sudan in as much as it has brought independence to her nine million inhabitants, after over half a century of domination jointly by Britain and Egypt. Recognising her growing national aspirations, Britain and Egypt, three years ago, worked out an agreement to give Sudan the option of sovereignty or autonomy linked with Egypt. A plebiscite was planned to ascertain the will of the people and India was among the nations who were willing to render help in this connection.

On December 19, 1955, the Sudanese Parliament decided Sudan would become a fully independent Sovereign State and asked the condominium powers to recognise and abide by this declaration. Britain and Egypt did not hesitate and on January 1, 1956, formally recognised Sudan's independence.

The assumption of full nationhood by Sudan is indeed a great event and has been hailed by all. USA has accorded full recognition and President Eisenhower has sent a warm message of goodwill to the new State. India has naturally welcomed Sudan's entry into the fraternity of free nations and has expressed its desire to establish diplomatic relations. It is truly gratifying to see one of the countries associated with last year's Bandung Conference gaining the mastery of its own destiny.

Now that Sudan has emerged as a full-fledged State a great burden rests upon the men who will be at the helm. The Parliament has chosen a committee of five to assume power. In the context of the present disturbed conditions in the Middle East, the course of Sudan must necessarily be circumspect. Great statesmanship will be called for to weather the storm and stress which are the inescapable heritage of every infant State. The Sudanese people whose determination won them their new status, no doubt, will not spare themselves in their advance toward a better future and they have with them the good wishes of freedom-living people all over the world.

World of Finance

Flexible Currency Control

THE returns of the Reserve Bank for the week ended December 30, 1955 disclose expansion of currency for Rs 15 crores—Rs 5 crores against ad hoc Treasury Bills and Rs 10 crores against foreign securities. This provides further evidence of the effective and flexible use of rupee securities and foreign securities for purposes of currency control. As a matter of fact, the operations in this respect during December are highly significant. In the week ended December 2, recourse was had to deficit financing to the extent of Rs 5 crores; and in the week ended December 9, to the extent of Rs 10 crores. Created money for Rs 15 crores was necessitated by the magnitude of the month-early disbursements. In the following two weeks, however, this process was reversed; and ad hocs were cancelled to the extent of Rs 10 crores in the week ended December 16 and to the extent of Rs 20 crores in the week ended December 23. The latest return, which is for the week ended December 30, shows creation of money against ad hocs to the extent of Rs 5 crores. It is quite possible that the returns for the first week of January will show further recourse to deficit financing.

While, from the point of view of the Centre's ways and means requirements, ad hoc Treasury Bills were pressed into service both by way of fresh issue and cancellation, the Reserve Bank made its own adjustments in relation to its needs of cash in the till. Thus, in the week ended December 16, the Reserve Bank, from the point of view of its own cash position, expanded currency to the extent of Rs 10 crores against foreign securities. In the week ended December 23, there was expansion by this means for Rs 20 crores. Expansion against foreign securities in the latest return, which is for the week ended December 30, is for Rs 10 crores. Thus, in the space of five weeks, ad hocs have been cancelled by an over-all figure of Rs 10 crores, while foreign securities in the Issue Department have received augmentation to the amount of Rs 40 crores. So, net currency expansion between November 25 and December 30 is Rs 30 crores. It is noteworthy that, during this period, there is a net reduction of Rs 10 crores in dificit financing.

+

Tenders for Rs 1,00,00,000 of 91 days Government of India Treasury Bills were opened on 3rd January, 1956. Total amount offered was Rs 1,39,75,000. Tenders at Rs 99-6 per cent were accepted in full and those at Rs 99-5-9 per cent allotted approximately 28 per cent. Total amount accepted was Rs 1,00,00,000, the average rate of accepted tenders being Rs 2-8-2 per cent per annum.

This week's result compared with earlier week's is as follows:

1955: Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
December:	(In '000 Rs.)		Rs. a. p.
6th	1,15,00	1,00,00	2 8 0
13th	1,22,50	1,00,000	2 8 0
1956:			
January:			
3rd	1,39,75	1,00,00	2 8 2

+

The statement of the State Bank of India for the fortnight ended December 30 reveals a drop of Rs 0.40 crores in deposits to Rs 222.30 crores. Borrowings from other banks are shown at Rs 5.00 crores as against nil, while other liabilities are lower by Rs 0.58 crores at Rs 4.74 crores.

On the assets side, cash balances have declined by Rs 2.00 crores to Rs 21.62 crores and Investments by Rs 0.11 crores to Rs 118.37 crores. Loans and Advances have risen by Rs 4.01 crores to Rs 103.31 crores—'Loans, Cash Credits and Overdrafts' accounting for a drop of Rs 2.01 crores and Bills Discounted and Purchased' for a rise of Rs 6.02 crores.

+

According to the returns of the Scheduled Banks for the fortnight ended December 23, both Demand and Time Liabilities have declined by Rs 9.00 crores and Rs 2.07 crores to Rs 606.68 crores and Rs 420.28 crores respectively. Borrowings from the Reserve Bank have risen by Rs 5.82 crores to Rs 17.72 crores and those from the State Bank of India by Rs 0.82 crores to Rs 7.76 crores. Cash and balances with the Reserve Bank are lower by Rs 2.09 crores at Rs 89.65 crores. Investments are shown at Rs 387.93 crores against Rs 393.52 crores. Loans and Advances have risen sharply by Rs 18.32 crores to Rs 622.22 crores. Money at call and short notice stands at Rs 12.00 crores akainst Rs 21.49 crores.

+

Britain's New Chancellor of the Exchequer

By PAUL EINZIG

AFTER a week of rumours and speculation, it was announced that Mr Harold Macmillan was to succeed Mr Butler as Chancellor of the Exchequer. The official announcement contradicted, by implication, the forecasts that Mr Butler would become a supreme co-ordinator of economic policies and that Mr Macmillan would have full control in that sphere. The idea of a Minister of Economic Affairs, whose control would be super-imposed over that of the Chancellor of the Exchequer, was tried for a short time in 1947, when Sir Stafford Cripps was appointed over Dr Dalton's head. But it was not a success. Sir Winston Churchill was toying with the idea when he was forming his Government in 1951, but the Permanent Secretary to the Treasury, Sir Edward Bridges, succeeded in convincing him that such a dual control of the national economy would serve no useful purpose, and that Mr Butler, as the Chancellor of the Exchequer, would in fact be an economic co-ordinator, because of his control over the expenditure of all Government Department.

Whether or not Sir Anthony Eden was considering the idea of a dual control, the fact is that Mr Macmillan has been put tin full charge of Britain's economic destinies, subject only to the overriding authority of the Prime Minister and of Parliament. Mr Butler is now in charge of non-economic domestic matters, and of everything that involves legislation. The economic Departments depend on him in so far they have to introduce Bills, but the non-economic Departments depend on Mr Matcmillan for the adoption of policies whose implementation requires the allocation of funds

Although the replacement of Mr Butler by Mr Macmillan has been rumoured from time to time, until a few days before the announcement, there appeared to be no reason to expect any immediate change. It was assumed that, should a change be decided upon, it would be deferred until Britain has succeeded in overcoming the present economic difficulties. Indeed, only a few weeks ago, Mr Butler was speaking about his future intentions regarding the adoption of a Corporations Tax on the American pattern, and of a Sales Tax on the Continental pattern. There was every indication that he intended to stay at least until after the April Budget. In the circumstances, the decision to 'change horses in mid-stream' came as a surprise to most people.

The explanation lies in the fact that the operation of the credit squeeze and the other disinflationary measures has been much slower than had been expected. Sir Anthony Eden was anxious to proceed with the re-shuffle of his Government, and this could not be done without making the most important change of all. There appeared to be no reason to expect a sudden change in the economic situation for the better. The deterioration of the British trade balance in November, and the further sharp increase in the cost of living index, made this plain beyond any doubt. To wait until Mr Butler had completed his work of checking inflation might have meant the deferment of the Government re-shuffle for six months, or even longer.

What is, perhaps, even more important, there is a growing feeling, even in the Conservative Party, that the situation should be handled by some one less committed to dogmatic 'laissez-faire' than Mr Butler is. He declared himself firmly against any important restrictions as a remedy of the adverse balance of payments, and would have found it difficult to eat his words. Now, Mr Macmillan is inspired by a different philosophy. Shortly before the war, he published a book entitled 'The Middle Way', in which he expressed himself emphatically in favour of import restrictions as a remedy of an adverse balance of payments. Even though he may be today in many respects much nearer to the orthodox Conservative view than he was seventeen years ago, the fact that, in a recent public speech, he said that 'we may again have to pause in liberalising imports' seems to indicate that the idea of import restrictions is not as repugnant to him as it was to his predecessor. At any rate, he is not likely to rule out that solution through sheer ideological dogmatism.

RESERVE BANK OF INDIA

Applications are invited for the following posts in the various Departments of the Reserve Bank of India:

(A) **Posts and Scales of Pay:**

(1) Research Officer, Department of Research & Statistics. (2) Assistant Accountant, Department of Banking Development. (3) Rural Credit Officers, Agricultural Credit Department.	Rs. 375-55-815 E. B. 55-925-60-1045.
(4) Probationary Assistants, Department of Banking Development/Agricultural Credit Department/Legal Division.	Rs. 250-25-450 E. B. 25-650.
(5) Economic Assistants	Rs. 175-12½-300 E. B. 20-440.

Note:—Candidates possessing exceptionally good qualifications and experience may be given a higher starting salary in the prescribed scales.

(B) **Additions to pay:**

(1) **Local Pay:**

10% of pay with a minimum of Rs. 10/- per mensem rounded up to next higher complete rupee to the staff working at Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad.

(2) **House Rent Allowance:**

Research Officer, Assistant Accountant and Rural Credit Officers	15% of pay with a minimum of Rs. 60/- and a maximum of Rs. 300/- per mensem.
Probationary Assistants	10% of pay with a maximum of Rs. 50/- per mensem.
Economic Assistants	10% of pay with a maximum of Rs. 20/- per mensem for pay upto Rs. 400/- per mensem and thereafter at Rs. 25/- per mensem for pay upto Rs. 500/- while stationed in Bombay or Calcutta.
(3) **Dearness Allowance:**	At prescribed rates.
Research Officer, Assistant Accountant, Rural Credit Officers	The present rate is 16-2|3% of pay with a maximum of Rs. 125/- per mensem.
Probationary Assistants	Rs. 65/- per mensem for pay (including local pay) upto Rs. 300/- per mensem.
Economic Assistants	Rs. 50/- per mensem for pay (including local pay) upto Rs. 200/- per mensem.

(The rate of Dearness Allowance is subject to revision from time to time).

(C) **Age limit as on 1st January 1956:**

Research Officer, Assistant Accountant, Rural Credit Officers	Candidates should not ordinarily be over 30 years of age.
Probationary Assistants	Candidates should not ordinarily be over 24 years of age except in regard to the posts of Probationary Assistants in Legal Division where the age limit would be extended upto 30 years.
Economic Assistants	Candidates should not ordinarily be over 24 years of age. The maximum age limit may be extended but not beyond 30 years, in the case of (i) candidates with approved war service, (ii) ex-employees of Banking Institutions whose services have had to be terminated for reasons of economy or as consequence of the closure of unremunerative branches or as a result of the Banks going into liquidation, (iii) personnel retrenched from Government offices after at least one year's service, applying through the Employment Exchange and (iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(D) Qualifications:

(1) **Research Officer, Department of Research & Statistics.**

First or high second class Master's degree in Economics of an Indian University, or first or high second class degree in Economics of a foreign University, or a Doctorate degree in Economics of an Indian or Foreign University **and** specialisation and research in Agricultural Economics.

(2) **Assistant Accountant, Department of Banking Development.**

Applicants should possess a first or high second class M.A. in Economics or M.Com. degree of a recognised University. **In addition,** the candidate should possess adequate experience of one or more aspects of Industrial Finance **or,** be a Chartered or Incorporated Accountant with experience of accountancy and audit in a firm of standing and repute.

(3) **Rural Credit Officers, Agricultural Credit Department.**

Applicants should possess very high academic qualifications of Indian or Foreign Universities, (preferably post-graduate) in Economics, Sociology or other Social Sciences, and possess degrees which are either first class or high second class. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution.

(4) **Probationary Assistants, Agricultural Credit Department and Department of Banking Development.**

Applicants should possess a first or high second class Master's degree of an Indian or Foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution. Proficiency in drafting notes, memoranda, reports etc. is expected.

(5) **Probationary Assistants, Legal Division.**

Applicants should be advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's Office or have practised independently, for at least 5 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of banking and company law and to candidates who have passed the Advocates' (O.S.) examination held by the Bombay High Court or the Solicitors' examination held by the Calcutta High Court or by the Bombay Incorporated Law Society.

(6) **Economic Assistants.**

Applicants should possess a high second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or Foreign University **and** have practical experience in the Co-operative Department of any State in India or abroad or in a Co-operative Institution of standing. Specialised study in Rural Sociology will be an additional qualification. Graduates who have passed out of any of the Training centres organised by the Central Committee for Co-operative Training or those run by State Governments may also apply.

The Board will insist on a very high standard of suitability in making elections for the above posts and only candidates who possess good academic qualifications and adequate experience of the type specified are advised to apply. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees.

The selected candidates for the posts of Research Officer, Assistant Accountant, Rural Credit Officers and Probationary Assistance will ordinarily be on probation for a period of 3 years which may be reduced or extended at the Bank's discretion. Candidates selected for the posts of Economic Assistants will be on probation for a period of one year. Candidates selected for the posts in Department of Research & Statistics, Department of Banking Development and Legal Division will ordinarily be stationed in Bombay but those selected for the posts in the Agricultural Credit Department must be prepared to serve in any office of the Bank in India and to undertake tours when required.

Applications should be in a special form to be obtained from any office of the Reserve Bank. All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does **NOT** accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before 31st January 1956. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications.

Applicants for all the above posts except Economic Assistants must remit application fees of Rs. 7-8 per application by Postal Order, Cheque or Bank Draft on a **Scheduled Bank payable at Bombay** along with the application. Candidates for the posts of Economic Assistants must remit an application fee of Rs. 2 in a similar manner. The application fee is in no case refundable. Bonafide refugee candidates who are **not in employment** applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of Scheduled Castes|Scheduled Tribes candidates the fee will be reduced to 1|4th.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should enclose a stamped self-addressed envelope or a postcard. Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

World Overseas

US Notes

REPORTS coming from various lines of business continue to show record gains giving concrete evidence of the spectacular rise in US economic activity in 1955. They also support the view that economic levels will remain high in 1956. Both domestic and foreign trade activity share in this favourable picture.

American consumers used more than 3,000 million barrels of oil in 1955, according to the American Petroleum Institute industry group. Not only does this mark the first year in history in which this annual total has been exceeded, but it is the 13th consecutive year in which consumer demand has surpassed the previous years level. When final figures are in, it appears the US demand for oil in 1955 will top 1954 by seven or eight per cent. There has been a commensurate rise in US petroleum supply, which has risen 643,000 barrels a day in 1955 on an overall average of 8,722,000 barrels daily.

Practically all sectors of the American paper industry are establishing new records in 1955. Overall production is moving up to an estimated record of 29.5 million tons. Newsprint alone has been running six million tons or eight per cent ahead of previous peaks. The US Department of Commerce points out that, even with mills operating at at capacity, "demand has outstripped production in most grades."

The US consumption of new rubber will reach the record total of more than 1.5 million long tons in 1955, about 22 per cent above the 1954 level and 12 per cent higher than the previous 1953 peak. The Rubber Manufacturers Association reports that US production of tyres will set a new record of 115 million units. The volume of business in non-tyre fields also is at a new high, passing the $2,000 million mark for the first time. Noteworthy has been the increased consumption of foam products, reflecting their wider use in automobiles, bedding and upholstery. The general industrial expansion and broad demand for appliances have been reflected in rising consumption of rubber in such other non-type products as industrial goods, belting, hose, flooring adhesives and coated fabrics.

Looking ahead to 1956, the American rubber industry expects consumption of new rubber to equal the 1955 high. In fact, sales are expected to set a new record largely because of higher labour and raw material costs, which have been on the rise during the past year. Although tyre output may decline slightly, the industry looks for continued growth in footwear, foam rubber, industrial goods and textiles as well as in foreign demand. Despite the huge growth of the automobile industry, non-tyre uses now account for more than half of the value of all rubber products shipped by American manufacturers, compared with 40 per cent in 1939.

The American paint, lacquer and varnish industry expects its sales in 1955 to set a new annual record of more than $1,500 million. For the first ten months of the year, sales ran 11 per cent ahead of those in the like period of 1954. With over-all business spending on new plant and equipment and the value of all new construction still rising, industry sources look for further sales gains in 1956.

The combined US production of farm crops and livestock products in 1955 was the largest on record. The crop volume alone all but equalled the 1948 peak, despite Government production controls on major crops. New Output highs were established for oats, soybeans and oranges. At near record levels were barley, rice, and sorghum grain. Favourable weather and rising yields were important factors in the big harvest, the US Agriculture Department says.

In line with the expansion of US trade with the rest of the world, steamship and air lines operating out of New York chalked up new passenger records in 1955. The airline officials estimate that 595,000 passengers will have crossed the Atlantic Ocean by air in both directions by the end of 1955, an increase of 23.3 per cent over 1954. The steamship travels will be up by more than 22,000 passengers over the 945,000 carried in 1954. Advance billings for 1956 indicate that these records will not last long. Air travel across the Atlantic may increase by more than 16 per cent, while steamship officials also predict some improvement in the year ahead.

The past year has seen increases in many kinds of US imports, both traditional and new. This week, the first shipment of hand-printed Farrukhabad cotton arrived in New York from Bombay. Print dresses of this material will be sold to the American public in stores throughout the United States. American merchandisers have been touring Asia extensively in the past in search of new fabrics and patterns that will meet American tastes and find profitable markets in the United States.

A traditional US import that has staged a significant come back this year is silk exports to the United States in 1955 will be at their highest point in five years. About 55,000 bales worth $35 million are going into the American market. Despite its decline as a hosiery item, silk from Japan is being used increasingly in such products as ties, scarves and lingerie. Industry sources believe that Japan can expect to ship between 50,000 and 75,000 bales a year to the US in the coming decade. Growing consumption in Japan, they say, will tend to limit exports to the United States.

US bicycle imports, which have been on the rise for several years, soared another 20 per cent in 1955 to a new high despite an increase in the American tariff last August. The previous record of nearly 937,000 imported bicycles was set in 1954. American industry sources estimate that imports in 1955 accounted for 41 per cent of the total US bicycles sales compared with 39 per cent on 1954 and 11 per cent in 1952. The United Kingdom accounted for about 60 per cent of US imports in 1955 followed by West Germany, the Netherlands, Belgium, France and Austria.

*

Britain

The Chancellor of the Exchequer, Mr R. A. Butler, announced in the House of Commons on December 13 that the British Government had decided that the fifth annual payment due on United Kingdom debts to the United States and Canada, amounting to $176,000,000, which falls due on December 31, would be met in full.

It is stated in London that this decision follows previous policy, four other instalments also having been met in full on due dates. The main payment of £63,000,000, due on December 31, is in respect of the settlement reached in 1945-46 with the United States and Canada on all outstanding war and immediate post-war financial obligations.

The terms of settlement with both countries provided for payment in 50 annual instalments starting in December 1951, with interest at the rate of 2 per cent per annum.

Provision is made in the US agreement for waiving the interest element of payment in any year in which certain complicated conditions connected with the state of the United Kingdom's balance of payments arise. A similar waiver on the Canadian loan can be made in the years in which the US waiver applies.

There are also other dollar payments due in December. The United Kingdom will pay the interest due on certain loans received as part of the American aid programme. The interest payable is approximately $4,000,000.

A quarterly payment of $(Canadian) 7,500,000, due on the Canadian (1942) interest-free loan, was made on December 1. The amount outstanding on this loan was reduced in 1953 to $150,000,000.

Before the end of this year the last of 20 Diesel-hydraulic locomotives specially built for India's Western Railway will leave Glasgow, where they were built by the North British Locomotive Company. Thirteen of them are already in service in India.

These Diesel locomotives were specially ordered because of the shortage of coal and the quality of water on the 170-mile rail line from Deesa to the new port of Kandla. They have a top speed of 55 mph. To run on metre gauge they are normally capable of producing 625 bhp, but have been de-rated to 605 bhp to suit the atmosphere of high humidity in which they must operate.

North British is but one of several companies engaged in work for India, Pakistan, and Ceylon. The Pressed Steel Company, of Cowley (Oxford), begins delivery early next year of more than 2,000 railway wagons; and Hurst, Nelson & Company, of Motherwell (Scotland), has an order for other rolling stock for Indian Railways. At the same time, R. Y. Pickering & Company, of Wishaw (Scotland), is supplying more than 1,000 covered railway wagons for Pakistani railways.

Continental Air Lines Inc., of Denver, USA, has ordered 12 Viscount 810-Ds, it is announced. Deliveries will start in March 1958, and be completed by September of the same year.

The Viscounts will initially be powered by RAD-7 engines, giving them a cruising speed of 363 mph. A change to RAD-8 engines in 1959 will raise their speed to 400 mph.

Viscount aircraft ordered by airlines throughout the world now total 254. This includes orders from North America for 103, valued at $110,000,000. These British turbo-

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

IN a recent issue of the Times Literary Supplement, there was an article on the literary and (by extension) the intellectual achievements of India since 1947. I was rather disappointed with the article, firstly, because of the unctiously patronising tone adopted by the Thunderer of the Printing Square and, secondly, because of the comparative barrenness of the achievement it recorded. In all the current preoccupation with development projects and standards of living and so forth, there is perhaps a tendency to shirk the question of India's record in the intellectual field in the last few years. The question is not illegitimate, for, when India has achieved all the targets it has set out to in its successive plans and given its people a life of comparative well-being, it would still have to prove its title to the name of a great nation by achievements in the realms of the mind and spirit. Mathew Arnold had the root of matter in him when he staked England's greatness by nothing so much as by its poetry.

*

In all pre-Independent discussion of the question, there was usually a certain uneasiness among the conscientious that our record in the recent past in the intellectual sphere did not measure up either to our own past or to contemporary achievement elsewhere. As in all such predicaments, assuage was had either by finding plausible alibis or by being self laceratingly cynical about it. Thus, it used to be said that a slave country had no poetry. Whenever anyone talked about the so called "Renaissance in India", a friend of mine used to quip savagely 'Oh! you are referring to that book by Dr Cousins". That was his way of giving vent to his profound despair about the matter.

Came the Independence, and at least those who claimed that a literary resurgence would take place the moment political shackles were broken were obliged to make good their boast. My own view is that, while no breath-taking masterpiece of all times has emerged, post-independent India has released a great deal of extremely heartening intellectual energy. One can feel the profound intellectual ferment taking place all over the place, a searching transvaluation of values, the reexamination of fundamentals in the light of new experience. The salt, in other words, hath not lost its flavour and that is promise enough for the future. After all, our Elizabethan era is still to come, and all that is now happening is the painstaking unspectacular consolidation of the age of Henry VII, whose reign was not exactly productive of master-pieces.

*

That there is a profound intellectual unrest in the country is undeniable. You have only to read the proceedings of some of the learned bodies that have been, in the spirit of a busman's holiday, having their annual sessions in the various parts of the country. The Conference of Oriental scholars in Chidambaram, the Philosophical Congress, the All-India Educational Conference, English Teachers Conference, the Indian Academy of Science, the Indian Science Congress and I know not what others have all met in the last fortnight. In every one of the reported proceedings I have read, there has been an effort to relate their particular disciplines to the fundamental values of life. By a curious coincidence, Mr K. M. Panikkar, who was delivering the Convocation Address at Shantiniketan, has put forward with characteristic provotcativeness certain ideas which are of great relevance in the formulation of the values that ought to govern our national life.

*

I must confess straightaway that I was delighted with some of the punches that Mr Panikkar dealt to that not inconsiderable body of canters who have been peddling with unctuous humbug India's "spirituality". I know that a good many of Mr Panikkar's blows are barely on the right side of the belt, but I would be more impressed with the argument that no educated Indian holds silly views about India's exclusive monopoly of spirituality had I not had a most shocking experience some years ago.

*

It was an academic occasion, mind you, and the lecturer of the evening, a well-known professor of philosophy at one of our universities, and the audience, though lay as far as philosophy was concerned, was not exactly illiterate. The lecturer was supposed to be talking about Yoga Vashista, but he was all the time yapping away about our remarkable prescience in spiritual matters on no stronger evidence than the fact that some of Dr Rhine's experiments in the Duke University on Extra Sensory Perception confirmed some of the notions about telepathy that our sacred books mention. Now, one need not be a student of comparative religion to say that almost all religions mention apparent miracles of the sort that tally with a faith in telepathy, and I for one would hardly consider the mention of possibilities of ESP as a particularly important title to greatness. But worse was yet to come. He quoted a sloka from Yoga Vashista (incidentally, that was the only reference to that book I heard that evening) in which some mention was made, in the manner of copy book maxim, of the importance of knowledge (Jnana). The lecturer then went on to compare the attitude the sloka implied with the alleged implication of the "Fall" in Christian theology and the fable of the Fruit of the tree of knowledge. He then went on to draw the inference that, Christianity was against knowledge, while Hinduism was all for it.

*

I was so profoundly shocked by the naivete of the man who could so simple-mindedly be unfair to both Hinduism and Christianity by making such unequal comparison and who, despite Jung, (whom he should have read as part of his special discipline) had no notion about the true nature of religious myths. He reminded me of the equally artless Christian preachers—these were rather more numerous some twenty or thirty years ago—who had no clue to the symbolism of the Rasa Krida and would describe Sri Krishna as a most depraved of debauchees.

*

As I said, I would not, after such an incident, subscribe to the theory that only illiterates think that we are the exclusive heirs to the world's spiritual riches. On the contrary, the illiterate peasant would have understood instinctively the myth of both Rasa Krida and the Fall while he would simply be bored by maxims about knowledge that could be fairly compared to the pearls of wisdom enshrined in such profound observations like "A rolling stone gathers no moss!"

*

In a sense, the undoubted depth of insight into the nature of reality that our ancestors possessed has been our special bane. My professor used to illustrate this point by a very telling analogy. We are like children in a rich household which employs the class teacher as a tutor with a view to doing for the children at home the problems that will ultimately be set in the examination. We thus know the problems, the steps and the final answers whereas the 'West" is like the poor but bright boy who has to work out anyhow all the answers for himself. For no fault of ours, our "spirituality" has been far too facile, far too easily professed. But, since every man can have only the degree of spirituality that his own personal experience affords, and since we do keep on the forms and gestures

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

according to the books, hypocrisy and unctuousness are rampant.

*

Having said this, we must see that Mr Panikkar's observations are brought into perspective without being merely allowed to become sterile debating points. There was nothing startling about his denunciation of the cult of poverty. The case against it had long ago been made, decisively and unanswerably by Bernard Shaw in Major Barbara: Poverty for its own sake is a deadly degrader, especially in the modern context of absence of other spiritual compensation, something that destroys dignity and individuality. But then, these and the more vexed question of spirituality are matters of definition. Mr Panikkar makes fair game of those who claim that India is not materialistic and is always pursuing spiritual values. It is fair to ask both those who use these expressions and Mr Panikkar to define these terms. Take Materialism, for example: There is a sense in which the Hindu and the Catholic is the grossest materialist because he values material and tangible symbols of divine association. No Hindu leaves a temple without taking the prasadam, the Vibhuti or the Kunkumam, both of which are as material as the ash and the mud. And, when there is illness in the family, he puts these on the forehead in prayerful expectation that health may be restored. The Catholic, with his preoccupation with the relics, is again a materialist. On the other hand, dialectical materialism is one of the most impressive body of abstract doctrine that the world has ever seen.

*

Again, it is not possible to discuss meaningfully the spirituality or the materialism of a nation. Individual human beings can be capable of deepest mysticism or the most gross attachment to material objects. That India contains and has always contained its quota of worldly men or charlatans and its measure of great men and seers, is a truism that needs no special mention. And as national ideals, it is not correct to say that sensible Indians have ever claimed seriously the exclusive possession of the secrets of life. On the other hand, Hinduism has, more than any other historical faith, been willing to be influenced by other faiths and has still retained the individuality of its own. Alone, perhaps among the world's faiths, it has not claimed revelatory uniqueness, and has asserted in the words of the Upanishads: "Truth is one: the seers call it by different names."

*

There is no fear, therefore, that India will ever commit the self immolating mistake of ever insulating itself from the life-giving sustenance of spiritual and intellectual streams of the West. The intelligentsia in the country today is not ever likely to sacrifice willingly its previous gifts of liberal values that association with the West has given it. As Gandhiji once put it, his is a house whose windows are wide open to give access to all the winds that blow but he would refuse to be swept off his feet by any of them.

There is no reason why the values that we have learnt to prize from the West should not harmonise with our basic attitude to life. If there is a recognisable Hindu attitude to life, which can be truly described as its essence, it is that of the preoccupation with personal salvation. Everything else, even the desire to shed possessions, flows from it. No one with such a passionate concern with one's own soul can be indifferent to the souls of others. That is where the Indian raison d'etre of the passionate concern for individual liberty resides. The West, starting from the premises of man's centrality, has erected the same positive value. (To the Christian, of course, the premise would be different). Combined with the well-known tolerance, not to say indifference, of Hinduism to all manner of faiths, democracy's second requisite of providing a workable mode of simultaneous living of different faiths in harmony is achieved. On the other hand, democratic values, in so far as they emerge from overweening humanistic pretensions of man's centrality in the universe, can lead directly to the most abject kind of slavery. But the relating of liberal political values to man's deepest spiritual concern, which I have described, will be India's (and according to Toynbee, the West's) surest talisman against the onslaught of totalitarianism.

Bombay Review

"Commercial Capital"

THE Nehru Plan for the city of Bombay is, at the time of writing, in a state of subdued excitement. When the proposal was sprung on us a bare fortnight ago, we were inclined to hail it not only for its merit of originality but also for its virtue of appositeness. There was no disposition to under-rate the difficulties in the way of implementing the suggestion; and, in particular, it was realised that the Eastern Capital, with its proud and unchallenged status as the Second City of the Commonwealth, would be none too pleased with its Western rival receiving official recognition as India's commercial Capital. All the same, the Bombayite felt that all that was now proposed amounted to a change from a de facto to a de jure status.

For, over a period of years the cumulative effective of trends and developments has been to invest Bombay with clear and assured pre-eminence in the commercial life of the country. From the first decade of this century began what may be called the Battle of the capitals. Whereas, till forty-five years ago, Calcutta was India's winter capital and Simla was the summer capital, the King's Proclamation in 1911 made Delhi the winter capital of India, while retaining Simla as the summer capital. It was a cruel blow to Calcutta; and the British rulers realised that special steps should be taken to keep Calcutta in good humour.

To assuage the hurt, it became the practice for the Viceroy to instal his camp in Calcutta for five weeks in December-January every year. Belvedere became the Viceroy's official residence; and, in the gayest season of the year, Belvedere was the seat of state and authority, the scene of brilliant functions and impressive ceremonies. It was also the custom for the members of the Viceroy's Executive Council to fix important engagements in Calcutta at this time of the year. And, in accord with the presence of such august personalities, a Calcutta meeting of the Viceroy's Executive Council developed into a regular feature. It was at this meeting of the Cabinet that the Finance Member made it the convention to present the first outline of the Budget.

The Viceroy's temporary court in the Eastern Capital was an attraction in many other ways, too. Ruling Princes, with full retinue and resplendent regalia, made Calcutta their homes during December and January. The Governor's Cup and the Viceroy's Cup constituted outstanding events. Calcutta's five-weeks' spell of concentrated official formalities and social festivities went a long way to make up for its loss of all-India prestige as the official winter capital.

It was meet and proper that, when the Imperial Bank of India was set up through the merger of the Bank of Bengal, the Bank of Bombay and the Bank of Madras, it was provided that the two managing Governors would reside and the Central Office would be located in Calcutta during the cold weather and in Bombay during the summer. The same pattern was incorporated in the Reserve Bank of India Act which was passed in 1933. It could be said that, by these and other means and tokens, it was clearly understood that, in relation to Government, Calcutta, though no longer India's Capital, had special importance, and that in the business world, Calcutta was on par with Bombay.

Meantime, persistent forces were at work to disturb this balance. While it is acknowledged that Calcutta's industrial supremacy, based on a variety of natural advantages and on the concentration of a number of important industries like iron and steel, coal, tea, engineering and minerals, was secure and unassailable, Bombay was steadily gaining as a financial and commercial centre and as the citadel of Indian (as opposed to foreign) business interests. Three of the leading joint stock banks had their head offices located in the Western Capital, as also the two top insurance companies. The money and exchange market in this city was more lively; and brokers and operators enlivened and extended business in various ways. The Bombay Stock Exchange, as the largest provider of facilities for shares quoted in the forward list, could claim a wider and keener participation of the general public. For all these reasons, Bombay was always in a position to give a lead in regard to subscriptions for new loans and, generally, to new capital issues.

Not less significant was the growing dominance of Bombay's commercial activities. Its bullion exchange is, perhaps, the most lively forward market in the world. Its cotton exchange has served as a model and pattern of its kind. In oilseeds, there is a vigorous and thriving exchange. With regard to most other commodities, facilities for spot trading as well as for forward trading have been suitably developed. Above all, a larger proportion of the City's population make their living through commerce than is the case with any other city of India.

Though Bombay could not keep pace with Calcutta in the variety and number of industrial establishments, the cotton textile industry has given the Gateway City a unique importance. Other new industries have grown and flourished. The industrialists of the earlier generation had a missionary spirit and understood their obligations and knew their tasks.

And, what is most important, the industrial houses of Bombay were, in most cases, most completely and competently Indian—Indian capital, Indian management, Indian personnel, and Indian loyalties. Thus, the Indian Merchants Chamber was a pioneer as a sturdy and efficient spokesman of Indian business interests. Since the early twenties, the Chamber has not only developed its own organisation and strengthened its own activities but has taken an active and leading part in prompting similar Indian commercial bodies all over India. Progress has been spectacular; and the Federation of Indian Chambers of Commerce, the logical climax and culmination, is today an all-India Institution designed to render apt service and to ventilate Indian Business's points of view. Mr J. K. Mehta, of revered memory, was, for years and years, the Secretary of the Indian Merchants' Chamber, and also the Secretary of the Federation in its formative years.

What time Indian businessmen were getting into full stride, and Indian commercial bodies were getting into good shape, foreign businessmen were obliged to share the pedestal with their Indian compeers; and purely European Chambers of Commerce, aggressive at one time, found themselves gradually in a defensive role. The Associated Chambers of Commerce, while maintaining their efficiency with indomitable courage, could no longer count on the prestige of ready official rating. Thus, while once upon a time, the annual session of the Associated Chambers was opened by the Viceroy himself and the proceedings were graced by the presence of the Viceroy's colleagues (who also replied to the debates), the Prime Minister undertook this function soon after independence; then came the turn of the Finance Minister to open the session; and, this year, the Commerce Minister was the ceremonial figure.

It is not suggested that this involves any downgrading. But it is clear that pomp and splendour at this mid-December function in Calcutta is a thing of the past.

Other changes had a similar import. The Governor & Deputy Governors of the Reserve Bank are no longer committed to scheduled sojourns in Calcutta; they are content to make infrequent and brief visits.

HISTORY AND BUSINESS:

The Company was incorporated in Bengal as a Private Company in 1934. It acquired in June 1934 and has since carried on the business in India of the Ever-Ready Company (Great Britain), Limited, including the sole right to use in India the world famous "EVEREADY" Trade Mark as well as other well-known Trade Marks including "MINI-MAX" "LAYERBILT", "MASTERLITE", "AIR CELL", etc.

The Company's predecessors commenced manufacturing dry cells and batteries for flashlights and radios in 1926 when the first plant was set up. From the beginning the manufacture of dry cells and batteries progressively passed from a purely assembly process of imported parts to a position where a majority of those parts are now produced by the Company in India.

Throughout its history the Company has shown a consistent and healthy growth. In 1935 the installed capacity of the production plant was approximately 15,000,000 cells per annum, with an area of 25,000 square feet being used for manufacturing and storage purposes. A new plant at Cossipore commenced operations in 1940 by which time production had doubled. In 1952 the Company increased its productive capacity by the installation of a modern factory in Madras; this installation, while showing a considerable saving in freight on finished batteries, also forms part of an overall plan of decentralization thus avoiding the possibility of complete disruption of the Company's business by civil disorder or natural calamity. Today the Company has a capacity of almost ten times that of 1935 and utilizes over 300,000 square feet of space for the manufacture of components and finished batteries.

In 1937 the Company's Sales Offices and Warehouses were located in Calcutta, Bombay and Madras. Today they are spread over Calcutta, Bombay, Madras, Delhi, Cochin, Vijayawada, Allahabad, Gondia, thus shortening the Company's lines of contact with its customers and thereby improving its service to them.

In keeping with its declared policy of manufacturing as many as possible of the component parts required in its operations, the Company installed in 1949 a manganese ore crushing and grinding mill with auxiliary air classifying and filter unit. The installation of this unit, the first of its kind in India, has enabled the Company to use basic raw materials direct from the mine in bulk for further processing in India thus eliminating costly packing and handling charges.

Ever watchful of its manufacturing costs, the Company has followed a steady plan of mechanizing manufacturing processes. Soon[illegible] end of the second World War was adopted for the complete automatic [illegible] of its zinc can manufacturing department. The automation of this department while reducing the labour complement approximately 10% of its former[illegible], was so carefully integrated [illegible]ompany's other expansion plans [illegible]lay-off of the labour force was[illegible].

The dry cell [illegible] its components relies on small [illegible]d formed metal and paper parts. [illegible]1948 practically all of these were [illegible]. Today in its well-equipped [illegible] shop a large volume of comp[illegible]roduced annually. This depa[illegible] recently been supplemented [illegible]inery for the production of m[illegible]nection sockets for radio batter[illegible]For the maintenance and m[illegible] of the special high precision d[illegible]d in the punch press shop, the [illegible] as set up a die department as [illegible] adjunct to its machine shop. [illegible]tivities of this machine shop, [illegible]s installed the most modern e[illegible] are supervised by experts wit[illegible]perience in die making and ma[illegible] operation.

The Company, [illegible]s to keep up a high standard [illegible], has always maintained labo[illegible]r examination of raw materi[illegible] products and for research. [illegible]talled the first air-conditioned [illegible]mperature and humidity labora[illegible] cell testing in India and most [illegible]ecification data evolved from in[illegible]collected in this laboratory and [illegible]mpany's overseas associates [illegible]vailable to the INDIAN STAN[illegible]NSTITUTE for developing its d[illegible] battery specifications. In [illegible]laboratory was considerably e[illegible]d fitted with complex and au[illegible]ting equipment with accommoda[illegible]ting over 5,000 cells simultaneo[illegible].

In 1953 the [illegible]ntroduced into India for the [illegible]he large scale manufacture of [illegible]ign of flat cell which is assemb[illegible]atteries known by the trade mar[illegible]AX". Because of its shape thi[illegible] itself readily to the requirem[illegible] radio battery and hearing-aid [illegible]since its incepdustry in India where it is a v[illegible]wn to a point Company's oper[illegible]nt part of the

During the ti[illegible]pany has done business in Indi[illegible]ays cultivated good relations w[illegible]loyees and has been in the fore[illegible]ustry in India with a provident [illegible] credit society as well as many [illegible]activities such as sports, clubs[illegible] canteens, etc. The Company h[illegible]ed a policy of including Indian nationals within its management group as well as providing practical training with its overseas associates to Indian supervisory and technical staff.

The Company was converted into a Public Company on 23rd December, 1955.

OBJECTS OF ISSUE:

The objects of the present issue are to afford an opportunity for the participation of Indian capital, and to provide additional capital for the expansion of the Company's business. The Directors are satisfied that all the capital intended to be raised by means of subscriptions received in response to this Prospectus can be usefully employed.

Financial Information.

Auditors' Report:

The following is a copy of the report of the Company's Auditors, Messrs. Ford, Rhodes, Parks & Co., Stephen House, Dalhousie Square, Calcutta-1.

The Directors,

Messrs. National Carbon Company (India) Limited, 18A, Brabourne Road, Calcutta-1, 2nd December, 1955.

Gentlemen,

We have examined the Accounts of National Carbon Company (India) Limited, as audited by us for the two years and nine months ended 25th September, 1955, and report as follows:

I. **PROFITS:**

The Profits of the Company arrived at on the basis set out below were as follows:

	Year Ended 25th Dec. 1953.	Year Ended 25th Dec. 1954.	Nine Months Ended 25th Sept. 1955.
	Rs.	Rs.	Rs.
Sales	3,88,75,052	3,70,00,797	3,30,98,331
Cost of Materials	2,06,21,848	1,75,83,524	1,78,81,264
Salaries and Wages	52,04,779	55,09,486	41,64,898
Expenses	44,52,967	47,92,171	39,85,177
Depreciation	5,50,788	7,15,585	5,69,056
	3,08,30,382	2 86,00,766	2,66,00,395
Net Profit before Taxation	80,44,670	84,00,031	64,97,936
	3,88,75,052	3,70,00,797	3,30,98,331
Net Profit before Taxation	80,44,670	84,00,031	64,97,936
Provision for Taxation	33,46,889	34,98,861	27,34,512
Net Profit after Taxation	46,97,781	49,01,170	37,63,424
Amount Capitalized, Bonus Shares issued	..	..	18,75,930

Excise Duty was imposed on 1st March, 1955 on Batteries manufactured in India. Cost of Materials for the nine months ended 25th September, 1955 includes such Excise Duty amounting to Rs. 19,67,513.

II. **DIVIDENDS:**

The Dividends paid (free of income-tax) in respect of each of the two years and nine months to 25th September, 1955 were as follows:—

1953 .. 30%
1954 .. 40%
1955 .. 20% Interim Dividend (before increase in Capital).

III. **NET ASSETS:**

The Net Assets of the Company as at 25th September, 1955 based on the Audited Balance at that date 1955 were as follows:—

	Book Value at 25th September, 1955.	Depreciation to 25th September, 1955.	Net.
Fixed Capital Expenditure:			
Land and Buildings	15,58,847	3,23,275	12,35,572
Plant and Machinery	70,28,203	28,15,445	42,12,758
Other Assets	17,85,359	8,84,576	9,00,783
	1,03,72,409	40,23,296	63,49,113
Goodwill (At Cost)			30,00,243
Current Assets:			
Stocks and Stores at Cost		1,54,72,221	
Sundry Debtors		23,08,745	
Due by Associated Companies		5,87,794	
Cash and Bank Balances		15,40,767	
Other Current Assets		11,17,387	
		2,10,26,914	
Less Current Liabilities and Provisions:			
Due to Associated Companies	11,63,372		
Sundry Creditors	13,61,524		
Bank Overdraft	33,45,485		
Provision for: Taxation	17,57,916		
Expenses	3,42,335	79,67,632	
Net Current Assets:			1,30,59,282
Net Assets as at 25th September, 1955			2,24,08,638

A revaluation of the Company's Fixed Assets carried out on the instructions of the Board showed that the cost of replacement would amount to Rs. 79,80,669 compared with the corresponding book value at 26th December, 1952 of Rs. 64,65,164. By a resolution of the Board dated 19th August, 1953 it was decided to incorporate this increased valuation in the books of the Company, the excess of Rs. 15,15,505 being carried to a Capital Reserve Account.

IV. **SHARE CAPITAL:**

The Share Capital of the Company was increased during the third quarter of 1955 by the issue of 4,00,000 Ordinary Shares of Rs. 10/- each, fully paid for cash, and 1,87,593 Ordinary Shares of Rs. 10/- each, by way of fully paid Bonus Shares. The issued Share Capital on 25th September, 1955 was:—

16,00,000 Ordinary Shares of Rs. 10/- each, fully paid Rs. 1,60,00,000.

V. **ACCOUNTS:**

No Audited Accounts have been made up in respect of any period since 25th September, 1955.

Yours faithfully,

FORD, RHODES, PARKS & CO.,
Chartered Accountants.

NEW PROJECTS:

The Company is presently constructing a zinc rolling mill for the production of high quality zinc alloy strip which ultimately will eliminate the need to import zinc strip for the dry battery trade thus taking a further step in its programme of self-sufficiency. It is expected that this zinc mill will be operating during the first half of 1956. Of the total amount of capital intended to be raised by means of the proposed issue, it is estimated that Rs. 55 lacs will be required for the purpose of equiping and establishing this zinc rolling mill.

The major part of the Company's business up to the present has been concerned with manufacture and sale of dry cells and batteries and it relies on the importation and indigenous manufacture of appliances, radio sets, flashlights, torches, etc., which operate with, or are powered by dry batteries to maintain the demand for its battery products.

The supply of flashlights and torches, the major stimulants to dry battery sales, is almost wholly dependent on importation from abroad, and, of course, on the foreign exchange that may be available to cover the necessary import licences. The Company has, therefore, formulated plans for and is proceeding with the establishment of a fully equipped factory for the manufacture of flashlight cases and it is expected to commence production during 1957. It will be equipped with the latest machinery and will make use of the

NATIONAL CARBON COMPANY (India) LIMITED—(Contd.)

newest techniques known for the production of high quality, economically priced flashlight cases. When completed the factory will be the most modern of its kind in Asia.

With the output from this factory the Company can expect to benefit not only from the extra volume of business from the new product itself, but also from a large increase in the sale of flashlight cells which will be required to power the flashlight cases produced and also for the replacement cells.

In addition to its manufacturing activities, the Company has imported for a number of years many of the various chemicals, plastic raw material, and industrial products produced by its associates in the U.S.A. and elsewhere. These associates are recognized as leaders in the field of chemicals and plastics both from the quality and quantity view point. The sales volume of these products has g.own to a point where the Company deems it proper to cosider their manufacture in India and recent surveys of the market have indicated that certain of these chemicals and plastics can now be manufactured economically in India because of the existence of regular supplies of the raw materials required. Plans for a modern chemical plant are now nearing completion and it is hoped to go into production in 1958. It is intended that products from this plant should consist of Polyethylene, Ethylene dichloride, a chemical in great demand as a fumigant for foodgrains, and some industrial solvents. It is anticipated that the sale of these products will add considerably to the Company's earnings.

PROSPECTS:

The present total sales density of dry cells in India is equivalent to 0.40 cells per capita per annum which compares adversely with adjacent Asian countries where densities run over 1.00 cells per capita per annum. With the application of the present Five Year Plan which envisages an all-round improvement in the standard of living, there is no reason to believe that the Indian consumption of dry cells will not rise to match or go beyond this figure. Were the consumption of dry cells to increase to one cell per capita, it is not unreasonable to assume that a very substantial portion of this increase would be secured by the Company.

There is also another good reason for optimism which arises from the rapid increase in the demand for batteries for radio sets which has increased approximately four times in the last five years. This growth in demand for radio bateries is due in a major degree to the ever-widening network of broadcasting stations presently erected and planned for the future by Government.

STATUTORY AND GENERAL INFORMATION MISCELLANEOUS:

(a) **Revaluation:**

The assets of the Company were revalued as at 26th December, 1952 and particulars of such revaluation are given below.

Original Value	Value on Revaluation	Surplus
Rs. 64,65,164	Rs. 79,80,669	Rs. 15,15,505

A reserve was created out of the total surplus arising on the aforesaid revaluation.

(b) **Bonus Issues:**

(i) The sum of Rs. 43,38,890 being a part of the balance standing to the credit of Profit and Loss Account as at 25th December, 1951, was capitalised and utilised for the purpose of paying up in full 4,33,889 shares of Rs. 10 each in the capital of the Company and these shares were allotted and issued on 23rd December, 1952 as fully paid up to Union Carbide and Carbon Corporation, a company incorporated in the United States of America.

(ii) The sum of Rs. 18,75,930 being a part of the balance standing to the credit of Profit and Loss Account as at the 25th December, 1954, was capitalised and utilised for the purpose of paying up in full 1,87,593 shares of Rs. 10 each in the capital of the Company and these shares were allotted and issued on 24th September, 1955, as fully paid up to the said Union Carbide and Carbon Corporation.

(c) **Cash Issue:**

400,000 new shares of Rs. 10 each were allotted and issued to the said Union Carbide and Carbon Corporation at par on 2nd July, 1955 for cash.

(d) **Minimum Subscription:**

The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in Section 101(2) of the INDIAN COMPANIES ACT, 1913 is Rs. 39 lacs made up as follows: (i) Cash Purchase Price of plant and machinery Rs. 33 lacs. (ii) Estimated expenses of this issue, Rs. 2,00,000. (iii) Repayment of monies borrowed in respect of the foregoing matters, Nil. (iv) Working Capital Rs. 4,00,000.

(e) **Underwriting:**

The shares now being issued have not been underwritten but the Company will pay brokerage as indicated below.

(f) **Redeemable Preference Shares:**

The Company has not issued and it does not at present intend to issue any Redeemable Preference Shares.

(g) **New Issues and Offer for Sale:**

Save as mentioned above no shares or debentures have been issued or agreed to be issued within the two years preceding the date hereof. An offer for sale in respect of 4,00,000 shares of the Company of Rs 10 each at Rs. 19 As. 8 per share was issued by Union Carbide and Carbon Corporation, the principal shareholder in the Company on the same date as that upon which this Prospectus was issued.

(h) **Payment of Commission:**

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect of shares issued.

(i) **Payment to Promoter:**

No sum has been paid within the two years preceding the date hereof or is intended to be paid to any promoter.

(j) **Licence:**

The licence referred to at the commencement of this Prospectus has been granted in respect of the Zinc Mill Project. No licences are necessary for the flashlight case project, the manufacture of polyethylene, and the manufacture of industrial solvents, for which projects, Government approval has been given.

DIRECTORS:

The Articles of the Company provide that the number of Directors shall not be less than three nor (unless otherwise determined by the Company in General Meeting and, if required by law, sanctioned by the Central Government) more than ten.

Unless otherwise determined by the Company in General Meeting a Director does not require any share qualification.

The Articles provide that each Director shall be paid out of the funds of the Company as remuneration for his services the sum of Rs. 300 for each meeting of the Directors attended by him or such other sum as may be determined by the Company in General Meeting and also that the Directors shall be entitled to be paid all travelling, hotel and other expenses, properly incurred in connection with the business of the Company.

The Articles also provide that the Directors may appoint a Managing Director, Joint Managing Director or Managers of the Company on such terms as to remuneration as the Directors shall deem fit.

A Director who is absent from or who is about to leave the District in which the Directors' Meetings are ordinarily held for a period of three months or more may appoint, with the consent of the Board of Directors, any person to be an alternate Director during his absence.

No sums have been or will be paid to any Director in cash or shares or otherwise to induce him to become a Director.

POWERS OF DIRECTORS:

The Articles provide that the Company shall be managed by the Directors who may exercise all such powers of the Company as are not, by law or by the Articles, required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations, not being inconsistent with the Articles or the law, which may be made by the Company in General Meeting.

INTEREST OF DIRECTORS:

Mr J. R. Galloway is the Managing Director of the Company and receives remuneration for his services as such. Mr. Galloway is also a Director of Alipore Estates Ltd., of which this Company is a shareholder.

Mr. J. E. Potts, Mr. F. J. Drane, Mr. T. G. Lewis and Dr. D. P. Antia are employed by the Company, and receive remuneration accordingly.

Mr. R. V. Farrell and Mr. J. K. Grassle are shareholders each holding less than 1/100th of 1% of the issued capital of Union Carbide and Carbon Corporation the principal shareholders of this Company.

Mr. D. P. Dunderdale is a partner in the firm of Messrs. Sanderson & Morgans, Solicitors to the Company.

Save as above, no Director has any financial or other interest in any of the property proposed to be acquired by the Company.

INDEMNITY:

Every Director, Managing Agent, Manager, or Officer of the Company or any person (whether an officer of the Company or not) employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Managing Agent, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted, or in connection with any application in which relief is granted to him by the Court.

MANAGEMENT:

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

NATIONAL CARBON COMPANY (India) LIMITED—(Contd.)

BORROWING POWERS:

The Articles provide that the Directors may from time to time raise or borrow for the purposes of the Company and secure the payment of any sums of money not exceeding the aggregate of its paid up capital and free reserves for the time being.

VOTING POWERS:

Subject to any special conditions or restrictions as to voting upon which any shares may be issued or may for the time being be held on a show of hands every member present in person and entitled to vote shall have one vote, and on a poll every member present in person or by proxy shall have one vote for every share held by him in respect of each share of which he is the holder. There are no special conditions or restrictions attaching to the present ordinary share capital of the Company.

RESTRICTIONS ON RIGHT TO TRANSFER AND VOTE:

The Directors may decline to register a transfer of any partly paid shares to a person of whom they do not approve and may also decline to register a transfer of partly paid shares on which the Company has a lien.

No member shall, unless the Directors otherwise determine, be entitled to vote at any General Meeting, either personally or by proxy, or to exercise any privileges as a member unless all calls or other sums presently payable by him in respect of shares in the Company have been paid.

CONTRACTS:

No property has been purchased or acquired or is proposed to be purchased or acquired, which is to be paid for wholly or partly out of the proceeds of this issue, save under Contract No. 4 below and also save as to part of the property purchased or to be purchased under Contracts included in item No. 9 below.

The following contracts, not being contracts entered into in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:—

(1) With Puri Brothers, Contractors, New Delhi, dated 29th July, 1954 for purchase of land and construction of a bungalow at New Delhi. (2) With N. N. Majumdar, dated 1st July, 1955, for lease of a flat in Calcutta. (3) With Property Development Trust Ltd., dated 1st July, 1955, for lease of a flat in Calcutta. (4) With Mackintosh Burn Ltd., dated 5th March, 1955, for construction work in connection with the Zinc Mill at a cost of Rs. 5,80,671. (5) With Calcutta Electric Supply Corporation Ltd., dated 3rd November, 1955, for extension of electric cables to the Zinc Mill site. (6) With General Electric Co., of India Ltd., dated 15th November, 1955, for electrical installation at the Zinc Mill. (7) With Commissioners for the Port of Calcutta, dated the 18th July, 1955, being a lease for 30 years with options of renewal of 10 years each, of the Zinc Mill site at Transport Depot Road, Calcutta. (8) With Mr. J. R. Galloway, dated December 19th 1955, appointing him Managing Director of the Company. (9) With various parties and of various dates between the 1st January, 1955 and 15th December, 1955 and represented by 28 Purchase Orders for the supply of materials and equipment for the Company's present and planned projects. These contracts are for various amounts from Re. 1/- to Rs. 16,60,000/- and the total amount of the material and equipment covered thereby comes to Rs. 40,00,000/- of which approximately Rs. 27,00,000/- will be provided by the proceeds of this issue.

DOCUMENTS:

Copies of the Memorandum and Articles of Association of the Company, the Consent Order of the Controller of Capital Issue, the Licence from the Central Government referred to at the beginning of this Prospectus, the Contracts referred to above and/or copies thereof and the original of the abovementioned Auditors' Report as set out herein can be inspected at any time while the subscription list is open during the usual business hours at the Registered Office of the Company.

A Copy of the Company's Memorandum of Association is printed in this Prospectus and forms part of it.

APPLICATION AND ALLOTMENT:

Applications for shares which must be for 50 shares, or multiples of 50 shares, must be made on the accompanying official form and will be refused, if not so made. The application form, together with a remittance for the full amount payable on application, must be sent to the Managing Broker, or Sub-brokers or a branch of the State Bank of India, in India, the remittance being made by cheque or draft which, if it is desired to avoid payment of bank charges, must be drawn either upon the branch of the State Bank of India to which the application form and cheque or draft are being sent, or upon a Bank situated in a town in which there is a branch of the State Bank of India. If drawn on a bank elsewhere the appropriate bank charges must be included in the remittance otherwise the application will be refused.

Cheques or drafts should be made payable to the "State Bank of India Account National Carbon Company (India) Ltd. New Issue" and should for the applicant's protection be crossed "A/c. Payee Only." A separate cheque or drafts must accompany each application form.

Allotment will be notified by the despatch of an Allotment Letter but the Company reserves the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full the whole or any balance of the application money received will be refunded to the applicant, in which event bank's commission, if any, will be payable by the applicant.

Share Certificates will be available for issue in exchange for Letters of Allotment on and after March 31, 1956, and each applicant who is allotted more than 100 shares will receive Share Certificates in lots of 100 shares, and such smaller denominations as may be required to complete the total number of shares allotted except when the applicants request Share Certificates in larger denominations.

BROKERAGE:

Brokerage at the rate of 4 annas per ordinary share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stockbroker.

Copies of this Prospectus and forms of application may be obtained from the Managing Brokers and Sub-brokers at the addresses given above and from the Bankers named above, at any of their branches in India.

WORLD OVERSEAS

(Continoed from page 20)

prop airliners are already in use on the Washington-Chicago route of Capital Airlines Inc.

With an optimum cruising speed of 500 mph and the capacity to carry 60 first-class passengers with baggage and freight over stage lengths of 3,000 miles, the Comet 4 will have greater power than its predesessors, although its engines will burn less fuel for a given thrust output.

These details are revealed by the de Havilland Aircraft Company, which states that the Comet 4 is expected to be in airline service on world routes before any other jet airliner. British Overseas Airways Corporation has ordered 20 for delivery in 1959.

De Havilland says the airliner has been designed mainly for world routes (other than transatlantic) on which most of the centres of trade and industry are 2,000 to 3,000 miles apart, but that even on the North Atlantic crossing, with its special conditions, the Comet 4 will provide most comfortable and speedy operation, despite the necessary one-hour halt on the westbound flight.

✱

EDITORIAL NOTES

(Continued from page 17)

latives it uses. But there is the disadvantageous side as well.

For, America has the misfortune to have an excitement in its presidential elections which make of them "the greatest show on earth." Play is so much the thing in election year, that while party politics receive their full share of attention, international affairs sadly suffer an eclipse.

It is thus that the issue of foreign aid, and its agonising re-appraisal, becomes transformed into a subject fit for the parties to squabble over. Although it is apparent that the Administration would wish to revise appropriations for foreign aid, stern opposition in Congress is anticipated for the very fact that 1956 is an election year.

While on the subject of elections, it seems to us that the possibility of Mr Eisenhower being unable to undertake a second term has caused serious gloom to the Republican Party's prospects. For, besides the President, there are few from the Republicans who command a following or popularity such as could keep off a Democrat onslaught.

As for the Democrats, Mr Stevenson has got off to a flying start; and, in spite of the fact that the party machine appears to favour Mr Averell Harriman, the present signs are that 1952's defeated Presidential candidate will once again be the Democrat's nomination.

At this distance in time, then, all portents point to Mr Stevenson as the most likely to be elected—unless Mr Eisenhower decides to seek a second term of office.

GATEWAY NOTES

(Continued from page 28)

generalised theories would ever help reduce the already glaring inequality of wealth between the rich and the poor.

A momentous and crucial time as this is, a good many ideas are floating in the air, each one trying to have its own way. Contradictions abound. As Mr Mahatab sees it, while urban facilities were being brought to rural areas, paradoxically, simultaneous efforts were being made to keep the rural economy where it was and to improve the urban economy as fast as possible.

It is certainly for the economist to clear the air of the familiar dilemmas concomitant with the change-over from a purely rural to a modern industrial economy. To enable him to do so, it is necessary that he be not fettered by political loyalties, or personal predilections.

Bombay Review

Gateway Notes

Economists and the Economy

Presiding over the Indian Economic Conference held at Poona in the last week of December, Dr B. N. Ganguli fervently pleaded that Indian economists should do considerable rethinking on the basic concepts, premises, methods of analysis and approach to the understanding of the economic reality in India. He was obviously implying the need for thorough realistic approach to the study and interpretation of national economic problems. Anyone is free to guess what the Economic Conference President has left unsaid. We do not like to indulge in this tempting pastime. We have referred to Dr Ganguli's very timely appeal, so that we may focus attention on certain fundamental obligations which the public are traditionally wont to expect from the economists as a class.

It is no longer safe to assume that economic thinking is confined to a few scholars here and there, whether in the universities or outside. The life of the masses, the intelligentsia, salaried men and persons in all ranks of industry have become so intimately linked with Government policies and programmes, particularly in their bearing on production, trade and consumption, that there has taken place a diffusion of genuine, interested thinking on economic problems, of whose extent and vitality not everyone seems to be aware of. In other words, except in a limited sphere, the responsibility for economic thought in its broader sense is no longer confined to the specialists. As the wearer knows best where the shoe pinches, we have all been compelled to acquire in varying degrees the habit of critical evaluation on the conduct of the State as well as other centres of authority and influence.

This is not to say that the specialists in the field of economics could abdicate their function. It is their sole purpose to provide the background of theory and the alternative between which Governments could choose. This task will become harder, as the economy grows more intricate. As far as mere theory is concerned, there does not appear to be much which could be thought of as pecullar or unique to India. The springs of human conduct and the impact of material circumstances and motives are not fundamentally different between one country and another. If there are differences in racial characteristics, they are, as a rule, irrelevant to the interpretation or application of economic theories. In this field, there is no special problem, as far as we could see, for the economists in India.

Then comes the question of factual data. It is accepted on all hands that any sensible economic policy should have a sound basis on data. It is also well known that India is very much backward in respect of the availability of data. This is a deficiency which cannot be made up overnight; and it is, therefore, not always fair to ask the economists to produce the full data for the conclusions they draw or the policies they advocate.

But, looked at from another angle, the situation should only make the economist wary and circumspect in his conclusions and recommendations. When he is not sufficiently so, he exposes himself to the charge of being reckless. Sir B. Rama Rau, Governor, Reserve Bank of India, in the course of his inaugural address at the Agricultural Economic Conference, takes the Planning Commission's Panel of Economists to task, for not indicating the material on which they have based some of their far-reaching proposals for the Second Plan. He wonders how, when the well-equipped Research Department of the Reserve Bank of India was not able to give him any adequate statistics of unemployment the Panel of Economists could freely proceed on certain assumptions and recommend policies which were of a highly debatable character.

We are drawing attention to this controversy, not with the intention of arguing a case this way or that, but merely to show how public faith in the value of the findings and suggestions of professional economists is likely to be undermined, if they are frequently liable to be assailed in this manner. This risk can be eliminated even in the absence of sufficient data, if the handicap is clearly and forcibly acknowledged, and whatever policy recommendations made are explicitly indicated as to that extent tentative We do hope that Indian economists will not grudge the measure of humility dictated by circumstances beyond their control.

At the same time, it would be dangerously fastidious to wait for the availability of full data before deciding on major policies. Many of India's problems are overwhelmingly pressing. All that can be said is that, when relevant data are conspicuously lacking and particular policies are clearly controversial, a little waiting and a little extra deliberation and examination of conflicting viewpoints would reduce the chances of error.

In fact, even among the Planning Commission's Panel of Economists, there is found to be sufficient diversity of views as to enable the authorities who take decisions to be aware of every side to a question.

There is a view that economists should not display differences of opinion on any subject. This view denies the one eminent group of people an elementary privilege which all mankind cherishes. To the administrator, it will undoubtedly be confusing to be confronted with opposite view-points on immediate problems. If it is remembered that the administrator is also a judge, the difficulty will be seen in proper perspective.

*

Mahatab's Call to Economists:

As economic planning proceeds, economists are being increasingly associated with governmental policy making. The role which they are thus called upon to play is comparitively recent in India. Planning presupposes to a very difficult extent the priori solution of problems as distinct from routine trial and error and trial. Economic forecasting has, of late, evolved into a highly involved unmathematical treatment of statistical data.

The economist has therefore to secure, on the one hand, adequate facilities for scientific research and on the other, an independence and intellectual honesty that would enable him, if necessary, to risk his popularity with the politician. In both respects, there is room for progressive change.

Inaugurating the 38th annual conference of the Indian Economic Association in Poona, Governor Hare Krushna Mahatab has called upon Indian economists to show the way to remove inequality between regions and between classes within the shortest possible time. If ever economics were to play a definite and distinct role in the development of a country it is here and now in India, he said. The Governor did not feel sure that

BOOK NEWS

Company management presents a host of problems to the experienced Executive, Secretary, or Managing Agent Lawyer and Auditor. The provisions of the new Companies Act of 1955 are far-reaching and without parallel in any statute relating to companies in any part of the world. A reliable guide and a book of reference to the new Act is indispensable.

Within the pages of the book written by an advocate with a vast and wide experience of company Law and matters one will find a lucid explanation of the statutory changes effected by this Act.

The important changes effected by the Act are explained in detail. The exact scope of the new amended sections and their operation and the extent to which legitimate advantage may be taken of the exemptions granted and exceptions made in respect of several matters are all set out clearly.

Buy a copy of this Book today. It will save you and your office Time & Money. A book of great practical use.

Ring out the Old

FOR the first time in many years, it is possible to take the customary valedictory salute to the departing year without feeling that it is mercifully well out of the way. Such an attitude was and is, of course, irrational, since the calendar can hardly be blamed for the mess we make of our lives. But the temptation to find a scapegoat (and some astringent copy) is always difficult to resist.

Not that this year's copy can be composed wholly of dithyrambs and paeans of joy, though, as recently as October last, the eyes of journalists were in a fine frenzy rolling at the thought of the New Year eve copy. But the setting in of the winter also saw the end of the thaw in international relations that came with the lark in the spring. Once again, political attitudes congealed into their old mould of cold war belligerence. The attractive froth at the brim of the beaker containing the Geneva Spirit turned out in the event to be anything but the demure blush of Hippocrene.

Let us, then, count the blessings that 1955 conferred on us. First came the Bandung Conference: though in strict chronology it belongs to 1954, its implications unfolded themselves only in 1955. The year's final achievement, namely, the entrance into the fold of the United Nations of a number of countries formerly denied admittance is ultimately relatable to it. For the first time in history, the voice of Asia and Africa, serene and and confident, rose over the European din that was till then, figuratively, renting the air of international assemblies. Another consequence of the Conference was the emergence of the Peoples' Republic of China from the inclosed atmosphere of Communist allies. At Bandung, China came into closer contact with its Asian neighbours and got to know them better. And they, in their turn, were able to see more clearly that it was no longer possible to behave as though the fact of the People's Republic could be obliterated merely by choosing to ignore its existence.

1955 also saw the welcome change in the political attitudes of the principal belligerents in the cold war. This change in attitude, long overdue,—due, in fact, from the day Russia exploded the first Atom bomb—recognised for the first time the inexorable logic of the nuclear stalemate which made nonsense of all talk, fashionable even in late 1954, of 'instant massive retaliation at times and places of our choosing'. The Soviet Union, always at an advantage when it comes to volte faces, blandly set in motion a whole series of acts which went a long way to bring about the temper that later became famous as the 'Geneva Spirit'. It kissed and made up with Yugoslavia, came to terms with Austria in a trice, actually promoted the idea of 'summit talks' on outstanding issues and established diplomatic relations with West Germany. The Western attitude throughout had the unenviable look of trying to catch up with these diplomatic manoeuvres since it was bothered by its obligation to explain its nature at every stage and its fear of being caught napping by Russian legerdemain. Though the solution of specific international problems was and still is as far from realisation as ever, the Geneva Conference did bring about a real change in Big-power relationships. For this alone 1955, deserves the gratitude of mankind.

In the Far East, things have achieved a certain stability: when one recalls the alarms and excursions over the off-shore Chinese islands, toward the end of 1954, one is filled with retrospective relief for the merciful dispensaion that placed at the head of American politics a man who had the wisdom and the courage to withstand the pressure of extremists at home. In Indo-China, the uneasy truce continues and the terms of the Geneva Agreement of 1953 are no nearer realisation than in 1954. The Middle East developed tensions toward the end of the year, tensions which have contributed to the evaporation of the Geneva spirit to some extent. Colonial tensions persisted in many parts of the world, more particularly in French Africa. In South Africa, the crassest racial arrogance continued its scandalous career as a stark and inescapable challenge to civilised values.

In the United Nations itself, the general pattern of markedly improved relations in the earlier half of the year slowly sliding into an uneasy kind of coming to terms with cold war realities was discernible. The Indian contribution to specific problems and to the general promotion of friendliness in the United Nations found increasing recognition. There was not one serious decision taken at the sessions of the General Assembly or of the specialised agencies to which India did not make a constructive, often decisive, contribution. India's good offices were requisitioned in every conceivable manner of situations—in smoothing the ruffled amour propre of France, in persuading the Russians to desist from frustrating the package deal despite grave provocation, in arranging the repatriation of civilians in America and Red China, and so on.

Two of the outstanding events of the year were Mr Nehru's visit to Russia last June, and the reciprocal visit of the Soviet leaders to India this winter. By any reckoning, the Russian tour of India was a remarkable phenomenon. Wherever they went, they were given the most spontaneous demonstration of hospitality and goodwill. The visit evoked frenzied diplomatic appraisal, some of which bordered on the ludicrous. Considerable amount of the time and energy of those responsible for and engaged in the task of interpreting the Indian attitude to world problems was taken up with allaying imaginary fears and with setting at rest unfounded inferences.

It has not been a happy year for Indio-American relations. This is a great pity, for, both in the United States and in this country there is, among the general public, far greater mutual goodwill and readiness to see the other's point of view than is suspected by those whose attitudes are conditioned by press comments. From the beginning, Indo-American relations have been bedevilled by the tendentiousness of slick journalism—surely the most tedious bane of our times. Moreover, a great deal of patient and painstaking good work done over a long period is heart-breakingly undone by the pique of a moment on the part of those in power. The incredible gaffe of Mr Dulles over the Russian speeches about Goa will go down in history as an illustration of the truth of the adage of great affairs and little minds going ill together. The extremely tactful, not to say, generous, handling of the situation arising out of this error of judgement showed, once again, India to be a diplomatically mature nation. Meanwhile, the distortion of mutually advantageous relations has once more to be patiently brought into focus by friends of both the countries.

As for domestic affairs, there is no doubt that 1955 will go down in history as a turning point in India's democratic nationhood. The eighth year of freedom and the final year of the First Plan saw the nation emerging with pride at what it has achieved and with immense confidence about the future. Events of the first eight years, which we had not looked at in perspective because we were too near them, appear now as part of the broad pattern of a self-conscious dedication of a nation toward realising its deepest aspiration. Indian political consolidation as a nation has stood the test of time—a glance at Pakistan's present difficulties will show how magnificently. In the economic sphere, the achievements of the First Plan are a testimony to Indian resourcefulness. The year 1955 began with the enunciation of the slogan of the 'socialistic pattern of society', a phrase that hides in its deliberate vagueness a pragmatic approach to social objectives. The year also saw the publication of the draft-frame of the Plan for the next five years and its almost incessant discussion. Even the most unsparing of the critics of the Plan-Frame will concede that it outlines a bold and imaginative programme of social action and is the result of a consciousness of inner strength that conceives of national tasks as a challenge and an opportunity. The almost complete permeation of the Plan in all discussions of the future of our country shows a heartening public interest in the nation's tasks.

A quick survey of events in the country, especially in the capital and in Parliament last year, would show that the socialistic pattern, while no doctrinaire slogan, is far from being an inoccuous piece of demogogy. The amendment to the Constitution, the recodification, consolidation and tightening of the law relating to corporate bodies (about which, I find, I have written for a considerable number of weeks last year) and the decisive steps taken in the sphere of industrial production under State auspices are all indicative of the Government's firmness of purpose in this regard. The Plan itself, conceived as a conscious instrument of further socialism of the pragmatic sort, is due for discussion in its final form shortly, and the indications are that Government are serenely confident about the future— a confidence for which there seems to be ample justification both in its actual achievements so far and in the mood of the people.

Apart from the publication of the Plan-Frame, the most decisive event of the year was the publication of the report of the States' Reorganisation Commission and the subsequent discussion and dissensions on the recommendations therein. It is a measure of the political health of the nation that it should have not been dismayed at the prospect of a fundamental change in its political geography as soon after its consolidation as a political entity. Those who deplore the disturbance both because it is too soon and because it is, in some measure, a surrender to separatist tendencies, do not realise that political health consists in precisely this kind of resilience. It is true that the proposals have created in certain parts of the country widespread recrudescence of regional loyalties: but, here again, I believe that the exaggerated fears of the moment will prove to have been baseless once the current controversies fall into position when the final decision is taken. On the whole, India has had a year full of hard and rewarding work and looks forward to the future with a quiet confidence that few nations in the world can boast.

Madras Review

South Indian Notes

Accountants and Industry

At a meeting of the Madras Regional Council of the Institute of Chartered Accountants, Sir Chintaman Deshmukh spoke at some length on the very important role which Accountants should play in industrial organisations. He naturally foresaw large scope for employment for the rising generation of Accountants with superior qualifications, even going to the extent of indicating that every sizeable industrial unit should feel obliged to employ a Chartered Acccutant.

In the Madras Regional Council, which has the unique distinction of having a lady as its Chairman, must have been pleased to hear the Union Finance Minister's description of those who followed this profession as his natural allies. "I regard Chartered Accountants and Auditors and Cost Accountants and others like them as the natural allies of the Finance Ministers."

The Finance Minister, however, was not merely paying a jovial compliment to the profession. His real intention was presently explained. To the successful operation of the new Company Law and the various control measures which the Government are taking in step, the Accountans are in a position to make a vital contribution. Sir Chintaman explained how. Company managements, he pointed out in an undertone of humour, could well delude themselves with false ideas about the prosperity of their concerns. He wanted to protect both the proprietors and others from the bad effects of such delusive notions; and for this purpose, Accountants and Auditors would be of great help. They could present a realistic picture of the afiairs of the private industrial units in a way no one else could. He appealed to them to act faithfully, vigilantly and conscientiously and to bring to public notice any matter affecting adversely the interests of the shareholders or the public. In this, they would be assisted by the indirect protection received through the provisions of the Company Law. The investor is much more powerful today and it is he who appoints the Auditor.

*

Employment Wedded to Production:

In the course of his short stay in the South, the Union Minister for Industry and Commerce also made a few significant statements relating to the future pattern of industrial development and the ways in which the State intended to assist the different sectors. At a gathering in Madras City, Mr Krishnamachari gave his own impressions about the present state of India's economic health; on the whole, its production going up allround, and the country confidently set to a more ambitious Five Year Plan, he finds the general position satisfactory.

But this satisfaction is not allround. There is a feeling that the equilibrium achieved for the present is far from comfortable; he described it as a knife-edge equilibrium. He did not care to explain why it was so. But it could be presumed that he was thinking of the major contradictions in ideas and to the formidable difficulties which the planner had to contend with.

On two points he was seeking to give some unambiguous lead; one was land reform, and the other, the solution of unemployment. Though these were dealt with in a somewhat casual manner, the two together comprehend all the basic problems of the economy. For this reason alone, the ideas which the Commerce Minister gave expression to should be deemed of great significance. With reference to land reform, he could find no way out except through a spirit of sacrifice on the part of the better-placed in society.

The subject of unemployment and the manner of solving it was more cautiously handled. While emphasising the fact that no solution could be divorced from the prospect of increased production and consumption, he readily conceded that both capital intensive and labour intensive production could be resorted to, as there was no inherent antithesis between the two. It is understandable that the Commerce Minister did not care to proceed beyond this not altogether unescapist generalisation.

*

Loans for Small Industries:

Both the Union Finance Minister and the Commerce Minister stressed the importance of small-scale industries in the economy, and indicated the prospect of wider and more liberal financial and technical assistaence to enterprises, run either on an individual or on a co-operative basis. Certain broad conclusions from the statements of the two Ministers could be summarised.

The State Governments will soon start amending the State Aid to Industries Act, particularly the provisions stipulating the conditions for distribution of loans. In future, loans may be disbursed at 3 or less than 3 per cent interest, subject to a maximum of 50,000 to any single party. Small units may expect to secure as loans as much as 75 per cent of the value of the security offered, which would include the assets and stock-in-trade created out of the loan.

Even the man without any material security to offer can expect loans up to Rs 1,000, provided he can convince the authorities that he has the proper ideas and the talents to put them into shape. These small loans would require no more than personal bonds. Up to Rs 5,000 would be similarly disbursed on the surety of two other persons.

It was disclosed that the Government of India had during the last twelve months, made available about Rs 1.75 crores in such loans. The State Governments are called upon to set up investigation staff, preliminary to the actual disbursements of the loans, the cost of the organisation being shared by the Central and the State Governments, half and half.

Mr S. V. Ramamurthi, under the initiative of the Planning Commission, is now examining the methods by which the State Finance Corporations and the State Banks could participate in this form of assistance to small industries. Already the supply of machinery and equipment on hire purchase system has been undertaken by the Central Government. The scheme has proved very popular with small industries in several States.

*

Nationalisation of Banking:

During his recent tour of Madras, the Union Finance Minister found opportunity to discuss the immediate future of Indian Banking in some of its salient aspects. Addressing a group of City bankers, at a tea party held in his honour at Hotel Connemara. Sir Chintaman Deshmukh offered a few clues to the directions in which banking expansion is expected to take place in the years ahead. Private banking will feel generally re-assured by his affirmation that the Government have no intention to expand the field of nationalisation beyond the extent recommended by the Rural Credit Survey Committee. The Finance Minister was positive on this subject.

In further elucidation, he indicated that as long as the private sector in industry continued to function. private commercial banking was also entitled to stay. The argument is logical; but is not altogether unassilable. If, by implication, it were to be contended that a State-run commercial bank is not capable of appreciating the needs and requirements of private industry, it will be tantamount to a denial of any useful relationship between that banks and its constituents, drawn from private industry.

Sir Chintaman Deshmukh categorically stated that private banks alone would be in the best position to judge the credit-worthiness of the private sector. This appears to be too drastic a way of delimiting functions between commercial banks run under private enterprise and those run by the State. It would not be unfair even to go to the extent of pushing the logic to a position in which State banks should deal only with the public sector and private banks with the private. Actually, the two sectors in banking do not seem to operate nor or they intended to operate on the basis of any relative functional superiority; it is simply a matter of co-existence or mixed economy.

The pace of nationalisation is not predetermined, once and for all. As we have pointed out, on a previous occasion, the Government of India have not fully adhered to the recommendations of the Rural Credit Survey Committee in the matter of reforming the structure of commercial banking.

These are, however, largely academic reflections. For the time being, the private banks not covered by the recommendations of the Rural Credit Survey Committee are not even in need of any fresh assurance with regard to their immediate future. Because even the first phase of nationalisation has yet to be completed. And Sir Chintaman Deshmukh has not specified any particular period. He has also taken care not to overlook the possibility of the Government going beyond the limits of the Committee's recommendations in respect of nationalisation, in the event of special circumstances.

BRITAIN'S NEW CHANCELLOR OF THE EXCHEQUER

(Continued from page 18)

Possibly, the Prime Minister and the Cabinet, too, are now inclined to the view that the orthodox remedies of high Bank rate and credit restrictions are all very well—but they do not seem to meet present requirements. Indeed, there can be little doubt that Mr Butler has proceeded too far toward making sterling convertible in practice if not in law, and there is too much temptation for Continental countries to force their exports on Britain and resist their imports of British goods, for the sake of earning sterling. To the extent to which this is the case, a reversal of Mr Butler's policy of liberalising currency and trade is called for.

Mr Macmillan is, however, too good an economist not to realise that the Socialists are hopelessly wrong in contending that import cuts would solve the problem. To the extent to which the balance of payment difficulties are due to domestic inflation, import cuts merely mean that the demand caused by inflated domestic purchasing power would reduce the exportable supply of British goods, and at the same time it would tend to raise their prices, so that cuts in imports would lead to declines in exports, apart altogether from the possibility of retaliation by foreign countries. Ideological dogmatism in favour of import cuts would be even worse than ideological dogmatism against them. Mr Macmillan will have to find a "middle way" between the two extremes.

There is no reason to suppose that the change at the Exchequer would entail a change of attitude toward convertibility. During recent months, Mr Butler arrived at the conclusion that there could be no quesion of making sterling fully convertible for some time to come. He also turned against the idea of a floating pound. In this respect, and in many others as well, the continuity of the British economic policy is likely to be upheld.—(Copyright).

BENARES ELECTRIC LIGHT & POWER COMPANY LTD.

NOTICE is hereby given that the Fifty-fifth Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 30th January, 1956, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report and the Statement of Accounts for the half-year ended 30th June, 1955 and the Balance Sheet as at that date and to transact any other ordinary business of the Company. The Share Transfer Books of the Company will be closed from the 24th January, 1956 to the 30th January, 1956 both days inclusive.

By Order of the Board,
MARTIN BURN LTD.,
Managing Agents.

Calcutta.
The 6th January, 1956.

KANKNARRAH COMPANY, LIMITED

NOTICE is hereby given that an Extraordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office, 4, Clive Row, Calcutta, on Friday the Twenty-seventh day of January, 1956, at 12-25 o'clock in the afternoon to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions, namely:—

1. That the Articles of Association of the Company be altered in manner following:—

The following new Article 6A shall be added after Article 6:—

"6A. Subject to the provisions of these Articles, the Company shall have power to issue Preference Shares, carrying a right to redemption out of profits or out of the proceeds of a fresh issue of shares made for the purposes of such redemption or out of the sale proceeds of any property of the Company, or liable to be so redeemed at the option of the Company, and the Directors may, subject to the provisions of Section 105B of the Act, exercise such power in any manner they may think fit."

2. That the authorised Capital of the Company be increased from Rs. 70,00,000 to Rs. 95,60,000 by the creation of 25,600 Redeemable Cumulative Preference Shares of Rs. 100 each and that such Redeemable Cumulative Preference Shares shall confer on the holders thereof the rights and privileges set out in the Articles of Association of the Company.

3. That the Articles of Association of the Company be altered in manner following:—

(a) The first paragraph of Article 6, commencing with the words. "The capital of the Company.." and ending with the words.. "rights and privileges:" shall be deleted and the following substituted therefor:—

"6. The capital of the Company is Rs. 95,60,000 divided into 30,000 Ordinary Shares of Rs. 100 each, 30,000 "B" Ordinary Shares of Rs. 100 each, 10,000 Preference Shares of Rs. 100 each and 25,600 Redeemable Preference Shares of Rs. 100 each with the following rights and privileges:"

(b) After Article 6(b) the following new sub-clause (c) shall be added:—

"(c) The said Redeemable Preference Shares confer on the holders thereof the right to receive a fixed cumulative preferential dividend at the rate of 6 per cent. per annum without deduction of Income-tax on the capital for the time being paid up thereon and the right in a winding up to payment off of capital and arrears of dividend whether declared or not up to the commencement of the winding up pari passu with the 10,000 Preference Shares of the Company and in priority to the Ordinary and "B" Ordinary Shares, but shall not confer any further right to participate in the profits or assets of the Company. The said Redeemable Preference Shares confer on the holders thereof no right to vote at General Meetings of the Company except:

(i) on any resolution placed before the Company at a General Meeting at the date of which the dividend due or any part thereof remains unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of such meeting and for this purpose the dividend shall be deemed to be due half-yearly on the 31st day of March and the 30th day of September in each year in respect of the half-yearly periods ending on the preceding 31st day of December and 30th day of June respectively, whether or not such dividend has been declared by the Company; or

(ii) on any resolution placed before the Company which directly affects the rights attached to the Redeemable Preference Shares and for this purpose any resolution for winding up the Company or for the repayment or reduction of its share capital shall be deemed directly to affect the rights attached to such shares.

Where the holder of any Redeemable Preference Share has a right to vote on any resolution in accordance with the provisions of this Article his voting right on a poll as the holder of such share shall, subject to any statutory provision for the time being applicable, be in the same proportion as the capital paid up on the Redeemable Preference Share bears to the total paid up equity share capital, as defined in Section 85(2) of the Companies Act, 1955, of the Company for the time being.

The Company shall have the option to redeem the whole or any part of the said Redeemable Preference Shares at any time or times after the 30th day of June 1970 at a premium of five rupees per share on giving not less than three calendar months' previous notice in writing and such notice shall be sent by registered post or otherwise served as hereinafter provided specifying the date of redemption and in the case of partial redemption the number of shares to be redeemed and the date of the drawing hereinafter referred to. The paticular Redeemable Preference Shares to be redeemed shall be determined by means of a drawing; all such drawings shall be conducted by the Directors in the presence of a Notary Public and also such of the holders of the said Redeemable Preference Shares who care to attend."

By Order of the Board,
JARDINE HENDERSON, LIMITED.
D. FORDWOOD,

India's Tea- India's Wealth

EXPORT:
During 1954 India exported 450 million pounds of tea. This is more than 2/3 of her total production. Exports were directed to Great Britain, United States, Eire, Canada, Egypt, Continental ports, Turkey, Sudan, Australia, New Zealand, Iran and other countries.

No other drink refreshes you so much, yet costs so little as TEA

How banking serves the COIR INDUSTRY

INDIA is the world's chief producer of coir and coir products, her yearly output being around 130,000 tons. More than half this output is exported, earning about ten crores of rupees in foreign exchange. The coir industry, which is exclusively South Indian, is concentrated in Malabar and Travancore-Cochin, and employs over six lakhs of workers.

Banking has greatly helped in the rapid growth of this industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the coir industry.

We at Palai are proud that so many leading coir goods manufacturers of South India employ the complete banking service we offer.

Current Accounts — Demand Drafts — Telegraphic Transfers — Investments — Letters of Credit — Bill Collection — Deposits — Loans & Overdrafts — Confidential Credit Reports, etc.

★ ★ ★ ★

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi ; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

MMC revolving flat cards

are now being extensively used in Textile Mills in India.
Their efficiency is undisputed,
their reliability guaranteed.

Outstanding features

1 Five distinct setting points, used singly or in combination to control setting to .001 inch.
2 Johnson bronze bearings for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3 Ball bearings to licker-in pedestals.
4 Self - lubricating 'Olite' bearings at several locations.
5 William's patent stripping motion for flats.
6 Drop lever with new disengaging handle.
7 Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8 Cards can be geared for any production in a mill organization.

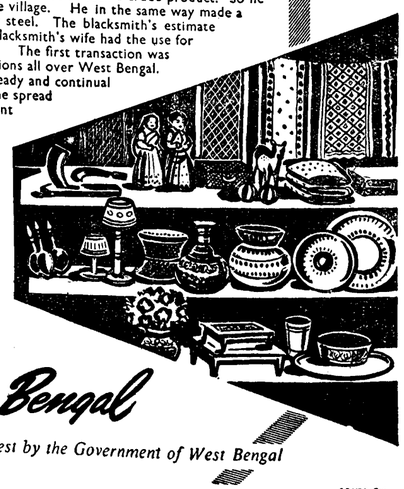
BETTER THAN BARTER
they exchange—spare time labour



The Government of West Bengal is experimenting a new programme for industrial extention in the State.

The first practical step to bring this novel scheme of "The Village Exchange" was taken on December 26, 1954 in an obscure village in the district of Birbhum. A carpenter carved out a small wooden lampstand in his spare time with a piece of waste wood. He estimated its price to be five annas but he could not sell it in the market because nobody in the village had five annas to spare and nobody outside was interested in such a crude product. So he took the lamp-stand to a blacksmith of the same village. He in the same way made a razor in his spare time with a piece of rusty steel. The blacksmith's estimate of razor, too, was worth five annas. But the blacksmith's wife had the use for the lamp-stand and the carpenter for the razor. The first transaction was quickly followed by many other similar transactions all over West Bengal. Every month since then has been a month of steady and continual progress. At the end of October the scheme spread over 920 villages in the Community Development and National Extension Service Blocks and as many as 4,969 artisans, craftsmen and other types of producers participated in it. The value of the articles and services exchanged amounted to Rs. 23,802. The additional wealth, thus created, would not be there were it not for the everexpanding Village Exchange plan.

This was a humble beginning but there was a more significant meaning behind the exchange with its insignificant value reckoned in money. It meant the release of the rural productive forces based on a new-wealth creating concept to —

build a Better Bengal

ARVES-E-1

For the Investor

Group Study

Investment Gossip:

A FEW weeks ago, I noticed that the de facto transfer in ownership of three jute mills had become a de jure change-over in management, and I was interested to see how the new management, Sahu Jain limited, would consolidate the position now that five years had passed since the first signs of the shift in ownership. I did not have to wait long. It was soon announced that two of the jute mills, Lothian and Albion would amalgamate with the third, the New Central jute mills. I need hardly say that mergers and amalgamations such as these are most welcome in stock exchange circles. And I have been wanting, ever since that announcement was made, to study For the Investor the performances of these companies since the de facto acquisition of Lothian, Albion and New Central by Sahu Jain Limited.

Once I commenced this study, I found that there was an even more important analysis that I should make For the Investor. For, if the change in ownership of the three jute mills is of but restricted interest, of much more moment has been the destiny of three sets of companies in Indian stock exchanges. These are what I mightly loosely term as the Sahu Jain group, the Mundhra group and the Birla group. In recent times —and here I mean a period of the past 18 months—activity on the stock exchanges generally has tended to be quite exciting.

The biggest gains were recorded in these three groups. The question occurred to me, as it would have to other people, whether the basis for the extra modicum of activity in these three groups was not due, in stock exchange parlance, to interested purchases. In this view, I have, for some days past, been collecting material which would enable me to present the case history of each of the three groups. In subsequent weeks, I hope to present special studies on the Birla and Mundhra groups. In this issue, because all my material is complete, an Investment Study on the Sahu Jain group For the Investor.

£R$

Sahu Jain Industries

Investment Study

The group known as Dalmia Jain with associate Companies on partnership among Mr R. Dalmia, Mr J. Dalmia and Mr S. P. Jain split into three distinctive and separate organisations in 1948 as a result of a good-will partition and the different Companies went under the individual control of the respective persons. Each of these Companies has been under the sole and absolute management of the respective persons without any inter-connection of investments as such, excepting what might have taken place in the nature of any business transaction in the ordinary and normal course. This partition was not an arrangement of convenience and for all purposes they became different and separate. The following companies formed the group under Mr S. P. Jain:

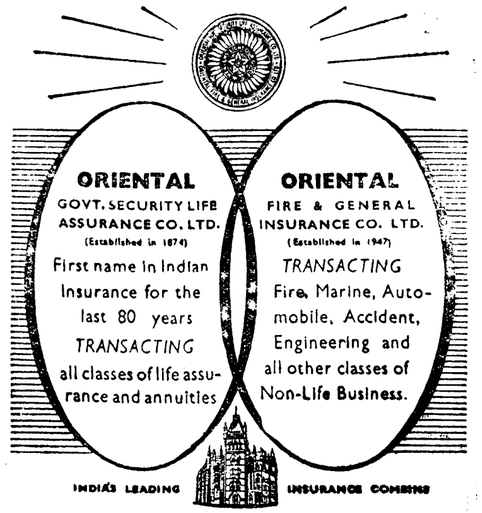
Rohtas Industries Ltd.
SKG Sugar Ltd.
Bharat Collieries Ltd.
Dehri-Rohtas Light Rdy. Co. Ltd.
Bharat Bank Ltd.
Dhrangadhra Chemical Works.

The interests in the Jute Mills; (New Central, Albion and Lothian.)

It is the progress of the group of Companies under Mr Jain in the last seven years that we shall be studying. The study indicates that there has been steady expansion and modernisation; and the share quotations reflect the growing public recognition of the shares as worthy of remunerative investment.

In 1950, Sahu Jain Ltd came into being, and this Public Limited Company holds the Managing Agency of the industrial units in the group. Today, there are 3 sugar factories, 2 cement factories, 1 paper factory, 5 collieries, 3 Jute Mills, a Chemical section, an Asbestos Cement Plant, a Vanaspati plant, a plywood factory, printing press and newspapers in the group.

Finding its banking operations becoming increasingly difficult due to various factors, the Bharat Bak transferred the banking business to the Punjab National Bank by mutual agreement. Bharat Bank became an investment company under the name and style of Bharat Nidhi Limited.



Expansion and modernisation of various manufacturing units has been carried on steadily; and the programmes, as indicated from year to year in the Directors' Reports and/or the Chairman's speech of the respective Companies, have been completed according to schedule. The fulfilment of such expansion and modernisation programme has, as is evident in the working results of the Companies, added to the efficiency, increased production and improved earnings; this, in turn, is reflected in the increased market assessment of the shares of the respective Companies. The figures shows that, over a period of seven years, there is improvement in the working of the Companies not only as compared with their own previous performance but with the performance of similar Companies in the field.

Rohtas Industries form the biggest section in the Group. The total paid-up Capital of Rohtas, including the recent issue of ordinary share capital at par, is Rs 3.33 crores. The profit before depreciation, which was Rs 18.5 lakhs in 1948, has increased six-fold to Rs 1.10 crores in 1953-54. Market expectations are that, with the steadily improving production of the units, especially Cement and Paper, consequent upon expansion and modernisation, the profit for the year ended October 1955 will be much more.

The Sales turnover has more than doubled since 1948: from Rs 3.09 crores, it has risen to Rs 6.71 crores in 1953-54. This has been due to expansion and resulting increase in production. With the different units—Cement, Paper, Sugar and Chemicals—fully contributing toward higher production not only the total sales turnover, but the net working results should show further improvement in the coming years.

It is certain that the resulting increase in efficiency; the economy in consumption of raw materials, chemicals etc. through modernisation by way of replacement by modern equipment; and the new additions will all ensure a reduction in production costs.

The finance of over Rs 3 crores required for modernisation and expansion is being found from internal resources, the recent issue of

HIGHLIGHTS

Three Little words: in unity, strength. Quite true, too.

Particularly is this so if we apply the adage to coal. The weakness of this industry has been the small colliery.

As with many things of which we have more than we should like, so with the small collieries.

More. As this week's Special Study says, there is a legion of owners for the mushroom number of companies.

The cynic may assert that the secret of success lies in excess; but this most certainly is not true of coal prospects, when we reckon the number of collieries.

It is recognised on all hands that, for optimum working, a scheme whereby the small collieries will be formed into larger units is needed.

Unfortunately, those that are at present concerned in examining this question of amalgamation are discovering that the "voluntary" sort may be impracticable, while that of the "legislated" genre may be disruptive.

In analysing the coal industry's problem child—the small colliery—we have indicated a scheme that could bypass the disruption that amalgamation possibly might bring in its wake. For the reader, then, this week's Special Study.

right shares and a loan from the Industrial Finance Corporation of India. It is not expected that the Company will need to go in for additional capital from the market for all the programmed expansions.

We may now consider individually the various sectors of production. First, paper.

Output of paper in 1948 was 8,200 tons. The present output is of the order of 27,000 tons. Over a period of seven years, there has, thus, been more than a three-fold increase in the output. The installation of additional machines and plants for the manufacture of new varieties of papers and boards not so far made in this country will push up production of the Rohtas paper factory to 55,000 tons by the end of 1956.

When the modernisation of Machine No 1 is completed, the total output from all the six machines and the Coated Boards plant and Vulcanised Fibre Board plant should be around 60,000 tons. Taking into account the expansion programmes of the paper industry in this country, Rohtas Industries will, on completion of expansion plans, become the largest producer in the country. They are already the largest—if not the only—manufacturers in respect of certain varieties of Boards and paper. I gather that the policy of Rohtas Industries has been to undertake manufacture of new varieties of papers and Boards, for which the country was and is depending on imports and to specialise in the production of such varieties.

A pioneering effort of significant national importance is the successful utilisation of Bagasse, a waste product of the sugar industry, as industrial pulp for paper making. This has evoked interest in many parts of the world; specialists from the continental countries and elsewhere have visited the Rohtas Bagasse Pulp plant, which can claim to the first and only one of its kind in India and the second in the world. Sustained research work and experiments had to be conducted. Consequently, it is to be presumed that the total expenditure in putting up the plant and perfecting the manufacturing process has been quite heavy—perhaps, very much more than the actual cost of the plant. Having regard to the fact that bamboo and grass supplies will be inadequate to meet the ever increasing demands on our paper industry for varieties of papers and boards, Bagasse will, in supplementing forest produce, be a valuable addition to industrial raw materials.

Another significant advantage is fuller utilisation of the chlorine that is produced in the Chemical section from Caustic Soda. Thereby, that which would have gone to waste is being saved. Moreover, it enables a reduced consumption of Caustic Soda by the paper factory, and makes a larger quantity of the chemical available for sale in the market. This has made possible an increase in the capacity of the Caustic Soda Plant by the addition of Mercury cells with electrical equipment which will produce Caustic Soda of Rayon quality.

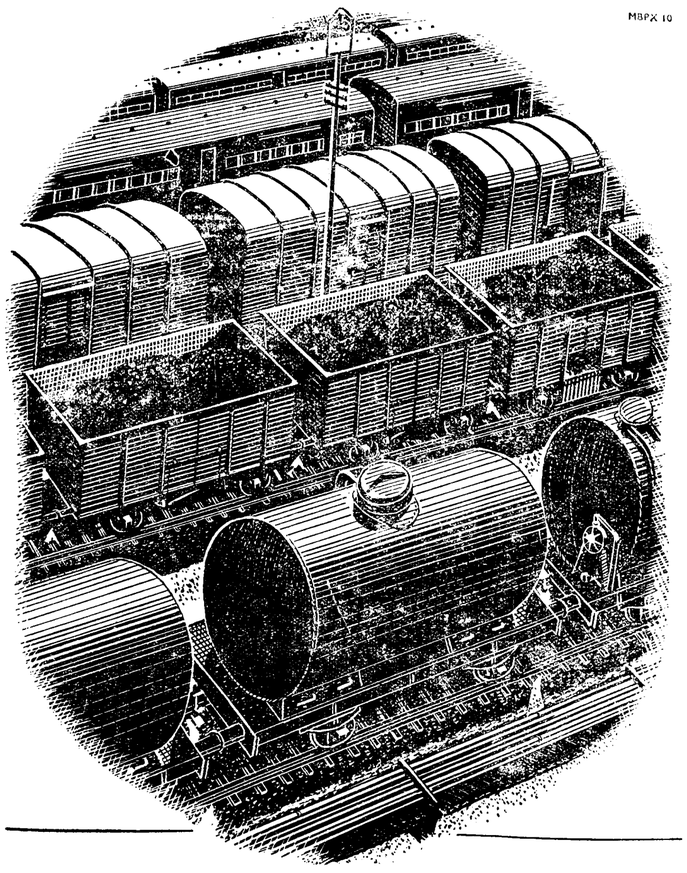
A five-stage bleaching equipment added to this section will give the pulp a colour that will not deteriorate and improve the quality of paper, giving it a whiteness of lasting character.

Rohtas Pulp section has also a mechanical wood pulp section, and successive experiments in regard to wood pulp have given Rohtas Industries an enviable experience in Indian timbers. A Research Laboratory has been established in Dalmianagar to work on Cellulose Pulp with a view to discovering a widening range of industrial raw materials for the paper industry.

Cement: During the last seven years, the cement capacity has been doubled from 1.75 lakh tons in 1948 to 3.50 lakh tons in 1952-53. The second kiln started production in 1950; and it was further modernised in 1953. The first kiln has been modernised on the lines of the second kiln, and the current rate of output of the cement factory is about 3.75 lakhs tons per year.

Sugar: The sugar factory has a capacity to crush 1,800 tons of sugarcane per day. It is the biggest single unit in the country. Non-availability of adequate supplies of sugarcane has been a serious problem. In 1954-55, steps were taken to have additional railway sidings and new line to augment the supply of cane.

Central Workshop: Rohtas have had a well-equipped Central Workshop for making the various spare parts and items of small machinery for the different manufacturing units. During the war years, it fabricated the Vanaspati plant, and the quality of the machinery has been favourably commented upon by experts from abroad. The workshop also manufactures paper factory machinery like pulp cleaning device and paper refiners which were hitherto being imported. The new workshop that is being put up will be able to manufacture such items of machinery required for the cement and paper industries.



Technical apprentices and Practical Training: The advantage of having a cluster of manufacturing units at one place has attracted students from Universities in India and neighbouring countries for training. Every year, batches of students have their practical training in the various units of Rohtas Industries.

The Company selects students as apprentices with a view to absorbing them eventually in the organisation. These apprentices receive complete training in all the units under the expert personnel of the organisation. After training, selected apprentices are sent abroad for higher practical study. At the present time, when there is dearth of trained technicians, this scheme will contribute in no small measure toward providing trained personnel for the growing needs of industrial expansion.

Investment Notes:

All interest on Dalal Street is concentrated on the likely terms of the rights issue that is impending in respect of Tata Iron & Steel Company. It is known that the controversy that has been raging has been as to whether or not the shares should be offered at par.

The reports are that Government are disposed in favour of a premium issue—though what the premium should be appears uncertain.

On the other hand, all other opinion favours the issue at par.

It may be suggested that Government should, if they insist on a premium issue, also make it clear that the company will be enabled to earn higher profits and that, thereafter, it will also be permitted to pay a dividend on the rights share in consonance with the premium.

OF all the sections on the Calcutta Stock Exchange, Coal has presented a bright picture following the sudden change in the attitude of the Planning Commission toward the private sector. There is a belief that the private sector is likely to be asked to increase production by more 8 million tons. Moreover, the private collieries have assured the Government that they will be able to attain the target assigned to them in the Second Five-Year Plan.

Thanks to better prices obtained at the last two auctions, the selling pressure in Tea shares has, at last, abated. In view of the existing conditions of the tea market; it should be said that the Calcutta Tea Regulation Committee has acted well in deciding upon adoption of a scheme for regulation of the tea crop in the current year. There is, however, a general inclination on the part of operators to await further developments before extending commitments.

The subscription list for Ordinary shares of the National Carbon Company (India), Limited is closed. Applications are reported to have been heavy and the issue has probably been subscribed several times over.

It is understood that Polychem Limited has obtained sanction from the Controller of Capital Issues for the issue of Rs 20 lakh worth of Ordinary shares to the public. The factory is expected to go into production either by the end of this year or early next year.

It is learnt that the 6½ per cent Debenture, issued by the South India Tea and Coffee Estates Limited for Rs 2 lakhs, has been heavily over-subscribed and the list has been closed.

Excellent Results Reported by ACC

Balance-Sheet Reviews:

THE Associated Cement Companies Limited has produced excellent working results for the year ended 31st July, 1955, thanks to modernising the plants so as to maintain output and efficiency of production. Sales for the year are substantially higher at Rs 21.23 crores as against only Rs 17.13 crores in the previous year, while the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 5.37 crores against Rs 3.91 crores.

With regard to allocations, the Depreciation amount has been raised to Rs 1.07 crores from Rs 85.67 lakhs and Taxation to Rs 2.14 crores from Rs 1.34 crores. A sum of Rs 55 lakhs has been set aside to Plant Reinstatement Reserve as against Rs 50 lakhs in the previous year. Of this amount, nearly Rs 49 lakhs has to be so set aside in consequence of the Rehabilitation Allowance of Rs

2 (net) per ton included in the selling price of cement as sanctioned by the Government of India. It is anticipated that even larger amounts will be required during the coming years to cover expenditure under this head adequately.

A sum of Rs 20 lakhs has been set aside to Development Reserve. Under recent Tax Legislation, a Development Rebate equal to 25 per cent of the cost of new plant and machinery installed is allowable in determining assessable profits. This allowance results in a saving of Income-Tax and Corporation Tax on the amount of such Development Rebate. The provision made for the year under report in respect of taxation stands abated, therefore, by the saving in tax, which is about Rs 20 lakhs. Since the Development Rebate is granted to enable development of industries, the directors have thought that it will be appropriate that the tax thereby abated should be retained in the business.

Even after these increased allocations, the directors have found it possible to raise the dividend to 10 per cent from 8½ per cent paid in the previous year.

The balance-sheet, as at 31st July 1955, shows a new reserve account of Rs 84.58 lakhs under the title 'Capital Reserve'. This is mainly due to the result of the amalgamation of the Patiala Cement Company. This amount mainly represents the Reserves of that company taken over as a going concern on amalgamation.

According to the Director's report, the construction of the new Cement Works at Sindri has nearly been completed; and its first unit, with an annual production capacity of one lakh hans, was commissioned in September, 1955. A second unit, which will add a further one lakh tons to the capacity of this plant, it is hoped, will be in production by the end of 1955. The construction of a new factory at Mancherial, in Hyderabad State, has been taken in hand and work is progressing satisfactorily.

In order to meet the requirements of the Bhakra Dam, the annual manufacturing capacity of the Bhupendra Cement Works was extended from 2 lakhs tons to 3 lakhs tons in 1951-52. The factory is now in a position to make 4 lakhs tons a year as soon as the necessary power becomes available.

Also, during the year, steps have been taken to increase the production capacity of the Chaibasa Plant, which will lead eventually to an output of 3 lakh tons per annum.

The Government of India have announced a target of 12.5 million tons of cement production, to be brought into effect during the course of the Second Five-Year Plan. On the completion of the expansion programme, the company's installed capacity will be a little over 5 million tons per annum. This will entail very heavy capital expenditure, a part of which will be met from the internal resources of the company and borrowings from the State Bank of India on the security of Debentures.

It has, therefore, been decided to place a proposal before the shareholders to issue further capital to the extent of Rs 6.36 crores and to offer the same to the existing shareholders for subscription in the proportion of one new share at par for every two shares held. This is subject to the consent of the Controlier of Capital Issues.

Dividend Raised by Rewa Coalfields:

Rewa Coalfields have reported an appreciable increase in both raisings and despatches during the half-year ended 30th June, 1955, thanks to the improvement in the wagon supply position and the relaxations on some of the routes.

Raisings for the half-year are higher at 164,865 tons as against 158,272 tons in the previous half-year and despatches at 162,787 tons against 152,840 tons. Sales have improved to Rs 23.55 lakhs from Rs 22.10 lakhs, while the net profit, before Taxation and Depreciation, amounts to Rs 3,98,565 against Rs 2,14,731. The directors have, after setting aside Rs 1.35 lakhs (Rs 45,000) and Rs 83,549 (Rs 87,674) for Depreciation, have raised the dividend to 8¾ per cent from 6¼ per cent. In view of the satisfactory working results, the directors have also allocated a sum of Rs 50,000 to Development Reserve.

Insurance in 1954

LIFE insurance business in India reveals an excellent record for the year 1954. New business during the year amounted to nearly Rs 230 crores, representing an increase of over Rs 75 crores on the business written in in the previous year. Of the total business, as much as Rs 213 crores was secured by Indian insurance companies. These figures speak for themselves.

What is specially significant is the sudden jump in new business from the average of all the previous post-war years. Between 1945 and 1953, new life business had been fluctuating within the comparatively narrow limits of Rs 135 crores ad Rs 155 crores. Strangely enough, barring 1947, this period was also characterised by annual ups and downs. Since 1948, no two years had registered successive increases in new business. The experience for 1953 and 1954 marks a striking departure; business during 1953 was substantially higher than in 1952; and 1954 saw a phenomenal leap forward. If at all insurance were to be taken over by the public sector, it would certainly not be for the reason that the performance of companies in the private sector was unsatisfactory; they can boast of a creditable record.

The fact that the entire increase went to Indian insurers has to be taken as a general indication of preferences. Actually, the foreign companies have secured a little less in 1954 by way of new business than in the previous year, though the difference is negligible.

The Controller of Insurance explains that part of the increase recorded for 1954 is attributable to the tendency to make old policies paid up with a view to avail of the reduced rates of premium. Even allowing for this conversion, it is clear that the insurance companies have succeeded in attracting savings at a much higher rate compared with that of the increase in small savings with the Government.

The reduced rates of premium must have been the largest contributing factor to the increase in business; and this reduction has been to some extent facilitated by the improvement in mortality experience and the increased yield on insurance funds. Here, we have to sound a note of warming. While the first circumstance is not likely to have any adverse repercussions the average person's preference for an insurance policy as against other forms of investment, the prospect of securing a higher interest yield on investment may well become an effective counter-attraction. A more stable trend has to be awaited before any final conclusion can be drawn on this aspect.

A large and more widely dispersed insurance business does betoken growing economic consciousness among the people. Unfortunately a break-up of annual business on the basis of policy amounts or of the income-levels of the insured is not available. However, on a rough calculation, it is seen that the average amount of a policy in 1954 is around Rs 3260, against Rs 2760 in the previous year. While this difference is agreeable, it does not provide a clue to any possible change in the relative importance of income groups in the coverage of business.

Another heartening feature is the decline in the ratio of lapses. As against 8.9 per cent in 1953, this ratio stands at 8.5 per cent in 1954. But even at this figure, it is high.

It is on the expense side that Indian insurers still show themselves in a comparatively unfavourable light. Average total expenses of management for the year work out at 29.3 per cent for the Indian companies, against 21.4 per cent for the non-Indian. For both, the rate of expenditure in relation to premium income was higher than in 1953, when it was 27.4 per cent for the Indian companies and 20.7 per cent for the non-Indian companies.

A good proportion of the Companies, both Indian and non-Indian, are found to be unable to conform to the official limits laid down for expenses. As many as 28 Companies have contravened the concerned provisions, for all the three evaluation years. When there are a sufficiently large number of Companies, which are able to restrain expenses below the basic limits, it should be worthwhile for the Controller of Insurance to examine how the latter proportion could be steadily increased. Those who confine themselves to life insurance are most numerous among the offenders against the expenses provisions, and the purely general insurers the least so. It is also found that a larger number of life insurers who had previously spent less than the basic limits of expenses were obliged to spend more in 1953.

From the standpoint of the public, it is regrettable that insurance companies should withhold payments without any material reason. Disputes in this regard are on the increase, and naturally, the Controller has deprecated the habit.

Peaceful Co-existence in 1956: Two Interpretations

BY SIR ROBERT BRUCE LOCKHART

THOUGH Soviet short-term policy is opportunistic Soviet long-term policy has two aims: one, to obtain the withdrawal of American forces from their European and Asian bases, and, two, to ensure the universal triumph of Communism. The second aim becomes more feasible after the attainment of the first.

The Soviet Government, which regards Moscow as the capital of Communism and injects into its world policy a strong element of traditional Russian imperialism, is unlikely, for some years to come, to seek the achievement of either or both of these aims by war. The dogma or policy recognies an indeterminate period of what is caled "peaceful co-existence".

If we assume that the Wet will never wage an aggressive war and tha the Sino-Soviet bloc does not, in its preset mood, desire a third world war, it is clear tat, as regards the future, much depends on he interpretation given by both East and Wet to the adjective "peaceful". Since 1945, apart from localised wars, there has been co-exstence with a cold war. Can any advance be ade in this coming year from the cold wa to peaceful co-existence?

The answer is not easy, and the first essential both for the West ad for the neutral world is to realise that between the Western and the Eastern attitudes owards peaceful co-existence there is a chasm which so far no one has been able to bridge.

By peaceful co-existence the West means a truce to the cold war, a genuine reduction of all armaments, the opening of frontiers to trade and travel, and a reciprocal agreement on non-interference in the internal affairs of other countries. If Soviet ambassadors report accurately—and this is uncertain—it can be assumed that the Soviet Government is well aware that no one in the West ever dreams of attacking the Soviet Union. It can be said that all the peoples of the West have a much clearer knowledge of the destructive powers of the H-bomb than has ever been vouchsafed to the peoples of the Soviet empire. Although the Soviet propagandists continue, for internal purposes, to denounce the Western Governments as "warmongers", it is precisely the West which realises that in the atomic nuclear age the choice is not between peace and war, but between some form of co-existence and no existence at all.

Given honesty and good will, there should be no obstacles to such an agreement between the West and the Soviet Union. Admittedly, the satellites are in a somewhat different position. When Soviet writers attack Sir Winston Churchill for his alleged anti-Soviet bias, they forget how, even before the end of the war, Stalin, with the most cynical disregard for his pledges, began to seize all the vantage points of Europe and to impose by force the pattern of his own ruthless regime on peoples for whose liberation the West went to war.

No one knew at the time what percentage of these local populations approved these violations. Today, no one can say for certain how many people are genuine supporters of the Communist regime in the satellite countries, but the tangible evidence provided by the Communists themselves indicates that the percentage is small. Where governments enjoy the support of large majorities they do not need to ban free speech, to maintain large forces of secret police, to take extraordinary measures to prevent news from outside from reaching the people, and to permit only one type of newspaper and one form of broadcasting. Yet these are the props of Communist government in all the satellite countries, and it is fair to assume that the dislike of such regime is strong. Unfortunately, the dislike can have only very limited means of manifesting itself, for the Communist Party claims to rule on behalf of the people until they are sufficiently advanced to rule themselves, and, as the Party will always be in advance of the people, it can be ousted only by another revolution.

In these circumstances it would be difficult for the West to refrain from correcting the lies which the Communists spread deliberately about the West throughout the satellite countries. On the other hand, it is almost impossible to imagine any situation in which the

West would go to war in order to liberate a satellite country, although many Western people would like to see the satellite peoples free again. In the West, policy is largely governed, not by fanatical dogma but by what is possible.

The attitude of the Soviet Communists is entirely different. To them peaceful co-existence is a temporary period during which the disintegration of capitalism must be promoted by all means short of war. These means include the creation of economic difficulties and of political divisions not only between the member-States of the Western alliance, but also between the different classes of people within each individual member-State.

In 1954, Political Economy, a Soviet text-book published in that year, expressed the hope that capitalism might be exterminated without the final armed conflict prescribed by Marxism-Leninism, provided that the peoples of the non-Communist countries "took the cause of peace into their own hands". This expression was Stalin's double-talk for urging the proletariat in the non-Communist countries to revolt against the bourgeoisie. In this connexion it should be noted that the term "bourgeoisie, once applied only to the middle classes, now covers all non-Communists including, not least, the Social-Democrats, who are today the unforgivable enemy.

More recently, however, discussions in Soviet periodicals reveal a return to the original conception of a final conflict. Certain Soviet theorists now hold the view that, whereas revolution by internal subversion succeeded beyond all hopes in Czechoslovakia, it might fail in a Western country. They therefore insist that, if such a revolution were to break out in the West, the Western revolutionaries should receive active aid from the Soviet Union.

Party dogma also makes a distinction between what is called an aggressive war and a "liberation war". It is true that hitherto the expression "liberation war" has been used to connote revolts in Asia and in Africa, but it could and would be applied very quickly to any large-scale revolution in a Western country. In plain language, the Soviet Government foments and encourages national and revolutionary aspirations abroad and suppresses them rigorously among the minority peoples of its own empire.

Holding these beliefs, the Soviet Government is unlikely to go far along the road of disarmament. It desires to abolish all nuclear weapons, but is determined to maintain its superiority in conventional weapons. In this regard its proposals for the proportional reduction of armaments merely guarantee the preponderance of Soviet strength. In its propaganda it endeavours, not altogether without success, to create the impression that the nations of the West are the aggressors. Yet, as Sir Anthony Eden said recently, "the West disarmed after the war. How different it would have been if Russia had followed this practical example. Instead, the Russians increased their armed strength and, long before any system of Western defence was as much as a plan on paper, they had built up great military power in the satellite countries far beyond the terms of the peace treaties".

This remains a fundamental truth, and, in regard to it, nothing could be more foolish than to ignore the Machiavellian elements in Soviet policy; the conviction that force settles all, that concessions are merely weaknesses to be exploited, and that in politics, hate is stronger than love.

So long as the Soviet leaders continue to promote the universal triumph of Communism, peaceful co-existence in the Western sense is a delusion. It may be that with the passage of time the new privileged class of Soviet bureaucrats, managers and military officers, created by the Stalin counter-revolution, will abandon dreams of conquest in the hope of perpetuating their gains both for themselves and for their progeny.

Until this day comes, the West will do well to consolidate its unity and its strength which are main guarantees of co-existence with or without the qualification of "peaceful".

Law for the Layman

Article 286 of the Constitution and the Taxing Powers of States

BY K. N. VISWANATHAN

THE impact of article 286 of the Constitution on the powers of States to levy Sales Tax under their respective Sales Tax Acts was recently considered by the Supreme Court in Ramnarain Vs. Assistant Commissioner of Sales Tax, reported in (1955) S.C.J. at page 808.

Before placing the authoritative interpretation of the Supreme Court of Article 286 of the Constitution vis-a-vis the taxing powers of States, the facts of this interesting case may be briefly noticed. Messrs. Ramnarain and Sons were registered as dealers under the Central Provinces and Berar Sales Tax Act 1947. They carry on business at Amaravati and other places in Madhya Pradesh as merchants. They were also functioning as buying agents for certain cotton mills situate outside Madhya Pradesh. Their work being to purchase for and on account of the mills outside Madhya Pradesh, raw cotton in Madhya Pradesh and after processing it send it on to the mills outside Madhya Pradesh. These purchases amounting to Rs 72,86,454-5-10 were included in the turnover of Ramnarain and Sons by the Assistant Commissioner of Sales Tax and the firm was directed to pay sales tax on these transactions, of Rs 1,13,850-13-6. The firm appealed against the assessment to the Commissioner, Sales Tax, Madhya Pradesh.

The Commissioner reduced the tax to Rs 25,000. Thereupon the firm applied to the Nagpur High Court by Writ Petition to quash the order of the Commissioner entirely. The Nagpur High Court held on a construction of the relevant provisions of article 286 (1) and article 286 (2) that it would be making the proviso to article 286(2) nugatory if it was held that article 286(1) overrides it and takes away the taxing power of all states in inter state trade or commerce except the delivery state and therefore dismissed the petition.

Reversing this decision of the Nagpur High Court, the Supreme Court held that the state of Madhya Pradesh could not on the facts of the instant case levy sales tax on the dealings of the firm. Their Lordships applying the test in explanation to Article 286(1)(a) of the constitution to the transactions in the instant case, hold that the transactions were outside transaction so far as the State of Madhya Pradesh was concerned, and therefore the State of Madhya Pradesh cannot levy the sales tax on these transactions and the tax so levied is illegal and the assessments should be discharged.

The Learned Judge Mr Justice Bhagvathi, who delivered the majority opinion of the court in the instant case, elucidates the legal character of the explanation to article 226(1)(a) thus: "As held by the majority Judges in The Bengal Immunity Co's appeal the bans imposed by article 286 on the taxing powers of the States are independent and separate and each one of them has to be got over before a State Legislature can impose tax on transactions of sale or purchase of goods. These bans have been imposed from different view points, and even though the transactions of sale or purchase may in conceivable cases overlap so far as these different view points are concerned each of those bans is operative and has to be enforced. So far as article 286 (1) (a) is concerned the Explanation determines by the legal fiction created therein the situs of the sale in the case of transactions coming within that category and when a transaction is thus determined to be inside a particular State it necessarily becomes a transaction outside all other States. The only relevant enquiry for the purposes of Article 286(1)(a) therefore is whether a transaction is outside the State and once it is determined by the application of explanation that it is outside the State it follows as a matter of course that the State with reference to which the transaction can thus be predicated to be outside it can never tax the transaction. This ban is effective independently of the fact that the transaction may also have taken place in the course of inter State trade or commerce or with reference to goods as have been declared by Parliament by law to be essential for the life of the community. The ban imposed under Article 286(2) is an independent and separate one and looks at the transations entirely from the point of view of their having taken place in the course of inter State trade or commerce. Even if such transactions may also fall within the category of transactions covered by Article 286(1)(a) and the explanation thereto or Article 286(3) the moment Article 286(2) is attracted by reason of the transactions being in the course of inter State trade or commerce the ban under Article 86(2) operates and such transactions can never be subjected to tax at the instance of a State Legislature except in so for as Parliament by law may otherwise provide or such power of taxation is saved by the President's order contemplated in the proviso. The ban under Article 286(2) may be saved by the President's order but that does not affect or lift the ban under Article 286(1)(a) read with the explanation".

The Learned Judge also gives the following illustration which further clarifies the scope of this provision in the constitution. "Suppose the goods are in the State of Madhya Pradesh at the time the contracts of sale of those goods are made in, say, the State of Bombay. Suppose further that the property in the goods has by reason of such sales passed in the State of Bombay but the goods as a direct result of such sales have been delivered for consumption in the State of Madras. According to the Respondents, the President's order made under the proviso to Article 286(2) saves the transactions from the ban of Article 286(61)(a) read with the Explanation. Then the State of Madras will be able to tax by virtue of Article 286(1)(a) read with the explanation or on the nexus theory by reason of the goods being delivered there for consumption; the State of Bombay will be able to tax because the title to the goods passed there: and the State of Madhya Pradesh will also be able to tax under the Explanation II to section 2(g) of the Act because the goods were in the State of Madhya Pradesh at the time when the contracts of sale were made in the State of Bombay. Nobody will say that the Constitution-makers intended to perpetuate multiple taxation of this kind and yet that will be the result if we were to accede to the arguments advanced by the respondents".

To sum up, once a transaction of sale or purchase is determined to be outside a State, as per the explanation to Article 286(1)(a) of the Constitution, the State with reference to which the transaction can thus be predicted can never tax the transaction.

Problem Child—The Small Colliery

Amalgamation—The Answer?

An Indian Finance Special Study

THOUGHTS on coal in the Second Plan have become more crystalised in recent weeks. Opinion in New Delhi is that Government today are even less dogmatic about the ceiling on production of coal in the private sector. At the same time, however, authority has made it known that it has by no means reconsidered its earlier decision not to give any specific undertaking on the issue of nationalisation. What is heartening is the fact that the private sector in coal has understood the difficulties that stand in the way of Government giving any specific guarantee against nationalisation. Consequently, in this realisation, the private sector is quite satisfied with the assurance that has been given in regard to compensation for any development that may have been proceeded with, and is actively planning to raise production in consonance with the demand for coal in the Second Plan. Now that the issue of nationalisation can be expected no longer to disrupt or delay development work aimed at increasing production, it is proper that a study is made of one of the prime requisites of the coal industry. This requisite is the amalgamation of smaller collieries.

Office Memorandum

For some two months now, this question of amalgamation has been engaging the serious attention of Goverment. For, the existence of small collieries is responsible for border seams of coal which it is, under the present circumstances, not possible to work. That Government have not been inactive in this matter may be gleaned from the Office Memorandum that was issued by the Ministry of Production some 8 weeks ago. This memorandum read:

> "The question of amalgamation of a large number of small and irregularly shaped collieries, existing particularly in the Bengal and Bihar Coalfields, has been engaging the attention of Government for some years past. These small collieries which have resulted from various causes the principal amongst which is the practice of Salami, tend to be uneconomic and wasteful with certain exceptions. They generally do not permit of scientific planning development and mechanisation and such fragmentation also results in loss of coal in barriers. The question was examined at length by the Indian Coalfields Committee (1946) and subsequently by the Working Party for the Coal Industry (1951). Both these Committees have strongly recommended that such colliery units should be amalgamated in the interests of the country. The Coal Industry has been consulted and they have agreed that such amalgamation is desirable and a Committee should study the position in the Raniganj and Jharia Coalfields and work out definite proposals. The Government of India are, therefore, pleased to constitute a Committee to examine the various issues involved and make recommendations."

The Committee so formed was an efficient one, and it was fully representative of both Government and the private sector in coal. The terms of reference of the Committee were as follows:

(i) to examine the position of the small collieries in Raniganj and Jharia Coalfields and to make proposals for their amalgamation into single economic units taking into account the areas of holdings, the current output and capacity of the collieries, geological and geographical and other relevant features, the need for efficient and economical production, conservation and preparation of coal by such process as washing etc.

(ii) to consider the objective in relation to existing State legislation and to suggest whether Central legislation will be necessary for carrying out amalgamation, and if so, to recommend the content of such legislation.

Committee Discussions

Thereupon, the Committee on the amalgamation of collieries, as it became to be known, issued two sets of questionnaires. One was addressed to collieries, while the other sought answers from organisations, experts, etc. connected with the coal industry. But, before we suggest what the correct approach to amalgamation should be, it is useful to take note of the opinions expressed in this matter at a meeting held in June last year. This meeting, called by the Coal Commissioner, was fully attended by representatives of the coal industry. Mr R. K. Ramadhyani, the Chairman, efficiently ensured that discussion was on constructive lines. It may be recalled that the amalgamation of collieries is, in principle, quite accepted by the representatives of the industry.

What, then, should be the steps taken to bring about that amalgamation which would create large production units in place of the presently existing small collieries? By indicating that this was the question for which the meeting must strive to find an answer, Mr Ramadhyani at once brought full attention to bear on the really important issue at stake. The Chairman's own opinion is understood to be that the minimum level of production per unit should be around 20,000 tons a month. It is apparent that, with production at such a level, the unit would be in a better position to put up a stowing plant, washing plant, to improve its facilities for labour, and, finally, to take more effective steps for mechanisation and scientific and methodical exploitation of reserves of coal. But Mr Ramadhyani also made it clear that the figure of 20,000 tons was not the all important basis for amalgamation. It may not be fruitful to amalgamate small collieries in isolated areas.

Industry's Viewpoint

Mr B. L. Agarwalla, as representing the Indian Colliery Owners Association, gently suggested that, previously, the reason advanced for amalgamation had been the loss of border coal. Thus, the suggestion that large units were to be fostered because they enabled mechanisation, etc. was an entirely new proposition. But this Association would fully support amalgamaton—if amalgamation was in the national interests.

Mr G. D. Daga, Indian Mining Federation, indicated that he was agreeable to amalgamation, either voluntary or by legislation. The IMF representative pointed out that legislation would, in any case, be necessary; for, otherwise, disputes might arise in regard to payment of royalties, etc.

Mr B. L. Mitter, Indian Mining Association, asserted that his Association was agreeable to the amalgamation of smaller collieries. At the end of the meeting, the following announcement was made:

> At a meeting held by the Coal Commissioner and Chairman, Coal Board, with the representatives of Indian Mining Association, Indian Mining Federation and Indian Colliery Owners Association on the 15th June, 1955, it was agreed in principle that amalgamation of small collieries, where necessary in the national interest, into up-to-date collieries capable of fulfilling the demands and attaining the standards of the Second Five Year Plan should be taken in hand.
>
> A committee will be set up immediately to study the position in the Raniganj and Jharia fields and work out definite proposals.
>
> Copies of the draft announcement were taken by the representatives of the Associations to the Chairman. It was also agreed that the announcement would be made on Saturday, the 18th June, 1955.

It will be seen that, in principle, the private sector in coal is fully appreciative of the need for amalgamation of smaller collieries. The question, however, remains: How is this to be done? It would seem that the necessary answer lies only in one or two directions. Firstly, by mutual arrangement, the smaller collieries might merge and form into bigger units. Secondly, if such enterprise is not forthcoming, or if it is not displayed readily and swiftly, Government might have no alternative to legislation for the purpose. Let us first examine the possible consequences of what we may term "legislated amalgamation".

Arguments Against Amalgamation

Firstly, if amalgamation is legislated upon unwilling members, internal dissensions are inevitable. Result: obstacles to progress, or even in the day to day management, not to speak of the concomitant decline in output, or obstacles to mechanisation.

Secondly, individual members, for lack of mutual confidence, may shirk from bringing any necessary monies for development. Moreover, a unit, in which there is dissension, is scarcely a proposition which the banker would approve for overdraft arrangements.

Thirdly, it may be stated that, in consequence, production of coal would suffer.

Fourthly, it would, of course, be open to Government to take over management in such cases. It must, however, be clear that such a step would be akin to locking the stable door after the horse is stolen.

But there is this advantage, and it must not be lost sight of, that legislated amalgamation will produce quicker results: at one stroke of the pen in New Delhi, the border coals become immediately available for working. Let us now see whether amalgamation of the other sort is not the easier or not the less disturbing to achieve.

The Difficulties

The first hurdle in this case is the biggest hurdle. Where contiguous small collieries are under the same management, naturally there is no barrier to amalgamation. But the position as it obtains in the coal industry is that there is a mushroom number of colliery owners for the legion of small collieries. When, therefore, it is a question of two different colliery owners, or three interested parties, who have to decide upon amalgamation, the question be-

An Indian Finance Special Study

comes complicated. Who is to be owner of this new amalgamated colliery? Who is to decide the price which must be paid? It is also possible that the interested parties may be either unwilling or unable to take over the whole new unit as such. How, then, would amalgamation succeed in such conditions?

It would appear, then, that voluntary amalgamation may be as difficult as legislated amalgamation might prove disturbing. But the need of the coal industry is undoubted, that smaller collieries should be banded together to form a bigger unit; otherwise, firstly, border coals are lost and, secondly, the individual smaller units are unable to proceed with stowing and mechanisation. The discussion so far would suggest that, while everyone has agreed that amalgamation is necessary, that amalgamation is almost impossible of achievement. That is to say, voluntary amalgamation is impracticable, while legislated amalgamation may be disruptive. These are uncomfortable conclusions to come to. For, they would indicate that the economic working inherent in amalgamation is something that we cannot achieve for ourselves in short shift.

Another Scheme

Fortunately, a scheme has been forwarded to this office that avoids the Scylla of legislated amalgamation even as it steers clear of the Charybdis of voluntary amalgamation. The scheme is ingenious. While we have not looked into its technical aspects and while it has not been possible for us to examine it in detail, it would appear that the logic and arguments of the scheme are sound. If the scheme is practicable, it is the answer that both Government and the private sector are in search of. In this light, we offer the broad outlines of the scheme, so that it might receive the serious examination of all those connected with the coal industry. We repeat, the scheme is in embryo form. There may be difficulties encountered in drawing up the details. But we have a duty to examine it seriously if, by implementing it, we are able to achieve the end of economic working without the disruption involved in amalgamation.

The Committee that has been constituted by Government to examine the various issues involved in the amalgamation of small colliery holdings has, in order that its recommendations might be based on correct data, issued two questionnaires. These questionnaires are intended to discover such answers as would enable the Committee to give concrete suggestions in the matter of amalgamation. It is not to be denied that the existence of small collieries leads to uneconomic and wasteful working; moreover, scientific planning development and mechanisation cannot be proceeded with; again, fragmentation results in a loss of coal in borders. It may be recalled that both the Indian Coalfields Committee (1946) and the Working Party for the Coal Industry (1951) recommended that such small colliery units should be amalgamated.

"Committee of Arbitration"

Thus, the question of amalgamation has been pending for some many years. But is this the most appropriate moment for carrying through schemes of amalgamation? For, the number of collieries that would suffer disruption in the event of amalgamation would be over 300. Legislation for amalgamation might, as just indicated, merely serve to disrupt production and to make the task of working to the Second Plan target a more difficult affair. Instead, a suggestion has been made on the following lines:

Firstly, groups of contiguous collieries, preferably working the same seams, may be fomed by legislation. Such grouping would not disturb individual ownership and management.

Each group so formed would constitute a holding company in which the individual collieries would participate and have shares according to the value of their respective assets. These holding companies will act as marketing boards for sale of the output of member collieries.

They would have powers to adjust boundaries of member collieries on a geological and geographical basis, keeping in view wastage of coal in barriers.

Next, the holding companies would also be empowered to create a fund by imposing a contribution on the basis of output tonnage from the member collieries.

The funds so created would be utilised for mechanisation, for stowing and for development.

According to the proponent of the scheme, a Committee of Arbitration should also be set up. Its personnel would include a mining engineer and an accountant and it would be headed by a person with the rank of a High Court Judge. This Committee of Arbitration would be responsible, in the first place, for suggesting, after a field survey, the manner in which the groups of contiguous collieries should be formed.

Secondly, the Committee of Arbitration will also be available for help in settling disputes.

Urgent Action Needed

This is by no means a scheme that has been worked out to its last detail. But, we repeat, it merits serious examination if it holds in it the promise of discovering a manner of securing optimum working of coal without the disruption that is apparently inherent in amalgamation as such. But we would like to take this opportunity to emphasise that it is vitally necessary for the coal industry to take urgent action in regard to the small collieries.

Co-existence in Coal

Unless the uneconomy of small collieries is eliminated, conditions will increasingly be created wherein Government will no longer be able to shirk the issue of nationalisation. On the other hand, if the industry is able to revolutionise itself and, by performance, indicate to authority that it is fully capable of achieving optimum working, it may be that private enterprise will entrench itself in the coal sector. There is no reason why, in the coal industry, there should not be the competitive coexistence of the two sectors. Much as this end is to be desired, it must be apparent that nationalisation would be inevitable unless the private setor in coal is able to rid itself of one of the industry's greatest handicaps—the small colliery.

Re-thinking on Amalgamation

While we have so far been content to study the question of nationalisation from the point of view of its possible consequences of disruption; and while we have also delineated the broad outlines of a scheme that avoids the apparently concomitant evils in amalgamation, we should also stress the need for more constructive thinking even in the matter of amalgamation. Once the question of amalgamation moves from the discussion stage to the one of its implementation, it is not at all unlikely that what presently appear to be difficulties are no more than apparently so. It must be borne in mind that what is at stake is the private sector's participation in the coal industry. Thus, surely, enlightened self-interest will see to it that the obstacles in the way of amalgamation will quickly be got over.

Editorial Notes

Situation Tamed:

The reorganisation of States has reached its final stage, with the appointment of a Cabinet sub-committee. This sub-committee consists of the Prime Minister, the Home Minister and the Minister for Education in the Union Government.

If the composition of this committee were to be interpreted as an indication of its principal line of approach, we can be fairly sure that political considerations will dominate the decisions. The extensive sojourns, which the Prime Minister and his colleagues were having in the course of the last two or three months, must have been useful in the matter of assessing the force and character of the complexities surrounding the several issues which the Reorganisation Commission have left unsolved.

Many of these issues have already been solved or are very near a solution, through the confabulations which the Congress leaders and the spokesmen of the Union Government were having with the concerned States representatives. Punjab and Bombay seem to be the only two questions on which a full measure of agreement between the contesting groups has yet to be reached.

Possibly a decision on the Punjab will be postponed to a later date. Master Tara Singh is reported to have suggested the establishment of two autonomous units within a single Punjab State. With the Zonal Council coming between the State and the Centre and autonomous units forming a new layer of authority down the ladder, the scope for friction will undoubtedly be enlarged. All the same, it would not be bad if an alternative to the division of the Punjab is to be found generally accepted.

As for Bombay, the Maharashtra Congress seems to have relaxed its opposition to the idea of the city being made a Centrally administered, commercial capital of India. This grudging acceptance of a new formula is not unconditional. Nor is the condition prescribed, namely, the recognition of Bombay forming an integral part of Maharashtra, devoid of potentialities for trouble. It is yet a helpful development that the three concerned groups have been persuaded into the acceptance of a practicable proposition. The Cabinet Sub-committee which, in large part, is only the Congress High Power Committee in a different name, has a less onerous task to face. If no unexpected difficulties crop up, the further path of reorganisation will be more or less smooth sailing.

*

Pak Constitution:

The complaint used to be frequently heard in Pakistan from the opponents of the Government that the State could not carry on without a new Constitution. For more than eight years, Pakistan did carry on with an adaptation of the Government of India Act of 1935. The first Constituent Assembly was dissolved in a crisis. The second has survived to complete a Draft which has been released to the Press last week-end. There is very little which is striking or novel in this Draft of what will probably be the Constitution of the future.

The State is to be an Islamic Republic. The few voices which sought to do without a formal religious complexion to the State were drowned by those of an overwhelming majority insisting on its inclusion. Neither the emphasis on religion in the name of the State, nor the reservation of the offices of the head of the State and his deputy for Muslims need upset the Hindu population of East Bengal, as even without specific provisions to this effect, it would be well nigh impossible for a non-Muslim to get elected to these offices.

The best that the Hindus could hope for was the absence of any aggressive reference to the link between religion and politics. Here there will be keen disappointment. Even among the majority community, a considerable section will not take kindly to the Draft provisions for making every piece of ordinary legislation conform strictly to the injunction of Islamic religion as laid down in the Holy Koran.

East Bengal will no longer bear that name, and will be co-equal with West Pakistan, as one of the twin units of the State. There is a longer lease of life (twenty years) provided to English as the official language of the State than is the case in India. After this period, Urdu and Bengali could claim equal possession of the heritage. Only persons not below forty-eight years of age are eligible for office as President; in India the minimum age for the head of the State is thirty-five.

A ban on drinking of alcohol is embodied in the Constitution, along with the prohibition of prostitution and gambling. While defence, foreign affairs, navigation and trade fall within the Central sphere, railways go to the provincial. The Draft has not omitted to provide for accommodating Jammu and Kashmir on a status left to be determined by its own people, "when they decide to accede to Pakistan". It is expected that membership of the Commonwealth will be retained.

*

Indecisive Elections:

In France, governments are incredibly short-lived and it is a glaring instance of French volatility that the average life span of a ministry since the War has scarcely exceeded four months. The recent general elections far from improving matters has thrust France again into instability. The results have belied the sanguine expectations of ex-Premier, M. Faure, who indeed precipitated the elections hoping to win a comfortable majority for his Orthodox Radicals allied with Pinay's Independents and the Catholic MRP.

The Communists have come out the largest single Party winning 150 out of 594 seats in the National Assembly. This is remarkable, as they had to fight alone, their efforts for alliances disdained by other solely aimed at depriving the Communists emerged the largest party but were elbowed out of the coalition cabinet of 1946-47. On the eve of the 1951 elections the new electoral law of appertainement, solely aimed at depriving the communists of quite a large number of seats they would have gained by a simple majority, was put into force. By this each party could put its own candidates, yet by alliance with other parties might jointly win all the seats of a constituency if their combined total was just above 50 per cent. This law is still valid. Communist success notwithstanding such crippling disadvantages is largely due to the party's wonderful organisation and its sway over the workers and poorer peasants, a circumstance which has given an unpleasant jolt to the complacency of their opponents. France's allies are clearly dismayed.

The alliance with Mendes France's wing of Radicals seems to have benefited the Socialists and they have won 98 seats. The Gaullists have met with their Waterloo and in all probability their effectiveness is gone for ever.

Most surprising and surely disquieting is the not insignificant success of the Poujadistes, in many ways reminiscent of the Fascists. They have won 52 seats, their supporters mostly shop-keepers lured by the Party's demagogic campaign against taxes. It augurs ill for France if such a Party were to gain momentum.

The results have clearly been indecisive. No party can by itself form a Government. Even a stable right-wing coalition cabinet is far from feasible. The Republican Front of Mendes France and the Socialists has feebler chances. The Communists are crying hoarse for a "popular front", but the possibility of other leftists joining them is remote. Any coalition government with the Reds will be anathema to France's allies of the Brussels Pact and the NATO and consequently has to be ruled out. The only way out from the present impasse perhaps lies in some sort of a rapprochment between the Right of Faure and the Left of Mendes France and the allies of both.

World of Finance

Exciting Quarter

THE final quarter of the financial year is of great import to the money market; and, in the current year, the three-month period which begins from this month is of superlative significance. January-March constitutes, by traditional pattern, the peak of the busy season—busy, that is, from the point of view of intensified commercial and economic activity. The harvesting of most of the important agricultural crops starts from the closing month of the calendar year; and, while crops continue to be harvested in the early months of the new year, business activity is vastly spurred by the movement of the produces to the consuming and exporting centres. In the conditions in which Calcutta jute mills depended predominantly on raw material from East Bengal which is now East Pakistan, the movement of jute from farm to factory used to attain the greatest momentum in August-September-October. With Indian-grown jute figuring largely in the raw material consumption of Indian jute mills, this process is no longer concentrated in the autumn. The Indian jute gets ready much later than the Pakistani crop; and, from the point of view of the financial requirements, the position since recent years is correspondingly altered.

Jute finance, in the earlier circumstances of reliance on East Bengal jute, stood aloof and apart from the finance required to lift the other crops. As jute flowed to the mills in a period which was part of the slack season, the financial problem in this respect involved no strain of any kind. With the Indian crop's harvesting getting nearer, in point of time, to the harvesting season of other crops, jute finance has begun to add a significant quota to the totality of finance required for seasonal produces. In other words, the present pattern of crop finance has an element of larger coincidence and greater concentration than hitherto. The demand for funds during the busy season has, thus, been stepped up; and, if this has not led to a corresponding stringency in supply of credits, it is because the Reserve Bank's readiness to make advances against usance bills facilitates quick adjustment of supply to demand.

Finance for agricultural produces has needed further reinforcement since the elimination of control over this sector of the economy. Trading in these commodities has reverted to private hands; and there is a growing demand for credits against commodities.

By all tokens, therefore, the current quarter may be expected to have, for the money market, very much more than the usual significance. Movement of funds must be distinctly brisker; and recourse to the central banking institution must considerably exceed previous records. The last quarter of 1955-56 will, from this point of view, call for greater facilities from banks; and it is comforting to have the assurance that the present guidance and assistance from the Reserve Bank will enable the banks to meet the expanding needs.

January-March is also significant as reflecting first the anticipations and later the consequences of the Centre's budget and, to a minor extent, of the State budgets. The Budget, due on the last day of February, casts its advance shadow and shudders; and markets in January and February provide conditions tailor-made for sooth-sayers, rumour-mongers and traffickers in "inside information". Violent price-gyrations are, therefore, to be expected. The month of March registers the reactions to budgetary changes. And, altogether, this quarter witnesses tension, excitement and wide and wild fluctuations.

This is, likewise, the period which records the consequential transactions of an inter-governmental character. The commitments implicit in the Centre's budget are duly carried out before the fiscal year draws to a close; and large-scale disbursements by the Centre to the States are a recurrent feature in March. In their turn, the States make payments to the Centre in respect of instalments on debts and allied commitments. 1955-56's final quarter will account for a particularly large turn-over in this respect as final adjustments are put through in connection with the closing chapter of the First Five-Year Plan. By the same token, the Centre's disbursements on its own account will reach the highest tempo in the final stage of the First Plan. These developments are calculated to augment the volume of deficit financing whose utilisation for ways and means purposes on a significant scale started just a year ago.

All of which goes to show that we are at the threshold of a quarter which promises expanding activity, bigger demand for and greater supply of funds, brisk transactions, intensified excitement and large-scale operations. In these circumstances, in the words of a US banker, anybody who can't find cause for at least selective optimism is congenitally morose.

Tenders for Rs 1,00,00,000 of 91 days Government of India Treasury Bills were opened on 10th January, 1956. Total amount offered was Rs 1,46,75,000. Tenders at Rs 99-6 per cent were accepted in full and those at Rs 99-5-9 per cent allotted approximately 15 per cent. Total amount accepted was Rs 1,00,00,000, the average rate of accepted tenders being Rs 2-8-1 per cent per annum.

This week's result compared with the previous week is as follows:

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs a p.
January: 1956:			
3rd	1,39,75	1,00,000	2 8 2
10th	1,46,75	1,00,000	2 8 1

+

The returns of the Reserve Bank covering the first week of January tell a story of big happenings. Deficit financing for the hefty amount of Rs 20 crores is recorded. Demand for money was so great that, in addition to created money of this magnitude, the Reserve Bank had recourse to further expansion of currency for Rs 5 crores against foreign securities. The outflow of rupee coin into circulation is at the high level of Rs 1.61 crores. Active note circulation shows a considerable increase of Rs 23.73 crores. As it was a week disturbed and bothered by the Bank strike, the full implications of these changes cannot be correctly assessed. Deposits of banks with the Reserve Bank show the usual month-early fall.

There has been currency expansion for Rs 25 crores in the week ended January 26. Rupee securities have increased by Rs 19.88 crores to Rs 558.55 crores; in foreign securities by Rs 5.03 crores to Rs 691.9 crores. Active note circulation has gone up by Rs 23.73 crores to Rs 1,385.71 crores. Rupee coin in circulation has been augmented by Rs 1.61 crores, as is testified by the fall in rupee coin to Rs 106.83 crores. As a result, notes held in the Banking Department have declined by Rs 0.44 crores to Rs 11.60 crores.

In spite of an addition of Rs 20 crores to created money, deposits of the Central Government show only a nominal change at Rs 54.11 crores. Balances of the State Governments are lower by Rs 0.89 crores at Rs 9.73 crores. The deposits of banks at Rs 51.79 crores

Wages Claims of £500,000,000

By PAUL EINZIG

IN Britain, the New Year started under the cloud of wages demands totalling no less than £500,000,000. The figure is nothing if not impressive, especially if it is written out as above, instead of writing £500m for brevity's sake. In a New Year's first leader, the "Times" suggested that such abbreviation, which has become fashionable in recent years, should be abandoned, and that all the six noughts should be written out in full, in order not to minimise the astronomic figures of Government spending, wages claims, borrowing, and other alarming items of the national economy. There is, indeed, good cause for alarm over the casual way in which tens of millions and hundreds of millions are cheerfully added to the growing volume of inflated consumers' purchasing power. In face of this flood, the credit squeeze and the other disinflationary measures are wholly ineffective.

In a recent speech, Mr Cobbold, the Governor of the nationalised Bank of England, stated that, so far from being overvalued, sterling is now actually undervalued. By this he meant that British prices are fully competitive in international trade. On the face of it, this may sound like an argument in support of wages claims which are usually opposed on the ground that, if conceded, the industries concerned would price themselves out of the world markets. In reality, wages demands are highly detrimental to British exports, not so much because they threaten to make British prices non-competitive (though that is the case with some industries) as because the inflation of domestic consumers' purchasing power makes it too easy for British industries to sell in the domestic market and thus reduces the incentive for an export drive.

The initiative taken by the British cement industry, which announced recently a six month's price freeze, has been followed by a number of other industries which have also undertaken not to raise their prices during the first half of 1956, even if their costs should continue to increase during that period through wages increases, higher transport costs, or higher prices of raw materials, fuel, electric power etc. The Government intend to exhort industrial firms to adopt a similar line, in the hope that it might influence the attitude of the trade unions. The latter show, however, no sign of relenting. The head of the Transport and General Workers' Union, Britain's largest trade union, declared recently that the workers must be given the benefit derived from increased productivity.

In view of the progress of automation in many British industries, this would mean that, although the higher productivity is not due to any intensified efforts on the part of the workers but to the installation of labour-saving equipment by the management, the workers would receive the full benefit derived from it. Considering that automation in Britain, as in the United States, is being adopted in face of the active resistance of the unions, the claim cannot be said to have such moral justification. Indeed, it would not be surprising if

World of Business

A Survey of Indian Shipping

DURING the past year, shipping companies in India were deeply distressed by problems all of which were not exactly in their power to solve. Company Chairmen were prone to put on a mantle of gloom. First, there was the unenviable situation created by the entrenched position of the foreign shipping companies, most of which carried at least 50 per cent of their national trade in their own ships, while, in sharp contrast, Indian ships carried just 5 per cent of this country's oversea trade. Indian shipping laboured under flag discrimination and unfair practices on the high seas, and also, curiously, had to face counter charges that Government policy in respect to nascent national shipping constituted discrimination against foreign companies.

Secondly, there was the series of threats from abroad that freight rates on cargo are to be increased, largely on account of the disquieting situation on the Indian waterfront. The go-slow tactics of the dock labour began seriously to eat into the none-too-large profit margins of Indian companies in three distinct directions, namely, an increase in the maintenance cost of the ships, the indirect loss of freight charges and the congestion in ports.

Thirdly, there was the urgent need for increasing the tonnage of Indian shipping, a process which, over the years, has consistently fallen far short of decided targets. The financial position of the companies did not assure that progress in this direction will be quick and effective. Government were looked to for transfusing adequate funds through easy loans, and for other aid by way of buying ships and chartering them to the companies and, above all, by assuring an adequate quantum of cargo to shipowners.

This, in a few lines, is the immediate background of our shipping problems. It is too early to claim that the challenging situation has been faced squarely and successfully. But an attempt has been made. Remedial measures have been thought out and, to some extent, implemented. The Second Plan should necessarily mean a more positive and confident approach. Can we look forward to a more disciplined and duty-conscious labour force? Will delay in ports continue to drain companies' resources? Will it be possible not only to increase the shipping tonnage but also to ensure the successful operation on different routes across the wide seas? Need Indian shipping succumb to the bullying tactics of shipping companies with strong vested interests?

We may look for the answers in the able survey made by the Chairman of the India Steamship Company. Before entering the wider aspects of Sir A. Ramaswami Mudaliar's comments, we may make a quick reference to the Company's fortunes during the year under review. The freight earned during the year is slightly over Rs 401 lakhs which is Rs 41 lakhs more than the freight of the previous year. However, this is counterbalanced by increased charges, stevedoring charges, transhipment charges and other expenditure. The chief cause of the lesser profits is given to be the greater time taken in the turn-round of ships. Despite these adverse factors, the company made a profit of Rs 24 lakhs before providing for depreciation. The Chairman sums up: The year under review has been an even more anxious and disturbing year than the last and it required all the care and ingenuity of the various departments of the Company and of our Agents abroad to obtain this result.

It is only natural that Sir Ramaswami should have devoted a good part of his speech to the labour situation, for, it continues to be the thorniest of all immediate issues facing the shipping industry. The past year saw actually a deterioration, Calcutta being worst affected with slightly less disruptions in Bombay. Almost concurrently, the disastrous strike by the British Dock labour took place in London, Liverpool and other main ports. However, the fact that dock strikes are a feature not only in India but also elsewhere has weakened the case of Shipping Lines which threatened an increase in freight charges.

Government, on their part, have done the best under the circumstance. The appointment of the Dock Labour Enquiry Committee, to whose thoroughness, patience, and equity Sir Ramaswami pays a handsome tribute, has been a step in the right direction. Both Government and the management have given their support to the implementation of the recommendations. But the India Steamship Chairman points out that "it will now be for the Chairmen of the Dock Labour Boards to carry out their responsibilities firmly, fairly and equitably without being thwarted in their work either by the intransigence of certain sections of labour or by any unreasonable attitude which stevedores may take in connection with reasonable amenities required by labour."

It will be wrong and unhelpful to isolate the labour problem from the historical events that led to it. If one may put it that way, the most urgent need of the moment is to strengthen the representative organisation of labour by the right type of leadership and to equip them with a working philosophy. Labour Unions have to be acknowledged and accepted, as in other spheres of industry, as a powerful force on the side of legitimate rights. Only then can any arrangement mutually agreed on by the labour and the employers, work in reciprocal obligation.

Sir Ramaswami touched briefly on two other points of vital relevance to the prospects of his company, namely, membership in various Conferences from ports on the route between India, the UK and the Continent and, secondly, on the continuing annoyance caused by unreal charges of flag-discrimination. On both points, he is clear and forthright. On conference membership, he says: "we have attempted time and again to get a reasonable settlement of this question, but so far we have failed to get any results from several of these Conferences. I feel the time has now come when with due regard to our convenience and interest we must make our entry into these routes, irrespective of whether members of such Conferences desire it or not".

Commenting on the self-righteous attitude of certain foreign shipping companies which once thrived on 'undiluted and uncontrolled flag-discrimination' and which now hurl charges on India, Sir Ramaswami says. ". . . vested interests have seen to it that such unreal allegations continue to be made. I feel that it is high time that we ignore these statements and I would suggest that the Indian delegates even if they attend such conferences, do not take part in these futile and meaningless debates and discussions."

It is to be noticed in this connection that foreign shipping lines are now less unco-operative than they were a few months ago. We have it on the authority of the Union Transport Minister that events that stemmed from the abortive threat of increased freight charges have actually led to greater understanding with them. And, there are no reasons why relations should not progressively improve.

Speaking on the development of shipping under the next Plan, Sir Ramaswami hopes that not only should the tonnage increase but it should be accompanied by a greater coverage of the area for shipping enterprise. One step that is essential for this is that Indian Shipping should not go unrepresented in the different shipping Conferences.

According to targets provisionally agreed the Second Plan would effect an increase of only 10 per cent in the volume of overseas trade which is carried by Indian ships. However, in this expansion India Steamship is bound to play a notable role. During the past year the company acquired two new ships, now plying on the India-UK-Continent Trade. Two more ships are expected to be delivered by June 1956. These four ships of 10,000 tons dead-weight will substantially improve the freight results of the company. Though adverse factors have circumscribed trading results, the financial stability of the company remains unimpaired and healthy. And, this

World *of* Jute

New Year Begins on Confident Note

IT is now possible to have a fairly complete picture of the jute goods industry during the calendar year 1955. The picture that emerges out of a study of the production, despatch and stock figures as released by the IJMA from month to month is of a variety that should engender feelings of optimism as regard the prospects of the industry in the new year also.

The following table shows production trends during the past four years:

PRODUCTION.

(In '000 tons)

	1955.	1954.	1953.	1952.
January ..	83.9	67.3	73.0	91.8
February ..	81.8	68.3	68.6	83.7
March ..	88.9	75.6	74.4	82.9
April ..	85.7	75.0	74.3	81.7
May ..	81.7	74.3	72.5	82.3
June ..	85.7	74.6	72.8	73.7
July ..	84.1	80.7	78.4	83.8
August ..	81.4	78.2	68.1	74.3
September ..	87.4	79.0	73.1	70.0
October ..	78.8	75.1	66.8	76.8
November ..	90.5	88.6	69.0	72.2
December ..	97.3	94.6	77.8	78.8
Total ..	1027.2	927.7	868.8	952.0

It will be seen that total production during the twelve months ending December 1955 has amounted to 1027.200 tons—a figure that is unsurpassed in the past four years. It is, however, to be noted that part of the increase is accounted for by the increase in working hours of mills from 42½ hours to 48 hours a week from October 1954.

DESPATCHES

(In '000 tons)

	1955.	1954.	1953.	1952.
January ..	76.7	68.5	58.8	86.0
February ..	74.8	68.1	61.0	66.2
March ..	78.7	78.2	71.5	77.4
April ..	76.1	76.0	75.2	78.3
May ..	89.6	76.0	71.5	94.5
June ..	84.0	73.0	77.1	77.8
July ..	91.6	87.4	76.7	82.5
August ..	82.7	88.7	71.8	82.4
September ..	95.8	80.7	89.9	71.0
October ..	86.9	72.2	81.8	73.6
November ..	88.2	89.5	73.3	62.0
December ..	96.2*	93.2	75.5	67.0
Total ..	1018.3	950.5	884.1	918.7

*Theoretical position.

In tune with the increased production, despatches have also shown considerable improvement during the period under review. Total despatches in the 12 months period ending December 1955 may be estimated at 1018,300 tons as compared with 950.500 tons in the corresponding period of the previous year. Here again we find that the figure is the highest for the last four years.

That the industry starts the new year with a very satisfactory statistical position will be evident from the following table.

STOCKS.

(In '000 tons)

	1955.	1954.	1953.	1952.
January ..	76.4	95.7	128.4	88.4
February ..	82.9	95.4	136.3	106.4
March ..	94.6	92.9	138.7	111.5
April ..	103.4	91.4	137.5	116.4
May ..	94.7	86.5	138.8	103.8
June ..	87.6	86.9	133.8	90.8
July ..	81.5	80.8	136.7	100.5
August ..	79.2	70.7	133.4	93.8
September ..	69.7	67.9	118.6	91.5
October ..	62.3	69.4	102.9	95.0
November ..	63.1	69.0	98.3	104.1
December ..	64.2	69.6	98.6	115.0

It may be recalled that stocks touched a new low in October, 1955. Since then the position has not changed much. From 63,100 tons at the end of November, mills have embarked upon the new year with stocks no bigger than 64,200 tons, which are considerably below one month's output.

From the statistical point of view, therefore, the Indian jute goods industry, is definitely in a very healthy condition. Offtake has been at a high level from May onwards and the last month of the year has topped the list. The fully steady conditions now prevailing in the forward positions in the Calcutta goods market are indicative of the fact that the first four or five months of 1956 will continue to record a high level of exports.

The Jute Goods market continued to rule firm, thanks to renewed activity on the part of shippers and speculators. A notable feature of trading was the increased activity in the forward positions which fetched a premium over ready goods in spite of the fact that production showed a substantial increase in December, 1955. Apart from sympathy with the raw jute market, renewed bear-covering purchases coupled with speculative buying caused a firmer tendency in prices in general although demand from overseas continued to be rather disappointing. As a fairly large bear position had been built up over the past few months on the accounts of the USA, Argentine, China and Russia, shippers were compelled to cover their sales. With the result, rates in the forward section were gradually pushed up, while those for the ready position moved up slightly only in sympathey. Mills, on their part, made scattered sales at higher levels. The following table shows the price trends:—

	Year Opening Rs. a.	Jany. 6th Rs. a.	Jany. 11th Rs. a.
Hessian:			
40"×10 Ozs.			
Ready ..	42 2	41 12	42 0
April-June	40 12	41 4	41 14
40"× 8 Ozs. ..	33 12	33 12	33 12
40"×7½ Ozs. ..	31 8	31 8	31 10
Sackings:			
B. Twills—			
Ready ..	114 8	115 4	116 8
April-June	112 8	114 12	116 8
Heavy Cees			
(Green) ..	112 8	115 0	115 12
Cornsacks ..	114 8	116 4	117 12
Cubans ..	132 8	132 0	140 0
A. Twills ..	137 0	140 8	143 0
L. Twills ..	131 0	132 8	134 8
D. W. Flours ..	140 0	141 8	141 0
Sugar Twills ..	131 0	132 0	133 8

The year-end firmness of the Raw Jute market was well maintained and prices recorded a steady rise on reports of poor arrivals into up-country centres. Sellers remained reserved and were reluctant to reduce their rates. But mills, being still confident about their supply position, made only limited purchases in order to meet their immediate requirements. Following mill business took place:—Assam Bottoms at Rs 29; Murshidabad District Tossa Bottoms at Rs 27-8.

World *of* Tea

Future Prospects

THE principal factor which is now being considered when assessing the future prospects of Tea is the world supply and demand position So far as the supply position is concerned, it is steadily increasing. It is estimated that, in the course of a year or so, it will exceed world's consumption capacity by no less than 80 million pounds. So far as the demand position is concerned, it has been sharply lower than last year's. The stock position in the UK is much higher than what it was in the previous year. While production is everywhere higher, the consumption is lower. All this indicates a basic rot in the situation.

A disconcerting report has already appeared in papers to the effect that there are large quantities of tea in Calcutta; and it is expected that the shipment of teas is likely to overlap the first of the new crop in the late spring of 1956. This, in other words, implies that the Calcutta market is already glutted with large quantities of tea and in consequence of which prices will not only come down during the rest of the present season, but will also affect the price of tea in the next season.

It is therefore, worthwhile to quote here the opinion of Carrit Moran & Company about the immediate prospects of the trade. They observe:

"The outlook seems less satisfactory. Whereas world absorption of tea in 1954 was only 41 million pounds less than production during the year, it appears that actual consumption was appreciably less than the figure of absorption, which covers all retained imports. Production may well, therefore, have been in the region of 65 million pounds in excess of consumption during 1954. A further point, which must be noted so far as the Indian producer is concerned, is the growing weight of African and also other growths, being offered on the London market. The UK buyer will naturally purchase first the tea available in London and will only obtain from the countries of origin such further quantities as are necessary to meet consumption Subject always to the quality of the offerings, these increased consignments of other growths to London will, therefore, limit the demand by UK buyers in the Calcutta and Colombo auctions A further decline in the market may be expected during the sales at the end of this season with poor liquoring and stalky teas difficult to sell".

Meanwhile, The Calcutta Tea Regulation Committee, representing the main tea-production Associations of North-East India has decided to introduce a scheme for the regulation of tea production this year. The Committee has stated that the regulation is desirable in view of the existing condition of the tea market. It has also recommended to its members that all tea waste should be destroyed on the gardens and all residue teas of doubtful quality should also be destroyed to prevent such grades of tea having further depressing effect upon prices.

That the world demand for Indian tea has been sharply lower than last year's is evident from the export figures. For, this season's exports of North Indian tea to the UK have been only 124.49 million pounds as against 169.96 million pounds during the corresponding period of last year. Exports of South Indian teas have also dropped from 43.71 million pounds to 37.62 million pounds and that of Ceylon tea from 283.71 million pounds to 263.03 million pounds. It is also stated that more than half of North Indian tea yet now remains unsold; and this has to be disposed of at unremunerative prices or losses. The position is, therefore, worse because of the fact that, as compared with the cost of production, the present sale prices are worse than those of 1952.

No doubt, a better general demand has been noticed during the past two auctions; but this demand is mainly confined to good quality teas, while poor quality teas still continue to meet with irregular demand. One factor, which must have stimulated a better demand for export teas, is the recent announcement of the reduction in the export duty.

In the Export Sale, held at Calcutta this week, offerings amounted to 58,600 packages. There was a fair general demand; but there was an easier tendency in prices. Fannings grades of all descriptions were the strongest feature of the sale. Medium OFs with black leaf appearance were often As 2 to As 3 per pound dearer, while there

(Continued on page 74)

World Overseas

US Notes

Reflecting the rate of economic activity in the United States, American production of metals and materials jumped 11 per cent in 1955 to a record value of 15,768 million dollars. According to the US Interior Department, this increase was due almost entirely to greater volume of output, not to inflated values. While some materials, such as copper and natural gas, brought appreciably higher prices during the year, the overall price index remained steady.

Metals showed the largest increase in production value in 1955 about 35 per cent. Fuels and non-metallic minerals were up 8 per cent. Among materials registering substantial gains were oil, natural gas, coal, copper, iron ore, zinc, lead, tungsten and manganese ores. A notable comeback was scored by the coal industry, which increased its output about 19 per cent over 1954. As a result of record-breaking demands of the steel industry, U.S. iron-ore output increased 40 per cent and imports 50 per cent. The non-ferrous metals. copper, lead, zinc, aluminium and tin ended 1955 with demand strong, prices firm, and the outlook for the months ahead very bright.

Copper shortages became pronounced during the summer and fall of 1955. The Copper and Brass Research Association, a privateindustry group, emphasizes that never before has peacetime copper output been so great, with increased production scheduled for the United States, Chile, Rhodesia and Canada, world's principal suppliers. The U.S. Commerce Department estimates that new American mines will add 7,000 tons a month to the domestic supply in 1956, increasing output nearly 7 per cent. Despite work stoppages last summer, 20 per cent more recoverable copper was mined in 1955 is estimated at nearly 1.5 in 1954 US copper consumption in 1955 is estimated at nearly 1 5 million short tons of refined metal—a rate that is expected to hold at least through the first quarter of 1956. American and world demand pushed the US price up to 43 cents a pound at the end of 1955, a rice of 45 per cent during the year.

Both lead and zinc reached consumption levels in the United States in 1955, and enter 1956 with demand at peak rates. American lead miners can meet only 30 per cent of domestic requirements, the rest being furnished about equally from imports and secondary sources. The price went up to 16 cents a pound during 1955, a gain of 6 per cent. Shipments of slab zinc, meanwhile, have been exceeding production in recent months. Imports have shown sharp increases; although domestic production is expected to increase in 1956, large tonnages will be coming from abroad. The price rose 13 per cent during 1955 to 13 cents a pound. The American aluminium industry established an all-time production record for the fourth consecutive year in 1955, with output exceeding 1.5 million tons. The price rose to 24.5 cents a pound, a 10 per cent increase.

Estimated US consumption of primary tin was about 8 per cent higher in 1955 than in 1954. Official reports put consumption in the first nine months of 1955 at 45,200 long tons, compared with 44,900 long tons in the corresponding period of 1954. Mill shipments of tinplate were up 11 per cent over 1954. January—September imports of tin metal were 48,434 long tons, of which 35,685 came from Malaya; in the same period of 1954, imports totalled 47,426 long tons, with 30,581 coming from Malaya. The US price rose some 15 per cent during 1955 to a—year-end high of about one dollar and 8 cents a pound.

During 1955, when steel mills in the United States turned out a record annual tonnage of nearly 117 million short tons of ingots and castings, the American steel industry added another 2,534760 tons to its productive facilities. This brought the steel industry's rated capacity at the beginning of 1956 to a new high of 128,363,090 tons, compared with 125,828,310 tons at the beginning of 1955. US steel capacity has grown about 60 per cent since before World War II, and about 35 per cent since the end of the war.

US steel situation continues strong as 1956 gets under way. Steel production in the first week of the new year is scheduled at 96.4 per cent of the 1956 capacity —a total of 2,373,000 short tons. In the last week of the week of the old year, output totalled 2,309,000 tons—about 95.7 per cent of the 1955 capacity. This indicates no appreciable change in the demand for steel despite a seasonal slow-down in motor car production. Users of sheet steel—one of the most important products in making automobiles—foresee demand remaining tight the first half of 1956.

American steel companies will be among their own best customers as they embark on further expansion programmes in 1956. In addition, many of the expansion projects planned or begun in 1955 are still to be completed in 1956 or later. This is in accord with the industry's thinking that growing industrial needs in the United States will call for a continuing enlargement of productive facilities.

The Commerce and Industry Association of New York has joined those groups that foresee another rise in 1956 in United States trade with the rest of the World. A poll of more than 50 companies associated with the Organizations of World Trade Committee shows that traders generally re-looking forward to an upward trend in both commercial exports and imports in the next 12 months. On the basis of results in the first 10 months of 1955, US foreign trade for the year will reach a record of more than $25,000 million, with imports soaring to a new peak of about $11,200 million—some 10 per cent above the 1954 level.

Final figures for October—the last month for which data are available—show that US imports were valued at $1,099.8 million, a 7 per cent advance over September and a 32 per cent rise over October 1954. This was the fourteenth month in the last 15 that US imports exceeded those of the same month in the preceeding year. Bulking large in the Odtober import gains was a wide variety of products. Vegetable food products—mostly coffee and barley—led the way. Also significantly higher were receipts of wood and paper, textile fibers and manufactures, and animal products. More moderate rises were shown in imports of metals and manufactures, particularly iron ore and concentrates, as well as of chemicals.

Indicative of the gains other countries have made in 1955 as a result of their trade and other transactions with the United States, the US Department of Commerce reports that US payments to other nations during the third quarter of the year totalled $5,400. As a result, other countries accumulated $475 million in gold and dollars through their dealings with the United States, bringing the accumulation in reserves to $1,230 million for the nine months of 1955.

The Commerce Department attributed its optimistic report on the third quarter balance of payments situation to the world-wide expansion in economic activity. Higher US imports of merchandise, which reached a quarterly record of $2.800 million, were primarily responsible for the gain in foreign reserves, although American tourist and government assistance expenditures also increased. The report shows that the independent non-sterling countries of Asia and Africa improved their dollar positions most in the third quarter.

The last month of 1955 has provided additional evidence of the benefits other countries are reaping through thir dealing with the United States. This week, the US Department of Defence announced it had awarded a British firm, Ferranti Electric Company, a contract of more than $2 million dollars for 21 transformers and other pieces of equipmnt for use at the Dalles Dam in the State of Oregon. Two weeks ago, the US Bureau of Reclamation awarded a $27,000 contract to American Elin Corporation, subsidiary of an Austrian Firm, for three transformers for a power sub-station at Grantite Falls, Minnesota. The transformers will be built in Wels, Austria. And earlier in the month, the US Tennessee Valley Authority awarded a $4,50,000 transformer order to the English Export and Trading Company, another British firm.

Paralleling the anticipated growth in US foreign trade is a report by the National Association of Purchasing Agents that the high level of business in the United States will continue through the first half of 1956. Fully 76 per cent of these executives take this view, while another 17 per cent are even more optimistic. Only 7 per cent think the business situation will be less favourable. The Association finds 1955 closing on a vigorous note, with 94 per cnt of the buyers reporting December production by their companies as high as or higer than November.

In line with this report, the business alalysis firm of Dun and Bradstreet estimates that American consumers bought a record $19?000 million worth of merchandise in the final month of 1955. Reflecting a 6 per cent gain over December 1954 levels. This brings retail sales volume for 1955 to a total of $185,000 million, a new annual high and an 8 per cent increase over 1954. And a survey by Kirby, Block and Company, a leading merchandising firm, shows that most retailers in the United States are confident that their dollar sales volume during January, February and March of 1956 will climb to the highest levels in history of any quarter, exceeding the first three months of 1955 by about 10 per cent.

Not only have Americans been buying more items than in the past, but they also have been showing a tendency to buy better quality and a wider variety of goods. Although the usual boliday gift items cosmetics, perfumes, handbags, hosiery, gloves, handkerchiefs and the like have been in very heavy demand during December, there has been a noticeable increase in purchases of other types of merchandise. Apparel, for instance, is growing in popularity as a gift item, with the rise in home building and ownership in the past 10 years, appliances and other household articles have become important gifts items. Toy sales, which always loom large in the December shipping season, are at record levels in 1955.

WORLD OF BUSINESS

(Continued from page 61)

inspires the Directors to plan the purchase of more ships bringing the fleet to a total of 18 ships by 1960, if not earlier. The Chairman adds: "The substantial assistance which the Government of India is giving by way of loan has been of considerable help both in planning this programme and in realising it in stages. The Directors have kept the financial commitments closely under review and are optimistic enough to feel that these commitments can be met without undue difficulty."

Aviation

KLM Miscellany

APTER concluding an agreement with an Italian Shipping Company (Linea C) and two British Companies (Royal Mail Lines and Blue Star Line), whereby passengers can make a combined air-sea journey between Europe and South America, KLM has now concluded a similar agreement with a Dutch Shipping Company, Van Nievelt Goudriaan & Co.

When the boat trip is made from Europe between December 1 and June 15 or from South America between September 1 and March 15, and the journey by KLM takes place within 12 months before or after the boat trip, a reduction of 10 per cent is granted on the fares for both sea and air transport.

THE SHARP rise in air cargo traffic between Europe and the USA, which has been noticeable during the last few months and which recently obliged KLM to increase the frequency of its all-cargo flights between Amsterdam and New York is now also perceptible in Europe and in particular on the air services between Amsterdam and London. KLM has now increased the frequency of its Amsterdam-London cargo services from 9 to 12 flights The total cargo capacity of KLM on this route is thus increased to 72 tons per week.

COMPARED with the corresponding period of 1954, the KLM traffic statistics for the third quarter of 1955, show an increase in passenger and freight transportation of 9 per cent and 15 per cent respectively. The number of passenger kms. rose from 499,800,000 to 555,300,000, while freight traffic rose from 11,400 000 to 13,100,000 ton kms. The total ton kms. sales in this quarter increased by 10 per cent and amounted to 64,400,000 as against 58,400,000 the previous year.

A survey of the first three quarters of 1955 discloses the following traffic figures:

The number of passenger kms. rose by 9 per cent from 1,204,600,000 to 1,307,700,000 while the freight traffic showed a constant increase of 15 per cent viz 38,700,000 ton kms. as against 33,500,000 during the first three quarters of 1954. The mail traffic increased only slightly and amounted to 6,450,000 ton kms. as against 6.380,000 in 1954.

From January up to 1955 inclusive, the "Flying Dutchmen" performed a total of 129,200 flying hours (as against 125,800 in 1954), covering an aggregate distance of 45,000,000 kms. (as against 42,900,000 the previous year).

The whole traffic in the first nine months of this year shows an increase of 9 per cent compared with the same period of 1954, the sales—expressed in revenue ton kms,—amounted to 166,200,000 as against 152,700.000 the previous year.

Orders for British Planes

NINETEEN countries ordered British aircraft during 1955, the Society of British Aircraft Constructors (SBAC) reported in a review of the year issued recently in London. "Aviation exports for the first 11 months of 1955 indicate that a new record may be established for the full year", the SBAC report said.

The Viscount turbo-prop airliner is listed as having been ordered by nine nations: India, Australia, Austria, Burma, Cuba, The Netherlands, New Zealand, Norway, and the United States. Three Latin-American countries—Argentina, Colombia, and Peru—were amongst buyers of other British planes.

In a month-by-month survey of British aircraft achievements, the SBAC describes the progress of the Britannia, the Viscount, and the Comet—aircraft which attracted world attention.

This Week's Special

Amongst other highlights, it records the advent of the Rairey ultra-light helicopter; the announcement of two new rocket engines intended for use in aircraft in normal flight (as opposed to booster take-off units); the establishment of a new Ottawa-to-UK. record by a Canberra averaging 496.8 mph; and the first appearance of the P. 1 jet fighter.

In late summer, a Canberra PR-7 flew from London to New York and back in a day. An Olympus-engined Canberra set a new altitude record of almost 66,000 ft. Subsequently the Conway engine passed type-tests which showed it to be the most powerful aero-engine in the world, at 13,000 lb thrust; and the following month the Gyron engine passed tests at 15,000 lb thrust.

In the autumn it was stated that design work on the Comet 4 was almost complete, and the first British "mixed-power" fighters were announced. At the end of the year, the Italian firm Fiat signed an agreement with the Bristol Aeroplane Company for the manufacture in Italy of Orpheus jet engines

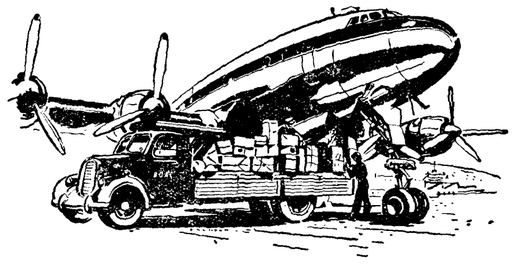
"Viscounts" Improve TAA Finances

THE SIGNIFICANT effect of Vickers Viscount turbo-prop air-liners in developing the company's business and improving its finances is a major feature of the annual report of Trans-Australia Airlines Ltd (TAA), one of the major operators of internal air services in the Commonwealth.

Announcing that the TAA profit for the year is double that of 1953-54, the report says: "An outstanding feature of the year's operations was the introduction of the Vickers Viscount to service in Australia. Although these aircraft were in regular service only for the second part of the year, they have had a significant effect and (by economy of operation and maintenance) have offset, in part, the steep rise in costs following marginal adjustments to salaries and wages which operated from last December".

Against an overall paying-passenger load of 70 per cent—a high figure by world standards—the report says the Viscount paying-passenger load factor since its introduction in Australia has been 85 per cent, which is regarded as "remarkable".

The inauguration of Viscount operations in Australia, the report adds, involved the introduction of an airliner designed to British standards and incorporating a vast range of British equipment and accessories completely novel to TAA engineering and maintenance staff.



The report also says that there has been freedom from engineering difficulties, which may be attributed in large measure to the reliability of the Rolls-Royce Dart propeller-turbine engines. The time lost through mechanical delay in the case of the Viscount has been considerably less than that for the existing piston-engined aircraft. Average utilization has been at the high rate of nine hours daily for each of the five Viscounts in service since TAA's Adelaide-Perth operations began.

The TAA report finally says that rising costs demand greater economy of operation, and this factor is exemplified in the results obtained with the Viscount. Six more Viscounts are under order for TAA, bringing this airline's fleet of these turbo-prop aircraft up to 11.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

IN many ways, 1956 may prove to be a year of crucial importance in the history of the United States, putting to test all its spiritual resources—its capacity for an unclouded vision of fundamentals, its political acumen and diplomatic resourcefulness. This prediction is not based merely on the fact that this is the election year; and that President Eisenhower is still undecided about running for the presidency again. The reasons are far more basic; and the President himself has indicated some of them in his State of the Union message to the Congress conveyed last week.

*

First among these is the very lively state of the American economy which has reached an all-time high and which bids fair to excel itself even more spectacularly in the coming year. While, in the words of the American President, "every political and economic guide supports a valid confidence that wise effort will be rewarded by an even more plentiful harvest of human benefit", the very lavishness of the bounty makes it necessary to approach the "coming year's business with a sober humility", and take care that "a needless pride in present strength does not blind one to the facts of the past and the pitfalls of the future". Even at the moment, the benefits of the prosperity have not been spread uniformly; for, farmers, as the President himself says, do not share them. Inequalities of participation of this sort are precisely the kind of threat that America should be wary of.

*

In the international sphere, by common consent, new and, in some stages, significant changes in postures and perspectives have taken place in the last year. The American thesis, which does not find universal acceptance, is that the deadly combat between international communism and freedom has taken on a new complexion, following the acceptance of the nuclear stalemate. Communist tactics against the free nations are supposed to have shifted in emphasis "from reliance on violence and the threat of violence to reliance on division, enticement and complicity". Even on such premises, it is difficult to avoid the inference that 1956 is a year of momentous significance to the US since it will have to mobilise all its resources to combat this new and subtler menace to freedom. Posing the "sum of the American international effort" in unexceptional language as "the waging of peace, with resourcefulness, and a great sense of dedication and urgency', President Eisenhower urges that American policy should be dynamic and flexible, "designed primarily to forward the achievements of our own objectives rather than to meet each shift and change on the communist front". The practical working out of all the implication of the broad strategy thus tersely expressed would involve a basic reappraisal of certain aspects of current American policies.

*

I wish that I could agree with the President's view that the last year has seen "major gains in the system of collective security", if by "gains" is meant, not accession of new nations to the idea of military pacts on regional basis, but the normalisation of international relationships. The President referred to the fact that the US had now security pacts with forty other nations with what appears to be a certain complacency; but he has not apparently given serious thought to the effect it was having on the vast body of uncommitted nations. The latest instance of the failure in fundamentals involved in the pursuit of this policy is to be seen in the confusion in the Middle East following the formation of Baghdad Pact. It requires little imagination, (the effort for which, Americans are, curiously, unwilling to make) to see that, in the eyes of impartial observers, there is some hypocrisy in the Western objection of arms supply to Egypt by the communist countries on the ground that it will upset the balance of power in that area. This self-righteous indignation conveniently forgets that the balance that the West does not want upset is a balance in its favour; and that it has been actively promoting serious upsets in earlier equilibrium by its own mutual security pacts in the region Again, what precisely is the difference between the American supply of arms to Pakistan and the Czech supply of arms to Egypt? And, even while the US is getting all worked up about the communist arms (and economic aid) to the countries of the Middle East, it is also suggesting, somewhat inconsistently, that it will be willing to consider the supply of arms to Egypt and also, of course, to Israel!

*

If any one should imagine that it is only the unctuous neutralist of India that indulges in 'sophistries' of the sort without understanding the difference between communist intentions and the intentions of the free nations, I should like to point out that thoughtful Americans are also of the same view. In a recent article in The New York Herald-Tribune, Walter Lippman, the noted columnist, has pointedly stressed the basic failure of the policy of military pacts that the US has been pursuing for so many years. There is reason to believe that American foreign policy has never brought itself to face squarely the contradictions involved in the detailed working out of its basic assumptions. For instance, an influential section of the Congress want foreign aid, including military aid, brought to an end. The Administration, caught up in the deepest folds of the dilemma of a situation in which it cannot lessen its commitments under foreign aid and yet satisfy the Congress's demand, has been wanting to get its way by a minor piece of sleight of hand. Unfortunately for everyone, this little strategem misfired; and Senators, who were briefed by the White House on the size of the foreign aid for the coming year, are obviously piqued by what seemed to them to be an effort at 'pulling a fast one' on them. But, as Mr Lippman points out, the Senators have no call to froth at the mouth at this minor trick played on them for, how could they have really believed that the vast net-work of military commitments that they clamour for all over the world could be provided if foreign aid were allowed to come to an end? Or, does it mean that they do not approve of the arming of Germany and Japan, the subsidising of the South Korean army, the Formosan army, the Viet Namese army, the SEATO, and the MEDO? The Administration, which was making do with carry-over funds all these years in meeting its commitments in spite of progressively reduced annual appropriations, now finds itself obliged to ask for more funds than has been allowed annually. I dare say that the miracle would occur at some future date (for the possibilities of God's creation are

endless), but a Treasury Secretary, who will be able to effect tax cuts and yet balance a budget and also arm the whole world to the teeth at the same time, is as yet not born.

While no sensible person wants America to withdraw into the crusted shell of isolationism, it looks as though America is gradually slipping into the opposite extreme of its traditionally distasteful 'entangling alliances'. For, entangling alliances are precisely what all these various military pacts are By giving military aid to Pakistan, America has created a great deal of mistrust of its intentions in India and Afghanistan; and Pakistan, alarmed at the Soviet friendliness to Afghanistan, feels that American aid to it is not adequate.

✱

Finally, the greatest objection to the continuance of the commitments of military aid is that it cuts deeply into the funds available for economic aid to undeveloped countries. I know that there is in Congress circles, greater opposition to economic aid than even to military aid; and that even a person of undoubted integrity like Senator George has expressed himself firmly against any further stepping-up of such aid. But, even on the American thesis that the Soviet Union is now embarking on a more covert form of conquest than direct use of force or the threat of force, it is necessary to combat the new offensive with weapons more appropriate to its nature. The President's message to the Congress has elaborated this thesis in the following words: "Because the conditions of poverty and unrest in the less developed areas make their people a special target of international communism, there is a need to help them achieve the economic growth and stability necessary to preserve their independence against communist threats and enticements".

✱

Starting on this premise, the President has, quite sensibly, asked for the assurance of continuity in economic assistance for development projects that require a period of years for completion. This request has become necessary partly because of the Congressional contretemps that was precipitated last week and partly because of the need for dovetailing the aid into a pattern of development that each country may plan for a period of years. The President has asked for limited authority for making long-term commitments in this regard and for flexibility in annual appropriations as and when the time comes for them.

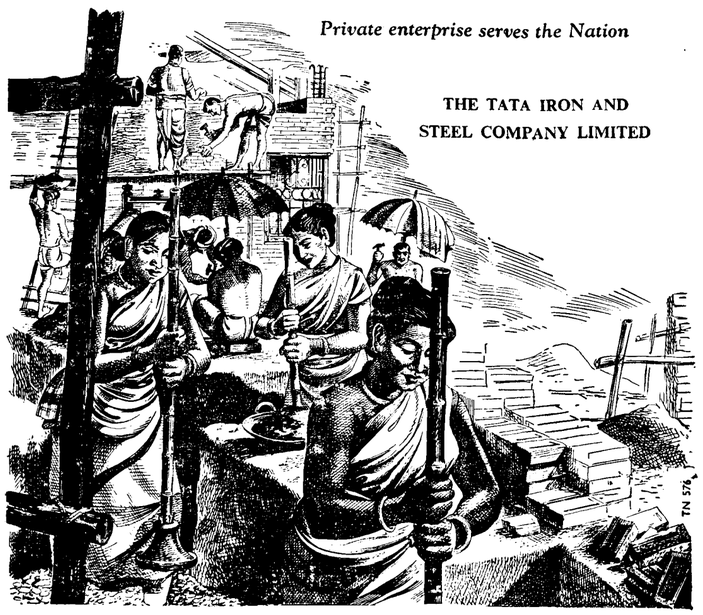
✱

At the moment, it is not clear whether the President's request will have the approval of the Congress. Indications are that it is likely to have the roughest of passages; for, as indicated earlier, Congressmen are not only opposed to further commitments, but are somewhat ruffled over the misunderstanding at the White House briefing last week. Even in the Administration, there seems to have been three different schools of thought, each wishing to obtain the President's assent for its particular view. The first, headed by the Secretary of Treasury, Mr Humphrey and ably abetted by Under-Secretary of State Hoover, wanted the aid figure pegged as last year's appropriation, so that, when the carry-over fund was spent, there would be an automatic end of foreign aid. The second school, which does not accept the current American thesis about the cold war and believes that the Soviet Union has never been able to subvert a nation by economic means and that it understands only force, wants military aid increased. The third school, headed by Vice-President Nixon, and aided by Presidential Assistants Harold Stassen and Nelson Rockefeller (who resigned recently on ostensibly 'compelling personal grounds' which are generally supposed to be an euphemism for frustration at his uselessness in the face of the present attitude of the Congress), presses the view that the only answer to the changed tactics of the Soviet Union is a significant stepping-up of economic aid. This view has the support of all the enlightened liberal opinion in America, and of the more responsible press. It has also the support of the American ambassadors in Asia, Africa, the Middle East and Latin America, who have, in a recent memorandum to the Congress, suggested that the aid should be for periods longer than a year. How far the Congress will be impressed by this influential body of opinion, which has also the additional undoubted prestige of Presidential association, is difficult to predict, especially in an election year.

✱

We in India do not subscribe to all the implications of the President's basic appraisal of forces operating in world affairs at the moment. Some of the vital differences I have indicated earlier. On the question of foreign aid, our attitude has been made clear repeatedly. Our planners have (exaggeratedly, in my view) put the requirements of foreign aid in the Second Plan at Rs 800 crores, and we are realistic enough to accept it from whatever quarter it comes so long as it does not carry overt or covert commitments of any sort. We have recently told ourselves that it is necessary to cut down to the barest bone the dependence on external help; and alternate resources are being assiduously searched by us. But it does not mean that the American President's message does not interest us. We welcome particularly the effort to

(Continued on page 68)



How strong must the foundation be for 43 lakh houses?

In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.

In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

Gateway Gossip

Bombay Review

The Tata Agreement

THE scene, Jamshedpur. An expert has just been called in to advise management as to the manner in which the company could, constructively and usefully, contribute to an amelioration of labour relations and of labour efficiency.

The immediate impact of the paragraph with which I have started this Gossip could quite possibly be that I am referring to the most praiseworthy agreement that has been reached as between the management and labour of the Tata Iron and Steel Company. That agreement was signed not even a week ago. But the first paragraph is not, in fact, connected with the latest in the long series of landmarks in the Tata management-employees relations. On the contrary, it was the first.

It was forty years ago, in Jamshedpur, when Mr G. K. Deodhar of the Servants of India Society was approached by Sir Dorab Tata with a view to securing his advice on how best the company could further improve the facilities and amenities it offered to labour. Fully forty years ago, then, the House of Tata was aware of the integral role played by labour in industry. And, since four decades ago, the Tata management has got into the habit of ensuring that its own labour force was given a fair and just deal.

I can remember when, in the early days, the effort was made to make of Jamshedpur a new home away from home. The bulk of the labour which was then recruited had tenacious roots in the agricultural countryside all around. Even as the coal labour of today is seasonal, with absenteeism rising to unfortunately high proportions as the time for harvest comes along, Jamshedpur was, in those early days, scarcely blessed with what I might call permanent labour.

Came, then—call it enlightened self-interest, if you will—constructive thinking for ensuring that labour was made to know that it had a permament stake in Jamshedpur. You might call it enlightened self-interest. But this is a slightly derogatory term which I, for one, will certainly not use to describe the public-mindedness that always motivates Tata action. Maybe, the facilities offered relating to building of houses by labour could be reckoned a bait in that it would create a home for the employee in Jamshedpur. But, you could not describe the proposal to train a new apprentice force from the sons of employees as anything but disinterested goodwill toward employees. There are countless employed in Jamshedpur today whose fathers were, in their time, unskilled labour. Thanks to the apprentice scheme, many of the workers of today have started off better than their fathers, as semi-skilled and skilled labour.

The next milestone was the linking of labour efforts to production. The production bonus, as we know it today, is not uncommon in India. But, when Tata management seized upon the idea of a production bonus and implemented it, it was, we may be sure, an action that sprung from its undoubtedly sincere desire to give labour what was due to it consequent to labour's part in higher production. One more milestone of importance there is which predates the new agreement. That was the decision, management's irrevocable decision, to let the labour force participate in profits. The profit-sharing scheme that the Tatas have is, if I have my facts clear on this subject, the only important one of its kind in this country. There is the explicit recognition that labour is due some portion of the profits that were earned.

Historically, therefore, we have, firstly, the creation of new homes; secondly, the security implicit in the apprentice scheme; thirdly, recognition of labour's right to a reward for efforts that result in higher production; and finally, the realisation that some part of the profits is due to labour, when the time comes for for distributing those profits.

Whether or no we term such an attitude on the part of Tata management as enlightened self-interest, its impact on the labour force, as evidenced in the new agreement, is nothing short of remarkable. For, the agreement indicates beyond all doubt that Tata labour has implicit faith in the management's solicitude for labour.

Now that we have come to the discussion of the new agreement, it is appropriate that we list its main features. The purpose of the agreement is "to establish and maintain orderly and cordial relations between the company and the union so as to promote the interests of the employees covered by this agreement and the efficient operation of the company's business." The immediate provocation, if we may use that word, for the agreement is the impending schemes of modernisation and expansion; and 'the parties realise the importance and need of maintaining such good and co-operative managment-labour relations for the effective and timely implementation' of these schemes.

For its part, the company recognises the Tata Workers Union 'as the sole bargaining agent of employees'; agrees to a union membership security system and 'to the collection of Union's subscriptions from the pay roll in respect of employees other than the supervisory staff;' will extend all reasonable facilities to the office bearers of the Union 'to carry out their duties in the best interests of the employees'; will extend similar facilities to elected group representatives of employees to attend 'the Union Committee Meetings', etc., provided the time spent does not interfere with their normal duty as employees; and will continue to give facilities 'to the Union representatives on the general committees to attend committee meetings during their working hours', and, as far as concerns the provisions, 'the company including its officers and representatives at all levels' are bound by the Agreement.

There is, so far, nothing of an extraordinary character in the agreement. It is the clauses which describe what the Union undertakes that are excitingly imbued with new ideas on the part of Indian labour. Firstly, the agreement "continues to recognise the right of the company to take disciplinary action." Secondly, and since the clause is of vital interest to industry, I reproduce it below in full:

> The Union recognises that there are functions, powers and authorities belonging solely to the Company prominent among which, but by no means wholly inclusive, are the rights of introducing new or improved methods or equipment, deciding the number and location of plants, the nature of equipment or machinery, the products to be manufactured, the methods and/or processes of manufacturing, the scheduling of production, the method of training employees, the designing and engineering of products and the control of raw materials, provided that where the employees' interests are adversely affected, the Union is consulted before the Company takes a decision and the Union reserves the right to represent their cases to the Management.'

Thirdly, the Union recognises the right of the company 'to hire, transfer, promote or discipline employees'; the proviso is that, 'in hiring a person, ordinarily the normal procedure in that behalf will be followed.'

Fourthly, the Union recognises the right of the company 'to fix the number of men required for the normal operation of a section or department'; here, the proviso is merely to the effect that the Union should be consulted before the company takes a decision in the matter in the case of existing sections and departments.

Fifthly, the Union recognises that the company has 'the right to make or change such rules and regulations regarding employees as the company may deem necessary and proper.'

Finally, and this is also a vital clause, the Union recognises the right of the company 'to eliminate, change or consolidate jobs, sections, departments or divisions.

Next, the company 'appreciates the view that an increasing measure of association of works employees with management in the working of the industry is desirable'. This would be the first time that Indian industry recognises that there is much to be gained by labour participation, as it were, in management. For, increasing association by employees would tantamount to such participation. There is the full recognition by the Union that an improvement in productivity should be supported by it. For this purpose, the Union has agreed that studies should be made 'to establish a standard force in each of the existing departments'; but, after such standard force is established, the company assures the Union that there would be no retrenchment of existing employees. If there should be surplus employees in particular departments, management would remedy the situation in three ways: firstly, vacancies would be unfilled; secondly, employees would be transferred from one department to fill up essential vacancies in other departments; and thirdly, by utilising such of them for employment on new plant.

Thereafter, the agreement deals on such subjects as the wage structure. It suffices for us to note that the agreement on wages, which entails some upward revision, redounds to the credit of both management and labour. Firstly, the company has agreed to revisions which are fair and just; secondly, the Union has not pressed unreasonable demands. The duration of the agreement has been fixed 'in the first instance for a period of three years'.

Such is the agreement that has been concluded; it is the background which imbues it with greater importance. The background is one in which Mr Nehru has returned from his trip to the West, and when he asserted that the association of labour and management could contribute substantially in improving production. Suggestions that this pattern should be copied in India were received by the Stock Exchanges with disbelief and incredulity. More, the asseveration was also made that any such attempt in India would be a bear factor in the eyes of Dalal Street and the Royal Exchange.

Again, it is a background wherein Indian ports continued to be troubled by a none too co-operative labour. Labour conditions were even more difficult, with the eastern metropolis, even today, being partly paralysed by recalcitrant Bank employees.

While these were the developments and the events in the Indian labour

Rail-Sea Co-ordination

The Rail-Sea Co-ordination Committee set up by the Union Transport Ministry has an extremely difficult piece of work in as much as (1) the stages of development in the two systems of transport bear little comparison with each other, (2) lack of co-ordination over long years has given rise to allied difficulties and (3) any recommendation offered should be scrupulously consistent with the available quota of monetary resources.

The Indian Merchants Chamber has made a valuable contribution by setting forth certain important views and observations that should not be lost sight of. In its memorandum there is, inescapably perhaps, a ponderous emphasis on on the development of coastal shipping, which means some balance between the two wings has to precede their co-ordination.

There is also a general view that there has been an unduly preferential treatment of railways though it is undeniable that the system, bearing as it does the major burden of internal transport, has not developed to an extent adequate to cope with the entire requirements. The aspect of increasing transport facilities apart, there is the larger question of economic policy to assist the development of coastal shipping. Government have already made a beginning in two directions: by implementing the policy of reservation of coastal trade to national shipping, and secondly, by extending assistance to the industry in building up an adequate tonnage. As the Chamber points out, it is not too early to plan a balanced development of the transport services on an adequate level and by a rational arrangement whereby they could play their part effectively and in a complementary manner instead of engaging in wasteful and unhealthy competition.

Getting down to specific problems the Chamber points out that the coal traffic emanating from the north-east region will have to be the basis for the operation of the coastal sea transport. At present, ships experience great difficulty in procuring enough cargo. Co-ordination will therefore have to be attempted by ensuring to the ships adequate traffic, so as to minimise chances of the ships having to return in ballast or loaded with cargo short of their capacity, which is an important factor contributing to increased costs of operation for the shipping companies. This would reinforce the proposal for arranging movement of bulk cargo such as coal, salt, foodgrains, cement, fertilisers, etc., by sea particularly in respect of port to port movements or where cargo is destined to interior places near to the ports.

Another point the Chamber makes out is that a rigid demarcation of commodities for transport by rail and by sea would defeat the major objective of rationalising the transport arrangements, namely, the full and effective use of both forms of transport.

Lastly, the Chamber has to say this on the cost to trade and industry as a result of rail-sea co-ordination. It argues against any increase in the incidence of transport costs. What Government can do is to keep the costs down to a minimum by effecting a rationalisation of both systems simulataneous with the proposed co-ordination.

✱

The Indian Road Congress:

The twentieth Indian Road Congress in Nagpur has done well not merely to restate the desirable extent of road development but to explore and suggest, with some success, the ways and means of making it possible. The presidential address by the Madras Highways Chief Engineer, Mr K. K. Nambiar should commend itself for special study by those in charge of road planning. His suggestions are all the more important because the Planning Commission have reduced the allocation in this respect from the original figure of Rs 350 crores to Rs 250 crores. As the Madhya Pradesh Governor sees it, the objective of doubling India's per capita income in 15 or 20 years calls for a more adequate road system and therefore, either this objective must be weakened or the allotment for roads must be strengthened.

The most interesting of Mr Nambiar's suggestion is the creation of of a permanent statutory fund for financing road revelopment and maintenance programmes. The present Central Road Fund is able to contribute only Rs 25 crores for the next plan period. Road works in the past have suffered an account of the sudden and sometimes violent fluctuations in the funds alloted for road development. And, lack of finance continues to retard current progress.

Even as early as 1927, the Road Development Committee reported that 'road development in India is passing beyond the financial capacity of Provincial Governments and local bodies and is becoming a national interest which may, to some extent, be a proper charge on Central Revenues". The origin of the Central Road Fund can be traced to this recommendation. Only in April 1947 did the Centre take over the financial liability of maintaining and developing the national highways while the State roads are to be maintained or constructed from State revenues, supplemented by grants from the Central Road Fund. Rural roads are, generally speaking, left to local effort and initiative.

The Taxation Enquiry Commission which went in to the question of funds for road development have seen a prima facie justification for (1) an annnal contribution from the Centre of a sum equivalent to the proceeds of the Customs and Central excise duties in petrol for the development of rural communcations, and (2) the provision by each State Government for expenditure on rural communications, of a sum not less than 25 per cent of the Central Grant to the State from the Central Road Fund, the Central Grant being conditional on such provision by the State.

Mr Nambiar emphatically supports the view of the TEC and maintains that the proceeds of such taxes credited to the statutory road funds should on no account be diverted for other purposes.

There is also a strong case for the creation of an Indian service of highway engineers so that engineers may have opportunity to have experience outside their own States. There needs also to be an expert body to go into the question of the operation costs of road transport undertakings, the justification of road improvement schemes and the extent to which road construction may be mechanised consistent with the necessity to maximise the participation of manual labour.

✱

Indigenous Newsprint:

The first year of production of the National Newsprint and Paper Mills Ltd should be hailed as an excellent start on the road to self-sufficiency in quality newsprint. The Mill, which is a combination of private and public enterprise, has been utilising wholly swadeshi pulp with encouraging results. Total production in the past year amounted to 2,600 tons of newsprint all of which has been readily sold to newspapers in the country.

The Chairman, Sir A. Ramaswami Mudaliar is undisguisedly happy over the co-operation and patronape extended by Indian newspapers. A large number of medium and small newspapers has switched over to Nepa newsprint, while some larger newspapers also use it for their evening and mofussil editions.

Government support also has been conspicuously helpful, the most important aspect of which is the exemption from excise duty accorded to the sale of Nepa newsprint to newspapers. The Chairman feels that the Government should assure a market for the product by creating a pool of indigenous and imported newsprint. It is feared that without this assistance, a steady marketable production may not be easy. But with a quality that compares favourably with imported newsprint, the Nepa Mills are well set for a progressively expanding business. Incidentally, the mills constitute a significant unit of the industrial sector of Madhya Pradesh.

make the aid last for longer duration; for, such continuity makes for more detailed planning. Even during last week, despite the Dulles's affair over Goa, we had heartening examples of further Indo-American cooperation. I refer, firstly, to agreements signed at Delhi under the technical cooperation scheme for further supply of steel, and, secondly, to the functions held at Bombay and at Port Okha to mark the arrival of locomotives and goods wagons from America. Mr Cooper's references to the continuous flow of American aid was marked by a certain justifiable pride which was at the same time characterised by modesty. No sensible Indian would fail to be impressed by the generosity and imagination implied by this continuous flow of help from America. At the same time, it is a measure of our own freedom from ideological bias (of which Americans seem to have persistent doubts) that we are not allowing ourselves to be piqued by stray incidents, into isolating ourselves from America. Ultimately, it is only mutual respect for each other's point of view and an active idealism for a better and freer world that will form the basis for enduring friendship between India and America. While it is not for us to indicate how far we have succeeded in achieving this end, we are free to express our warmest admiration for the way in which the American ambassador in India is fufilling his mission.

scene, quietly and without fuss or bother, Tata management has been negotiating from a strength derived from proper understanding of labour's role in industry. Labour in the Tata organisation also responded magnificently in these discussions. The keen interest taken in labour conditions, starting as it did in Sir Dorab Tata's time, has today paid handsome dividends—for the simple reason that no dividends were sought when such policy was first initiated. The House of Tata has served as a precept in many important industrial matters. Let us hope that the latest fruit of Tata pioneering—association of labour in management—will be emulated in the next few years by the other components of Indian industry. For, it not only promises industrial peace; it is agreements such as these that will ensure industrial prosperity.

Vital Preoccupations

THE week in the Capital has been almost completely dominated by continuous preoccupation with what in the event may well turn out to be decisions of momentous significance to the future of the country. One of them was political and the other economic. The first was the discussion in Government and Congress circles on the reorganisation of States, which, even at the moment of writing, is still inconclusive on vital issues connected with it. The second was the consideration by the Cabinet and by the Standing Committee of the National Development Council of the almost final draft of the Second Five-Year Plan.

The importance of these confabulations can hardly be exaggerated; for, final decisions on the first will settle, for decades, the future political geography of India and may conceivably be followed by fundamental developments on national attitude either for good or evil, depending upon whether or not the final decisions are accepted in a spirit of democratic acquiescence to the general consensus. Final decisions on the second, (whose nature, however, is already familiar) will settle the broad framework in which Indian economy will function in the next twenty years at the least.

While it is heartening to find that the discussion on the economic issues has been characterised by a certain sobriety, not to say even a humdrumness, (which, surely, is the characteristic of a mature democracy in dealing with important issues), the atmosphere that surrounded the discussion of the political problem has been contaminated with prejudice, group loyalties and even a certain reluctance to come to unpalatable decisions. The Congress Sub-Committee, charged with the task of coming to final decisions on the disputed issues, was to have announced its final decision on Monday, but this was not done. Even at the moment of writing (which was delayed as much as possible in order to give the final picture), the vital questions of the future of Bombay and of the Punjab continue to baffle solution. There is now little chance of the draft States Reorganisation Bill being ready by the 15th of January as was originally scheduled. Though this does not matter very much as there is still plenty of time, the uncertainties surrounding the issues and the plentiful crop of rumours, statements and counter-statements emanating in the heat of controversies is getting on everybody's nerves. It would be better if the decisions, whatever they are, are made known at the earliest possible moment.

As is only too well known, the real difficulties are in regard to the shape of Maharastra and the future of Bombay, on the one hand, and the future of the Punjab, on the other. So far, very little has been heard about the Punjab, partly because, no firm decision has yet been taken on it (except that Himachal Pradesh should be kept separate) and partly because the Bombay issue has completely overshadowed the other. The future of Bombay, about which all kinds of rumours have been prevalent is the one issue which is still defying a final solution acceptable to all. The discussion among local leaders having completely failed to yield results, the Congress High Command has now to give its final solution. This is, in a sense, good, because, since every conceivable opportunity has been given to the local leaders to use such political sagacity as they possessed and since this has proved inadequate to the situation, no one, least of all the leaders themselves, can blame the High Command for any decision that they may take. Mr Shanker Rao Deo, the Maharastrian leader, who held discussions with Mr Morarji Desai on the question, has himself said that he would now leave the matter to Mr Nehru for decisions and Mr Patil, the Bombay Congress Chief, has already assured his support to any decision the Committee might take.

The fact that the Maharastrian leaders of Poona and of Vidharba have been summoned to Delhi seems to indicate that the points for decision are no longer the future of Bombay but the merger of Vidharba with Maharastra and which city should be the capital (whether Nagpur or Poona), should it be decided to have Maharastra comprising of both Vidharba and the Maharastrian area of Bombay and Hyderabad. Despite claims made by Bombay Maharastrians, it now seems fairly settled, though no announcement has been made, that Bombay will not form part of Maharastra, nor will there be a bi-lingual State of Bombay of either the SRC k'nd or of the subsequent Maharastrian pattern including Vidharba. Speculations about Bombay being made the second Capital of India would now appear to have been premature. The probable final picture of Western India is a Gujerat State to include the Gujarathi districts of Bombay State, Saurastra and Kutch, and a Maharastra consisting of Maharati speaking areas including Vidharba, though, even at the moment there is a strong resistence to this merger from Vidharba. As regards Bombay, it will in all probability be a separate State.

This last decision would appear to be favoured as a sop to the Maharastrians. Under the Constitution, it is open to a State to merge with a neighbouring State at any time it chooses. Maharastrian leaders who have, unfortunately, not come out very well in all these negotiations by changing their stands often will find the position something of a mercy, since Bombay can be made later to vote for a merger with Maharastra. At one time Maharastrians favoured a bi-lingual State in which the Gujerathi area, but not Vidharba or Bombay would be given the right to secede. This, of course, was not acceptable to the Gujerathis. Later on the Maharastra Provincial Congress Committee seemed to favour a separate Bombay State with option to merge with Maharastra after five years. This was agreed to by the Congress President, but the Maharastrians resiled from this position because the populace had peen encouraged to hope for a Samyukta Maharastra with Bombay as Capital and they would not hear of anything else. Thus, the Maharastrian Congress leaders have been caught in a net of their own weaving and have left the decision to the Congress Working Committee. As stated earlier, Bombay will in all probability be left as a separate State to keep open its later merger with Maharastra. This is the utmost that Maharastra is likely to get at the moment, though they seem also to be hoping to have some of the offices of Maharastra in Bombay.

As regards the Punjab, it seems settled that Himachal Pradesh will be Centrally administered. PEPSU and the Punjab will also be merged, but the crux is how to assuage Akali fears. In this connection, support is being canvassed for an interesting proposal for enlarging Delhi to include a sizeable bit of the Punjab so that the percentage of Sikh population in the rest of the Punjab as reconstituted will be more than at the moment. But there are powerful polttical sections objecting to placating Sikh sentiments in such ways.

As regards the rest of the issues connected with reorganisation, it is now practically certain that Vishal Andhra will come into being. And on the question of border adjustments, too, there are to be extensive changes from the recommendations of the SRC's report. Apart from specific departures in individual cases, there is a shift in principle in that the basis of division is now to be linguistic majorities in taluks instead of districts.

As regards the discussions on the Plan, it is now settled that the draft memorandum on the Second Plan from which extracts have been unofficially appearing in the press in the course of the last fortnight, will be officially released by the end of the month after consideration by the National Development Council which is scheduled to meet on the 21st of this month. The Cabinet has already discussed it and so has Standing Committee of the National Development Council. Eighty members of the Parliament belonging to all the parties have been invited to discuss the draft memorandum for three days from Thursday. The draft as finalised after all these discussions will be presented to Parliament in its next session.

The latest development with regard to the Plan is the fruition of an idea that was thrown out by Mr Nehru on his return from Russia. This was the concept of 'the plan within the plan," that is to say, annual plans within the broad framework of the Five-Year Plan. Cynics aver that this is a device to postpone ticklish final decisions on the scope and size of the Plan and the embarrassments of coming to firm decisions on available financial resources. But the idea has obvious advantages. First of all, flexibility is assured and it is possible to modify in the light of experience and over-ambitious or unduly pessimistic targets. Since it is admitted that data has not been adequate for many decisions and that too many imponderables have been taken into account, this will insure short notice changes. This will be especially necessary in relation to transport and cloth and in the general sphere of consumer goods planned to be supplied by cottage industries. External assistance is also an uncertain factor which can be accommodated by annual plans. Annual revisions will also help eliminate waste since reallocation is possible and we would not have the spectacle of money wasted merely because an allocation has been made. Lastly, the intangibles of the moment, like price levels, employment trends and supply of steel, may be more precisely assessed as the Plan progresses.

In view of the flexibility provided by the concept of annual plans, the overall financial outlay of Rs 4.800 crores has been accepted by the Cabinet and is expected to be undisturbed by the National Development Council. In its final form, the draft memorandum is not substantially different from what we have been led to expect from discussions in the last few months in the country. The emphasis is heavily on industrial expansion, on the one hand, and increasing of employment opportunities by expanding the cottage industries sec-

North Indian Notes

Inadequate Allocation for Transport?

It is a little consoling to note that a reduced expenditure target for the Railway's Second Plan does not necessarily involve a dislocation of the order of priorities that was originally drawn up. As against the Rs 1,400 crores asked for by the Railway Ministry, the Planning Commission have allotted Rs 900 crores for railway development, apart from the depreciation fund contribution estimated at Rs 225 crores. The length of new tracks to be laid may have to be curtailed, but it will not be possible to leave any of the demand for increased tonnage of traffic unsatisfied, except at serious detriment to industry and trade. The total traffic to be handled by the Railways at the end of the Second Plan is expected to be 180 million tons, which is more than a 50 per cent increase over the estimated tonnage in 1955-56. The Ministary apparently continues to have misgivings over its ability to meet the situation after a cut of Rs 355 crores on available funds.

The development programme is understood to provide for the renewal of some 1,600 miles of track each year and electrification of 800 miles of railway lines, four workshops at a cost of Rs 28 crores, a new metre gauge coach factory at a cost of Rs 10 crores. Another Rs 5 crores go to the expansion of the Chittaranjan Locomotive Works. Welfare of railway workers (incidentally, Railways is the largest single employer in the country) and better amenities for III class passengers are promised, but progress in this direction may well be slow, unless a larger expenditure is allowed. Many, in fact, consider the original target as a bare minimum.

The Ministry has done well to plan a ten per cent improvement in operational efficiency, through a more intensive utilisation of rolling stock, which surely will bring about some saving in the purchase of fresh rolling stock.

*

It is interesting to examine, side by side, the fresh fillip for road development. The allocation stands at Rs 250 crores, apart from the expected grant of Rs 25 crores from the Central Road Fund. The Nagpur Plan of 1943 had laid down a general target that, by 1963, no village in a well-developed agricultural area should remain at a distance of more than five miles from a main road. It is estimated that by the end of the First Plan, a third of this target would have been realised. In the next Plan, some 1,000 miles of inter-State roads and roads of economic importance would be built at a cost of Rs 20 crores. Road development in the States would cost Rs 165 crores.

The fact that development of road transport has consistently lagged behind development of roads has inspired an innovation, namely, Road Transport Corporations in each State, under the Road Transport Corporation Act of 1950. The Railways is asked to contribute its share toward these Corporations.

*

Efforts are simultaneously being made to correct the glaring imbalance between the different systems of transport. Eighteen new ships with a total tonnage of 110,000 are to be added to the mercantile marine by the middle of 1957. Between the different shipping companies, Government have advanced loans totalling Rs 12.64 crores toward the cost of these ships. India Steam, Scindia Steam, Great Eastern and the Eastern Shipping Corporation are the companies sharing the loan. Indian merchant shipping had a total tonnage of 3.5 lakhs in 1950, which rose only to 4.8 lakhs in 1955, though the First Plan envisaged raising it to 6 lakhs. The Second Plan provides for a further expansion to 9 lakhs tons with a provision of Rs 50 crores. It is calculated that when this phase of expansion is complete, Indian ships would carry 100 per cent of the increased coastal trade, 50 per cent bf the adjacent trade and 15 per cent of the overseas trade.

*

The Food Front:

It is a tribute to the inherent soundness of Government's food policy that ' the self-sufficiency achieved in foodgrains is such as not to be affected seriously by the recent floods and cyclones. This is the time, perhaps, to recall the courage, discernment and foresight of the late Mr Rafi Ahmed Kidwai. In essence, his policy consisted of, on the one hand, a carefully limited price policy which lent consistent support to the cultivator and, on the other, a substantial building up of reserves which prevented the consumer from being let down. Evidently, his policy is now bearing fruit.

It is all to the good that the present Food Minister, Mr A. P. Jain, has taken up where Mr Kidwai has left, fully appreciative of the latter's approach.. Striking a very confident note, Mr Jain described in a recent broadcast, the progress in the agricultural sector as the outstanding economic development during the period of the First Five-Year Plan.

The production of foodgrains has increased from 50 million tons in 1950-51 to 65.8 million tons in 1954-55, exceeding the Plan target by about 4.2 million tons. Correspondingly, the food imports have come down from 4.7 million tons in 1950-51 to 0.77 million tons in 1955 and the present imports are meant more for building up a reserve than for immediate consumption. In fact, it has been possible to allow limited exports of rice, maize, jowar gram and other pulses. Not less satisfactory are the production figures of commercial crops. Even in the case of jute, which showed, perhaps, the slowest progress, production in 1955-56 has been estimated at 4.1 million bales compared to 3.3 million bales in 1950-51. Taking agricultural production as a whole, the index number has gone up from 100 in 1949-50 to 114 in 1954-55.

The change has been brought about by favourable climatic conditions, by the large number of irrigation projects and tube-wells, reclamation projects, fertilisers and improved seeds and, lastly, by the enthusiasm engendered by the community development schemes and the extension service. Further progress lies in two new directions, namely in advanced agricultural research, bringing its fruits to the service of the farmer and, secondly, in agrarian reforms which should ensure greater distributive justice and give the average peasant an interest in land more than that of a hired labourer.

NORTH INDIAN MARKETS

Crushing in full Swing

CRUSHING for the new Sugar season, which officially commenced from November 1, 1955, is now in full swing. According to the Indian Sugar Mills' Association, more than two-thirds of the total number of factories in India had started crushing by the first week of December. The number of factories, which had started working by December 5, was 95 as against 88 up to the same date in 1954.

Production figures for the fortnight of the season ending November 15, 1955 suggest that, if the trend continues, production this season will be still higher than last season's record of 15.95 lakh tons. Actual production up to November 15, 1955 was 34,070 tons as against 28,732 tons for the corresponding period of the previous year.

Under the Second Five-Year Plan, it is proposed to increase the country's annual sugar production to 22.5 lakh tons, while the industry, at present, is capable of producing 15 lakh tons of sugar. It will have to be expanded in order to achieve the target during the next five years. Already 39 new factories and expansion projects in 46 existing units have been licensed which, when completed, will provide additional capacity of 6.5 lakh tons. Further capacity is in the process of being licensed.

According to the Indian Sugar Mills Association, licences for installing new sugar factories will be granted by Government only after considering the views of existing factories in the localities where the new units are to be set up and satisfying themselves that no adverse effect on their working will occur. It is feared that, in Bombay where about 20 new factories are proposed to be built up, a situation may develop necessitating the removal of factories for want of sufficient supplies of cane. The Association has, therefore, suggested to the Government that new sugar factories should be located at a distance of 20 miles. Furthermore, before granting licences for new factories, steps should be taken to expand the already existing ones.

Meanwhile, sugar markets continued to remain dull following the start of cane crushing season. Following were the mill delivery rates quoted per pound:—Jaswant Rs 28-10; Simbhauli Rs 29-0; Mowana Rs 29-3; Daurala Rs 29-4; Amroha Rs 28-0; Bijnore Rs 28-0; Mansoorpur Rs 30-0 and Rampur Rs 31-8.

*

In the Hapur market, Gur prices moved within a narrow range of Re 1 per maund, mostly influenced by prices in the futures section. Ready was quoted at Rs 12-3 per maund, while Old stocks were disposed off at Rs 10 per maund.

Loading facilities were easy and a special load of 83 wagons was despatched to Gujarat. Arrivals were very low, at an average of 3,000 maunds daily, while stocks were estimated around 15,000 maunds daily. Total arrivals, since the beginning of the season, were 2.8 lakh maunds as against 3.58 lakh maunds at the time last year.

Madras Review

The Peninsula

Issues on the Anvil

THE Governments at the Centre and the States should have, by now, been specifically thinking in terms of framing their budgets for the coming year. The year has a special significance in that it is to see the launching of a national plan, the content, shape and size of which have no precedence. Time, therefore, is now opportune emphatically to present points of view in respect of vital matters of policy which are apt to be overlooked. The comments made by Mr M. A. Chidambaram in his presidential address at the quarterly general meeting of the Southern India Chamber of Commerce are well-timed and merit the serious consideration at governmental level.

Though most of the points he made out have been covered in earlier memoranda they appear only in sharper relief in the new set of circumstances of an evolving economic pattern. We confine for the present to three issues on which Mr Chidambaram spoke in detail, namely State trading, textile production and single-point sales tax. It will be seen that in a few months' time decisions are bound to be taken on all the three issues. In order that their implementation may have the widest possible support, it is essential that they be reached after full discussion and proper appreciation of the seemingly conflicting points of view.

The possibility of actively entering trade has been under the special consideration of the Union Government for some time now. In fact, a Committee was appointed to go into the matter in 1950 and another again in 1952. In his recent address to the Import Advisory Council, the Commerce Minister reiterated the proposal, which apparently, carries an additional appeal in the context of securing more resources for the Second Plan. The Panel of Economists has given its approval for making a beginning in State Trading in jute, etc, at an opportune moment.

The opposition to this scheme which Mr Chidambaram strongly has, in common with other spokesmen of private enterprise, is not merely based on the understandable fear that an incursion by the State into the field of trade, either foreign or internal, would dislodge many of the agencies, the smaller ones in particular, which now operate successfully. There is certainly the risk of throwing people engaged in these agencies out of employment.

Mr Chidambaram gives equally unassailable and perhaps more persuasive reasons why the proposal should not be carried through. He believes, with plenty of justification, that the efficiency of State trading in various countries is markedly less than that of private agencies. Experience has shown that State trading has neither secured for the Government the finance it hopes to find nor has resulted in fair supplies at equitable prices to the consumer. At best, it is a mechanism suited to the exigencies of an economically serious situation.

Again, it can be argued that foreign trade lends itself least to be included in the frame work of a plan, even though the planner is obliged to do so. The reason is that a plan pre-supposes a self-contained unit. The changing conditions of foreign markets can hardly be forecasted and where they can be, their representation in precise terms is often untrustworthy. It is for this reason that Mr Chidambaram says that monolithic State trading organisations cannot be flexible and will have no capacity to adjust and adapt themselves to the changes in markets abroad. Relatively, private agencies are bound to fare more effectively.

As another important spokesman of the private sector points out, bulk buying under the aegis of the State generally leads to a rise in prices in the supplying countries. Again, no single agency, however informed, is in a position to negotiate whereas, private traders with their past experience and continued contact are in a better position to secure favourable terms.

The argument that State trading will strengthen the States' coffers can also be countered. At present, the State gets a substantial share from the profits of private trading and commerce and this, in the event of the new scheme will considerably dwindle. The probability therefore is that State resources will suffer a shrinkage.

The new proposal, however, derives much of its attraction from the prospect of trade with communist countries. But it is, argued that none of the communist countries has so far expressed reluctance to appoint traders in the private sector as their agents. It is possible that the State trading organisations established to deal with communist countries might find it ineluctable to import some goods from these countries which may not be needed in this country or may be got from elsewhere at cheaper rates..

One could, of course, marshal in this discussion the usual arguments for competition against monopoly. But it is highly essential that this crucial issue should not be brought down to the level of a debate. Government have betrayed a somewhat strong inclination to enter into such activties as banking, insurances, foreign trade, etc. But it is good that they have no sentimental preference for nationalisation as such. In fact, nationalisation as a means for higher efficiency and greater productivity has lost much of its glamour. What is left of it is its appeal as a means for bringing about a greater equality and justice in the distribution of wealth. It is imperative therefore, that every thought should be given to see if the measures which Government have in mind, subserve this overriding criterion. It is a matter for careful and unbiassed analysis rather than for instantaneous decision.

We may now pass on to the second issue which Mr Chidambaram takes up, namely, the target for production of the textile industry. Unfortunately the subject has come in for a good deal of avoidable controversy, and we shall be careful not to add to it. There is a section of opinion which is all out for pegging mill cloth production at the figure of 5,000 million yards with a view to give the increase in volume of consumption of cloth during the Second Five-Year Plan to be met wholly by the cottage textile industry. Greater employment opportunities is a distinctly favourable argument on its side. Lately the controversy has raged to disturbing dimensions with the advent of the Amber Charka into the field, a contrivance that is at any rate unique in that it set fire to an almost endless train of arguments and counter-arguments, most of which evidently betrayed an extremely nebulous idea about the economics of the new device. Now that it is decided to give it a trial on a limited scale and verify its pretensions, we may not draw any hasty conclusion. Meanwhile it is hazardous to decide that the production of mills should be pegged and licensing of new spindles stopped because fresh light need to be shed on such points as the extent of additional financial liability involved, the suitability of the new type of yarn, the cost to the weaver for this raw material, the interests of the consumer, the marketability of the handloom product, and finally, the income potentiality of the created employment.

The mercantile community had been vigorously representing to Government for the introduction of a single-point sales tax. Mr Chidambaram has taken the opportunity to sound a reminder. At a recent conference in Madras, representatives of trade and commerce of the State reaffirmed that the multi-point sales tax has been responsible for the elimination of the normal links in the trade and have given rise to many difficulties in the matter of submission of returns, statements, etc. The tax being of a cumulative nature all links in the chain of transaction have to maintain the accounts in the languages prescribed under the Act; and, as most of the assessees are drawn from the retail trade, the difficulty becomes aggravated. Mr Chidambaram suggests that a single-point levy of taxation should be introduced rather at the first link in the chain of transactions at a rate fixed by the Government without prejudice to the budgetary position of the State. He makes it abundantly clear that this suggestion does not cloak a plea for reduction in the quantum of the tax.

*

WORLD OF FINANCE

(Continued from page 60)

show a shrinkage of Rs 6.08 crores. Thanks to the transfer of securities to the Issue Department, foreign balances held in the Banking Department have declined by Rs 4.90 crores to Rs 43.40 crores.

\+

The statement of the State Bank of India for the week ended January 6 reveals a rise of Rs 1.59 crores in deposits to Rs 223.89 crores. Borrowings from other banks show a decline of Rs 4.20 crores to Rs 0.80 crores, while other liabilities, including inter-office adjustments, are lower by Rs 0.73 crores at Rs 4.01 crores.

On the assets side, cash balances have declined by Rs 3.65 crores to Rs 17.97 crores and Investments by Rs 1.73 crores to Rs 116.64 crores. Loans and Advances have risen by Rs 5.86 crores to Rs 109.17 crores—'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 2.29 crores and 'Bills Discounted and Purchased' for Rs 3.57 crores.

According to the returns of the Scheduled Banks for the week ended December 30, 1955, demand liabilities have sharply risen by Rs 7.80 crores to Rs 614.48 crores, while time liabilities have declined by Rs 1.88 crores to Rs 418.40 crores. Borrowings from the Reserve Bank have shown a sharp rise of Rs 12.30 crores to Rs 30.02 crores and those from the State Bank of India are lower by Rs 0.53 crores at Rs 7.23 crores. Cash balances have moved up by as much as Rs 8.58 crores to Rs 98.23 crores. Investments are lower by Rs 2.88 crores at Rs 385.05 crores. Advances are shown at Rs 631.45 crores against Rs 622.22 crores. Money at call and short notice stands at Rs 10.50 crores against Rs 12.00 crores.

Madras Review

South Indian Notes

Southern Region's Needs

The reduction in the overall allotment to the States in the Second Five Year Plan need not cause any misgiving because adequate provision has been made in the Plan to expand its scope according to the resources available and the felt need for new schemes at a later stage. Though the final picture of the States' plans will emerge after the meeting of the National Development Council scheduled to be held in the third week of January, it is expected that a complete picture will not be available before next year.

Mr C. Subramanyam, Finance Minister, Madras State, disclosed on his return from New Delhi early this week, that all state plans had been cut down by five per cent and that the outlay for Madras would stand reduced from Rs 182 crores to Rs 170 crores. The State Government considered the allotment was not proportionate to the revenue resources available to them. There, was, however, no need to feel disappointed because the Plan itself was flexible.

Apart from the size of the Plan, Government are concerned about the industrial backwardness of the Southern region. Since the Second Plan has not been designed to increase urban employment, it is inevitable that pressure on land will increase. It is common knowledge that in the region, pressure on land is already at its maximum and if new vistas for employment are not opened up, there would be serious disruption to the State's economy. Mr Subramanyam's solution to this knotty problem is the setting up of new industries capable of employing a large number of people. In this connection he has mentioned an alumiium industry and a heavy electrical industry.

The fact that Avadi has been included in the list of places to be visited shortly by a team of experts representing the Associated Electrical Industries with whom the Government of India have entered into an agreement for the setting up of a factory for the manufacture of heavy electrical equipment, has given rise to the hope that the proposed factory may be located in the Madras State. The consensus of opinion is that it is high time the Central Government have given consideration to the State's demand in this regard. For one thing, rural electrification has made strident advance in Madras and hence there is a great demand for heavy electrical equipment both within the state and in the neighbouring regions. As Mr Subramanyam has pointed out there is urgent need for establishing a major industry in the Southern region if only to avert a deterioration in the employment situation. It is to be hoped that unless serious handicaps are discovered, the Central Government will have no difficulty in deciding in favour of Avadi as a suitable site for the proposed factory.

*

Co-operative Farming:

Advocates of collective farming as a means of removing the disabilities of the cultivator hardly pause to think or explain the implications of the methods outlined by them. They somehow seem to be convinced that there need not be any arguments about it. Such enthusiasts were asked the other day by Mr Jay Prakash Narayan in a speech at Madurai whether they had ever given thought to the danger to village democracy that would entail from a new kind of bureacracy that would develop under the new set-up. Mr Narayan pointed out that under collective farming the agriculturist's status would suffer a further setback and that he would be reduced to the position of a mere wage earning labourer. The managers of collective farms would be vested with enormous powers and the cultivator would in course of time lose all interest in the work he did. Mr Narayan cited the example of the USSR where such a development had taken place. In his opinion, the collective farmers in Russia if left to themselves would unanimously vote for the abolition of the system because under collective farming they had been reduced to a position which offered them no allurement except their wages.

In India, collective farming, which implied the use of mechanical farming implements, was not a desirable objective in view of the fact that a large population depended on agriculture for their livelihood. Since collective farming also meant the negation of the fundamental characteristics of democracy, it was of no practical use in India.

Mr Narayan's alternative is collective ownership and co-operative farming. All the land in the village were to be collectively owned by the villagers with plots allotted on a family basis and according to the resources and needs. He had no objection to ceiling of land holdings provided enough land was kept apart to be distributed to cultivators so as to enable them to live a fairly comfortable life.

Though Mr Narayan's criticism of collective farming is certainly valid, it must also be admitted that his alternative to collective farming is not devoid of the same danger which he so much abhors. Apart from the practical difficulties involved in bringing about an equitable distribution of land among the cultvators, there is no guarantee that, in course of time under the new system proposed by him power will not tend to concentrate in a few hands.

*

Future of English:

The view that India should begin to discard English as an official language only when all educated people in the country had learnt to speak and write in Hindi fluently and with precision, was advocated by Rajaji in his evidence before the Official Language Commission. According to him it was wrong to have fixed an absolute dateline in the Constitution for making Hindi the Union Official language. He characterised the idea of abolishing English which had been acquired over a period of years by the educated people in the country and which had a pre-eminent position among international languages, as a foolish surrender of a valuable asset.

The Madras Government's representation has made it clear that it is not necessary to make Hindi a compulsory subject of study in schools and colleges in the State. It is argued that since it is not going to be a practicable proposition to replace English by Hindi before 1965 the State Government will have to make Tamil the first compulsory language, English the second compulsory language and Hindi the third optional language. It is however, believed that even after 1965 it will be found to be necessary to continue English for certain specific purposes such as inter-Governmental communication, language of the Supreme court and High courts, etc. In short it will be extremely advantageous to keep English as the subsidiary official language of the Union.

SOUTH INDIAN MARKETS

15-Year Coffee Plan

THE newly-constituted Coffee Board has, it is learnt, proposed a 15-year Plan for trebling present production of Coffee to 68,000 tons. The draft plan envisages achievement of the target by 1970. If the normal trend of organised cultivation of ccffee, noticed during the last ten years, is continued, the expected production of coffee will be 45,000 tons by the end of 1970. The current output of about 25,000 tons from 250,000 acres is to be increased largly by intensive cultivation. The Board proposes to give aid for the replantation of 77,000 acres under Arabica and 44,000 acres under Robusta. Aid will be in the form of grants, bonuses and loans.

In view of the upward trend in coffee consumption in India, the Board has agreed that the export allotments should be carefully estimated, and initially to recommend to Covernment for a tentative allotment of 800 tons of Plantation and 500 tons Arabica Cherry out of the 1955-56 crop and to have the position reviewed later.

The revised estimates of coffee for 1955-56 were placed at 27,740 tons, made up of 18,175 tons of Arabica and 9,565 tons of Robusta. With the carry-over of about 3,777 tons of 1954-55 crop to 1956, the stocks available in the Coffee Pool for the current year is estimated to be about 31,000 tons.

Meanwhile, world coffee production for 1955-56 has been above estimates and the 1956-57 crop, which is expected to show the effect of frost which hit Parana estates last year, is expected to be higher by 5 million bags, to a total of 46½ million bags or 2,600,000 tons. Whatever the long-term outlook for ccffee, the immediate prospects do not appear to be too brtight.

*

Pepper markets ruled steadier during the past week. In the Alleppey market, the rate remained unaltered at Rs 837-8 per candy; and the inflow of 200 candies encountered an offtake of 50 candies. In the Kozhikode market, there was a good demand for the commodity, Wynaad quality being quoted upto Rs 950 and the Country variety new upto Rs 950 per candy.

The US import figures for the first nine months of 1955 disclose that she has enlarged her pepper imports; but India's share has dropped on account of considerable underselling by her rivals in the American market. US imports, during the period under review, amounted to 263,718 cwts as against 243,221 cwts during the corresponding period of last year. But the imports from India dropped from 168,113 cwts in the first nine months of 1954 to 118,481 cwts during the corresponding period of 1955.

Stock Exchanges

MARKETS HESITANT

Watch-dog Writes:

STOCK markets have, in general, started the New Year with every evidence of uneasiness. Sentiment has been adversely affected by the uncertainties over the forthcoming Budget and the premium that will be decided on the Tata Steel issue.

Markets have, however, been endeavouring to take a fairly constructive view of the future. The technical position has been somewhat corrected after the recent shake-out. This may probably be the reason that operators have been in a slightly more confident mood and lending good support to selected scrips.

On the Calcutta stock Exchange, the Coal section presented a bright picture following the result of the sudden change in the attitude of the Planning Commission toward the private sector.

Although dealings on the Bombay Stock Exchange were thin and slow due to the anxiety with regard to the Tata Steel issue, selected issues forged ahead on short-covering.

Activity on the Madras Stock Exchange was at a low ebb and there were more sellers than buyers in evidence.

Sentiment on the London Stock Exchange remained rather depressed and the entire list showed widespread losses.

Wall Street closed firm with a good distribution of gains, ranging mainly to $1 or more.

*

Calcutta

Calcutta, Thursday Evening.

THE local Stock Exchange started the New Year in a subdued mood. Sentiment remained depressed by the continued uncertainty about the amount of premium that would be decided on the Tata Steel issue, fears of increased taxation in the forthcoming Budget, the Planning Commission's suggestions for an annual tax on total wealth as a complement to income-tax and death duties, the disappointing production figures released by the IISCO and the difficulties experienced due to the Bank strike.

But it was satisfactory to note that, despite the severe shake-out, noticed during the first week of the year, operators were found to be slightly more confident during the second week, being encouraged by the assignment of an important place to a substantial expansion of both the heavy and light engineering industries in the private sector under the Second Five-Year Plan. The general improvement in prices was, however, more marked in Coal than in other sections.

Trading in the Giltedged market remained rather dull, partly to monetary stringency and partly to the pre-occupation of banks with the strike of their employees. 2 per cent 1986, after touching Rs 80-10 from Rs 80-4, finished the week at the last quoted level. 3 per cent 1957 changed hands at Rs 99-7; 3 per cent 1963-65 at Rs 94-7 and 4 per cent 1960-70 at Rs 101-13.

Despite the strike, Bank shares remained unaffected on expectation of encouraging working results for last year. Punjab National were taken upto Rs 49-4 from Rs 48-8; Hind upto Rs 37-0 from Rs 36-0 and United Commercial upto Rs 53-0 from Rs 52-8.

Although turnover in the Jute section was restricted, prices remained steadier on firmer advices from the jute goods market. There was also a general belief that mills would be making good profits in the coming months in view of the changed outlook for the industry following the recent decision to increase production gradually and the steady progress being made by most of the mills in respect of modernising their machinery. Anglo-India were enquired upto Rs-212 from the year-end closing of Rs 207; Budge-Budge upto Rs 185 from Rs 183; Ganges upto Rs 87 from Rs 86-8 and Kamarhatty upto Rs 189 from Rs 185. National moved between Rs 31-13 and Rs 32-3, to finish better at Rs 31-14.

Of all the sections, Coals presented a bright picture following the result of the sudden change in the attitude of the Planning Commission toward the private sector of the industry. The belief, that the private sector would be asked to increase production by more than 8 million tons per year, made professional operators as well as investors to enter into buying of selected scrips. Bengal were taken at one time upto Rs 605 from Rs 574; Burrakur upto Rs 17-1 from Rs 16-4; East Indian upto Rs 36-3 from Rs 32-14 and Equitable upto Rs 36 from Rs 34-12, to finish the week at Rs 600, Rs 16-14, Rs 35-10 and Rs 35-12 respectively. South Karanpura eased off at the close to Rs 13-7 after touching a high of Rs 13-14 with New Beerbhoom hovering around Rs 22-15.

Textile shares, after showing initial weakness, steadied up toward the close on expectation of encouraging working results for 1955. Kesoram were a bright feature having sustained support upto Rs 18-3 from Rs 17-14, while New Victoria were rather sticky at Rs 2-1.

Thanks to better prices obtained at the last two weeks' auctions and the announcement with regard to the decision for regulating the tea crop during the current year, Tea shares showed a marked recovery from the recent low levels. Operators were, however, hesitant to enter into big commitments pending further developments. Brooke Bond improved to Rs 20-4 from Rs 19-10; Dhelakhat to Rs 18 from Rs 17-6; East India to Rs 23-2 from Rs 22; Hantapara to Rs 291 from Rs 276; Hasimara to Rs 33-12 from Rs 33-4 and Bishnauth to Rs 37-6 from Rs 37.

Little or no interest was shown in the Sugar section. The only bright spot were Darbhanga, having some support upto Rs 26 from Rs 24-14, SKG moved narrowly around Rs 13-5, while Cawnpore were a shade better at Rs 25-10 against the year-end closing of Rs 25-7.

Price movements in Engineering shares were mostly influenced by the speculative activity in Indian Irons. Indian Irons, after touching a high of Rs 38-7 and a low of Rs 37-11, finished the week at Rs 38-1. After market hours on Thursday, there were buyers at Rs 38-1-6 with sellers at Rs 38-2-0.

Among other Engineerings, Jessops were keenly sought after upto Rs 64-0 from Rs 61-8, while TEXMACO changed hands at Rs 21-4 to Rs 21-9 and Richardson at Rs 27-5 to Rs 27-12. Burn were taken upto Rs 329 from Rs 326 and Indian Standard Wagon upto Rs 169-8 from Rs 160.

Miscellaneous shares ruled generally steady. Among Paper shares, Orient at one time touched a low of Rs 34, Titaghur Rs 46-10 and India Pulp Rs 24-5, to finish the week better at Rs 34-9, Rs 46-14 and Rs 24-8 respectively. Shree Gopal moved between Rs 19-1 and Rs 19-4, while Bengal were nearly maintained at Rs 118.

In Minings, Indian Copper were a narrow market, moving between Rs 6-15 and Rs 7-1, while Orissa Minerals turned a shade cheaper at Rs 23-9 against Rs 24.

In Oils, BBP were nearly maintained at Rs 4-6 and IBP at Rs 45.

Among other scrips, Indian Cable had buyers at one time upto Rs 33-4 and Martin-Burns upto Rs 29-4, to ease off at close to Rs 32-15 and Rs 28-13 respectively. BIC changed hands at Rs 13-1 to Rs 13-4; India Steamship at Rs 8-4 to Rs 9-6; Rohtas Old at Rs 23-14 to Rs 24-2; Rohtas new at Rs 22-6 to Rs 23; and Alkali Chemicals at Rs 22-6 to Rs 22-12.

*

Madras

Medras, January 10.

ACTIVITY on the local Stock Exchange, during the past week, was at a low ebb. While Planting scrips continued to depict an easy tone with offerings at slightly lower levels, moderate enquiries were noted in Textiles. Other sections displayed dullness.

TEXTILES:—Although sellers were seen for most of the shares, there was small and selective buying interest in Kotharis, Coimbatore Spinnings, Lakshmi "A" and Travancore Rayons. Kotharis were done at Rs 17-12 and Lakshmi "A" at Rs 93. Bangalore Woollens were, however, lower at Rs 575, while Loyals lost twelve annas at Rs 37-12. Maduras were quoted around Rs 51; Pankajas at Rs 70 and Buckinghams at Rs 176.

PLANTINGS:—Prices in this section, developed an easier tendency due to renewed selling. While Tea and Coffee shares were continually hammered down, Rubber shares escaped without any substantial price-cuts.

In the Tea section, Kalasas were offered at Rs 14-12 and Twyfords at Rs 23-12. Periakaramalais changed hands at Rs 8-14; Coorgs at Rs 10-10 and Peermades at Rs 38-8.

Among Rubber shares, TRTs closed lower at Rs 12-13 and Parksides at Rs 20-15. Kil Kotagiris dropped down to Rs 6-3 following the reduction in the dividend for last year, while Pullangodes were quoted at Rs 4-3-6 and Kallas at Rs 5-6-6.

In the Coffee section, Consolidated Coffees were quoted at Rs 21-5 with sellers at this level. Coffee Lands were offered at Rs 21-5, while Ouchterlonys and Chandramalais hovered narrowly around Rs 5-11-6 and Rs 6-5 respectively.

MISCELLANEOUS:—Price variations were very little in this section. India Cements met with sellers at quoted rate, while Travancore Cements were As 2 lower at Rs 12-7. FACTs ruled steady at Rs 7-6. Madras Vanaspati were quoted at Rs 15; Rane Madras at Rs 9-2 and Aluminium Industries at Rs 21-8.

*

London

London, January 11.

TRADING on the London Stock Exchange was dull during the past week, sentiment being mainly influenced by the difficulties in the motor car trade and the setback on Wall Street. With the result, prices developed an easier tendency and the list of falls was widespread.

Oils moved rather erratically and closed above the worst, while the price movements in Rubber and Tea shares were irregular. Copper shares remained depressed until the last minute when they rose sharply on higher Wall Street advices. Giltedged securities, after initial easiness steadied up a little toward the close.

Following were the closing rates of selected stocks and shares, the figures shown within brackets being the opening rates:—2½ per cent Consols £55 (£56½); 3½ per cent War Loan £47-13/16 (£76½); Dunlop Rubber 23/3 (25/4½); Imperial Chemical 46/6 (49/3); Imperial Tobacco £3-1/32 (£3-3/32); Calcutta Electric 20/4½ (20/4½); Calcutta Tramways 25/6 (25/6) and Assam Teas 21/9 (23/7½).

*

New York

New York, January 11.

THE market recovered from the New Year decline on short-covering and new buying which developed, reflecting more attractive levels obtainable together with additions of largely helpful business news. The closing tone was firm.

Oils continued to dominate, aided by somewhat belated materialisation of higher distillate oil prices along the East Coast. The leaders were Houston Oil and Atlantic Refining. In early trading, Houston added $5, while Atlantic gained over two. Houston's directors have proposed liquidation of the company and the distribution of the proceeds in cash to stockholders.

Following were the closing rates:—Anaconda Copper $71 ($71/9—previous week); General Motors $44¾ ($44¼) and US Steel Common $53 ($57/0).

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN that the TWENTY-FOURTH ANNUAL GENERAL MEETING of the Members of Jessop and Company, Limited, will be held at the Registered Office of the Company on Monday, the thirteenth day of February, 1956, at 11 O'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Directors and Auditors, for the year ended 31st October, 1955.
2. To declare a Dividend.
3. To re-elect Directors.
4. To re-appoint the Auditors.
5. To transact any other business of an Ordinary General Meeting.

By Order of the Board,
G. M. ROBBINS,
Secretary.

63, Netaji Subhas Road,
Calcutta,
9th January, 1956.

A Member entitled to attend and vote is entitled to appoint one or more Proxies to attend and vote instead of him. A Proxy appointed specifically for this Meeting must be a Member of the Company.

The Ordinary Share Transfer Registers will be closed from 6th to 18th February, 1956, both days inclusive.

WORLD OF TEA

(Continued from page 62)

was an improved demand for CTC teas, particularly the best sorts which were in keen competition.

Medium Brokens were steady to occasionally dearer, while Common and Low Medium Brokens were sold at half an anna per pound below last rates. Leaf grades were from one to two annas per pound easier, while BPS grades were in less demand. Tippy teas were again sold well.

In the Internal Sale, offerings were 19,400 packages of Dusts. There was a good general demand for all descriptions except for some of the poorer liquoring grainy types which were irregularly half to one anna per pound easier. Black leaf types, suitable for the Middle East, and the very best CTC Assams with good liquors were the strongest features of the sale and sold generally at several annas above valuations. Commons, Dooars and Medium Assams were fully firm to dearer, while Commonest types were in much strong demand than in previous weeks. The poorer fibrous CTC's were irregular and geneally easier.

There were 1,500 chests of Leaf grades on offer, which were mostly of a stalky and residual type. These met with a fair demand and were sold at one to two annas per pound.

The following table shows the price trends during the past two auctions (price per pound):—

	Week ended 14-1-56			Week ended 7-1-56		
	Rs	a	p	Rs	a	p
Export Sale:						
Clean Black Pekoe ..	2	9	0 to 2	1	0 to 2	2 0
Plain Broken Pekoe ..	1	7	6	1	8	0
Medium Assam Broken Pekoe ..	1	10	0	1	10	0 to 1 11 0
Best CTC Assam Broken Pekoe ..	2	1	0 to 2 3 0	2	1	0
International Sale:						
Medium Dooars Dust ..	1	6	0 to 1 6 6	1	5	6 to 1 6 0
Medium Assam Grainy Dust ..	1	7	0 to 1 8 0	1	7	6 to 1 8 0
Best CTC Assam Dust ..	2	4	0 to 2 5 0	2	2	0 to 2 4 3

In the Export Quota section, rates moved narrowly between 20 and 22 pies per pound.

At Sale No. 1, held at Cochin, offerings were approximately 2¾ million pounds. Quality, although still irregular, generally showed a slight improvement from most districts. Bombay buyers were quiet, but exporters, taking advantage of the reduction in the export duty, were active. Improved high-grown and bright liquoring Mediums, particularly the Fannings grades, met with a strong enquiry at dearer rates; but other sorts in this category were irregularly easier. Low Mediums were extremely irregular, while Whole Leaf grades, thin liquoring and stalky descriptions and reprinted lots were neglected.

Clean Black-leaed Fannings were a strong feature, but the keenest enquiry was for Fannings with bright, coloury liquors, which were the strongest feature of the sale. Following rates were quoted per pound:—Low-grown Travancore BOP Rs 1-10-0 (nominal); Medium-grown Travancore BOP Rs 1-13-6; Anamallais BOP Rs 2-1-0; Best Liquoring BOP Rs 3-3-0; Nilgiri BOP Rs 2-8-0 and Black well-made OP Rs 2-6-0 (nominal).

In the auction, held at Colombo last week, offerings were about 6,560,350 pounds. There was a strong demand for high-grown and medium sorts at generally dearer rates, particularly where quality was improved. Low-grown teas were, however, quoted lower.

Despite the larger outturn, tea shipments from Ceylon are running considerably behind last year. Though the crop up to the end of September 1955 was 8.2 million pounds ahead of last year, exports totalled only 263.03 million pounds as compared with 283.71 million pounds in the corresponding period of last year. With a few exceptions, the decline in exports has been shared by all the importing countries.

As a result of good weather, Pakistan has produced a larger crop of 7.8 million pounds in November, 1955 as compared with 5.9 million pounds in the corresponding month of 1954. The total outturn, during the year up to the end of November 1955, however, amounted to only 48.5 million pounds as against 51.7 million pounds in the corresponding period of last year.

Tea exports from Pakistan have contracted considerably as a result of lower production and rising home demand. Total exports, during the eleven months ended November 1955, were substantially lower at 9.14 million pounds as compared with 16.64 million pounds in the same period of 1954 and 20.44 million pounds in 1953. Shipments for internal consumption to Karachi, however, recorded a steady increase.

TEXTILE MACHINERY CORPORATION LTD.

Notice is hereby given to the Ordinary Shareholders that the time-limit for receipt of applications for 9 lacs new ordinary shares of Rs. 10 each has been extended from 8th January, 1956 to 31st January, 1956.

By order of the Board,
BIRLA BROTHERS LTD.
Managing Agents.

Calcutta,
6th January, 1956.

OLYMPUS

(Continued from page 69)

tor, on the other hand. Transport has wangled a larger allocation, though grumbling has not been entirely silenced. Increased allocation has also been made for social services and education. The private sector has been allocated a total of Rs 675 crores for industrial expansion and these do not include development in mining, electric power generation and plantation and small scale industries. The resources for these developments in the private sector are planned to be found from internal resources to the extent of Rs 300 crores, while foreign capital and help has been at Rs 100 crores. Other resources listed are the Industrial Finance Corporaion, The State Finance Corporations, Industrial Credit and Investment Corporation, National Industrial Development Corporation and Government from the Equalisation Funds and in the form of capital investment by Government in the undertakings of the private sector.

NORTH INDIAN MARKETS

(Continued from page 70)

The Foodgrains market ruled quiet during the past week. In the Hapur market, Wheat prices showed an easy trend with dara quality quoted at Rs 14-4 and farm quality at Rs 15-12 per maund. The offtake was considerable, mostly by millers of Delhi and Bombay.

Rice prices ruled quiet as supply position was reported to be easy. Gram prices eased slightly on Punjab advices, while Barley and Bejhar prices improved on good seasonal demand coupled with poor stock position. The markets for Maize and Bajra remained quiet. The rate for Arhar remained unchanged, while that for Urad eased off in line with the fall in prices in futures section.

Quiet conditions prevailed in the Delhi grains market. With the commencement of sales of wheat in various States by the Government from their stocks, Wheat prices eased, while prices of other grains moved down in sympathy. Rice prices, however, showed no appreciable change.

A quiet tendency in Wheat and Pulses was the main feature of trading in the Bombay market. Prices of Rice kept steady after the recent firmness, while rates of Jowar recorded a substantial improvement.

Reports that the Government had arranged for despatches of about 15,000 tons from Uttar Pradesh imparted an easy tendency in the Wheat section. Ready supplies of the Pissi wheat from Madhya Pradesh were placed at Rs 14 per maund. The Pissi quality from the Punjab was quoted at Rs 14-8.

The undertone in the Rice section was quietly steady. A potentially bearish factor was provided by the announcement of auctions of rice held by the Government. The market was not, however, perturbed over this in view of the fair demand for the grain and higher upcountry advices.

In the Coarse grains section, Jowar presented a better appearance wih the Sholapur quality gaining Rs 5 to Rs 10 per candy at Rs 110 to Rs 115. The improvement was attributed to good consumer demand and increasing enquiries from Africa.

Advance reports from the large rice producing countries of Asia suggest that there will be no fall in rice production in the 1955/56 season. The first official forecast for India is of an increase in acreage of some 5 per cent. In Pakistan, the toal output is not expected to show a reduction as a result of the the floods. In Indonesia, however, production has been affected by floods in Sumatra and more recently in Java. In Japan, the official estimate of paddy production has been revised upwards to 14.5 million tons. The crop in Burma is unofficially placed around last year's level. The harvest in Thailand is also expected to be good as a result of the favourable season. The second crop in Formosa is reported to have been excellent. Production in the Philippines is officially placed higher than last year. The increase in production in China is expected to be 5 million tons.

*

According to the preliminary estimates given by the Indian Lac Cess Committee, the Aghani (Kusmi) Lac crop in India for 1955 is expected to be 61,000 maunds as compared with the final estimates of 158,000 maunds and 51,000 maunds respectiveiy for the last two years for the same crop. The normal of this crop, based on the average of ten years preceeding 1955, is 103,000 maunds.

The final estimates of the Katki lac crop is put at 293,000 maunds, which is 3,000 maunds less than the preliminary estimates of this crop given in November last. The final estimates of this crop in the last two years were 229,000 maunds and 161,000 maunds respectively as against a normal (based on the average of production for ten years preceeding 1955) of 251,000 maunds. The higher production this year is due to the fact that in Madhya Pradesh, specially in and around the areas of Gondia, the crop has been good.

Meanwhile, the Shellac market in Calcutta ruled quiet and hardly any business passed during the past week.

*

WAGES CLAIMS OF £500,000,000

(Continued from page 60)

on the occasion of the next Budget, the Chancellor of the Exchequer were to be pressed by Conservative Members of Parliament to treat wages increases obtined in such circumstances as unearned incomes for taxation purposes.

Meanwhile, the Government are subject to a barrage of criticism on the part of their own Conservative supporters in Parliament, in the Press, and in the business world. The credit squeeze, ineffective as it is, has become very unpopular. Its chief victims are the small firms which do not possess adequate reserves or borrowing facilities outside banks. They are forced to abandon plans of expansion, and many of them even have to curtail their activities. The big firms have ample resources and, if necessary, they can always obtain more from insurance companies or other non-banking resources. But smaller business firms are affected badly, and there is a growing volume of protest against this unilateral victimisation.

The unpopularity of the credit squeeze is enhanced by the feeling that the Government, while preaching economy, continue to spend on a gigantic scale. It is true, in his Budget statement of October 26, the ex-Chancellor of the Exchequer, Mr Butler, announced a few cuts in the Government's capital investment schemes. They did not amount to anything like 10 per cent, however, which was the target for the credit cuts by the banks at the expense of private firms. There is a growing agitation in Conservative circles that the Government should set an example in cutting down ruthlessly their own expenditure before forcing the private sector of the economy to do so.

It remains to be seen whether the new Chancellor, Mr Macmillan, will do better in this sphere than his predecessor. It is now too late for him to attempt to enforce administrative cuts in current expenditure for 1956-57, because the annual Treasury scrutiny of Departmental Estimates for the next financial year is now practically completed. For quick effect his only means would be to cut down ruthlessly the capital investment plans of the Government, the Local Authorities, and the nationalised industries and other public corporations. Any really drastic cuts in this sphere would go a long way toward making it clear that he really means to curtail inflated consumers' purchasing power.

Such a gesture might induce employers to put up a stiffer resistance to wages demands. Hitherto, they have been inclined to yield after little more than token resistance, on the safe assumption they would encounter no difficulties in passing on to the consumer the additional costs, in the form of higher prices. The moment the outlook becomes dubious, they would be inclined to risk losing some output through strikes rather than risking difficulties in selling their goods at higher prices. And, if the trade unions realise that their demands are no longer conceded as a matter of course, they might be inclined to moderate their claims rather than risk unsuccessful strikes.—(Copyright)

SOUTH INDIAN MARKETS

(Continued from page 72)

This gradual loss of the US market for Indian pepper has, no doubt, given room for a certain amount of anxiety. For, the US traders have, of late, changed their buying policy and they are buying just to meet their immediate requirements instead of their usual buying for stockpiling. It is stated that, if useful buying support from the USSR and other communist countries was not forthcoming, the Indian pepper-growers would have been in greater difficulties last season.

In the New York market, Malabar and Lampong pepper were quoted at 36 per pound for the spot position. Sarawak spot was quoted at 32½ cents and 'awaiting release' at 32 cents.

For the new season, the crop is estimated at 23,000 tons as against last season's crop of 19,000 tons. New crop arrivals in the primary markets are assuming larger proportions; but foreign demand has not been large enough to absorb them. The future prospects for Indian pepper depend largely on foreign demand, the quantum of which is rather uncertain.

*

According to the figures released by the Indian Rubber Board, raw Rubber production in India, during November 1955, amounted to 2,680 tons as against the manufacturers' offtake of 1,847 tons. As some of the producers and dealers do not submit correct figures to the Board in order to evade payment of cess (Rs 6¾ per 100 pounds) the Board's figures have not given a true picture of the real situation. The following table shows the production, consumption and stock figures for the three months ending November, 1955 (in tons):—

	Novr. 1955	Octr. 1955	Septr. 1955
Production ...	2,680	2,450	2,310
Consumption ...	1,837	2,214	2,545
Stocks with Estates & Dealers	4,452	4,515	3,355
Stocks with Manufacturers ...	2,936	2,027	2,946

In India, November and December are the peak production months; and the year-end total is likely to be something between 22,500 tons and 23,000 tons as compared with last year's output of about 21,500 tons. The gap between production and consumption is not likely to exceed 4,000 tons in 1955. Production for 1956 is now estimated at 24,000 tons as against a consumption of about 30,000 tons.

*

Conditions in the Madras Groundnut market were rather unsteady during the past week and prices fluctuated widely. Business was reported done in superior oil-quality seeds at rates varying from Rs 116 to Rs 121 per candy and bold varieties from Rs 113 to Rs 118.

Arrivals ranged between 50 and 85 tons per day. Crushers figured as prominent buyers as also Calcutta and Bombay interests, as prices were found to be more advantageous than buying from North Indian centres.

In the Groundnut Oil section, there were no large-scale buyers or sellers. As most of the mills had outstanding commitments, buying interest was small, while shippers and Calcutta intests operated on a limited scale. The rate for the ready position, after improving to Rs 246 from Rs 238, finished at Rs 244 per candy.

There was nothing of importance to report regarding overseas trade. The rate for the UK was quoted at £113 to £114 per ton and Rs 1,600 per ton for Burma.

*

In the Madras Tanned Hides market, arrivals of Cow hides were moderate and prices remained unchanged in light and medium weights. 10/12 lbs were, however, weak reflecting the lack of overseas buying. There was no change to report in the Calf section. Buff hides continued to arrive and were sold on the same level as at the close of 1955.

In the export section, enquiries for fifths in 5/5½ lbs and 8/8½ lbs were fair; but 10/12 lbs. were neglected. There were again complaints from the UK about the adulteration of hides, even up to 10 per cent in certain cases. There were, therefore, indications of hesitancy on the part of London buyers, who were adopting a policy of "wait and see".

Aluminium—India's fastest growing Industry

REGARDED with little favour—even for household uses—by the ordinary man-in-the-bazaar some fifteen years ago, Aluminium has today become the engineer's favourite light metal. It is now fast replacing other metals and wood in the construction of railway-coaches, bus-bodies, aircraft and ships. Experts estimate that by 1960 demand for Aluminium will have doubled, rising to about 40,000 tons per annum.

What is being done to increase Aluminium production ?

Simultaneously with expanding demand, India's production of Aluminium will increase many times. Indian Aluminium Company, who started the first Aluminium smelter in India, are now installing another smelter at Hirakud, Orissa. This smelter will *triple* the Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited — the world's largest group of aluminium companies.

What will it cost ?

The estimated capital requirements for Indian Aluminium Company's Hirakud project are about Rs. 9 crores. A part of these requirements will be raised by a fresh capital issue, half of which will be subscribed by Aluminium Limited and the other half offered to the public.

Aluminium is facing a bright future in India today. India's vast bauxite deposits and water-power resources can support a large aluminium industry for years to come. Harnessing these natural resources, Indian Aluminium Company's Hirakud project will be an important step towards India's goal of self-sufficiency in Aluminium.

Indian Aluminium Company Limited

A Canadian – Indian enterprise

For the Investor

Time to Mark Time

Investment Gossip:

THEY are taking it hard on the Royal Exchange; so I was told by somebody who ought to know, because he is definitely some one on the Calcutta Stock Exchange Committee.

Bombay is getting them down; and Dalal Street is forcing the pace—all downward.

The budget that is to come is scarcely being thought of in roseate terms—operators hardly expect favourable tidings at the end of February from Sir Chintaman Deshmukh.

Production may be all right; sure, we have the Second Plan, and that will mean increasing output of goods in this country; but, as far as the reasoning of the stock exchange operator is concerned, all that matters are the immediate influences at work.

And these, as I have reported at the beginning of this Gossip, are far from cheerful.

Taking note of such facts, I gently questioned my friend, the 'some one who ought to know.' His views, for what they are worth, ran along the following lines.

He expected that the current trend of uneasiness, of uncertainty and doubt, would continue into the middle of April.

The budget would come along; the surprises that it might hold would be few; and the shocks would, at that time, have long since been discounted.

This reasoning led him to suggest that, as we go into the end of April, the full favourable impact of the Second Plan would begin to overawe all other factors that might count with stock exchange operators.

In other words, it was his belief —and he, as I said, ought to know —that markets should turn for the better by the beginning of May; till then, quite possibly the gently backsliding prices—less gentle at times (whenever, for example, a sedate Bombay gets to burn BEST buses).

What should the investor do in the meantume? Mark time, I suggest; take advantage of the lull offered to study more carefully scrips and accounts that might engage his greater interest.

And what are these scrips of greater interest? Again, as some one said, the scrips are those belonging to the three groups—the three groups that I have set out to study for the benefit of the investor. This week, the concluding portion of the study on Sahu Jain; in subsequent weeks, full scale studies of what may loosely be termed as the Birla and Moondhra groups.

£R$

Sahu Jain Industries—II

Investment Study

With their five collieries at Ekrakhas, S. E. Baraboni, Chapui Khas, Maheshpur and Junnordeo, Bharat Collieries have an annual raising of 600,000 tons. Some of these collieries are exhausting their seams of better quality coal. The Company is, in this view, engaged in sinking new pits for opening up new seams of coal, especially the Dishergarh Seam at Chapui Khas colliery; and, in due course, the production of this new coal will be more than what the Company will lose by exhaustion of coal in the seams now being worked. The Company is also said to be negotiating with the Coal Board for necessary financial assistance in order to carry out sand stowing arrangements at Ekra Khas.

Jute Mills:—The three Jute Mills in the group have a combined loomage of 1,765. In spite of the fact that the management had no previous experience of the jute industry when it took over control of the mills in 1950, it fared much better than the counterparts in the industry. The results of per loom profit compare not only favourably with the average of the industry but are better than those of the best among the European-owned mills. The average per loom profit, over a period of three years, of the Jute Mills in the Sahu Jain group is Rs 2.328 as against the average of Rs 1,747 for the best among the selected European and Indian-owned mills.

The spinning and weaving sections are being modernised and electrified. I understand that the order has already been finalised for installation of the biggest automatic wide loom plant in the world for the manufacture of specialities of jute goods to cater to the new requirements of the expanding market. This is, as far as I know, the only group in the industry which has undertaken such an installation. The monopoly of the Indian Jute Industry in the world market for standard varieties has been challenged. The Sahu Jain man-

HIGHLIGHT

The incognito of the writer is jealously guarded here at Indian Finance; but there are some in the know, and it was one such who dutifully introduced me as Watch-dog to someone else.

There followed the pleasurable embarrassment of being told that each Friday, what time that Investment Crusade was a weekly feature, the current issue was opened with trepidation—lest the reader should find his own company "black" listed.

A similar embarrassment concerns the real pleasure (as I was told) that the reader obtained from Watch-dog applauds. And, if I seem to be immodest in relating all this, my only defence is that the incognito is still in tact.

Also, there is a reason to this talk of Investment Crusades and the Watch-dog applauds. Both features came into being because the times demanded them; company mismanagement and contravention of the company law both cried aloud for a crusade.

And, if the Crusade was harsh, lest the reader should think that there was nothing good in Indian companies generally, it was very necessary forcefully to hail good management; wherefore Watch-dog applauds.

The times today call for study; it is the day of discriminating investments, it is the time when the very active interest in particular sections of the stock exchange needs correctly to be interpreted.

For this purpose, with last week, the beginnings of Investment Study; Part II of Study I appears this week. Two further studies are on the way.

I trust that these will be as useful to the discriminating investor as were the Investment crusades (the brickbats, if you will) and the encomiums (or bouquets) that were ladled out in the past.

Watch-dog.

agement has sought, while improving its competitive strength in the standard varieties of jute goods, to undertake manufacture of specialities the demand for which is being largely met by the Dundee industry.

With a view to facilitating fulfilment of large schemes for the development of the industry, the group has, along with the modernisation of the mills, carried out amalgamation of the three mills into one. Albion Jute Mills and Lothian Jute Mills have been amalgamated with the New Central Jute Mills Co. Ltd., The capital structure of the amalgamated Company is as under:

There will be 850,000 ordinary shares of Rs 10 each and 7 per cent cumulative Preference shares to the tune of Rs 33 lakhs, giving a total capital of Rs 1.18 crores. Against this, there is a reserve of Rs 96 lakhs. The gross block of Rs 1.47 crores is shown depreciated by Rs 94 lakhs to stand at a net of Rs 53 lakhs. Liquid assets are as high as Rs 2.13 crores as against sundry liabilities of Rs 72 lakhs.

SKG Sugar:—This Company owns two factories in Hathwa and Lauriya in the Saran and Champaran districts of North Bihar with a crushing capacity of 1,400 and 1,200 tons of sugarcane per day respectively. The cane crush in Hathwa has been quite satisfactory although, in 1953-54, the crush was reduced by nearly 50 per cent on account of floods. The crush for 1954-55 is 32 lakh maunds of cane. This average recovery of 10 per cent compares favourably with the factories in the neighbouring area.

Lauriya owns its sugarcane farm and realises the advantage of direct supplies of cane from the factory farms, especially from the point of view of the quality of the cane. If we exclude the low crush on account of floods in 1953-54, the average crush of Lauriya factory has been 28 lakh maunds and the recovery percentage for the last seven years is 10.2 and compares favourably with other factories in the area.

The present capital structure of the Company, including the recent issue of ordinary shares at par, amounts to Rs 58 lakhs. Of this, Rs 40 lakhs are in ordinary shares and Rs 18 lakhs in Preference. The new issue has been made with the purpose of meeting the working capital requirements of the Company, which have increased on account of increase in the value of stocks and of the extended operations of the Company, owning as it does two sugar factories, a distillery and an agricultural farm.

Dehri-Rohtas Light Railway Co. Ltd.—This light railway, with a track mileage of 51 miles including sidings, stands as a proof of efficient operation under private enterprise. The operating expenses per train mile of this railway have been steadily declining. The working expenses have come down to Rs 10.27 lakhs in 1955 from Rs 10.67 lakhs in 1954 and Rs 11.84 lakhs in 1953. The expenditure per train mile run has declined to Rs 7.33 from Rs 8.05 in 1954 and from Rs 8.54 in 1953. Against this, the earnings per mile is Rs 14.99. The yield in the case of DRL shares is 7.4 per cent. With the expansion of the industries in its belt, the volume of traffic on the railway has been increasing and will further improve, and, on the basis of its efficient operation with declining operation expenses, the profits may be counted upon to go up.

Ashoka Cement:—Ashoka Cement Limited is putting up a plant at Dalmianagar with a capacity of 800 tons of cement per day. In view of the advantages of an already well-established cement factory in the area, this plant has a small capital base and low capital expenditure per ton of cement. The total production of cement in Dalmianagar will, therefore, be 1,900 tons per day of 600,000 tons of cement per annum.

Jaipur Udyog Ltd.:—The Cement factory at Sawaimadhopur owned by Jaipur Udyog Limited, which has now been added to the Sahu Jain Group, has a capacity of 600 tons of cement per day and will, by the end of the year, with the triplication of the plants, produce 600,000 tons a year. Jaipur Udyog Limited, which was a private limited Company, has recently been converted into a Public Limited Company. The total production of cement in the group will be 1.2 million tons against the industry's capacity of 6 million tons, i.e., nearly 20 per cent of the national capacity.

It can be seen that the organisation, in undertaking schemes of expansion, has been striving to embark upon projects that will have national significance and which are

Purtabpore Sugar Maintains Dividend

Balance-Sheet Reviews:

DESPITE a steady and continuous fall in sugar prices, the Purtabpore Company Limited has reported increased earnings for the year ended 31st October, 1955. The efficiency of the factory operation continues at a high level, although despatches of sugar are generally affected by inadequate railway transport facilities.

The quantity of cane crushed at the company's factory, during the season 1954/55, showed a considerable increase over the previous season and is the highest since World War II, at 2,615,826 maunds as against only 1,222,938 maunds. Sugar manufactured is higher at 265,544 maunds against 128,221 maunds. The recovery is, however, reduced to 10.15 per cent from 10.48 per cent, mainly due to the result of a longer season.

Sales for the year have risen to Rs 66.06 lakhs from Rs 40.95 lakhs, while the net profit, before providing for Taxation and Depreciation,

(Continued on page 148)

A Distraction Removed

THE Union Government's decision on the States' Reorganisation Commission's Report must silence once and for all all controversies on the subject. In taking up this question, the Government are undoubtedly guilty of a reversal of fundamental priorities among national tasks. When the Prime Minister says that it does not matter the least to which State in India a particular chunk of territory belongs, he is only indicating the relative unimportance of States reorganisation, from the standpoint of real national well-being. Presumably, left to himself, he would not have done anything just now in the way of changing the country's political geography. For, he is fully aware of the paramount importance of those fields of work on which the entire energies of the nation will have to be concentrated, if political freedom is to have its full content and reality for the masses. Beside the Five Year Plan, questions like States reorganisation are eligible for a very low priority.

But all this becomes futile speculation, when the Government of the day are confronted with certain commitments of the past, commitments which have aroused extravagant popular sentiment and a number of fierce local controversies. The grudging acceptance of the need to appoint a Commission and to take prompt action on their report has followed as a result of a painful necessity, which normally would have been conveniently and gladly postponed.

Under the circumstances, it was wise and timely on the part of the Government to have appointed the Commission. The three eminent men who formed the members took every care to examine and weigh the pros and cons of every issue and their recommendations are conceived in a spirit of dynamic patriotism and political foresight. As there was a general assurance from all the contending parties that the Commission's report would be accepted, it would have been quite proper for the Union Government to approve the recommendations without further delay or discussion. They did not do it. Every State legislature and Government, the Press, public organisations and individuals were given a further opportunity to discuss the issues threadbare and subject the Commission's recommendations to the closest scrutiny, so that details and points of view which escaped the Commission's attention could be adequately aired in the open.

Keenly alive to their responsibilities in this vital matter, the Union Government thus did all that they could, to assess the strength and validity of every claim and counter-claim and to discover the largest measure of agreement, for every solution. It is now no longer possible for any State representative to say that the Centre has acted hurriedly or arbitrarily. It is also a tribute to the statesmanship and spirit of accommodation of most of the State Governments and party leaders that they were able to put forward agreed solutions on most of the controversial issues.

The decisions announced on Monday mostly conform to the SRC recommendations. The few adjustments made are relatively minor and intended to satisfy either the wishes of the people concerned or for other unassailable material reasons. An unauthorised report that West Bengal was not going to secure the territory which the Commission had recommended for transfer caused a temporary flutter in the State. Happily the report turned out to be false and with a minor modification, to which the West Bengal Government's prior approval was secured, the State's claim, as approved by the Commission, has been met. The assimilation of Tripura into Assam was liked neither by the people of Tripura nor by those of Assam. For this reason Tripura has been allowed to retain its distinctiveness, but with a more democratic apparatus of government than before.

In the South, the SRC scheme has been totally approved, barring one or two little border adjustments for Karnataka and Kerala. A conspicuous departure from the Report is in respect of Bombay. While opinion outside Maharashtra is nearly unanimous that in the absence of an agreed alternative, Central administration of Bombay is the most desirable course, it has been found difficult to get round a section of opinion in Maharashtra in its favour. The Union Government left no stone unturned to secure agreement between Gujarat and Maharashtra. It is therefore clear where the blame would lie for the unfortunate incidents which have twice marred the life of that reputedly disciplined and law-abiding city in recent weeks. A bilingual State of Bombay, as suggested by the SRC, would certainly have been most suitable for harmonious relationship between the different elements of the City's population and between the City and the interior on both sides.

The partial political disenfranchisement of Bombay should cause regret. It will end only by making the City the cultural and administrative centre of a congenial big State. The claim put forward by the Akalis for a Punjabi speaking State has held up decisions relating to that area. Likewise, the opposition of a powerful section in Telangana to the immediate formation of Visalandhra has created another deferred problem. As the Congress and Cabinet Sub-committees are assiduously pursuing these two questions, it can be hoped that by the time the Bill is ready for presentation to Parliament, nothing will be left over.

The few angry and violent demonstrations which the decisions have provoked should be seen in proper perspective. These outbursts are confined to two or three States. There is no reason to suppose that the good sense of the political leaders who sympathise with these demonstrations will not be incapable of restoring a more reasonable outlook among the agitated sections. At one stage it appeared that irreconcilable differences would persist between the Union and a few States Governments. That position does not obtain now. Temporary and local rifts within the Congress Party are indeed a sign of weakness; but when the excitement of the moment dies down and when the State Governments turn to more worth-while tasks, these rifts would get automatically closed.

That some bitterness is bound to linger, despite the transparent soundness and impartiality of the Union decisions, has to be reckoned with. To dissolve this bitterness and to fight the ungenerous instincts from which it springs, the Union Government have decided to go beyond the SRC recommendations, by creating Zonal Councils. A certain amount of scepticism about the usefulness of these Councils is amply justifiable. They are likely to be regarded as an affront to State autonomy, which is a powerful notion in a federal structure. The Constitution provides for joint Public Service Commissions. Joint Governors and Joint High courts will be innovations. Among State Governments, which start functioning in an unfriendly atmosphere, these common institutions vested with supervisory authority can frequently come up against embarrassing situations and be looked upon as unwanted mediators. If the Union Government themselves are not to become the victims of new antipathies, they will have to exercise the greatest care in the choice of men for the zonal jobs.

The zonal set-up will undoubtedly be a psychological prop for minorities, but whether there will be any prompt and effective help against oppression, overt or disguised, remains to be seen. The Governor is an authority with very limited powers, and the bigger the area of his charge, the weaker his influence is likely to be. The existence of an extraneous authority to whom a minority can look up for succour can also turn out to be a handicap to the extent that it can undermine its ardour to cultivate the majority.

There are innumerable ways of subtle, insidious oppression of minorities, against which even a strong and impartial State Government can do little. The Zonal Councils will be in a much more unenviable position. Ultimately, healthy relations between majority and minority groups within a State can rest only on the tolerance and understanding of both.

Education, economic improvement and the emergence of higher traditions of social behaviour can alone ensure cordiality from the majority groups and an outlook in the minorities, devoid of the bias for exaggerating trifles.

Though the present decisions are virtually final, there is yet another hurdle in the form of the full-fledged Parliamentary debate on the Reorganisation Bill. If there is to be an understanding among the different parties in Parliament that, in view of the elaborate discussions which have already been gone through in the Central and State legislatures alike, the scope of the new debate will be severely residual, it will save time and trouble. That none of the major decisions would be reversed, except in the remote event of hefty landslides off the Congress majority, is a foregone conclusion.

Thus, having accomplished a big political task satisfactorily, the country can now concentrate with steadfastness and discipline on the more pressing task of implementing the Second Five Year Plan. A big distraction has been removed and it is in this sense that the decisions on reorganisation and boundary adjustments have to be welcomed as a step toward national solidarity and progress.

Law for the Layman

Accounts of Companies and Tax Authorities

By K. N. VISWANATHAN

IT is the bounden duty of Companies to see that every transaction of sale or purchase is entered in their Account Books, as omission to record even one transaction, though of a small amount, may entail the disregarding of their accounts by the Tax Authorities as was done in the case of Rosette Franks (King Street) Ltd., V. Dick (a decision of the Court of the Queen's Bench, England, reported in Tax Cases Volume 36, at page 100). This decision is a warning to Companies to be careful about their business methods.

✱

The case against the Company by the Tax Authorities was this. The Company carries on the business of Ladies Out-fitters. It appears a Mrs Joan Grey went to this company to purchase an Evening dress. She purchased a white one at the price of £30 sh. 9. She gave clothing coupons for it and she was attended to by a lady assistant of the company. When she started to make out a cheque in favour of the company, another lady assistant came to her and asked her to cancel the name of the company and to make out a cheque to Bearer. She accordingly made out a cheque to Bearer and handed it over to the lady assistant. Feeling suspicious about all this, she reported the matter to the Tax Authorities.

The Tax Authorities levied additional assessments on the company over and above the prior assessment, for the years 1942-46 amounting to £5,000. For the years 1946-53 also, the Tax Authorities levied assessments disregarding the accounts of the company. The Tax Authorities took the view to regard both the periods aforementioned that the company's accounts did not show the full profits of the company's business. The company appealed to the Commissioners for the general purposes of income-tax. The Managing Director and Book-keeper of the company gave evidence supporting the books of the company. The Lady who made the purchase gave evidence to the effect already mentioned. In the result the General Commissioners came to the conclusion that the assessment levied should be confirmed.

The company being dissatisfied with this decision, asked the Commissioners to state a a case to the High Court. The Commissioners stated a case, that in their opinion, the accounts submitted by the company in support of the Appeals, could not be relied upon to show the whole of the trading profits of the company. Thereafter, the matter came on before the High Court, before Dankwarts, J. and the learned Judge upheld the decision of the Commissioners and confirmed the assessments. The learned judge held there was evidence justifying the conclusion reached by the Commissioners and that the Managing Director of the company was not able to explain satisfactorily the omission of the transaction referred to above from the books of the company.

✱

This case is a grave warning to companies. It comes to this. Even one instance, of a sale not being included in the accounts, appears to be enough to justify the Tax Authorities to put aside a company's accounts altogether and levy assessment on the basis of their own estimate. Says the Learned Judge in dismissing the appeal of the company. "It is perfectly true that this is only one incident, and the one incident only, which the Inspector of Taxes was able to establish before the Commissioners; but it was open to the Commissioners, as it seems to me, to conclude that this was not merely an isolated transaction but showed the kind of thing which was going on, and they were, in my view, entitled to come to the conclusion to which they did come from this incident, though one only, that there must have been other similar incidents and, therefore, that the accounts of the Company could not be relied upon to show the whole of the trading profits of the company".

✱

Eavesdropper writes:

MY astrologer friends have let me down; they have not told me the import of the current planetary positions; and it looks as if the stars are none too favourable for the world's leaders. If it is the USA, Mr Eisehower is sore beset in election year, necessary as it is for him to bear the burden of a Secretary of State who doesn't know how to stop on the brink of speech. If it is Britain, Sir Anthony Eden is having a far from comfortable time. At home, the Prime Minister is facing the severest challenge to the hold he has over the country, in the matter of the decisions on the SRC Report.

You could mark them off as coincidence. But it is surprising that, the world over, leadership is being sorely tried. To mention one more instance, the crisis in leadership in France is so grave that that country cannot find a leader. I could go on.....but definitely, it seems to me, the stars are to blame. And, for a last thinking point, since I suspect all illnesses behind the Iron Curtain, is it coincidence that Mr Bulganin has been indisposed?

Editorial Notes

Press and the State:

There must be many all over the world like the Duke of Edinburgh, who feel gratefully relieved, when the newspapers suspend publication for a couple of days together. Probably these persons, on such occasions, experience a feeling of calm serenity, a divine peace. The newspaper editors, even when they too enjoy a coveted holiday, cannot quite endorse that feeling. The common run of the world would rather miss a day's meal than its news.

And herein lies the real reason why the pen is still described as mightier than the sword, incidentally a description which looks rather irrelevant in the era of Panch Shila. Nowdays, nobody seems to ask how mighty is the pen, but only how it could best be used. When the State is trying to do everything in its power to improve the lot of the people, to feed, clothe and educate them better, to make their lives more cheerful in many ways, is it not proper that the newspapers should support the State wholeheartedly? At the Newspaper Editor's Conference, a powerful spokesman of the State gently gave the advice that they should.

Newspapers may well agree. But they certainly dislike being shown the way. There will be very little left of the freedom and independence of the Press, if Governments consistently start ordering the Press about, howsoever courteous the language or disguised the means, However, there is no escaping the tightening grip of the State on the Press. A special Study made by the International Press Institute at Zurich gives unmistakable evidence to the decline in the freedom of the Press in most parts of the world since World War ii.

Young democracies are among the worst offenders; and India is no exception. The study records examples of arbitrary arrests of journalists, violence against them and Government inspired attacks on newspaper plants. Pressures on policy exerted through Government advertisements are growing. Assertive public opinion is pointed out as the only safeguard. It does not look like a sufficiently effective one, when the people regard the newspapers as their most powerful media and the advertisements on which the newspapers are sustained are becoming more and more a Government patronage.

✱

A Family Tax:

One of the suggestions mdae at the recent meeting of the Consultive Committee of Parliament Members, toward financing the Second Plan, was an income tax on the joint incomes of husband, wife and minor children. The Taxation Enquiry Commission has examined the desirability of this tax. They were not deterred by the difficulties presented by the Hindu undivided family; but they made it clear that while introducing tax on joint incomes of this kind, the State could not overlook the need for suitable family allowances.

At present, except in the case of incomes from firms where an individual's wife or a minor child is his partner, the incomes of the husband, wife and the minor are treated separate for purposes of assessment. In the Income Tax Amendment Bill of 1938, a clause was included for the aggregation of the incomes of a couple, in all circumstances except where the wife's earned income did not exceed Rs 500. This clause had to be droped on account of opposition in the legislature.

Both Taxation Committees of 1924 and 1936 rejected family allowances for a country like India where nearly every one was married. This is apparently the reason why a high slab of extention from tax prevails in the Indian system.

Foreign practice is by no means uniform. In the US, for instance, the couple have an option to divide their income or show it as one for purpose of taxation. When dividing, the two halves are taxed. In the UK, the incomes are treated as a single unit for taxation.

In a few countries, rebates on taxation are extended to wives without earnings. In these countries obviously earning wives are the vogue rather than the exception. India is still far from that state. Family allowances and the joint taxation of family incomes must necessarily go together. There is also the slightly, complicating consideration of the need to limit population.

✱

Calcutta Port Finances:

The financial results of the working of the Calcutta Port for 1954-55 have roughly coincided with the revised estimates for the year. Total income at Rs 883 lakhs showed an excess of Rs 22 lakhs over the revised estimates. Total expenditure at Rs 921 lakhs was higher by Rs 32 lakhs. On the income side, the excess is accounted for by an increase of Rs 14 lakhs under goods, Rs 7 lakhs under miscellaneous receipts and Rs 3 lakhs from sale of unserviceable material.

The bulk of the increase in expenditure is explained by the inclusion of arrear over-time payments. The results are a little off the mark, so far as the actual deficit turned out to be about Rs 10 lakhs higher than in the revised estimates. If the unallotted item of expenditure of Rs 25 lakhs were to be kept out the scales would turn the opposite way.

In comparison with the previous year, traffic borne by the Port was smaller. Against Rs 8,059,000 tons in 1953-54, the total for 1954-55 was Rs 7,814,000 tons. The fall in traffic and the increase in expenditure necessitated a few increases in Port Charges, which fetched an additional income of nearly Rs 30 lakhs. Against an estimated total expenditure of Rs 1,196 lakhs on the 26 projects covered by the First Five Year Plan, expenditure incurred up to 31 March 1955 amounted to Rs 216 lakhs.

✱

US Budget and USSR Plan:

In his budget message to the Congress, the US President disclosed intention to spend 1,200 million dollars on existing economic aid and 590 million dollars on new programmes during the fiscal year ending June 30, 1957. Defence aid, economic aid and technical aid to backward nations will be main considerations, in view of potential communist threat to entice them. About half of the military aid contemplated will go to Korea, Pakistan, Formosa and Turkey.

Mr Eisenhower puts the blame for increasing America's military expenditure on Russia's intransigence against a reasonable agreement on disarmament. Budget expenditure for national security programmes in 1957 is estimated at 40,000 million dollars, which is 903 millions more than in the previous year. For atomic purposes the expenditure is expected to be 230 million dollars more. Pending a trustworthy agreement on atomic disarmament, America will continue to increase its stockpile of nuclear weapons which, the President hopes, will be the principal deterrent to Communist aggression.

A day previous to Mr Eisenhower's message, Soviet Russia announced her sixth Five Year Plan which came into operation actually on January 1. It is highly ambitious, envisaging to surpass the most developed capitalist countries in the shortest possible time. Industrial, agricultural and atomic developments are given top priority. Atomic energy is to be tapped for electricity. By 1960 Russia expects to have 50 per cent more technicians and specialists. The accomplishment of the Plan, the Soviets claim, will raise considerably the living standards of the people. Competent observers believe that Russia is obviously determined to challenge the West especially in the harnessing of atomic energy for peaceful purposes. It is also noteworthy that Russia recently scaled down her military expenditure. All these may be portents of her willingness to compete peacefully and co-exist with nations of different ideologies and programmes.

World of Finance

Sharp Increase in Advances

THE statement giving the consolidated figures of the Scheduled Banks as at the close of business on January 6 is significant from more than one point of view. The outstanding feature is a rise of over Rs 20 crores in Loans and Advances (including Bills) from Rs 631.45 crores on December 30 to Rs 652.00 crores on January 6. It is noteworthy that the banks have met this large demand without recourse to the Reserve Bank. In fact, banks' borrowings from the Central Banking Institution have actually declined from Rs 30.02 crores to Rs 29.84 crores. It must be added, however, that, if the consolidated figures were studied in relation to the figures of the State Bank of India, a different kind of inference may have to be drawn. Between December 30 and January 6, Scheduled Banks taken together have reduced their borrowings from the Reserve Bank by Rs 0.18 crores; and, in the same period, the State Bank's indebtedness to the Reserve Bank has gone down by Rs 4.20 crores from Rs 5.00 crores to Rs 0.80 crores. This means that the Scheduled Banks other than the State Bank have increased their debt to the Reserve Bank by Rs 4.02 crores.

The borrowings of other banks from the State Bank have also gone up by Rs 2.61 crores from Rs 7.23 crores to Rs 9.84 crores. During the week ended January 6, Scheduled Banks' balances with the Reserve Bank have shrunk by nearly Rs 10 crores from Rs 60.17 crores to Rs 50.48 crores. Likewise, balances with other banks and money at call have declined from Rs 14.35 crores to Rs 11.53 crores and from Rs 10.50 crores to Rs 8.35 crores respectively. All these devices did not suffice to cope with the heavy demand for Loans and Advances. So, Investments have been reduced from Rs 385.05 crores to Rs 382.93 crores. This shrinkage in the giltedged portfolios may be a reflection of the sale of Treasury Bills to the Reserve Bank.

The heavy demand for credits, which banks have had to meet, is explained partly by the monthearly requirements in connection with salaries, and partly by the rising tempo of the busy season. The first week of January also coincided with the suspension of the clearing house for banks in Calcutta; and, while the full repercussions of the clearing house's suspension on the money market returns may not be known for another week, it is obvious that banks in Calcutta have extended substantial credit facilities to their constituents for meeting commitments that cannot be put off. From this point of view, the consolidated statement of the Scheduled Banks for the week ended January 13 and January 20 may be expected to show further sharp rises in Advances.

It is a great tribute to the financial resources of Indian business and to the apt aid given by banks that an extended closure of the clearing house in so important a commercial centre as Calcutta has precipitated no crisis. It is the small businessmen who have suffered the greatest inconvenience. At the time of writing, there is a confident expectation that the clearing house will start functioning from this week-end.

Scheduled Banks' advances at the end of the first week in January, at Rs 652 crores, are Rs 100 crores higher than in the corresponding period last year. Banks' deposits, too, are correspondingly higher. It stands to reason that bank profits for 1955 would make good showing. Taking all the banks together, the increase in profits must be of the order of Rs 75 lakhs. And the rising trend in profits may be expected to be accelerated in 1956 and in the coming years, thanks to the anticipated disbursements of an average of Rs 900 crores per annum in connection with tne Second Plan. Higher bank profits in India synchronise with higher bank profits in the UK and the USA. In the latter cases, however, banks are faced with colossal depreciation in their investments in Government securities. Banks in India have been mercifully spared this embarrassment. The 1955-end giltedged prices do not materially differ from the 1954-end prices.

+

Tenders for Rs 1,00,00,000 of 91 days Government of India Treasury Bills were opened on 17th January, 1956. Total amount offered was Rs 1,42,75,000. Tenders at Rs 99-6 per cent were accepted in full and those at Rs 99-5-9 per cent allotted approximately 39 per cent. Total amount accepted was Rs 1,00,00,000, the average rate of accepted tenders being Rs 2-8-3 per cent per annum.

This week's result compared with the previous weeks is as follows:

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs. a. p.
January:			
1956:			
3rd	1,39,75	1,00,000	2 8 2
10th	1,46,75	1,00,000	2 8 1
17th	1,42,75	1,00,000	2 8 3

+

The returns of the Reserve Bank for the week ended January 13 disclose further deficit financing for Rs 5 crores. Present indications are that, in the coming weeks, there will be recurrent recourse to created money. By this means, notes in circulation, which are already at a record high level, may be expected to expand by anything like Rs 150 crores before the fiscal year draws to a close.

Active note circulation has risen by Rs 3.04 crores to Rs 1,388.75 crores. Notes held in the Banking Department have declined by Rs 1.40 crores to Rs 13.00 crores. On the assets side, rupee coin is lower by Rs 0.52 crores at Rs 106.31 crores. Rupee securities have shown a further rise of Rs 4.97 crores to Rs 563.52 crores.

In the Banking Department, both Central and Provincial Governments' deposits have declined by Rs 2.00 crores and Rs 1.27 crores to Rs 52.11 crores and Rs 8.46 crores respectively. Bank deposits are higher by Rs 3.27 crores at Rs 55.06 crores and other deposits by Rs 0.21 crores at Rs 15.83 crores. Balances held abroad have improved by Rs 0.56 crores to Rs 43.96 crores. 'Other Loans and Advances' have declined by Rs 1.20 crores to Rs 43.48 crores, which includes Rs 14.38 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 3.87 crores. Investments have moved up by Rs 1.08 crores to Rs 51.59 crores.

+

The statement of the State Bank of India for the week ended January 13 shows a sharp rise of Rs 7.23 crores in deposits to Rs 231.12 crores. Borrowings from other banks are higher by Rs 0.20 crores at Rs 1.00 crore, while other liabilites, including inter-office adjustments are lower by Rs 0.47 crores at Rs 3.54 crores.

On the assets side, cash balances have risen by Rs 5.53 crores to Rs 23.50 crores. Investments are shown at Rs 116.58 crores against Rs 116.64 crores. Loans and Advances have risen by Rs 2.67 crores to Rs 111.84 crores—'Loans,

Recession in British Motor Industry

By PAUL EINZIG

NEW Year in Britain witnessed a sharp setback on the London Stock Exchange. The hostile campaign of criticism against the Government may have had something to do with it, but by far the most important cause was the realisation that all is not well in the motor industry. In Britain as in other countries, that industry increased its capacity to an excessive degree. Import restriction in Australia, but more especially the decline in domestic demand due to the credit squeeze, the instalment credit restrictions, and the increase in purchase tax rates, was bound to make this fact evident. The decision of the Austin Motor Works to put some 18,000 employees on a four-day week gave rise to a wave of pessimism about business prospects in general. Hence the fall in equities and the sympathetic, if not very logical, fall in Government loans.

The argument that the reduction in output is largely seasonal does not carry much conviction. Nor do people derive much comfort from the evidence of continued consumer demand and of scarcity of labour in most industries. Beyond doubt, the amount of overtime worked has declined lately, thogh in many firms have to keep it up, in spite of a decline in current orders, in order to carry out existing contracts. But the decision of Standard Motors to refuse point blank the latest wages demand, indicating a willingness to face a strike rather than agree to a further increase in the cost of production, is regarded as symptomatic. Whatever may be the industrial situation in general, there can be little doubt that the motor industry is experiencing a recession.

The Austin Motor Works, which is leading the way in the cut in the output, is one of the most up to date factories in Britain. At a conference on automation of the British Institution of Production Engineers last summer, Mr H. J. Graves, one of the executives of that firm, stated that, largely as a result of the installation of automatic transfer machines, his motor works increased the weekly output from 3,500 to 5,000 vehicles. It is to be feared that this experience, in which automation was followed by a reduction of the working week, will greatly strengthen trade union resistance to automation. Until now, amidst the inflationary boom-like conditions prevailing in Britain, automation simply meant an increase in the output without a corresponding increase in man-power. There have been very few redundancy dismissals or even cuts in overtime. Notwithstanding technological improvement, the industry was barely able to meet the full demand and labour remained scarce.

In itself, the progress of automation at the Austin Works has not been the real cause of the present setback. The view that has been gaining ground in Britain, that automation need not give rise to unemployment, is still valid. But the experience of the Austin Works seems to indicate that, the moment a recession sets in for no matter what reason, a previous increase in productive capacity through automation is liable to lead to a curtailment of employment. In the instance in question, it seems reasonable to assume that, had the capacity of the Austin Works remained at 3,500 vehicles a week it would have been possible to keep the staff fully employed. Since, however, the capacity is now 5,000 vehicles, and there is no demand for such numbers, employment has been reduced in the form of working a shorter week.

This experience may appear to lead to the conclusion that automation is against the interests of the industrial workers. If we take a longer view, however, we reach a different conclusion. For, the fact that it has now become possible to produce 3,500 vehicles in a four-day week means that the cost per unit is lower than it was before the automation of the Motor Works in spite of the increase of wages granted in the meantime. This means that the firm stands a better chance of regaining its markets at home and abroad than it would have stood if it were still working on the basis of its higher pre-automation costs. But for its technological progress, it might have become necessary to reduce employment even more, for even 3,500 vehicles a week would have been in excess of demand.

This experience should go some way toward providing the answer to the highly controversial question whether or not automation makes for deflation. There can be no simple answer of "yes" or "no." It depends on the general conditions prevailing while automation is in progress. So long as boom-like conditions prevail, automation is liable to be inflationary rather than deflationary. There is no inducement for producers to cut their prices, and there is no need for them to reduce the number of their employees. In spite of the reduction of the cost of production in terms of man-hour per unit of output, the grand total of their production cost increases, because the increase in the volume of the output and the higher wages more than offsets the decline of the number of man-hours per unit. In conditions of recession, however, automation is distinctly deflationary. It enables the producers to reduce employment while maintaining the volume of output at a reasonably high level. If necessary, they can cut prices. And there is a tendency to deflation owing to the lower spending power of the workers.

Does the British experience teach the lesson that, in such circumstances, automation should be resisted? By no means. For, if Britain alone does not swim with the tide, its exporters will be unable to compete with their more progressive rivals. The resulting loss of foreign markets would reduce employment to a larger extent than it would be reduced, even in a recession, as a result of automation.

The right solution lies in trying to avoid recession. The main reason why it became necessary in Britain in 1955 to curtail consumer demand was that, owing to excessive wages claims, domestic consumption increased too much, and this reacted unfavourably on the balance of payments. Had the workers been more moderate in their wages claims, there would have been no need for restrictions on instalment credits, for credit squeeze, and for an increase of purchase tax. The Austin Works could have continued to sell 5,000 vehicles a week, and the full working week could have been maintained in spite of the increase of productive capacity through automation. This is a lesson which is well worth remembering.

World *of* Business

Gearing to a New Role

The unreserved general support with which the findings of the Rural Credit Survey was received by experts and the general public, has greatly helped to carry its practical suggestions a long way. It has been possibe to include in the draft of the Second Plan an integrated scheme for co-operative development. But, to a great measure this preliminary progress in the face of many incipient hurdles was possible by the valuable guidance and the unstinted support of the Standing Advisory Committee on Agricultural Credit. At the fifth meeting of this committee, Sir B. Rama Rau, the Governor of the Reserve Bank was evidently impressed by what has been done and confident about the realisation of the targets set.

As Sir Rama Rau pointed out the section of non-official co-operators who were in the beginning somewhat sceptical and apprehensive about some of the features of the Rural Credit Survey, have now come round and expressed their approval at the Second Indian Co-operative Congress in March 1955. This was followed by a conference State Ministers for Co-operation which, fittingly, was also attended by Development Secretaries and Registrars of Co-operatives, representatives of the Ministry of Food and Agriculture, Planning Commission and the Reserve Bank. This resulted in the decision that even ahead of the Second Plan, the main features of the integrated scheme should be implemented in each State in a few compact and self-contained areas through pilot projects.

The Reserve Bank and the Government of India took prompt action to promote the legislation necessary for amending the Reserve Bank of India Act to enable the Bank to constitute two important funds: the National Agricultural Credit (Lond-term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund. Provision is being made for loans, especially from the former fund, to enable State governments to subscribe to the share capital of rural credit co-operatives.

Another important problem now being successfully grappled with is the training and education of officials and non-officials. The services of Professor D. V. Karve and the veteran co-operator, Mr V. L. Mehta have been enlisted in this regard. Sir Rama Rau has emphasised that the training must include non-official workers and, in particular, the chairman, office-bearers, and committee members of co-operative societies. The All India Co-operative Union has now to step in to promote concrete schemes for training through Co-operative Institutes of the different States.

The Reserve Bank has geared itself effectively to the new role which it is called upon to fulfil. Rural finance and banking development now receive the undivided attention of a senior executive of the Board level of the Bank. Simultaneously, the reorganisation of the Agricultural Credit Department is proceeding apace, with continuous attention being paid to problems of policy, planning and development. The Inspections Division is also being gradually strengthened and four regional offices are proposed to be set up to undertake, more effectively, the task of inspection of the credit institutions.

Sir Rama Rau was careful to point out that an important counterpart of the proposals for the development of co-operative credit consists of the proposals for the development of marketing, processing and allied economic activity and of warehousing and storage. Work in this direction remains and its success will demand the closest alignment of thee Ministry of Food and Agriculture with the Co-operative Movement.

*

The Calcium Carbide Industry:

The Tariff Commisson's public inquiry into the claim of the Calcium Carbide Industry to protection is in progress. It is therefore proper that the essential features of production, imports and consumption of this basic heavy chemical be discussed in the background of its importance to the country's industrial development.

The industry is scheduled to be developed on priority basis during the Second Five Year Plan. The chemical is the source of acetylene, essential for engineering industries and from which production of plastics, solvents, organic chemicals etc. can be established. It also finds important use in manufacture of nitrogenous fertilisers and also propellants.

At present though there are three units, namely the Birla Jute Manufacturing Co Ltd, Calcutta, the Industrial Chemical Ltd., Madras State, and the Travancore Electro-Chemical Industries Ltd., only the first, with an annual rated capacity of 3,300 tons, is engaged in production on any considerable scale. The total annual rated capacity of the three units together come to 5,050 tons, while their total production figures were 98 tons in 1952, 15 tons in 1953, 373 tons in 1954 and 1605 tons in January-June 1955. However, all the three units contemplate enlarging capacity the present size being considered uneconomical.

The Ministry of Commerce and Industry has estimated the demand for calcium carbide in the country at 8000 tons in 1954. 9,250 tons in 1955, 10,300 tons in 1956, 13,200 tons in 1957, 16,100 tons in 1958 and 25,000 tons at the end of Second Plan period. The projected expansion in steel fabrication work contributes significantly to this rapid rise in prospective demand.

The next important aspect concerns the imports and import control policy. The principal sources of imports are Norway, Sweden, Canada, Japan, Italy, Czechosolvakia and Germany. The following are the relevant figures over the last four years.

Imports of Calcium Carbide.

	Quantity (tons)	Value (Rs.)	Value per ton
1951-52 ...	9,849	67,22,283	682.6
1952-53 ...	5,211	35,86,611	688.3
1953-54 ...	7,447	39,15,250	525.8
1954-55 ...	9,422	52,48,948	557.1
1955 Apl.-July	2,152	11,42,433	530.8

The imports were assessed to duty at a standard rate of 31½ per cent ad valorem till the end of February 1955. Thereafter it has been raised to 50 per cent advalorem.

It is now represented that the manufacturers have to face several handicaps including those in respect of cost of raw materials and electrical energy, size of operation and freight rates. The production cost of the indigenous chemical is too high for effective competition with the foreign material. The company has asked for a levy of import duty at the rate of 120 per cent ad valorem, while another suggests a 100 per cent advalorem duty. Restriction, within suitable limits of imports, is also suggested.

Lastly, it may be mentioned that Indian manufacturers are hard put on account of inferior raw material, to measure up to the quality specified by the British standard.

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

World of Jute

Prosperity through Amalgamation

IN Calcutta, what they were talking about was the possibility of unsealing such portions of the looms which, till today, have remained closed. In the Stock Exchange in Calcutta, the topic of discussion in the jute section was the amalgamation of three jute mills into one unit styled The New Central Jute Mills Limited. In Delhi discussion was a bit heated. When the subject of state trading was taken up, there were not a few who urged that an industry whose working was—or seemed to be—not too complex, could, perhaps, be taken up by Government as a state trading venture.

These three events—call them discussions or gossip if you will—quintessentially describe the state of the World of Jute in this country. As far as concerns the present, and the immediately forseeable future, the confidence is held that the output of IJMA mills will, without difficulty, be absorbed by foreign customers. Secondly, there is by no means the belief today that the current season's outturn of raw jute will be found insufficient for the needs of our mill industry. Thirdly, the confidence of the ability of India to dispose of its jute goods production is running so high that thoughts are being turned, as I have already related, to the unsealing of the 10 per cent of looms presently not being worked.

Thus, for the jute goods industry, no shortage of raw jute; no shortage of demand for jute goods. On the contrary, the expectation is that even higher production could be absorbed.

We may now apply ourselves to the ideas of state trading that have been mooted and booted around in New Delhi. The advantages, as they appear to have been cited, are that the industry is concentrated over a small area; that the customers are more or less permanent; that the tasks involved in the shipping of jute goods, and in jute goods trading generally, are so facile as to make of the industry an admirable choice for Government to embark upon their career as state trading.

I do not propose to write at length on the impracticality of state trading in jute goods. For, I think this impracticality is apparent enough, and surely known to authority. Once upon a time, it may have been true that India possessed what amounted to a monopoly in raw jute—and consequently a near monopoly in the manufacture of jute goods. But, with partition, the halcyon days are dead and gone for ever. Quite on the contrary, the initiative in the production of jute goods would seem slowly to be being wrested away by Pakistan. Its modern jute mills have risen almost overnight; its competition has reached sizeable proportions—though, as yet, not of a quantity as seriously to disrupt or disturb the export markets of India. With the higher degree of competition, that has nevertheless made its appearance with Pakistan emerging as producer of jute goods, the sale of jute goods is no more an automatic process. It is business enterprise which, many times, concludes the deal. It is the zeal of our exporters, the extra effort expended by shippers in face of the difficult labour situation in the Calcutta docks—it is these that are today helping to sell the Indian jute goods at an even pace. Obviously, if the State should decide to encroach upon trading in a commodity whose saleability, as it were, has become a more complex process, it merely serves to facilitate the Pakistani ambition of cutting jute goods markets from under India's feet.

Thus, I am not writing at length about the impracticability of state trading in jute goods; but, nevertheless, I feel it is my duty to suggest ways and means whereby the industry can strengthen itself for meeting the undoubtedly greater modicum of competition that we are likely to have from Pakistan. It is in this light that we must take due note of the formation by merger of the New Central Jute Mills. One of the worries of the Indian jute goods industry is that it is in sore need of modernisation of plant and equipment. The latest figures, which are cited when we talk of modernisation of the jute mills industry, is Rs 50 crores. It is also common to hear that the industry can by no means lay its hands on so large a sum. In the background we have the certain knowledge that modernisation is the indispensable prerequisite for ensuring that the Indian jute goods industry will have a future beyond the immediate future.

How, then, is modernisation to be achieved? This question has been engaging the serious attention of both industry and Government. For this purpose, Government have sought to help the industry as much as it lies in their power. The industry, for its part, has not remained idle either; many groups of mills can justifiably be proud of the progress that has been achieved in this matter of modernisation, which has taken them a step nearer implementation. But, I suggest, amalgamation of units serves many important purposes—and amalgamation of units should surely be a matter that should receive the careful study of our jute mill interests.

Amalgamation will, firstly, mean that some economy will be possible in the running costs. Secondly, amalgamation of weaker units with stronger units will enable the financially less better off to take advantage of the resources that will be gained by merger with the financially more affluent. In the result, with economy achieved and modernisation for all units enabled, amalgamation should result in the creation of a smaller number of strong units in the jute mills industry as against today's, some of them, also rans in the field.

*

The Raw Jute market remained practically unchanged. As a result of rising prices in the upcountry centres, sellers continued to be reserved, while mills were unable to obtain their full requirements. It was, however, believed that the supply had been held up, mainly by the harvesting of paddy crop by cultivators. This might probably be the reason that mills had been showing only limited interest in their purchases and sellers were inclined to reduce their rates by As 8 per maund toward the close. Assam Bottoms were nominally quoted at Rs 28-8 per maund for January-February delivery.

Prices in the Jute Goods market, after a steady opening, developed a sagging tendency due to selling pressure though, toward the close, there was a slight recovery due to bear-covering. The absence of any fresh business from overseas buyers and the rumours of further unsealing of looms by the end of February caused a sharp setback in prices following liquidation by weak holders. Even the announcement of the increase in US burlap consumption from 70 million yards to 74 million yards in December 1955 had no effect on market sentiment. The only redeeming feature of the week's trading was the relative

World of Tea

Some Stability in Prices

TEA markets have gained some stability, and prices of better grades have looked up. This trend is most visible in the markets of origin—Calcutta, Cochin and Colombo. In the export sale, held in Calcutta this week, there was a much better demand than in previous weeks and buying from outmarkets was much stronger. The Cochin market experienced better demand, which strengthened as the sale progressed. Although London does not move in equal pace with Calcutta and other markets, improvement in sentiment is noticeable there also.

Although this turn of the market cannot be easily explained, it is generally believed that prices for the rest of this season's teas are likely to be maintained in coming months if the weekly offerings continue to be regulated. Stocks in Calcutta are still heavy, and it is estimated that there will be a balance of 163 million pounds of this season's crop still to be sold.

Stocks in London also are fairly heavy, and, on the 6th January 1956, they were 100.32 million pounds. Excess production over consumption in 1955 is now estimated around 70 million pounds. No doubt, this 70 million pounds, which is equal to British consumption of seven to eight weeks, is not much; but the feeling that enough tea will be available at any times has done some damage to the market.

Production of North-Indian crop, during December at 14.90 million pounds, shows an increase of about 3.84 million pounds as compared with the figure for the corresponding month of 1954. Thus, total North-Indian crop amounts to 533.2 million pounds in 1955 as against 513.6 million pounds in the previous year. As a result of this increase, the world supply, according to the available statistics, is 28.2 million pounds ahead of 1954.

Of the total output, 140 million pounds will be shipped direct to the London auctions. The quantity sold in Calcutta so far amounts to 182 million pounds. Private sales are expected to absorb 40 million pounds. Thus, there will be a balance of 171 million pounds of this season's crop still to be sold.

South Indian output for the month of November at about 9 million pounds shows a decline of 5 million pounds over the production in October. December crop reports, now available, disclose a further fall in production. So, the year-end production figure may fall short of the original estimate of 130 million pounds.

Production in Ceylon, to the end of October, was about 17 million pounds ahead of the previous comparable period; but the lower prices may induce Ceylon producers also to cut short their output.

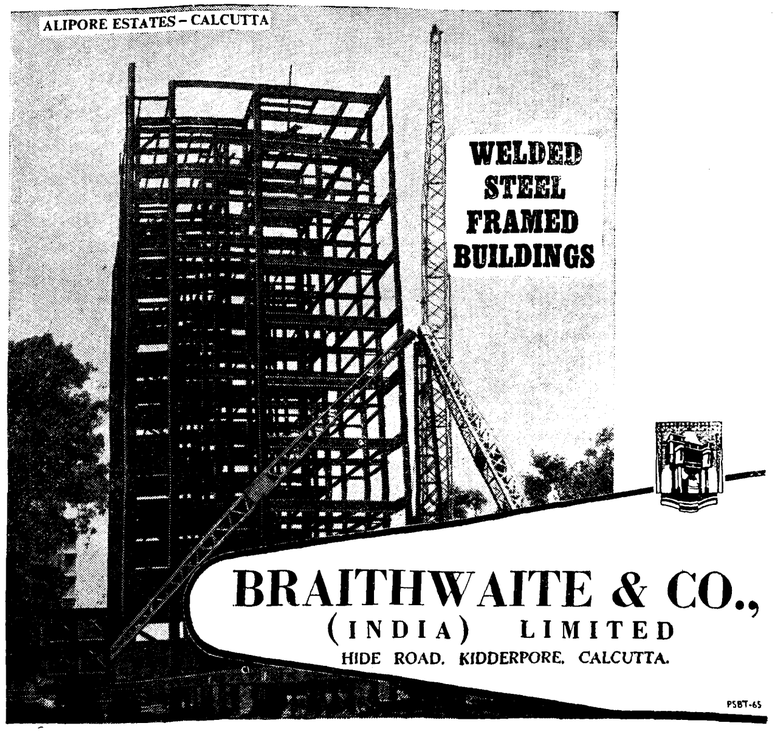
In Pakistan, the total crop to the end of November was 3.2 million pounds lower at 48.5 million pounds.

The suggestion, therefore, that producers should voluntarily agree to destroy 2% of their output or at least prevent it from coming to the auctions can be a useful stabilising influence on prices. After taking the residue teas—estimated at 10.5 million pounds—out of account, the balance of the 1955 crop amounts to 152.5 million pounds. Of this, Dusts will amount to at least 28.5 million pounds and are expected to be absorbed by June. The remaining 125 million pounds, consisting mainly of export and partially internal Leaf teas, will be sold without much difficulty by the beginning of June as consumption is good.

In the Export Sale, held in Calcutta this week, offerings amounted to 57,000 packages. Fannings grades of all descriptions were once again the strongest feature of the sale, particularly Medium OFs with black leaf appearance. Medium Assam BOPs were well supported and the very best CTC sorts met with a good demand. The remaining CTC offerings, however, were rather irregular and tended to be a little easier.

Stylish Leaf grades were strong and generally dearer; but the more ordinary types of this description were about one anna per pound easier. The remaining kinds advanced by about one to two annas per pound above last rates. Following rates were quoted per pound:—Clean Black Pekoe Rs 2-1-0; Plain Broken Pekoe Rs 1-8-0 to Rs 1-8-6; Medium Assam Broken Pekoe Rs 1-10-0 to Rs 1-11-0 and Best CTC Assam Broken Pekoe Rs 2-3-0.

In the Internal Sale, offerings amounted to 17,800 packages of Dusts. There was a strong and active demand for all descriptions. Black Leaf types, suitable for the Middle East, were once again a very strong feature of the sale and advanced by several annas. Grainy Dooars, Commons and Medium Assams were generally one to two annas per pound dearer, while powdery types were fully firm.



Commonest types received good support and were dearer by As 2 to As 3 per pound, while the very best CTC Assams with good liquors were fully firm to dearer. The poorer sorts of this description were, however, rather irregular and were sometimes easier. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-7-6 to Rs 1-8; Medium Assam Grainy Dust Rs 1-8-6 to Rs 1-9-6 and Best CTC Assam Dust Rs 2-4 to Rs 2-6.

Offerings of Leaf grades consisted of 2,500 packages for which were a good demand and prices advanced by one to two annas per pound above last rates.

In the Export Quota section, the rate developed a slightly hardening tendency to quote 24 pies as against 15 pies per pound quoted in the previous week.

In the Cochin market, just over 7 lakh pounds were offered in the Internal Sale, held last week. There was a fair general demand which strengthened as the sale progressed. Best Liquoring high-growns received a more restricted enquiry and declined by one to two annas per pound, while Medium and Commons were about steady on last rates. Travancore-milled Dusts were the strongest feature and advanced by one to two annas per pound. Clean Black grainy descriptions were sold at about

World Overseas

US Notes

A report by Atlantic States Shippers Advisory Board, a private trade organisation, should dispel any doubts about strength remaining in the current United States business upswing. The Board estimates that freight carloadings in the eastern part of the country will be 8.7 per cent greater in the first quarter of 1956 than in the same period of 1955. Biggest jump is seen in shipments of hay, straw and alfalfa, expected to be 46.9 per cent above a year ago. Among other commodities slated for increases are automobiles and trucks, up 26.8 per cent; ores and concentrates, up 22.2 per cent; paper products, up 11.3 per cent; iron and steel, up 10.8 per cent; and coal and coke, up 8.5 per cent.

The more one examines the 1955 record, the more conclusive is evidence of continued exuberance of US economic activity. Actual performance in a number of basic industries maintained a pace in latter months of 1955 that not only confounded earlier cautious forecasts, but also contributed to overall annual achievements that outstripped even raised sights of more optimistic experts.

It now appears that US imports for 1955 not only will exceed the $11,000 million mark for first time in history, as was generally anticipated, but also will reach a total of at least $11,300 million. The US Department of Commerce has just estimated that imports last November, at $1,053 million dollars, reached the highest monthly level recorded since March 1951. November imports showed a gain of 4 per cent over October, 1955 and of 25 per cent over November, 1954. They brought total imports for the first eleven months of 1955 to $10,357 million, higher than the $10,211.8 million recorded in the entire year of 1954. The monthly import average for the first 11 months of 1955 was nearly $942 million, about equal to the December, 1954 total. If final figures show that this rate was maintained in December, 1955—which now appears a conservative estimate—US imports for all 1955 will come to $11,298 million. The US Treasury Department has estimated December US customs receipts, usually indicative of the import trend, at nearly 11 per cent greater than in December 1954.

The American Iron and Steel Institute has estimated US production of steel ingots and castings in 1955 at a record 117,000,566 net short tons. This was 5 per cent more than the previous high set in 1953, and more than 30 per cent above the tonnage poured in 1954. At the beginning of 1955, experts were cautiously predicting a steel outturn equal to 1953 record. As recently as November, most experts were talking of an annual production in 1955 of 116 million tons.

Spending for new construction in United States in 1955 totalled $42,250 million, establishing an all-time high for the ninth consecutive year, according to Government estimate. The total dollar value of New York construction was 12 per cent above the 1954 figure, and even after adjustment for price changes represented the highest volume on record. Private construction rose 17 per cent and public building edged up two per cent. Despite a slight seasonal let down late in the year, construction activity in 1955 exceeded earlier government forecasts by about $250,000.

The record of the coal industry shows one of the most significant production gains scored by an American industry in 1955. When the year began, coal men were looking forward to a moderate recovery from the 392 million short tons output of 1954, which was well below the post-war annual average. As year wore on, it became evident that production would exceed these expectations. As recently as last October, annual output was estimated at about 450 million tons. Actual results, based on reports issued by US Bureau of Mines, show the 1955 production at 469.2 million tons.

The one industry that failed to meet its most optimistic expectations was the automobile industrp—and its failure was insignificant as its production represented by far the highest level ever attained in one year. The trade paper, Automotive News, reported last week that automobile makers in the United States turned out in 1955 a total of 7,953,969 units—a scant 46,031 units below their stated goal of eight million, and 21 per cent above the previous record set in 1953. The truck production was put at 1,244,875 units, only 5,125 below the 1,250,000 goal. Despite seasonal production slowdown of the past few weeks, automobile output still is proceeding at an annual rate of 7.5 million units. When this production level was forecast for 1955 by some manufacturers last spring, it seemed hardly believable to most economic analysts.

Record consumer buying in December pushed 1955 retail sales in the United States to an annual high of $185,685 million, latest reports of US Commerce Department show. This was a 9 per cent climb over the 1954 and 1953 levels, the previous annual high. It also is about $700,000 higher than predictions made by many Government and business officials only a month ago.

Strongly indicative of current trends in US economy is the fact that orders received by machine tool builders last November were at the highest level for any month in the past four years. At $128 million, these orders were more than three and one-half times the volume received in November 1954. They are particularly significant as they normally presage industrial operations and plant expansion and improvement programmes for future periods. The Machine Tool Builders Association now estimates total orders for 1955 at more than $900 million, compared with earlier estimates of $850 million. The 1954 total was $560 million.

*

Britain

By PAUL BAREAU

THE year 1955 reinstated the sequence of the odd-year balance of payments difficulties that have punctuated the post-war economic history of Britain.

Last year's difficulties do not deserve the epithet of "crisis". The first half of the year achieved a small surplus in the overall balance of payments. There may be a small deficit in the second half (it must be remembered that big payments on the US and Canadian loans are made at the end of the year), but the final balance for the 12 months will not be widely out of true.

A bare balance, however, is not good enough, and no real comfort can be gained from the fact that last year Britain was doing little better than a tight-rope balancing act.

If, however, Britain came back last year to its customary odd-year balance of payments troubles, it can, on the other hand, be claimed that the difficulties have been tackled by entirely new methods—new, at least, for the post-war period.

The serious difficulties of 1947 and 1949 were countered, in the main, by direct economic controls appropriate to the economic philosophy of the administration then in power. Cheap money was not disturbed. Imports were cut, travel allowances curtailed, scarce materials retained and allocated, building licences trimmed.

All this may have suppressed, but it did not cure, the underlying tendency towards inflation, of which the balance of payments difficulties were a symptom. Nor did it avert the need for the considerable devaluation of sterling in 1949.

Then came the difficulties of 1951. On that occasion, the Bank Rate was raised from its long slumber, and credit policy was applied once again. The position, however, was so grim, and in need of such quick-acting correctives, that the re-discovery of credit discipline had to be supplemented by more specific measures of economic control. Once again imports were cut and a direct attack made on the imbalance of Britain's oversea payments.

The mixture on that occasion succeeded admirably. It did so, in part, because dearer money was aided by the prickling of the post-Korean boom throughout the world.

Commodity prices were falling, and when that is happening the efficacy of dear money is doubled. Traders and manufacturers are more likely to get rid of stocks and pay off bank loans when the trend of prices is downward than when the converse is true (as is now the case) and when traders are convinced that if they de-stock, they will have to re-stock at higher prices later on.

Whatever the explanation, the remedies of 1951-52 worked most efficaciously, and by the middle of 1952 Britain's economy was soaring again, and with such momentum behind it that the recovery carried right through 1953, the first post-war odd year not to be marked by balance of payments difficulties. Since then, the policy of the Government has been opposed to the use of specific economic controls. With Mr R. A. Butler at the Treasury Britain has, in fact, taken the initiative in the move towards freer trade and freer payments.

When, therefore, the oversea balance of payments difficulties manifested themselves again in 1955, the correctives applied were essentially those of overall domestic credit control. The Bank Rate was raised to 4½ per cent. and steps were taken to curtail credit.

As the year progressed, more specific controls appeared. Directives were given to bankers, with instructions to apply their own sense of what was in the national interest in determining which credits to curtail and which to leave untouched. Specific restrictions on hire-purchase credit were reintroduced. Among these direct measures mention should also be made of the curtailment of marginal capital expenditures by nationalized industries.

New machinery was also devised for financing the capital needs of local authorities. This last development was the most important of the changes announced in the supplementary Budget last October. Until then, local authorities had been able to borrow more or less automatically from the Public Works Loan Board at comparatively low rates of interest. The money in question was provided by the Exchequer, which, in turn, financed itself by additional issues of Treasury bills. Thus houses built by local authorities were being financed by the shortest term and most inflationary form of borrowing.

The rates charged to local authorities are now being increased, and before they are allowed to borrow from the Public Works Loan Board these authorities must show that they have made appropriate efforts to raise the money in the open market. Since the local authorities, through their capital pro-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

"OF all modes of apprehension," said Dr Johnson, "Time is the most obsequious to the imagination." I should dearly like to know what the great man had to say about "Numbers". I rather fancy that his imagination would have found them anything but cringingly obedient. Personally, I find them most difficult to comprehend (in the Latin sense of the term) and when I contemplate them, my imagination gets paralysed and refuses to function even before it gets a chance to boggle. I am, therefore, unable to visualise, in space, time or money, figures that exceed those that we deal with in the ordinary course of our ordinary lives. Light years, geological ages, cosmic spaces and other enormities of Science do not purge me with pity and terror, as, in sober reason, they ought: I merely gape ununderstandingly at the pages that record them. This is true of my reaction to economic statistics also.

*

The fact that statisticians are able to ply (save the mark!) their trade and do it with such obvious impunity is perhaps an indication that my predicament is not unique. An even more flattering indication of my being not only in company but in excellent compay came recently when I found that the Times of London had similar difficulties with numbers. In a new year leader (the solemn first, mind you, and not the facetious fourth) it sedately rebuked the new fangled habit of dropping the naughts in representing figures and taking recourse to words to indicate enormities. Thus, that new year gift to the British Government from the British workers, the new wage claim amounting to £500m should according to the Times, be written £500,000,000. Unfortunately, I am no more impressed by the intimidating length of naughts than I am by the millions and billions and even by our Mahalanobis' "abjas". In spite of the obliging commas, my eye misses a naught or two and in any case it passes on dazedly to the next sentence that tells that this is a terrible thing to ask: and since the Times says so, I argue, it must be so and leave it at that.

*

This rather longish exordium seems necessary because I have been overwhelmed by the abundant crop of figures in the annual surveys of world economy I have been reading in the last few days and about which I thought I must say something in these columns. All manner of figures, of production in terms of quantities, money value, percentages, in all manner of measures and currencies are strewn all over the place. One can, I am sure, if one's humour takes one that way, pull the leg of the most self assured statistician in the world by juggling with them. They are also, I fear, an open invitation to the kind of mad mathematics that would have delighted the author of Alice in Wonderland. But I shall, as befits a financial scribe, resist all such temptation and address myself to the task in hand, which is the survey of world economy in 1955. But I shall spare the figures as much as possible except that, once in a way, I shall use them to impress the statisticians.

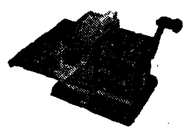
*

Even I, dazed by the data I have been wading through, can see that 1955 has been a year of unparalleled prosperity for the greater part of the world. Though the big powers and not so big powers have been using a sizable bit of their resources on the production of armaments of all sorts, productive resources were creatively employed over the greater part of the world to an unprecedented degree. Consequently, the United Nations Survey is able to report that, in 1955, the "great boom encircled the globe". Production of iron and steel, the very sinews of industrial strength and the surest indicator of productive health, for example was an all time record. Pig iron production exceeded the achievement of 1953 by 15 per cent and steel exceeded the record for the same year by 10 per cent.

*

The most impressive individual performer of the year was, of course, the United States. American achievement has been of a sort that makes nonsense of phrases like "reaching for the moon", supposed to express the aspiration for the impossible. A Long Island businessman by name Robert Cole is reported to have filed an affidavit with the City Clerk in Long Island in claiming the entire moon. He has since sold to as many as 9,000 people plots of land in the moon at a dollar an acre. At the moment, it is not entirely clear how far all this constitutes lunacy in the most literal sense of the term and how far it is in the best traditions of American pioneerism or even is orthodox enterprise. The New York State Attorney General's office, at any rate is not, in the characteristic pettifogging manner of lawyers, inclined to look at the event in the romantic or even the humorous light. It is actually reported to be trying to swell out a fraud in the whole idea. But whichever way you look at it, the 9,000 odd people who parted with a dollar in the hope of eventually spending their summer in the moon must have been in an extraordinarily fine fettle. For them, at any rate, everything was best in the best of all possible worlds, for, has not 1955 been the greatest business year in US history? That it has been is abundantly clear. I shall again spare you the figures, but it would appear that more of everything (or nearly everything) was produced and more, naturally, consumed. (Or should it be the other way about?) In steel, for example, the US led the world accounting for nearly 40 per cent of the world's total production, Soviet Russia trailing a long way after with less than half of US production. The gross national product was at an annual rate of 387 billion dollars, a good six per cent over the previous record of 1953. Profits showed sympathetic expansion and so did wages. Unemployment was at the lowest and, in such expansive circumstances, asking for the moon did not seem such a fantastic thing.

*



The only area of the economy which did not share the prosperity was agriculture. Here again, the problem was not shortage but over-production. President Eisenhower has already outlined a detailed programme to strengthen this section of the economy, a programme which includes taking away land from cultivation and selling of surplus products, even to the countries beyond the Iron Curtain. How far all these measures, of crucial importance in an election year, will succeed, especially in a world comparatively glutted with farm produce, is difficult to predict.

*

Data for Soviet Union's performance are not as complete as could be desired. But, even so, it is estimated that its production of steel, coal and electricity has been second only to that of the United States. (For the figure-happy, the annual rate of production in steel, pig iron, oil and coal is 45,000,000, 33,000,000, 70,000,000 and 390,000,000 tons respectively and electricity was produced at the rate of 166,000,000,000 kilowatt hours). Economic objectives, which after Stalin's death appeared to swing in favour of

production of consumer goods, have once again swung back to greater emphasis on capital goods and heavy industries. But there is some indication that agriculture (Khrushchev's special interest) is also receiving serious attention. But the recently announced targets for the sixth five year show clearly the heavy industrial bias of the Soviet economy and give impressive evidence of the Soviet Union's ambition to outstrip the acheivement of the most industrialised nation of the West in the shortest possible time. Another development was the entry of the Soviet Union into the sphere of competitive foreign aid to underdeveloped countries, the precise significance of which will unfold itself more fully in 1956.

✱

As for Europe, 1955 was a year of uneasy prosperity. While production and the gross national product went up in almost all countries, the spectre of inflation was haunting most of the Chancellors of Exchequer. Bank rate had to be raised frequently and other devices of credit squeeze employed rigorously. Britain had a trying time for the greater part of the year and an autumn budget was necessitated to meet the difficulties. As 1956 opens, large wage claims are being pressed on a Government already seriously embarrassed with other economic and political difficulties.

✱

The "little countries" of Europe have done much better than their more powerful neighbours. Belgium, Switzerland, the Netherlands and Sweden, for example, increased their national income at rates higher than achieved by the bigger countries.

✱

But the most spectacular achievement in Europe was that of West Germany, which surpassed the progress of every other West European nation. The gross national product is estimated to have gone up by 10 per cent and industrial production by 14 to 15 per cent. Steel production has gone up by over four million tons; and West Germany is, as a result, the biggest producer of steel in Western Europe, a position formerly occupied by Britain. Other industries, with the exception of coal, have shown a smilar expansiveness and all this has been achieved without serious inflationary distortion so far. Already, the rest of the world has started worrying about German competition, though the vast industrial potential of prewar Germany is not available to West Germany today.

✱

In Asia, Japan has had a prosperous year. Among its many achievements of the year is the surpassing of Britain as the greatest exporter of ships, though its total production of ships was less than that of Britain. Except for textiles, which, as the year drew to a close, had to face serious opposition to imports into the US, the Japanese economy is in a buoyant mood.

✱

And, finally, India. Figures of expansion in the more advanced coutries of the world may make us feel somewhat depressed, but our own achievement has been, considering our background, creditable. The last year of the First Plan saw the fruition of many of the goals set at the beginning. The food position continues, despite floods and other calamities, to be satisfactory, and many of the development projects have started yielding results. As chronicled in the pages of this journal throughout the year, the Indian economy has been steadily expanding with industrial production increasing significantly. The Industrial production index, which stood at 97.2 in 1947, rose to 146.5 in 1954 and went up to 157.9 in the first quar-

it's a GREAT job...

keeping thousands of workers fit and happy

Over 8,000 people are on the payroll of the Assam Oil Company—a great community, drillers and doctors, truckdrivers and typists, whose lives are centred round the winning, refining and distributing of oil. Helping to keep contented minds in healthy bodies—both in their leisure and their working hours—is indeed a formidable task.

Taking physical well-being first, Digboi Hospital is one of the most modern and best equipped in India. There are maternity centres and clinics readily accessible and a fully staffed Welfare Office. Malaria, which at one time affected three out of five workers, has been virtually stamped out.

More than 4,300 children attend the company's nine schools, which have a high record of Matriculation successes. Social clubs, sports clubs and playing fields cater for every kind of sport. Vegetable and flower shows, arts and crafts, stage plays, concerts—every form of hobby and recreation is encouraged.

In these ways the Assam Oil Company is glad to acknowledge the loyal service of its family of workers, engaged as they all are in a great national effort to satisfy India's oil needs from her own resources.

Gateway Gossip

Bombay Review

Doubly Un-Indian

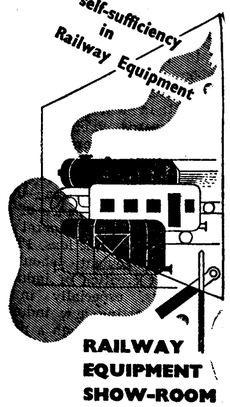
MR T. T. Krishnamachari was in town last week. And, as is usual with him, he wasted no time when he was provided with a forum whereat he could usefully make some important points. The occasion was the Chemical and Textile Standards Convention; and, in inaugurating it, TTK matter-of factly stated that Government attempts to introduce quality control in textiles on a voluntary basis had failed signally; next, he added bluntly that, for his part, he would give the industry a period of one year within which to lay down standards and stick to them.

This question of standards is no matter to be taken or judged lightly. It is standards which determine not merely the competitive strength of a nation's products; of more relevance is the goodwill, the reputation and prestige that can be gained by keeping certain minimum standards.

And, when we consider that the very first industry which every under-developed country seeks to establish and to achieve self-sufficiency in is textiles; when, moreover, the facts are clear that the world markets in textiles are increasingly getting competitive in character, Mr Krishnamachari's warning to the textile industry becomes one that must very seriously be heeded.

TTK said that sub-standard goods were being manufactured and these were being dumped upon willing or unwilling consumers. This is true of India, within India. In the export markets, the complaints are not a few that the widths of cloth exported seldom conform to the samples provided. Even so, with the length of pieces of cloth. And Mr Krishnamachari has also recorded it that the Millowners Association has by no means displayed an eagerness to associate itself with the Indian Standards Institute. He decried this fact, adding that the ISI was not a Government body, but primarily a co-operative association that ensured that a certain minimum in quality was being maintained. By establishing standards, it contributes to the betterment of trade, commerce and industry. And, as the President of the Indian Merchants Chamber, Mr Babubhai M. Chinai, rightly pointed out, "in the highly competitive conditions of world trade today, a product which has no stamp of quality attached to it has ultimately to go to the wall."

The ostensible reason, as stated by Mr Krishnamachari, for the unwillingness on the part of the textile industry to associate itself with the ISI was that, by so doing, standardisation would be tantamount to regimentation. We may safely lay aside this idea. Not for us is the danger that all textile units will be producing the same sort of monotonous blue cloth, in manner similar to our neighbour country whose government is totalitarian. We have to be clear in our mind what we expect from the textile industry, or for that matter from any industry in the country, is a sincere and honest application to its job of work. When the consumer is sold something, he has a right to expect his money's worth. But, so long as indigenous supply falls short of demand, or so long as there is little choice as to the availability of particular commodities at particular prices, the consumer becomes the "unwilling or willing" dupe on whom substandard articles can be foisted.



Within the country, it is possible that, unless Government take due care in the matter, the particular industry might be able so to dupe the customer for some considerable time. But the picture is quite different when we treat with export markets. To be bitten once is once too often, as far as the foreign importer is concerned. Let him receive but once sub-standard qualities; and not only is that particular dealer black-listed, but the country from which the articles were imported is one that the foreign importer later could scarcely put any reliance on.

Thus, the manufacture and sale of sub-standard articles may be said to be doubly un-Indian. I use this phrase in the sense connoted by the Committee that was set up in America to investigate un-American activities. Un-Indian behaviour falls, as I have said, into two categories.

India's stated ambitions may be said to be two-fold. Firstly, of course, it is the welfare of the masses that we seek to improve in as short a measure of time as possible. This not only means that we see to it that he is in a position to earn the wherewithal with which to dress himself decently; it also imposes upon us a duty to make available sufficient quantities of products of certain minimum standards which will ensure that the rupee he spends is something that the consumer receives full value for. It is in this light that the stated objective of the Second Plan seeks to create employment opportunities for as many Indians as possible.

But our ability for making available the commodities that an Indian might need depends upon the industrialisation of this country. If we are to industrialise, we have to buy the machinery, to set up the plant and equipment, to plan the production and to arrange for the equitable distribution of the manufactures. All this will require foreign exchange, because capital machinery is something that we have to import. Foreign exchange means, in turn, that we can afford to spare no effort in increasing our earnings from exports.

But the Indian exporter of substandard articles not only loses his future business; as I said, he also is responsible for creating in the foreign importer's mind an antipathy to products of this country. This suggests that the exporter of sub-standard goods is indirectly contributing to a reduced competitive capacity of Indian exports. If our goods are more difficult to export, then exchange earnings are more difficult for us to obtain. Thus, an exporter of sub-standard goods is un-Indian again—because he hinders Indian industrialisation by the very fact that he renders the earning of foreign exchange more difficult.

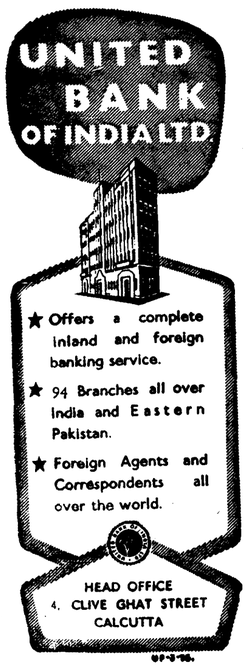
Loans to Industries

Mr T. T. Krishnamachari had occasion last week to give a much needed assurance to entrepreneurs in small-scale industies. It is generally known that the starting and efficient running of small units on a commercial scale is attendant with a variety of risks and problems very different and perhaps more difficult than in the case of a large industrial set-up.

The main task of helping small industries gain their feet rests with the State Governments rather than with the Centre. It is true that a big step forward was taken with the statutory provisions under the State Aid to Industries Act. But there is currently an unquestionable need to expediting the implementation of schemes already sanctioned for such development.



The Union Minister recommended to representatives of the State Governments of Bombay, Saurashtra, Vindya Pradesh and Kutch, the liberalisation of the conditions for distribution of loans. The Government of India have suggested to the States that loans up to 75 per cent of the value of the security offered should be advanced. Such security should include equipment, stock-in-trade, and other assets created by that loan. It is stipulated that loans to small units would be at 3 per cent interest and to industrial co-operatives at 2½ per cent interest.

The Government of India have gone further to agree to pay the difference between the rate of interest at which loans are sanctioned by the Centre to the State Governments and the reduced rate of interest at which loans were to be advanced to the industries.

In this connection, the recommendation of the Small-Scale Industries Board is significant. It has suggested that loans up to Rs 1,000 should be given without any security, but merely on personal bonds. Loans up to Rs 5,000 should be given on the surety of one or more persons. It is reassuring to find that State representatives have reacted favourably to this suggestion.

But equally, there are non-financial aspects calling for speedy implementation. Mr Krishnamachari made special mention of the scheme for industrial estates where factory space, electric supply, water and common service facilities would be provided. The entire cost of starting such estates will be sanctioned as a loan to the State Governments.

It is slightly paradoxical in this context to hear complaints of inadequacy of staff to scrutinise applications and to conduct investigations. State Governments should lose no time in making good this fundamentally important gap. The State Finance Corporations, as they exist today, are unable to cope with the task fully and effectively. The collection of essential statistics is a necessary first step, necessary for these organisations toplay their allotted role.

✱

Bonus Pact:

An outstanding event of past week has been the finalisation of a five-year pact by representatives of the Millowners' Association (which covers sixty of the sixty-two mills in the city), and the Rashtriya Mill Mazdoor Sangh, the Union of Bombay's textile workers. Some two lakhs sixty-thousand workers are now assured of a yearly bonus ranging from 15 days' to three months' pay for a period of five years from 1953.

The intervention of the Union Labour Minister played a timely part in ending negotiations which protracted over three months. Under the terms of the agreement even those mills, whose bonus disputes for 1952 are pending before the industrial court, are obliged to pay bonus for that year to their workmen, numbering a third of the city's textile labour force.

The agreement is fully reflective of a new, but steady trend in industrial relations. It closely follows the Ahmedabad bonus pact and basically is much the same as the latter with only a few modifications to suit local conditions.

A welcome offshoot stemming from the settlement is the prospect of large-scale industrial housing projects. Together with the existing and prospective assistance from the Government, the contribution of the mills will provide for the construction of at least 4,000 tenements. Equally laudable are the other features of the agreement. Those employed in mills suffering losses—and these are calculated to number nearly a third of the city's textile workers—will receive 15 days' basic wage as bonus for 1952, in addition to the benefits under the agreement for five years from 1953 to 1957, both years inclusive. This clause is specially noteworthy as the tribunal awards in the past had not permitted the pooling of resources within the industry for paying bonus to all workers including those employed in mills incurring losses.

Another hard-fought issue in the negotiations was also amicably settled. The parties agreed to the appointment of a committee by the Government to revise the rehabilitation reserve for 1956-57. This reserve will be allowed to be treated as a prior charge on the mills' profits before the amount available for bonus is determined.

With regard to the development rebate, there was general accord that the method of calculation should be rationalised.

The happy ending of the bonus dispute should now pave the way not only for harmonious industrial relations but also for an early and unbiassed settlement of the vexed question of rationalisation of the textile industry.

✱

Compulsion?:

Everyone who hailed the agreement between the management and workers of TISCO would surely agree with the Union Labour Minister that such association of employees and the management is a progressive step that should spread to all industries in the country. Mr Desai added that this urge of the present age is in line with the future labour policy of the Government. But it seems to be a slight misreading of the significance of the new development when one goes to the extent of asking industrialists "to force the workers to accept some responsibility in the management, even if the latter refuse to do so". For, it will be one of the surest ways of making labour less conscious of its responsibility as employees. A mutual labour-management accord has to spring from an identity of purpose. The Tata agreement, for instance, is not so much in the nature of a concession to the workers, as a co-operative effort at incrreasing productivity, on objective of the highest importance in the present stage of our economic development.

Unless circumstances in particular industries provide some guarantee against it, there is the real danger of labour leaders being no more representative of labour once they take up a share in management. There are bound to be other difficulties calling for the attributes of quick adaptability and deft adjustment. For one thing, the set of conditions in India is different, in a very real sense, from that obtaining in Yugoslavia where, apparently, the arrangement works successfully and smoothly.

Mr Desai admits that much cannot be done by law in respect of ensuring harmonious industrial relations. While every governmental support should be given to labour in securing their legitimate claims the question of compulsorily making labour participate in management should not be decided too hastily. The Labour Ministry has, it is authoritatively learnt, made a suggestion to expedite the process in its memorandum to the Planning Commission.

Labour interests, generally speaking, do not stand in danger of neglect; in fact, the vast majority of awards given by labour tribunals has strengthened and continue to strengthen the position of employees.

What Government can do, at the moment, in pursuance of the policy, which enjoys general support lies in two directions. Firstly, every encouragement should be given to the creation of industrial co-operatives, especially in the context of starting new industrial units. Secondly, through a phased programme, Government can associate employees in the management of industries in the public sector, giving thus a lead to private industrialists. A gradual process will help prepare the workers to shoulder responsibilities that will only increase with the years.

✱

Tanker Fleet:

Final Decisions on States Reorganisation

AFTER what appeared to many observers interminable parleys and consultations, final decisions on most of the recommendations of the States Reorganisation Commission were announced here on Monday evening. The fact that the announcement was made by Government rather than the Congress Sub-Committee grappling all these days with the rival claims of various interests came something as a surprise. Though the practical identity between the Government and the Congress today makes this a matter of mere academic interest, there is a feeling here that the announcement was decided upon rather suddenly and was perhaps taken personally by the Prime Minister to put an end to the mounting suspense.

Almost simultaneous with the Government communique, giving the Government's decisions on the issues involved, the Prime Minister broadcast to the nation on the subject. It was a characteristic performance. He began with what must at first sight have seemed an irrelevant reference to atomic energy and the destructive potentialities of nuclear weapons. He then went on to refer to peaceful coexistence and Panch Shila. Next came a reference to the Republic Day just round the corner and our achievements in the last eight years and our hopes for the future, which can be realised only by effort, unity, co-operation and hard work. It was only then that Mr Nehru brought up actual decisions on the SRC recommendations. After indicating the more important of these, he stressed the need for our living up to our own precepts of peaceful coexistence and ended with a stirring peroration, in the name of Buddha, to eschew violence. Cynics might aver that references to Panch Shila have become a reflex with Mr Nehru, whenever there is a microphone in front of him.

But were the references to our being in an Atomic age and our professions of peaceful coexistence among nations so irrelevant after all? I rather think not. Firstly, there is the obvious connection that Mr Nehru himself brought up toward the end of the broadcast—the sanctimonious absurdity of our preaching to the rest of the world and on a global scale a doctrine that we are unable to practice in the far more restricted sphere of our own internal affairs. Secondly, there is the comparatively triviality of preoccupation with State boundaries when the power of the atom puts the seal on the process that has reduced space and distance to meaningless entities. Thirdly, by reference to the central crisis of our civilisation as a while, in which profound moral issues are involved, Mr Nehru underscores the fatuity of quarrelling about issues in which nothing more fundamental than the Governor from whom you receive your orders is involved.

As a "performance," the speech was cunningly built up. The problem of States reorganisation was placed in perspective, first in the global context and then in the national context by a natural reference to the Republic Day that is in the offing and, inevitably, to our achievements and hopes and aspirations at the national level. Viewed in the enormity of the basic issues of our times and the stupendous nature of our real tasks, the squabbles over the map are shown to be unforgivable childishness. There was, thus, no cant or hypocrisy in Mr Nehru's references to issues of wider import, because he is, as every one of us ought to be, profoundly conscious of the burden of our nation's high destiny.

More limitedly and practically, the problem of reorganisation is to be viewed in the light of the unity and security of our nation and in the light of our constitutional guarantee of a common citizenship. The former concept is in the nature of call to duty and the latter is in the nature of an assurance. Whichever way you phrase it, the paramount consideration with all patriotic Indians should be the whole of India, and the greatest assurance of his rights that any Indian can have in our Constitution. Provincial boundaries are reduced to mere matters of administrative convenience when it is realised that no matter on which side of the border you live, your rights as a citizen are assured and you have the same rights, privileges and duties as those across the border. This assurance, coupled with the implementation of the recommendations for safeguarding the rights of linguistic minorities in the States, should make people view the problem in the only proper light.

The broad details of the actual decisions on particular recommendations have already been published in the daily press. The principles that have governed Government's decisions have been stated to be to depart from the Commission's recommendations only when "it has been found that the minimum measure of agreement necessary for the efficient working of the administrative units would not be forthcoming on the basis of the Commission's recommendations." As regards border adjustments, departures have, for the most part, been by agreement among the interests affected.

In the general preoccupation with the controversial decisions, there has been a tendency to forget recommendations of far reaching importance that have been accepted by the Government. Thus the sweeping away of constitutional disparity between the different States of India and the abolition of the institution of Rajpramukhs are of great constitutional and political significance. Not many seem to realise the import of this casual ending of the last vestige of political power of the once all powerful ruling princes, who were, until Sardar Patel came on the scene, the most powerful vested interests in the country. One cannot help contrasting the gracefulness with which these former rulers have accepted the inevitable progressive diminution and the ultimate extinction of their once enormous powers in the larger interests of the country with the exhibition the politicians are making of themselves over petty border adjustments that seem to threaten their brief authority.

As a result of the Government's decisions so far taken, Kerala, Karnataka (to be renamed Mysore), Madhya Pradesh, Rajasthan, Madras, Uttar Pradesh, Bihar, West Bengal, Assam and Orissa will be formed almost on the lines recommended by the Commission, except for a few border adjustments. As regards Bombay, the decision had been made most difficult by the impossibility of reconciling the conflicting claims of the Bombay Maharashtrians, the people of Vidharba, and the Gujerathis. The 'award' as given finally is sure to disappoint Maharashtrians, but most people would agree that they have only themselves to blame for this state of affairs. Subsequent acts of the mob in Bombay whom the Maharashtrian leaders either cannot or do not want to control, have not made the general public more convinced of the justice of their case. The final decision has been to have three units in the place of two: a Maharashtra consisting of Marathi-speaking areas of Bombay, Hyderabad and the Vidharba (whose people, by the way, showed extreme reluctance to join the new State): a Gujerat consisting of all Gujerathi speaking areas of Bombay, Saurashtra, Kutch: and the City of Bombay to be administered centrally. There was no element of surprise in the announcement since some such arrangement had seemed almost inescapable from the beginning as the people of the area were not willing to accept the bilingual State of Bombay which, of course, would have been the most admirable thing to have had.

The only important outstanding issues are those relating to the future of Telengana and the Punjab. It would have been admirable if decisions on these two issues had also been announced along with the rest. But in view of the inconclusive nature of the discussion on the questions and in view of the fact that it was necessary to announce final decision on Bombay to end the uncertainty, this postponement was inevitable. But the shocking way in which linguistic insurgents in Bombay have been behaving since the announcement may give malcontents the mistaken idea that the agitational approach may embarrass the Government into giving them what they clamour for. In Punjab this would be particularly serious since the linguistic controversy there has, unfortunately, communal overtones. It is to be fervently hoped that the good sense of the Punjabis and the firmness and tact of the Government would be adequate to meet any situation that might arise in that troubled province.

The Government communique gives details of the proposed zonal councils. The purpose of these councils is said to be inter-State coordination of the activities of the component States in all matters including economic planning and questions arising out of reorganisation. The effectiveness of these zonal council remains to be seen since they are merely advisory and deliberative bodies. The proposed zones are the Northern Zone, comprising the Punjab, Pepsu, Himachal Pradesh, Delhi and Rajasthan: the Central Zone, comprising the two largest linguistically homogeneous States of Uttar Pradesh and the proposed Madhya Pradesh: the Eastern Zone, comprising of Bihar, Assam, West Bengal, Orissa, Tripura and Manipur (to be Centrally administered): Southern and the Western Zones roughly covering the former presidency areas of Madras and Bombay with the adjoining 'Indian State' territory

North Indian Notes

Jobs for the Trained

The Planning Commission's draft memorandum on the Second Five Year Plan, as far as it can be known at present, provides an allotment of Rs 26 crores for technical training and labour welfare. If it is their view that this amount will make it possible to meet fully the increased demand for trained personnel for industrial and mineral development they have not made it explicit. At best, the bid can be considered as making a beginning, but, unfortunately, not where it should have begun. It gives little clue to how employment is going to be linked with the much talked about reorientation of the present educational set-up, in order to give it a technological and vocational bias.

The programme, the bare outline of which is now known, is however, not without its points of strength. To meet the requirements of skilled labour, arrangements for training 2000 apprentices in the first year of the plan are, reportedly, being made. This will be gradually expanded till at the plan-end, some 5000 apprentices per annum will be equipped with specialised talents. This will call for the utmost cooperation of industrial establishments where facilities can be procured for such training.

For the rest, the proposals are but an extension of the type of efforts already being made and which, admittedly, have failed to make any noteworthy impression on the employment situation. For instance, the Commission are of opinion that the scope of the employment exchanges will be enlarged in view of the large industrial programme on hand. It is thus proposed that their number should be increased from 131 to 265. It will be regrettable if the planners fail to draw any inference from the functioning of the existing employment exchanges. Have these been able to keep a respectable proportion between the number of jobs secured and the number of registered applicants? Lately, they have turned from the position of the over-worked and heavily-burdened organisations to that of half-awake bodies perpetuating lots of delay. The links they maintain with employment opportunities are very often unreliable. Their links with the educational institutions are nil. It is not uncommon to hear for instance, of dearth of engineering talent as well as of a surfeit of it, simultaneously from two parts of the country. There needs to be some re-thinking as to the future channels of recruitment. Universites could act in this respect as dependable consultants who could properly canalise talents with varying aptitudes.

The existing centres now administered by the Union Labour Ministry are proposed to be transferred to the respective State Governments. This step should make for expedition and greater knowledge of local conditions and needs and prospective employment avenues.

*

Machine Tool Industry:

A great lacuna that is obviously worrying the planners, sometimes to the extent of defeating their purpose is the lack of full and reliable statistics regarding the current position in particular industries. Special committees of investigation represent a usual recourse, but even these can only bank on second-hand information and wide generalisations, unless assisted by an efficient statistical unit. It is to be hoped, therefore, that the newly appointed Committee for reviewing the present capacity and studying the need of future expansion will have the benefit of accurate and up-to-date data. The ten-man Committee is composed of senior officials from the Ministries of Scientific and Industrial Research, Production, Iron and Steel, Railways, Defence, Housing, Works and Supply and Commerce and Industry and two representatives from the private sector.

It is to the good that Government have come to the realisation, before it is too late, that the progress in the development of the machine tool industry is far too slow in relation to the present and future requirements and there is an urgent need to infuse a dynamic development programme.

The Committee is asked to assess the country's requirements in machine tools in different categories and determine the gap between requirements and present manufacturing capacity. It will also investigate the causes responsible for impeding faster development of the industry and suggest how they can be eliminated. The existing capacity for designing machine tools will also be reviewed by the Committee which survey the facilities available for training machine tool designers. It will suggest ways and means of helping the industry in securing training facilities at home and abroad for such staff.

The largest consumers of machine tools, perhaps, are the various Government departments. The Railways have, in fact, completed some standardisation work in respect of general purpose machine tools. The Committee is asked to study this aspect with a view to extending standardisation to the most widely popular requirements.

Also, on the Committee falls the task of suggesting the machinery for laying down standards of performance and specifications for inspection of the final product.

*

Educated Unemployed:

The Union Planning Minister has done some service to the educated unemployed by assuring them, unambiguously, that the small-scale industries proposed for absorbing them need not necessarily mean village industries. Neither do they mean non-mechanised units. The Planning Commission seem to have an ambitious plan to absorb over a lakh of matriculates in small urban industries such as the manufacture of hand tools, automobiles parts, agricultural implements, cutlery, sports goods, etc. But less thought seems to have been given to the administrative reorientation necessary for the organisation of a vast net work of such industries.

Another avenue for absorbing the educated youth is provided by the cooperative movement. By bringing technically trained young men into the cooperative set-up the ideals of Cooperation stand to gain. But here again, monetary resources are necessary but not sufficient.

*

Technical Co-operation:

The fourth anniversary of the Indo-US Technical Co-operation Programme has been fittingly commemorated by the signing of two new agreements involving an assistance of over $250 million.

India is to receive from the US 100,000 tons of steel for railways bringing the total of US steel under the TCP to more than 700,000 tons. Also, the US will supply 100 locomotives and approximately 8,700 wagons to enable the Indian railways to make highly necessary improvements.

The joint project of malaria-control which, already has made itself felt throughout the country, is to be further aided by the supply of 6,000 tons of DDT.

The other important field in which the US Aid Programme is playing a significant role is the community development and extension service. A total of $12,000,000 was provided by the US Government for this purpose against a planned outlay of about Rs 100 crores by India. The assistance took the shape of tractors, agricultural demonstration equipment and mobile cinema units.

*

Toward Prohibition:

Public reaction to the report of Prohibition Inquiry Committee was far from hostile, though not many thought April '58 as a good enough deadline. The Planning Commission have now taken their stand. They certainly go well beyond the view that prohibition should be achieved more through education than by legislation. It has been very aptly decided that there need not be any undue insistence on identical steps or identical dates for all the States in the Union. In fact, the States have markedly individualistic opinions on the phasing of the prohibition programme. The Commission have, therefore, wisely confined themselves to recommending certain measures which State Governments may implement as a first step. They have adopted a sound and sober approach in recognising that a national policy, such as pro-

North Indian Markets

Heavy Sugar Stocks with Factories

ACCORDING to the Indian Sugar Mills Association, the new sugar season—November, 1955 to October, 1956—has opened with heavy stocks with the factories carried over from the previous season—449,832 tons against only 67,663 tons on the corresponding date of the previous season. By the end of November, 1955, i.e. first month of the new season, 60,535 tons of sugar were produced; and 66 factories had already started crushing against a total of 140 factories expected to crush during the season. About 50 factories were due to start by the 15th December.

The despatches from factories during the month were 139,679 tons against only 37,795 tons during the same period last year, leaving a closing stock of 370,688 tons with the factories on the 30th November against 106,668 tons at the same time last year.

Meanwhile, sugar markets continued to remain dull and the small demand from Gujerat, noticed during the past week, disappeared following the release of the first quota to Deccan and South Indian factories. Traders were, in general, following the "wait and watch" policy, expecting a fall in prices due to easy stock position. Rumours regarding an upward revision still persist.

Following were the mill delivery rates quoted (per maund):—Jaswant Rs 28-6; Simbhauli Rs 28-14; Mowana Rs 29; Daurala Rs 29-8; Amroha Rs 27-11; Bijnore Rs 27-11; Mansoorpur Rs 30-0 and Rampur Rs 31-8.

According to the second estimate of sugarcane crop in Madhya Bharat for the year 1955-56, the area under sugarcane cultivation in the State is 39,000 acres; and production of gur is estimated at 43,000 tons. This compares with last year's figures of 35,000 acres and 39,000 tons.

*

Cloudy weather accounted for a sharp fall in the daily arrivals of Gur to about 500 maunds at the Hapur market. Loading facilities for gur continued to be easy and about 30 wagons were despatched during the past week to Rajasthan followed by a despatch of 48 wagons to Gujerat and Saurashtra. Stocks were estimated around 23,000 maunds.

The rate for ready gur showed a fall of As 4 to As 6 per maund, to be quoted at Rs 11-12.

*

The Foodgrains markets in Uttar Pradesh continued to rule steady with gains in prices recorded by all cereals. Wheat average quality was quoted at Rs 15 per maund and farm quality at Rs 16-12 as against Rs 14-4 and Rs 15-12 per maund respectively quoted in the previous week. Daily arrivals of wheat were small, averaging 50 maunds, while the offtake was considerable.

Rice prices ruled steady though the supply position was easy.

Heavy offtake accounted for an improvement in Gram prices by As 4 per maund to Rs 10-4 for the local quality and Rs 10-10 for the Punjab quality. Other coarse grains also recorded fractional gains with Barley quoting Rs 9-12; Bejhar Rs 9-12; Bajra Rs 10-12; Jowar Rs 10-4 and Gowar Rs 9-8.

Pulses registered a hardening tendency although good rain proved beneficial to standing Peas and Arhar crops. Peas dara quality was transacted at Rs 9-8 and white quality at Rs 10-8 per maund. Arhar was quoted at Rs 13-6. Urad prices, however, eased in line with the fall in prices in the futures section, being quoted at Rs 16.

Prices in the Delhi grains market developed a hardening tendency. Wheat, for both farm and dara qualities, gained about As 12 to Re 1 per maund due to slackened arrivals and greater offtake. The market for Rice, however, remained depressed. Barley registered sizable gains in line with wheat. Gram was quoted As 8 per maund higher on good outside enquiry. Bajra hardened by about Re 1 due to good seasonal demand from retailers.

In the Bombay grains market, prices moved within a narrow range due to limited business in view of the uncertainties regarding the City's political future. The undertone in the Wheat section was steady with the ready Pissi quality placed at Rs 14 and that from the Punjab at Rs 14-8 per maund.

Business in the Coarse grains section was characterised by a reactionary decline in the prices of Jowar after the marked strength in recent weeks. Sholapur quality eased from Rs 118 to Rs 114 per candy following the lack of demand at higher levels.

Prices of Rice were, however, maintained. There was little anxiety to sacrifice prices on account of the reports that the Government would not accept offers of less than Rs 14 per maund for Burma rice in their auctions. The overseas demand was moderately good, but business was handicapped in view of shipping difficulties.

*

The Calcutta Shellac market ruled quiet with only small business reported done. Pure Buttonlac was quoted at Rs 165; Pure TN Shellac at Rs 147; Lemon No. 1 shellac at Rs 163 and No. 1 Kusmi Seedlac at Rs 155. Shipments, during January till the 14th, were 10,046 packages.

SOUTH INDIAN MARKETS

Poor Enquiry for Hides and Skins

IN the Madras tanned hides market, clearances, during the past week, were again slow, reflecting the dwindling enquiries from London. It looked as though the activity during the first week of the New Year was like a flash. In general, buying enthusiasm seems to have waned and buyers in England have reported dull conditions with dressers holding back further purchases. It is even reported that dressers, in many cases, have succeeded in bringing down prices in certain line.

Arrivals of Cow, Cow Calf and Buff Calf hides were fair, but clearances were moderate. There was no change in Buff hides. There was very little enquiry for light weights. A few transactions in certain marks were reported at 55d. In 8-8½ lbs, London bids were around 45d. Runs and fourths were almost unsaleable, while inferiors were uninteresting to the UK buyers. Prices of 10-12 lbs. inferiors were, however, well maintained, mainly due to the internal demand.

In Cow Calf, single tannage marks 1-1½ lbs were enquired upto 100d and in 1½-2 lbs at 90d. There were some enquiries for Buff Calf 1½-2 lbs thirds at 55d. Business was, however, found difficult to put through in Buff hides in view of the price difference quoted by buyers and sellers.

In Tanned Skins section, arrivals of both Goat and Sheep skins were fair, while clearances were good, particularly of sheep.

In the export section, trading was selective, mostly confined to light weights. Although there were some enquiries for common quality goats light weights, supplies were difficult to obtain.

There was very little change in sheep skins. Business was reported done in 7-8 lbs fifths and inferior fifths at 8sh and 7sh respectively.

The total quantity of tanned skins, catalogued for the London auctions, is reported to be 470,000 pieces of goats and 420,000 pieces of sheep skins.

*

The Madras Groundnut market ruled quietly steady due to the absence of any interest on the part of buyers. The rate for superior oil-quality seeds fluctuated narrowly around Rs 122 per candy and for bold varieties around Rs 120 per candy. Arrivals ranged between 30 and 80 tons per day, while crushers were taking up small quantities. Bombay traders also operated to a small extent.

Prices in the Groundnut Oil section continued to rule steady. Both buyers and sellers were adopting "wait and see" attitude due to apprehension that the Government of India might increase the export duty should prices rise to high levels. Business was, therefore, confined to small deals by bazar interests. The rate for the ready position hovered narrowly around Rs 247 per candy, while February delivery was quoted at Rs 247 per candy.

No business was practically done with foreign destinations. The rate for Burma was quoted at Rs 1,600 per ton and for the UK and the Continent at £114 per ton.

*

According to the latest reports, the Coffee crop for 1956 is estimated at 27,740 tons, showing an increase of about 1,000 tons over 1955. With the carry-over from 1955, the quantity available to the market is 31,880 tons this year. Allowing for a carry-over of 5,600 tons into 1957 and home consumption of 24,000 tons, the surplus available for export is barely over 2,000 tons. If internal consumers are subsidised as in the past at two annas per point, the earning from exports may not be enough to cover the loss. A further rise in internal prices is, therefore, considered possible.

*

Pepper markets ruled quiet with prices developing an easier tendency due to reports of increasing arrivals at primary centres and in sympathy with New York where buyers were unwilling to pay more than $0.32 for January shipment. In the Alleppey market, there were sellers at as low as Rs 825 per candy for superior fully-dried

The Peninsula

Reactions to SRC Decisions

IT is difficult to confine this week to any single theme. The Central Government's decisions on States Reorganisation have generally received a response free from discourtesy or disturbance. In Mysore, the people are glad that the Commission's title of Karnataka for the new State has been quietly abandoned in favour of Mysore. In fact, it was really perplexing why the the Commission chose Karnataka for a State of which Mysore formed the core and the bulk with all the other districts coming in to swell its borders.

Opinion is also strongly in favour of retaining the Maharaja as a Governor for life—a gesture which even the most radical-minded Mysorean may not grudge towards a family and a person, associated with lasting service to the State. Of all the States affected by the Reorganisation, Mysore has reason to be the happiest.

In Kerala, there seems to be relief that more was not taken out of the Travancore-Cochin State than was recommended by the Commission. There is, on the contrary, a little addition from the outgoing Shencottah taluk. The latter small adjustment has occasioned protests in two cities in the Madras State.

The Tamil Nad Congress Committee President, Mr Kakkan, has promptly come out with a statement that his Committee and the Government of Madras have argued the case for the Madras State most forcibly and that it was pointless to think that any other organisation or individual could hope to achieve results which the Congress Committee and the State Government have not.

That is an unequivocal direction to the people of Tamil Nad not to waste their energies on futile agitation; Mr Kakkan has also given them the assurance that if any issue has to be reopened, his Committee will not fail to do so. On the whole, one feels that Tamil Nad will regard the chapter closed and will divert its energies to the various economic schemes which are vital to its future welfare.

Andhra leaders are frankly worried over their inability to bring round all those who count in Telengana to the acceptance of Visalandhra immediately. Hectic parleys are going on between different groups of leaders and, I gather, in different places, including Delhi. The Visalandhra cause has gained by the Congress Sub-Committee declaring itself in favour. All India opinion has thus moved a step further from where the States Reorganisation Commission left it.

It is, however, feared that if the opponents of the move in Telengana do not quickly resile, the Central Government may not think it worthwhile to make any change on the position as recommended by Commission. That would mean postponement of Visalandhra for another five years, in the first instance, and possibly its permanent shelving, a prospect utterly disagreeable to the majority of Andhras in Andhra and Telengana alike. There is an air of expectancy over the forthcoming decision on this issue.

Meanwhile, public life in Andhra has acquired a new distraction. It is well-known that most of the Andhra Communist Leaders were never happy over the Communist Party's decision to extend qualified support to the Government on foreign and internal policies.

The official group headed by the General Secretary takes the line that Pandit Nehru should be given credit for deliberately changing India's foreign policy in the recent past and for following an internal policy better suited for improving the economy of the country. The Second Five Year Plan and Pandit Nehru's internal policy, according to this group, are progressive, though reactionary to a large extent.

Andhra leaders would like to toe the orthodox, doctrinaire line of complete resistance to the Government. They do not see any qualitative shift in internal policy or any danger to the interests of the Communist party, in denying support to the Government. On the contrary, they hold that any attempt to line up the working class and the Communist party behind one section of the Government against another, under whatever pretext, would merely mean making the working class an appendage to the capitalist ruling classes. Pandit Nehru's defence of India's links with the British Empire and his accusation of the Comminform as interfering with the internal affairs of the country, are regarded as conclusive evidence to the fact that the progressiveness of his policies are more apparent than real. The next meeting of the party is expected to be another crucial one, for reason of this fundamental controversy. A split in the Indian Communist Party is not unlikely; though it is believed every one is keen to avoid bringing matters to such an extreme.

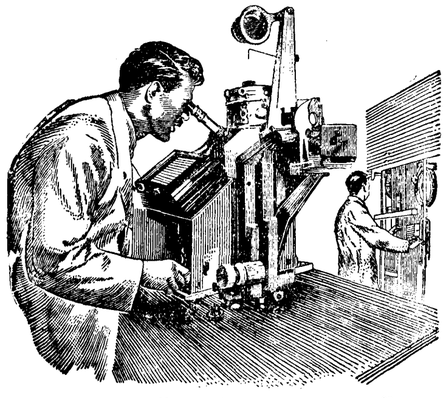
Leaving politics aside, one would now like to convey a few glimpses of the Second Five Year Plan, envisaged in South India. Tentative details are being finalised in all the States and the States reorganisation is not likely either to result in serious changes or to interfere with the schedule of work.

The Port of Tuticorin will figure as a major scheme of transport development, At present vessels of twelve feet deep alone can be birthed in the port. There are plans to anchor vessels of twenty feet deep. The port will also be very much enlarged.

The Rubber Research Institute, for which Dr Rajendra Prasad will lay the foundation stone on February 4, is expected to employ sciences like agronomy, botany, plant pathology and applied chemistry for the advancement of rubber growing. The Institute proposes to carry on intensive extension work among the small growers who number about 25,000 as against less than 500 large growers. For this purpose the institute hopes to organise an adequately larger staff.

In Mysore 2,250 new primary schools have been proposed for the Second Five Year Plan. The Plan also contains provision for the appointment of 1750 additional teachers. Under the first Plan, 787 new primary schools were opened. And in January 30, 1956, another 250 will be added. The education Minister of Mysore claims that these schools are a great source of employment for educated youths. Against the 293 basic schools which Mysore will be having by the end of the First Five Year Plan, 2000 new basic schools are provided for in the Second Five Year Plan.

The Official Language Commission are on the last lap of their visit to South India. Scanning the evidence furnished by the State Governments and non-official representatives, to the Commission, it is possible to draw certain broad conclusions. There is near unanimity in South India on the need for retaining English in its present dominant position for a much longer term was initially envisaged at the time the Constitution was drafted.



Some thnk that an extension of ten years for replacing English completely by Hindi as the national official language would be sufficient; but others, who appear to be more numerous, take the view that no fixed time-limit should be set for this change and that it will have to be determined by the speed with which alternative medium become

(Continued on page 149)

CAUTION ! Men at work

In the quiet of India's laboratories, much scientific work is being done today that will shape and mould our tomorrow. Research work has already begun on our most pressing problems. In our 11 National Laboratories, established and maintained under the Five Year Plan at a cost of Rs. 4.6 crores, scientists can now work with much more facility than was possible before.

In this work of our scientists, and in the making of the Plan which has made that work possible, paper is indispensable.

South Indian Notes

Rural Industrialisation

In the matter of rural industrialisation Mysore seems to have stolen a march over the rest of India. It may be recalled that already the State has implemented a scheme in this regard under the guidance of Dr M. Visvesvaraya in two districts. Evidently encouraged by the results of the experiment, the State Government have taken active steps to extend the scheme to the whole of the State. In furtherance of their aim they have now established a Rural Industrial Finance Bank with a block capital of Rs 30 lakhs.

The main aim of the scheme will be to ensure fuller employment to villagers who are now engaged in agriculture and other established professions. Existing cottage and minor industries will be encouraged to improve while facilities will also be made available for new indstries to spring up. The scheme will ultimately be worked out by the villagers themselves in the sense that every village will have a rural industrial co-operative society cum development committee which will receive applications for financial assitance. The share capital of all the co-operative societies in each district will be deposited to the credit of the district in the Rural Industrial Financing Bank and will be made available for disbursement as financial assistance for intending applicants from the villages for the establishment of new village industries or for effecting improvement to existing units.

*

Development Programme of AIR:

With the inauguration of a 20 kw medium-wave transmitter at Avadi last week by the Union Minister for Information and Broadcasting, the broadcasting facilities at Madras have been considerably augmented. The new Avadi transmitter is the third 20 kw transmitter that has been opened during the financial year and forms part of the development programme of AIR.

In the course of his speech Dr Keskar disclosed that the Five Year Plan for broadcasting would, apart from being completed according to schedule, have the additional distinction of completing most of the expanded programme embarked upon in the last two years. Medium-wave transmitters similar to that in Avadi were also in the process of being constructed in five other places in the country. Two short-wave transmitters, one in Bombay and the other in Madras, were also under construction.

It is expected that when all the medium-wave transmitters are completed there will be a powerful network of broadcasting medium which will enable the listener with an ordinary radio to listen to programmes from atleast two or three stations. Moreover, the increased power of the transmitters will help in effecting improvements to the quality of programme output.

Dr Keskar disclosed that under the Second Five Year Plan, the Madras area would be further strengthened. The 100 kw short-wave transmitter was expected to be finished in the course of 1956 and in all probality there would be a higher power medium-wave transmitter in Trichi. Apart from the construction of the two, during the Second Plan period, Government would not be interested in the construction of new transmitters but would rather concentrate on the construction of studios and the extension of facilities to existing studios.

While it is gratifying to note that Government are fully conscious of the fact that the radio is a valuable aid in the consolidation of national life and activity, it is to be noted that much remains to be done if the full benefits of the improvements achieved so far and planned for the future are to reach the masses. In the first place the radio receiver must be brought within the reach of the common man. The programmes also need revision as the majority of the new listeners will be villagers.

*

P & T's Second Plan:

Like other Departments and State Governments, the Communications Department of India is also dissatisfied with the pruning of its demand under the Second Five Year Plan. As against Rs 142 crores asked for, the Planning Commission have allotted only Rs 125 crores for the Department. Referring to the cut, Mr Raj Bahadur Union Deputy Minister for Comminications said in Madras that the sum of Rs 142 crores asked for was the barest minium considering the rate of demand for facilities from the public. He was, therefore, sure that unless the cut was restored, there would be periodic jamming of telegraphic streams.

In a review of the work done by the Department, Mr Raj Bahadur said that in some cases the targets laid down in the First Plan had been exceeded. During the plan period 92,000 telephones were added bringing the total number of telephones to 2.60 lakhs. The number of telegraph offices working was 1204 as against a target of 1200. The number of post offices added was 18,000 as against a target of 15,000. More than 300 new trunk exchanges had come up representing 70,000 miles of new telephone circuits.

Under the Second Plan 20,000 new offices are expected to be opened. The present number of 55,000 post offices is thrice the number of offices in 1947. 2,000 new telegraph offices are also expected to be established in the course of the next five years. The number of public call offices will be increased to 14150 and they will be available for both short and long distance calls.

By far the most important improvement proposed is a Rs 10 crore scheme for the laying of 2000 miles of co-axial cables from Bombay to Calcutta via Delhi, telephonically linking up important cities and towns enroute. As under the new scheme 960 additional channels will be available trunk telephone service on the Bombay-Delhi-Calcutta circuit will become very efficient.

*

Sericulture industry:

There is every indication that sericulture will grow into a prosperous industry in the course of the next five years. The fact that a large number of people are engaged in the industry has given it special significance and the Government of India have evinced considerable interest in the development of the industry. According to the President of the Central Silk Board, Mr V. Nanjappa, development schemes to the tune of about Rs 4 to Rs 5 crores have been drawn up under the Second Five Year Plan. Special attention will be paid to increasing the yield per acre of mulberry crop by improved method of cultivation and to reducing cost of production of silk. The establishment of a research centre has also been sanctioned.

Mr Nanjappa who has invited the State Government to send to the Central Silk Board, suitable proposals for the establishment of a sericulture school has pointed out that the industry may be developed on a co-operative basis as in Japan.

As far as Mysore is concerned the Board has sanctioned Rs 23 lakhs for development schemes and the Board President has pointed out that more funds will be forthcoming if only suitable schemes are drawn up. The State Home Minister has disclosed that schemes costing over Rs 60 lakhs have been planned in the Second Five Year Plan.

*

GATEWAY NOTES

(Continued from page 130)

the absence of any guarantee of regular cargo round the year. This uncertainty remained even though Government had reserved coastal traffic for Indian shipping as far back as 1951.

The agreement reached between the Government of India and representatives of shipping companies last week in Bombay may well mean a break in the long-standing sluggishness and the realisation of a long-felt need. According to the agreement Indian shipowners will purchase five oil tankers from overseas to form the nucleus of the new fleet. Government will provide Rs 3 crores by way of loans while the shipping companies will bear the remaining cost of about Rs 1.5 lakhs. Each of the tankers will require a complement of 17 officers, 10 of whom will be foreigners.

Further progress in this direction will depend on the enterprise and ability of other shipping companies to come forward with their share in building up a tanker fleet. Government have indicated that a larger quota of financial help is possible during the Second Plan period. The position and prospects of oil transport are distinctly favourable and business interests should satisfy themselves that the advent of tankers should prove a timely and profitable enterprise. The incentive should be even greater considering that at present a quarter of the worlds' shipping tonnage is accounted for by tankers.

*

NORTH INDIAN NOTES

(Continued from page 132)

hibition, has to be carried out through more than one channel. Enforcement measures apart, there are other aspects to be reckoned with such as growth of the sanction of public opinion, voluntary work of social service agencies and workers and the provision of alternative interests and recreations.

To start with, it is suggested that advertisements and public inducements related to drinks should not be allowed to continue. Also, drinking is to be stopped in public premises like hotels, clubs etc., with due exemption to foreigners. Finally, committees are to be constituted to draw up phased programmes on lines suggested by the Prohibition Inquiry Committee.

These suggestions take into full account the essential gradualism inevitable in any reform aiming at a change in habit. And, there is no surer way of jeopardising a good cause than by getting over-zealous and hasty about it. The room for a considerable degree of variation in the steps to be taken, that is now allowed to the State Governments (some of which have been ploughing the sands long enough) should be utilised to build up a prohibition programme based on public sympathy and support.

T. I. Cycles of India Limited

FURTHER PROGRESS ACHIEVED DURING YEAR

HIGH PRAISE FOR COMPANY'S PRODUCTS

SIR A. RAMASWAMI MUDALIAR'S REVIEW

Presiding at the Sixth Annual Meeting of T. I. Cycles of India Limited, Sir A. Ramaswami Mudaliar, the Chairman Said:—

Gentlemen,

It gives me very great pleasure to welcome you to this Annual meeting of the T. I. Cycles of India Ltd. The Directors' Report and the Audited Accounts and Balance Sheet for the year ended 30th June, 1955, have been before you for sometime and with your permission I shall take them as read.

It is a matter of satisfaction to be in a position to report that your Company has made further progress during the year under review. Factory 'B' which was erected for the manufacture of component parts is being extended to accommodate additional machinery which has been imported to increase the output of cycles and cycle components. The plant for the manufacture of freewheels has also been ordered and will shortly be arriving. This will enable the Company to manufacture freewheels for the cycles produced at the Factory and also to make them available to other manufactures.

A building is also being erected for housing a modern and up-to-date canteen for the use of the staff and factory workers and it is expected to be opened early in the New Year. The construction of an administrative block for the accommodation of the office is also in progress. When the new office building is completed the present temporary office will be used for the purpose of assembling and storing finished cycles for which space is badly needed.

DEVELOPMENT OF MANUFACTURING ACTIVITIES

As has been stated in the Directors' Report, the Government of India have been good enough to accede to our request to increase the sanctioned capacity for manufacture of cycles from the present limit of 1,00,000 cycles to 2,00,000 in the year 1956. They have also given their sanction for the manufacture of 1,00,000 sets of cycle components per year, and this will be possible with the additional machinery now being installed for the manufacture of component parts including mudguards and freewheels. Your Company will be then in a position to manufacture in the Factory more than 80% of all the components required for a complete cycle. With the incorporation of a few parts that are being manufactured at other centres in India and excluding the tubes required which are now being imported, it may be truly said that the cycle manufactured in your Factory is practically all Indian made.

QUALITY OF PRODUCT

I have consistently stressed in these annual speeches the importance of quality in the cycles produced and I am glad to state that it has now been established that the cycles manufactured by your Company are one of the very best manufactured in India. Till recently these cycles were named 'HERCULES-INDIA', distinguishing them from the 'HERCULES' cycles manufactured and exported to this country by our British associates. Experts from the British factory who have been inspecting our production from time to time were so well satisfied with the quality of our manufacture that they recommended that the name may now be changed from 'HERCULES-INDIA' to 'HERCULES'. Mr. Arthur Chamberlain the Overseas Director of T. I. Cycles and a Director closely associated with the production of 'HERCULES' in England in accepting the changed name states:

"I am delighted to be able to tell you that I am completely satisfied with the quality and general standard of accuracy of all the work now being undertaken in the Factory. I also feel that the very strict standards which we have laid down together with the meticulous care that has been given to the maintenance of these standards, have ensured that the quality of our products is second to none. In consequence the time has now arrived when I believe we should market our products under the trade mark 'HERCULES' in the certain knowledge that all bicycles emanating from our Ambattur factory will do more than justice to the name....."

This is high praise indeed and the change in the nomenclature of the product has been hailed by the consumers. The factors that have helped to produce these results and continue to maintain the standard attained are, first, that the latest machinery has been installed most of which is automatic, and second, that the utmost care is being taken and proper supervision exercised so that any part below standard is immediately rejected.

DEMAND FOR BICYCLES

It is a matter for satisfaction that we are in the happy position that the demand for our cycles often outstrips the production. I sincerely hope that both the supervisory staff and the workers will continue to put their best endeavour to further improve production at our Factory and so meet the increase in demand.

PRICE FACTOR

I have more than once stated at these meetings that the cycle is the automation not for the rich but for the middle class and the workers and that, therefore, the consumers' interest has always to be kept in view. Your Directors have taken this into consideration from time to time and have recently further reduced the price of the bicycles without any deterioration in quality. I trust that this gesture will be understood and appreciated by the Government, the consuming public and equally by our own employees.

SECOND FIVE YEAR PLAN AND LABOUR'S RESPONSIBILITY

The demand for cycles is expected to rise steadily during the Second Five Year Plan. I stated at one of the annual meetings that the expected demand for cycles will be more than one million a year. Under the Second Five Year Plan preliminary investigations have revealed that the demand will be even more than this. Your Directors will do their best to further increase the target of our production and I am sure I am speaking on behalf of all shareholders when I state that we shall fully co-operate to achieve the wish expressed by the Prime Minister that the Second Five Year Plan is at least as successful as the First Five Year Plan in regard to the product of your Company. It is my earnest desire, and in this I have the full support of all my colleagues in the Directorate and of the Management, to do all we can to promote reasonable amenities for labour to keep them reasonably contented and to secure production at the rate as which it has been estimated by the planners. There is an equal obligation on the part of labour that their work is according to what is expected of them and there is no needless deterioration either in quality or the quantity of the output by the workers. The Labour Minister of the Government of India has deprecated any 'go-slow' tactics on the part of the workers and has stressed the the fact that wherever possible piece rate systems should be introduced so that there can be definite understanding on the part of labour of what their work is worth and what their remuneration should be on their daily work. I trust that this statement of the Labour Minister will be fully accepted by all labour leaders loyal to the cause they espouse. I have already given the assurance that the Management would do all that is reasonable to promote welfare conditions.

NEW TUBE PROJECT

I now come to a point which I have briefly indicated in my prefatory remarks. I stated that tubes are the only components that will have to be imported into this country for some time. I am glad to be able to announce that efforts are now being made to fill this want. The tube is an essential component in cycles and it is necessary in the larger interest of the country that they should be manufactured in India in sufficient quantities to meet the requirements of the country. Your Directors have been exercising their minds over this question for some time and have been considering the problems of production of tubes for cycles and for other purposes in India. Our British collaborators in the cycle industry who are the world's foremost manufacturers of electrically welded precision tubes have now come forward with proposals for participation with Indian interests in this venture. Early this year Sir Ivan Stedeford our British colleague visited India and discussed with some of the Indian Directors of your Company the possibility of establishing a Tube Mill in this part of India. I am glad to inform you that the result of the discussions has been satisfactory. A new Company—Tube Products of India Ltd., has been floated and land acquired for the construction of a factory to produce tubes in Avadi very near Ambattur. It is expected that very early in 1957 this Factory will be in production and place on the market electrically welded tubes for all industrial requirements and in particular for the requirements of the cycle industry.

THANKS

I cannot conclude this Speech without expressing the sincere thanks of the Company to the Government of India and to the Government of Madras for the encouragement and assistance that we have continuously received during the past few years. The Minister of Commerce and Industry of the Government of India in particular has shown great interest in the cycle industry and in the allied industry to which I have referred—the production of tubes. He and other Ministers both of the Central and local Governments have noted with satisfaction the progress that your Company has made, a progress which I trust will be maintained in the coming year.

Lastly I should like on your behalf to thank the office staff, the staff in the Factory and the workers for their continued co-operation.

CLIVE STREET GOSSIP

(Continued from page 128)

ter of 1955. The performance at Chittaranjan, at Sindri, at Jamshedpur and at Kulti and elsewhere has been of the most heartening kind. Though considerable expansion of currency has taken place, fears of running inflation have proved to have been unfounded. The Second Five-Year Plan, which is being finalised now, has in its ambitious targets for increasing the national income at the rate of 5 per cent per annum and its programme in the sphere of basic industrialisation is equally ambitious. India's major worry during 1955 has been, unlike that of the other nations I have discussed, the unsatisfactory employment situation. The Second Plan has taken note of the problem as one of the two basic considerations in arriving at decisions about the nature of the Plan's targets. Though it is too early to predict on details, there is scarcely any doubt that the monumental effort envisaged in the Second Plan will be forthcoming in the Plan period.

--EAVESDROPPER.

OLYMPUS

(Continued from page 131)

thrown in. The concept of the Zones may also facilitate the acceptance of the Commission's recommendations regarding common Governors, High Courts and Public Service Commissions. The decisions on these, however, are not yet finalised.

The tasks connected with States Reorganisation are complex and in detail so overwhelming that many in the country wonder whether it was at all advisable to have launched on it now. But the case for reorganisation became irresistible once Andhra was created and there was dissipation of national energy in squalid disputes and minor persecutions of minorities. But the real task is yet to begin. Mobs may believe that the cue has been given for them to take charge now that broad decisions have been taken and announced. But the administrator finds that his task has hardly started and that he has now the additional unwelcome problem of having to deal with hooliganism. It is high time that responsible leaders in all regions bring their influence to bear upon their followers, so that the harassed administrator could get on with the real tasks of reorganisation.

WORLD OF JUTE

(Continued from page 124)

steadiness in forward as compared to the ready positions. Although demand from overseas buyers continued to be disappointing, both mills and dealers were found to be reluctant to make forward sales as there was a general belief that there was little possibility of any recession in prices, especially when the market for raw jute continued to rule firm. Mills took advantage of the situation and sold fair quantities. The following table shows the price trends during the week:—

	Week's Opening	Week's Low	Week's Closing

SOUTH INDIAN MARKETS

(Continued from page 133)

pepper. About 150 candies of arrivals met with only 50 candies of offtake. In the Kozhikode market, Wynaad quality was quoted at Rs 900 and the Country old variety at Rs 875 per candy.

In view of the restricted enquiries from New York, buying by exporters proved smaller than the inflow from the gardens. Consequently, floating stock in the terminal markets continued to augment and was estimated at about 2,500 candies. It is feared that, if concentrated buying by the US failed to develop within the coming fortnight, the markets at Alleppey and Cochin would go down under impact of accumulated floating stock and competition from Northern Malabar.

Underquoting by shippers per s. s. Millerntor, who were able to obtain freight cheaper than that of Conference line, was stated to be one of the reasons for the present neglecting attitude by New York dealers. It is reported that about 500 tons will be lifted by the s. s. Millerntor during the current month.

It is also reported that representatives of shippers of black pepper have urged the Karmahom Conference Lines that freight on the commodity from India to America should be reduced to promote still larger shipments to that country. The present rates, which were fixed when the pepper price was was ruling at $2 per pound, should be appreciably revised downwards as the price has declined sharply to as low as 35 cents on an average.

Meanwhile, it is reported that shipments, during the current month, are expected to be fairly large as freight for a fair quantity is being booked with an Indian shipping company, which has offered a scale rebate ranging between 15 and 20 per cent on existing rates.

WORLD OF TEA

(Continued from page 125)

firm to dearer rates. Reprints were again virtually neglected.

Offerings in the Colombo market, were about 6,635,900 pounds. There was a strong general demand at dearer rates following improved quality. The quality of Nuwara Eliya teas was, on the whole, well maintained though prices of all grades showed some irregularity.

There was a strong demand for high-grown teas at generallydearer rates. The prices of medium-grown teas advanced by 5 to 15 cents per pound, while teas from the Uva side showed little change in quality. Among low-grown teas, small Leaf Broken grades were fully firm. Persian Gulf types were in strong demand and these advanced by 10 to 20 cents per pound, according to the degree of stylish appearance.

In London auctions, offerings were about 42,145 packages. There was a strong and general demand for all descriptions and prices where changed showed firmer tendency. Plain Fannings remained, however, unsold.

The recent recommendation of the London Regulation of Sales Joint Committee to regulate offerings at the London auctions has been welcomed as a suitable corollary to the regulation here. The intention in the UK is to limit the total offer for each week to an average of 6½ million pounds. Each producing country will be allocated a certain proportion of this total. This will allow all the Indian shipments to be disposed of by the end of June.

IVAN JONES LIMITED

"Notice is hereby given to all the shareholders of the Company that an interim dividend has been declared by the Directors @ as. 3/- per share out of the profits of the Company for the year ended 30th September 1953. The shareholders are requested to communicate the change of their address, if any.

The share transfer books of the Company will be closed from 1st February to 15th February 1956 (both days inclusive)".

Stock Exchanges

SUBDUED SENTIMENT

Watch-dog Writes:

STOCK markets have, in general, passed through another week of anxiety. Restricted business and continued inability to take a view have been responsible for a further setback in equity values.

Apart from the daily flow of discouraging news on taxation and the anxiety with regard to the TISCO new issue, there is general uncertainty about industrial peace in the coming weeks. The political unrest and the strike in some of the textile mills in Bombay have come rather heavily on an already tired markets, resulting in panicky selling. Despite the phenomenal fall in prices, there is little or no inclination to support the markets.

Quiet and irregular conditions were witnessed on the Calcutta Stock Exchange where only the speculative issues staged a partial recovery toward the close due to some bear-covering.

Trading on the Bombay Stock Exchange was generally restricted though, toward the close, there was moderate improvement under the lead of Steels and selective Miscellaneous scrips. Textiles were particularly subdued, reflecting the disturbed conditions in the mill areas.

The Madras Stock Exchange ruled weak with sellers predominating in all the sections.

The London Stock Exchange experienced a week of declining prices due to lack of incentives.

Wall Street, however, finished the week on a steady note.

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN THAT THE SIXTY-FIFTH ORDINARY GENERAL MEETING OF THE CHAMPDANY JUTE COMPANY, LIMITED, will be held at the Registered Office of the Company, No. 2, Netaji Subhas Road, Calcutta, on 7th February, 1956, at 12 noon, for the following purposes:—

1. To receive and pass the Directors' Report and Audited Accounts for the half-year ended 30th September, 1955.
2. To declare a dividend.
3. To transact any other competent Business that may be brought forward.

The Share Register of the Company will be closed from 25th January to 7th February, 1956, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfer are advised to effect registration of scrip in their names before 25th January, 1956.

By Order of the Board,
JAMES FINLAY & CO.,
LIMITED,
Managing Agents.

2, Nateji Subhas Road,
Calcutta, 14th January, 1956.

Calcutta

Calcutta, Thursday Evening.

APART from the speculative issues which staged a remarkable recovery from the recent low levels, conditions in other counters on the local Stock Exchange remained dull during the past week. Operators were, in general, found to be inclined to restrict their commitments due to continuing uncertainties. With the prospects of a bearish Budget, the anxiety with regard to the premium that would be decided on the TISCO issue and the absence of any improvement in the clearing arrangements for cheques, activity on the part of professionals as well as investors continued to be at a low ebb. Although the present rates should attract replacement buying, sentiment is so demoralised that a sustained recovery seems very unlikely, at least for some time to come.

In the Giltedged section, business continued to be on a small scale as investors showed little interest, partly due to monetary stringency and partly to investment of funds in the recent share issues. 3 per cent 1986 Conversion Loan, after touching a high of Rs 80-9 and a low of Rs 80-3, finished the week at Rs 80-5. Among other Loans, 3 per cent 1957 changed hands at Rs 99-5 and 3½ per cent 1964 at Rs 99-8.

Bank shares ruled steady following the announcement of increased dividends by some of the banks and the belief that other banks would follow suit. United Commercial had buyers upto Rs 53 and Punjab National upto Rs 49.

Operators in the Jute section, continued to restrict their dealings on the belief that the continued firmer tendency in raw jute prices would affect the profit-margin of the mills. National moved narrowly between Rs 31-10 and Rs 31-14; India between Rs 157 and Rs 159 and Budge-Budge between Rs 183-8 and Rs 184. Gourepore were, however, well maintained at Rs 322.

In contrast to past few weeks, activity in the Coal section, was rather restricted due to lack of follow-up support, though a few selected scrips maintained their previous levels. Amongst these were Bengal having buyers upto Rs 590; Burrakur upto Rs 16-14 and East Indian upto Rs 35-1. Equitable changed hands at Rs 35-14 with New Beerbhoom being a shade cheaper at Rs 22-11 and South Karanpura at Rs 12-15. Central India moved narrowly between Rs 8 and Rs 8-2 and New Manbhoom between Rs 13 and Rs 13-3.

Textiles shares came in for limited enquiry on quieter advices from Bombay. The only two bright spots were Elgins and Kesoram, being maintained at Rs 27-4 and Rs 17-14 respectively. Cawnpore changed hands at Rs 9-4 to Rs 9-8.

Tea shares continued to be well maintained though a further improvement in prices was not recorded due to the cautious attitude adopted by operators, pending further developments in the tea situation. Brooke Bond had buyers at Rs 20-9 to Rs 20-11; Baghmari at Rs 24-1 to Rs 24-3; Dhelakhat at Rs 18-9 to Rs 18-11; Hantapara at Rs 285 to Rs 287; Hasimara at Rs 33-7 to Rs 33-12 and Teloijan at Rs 26-8 to Rs 26-10.

Sugar shares ruled generally quiet. There was a belief that prices for the sweet commodity would show a fall from the current level if once the output, during the current season, would be higher than last season's record. Belsund and Ramnugger were the only two bright spots, having support upto Rs 11-13 and Rs 25-13 respectively. SKG were steady at Rs 13-8.

Price movements in the Engineering section, were mainly influenced by the speculative activity in Indian Irons. The only exception to the general trend were Jessops, which met with special support upto Rs 65-8 from a low of Rs 63-6 on expectation of encouraging working results for last year and a higher distribution. Burn & Company changed hands at Rs 329 to Rs 331; Britannia new at Rs 18-3 to Rs 18-5 and Richardson at Rs 27-2 to Rs 27-11. TEXMACO, after touching a low of Rs 21 and a high of Rs 22-3, finished the week at Rs 21-8. Indian Irons started at Rs 38-11 and, after touching a low of Rs 37-8 and a high of Rs 38-4, receded at the close to Rs 37-7. After market hours on Thursday, there were buyers at Rs 37-4 with sellers at Rs 37-4-6.

Trading in the Miscellaneous section was generally featureless. The only firm feature were Indian Copper, which were keenly sought after upto Rs 7-5 from Rs 7 on expectation of an early announcement of the sanction for the bonus issue. Karanpura Development met with some speculative support upto Rs 21-8 from Rs 18-3.

In the Paper section, Orient, after being taken upto Rs 35 from Rs 34-5, eased off at the close to Rs 34-6. Titaghur moved between Rs 47-3 and Rs 47-9 and Shree Gopal between Rs 18-15 and Rs 19-2.

In Oils, BBP hardened to Rs 4-6 from Rs 4-4 with IBP maintained at Rs 45-12.

Among other scrips, BIC were rather sticky at Rs 13, while India Steamship were taken upto Rs 8-10 from Rs 8-4. Indian Cable met with further liquidation by tired holders and the scrip receded to Rs 31-14 from Rs 32-12. Rohtas Old changed hands at Rs 23-14 to Rs 24-2; new shares at Rs 22-9 to Rs 22-12; Metal Box at Rs 26-14 to Rs 27-1 and Martin Burns at Rs 28-10 to Rs 29. Angelo Brothers were a shade cheaper at Rs 25-11 against Rs 26-2 on quieter advices from the shellac market.

*

Madras

Madras, January 17.

THE local Stock Exchange continued to rule weak during the past week, when sellers predominated in a number of issues. Buyers adopted a "wait and see" policy, although there was some absorption at lower levels.

TEXTILES:—Business was restricted in this section, and prices gave way under selling pressure. There were sellers of Buckinghams and Cambodias at market rates. Bangalore Woollens closed lower at Rs 565, while Metturs declined to Rs 387. Kothari's, however, received some support upto Rs 17-6. Maduras were fairly steady at Rs 50-8 following the announcement of the dividend.

PLANTINGS:—This section was seller-ridden and the entire list closed lower for the week. Rubber shares, which were comparatively less affected till now, also came under selling pressure. Offerings were observed in Cochin Malabars at Rs 8-5; Nilamburs at Rs 17-12; Rajagiris at Rs 20-12; Midlands at Rs 19-6 and Kelpettas at Rs 26. Malankaras were done at Rs 28-6 and TRTs at Rs 12-12.

In the Tea section, there were sellers of Nonsuch, Peermades, Coorgs, Twyfords and Talayars at market rates. There was a drop of as much as 10 points in United Nilgiris, which were offered at Rs 320. Periakaramalais encountered selling pressure at Rs 8-6-3 xd. Despite the announcement of an interim dividend of 10 per cent, Devasholas were sticky at Rs 23.

Coffee shares were no exception to the general trend. Consolidated Coffees were a shade cheaper at Rs 20-9 and Pullangodes at Rs 3-4. Ouchterlonys hovered idly around Rs 5-8.

MISCELLANEOUS:—This section was flat with business meagre. Indian Steel Rolling Mills had sellers at Rs 12-14 and FACTs at Rs 7-3. India Cements changed hands at Rs 32-14. Mysore Chemical Fertilizers continued to attract sellers as also Forest Industries at market rates. Aluminium Industries had sellers at Rs 21-6. In the Sugar section, Kirlampudi receded to Rs 36-8 and Mysore Sugars to Rs 53-8 sellers.

London

London, January 18.

THE London Sotck Exchange experienced a week of declining prices due to lack of incentives and several adverse influences. Selling was more marked, while buyers kept away.

Industrials were the chief sufferers with widespread losses, although Fords and Hawkers were the only exceptions to the general trend. Oils were irregular, while Rubbers and Teas appeared easier. Base metals were on the dull side.

The slight improvement in Giltedged prices, noticed earlier in the week, was only short-lived. Foreign Bonds were quiet except Japanese issues, which were firm. Following were the closing rates of selected stocks and shares:—2½ per cent Consols £55⅝ (£54⅞—week's opening); 3½ per cent War Loan £75 (£74⅞); Dunlop Rubber 22/9 (23/3); Imperial Chemicals 45/10½ (47/0); Imperial Tobacco £3 (£1/32); Calcutta Electric 20/4½ (20/4½); Calcutta Tramways 25/6 (25/6); Assam Teas 20/3 (21/9); British Petroleum 101/10½ (103/10½); and Indian Copper 10/3 (10/3).

*

New York

New York, January 17.

WALL STREET ruled generally steady and prices made further recovery due to short-covering and re-investment demand under the leadership of pivotal industrials.

Steels, Non-Ferrous metals issues, leading Motors and Oils were very prominent. Demand for Oils was attracted by the chances of further fractional price increase along the east coast. Among Motor shares, attention was mainly directed toward Fords on reports from Toronto regarding a premium price for stock on a when-issued basis. The issues were quoted at $69 as against the issue price of $64½ in the registration statement filed by the company with the Securities and Exchange Commission. Among Aircrafts, Dendix Aviation gained fractionally on reports of increased earnings for 1955 though profit-taking prevented any extension of this advance towards the close of the week.

Following were the closing rates:—Anaconda Copper $70 ($70½—week's opening); General Motors $45½ ($43⅜) and US Steel Common $55⅛ ($55⅛).

TEA BOARD

EXPORT QUOTA 1956-57

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1956 to 31st March 1957 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1956. No export quota will be allotted unless application under this rule is duly filed. Application forms have already been issued to all registered estates, but the Tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 27 & 29, Brabourne Road, Calcutta, and, in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin 1, South India.

K. SENTHIAPPAN,
Controller of Licensing.

Provision for Income-tax and Super-tax will absorb	25,00,000	0 0
Interim dividend at the rate of 6 per cent, free of Income-tax for the half-year ended 30th June, 1955, absorbed	15,00,000	0 0
The balance available for distribution is Rs. 54,01,630-3-5.		
The Directors propose to pay a final dividend at the rate of 10 per cent free of Income-tax making 16 per cent for the year	25,00,000	0 0
To place to the Bank's Landed Property Account	3,00,000	0 0
and to carry forward, subject to the payment of a bonus to the staff ..	26,01,630	3 5
Total Rs. ..	94,01,630	3 5

THE INDIAN OVERSEAS BANK LTD., MADRAS.

The net profit of the Indian Overseas Bank Ltd., subject to audit, for the year ended 31st December, 1955, after providing for contingencies and expenses amounts to Rs. 18,71,564-3-11 including the sum of Rs. 2,15,839-1-5 brought forward from the previous year's account.

From this sum the Directors have made the following allocations:

	Rs.	A. P.
Provision for Taxation	7,50,000	0 0
Transfer to Reserve Fund ..	4,00 000	0 0
Provision for Bonus to Staff ..	1,25,000	0 0
The Directors propose to recommend to the Shareholders at the next General Meeting payment of dividend of 7½ per cent (free of tax)	3,68,265	0 0
To carry forward	2,28,299	3 11
Total Rs. ..	18,71,564	3 11

ANDHRA BANK LIMITED.

The net profit for the year ended 31st December, 1955 (subject to audit) amounted to Rs. 4,99,092-12-10 after payment of half a month's salary as bonus to staff, and including a sum of Rs. 16,321-7-0 brought forward from the previous year's accounts and deducting therefrom the payment of an ad-interim dividend at the rate of 6 per cent per annum, free of income-tax for the half-year ended 30th June, 1955, which absorbed Rs. 89,000/-, the net profit available for final appropriation is Rs. 4,26,414-3-10.

THE UNION BANK OF INDIA, LTD., BOMBAY.

The net profit of the Union Bank of India Ltd. for the year ended 31st December, 1955, including the sum of Rs. 1,75,873-10-7 brought forward from the last year's account amounts, subject to audit to Rs. 11,23,548-6-11. Out of this sum the Directors have made the following appropriations:—

	Rs.	A. P.
1. To Reserve Fund Account ..	2,00,000	0 0
2. To Contingency Account ..	50,000	0 0
3. To premises Account	75,000	0 0
4. To provision for Taxation Account	1,75,000	0 0
5. To provision made for Bonus to Staff	1,25,000	0 0
6. To Balance	4,98,548	6 11
Total Rs. ..	11,23,548	6 11

Out of the above balance the Directors propose to recommend to the shareholders at the next General Meeting payment of dividend at the rate of 7½ per cent per annum, free of income-tax, i.e., As. 5-6 per share on 8,00,000 shares leaving Rs. 1,98,548-6-11 to be carried forward to the next year's accounts.

P.S.—Following is the figure for the year 1954 given for a comparative study. Last year's dividend was 6¼ per cent per annum, free of Income-tax, i.e., As. 5-6 per share on 8,00,000 shares which left a balance of Rs. 1,75,873-10-7 to be carried forward to 1955 accounts.

THE HONGKONK AND SHANGHAI BANKING CORPORATION.

The Hongkong and Shanghai Banking Corporation's profit for the year after providing for taxation, etc. H.K.$20,580,320, written off Bank premises H.K.$4,000,000 and final dividend £3 per share, leaves balance to be carried forward H.K.$606,689, subject to audit.

As a result of amendments to the inland revenue ordinance, dividends are no longer subject to deduction of Hong Kong Corporation profits tax.

BALANCE-SHEET REVIEWS

(Continued from page 116)

amounts to as much as Rs 6,75,414 against Rs 4,11,634 in the previous year.

Due to increased profit, the directors have been able to raise allocations to various Funds—Taxation from Rs 1.30 lakhs to Rs 2.50 lakhs; Depreciation from Rs 1.00 lakh to Rs 1.25 lakhs and Rehabilitation Reserve from Rs 70,000 to Rs 1.20 lakhs. Apart from these, a sum of Rs 50,000 has also been provided for Contingencies Reserve. The dividend on the Ordinary shares is, however, maintained at As 12 per share.

The balance-sheet, as at 31st October 1955, shows a paid-up capital of Rs 15 lakhs—Rs 9 lakhs in Ordinary shares and Rs 6 lakhs in Preference shares. Capital Reserve is shown at Rs 9.35 lakhs, while General Reserve stands at Rs 2.00 lakhs and other Reserves at Rs 6.29 lakhs. The gross block at Rs 37.86 lakhs is depreciated by Rs 30.57 lakhs to show a net block value of Rs 7.29 lakhs. Liquid assets amount to Rs 47.18 lakhs, which are substantially higher than sundry liabilities, at Rs 21.74 lakhs.

The directors have, in their report, stated that they have approved a Cane Development Scheme for execution during the next five years. The main object of the scheme is to bring about a considerable increase in the yield of cane per acre in the areas serving the factory, with a corresponding increase in the quality of cane crushed and a consequent improvement in the company's financial results. The requirements of finance for the execution of the scheme will be substantial. They have also had those requirements in view in addition to requirements for rehabilitation of plant and machinery in recommending the transfer to Rehabilitation Reserve of the sum of Rs 1.20 lakhs.

The prospects for season 1955/56 indicate that a normal crop will be taken off although, due to adverse weather conditions, the extraction may be less.

£R$

Elgin Mills Company:

The Elgin Mills Company has reported a substantial rise in the net profit, before providing for Taxation and Depreciation, to Rs 44,70,109 for the year ended 30th September 1955 from only Rs 34,77,853 in the previous year, though the former figure includes Rs 3,39,645 being refund of EPT. These results, having regard to the partial strike which took place in the factory from 2nd May to 20th July 1955, should be considered very satisfactory.

The directors have, after setting aside Rs 16.00 lakhs (Rs 12.00 lakhs) for Taxation and Rs 8.00 lakhs (Rs 8.50 lakhs) for Depreciation, provided Rs 13.00 lakhs for Rehabilitation Reserve. It will be seen from the balance-sheet that existing commitments of the company on account of capital expenditure amount to Rs 18.00 lakhs. The dividend on the Ordinary shares is maintained at Re 1 per share.

£R$

South Behar Sugar:

The working of the South Behar Sugar Mills, for the year ended 31st October 1954, has resulted in a loss of Rs 24,453. The cane crushed in the company's factory was the lowest in the history of the company. The quantity crushed was 7.28 lakh maunds, which represented a crushing of only about 25 days' working at its full capacity.

The loss for the year was not large, thanks to favourable sugar prices. After adding the year's loss to the previous loss of Rs 15.90 lakhs, there is a total of Rs 16.15 lakhs at the debit of the Profit and Loss Account, to be carried forward to the next accounts.

FOR THE INVESTOR

(Continued form page 116)

pioneering in character. The project for the manufacture of Ammonium Chloride and Soda Ash now being undertaken by Sahu Chemicals Ltd., is a venture that falls into this pattern. Ammonium Sulphate has proved to be a nitrogenous fertiliser of value. But Gypsum, being in limited supply in this country, and Sulphur having to be imported from abroad, the possibility of an unlimited expansion of Ammonium Sulphate industry is doubtful. In the manufacture of Ammonium Chloride, nitrogen is fixed through common salt, which is available in abundance in the country; thus, Ammonium Chloride will be able to meet the increasing requirements of the Indian agriculture for nitrogenous fertiliser. Experiments conducted in actual farms in various states in this country have proved that Ammonium Chloride is a suitable nitrogenous fertiliser. But it did not gain popularity because of its high cost. Now, it is possible to produce Ammonium Chloride cheaper along with Soda Ash as a joint product.

Another project which is of importance to the national economy is manufacture of Sulphur from Pyrites. Deposits of this are largely available in Amjor in Bihar. The possibilities are being worked out in collaboration with reputed foreign firms. The results are reported to be promising.

In the final analysis, what is important For the Investor is the popularity commanded in Stock Exchanges by particular scrips. And the expansion and modernisation programmes taken on hand by the Sahu Jain enterprises have won their due recognition. This is clearly indicated in the attached table, which gives the trend in the share prices of the Companies in the Sahu Jain Organisation since 1946 compared with the general price index in respect of ordinary shares. In the Statement, 1946 August has been taken as base as the prices of shares were the highest at that period.

£R$

Investment Notes:

The Bank dividend season has made a promising start. Of the results so far announced, only the Andhra Bank Limited has reduced the dividend from 7 per cent to 6 per cent for 1955. Bank of India has, however, raised the dividend from 14 to 16 per cent; Union Bank from 6⅞ to 7½ per cent; Devkaran Nanjee Banking Company from 4 to 5 per cent and Indian Overseas Bank from 6 to 7½ per cent. Indian Bank, Madras, has maintained the dividend at 12 per cent and Bank of Maharashtra Limited at 5 per cent.

Thus, the dividend rise in most of the banks has given rise to speculation whether the other major banks will follow suit. The Central Bank of India Limited is reported to have done well. In the case of the United Commercial, an increase of at least As 4 per share is confidently expected by market circles.

Indian Aluminium Company, the principal producer of aluminium in the country, proposes to raise over Rs 3 crores of new capital in the form of Convertible Notes. These Notes will carry a fixed rate of interest and confer upon the holders of the Notes the right to convert them into Ordinary shares of the Company.

The Convertible Notes issue by Indian Aluminium Company will provide a part of the funds required for the establishment of a new smelter at Hirakud in Orissa, which will triple the Company's production of aluminium metal to 15,000 tons per annum. The Canadian majority shareholder of the Company, Aluminium Limited, has agreed in principle to take up half of the new issue and the other half will be offered to the other shareholders and the Indian public.

The Standard Vacuum Refining Company has announced that the company's issue of 75,000 Preference share allotment is complete. Applications received from the public and Stanvac employees total over Rs 2.63 crores as against the original offer of Rs 75 lakhs. Partial allotments are, therefore, expected to be made to the applicants. It is believed that applications up to 15 shares may secure allotment in full.

BIC has announced that the Share Transfer Books will be closed from March 6 to March 31, both days inclusive. Dividends, that may be declared, will be paid without any application.

£R$

Investment Briefs:

Birds Investments have maintained the dividend at 12½ per cent for the year ended 30-9-1955.

Scindia Steamship has maintained the dividend at As 8 per share for the year ended 30th June, 1955.

*

WORLD OF FINANCE

(Continued from page 121)

Cash Credits and Overdrafts" accounting for a drop of Rs 2.20 crores and "Bills Discounted and Purchased" for a rise of Rs 4.87 crores.

+

According to the statement of the Scheduled Banks for the week ended January 6, demand liabilities are slightly higher at Rs 614.63 crores against Rs 614.48 crores, while time liabilities have declined by Rs 5.07 crores to Rs 413.33 crores. Borrowings from the Reserve Bank have gone down by Rs 0.18 crores to Rs 29.84 crores, while those from the State Bank of India have risen by Rs 2.61 crores to Rs 9.84 crores. Cash and balances with the Reserve Bank have shown a sharp decline of Rs 9.48 crores to Rs 88.75 crores and Investments by Rs 2.12 crores to Rs 382.93 crores. Advances are shown at Rs 652.00 crores against Rs 631.45 crores. Money at call and short notice stands at Rs 8.35 crores against Rs 10.50 crores.

WORLD OVERSEAS

(Continued from page 126)

gramme, spend in the neighbourhood of £600 millions a year, or almost one-quarter of the total investment made in Britain, the importance and significance of this development should be self-evident.

While excessive demands on the British economy are thus being curtailed by the restriction of credit and by more direct attacks on the capital programme of local authorities, Britain has, during this past year of difficulty, adhered to the policy of freer trade and payments which it has steadfastly pursued since the end of 1952.

Admittedly this is a road along which further progress cannot be made until the balance of payments once more shows a surplus sufficient to allow Britain to meet its capital commitments and to provide a margin essential to finance new investment in the Commonwealth. Apart from this, it is essential that the British gold and dollar reserve—which has to serve not only Britain but the whole Sterling Area—should be larger than it is today.

There has, however, been no retreat on this front. The objective of the Government is still to deal with the causes, and not the symptoms, of inflation. That was Mr Butler's recipe. It is likely to be that of his successor, Mr Harold Macmillan.

*

Australia

AUSTRALILA is the fourth biggest producer of cane sugar in the world, exceeded only by Cuba, India and Brazil. Australian cane farms, some of which have been cultivated for 70 years, are more fertile and produce more sugar an acre today than ever before.

Australia grows the sweetest cane in the world, and its modern factory and refinery methods rank favourably with those overseas. The price of refined sugar, nine pence a pound in the capital cities, is one of the world's lowest.

The cradle of the sugar industry is a narrow fertile strip on the east coast, stretching 1,300 miles from Mossman in North Queensland to Murwillumbah and Grafton in New South Wales.

The Sugar Coast is physically well favoured. Its narrow valleys, interrupted by steep spurs, have rainfalls between 90 and 180 inches a year, and the dry season is short.

The vegetation consists mainly of rain forest—the Big Scrub—though there are some areas of swamp and ti-tree (Melaleuca) flats.

The soils include good alluvials, highly favoured for cane though liable to flooding during cyclonic storms, patches of rich basalt, and poorer soils from granite and schist.

ff

Soil for sugarcane needs more preparation than for grain crops, and disc ploughs are universally used to obtain a tilth of eight to ten inches deep.

The setts are planted end to end in drills about five feet apart, and large quantities of suitable fertilisers are usually applied.

Weed pests are controlled by frequent cultivation or with chemical weed-killers until the growing crop shades over the field.

The canes grow from five to eight feet high, and weigh about 2½ lb each. They mature in 12 months, when the crop is harvested. But in some cool districts harvesting is undertaken every second year.

Usually after three crops, one plant crop and two ratoon, a farmer ploughs out the old stools. He then grows a fallow crop of legumes which he ploughs in as green manure before replanting for another four-year cycle.

The average yield from one acre is 26½ tons of cane, with a sugar content of 3.66 tons. Australia thus uses only seven tons of cane to produce a ton of sugar—the best ratio in the world.

In 1915-19 the ratio was 8½ tons of cane to one ton of sugar, and at the beginning of the century it was nine tons to one.

*

THE PENINSULA

(Continued from page 134)

generally popular and understood throughout the Union.

There is hardly any constitutional hurdle against the retention of English either in its present, full status or in a progressively curtailed one for any length of time. All that is required is parliamentary sanction for whatever adjustments are called for from time to time.

It is a fortunate circumstance that barring one political group in Madras, there is scarcely any opposition to the acceptance of Hindi as a common national language, provided the Union Government are not in hurry to push it in non-Hindi areas. The Commission should by now have become aware of the real attitude of South Indians to the question of Hindi. It has been made clear that there is no opposition to the language but only keenness to see that its introduction does not become a nuisance or a matter of practical inconvenience.

Academic opinion has also begun to recognise the unavoidability of the study of three languages for educational institutions. The demand that English should at no time be completely given up and that it has a good claim to be accepted as a subsidiary official language and a compulsory second or third language for educational institutions is also found to have more advocates in South India than was believed to be the case.

After recording the above-mentioned views from spokesmen who could speak with authority and the weight of informed opinion behind them the Union Government are bound to adjust all-India language policy in a manner which would satisfy the aspirations of the non-Hindi areas.

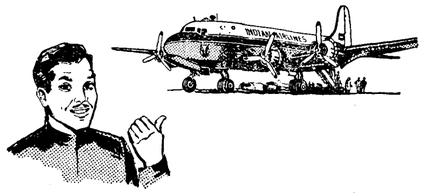
I never realised flying overnight saves so much money!



Time really is money to me. I can't afford to waste valuable working hours. That's why I chose IAC's night service. But I never realised how many *other* expenses it would save

Travel to and from the airport costs nothing! An IAC luxury coach takes you both ways — so comfortable, quick and convenient

Airport staff take charge of your luggage, put it on the plane, load it on the coach when you arrive — there's nothing to pay

If you are travelling onwards, you step straight into your connecting plane. No overnight stops — so you spend nothing on accommodation!

During the journey you are IAC's guest. And what a fine breakfast they give you — no extra charge, of course

NOW fly overnight by luxurious 4-engined Skymasters

New luxurious Skymaster services connect Bombay, Delhi, Madras, Nagpur and Calcutta. Carefully scheduled to connect with *34 early morning flights* from the 5 great airports, Skymaster service cuts out irritating overnight stops, saves all unnecessary expense on the way!

For details contact an I.A.C. booking office or your Travel Agent.

For the Investor

No Time for Eloquence

Investment Gossip:

READERS of this column would, doubtless, have heard of Mr Kedarnath Khandelwal. He was the first Indian President of the Calcutta Stock Exchange. A tall, impressive figure, always sartorially distinguished, a gay flower in his button-hole, and a genial smile on his face, Mr Khandelwal was a notable and noted personality in the ring in Lyons Range.

I must, however, hasten to add that he was to be seen on the ring at all times other than those days when prices tumbled. When bears overwhelmed the market, Mr Khandelwal scrupulously kept himself away from the ring.

So much so, one could peep into the Exchange hall, see if he was there, and, if he was, conclude that prices were on the rise.

Mr Khandelwal was an irrepressible bull.

This column has aught of the quality of the first Indian President of the Calcutta Stock Exchange. If there is cheerful news to tell, and if there is a bright prospect to forecast, Watchdog is at his best, and waxes eloquent.

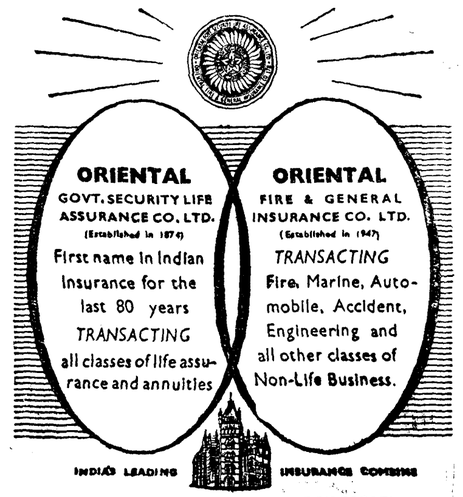
If conditions are adverse, he tries to see how soon they will change for the better. If the sky is overcast by clouds, he tries to discover the silver lining.

The present combination of factors which go for uncertainty and nervousness was anticipated by him; and he gave the simple advice: Wait till the budget is out of the way.

The same advice holds.

Let me add a post-script: The conditions in which industry functions in this country continue to favour buoyont markets and hefty margins of profit. Intrinsically, then, industrial shares continue to merit the attentions and affections of discriminating investors.

£ R $



Investment Notes:

The Kanknarrah Company has announced a major programme of modernisation of its "A" mill with a view to maintaining its competitive position in the Indian jute mill industry. The company has planned to issue Rs 25 lakhs worth of 5½ per cent Debenture stock to meet part of the cost of the modernisation scheme. A prospectus, in this connection, is expected to be issued shortly.

The company has also decided to recommend to shareholders the issue of 25,600-6 per cent Redeemable Cumulative Preference Shares of Rs 100 each. These will be offered, in the first instance, to existing shareholders, whether preference, ordinary or 'B" ordinary, in the proportion to the number of shares held by them. The company will have the option to redeem the whole or any part of the new preference shares at any time after June 30, 1970 at a premium of Rs 5 per share.

An offer has been made by one Mr R. G. Saharia of 35, Chittaranjan Avenue, Calcutta, to purchase all or any of the shares in the Sonai River Tea Company at a price of Rs 101 (including brokerage) for every Preference Share and Rs 18-8 (including brokerage) for every Ordinary share on condition that the present Managing Agents resign their office. The offer to all shareholders will remain open until the 3rd March 1956.

The Britannia Building & Iron Company has offered to the existing shareholders new issue of 100,000 Ordinary shares and 10,000-6 per cent Preference Shares at par in the proportion to their holding. It is learnt that the directors, managing agents and their friends have agreed to take up 40,000 Ordinary shares and 4,000 Preference shares out of the issue "not applied for by the existing shareholders". The applications from the public will, therefore, be considered only in the event of any share being available for disposal by the directors. The proceeds from the new issue will be utilised to finance the increased activity of the company. The directors hope that the proposed expansion will strengthen the company's position and improve its profits.

Investment Briefs:

Bengal Luxmi Cotton has maintained the dividend at Rs 4 per share for the year ended 31-3-1955.

In the Cotton Agents Sugar group, Bharat has maintained the dividend at Rs 1½ per share; New India at Rs 2½ per share and Upper Ganges at Rs 2½ per share, all for the year ended 30-6-1955.

Madura Mills have maintained the dividend at 20 per cent for 1955.

East India Distilleries and Sugar Factories have announced a final dividend of 5 per cent on "A" shares and 15 per cent on "B" shares for the year ended 30-9-1955.

Pandyan Bank has raised the dividend from 6¼ to 7½ per cent for 1955.

The Bank of Baroda has maintained the dividend at 12 per cent for 1955.

£ R $

Champdany Jute Raises Dividend

Balance-Sheet Reviews:

IN spite of generally falling prices for jute goods, the Champdany Jute Company was able to secure remunerative prices for its manufactures during the half-year ended 30th September, 1955. This, combined with the better working of the mills following the completion of the modernisation programmes, is largely responsible for the satisfactory working results.

Sales for the half-year have risen to Rs 1.70 crores from Rs 1.51 crores, while the net profit, before Depreciation, amounts to Rs 9,62,126 against only Rs 6,10,073 in the previous half-year. A sum of Rs 5.75 lakhs (Rs 2.98 lakhs) has been provided for Depreciation.

HIGHLIGHTS

Comes the end of January; comes the realisation, too, that the Budget is scarce a month away.

Budget jitters are then in order; and the genus rumour that may be heard wafting around in any of India's Stock Exchanges cannot be described as any other than conjecture (interested theorising, that is) in order to facilitate speculation (in other words, frisks and gambols in Dalal St. and Royal Exchange).

Also in order, from Indian Finance, is a keenly analytical study of what the Budget should be. The facts and figures relating to the greater part of the year we are ending are by now available; and they lend themselves to intelligent speculation.

A word to explain what we mean by "speculation", as we have used it in the last sentence. According to the Concise Oxford (the dictionary that is presently handily by our side), speculation is "meditation on, inquiry into, theory about, a subject."

Conjecture, incidentally, is no more than "formation of opinion *without sufficient* grounds."

Conjecture, thus, is very much like shooting an arrow into the air; like Longfellow, you never could know what target you hit.

On the other hand, provided you have gathered the data and marshalled the pertinent figures, reasonable grounds are available to you whereon to speculate intelligently; the portents, the future, no longer need be mystifying.

We have sought to do this in World of Finance; and, as we got the data together, certain conclusions suggested themselves. Both the data and the conclusions may, therefore, be reckoned speculation on Sir Chintaman's Budget for 1956-57—they will not be *mistaken*, we trust, for foolhardy predictions.

All Contents of this Issue Copyright 1956 by INDIAN FINANCE

After taking into account the losses for the two half-years ended 31st March 1954, as computed for income-tax purposes and the Development Rebate on new plant and machinery installed during the year to 31st March 1955, it has not been found necessary to make any provision for taxation on the profits of working for the half-year. The capital loss on old machinery, resulting entirely from the rehabilitation programme at the mills, has again been charged against the Rehabilitation Reserve, which was originally raised to meet these losses. The dividend is raised from Rs 4 to Rs 6 per share for the half-year under review.

The balance-sheet, as at 30th September 1955, shows a paid-up capital of Rs 59.16 lakhs against which Capital Reserve is shown at as much as Rs 75.71 lakhs, General Reserve at Rs 6.02 lakhs and other Reserves at Rs 16.85 lakhs. The gross block at Rs 2.22 crores is depreciated by Rs 1.07 crores to show a net block value of Rs 1.15 crores. Liquid assets at Rs 74.46 lakhs are substantially higher than sundry liabilities, at Rs 30.34 lakhs.

The directors have, in their report, stated that, since the close of the half-year under report, the relative levels of raw jute prices and those obtaining for jute goods have made simultaneous business at a profit very rarely possible. The two Mills are, however, working well. White it will be unreasonable, in present circumstances to expect a continuation of profits at the present scale, the results for the current half-year are not expected to be unduly disappointing.

£R$

Jessop & Company:

Jessop & Company has doubled the dividend to 30 per cent for the year ended 31st October, 1955, thanks to a substantial rise in profits. Sales for the year have improved by Rs 1.70 crores to Rs 6.73 crores, while the net profit has increased by Rs 20.31 lakhs to Rs 47,27,193.

In respect of allocations to various Funds, the provision for Taxation has been raised by Rs 10.16 lakhs to Rs 20.26 lakhs; Depreciation by Rs 2.15 lakhs to Rs 5.25 lakhs and General Reserve by Rs 5.25 lakhs to Rs 9.25 lakhs. The amount carried forward is only Rs 14,130 as against Rs 2.93 lakhs brought in.

Sanction has been obtained from the Controller of Capital Issues for issuing new shares in the proportion of one for one. The authorised capital has been increased to Rs 3 crores; and the this increase in capital is meant to finance the company's expansion programme, in particular the projected manufacture of electric suburban railway coaches for which a substantial contract has been secured. Another development is the manufacture of road rollers under licence from Messrs Aveling Barford.

£R$

Dividend doubled by Kumergode Estates:

Kumergode Estates, Madras, have doubled the dividend to 20 per cent for the year ended 31st October, 1955, thanks to a substantial rise in sale proceeds and earnings.

The outturn of Coffee crop is higher at 3,021 cwts as against 1,880 cwts in the previous year, while sales amount to Rs 5.73 lakhs against Rs 3.78 lakhs. The total coffee crop was delivered to the Coffee Board and was valued at Rs 2-4-0 per point. Payments received to-date amounted to Rs 1-15-0 per point.

The net profit, before providing for Taxation and Depreciation, has risen to Rs 2,16,079 from Rs 54,269 in the previous year. Apart from Rs 30,000 set apart for Debenture Stock Redemption Reserve and Rs 33,705 for Taxation Reserve, the directors have raised the Depreciation amount to Rs 20,362 from Rs 9,775 and General Reserve to Rs 1.00 lakh from Rs 50,000. Even after these increased allocations, they have found it possible to double the dividend to 20 per cent.

The balance-sheet, as at 31st October 1955, shows a paid-up capital of Rs 2.00 lakhs and Debentures at Rs 2.70 lakhs against which General Reserve stands at Rs 1.50 lakhs. Liquid assets at Rs 2.81 lakhs are higher than sundry liabilities, at Rs 1.85 lakhs.

The 1955/56 crop was originally estimated on blossom at 105 tons; but the estimate now is revised to 80/90 tons.

Anniversary Week

MOMENTOUS for India is the last week in January. It was on the 26th of the month, in 1950, that India became a Republic; and the day to commemorate this event is one that should make us strive to greater efforts in protecting the democracy that was won after a long battle. It is a day of dedication, more so than on the anniversaries that have passed, because the tasks that face us are compelling and urgent. To safeguard the freedom we have earned, it is necessary that we bend our energies to the solicitous care of the myriad have-nots in the country; and this means that we must, with courage and ambition, set about the implementation of a Plan that will bring nearer a socialistic pattern of society.

Ambitious planning without humility can degenerate into braggadocio. But the last week in January also reminds us that there is much that we should be humble for and about. Eight years ago, he who gained us our independence died a martyr's death. It was a dastard and traitorous bullet that killed Gandhiji; there is the lesson for us that, on this day, we should subject our actions to reappraisal; at this time, it is proper that, mindful of the humility that Gandhiji taught us, we re-dedicate ourselves to the kind of selfless national interest that was always the Mahatma's.

For our part, the last week in January marks a more personal anniversary. It was 28 years ago, on the 28th of the month in 1928, that this journal was born. This is a time when we recall, with pride but not without modesty, Indian Finance's contribution to the shaping and understanding of India's economy; this is also the time when we pledge ourselves anew to our duty of analysing and interpreting, without predilection and without prejudice, all that matters in our economic life.

Nationalisation of Life Insurance

WITH startling suddenness, Government last week announced the nationalisation of life insurance in this country. The reaction in insurance circles has been on the pattern that was to be expected; it is significant, however, that, in all such comment, there is to be discerned shock only in that the announcement was so well-guarded prior to its being made. That, with regard to two important announcements on nationalisation, the secret was well kept up to the last moment is a most heartening fact. It suggests that efficiency and integrity at the Centre are at a commendably high pitch.

Now that nationalisation of life insurance is a fait accompli, it is befitting that we understand properly the motivations of Government for their action. For, unless we are so able to appreciate the reasons which moved Government to take this decision, we would be in danger of coming to the conclusion—and it would be an erroneous one—that Government are dogmatically wedded to a policy of nationalisation. For our part, and we also believe this to hold true of the insurance interests in this country, there is little of surprise in the Government decision. We should have preferred it if, as an experiment, Government had merely constituted a State insurance organisation by banding together such units as were being managed by administrators. But recent events in the World of Insurance, it would appear, have weighed heavily with Government in their decision of total nationalisation of life insurance. For the purpose of clarifying the various considerations that influenced Government, Sir Chintaman Deshmukh made a speech that also contains a vigorous reply to all erstwhile criticism that the State could never run life insurance successfully.

As the Finance Minister put it, all the arguments marshalled against nationalisation "have failed to satisfy us" and Government have "come to the conclusion that nationalisation of life insurance is essential for the implementation of our Plan." The various arguments mooted against nationalisation may be summarised thus:

(1) State schemes have not been successful.
(2) A State enterprise cannot possibly function with the same flexibility that the private sector can.
(3) State-run life insurance cannot achieve the highest ideals of insurance.

Sir Chintaman reveals that, on an objective appraisal, "it appears that the only conclusion that can be drawn from the experience of other countries is that, wherever there has been a wholehearted attempt by the State, nationalisation has been an unqualified success, even in the face of severe competition from the private sector; and failures, wherever they occurred, have been due to the half-hearted manner in which experiments were tried."

He adds: "There is no reason why a nationalised industry cannot be run efficiently." In rebutting this argument, Sir Chintaman points to the fact that, with insurance "a type of business which ought never to fail, if it is properly run, we find that, during the last decade, twenty-five life insurance companies went into liquidation and another twenty-five had so frittered away their resources that their business had to be transferred to other companies at a loss to the policyholders."

The final clinching argument concerns the unhealthy trends that were noticeable in the investment of insurance funds. The tendency, reports the Finance Minister, "not infrequently has been to utilise the funds to meet the capital requirements of enterprises in which the managements are interested rather than those which are clearly in the interests of policyholders."

It is clear that the primary purpose underlining nationalisation has not been to bring about a greater flow of insurance funds into giltedged investment. If this were the main reason for deciding upon nationalisation, we should be opposed to the idea. On the contrary, it should be the purpose of nationalisation to ensure that the frittering away of resources will be, in insurance, a thing of the past. If Government have been able to find adequate reasons for nationalisation of life insurance, it is very important that they are also correctly guided as to the utilisation of the insurance funds which, today, have been safeguarded.

In this matter of the safe-keeping of insurance funds, it is noteworthy that the first step taken by Government has been the appointment of custodians to the various units. The most important duties of these men of experience and integrity, who have been appointed as custodians, will be to have an eye on the investment portfolios of the units of which they are now the watch-dogs. Until such time as clarification is available of the form and content that nationalised insurance will take, it may be said that the task of the custodians will be the routine one of seeing to it that insurance funds are not mis-applied. This raises the question of the form of nationalised insurance as well as the pattern of investment of the insurance funds. We may now study these briefly.

The style of the nationalised life insurance should, we suggest, be four units of State Insurance Authorities. These would roughly cover the Eastern, Northern, Western and Southern regions in the country. After such constitution, the assets appertaining to the insurees in each of the four regions could be transferred, in order to facilitate book-keeping, to the respective regional unit. While the rationalisation of premium rates would largely affect future policies, the division into regions would, it can be seen, greatly benefit the areas in which insurance today is already relatively better developed.

After this constitution of the four units, we suggest most strongly that the current pattern of investments should in no way be changed. An important source of capital for the private sector has been the insurance funds. To deny this availability of capital to the private sector in the future would be to deprive that sector of a legitimate source of capital. As important is the need for continuing the facility of granting loans on mortgages of building. In this country, as in most others, it is insurance funds which enable development of housing by providing finance against mortgages of buildings. It is also important to remember that the provision of finance for building by individuals is well inside the pattern of a socialistic society.

We would stress that nationalisation of both the Imperial Bank and of life insurance was decided upon each on its own merits. If Government were nationalisation-minded dogmatically, they would surely have considered two other industries as lending themselves much more easily for being taken over by the State. On the contrary, what we find is that Government are providing every encouragement to, firstly, the cement industry for development and expansion. Even more startling is the fact that, in the case of the shipping industry, for which the bulk of the capital for development has to be provided by Government at most favourable rates of inte-

rest, the State has shown no inclination to run it under its aegis.

The Imperial Bank was nationalised for the specific reason of improving financial facilities in the rural areas. Today, life insurance has been nationalised with the specific object of ensuring that the vast sums of money represented by insurance funds are not put to malafide uses. While, for this reason, the current decision of Government is no surprise and while, consequently, we welcome it, we must emphasise that nationalisation of life insurance will be unfair and unjst if the pattern of investments is so changed as to deny finance to the private sector, on the one hand, and to deprive individuals of facilities for house building, on the other.

Above all, life insurance under the State's auspices must prove that it has the drive for ever-growing progress, the initiative for new and better public relations, the flexibility and business like efficiency which alone could ensure life insurance getting into its own in India in the sense and to the extent that it has in all advanced countries.

To the Rescue

THE unseemly events which took place in different parts of India on the announcement of the Union Government's decision on States reorganisation have turned out to be a mixed evil. It provided the impetus for a new political initiative which is at once sober and daring. The Chief Ministers of West Bengal and Bihar have issued a joint statement embodying a proposal for the merger of the two States. Though the announcement itself came all of a sudden and was undoubtedly the outcome of not more than a couple of days' hectic consultations, the idea of a merger had been nebulously floating in the minds of a few political leaders for a pretty long time. When the zonal councils were proposed as part of the reorgaisation scheme, there were suggestions that the Councils could well be converted into full-fledged States.

There is a rising tide of official and non-official opinion almost all over the country in favour of zonal States. In Bengal and Bihar, the Governments have started acting in meticulously constitutional manner. In spite of the inherent reasonableness and beneficial character of the proposal, they have thrown it open for free public discussion and await the vote of the two legislatures for final approval.

But as this process necessarily involves delay, the two Governments have also not neglected to proceed into the realm of practical details. An expert with a representative panel of colleagues may soon be appointed to work out the details involved in the process of merger, including collection of statistical data, location of the capital and the different offices and provisions regarding languages. In these two States, Congress leaders will be undertaking a vigorous campaign of propaganda in favour of the scheme. As the popularity of the Congress among the people of these two States and the party's strength in the two legislatures are unassailable, there needs be no misgiving about the public response to the scheme and its fate at the hands of the legislatures.

If, at first, West Bengal and Bihar vote for a common administrative destiny, Orissa and Assam may also find it advantageous to pool themselves into the new State and thus constitute what will become an economically compact and powerful zonal unit of Eastern India. The impetus for union will then become increasingly irresistible in other zones as well.

It would, however, be unrealistic and unwise to belittle the character and the extent of the opposition which the merger scheme would encounter. The majority of the leftist parties have already declared themselves uncompromisingly against the proposal. And these parties together have demonstrated that they can throw out a practical challenge on a country-wide scale. They have a number of plausible arguments to buttress their opposition. And some of these arguments could be very embarrassing to the Congress. For instance, it could be pointed out that the Congress is abjuring a political principle which, for the last thirty years, it has been clinging to as an inviolable article of faith. For Congress-men themselves it will call for a new objectivity and courage to disown language as the dominant, if not the sole basis, of political reorganisation.

Top-leaders all over India have begun realising the folly of keeping the linguistic principle on an exalted pedestal and offering incense before it. They should have no qualms in removing the idol to a more suitable place. The underlying assumption of zonal States is that the interest of language and culture will in no way suffer in multi-lingual political units and the latter have indispensable advantages over unilingual units with none of the latters' troubles. The process of rethinking on the commitments that the Congress had given with regard to linguistic States has now gone sufficiently ahead. The VJP Report and States Reorganisation Commission Report provide ample warning against giving unbridled scope for language as a determinant of political geography. What is now required is to convey the disillusionment which the leaders have already had to the rank and file, so that every one could see what linguistic States could and could not achieve and how they are sources of positive and permanent danger.

In other words, an old commitment has to be reinterpreted in the new setting, in the light of new national requirements. A new direction has to be given to the popular impulse in respect of this question. The Congress Party will undoubtedly have to face a barrage of opposition arguments some of which, as we have already pointed out, used to be its own favourite weapons. It would be a stiff fight, but one which cannot be avoided and whose outcome is not in the least doubtful.

If the State Congress Committees and some of the State Governments were a little more loyal to the Congress High Command, the country would have been spared the deplorable incidents which have occurred since January 17. The Central decisions were given the complexion of arbitrary and tyrannical awards and of an affront to certain linguistic groups concerned. This kind of lack of co-ordination, to say the least, between different tiers of the Congress organisation and of State authority should, under no circumstance, be permitted to recur. It is bad enough that a very reasonable and constructive move should create bad blood between different sections of the people, through the inspiration of other parties. It is unthinkable that the ruling party itself should be instrumental for such feuds. We hope that the lesson of Bombay and Orissa will not be forgotten.

The emergence of a new initiative in the direction of mergers would probably postpone the implementation of States reorganisation and possibly even decisions thereon. Consequently, the general elections may also have to be deferred. Dates are not sacrosanct. It should be possible for the Union Government to proceed sufficiently slowly from the new premises and to arrive at and start executing decisions after assuring themselves fully that whatever steps they take would provoke the least dissent and, in whatever manner they are challenged, the authorities would in a position to meet it promptly and firmly. The future must show wiser decisions and their more skilful execution.

Law for the Layman

Responsibility of Hospitals for Breach of Duty to Patients

By K. N. VISWANATHAN

AFTER the decision of the Court of Appeal in England in Cassidy vs. Ministry of Health (reported in 1951-2 K. B. 343) the legal position of a Hospital whose staff is guilty of negligence in regard to a patient, who has suffered injury thereby, can be summarised thus: If the patient who has suffered injury, shows that there was negligence in the treatment given to him taken as a whole, he will be entitled to a decree for damage against the Hospital concerned, if the Hospital is not able to counter his case. In other words, it is no longer necessary after the aforesaid decision, for the patient who has been injured, to show which specific person was responsible for the injury caused to him. This development in the Law, is an undoubted and well merited advantage to the patient, who otherwise, in addition to the injury suffered by him, would have to embark on a roving enquiry as to the person responsible for it.

Let us now turn to the facts of this interesting and important case which lays down the legal position stated above. Lord Somerwell, L. J. one of the learned Judges who decided this case states the facts succinctly thus:—

"The plaintiff sues the defendants for damages for negligence.....

"The Plaintiff, a general labourer, now some fifty-nine years of age, was suffering in the early part of 1948 from a contraction of his third and fourth fingers. He consulted his panel doctor, Dr Flanagan. Dr Flanagan diagnosed the condition as Dupuytren's contraction. He sent the plaintiff with a note to Walton Hospital for examination. Here the plaintiff was seen by a Dr Fahrni, the third party in these proceedings. Dr Fahrni was a whole-time assistant medical officer of the Walton Hospital. That hospital was at that date a hospital of the City of Liverpool, the original defendants to these proceedings. By reason of 6 of the National Health Service Act, 1946, it is common ground that the Ministry of Health have been properly substituted as defendants. Dr Fahrni was a Canadian who had graduated in Canada in 1940. In 1941 he joined the Canadian Army and came to this country in 1942 or early in 1943. He had at the material dates specialised to a considerable extent in orthopaedic surgery, in military hospitals and elsewhere. In this country he had received the F.R.C.S. at Edinburgh. No attack is made on his qualification, or general competence."

Says the Learned Judge in holding the Hospital to be guilty of negligence and therefore liable in damages to the patient!

"I have gone straight to the result because, in my opinion, on the basis that the Hospital was responsible for all those in whose charge the plaintiff was, the surgeon, doctor and nurses, the result seems to me to raise a case of resipsaloquitur: a jury would have been entitled to find negligence on the facts as I have stated them."

"Resipsaloquitur" means the thing speaks for itself without the necessity of proof. That is to say, the very nature of the injury suffered will raise a presumption of negligence against the party guilty of negligence.

Editorial Notes

The Mounting Influx:

Amidst the controversies raging over issues connected with States reorganisation, the country is apt to overlook a problem, which has again developed an acute phase. For some weeks, people from East Bengal have been migrating into the Indian Union in large numbers. Lately the daily inflow is estimated at more than five hundred. It is reported that a considerable percentage of this number is from the Muslim community. The latter fact might rob the exodus of its communal character and may be made use of for complacent explanation on both sides of the border.

As the Indian Union alone has to shoulder the burden and for Pakistan at least economically all that is had is only relief, it is time that some concrete steps are taken to arrest this inflow. This is a question which has also got mixed up with other grave political issues, including the alignment of State boundaries.

Neither State Governments nor the Union Government can afford to be indifferent to the growing strain and unwanted responsibilities involved. The principal issue is simple. How far and how long are governments in India prepared to meet the inflow of refugees? Their moral responsibilities to accommodate a sizable proportion of the East Bengal Muslims may also soon become pressing.!

As a secular state, the Indian Union can certainly not afford to close its doors against non-Hindu refugees, especially when Pakistan's spokesmen are keenly maintaining that it is economic distress and India's open door methods which impel large-scale migration. It is ridiculous that the major repercussions of poor crops or unemployment in one State have to be borne by a neighbour. Possibly the Union Government are too much distracted to give adequate attention to a situation which has always remained unmanageable. The price of this inability is steadily mounting and a limit has to be set somewhere.

*

Malayan Independence:

The future of Malaya is being determined by the talks currently going on in London between the Chief Minister of the Federation and the British Government. Tengku Abdul Rehman left for London after giving an undertaking to his people that he would return with the offer of independence. The current negotiations are intended to fix the date and fill the details.

Britain is certainly not interested in delaying the transfer of residual authority to the native Government. Since the communist insurgence, the cost of maintaining law and order in Malaya has become intolerably heavy both in men and in money. The plantations, mostly British owned, have been converted from an earthly paradise into pockets of hell. The financial stake for Britain in these plantations is too attractive to be given up under duress.

The overwhelming support for the Coalition Government and their determination to fight the communists to the bitter end are decisive arguments for Britain yielding with grace to the political demands which the Malayan Chief Minister have carried with him. Britain may even agree to render temporary financial and technical assistance for the upkeep of an army which will become increasingly indigenous in complexion. Likewise, the British element in the Services may also be gradually withdrawn.

For the Indian settlers, the future is bound to acquire new uncertainties, once power is completely transferred and a more authoritative government take charge. The disunity and vacillation of the Indian community before the last elections should not be allowed to recur. A relatively weak minority, constituted mostly of working class, the Indians in Malaya can hope to secure at least minimum political justice, if they speak and act with one voice. Otherwise, events may shape disagreeably.

*

The Egyptian Constitution:

After the exile of Farouk and the subsequent abolition of the monarchy in Egypt, dissensions within the ruling military junta halted progress towards a democratic set up. Soon Nasser emerged as the supreme national leader and adopted drastic policies such as dissolution of the legislature, suppression of political parties and gagging of the press. These steps brought about political stability. Two years ago a fruitless effort was made to establish a parliamentary form of Government. President Nasser is now confident that the people are ready for some measure of responsibility and has announced a Constitution. This step may well presage the end of the transition and the military government. A national plebiscite six months hence is to decide whether the constitution is acceptable.

The Constitution envisages a Welfare State. Socialism is the goal but to be attained through gradual stages. Egypt will have an elective unicameral legislature, the National Assembly, with an elected president who will be the head of the State and the chief executive. All social distinctions are to be abolished. The Constitution guarantees certain fundamental rights as social justice, equality of opportunity and freedom of expression, though some of these may not be absolute. The most noteworthy effect will be the enfranchisement of Egyptian women which is indeed a revolutionary step, considering the unenviable position women still occupy in Arab countries.

Islam is to be the State religion. This may sound an anachronism and may have troublesome significance in countries like Egypt with sizable religious minorities. Another intriguing feature of the Constitution is the refusal to recognise political parties. Without them freedom of expression will be meaningless and democracy almost inconceivable.

*

The Private Sector:

During the First Five-Year Plan period, Indian industry has recorded impressive increases in output. A few targets were pierced. In this period, the industrial sector has remained mostly in private hands. Therefore, when at the annual meeting of the Employers' Association, Calcutta, the President, Mr S. P. Jain, endeavoured to present the private sector's record of achievement, he could lay his hands on a few flattering figures.

Even if he were to have confined himself to the output of private industry, the figures would not have failed him. He, however, took into his sweep agricultural production, transport and the entire national income. It is only very recently that agriculture too has come to be referred to as forming part of the private sector. In the more orthodox tradition, agriculture enjoys a kind of peaceful neutrality, free from the impact of the battle of the sectors.

Its inclusion in the private sector is obviously a defensive move impelled by the spreading tentacles of the public sector. For the time being, the private sector is also enabled to put on a mightier look. Mr S. P. Jain, without the least affront to current nomenclature, could rope in Rs 650 crores worth of increase in agricultural production, which is about twice the value of the estimated increase in industrial production.

There is a long-standing, still dormant controversy as to whether land in India is owned by the State or by individual citizens. Though small peasant-proprietors and co-operatives are immediately in favour, the State can change its mind. Even otherwise, under the concept of mixed economy, it is possible for the State to contend that even after big chunks, of industry and trade are taken over, there is yet a vast private sector in agriculture. It does not appear to be profitable for advocates of the

THE NEW COMPANY LAW

By

C. S. RANGASWAMI

and

G. BASU

The New Company Law, which is intended to be a practical handbook for company managements and commercial students, will contain detailed commentary on the new Act. The first volume has an exhaustive introduction, while the second will include a number of relevant appendices

Pre-publication price is Rs. 25 for a set of 2 volumes.
Post-publication price is Rs. 30 plus postage.

Advance orders at pre-publication price may be booked with "Indian Finance", 116 Lower Circular Road, Calcutta—14. Orders must be accompanied by a cheque to cover the price.

Publication Date: Soon after the President's assent to the Bill is given.

Publishers: Oxford Book & Stationery Co.

World *of* Finance

Budget Prospects

IN a month's time, the Union Finance Minister (and, we earnestly hope, it will be Sir Chintaman Deshmukh) will outline his proposals for the Central Budget; and, conforming to our customary practice, we may permit ourselves to indulge in the rather fool-hardy pastime of figuring out what the Budget's shape and state will be, and of gauging what trends and impositions are likely to be revealed. The hazard of such an exercise is all the greater on the present occasion, as the 1956-57 Budget may well be influenced by a number of extra-budgetary considerations. The most significant fact to take note of in this connection is that the Central Budget must needs have reference, not only to the routine transactions and developments of the Government of India, but to the Second Plan all-embracive of the Centre and of the States. The impending Budget has to continue the process of implementing, to the extent possible, the recommendations of the Taxation Enquiry Commission. By the same token, it has to incorporate the beginnings of the practical implications of a socialistic pattern of society. The 1956-57 Budget is, thus, the Second Plan's first-year budget; the budget designed to streamline and realign the tax structure; the budget framed to express the nation's declared objective of social justice. For our part, we shall, in this assessment, confine ourselves to a study of those features which do not involve policy-making at the highest level.

Intent on keeping our feet on safe ground, we may, at the outset, hazard the guess that the tale, which the steward of India's finances will unfold on February 29, will be definitely cheerful and greatly heartening. Judging from the state of national economy, and forming such impressions as we may from the necessarily incomplete and admittedly scanty figures pertaining to foreign trade, industrial production, railway traffic, revenue receipts, etc., we think it safe to assume that the revised estimates for 1955-56 will convert the originally expected deficit of moderate size into a surplus of respectable magnitude. Imports from foreign countries are running at a higher level than in 1954-55; and the industries, which are of importance from the point of view of excise duties, account for substantially increased production. Customs revenue may be expected to show an improvement of Rs 15 crores over the Budget estimates. The contribution of the Railways to general revenues may, likewise, expand by Rs 15 crores, thanks to the record levels of passenger and goods traffic. The higher interest rates on sterling securities, and the larger volume of rupee securities on account of recurrent recourse to deficit financing, may step up the Reserve Bank's contribution by Rs 5 crores. Posts and Telegraphs, too, may improve their contribution by Rs 3 crores; income from trunk telephones is higher, and other sources of revenue have been favourably affected by the higher standard of the nation's economy. Corporation tax is sure to make good showing, the most notable being the engineering, tea, sugar, iron and steel, cement and paper industries. Advance payment of income-tax is another important contributory factor. Income-tax should account for an excess of over Rs 10 crores over original estimates. Taken all in all, the revenue position may show an improvement of as much as Rs 50 crores.

Allowing for the budgetted deficit, and taking into account unforeseen expenditure as on flood relief, the 1955-56 revised estimates may reveal the handsome surplus of Rs 30 crores.

The 1956-57 budget, on the basis of the existing taxation and on the assumption of the continuance of current economic trends and influences, may be expected to disclose a much larger surplus. 1955-56 has been a good year for industry and for commerce, for corporations and for businessmen. At current tax levels, the receipts, based on 1955-56 incomes, may be anticipated to make still better showing to the extent of Rs 30 crores. Let it not be forgotten that the year drawing to a close provided alround evidence of the beneficent effect of expansionary forces; that it is in the current quarter of 1955-56 that deficit financing may achieve its highest tempo; and that the first year of the Second Plan is also expected to witness the sharpest utilisation of created money. 1955-56 and 1956-57 are, from this point of view, assured of maximised expansionary influences. The most direct beneficiary is business profits. Personal income-tax and Corporation tax may easily surpass the Rs 200 crores mark.

From 1956-57 onwards, the average annual disbursements on account of the Plan will be of the order of Rs 1,000 crores. This means more imports and, therefore, more Customs revenue; more movement of goods and, therefore, more surplus from the Railways, and so on. In the light of the expansionary forces already present in strident style and progressively assured of acceleration, 1956-57 Budget must, on this fact alone, show a surplus of between Rs 80 crores and Rs 100 crores.

Such is the over-all picture as we can visualise now. The simple question is: Should not the Budget aim at the fulfilment of the expansionary forces which have already done so much good to the budgetary position? Will it be wise, will it be prudent, to interfere with the influences which are clearly demonstrating that they will help bettering the assumptions made in the draft-Plan with regard to resources? In brief, will not fresh imposts alter the direction, and cramp the style, of these favourable influences? From the point of view of the Second Plan's resources, the good showing which the Budget may be confidently expected to make is an argument against further taxes. But, then, we may be asked: What about the popular demand for tax on wealth, for ceilings on incomes, for further soaking of the rich? Our answer is that these may come in due time —but not in conditions in which you will be killing the goose that lays the golden eggs.

In any case, the 1955-56 budget had already upgraded the taxes on personal income. To those who, ideologically, seek immediate steps to precipitate the socialistic pattern of society, the Finance Member may justifiably point to the impressive record already achieved: Firstly, the Company Law; secondly, the nationalisation of civil aviation; thirdly, the nationalisation of the Imperial Bank of India; and, now, the nationalisation of life insurance. Let us pause, take breath, and consolidate the gains so far made.

This pause will also allow for a suitable interval within which the additional taxable capacity, released by the expansionary forces, may be crystallised firmly and can be measured more precisely.

This pause may be similarly useful for rearranging the tax structure, such as incorporating the State Sales taxes on cloth and tobacco into a higher Central excise. The States, too, have many directions in which they have to take action on the recommendations of the Taxation Enquiry Commission. 1956-57 is a year for dynamic rearranging of taxes at the Centre (including the plugging of all loop-holes for tax evasion) and for apposite taxation in the States.

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on January 24. Total amount offered was Rs 1,21,75,000. Tenders at Rs 99-6-0 per cent were accepted in full and those at Rs 99-5-6 per cent were allotted approximately 67 per cent. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-5 per cent per annum.

This week's result compared with the previous weeks is as follows:

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs a. p.
January:			
1956:			
3rd	1,39,75	1,00,00	2 8 2
10th	1,46,75	1,00,00	2 8 1
17th	1,42,75	1,00,00	2 8 3
24th	1,21,75	1,00,00	2 8 5

*

The Centre's need for cash has led to expansion of currency for Rs 25 crores against ad hoc Treasury Bills. As this would have caused plethoric cash in the till for the Reserve Bank, the latter has promptly transferred Rs 25 crores of foreign securities from the Issue Department, thus maintaining the status quo.

The Reserve Bank returns for the week ended January 20, show a fall of Rs 6.04 crores in active note circulation to Rs 1,382.71 crores. Notes held in the Banking Department have, therefore, risen by Rs 6.11 crores to Rs 19.11 crores. As regards foreign securities and rupee securities, the status quo is maintained overall, though Rs 24.84 crores of foreign securities are transferred from the Issue Department to the Banking Department; and Rs 24.84 crores of rupee securities by way of ad hoc Treasury Bills have been added to the Issue Department. Rupee coin is higher by Rs 0.08 crores at Rs 106.39 crores.

In the Banking Department Central Government's deposits have declined by Rs 1.61 crores to Rs 50.30 crores while Provincial Governments' deposits have risen by Rs 4.92 crores to Rs 13.38 crores. Bank deposits are higher by Rs 12.45 crores and other deposits by Rs 5.58 crores at Rs 67.51 crores and Rs 21.41 crores respectively.

Thanks to the transfer from the Issue Department and thanks to further net accruals, foreign securities held in the Banking Department have gone up by Rs 28.59 crores to Rs 72.55 crores. It may, therefore, be inferred that net accruals during the week amounted to Rs 3.75 crores. "Other Loans and Advances" have declined by Rs 0.89 crores to Rs 42.59 crores, which includes Rs 15.25 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1955, is Rs 5.50 crores. Investments

The Curse of Overfull Employment

By PAUL EINZIG

WHILE the reconstructed Government are engaged on the task of devising means for checking inflation, organised labour in Britain is doing its utmost to accentuate it. Hardly a day passes without another and yet another wages claim being presented. By the time a wages settlement is reached, the Union concerned is ready to put forward a new claim. And such is the scarcity of labour that employers, after going through the gestures of negotiations, usually concede the greater part of the claims, if not the whole of them. The claims are based in part on the rising cost of living, even though they are caused by such claims, and in part on rising profits, which argument is certainly inapplicable to nationalised industries.

The inflationary wages spiral is not the only evil consequence of overfull employment. The restrictive practices, which greatly aggravate the scarcity of labour and handicap Britain in technological progress, and also on the debit side of the balance sheet of overfull employment. As the Prime Minister, Sir Anthony Eden, pointed out in a speech on January 18, workers behave at present as if we were still amidst large-scale unemployment. He very aptly described this attitude "Maginot Line mentality", meaning that the workers entrench themselves in their jobs and fail to use their opportunities for progress.

Day after day, new instances of trade union restrictive practices come to light. The Transport

World of Tea

Improvement in Demand Sustained

IN the Export Sale, held in Calcutta this week, offerings amounted to 58,800 packages for which there was a good general demand. Medium Assam Orange Fannings were again the strongest feature of the sale and often advanced by as much as As 2 to As 3 per pound. The best CTC teas were from half to one and a half annas per pound dearer, while the more ordinary sorts of this description were slightly dearer. Commonest kinds were about one to two annas per pound dearer, while Medium and Clean Common Brokens were fully firm anl sometimes dearer. Whole Leaf grades met with fair demand, but at lower rates than in the previous week. Following rates were quoted per pound:—Clean Black Pekoe Rs 2 to Rs 2-1; Plain Broken Pekoe Rs 1-8-6; Medium Assam Broken Pekoe Rs 1-10 to Rs 1-11 and Best CTC Assam Broken Pekoe Rs 2-3 to Rs 2-4.

In the Internal Sale, offerings consisted of 20,200 packages of Dusts for which there was a good general demand. Although prices were irregular, the market was firm at about last rates. The strongest feature of the sale were again the black Leafy types, suitable for the Middle East, while the very best CTCs received good support. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-7-6 to Rs 1-8-0; Medium Assam Grainy Dust Rs 1-8-6 to Rs 1-9-6 and Best Assam CTC Dust Rs 2-4-0 to Rs 2-6-0.

The offerings of Leaf grades consisted of 1,800 packages for which there was a fairly good demand with prices an irregular one to two annas per pound dearer.

In the Export Quota section, rates moved narrowly between 22 and 24 pies per pound. Some business was done, toward the close of the week, at the last quoted level.

While tea production in North India has increased from 513.56 million pounds in 1954 to 533.22 million pounds last year, exports have declined from 361.94 million pounds to 289.31 million pounds. With a few exceptions, exports to all destinations have recorded a decline last year. Thus, the fall in exports coupled with rising production have resulted in a large accumulation of tea in Calcutta, totalling about 985,160 chests at the end of December, 1955 as compared with 568,350 chests at the end of the previous year.

According to figures released this week, production of tea in Ceylon for 1955 is the highest ever, at 380 million pounds. This compares with previous highest of 366.7 million pounds in 1944. Shipments have amounted to 360.8 million pounds as against 359.1 million pounds in the previous year. Thus, there is a widening gap between production and shipment. For Ceylon is consuming more and better teas as a result of the Tea Pest Prevention Act. This Act, which operated from July 1954, places restrictions on sale and use of "refuse tea". Full impact of the Act was only felt last year.

The tea trade in Colombo has warned that there will be another steep drop in the price of tea by Easter this year and has suggested that producers will do well to concentrate on quality and not on quantity in the next few months. The basis for this fear is, that large stocks of poor quality tea are accumulating in Calcutta owing to restrictions imposed by the Indian Government on the volume of tea to be sent to London and also owing to less buying in London.

Trade circles feel that, if quality is maintained during the high-producing season ahead, Ceylon will have nothing to fear where prices are concerned. It is considered that, if prcducers have a cool dry season now, which has evaded them from the corresponding periods over the last two years, conditions will be ideal for the producers.

Meanwhile, offerings in the Cochin market amounted to about 1,320,000 pounds. There was rather a limited selection on offer, but quality, particularly the later invoices, showed a further slight improvement from most districts.

The sale opened to a good general demand with exporters particularly active. Best high-growns with improved quality were considerably dearer, other descriptions in this category selling at about last rates. Bright liquoring Medium and Low Medium descriptions were supported and advanced by about one to two annas per pound, while Common sorts were generally firm to dearer.

There was a rather restricted enquiry for Black Middle-East types which, apart from the best kinds, came to an easier market. Orange Pekoes again met with a weak demand and were difficult of sale. Following rates were quoted:—Low-grown Travancore BOP Rs 1-15; Anamallai BOP Rs 2-2-6; Best Liquoring BOP Rs 4-7; Nilgiri BOP Rs 2-11 and Black well-made OP Rs 2-4. Export Sale No. 3 will be held on the 31st January, 1956.

At the Sale No. 16, held in Chittagong last week, offerings consisted of 10,853 chests of Leaf grades and 3,021 chests of Dusts. There was a steady demand for Leaf teas, keenest interest being shown for Whole Leaf grades, which were irregularly As 3 per pound dearer. Orange and Pekoe Fannings were about As 2 per pound dearer, while Plain Brokens showed an advance of one to one and a half annas per pound. Buyers, however, discriminated against the more inferior stalky types which, although selling freely, frequently realised As 2 to As 3 per pound below brokers' valuations.

There was a good general demand for Dusts, especially for the popular non-wither varieties which were keenly sought after. Plain Sylhet Dust was quoted at Rs 2-4 to Rs 2-4-6 per pound.

Also 500 packages of Green teas were offered. There was a keen demand for these and prices showed an advance of about As 3 per pound. Sale No. 17 will be held on the 1st February, 1956.

In London auctions, offerings were 20,190 packages, including 17,440 packages of Northern India teas and 430 packages of Pakistani teas. Demand was fairly strong for all good coloury teas and prices were fully firm to dearer on last week's rates. Thin plain teas were irregular and sometimes easier. The average prices realised for Northern India teas was about 4sh 3½d per pound. Plain Broken Pekoe was quoted at 3sh 5½d and Good Assam Broken Pekoe 5sh 4d. The Calcutta equivalent price of the latter grade will be about Rs 2-14.

Stocks in London, as at 13th January 1956, were 100.96 million pounds as compared with 100.32 million pounds a week ago and 98.12 million pounds a year ago. Landed between the 7th and the 13th January, 1956 were 13.80 million pounds, while deliveries during the same period were 13.16 million pounds.

SOUTH EASTERN RLY. TENDERS.

The General Manager, Garden Reach, Calcutta—23 invites the following tenders for the Wagon Erection Plant at Visakhapatam, (1) Tender No. GM1/56/12400R (55) for supply of 629 Cwts. of Waste Cotton Superior white teased to Army Specification IND/TC/0256 and (2) Tender No. GM2/56/12398R(55) for supply of 57,200 gallons of Paint, Red Oxide R/M to Specification IS-123 and ISC-446.

Tender form can be had from the office of the Controller of Stores (IB Section), Garden Reach, Calcutta—23 on remittance of Rs. 5/- for each item of works by Money Order (not refundable) in case of Mofussil Firms and on production of cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta by Local Firms. Earnest Money required for item (1) is Rs. 500/- and for item (2) is Rs. 2,000/- in cash. Valid Income-tax clearance certificate must accompany the tender.

Closing date for item (1) is on 10th February, 1956 and item (2) is on 8th February, 1956 at 12 noon.

IJMA Mills to Unseal More Looms

AT their Committee meeting last week the Indian Jute Mills Association have decided to unseal a further 5 per cent of looms with effect from February 20. The decision will bring 95 per cent of the looms into commission leaving 5 per cent still under seal.

It may be recalled that the question of unsealing the 12½ per cent of looms was first mooted in November last. The first indication that the I.J.M.A. was actually considering the proposal was available toward the end of that month when it was announced that a final decision had been deferred till such time as the statistical position as at the end of November was available.

About the middle of the second week of December the IJMA's decision to unseal 2½ per cent of the 12½ per cent looms with effect from January 10, 1956, was announced.

The effect of the announcement on market sentiment, however, was negligible because it was argued that the increase in production as a result of the unsealing of 2½ per cent of looms would make no appreciable difference to the supply position in jute goods. Nevertheless, the decision was a clear indication that, in the opinion of the IJMA, demand for jute manufactures from India was on the uptrend.

The decision was characterised by a section of the trade as unnecessarily cautious as it maintained that foreign demand had improved so much as to absorb the increased production even if all the remaining looms were unsealed.

With the publication of the stock and production figures for the month of December speculation revived as to the possibility of a further consideration of the question by the IJMA.

It was at the same time pointed out that, though the statistical position of the industrry as at the end of December was clearly in favour of a further increase in production, the IJMA were not likely to take up the matter for consideration before they had with them the production and stock figures for the month of January.

Therefore, the element of surprise in the decision is in its timing. Though it is true that another month must elapse before the new decision becomes operative, the fact remains that the question of unsealing of looms has been considered within ten days of the coming into effect of an earlier decision on the matter.

It is evident that the IJMA have been convinced that, either from present indications or future prospects, their member mills should be enabled to increase production from the earliest possible moment. Considering the care taken before arriving at the first decision to unseal looms, it is to be inferred that unless strong grounds existed, the IJMA would not have decided to advise increased production.

Rumour has it that a big deal with Russia is in the offing. In a recent speech in Madras Mr T. T. Krishnamachari disclosed that India had entered into an agreement with Soviet Russia for the supply of 1 million tons of steel and that the Government of India were currently engaged in drawing up a list of products that India could supply to Russia in return for the steel to be supplied by that country. Though Mr Krishnamachari had not mentioned anything in particular, it is quite possible that jute manufactures from India figure largely in the list. Last week's decision of the IJMA seems to confirm the rumour.

Be that as it may, the 8,000 to 9,000 tons of additional production of jute goods that will be available as a result of the unsealing of 7½ per cent of looms, may not constitute a difficult problem for the industry, considering the level of offtake during 1955.

*

The market for Raw Jute remained practically unchanged. Following the decision to unseal further 5 per cent looms, mills showed increasing interest, resulting in substantial business done in all types of fibres. Taking advantage of the reports of the continued smaller imports into mofussil and upcountry centres, sellers were naturally reserved and not keen to discount prices. Mills were, therefore, compelled to make some of their purchases at enhanced levels; and a fairly large amount of business was reported done in:—Assam, Dhubri, Indian Northern Bottoms at Rs 29-0 to Rs 29-8; Daisee and Assam Mesta Bottoms at Rs 26-8 to Rs 27-0; Cutta Bottoms at Rs 30-0 (all per maund) and Pakistani Cuttings at Rs 120-0 to Rs 122-8 (per bale), all for January/February delivery.

Arrivals of raw jute into Calcutta and mill stations during December 1955, were 7,77,395 bales of 400 lbs each) of which 6,28,869 bales were of Indian origin and 1,48,526 bales Pakistani. Such arrivals for the six months ending December 1955 totalled 31,70,263 bales of which 23,93,897 bales were of Indian origin and 7,76,366 bales Pakistani. In December 1954, arrivals totalled 754,780 bales of which 628,060 bales were of Indian origin and 126,720 bales Pakistani.

*

Except for a sharp recovery in mid-week, conditions in the Jute Goods market remained generally steady during the past week. Although the market opened on a quiet note, prices firmed up in mid-week following the reports of the IJMA's decision to unseal an additional 5 per cent looms with effect from the 20th February. Also, rumours of orders from Russia and Israel and the receipt of tenders from Burma for 41,000 bales of Sackings, contributed to the sharp recovery in prices. Toward the close, however, the market again turned quiet due to the lack of support from overseas buyers. Moreover, the reports of some delay in Burma tender and the rumours that some portion had gone to Pakistan, depressed sentiment and prices developed a slightly easier tendency, both in hessians and sackings. Following were the price trends:—

	Week's Opening		Mid-Week		Week's Closing	
Hessian:	Rs	a	Rs	a	Rs	a
40"×10 Ozs. Ready ..	40	6	41	0	40	8

BURLAP CONSUMPTION IN USA IN 1955

Consumption of burlap in the USA during 1955 gained to 826 million yards, an increase of 5.6% over 782 million yards for 1954, according to the Indian Central Jute Committee.

The improvement in US consumption and intake of burlap according to trade circles reflects the recent widespread swing among consumers to the usage of burlap as a packaging and industrial material and is the result of increased availability of supplies at reasonable and stable prices.

Of greater significance to the Indian jute industry is the fact that India's share to the total US imports of burlap has risen to 85 per cent over the first 11 months of 1955 against 82 per cent for the same period in the previous year.

Trade circles here say that the removal of export duty on burlap since September 1955 following the devaluation of Pakistani currency has helped the increased use of burlap in US market.

UK IMPORTS OF RAW JUTE IN 1954

United Kingdom imports of raw jute during 1954 amounted to 125,000 tons which were 48,000 tons lower than that for the previous year. 1954 consumption however, was estimated to have risen by 5,000 tons over the 1953 figure, which was 130,000 tons. Increased consumption of raw jute in 1954 was offset by an equivalent reduction in the consumption of imported jute goods.

Indian Aluminium Company plans to treble output

Why this expansion ?

Aluminium has become an important metal today in many fields—from structural engineering to electrical distribution. Experts estimate that by 1960 demand for Aluminium will have doubled, rising to about 40,000 tons per annum.

Company's rapid expansion

In order to keep pace with expanding demand, Indian Aluminium Company is increasing its capacity for aluminium production. The new smelter which Indian Aluminium Company is installing at Hirakud, Orissa, will triple the Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies.

New Capital Issue

The estimated capital requirements for Indian Aluminium Company's Hirakud project are about Rs. 9 crores. It is proposed to raise a part of these requirements by the issue of new capital in the form of Convertible Notes. These Notes will carry a fixed rate of interest and confer upon the holders of the Notes the right to convert them into Ordinary shares of the Company. The Canadian majority shareholder of the Company, Aluminium Limited, has agreed to take up half of the new issue and the other half will be offered to the other shareholders and the Indian public.

Aluminium is facing a bright future in India today. India's vast bauxite deposits and waterpower resources can support a large Aluminium industry for years to come. Harnessing these natural resources, Indian Aluminium Company's Hirakud project will be an important step towards India's goal of self-sufficiency in Aluminium.

Indian Aluminium Company Limited

A Canadian-Indian enterprise

World Overseas

US Notes

Figures for December, published this week by the Federal Reserve Board, confirm that mines and factories in the United States chalked up a spectacular 11 per cent gain in prodoition in 1955. The Board's index of industrial prodoction shows that output in December lived up to seasonal expectations, remaining at the record rate of 144 per cent of the 1947-49 average. In fact, tne final three months of 1955 represented the highest industrial production level for any quarter in history. For 1955, as a whole, output averaged 139 per cent of the base level, topping the previous 1953 high by 2 per cent and 1954 by 11 per cent.

Total manufactures in 1955 increased by 10.2 per cent, including a 13.1 per cent rise in "hard" goods, such as automobiles and locomotives and an 8.9 per cent rise in "soft" goods, such as textiles and rubber. Minerals output rose by 9.9 per cent. The biggest gain was in the production of consumer goods, which soared by 30 per cent.

Examination of the December statistics shows that a few of the more spectacular gains of past year have begun to wane. Furniture production held steady, for instance, but output of automobiles and television sets registered moderate declines from their earlier exceptional levels. Works stoppages in some plants helped bring machinery output down. Production of building materials remained high despite the recent drop in home construction.

The Government, meanwhile, have given a timely demonstration of its flexible monetary policy. This week, as a boost to residential building in this normally slack construction season, it eased the regulations on repayment of Government-guaranteed home loans.

Administration spokesmen have indicated, however, that Congress will be asked to allow easier terms for home improvement and repair loans that are guaranteed by the Government. These terms are fixed by law, and would have to be changed by Congressional action. At present, homeowners can borrow upto $2,500 for three years on improvement and repair projects.

The recent slowdown in automobiles and housing has led to some speculation that the business upsurge of the past year may be levelling off. But most businessmen still are optimistic, particularly for the long run. Hard on this week's announcement of new expansion programmes in steel and automobiles, for instance, comes a report by the magazine, **Iron Age**, that talk of a letdown in demand for steel—most widely used of industrial materials—may be based more on illusion than fact. Although there have been some cutbacks in orders from the automobile industry, the magazine notes that supply remains tight, with every ton of steel produced being snapped up by consuming plants. It points out that construction and automobile production will probably be rising again with warmer weather. Appliance output remains strong, the record freight and building programme of the railroads is barely under way, and such industries as oil and gas are taking all the steel they can get. Supporting this view, steel production this week is expected to remain close to the record 2,428,000 short tons poured last week.

In another expression of optimism over the economic future of the United States, a leading automobile maker and a leading aluminium producer have negotiated a new and significant agreement. The Reynolds Metals Company has contracted to deliver more than 640 million pounds of aluminium to the Ford Motor Company during the next 10 years—the biggest order in the history of the aluminium industry. Most of the aluminium will be delivered in molten form direct from a new Reynolds plant to a new Ford foundry adjacent to it. The construction of both plants is scheduled to start soon. The Ford Company will take about one-third of the new Reynolds output, the rest going to other fabricators, thereby helping to ease the short supply of aluminium. To support the added production, Reynolds also will enlarge other facilities, including new Bauxite Mines in Haiti and Jamaica.

Americans from all walks of life were expressing their confidence in the economy in quite another way this week. By nightfall on Wednesday, hundreds of thousand of people—variously estimated at between 250,000 and 500,000—were part owners in the $2,400 million Ford Motor Company. Nearly 500,000 shares were sold in this first public offering of Ford Stock, which opened the day with an initial value of 64.50 dollars a share. The massive job of distributing the stock was in the hands of 772 underwriters and 1,200 dealers. In line with the Ford's desire to secure as broad an investment base as possible, most allocations to purchasers ran from five to ten shares apiece. The largest single offering was about 200 shares, while many persons bought only one or two shares each. Eventually, 10.2 million shares, representing 60 per cent of the voting strength, will be sold publicly. Of this, 7.5 million will go to individual investors, 1.2 million to institutions, and the rest to Ford employees and to dealers in Ford cars and trucks.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

JUDGING from the press reports, the best evidence so far tendered before the Official Language Commission has been that of the representatives of Madras. Mr. B. G. Kher, the Chairman of the Commission, has deservedly singled out for special praise "as the best evidence so far received by them" the detailed memorandum submitted by the Government of Madras. This is not altogether a matter for surprise, as the arriving at of correct decisions by the Commission is of momentous importance to none so much as to the people of the South. Already, there is a widespread misgiving among the people of that region that persistent efforts are being made by zealots of Hindi to queer the pitch to such an extent as to make impossible a satisfactory solution of the problem. There has also been a feeling that the Government of India are inclined, against their own better judgment, to appease pressure groups who desire to force the pace of natural develoments. Strident claims regarding the place of Hindi in our national life and its Constitutional status are often made with an attitude that appears to be composed of three quarters of naivete and one quarter of disingenuousness. The appointment of the Commission, therefore, did not come a day too soon, for, a clear and authoritative finding on the questions involved is of urgent importance to the future of the country. And, in arriving at this, I am sure that the evidence collected at Madras would be of decisive value.

*

The first thing that needs to be done in this connection is to clear away a great deal of irrelevances that have accreted themselves to the discussion of the question. Foremost among these are supererogatory claims made on behalf of Hindi as the "National Language of India". The Government of Madras draw the attention of the Commission to this in a passage of characteristic deadpan officialese. They refer to the "widespread belief that the Constitution has declared Hindi to be the 'National Language of India'" and say in what is surely a triumph of understatement, that this notion is "incorrect". They suggest mildly that "it is necessary that this usage should be changed". Now, writing, less inhibitedly, nearly a year and half ago, I had stated in these columns: "On merits, the claims of Hindi beyond the minimal ones conceded by the Constitution are entirely specious. Hindi in Devanagari script is designated the **"Official Language** of the Union.. In all discussions on the place of Hindi in our national life, a suggestion that it is our national language is insinuated by certain people. This is not borne out by the provisions made in the Constitution".

*

It is no mere pedantry that prompts me (or the Madras Government) to insist on correcting what on the face of it appears merely to be a loose expression. For, I very much fear that this assertion about Hindi being the national language has behind it a whole series of conscious and unconscious assumptions that have a great potentiality for mischief, and require, for that reason, to be promptly exorcised. First among these assumptions is the belief, held with varying degrees of honesty, that Hindi is capable of being a proper vehicle for the mystic linguistic consolidation of our national sense. This theory derives some authority from the entirely nebulous speculations about the Idea of a Nation that were fashionable in the nineteenth century. I shall show presently that, as far as India is concerned, language, far from constituting a force for consolidation, is already in some danger of becoming the most powerful factor for disruption among us, whom a hundred other more important things unite. At the present, I shall merely state the fact that the best that had been conceded to Hindi even in the perfervid pre-independent days was the status of a Lingua Franca,—a serviceable vernacular for inter-provincial communication. In this role, it was to be known as Hindustani which name was significantly abandoned the moment Gandhiji was not on the scene. In fact, the abandonment of the name Hindustani in favour of Hindi with its historical, political and even communal overtones may be said to mark the beginning of the assumption of the grandiose imaginary role as national consolidator that Hindi has assigned itself.

*

The blunt truth is that, in so far as language is of relevance to Indian unity, its role has, ironically, been the opposite of what the Hindi enthusiasts have been claiming. The present moment is of sombre and even poignant relevance in this context: What have we been seeing in the last few weeks but the demonstration of the fact that language divides as much as it unites and even when it unites, it unites the wrong way? Could any one, after such an impressive demonstration of the vast reservoirs of unreason behind linguistic gregariousness ever wish to stir gratutitously these deep waters? Stirring these deep waters would be precisely what we would be doing if we assign to Hindi a position that would exacerbate linguistic susceptibilities of other groups.

*

The fact is, and it is high time every body realised it, that conditions that make language play a creative role in the consolidation of national sense are entirely absent in India. Normally, unless the entire group speaks the same language, consolidation in a constructive sense is impossible. On the other hand, a persecution mania may consolidate sub-national groups and cut at the root of the national idea. A country like Great Britain, for instance, was able to employ language creatively for consolidating national sense despite powerful other historical factors like Scottish and Welsh local patriotism, because of the fact English was the language all of them generally spoke. In other words, the tongue that unites must be mother-tongue, not the foster mother tongue, or, what is even worse, the step-mother tongue. And step-mother tongue is what Hindi is in danger of becoming vis-a-vis other language groups.

*

It would be best for us, therefore, to realise once and for all that language would, at the best of times, be a factor that must be watched out uneasily in the context of national unity. It certainly is no promoter of unity. This is not particularly a calamity for the simple reason that there are other aids to the promotion of a national sense and these have been active and powerful in the case of India since historical times. Hindi zealots have distorted the perspective by suggesting that Sanskrit, and latterly Persian, both of which are court languages, have acted as instruments of national unity. This is not borne out by historical evi-

dence. The deepest sources of the fundamental unity of India have their roots elsewhere. I shall quote what I wrote on a former occasion on the subject: "The real unity of the Indian people operated, firstly, in the deepest levels of the collective imaginative and psychic lives of the people; secondly, through the identity of fundamental philosophic ideas and, thirdly....through the wonderful co-operative domination by a sacerdotal hierarchy over the minds and actions of all men from the Himalayas to the Cape Comorin". These indeed are still operative and, in recent historical times, political and administrative factors (the most important of which is our Constitution) have set the seal on this basic unity. Nothing but the tendency for the most perverse throwing away of God's gifts need jeopardise this unity, and one of the forms this perversity can take is linguistic chauvinism and linguistic supererogation.

✱

Once it is realised that Hindi is only a handy language for running the administration of the country, the problem is at once simplified and becomes one of administrative detail. So much so, one suspects the thirst for vicarious political thrills in the actions of those who wish to convert this simple administrative problem into a high drama of political emotions. Mr Kher put the problem in perspective when he said in a meeting at Madras: "On another occasion I appealed for the language problem being approached as a problem of practical policy from a secular, as distinct from a religious, or revivalist standpoint; from a pragmatic, as distinct from axiomatic and ideological standpoint: from a national as distinct from a provincial or communal standpoint."

✱

In this view of the matter, it is necessary to see what exactly is the constitutional status of Hindi. The Madras Government's memoandum has analysed the background to the constitutional provisions with admirable clarity. English was the all-India language (firstly, because it was the official medium of official business and not the national language) till the British left India because, secondly, it was the common medium of higher education, and, thirdly, because it was the unofficial means of communication between the intelligentsia of the different parts of the country. This position had to be changed after the attainment of independence (though there are some who do not see why). The two alternative propositions for the successor to English were: Firstly, Hindi, and, secondly, all the Indian languages. The difficulties, especially transitional ones, in choosing either of the alternatives to the exclusion of the other were obvious. The Constitution, therefore, evolved a compromise which has been described in a felicitous analogy by the Government memorandum. There was to be "an impartible succession" for certain specific purposes: and partition for all other purposes. And even these changes were not to be brought about forthwith: neither they were to be put off till the Greek calends. A target date was to be set; but safeguards were also to be provided and undue haste guarded against.

✱

These eminently sensible suggestions were embodied in the Constitution. As a result, there is no single official language common to both the Union and the States. The Republic of India, in other words, is to have many official languages and the transition from English to these various official languages is to be phased. This phasing is to be effected by certain transitory provisions embodied in Articles 343 and 344 of the Constitution. These Articles provided that there should be two official languages of the Union. These have been designated usefully by the Madras Memorandum as the "principal" and "subsidiary" official languages. Up to 1965, English is to be the principal official language and Hindi the subsidiary official language of the Union. (The position at the State will also be analogous). After 1965, English would not cease to be the official language as is often assumed; the Constitution provides that Parliament may enact that English should continue to be used for certain purposes. The Madras Government's Memorandum suggests that, after 1965, English should by an act of Parliament continue to be used as a subsidiary official language until such time as the development of Hindi makes it possible for us to drop English as even a subsidiary language.

✱

I consider the suggestion eminently reasonable. It is necessary that the Hindi enahusiasts should realise that the Government's views are actually a "concession" and that they are not shared by a number of eminent men even in Madras. For instance, Rajaji wants the switch-over to Hindi to begin twenty years after Hindi has been introduced as a compulsory language in the secondary school. The Madras Government, however, are willing to have the deadline already fixed to remain, but with the proviso that English should continue as the subsidiary official language. This shows both an anxiety to accommodate reasonable demands that the switch-over should not be indefinitely postponed and a concern for administrative continuity. The Madras Government are already under a barrage of criticism for this "con-

"Statistical Outline"

THE pace of progress in this country is not immediately evident; any the most carefully written article still fails to carry the full impact of achievements. For. necessarily, the article tends either to concentrate on the progress in a particular sector or field, or else it undertakes so sweeping a survey of the general economy that, in the result, the conclusions pointed are not as impressive as they could or should be. All the same, if one were to take the trouble of gathering the figures, the comparative figures over a period of time, one would inevitably be left with the conviction of great achievements in a short period of time.

The House of Tatas, some three years ago, took on hand this very chore and, in 1953, as the fruit of their study and endeavours, Tata Industries Limited published a small little handbook, which was called "Statistical outline of India". Small though the publication was, it was, in every sense of the term, comprehensive. No figure that was important appertaining to the Indian economy was left out. And the student of the Indian economy, if he took the care to look into the figures that had been served up, would at once get a total sense of national achievement. Last week, the Tata Industries Limited have published a revised edition which, firstly, brings the data up-to-date and, secondly, amplifies the contents of the work. The main object of the publication, as the introductory note points out, is to provide 'the basic statistics relating to India's economy." And this is exactly that the publication does.

And since these figures are most useful indeed to all those concerned in the Indian economy, I think it would profit us to go through, very quickly, but not too briefly, the various sets of tables that have been collected in the handbook.

The national income of India "at factor cost", has risen from Rs 8,650 crores in 1948-49 to Rs 10.600 crores in 1953-54. At current prices, the national income per capita has risen from Rs 247 to Rs 284. In terms of 1948-49 prices, the per capita income has risen by a smaller level from Rs 247 to Rs 267.

Domestic income amounted to Rs 8,670 crores in 1948-49 and went up to Rs 9,870 crores in 1952-53. Source-wise, although every head shows an increase, proportionately the largest is registered by large scale industries and mining. This source accounted for Rs 610 crores in 1948-49, and accounted for 7 per cent of the total domestic income. The relative figures in 1952-53 were Rs 790 crores and 8 per cent.

Of the domestic income of Rs 8,670 crores, the private sector had the lion's share at Rs 8,030 crores, or 92.6 per cent. In 1952-53 the share of the public sector, by rising from Rs 640 crores in 1948-49 to Rs 770 crores, has also improved its percentage from 7.4 to 7.8. As far as national expenditure, however, is concerned, the proportion relating to private sector has increased from 90.6 per dent to 91.3 per cent.

In 1948-49, out of the total of private income at Rs 8,700 crores, Government absorbed Rs 690 crores representing 7.9 per cent. The percentage in 1952-53 has risen to 8.1, with a sizeable increase in realisations from indirect taxes from Rs 360 crores to Rs 460 crores.

The 1951 census figures relating to area and population have also been given. Since reorganisation of States has taken, or is taking, place, the utility of this table has largely been diminished.

The uptrend in population could certainly be worrying Malthusians. In the last three decades, the decennial growth has been steadily increasing. At the end of 1951, the increase in population over the decade amounted to 46 million, or 15 per cent.

The largest age group represented in our population is between 5 and 14; this group accounts for nearly one quarter of India's population. While this is a heartening fact from the point of view of the latent man-power in this country, it also brings sharply into focus the real problem before India of providing employment for the anticipated accretion to labour force.

This problem of unemployment is also highlighted in the next table of statistics relating to population by livelihood categories. This table indicates that 69.8 per cent of the population is agricultural. The relevent figure is 249 million—but 147 million of this are classified as non-earning dependents. Similarly, out of the 108 million persons who may be termed non-agricultural, 68 million are, again, non-earning dependents. Thus, out of the total population of 357 million, 104 million are self-supporting persons; another 33 million are earning dependents; and the balance of 215 million are non-earning dependents.

Other facts relating to the census of 1951 are also given. The number of villages is 558,089. The towns are barely 3,000. The rural population is of the order of 295 million, and its ratio to the urban population is 83 : 17. The number of females per thousand males is, although the matrimonial columns in the daily press would seem to suggest otherwise, no more than 947. The percentage of literacy is a bare 16.6.

And, in such manner, the story in the form of statistics continues. I wish I had the space to trace out the progress as measured by the indices of industrial production, and all the other figures that the handbook contains. Unfortunately, the space that is available to me is limited; but it should be clear enough that the Outline published by Tata Industries is an invaluable ready reference; and its value is the more enhanced today, with India on the brink of our Second Plan. I hope, in a subsequent week, to complete the survey of the Outline, therein to adduce the progress and development that are made manifest in the carefully selected and compactly presented sets of statistics.

BOOKING OF
'EXCEPTED ARTICLES'
and the Railways' Responsibility

✱

The Railway shall not accept responsibility for the loss, destruction or deterioration of any package containing articles which are enumerated as "Excepted Articles" in the Second Schedule under Section 75 of the Indian Railways Act, when the total value of such articles contained in the package exceeds Rs. 300/-, unless the contents of the package and their value are declared and the authorised percentage charge (compensation for increased risk) paid at the time the package is booked for carriage by the Railway.

Where the value of such articles in any parcel or package exceeds Rs. 300/-, the sender or his authorised agent must record in the Forwarding Note whether he engages to pay the percentage charge prescribed. Should he elect not to pay prescribed percentage charge on value, the package will be accepted for carriage but the Railway shall not be responsible for the loss, destruction or deterioration of the same. The percentage charge on value must in all cases be pre-paid.

Commodities like Watches, Clocks and Timepieces of any description, Maps, Art Pottery and all articles made of Glass, China or Marble, Silk, Shawls, Lace and Furs, Radio (Wireless) apparatus, Photographic apparatus, Statuary, Scents are a few examples of the "Excepted Articles."

★ *Rules and conditions regarding the booking of "Excepted Articles" and the full list of these articles appear in the Goods and Coaching Tariff published by the Indian Railways Conference Association and in placards displayed at stations. Detailed information may also be obtained from the Station Masters.*

Gateway Notes

Back to Normal

Bombay has returned to normal after six days of violent demonstrations and intermittent firing. The reason is not so much that an acceptable settlement has been reached, as that Mr Morarji Desai has handled the disturbances firmly and unflinchingly.

The Congress Working Committee is not likely to revoke its verdict of the three-State formula. Reaction in Gujerat is tinged with some enthusiasm over the prospect of a separate State. In fact, Ahmedabad is already wearing the look of a prospective capital. Less favourable is the situation in Maharashtra. Several Maharashtrian ministers and legislators have gone to the extent of submitting their resignations, though it was made clear earlier that such action would not only go against their loyalty to the Congress but weaken the party as a whole. .

Now that peace has been restored and thinking men of the different linguistic groups are agreed that the agitational approach should be eschewed, the greatest attention has to be bestowed on the prevention of further violence and destruction.

Mr S. K. Patil, the veteran organiser that he is, has taken a timely and useful step in getting together a Peace Brigade to complement the work of the police. The Santi Sena has already gained a respectable number of members. Strictly a non-political organisation, it is making itself felt in the riot affected areas of Bombay.

The happenings in Bombay since the publication of the SRC report should make one thing clear: even among Congress leaders and leaders of responsible groups there was vacillation as to their aim in view. A series of proposals were put forward from time to time and none was acceptable to all the parties concerned. The Centre gave sufficient time for the disputants to come to terms. On any count, it will be to the good to allow matters to rest for a little time to come. Developments in other parts of the country will have a tremendous psychological effect on popular opinion in Western India. Much of today's controversy will give place to more sober second thoughts. Meanwhile every effort should be made to tame unruly elements.

✱

A Community Plan:

A memorandum submitted to the Planning Commission by nineteen independent members of the Bombay State Legislature makes interesting study in as much as it sets forth some practical and comprehensive suggestions for the development of the village community. In so doing, they have avoided the popular temptation of running into purely idealistic alleys. But it may be said at the outset that because their scheme presupposes that initiative and enterprise rest in popular hands, the role which Government can play is secondary and only in the nature of giving encouragement and assistance.

A pivotal place is accorded to the village community as a 'socio-economic union' in the planning for agriculture and small-scale industry. The memorandum explains: The village community should be in charge of the entire village life including the organisation of credit, purchase of implements and sale of produce. It could plan its food and other crops, its fodder and fuel, discover local talents and crafts, meet the revenue and other charges and generally work as an active agent of the planning authority.

It is argued that a practical system for setting up and running the economy on self-sufficient and self-governing framework could be devised and operated under a village community council with its State establishments functioning through district and taluk administrations. Agriculture, co-operative and education and for avoiding redtape.

A scheme is outlined for the organisation of rural credit, banking and insurance. Special institutions should be set up with capital entirely subscribed by the rural people. It is suggested that though rural credit was being extended through the State Bank or Co-operatives, it would essentially be a commercial proposition for helping the movement of crops after the crop season and not for cultivation of crops. This deficiency can be made up by the setting up 'agricultural banking corporations' exclusively for aid in irrigation wells and electricity on long-term basis for agricultural purposes. The formation of special 'chartered peasant banks' for the dual purpose of assisting peasants in meeting farming needs and for personal and social needs, is recommended. Both these banks are to have a Rs 50 crores capital from a village community of 500,000.

The memorandum goes further to suggest a peoples' State Insurance Corporation, a death benefit insurance association and a community 'crops and cattle insurance with a view to protecting the people against calamities. Other points made out include the need for greater association of subordinate administrative personnel with the people and for organising youth under a national youth council for national reconstruction.

The memorandum comes to a crucially important point when it endorses the concept of community ownership of the village lands much on the lines made out by Acharya Bhave.

It can be seen that in its implications, the scheme is quite in tune with the conception of 'planning from below'. The Planning Commission should find no reason why it should not be given a trial in the Ahmedabad area, whose economic pattern seems to have provided the raw material for the legislators' idea.

✱

Territorial Waters:

The recent flight of a Portuguese aircraft over India's territorial waters has served, once again, to bring to the forefront, the much debated question of the extent of such waters and of the continental shelf over which a coastal State can exercise its sovereignty. The conventional limit has been three miles from the coast. But, not all nations are agreed on this distance, not, even, on the method of measuring it. Some coastal countries already assert their rights up to 12 miles for customs purposes or for fishing. The US and the USSR are examples of such countries.

It has to be mentioned that the three mile limit is adhered to by countries like Britain, the Netherlands, Belgium, Germany, Portugal and Japan. But it is being increasingly realised that it is to little purpose to lay down absolue limits if a considerable proportion of States are not prepared to accept such limits as binding on them in all circumstances. Not long ago, some of the South American States made a bid to extend their territorial waters to a range of 200 miles and, in fact, one of them, Peru, took unilateral action toward such an end. There are countries which continue to make determined efforts to secure that each State should be left to set its own limit. This view seems to be guided by the fact that codifying strict laws without the machinery to enforce them strictly, would actually weaken International Law instead of strengthening it.

There is another aspect of the question which pertains to the exploitation of the mineral and other wealth of the sea-bed and the subsoil. Late last year, a Bill was introduced in the Indian Parliament to amend the Constitution (Article 297) in order that the Continental Shelf adjoining Indian territory and extending beyond the territorial waters may vest in the Indian Union. This is viewed as an economic necessity. ,

It is learnt that the subject will come up before the United Nations General Assembly sometime this year. The importance of arriving at an acceptable decision cannot be gainsaid.

✱

A Farm Report:

"More than 90 per cent of agriculturists in the country has no basic knowledge of proper use of chemical manures and fertilisers and are reluctant to use organic manures due to the age-long prejudice on the one hand and ignorance on the other", reports the Gandhi Smarak Nidhi's department on agriculture. This does not come as a startling revelation to those familiar with the low productivity and continued deterioration in the fertility of the soil. It is wrong to attribute low yield entirely to the ignorance or prejudice of the cultivator. More correctly, it is a symptom of the general stagnation of the rural economy. Often, the cultivator cannot initially afford the use of fertilisers, or he feels that the net return is not worth the money spent on them. The first need is therefore the transfusion of greater extraneous aid for the peasant to gain his feet. Provision of rural credit is a step in this direction.

Next in importance comes the need for equipping the farmer with a scientific knowledge of modern methods of cultivation. Today, it is common to see fertilisers being used indiscriminately by those who go in for them. As the report points out, chemical measures unless sparingly and judiciously mixed with organic manures, might react adversely on the texture of the soil and affect its fertility. It is suggested that demonstration parties should visit the rural areas at regular intervals to assist and train agriculturists in converting waste materials like night soil, urine and animal dung into useful manures.

Organic manures can be had solely from the villages if properly procured. Experiments at the Pusa Institute have helped in arriving at accurate estimates of the potentialities of some of the easily obtained manures.

The report, rather vaguely, suggests the mobilisation of constructive workers for propaganda and fails to indicate how to make possible practical demonstration on a substantial scale without which propaganda is not likely to impress and produce any tangible result.

Dr Hyde in Indian Politics

MODERN India, if you will permit an extremely hazardous generalisation, would seem to be suffering from a kind of collective schizophrenia. On the one hand, we have witnessed in the last few days the most deplorable kind of mass hysteria and unbalance in the political field over propsals for realigning State boundaries. Roughly coinciding with the same period, constructive thinking on economic questions has been going in Delhi. The last lap of the journey of the draft Plan-frame toward its final destination of a concrete draft Plan has been successfully completed.

After the meeting of the Standing Committee of the National Development Council held early this month, the consultative committee of members of Parliament gave the benefit of its collective wisdom. And, last week, the National Development Council met and discussed the Plan-frame at length and generally approved of its basic assumptions and detailed proposals. This would seem to indicate that, on economic questions we are more or less on the right track or, at any rate, we are able to discuss our differences like reasonable men. But, over the political issues, we allow ourselves, Dr Hyde-wise, to behave in the most objectionable manner.

Mr Nehru made an indirect reference to this fact during the discussions in the National Development Council. He said, 'In spite of all kinds of distractions, political and other, that are taking place in the country, we are moving continuously from the political to the social and economic planes. Planning represents essentially our moving, our thinking, our action. It is a backward country which is constantly preoccupied with purely political problems.'

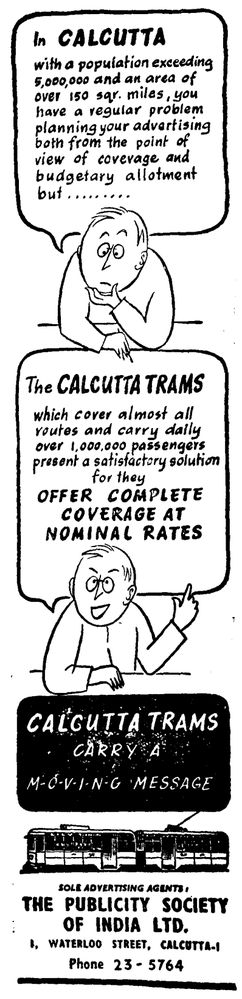
Though, on the whole, the country has become more plan-conscious now than it was five years ago, it is unfortunately true that even today, there is far too much preoccupation with political issues. The reason may be that economic and social thinking is far more strenuous and requires a degree of mastery of detail that taxes the capacity of many public men. But, if we are to achieve any degree of greatness, it is of utmost importance that facile thinking in politics yields place to conscientious and clear thinking on economic and social questions.

In its two day session, the National Development Council discussed almost all the important questions relating to the Second Plan. Among the more important issues dealt with were the manufacture of heavy machinery, balanced regional development, land policy and development of co-operatives in agriculture and small industries, reduction of disparities of income and wealth, long term planning and planning techniques. The size of the Plan and the estimates of resources, both financial and technical, were also discussed.

Of questions of general nature, the most important was the ends of planning, long term planning and planning techniques. Mr Nehru dwelt on this question at length at this meeting, at the earlier meeting of the Standing Committee and also in his address at the Delhi School of Economics. He referred to the need for being clear about the real objectives of a welfare state, which were not merely the increasing of the capacity for consumption of more and more commodities. He realised, he said, the importance of material well being, but more and more possessions did not automatically increase happiness. In this connection, he referred to the experience of other countries and said that he was not anxious that everyone in India should have a motor car or a washing machine or a refrigerator. Every one who has given thought to the subject will agree with Mr Nehru that the acme of civilization is not achieved merely by everyone having a television set.

Characterising the chief bane of modern civilization as the concentration of power in fewer hands, the Prime Minister said that we should try to reconcile this inevitable concentration and centralisation with the need for preserving individual freedom. Socialism in itself will not solve the problem, as is only too notoriously well-known: it will merely pass the power into a ruling clique or to an amorphous bureaucracy that would employ its power with such cunning that we may not even suspect that, despite all our Parliamentary paraphernelia, we are the ruled and not the rulers. But, if we could consciously plan from the beginning for a socialism that will harmonise with our notions of the true ends of life, we may be in a position to avoid the errors of other highly developed countries.

Mr Nehru's comments on the need for long-term planning and for dovetailing, within long term broad objectives, the successive Five Year Plans and the more detailed annual Plans are so eminently sensible that they may even sound trite. There should be, on the one hand, clear understanding of our basic objectives and notions of what constitutes for us the 'good life'. Once this is settled, than considerable room for manoeuvre in the actual process of attainment of these ends should be provided for in the five year plans. These plans will also enable us to learn from experience and to avoid clinging too rigidly to what may prove in the event to be utopian ends.



On the other hand, nebulousness and woolly thinking (largely wishful) is avoided by concrete annual targets and detailed working out of programmes. The success of our planning is, therefore, to have many yardsticks. Firstly, it will be judged at the end of every year to see whether specific targets have been achieved; secondly, at the end of every five years, we shall have to submit ourselves to the test whether we have achieved the general level and pattern of development envisaged at the beginning of the Plan. But the final reckoning, the historic judgment and rendering of account of posterity, will have to await the end of a twenty year period.

Of specific problems discussed at the meeting, the most important was that of heavy machinery manufacture. It was the consensus of opinion at the meeting that steps should be taken even during the Second Plan-period to enable the country to produce a considerable proportion of the machines needed for the industrial development of the Third Plan and that dependence on foreign sources for heavy machinery should be reduced to the absolute and unavoidable minimum. In this connection, the need for an integrated plan of development was, not unnaturally, stressed.

Giving specific instances, Mr T. T. Krishnamachari gave a closely argued exposition of the problem. He drew the attention of the Council to the difficulties of the situation and the gaps in the present position. These were, of course, the familiar ones of lack of equipment and trained personnel. Mr Krishnamachari stated that Government have already taken a number of steps to make good the deficiencies and have set in motion negotiations with a number of foreign firms. He indicated that a large number of forges and foundries will be set up in the Second Plan-period and that details of a plan for training of personnel are already being worked out. His estimate was that, at the end of the Second Plan, India would be manufacturing about 60 to 70 per cent of its requirements of capital machinery for the Third Plan. This, it will be conceded, is a heartening pace of development.

On the land problem, the Council generally endorsed the suggestions of the Standing Committee, which had met earlier in the month. These suggestions, it will be recalled, were: Firstly, the Second Plan should set out as clearly as possible that the longterm goal for our agrarian structure should be co-operative farming and co-operative village management. Secondly, the Plan should provide for experiments in co-operative farming and village development and lands obtained by the application of ceilings on holdings should be automatically turned over to this experiment. Thirdly, in case where the lowering of rents causes hardship to erstwhile owners, an option may be provided for them to sur-

Delhi Review

North Indian Notes

Investment in the two Sectors

A comparison between the rates of growth of the private and public sectors of industry (which is now possible on the basis of corporate returns and Reserve Bank Surveys) has to be made in the historical background of the development of each sector. The public sector is of relatively recent growth, and at the beginning of the first Plan, its capital outlay was very small at Rs 50 crores, including both Central and State undertakings. The current impetus being given to the expansion of this sector can be gauged by the estimated figures at future dates. During the First Plan, an amount of nearly Rs 60 crores is estimated to have been invested in the public sector, giving an outlay of more than Rs 109 crores at the beginning of the second Plan. New investments in industrial projects of the Central Government in the public sector are envisaged at Rs 487 crores (excluding the provision for the National Industrial Development Corporation), while about Rs 24 crores are expected to be invested in enterprises by the States. This brings the total outlay at the end of the next Plan to Rs 620 crores, which excludes an allocation of Rs 30 crores under the NIDC.

Fixed capital investment in the private sector has recorded an equally steady rate of expansion, but the outlay on this sector will be about thrice that on the public sector at the end of the Second Plan, when it is estimated at Rs 1,750 crores. At the beginning of the First Plan, the figure stood at Rs 750 crores. It is estimated that during the plan-period some Rs 340 crores was invested. During the Second Plan-period new fixed capital investments are estimated at Rs 525 crores plus an additional Rs 150 crores for replacements. The gross total is thus taken to Rs 1,750 crores.

It is noteworthy that in the public sector there is practically no provision for replacements while in the private sector this accounts for high investments.

✱

New Undertakings:

A fair idea of current development of the private sector, in non-monetary terms, can be had by surveying the different categories of licences granted by Government for new undertakings, manufacture of new articles and expansion of existing undertakings during 1955. The total number of licences stood at 563. Refusals totalled 119.

Of the licences granted, as many as 124 were for cotton textiles, 57 to iron and steel (fabrication and re-rolling work), 41 to art silk fabrics, 30 to automobiles parts, 27 to cement, 26 to heavy chemicals and fertilisers, 26 to sugar, 24 to glass and ceramics, 11 to bicycles and 24 to pharmaceutical undertakings.

The Licensing Committee is in a position to act as the main instrument of Government's industrial policy. This, however, throws a momentous responsibility on the Committee in that it has to make an accurate study of the diverse factors concerning particular industries, such as the capacity of the existing and projected factories, the availability of raw materials, the economics of location, the need to protect small-scale manufacturers, etc. It often becomes essential to undertake special investigations, a recourse which the Committee frequently resorted to during 1955. It will be more delicate to arrive at decisions directly reflecting questions of policy. During the past year the Committee was obliged not to permit any expansion in the weaving capacity of large textile mills. In such matters, a periodical review of earlier decisions is sure to help.

✱

Sachar Ministry's Balance-Sheet:

The end of Mr Bhimsen Sachar's ministry in the Punjab is abrupt in its political implications, but few doubt that the results would be disastrous if it would mean a break in the policy of reconstruction and consolidation followed by the outgoing cabinet. An impartial stock-taking of Mr Sachar's four-year-term of office would reveal that fresh ground has been covered in several new directions, though some governmental programmes show themselves in less favourale light.

For the first time, the Punjab has felt the impact of planned development. Decentralisation of the administration has all along been the guiding principle of the ministry, so that, today there is greater conformity with the democratic pattern; the services of the administration have been made available to the man in the village as near his house as possible. The separation of the judiciary from executive was initiated at the district level. In 1954-55, a major step was taken following the recommendations of the District Reorganisation Committee; a number of subdivisions were created with resident magistrates at important tehsil headquarters.

Mr Sachar's anti-corruption drive took the shape of a high-power anti-corruption department for dealing with unsuitable officers expeditiously. Maintenance of law and order showed a record better than previous years and other States. The expansion of local self-government proceeded on planned lines. During the past four years, 9,000 panchayats were set up. If the functioning of these now leaves much to be desired only the differences inside the State Congress Party are to blame.

In the field of education, the number of primary and basic schools has gone up from 4,315 in 1950-51 to 10,000 in 1954-55. The number of students in primary classes has increased from six to eight lakhs.

In the economic sphere, production showed a steady upward trend both in the agricultural and industrial sectors. Foodgrain production rose from 2.41 million tons in first year of the Plan to 3.69 million tons in 1953-54. The index of sugar production rose from 100 in 1952 to 137.7 in 1954. Similarly, paper output advanced by 24 per cent in 1954, textiles by 42 per cent and woollens by 17 per cent.

Development activity in the Sachar regime was however dominated by the two projects, the Bhakra Nangal and the Chandigar Capital project, which between them will form the basis of future economic prosperity. In both the projects substantial progress has been achieved and a fair rate is being maintained.

Another achievement of the ministry has been the successful handling of the rehabilitation programme particularly by liberalising compensatoin terms for displaced claim holders.

Without exaggerating the weaker points of the Sachar Ministry, the few instances, where it has fallen short of expectations and has come in for strong criticism may be mentioned. Governments' enactments in the field of tenancy reform has pleased neither the tenant nor the landlord and alienated an influential section of the State Congress Party.

A just cause for complaint has been the financial irregularities which has come to light in connection with the Bhakra Nangal and Chandigarh projects as well as in the transactions in the regular administration.

✱

Banganga Barrage:

Last week, U.P.'s Chief Minister opened the Rs 36 lakh Banganga canal system, which touches the Indo-Nepal border. Banganga is the State's second barrage and runs to a length of three hundred and eighty feet. The canal network is 90 miles long and will irrigate 19,000 acres of kharif area and 10,000 acres of rabi area. A substantial measure of protection will be given to U.P.'s rice granary in Basti district, which produces one of the first varieties of late paddy.

The need for a protective project in this region was brought home during the years of acute food scarcity between 1950 and 1953. The low, ill-drained trans-Rapti area, with small holdings and high population density, however, provides serious constructional difficulties. Even now only a fraction of the cultivated land enjoys a regulated water supply through irrigation.

Power potentialities exist in this region, but their tapping would depend on the possibilities of building reservoirs in Nepal territory. Nepal Government do not seem disinclined towards such a proposition.

CLIVE STREET GOSSIP

(Continued from page 166)

cession" from many powerful interests in the State. But, actually, there has been no "concession", for, the matter has been argued purely from the administrative angle. They have indicated in great detail the actual tasks that require to be done before the change-over can take place. They have discussed the connected problems of medium of instruction in educational institutions and the language of the law courts. They have discussed their past experience and future plans. I wish I could summarise for you the data, supported by a wealth of administrative minutiae, that the Madras Government have gone into in arriving at the conclusions they have embodied in their evidence. But, there is no space for it here. In fact, their memorandum is the sort of document that would delight the heart of Jeremy Bentham and is in the best traditions of mature thinking on administrative problems for which Madras is justly famous. If I may hazard a prediction, the final recommendations of the Official Languages Commission are unlikely to be far different from those contained in this admirable memorandum.

North Indian Markets

Rising Tendency in Foodgrains Prices

FOODGRAINS prices have, all over India, registered a sizeable rise during the past few days. The Government of India's proposal to check the advance and the announcement about the import of wheat to the tune of 325,000 tons have had no effect on the general price levels. The rise in prices is generally attributed to depleted stocks of wheat in the surplus mandies of the Punjab and PEPSU where stocks were damaged by the recent floods. The increase in demand from the regular importing markets has also helped the rising trend. Moreover, the flour mills in the country are reported to have shown greater buying interest in the recent past. The general feeling is that the scheduled imports from abroad will take about two months to come and that the demand is in excess of the supply. It is, therefore, likely that the shortage will continue till the new crop arrives.

Meanwhile, in a statement made by the Union Minister for Food and Agriculture, it is revealed that the existing wheat stocks with the Government and the firm commitments they have already entered into for further supplies are more than enough to meet the effective demand until the next harvest. The Government had, as on the 17th January, nearly 2 lakhs tons of wheat in the Central reserves at Calcutta, Bombay and other parts of the country. Final arrangements for the import of about 180,000 tons of wheat from the USA, Russia, Australia and Pakistan have been completed. The first ship, carrying 10,000 tons of wheat, has already reached Bombay. During the next few days, 10,000 tons will be reaching North Indian markets from Pakistan. By the beginning of March, another 50,000 tons will be arriving in India.

Under the US 10-million-dollar aid programme for the current year, orders for the import of 5 million dollars worth of wheat have already been issued and orders for the balance will be issued in a week's time. In Calcutta and Bombay, wheat at the rate of 55,000 tons per month will continue to be issued from Government stocks, which is enough to meet the full demand af these two towns. Requisite stocks have been built at Hyderabad, Madras, Bangalore and Vizagapatnam, and the needs of the South are being met from there. This has almost eliminated the demand for wheat in the North Indian markets from Calcutta, Bombay and the South. In the Punjab, 15,000 tons of wheat have been released from the Government reserves.

In order to check further rise in prices, the Government of India have allowed the Uttar Pradesh Government to sell wheat in its five big cities from the Government-owned stocks, purchased under the price support scheme. In the Hapur market, average quality wheat improved by As 8 to Rs 15-8 per maund. Farm quality, the stocks of which are low, was quoted upto Rs 17 per maund.

Gram prices also advanced by As 8 to Rs 10-8 per maund. Good seasonal demand and paucity of stocks accounted for the improvement in the prices of all coarse grains, the latest prices being Rs 10-6 for Barley; Rs 11-0 for Maize; Rs 10-8 for Bajra and Rs 11 for Jowar.

Despite better crop prospects, Peas recorded modest gains in line with the rising trend in grain prices, dara quality being quoted at Rs 9-8 and white quality at Rs 10-8 per maund. Arhar prices continued to rule steady at Rs 13-8.

The Government decision to sell wheat at Rs 14 per maund caused a setback in prices in the Delhi grains market. Other grains were also affected. After touching Rs 18, farm quality finished the week at Rs 17 per maund. Barley recorded small gains. Maize, Jowar and Gram rates improved slightly due to good buying activity. Rice prices showed a fall of Re 1 per maund in the absence of enquiry.

Trading in the Bombay grains market was almost completly paralysed as a result of the recent disturbances in the City. Prices were, therefore, quoted only nominally. The tendency in Rice prices was quitely steady in the absence of demand. The recent upward trend in Wheat prices was also arrested following Government measures to check an undue rise in the prices. Prices of Jowar, however, were maintained around the previous week's levels with the Sholapur quality quoted at Rs 110 per maund. Prices of Bajra were also steady with demand subdued.

✱

Slightly better conditions prevailed in the Sugar market, thanks to some fresh demand from the consuming centres. There was a slight improvement in mill delivery rates. Jaswant was quoted at Rs 28-11; Simbhauli Rs 29-0; Mowana Rs 29-0; Daurala Rs 29-8; Mansoorpur Rs 30-0; Amroha Rs 28-0; Bijnore Rs 28-0 and Rampur Rs 31-4 (all per maund).

✱

In the Hapur market, Gur prices moved within narrow limits. Arrivals increased to about 25,000 maunds, while want of loading facilities hampered despatches to Gujerat. A small quantity of gur was, however, sent to Rajasthan and the Punjab. Stocks were estimated around 35,000 maunds.

It is stated that the arrivals of the new crop gur have increased substantially at most of the terminal centres in the Deccan; but despatches to consuming areas have not been sufficiently swift due to the lack of adequate transport. This has accentuated the bearish sentiment at those centres. Traders feel, however, that the prices will stabilise at the present or slightly lower levels as a larger quantity of sugarcane is likely to be utilised for the production of sugar.

The Bombay market developed an easy trend with the prices of almost all qualities declining by Re 1 per maund. The weakness of the market was attributed to adverse reports from the producing areas where prices registered a fall of Rs 2 per maund to Rs 9-8 to Rs 14-0 per maund, according to quality. In Bombay, the rate moved between Rs 12 and Rs 17 per maund.

SOUTH INDIAN MARKETS

Unprecedented Demand Forecast for Rubber

DEMAND for Rubber is bound to increase at an unprecedented rate during the Second Plan period. It is generally believed that the target, set in the Plan to meet this demand, will be achieved by the various sections of the industry.

According to the latest issue of the Indian Rubber Bulletin, 68 per cent of the rubber consumption in the country is accounted for by the tyre manufacturing section. The Planning Commission have, therefore, stated that, in formulating the development programme for the rubber manufacturing industry, two of the major items, namely tyres and tubes, should receive detailed consideration. With plans already afoot for increased production of automobiles and bicyles, the demand for tyres and tubes must increase.

With an increased tempo of production already manifest, it had been estimated that the total usage of raw rubber by the rubber manufacturing industry in 1955 should be higher than ever in the past compared with 25,487 tons in 1954. From actuals up to the end of October last year, it is now apparent that even the original estimate for the year of 27,500 tons may be outstripped by a few hundred tons. The Planning Commission have been taking into active consideration the scope for development of the industry during the Second Five-Year Plan, and have estimated that, by 1960, the rubber consumption will reach 40,000 tons per annum.

The manufacturing industry, in this connection, has aready stressed the need to make satisfactory arrangements for meeting the gap between the supply and the requirement of raw rubber. The programme to replant 7,000 acres of rubber per annum in South India over the next ten years, it is to be hoped, will have some effect in this dircton.

Coffee auctions were held this week at two centres. In the monthly auction held at Palayamkottai, a total quantity of 585 pounds was offered, out of which 225 cwts of Plantation, 3 cwts 28 pounds of Arabica Cherry and 287 cwts of Robusta were absorbed by the bidders. A total quantity of 69 cwts 84 lbs was withdrawn.

Following were the prices realised (per cwt):—Plantation PB Rs 229-8 to Rs 255; Plantation A Rs 214-10 to Rs 225-10; Plantation B Rs 209-0 to Rs 209-8; Arabica Cherry Flats Rs 188-8; Robusta Cherry PB Rs 170-1 to Rs 172-0 and Robusta Floats Rs 160-4 to Rs 163-0.

In the auction held at Mysore, about 19,596 tons were exposed for sale. Out of this, 508 tons were sold and the rest were withdrawn. Prices ranged as follows (per cwt):—Plantation Peaberry Rs 261-9 to Rs 268-15; Plantation A Rs 215-5 to Rs 223-9; Arabica Cherry Peaberry Rs 195 to Rs 200-15 and Arabica Cherry Flats Rs 176-1 to Rs 193-15.

✱

The troubles in Bombay had its repercussions in the produce markets at Kozhikode, Alleppey and Cochin. Transactions in Pepper were thin.

In the Kozhikode market, nearly 38 candies of Wynaad and 183 candies of Country pepper were sold to exporters during the past week. Prices, after dropping down by Rs 25 per candy for Wynaad and Rs 50 for Country variety, recovered toward the close following renewed activity by exporters. Closing rates for the week were Rs 850 per candy for Wynaad and Rs 800 for Country variety.

In the Alleppey market, rates were nominal at Rs 825 and Rs 800 per candy for superior Palai and inferior Thekkan varieties respec-

The Peninsula

The ECAFE at Bangalore

I did not have the good fortune to be present at the Session of the ECAFE held in Ootacamund in June 1948. That was the only occasion when a full session of the ECAFE was held in India previously. From a distance of nearly eight years I can only speculate a comparative estimate of that session and the one which has started here on Tuesday, January 24th. In 1948 ECAFE was just a year old. It had a smaller membership and the organisation was just feeling its way.

But now all this has changed. The ECAFE can look back on a magnificent record of work and can claim a distinguished contribution not only to the development of statistical work but to the shaping of government policies in all the countries concerned. The organisation has now come to be known as "the parliament of Asia." It is perhaps too flattering a title. One would like to call it the "economic parliament of Asia." It is just because the organisation is able to keep off from politics that it has been able to pursue activities whose results are reflected in the development of national economies. In that way this economic parliament has better claim on the gratitude of the peoples of this region than any common political body which could be remotely envisaged.

Dr. P. S. Lokanathan, the Executive Secretary arrived at Bangalore sufficiently early to share in the supervision of the touches to the arrangements for the Conference. One could feel the flavour of the United Nations in the crisp lavishness of the arrangements. The cosmopolitan City of Bangalore is the best meeting place for an international body of this kind. Delegates of twenty-three, out of the twenty-four nations represented in the ECAFE are present; Cambodia alone is not sending any delegate. Besides the delegates of member-countries, observers from other countries who are members of the UN have come. Rumania, Poland, Canada, Yugoslavia and Zechoslovakia have sent observers to attend the session. The Indian delegation is led by Mr K. B. Lall, Joint Secretary, Ministry of Commerce and Industry.

At a Press Conference on Monday morning, Dr. Lokanathan gave a resume of the work of the ECAFE since its inception a preview of the work of the Committee on Trade and Industry which would commense its session the succeeding day. Dr Lokanathan described the ECAFE's work as really spectacular. The ECAFE could only recommend; decisions and execution of decisions rested entirely with the governments concerned. It was therefore a source of great satisfaction that the member-countries had accepted the bulk of the recommendations made by the organisation, with the result that agricultural and industrial production in the region has vastly expanded, plannng has become more or less a regular feature, the administrative structure in many of the member countries has improved and institutions for financing agriculture and idustrial development have been formed. These provide a rough index of the very important work which the ECAFE is carrying on

Dr Lokanathan refuted the impression that there was any duplication of work involved between the ECAFE and other associated bodies of the UN. There was close cooperation between ECAFE and the Economic Commission of Europe and the Economic Commission of Latin America and regular exchange of views, the pooling of knowledge and experiences between these bodies.

The Deputy Executive Secretary, Dr Dollinger, emphasised the work of the Commission in the fields of cottage and small-scale industries, electricity, power development, housing problems, iron and steel, mineral resources, and inland transport. He pointed out that the ECAFE was a most useful clearing house of economic needs, data and experience, not only among the countries of the region but between them and other parts of the world.

The Plenary Session of the ECAFE begins on February 2. The Prime Minister and the UN Secretary-General are scheduled to participate in the session. On Tuesday, the Committee on Industry and Trade commenced its sitting, which is to last for eight days. The high-light of the proceedings was the key-note address by the Executive Secretary.

The address reviewed the activity of the various sub-committees during the last year, the work done by specialist bodies and the technical advisory services rendered in response to requests from individual governments. A group of geologists and mining engineers from the ECAFE region made a study tour of Western Europe and USSR. This tour, it is hoped, will be of considerable value in the planning of the mineral resources development of the region.

A plan of work has been evolved for inter-regional exchange of ideas on the exploitation and utilisation of lower grade coals. The ECAFE sub-committees have also undertaken valuable studies in various other fields such as electric power, the peaceful use of atomic energy, housing and building materials, small-scale industries and handicrafts marketing and management-training.

On the second day, the Committee committed to a Five-Nation Sub-Committee a resolution moved by the Indian Delegation on the Secretary's Report on the activities in the field of mineral resources development. As usual, there was a gentle exchange of differences between the US and USSR delegates. The Indian delegate gave expression to the determination of this country to go ahead with development schemes with a sense of urgency, though the note of caution sounded by more advanced nations would be gratefully received.

STATE BANK OF INDIA

The following is a note of the net profits of the State Bank of India for the half-year ended the 31st December, 1955 and their distribution:

	Rs.
Net profits for the half-year	68,59,400
Amount transferred from the Imperial Bank of India	33,56,400
Total Rs. ..	1,02,15,800
The Directors have declared a dividend of Rs 8 per share, absorbing ..	45,00,000
Transferred to Pension Funds	2,78,500
Bonus to Staff ..	20,00,000
Carried Forward ..	34,37,300
Total Rs. ..	1,02,15,800

Madras Review

South Indian Notes

Cooperative Enterprise

The Cooperative movement in India is expected to make rapid progress in the next five years. As against the present 5 million members in primary agricultural credit societies, there will be 15 million by the end of 1960-61. Short term loans are to be increased from Rs 30 crores to Rs 150 crores, medium term loans from Rs 10 crores to Rs 50 crores and long term loans from Rs 3 crores to Rs 25 crores. During the Second Five Year Plan period, 12,000 large-sized cooperative societies and 5000 godowns are expected to be set up.

Speaking at the 40th Session of the Mysore Provincial Cooperative Confierence, Mr A. R. Shetty, Minister, Madras State, disclosed that the basic recommendations of the All India Rural Credit Survey Committee had generally been accepted by Government and that unprecedented expansion of cooperative activity on all fronts had been planned.

While the large number of new credit societies would meet 30 per cent of the credit needs of farmers, as against the present 6.4 per cent, other forms of cooperarative enterprise, such as animal husbandry, small-scale and village industries, milk supply and housing would also be getting assistance from Government.

Finance to the tune of Rs 80 crores for the proposed expansion would be provided jointly by Central and State Governments and the Reserve Bank. Nationalised insurance might be able to supply a large portion of the Rs 225 crores required annually for the short, medium and long term loans to be provided by the end of the Second Plan period.

The history of the cooperative movement in India in the last fifty years has clearly brought out the need for effective State direction and supervision. In the absence of active Government interest, the movement has not made much headway. Large parts of the country continue to be left uncovered by it, while the bulk of the agricultural population has not derived any benefit from the movement.

By deciding to embody the framework of action suggested by the Rural Credit Survey Committee in the Second Five-Year Plan, Government have now ensured one of the two essential prerequisites to the success of the movement. The other, public interest, is equally important and Mr Shetty has pointed out that a psychology in favour of the cooperative effort in the place of individualistic competition should be created in the country.

*

Export of Tobacco:

Though tobacco is the ninth biggest earner of foreign exchange, the problems connected with its export trade have not received the attention they deserve at the hands of Government till two or three years ago. It is, however, gratifying to note that when once they have begun to look into the matter, action has been quick enough. The whole question of export has been plaaced on a more rational basis and it has been decided to set up the Tobacco Export Promotion Council.

India produces about 500 million lbs of tobacco every year and exports about 90 million lbs most of which is Virginia tobacco grown in Andhra State. The United Kingdom, China, Japan, Aden and Dependencies, Belgium, Ceylon, Egypt, Hongkong, Indonesia and Netherlands are the main importing countries.

With the inauguration of the Council, the future of the industry has been entrusted to competent hands. The varied problems connected with the trade will now receive the concerted attention of a separate body and it may be hoped that the country's export trade in this important commodity will increase considerably in course of time.

Referring to the increased competition for Indian tobacco in world markets, Mr T. T. Krishnamachari has emphasised the need for approaching the problem with faith in the ability of our produce to maintain old markets and win new fields by the strength of its attractive price level and superior quality. For, it is idle to expect sheltered markets or special preference in the present context of world trade. Therefore, the main task of the new export promotion council will be to bring into being an efficient selling organisation.

As for the possibility of the loss of some of the traditional markets, Mr Krishnamachari has pointed out that such developments are only to be expected. Instead of getting upset about them, tobacco traders in India should explore new markets in the countries that are now slowly being opened to world trade. In this connection he has mentioned that there are indications that Russia may be interested in Indian tobacco. It may be worthwhile for the trade to explore the possibilities of extending tobacco exports to other east European countries also.

*

Industrialisation:

The respective roles of the public and private sectors under the Second Five-Year Plan were defined last week in Madras by Mr T. T. Krishnamachari, Union Minister for Commerce and Industry. Speaking on the occasion of the opening of the new building of the Southern India Chamber of Commerce, he pointed out that in terms of proportion the development of the private sector would be less than that of the public sector.

While existing units in the private sector would be allowed to operate without let or hindrance, Government might also enter the field. But if and when new units were set up under Government auspices, care would be taken to ensure effective working of the older units in the private sector. It would be seen, therefore, that at no stage there would be competition from the public sector to existing private enterprise. Mr Krshnamachari drew the attention of entrepreneurs in South India to the good scope offered by the sugar industry in their part of the country. The low cost of production coupled with the possibility of exports would enable private enterprise to set up and operate sugar factories with profit.

Government's industrial policy was so framed as to allow ample room for the private sector to play

(Continued on page 175)

SOUTH INDIAN MARKETS

(Continued from previous page)

tively, while stray business took place in garbled stuff at Rs 140 per cwt. In the Cochin market, prices declined by Rs 25 to quote Rs 800 per candy.

*

The Madras Groundnut market ruled barely steady with price movements confined to a narrow range. Buyers, in general, were operating only for their immediate requirements. Arrivals averaged 35 to 60 tons a day, while crushers were absorbing small quantities. The rate for superior oil-quality seeds was quoted at Rs 124 to Rs 127 and bold varieties at Rs 122 to Rs 126 per candy.

In the Groundnut Oil section, buyers were rather reserved, while sellers were not equally keen to do business. Calcutta interests did not show much interest, while shippers took up small quantities. The rate for the ready position fluctuated between Rs 250 and Rs 252 per candy, while February delivery was quoted at Rs 253 per candy.

Arrivals of groundnuts in the South Arcot markets declined sharply by more than 60 per cent. This was due to paucity of stocks with the producers. With the result, prices increased from Rs 5 to Rs 10 per candy. The South Arcot Market Committee gives the following report (price per candy):—

	Sales (In Tons)	Highest Rs.	Lowest Rs.
Vridhachalam	177	132	100
Villupuram	16	130	107
Tindivanam	113	125	96
Tirukoilur	85	124	98
Cuddalore O.T.	28	127	98
Panruti	27	125	78
Chinna Salem	3	119	107
Ulundurpet	9	125	98
Kallakurichi	22	122	108

Trading in the Madras Tanned Hides market continued to remain dull with prices of all weights and selections showing a downward trend in the complete absence of any enquiry from London buyers. Larger arrivals of raw hides, overproduction of kips, financial pressure and larger offers from Madras —all these factors contributed to the downward trend in prices.

Only stray business was reported done in 8-8½ lbs fourths and fifths. Buff Calf was, however, steady; and there was enquiry for 1½-2 lbs at 66½d. Buff hides continued to derive support more from indigenous users than from overseas buyers.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were normal and there was a fair clearance. Prices for Sheep skins ruled firm, while those of Goats ruled steady, particularly for light weights.

In the export section, stray transactions were reported done at steady levels. In Goat skins, business was done in 5½-6 lbs at 14sh 6d for runs and at 13sh 6d for fifths. Germany continued to be a good source for prime class tannages. In Sheep skins, prime middle class was steady around 21sh 6d with fifths quoting at 14sh.

In the Raw Hides section, prices showed a slightly easier tendency. Tanners, however, continue to lend support in the hope that tanned prices will improve shortly.

The market for Raw Skins ruled steadier with one or two centres reporting a slight advance in prices. Raw Sheep prices were unchanged to Rs 10 per 100 pounds easier.

The Associated Cement Companies Limited

Another Successful Year of Working

Plans to Increase Capacity to 5.2 million Tons

Mr. Dharamsey M. Khatau, the Chairman, deals with Private Sector's Role in 2nd Plan

The Nineteenth Annual General Meeting of the Associated Cement Companies Limited was held in Bombay on 27th January, 1956. The Chairman, Shri Dharamsey M. Khatau, reviewing the major developments in the economic and industrial field that have taken place in the country said: "We in this country have got into a curious habit of achieving political, economic and social progress by suden jerks. Every year, two or three major economic or political concepts are mooted and bitterly pressed, often to extreme limit: this is followed by some hasty legislative action; and the controversy then dies down as suddenly as it began.

"This has been going on since 1950; and the year 1955 was no exception. It began with the proclamation of the 'socialistic pattern of society' as the ultimate objective of political and economic policy. This was followed by the Fourth Amendment to the Constitution, whereby it would no longer be unconstitutional to nationalise, either by acquisition or by obtaining complete physical and management control, every form of private property on payment of only such compensation as may be laid down in the particular nationalisation enactment. Quick on the heels of this serious detraction from fundamental rights came the taxation proposals of the 1955 Budget which contained a curious mixture of measures adversely affecting individual enterprise and incentive, savings and investment, on the one hand, and affording encouragement to industrial development, on the other! And before the ink was dry on this drastic scheme of taxation came the nationalisation of the Imperial Bank. Later, we had the Indian Companies Act with its quite unjustified attack on the Managing Agency system, the objective apparently being to kill rather than to cure the one institution which had been most responsible for the rapid industrial advance we have achieved since the First World War. And finally, the nationalisation of life insurance was announced only last week!

THE SECOND FIVE-YEAR PLAN

Referring to the 'Plan Frame' of the Second Five-Year Plan, Shri Khatau said that he felt it had caused grave concern to knowledgeable circles. He characterised it as "no more than a jumble of ill-conceived and unattainable 'physical targets' of production, tied together with bits and pieces of loose thinking, which completely ignored such **practical** issues as how or wherewith they were to be achieved". It was fortunate, Shri Khatau added, that the Plan Frame had since been subjected to the most rigid scrutiny with the result that while its old name persisted in substance, it was new and more in the region of practical economics. Shri Khatau continued: "Even so, two features of one Second Five-Year Plan as it is now emerging give cause for some anxiety. One is the drastic cutting down of the outlay on transport, especially railways; and the other, the impractical approach to the problem of resources to cover the enormous over-all outlay of some Rs. 4,800 crores contemplated in the public sector. There lies before us, in consequence, the grave prospect of the probable incapacity of the transport system to cope with the increased production envisaged under the Plan, alongside with acute inflation coupled with crushing taxation of income and capital."

THE PRIVATE SECTOR

Speaking on the progress and prospects of the private sector, the Chairman observed that there could be no doubt that the urgent need to achieve industrial expansion along sound lines was appreciated as keenly by free enterprise as by those who spoke from the ideological or political platforms. "Whether it is a question of raising the general standard of living or of avoiding inflation in the wake of deficit financing of development in the public sector, the **sine qua non** is continually increasing production. Towards this end free enterprise has played its part, and will continue to do so subject to the numerous handicaps imposed upon it even within the limited scope permitted to it. It is admitted that the targets set for the private sector under the First Five-Year Plan have generally been fulfilled; and that in some cases. they are even likely to be exceeded —as has already happened in the cotton textile industry. No one need doubt, therefore, that the role allotted to the private sector in the Second Five-Year Plan will be equally significant. But its achievement will depend to a large extent on the broadbased backing of the public as well as of the Government, on wise planning and sound fiscal and political policies, on full and unstinted co-operation from labour, and on the uninterrupted flow of savings and investment year after year. In all these matters the most effective single factor will be the plans and policies of the Central and State Governments in relation to financial matters generally and in regard to taxation and nationalisation in particular."

PRODUCTION AND SALES

Turning to the affairs of the Company, the Chairman reported yet another successful year of working for the A.C.C. Both production and sales of cement were satisfactory, though the Company had not been able fully to cope with the demand. These results were due to the very strenuous and sustained efforts the Company had already made to increase production.

PLANT REHABILITATION AND EXPANSION

Shri Khatau stated that since the ACC embarked upon its postwar expansion programme it had already increased its annual manufacturing capacity by nearly 1.3 million tons. Satisfactory progress was maintained during the year in the modernisation and extention of the Shahabad, Bhupendra and Kistna factories. The new works for the production of refractories at Katni was about to go into production, and by October 1956 would have a capacity of three times that of the old plant.

SINDRI

Coming to the field of new installations, the Chairman reported that the first unit of the Sindri plant having a capacity of one lakh tons was put into operation in September 1955 and a second unit with a similar capacity went into production two months later. That plant, utilising calcium carbonate sludge (hitherto a waste by-product from the Sindri Fertiliser Factory) for the manufacture of cement is the second of its kind in the world. "This splendid achievement," Shri Khatau said, "involving the solution of some very difficult technical problems, was the work of the members of our own staff, unaided by any outside consultants or experts. I am glad to say that the cement produced there is well up to our best standards".

TARGET FOR CEMENT INDUSTRY

Referring to the target of 12.5 million tons set for the Cement Industry under the Second Five-Year Plan, Shri Khatau spoke of the ACC's role in the implementation of this huge target: "As the leading manufacturers of cement in the country, we have to play our full part in bringing about the very large expansion which the achievement of this target will necessitate. This we plan to do by establishing a number of new factories in various parts of the country and by extending those of our existing Works which are favourably situated with raw-materials in sufficient quantities. We have already formulated plans to increase our capacity to nearly 5.2 million tons by extending our existing factories at Kymore, Lakherj, Shahabad, Dwarka, Kistna, Chaibasa and Sindri, and by putting up five new factories—at Mancherial in Hyderabad, at Yerraguntla in Andhra, at Drug near the site of the Bhilai Steel plant, at Abu Road and at a new site in Porbandar in replacement of the present old factory. Further projects are under consideration. Apart from our contribution other interests in the cement industry will also undoubtedly have similar plans of expansion so that we may collectively achieve the extremely rapid expansion which is required in fulfilment of the high target".

FINANCE FOR EXPANSION PROJECTS

Speaking about the very substantial capital expenditure entailed by these expansion projects, Shri Khatau said that the ACC had entered into a cash-credit arrangement with the State Bank of India enabling the Company to borrow up to a limit of Rs. 4 crores against the security of its own 5% First Mortgage Debentures deposited with the Bank. He also said that the Extraordinary General Meeting to be held later that evening would consider the issue of 6,35,928 shares of Rs. 100/- each to be offered at par to existing shareholders in the ratio of one new share for every two shares held, subject to the sanction of the Controller of Capital Issues. This additional finance, supplemeted by the Company's present and prospective internal resources, the Chairman observed, would be adequate for the purpose of attaining an annual production of nearly 5.2 million tons.

CENTRAL WORKSHOPS

During the past few years, Sri Khatau continued, some of the machinery required for the ACC had been manufactured in the Company's own workshops. But with the plans for rapid expansion ahead, there was now urgent need for considerably higher production of cement-making machinery in India utilising the best techniques and newest developments. Shri Khatau announced that the ACC, with the approval of the Government of India, was negotiating with Messrs Vickers Ltd. for jointly setting up a plant for the manufacture of a wider range of cement-making and other machinery in India. Vickers Ltd., together with their many associated companies and their respective subsidiaries, the Chairman said, constituted perhaps the largest engineering group in the United Kingdom manufacturing an extensive range of products including heavy engineering machinery, plant and tools of all kinds, cement making machinery, ships, aircraft, railway rolling stock and numerous other products. After preliminary negotiations, Lord Knollys, the Deputy Chairman of Vickers Ltd. visited India. That was followed by Vickers sending out a team of experts who, along with an ACC team, made a thorough investigation of the project and submitted a joint report which is now under consideration by Vickers Board and by ACC Directors. It was envisaged that the new works to be jointly established would manufacture not only a wide range of cement machinery adequate for the country's entire requiremen'ts, but also such badly needed machinery as gears, pumps, mining equipment, etc. The bulk of the capital required for the project would be contributed by Vickers and the ACC in equal shares; and provision for the ACC's contribution had been made in the financial arrangements referred to earlier. If on careful consideration the scheme proved to be a worthwhile proposition, it would be put before the shareholders for their sanction.

WHITE CEMENT

Shri Khatau then stated that the ACC had embarked on the manufacture of white cement at the Porbandar factory on a small scale, and said the production would be gradually increased with growing demand. The new product, which was also an excellent base for making coloured cements and cement paints, was now being marketed under the trade name of "Silvicrete".

BULK CEMENT

The Chairman turned next to the ACC taking the lead in supplying cement in bulk to its customers, and stated that the first Bulk Cement Depot at Delhi was now ready and deliveries of bulk cement from this depot would commence next week. Depending on the experience gained from this experimental project, the Company intended to establish similar bulk cement depots wherever feasible.

PAKISTAN

The Chairman stated the ACC's two factories in Pakistan were operating satisfactorily, and that remittances of part of the profits from Pakistan were with great difficulty being allowed from time to time. He felt that with the devaluation of the rupee by the Government of Pakistan, the remittance problem should ease. Shri Khatau anticipated some increase in costs there and expressed the hope that the Government of Pakistan would take this into account when fixing cement prices for the current year.

COLLIERIES

Reviewing the progress of the ACC's two collieries at Kotma and Nowrozabad, the Chairman said that in line with the targets for coal production in the Second Five-Year Plan, the ACC was considering schemes for increasing the output of the Nowrozabad Colliery and for setting up a coal-washing plant to improve the quality of the coal despatched.

LABOUR MANAGEMENT RELATIONS

Turning to labour-management relations, the Chairman observed: "I referred last year with some satisfaction to the unanimous decisions of the Industrial Committee on cement reached at the Hyderabad Conference, and also expressed the hope that we in the cement industry could look forward to a long period of peaceful and productive hard work.

"Unfortunately the goodwill fostered by the Hyderabad Conference and the "peace within industry" which the ACC has so assiduously sought to build up by its progressive labour policy over a period of years, was marred by the efforts of certain interests to negative the joint decisions taken at the Hyderabad meeting. The interpretations sought to be put on the deliberations of that Conference, as also on the ACC's readiness to react generously to the wishes of labour, have resulted in demands being made on the Company to assume more and more responsibilities and financial burdens without any reciprocal gesture on the part of labour. It is, therefore, with some sorrow that I have to report that at our Chaibasa factory the workers were misled into a prolonged strike on issues which had already been previously settled by mutual negotiations. Ultimately, when, after a lapse of four months, the Government referred the matter to an Industrial Tribunal, the harm had already been done, and this futile and wasteful stoppage of work resulted in a loss of production of over 60,000 tons of cement. However, I am glad to report that it was possible later to work out a settlement with the Chaibasa Works Union on all matters pending before the adjudicator, resulting in a joint request to him to give his award in terms of the settlement.

The great majority of the Company's employees, I can say with confidence, are well-satisfied and enthusiastic workers who take pride in the part they are playing in the progress of this great organisation and its service to the nation."

BONUS

The Chairman announced that the Board had recommended the payment of a bonus equivalent to three months' basic earnings to all employees at the Head Office, the Works and Branch Offices, and concluded by recording the Company's appreciation of the excellent work and fullest co-operation of the staff and operatives.

The Report and Audited Statement of Accounts for the year ended 31st July, 1955 were then adopted and confirmed.

EDITORIAL NOTES

(Continued from page 159)

private sector in industry to claim family relationship between agriculture and industry.

✱

Metal Box's Modern factory

All the modern developments in the techniques of factory-building are embodied and reflected in the new Metal Box Printing Factory, which has just gone into operation in Hyde Road Extension. The building stands on a site of ten acres, which leaves ample space for extensions, and at the same time provides an excellent sports ground for the company's employees. The factory adds 60,000 square feet to the 150,000 feet covered by the main factory in Hyde Road where the manufacturing process is carried out.

In this new factory, primarily concerned with printing tinplate sheets from Jamshedpur, which are subsequently made into tins of various descriptions at the main factory, the complicated process of making printing plates which will, for example print a colour photograph in fine detail direct on to tinplate, is carried on in the air-conditioned second floor of the building which accommodates a range of very complex, delicate and expensive equipment.

Mr Chiswell Jones, the Chairman and Managing Director, and Mr Lindsay, the Commercial Director of the Company, can justifiably claim the major share of the credit for the up-to-date and elegant layout of the factory, which takes company with five other units in Calcutta, Bombay, Madras, Delhi and Mangalore run by the Company and which together represent packaging service for goods worth Rs 60 crores annually.

✱

OLYMPUS

(Continued from page 169)

render the land to Government in return for suitable compensation. Fourthly, the rates of compensation should be on the slab system. Lastly, on the vexed question of ceilings, it is necessary to consider whether a time limit should be set for the carrying out of the programme by the States.

The Council also approved the extension of the principle of co-operation in agriculture, small industries, rural trade and construction. In the opinion of the Council, the main form this co-operative principle should take is that of co-operatives of producers. It also suggested that steps should be taken to extend training facilities and instruction in co-operation in educational institutions.

On the size and resources of the Plan, the Council was of the view that the correct approach to the problem of filling the gap was not to reduce the size or spread it over a longer period but for the Centre and the States to prepare the country to accept courageously the responsibility for finding the resources. It was also pointed out that abandonment later of projects started for lack of resources would be doubly uneconomical. It was emphasised that steps for raising the additional resources should be taken at the commencement of the Plan itself, that is to say, from the budgets that are to be presented shortly. It was also stressed that, since greater tax burdens are inevitably to be imposed under the Plan, it is necessary that tax evasion of all sorts should be plugged vigorously.

It will be thus seen that, while in the political field, conflicts and confusion prevail to an extent unprecedented in recent years, in the economic field, constructive thinking of a high order and a near unanimity on the true ends of our endeavour are to be seen. It is to be hoped that leadership at all levels will make a conscientious attempt to wean the people that look up to them away from puerile wrangles over State boundaries and to direct national and energetic implementation toward serious discussion of economic and social problems.

SOUTH INDIAN NOTES

(Continued from page 173)

its own part in the development of the country.

Government were engaged actively in the task of removing the industrial backwardness of the entire country. As far as the southern region was concerned, the Central and the Madras Governments were irrevocably committed to the huge lignite project which had been estimated to cost between Rs 50 and Rs 60 crores. Mr Krishnamachari also disclosed that an aluminium plant and an iron and steel plant in Salem were distinct possibilities.

Stock Exchanges

LOSSES OVER A WIDE FRONT

Watch-dog Writes:

STOCK markets have generally depicted a nervous tone. Buyers have been scared away by a variety of uncertainties and share values have recorded losses over a wide front. The unsettled political conditions, the prospects of a "heavy" Budget and the nationalisation of Life Insurance business, have aggravated the speculative pressure on the markets. Also, sentiment has been adversely affected by apprehensions regarding settlement difficulties on the Calcutta Stock Exchange.

A sudden landslide was witnessed on the Calcutta Stock Exchange where business done was only of a squaring-up nature.

Lack of fresh support coupled with selling, induced by settlement difficulties at Calcutta, was responsible for a quieter trend on the Bombay Stock Exchange.

The Madras Stock exchange gave an unimpressive performance and the general tone still lacked vigour.

There was little to assist sentiment on the London Stock Exchange where investors displayed a great reluctance to extend commitments.

Wall Street closed heavy with prices showing an irregularly lower tendency, ranging mainly to one dollar or more.

Calcutta

Calcutta, Friday Evening.

DURING the short week under review due to intervening holidays, trading on the local Stock Exchange was generally restricted and prices slumped to new low levels, particularly after the promulgation of the Ordinance by the Government nationalising Life Insurance business in the country. All the earlier attempts, made by the market just to steady up following the return of normal banking conditions, were foiled.

Meanwhile, the Committee of the Calcutta Stock Exchange was taking steps to adjust arrears of outstanding business in clearing shares. Only squaring-up transactions in the six forward scrips were allowed at settlement rates, which were fixed by the Committee. The Committee fixed the following rates for the present clearing, the figures shown within brackets being the carry-forward charges for the next settlement:—Indian Irons Rs 36 (As 1-9); National Jute Rs 30-8 (As 1-6); Burrakur Coal Rs 15-4 (As 0-9); TEXMACO Rs 20-8 (As 1-0); Orient Paper Rs 33-8 (As 1-6) and Indian Copper Rs 6-12 (As 0-4½). The Committee also decided to withhold fresh transactions in Indian Irons and other forward scrips owing to settlement difficulties.

The Gilt-edged market ruled steady; and official support continued in some of the short and medium-dated Loans, 3 per cent 1986 Conversion Loan hovered narrowly around Rs 80-4. Among other Loans, 3 per cent 1966/68 was done at Rs 92; 3 per cent 1957 at Rs 99-12 and 3 per cent 1970/75 at Rs 87-15.

Despite better working results for 1955, Bank shares ruled somewhat quiet on the feeling that the next target for nationalisation would be banks. Punjab National eased off to Rs 48-8 from Rs 48-14 and Hind to Rs 33-8 from Rs 35.

Jute shares met with little or no interest as operators were not generally inclined to enter into commitments due to the renewed firmness of the raw jute section. Amongst the few transactions recorded were Howrah quoting down to Rs 25-10 from Rs 27-4 and National to Rs 30-10 from Rs 31. Kamarhatty met with some enquiry upto Rs 186 and Agarpara upto Rs 12-5.

Activity in the Coal section slowed down and prices were marked down sharply due to general profit-taking. Bengal lost as much as 30 points at Rs 560, while Burrakur were marked back to Rs 15-5 from Rs 15-14 and East Indian to Rs 32-12 from Rs 35-1. Equitable were, however, remarkably steady at Rs 34 with Talcher hovering idly around Rs 8-7.

Except Elains which continued to receive good support upto Rs 27-8 from Rs 27-4, all other Textile shares were generally marked down. Dunbar were quoted at as low as Rs 304 from Rs 318, while New Victoria were freely offered at Rs 1-14. Kesoram moved between Rs 17-2 and Rs 17-8.

Sentiment in the Tea section was comparatively better, thanks to the steady improvement in the prices obtained at the auctions. Turnover was, however, restricted as operators were disinclined to make big commitments, pending further developments in the tea situation. Brooke Bond changed hands upto Rs 20-7; Dhelaikhat upto Rs 18-10; Banarhat upto Rs 329-8; Rasimara upto Rs 33-10 and Teespore upto Rs 24-6.

Sugar shares were practically neglected on continued quieter advices from the commodity market. Bamnugger were the only bright spot having support upto Rs 26-4. SKG Old moved narrowly between Rs 12-15 and Rs 13-3.

Engineering shares came in for heavy selling pressure and prices touched new low levels though the closing rates for the week were a shade better due to some replacement buying and short-covering at lower levels. Indian Irons, after opening at Rs 36-8 and touching a low of Rs 34-6 on Wednesday, finished the week better at Rs 35-2.

Among other Engineering scrips, Richardson were marked down to Rs 25-14 from Rs 26-11, while TEXMACO closed better at Rs 20-10 after touching a low of Rs 19-12 from Rs 21. Despite the dividend being doubled to 30 per cent for the year ended 31st October, 1955, Jessops were pushed down at one time to Rs 59-12 from Rs 62-8, to finish better at Rs 60-13.

Trading in the Miscellaneous section was generally dull and prices of almost all scrips showed the general trend of the market. In the Paper section, Orient finished the week better at Rs 33-8 after touching a low of Rs 32-14 from Rs 33-11. Shree Gopal were marked back to Rs 18-8 from Rs 18-13 with Bengal quoting around Rs 117-8.

In Minings, Indian Copper receded at one time to Rs 6-7 from a high of Rs 6-14, to finish better at Rs 6-10. Orissa Minerals changed hands at Rs 24-2 to Rs 24-6 and Karanpura Development between Rs 20-6 and Rs 20-8.

In Oils, BBP were on offer at as low as Rs 3-15 with IBP marked at Rs 45-12.

Among other scrips, BIC were pushed down to Rs 11-12 from Rs 12-9; Rohtas Old to Rs 21-12 from Rs 22-15; New shares to Rs 20-10 from Rs 22-12; India Steamship to Rs 8-2 from Rs 8-14; Martin Burns to Rs 27-3 from Rs 28-4 and Osler to Rs 14-14 from Rs 15-8. Rallis shed one point at Rs 36-12 with Aluminium Corporation hovering around Rs 9-13. NICCO changed hands at Rs 21-3 to Rs 21-5.

*

Madras

Madras, January 25.

THERE was little change in sentiment on the local Stock Exchange during the past week and the general depression continued owing to further selling pressure and very little buying interest.

Textiles:—This section behaved unimpressively and many scrips were offered freely with buying interest restricted to a few shares. Gnanambikais met with some support upto Rs 132-8, while there was some enquiry for Dhanalakshmis at the market rate. Cauvery Spinnings attracted sellers at Rs 13-2; Jawahars at Rs 9-4; Bangalore Woollens at Rs 565; Buckinghams at Rs 172; Ranga Vilas at Rs 76-8 and Lakshmis at Rs 180. Travancore Rayons were quoted around Rs 15-4.

Plantings:—Although small improvements were noticed here and there, the majority of shares in this section showed further weakness.

In the Tea section, Halleyburias declined further to Rs 25-12, while Coonoors continued to attract sellers at Rs 31. Twyfords were quoted at Rs 22-14. Highlands moved between Rs 15-12 and Rs 15-14 with Periakaramalais quoting at Rs 8-3 and Nilgiris Old at Rs 11-14.

Among Rubber shares, TRTs changed hands at Rs 12-5 to Rs 12-8; Cochin Malabars at Rs 6-4 to Rs 6-7 and Vadakundams at Rs 26-10. Midlands were pressed down to Rs 18-14.

The announcement of the dividend being doubled to 20 per cent had no effect on Kumergodes, which were offered at the market rate. Consolidated Coffees eased off to Rs 20-7 from Rs 20-12, while Coffee Lands hovered idly around Rs 17-10. Cachcherionys moved narrowly between Rs 5-6 and Rs 5-8 with Chandramalais quoting Rs 5-6-6.

Miscellaneous:—Business was small in this section. Andhra Cements closed lower at Rs 159 and "B" shares at Rs 13-14. India Cements were quoted at Rs 32-14, while Travancore Cements were offered at the market rate. In the Chemicals section, FACTs had good sellers at Rs 7-2 with Mettur Chemicals attracting sellers at the market rate. Parrys were, however, bid higher at Rs 5-10. Spencer Ordinaries changed hands at Rs 18-12 o.d.

*

London

London, January 25.

UNECONOMIC uncertainties again dominated sentiment on the London Stock Exchange where prices steadily drifted lower as investors generally displayed a great reluctance to extend commitments. Selling was, however, speedier toward the close, thanks to a sharp advance on Wall Street and expanding business in UK shipyards.

The outstanding feature was a strong advance in Oil shares due to a Fuel Efficiency Conference statement that UK consumption of oil was likely to expand rapidly. British Petroleum gained 5s, while Shell advanced by 4s. Selective buying brought gains to certain of the leaders, including Rolls-Royce, Hawkers and Great Universal Stores. Kaffirs lost their firm tone, while Coppers gave way after initial firmness.

Talking of higher interest rates was the chief factor in the Giltedged market and small selling on an unwilling market brought falls. Following were the closing rates of selected stocks and shares:—2½ per cent Consols £54¼ (£55—previous week); 3½ per cent Loan £74 (74½); Imperial Chemicals 45/9 (45/10½); Imperial Tobacco £3 1/16 (£3 1/32); Calcutta Electric 20/4½ (20/4½); Calcutta Tramways 25/6 (25/6); Assam Teas 20/9 (20/3); Shell Transport £6 13/16 (6 21/32); Indian Copper 10/0 (10/3).

*

New York

New York, January 23.

AFTER initial indecision, Wall Street continued to ease, reflecting Presidential re-election uncertainties. The market rallied early following its recent softness on short-covering and investment demand, which was attracted by the better yields available.

Industrials were the leaders. Featuring trading was Texas Company which, after advancing by $3, eased at the close due to realising following the announcement of a proposed stock-split. There was a significant enlargement in liquidation and this company showed a final loss of $4¼. Motor issues were under pressure with Chrysler declining over $3 though the loss was trimmed back to slightly over $2. Unsold stocks in dealer's hands suggested that sharper car production cuts might be ahead. Some support came into the Steel section following a new production high last week.

Following were the closing rates:—Anaconda Copper $68¼ ($68¾—previous week); General Motors $44 ($44) and US Steel Common $54¼ ($54¼).

*

In Brief

Bhopal Sugar has maintained the dividend at Re 1 per share for the year ended 30-9-1955.

*

Cawnpore Sugar has maintained the dividend at 7½ per cent for the year ended 31-10-55.

WORLD OF FINANCE

(Continued from page 161)

are shown at Rs 51.24 crores against Rs 51.59 crores.

FINANCE FOR EXPANSION PROJECTS

Speaking about the very substantial capital expenditure entailed by these expansion projects, Shri Khatau said that the ACC had entered into a cash-credit arrangement with the State Bank of India enabling the Company to borrow up to a limit of Rs. 4 crores against the security of its own 5% First Mortgage Debentures deposited with the Bank. He also said that the Extraordinary General Meeting to be held later that evening would consider the issue of 6,35,928 shares of Rs. 100/- each to be offered at par to existing shareholders in the ratio of one new share for every two shares held, subject to the sanction of the Controller of Capital Issues. This additional finance, supplemeted by the Company's present and prospective internal resources, the Chairman observed, would be adequate for the purpose of attaining an annual production of nearly 5.2 million tons.

STATE BANK OF INDIA

NOTICE

The Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Wednesday, the 29th February 1956, at 4-30 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1955 and the Auditors' Report on the Balance Sheet and Accounts.

John Matthai,
CHAIRMAN.

THE CURSE OF OVERFULL-EMPLOYMENT

(Continued from page 161)

Commission installed at one of the Ports at considerable expense a grain elevator, to allay the scarcity of dock labour. But the Transport and General Workers' Union insist that the same number of men should be employed as before for handling the grain which is now handled by the elevator. It is not as if there could be a question of dismissing the men who have become superfluous for the performance of this particular job. There is plenty of other dock work for them. And even if they were dismissed, there are thousands of firms who would gladly re-employ them. Nor are most workers opposed to change. Year after year, a very high proportion of workers change their jobs of their own free will. But they are determined to refuse to be moved from their jobs by their employers, even if their employers happen to be a national board like the Transport Commission

The number of accidents has increased considerably on the British Railway during recent months. This is due in part to shortage of maintenance staff and in part to shortage of signalmen. In spite of this, the National Union of Railwaymen objects to the repair of the railway lines by outside contractors, and to the adoption of automatic signals.

At the Smithfield meat market, a retail butcher made a heroic effort to assert his human rights by loading on his van the modest quantities of meat he purchased, instead of engaging overpaid licenced porters for that task. He took the matter before a Law Court, and the judgment confirmed that he was entitled to dispense with these porters. But the porters threatened with strike, so the wholesalers refused to sell any meat to this butcher unless he engaged porters. The matter has now been put before the Lord Mayor, and there is a demand for Parliamentary inquiry into this monopolistic practice. If the butcher, Mr Durrant, should emerge successfully from this struggle, his name may go down in history with that of John Hampden, who resisted an equally obnoxious tyranny three centuries ago by refusing to pay ship money. The tyrant of those days, Charles I, imposed ship money unlawfully. The tyrant of our days, the Smithfield branch of the Transport and General Workers' Union, seeks to impose its arbitrary ruling in flagrant defiance of the ruling of one of the Judges of the Queen, Charles I's descendant. The tyrant has changed but the attitude of defying the law of the land remain the same.

An impending Government's Bill, seeking to reduce restrictive practices by associations of business firms, is confined to restrictive practices of one side of industry only. The Government considered it politically impracticable to try to interfere with the restrictive practices of labour. But once the Bill becomes law, the moral case for doing away with the worst abuses of Trade Union on monopolies will become much stronger. It is the Prime Minister's intention to contact the Trades Unions Council after his return from Washington, to seek to obtain some agreed modification of such restrictive practices.

But the Trade Union leaders themselves are largely powerless against the determination of the rank and file to uphold these practices. For instance, although most responsible Trade Union Leaders are in favour of importing Italian mine workers to increase the coal output, they have encountered stubborn resistance on the part of the branch unions, and the scheme had to be dropped.

With the increase of the degree of overfull employment, the extent to which the monopolistic position of workers is abused is increasing progressively. Today, the state of affairs is incomparably worse than it was even a year ago. Discipline in industry is deteriorating, and conditions in many instances are verging on the intolerable. In such circumstances, it is not at all surprising that many employers and Conservative politicians would like the return of a certain degree of unemployment. This has now become an emotional issue, however, and arguments that the present abnormal state of affairs must be brought to an end, if possible without creating unemployment, but if necessary through creating unemployment, are brushed aside with contempt. Yet, it may have to come to that, for, unless the trade unions exercise some self-restraint, the danger of runaway inflation is bound to lead to drastic deflationary measures. —(Copyright)

For the Investor

Settlement Blues

***Investment Gossip*:**

ONE

A BULL in a china shop was reckoned dangerous; there was no knowing the crockery that would suffer damage.

Today, on the Royal Exchange, a bull exiting from the arena is seen to be doubly dangerous. For, this animal succeeds in calling halt to all Stock Exchange activity in the city.

I shall be brief; the swift and sizeable decline in prices unnerved a prominent bull operator; and his offer was to pay the difference (on the basis of a certain price) and get out of the transaction.

Crisis there most certainly was. Does the Stock Exchange Association have powers to deal with it? Yes.

Conditions were most difficult. Was it the Stock Exchange Association's duty to do something about it? Yes.

In the eyes of the Association, there is no question of favouring the bull or the bear; all that is important is that their decisions shall be scrupulously fair, and that the suggestions, upon implementation, will restore normalcy.

It is the Association's duty to arrange a settlement. Given any solution that has in it something of compromise, you can always find sections opposed.

This is what has happened. Settlement, Indian Irons, at Rs 36? Bosh, cry the bears; we can buy all the Irons we want from Bombay at a cheaper price.

The answer does not convince. Nor does the plea that the decision places them in the position of sellers who might be forced to disgorge shares (when the market improves) to the bull who demands delivery.

After all, they that are the bears have in the past fed sumptuously on satta; and, in selling short, they were usually disposing of goods which, in the first place, they never had.

A settlement has been suggested. It is, by all tokens, bona fide. There is little excuse for certain sections to feel churlish, and thereby to prevent normalcy's return.

The Print—and Not the White Between the Lines

***Investment Gossip*:**

TWO

"IT reads so much between the lines that it forgets about the print. It can deal with the half truth, half false...It can handle frauds or boobs or....twisters...."—James Reston.

In America there seems, as reported by James Reston in the New York Times, a strange inability on the part of Washington to understand Mr Eisenhower. If he should say anything, the immediate reaction by politicians in America's Capital would appear to be to read between the lines of his statements.

In so doing, as Mr Reston reports, the politicians of Washington quite forget, completely overlook, the straight forward sentiments that the US President wants to convey.

The habit to read between the lines, to the obliviousness of actual black and white, is a failing of the speculative interests around Dalal Street and Royal Exchange as well.

Give them a blunt Government communique; or a statement of policy that is frank and direct, you will still find that Phatkaram Pagla will be interested only in the so-called "inner" significance that he has to read for himself between the lines. During the past week much has happened whose meaning is likely to be distorted by Phatkaram Pagla and his tribe—seeing that they are so prone to discover new meanings in the white space between the lines of the black print. Let us be clear in our minds that the objective analysis of these statements leads to conclusions quite at variance from any that might be suggested by the speculative tribe.

First, then, in this view, let us consider the Government decision on the price at which the new TISCO shares are to be issued. The controversy has raged for some time as to the rate at which the issue should be made.

It has been no secret that those associated with the management of the company have been pressing for the issue at par. Nor has the Government predisposition to the issue at a substantial premium been anything of a State secret.

What was of moment in this controversy was not so much the decision itself, but the policy that would be followed in the years after such issue.

On the part of Government, it must, of course, have weighed heavily with them that the issue of shares at a premium might facilitate the task of the company as far as concerns the gathering of resources for the development now

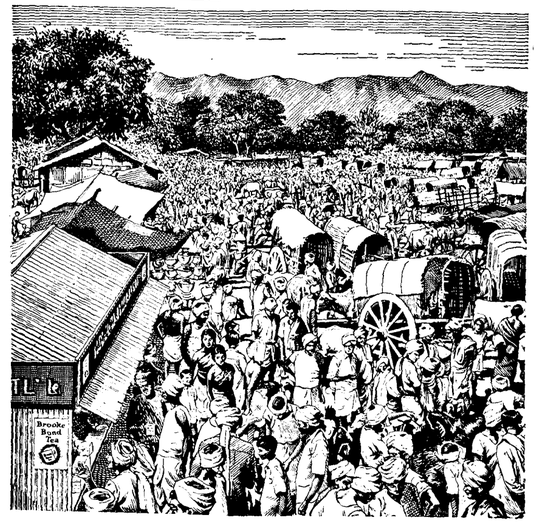
HIGHLIGHTS

A camel just will not pass through the eye of a needle. You might experiment if you disbelieved us, but we are afraid it is beyond human ability.

Our thoughts ran on these lines, when we thought of the ton upon ton of machinery and equipment which, over the next five years, will have to be unloaded at Calcutta.

In one way, we feel quite flattered; if this city is to have an enormous strain imposed on its port facilities, it is only an index of the great industrial development in store for the hinterland.

But, for the same reason, we are somewhat anxious as well. It seems to us that even the feat of a camel, etc. is possible; but not, clearly, will Calcutta's port facilities be adequate to handle the traffic earmarked for it.



True, the facilities are to be augmented; and reports are that development plans for Calcutta Port are awaiting sanction.

Even then, however, it is our understanding that the one or the other of the great projects—maybe it will be the TISCO expansion programme, perhaps the Indo-Russian steel plant—will stand to suffer delay in the off-loading of equipment—if Calcutta alone is to be the port to handle all such imports.

We cannot afford to take risks in this matter, we dare not complacently assume that Calcutta Port will rise equal to the task. The risk is too great: delay, should it occur, might seriously affect target dates of the Second Plan.

What, then, should we do? We have suggested the answer. It lies in the creation of a two-way, mechanical port at Geonkhali. The Leading Article elaborates on this theme.

Around India with Brooke Bond

Pollachi Shandy (South India)...

Twenty-eight miles to the south-west of Coimbatore is situated the little town of Pollachi, the scene of South India's biggest weekly shandy or market. The shandy is held every Thursday at a vast open space in the heart of the town. From far and near, over 50,000 people visit the shandy and buying and selling goes on from early in the morning till late in the night. It is a common saying that one can get anything at Pollachi shandy—from a pin to an elephant!

Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

to be taken in hand. If shareholders are to benefit—if not tomorrow, some tomorrows hence—from the greatly enhanced earning capacity of TISCO, Government might have suggested that it would be proper for shareholders to contribute in cash today in better measure.

On the part of the company, the attitude might have been that, with the seeming "freeze" on steel dividends, the only way to pass on the long-awaited, over-due benefit to shareholders would be to issue the rights shares at a favourable par.

But now, we have the decision—the shares are to be issued at Rs 105; in the result, the premium will fetch nearly Rs 4 crores of additional capital. To that extent, certainly, TISCO's task in securing finance has been lightened.

But, as I have said, what is really relevant is the policy that we may expect, partly as it relates to the company, but largely as it pertains to Government, in the years after the issue has been made.

At the last Annual General Meeting of TISCO, Mr J. R. D. Tata, the Chairman, stated that, with regard to the dividend-paying capacity of TISCO, the company would not find it difficult to offer a return to the shareholders at roughly the same yield pattern as then obtained on the ruling share quotation for Tata Ordinaries.

At that time, Tata Ordinaries offered a yield of something less than 5 per cent. The current price of Tata Ordinary is Rs 222. The ex-rights quotation, on the basis that the new issue would be at Rs 105, would be around Rs 160. At Rs 160, a dividend at Rs 7-8 per share would give roughly the same yield as obtained at the time when Mr Tata made his Chairman's speech.

The ordinary dividend for 1954-55 absorbed Rs 1.35 crores—after Rs 3.77 crores have been ploughed back into the company by way of accretion to reserve. On the new capital base, an ordinary dividend at Rs 7-8 per share would require Rs 1.93 crores; and this, as we have seen by the large transfer to reserves in 1954-55, it will be well within the ability of the company to pay.

Why, then, should we have a controversy about the rightness or wrongness of the issue at Rs 105? So long as Government, in insisting on the premium, are aware of the need and of the implicit promise to the shareholders on this account to pay a commensurate rate of dividend, we need not worry about the higher issue price.

At this stage, therefore, the Government decision on the issue price is no news that is startling. There is time enough to assert that the shareholder has not had a fair deal—that time would be if, for the 1956-57 dividend, Government refused to allow a dividend commensurate with the premium price of Rs 105.

It is to be expected, I suppose, that the TISCO issue is imminent; and the new Tata Ordinaries would, presumably, rank for dividend as from the 1st April, 1956.

We may now turn to another aspect of steel news which is of considerable importance to the shareholder. I here refer to the steel retention prices.

An announcement on Wednesday stated that the Tariff Commission's recommendations on steel retention prices have been accepted by Government, and that the average price has been fixed at Rs 393 per ton. The revised schedule of prices would remain in force from April 1, 1955, to March 31, 1960.

This marks an increase of Rs 8 per ton over the revisions that Government announced last May pending enquiry by the Tariff Commission.

It may be recalled that, in May last year, the retention prices of both the producers were raised to the uniform rate of Rs 385 per ton. While IISCO benefitted only by Rs 7 per ton, TISCO was better off to the extent of Rs 54 per ton.

At that time it was made clear, in their enquiry, the Tariff Commission were to be guided by the necessity for the companies to finance from internal resources the current and additional expansion programmes which the steel producers were to undertake. The latest communique stresses that this guiding principle has influenced the Tariff Commission's recommendations. It also makes it clear that the prices are adjustable if, for no fault of their own, the steel producers should suffer an increase in costs as a result of changes in railway freight, prices of coal and other fuel, raw materials, stores or machinery, and labour costs.

Furthermore, the Tariff Commission have also recommended that, should IISCO find Works costs in the last two years of the quinquennium to be higher than those assumed by the Commission to such degree that the special element in the retention price for the purpose of internal resources is reduced for that reason, IISCO may apply to Government for a review of the retention prices.

I may take this opportunity of stressing that it would have been much more graceful on the part of Government to allow an even larger element in the retention price for internal resources; but, at the same time, the new rates are by no means unfavourable — especially when we consider that assurances have been given of revision in the levels, should the need arise.

After all, what matters to the companies is that Government should keep their word about the special element in the retention price. In this context, the latest announcement on retention prices indicates Government bona fides; for, over and above the full acceptance of the Tariff Commission's recommendations, Government have also made it clear that they would be willing to review the retention prices—if the quantum of the special element is reduced because of higher costs.

All this is what is indicated in the black print on two important pieces of steel news. The investor, should he succumb to the habit of reading between the lines, may not find much to cheer him. But, if he sticks to the black print, heartening news has been forthcoming for the Investor.

Particularly Good

Investment Special:

Banks had a good year. A well managed bank, therefore, had a particularly good year in 1955.

The Hind Bank Limited has increased its profits sharply from Rs 6.56 lakhs to Rs 10.87 lakhs.

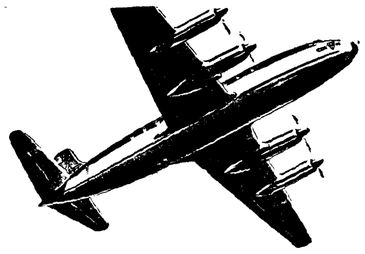
And this is how management disposed of the increased profits.

Firstly, provision for taxes was raised from Rs 2.8 lakhs to Rs 4 lakhs.

Secondly, the transfer to Reserve was increased to Rs 2.5 lakhs from Rs 1.5 lakhs.

Thirdly, the carry-forward is over Rs 1¼ lakhs higher than the amount brought in from the 1954 accounts.

Finally, the dividend has been doubled to Rs 3 per share.



Suggestion, therefore: greater investor interest in Hind Bank.

The brief communique on the Hind Bank's working results has whetted my appetite: I am (it need hardly be said) looking forward to the complete accounts.

mium cannot altogether be ruled out. The company is still awaiting the reply from the Government.

It is learnt that arrangements to implement the scheme for the issue of Bonus shares have been finalished by the Belapur Sugar Company.

An Extraordinary General Meeting will be held on the 21st February to pass the following resolution: That Davenport & Company will be requested to resign their office as managing agents of the Sonai River Tea Company on payment of Rs 75,000 as compensation for the loss of such office'.

£ R$

Scindia Steam Results

DESPITE adverse working results for the year ended 30th June 1955, the Scindia Steam Navigation Company has maintained the dividend at As 8 per share.

During the year under review, the conditions of cargo working have shown further deterioration due to continued slow working of Port and shore labour and congestion at various Ports and also due to serious and unexpected detention of rice loaders at Rangoon, caused by heavy rejections of cargo by the inspecting officers. Moreover, some of the ships were delayed at the UK Ports and had to be diverted to the Continent owing the dockers' strike and the congestion caused thereby. The extra loss of time suffered thereby in comparison with the conditions prevailing in the preceding year is about 380 voyage days.

Again, the costs of stevedoring and other cargo working expenses, marine dues, etc., have shown further rise, especially at Calcutta due to the very marked 'go slow' of labour, and at Madras owing to enhancement of wages and introduction of decasualisation of stevedore labour.

Further, due to the delays in the delivery of ships by the Visakhapatnam shipyard, it became necessary to charter more tonnage than in the previous year and to postpone the special surveys of 4 owned ships to the following year by securing the necessary extensions from the authorities concerned.

For obvious reasons, freight income, during the year, has shown a decline to Rs 8.88 crores from Rs 9.18 crores in the previous year. The net profit, before Depreciation, amounts to only Rs 1.07 crores as against as much as Rs 1.44 crores. The Depreciation amount has been reduced to Rs 74.70 lakhs from Rs 81.32 lakhs.

Under the recent amendment in the Income-Tax Act, a Development Rebate of 25 per cent in respect of new ships delivered during the year is now allowed as a deduction while determining assessable profits. Accordingly, the directors have considered it advisable to set aside a sum of Rs 11.00 lakhs for Development Reserve. No provision is, however, made for Taxation Reserve as in the case of the previous year when a sum of as much as Rs 29.50 lakhs was set aside against this item. The dividend of As 8, now recommended, has also been made only after transferring a sum of Rs 11.75 lakhs from Dividend Equalisation Reserve.

According to the directors' report, the company has ordered, in Germany, further six ships each of 9,500 tons deadweight. Three of these ships are due for delivery in the second half of the current year and the other three in the first half of 1957. The company has also ordered one ship of about 3,300 deadweight tons for the West Coast trade. She is expected to be delivered in June next. On completion of the present tonnage programme, the total loan from Government, in respect of the eight overseas ships ordered from Germany, will be of the order of Rs 8½ crores.

£ R$

Dividend Maintained by Cawnpore Sugar:

The Cawnpore Sugar Works Limited has produced excellent working results for the year ended 31st October, 1955. The quantity of cane crushed by both the factories-Gauri and Marhowrah — during the season 1954-55, has shown a considerable increase over that crushed in the previous season: and in the case of Gauri factory, the cane crushed is the highest ever recorded.

The total quantity of cane crushed by both the factories, during the year under review, is higher at 56.77 lakh maunds as against only 30.42 lakhs maunds in the previous year, while sugar manufactured amounts

(Continued on page 224)

Investment Briefs:

In Bird-Heilgers Jute group, only Northbrook and Union have maintained the dividends at As 12 and Rs 5 per share for the half-year ended 30.9.1955. Auckland has reduced the dividend from Rs 6 to Rs 4 per share; Dalhousie from Rs 3 to Re 1; Kinnison from Rs 7 to Rs 6; Lansdowne from Rs 5 to Rs 2 and Lawrence from Rs 5 to Re 1.

In Andrew Yule Jute group, Budge-Budge has halved the dividend to Rs 2½ per share for the half-year ended 31.10.1955, while National has reduced the dividend from Re 1 to As 12 per share.

'The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right.'—The Analects of Confucius.

Geonkhali—Answer to Port Bottleneck

IT is to the good that we are able to plan in ambitious terms; but, as Sir Jehangir J. Ghandy recently pointed out, plans for industrial development may suffer some delay in implementation if, as he feared, the transport bottleneck prevented the expeditious despatch of the many items of machinery and of commodities that are necessary before a plant can be brought to productive pitch.

As far as apprehensions about the inadequacy of transport are concerned, there is, fortunately, the gratifying aspect that the planners in New Delhi are daily becoming more aware of the necessity to stint no rupee in the development of transport. While this fact, again, is to the good, it is a matter for regret (and one that might cost us dear in terms of time, unless Government move in the matter) that not sufficient thought is being paid to the improvement of port facilities.

We understand that the Calcutta Port Trust authorities have projected various schemes which could go some way in meeting the increased demand for facilities that will no doubt be made of Calcutta. But, whatever be the size and scope of the development scheduled for Calcutta, and now awaiting sanction, it seems scarcely possible that this Eastern port will be in a position to deal with the greatly diversified and magnified demand that it will be faced with in the next quinquennium.

Development of heavy machinery industries in the Second Plan is largely in the area that represents the hinterland to Calcutta. The more important of these may be listed.

(1) Durgapur is to have a coke oven plant, a power plant and the projected steel plant, if the talks with the British interests bear fruit.

(2) Indian Iron & Steel Company Limited are already embarked on plans to raise productive capacity to one million tons.

(3) The Tata Iron & Steel Company Limited have been given the green light for a scheme to raise their production to two million tons ingot.

(4) Rourkela in Orissa is the site for the Indo-German steel plant of a million tons ingot capacity.

(5) The Russians are going ahead with the project at Bhilai, in Madya Pradesh, for a steel plant of another million tons capacity.

(6) The ancillary foundries for machinery manufacture will necessarily spring up.

(7) Plans have been approved and the contract signed for a ferro-manganese plant (initial capacity: 30,000 tons) to be established and run under Tata auspices at Joda in Orissa.

(8) Cement capacity in the eastern part of the country is to increase at mushroom speed.

(9) Indian Aluminium have their project for Hirakud.

Each one of the projects thus catalogued will call for substantial imports of heavy machinery. Fears have been expressed that even a "developed" port of Calcutta would be unable to bear the traffic. In this regard, we may mention that we have it on excellent authority that the contractors to the TISCO expansion project, Kaiser Engineers, seriously considered the desirability of constructing a harbour to ensure that equipment shipped in this behalf would not have the sorry experience of being delayed by port bottleneck.

When it is realised that Calcutta has only one heavy duty 200-ton crane; and when, moreover, it is borne in mind that the crane is as temperamental as dock labour in the city, it will be clear that there is urgent need to think of creating new port facilities to cater to the specialised demand that will arise consequent to the projects in plenty in Calcutta's hinterland.

It is thus that we revert to a scheme that was originally mooted in the columns of Indian Finance. It may be recalled that, some three years ago, we had given a scheme in its details for the building of a port at Geonkhali—a port that would be specially equipped for exports of iron ore. The tempo of industrial development as it will obtain in the next five years makes a forceful case for a two way port at Geonkhali.

When Government approved plans for a port at Kandla, they were, it may be assumed, motivated by three or four important factors. Firstly, the loss of Karachi was sought to be made up; secondly, it was hoped to reduce the burden on the facilities at Bombay; thirdly, Kandla was to cater to the particular requirements of a large industry being set up nearby —the oil refineries at Trombay; and, finally, it was also true that another major port was necessary to India, especially as we were on the brink of great development activity.

What is strange is that there have not been similar reflections about the Eastern part of India. If anything, the need for creating new facilities has been the greater around this area. Moreover, although original intentions had been to route some of the plant for Bhilai through Vizagapatam, the Southern port as an off-loading centre has been found to be unsuitable, and present plans call for all such importations to be made through Calcutta.

It would be folly if we were to be complacent about the ability of Calcutta port to handle the substantially increased traffic; and it would be dangerous to postpone action on a subsidiary port.

There need be no fear that, should Geonkhali come into being, Calcutta's importance will be diminished. On the contrary, we suggest that Geonkhali, as a subsidiary port, should be under the care and management of Calcutta Port; the fact that there is already an efficient working Administration will make it possible for the new port to be built in swifter time. In the result, Calcutta's importance will increase—and not otherwise.

From the point of economy, the construction of a fully mechanical port at Geonkhali will be of great value. It would, naturally, be planned on the basis that its duties and responsibilities will be specialised. On the import side, heavy duty cranes will be responsible for off-loading the vast quantities of plant and machinery that will be destined for addresses in Calcutta's hinterland; on the export side, arrangements could be made, at no great capital cost, for the automatic loading of coal and iron ore. Exports of both these commodities could be stepped up; and the creation of the new automatic facilities will alone be sufficient incentive for such increased shipments—and the exchange earnings thereon will not be inconsiderable.

If the Second Five-Year Plan is not to become one that will extend over a larger number of years, and if, therefore, Indian industrial development is to proceed smoothly and according to target dates, an indispensable pre-requisite is a two-way, mechanical port at Geonkhali. Nor can we afford to leave behind too many tomorrows before we finalise plans for the vital subsidiary port to Calcutta.

Guidance for Sugar Industry

THE Congress of the International Society of Sugarcane Technologists, which has been in session in New Delhi since January 25th, can make a significant contribution to the future development of India's sugar industry. The Congress has discussed new techniques of sugar manufacture, sugarcane growing, cane-juice clarification, the manufacture of by-products, sugar engineering and, what is of exceptional importance to India, the problem of cane pricing.

The pity is that some of the vital suggestions intended to reconstruct the foundations of the industry on more scientific lines have come up against the opposition of vested interests, so that there is a certain sense of futility over the deliberations of persons who are remote from the seats of authority. A large-scale shift of sugar factories, which has long been considered indispensable for a general improvement in outturn and reduction in costs, has yet to be seriously attempted. The freakish trends and vicissitudes in sugar production in post war years have remained a perplexity and challenge to the Administration. We reluctantly draw attention to these facts in the hope that the authorities concerned will not turn a deaf ear to the valuable suggestions which the Congress could give.

The two most pressing handicaps of the Indian industry lie in the comparatively poor yield of cane and its low quality. The problem of yield is aggravated by the fact that it is lowest in the region which contributes nearly three-fourths of the crop. In Bihar and Uttar Pradesh, the yield averages 14 tons per acre while, in South India, the average is more than double the quantity. In the cane growing areas of Madras and Andhra, the yield is anything between 45 and 50 tons while, in Bombay, the 18 months crop has secured as much as 55 tons per acre on an average.

Average sugar content also shows regional variations. While in Northern India, the sugar content ranges from 11.5 to 13 per cent, and in Madras it is lower around 11.5 per cent, in other parts of India, 13 to 14 per cent is obtained. As the technique of fixing cane prices has also interfered with the quality of the cane, a satisfactory and lasting solution to this problem does not lie in the hands of the technical man alone.

Comparatively, Indian sugar is dear. The prospect of cheapening it through reduction in taxes is far too distant. According to Dr D. R. Narang, the General Chairman of the Congress, though there is scope for modernising the factory machinery, the technical efficiency of the manufacturing side is high and the problem of cost has to be tackled mostly through yield and quality.

According to Dr Harry Evans of British Guiana, mere concentration on the quantity of cane produced is not advisable, while Mr N. J. King from Brisbane thinks that, with the correct methods of fertilisation, the yield would go up by at least 30 per cent in the course of three or four years.

Indigenous research has already made effective contributions in the shape of superior breeds of cane, new technical processes in the manufacture of sugar and in plant equipment, as also in the utilisation of molasses and bagasse in the manufacture of by-products.

It is clear that the problems of the industry are far from simple; nor could they be tackled in mutual isolation. The value of the Congrsss of the International Society of Sugarcane Technologists lies mainly in the opportunity it has provided for a first-hand understanding of these problems by the world's leading experts, and for the exchange of ideas from which a synthesised and practical approach could be evolved.

Nationalised Insurance—A General Study

By AN INSURANCE MAN

THE element of surprise, if at all, in the nationalisation of life insurance was limited to its timing, not in its actual coming into being. Various ministerial pronouncements publicly acknowledged for many months that the subject was being seriously considered. From the historical standpoint, nationalisation of life insurance is nothing more than the natural outcome of progressive State control reflected in each amending legislative enactment from 1912 onwards. The main keynote in the successive legislations and regulations made thereunder was increasing Government control with consequential diminution in private initiative.

Nevertheless, complete state trading was never seriously considered, although the threat was held out by the Select Committee, whilst considering the amending bill of 1950, that, unless insurance companies behaved themselves, there would be no alternative for the Government but to take insurance over. Insurance companies did not take the warning seriously nor did they, as a rule, behave. Numerous complaints coming to the ears of the Government gave the rather academic question of nationalisation a positive character. The thought process was accelerated by the adoption of the goal of a socialistic pattern of society. The Bharat Insurance scandal and many other lesser unpublished scandals presumed to be with the Goverment of India climaxed the issue.

As is well-known, life insurance differs from any other industry in that in it are locked for many years the savings of the millions to be jealously guarded by those on whom the people repose the trust. A welfare state, however, cannot, by its own declared objectives, afford to take the slightest risk. It, therefore, feels that common good can best be achieved if it directly becomes the custodian of the savings rather than to leave them at the discretion of the few, however honest. The savings of the people thus take the character of loans to the Government to be ploughed back again for creation of socially necessary utilities. The utilisation of funds by private sector is necessarily mercenary with or without limitations of the Insurance Act. It is utilitarian when in the hands of the State.

Nationalisation is thus the natural result of these basic considerations weighing with the Government of India. The surprise expressed by many was largely born of the hope, wishfully entertained, that Government of India would not dare, with hands so full, to undertake a vast venture of this kind. The other consideration which weighed with them is that the Government of India would not possibly wish to expose with all ruthlessness their acquisitive character, particularly when foreign interests are involved.

The acquisitive role of the State, in this context, admits of some explanation. It cannot obviously allow foreign insurance companies to operate in India unhindered whilst acquiring all Indian interests. That would have amounted to discrimination of an invidious kInd. Nevertheless, forcible closure of a source of profit, yielding returns for many years, is bound to react unfavourably on foreign investments in this country. New investments are likely to become more shy. If Government are not worried over such obvious possibilities, it can be presumed that they have equally attractive, if not better, alternative sources of foreign capital investments.

By the fact of nationalisation, Government of India have projected themselves—in many cases quite powerfully—into numerous private business interests in whch life companes had investments. In many cases, ownership of shares can be quite powerful if all the investments of all life companies are lumped together. The large inroad the State thus makes in the domain of the private sector invests the State with a new power.

In the matter of life insurance itself, the first casualty must necessarily be service despite what Sir Chintaman Deshmukh may wishfully hope. Insurance is above all a personalised undertaking. Its content are service and security. State management cannot but be impersonal, lacking the human urge so essential for the individual to make investment of this nature.

In a country where insurance continues to be a forced sale, it will lead to diversion of possible falling off in insurance will disrupt economic security. Insurance keeps the economic fabric of the community in a state of constant repair. Its possible falling off following from disruption in service will mop off savings, thus largely defeating the purpose of nationalisation as a fiscal weapon.

The second important effect of nationalisation is loss of all initiative in investments in private sector, the initiative now passing on entirely in to the hands of the State, which will decide the nature, form and quantum of investment of life funds in the private sector. That will be conditioned by the requirements of the Second Five-Year Plan. It has been the objective throughout to coalesce the two sections into one cohesive whole. In the attainment of that objective the hands of the National Development Council will be considerably strengthened.

Apart from the fact that many persons will be denuded of power, nationalisation of insurance deprives many of their standard vocations and creates uncertainty in the rest. The technique of business writing will undergo sweeping changes. The absence of competition will render a part of the field force redundant. Vocations will, however, be assured to most not necessarily in the present set up, but in all corners of India. The untapped insurance in rural and industrial sectors is considered many times larger than the limited field offered by urban life.

Law for the Layman

Position of third party in breach of contract of personal service

By K. N. VISWANATHAN

THIS branch of the Law which is of immense practical importance to the layman, came up for review before the Court of appeal in England in Jones Brothers (Hunstanton) Ltd. v. Stevens reported in (1954) 3 W.L.R. at page 953.

The layman ought to know how far he can safely employ a servant without violating the right of another person. Because, the servant whom he employs may be under a contract of service to another person; the moment he is appraised of this fact by that other person, it is his duty to send the servant back to that other person; otherwise he would be liable in damages for continuing to employ the servant of another after notice.

The facts of this interesting case taken from the judgment of Lord Chief Justice Goddard of England are:—"The plaintiff company have a business at Hunstanton and carry on a restaurant and also a fried fish bar. The defendant is an hotel proprietor in the same town and the engagement of servants for the hotel is undertaken by his wife on his behalf. On July 22, 1952, the plaintiffs' director engaged Nicholson as a fish frier and apparently it is not easy in these days to get a competent man for this particular work. He was engaged by the week though, no doubt, the plaintiffs hoped he would stay in their service for the summer season. His wages were 8/10/- a week. He entered on his service and stayed there till August 6, 1952. At 11 A.M. on that day Nicholson asked if he could go out for a short time. On getting permission he went to the defendant's hotel and applied to the defendant's wife for the job of assistant chef. She agreed to engage him and he was to start work the following morning at a wage of £7 a week. This was later made subject to his obtaining the permission of the labour exchange under the Notification of Vacancies Order 1952. Considering that his new wage was 30s. less than he was paid by the plaintiffs, it is clear, as the judge held, that Nicholson certainly did not intend to return to the plaintiffs' service. In fact, however, he did return that afternoon because in the hurry of leaving he had left his watch behind; he went back and got his watch and worked till closing time that day, but that evening, without a word to the plaintiffs, he finally took himself off about 6 P.M. He obtained from the labour exchange a permit to enter the defendant's service and, on producing that to the defendant's wife the next day he entered on his work at the hotel as assistant chef.

About 6.30 on the previous day, Myers, the plaintiffs' director, having discovered what was afoot, went to the defendant's hotel and told him that Nicholson was in the plaintiffs' service and protested against the defendant taking him on, and followed this up by sending a letter to a like effect which was delivered the next morning before Nicholson presented himself for work. So there is no doubt that when the defendant retained him in his service

(Continued on page 207)

Editorial Notes

A Deplorable Rift:

The emergence of rival political parties in power in the Union and States Governments in a federal set-up is a favourite theme for misgivings in contemporary political speculation. Where no violent ideological differences are involved and it is more or less a question of Tweedledum and Tweedledee, such misgivings have obviously little practical significance. In some States like Australia, the possibility of such ideological feuds between the Union and State Governments is also ruled out through a constitutional ban on militant leftism.

India is the only federation where the States enjoy a large measure of real power and where the possibility of a positive challenge by a State Government run by a rival party to the Union Government is most real. The situation which has evolved in the Congress organisation since the middle of January is a dark portent. What has happened indicates a possible line of development which may be even worse than a fight between governments.

There was a sudden crack in the most powerful all-India political party. The repercussions included the resignation of the Union Finance Minister who, though subsequently persuaded to withdraw the step, has not hesitated to record his disapproval of the way in which the Union Government handled the reorganisation of the Bombay State. He would have persisted in resigning, if the Maharashtrian Pradesh Congress Committee had not resiled from its original stand.

For a little while, what obtained was the highly anomalous position of the MPCC asking for the resignation of Legislators and Ministers and succeeding in securing overwhelming response, the Congress Working Committee challenging the MPCC directive as unconstitutional and many of those who resigned refusing to rescind, in spite of the Working Committee's resolution.

The breach would have continued if the majority in the MPCC were not impelled by the magnanimous and sagacious thought of putting the Congress above the cause of Samyukta Maharashtra. But the Pradesh Congress Committee's latest resolution does not take the Congress leaders completely out of the conflict of loyalties they were in. There is a rump sticking to the old stand and even the majority, while withdrawing the demand for resignations, feels obliged to request the Working Committee to reconsider its decision on resignations.

There have occurred feuds between the Congress High Command and the Provincial Committees before the transfer of power but the circumstances then were less pregnant with danger and when personal factors were removed, there used to be automatic healing.

The present strife goes deeper and it is entangled with a highly delicate public issue. The MPCC could restore its loyalty to the national body only at the cost of public sympathy. Rival groups have already assumed sole charge of the movement which hitherto was led by the Congress Party. Having roused general antipathy to a decision blessed by the Congress Working Committee, the MPCC will now find its hands enfeebled if it tries to veer round and start supporting the decision; its resolution disables it further in that direction.

The best that it can hope for is to persuade the Working Committee to alter it. This will involve more than loss of face for the Working Committee, and is improbable. The merger may provide a wayout. Whatever be the outcome of future negotiations between the MPCC and the Working Committee, both will have to examine the recent past with a great deal of concern, if not remorse, and see that a like calamity does not recur.

*

Nepal Ministry:

Since the end of Rana rule in Nepal, efforts to establish responsible government were all abortive mainly because of rampant personal and parochial rivalries. Nearly a year now, Nepal had been under the personal rule of King Mahendra and negotiations were on for the formation of a caretaker coalition government. Perhaps owing to the exasperating tardiness involved, Nepal suddenly announced a Cabinet headed by Tanka Prasad Acharya, the Praja Parishad leader. Four of the Ministers are members of the Prime Minister's party, while the other three are from among the royal advisors. Provision for later enlargement is envisaged, to draw in members of other parties willing to cooperate.

A nation-wide general election is scheduled to take place next year and one of the tasks confronting the Ministry is its organisation. More important would be the implementation of the land reforms promised earlier by the King. The success of the Ministry will be determined by the manner in which it handles these problems. The Prime Minister has avowed his intention to be always with the masses and has promised to launch a new social order based on the elimination of lingering feudalism.

As regards foreign policy, Mr Tanka Prasad has expressed desire for friendship with all and entangling alliances with none. Nepal is prepared to join constructive forces to achieve world peace. Unconditional aid from all countries would be welcome.

Though the Ministry keenly desires co-operation, the attitude of other parties remains doubtful. Intense opposition to the new set-up is likely. Yet, in the context of the re-emergence of the stormy petrel, Dr K. I. Singh, chances of less radical rivals reaching a working compromise with the Tanka Prasad Ministry cannot entirely be ruled out.

*

An Administrative Problem:

The administration of nationalised industrial enterprises have come for some sharp criticism at the hands of the Estimates Committee. While the Committee is generally satisfied with the pattern of organisation of these undertakings, it finds scope for improvement and beneficial deviations from policies on a number of points. The Government-nominated Boards of Directors are not found to be fulfilling any useful role; in the opinion of the Committee, either a single Managing Director or a Board of Managing Directors could be appointed in accordance with the size and importance of the undertaking; but the members of the Board should represent a suitable variety and range of business experience and expertness.

An Advisory Board is recommended to provide counsel and liaison between this functionary and the Minister-in-charge. At present the relations between the State industries and the Cabinet are not sufficiently satisfactory. The Committee lends the weight of its support to the proposal for an Indian commercial and industrial service, expected to provide a common cadre of administrative officers, who, in the interest of greater efficiency, will replace the recruits from the general administrative services now adorning the top-ranks in the State undertakings. How the different grades of staff should be recruited has also received detailed attention.

The Committee has emphasised the need for as wide a dispersal of industries as possible. The present over-industrialisation of certain areas and the implied neglect of other parts, not only result in a general imbalance and economic waste, but lead to discontent and regional jealousies. The argument, that certain parts of the country are not adequately rich in natural resources, is rejected as unconvincing. While the disposition of natural resources is undoubtedly a limiting factor, and some regional disparities in industrial development are unavoidable, a compre-

Foreign Aid Prospects

THE visit to India of the Russian leaders has imbued in America a new awareness of our Second Plan. At the same time, the Soviet economic "offensive" has aroused rethinking on American aid policy. These two facts, and the thought that is being bestowed on them in Washington, suggest that the American attitude to foreign aid is in the process of being recast and that, consequently, India's exchange problem in respect of the Second Plan might be considerably ameliorated.

In this regard, it is to be presumed that the Administration in Washington will pay careful heed to the views expressed by the Ambassador in India, Mr John Sherman Cooper. Before Mr Cooper left for these discussions, he left no doubt in Indian minds as to the case he would be pressing. In a speech at Port Okha, he said:

"There is nothing new about American aid to India, just as there is nothing new about American friendship for India. In the days of your freedom struggle, the United States urged Indian independence. Since then the United States has demonstrated through its assistance, its interest that India should succeed in establishing economic independence. There is no doubt that India will succeed, and in your great purpose my country gives its friendship and support."

But, while indications favour a sympathetic attitude on the part of the US Administration, it can by no means be assumed that US aid to India in larger measure is a certainty. Especially in Congressional circles, there would appear to be a disinclination to help the so-called neutralist countries. In this regard, it is worth remembering that, possibly in an attempt to discourage Pakistani reception of Communist overtures, the US Ambassador to that country, Mr Horace A. Hildreth, recently stated that neutralism did not pay so far as economic aid from the United States was concerned. Mr Hildreth's report showed that 10 countries aligned with the United States received, on a per capita basis, 12 times more economic aid than was given to other countries which had not entered into such defence agreements.

Comment about Mr Hildreth's linking of economic aid and neutralism is unnecessary. For, we do not think that, in this matter, Mr Hildreth reflects the attitude that governs the new aid policy as it presently appears to be evolving in Washington. On the contrary, there are reasons to think that informed opinion has begun to realise the importance of giving all help possible to enable India to make a success of the Second Plan. Two weeks ago, Senator Hubert H. Humphrey stressed the need for India's continued freedom in order "to counterbalance the spread of communism through Asia." For this purpose, Mr Humphrey called for a "new and imaginative" Asian policy which would include a substantial long term economic aid programme. The President, Mr Eisenhower, has also emphasised the need for America to draw up a distinctly long term foreign aid policy.

The American press has been at pains to point out the desirability of continuing economic aid to countries such as India even if such assistance has not "produced just warmth for the United States". In a despatch to the New York Times, A. M. Rosenthal reports that "Americans in India think that to pull out of India would amount to surrendering the fight against Communism in Asia." Mr Rosenthal lists the following suggestions for improving foreign aid policy:

"As for improvements in the program, the feeling is that the first step should be to give an official assurance that aid will continue for a respectable length of time. That would allow each country's planners to work with more security. There is satisfaction here that President Eisenhower's message to Congress backed a long-term approach.

"The feeling in India is that an increase of the yearly program to about $100,000,000 would be of great help, without commiting the United States to underwriting Indian development. Among Americans in both countries there is a belief that the emphasis should be more on loans than on gifts."

We may draw particular attention to the suggestion that the emphasis should be on loans rather than on gifts. Polonius warned Laertes of the unhappy consequences of lending and borrowing. In the matter of foreign aid, gifts would seem to be an even more unhappy proposition than loans. For, so long as loans are given and accepted with self-respect, and so long as they are made on conditions which jealously have regard for self-respect, they steer clear of the pitfall of enmity that Polonius prophesied.

One snag in American foreign aid policy, or at least the reason why one section of opinion in America is dissatisfied with aid policy, is that US aid has not meant "automatically, dollar for dollar appreciation or good relations." While there is the admission that, in India, "there is private official recognition of the help of the United States," the implied complaint is that there is no expression of mass gratitude.

We should like to stress that it will be aid with self-respect only when such aid is given without flourish and accepted without great pomp or ceremony. Surely, it should be sufficient to America that, by rendering help to India, it is playing an important role in strengthening the only country in this region which could be a bulwark against Communism. For India's part, the intelligentsia would be keenly conscious of the gratitude due to America in this regard. May we suggest that unexpressed gratitude need not be mistaken for lack of gratitude?

+

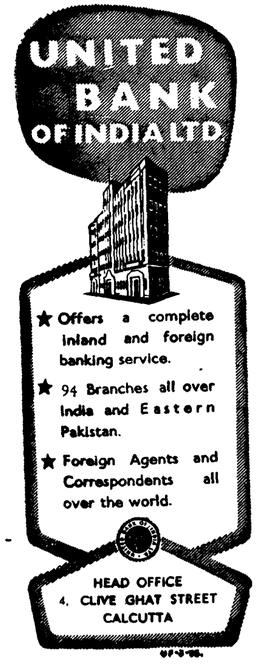
The returns of the Reserve Bank for the week ended January 27 reveal a decline of Rs 3.65 crores in active note circulation to Rs 1,379.07 crores. Rupee coin is lower by Rs 0.20 crores at Rs 106.59 crores. In the result, notes held in the Banking Department have risen by Rs 3.85 crores to Rs 22.97 crores.

In the Banking Department, deposits of the Central Government have risen by Rs 372 crores and those of the Provincial Governments by Rs 5.09 crores to Rs 54.02 crores and Rs 18.47 crores respectively. Bank deposits are lower by Rs 2.27 crores and other deposits by Rs 4.31 crores at Rs 65.24 crores and Rs 17.10 crores respectively. Balances held abroad have declined by Rs 5.50 crores to Rs 67.05 crores. "Other Loans and Advances" show a rise of Rs 1.44 crores to Rs 44.03 crores, which includes Rs 17.70 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 9.21 crores. Investments remain almost unchanged at Rs 51.17 crores.

+

The statement of the State Bank of India for the same week discloses a drop of Rs 3.48 crores in deposits at Rs 238.42 crores. Borrowings from other banks are shown at Rs 0.75 crores against Rs 0.90 crores, while other liabilities, including inter-office adjustments, are higher by Rs 1.82 crores at Rs 3.39 crores.

On the assets side, cash balances have risen by Rs 1.27 crores to Rs 32.04 crores. Investments are lower by Rs 0.20 crores at Rs 116.12 crores. Advances have risen by Rs 4.38 crores to Rs 114.47 crores —"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 3.22 crores and "Bills Purchased and Discounted" for Rs 1.16 crores.



+

According to the returns of the Scheduled Banks for the week ended January 20, demand liabilities have risen sharply by Rs 21.35 crores to Rs 655.46 crores, while time liabilities have declined by Rs 1.48 crores to Rs 411.08 crores. Borrowings from both the Reserve Bank and the State Bank are lower by Rs 0.91 crores and Rs 0.12 crores at Rs 27.54 crores and Rs 11.21 crores respectively. Cash and balances with the Reserve Bank have risen by Rs 11.64 crores to Rs 99.51 crores. Investments are at Rs 381.60 crores against Rs 381.92 crores. "Loans and Advances" show a rise of Rs 2.74 crores to Rs 665.80 crores. Money at call and short notice stands at Rs 9.97 crores against Rs 9.59 crores.

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on January 31. Total amount offered was Rs 1,72,00,000. Tenders at Rs 99-6 were accepted in full and those at Rs 99-5-9 were allotted approximately 56 per cent. Lower tenders were rejected. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-3 per cent per annum.

Britain Becomes Automation-Conscious

By PAUL EINZIG

'AUTOMATION' is a word that appears in the headlines of the British Press—not only the technical and trade papers but even in popular daily newspapers—with increasing frequency, and the British public is becoming increasingly automation-conscious. Admittedly, the overwhelming majority of the readers of newspapers has only the haziest notions of what the word means. But the descriptions of the latest automatic installations in factories and offices are read with fascinated interest by growing number of people. Politicians, Government officials, and the lay public are gradually beginning to realise that automation is a development which might assume considerable importance.

Practically every newspaper has now a Science Correspondent who translates into popular language the technical descriptions of the latest inventions in the sphere of automation. Judging by the Editors' mailbags, such articles have at least as big followings as the highly popular products of science fiction. Serious literature on the subject is rather scant in Britain. What there is, is confined almost entirely to its technological aspects. Some of the American books published recently are obtainable, and the published proceedings of two recent conferences on automation, organised last year under the auspices of the British Institute of Management and of the Institution of Production Engineers, had a wide circulation.

When the published proceedings of the US Congressional Sub-Committee on Automation and Technological Change arrived at the Library of the House of Commons, there was quite a waiting list of Members of Parliament anxious to read the single copy available. Toward the end of last year, a Private Members Bill was introduced, providing for the establishment of a Committee to examine problems arising from automation.

An official body, the Department of Scientific and Industrial Research, has been engaged for some time on an investigation of automation in Britain, and its report, which is expected to appear shortly, is awaited with much interest. The various Government Departments concerned with various aspects of automation—Board of Trade, Treasury, Ministry of Labour—devote considerable attention to the subject. Until now, however, most literature in Britain was confined to its technological, social, or commercial aspects. Its financial aspects are only just beginning to receive attention, in connection with the Government's efforts to persuade industrial firms to give the benefit of technological progress to the consumer in the form of lower prices.

It has been pointed out that, should a large proportion of the firms who have cut their costs as a result of automation follow the Government's advice, it would spell ruin for a large number of less progressive firms in the same industries, many of whom cannot afford to instal modern automatic equipment. The Government have been called upon to relax the credit squeeze for the benefit of such firms, or to provide special financial facilities to enable them to catch up with their more progressive rivals.

The broader economic aspects of automation have received in Britain even less attention than in the United States. The overwhelming majority of economists takes the view that there are no special problems arising from automation. In their view, automation is just another word for technological progress, and the problems arising from it have been covered by economists dealing with economic growth. It is true that, at the relatively slow rate at which automation is being adopted in Britain, it has not raised so far any spectacular economic problems. But the possibility of an acceleration of its progress is causing many sleepless night to trade union officials.

The Trade Unions Council is engaged in studying the subject from the labour angle. It is at pains to emphasise, whenever occasion arises for doing so, that the trade union movement is not opposed to automation. The experience of many firms, and also of nationalised industries, does not bear out this contention. In many instances, the safeguards on which the unions insist as a condition of giving their consent to the instalation of labour-saving equipment are so onerous that employers prefer to abstain from proceeding with automation.

Reports about the speedy progress of automation in other countries—especially in the USA and in the USSR—are causing growing concern in British industrial circles. It is true, under existing conditions, most of the cuts in the cost of production through automation are used for higher profits and higher wages, and there has so far been little evidence of substantial price cutting by the rival of British exporters. Nevertheless, the possibility of ruthless price cutting that is liable to occur as soon as a recession sets in is freely envisaged. It is feared that the less progressive industries may find themselves at any moment at a grave disadvantage. Some comfort is derived from the evidence before the Congressional Committee which indicates that American industrialists, in turn, are afraid of the effects of progress of automation in the Western Europe on the competitive power of their rivals. So it seems that all advantages are not necessarily on one side.

The progress of automation in the Soviet Union is causing concern not so much from an economic point of view as from the point of view of the political and military balance of powers between West and East. In particular, the statements about the staggering number of technologists that are being trained in Russia has produced a profound impression. It is believed to have greatly influenced the Government's decision to step up technological education. Members of Parliament who visited the USSR recently were impressed by what they saw in facories. One of them, an engineer by profession, said that a ball bearing factory he inspected was more up to date than anything he has seen in the West. This may be an isolated instance, but it is reports of this kind that tend to make British political circles increasingly automation-conscious.

World *of* Business

A Million Cycles by 1961

FEW industries provide a parallel to the spectacular progress recorded by the bicycle industry in the post-Independence period. The credit should go to the three premier cycle manfacturing enterprises namely, Hind, Sen-Raleigh and, not least, the T. I. Cycles of India. The hazards of the beginning stage have been successfully overcome and all the concerns have firmly established themselves as truly idigenous industries. This has been possible firstly, by the effective association with British manufacturers having a long and proud history behind them; secondly, by the consistent support and encouragement given by the Government who have, through protective measures, always seen to the fulfilment of the needs of a growing industry; thirdly, the popularity of the bicycle with the middle class and the workers has tremendously increased and continues to increase; demand, as a rule, outstrips production.

The development of manufacturing activities of the T. I. Cycles represents, in epitome, the steady growth of the industry as a whole. Government have permitted this company to increase its capacity for manufacture of cycles from the present limit of 1,00,000 cycles to 2,00,000 cycles in the year 1956. The company will also go ahead with its plan to manufacture 1,00,000 sets of cycle components per year. Additional machinery is being installed for the manufacture of component parts including mudguards and free wheels. It will then be possible for the company to manufacture in their factory at Ambattur near Madras, more than eighty per cent of all the components required for a complete cycle.

All this, and much besides, have made the Chairman, Sir A. Ramaswami Mudaliar almost unreservedly optimistic about the realisation of the country's Second Plan target in cycle manufacture, which is over 1 million cycles a year. The progress of the industry since 1953 does not belie this hope. That year, production stood at 2,64,000 cycles. In 1954, the figure rose to 370,000 as against the estimated demand of 450,000. The capacity on single shift has increased from 417,500 in 1954 to 718,000 of which 50 to 80 per cent is being utilised. We can thus safely predict that the production figure for 1956 will not fall below the 5,00,000 mark.

Coming to the position and prospects of the T. I. Cycles, Sir Ramaswami could dwell on equally promising aspects, the most important of which is the quality of the product. It is decisive not only in determining the consumer, market but also in influencing the tariff policy of the Government. Government had generally adopted the view that imports should be allowed only to cover the gap between indigenous production and domestic demand. Now that the quality of the Indian manufacture has improved significantly, there is greater validity for such a policy.

For instance, the T. I. Cycles were till recently, obliged to distinguish their product from the Hercules cycles manufactured by their British associates by using the nomenclature, Hercules-India. The distinction has now been dropped. The strict standards laid down and the meticulous care with which they are maintained have made it certain that bicycles from the Ambattur factory 'will do more than justice to the name, Hercules.'

Sir Ramaswami lists the factors that have helped these results as the latest machinery that has been installed, most of which is automatic, and secondly, the utmost care taken and supervision exercised so that any part below requirements is rejected.

It is a tribute to the vision and courage of the management that they have given practical effect to reducing the price of the bicycle without any deterioration in quality. The policy is also necessary in order to take the vehicle within the means of the average worker. The over-all improvement in quality is noticeable in respect of the other leading companies. But these also would do well to show the same keenners to bring down prices.

As stated earlier the manufacture of components forms an important part of the company's programme. But up till now this did not embrace the manufacture of tubes, an essential component which is still being imported. This want will now be filled with the establishment of a Tube Mill very near the factory. This mill will go into production early in 1957 and place on the market electrically welded tubes not only for the requirements of the cycle industry but for all industrial requirements. This industrial landmark is again the product of Indo-British collaboration.

It will be seen that the conditions and needs of the cycle industry are different from what they were four years ago. Government's attitude toward the industry has generally been acclaimed. It does not seem, however, to be too early to formulate a viable export policy also which will take into account the needs of some of our Asian neighbours as also the greater resources which the home industry can now muster. Labour's contribution toward the achievement of the high target for the Second Plan will be decisive and is likely to be enhanced with the introduction of the piece-rate system, wherever possible, a suggestion supported both by Sir Ramaswami and India's Labour Minister.

Letter to the Editor

Export of Cotton Piece-goods:

Dear Sir,

Bleak prospects seem to be ahead of India's export trade of cotton piece goods particularly in the UK. During the past eight weeks or so, the price of Indian cotton goods has gone so high that buyers in Lancashire feel that very soon the margin in price which made Indian cotton piece goods preferable to their own would disappear. This upward trend of prices of Indian cotton piece goods is only helping Lancashire to get on her own. Such a phenomenon in the face of an impending recession in the cotton market owing to the huge American cotton surplus is contrary to hypothesis and has baffled many buyers who have put off buying.

The very much increased demand for cotton piece goods in India is reported to be one of the main causes for the increase of textile prices there. This demand, it is said was likely to increase further by the end of the Second Five-Year Plan. This would naturally lead to further rise in prices at home, making our cloth less competitive in the overseas markets. The best way to combat increased demand is by increased production. The present policy of fixing a ceiling on the production of mill cloth is only placing an impediment on production, thus allowing prices to remain sky high. Our already threatened export markets have begun to shrink. Entering a new market is a difficult enough job — regaining a lost one is impossible.

We are having formidable competitors in Japan, China, Spain and even Russia, all of whom are aggressive sellers at keen prices scheming to capture as many overseas markets as possible. UK is not lagging behind and is planning to open up textile mills in the Colonies where, with cheap labour, they hope to produce cloth for local consumption at low prices. One mill in Nigeria has already been completed and is expected to meet a third of Nigeria's requirements of 42 million yards. Nigeria has so far been one of India's best markets.

At such a time, when others are trying to enter our markets, circumstances in India seem to help them get in. Such circumstances have to be contended with.

Something has to be done to keep our prices in the export market steady. The least the State can do to forestall a catastrophe in the textile export trade would be reconsidering their policy on establishment of weaving mills, encouraging automatisation and removal of export duties. 'Produce more, Wear more and Export more' should be the slogan of the textile trade in India.

It is high time people in authority in India woke up to the situation. By strangling the textile industry in India by restricting their equipment, production, and even progress by way of modern equipment they are not helping India to build up but positively ruining one of her major industries which has struggled hard successfuly to enter international markets and has obtained for India a decent share of much needed foreign exchange.

Yours faithfully,
A. S. Krishnaswami

Midland Hotel,
Manchester.

THE UNITED COMMERCIAL BANK LIMITED

Press Communique

The profit of the Bank for the year 1955, subject to audit, including the amount brought forward from last year's accounts, is Rs. 37,77,761-2-0. But of this sum, the Directors have made the following appropriations:

Transfer to Reserve Fund Rs. 8,50,000; Provision for Taxes Rs. 14,00,000, leaving a balance of Rs. 15,27,761-2-0.

Out of the balance, the Directors propose to recommend to the Shareholders at the next Annual General Meeting the payment of a dividend at Rs. 2-12-0 per share, free of incometax, which will absorb Rs. 11,00,000, leaving Rs. 4,27,761-2-0 to be carried forward subject to payment of bonus to staff.

The securities and investments of the Bank appear in the accounts on 31st December 1955 at or below the market rate ruling on that date.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta,
27th January 1956.

World *of* Jute

Raw Jute Prices

THERE is hardly anyone in the world of jute today who seriously questions the validity of the statement taht in jute year 1955-56, raw jute supplies will be plentiful. Yet even after the lapse of seven months in the current season, raw jute prices have not shown any indication of an appreciable decline.

How is it that the Indian raw jute dealer has managed to quote a high price and what is more, get it? Further, from what one can see of the trend of the market, it seems quite probable that for the rest of of the season also, he may continue to hold the whiphand.

The largest contributor, to the strength of the raw jute seller in this country is, strangely enough, Pakistan. The decision of the Pakistan Government to make no change in the minimum export price of jute automatically made indigenous raw jute more attractive to Indian mills. The continued difficulty in getting supplies from Pakistan had also further strengthened the bargaining position of Indian raw jute dealers, who were themselves experiencing considerable difficulty in moving supplies to markets and mill stations, due to wagon shortage and dislocation to goods traffic as a result of floods in Assam and West Bengal.

A new factor that has not been foreseen by mills has also begun to exercise its influence this season. Convinced of a considerable increase in the size of the crop, mills have been reluctant to pay the prices prevailing at the beginning of the season in the firm belief that prices are bound to decline as the season advances. Consequently they have been following a hand-to-mouth policy. The Puja season came and went without the expected anxiety on the part of the cultivators to sell their crop at distress price levels. The surprised mills have been left with no other alternative but to pay the prices asked for.

Meantime, the IJMA decision to unseal 2½ p.c. looms has imparted renewed strength to the Indian raw jute market. It is no wonder that the latest announcement that with effect from February 20, another 5 per cent of the looms will be unsealed has resulted in giving fresh impetus to the upward movement of prices.

It is no doubt a matter for satisfaction that our jute cultivators are getting a good price for their crop. But it will be evident that high price for raw jute, which constitutes about 70 per cent of the cost price of jute goods, will jeopardise the interests of the industry as a whole.

For, the installed capacity of the world industry is much more than present and even prospective demand. While demand has not shown any appreciable increase, installed capacity has definitely increased as jute mills have sprung up in many a country. For instance the industry has made rapid strides in Pakistan.

Fortunately for our jute mills industry, 1955 has brought good cheer in the shape of increased exports and Indian jute goods are regaining their popularity in the USA. Canada and other countries. A combination of circumstances, abolition of export duty and the comparative freedom from dependence on Pakistan for the supply of raw material (Indian jute crop in 1955-56 has been a bumper one) has conferred on Indian jute goods an advantage that is not available to their rivals.

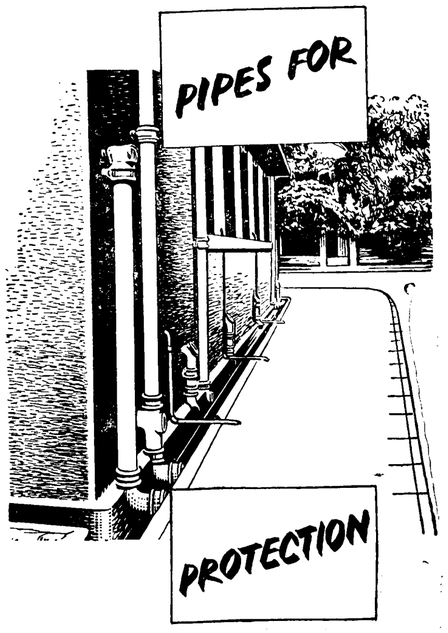
In the last four months conditions in the trade have been so very satisfactory that the IJMA have decided to increase production by first unsealing 2½ per cent looms and then another 5 per cent out of the 12½ per cent looms kept idle with mills.

Though it is true that the IJMA would not have omitted to take into consideration the bullish influences that would be generated in the raw jute market as a result of their decision to unseal 7½ per cent looms, it is not to be forgotten that foreign buyers will lose interest in our jute goods once their cost becomes prohibitive.

*

In Pakistan also the season has turned out to be an extremely profitable one for jute cultivators. Presiding over the sixth annual general meeting of the Pakistan Jute Association, Mr Maqbul Illahi revealed that Pakistan's combined overland and sea exports of jute for 1955-56 would be about 10 per cent higher than the 5.1 million bales which were the country's total exports for 1954-55.

He was confident that since by the corresponding month of next year Pakistan's own jute mills would have purchased about 20 per cent of the crop, there was every possibility of raw jute prices maintaining the high levels in the next season also provided the Pakistan Government took strict measures to limit the crop to 5.5 million bales. He further pointed out that demand had been so good that there would not be 'an embarrassing quantity of jute to carry over into the next season.'



*

The Raw Jute market moved in sympathy with the manufactured goods section. Mills purchased substantial quantities despite the fact that the market was very firm and-uneconomic as compared with jute goods prices. Sellers were also inclined to be reserved unless business was put to them at full market rates. As imports into upcountry centres were very small and as mills were buying at advancing prices, there was a good demand for small supplies of jute available. Following business was done during the week in:—Assam, Dhubri and Indian Northern Bottoms at Rs 29, Middles at Rs 32; Daisee Mesta and Deshal Mesta Bottoms at Rs 27, Middle at Rs 29-8 and Jungli Mesta Bottoms at Rs 25-12, all per maund.

The Jute Goods market, after opening quiet, firmed up toward the close due to covering business by shippers. In the early part of the week, sentiment remained depressed in the absence of any enquiry from overseas buyers. Moreover, reports of some delay in the placing of the Burma tender, rumours that some portion of this had gone to Pakistan and reports of poor shipments during January — all these factors caused an easier tendency in prices. Thus, except for some enquiries for forward positions, the rates for ready deliveries showed a downward trend.

In mid-week, however, the market took a turn for the better and prices firmed up on covering by shippers in anticipation of good business from Burma and Russia. Also, there was a fair amount of speculative buying in both hessians and sackings. The following table shows the trend of prices during the week:—

	Week's Opening Rs. a.	Week's Closing Rs. a.
Hessian:		
40" × 10 Ozs.—

World *of* Tea

Increase in Export Quota

THAT the congestion of Tea at Calcutta and the gardens had been causing a good deal of concern, is a known fact. It is now learnt that the Government of India have decided to allow as much as 480 million pounds of tea for export during the current season. The total export quota, during the current season, therefore, amounts to about 69.3 per cent of the crop basis. Expressed in terms of the Standard Export Quota, the release comes to about 138 per cent as compared with 135 per cent — the maximum permissible under the International Tea Agreement.

It would be recalled that, in the initial stage, an export quota to the extent of 50 per cent of the crop basis, amounting to about 365.65 million pounds was declared in March last year. A second interim release of 10 per cent of crop basis was made in August, 1955. This increased the export quota by about 52.24 million pounds, bringing the total release to 417.89 million pounds.

The recent decision of the Tea Regulation Committee to regulate the crop for the coming season was evidently a sequel to the slump in tea prices at auctions and the increased stocks in Calcutta warehouses. Though the trend represented a steep fall in prices, it was not a continuous recession. Prices tended to steady up at the end of November, owing to an improvement in demand. But the market had again a shake-out on account of the increase in the tea crop gathered in November. The trend was upward again at the end of December, due to the improved demand engendered by anticipations of a reduction in the rate of export duty for January. Nevertheless, the prices obtained at this week's auction show a slight fall as compared with the earlier week.

The absence of any positive influence in the direction of improved prices for tea seems to make the buyers hesitate to make any large commitment; and the result is showing up in the uncertainty in the market. The trade seems to be coming to the conclusion that international tea export agreement has to be enforced.

It is stated that world production now outstrips world demand by about 50 million pounds. Until this balance can be adjusted, the future remains obscure. There is a general belief that the first few months of 1956 will be a testing time for the whole of the Industry.

As far as exports of Northern India teas are concerned, they have shown a sharp decline during the period from 1st April, 1955 to the 14th January, 1956 to 227.39 million pounds from 307.40 million pounds in the corresponding period of 1954-55.

Tea shipments from Cochin have shown a decline to 75.93 million pounds during 1955 from 78.04 million pounds in 1954.

Also, the importance of Pakistan as an exporter of tea to world markets has gradually dwindled in the past few years. Total exports from Pakistan during 1955 are estimated at 9.68 million pounds as compared to 20.99 million pounds in the previous year and 23.2 million pounds in 1953. Though the decline in output from 54.6 million pounds in 1954 to 52 million pounds last year was a contributory factor, the rising internal consumption is mainly responsible for the sharp fall in exports. Shipments to Karachi have risen to 32.43 million pounds during 1955 as compared with 28.72 million pounds in 1954 and 26.64 million pounds in 1953. Consumption in East Pakistan is also estimated to have nearly doubled from about 5 million pounds in 1954 to about 10 million pounds last year.

Meanwhile, offerings in the Export Sale, held in Calcutta this week, amounted to 64.800 packages. There was less general demand and a quieter tone prevailed during the sale. All Fannings, particularly black Assam OFs with a few tips, were in strong demand and were the strongest feature of the sale. CTCs met with good support and were sold generally at dearer rates.

Commonest and Common Brokens met with less demand and were from half to one anna per pound easier, as were Medium Assam BOPs. Stylish Whole Leaf grades were in fair competition; but there was less demand for the more ordinary sorts. Darjeelings with any flavour were fairly well supported. Following rates were quoted (per pound):— Clean Black Pekoe Rs 2-0-0; Plain BP Rs 1-7-6 Medium Assam BP Rs 1-10 and Best CTC Assam BP Rs 2-3 to Rs 2-5.

In the Internal Sale, offerings were 20,600 chests of Dusts. There was a fair general demand. Black Leaf teas, suitable for the Middle East, were in strong demand and were the strongest feature of the sale. Teas with useful liquors from all districts were fully firm and occasionlly dearer, but the remaining offerings were an irregular half to one anna per pound below last rates except for selected lines of CTC Assams, which were one to two annas dearer. The poorer CTCs showed a decline of one to two annas per pound. Following rates were quoted:—Medium Dooars Dust Rs 1-7-6, Medium Assam Grainy Dust Rs 1-8-6 to Rs 1-9 and Best Assam CTC Dust Rs 2-4- to Rs 2-6.

About 2.200 packages of Leaf grades were also on offer which met with a fair demand at slightly easier rates. Fannings grades were the strongest feature. A few lines of Green Tea were on offer and they met with only limited support.

In the Export Quota section, the rate declined sharply from 24 to 16 pies per pound at the close following the Government announcement regarding the release of quota for 480 million pounds for the current season.

Just under 500,000 pounds were offered in the Internal Sale, held at Cochin last week. There was a strong general demand. Best Liquoring high-growns and residual kinds were one to two annas per pound dearer, while good Mediums were sold at firm to dearer rates. Clean Calicut description were the strongest feature of the sale and advanced by As 2 to As 3 per pound. Black grainy descriptions were well supported at irregular rates.

At the Colombo market, offerings were 6,569.850 pounds. Prices were irregular, but generally substantially lower for all grades except Fannings and coloury Medium Brokens. The quality of Nuwara Eliya teas was very irregular and prices followed accordingly. Among high-grown teas, a small section of top quality Broken grades was in strong demand at about last rates. There was also strong demand for medium-grown teas with coloury Brokens sold at dearer rates. Low-grown teas met, however, with less demand with Persian Gulf types generally 20 to 30 cents per pound lower.

In London auctions, 42,819 packages were catalogued of which 24,082 packages were offered for sale. There was a good demand. Though there was some irregularity, prices were generally fully steady at last week's levels. Gow and Wilson quoted Plain Fannings at 3sh 8d per pound.

Stocks in London, as at 21st January 1956, were 101.61 million pounds as compared with 100.96 million pounds in the previous week and 104.20 million pounds a year ago. Landed between the 14th and the 21st January 1956 were 14.16 million pounds, while deliveries during the same period were 10.01 million pounds.

SOUTH EASTERN RLY. TENDERS.

The General Manager, Garden Reach Calcutta—23 invites the following tenders for the Wagon Erection Plant at Visakhapatam. (1) Tender No. GM1/56/12400R (55) for supply of 629 Cwts. of Waste Cotton Superior white teased to Army Specification IND/TC/0256 and (2) Tender No. GM2/56/12398R(55) for supply of 57,200 gallons of Paint Red Oxide R/M to Specification IS-123 and ISC-446.

Tender form can be had from the office of the Controller of Stores (IB Section), Garden Reach, Calcutta—23 on remittance of Rs. 5/- for each item of works by Money Order (not refundable) in case of Mofussil Firms and on production of cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, Calcutta by Local Firms. Earnest Money required for item (1) is Rs. 500/- and for item (2) is Rs. 2,000/- in cash. Valid Income-tax clearance certificate must accompany the tender.

Closing date for item (1) is on 10th February, 1956 and item (2) is on 8th February, 1956 at 12 noon.

World Overseas

US Notes

Estimates from private sources are lending support to President Eisenhower's prediction, presented in his Economic Report to Congress this week, that the United States world trade will continue at high levels in 1956. The National Foreign Trade Council forecasts further expansion in US exports and imports this year, accompanied by another rise in other countries' holdings of gold and dollars. The Council estimates commercial exports in 1956 at $14,700 million, a gain of about $600 million over 1955, and imports at $11,900 million, a gain of about $4 million over 1955.

In all, a total of $20,800 million, exclusive of US military aid, is expected to be available to other countries in 1956 as a result of sales of goods and services to the United States, including not only imports but such other elements as US economic assistance, private investment and tourism. This would be about $4 million more than in 1955, and would result in net foreign additions to gold and dollar reserves of about $1,500 million compared with some $1,900 million in 1955.

On a shorter-term basis, the newspaper, Journal of Commerce, estimates that US imports in the first quarter of 1956 will run well ahead of those in the first quarter of 1955, when $2,739 million worth of goods entered the country as American foreign trade was staging a recovery from the minor setback of 1954. The Journal notes that import Letters of Credit, — usually indicative of trade trends, some ninety days hence — established with New York banks in October, November and December last year pointed to further US import gains in January, February and March this year.

The rising trend of US trade is further indicated by the fact that vessel movements through the Port of New York reached their 1955 high of 1,115 arrivals and 1,125 departures in December. For the entire year, vessel movements through the port reached a post-war annual high of 12,625 arrivals and 12,605 departures, topping both 1954 and the previous peak year of 1952. Nearly 60 per cent of the dry cargo and passenger vessels moving through the port were of foreign registry. Norway was represented with the most vessels, followed by Liberia, the Netherlands, and Denmark. About 23 per cent of all vessels arriving and departing from principal US ports in 1955 called at New York. Hampton Roads, Virginia, had 12 per cent of all traffic, and Philadelphia 11½ tenth per cent.

Another element in the President's Economic Message that has stirred considerable interest in the American business community is his recommendation that Congress approve stand-by controls over consumer credit, to be imposed when and if the situation warrants. The President made it clear that the recent expansion of such credit has by no means reached a dangerous stage; but he wants this additional authority to help keep in check possible inflationary forces as the economic upsurge continues. Two influential private groups — the American Bankers Association and the National Industrial Conference Board — have within the past week supported the President's view that the credit situation is basically sound, but that it should be watched carefully. Economists attending a meeting of the board last week suggested further that statistics on the consumer situation should be improved as an additional safeguard.

The need for more and better economic statistics was stressed by Mr Eisenhower in his Budget Message. He recommended that Congress authorise an expenditure of $35.1 million for government statistical services in the 1957 fiscal year — $3.2 million more than was appropriated for the current fiscal year and $7.3 million more than was available for fiscal 1955. The money would go for such purposes as improving the estimates of consumer income and spending, manufacturers sales and inventories, and business plans for expanding plant and equipment. An additional $4.8 million is being asked for gathering data on housing and on receipts and expenditures of State Governments, and to prepare for a 1958 census of business in the United States.

*

Britain

By PAUL BAREAU

United Kingdom trade figures for the year 1955, issued a few days ago, offer some grounds for satisfaction, although not for complacency, in that exports were well above those of 1954. The increase —£2,906 million compared with £2,674 million—does, in fact, run at about 8½ per cent. (This figure excludes re-exports, which, at £119,000,000, themselves rose by 18 per cent in 1954).

The increase in volume was about seven per cent, which compares with an increase of four per cent in 1954 over 1953, and prices rose by between one and two per cent. Admittedly, some shipments were delayed from 1954 into the early months of last year in consequence of the dock strike in October 1954; but even if allowance is made for this special factor, it is obvious that Britain's export trade has made steady progress.

There has been little substantial change over the past year in the compositon of this export trade. (As detailed figures are not yet available, the analysis is based on data for 11 months). Engineering goods maintained their share of just under two-fifths of total exports. The share of textiles declined: 1955 was an unsatisfactory year for exports of cotton and synthetic-fibre goods, although shipments of woollen and worsted goods and also of miscellaneous textiles—though to a small extent—increased.

It is particularly noteworthy that exports of iron and steel increased by as much as 14 per cent in spite of increased domestic requirements for these metals for both capital and durable consumer goods. Exports of non-ferrous metals and semi-manufactures were up by one-third, with a notable expansion in sales of copper wire.

Among motor vehicles, exports of commercial vehicles rose by no less than 26 per cent; they were particularly successful in the Commonwealth. Although they did not show as big an increase as in 1954, exports of cars were also higher. British cycle exports were up by one-seventh, exports of aircraft rose by one-quarter, and the chemicals industry recorded a 10 per cent increase in its oversea sales.

It is impossible, within the scope of this article, to give more than a rough outline of the progress; but among smaller groups, the spectacular increase of 80 per cent in exports of plate glass deserves mention.

In the geographical pattern of UK exports, success of the dollar export drive is considered to be particularly gratifying. Sales to North America increased by 15 per cent from 1954 to 1955 (exports to the United States by 23 per cent and to Canada by seven per cent).

An even greater rate of increase (20 per cent) was noted for "other non-sterling" countries (that is, all non-sterling countries outside the Organisation for European Economic Co-operation). In particular, exports expanded to the oil countries in the Middle East, to Finland and Yugoslavia, and also to Eastern Europe.

Exports to Western Europe were rather disappointing; in spite of the boom on the Continent, exports to the OEEC area rose by less than five per cent. There are, however, signs that an improvement may be forthcoming here.

The Sterling Area has held its share in Britain's total exports. As this share has been maintained at a high level over the last five years and a number of Sterling Area countries have been obliged, by balance-of-payments difficulties, to limit their demand for exports, no spectacular increase was to be expected.

While the export picture is on the whole satisfactory, the import figures may, at first sight, give rise to some doubt. Total imports rose by 15 per cent in value, from approximately £374 million in 1954 to £3,889 million in 1955. In volume, there was an increase of 12 per cent, and import prices rose by three per cent.

The main reason for this substantial rise was not excessive consumption, but rather the need of industry for increased supplies to support expanding output. Somewhat higher food imports were another factor; these rose by eight per cent. Cereal imports rose by 27 per cent, due partly to the running down in Government stocks after decontrol in 1954, and partly to the bad harvest in that year. There was also a marked increase in imports of feedingstuffs.

Among industrial materials, special factors operated in the field of coal and steel. Coal imports multiplied fourfold as a result of a slight decline in domestic output, allied with an increase in manufacturing activity, while steel imports were three-and-a-half times as much. Home output increased by nearly seven per cent—in itself a satisfactory performance, but not enough to meet rising home and export requirements.

Imports of non-ferrous metals also expanded. Most of these had risen in price, and greater quantities were needed for use in manufacture for export.

Other materials which show higher import figures are timber, rubber, pulp, paper, and newsprint. On the other hand, imports of textile fibres declined; cotton stocks were run down, and wool prices fell.

There is no doubt that industry needed higher imports last year, especially since in 1954 expansion in production was not matched by a corresponding increase in imports. Although one cannot draw a firm conclusion from the available statistics, there is little doubt that some stocks were accumulated last year.

Thus, there is reasonable hope that n the coming months any expansion in imports will be at a slower pace than last year. Coal and steel imports are likely to

THE HIND BANK LTD.

WORKING RESULTS FOR 1955.

The profit of the Hind Bank Ltd. for the year 1955, subject to audit, including the amount brought forward (Rs. 1,12,820-6-8) from last year's accounts, is Rs. 11,99,277-15-9. Out of this sum, the Directors have made the following appropriations:—

Transfer to Reserve Fund Rs. 2,50,000/- provision for taxes Rs. 4,00,000/-, leaving a balance of Rs. 5,49,277-15-9.

Out of the balance, the Directors propose to recommend to the shareholders at the next Annual General Meeting the payment of a dividend at Rs. 3/- per share, free of income-tax, which will absorb Rs. 3,00,000/- leaving Rs. 2,49,277-15-9 to be carried forward subject to payment of bonus to staff.

The Securities and investments of the Bank appear in the accounts on December 31, 1955 at or below the market rate ruling on that date.

decline, and perhaps also the high imports of cereals.

Exports should continue to expand. Although the restrictions introduced in Australia and New Zealand may affect exports to these markets, trade with the Sterling Area as a whole should continue at a high level. Prospects in Western Europe appear to be good. The measures taken to restrain demand are designed to hold expansion within reasonable limits rather than to reduce activity, and with the exception, perhaps, of the Scandinavian countries the measures are, for the most part, rather mild.

There should be further opportunities of increasing exports to the expanding markets of the Middle East; and in the dollar area as well as in the less-developed countries, the UK has proved last year that it can hold its own.

*

Australia

With its roots literally in the soil, the Australian sugar industry has branched out to include the production of goods as various as building materials and organic chemicals.

At one end of this unique production line is the cane cutter in the fields, slicing off the stalks at the ground with a heavy knife.

At the other end are the electronically controlled chemical plants producing substances with names as mysterious as deodorised di-2-ethyl hexy phthalate.

Industrial cane-growers, co-operative and company mills, company refineries, Commonwealth and State Governments and the Colonial Sugar Refining Company are all linked in an integrated industry which supports nearly one quarter of a million people within the sugar districts.

The whole story of sugar in Australia is bound up with the Colonial Sugar Refining Company, which celebrated its centenary in 1955.

Although its role has been very influential CSR does not control or monopolise the industry. For instance, it does not grow sugarcane. The cane is grown by about 9,000 independent farmers, cultivating an average of 50 acres each.

In 1954 about 1.3 million tons of raw sugar were produced. This was a record, and approximately double the production in 1934.

Thirty-four mills crush the harvested cane of Queensland and New South Wales. Farmers' co-operatives own 14 of them, 13 are owned by various companies, and the rest belong to CSR.

Since the Second World War about £A.12 million has been spent on expanding the milling industry.

There are six refineries — at Bundaberg, Queensland, and in the State capitals. The Millaquin Sugar Company owns the Bundaberg refinery, and CSR the rest.

There are also several molases distilleries, which produce power alcohol, industrial spirit or rum.

Sugarcane is the sole crop where the rainfall exceeds 40 inches a year or where irrigation is available as on the Burdekin River in Queensland.

Most of it grows within 20 miles of the coast, and 80 per cent is produced north of Mackay in North Queensland.

The sugar belt is in the great fertile littoral between the ranges of hills and the sea. It begins at Mossman, North of Cairns, and runs across the Queensland-New South Wales border to Murmillumbha and Grafton — 1,300 miles of farms, scientifically and intensively cultivated.

The development of the industry proceeds steadily, though production is officially curbed from time to time in accordance with the state of the market.

The present home market, with Australia's share of overseas markets under the British Commonwealth and International Sugar Agreements, is not capable of absorbing an unrestricted production of raw sugar in Australia. Its output was, therefore, limited to about 1.17 million tons in 1955.

But the efficiency of all branches of the industry is continually increasing.

Perhaps the most interesting and significant development recently has been the use of by-products from the extraction of raw sugar.

One of these by-products is cane fibre (megass), which is used as fuel in the mill furnaces or as the raw material for the low-density wallboard marketed by CSR as Canelte.

Another is the dark, heavy substance fnown as molasses, the sugar in which cannot be economically extracted.

Molasses may be used as stock feed or fertiliser, but a much more important use is its fermentation to make industrial alcohol and methylated spirit.

Alcohol is one of the bases of the organic chemicals industry, and on this base has been established CSR Chemicals with a capital of £A.6 million.

This firm has its principal plant in the Sydney suburb of Rhodes. With alcohol derived from molasses this plant produces various industrial chemicals, including cellulose acetate flake, the raw material of the rayon industry; the acetic acid group; plasticisers, solvents and stearates, the polyol group, sorbitol and mannitol, and ascorbic acid (Vitamin C).

More uses have been found not only for sugar but for its byproducts. The distillation or rum has its modern successor in the production for export of a fine chemical in a six-stage synthesis.

The field opened up by the use of chemicals based on sugar-derived alcohols, which include a whole range of plastics, solvents and pharmaceuticals, appears almost unlimited.

The horizon is far wider than would have seemed possible even 20 years ago, and it would be rash indeed to try to set limits to the development of this great basic industry.

TO nationalise or no? This question in reference to life insurance was examined in an Indian Finance Special Study, which, in the sense of the golden mean, suggested Yes and No as answer. That is to say, Yes with regard to companies already under the management of Government-appointed Administrators, as well as companies assignable, on prima facie evidence, to that destiny; and No as regards all other life insurance companies. Thus was the accepted policy of mixed economy interpreted in the context of life insurance. And, mixed economy can, I suppose, be crudely described as a yes and no affair. The Finance Minister has now given Government's answer to the poser; and it is a sweeping and comprehensive Yes. Nationalisation, as now proposed, embraces not only Indian life offices, but also provident societies and the Indian life business of foreign offices.

*

Over the past few years, nationalisation has been the proverbial Damocles' Sword in the sphere of life insurance. What time Sir Shunmukham Chetty, the first Finance Minister after independence, made the announcement, some eight years ago, that it was the Government's policy to nationalise the Reserve Bank of India and the Imperial Bank of India, insurance circles became apprehensive that the next item on this agenda would be life insurance. The lag between this declaration and its implementation in respect of the Reserve Bank had the effect of giving a quietus to such fears. That, while the Reserve Bank was nationalised, the Imperial Bank was apparently spared a like fate, served as an opiate to the authorities controlling the destinies of the insurance concerns. In recent months, however, apprehensions on this score have again come to the fore and reached a frenzied phase since the assumption of State control over the Imperial Bank. With Government spokesmen reiterating that the matter was under "active consideration", insurance spokesmen were engaged in hysterical propaganda advertising the performance and accomplishments of insurance under private management.

*

From this point of view, the decision, made known last week, of Government's intention to nationalise life insurance should not have occasioned surprise. On the other hand, the insurance magnates should have been in the mood to regard definite doom as better than lingering suspense. The fact, however, is that the news, besides being a shock, was also in the nature of a surprise. Doubtless, many of the shrewd insurance leaders had come to anticipate nationalisation in a spirit of resignation; but even they were startled by the timing and manner of the announcement. The most remarkable thing about Sir Chintaman Deshmukh's broadcast last Thursday was that it had all the attributes of a bolt from the blue. This is a measure of the triumph of a well-guarded official secret. In the earlier case of the Imperial Bank's nationalisation, too, secrecy was so well-maintained in all the processes of official discussion and final decision that the news created the sensation of suddenness. It was recently revealed that, in the matter of the arrest of Mr R. Dalmia, the only two Ministers who knew about it were the Prime Minister and the Finance Minister.

*

These three instances provide a high tribute to the sense of integrity and responsibility at the highest levels of the Finance Ministry. The value of this tribute can be better appreciated if we visualise the several stages of consultation and preparation involved, for example, in the decision to nationalise life insurance and take into account the number of officials concerned in the preparatory work and of those concerned in the instantaneous implementation of the decision. The first stage pertains to the data and the memorandum on the basis of which the Cabinet could arrive at the formulation of the policy in this respect. The Superintendent of Insurance and, possibly, one or two of his top lieutenants must have taken on themselves exclusive responsibility for all this work; and, when documents were ready, the Secretary of the Economic Affairs Ministry would have come into this picture, and, perhaps, also a highflight aide. The final touches should have been given by them; and the finalised papers submitted to the Cabinet. The Ministers must have had discussions, consultations and, possibly, to and from references, at the end of which the decision would have been made.

*

The decision should then have gone to the Insurance Department for the detailed work preparatory to its implementation. The ordinance had to be thought out to the littlest practical detail; and the drafting work passed on to the Law Secretary. Meantime, the personnel required to proceed to the various "spots" for the taking-over had to be hand-picked and mobilised. For, let it not be forgotten that, with the Ordinance coming into effect soon after its promulgation, an army of trusty officials had to be dispersed all over the country, so that, at the appointed hour, each one of the 150 insurance companies would be visited by the official designated thereto and charged wth completing the formalities connected with the taking-over by the State.

*

The initial formality on the morning after the issue of the ordinance was to be put through by what are described as authorised persons; and, soon thereafter, the administration was to be under the charge of what are described as custodians. The authorised persons were picked from the personnel of the office of the Superintendent of Insurance; and the custodians have been selected from top insurance officials skilled as actuaries or greatly versed in insurance rites.

*

The whole list of authorised persons and custodians must have been more or less finalised in New Delhi at the level of the Superintendent of Insurance and the Secretary of the Economic Affairs Ministry; and the officials chosen as authorised persons must have been despatched to the assigned destinations without their knowing what it was all about. Each zone must have been taken charge of respectively by the Superintendent of Insurance and two or three of the highest officials of the department. Thus did the scene shift to Bombay or Calcutta or Madras. Superintendent Rajagopalan himself supervised the "operations" in Bombay; and Mr B. G. Rao was at the helm of affairs in Calcutta.

*

It is to be presumed that Mr Rao reached Calcutta on Thursday, that is, the eve of Sir Chintaman's broadcast. He could not bestir himself till the hour of the radio talk; and only thereafter could he have set about fixing custodians by seeing the nominated persons and securing their consent. This whole process of finalising the list of over a dozen custodians and instructing them had to be completed in the space of a day or two. In the meantime, on Friday morning, Mr Rao had to direct the authorised persons to the respective companies, with instructions as to

what all they should do to legalise the taking-over formality. The situation was further complicated by Saturday being a hartal and Monday a holiday. The arrangements were put through with such adroitness and nimbleness that the authorised persons had discharged their allotted tasks by Friday, and the custodians were in their seats by Tuesday. Verification of securities and cash, and custody of cheque books and minutes books engaged the immediate attention of the authorised persons, who thus prepared the ground for the detailed scrutiny by the custodians. How smart and thorough this aspect of the work has been, is indicated by the reported case in Bombay and the other reported case in Calcutta of action taken with regard to missing securities.

★

The first stage in the nationalisation of life insurance has been accomplished with consummate skill and one hundred per cent competency, and without any fuss or friction. A great task superbly performed! This evidence of well-begun may be hailed as a guarantee that nationalised life insurance will function with the flexibility and business-like assurance that are essential for sustained progress. I have no doubt that when the Finance Minister launches the Nationalisation Bill in the spring session of the Parliament, he will acknowledge the splendid work done by the Economic Affairs Ministry and the Department of Insurance, especially by the heads of the two departments. Nothing more could be expected of them; nothing less was expected of them.

Which reminds me of a memorable tribute paid by Sir Basil Blackett to the departmental officials in his regime. On the floor of the Assembly, he narrated an incident in connection with one of his budgets. It was the custom then to despatch, by a specified date, advance information about the budget to the Secretary of State. The relevant papers were being set ready in Simla; and the papers missed the Simla-Kalka mail by a few minutes. Mr A. V. V. Aiyar, who was then the Budget Officer,

ACC Chairman Speaks Out

DOUBT continues to be the dominating note in Chairmen's addresses. I should have thought that, by this time, the private sector would have gained heart from the assurance that has been given, in that it would be afforded proper encouragement to proceed with its role in the Second Plan. But reasons there have been a-plenty, as Mr Dharamsey M. Khatau pointed out the other day, which do not exactly conduce to confidence.

An industrialist of Mr Khatau's stature is certain to be accorded the most careful of attention whenever he touches on national economy. When the forum for Mr Khatau is the annual general meeting of the Associated Cement Companies, I should expect that his remarks will command even greater interest. For, cement is one of the key industries of the Second Plan, one of the important raw materials with which we can build to the specifications of the schemes scheduled for the second quinquennium of planned endeavour.

Thus, what I expected to read in Mr Khatau's speech was something that would relate foresight and planning, expression of endeavours taken on hand and of development that had been decided upon. I was, of course, not disappointed: the latter half of Mr Khatau's speech is abounding in details in this regard. But the beginning is something else again. In it, as I have reported, Mr Khatau has made known the fears and uncertainties that have come to beset the private sector.

Every year, said the ACC Chairman, "two or three major economic or political concepts are mooted and bitterly pressed, often to extreme limits; this is followed by some hasty legislative action; and the controversy then dies down as suddenly as it began." To this rule, 1955 was no exception. Rather, it has been a year replete with action on new economic concepts.

What these various measures were, there is scarcely any need for me to list; nor does it serve any useful purpose—because it has been done often enough in these columns—to discuss the justifiiability or otherwise of Government action. When, however, Mr Khatau points to two distinctive features of the Second Plan which "give cause for some anxiety", it is wise to pay heed to his views: as a practical industrialist, he sees some obstacles in the way of the successful implementation of the Plan. Once there is the realisation that the features referred to by Mr Khatau are, in fact, impediments, it should help us to discover the solutions.

The first disquieting feature is "the drastic cutting down of the outlay on transport, especially railways". Controversy on this matter has been raging for some time. And the most widely held belief is that, besides administrative personnel (and barring, of course, financial resources), the biggest problem that the Second Plan would encounter would be transport—especially rail transport.

It should be clear that, without adequate transport facilities, production as a whole would suffer; at the same time, unfortunately, Government are not in a position to allot to transport as large a sum as may be desirable. To the extent, however, that planning is to be flexible, it is to be suggested that transport should be accorded the highest priority if, consequent to any revision of plans, some financial resources should be freed.

The second feature that worries Mr Khatau is "the impractical approach to the problem of resources to cover the enormous outlay of Rs 4,800 crores in the public sector." The ACC Chairman is right in his belief that additional (or fresh) imposts will not provide finance of such size. It would be wrong, however, for this reason to conclude that a plan of the magnitude now being thought of is impractical or impossible of achievement. The problem of resources needs to be tackled from a new viewpoint — not merely from the narrow standpoint of how much more the rich could be soaked. Suggestions as to what constitutes a dynamic policy for raising the resources have been offered in past issues of Indian Finance. I may repeat two of them here. Firstly, Gold Bearer Bonds could be a source of considerable revenue. Secondly, Government giltedged policy, if ambitious and daring enough, could raise much more than has been estimated in all calculations hitherto.

I might also add, and I would think that Mr Khatau would agree, that, by virtue of an expansionist economy, Government could hope for increased tax revenues — without higher levels of taxes.

Next, the ACC Chairman has referred to the progress and prospects of the private sector. Today's industrialist is as keenly aware as Government are of the need continually to increase production, and thereby to raise the standard of living. Toward this end, says Mr Khatau, 'free enterprise has played its part, and will continue to do so subject to the numerous handicaps imposed upon it even within the limited scope permitted to it." These are not empty words: in a later paragrph, reference has been made to plans already formulated to increase ACC capacity to nearly 5.2 million tons — a figure that works out to over 42 per cent of the target for cement at the end of the Second Plan.

But, as Mr Khatau remarks, although the role allotted to the private sector in the Second Plan will be significant, achievement may be quite another thing. In his words:

> "...its achievement will depend to a large extent on the broad-based backing of the public as well as of the Government, on wise planning and sound fiscal and political policies, on full and unstinted co-operation from labour, and on the uninterrupted flow of savings and investment year after year. In all these matters the most effective single factor will be the plans and policies of the Central and State Governments in relation to financial matters generally and in regard to taxation and nationalisation in particular."

Judged by its performance in the First Plan, where many targets are assured of being attained, if not exceeded, the private sector may be expected to fulfil any role allotted to it. But there is some fear that the private sector might be in the unenviable position of being no no more than a willing Barkis.

To be sure, there has been a measure of official assurance that apt aid and appropriate encouragement will be given to the private sector for the implementation of development schemes undertaken by it. But, since these assurances were given, there has been Government action of a nature that has raised fresh doubts. What is, therefore, needed now from Government is a categorical statement that will set at rest all current apprehensions.

I should suggest a re-statement of the 1948 Industrial Policy resolution; let there be no vagueness

(Continued on page 224)

LAW FOR THE LAYMAN

(Continued from page 196)

he had notice that he had broken his contract with the plaintiffs.

The defendant and his wife appear to have been under the belief, and as the judge found the bonafide belief, that as Nicholson had the permission of the labour exchange to enter their employment that was all that mattered and that notwithstanding the notice they had received from Myers they were free to employ him. That, of course, was an entire misconception, and it is not contended that the labour exchange officials had any power to authorise or excuse a breach of contract on Nicholson's part. But we understand from his judgment that Hallett J. held that "as the defendant held this honest belief he could not be said to have maliciously harboured the plaintiffs' servant, and it was on that ground that he gave judgment for the defendant. While, as will be seen, we are of opinion that in the result, the judgment was right, we cannot agree with the view of the judge on this point

There can be no question, subject to what we have to say about proof of damage, that it is actionable to continue to employ the servant of another after notice, though the person so continuing to employ the servant did not procure him to leave his master or know when he engaged him that he was the servant of another."

No doubt, in this case, the defendant escaped liability, because no damage was caused to the plaintiff as the servant was unwilling in any event to return to the service of the plaintiff. But the position would have been different if that were not so.

The Lord Chief Justice sums up the legal position on this branch of the law thus:—

> "No doubt at the present day if a servant, domestic or otherwise breaks his contract of service he or she may put his employer to the greatest inconvenience and may put his employer to the greatest inconvenience and may cause him actual pecuniary loss. For so doing the servant is liable to an action for damages, and if a third party has enticed or procured the breach, he too is liable. But if, not having enticed the breach, a person employs that servant who would not in any case have returned to the first employer, while the servant remains liable, the second employer is not, for his action has caused no injury to the original master."

Manufacturers Meet

The ninth annual general meeting of the Indian Machine Tool Manufacturers Association was held last week in Bombay. The report for the year ended June 1955 is particularly important, as also the presidential address of Mr M. B. Jambhekar, for, these, come at a time when the position of the industry is to be restudied and a new policy is likely to be launched by the Union Government. The recently constituted Committee for this purpose would do well fully to appreciate the points of view of the private sector which forms the larger slice within the industry.

The production of indigenous machine tools reached a peak about 1945, and thereafter maintained an unsteady graph. There is, however, a remarkable improvement in 1954 in that the total value of machine tools produced was higher than in the previous year by about 7 per cent and in addition to increased production, most manufacturers have been engaged in extensive work on designing and developing new and more modern types of machine tools. Meanwhile, imports also show an upward trend, their value in 1954 being Rs 386 lakhs. In the first half of 1955, value of indigenous machine tools was Rs 31 lakhs and the year is expected to reach the record level in post-war period of over Rs 60 lakhs. The following table gives the comparative statistics of imports and production of graded machine tools in the past few years ended 1954.

Year.	Imports value in lakhs of Rs.	Production value in lakhs of Rs.
1941 ..	68.4	—
1946 ..	183.2	91.3
1947 ..	367.6	45.9
1948 ..	414.4	54.7
1949 ..	419.6	47.3
1950 ..	249.0	28.6
1951 ..	250.0	47.3
1952 ..	221.1	44.4
1953 ..	312.7	44.1
1954 ..	386.4	47.1

In spite of the Second Plan's emphasis on heavy machinery and other key industries, definite figures of the country's requirements of machine tools by group, type or size are not yet available. But a rough estimate puts the demand in 1955 to the tune of Rs 4 crores, representing a wide range of machine tools. A big gap will still remain between demand and indigenous output. It requires the best efforts at increasing the output and improving the quality in order to reduce the gap. What Government can do in this respect is, firstly, to assist this development particularly through financial assistance, and secondly, to assure that, wherever possible, orders against Governments' requirements would be placed on the indigenous manufacturers.

Mr Jambhekar could pick out specific instances where a change in Government policy would be helpful. There is a gross shortage of essential basic raw materials like graded pig iron and coke for castings. A similar story is told by alloy steels which the industry is at present unable to obtain from abroad. Attention is drawn to the difficulties in obtaining semi-finished parts, such as alloy steel forged blanks for gears, forgings for spindles, etc. It is pointed out that the formalities involved in obtaining supplies from one of the major suppliers, the Ordnance, is cumbersome to an undue extent. As for difficulties in obtaining ball-bearings, it is suggested that as far as machine tools manufacturers are concerned actual user licences should be given for those bearings which are not manufactured in the country. Again, the mode of purchase by Government departments betrays an absence of systematic planning and sets for the manufacturer the impossible task of coping with a sudden demand for large quantities. Bulk orders from technical institutions are an instance of the point in question.

While the import policy of the Government is basically sound, it is highly essential that no discrimination should be made between the public and private sectors especially when State owned enterprises place orders. Unless this is ensured, development of the industry is bound to be tardy.

*

Mr Mehta on Second Plan:

Mr Ashok Mehta is one of the Opposition leaders associated with the various panels of the Planning Commission. We may expect his criticism to be constructive and friendly. In a recent speech, he once again regretted that the Planning Commission had not yet explored fully the organisation of popular and non-official efforts for the Second Plan. In other words, the concept of planning from below is not being given full practical shape. The main problem is to accelerate the basis of the economic development so that not only the increase in population is looked after, but the back-log of economic progress is eliminated.

Mr Mehta was obviously apprehensive of the promise of some eight million jobs by 1961. Even if this target be achieved, the country will have at that date some 7 million unemployed, that is about two to three million more than today.

The number of educated unemployed today is estimated at 5,50,000 and it is unlikely that employment opportunities will be provided to 18 lakhs of additional educated youth who will come into the employment market by 1961. The employment situation thus leaves little place for a sanguine expectation.

The basic features of the First and Second Plans are viewed by Mr Mehta as essentially different. The financial allocations in the two plans do not, however, bear out this view. Mr Mehta approximates the First Plan to the American concept of economic planning with emphasis on agriculture and allied occupations and the Second Plan to the so-called Russian approach depending on heavy industries as the principal leverage of economic development. In view of the fact that agriculture, irrigation and power receive by far the single largest allocation in the coming plan, namely Rs 1200 crores, it is more appropriate to describe the Indian approach as a combination of the American and Russian concepts of planning. However, Mr Mehta's contention that a good deal of urban-rural tension is going to be created which will put considerable strain on statesmanship of this country, still holds good. The programme outlined for the next plan, with the exception of cooperative movement, do not take into full account the need for fostering economic links between rural and urban areas.

*

CLIVE STREET GOSSIP

(Continued from page 206)

and his colleagues put their heads together and decided to engage at their own cost, a special train to carry the papers to Kalka and thereby to contact the mail train to Bombay. This was done; and Sir Basil came to know of it only in an indirect way. He was greatly moved by the officials' sense of duty and devotion to schedule; and, on the floor of the Assembly, he expressed his appreciation and remarked: How much is a Finance Minister's responsibility lightened when he is supported by officials with such a high sense of responsibility?

*

After ten years of highly distinguished service as the Executive Secretary of the United Nations Economic Commission for Asia and Far East, Dr P. S. Lokanathan will be retiring next June. Dr Lokanathan can proudly claim to be the chief architect of the ECAFE. The range and importance of the work of ECAFE are now well-known not only in the countries immediately covered by the Organisation, but all over the world. The ECAFE has given a new direction and a new purpose to economic activities in South East Asia and its Executive Secretary undoubtedly represents the major driving force behind all the great, silent and invariably tedious work. His success in the ECAFE is not a little due to his stern singlemindedness, his steadfast devotion to the task on hand, to his indifference to ostentation, which is invariably a hall-mark of the cultivated intellectual.

In the rather inhospitable environment of Bangkok, Dr Lokanathan was able to build up an international organisation whose work is closely being reflected in the social and economic policies of innumerable countries. The UN Secretary-General paid him a fully deserved compliment, when he said that his achievement was one in which the UN could legitimately take pride and that, thanks to his keen understanding, insight and deep and extensive knowledge of economic problems, they have been able to constitute a focal point essential to economic cooperation in the vast area covered by the Commission. Dr Lokanathan is likely to take up another equally onerous assignment as the Director of the Institute of Economic and industrial Research, to be established in India with the aid of the Ford Foundation.

Olympus

A Week of Heart Searching

REPUBLIC day and the anniversary day of Gandhiji's martyrdom must have been the occasion for some deep heart searching by all those responsible, in ever so small a way, for directing the destiny of our nation. At any rate, it was so in the capital. Recent events, especially the ugly incidents of appalling violence in Bombay and Orissa, have shown how perilous is our complacency over our performance in the last few years and how our deep-seated weaknesses as a people take very little to become manifest endangering many a gift won at great sacrifice. The anniversary of the Mahatma's death lends special urgency and poignancy to the introspection, because of the fact that Gandhiji became a martyr for precisely these tendencies in our national character and because we had hoped that his death was the final price paid for such folly. But, it would appear from what has been happening in the last few days that Gandhiji died in vain as far as we, who had the most precious privilege of calling him one of us, were concerned. It is, as everyone will agree, a heart-breaking thought.

It was clear that Mr Nehru's thoughts were very much with the evening eight years ago when he addressed the people here on the occasion. In a deeply moving reference to Mahatmaji, he said, "Today, eight years ago, a very great man's blood flowed in India. He shed his blood for the unity of the country. If today we forget this, we shall prove ourselves to be unworthy of the great martyrdom." Pandit Nehru feared very much that recent demonstrations of linguistic parochialism was of a piece with our pre-independent communal squabbles and even our historical "disease to lose ourselves in petty quarrels and thereby lose sight of the great things we have set out to achieve."

None with any sense of history could consider that Mr Nehru's fears are exaggerated. By all accounts, events in Bombay and Orissa were of a sort that recalled the communal frenzy of the period that immediately preceded and succeeded partition. Some of the methods employed brought back bitter memories of 1942, and the bitterness was due to the fact that the methods were now employed in an unworthy cause. The end in 1942, however mistaken the methods employed, was unexceptional, whereas linguistic chauvinism, on behalf of which these deeds of violence are indulged in, can by no stretch of imagination be called worthy.

There is no doubt that there has been a sharp decline in India's prestige abroad as a consequence of the happenings in Bombay and Orissa. Indian stability, which had been taken for granted even by people irritated by our policy of non-involvement, has now apparently been shown to be every much a put up affair. Unfriendly foreign observers have been given an opportunity to say "I told you so" and friends of India have been deeply troubled by these events. Though, of course, there is no need to set overmuch store by the opinion abroad, one way or the other, it is clear that the prestige of India and its influence for aiding the working of the forces of peace can be seriously jeopardised by continuous exhibition of political immaturity at home. In particular, our professions and preaching of peaceful co-existence will be shown to be mere hypocrisy if we are not able to practise the same principle in the limited sphere of our internal affairs.

The two questions that Mr Nehru specifically dealt with in this speech on the occasion of Mahatma Gandhi's anniversary were: firstly, the correct point of view from which the redistribution of state boundaries should be viewed; secondly, the responsibilities of leadership in a situation in which deep passions have been aroused. On the first, he said that there is no finality about the state boundaries and these could be adjusted by discussion and mutual agreement. This being the case, agitation should take the form of constitutional pressure, which is the recognised democratic way of achieving any change. Violence was not the way to achieve this end, since it merely bred the opposite kind of violence. And, secondly, the paramount issue was whether 'this business of overemphasising the status of language was taking India toward consolidation and unity or toward disintegration and disunity. The disturbances over the question have completely laid bare our weakness of succumbing to narrow parochial sentiments. We live in a big country and just cannot carry on if we behave in a petty way."

On the responsibilities of leadership in the present context, Mr Nehru had some very important things to say. He emphasised, of course, the need for dealing firmly with the trouble makers and putting down violence with all resources of the Government. But more importantly, he referred to the technique or resignations adopted by the Maharastrian Congressmen over the issue. Self-righteous people may consider the resignation as a form of protest: pressure tacticians may consider it a method of bringing the authorities of both the Congress and the Government to knee. Others may have the view that this is the only way to demonstrate to the people their solidarity with them and may, actually, be ensuring their re-election by this act of resignation.

But behind every one of these motives, is the basic escapism from responsibility in a time of acute crisis. Mr Nehru did not mince his words when he referred to this: 'The resignation of public men from their office in difficult times only meant that they were running away from responsibilities instead of facing them boldly and squarely." He referred to his own expressed desire to retire about a year and a half-ago, and clarified that it was no escapism that made him want to retire. He said that there was such a lot of work to be done in this country and that we are still very far from what we have set out to achieve and to talk of resigning, especially when events were threatening the progress toward this ultimate goal, is nothing short of a wish to desert from the post of duty.

It is premature to predict how the Prime Minister's exhortation will influence leadership at the State levels. On the question of State Reorganisation itself, the picture, as viewed from the Capital, is far from clear. The idea of merger of Bihar and West Bengal has certainly come as an "electric shock" as Mr Nehru Put it, and to the joint announcement of the Chief Ministers of the States concerned may be attributed the sudden drop in the intensity of the agitation over the SRC proposals. The idea came so suddenly that opposition parties were completely caught by surprise. There is some evidence that the Communists are furious with this turn given to the question; for, they find that they have now to throw away the advantage of momentum gained by the agitation with popular backing over the SRC proposals.

In Calcutta, especially, the peaceful nature of the demonstration showed not only that popular feeling, even when there were no doctrinaire commitments, was solidly behind the demands made by Bengali leaders, but also that the leftists can, when it suited them, avoid violence. The idea of merger of the two neighbouring states has some very obvious advantages — not the least of which is the security of people of one state in the other, which was seriously threatened during the agitation. Moreover, the disruptive possibilities of linguistic loyalties are so fresh, that the people are willing to give the idea a trial.

But it is premature to think that the idea will have a safe passage to the Statute Book. Opinion in Bengal and Bihar is in the eyes of competent observers here, about evenly divided and this division is at all levels. In the execution of an idea like this, even a powerful minority obstruction may lead to difficulties. It is clear that the Communists are out to dstroy the idea as they fear that their party political fortunes will be sorely threatened by this move.

Elsewhere also, the idea has not received universal enthusiasm. The Maharastrians are not at all enthusiastic, for, they have become too committed to the linguistic doctrine to seem now to favour an idea that is directed specifically against it. In the South, influencial non-governments cireles, including Rajaji, have come out enthusiastically in support of the idea. But the Government of Madras are cagey and unwilling to commit themselves, though individual members of Government, notably the Finance Minister, Mr Subramaniam, have supported the idea. It is expected that Mr Nehru will discuss the idea with the local leaders when he goes to Bangalore in the very near future.

The problem of Punjab, too, is still very much in the melting pot. Master Tara Singh has, perhaps deliberately, made a premature announcement of certain tentative suggestions made to him by the Congress Sub-Committee on reorganisation regarding the State language of the proposed Punjab. This has led to enthusiasm (perhaps unjustified) among the Akalis and a corresponding gloom (perhaps equally unjustified) among the Hindus. The final decision on the question is anybody's guess.

Meantime, the draft bill incorporating the decisions already announced is ready. But no one here would care to predict the final shape of the act that will, in the near future, settle the map of India.

North Indian Notes

Flexible Long-term Planning

Mr T. T. Krishnamachari was obviously taking a long-range view of industrial development in his address to the newly constituted committee for the development of the machine tool industry. When flexibility, that is yearly evaluation and revision, is assured to be one of the attributes of our planning, it seems only consistent with the objective of self-sufficiency to look ahead to a period of ten years or even more.

In the matter of steel production, Government's plans are bold in conception and bid fair to be dynamic in execution. They have fixed a target of 4.5 million tons in 1959, and of 6 million tons by the end of Second Plan. In the third Five Year Plan, said the Minister, we will have to treble that figure and reach 18 million tons. A comparable emphasis is laid on the manufacture of heavy machinery.

If this be the scale of projected expansion, there is no reason why we should not make most of the machine tools that we require within ten years.

As currently agreed over the steel industry, where the public and private sectors are to co-exist competitively, so in the machine tool industry, it is necessary to demarcate the sectors so that each, within its field, will have full play.

The Engineering Capacity Survey Committee has shed some light in machine-tools now employed by the regard to the obsolescence regarding industry. The machine tool industry in this country 'started off with a bang' some time after the end of the war. In 1952, production was valued at Rs 44 lakhs. Thereafter progress was lethargic. In 1955, though India produced Rs 71 lakhs worth of machine tools, the quantum of improvement is considered negligible when allowance is made for the increase in prices.

As against this, imports have been going up rapidly. In 1952, imports amounted invalue to Rs 221 lakhs, in 1954 to Rs 386 lakhs and in the first half of 1955 to Rs 360 lakhs This gives some idea of the gap to be covered.

✱

External Assistance:

Facts about the external assistance received by India have a special interest when conjecture, not always intelligent, continues to spin round the prospect of such aid during the next plan-period. External assistance has been primarily marginal in character in the context of the financing of our economic programme. Foreign aid makes for a crucially important fraction of the total resources needed for the Five Year Plans, but it has been the policy of the Government to receive aid, whenever possible, in the shape of loans.

Since 1951, aid has been received from the Governments of the US, Canada, Australia, New Zealand, and Norway. From March 1951, to January 1956, external aid totalled Rs 306.7 crores. Of thas, Rs 144.6 crores was utilised for the first four years of the First Plan. Another Rs 50 crores is earmarked for the current year. The remaining Rs 112.1 crores will be used up during the Second Plan.

The total assistance authorised or provided by the US during the period was of the order of 294 million dollars. In 1954-55 development assistance from the US totalled 60.5 million dollars. Of this, 45 million dollars is on loan basis, repayable in rupees over a period of 40 years at 4 per cent interest. The allocation for the current year stands at 50 million dollars, a major portion of which also is taken as loan. The funds are being utilised in many fields: industry, agriculture, transport, education and health.

From Australia, total capital assistance amounted, during 1951-55, to about 9.6 million Australian pounds. This aid was utilised for the purchase of wheat and flour, construction requirements of the Tungabhadra project, electrical equipments for the Ramagudam project, some essential items of equipment for the All India Radio and diesal cars and wagons for the railway.

Canada's contribution has been approximately 77 million dollars. The aid played a substantial part in the execution of the Mayurakshi project. It is being used also for the supply of vehicles, locomotives, copper and aluminium bars for the cable and wire industry, and electrical equipment for a hydro-electric project in Assam. Allocations in the current year will be utilised for a survey of the Jaisalmar area for oil-prospecting, aircraft for locust control, and finally, for a reactor for the Atomic Research Centre at Bombay.

The New Zealand Government announced at the inception of the Colombo Plan, a contribution of £1 million over a period of three years. This apart, £250,000 has been provided for dairy schemes, in 1954-55 and a further £400,000 in 1955-56, the utilisation of which is now under consideration.

Lastly, from the International Bank, a sum of 69 million dollars has been negotiated prior to 1954-55. Part of this has been utilised for agricultural equipment, the Damodar Valley Project and a steel mill project. Two further loans were negotiated for projects in the private sector, the Trombay Loan of 16.20 million dollars, and the 10 million dollars loan for the Industrial Credit and Investment Corporation.

✱

First-Plan Results.

The First Five Year Plan, which now draws to a close is essentially an irrigation and power plan. Judged by the number of acres newly irrigated and the number of kilowatts generated, it has been a thumping success. Targets have been exceeded. Projects have been completed ahead of schedule. A visible change has occurred in the agricultural field and the beginnings of a sound industrial economy has been made.

Food output has risen from 50 million tons in 1950-51 to 65.8 million tons in 1954-55, outstripping the target by 4.2 million tons. This is due mainly to the fact that 4 million acres of virgin or inadequately irrigated soil have been opened up through irrigation facilities. Food imports have correspondingly decreased from 4.7 million tons in 1950-51 to 0.77 million tons in 1955.

The Plan envisageed an addition of some 8.5 million acres under irrigation and about 1.1 million kilowatts of generated power at a cost of Rs 614 crores which is about one-third of the total Plan outlay of Rs 2069 crores; this was in addition to about Rs 153 crores spent up to March 31, 1951.

By the end of the Plan, an additional area of about 7 million acres has been brought under irrigation and about 1 million kilowatts of power generated. Minor irrigation schemes have helped bring another 10 million acres under the plough, thus increasing the total irrigated are at the end of the Plan-period by 17 million acres, with itself is nearly one-third of the pre-Plan irrigated area.

The Plan expenditure for power development (excluding a sum of Rs 100 crores incurred under the multi-purpose projects) has come to about Rs 160 crores. This means, in real terms, that the installed capacity in public utility undertakings will be pushed up to 2.71 million kilowatts.

The Plan would have thus raised the total irrigated area from 51 million acres to 68 million acres, and installed capacity from 1.7 million kilowatts to 4.41 million kilowatts.

It is true that the Second Plan will give prominence to industry and transport which are to receive, between them, an allocation of Rs 1850 crores. But, irrigation, agriculture and power development will continue to figure with a substantial provision of Rs 1200 crores. This is as it should be for (1) the country has in all about 290 million acres of cultivable land a major slice of which is now inadequately irrigated, (2) agriculture is unorganised and its methods unscientific and (3) the demand for power is almost inestimable and potentialities for its development are rich.

✱

TCM in India:

The story of the United States Technical Co-operation Mission in India provides an interesting chapter in international economic co-operation and a living example of the practicability of helping people to help themselves. Beginning with Community Development and National Extension, followed by other agricultural health and educational projects, American technical aid has made a perceptible imprint on the non-industrial life of the country.

Under the enargetic supervision its Director, Mr Clifford H. Wilson, the TCM is making itself felt in the industrial field as well. Through assistance in the importation of steel, through provision of rolling stock and through technical assistance, the programme is contributing to the advancement of the engineering and other industries.

In the field of industrial credit, a sum of Rs 75 million has been made available from the rupee proceeds of the steel supplied by the TCM to the Industrial Credit and Investment Corporation. According to Mr Wilson, provision of further support to such industrial credit institutions, as rapidly as the growing requirements of Indian Industry necessitate, is being considered.

There is an even closer co-operation in the sphere of industrial technical assistance. During 1954, the US supplied 21 industrial technicians, a contingent which was strengthened to 30 in 1955. TCM technicians are assisting the industrial programme in India not only on specialised technical problems, but in the broader problems of industrial organisation and management; in the introduction of more effective marketing techniques including attention to the problems of industrial sales and of assistance to the smaller manufacturers in meeting sales problems; in improving the productivity of small scale industries; in improving labour-management relations; in expanding industrial and managerial training, thus is generally supporting the initiative and self-improvement efforts of the Indian industry.

It will be a pity if the role of this effective and purely economic programme will have to be curtailed on account of political misunderstanding or lack of appreciation. As the whole programme is under the careful guidance of the Ministry of Commerce and Industry we may hope that it will prove to be of increasing usefulness in the years to come. The fact that initiative is never sought to be taken out of Indian hands should go to strengthen this optimism.

Delhi Review

North Indian Markets

Sugar Statistics

SUGAR production in India, during December last, was 280,046 tons, bringing the total in the first two months of the current season to 359,162 tons as against 331,402 tons during the corresponding period of the previous season. Factories numbering 132 had already started crushing by the end of December against a total of 140 expected to crush during this season.

The offtake of sugar from the factories, during December, was 117,438 tons as against only 53,679 tons during the same period last year. Total offtake, during the first two months of the current season, was 256,323 tons as against only 90,520 tons in the previous season. Closing stock with the factories on December 31 was 533,236 tons against 307,917 tons a year ago.

As a result of larger supplies of sugarcane to factories and expansion in the cane-crushing capacity of the industry, total sugar production, during the current season, is expected to be about 1.75 million tons as against the all-time record of 1.59 million tons touched in 1954-1955.

The cane crop, during the current season, is estimated at 50.28 million tons as compared with 48.1 million tons in the 1954-55 season. Furthermore, Gur prices are low enough to divert the flow of cane to factories.

Licences have been issued for the establishment of 37 new factories, and expansion of 40 existing units. This is expected to increase the installed capacity of the industry by 649,000 tons, of which nearly one lakh tons will be available for utilisation during the current season.

Meanwhile, conditions in sugar markets remained quietly steady in anticipation of good demand, Delhi and the Punjab being the main buyers. Following were the latest mill-delivery rates (per maund):—Jaswant Rs 28-8, Simbhauli Rs 28-12, Mowana Rs 29, Daurala Rs 29-4, Amroha Rs 27-12, Bijnore Rs 27-12, Mansoorpur Rs 29-8 and Rampur Rs 30-8.

✱

In the Hapur market, Ready Gur prices, after an early fall from Rs 12 to Rs 10-14, improved again toward the close of the week to Rs 11-4 per maund. The fall was due to want of loading facilities; but, later on, allotment of 53 wagons for Gujerat caused prices to improve.

Daily arrivals averaged 3,000 to 4,000 maunds. Stocks were estimated around 50,000 maunds.

Merchants in Meerut have demanded that the Central Government should pay the price of Pakistan wheat, which they intend to import, in gur and not in cash. If it is not possible to send gur to Pakistan on Government account, licences may be given to private merchants for such exportation. This decision was taken at a meeting held last week. The resolution pointed out that areas now comprising West Pakistan were formally substantial purchasers of gur. It would, therefore, help gur cultivators in Meerut if the Government decided to send gur to Pakistan.

✱

Following Government measures to curb rising trend in Wheat, prices in the Hapur market declined during the past week. The Union Food Minister's statement regarding stocks with the Government and firm commitments for further supplies from abroad, had a salutary effect on the market. Moreover, prospects of a good 'rabi' crop helped in the lowering of prices. Other contributory factors were the arrival of 10,000 tons of wheat in the Bombay port and expectations of another big consignment by the beginning of March from abroad.

Wheat prices eased by about As 12 per maund to Rs 14-4. Better crop prospects and slack demand accounted for a fall of As 8 per maund in the price of Gram, which was transacted at Rs 9-14. Barley and Bejhar prices also eased fractionally to Rs 10-0 and Rs 9-14 per maund respectively. Maize and Bajra prices, however, ruled steady due to good seasonal demand and poor stock position.

Following the Government's ban on exports of Jowar, the price of this commodity eased moderately to Rs 10-14 per maund. Pulses also registered a fall in prices on slack outside buying enquiry and crop prospects. Peas dara quality was done at Rs 9½ and the white variety at Rs 10 per maund. Arhar was quoted at Rs 12-8, the stock position remaining unchanged.

Easy conditions were observed in the Delhi grains market where Wheat registered further losses of As 8 per maund at Rs 14-12 to Rs 16-8 per maund, according to quality. Despite good demand for Gram from Madras, the rates eased slightly due to better arrivals. Barley rates moved down modestly in line with wheat. Other coarse grains grains were also affected, Jowar and Bajra qroting down by Re 1 to Rs 1-8 per maund.

Sentiment in the Bombay grains market remained subdued; and trading was confined to only small transactions. Traders were considerably disappointed over the Government decision to ban exports of Rice with immediate effect. They felt that this decision was ill-timed, particularly as the new crop was being marketed all over the country. Prices, however, ruled steady, thanks to small arrivals.

The Wheat section reflected a quieter undertone. Among coarse grains, the price of Bajra recorded a small decline in the midst of a comparatively good demand. Business in Pulses was featured by a sharp decline of about Rs 10 per candy. The weakness was attributed to larger arrivals of the new crop in the face of subdued demand.

✱

The Calcutta Shellac market ruled quiet and only a small business passed at lower prices. Shipments, during January till the 28th, were 17,902 packages. Pure TN Shellac was quoted at Rs 135; Pure Buttlonlac at Rs 155, No. 1 Kusmi Seedlac at Rs 145 and Kireelac at Rs 60.

There have been relatively fewer enquiries from the USA—the main buyer. This country has lately bought from Siam large quantities, which amounted to 26,000 packages in December. Secondly, the pressure of arrivals of the Katki crops, amounting to 150,000 maunds, has also affected sentiment.

The trade thinks that the trend in coming months is likely to be steady. The supply is, however, expected to be adequate, considering the stocks of the Kusmi and Katki crops, although the Bysacky crop is not likely to be available until April. The prospects are, that this year's output may be higher due to the steps taken by the Government to increase production.

SOUTH INDIAN MARKETS

Pepper Arrivals on the Increase

THE demand for Malabar pepper has been very poor since the beginning of the year as a result of which offtake by exporters has dwindled considerably. Against this, arrivals are increasing in the primary markets. Consequently, floating stocks in the markets are mounting. Another distressing factor is the willingness of a section of the growers to part with their pepper even at lower price. Moreover, banks at Alleppey and Cochin are reported to have refused to advance further loan to growers as stocks of loaned pepper with them are already heavy. The growers are, therefore, quoting competitive prices to attract business, but so far without notable success. There is a general belief that, if no support from overseas buyers will be forthcoming within a short time, prices may probably decline further. It is also believed that the present prices may topple down by Rs 50 to Rs 100 per candy under nervous selling both by the bankers and the growers, the moment the present resistance level of Rs 800 is pierced through.

On the whole, the technical position of the market is getting weaker, under pressure of accumulated stocks and for want of support either from overseas buyers or from the local merchants who appear to be unwilling to buy either for stock-piling or for investment unless prices are stabilised.

In the Alleppey market, dullness continued to prevail for want of incentives. About 50 candies were done at Rs 775 to Rs787-8 per candy. In the Kozhikode market, Wynaad variety was quoted at Rs 850 and the Country variety at Rs 800 to Rs 825 per candy.

Sentiment on the New York market remained depressed with values declining by about half a cent per pound. Substantial arrivals and "afloats" continued to depress the spot market, with the undertone further unsettled by increasing Malabar orgin offers at lower levels. The potential buyers are inclined to stay side-lined, seeking further concessions. Malabar, Lampong spot and "awaiting release" were quoted at 32½ cents per pound, while Malabar first-half February shipment was quoted at 31 cents. Sarawak spot was quoted at 30 cents. In the London market, White Sarawak was quoted at 32 cents per pound and black Sarawak at 23 cents, sellers.

Meanwhile, shipments from the Cochin Port, during the first eleven months of 1955, at 201,120 cwts disclose a fall of 45,794 cwts over that of the same period in 1954. In terms of value, the fall is steeper from Rs 7.68 crores to Rs 3.9 crores.

✱

The Rubber supply position in India is reported to be very stiff as the growers and dealers are hoarding rubber against the "summer" shortage and the rumoured increase in price.

According to the figures released by the Rubber Board, production in December has shown a slight rise to 2,787 tons from 2,680 tons in November, while consumption has risen sharply to 2,721 tons from 1,837 tons. Stocks with estates and dealers are shown at 4,758 tons against 4,452 tons, while stocks with the manufacturers have declined to 2,696 tons from 2,936 tons. The following table shows the production, consump-

Madras Review

The Peninsula

The Rent Bill

THE Madras legislature has taken up for discussion an important measure of agrarian reform, the Madras Cultivating Tenants, (payment of fair rent) Bill. The Bill was introduced in the Assembly by Mr Manickavelu, Revenue Minister, on January 27. It is to be referred to a Joint Select committee of the two Houses, before the legislature passed its final verdict on it. The main object of the Bill is to increase the share going to the cultivating tenant.

It is provided that 40 per cent of the total gross produce of the principal crop or crops as the case may be, should be payable by the tenant to the land-owner. This percentage will become the legal fair rent for the future. In the event of a contract between the landowner and the tenant for the payment of a smaller percentage. then the contract will continue to have force.

The debate which took place in the Assembly would be better intelligible, if one recalls the general background of the measure. The percentage of rent shows variations between one district and another, though the upper and lower limits are not always different. In Tanjore, for which a special Act is in force, the tenants' share ranges from 27½ to 40 per per cent in general. In some cases, the share even goes further down: where there is double cropping, the average level is lower. In other words, the land-owners get generally from 60 to 72½ per cent of the gross produce.

Against these customary shares, there has arisen a not altogether non-violent challenge. The inspiration for this challenge comes mainly from two sources; the Communists and the Dravida Kazhagam. Tenants led by the Communist party are demanding as much as 75 per cent of the gross produce as their share. Those who are led by the Kazhagam—here it is called the Dravidian Federation—are more modest and are content with 55 per cent.

In other districts, where tenants' organisations and the influence of political parties on them are less conspicuous, the share retained by the tenants sometimes goes down to less than 18 per cent. In calculating the respective shares of tenants and owners, the burden of cultivating costs including manure also sometimes enters; a complication which considerably distorts comparison between one district and another and even between different sections within the same district.

Last year, the TNCC appointed a special committee to study the question of land reform; and this Committee has collected elaborate data, in the light of which the actual conditions of the tenant vis-a-vis the landowner in the matter of share of produce could be seen to be better than the percentage figures indicate. The Committee has found that about half the number of landowners were agreeable to forego a considerable part of their customary share. It is claimed that the majority of tenants were also eminently reasonable in putting forward their demands.

On the basis of the evidence collected, the Committee recommended a fifty-fifty share of the gross produce for wet lands under class 1 sources. In determining the gross produce, common village expenses and harvesting charges will have to be deducted. Of the total produce, the land-owner will be entitled to 46 per cent and the tenant the remainder. These percentages were regarded as conforming to the Committee's motto of "maximum justice to the tillers, with minimum injustice to the landowners."

Communist-led tenants are now demanding as much as 75 per cent of the share. This demand has gained enormous support by the fact that it is the same as what the Planning Commission has declared desirable. It has therefore lost its political sting.

Two more facts should be mentioned in this connection. A number of land-owners, particularly the richer ones, are actually surrendering to the tenants as much as 55 per cent of the gross produce including the cost of seeds, manure etc. These landowners are thus on the right side of the TNCC Committee's proposal for a rent of 46 per cent share for them.

Then there are the small owners, who, all told, are not appreciably better off than their cultivating tenants, even at a basis of fifty-fifty share of the produce for them. For them, any further reduction in income would involve intolerable strain.

It has been one of the unfortunate effects of the policy of gradual increases in tenants share, that the landownners have successfully tried to do away with the tenants altogether. The result is, however over the last ten years direct cultivation by the owner has steadily enlarged and the area under tenant cultivation has correspondingly narrowed down; this is the trend which, of all sections, the tenants would regret most. It is natural that the legislative debate reflected some of these aspects of the agrarian situation as obtaining in the State. The argument also roughly followed party lines. Congress members were on the whole inclined to the view that the Bill with its 40 per cent limit for the landowner, has gone further than it was fair and realistic. One member pointed out this proportion would mean hardship for the landowners when agricultural prices went down. Expressing lack of faith in the statistics on which the Government had based their calculation, he accused the communist tenants themselves of having denied fair wages to their agricultural labour. This charge to concede that the shares promunist member that the Government should fix fair wages for agricultural labour also. Another Congress spokesman was willing to concede that the shares proposed by the Bill were fair but the owner should be entitled to a portion of straw over and above their share of grain. The case for the landowner was also supported by a few independents. The view of the extreme left was represented by the demand that there should be complete protection from eviction; what was needed was that the tenant should be enabled to own land and that his share should not be lower than what the Planning Commission has stipulated. It was argued that ceiling on ownership and personal cultivation were urgent if there was to be a general increase in the purchasing power of the peasants. And alongside a minimum wage for agricultural labour should also be enforced.

It would be rather misleading to compare conditions in other States in view of the historical similarities but as far as the future is concerned, the attempt in that direction made by the revenue minister should be of value. Mr Manikkavelu, in his introductory remark, mentioned some figures concerning other states confronted with a similar problem; in West Bengal, the fair rent was fixed at 50, when the landowner met the cost of cultivation and 40 per cent when he did not. In Bihar, it was 35 per cent, in Bombay where the landowners seem to have been faring worse than in most other parts of India, the rent payable in cash is not to exceed five times the assessment on land or Rs 20 per acre whichever is less. In Hyderabad, the fair rent in the case of canal irrigated land should not exceed 1/4 of the crop.

The fair rent which would be fixed by the Bill before the Madras Legislature, would remain unaltered for a period of five years. The Bill contains a provision to this effect; and whenever there is a remission of revenue from the Government there the tenant is entitled to a corresponding rebate.

EDITORIAL NOTES

(Continued from page 197)

hensive survey of all the relevant conditions, as indicated by the Committee, can throw full light on the extent to which industrial dispersal could be sought without prejudice to considerations of real economy.

*

Paying the Rulers:

A Bill seeking to increase the emoluments of Ministers, Parliamentary Secretaries and Members of the Legislature provoked an entertaining debate in the Uttar Pradesh Assembly. As a Government-sponsored measure, the Bill was carried through, with the legislators securing one or two concessions over and above those at first intended. The Opposition, being a small minority, could naturally do little to impede the Bill.

They could draw comfort from the fact that they were able to say freely what they thought about the usefulness of some of the State dignitaries. One member suggested that Parliamentary Secretaries instead of being given more emoluments might better be scrapped. He wanted that at least there should be an inquiry into the work actually done by these gentlemen Another argued against any attempt to measure the utility of public workers like Deputy Ministers and Parliamentary Secretaries in terms of gold, driving to the conclusion that even their present emoluments should be completely stopped! Nor could he see any justice in giving free medicine to Ministers and their families, when poor people could not get medicine even in times of epidemic.

Another argued that at least in respect of free medicine the ordinary legislator should be treated on a par with the members on the Treasury Bench. The most ingenious excuse on behalf of an allowance permissible even during one's absence was offered by a Congress member. He extolled the provision as an effective device for keeping members off the house, thus shortening the sessions which in turn would lead to considerable savings. At the end of the debate, the MLAs and MLCs found themselves the beneficiaries of two new privileges—free accommodation at Lucknow and a double instead of single free first class fare for their journeys.

Madras Review

South Indian Notes

Aid to Small Scale Industries

The development of small scale industries has acquired special significance since the formulation of a socialistic pattern of society as the aim of Government. But it has been found that industries in this category cannot thrive without substantial aid from the State. Though the State Governments have been given adequate powers to render help to deserving industries in their respective regions, in practice such aid as can be given has been available only to the larger industries who can obtain the necessary finance from other sources. The small scale industries have continued to be handicapped from insufficient working capital.

In recent months the problem of state aid to small scale industries has received the active attention of the Central Government who, after a review of the aid given to the small scale industries in various states, have come to the conclusion that existing Acts in this regard should be suitably amended if adequate help from Government is to reach the small scale businessmen.

The Madras Government have, therefore, decided that the conditions governing the grant of aid under the Madras State Aid to Industries Act should be liberalised. To achieve this object they have published a Bill further to amend the Act.

Under the new Bill cottage industry is defined as meaning an industrial business or enterprise to which the Factories Act 1948 does not apply and as including dairy farming, bee-keeping and keeping a poultry farm. Small scale industry is defined as meaning an industrial business or enterprise the capital in which does not exceed Rs. 5 lakhs. Another amendment specifically refers to small-scale industries also as industries to which aid may be given.

Another provision raises the amount of loan that can be granted from 50 per cent of the net value of assets to 75 per cent. Apart from conferring powers to grant interest free loans to deserving small-scale industries, the Bill will enable Government to grant loans upto Rs 50,000 to any small-scale industry.

Other proposed alterations are in respect of subscription to the share capital of small scale industries, subsidies and technical assistance. Under the Bill Government will be enabled to deal with each case on its merits as far as subscription to share capital is concerned. On the question of subsidy the present restriction that subsidies granted to small scale industries other than cottage industries should not exceed 40 per cent of the cost of the research or of the cost of machinery will be removed so that Government may decide each case again on merits as regards the quantum of subsidy that should be given. Over and above making available to any industrial business or enterprise the services of experts Government will assist the enterprise in the purchase of implements or machinery as well as assist in the marketing of products in the possession of any industrial business or enterprise.

Plight of educated Unemployed:

The extent of the demoralisation that has set in among the majority of university graduates in the country is clearly brought out in Mr S. Govindarajulu Naidu's Convocation address of the Travancore University. Referring to the growing tendency to look down upon the graduates, Mr Naidu exhorted the educated women and men who had acquired invaluable knowledge at much expense of time and money not to lose confidence in their achievement. It would be doing good neither to the educated persons nor to the nation to belittle the usefulness of college education. There was absolutely no doubt that persons with university education were essential to any civilized nation as only such people could guide its destinies efficiently.

It is true that the graduates should guard themselves against the autosuggestion that they are really of no use to the community. But what are they to do when their attempts at getting jobs are continuously thwarted. The plight of the educated men and women was described vividly the other day by Mr K.C. Reddy, Union Minister for Production. Speaking in Trivandrum last week Mr Reddy revealed that persons in authority were daily flooded with applications for jobs from the educated unemployed. The writers who pathetically pleaded for some job somewhere invariably mentioned that the alternative to their failure to secure a job was suicide.

The wretchedness of these people can be better imagined than described. While one can wholeheartedly endorse the fervent appeal made by Mr Naidu in his Convocation address, one cannot but feel that Government have been rather lukewarm in their sympathy for the educated unemployed in the country.

In marked contrast to the bleak prospects before the arts graduates, there is promise of immediate and increasing employment for technical men who come out of the Universities. In view of the ever increasing number of new projects, there is a growing demand for technical men in the country. Technical and technological institutions are also receiving the special attention of Government and grants for building hostels for students studying in these institutions are readily available through the All India Council of Technical Education. Referring to the increasing scope for technical men, Dr. A. Ramaswami Mudaliar said in Trivandrum recently that since Government had only started tapping the resources that had been left untouched for the past 150 years, there would be a great demand for technical men in the near future.

Giant industrial units were being put up. Plans for steel plants costing nearly Rs 100 crores had been finalised and more was in the offing. A number of irrigation works, dams, and hydro-electric works were coming up. Mineral resources were tapped more extensively than before. All the expansions and new schemes required a large number of technical personnel.

ASSOCIATED HOTELS OF INDIA LIMITED

Presiding at the Thirty-Ninth Ordinary General Meeting of the Shareholders of Associated Hotels of India Limited held on 30th December 1955, Right Hon'ble Lord Sinha of Raipur Chairman and Mr. M. S. Oberoi, President, Oberoi Hotels (India) Limited, addressed the meeting as follows:—

ADDRESS BY RIGHT HON'BLE LORD SINHA OF RAIPUR

Gentlemen,

It gives me a great pleasure to welcome you today to the 39th Ordinary General Meeting of the Company.

The Report of the Directors and the Audited Accounts for the year 1954-55 have been with you for some time and with your permission I will take them as read.

I would like to acquaint you with a few salient facts, which will give you an idea as to the steady progress of your Company and the improvements in the increased turnover and profits since the appointment of Messrs. Oberoi Hotels (India) Ltd., as Managing Agents. It will be observed that before the Managing Agents were appointed, the turnover for the year ending 31st March, 1947, was Rs. 50 lakhs, which has steadily risen to about Rs. 65 lakhs during the year under review. There has been a corresponding increase in profits.

You will, no doubt, wish me to explain the reasons for low dividend recommended by the Directors during the last few years. To satisfactorily explain the position, it is necessary to give you a brief background of the hotel industry in this country, in which your Company plays a major part. You are aware that all the hotels in our group were built in pre-war times, and soon after independence, it became necessary to improve the standard of the hotels and bring them up to the standard of the hotels in the West. The Company, therefore, undertook extensive programme of reconditioning and air-conditioning of rooms in each hotel and also redecorating and air-conditioning of the public rooms. You will appreciate that such an ambitious programme naturally entailed heavy expenditure. Although the Company spent, at an average, about Rs. 6 lakhs a year towards improvements, it would be gratifying to note that in spite of that the profits for all these years have been maintained. Furthermore, the Company has spent about Rs. 14 lakhs in the course of the last five years for additions. This money has had to be provided from the profits, and I am glad to report that this expenditure has resulted in good dividend, inasmuch as there has been a big increase in the turnover and profits. Had it not been necessary to make provision for this heavy expenditure, the Company would have been in easy position to declare higher dividends even to the extent of 15 to 20 per cent.

I am glad to be able to say that today our hotels compare with the best in the world and important visitors from abroad have commended the standard of our hotels.

It is, however, our intention to complete our programme of improvements during the next year or so, and soon after that, the Company will be in a position to pay substantially increased dividends which, I am sure, will be higher than those declared in the previous years. I might also mention that our Company would have been very adversely affected had these improvements not been undertaken, as new hotels will be built all over the country and our hotels will be faced with increased competition. I must thank our Managing Director, Mr. M. S. Oberoi, for his foresightedness in taking up this bold step. With these immense improvements in the hotels of our group, we are now in a position to compete with any new hotels that may be built.

During the year under review, Hotels (1938) Ltd., which run the Grand Hotel, Calcutta, became a subsidiary company of your Company. You are aware that the Grand Hotel is one of the leading hotels in Calcutta, and the addition of this hotel to the Company will, no doubt, be an asset to the chain of hotels controlled by the Associated Hotels of India Limited.

Before I conclude, I would like to take this opportunity of thanking Mr. M. S. Oberoi, Managing Director of Messrs. Oberoi Hotels (India) Ltd., the Managing Agents of your Company, under whose guidance and through whose untiring efforts the Company has shown such marvellous results. I would also like to thank the officials and staff for their contribution towards the Company's success.

I would now request Mr. M. S. Oberoi to address the shareholders.

ADDRESS BY MR. M. S. OBEROI

Lord Sinha and Gentlemen,

I thank Lord Sinha, the Chairman, for giving me an opportunity of addressing you.

Lord Sinha has already briefly placed before you the activities of the Company during the current year. I hope you have noted with satisfaction the results achieved by the Company during the last 7 years. I am also pleased that Lord Sinha has clarified the position of lower dividends declared during the last few years in spite of the increased turnover and profits. I can assure you, Gentlemen, that the foresight shown in this programme of improvements will be appreciated by you in the coming years. The sacrifice made by the Shareholders in accepting reduced dividends in the last few years will be repaid in ample measure.

It is my intention today to touch briefly on the prospects of the hotel industry in the country and its place in the economic development of the country.

TOURISM

Since independence tremendous efforts have been made, and we hope will continue to be made, to raise the standard of living and to bring India on the economic level of other first class nations of the world. In addition to the various activities in the development of industries and commerce, it is gratifying to note that India has also appreciated the importance of the tourist industry. This industry has been accepted all over the world as an extremely important industry for purpose of earning foreign exchange. Besides, the economic advantage of the development of tourism, the importance of tourism from the point of view of world politics should not be minimised.

Our efforts to promote tourism have continued and we have been in contact with travel promotion organizations all over the world by regularly sending them literature and looking after their personnel when visiting this country. We have found that our close attention to travel personnel abroad, and domestically, have resulted in increased tourist business. I would also take this opportunity of thanking the Travel Agents in India for their co-operation. Also, due to the improved international status of our country, we are receiving more and more attention from tourists of different countries, and I anticipate an increased number every year. The figures of turnover in our hotels is an indication of improved business.

INTERNATIONAL MEETINGS

Three important events in the tourist development programme of the Government of India took place during the course of this year. The first was the holding of the Council Meeting of the International Hotel Association in New Delhi in February, 1955. As a result of this, leading hoteliers from all the European countries visited India. After the Conferences they undertook an extensive tour of India, visiting important places of touristic interest. I have received numerous letters from the visitors in my capacity as President of the Indian Hotel Federation, saying how pleased they were with their visit and how little people abroad realised the attractions and comforts of this country. I am confident that these visitors will be excellent ambassadors for promoting tourism to this country. The second important event was the meeting of the International Union of Official Travel Organisation in Delhi in October, 1955. Heads of official tourist organisations from all parts of the world met in Delhi to discuss ways and means of improving facilities for tourists. More than anything else these Conferences helped to impress upon the Indian Government the importance given to tourism in other countries of the world. The delegates were very appreciative of the address given to them by our Prime Minister. I am glad to be able to report that the Ministry of Transport (Tourist Section) are now taking an increasing interest in the development of tourism and their efforts will without doubt help to increase the volume of tourists to this country. The third event was the Travel Agents Annual Convention in Kashmir. It is gratifying to note that this important section of the Tourist Industry is becoming organised in India. I am sure that it will help to develop the industry on healthy lines.

INDO-U.S. AIR AGREEMENT

In view of the hotel industry being an integral part of the tourist industry, I feel that it is relevant to say a few words about the Indo-U.S. Air Agreement which, I consider, vitally affects the tourist industry in the country. At present the agreement is still under negotiation, and it is my hope that it will be brought to a satisfactory conclusion, so that American Airlines continue to operate through India. These Airlines can be extremely helpful in promoting tourism to a particular country with their vast resources.

SECOND FIVE YEAR PLAN

I am very glad that the Ministry of Transport have strongly recommended to the Planning Commission the inclusion of tourism in the second Five Year Plan. The hotel industry plays a very big part in the promotion of tourism and it is expected that the Government will give due consideration for providing aid for the improvement of present hotels and building new hotels.

IMPORTANT VISITORS

During the course of the year, a large number of Government visitors have travelled through India, including Marshall Tito, the King of Saudi Arabia, the King of Nepal and the heads of the USSR Government. I am proud to say that your Company was entrusted with catering to these distinguished guests at various places. The Cecil Hotel, Simla, was specially opened for the King of Saudi Arabia and his party, and a number of functions were catered for by your Company. We were also asked to cater for Marshall Bulganin and his party in Delhi and Srinagar. Our new hotel in Kashmir, the Oberoi Palace Hotel, owned by your subsidiary company, was used to accommodate the entire party including Marshal Bulganin and Mr. Khrushchev. This hotel is Maharaja Hari Singh's converted palace and all those who have visited it have without exception stated that it is one of the finest hotels they have visited. The building has been completely remodelled and refurnished and the rooms are according to international standards providing all modern conveniences. I am glad to report that Marshal Bulganin and his party were very complimentary in their remarks about the arrangements made by us. It is also interesting to note that this was the only place on their entire tour where the party stayed in a hotel.

KASHMIR ACTIVITIES

I am very happy that our Company took the right decision to extend their activities in Kashmir. Apart from the fact that this hotel will play a great part in the promotion of tourist industry in Kashmir State, it has without a doubt, created a big confidence amongst the business community, in India and abroad. Besides, it is my confirmed belief that the facilities now offered in Kashmir will draw people from all over the world. This should prove an incentive to business men in India and abroad to explore possibilities in trade, commerce and industry, even when they visit Kashmir on a holiday. It will not be out of place to mention that the Government of Kashmir is taking keen interest to extend their patronage both to the development of tourist traffic and through them to the expansion of trade and industry.

TRAINING OF PERSONNEL

In view of the increased activities of your Company, there has naturally been an increased demand for staff. To keep in line with the policy of Indianisation, we have sent abroad three young Indian boys for training in the Hotel School in Scotland. It is our intention to send more such boys and girls, so that we have experienced trained Indian personnel to man our projects in the future.

NEW HOTEL PROJECTS

I take this opportunity of informing you of the new Hotel projects in Delhi. A public limited company has been floated with the Government having a substantial interest for building a large size hotel in the Diplomatic Enclave. Construction of this hotel has already been commenced. The Government of India have also allotted land adjacent to the Golf Club to build another hotel. This project has been entrusted to East India Hotels Ltd., a public limited company.

FOREIGN INTERESTS

You may have noticed from the news item in the papers the other day that a third project is being considered and a foreign company is being entrusted to handle the project. With the building of 2 new hotels, mentioned above, it is my opinion that the requirmeents of hotel accommodation in Delhi will be met for many years to come. It is expected that our Government will not agree to a foreign company running a hotel in the Capital, when we have sufficient business accumen in the country to run hotels of international standards. I am not aware of the details of the arrangements arrived at between the foreign company and the investment company in India, but in view of the fact that we have sufficient material for running hotels in the country, the necessity for foreign help in this industry is not desirable. I would earnestly request the Government of India and particularly the Ministry of Transport to please look into this important matter in all its aspects.

I would like to take this opportunity of thanking the Ministry of Home Affairs, External Affairs, Transport, Commerce, Works, Housing and Supply and other Ministries for giving us all the co-operation and assistance. My thanks are due to all our staff for the whole-hearted co-operation and hard work which they have put in to achieve these results. I would also like to thank the Directors and Shareholders for the confidence that they have shown in the Managing Agents and their support.

India is on the road to great achievements, and the general economic outlook in the country is far brighter than it has ever been in the past. I am confident that with the economic improvements in our country, all industries will flourish and I end my report on an extremely optimistic note.

THE AUCKLAND JUTE CO., LTD.

At a meeting of the Board of Directors held on the 28th day of January 1956, the following Dividends were recommended to be paid for the half year ended 30th September 1955, without deduction of income tax paid by the Company in each case.

Witcher, Mr. K. W. Young.

Stock Exchanges

EQUITES DEPRESSED ON CALCUTTA CRISIS

Watch-dog Writes:

STOCK markets, in general, have been in a state of suspense during the past two weeks. The shakiness of the technical position in clearing shares has been exposed by the sudden impact of various adverse factors.

While the markets are partly reconciled to the fact that the forthcoming Budget will inevitably cast more burdens on industry and higher levels of income, the main anxiety has been about the future role and set-up of the private enterprise.

In fact, there are fears of additional industries being nationalised, particularly Banking. Again, the reports that the new TISCO issue will be made at a premium of Rs 30 per share and the proposal that Government loans to private enterprise may be converted into equity capital are bearishly construed

Business on the Calcutta Stock Exchange was virtually at a standstill due to the settlement crisis

Sentiment on the Bombay Stock Exchange was demoralised; and active scrips recorded sizeable losses on heavy unloading and bear pressure.

The Madras Stock Exchange continued to reflect easiness in all the sections.

The London Stock gave a better showing though there was not much improvement in prices

Wall Street closed firm, showing a fairly broad front of gains ranging mainly to $1 or more.

*

Calcutta

Calcutta, Friday Evening.

THE local Stock Exchange witnessed another uneasy and depressed week Activity in all the counters came virtually to a standstill and prices collapsed on nervous liquidation.

Anxiety over the likely tax provisions in the forthcoming Budget, apprehensions regarding ceiling on personal incomes, uncertainly about the political situation and misgivings as to the effect on investment markets following the Government decision to nationalise LIfe Insurance—all these factors helped to accentuate the underlying nervousness. On top of these, the reports, that two broking firms had been declared defaulters, aggravated the speculative pressure on the market which was already in a nervous state

When the settlement crisis took a queer turn, the Committee of the Stock Exchange was even obliged to take special measures to cope with the situation by fixing settlement prices and carry-over charges for last clearing. At a special meeting, held on Wednesday, the Committee passed emergency resolutions to the effect that:

"In view of the serious situation that has overtaken the market, the Committee deems it imperative to save the situation by taking some emergency steps. It is, therefore, resolved that, so far as the transactions in the clearing shares are concerned, the following rules shall be observed by the members, Rates for clearing shares are fixed as follows:—Indian Iron Rs 36-0; Burrakur Coal Rs 15-4; National Jute Rs 30-8; Orient Paper Rs 33-8; TEXMACO Rs 20-8 and Indian Copper Rs 6-12"

"Until otherwise fixed, all dues at the aforesaid rates shall be paid and received as the case may be by the members concerned."

"All outstanding transactions shall be ipso facto carried over to the next clearing without any charges to be levied either by the seller or by the buyer until the buyer demands delivery at the above-fixed clearing rates"

"Outstanding transactions shall be allowed to be squared up at the abovementioned fixed rates and no new transactions shall be done by the members until further notice."

"Any transactions done below the fixed clearing rates should be adjusted direct between the seller and the buyer at the fixed clearing rates, and the clearing is to be effected according to the fixed rates"

Business in the Giltedged section continued to be restricted, the proximity of the Budget and monetary stringency being largely responsible. 3% 1986 Conversion Loan moved narrowly between Rs 80-4 and Rs 80-8, to finish the week at Rs 80-4.

Despite the decision by the IJMA to unseal a further 5 per cent looms, Jute shares met with little or no interest Apart from the anxiety with regard to the renewed firmness of the raw jute section, the disappointing dividend announcements made by some of the companies in Andrew Yule and Bird-Heilgers jute groups depressed sentiment in the section. Howrah, after touching a low of Rs 24-12 from Rs 25-10, closed better at Rs 24-15 Nuddea moved between Rs 45-0 and Rs 45-8.

Among Coals, Bengal changed hands at Rs 557 to Rs 560, while Burrakur shed five annas at Rs 15-0. East India were, however, better at Rs 32-12 against Rs 32-8.

In sympathy with the Bombay market, Textile shares lost some ground with Elgins quoting down to Rs 26-15 from Rs 27-8. Kesoram met with some business at Rs 16-12 to Rs 17-0, while New Victoria were sticky at Rs 1-14.

Only few deals were reported in the Tea section. Brooke Bond were marked down to Rs 19-12 from Rs 20-7, quoted in the previous week. Huldibari, after a long time, were in enquiry at Rs 30-0. Bishnauth eased off to Rs 36-12 from Rs 38-2.

No dealings took place in the Sugar section on quieter advices from the commodity market.

In the Engineering section, Jessop, after recovering to Rs 62-0 from Rs 61-0 following the publication of excellent working results, receded again toward the close to Rs 60-0 on selling pressure.

Among Miscellaneous scrips, Orient Paper, after being quoted upto Rs 33-7, finished at Rs 33-0. Indian Copper were on offer at Rs 6-11. BIC were cheaper at Rs 11-11 against Rs 11-14; Indian Cable at Rs 29-12 against Rs 31-4; Rohtas Old at Rs 21-9 against Rs 22-2 and BBP at Rs 3-11 against Rs 4-0.

*

Madras

Madras January 31.

ACTIVITY on the local Stock Exchange continued to be restricted and prices were generally marked down in a number of scrips due to the predominance of sellers.

Textiles:—This section lacked support and there were more sellers than buyers in a number of scrips. Buckinghams were offered at Rs 170; Bangalore Woollens at Rs 555; Lakshmis at Rs 176; Ranga Vilas at Rs 74 and Trichinopolys at Rs 12-11. Maduras were steady at Rs 50, but there were sellers at this level.

Plantings:—Although crop reports from various companies had been uniformly good, this section was subjected to selling pressure.

In the Tea section, United Nilgiris were offered at Rs 305; Nonsuch at Rs 32-4; Coorgs at Rs 9-10; Periakaramala is at Rs 7-14 and Coonoors at Rs 30-8 and Highland Produce at Rs 15-8.

Among Rubber shares, Thirumbadis were the only steady feature at Rs 2-3 following the increase in dividend from Rs 10 to 12½ per cent. Anandams showed a drop of Rs 1-12 at Rs 20-0, while Cochin Malabars were marked back to Rs 7-13 and Midlands to Rs 18-8. TRT, though steady at Rs 12-6, attracted sellers at this level.

In the Coffee section, there was very little buying support. Consolidated Coffees hovered idly around Rs 20-8 with Ouchterlonys quoting Rs 5-4 c.d. and Coffee Lands Rs 17-5.

Sugars:—Except EID "B" Ordinaries which were enquired upto Rs 30 c.d. following the increased dividend, other shares were neglected. Mysores had sellers at Rs 51-8 and Deccans at Rs 8-3.

Miscellaneous:—Business was restricted in this section. Offerings were noted in Brunton Engineerings, FACTs and Indian Steel Rolling Mills at market rates. India Cement Ordinaries changed hands at Rs 32-6 to Rs 32-9, while Deferreds had sellers at Rs 6-8. Travancores were on offer at Rs 12-0. Mettur Chemicals were quoted at Rs 5-14 and Parrys at Rs 5-8. Central Scientifics met with some support at Rs 6-6.

*

London

London, February 1.

THE London Stock Exchange gave a better showing during the past week; but the improvement was due more to a cessation of recent selling than to any increase in buying. The advance on Wall Street and the news that the USA would not cut oil imports were two helpful factors. Operators were, however, unwilling to enter into big commitments due to uncertain economic conditions.

Industrials were a little brighter; but there was not much power behind the move.

Prices in the Giltedged section remained steady though the turnover continued to be small. Foreign Bonds were a little easier.

Following rates were quoted for selected stocks and shares:—2½ per cent Consols £55 3/8 (£54¼—previous week); 3½ per cent War Loan £74 9/16 (£73 7/8); Imperial Chemicals 45/4½ (45/4½); Imperial Tobacco £3 1/16 (£3 1/16); Calcutta Electric 19¼½ (19/4½); Calcutta Tramways 23/6 (25/6); Assam Tea 20/3 (20/6); British Petroleum 108/6 (107/1½) and Indian Copper 10/0 (10½0).

*

New York

New York, January 31.

PRICES on Wall Street, after showing initial weakness, firmed up towards the close. In the early part of the week, a new uncertainty was generaid by the reports that Russia had asked the USA to study a non-Aggression Pact. Toward the close, however, the market advanced under the leadership of Industrial Specialities.

Standard Oil of New Jersey added another $3½, while Kennecott Copper advanced by over $2 on a new earnings record in the fourth quarter. Atchison Topeka scored $1 after a proposed five-for-one stock-split. Also, Shell Oil added $1 following its earnings outlook and dividend liberalisation talk.

Anaconda Copper finished the week at $66 3/8 ($66 5/8—previous week); General Motrs $43 1/8 ($43½) and U.S. Steel Common $54½ ($54½).

In Brief

Rohtas Industries have maintained the dividend at Rs 1-8 per share on Old shares for the year ended 31.10.1955. Transfer Books will be closed from the 21st February to the 6th March, 1956.

BALANCE-SHEET REVIEWS

(Continued from page 194)

to 5.91 lakh maunds against 3.18 lakh maunds.

Sales for the year are shown at Rs 1.60 crores against Rs 1.16 crores, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 17,57,327 against Rs. 14,86,060, though these figures include Rs 1.76 lakhs and Rs 3.70 lakhs respectively as provisions for liabilities no longer required. Apart from setting aside a sum of Rs 80,000 for Contingencies Reserve, the Taxation amount has been raised to Rs 6.50 lakhs from Rs 3.50 lakhs. Depreciation has, however, been reduced from Rs 3.25 lakhs to Rs 3.00 lakhs and Rehabilitation Reserve from Rs 5.00 lakhs to Rs 4.00 lakhs. The dividend on the Ordinary shares is maintained at As 12 per share.

The prospects for season 1955-56 indicate that a good cane crop will be available for the Marhowrah factory; but adverse weather conditions have reduced the quantity of cane available for the Gauri factory.

The directors have recently approved plans to expand the sugar interests of the company. It is mentioned that a separate communication will be sent to the shareholders as and when these plans are implemented.

*

GATEWAY GOSSIP

Continued from page 207)

about the industries that will not, in the near future, attract Government interest. As far as concerns aid to the private sector, stress should be laid on two points.

Firstly, the help being rendered by Government at present to the private sector is not inconsiderable: the advances to the shipping industry are a case in instance. Secondly, there should be an unambiguous Government announcement that insurance funds will be available for investment in the private sector in the same proportion as obtained before the nationalisation of life insurance.

The note on which I should like to conclude is this: the private sector's fears may be exaggerated. After all, in one of the key industries, cement, Government have approved all development by private enterprise—in spite of the fact that a very large proportion of the output is bought by Government as consumer.

Meanwhile, the world rubber market has undergone a sharp downward revision of prices. This is attributed to weaker advices from the markets of origin and New York's tendency to hold off. From as high as 130 cents (Straits) per pound in December, the latest quotation available is about 114 cents. Even at this price, the world price is roughly As 7 per pound higher than the statutory price in India. This is however, considered only a development of temporary nature.

Most of the world rubber magnates are of the opinion that 1956 will be a year of prosperity for the rubber plantation industry in view of the increased demand for rubber and the industry's inability to raise production to the extent of the increased demand for the commodity.

*

The Madras Groundnut market maintained a firm tone with prices showing a sharp rise as sellers were reserved. The rate for superior oil-quality seeds improved to Rs 135 from Rs 128 per candy, while bold varieties were done upto Rs 132 per candy. Arrivals ranged from 40 to 80 tons a day, while crushers were the main buyers.

In the Groundnut Oil section, price also ruled firm with the ready rate rising to Rs 262 from Rs 256 per candy. During the past week, sizeable quantities were reported to have been taken by shippers. Crushers and dealers are presently in no mood to sell even now though foreign markets have not advanced to Indian price-levels.

*

In the Madras Tanned Hides market, arrivals of Cow hides were as usual, but clearances were on a moderate scale. There was a sharp decline in prices following very few enquiries from the UK.

Owing to the continued lack of demand from abroad, the Southern India Hides and Skins Merchants' Association convened a meeting last week to try and find ways and means to arrest the decline. The Association's main object was to advise all the tanners either to suspend their soakings for a period or to reduce them considerably and also to stop buying raw hides. As many of the tanners were outside Madras and were not represented at the meeting, an adjournment was made until February 3.

Arrivals of Buff hides and clearances were as usual without any change in prices. There was a moderate demand from the UK and, in addition, American enquiries kept up prices. Prices of Cow Calf remained unchanged. London buyers were holding back and trying to buy at reduced rates. There were some clearances of Buff Calf at unchanged prices; and the UK was trying to buy at lower prices.

Economy and Reliability

The illustration shows a sugarcane rolling mill of triangular type, 14" × 22", built by Gutehoffnungshutte, Germany, and equipped with SKF spherical roller bearings.

A few years ago the first SKF roller — bearing — equipped crushers and rolling mills of triangular type were installed in the sugarcane industry. The results obtained have been very satisfactory, and several well-known manufacturers are now ready to offer machinery with such bearings.

The chief advantages gained by the use of SKF roller bearings are:

Lower installation costs:
no equipment needed for water-cooling and circulating — oil lubrication of the bearings. The aligning device between the top roll and the pressure — regulating apparatus also becomes unnecessary, since the bearings are self-aligning.

Lower maintenance costs:
no wear of the journals and bearings, and consequently less repairs. Economy of lubricant and reduced shut-down losses.

Lower running costs:
economy of power because of the low friction even at start under full load.

Greater running reliability:
no hot running and no interruptions due to bearing troubles.

Apply to SKF for further information!

For the Investor

Up and Active: Two

Investment Gossip:

THE doctor prescribed the medicine; of patients there were six. Two have since recovered their health, and are active once again.

The doctor in the present case was the Committee of the Calcutta Stock Exchange Association; the two patients who are back on their feet, and busy in transactions, are Orient Paper and TEXMACO.

Four are yet a-bed; no public appearances, the Committee has ruled, for Indian Irons, Burrakur, Indian Copper and National Jute until they are pronounced fit.

Numerous well-wishers (they that belong to the speculative tribe) have asserted that the other four will soon be active, too.

Active, they say, but not as mercurial as they used to be—at least for some time. And this may be a good thing.

For, some have it that the high prices that were obtaining recently were signs of obesity, of inflated values. And excess fat, as any doctor will tell you, may be good for the soul (bringing it nearer to God), but certainly is not good for the body.

Others are of the view that too much weight has been lost; a few pounds more (or rupees, if you will) would seem to be indicated as being all right.

Fitness lies in being the correct weight—in quoting at a level that is neither inflated nor deflated.

For this reason, I have heard it said that stock exchange prices of the future will conform more closely to the yields available—even in respect of the so-called speculative issues.

This contention suggests that, in cases where dividends are frozen by Government fiat, no account should be taken of the appreciation in intrinsic values.

I am not sure that the investor will choose so to be oblivious of an important element that decides the scrip in which he puts his money. Nor am I confident that this is the first time that the bull of the tail-end of 1955 has been bitten; he may shy away for some time, he may hesitate twice before he takes due note of favourable developments in the economy; but optimism cannot be curbed for all time.

Also, the yield that the investor will be satisfied with is bound to vary; a return of eight or ten per cent may be obtained because of an element of risk; a greater sense of security, and the investor may be satisfied with even three per cent—provided he is of the view that some capital appreciation is also assured to him.

But now is not the time for crystal-gazing. The sharp price corrections are to be welcomed; they have been made in good time before the budget (which may not be too favourable) is due to appear. Post-budget corrections, therefore, may turn out to be small-sized.

Finally, it is also heartening that the sense of panic has disappeared well before the budget. Markets are firmer, and the tone is one more resolute to face the surprises that Sir Chintaman might have in store.

UCO Bank: Bigger Profits

Investment Special:

More testiminy is available of stellar performances by Banks in 1955. This week, we find that it is a big Bank which reports bigger figures.

The balance of profit of the United Commercial Bank Limited has increased sharply from Rs 29.07 lakhs to Rs 36.69 lakhs.

All the heads of appropriation benefit. Taxation receives Rs 3½ lakhs more at Rs 14 lakhs.

The transfer to Reserve is raised by Rs 2 lakhs to Rs 8½ lakhs. The Reserve Fund now stands at Rs 95 lakhs.

Shareholders, too, receive more; the dividend is at Rs 2-12 per share as against Rs 2-8 for 1954.

The carry forward is sharply higher at Rs 4.28 lakhs against Rs 1.09 lakhs brought into the 1955 accounts.

But this is subject to payment of bonus to staff.

The provision for staff bonus was, incidentally, Rs 2½ lakhs in 1954.

It is clear that Indian banks, big and small, will be releasing extremely satisfactory accounts for 1955. It is also clear that the UCO Bank figures will be among the best.

£R$

Investment Notes:

It is learnt that, in view of the recent setback in the principal markets in the country and the consequent adverse effects on the capital market, the Tata Iron & Steel Company is going to make its new issue by instalments. The exact number of instalments will be clear only after the shareholders' meeting, which is expected to be held shortly.

National Carbons are now quoted around Rs 24. The recent issue has been subscribed nearly six times over. The general expectation is, that each applicant will get 15 to 20 shares, irrespective of the number applied for.

TELCO has obtained the sanction from the Controller of Capital Issues for the second issue of 1960-65 Debentures of Rs 1,000 each, to be issued at par. The total issue is Rs 1.5 crores. The Debentures carry interest of 5 per cent per annum on the same term and conditions and ranking pari passu in all respects with the existing shares. Shareholders are given the opportunity to subscribe up to 10 per cent of this issue, i.e. for Rs 15 lakhs on or before the 25th February.

Messrs. Tata Industries Limited, Managing Agents for the Tata Iron and Steel Company, Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of January 1956 was:—

	Tons.	Tons.
Pig Iron ..		103,900
Steel Ingots ..		96,800
Saleable Steel:		
Semis ..	24,000	
Finished ..	47,600	71,600

HIGHLIGHTS

We have been accused of wearing rose-tinted glasses; this, of course, is no new charge. In our defence, we have two things to say.

We do not believe that it is a bad thing to see the silver lining—whenever a cloud does possess one. Indeed, there is a compliment implict in such ability: it indicates that one is not overawed by difficulties, that one is able to discover a way out of them

Thus, we don the rose-tinted glasses to screen the glare—but in such manner that we see prospects clearly.

At the same time, if we have grim forebodings, we don't hide them from readers. For what they are worth, the warnings are uttered in Indian Finance.

Two weeks ago, the World of Finance assessed what were properly the budgetary prospects. These suggested that, with the benefits accruing from an expansionist economy, a good case could be made for Sir Chintaman Deshmukh to postpone any large-scale increase in taxes.

Eavesdropper, in this week's Gossip, examines the other side of the medal: there may be other considerations which would necessitate higher taxes for 1956-57.

He gives the facts and figures, the facts as they relate to revenue trends of the recent past and the figures as they relate to the amount of money that would have to be raised toward the Second Plan.

And, on the basis of such facts and figures, his conclusion is that both fresh and additional taxation may be in store. All this, in this week's Clive Street Gossip.

Macneill-Barry Jute Group Results

Balance-Sheet Reviews:

THE difficult conditions generally experienced by the jute industry, during the half-year ended 30th September 1955, are fully reflected in the working results of the Macneill & Barry group of jute mills. Earnings have been adversely affected by high prices of raw jute in relation to those of manufactured goods.

Sales, during the half-year under review, are lower in all cases. Excepting Gourepore Company which has improved its profit, Nuddea and Ganges Manufacturing have incurred losses.

The Gourepore Company has shown Gunny sales at only Rs 1.34 crores against Rs 1.43 crores in the previous half-year; Yarn sales at Rs 2.09 lakhs against Rs 2.34 lakhs; Jute sales nil against Rs 1.03 lakhs and oil sales at Rs 253 against Rs 3,331. The net profit, before providing for Depreciation, is, however, higher at Rs 5,71,588 as compared with Rs 3,57,742. Apart from setting aside Rs 1.10 lakhs for Contingencies account and maintaining the Depreciation amount at Rs 1.50 lakhs, the directors have reduced the allocation to Reserve for Machinery Renewals and Replacements to Rs 1.00 lakh from Rs 2.00 lakhs. The dividend on the Ordinary shares has been maintained at Rs 7½ per share.

In the case of the Nuddea Mills Company, sales have declined to Rs 1..07 crores from Rs 1.11 crores, while the net profit is shown at only Rs. 1,39,772 against Rs 1,79,266 in the previous half-year. Apart from setting aside a sum of Rs 1.10 lakhs for Contingencies, the Depreciation amount has been raised to Rs 3.50 lakhs from Rs 1.00 lakh. The dividend is, however, maintained at As 8 per share.

The Ganges Manufacturing Company has reported sales at only Rs 1.55 crores against Rs 1.60 crores. Following the labour disturbances at the mills in March 1955 when it was found necessary to close the mill for some days, relations between management and labour were slow to return to normal; and the mill's efficiency suffered in consequence. With the result, the accounts show a loss of Rs 14,292 as against a net profit of as much as Rs 8,51,897 in the previous half-year. The directors have set aside a sum of Rs 3.00 lakhs (Rs 2.00 lakhs) for Depreciation; and this is possible only after transfering the amount from the Reserve for Machinery Renewal and Replacement. Naturally, the dividend on the Ordinary shares has been passed over.

£ R$

Ganges Rope Maintains Dividend:

Despite a decline in net earnings, the Ganges Rope Company has maintained the dividend at Rs 7½ per share for the half-year ended 30.9.1955. Although sales of ropes have shown an improvement over the previous half-year, the profit margin on the company's products is seriously affected due to continued competition and the necessity to reduce prices to meet market conditions. An additional factor affecting sales was the disastrous floods in North India, which seriously reduced the normal mofussil demand.

The profit for the half-year has declined by nearly Rs 1.00 lakh to Rs 89,746. The amount provided for Taxation has been reduced by Rs 39,000 to Rs 6,000, while Depreciation is allocated Rs 34,344 against nil. The carry-forward is slightly lower at Rs 27,194 as compared with Rs 52,823 brought in.

£ R$

Investment Briefs:

Consolidated Tin Mines of Burma Limited has maintained the dividend at 7½ per cent for the year ended 31-3-1955.

New Beerbhoom Coal has raised the dividend from As 6 to As 8 per share for the year ended 31st October, 1955.

North-West Coal has raised the dividend from As 10 to As 12 per share for the half-year ended 30th September, 1955.

Ryam Sugar has recommended dividend on the Prefererce shares, the Ordinary dividend being passed over for the year ended 30th June, 1955.

Aluminium Industries, Madras, have announced an interim dividend of 6¼ per cent on all shares (excluding the recent issue of 150,000 shares which rank for dividend only from December 1, 1955).

Indian Finance
Established 1928
February 11, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

RECENT discussions have indicated that attempts are to be made to establish in this country, in time for the Third Plan, such industries as would be capable of producing heavy machinery. High ambitions in this regard are tempered by an awareness of the inadequacy, at present, of both men and money for carrying through such a project. There is, nevertheless, a desire to proceed as swiftly as possible in the matter.

To this end, Government are reported to have held confabulations with four parties—Czechoslovakia, West Germany, Fiat of Italy and a British consortium. Reports suggest that Government are thinking in terms of appointing one of the parties as working consultants in a manner similar to the appointment of AEI in the electrical field. In our view, this procedure is not too well considered.

While we welcome the fact that International Consultants have officially been appointed as advisers on steel to Government; and while the selection of AEI as guide in electricity is apt and appropriate, it seems to us that heavy machinery is a sector in which there is great and compelling need for an independent body to work as consultants.

Indeed, this pattern is already embodied in the appointment of International Consultants. In what may be termed specialised industrialisation, it is important that India should be able to appraise the help it will need, and then to choose as partner and source of technical know-how that country in which technological development in the particular field of industry is most advanced.

Our financial resources most certainly do not permit of our securing, and being satisfied with, what may only be second best. Each scheme has to be assessed dispassionately and expertly. The selection of any particular country might cause bias to be inescapable.

Moreover, by providing that ample opportunities should be available for the training of Indians, an impartial body of consultants would also ensure that a wealth of Indian technical knowledge and experience would be quicker built up.

It is not as if urgency dictated an immediate decision on the selection of consultants for heavy industries. For India to obtain the best in international co-operation and technical assistance, it is necessary to safeguard against the possibility that we may be more or less committed to accept the restricted and necessarily limited store of knowledge that a single country could give. The safeguard here lies in making doubly sure that the advisers appointed are experts in heavy industry, and that they are also truly international in outlook.

New Look for International Aid

SOUTH East Asian countries have grasped a new economic direction during the post-war years and most of them have already travelled some way along it. Political emancipation facilitated a reorientation of economic effort calculated to impart a greater balance in production and reduce industrial dependence on other regions. The latest ECAFE Survey testifies to the progress of development expenditure in the different countries of the region, improvement in agricultural production and industrial expansion. On the whole the trends are encouraging, though the tempo varies with different countries.

The most outstanding achievement is the attainment of an overall self-sufficiency in food for the region. Inter-regional commerce is growing. Above all, there is a widespread popular realisation of the need to improve standards of living and the urge to put further efforts toward that end. The remarkable success of the measures adopted in harnessing domestic savings in the ECAFE countries is a sure testimony to this urge. Foreign aid has also played a considerable part in the progress of post-war economic development.

But, gratifying as current trends are, progress is by no means adequate in relation to needs and to the general level of development from which the new build-up has had to start. The improvement in agricultural production, due largely to a succession of good harvests, cannot yet be regarded as stable. For the region as a whole, the increase in population has tended to outstep the expansion in agricultural production, with the result that in 1954-55 the per capita agricultural production was still 14 per cent below the pre-war level. In India, the rate of current savings has failed to keep up to the Plan schedule, though in 1954-55, a reassuring increase has occurred. The growth of employment opportunities during the first Five Year Plan has been disappointing. With the vast majority of the population still on the margin of subsistence, these can be no satisfaction with the tempo of development.

At the ECAFE session at Bangalore, more than one delegate spoke in terms of narrowing the gulf between standards of living in the industrially advanced countries of the West and the comparatively backward countries of the East. This is a far-cry from what is practicable for another generation or two. In India, for instance, even if there is to be an increase of 27½ per cent in the national income, after making allowance for the rise in population, the residual impact on the standard of living of the masses will be small. The glaring maldistribution of territory and natural resources between the various peoples of the world is not likely to be rectified, except through processes which no one can seriously contemplate at present. The one unmistakable direction implied in the counsels of the ECAFE is toward more vigorous efforts to curtail the growth of population.

Equally important is foreign aid. Even with the maximum strain on the region's domestic resources, an adequate pace of development could not be secured. The Prime Minister felt no qualms in appealing for liberal foreign assistance. The Bangalore session coincides with a new turn in the general outlook on this question. The proposal for the creation of the Sunfed (Special UN Fund for Economic Development; the term has nothing to do with solar energy) has been before the world for some time. Pandit Nehru not only welcomed the proposal but emphasised its urgency. The UN Secretary-General is another keen believer in its usefulness. At the Session, the Russian delegate pledged the unstinting co-operation of his country for the Fund and he pleaded for its early establishment.

The Sunfed proposal has thus gained an extra momentum at Bangalore and its prospects are now far brighter than before. The existing regional and international organisations through which financial and technical assistance is conveyed to under-developed countries are exposed to the charge of being politically inhibited. It would be unfair to lay this charge at the door of the Colombo Plan where the participating countries have taken special care to avoid wounding the susceptibilities of any nation. But for the Powers who look askance at the Commonwealth, the political link is a source of irritation. The World Bank also is similarly placed. The International Financial Corporation has a limited scope and is organisationally pro-Western.

In the majority of Eastern countries, which are in need of foreign assistance, particularly financial, there is a growing suspicion against "political strings". Even when no formal commitments or obligations are involved in foreign loans or grants, there is a fear that such assistance may undermine freedom of action. No wonder that at Bangalore, the delegates of Russia, Britain and US vied with each other in disclaiming motives behind aid.

The Russian delegate sought to convince his colleagues from the South East Asian countries that military pact and the commitments they involved would be highly prejudicial to the interest of economic development; and that these countries would be serving themselves best by keeping off such alliances. In the unavoidable intrusion of the cold-war, the opposite point of view found expression, notably from the Pakistan delegate and from the UN Secretary-General. Amidst the exchange of this diplomatic fire, the cause of the under-developed countries could glean one helpful feature—the anxiety of most of the "surplus" nations to contribute increasingly large resources in the form of aid. That there is an unhealthy element of competition in this sphere is not altogether regrettable; though it is unworthy and ultimately harmful to the beneficiaries to exploit it.

Besides being a fully broad-based complement to the private and institutional channels of international financial and technical aid, which now obtain, the Sunfed can develop as an inspiration, a sobering influence on, if not a direct corrective to the existing institutions. It can import a residual coordination to international aid. It can inquire into the special

requirements of the different countries with a status and authority which no other organisation can command. Aid dispensed through the Sunfed will be immune to stigma and suspicion. The Sunfed may also be in a position to offer criticism and direction of national policies in a manner which will not usually be resented anywhere. If the administration of the Sunfed is protected from the danger of being enmeshed in the web of red-tape and formalities for which the UN has become notorious, the organisation will function as a vital instrument of not only international aid but of international understanding. At the worst, it may provide another avenue for the manifestation of the cold war.

Moscow and Washington

IN the atmosphere of bewildering and portentous distrust which poisons current international relations, it would be presumptuous to attempt to pronounce a verdict on the response which the Soviet Premier's offer for a treaty of friendship has received from President Eisenhowever. The US President's rejection of the offer was so prompt that it almost looked like an instinctive reaction. It is possible to bemoan or decry this forthright rejection as callous and, from the standpoint of world peace, at least negatively harmful. On the other hand, it is possible to acclaim Mr Eisenhower's attitude as thoroughly realistic. The critic's viewpoint will obviously be decided by his political sympathies. And that leads us nowhere.

When the motives and methods of the cold war are extremely confusing, it is difficult to see why Marshal Bulganin made this appeal to his international adversary Number One. It can be a sincere gesture and the Soviet Premier's letter can be taken for what it says. In this letter is envisaged an improvement of Soviet-US relations which would "lighten the task of putting an end to the armament race and to contribute to a fuller utilisation of the economic resources of the two States in the interest of peace. In this case, the resources now going into unproductive military expenditures could be used for purposes of improving the material well-being of nations, lowering taxes, raising real wages, housing and public construction and aiding under-developed countries in the interest of peace and of strengthening international cooperation".

What is aimed at as desirable is a return to the "Geneva spirit", of which much was expected, seven months ago and little was fulfilled. The US President's quick reply showed that he had no faith in the mere creation of a climate bringing any good, as hoped for by the Soviet leader. As far as the US was concerned the only useful course would be to tackle specific major issues which infest mutual relations. In other words, Mr Eisenhower, as the representative of US opinion, does not believe in gestures of friendship, when there are innumerable points of conflict between the two parties. There is therefore a call for deeds.

Besides, there is also the suspicion that the offer from the Soviet Premier is an attempt to break the ranks of the Atlantic Powers. Marshal Bulganin's second offer to extend the treaty of friendship to other Western Powers has met the same fate as its predecessor. In the interval between the two offers, the French and British Prime Ministers had endorsed the view that a treaty of friendship with Russia under the existing circumstances would be no more than a scrap of paper. Thus, they had forestalled the fate of the second offer, of collective friendship.

The tortuous history of Europe since the end of the first world war is strewn with many broken friendships of this character, and neither party can claim to be wholly innocent in this respect. France had a treaty of mutual assistance with Russia in 1940, when Hitler was blowing up the Maginot Line. There was also a little treaty between Russia and Japan which had to be overlooked when Russia found itself in the opposite camp. From its side Russia can point to the abrogation last year of the peace agreement signed between Russia, Britain and France, against the rearmament of Germany.

Bilateral and even multi-lateral pacts for mutual assistance have quietly collapsed in the face of new international emergencies. The failure of the Soviet offer is therefore historically justifiable. All the same, there will be regret arising from the thought that the US, and its friends, ever alert to the changes in Soviet tactics, will have lost little by accepting the offer. Possibly the offer represented a genuine offer for peace, in which case its rejection is certainly no matter for congratulation.

But the United States can have reasons for a different interpretation of the consequences, if it were to have accepted the offer of friendship and a no-war declaration. Just now the world's attitude to communism runs on three parallel lines. The Communist States are wedded to the aim of pushing their ideology all over the world. There has been no consistency in the choice of methods for this purpose. In the non-communist group, there is sharp division of opinion. The US represents one section, keen on preventing the spread of communism anywhere, and on rescuing as many as possible from the already converted. This attitude does imply a protective compromise with the democratic principle of free expression of individual opinion with a view to influencing the majority. Britain and India represent the other section, governed by a less compromising faith in democracy, and complete freedom for the individual to persuade or be persuaded by others into any ideology. In Britain, there is, of course, the unacknowledged assumption that the average citizen's faith in democracy is powerful enough to withstand the appeal of a less tolerant political creed. India shares this assumption, but its basis may be weaker.

Other major powers in the West who form the leading lights in the Atlantic Pact find themselves in company with Britain, but as recent events in Italy and France have demonstrated, with a less robust attachment to democracy as a matter of belief. Perhaps, the incoherence of views between the different members of the Atlantic Community may, to a large extent, be attributed to these underlying differences. The US, at any rate, functions as the most uncompromising champion of an order which it is the intention of communism to disrupt.

In more practical terms, it becomes a question of propaganda or war for the preservation of the non-communist neutral nations of the world in their existing political order. Here, the Western nations, under the leadership of the US, are handicapped in several ways; in Asia particularly, territorial affinity of the neutral and the communist countries is a point against Western Powers. Though Britain has been surrendering its empire bit by bit more or less gracefully and Netherlands doing it on compulsion, psychologically, even the liberated countries are not fully redeemed from the inhibitions of their past. The lingering presence of residual Empires and of Western pockets dotted all over Asia sustain the antipathy to the European Powers, in spite of whatever generosity or wisdom they are willing to show in the matter of economic assistance.

It is not easy for peoples long subjected to foreign rule to forget their experience under erstwhile masters, who in this case, have all been from the West. This is why the anti-communist tirades of the Western Powers fail to make a full appeal on even those who have unflinching faith in democracy. Wherever there are issues to be settled between subject peoples and their Western over-lords, the US particularly has not always been acting in a way calculated to inspire confidence and cordiality in the minds of the former.

In the Middle East, there is a tangle of problems, to which the Western Powers themselves have contributed a great deal. Trying to be friends with mutually warring parties, they seem to have largely forfeited the sympathy of both. In the economic situation in the whole of Asia, there are still significant elements which can undermine democracy. All these features are congenial for the expansion of communism even without much of fighting or international direction.

The recent meeting of the British Premier and President Eisenhower was intended to make a fresh assessment of the outstanding problems of the day and to concert measures to tackle them in a manner suitable to their political aims. The joint communique issued from Washington is an indirect admission that even Britain and United States, so closely linked through common purposes, are yet unable to see eye to eye on vital questions such as trade with China and policy on the Middle East. In this rather unfriendly political landscape, it is understandable that the US thinks that a treaty of friendship with Russia will turn out to be more a trap than a boon.

Law for the Layman

What is the effect of the Redemption of preference shares upon the Capital Structure of a Company?

By K. N. VISWANATHAN

THIS question came for decision before the Chancery Division of the High Court in England in re: Serpel Ltd. (reported in 1944 Chancery Division at page 233).

Before stating the answer to this question, it would be useful to place the facts of this case before the reader, for a proper appreciation of the conclusion reached by the High Court.

The Original Capital of this Company was £210,000 consisting of 110,000 seven per cent redeemable preference shares of £1 each and 100,000 ordinary shares of £1 each fully paid up. Of these preference shares, 24,000 were redeemed before April 1949. The Company held an extraordinary general meeting on 28th April and passed a resolution "that the capital of the Company which now consists of £185,000 divided into 85,000 seven per cent redeemable preference shares and 100,000 ordinary shares of £1 each all fully paid up be reduced to £100,000 divided into 100,000

(Continued on page 285)

Bihar Budget:

The first Second Plan State Budget was presented by Dr Anugrah Narain Sinha to the Bihar Assembly last Tuesday. The budget reflects a sincere effort to meet the growing annual deficit with new taxes. Three levies are proposed. There is to be a new cess, for the purpose of financing primary education, on rent receivers who will have to pay at the rate of one anna per rupee. Diesel fuel will be treated as a form of motor spirit and be subjected to a tax of 3 annas per gallon. A multi-point sales tax at lower individual rates will replace the existing single-point tax.

The total proceeds from these three levies is estimated to be about Rs 2 crores. In the Finance Minister's speech, there is also the suggestion of a tax on the capital value of urban property which changes hands. Against a total estimated income to the Consolidated fund of Rs 66.76 lakhs total expenditure stands at 96.23 lakhs, leaving a net deficit of Rs 29.47 lakhs.

With the withdrawal of its entire balance of Rs 250 lakhs, the Postwar Reserve Fund disappears. On the revenue account, between an income of Rs 36.36 lakhs and an expenditure of Rs 64.88 lakhs, there is a deficit of Rs 28.52 lakhs, which means the overall deficit is almost wholly accounted for by the gap between ordinary revenue and expenditure. The Government, for various reasons, are obliged to spend more and more on general administration. On the Second Plan projects, the State hopes to spend Rs 26 crores during the year.

Editorial Notes

A New Criterion:

The Planning Commission are reported to have favoured a pilot scheme for small-scale industries, intended for the educated middle-class. This scheme claims to have an employment potential of 10,000, for the whole of India. Presumably the Government would be subsidising, either wholly or in part, producing or distributing concerns run on an individual or cooperative basis. The scheme should naturally start with a general recruitment of unemployed persons and giving them some preliminary training.

As this is a field which is likely to attract those who have completed their secondary education, undergraduates and probably graduates also, applicants will run to hundreds of thousands. The latest figure of educated unemployed in India is around 5½ lakhs. Only a tiny fraction of this forbidding number could be relieved by this scheme. By applying certain humane criteria it might be possible to reach this relief to those among the most deserving. These criteria may be superficially novel, but the underlying spirit is already unequivocally recognised and reflected not only in State policies but in many social programmes approved by the State. Subject to character and average capacity, the eligibility of candidates should be judged primarily by their means. There are innumerable families, where, the majority are all of the younger generation are without jobs, and with little else to fall back upon. Preference to such families will ensure the maximum relief. The number of dependants of the persons can be another test. If means is to be regarded as the principal basis, it will lead to the most equitable dispersal of employment under the scheme. It cannot be denied that in the traditional methods of recruitment, especially in the higher cadres, there is a pronounced bias toward concentration of opportunities. This bias is inconsistent with the aims of genuine economic democracy.

*

What it cannot do:

Many a good cause is lost by over-pleading. In the course of the debate on the merger scheme in the West Bengal Council, one member expressed the hope that the merger would largely solve the unemployment and refugee problems. As a specific desire, this hope is laudable. But there is a clear exaggeration of prospects. Bihar is not free from the problem of unemployment, though it is of a far less intractable character than West Bengal's. There is no authoritative estimate of the scope for absorpton in Bihar of persons outside the State in regular employment.

It is true that its comparative backwardness in education has created a few categories of shortages of personnel in Bihar. The total position however does not seem to be encouraging from the point of view of employment opportunities. Nor is the pattern of employment in Bihar and West Bengal as obtaining today congenial for any large-scale off-take between the States, without a broad element of reciprocity in it. The mere unification of the two States cannot be looked upon as productive of opportunities for jobs which are otherwise absent.

Likewise, it is too rosy to expect that the swelling numbers of refugees could be absorbed in Bihar on a scale found impracticable hitherto. In this respect, the only new advantage is the possibility of the refugees becoming more agreeable to seek a permanent abode in Bihar. There will no longer be the inhibition of an exotic environment, though even here proximity to the West Bengal border can remain a vital influence.

There will undoubtedly be some economic benefits accruing to both the States by the sheer fact of a mutual union and better ability to tackle unemployment through joint efforts will be one them. But this is not equivalent to any substantial solution. The sponsors of the merger are not unimpressed with the economic benefits but the most compelling consideration is political. By an exaggeration of the non-political gains which could easily be shown in their true dimensions, the proposal itself may invoke greater opposition. This is a mistake to be guarded against by all those who wish success for the merger scheme.

*

NEFA Troubles:

A rapidly worsening situation has compelled the Government of Assam to declare Naga Hills a disturbed area and to requisition the army to restore order. Lawlessness in the almost inaccessible north-east frontier is not entirely a new phenomenon. During British rule only nominal suzeiranty prevailed and the attempts since the transfer of power to establish regular administration were not immediately popular with many Nagas accustomed to freedom without sufficient responsibility. Trouble was brewing for sometime and now it has assumed disconcerting proportions.

Though the majority prefer autonomy within the Indian Union, extremists led by Phizo would have nothing short of a completely independent Nagaland. Doubtful now of popular support Phizo has let loose violence. The leader of the liberal group, Mr Sakhrie, was recently murdered. But terrorism has failed to intimidate the saner elements who have offered full cooperation to the authorities. Extremists are steadily losing ground and are now forced to go underground.

Far-sighted policy on the Government's part is the need of the hour; strong yet sympathetic measures should be adopted to meet the situation. Every effort must be made to make the Nagas realise that their destiny is inextricably linked with India. Separatist tendencies must be weeded out but there should be no interference with the customs and traditions of the people. Development of communications will rapidly bring the Nagas into contact with the rest of India and they will soon be ready to shoulder responsibilities as citizens of India. The large sums earmarked in the Second Plan must be fully utilised to bring amenities to the tribal people.

World of Finance

Rs 15 Crores Deficit Financing

THE returns of the Reserve Bank for the week ended February 3 may be said to be a landmark in the annals of agricultural credit in India. In the return for the Banking Department, two heads appear on the Liabilities side. The first is: National Agricultural Credit (Long-term Operations) Fund. The second is National Agricultural Credit (Stabilisation) Fund. The Long-term Operations Fund shows a balance of Rs 10 crores. The Stabilisation Fund figures as a new head; and it is to be expected that the balance in this Fund will, in due course, be provided from the Government's share in the dividends distributed by the State Bank of India. Both these Funds on the Liabilities side of the returns for the Banking Department are in implementation of the recommendations of the Rural Credit Survey Committee. The opening balance of Rs 10 crores shown to the credit of the Long-term Operations Fund has been made possible by the contribution made by the Government specifically for this purpose. This is the second instance of Government's allocation to the funds figuring in the Banking Department. At the inception of the Reserve Bank, the Act provided that, while the paid-up capital would be Rs 5 crores, the Reserve Fund would also be Rs 5 crores from the beginning, the amount of Rs 5 crores for the Reserve Fund being an allocation made by the Government specifically for this purpose.

While the origin and source of the balances in the Reserve Fund and in the Long-term Operations Fund are similar, the uses to which the balances are to be put vary. In the case of the Reserve Fund balance, this amount is swallowed up in the general transactions of the Banking Department. In the case of the Long-term Operations Fund's balance, however, the purposes for which it is to be utilised are strictly prescribed. It is, therefore, likely that the assets side of the Banking Department will present a clear picture of the purposes for which the Fund is used and the magnitude of the amount involved from time to time. From this point of view, it may be suggested that a new head must be added to the assets side after "Other Loans and Advances"; and that the new head should be described as "Long-term Agricultural Loans".

While this suggestion is being considered, it is also useful to examine the present composition of the transactions shown under "Other Loans and Advances". The present practice is to show, under this head, loans given to the Scheduled Banks as well as loans given to Co-operative institutions. What proportion of 'Other Loans and Advances" represents loans to member banks and what proportion represents loans to Co-operative institutions, can now be ascertained by reference to the weekly statement giving the consolidated position of the Scheduled Banks. The latter statement shows the week-to-week figure of the Scheduled Banks' borrowings from the Reserve Bank. If this amount is deducted from the total of "Other Loans and Advances", the balance represents the loans to Co-operative institutions. We think that "Other Loans and Advances" may be usefully split into two heads: (a) "Loans and Advances to Scheduled Banks" and (b) 'Loans and Advances to Co-operative institutions."

The Reserve Bank returns for the week ended February 3 are also noteworthy for a substantial instalment of deficit financing. Rupee securities have increased by Rs 14.90 crores to Rs 603.26 crores. Rupee securities in the Issue Department stood at Rs 533.75 crores on April 1, 1955. The magnitude of deficit financing in the first ten months of the current fiscal year is, therefore, Rs 70 crores. In the remaining seven weeks of the fiscal year, there will be recurrent and substantial recourse to created money.

The Reserve Bank's action in raising the rate on advances against usance bills by ¼ per cent and in withdrawing the facilities in regard to stamp duty must be viewed firstly in relation to the seasonal pattern of money rates and secondly in relation to the official monetary policy in the leading financial centres of the world. It is, indeed, remarkable that, while the Bank Rate has been put up almost universally, the Bank Rate in India has remained unchanged. This is a measure of the self-containedness of the Indian money market. At the same time, to the extent that exchange banks constitute an important segment of the Indian banking world, our money market's insularity is true only to a limited extent.

The rates for term deposits as well as call money are now slightly over 3 per cent; and the rates may go even higher if the total paucity of funds does not reduce business in the money market to almost nothing. From this point of view, as well as from the point of view of seasonal demand, a stepping up of money rates is inevitable. That the Reserve Bank has decided to keep the Bank Rate unchanged for the time being, and to raise the Bill Re-discount Rate by ¼ per cent, is therefore a recognition of the fact that the Indian market is no doubt insulated, though only partially so.

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on February 7. Total amount offered was Rs 1,68,25,000. Tenders at Rs 99-6 were accepted in full and those at Rs 99-5-9 were allotted approximately 36 per cent. Lower tenders were rejected. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-3 per cent per annum.

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs a. p.
1956:			
January:			
3rd	1,39,75	1,00,00	2 8 2
10th	1,46,75	1,00,00	2 8 1
17th	1,42,75	1,00,00	2 8 3
24th	1,21,75	1,00,00	2 8 [illegible]
31st	1 72,00	1,00,00	2 8 3
February:			
7th	1,68,25	1,00,00	2 8 3

+

In the week under review while currency was expanded against ad hoc Treasury Bills to the extent of Rs 15 crores in order to provide the means to allocate Rs 10 crores to the Long-term Operations Fund and to take care of the Centres' month-early disbursements, the Reserve Bank did not stand in similar need of cash replenishment. So, the expansion against rupee securities was offset by contraction against foreign securities which show a decline of Rs 14.91 crores to Rs 652.16 crores. In the result, the status quo is maintained. But, on account of the heavy disbursements usual to the beginning of the month, active note circulation has expanded by Rs 13.30 crores to Rs 1,392.37 crores. Rupee coin has gone out into circulation to the extent of Rs 1.21 crores. Notes held in the Banking Department are, therefore, down by Rs 14.42 crores to Rs 8.45 crores.

In the Banking Department, in conformity with the customary pattern in the first week of the month, deposits under all heads show declines: Central Government by Rs 1.14 crores to Rs 52.88 crores; State Governments by Rs 4.07 crores to Rs 14.40 crores; banks by Rs 2.01 crores to Rs 63.23 crores; and other deposits by Rs 1.30 crores to Rs 15.80 crores. Thanks to the transfer from the Issue Department, foreign balances in the Banking Department have risen by Rs 14.36 crores to Rs 81.41 crores. Scheduled Banks have had to increase their borrowings by Rs 5.29 crores to Rs 49.62 crores. The firmer sentiment in the giltedged market is reflected in a decline of Rs 0.79 crores in Investments held in the Banking Department.

+

The statement of the State Bank of India for the same week reveals a drop of Rs 1.74 crores in deposits at Rs 236.68 crores. Borrowings from other banks are slightly higher at Rs 0.90 crores against Rs 0.75 crores, while other liabilities, including inter-office adjustments, have risen by Rs 8.06 crores to Rs 11.45 crores.

On the assets side, cash balances have declined by Rs 2.19 crores to Rs 29.85 crores. Investments have moved up by Rs 0.79 crores to Rs 116.91 crores. Advances have shown a rise of Rs 3.24 crores to Rs 117.71 crores —'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 0.31 crores and 'Bills Discounted and Purchased' for Rs 2.93 crores.

According to the returns of the Scheduled Banks for the week end-

Mr Macmillan's Dilemma

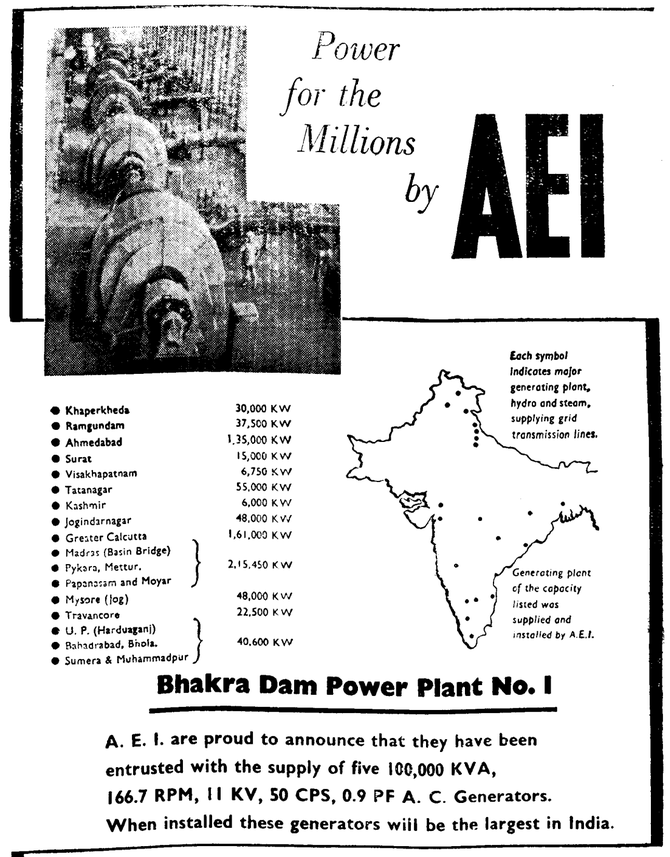
By PAUL EINZIG

Mr. MACMILLAN is not expected to disclose his full plans of dealing with inflation before Budget Day. In the meantime he and the junior Ministers of the Treasury, when answering questions in Parliament, usually resort to the time-honoured formula: "I cannot anticipate the Budget statement." Nevertheless, he has already made it plain that he intends to make no change in the value or status of sterling, and that he intends to introduce no statutory limitations of dividends. For the rest, he remained tantalisingly vague. So speculation is ripe if, and to what extent he will resort to controls in order to reinforce the operation of the credit squeeze and of other measures adopted by his predecessor. It now seems certain that those measures will need reinforcing, for they have completely failed to arrest the inflationary wages spiral.

It is true, the latest bank figures show a marked decline in the amount of bank advances. Sterling has been firm since the turn of the year, and the Treasury actually succeeded in recovering some gold in January. But there are as yet no indications of any basic change in the trend of the balance of payments. And the domestic situation continues to be inflationary. When a Socialist Member of Parliament demanded that the Government should drop the credit squeeze on account of its deflationary effect on industry, the Economic Secretary to the Treasury, Sir Edward Boyle, reminded the House that inflation and not deflation remains the main danger..

The new Chancellor has to make up his mind between now and April 10 when he will make his Budget statement, whether to administer yet another dose of orthodox credit restrictions, and supplement them with a 6 per cent Bank rate, or to resort to unorthodox physical controls and measures of compulsion. It has been suggested, for instance, that he might repeat the Keynesian device of compulsory saving, by adding another shilling in the pound to the rate of Income Tax and credit the proceeds to the accounts of taxpayers. The idea is that these amounts should be released if and when consumer demand will show genuine signs of slackening. There is already an amount of £520 million earmarked for that purpose, the outstanding balance of the "Post-war Credits" which were supposed to be repaid after the war but which are only repaid as and when the beneficiaries reach retiring age. Even so, the amount is being gradually reduced. Possibly the Government may be anxious to replenish this fund, so as to be able to intervene more effectively if and when there are signs of a major depression.

There is also much talk about the possibility of a return to steel control. Industry is suffering from an acute shortage of steel, and the Government is subject to Socialist criticism on account of its attitude in allowing steel to be used extensively for the construction of office buildings and other non-productive schemes, while some of the dollar-earning exporters are short of raw material and have to cut their output. Such criticism is not confined to Socialist quarters. The Conservative Party appears to be sharply divided between the 'diehards" who prefer ruthless orthodox measures of credit restrictions and the more progressive elements who would like the Government to relax its "ideological dogmatism" in face of the realities of the situation.



The practical case for resuming the system of steel allocations to safeguard the supplies of exporting industries is a strong one. But a large proportion of Conservative politicians and almost the entire Conservative Press are opposed to it, for fear that it might become the thin end of the wedge. Once the principle that shortages justify the reintroduction of physical controls is adopted in one instance it is liable to be applied in many spheres. In spite of this, a by no means insignificant section of the Conservative Party is in favour of it. There is a growing feeling amongst them that under Mr. Butler's Chancellorship, the Government had gone too far toward liberalising trade, and that under prevailing conditions, Britain's expanding economy is bound to entail inflation in the absence of some physical controls. Those who think on such lines are hoping that Mr Macmillan will prove to be their man.

The main difficulty which Mr Macmillan will have to face when deciding on this issue of freedom Vs. controls is that the Conservative Party has committed itself heavily on the side of economic freedom. But he himself is as yet uncommitted, and it is just possible that the reason why Mr Butler was succeeded by Mr Macmillan is that it is always easier to eat the words of one's predecessor than one's own words.

There is the danger that the reintroduction of physical controls might split the Conservative Party from top to bottom. Already there are indications of Right-wing hostility toward Mr Macmillan, even before anybody knows what he intends to do. There are other elements of possible disunity—the forthcoming Monopolies and Restrictive Practices Bill, over which Conservative opinion is sharply divided, and the personal rivalries between the Conservative leaders. The Traditional Conservative Party discipline and loyalty will be put to a very severe test this year. And Mr Gaitskell, the newly-elected Leader of the Socialist Opposition, is awaiting his opportunity to exploit any split in the ranks of Government supporters.

Britain's political horizon is thus far from clear, in spite of the increase of the Government's majority at the general election last year. It would be deplorable if the difficult economic situation were aggravated by political complications.—(Copyright).

World *of* Business

Cotton Target for Second Plan

Dr P. S. Deshmukh's disclosure at the 73rd meeting of the Indian Central Cotton Committee of the Second Plan target of 55.86 lakh bales must have disappointed the more optimistic. A bolder target would have been justifiable, if not necessary as some think, on account of the larger acreage that will probably be brought under cotton cultivation with the realisation of irrigation projects. Marked improvements in yield are also possible as research progresses and the use of better seed spreads.

According to official estimates, cotton production has increased from about 21.88 lakh bales in 1947-48 to 42.98 lakh bales in 1954-55. To a considerable extent the country has recuperated from the aftermath of partition which entailed a loss of 22 per cent of the total crop area accounting for 35 per cent of the production. The pre-war level of self-sufficiency has not been reached yet.

In 1949, imports totalled 11 lakh bales. The recovery during the period was swift. By 1951, production increased by 8 lakh bales. And then, the first Five-Year Plan made possible a significant increase in acreage of 3.5 millions and in production of 12.5 lakh bales.

At present more than 20 million acres are under cotton crop producing over 40 lakh bales. Notwithstanding these, the country is now dependent on imports to the extent of 7 lakh bales entailing an annual commitment of some Rs 50 crores. Modest estimates have placed the country's requirements at 60 lakh bales.

There is a qualitative aspect as well in respect of the improvement. Here again, satisfactory progress has been in evidence. Twenty-five per cent of the crop is constituted by medium and long staple. In 7 years' time, long staple alone has risen from 15 to 35 per cent of the crop. Further advance in this direction is necessary to minimise imports.

There is little scope for complacency in spite of the fact that a current annual saving to the extent of Rs 44 crores is effected as a result of the increased consumption of 12.7 lakh bales of Indian cotton.

For the realisation of the next Plan's target, more adequate representation of cotton growers on the Central Cotton Committee is urgently necessary. Only then will the policy of the Committee to place the interests of growers foremost be fully effective.

*

Financing UP's Plan:

Though final touches are only being given to the Second Plan, the different States should have, by now, had a rough idea of the extent of the Planning Commission's downward revision of the original size of their plans. Uttar Pradesh, for one, is obliged to bring down the original Rs 700 crores plan to a considerably lower level. The size of the new plan can be pictured in the light of the fact that an aid totalling about Rs 260 crores only will be given by the Centre for putting the plan through. The States' own revenues are not likely to contribute in a comparable degree, for of its almost inelastic income ranging from Rs 70 to Rs 80 crores, a major slice is swallowed by the cost of administration.

The process of reconciling needs with resources may be said to be satisfactorily gone through and emphasis should now turn to fully successful implementation. In real terms, the plan is scheduled to expand the public sector of industry by the setting up of a fertiliser factory, a heavy electrical goods factory and a railway wagon factory. It is understood that preliminary investigations as to the prospects of such industries in relation to availability of new materials, power, etc, have reinforced U.P.'s claim to an early rectification of its industrial backwardness. Hitherto, the abundant industrial raw material of the upper Gangetic plains has been feeding the factories lower down in eastern India and it is to be hoped that this flagrant regional imbalance will be less glaring at the end of the Second Plan.

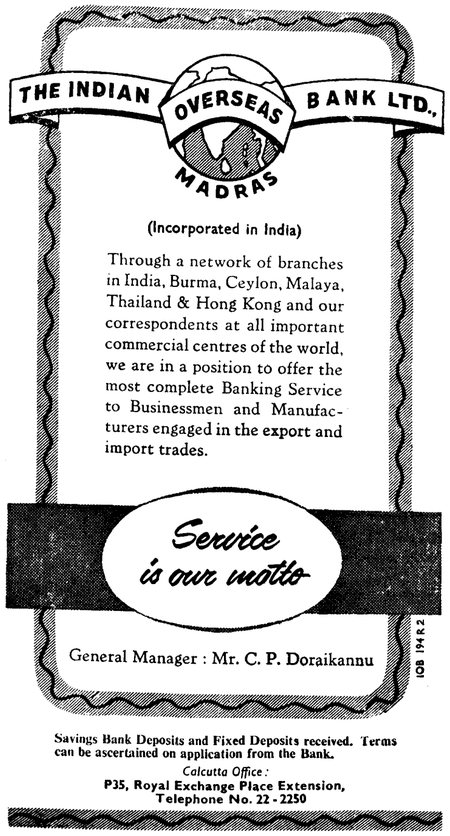
The plan also envisages the injection of fresh external resources into the private sector. Concessions in respect of sales tax, supply of power on favourable terms, provision of easy loans, acquirement of land by Government for private industrial ventures, these are some of the proposed channels of aid.

It has to be said in this connection that the process of gearing itself, organisationally to the task of generally guiding and financially assisting private industries has been too long in making a beginning, so that, whether the administration can cope with the new task is yet to be seen.

The current fiscal year saw a staggering financial drain, wrought by the recent flood havoc. The flood relief bill has already exceeded Rs 2.28 crores. This has inevitably put great strain on the final phase of the First Plan, which has another two months to go. There are, however, notable instances where the targets have been realised ahead of schedule. The food front has been one. The cultivated area has increased from 98.3 million acres in 1946-47 to 42.6 million acres in 1955-56. Production of foodgrains rose from 8.84 million tons in 1950-51 to 12.45 million tons in 1954-55, stealing a commendable march over the plan target. During the Plan-period, the area under irrigation has spread from 78 lakh acres to 108 lakh acres, representing a 38 per cent increase.

*

Earnings from Tourism:



The most important export that France possesses is not a commodity that one would readily think of. The invisible earnings made possible by the great influx of tourists very often make all the difference between a deficit and a surplus in the French budget. Moreover, the accretions to gold and dollar reserves of the West European nations were largely accounted for by the "invisibles" represented by tourist (especially American) expenditure in the area since the end of the war.

While, thus, the potentialities of tourism as an exchange earner are of a substantial nature, India's harvest of the tourist crop has, until recently, tended to be poor; and the reason for the smaller number of sight-seeing visitors from abroad is that there is the mistakenly held belief that even the minimum conveniences and comforts of good hotels are unavailable.

At the annual general meeting of the Associated Hotels of India Limited, Mr M. S. Oberoi spoke at length on this point. He quotes some visitors as having asserted "how pleased they were with their visit and how little people abroad realised the attractions and comforts of this country."

The chain represented by Associated Hotels has, it is clear, spared no effort to increase the facilities to visitors and to raise the standard of conveniences provided on a par with those found abroad. The Chairman of the Company, the Right Hon'ble Lord Sinha of Raipur, has referred to the profits ploughed back toward re-decoration and improvements, and has stated that, for this reason, the dividend payment has been conservative.

'We are", said Mr Oberoi, "receiving more and more attention from tourists of different countries." India's rich and historical past, and its exciting progress of the present day, may both ensure that visitors will increasingly turn to India for their holiday. Provided that Indian hotels adopt 'Service at reasonable cost" as their motto, there is no reason why exchange earnings from tourist traffic should not be substantial.

World *of* Jute

A New Market—and How to Exploit it

FIVE months remain before we come to the end of the jute year 1955-56; and, at the slightly better than the half-way mark, it is apparent that, for India, a quite satisfactory year is being experienced. Apprehensions that raw jute may be in short supply have been belied, rumours that we could not afford to increase working hours have been falsified, asseverations that additional production of jute goods by IJMA mills would fail to inspire a corresponding demand have happily been proved wrong.

The price ranges of both jute goods and raw jute continue to be reasonable; demand is forthcoming to the extent of the additional output of mills; one more favourable factor is that there is evidence of sustained demand on a higher level for India's manufactured goods.

All these, of course, are of great relevance when we discuss the future of the jute goods industry. It would appear that the most critical of the crises—the possibility that, with Pakistan increasingly a producer of jute goods, markets for Indian wares would show a shrinkage—has now been left behind us.

For the present, therefore, all is well. In price, only Pakistan can compete with India—the continental mills, although they have the advantage of better quality Pakistani jute, are hard put to it competitively to offer against Indian prices. Also, a second (and important) advantage that continental mills used to be favoured with is currently in the process of being offset. I refer to modern machinery and modern equipment.

Not only is it that Pakistan represents the only entity that is in a position to quote against India: that country's limited production leaves great scope for demand from India.

With modernisation of IJMA mills a chore that is well in hand, I may suggest that, for all future time, the competivity of continental mills has been killed: the only saving clause is that, if we should have a particularly poor jute crop, and if, at the same time, the Pakistani crop is unaffacted, Indian mills might temporarily be eclipsed.

The only competition that we have therefore, to fear is from Pakistan. Events are conspiring to postpone the real trial of strength in this regard. It may even be that we shall never be put to the test. For, in the first place, Pakistan's production is limited, and is not likely in the near future to assume such proportions as would seriously disturb demand from India. In the second place, it is important to note that what I have termed as specialised demand has emerged.

I suggest that it is very necessary to exploit as fully as possible this specialised demand. Let us define this first: in the economic or trade offensive that the Soviet Union has embarked upon, it is tacitly, and sometimes even explicity, recognised that the USSR's heavy machinery exports will be paid for in terms of exports by the under-developed area of commodities which it possesses in surplus quantity.

In this light, Ceylon has no problem of an excessive production of rubber, Burma's rice gains an easy market in Russia; and there is no good reason why, similarly, Indian shipments of jute goods to the Iron Curtain countries should not be fostered and increased.

As it is, the announcement that Russia was to make available one million tons of steel has been correctly interpreted by jute markets as betokening the emergence of fresh demand from that country for our jute goods; there is every reason to believe that, if and as imports from the Iron Curtan are stepped up, there should be a corresponding increase in demand for jute goods.

It is true, purchases of such nature are on a Government basis. But I should think that it is scarcely enterprising business, if India were to rest content with the rises in demand dictated and decided upon by the Kremlin. I am quite sure that there is not a sufficient awareness, in Russia and in the Communist bloc, of the usefulness of jute goods. It may even be that, at the present time at any rate, the purchases made border on 'courtesy' ones—and use is found for the goods some time after.

I believe that it should be possible for the bulk of imports from the Soviet bloc to be paid for by and in terms of jute goods. For this reason, I have a suggestion to make.

Special delegations from the IJMA have done notably good pieces of work in Australia and New Zealand; and such tours have gained much goodwill.

In respect of the Soviet Bloc, there is no need to 'sell' goodwill; it is ours already, because it is the Soviet Bloc that is wooing India. We can turn this to good account, by making it profitable business.

Profitable business, that is, if we are able to persuade the Iron Curtain countries that the uses of jute goods are mainfold. It should be possible to initiate discussions, to impress upon those that wield influence that jute goods are a good 'buy'. Perhaps, brochures and booklets could be brought out and distributed; maybe, a visiting delgation

World *of* Tea

Substantial Rise in 1955 Production

IT is understood that the North-East Indian tea producers have agreed upon some form of restriction of the 1956-57 crop after having produced the largest crop of over 30 million pounds during 1955-56. As a first step, waste tea is to be destroyed so as to prevent it reaching the market in any form. In South India, the opinion is generally held that finer plucking and careful manufacture will met the situation.

The crop in the major producing countries of the world has recorded an increase of more than 24 million pounds during last year. The total crop has amounted to 4,182.2 million pounds as against 4,158 million pounds in 1954. Output in India has risen to a new record figure of 662.2 million pounds as compared to 642.1 million pounds, showing an increase of 20 million pounds.

While North Indian crop at 533.2 million pounds has shown an increase of 19.6 million pounds, outturn in South India is slightly better at 129 million pounds as against 128.5 millon pounds in 1954. Ceylon has also produced a record crop of 380 million pounds as against 366.7 million pounds in the previous year.

The increased tea production in India and Ceylon is partially offset by lower output in Pakistan and Indonesia. Outturn in Pakistan has declined from 54.6 million pounds in 1954 to 52 million pounds, while the Indonesian tea crop, up to the end of November 1955, at 88 million pounds, shows a decline of 6.6 million pounds.

Meanwhile, there has been a fair demand for tea in the auctions held at various centres. In Calcutta, offerings this week amounted to 67,250 packages. The market opened with a fair general demand which strengthened as the sale progressed.

When the sale opened,, Commonest and Common Broken were from one to two annas per pound easier; but, at the close, they were only about half an anna per pound lower. Any teas with useful bright liquors were a very strong feature and were dearer by As 2 to As 3 per pound, while the more ordinary CTC teas were from one to two annas per pound dearer.

Fannings grades, particularly those of black leaf appearance, were again the strongest feature of the sale and were generally from As 2 to As 3 per pound dearer and sometimes more. Whole Leaf grades were the weakest feature of the sale and were from As 2 to As 3 per pound easier. Following rates were quoted per pound:—Clean Black Pekoe Rs 1-13-0; Plain BP Rs 1-7-0; Medium Assam BP Rs 1-9-6 to Rs 1-10-0 and Best CTC Assam BP Rs 2-5-0 to Rs 2-6-0.

In the Internal Sale, offerings were 20,600 packages of Dusts. There was a fair demand. The market opened fully firm; but, towards the close, demand eased. Black leaf teas, suitable for the Middle East, received fair support; but generally sold at prices below those of the last sale when they were the strongest feature. All teas with bright liquors were fully firm, but poorer liquoring teas were an irregular half to one anna per pound easier. The best CTC Assams with good liquors were strong, but poorer teas of this type were inclined to be irregular. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-7-0; Medium Assam Grainy Dust Rs 1-8-6 and Best Assam CTC Dust Rs 2-4-0 to 2-6-0.

Also, 3,450 packages of Leaf grades were offered. These met with a fair demand at prices which were generally 1 to 1½ annas per pound below those of the last sale. In the Export Quota section, business commenced at 15 pies per pound. The rate then declined to 9 pies. Toward the close of the week, business was reported done at 10 pies.

In the Cochin market, offerings amounted to about 985,000 pounds. There was a fair selection on offer; and quality, particularly for Medium and Low Medium descriptions, showed improvement. The sale was characterised by a good general demand. Best Liquoring Nilgiri high-growns were well supported, but at irregular rates; while other Nilgiri descriptions were steady. Improved bright liquoring Mediums and Fannings grades advanced by As 2 to As 4 per pound, while Common Brokens were firm to dearer.

There was a better demand for Whole Leaf grades which were a full As 2 per pound dearer, while black leaf Middle East types were a strong feature. Following rates were quoted:—Low-grown Travancore BOP Rs 1-12-0; Medium-grown Travancore BOP Rs 2-2-0; Anamallais BOP Rs 2-8-0; Best Liquoring Nilgiri BOP Rs 4-3-0 and Black well-made OP Rs 2-7-0.

In the auction held at Colombo, offerings were 6,379,550 pounds. There was a good general demand, but prices were irregular. The

Britain

ACHIEVEMENTS OF COLOMBO PLAN SURVEYED

EXAMINING the Colombo Plan in the latest issue of its quarterly review, just published in London, the National Bank of India (NBI) says that, while much remains to be done, a glance at achievements to date shows that there are grounds for optimism.

Noting that this year's meeting of the Plan's Consultative Committee is to be held in New Zealand, the NBI review says that this is far enough removed from Colombo to indicate that the Plan spreads its antennae well beyond the generally recognized boundaries of South and South-East Asia, though it is in that part of the world that the recipient countries are all to be found.

Saying that, because the Colombo Plan itself is not susceptible to easy definition, some people find it difficult to understand exactly what this unique achievement in international co-operation is, the NBI review adds that the Colombo Plan is really the name given to the whole sum of the effort which the countries of South and South-East Asia, helped by countries outside the region, are making to develop their economies and raise the living standards of their people.

To this end, development projects are going ahead in all countries of the region, though progress varies according to the degree to which the countries themselves have been able to organize their national plans.

Much remains to be done, says the NBI review, if the progress so far achieved, not only in food production but in general economic development, is measured against the fundamental problem of raising the living standards of rapidly rising populations. The rate of population increase in the region is estimated at 10,000,000 per annum.

This rising birthrate is accompanied by a falling deathrate, and these annual increments to the population and the resultant increase in the labour force are seen as soon likely to aggravate every facet of the unemployment problem. All governments in South and South-East Asia, the NBI review says, are thus engaged in a race against time.

Because of this situation, the NBI review says, greater efforts will be required in the future. But, glancing at what already has been achieved, the review notes that the estimated cost of development in the public sector in 1956—taking nine of the Colombo Plan countries—is some £724,000,000 in 1954-55.

"This shows how the tempo of development is rising fast", comments the NBI review, "although much of the contemplated increase in expenditure is accounted for by two of the nine countries—India and Pakistan——whose proposed outlays in the public sector have been raised by £126,500,000 and £32,200,000 respectively".

The NBI review notes that in 1954-55, more trainees were sent abroad under various technical-assistance schemes than in any previous year, and that the training was more closely adapted to the needs of the many development projects now in hand.

Likewise, more experts (administrators, scientists, technicians, instructors, and teachers) came into Colombo Plan countries, and brought with them more special equipment than in the past.

Altogether, 7,200 places have been allotted for men and women from countries of the Colombo Plan area to receive training outside their own countries since the inception of the technical-training scheme. On an average, 1,800 places a year have been secured in countries outside the South Asian region, and financed under the various schemes of aid. By any reckoning, says the NBI review, this is no mean achievement.

Moreover, as the range and scope of economic development extends, and the economies of the Asian countries become more diversified, there will be, thinks the NBI review, an increasing demand for specialized knowledge and skills.

And the review ends with the comment that "it is only one of the many merits of the Colombo Plan that it has shown how this demand can be met, and it is not surprising, therefore, that the participating countries have resolved on its continuance for a further period of five years".

✱

Automobile Products of India (API) has made an agreement with the firm of Henry Meadows—a subsidiary of Associated British Engineering Ltd—for the manufacture of Brtish engines under licence in India.

The agreement is the culmination of negotiations begun about 12 months ago, and provides that API will sell, service and, ultimately, manuacture the whole range of Henry Meadows products in every type of application—automotive and marine engines, generating sets, and compressors.

A three-year period is envisaged before Indian production of the Henry Meadows range of engines is fully under way. Thus, the agreement provides that in the initial stages complete engines will be imported from Britain; and the first batch, worth about £1,000,000 has already been shipped. Progressively, over the next three years, these will be followed by "knocked-down" engines of increasing range to the point where all Meadows engines will be fully manufactured in India under the control of Indian nationals.

API's managing director is at present touring Britain and the Continent to arrange for the purchase of £260,000 worth of machine tools for the further equipment of the company's Indian factories.

Russia

TECHNICAL PROGRESS OF SOVIET OIL INDUSTRY

By Professor F. Trebin.

CHARACTERISTIC of the Soviet oil industry is the high tempo of the development, both before the war and in post-war years. Way back in February 1946 J. V. Stalin, speaking on the economic perspectives, in particular, noted that it was imperative in the next three five-year plan period to raise oil extraction in the country up to 60 million tons a year. Already this year the Soviet Union will have extracted 70 million tons of oil.

Especially rapid is the growth of oil extraction in the Eastern regions of the country where new large oil fields have begun to be exploited.

The high tempo in the expansion of the oil industry was achieved thanks to the utilisation of the latest achievements of Soviet and world science and technology, especially in the field of prospecting and drilling work. During post-war years the drilling speed of wells in the Eastern regions of the country, where there are exceptionally hard and strong rock formations, has increased over three-fold. This was achieved due to a radical reconstruction of the drilling equipment and improved methods of drilling wells. New powerful drilling rigs were built driven by electric and diesel motors and equipped with large-capacity pumps.

Of decisive importance in increasing the drilling speed of oil and gas wells was the turbine method of drilling introduced by Soviet engineers. Now over 80 per cent of all wells are turbo-drilled. The bit is driven by a hydraulic turbine which is brought into action by the washing fluid.

With the introduction of turbine drilling it was possible to conduct slantwise drilling from small areas. This made possible the exploitation of a number of oil fields which were impossible to reach by vertical drilling, without the construction of expensive maritime foundations under the oil derricks.

Turbine drilling has made possible the drilling of two and three wells from one derrick (multi-well drilling). This cheapens building-assembly work and accelerates well drilling by up to 30-40 per cent in comparison with the old method of drilling.

Maritime oil drilling in the Soviet Union is rapidly advancing to the fore. Millions of tons of oil have already been extracted from the sea-bed. A great achievement of Soviet oil science and practice is the widespread introduction of effective means of maintaining stratum pressure in new oil fields and the method of second oil extraction in the old oil fields. Mention should be made of the method of trans-contour and inter-contour water flooding of the oil deposits i.e. the pumping of water into the deposits through pressure wells. This method considerably increases the percentage of oil extracted from the stratum, hastens the working of the stratum and prolongs the period of work of the well.

The introduction of these methods of drilling have become possible as a result of the study of the peculiarities of the oil stratum which a large number of new instruments and apparatus have made possible.

Together with the introduction of new methods for working oil deposits, the wide-spread use of new equipment and new methods of exploitation of oil and gas wells has facilitated the increase of the percentage of extracted oil. After the war the extraction of oil by pumps has undergone a radical change. Now the rod-less submerged electric pump is widely applied. Industry is receiving equipment for the separate exploitation of two levels from one well. Automatisation and mechanisation of the production processes in the drilling and extraction of oil, in a developed dispatches service of the oil fields have been widely introduced.

The introduction of new methods of working of oil deposits and the modern machinery and methods applied for the exploitation of the oil and gas wells became possible thanks to the large amount of research, designing and construction work going on in the Soviet Union.

Considerable success has also been achieved in the development of the oil refining industry of the country. This industry is developing along the lines of improving the chemical process of refining oil which considerably increases the output of light oil products (petrol, paraffine oil, diesel oil), improving their quality and increasing the number of different sorts of oils produced. The selective refining of automobile and aviation motor oil has considerably improved their qualities and has cut down losses in their production. New highly productive thermal and catholyte methods of aromatisation of oil products have been elaborated. Synthetic fats

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

AS the Budget approaches, excited speculation on the shape of things to come becomes the preoccupation of all interests connected with or concerned in business. Conjectures in this respect vary from optimism to pessimism according as the impulse behind them is wishful thinking or anticipatory apprehension. The performance of India's economy in the fiscal year drawing to a close is apt to stimulate wishful thinking. On the other hand, official hints and authoritative suggestions, emanating from quarters which influence the influential, that is to say, which may be expected to be taken note of at the decision-making level, counsel caution and warrant anticipatory apprehensions. The first line of reasoning was the keynote in the Budget forecast that appeared in World of Finance two weeks ago. It is equally important to assess the developments and gauge the prospects on the assumption that official hints have the quality of the proverb which tells us that there can be no smoke without a fire.

✱

I propose, therefore, to adopt, in this week's analysis a deliberately conservative standpoint about present performance and a deliberately pessimistic estimation of the prospects ahead.

✱

The Budget for 1956-57 of the Central Government is due to be presented before the Lok Sabha in a few days. It will not, therefore, be inappropriate to speculate as to the form it is likely to take.

✱

In the budget for 1955-56, the revenue was estimated at Rs 475 crores (figures rounded to the nearest crore); and the expenditure at Rs 492 crores, leaving a deficit of a little over Rs 17 crores. The main items of revenue were (i) Income Tax (less States' share) Rs 77 crores; (ii) Corporation Tax Rs 40 crores; (iii) Import duties Rs 115 crores; (iv) Export duties Rs 48 crores; (v) Excise duties Rs 132 crores; (vi) Contribution from Railways and Posts and Telegraphs Rs 7 crores; (vii) Currency and Mint Rs 20 crores; and (viii) various other receipts Rs 36 crores.

✱

It is possible that the revised budget for 1955-56 will show a considerable improvement over the position as stated above. During the year, tax collection has proceeded vigorously, particularly in the Income Tax Department. It will not be far wrong to say that Income-tax and Corporation Tax together may bring in about Rs 5 crores more than what was estimated. As regards import duties it may be stated that the receipts under this head during 1954-55 were of the order of Rs 140 crores. In the budget for1955-56, import duties were estimated at Rs 115 crores on the ground mainly that imports of motor spirit, kerosene, and lubricants will decrease to almost a quarter of the previous year's level as a result of the second oil refinery at Bombay. In 1954-55 imports amounted to Rs 295 crores in the first half of the year and Rs 315 crores in the second half of the year. In 1955-56, imports in the first half of the year were to the extent of Rs 291 crores, and very probably, for the whole year, imports will amount to more than Rs 600 crores. It may, therefore, be reasonably assumed that, for 1955-56, import duties will fetch about Rs 25 crores more than originally estimated. As regards export duties, while the chances are that more would have been realised than what was estimated, the variation may probably be not appreciable. In regard to excise duties, a higher receipt than that provided in the budget estimates may be safely assumed. The fact that the general index of our industrial production has risen from 146.6 in 1954 to 159 in 1955 is a pointer in this direction. Rs 5 crores more than the original estimates may be reasonably anticipated under this head. The contribution from the railways is expected to be more by about a crore of rupees. There has been a substantial increase in currency during the year, and about Rs 4 crores more may be expected under this head.

✱

Our Finance Minister does not under-estimate expenditure. Thus, in 1954-55 the budget estimated the expenditure at Rs 461 crores. In the revised budget the expenditure was Rs 449 crores. In the budget for 1955-56, the expenditure has been estimated at Rs 492 crores. And, probably, that figure will not be exceeded.

✱

In the net result, the budget for 1955-56 may be expected to be somewhat as follows:

(In crores).

Revenue	1955-56 Budget	1955-56 Revised
Income Tax & Corporation Tax ..	117	122
Import Duties ..	115	140
Export Duties ..	48	48
Excise Duties ..	132	137
Contribution from Railways, Posts & Telegraphs, and Currency and Mint ..	27	32
Other Sources ..	36	36
Total Revenue ..	475	515
Expenditure .	492	492
Surplus (+) or Deficit (—) ..	—17	+23

✱

A deficit of Rs 17 crores turning into a surplus of Rs 23 crores or thereabouts should be quite pleasing to the Treasury Benches.

But it would be folly to think, on that account, that the budget for 1956-57 will contain no proposals for enhanced taxation or for new taxes. There are two reasons for this. Firstly, as is well-known, our public expenditure has been steadily mounting. In 1953-54 it was Rs 401 crores; in 1954-55 it was Rs 450 crores; for 1955-56 it has been estimated at Rs 492 crores; and for 1956-57 it will probably be Rs 530 crores. Possibly, because of the increased tempo of economic activity in the country, this amount could be found even at existing rates of taxation. Even otherwise, if a shortfall there were, it could only be of the order of Rs 15 crores, as could be seen from what has been said earlier. But all the same it would be natural to expect the Finance Minister to provide for bridging the gap, which means either enhanced taxation or new taxes or both. The second reason is a stronger one. The year 1956-57 is the first year of the Second Five Year Plan. According to all accounts, the Second Plan estimates an expenditure in the public sector of Rs 4,800 crores, and it is hoped to meet this somewhat as follows:

	Rs. Crores.
By deficit financing ..	1200
From Public loans, and small savings schemes ..	1200
By foreign aid	800
From current revenues at present rates	350
By additional taxation ..	450
From railways	150
From miscellaneous sources ..	250
Total ..	4400

This leaves a gap of Rs 400 crores against the total outlay of Rs 4800 crores. According to reports, the additional taxation of Rs 450 crores referred to above is to be made equally by the Centre and the States, which means that during the five year period the Centre has to find by additional taxation Rs 225 crores, that is to say an average of Rs 45 crores each year. It will probably be less in the first year and progressively increase thereafter. In addition to this, it has to be borne in mind that our public expenditure is steadily mounting. In this connection, it is significant that the intention to appoint a Committee to explore avenues for economy in public expenditure was expressed by the Finance Minister before the Consultative Committee of Parliament on the 13th January this year. Assuming that the increased public expenditure in 1956-57 will be of the order of Rs 30 crores, and adding to it the additional taxation (for each year of the Second Plan) of Rs 45 crores referred to earlier, it makes a total of Rs 75 crores more which the Finance Minister will have to find. Whether it be Rs 75 crores or something less, the fact remains that measures to find more money will be engaging the attention of the Finance Minister.

*

In the light of the foregoing, it may reasonably be expected that the budget for 1956-57 will contain proposals both for enhancing existing taxes and also for new taxes. The recommendations of the Taxation Enquiry Commission, the recent discussions in connection with the Second Five-Year Plan, and various official pronouncements anent the "Socialistic Pattern of Society" contain significant pointers regarding the shape of things to come. In the following paragraphs different proposals for new or enhanced taxes, that have been mentioned in several quarters recently, are examined.

*

Possible changes in regard to Income-tax and Super-tax may be examined first. A suggestion made by the Taxation Enquiry Commission in regard to rates of personal Income-tax and the rates now prevailing under the 1955-56 budget proposals (as finally adopted) is shown in the following Tables:

RATES OF PERSONAL INCOME-TAX.

	According to Taxation Enquiry Commission.	According to 1955-56 budget* (Married persons).
	As. Ps.	As. Ps.
On the first Rs. 2000	No tax	No tax
On the next Rs. 3000	1 0	0 9
On the next Rs. 2500	2 0	1 9
On the next Rs. 2500	2 9	2 3
On the next Rs. 5000	3 6	3 3
On the balance ...	4 0	4 0

*Plus 5% surcharge.

*

When the 1955-56 budget was originally presented, the Finance Minister referred to the rate structure recommended by the Commission and said that "the broad pattern of adjustments suggested by the Commission has been accepted by Government" and that the proposals he was then making did not by any means cover all the recommendations of the Commission. If the 1956-57 budget proposes a quarter anna more on incomes of Rs 5,000 to Rs 7,500, and on incomes of Rs 7,500 to Rs 10,000, it need cause no surprise, though it will not be palatable to these two income groups and will be rather hard on them.

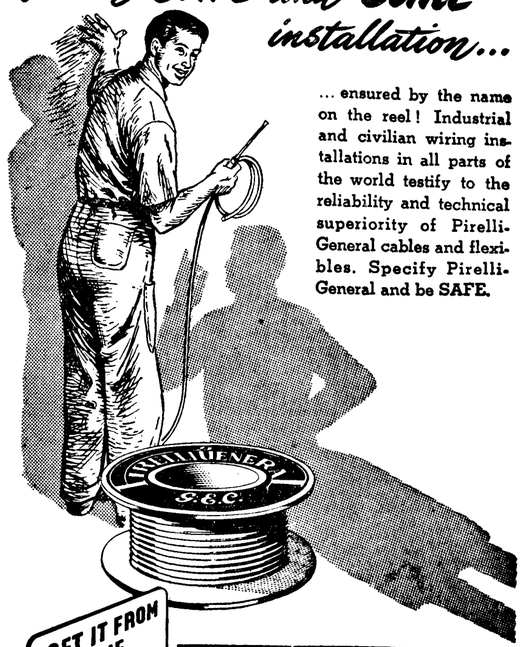
*

To turn to super-tax, there is good reason to think that there will be some enhancement here. The Taxation Enquiry Commission recommended that Super-tax should start at Rs 20,000 instead of Rs 25,000; that recommendation was implemented by the 1955-56 budget. As regards the rate structure, the following Table shows one rate suggested by the Commission, and the rate now prevailing:

RATES OF SUPER-TAX.

	According to Taxation Enquiry Commission.	According to 1955-56 budget*
	As. Ps.	As. Ps.
On the first Rs. 20000	No tax	No tax
On the next Rs. 5000	2 0	1 0
On the next Rs. 5000	3 0	3 0
On the next Rs. 10000	4 0	3 0
On the next Rs. 10000	5 0	5 0
On the next Rs. 10000	6 6	6 0
On the next Rs. 20000	7 6	7 0
On the next Rs. 20000	8 6	8 0
On the next Rs. 50000	9 0	9 0
On the balance	9 6	9 6

*Plus 5% surcharge.



*

When resources for the Second Five-Year Plan were being discussed before the Consultative Committee of Parliament, the Finance Minister mentioned changes in Super-tax as a possible source of increased revenue, which shows the direction in which the wind is blowing. The 'Socialistic Pattern of Society' envisages a levelling down of incomes in the higher brackets. There has also been considerable talk recently about placing a ceiling on incomes. The Taxation Enquiry Commission suggested that by progressive stages such a ceiling should be achieved: the ceiling they recommended was that thirty times the "average per family national income" should be the highest net after-tax income. This has been estimated at about Rs 30,000 which means a before-tax income of about Rs 45,000. Government may possibly be a little more liberal, if a ceiling is fixed, that is they might fix it at a higher figure than this Rs 45,000. Further, prominent persons in the ruling party, who have discussed

New Malady—Nationalisation Jitters

I remember the days, and they were not so long ago at that, when this Gateway City could legitimately take pride in the enterprising lead which we could offer to the rest of the country. Whether we reckon this initiative from the view point of the new ventures embarked upon, or from the standpoint of the efficiency and integrity that marked their management; whether it concerned the fashioning of correct attitudes or whether it had regard to the formation of the spirit of national endeavour, past history has been very flattering to Bombay. And yet, in the few weeks and months of the recent past, events have occurred which have robbed this fair city of much of the reputation it so assiduously built up.

I do not here particularly have in mind the disturbances consequent to SRC decisions, or the strange behaviour of the citizenry which till recently could make high claims to civic consciousness and pride.

It is, rather, the fact that, of late, Bombay's outlook has ceased to be progressive, as bold and adventurous as it once used to be. Traditionally, the source and inspiration of a confident surge in stock exchanges, Dalal Street last year for some time played second fiddle to the more robust bent of mind of the Royal Exchange. Even this, this failing to be properly enthused by the great development work in the country, I should not much mind. But it does pain me to see that Bombay has now reached the stage when it is the source and origin of what I may call nationalisation jitters.

While it is fortunate that we possess industrialists of the calibre of Mr Tata, who can recognise beyond all doubt the expansionary influences released by planned endeavours, and while we are also fortunate to possess a Mr Khatau for a frank and forthright statement of the fears of the private sector, I still think that it is unfortunate that nationalisation jitters should be a commodity whose manufacture Bombay so stridently seems to have taken on hand.

I am afraid there is urgent need today for the private sector to be properly appreciative of Government action and the motiviations of what Government do. As I have indicated, there is, today, an insufficient realisation by the private sector of such motiviations. This is to be evidenced in the frequently carping tone which spokesmen of private enterprise sometimes adopt to describe or to critisise Government policy. I agree that, when a sector of industry receives no help from Government, it has every right to give expression to the complaint that a vapid Government policy raises such uncertainties as to render difficult development of that industry. But, in shipping, this is by no means the case.

Mr M. A. Master justly commands a voice that is listened to with respect in the World of Shipping. And, on many occasions, he has seen his duty clear, and saw right, that he should explain the particular handicaps under which the shipping industry in this country functions. At Rajkot last week, another forum was available for Mr Master to speak on this certainly an important topic.

So long as Mr Master was speaking in terms of co-operation between Government and industry, his remarks are unexceptionable—indeed, they needed to be expressed. If the development of the Indian economy is not to proceed on a lop-sided basis, there is much leeway that the shipping industry has to make up. The finances required are quite enormous—so much so that it is patently clear that the industry by itself will be able to secure no more than a very small proportion of the required finance. The expenditure target over the next five years in this sphere is around Rs 80 crores. The private companies, between them, will not be in a position to lay their hands on a sum exceeding Rs 10 crores. The balance of Rs 70 crores, obviously, it will be for Government to find.

Similarly, Mr Master is on the right track when he gently chides Government on the present rate policy, which does not confer on the companies any benefit from the advantages of the large amount of cargo carried on Government account. The limited resources of Indian shippers disable them from competing with foreign companies in the matter of freight rates. Technically, it should be possible for Government to ensure that the benefit inherent in large-scale Goverment imports should accrue in considerable measure to national shipping. I have no doubt that both representatives of the industry and of Government are putting their minds to the consideration of this matter; and I do not doubt it at all that decisions will soon be forthcoming which will render unto Indian shipping that which is its due.

The third point raised by Mr Master concerned the nucleus of a tanker fleet. Government have already taken positive measures to provide finance for the purchase of tankers. By so doing, Government have placed the onus of initiative on the industry. The optimum utilisation of such financial assistance as has been promised should enable Indian shipping to create the nucleus of a tanker fleet.

Also, if we may draw a lesson from the remarkable increase in the tonnage achieved by Japan and Germany in the post-war era, the initiative rests with the industry as far as development is concerned. In both the countries—or, for that matter, in any country—progress in the industry depends to some extent on State assistance. Such assistance has already been vouchsafed to Indian shipping. It would seem, therefore, that, with promise already given, it is now up to the private sector to display initiative and enterprise.

Unfortunately, matters are not so simple as all that. Mr Master has opined that, with the nationalisation of insurance, the possibilities of the shipping industry being taken over by the State are greater than ever before. This is said to be a disabling fear in that, with the lack of a specific Government guarantee against nationalisation, it has acted as a disincentive that retards progress in expansion.

It is here that I feel that Mr Master is guilty of falling prey to the new malady of nationalisation jitters. For, firstly, such is the extent of finance provided by Government to shipping, the industry would surely have been examined before as one that attracts nationalisation. Secondly, even if Government should decide to nationalise shipping, they have a clearer case for so doing in shipping.

The facts, however, are to the contrary. Government do not have a pre-disposition to nationalisation; national interests influ-

Surveying the Middle Class

The results of the Middle Class Economic Survey conducted by the Gujerat Chamber of Commerce are now published. Mainly it confines to investigation into living conditions, savings capacity and incidence of taxation on a fairly representative sample of middle class families in Ahmedabad City in 1953. The mode of selection of the sample was as follows: Some 1632 replies to the Chamber's questionaire were received, out of which 1000 replies were taken up at random. In defining the middle class, multiple criterea have been used, providing to include persons belonging to professions as well as those drawing fixed salary incomes and to exclude those whose income did not come within the range of Rs 900 to Rs 5,200 a year as also all working class families, whatever their annual income. Within the limitations of such an initial frame of reference, the conclusions drawn may be regarded as representing a reliable picture of middle class economy in the area.

The Survey divides the families into three income-groups. A correlated study of the income-scale and the size of the family leads to the conclusion that the income of a family and its size rise or fall together, but significantly, not in strict proportion. In fact, the per capita income is found to increase as we move from a lower income group to a higher income group of families. The findings about living conditions follow more or less familiar lines. It may be noted that a good proportion of the middle class families in Ahmedabad have their own houses, though in the lowest of the three income groups the proportion is only 4 per cent as against 44 per cent in the highest.

Coming to income and expenditure, the per capita incomes in the three groups are respectively Rs 374.9, Rs 524.1 and Rs 756.1, while the corresponding per capita expenditures are Rs 445.5, Rs 533.06 and Rs 668.9. In terms of adult male equivalent, it is seen that the differences in expenditure between the different income groups are not as great as the corresponding differences in their respective incomes. As for the pattern of expenditure, there are no marked differences between the groups except in respect of education and miscellaneous expenditure. It is noted that an increase in income is invariably accompanied by a higher expenditure on education.

The lowest group has naturally the highest percentage of families without any savings. Borrowings to meet compulsory obligation for saving are all too common in this group. The proportion with only voluntary savings is not high in any of the groups.

The survey gives some idea of the burden of taxation borne by a middle class consumer. On an average, tax represents 1.9 per cent of the per capita expenditure. The biggest single item of tax is paid through the purchase of cloth; next comes tea and sugar.

As the survey has confined itself to certain limited taxes, namely, sales tax and central excise duty, the tax burden as shown by it can be understood only as an indication of the lower limit.

On the whole, the Survey has made the best of a difficult, almost unwieldy job, remembering the limited means within its reach. Surveys of this type, conducted in selected areas would help to recheck the findings of the National Sample Survey and other accepted notions about the economic middle class.

*

State Plan for Road Transport:

Current developments indicate that the entry of the State into particular fields of industrial activity, has not always an alternative. One more instance to the point is provided by the Bombay Government's reported decision to take up goods transport on a vastly expanded scale. There can be few objections to this venture as the movement of goods is being handicapped by a continuing vehicular shortage. The position has already become acute in the Ahmedabad area.

The State Government have to hand a Rs 30 crore scheme to nationalise goods transport services in ten years. At present over 400 trucks operate on 50 routes in the State. The new scheme envisages the operation of 10,000 trucks by the end of 1965. The cost of trucks is estimated at Rs 20 crores, other assets claiming the remaining Rs 10 crores.

The details of the phasing of the project are not known yet. There is every reason for expediting its initiation. The prospects for several medium and small industries being otherwise bright, a regular supply of industrial raw material and distribution of finished products have to be served by efficient transport. Seasonal difficulties in the movement of agricultural produce are perhaps as common in this area as anywhere else. Now that the expansion of the railways is not to be on the originally planned scale, Government's scheme is to be welcomed as necessary and timely.

On all tokens, Bombay's State Road Transport Corporation has made a good showing and is vigorously pursuing an expansion and development policy in respect of passenger traffic. A Rs 9 crore scheme to be spread over the next five years is being considered. Official calculations put the annual increase in passenger traffic at 5 per cent and the number of additional buses required during the five-year period at 781. Presently, the State Transport plies 2,800 vehicles on 1,800 routes carrying about 500,000 passengers every day.

*

Railway Equipment:

Except for fixing a provisional, and possibly inadequate, expenditure target of Rs 1,150 crores, the bulk of detailed planning for the development of railways, seem still to remain. The requirements would partly have to be supplied by Indian engineering industries and these have but a vague idea of the prospective demand. Shortage of basic materials like steel, cement, and timber has been the invariable burden of the speeches made at the recent conference of the zonal General Managers.

The first meeting of the Standing Regional Railway Equipment in Bombay provided an occasion to have a look into the potential role of engineering concerns in the State. There are as many as 1,600 orgaised enterprises, manufacturing a large range of engineering products. These apart, there are a number of unorganised small-scale engineering workshops and factories.

The task before the Committee is to examine the position of the engineering industry, large, medium and small-scale, with a view to finding out their installed capacity in different departments, to ascertaining the percentage utilisation and to suggesting ways and means to employ the surplus capacity. It has also to act as link between the industry and the Central Equipment Committee.

*

WORLD OF JUTE

(Continued from page 233)

could hold conferences for the purpose.

What I wish to stress is that a correctly defined and outlined piece of propaganda for jute goods could conceivably increase considerably the demand for our wares from the Iron Curtain countries. Both Government and IJMA authorities would do well to study this question: the important advantage that India starts out with is that the Soviet Bloc represents a market in which Pakistan can make no impression.

*

Conditions in the Jute Goods market remained, on the whole, steady during the past week, partly in sympathy with the raw jute section and partly due to covering business on expectation of business from overseas buyers. Recurrent rumours of Russian buying, expectation of business from Australia and the reports of small business done in hessians with overseas buyers were helpful factors for the recovery in prices although higher levels could not be retained for long due to general profit-taking on reports of the increase of 14,900 tons in stocks with the mills at the end of January.

Mills came out as sellers to take advantage of the prevailing premium for forward delivery; and this acted as a check on the rise in prices. Moreover, it was doubted whether the world market would be able to meet the increased output, especially in the face of keen competition from Pakistan. It seemed as if that overseas buyers were also marking time to see the effect of the unsealing of looms on the general statistical position of Indian jute goods. The following table shows the price trends during the week:—

	Week's Opening		Mid-Week		Week's Closing	
	Rs	a	Rs	a	Rs	a
Hessian:						
40"×10 Ozs. Ready	41	0	40	13	41	2
40"×10 Ozs. March	41	2	41	2	41	2
40"×10 Ozs. Apl./June	41	6	41	4	41	4
40"× 8 Ozs.	33	6	33	4	33	8
40"×7½ Ozs.	31	0	31	0	31	2
Sackings:						
B. Twills Ready	114	4	114	8	114	8
March	115	8	115	4	115	0
April-June	116	8	115	8	115	8
Heavy Cees (Green)	114	0	114	4	113	8
Cornsacks	117	0	117	0	116	8
Cubans	137	8	138	8	138	8
A. Twills	141	8	141	0	141	0
L. Twills	131	8	131	0	130	4
D.W. Flours	136	8	137	0	137	0
Sugar Twills	131	0	130	0	130	0

The Raw Jute market continued to rule firm, being unaffected by the changes in the manufactured goods section. Poor arrivals into all centres, prices ruling higher than the Calcutta parity and higher advices from the Pakistan market—all these factors made sellers to be more reserved than ever. Only the following mill business took place during the week in:—Assam Bottoms at Rs 30-8, Middles at Rs 33-8; Indian Northern Bottoms at Rs 30, Middles at Rs 33; Agartala Bottoms at Rs 30-0, and Deshi Mesta Bottoms at Rs 28, all per maund for February-March delivery.

Olympus

Indo-British Relations

HALF a dozen intelligent but politically incurious persons, whose opinion I sought on Mr MacDonald's speech at the Rotary Club here last week, expressed themselves somewhat surprised at it. Pressed for reasons, they gave evidence of precisely the same kind of complacency against which the British High Commissioner in India warned both the countries.

It appeared to them that the relations between the two countries were never so excellent as now: they were aware of nothing that has happened in the recent past that could jeopardise the abundant mutual goodwill and large measure of common outlook on world problems that have characterised the relationship between the two countries since Indian independence. They pointed to the complete absence of any legacy of bitterness in the current relations of the two peoples, who have a great deal in their joint history to forget in order to forgive, as indicative of a deep seated political sanity which will see them through other differences.

The continuance of India as a member of the Commonwealth and the many instances of Indo-British co-operation in international conferences of crucial importance were also cited as further proof of a state of warm and intimate friendliness between the two countries. British interest in India's development plans, evidenced not only through traditional channels of trade but by British readiness to give technical assistance through the agency of the Colombo Plan and also through bilateral arrangements like the one over the erection of a Steel Plant, was quoted as another instance of the salubrious nature of the climate of Indo-British friendship. They were, therefore, inclined to consider that Mr MacDonald was being rather surprisingly alarmist in his expressions of anxiety about trends in relationship between the countries.

While there is a great deal in these arguments, it is the view of competent observers here that the salutary warning against taking things for granted came not a day too soon. Time was when Ambassadorial duties were thought to consist entirely of lying abroad for the sake of one's country and to keep up a front of interested hypocrisy in public. Mr Malcolm MacDonald is refreshingly free from this kind of diplomacy. His speech at the Rotary Club was characterised by an engaging forthrightness and contained much that needed to be said.

His admiration for India, it goes without saying, was both warm and fortified by intimate knowledge. Not many have been so enthusiastic about India's role in world affairs as Mr MacDonald, when he said: 'India's international influence has been achieved largely by an exercise of moral force. Her leaders have pursued a peaceful and yet passionate diplomacy which appeals to men's reason, to their tolerance, to their anxiety to be friends together, to their longing for peace'.

But no useful purpose will be served, and much harm may be done, by subsequent disenchantment if one does not realise that relations between nations cannot be one long honeymoon of esctatic mutual admiration. There is a great deal in common in the international outlook of India and Great Britain. Both countries avoid instinctively the kind of 'catastrophic' view of world events: they realise that human affairs are largely a matter of loose ends and an untidy mess of complications. No Herculean cleaning of the Augean stables is possible, and only the ancient art of patient negotiation can make the world less riddled with a confusing clash of interests. As is well known, this common philosophy of diplomacy has won some of the most spectacular victories of recent diplomacy.

On specific issues, too, as contrasted with general approaches, a great deal is common ground between India and Britain. On the need for seating the Peoples Republic of China in the United Nations, for instance, there has been more or less complete unanimity, and one of the important differences between America and Britain stems from contrary views on this subject.

But it is, at the same time, necessary to recognise, as Mr MacDonald urged, that there are vital issues that impinge powerfully on our respective self interests in which Britain and India hold strongly differing views. It is necessary to see these differences in the context of the historical evolution of the respective policies, and to isolate the area of difference. Having done that, it is necessary to make honest attempts to convince the other of the rightness of one's own views and leave a common respect for reason to do the rest.

The most important difference of opinion between India and Great Britain is, over the necessity and the advisibility of regional military pacts, especially in the Middle and Far East regions. The immediate provocation for Mr MacDonald's references to the commencement of a 'critical period of Indo-British relations' and the wearing off of the earlier somewhat enchanted mood of our relationship' is the recent exchange of notes between Britain and India over the Baghdad Pact, to which Britain is a party. Taking the cue from Mr MacDonald's advice, let us see our differences in our approach to this problem.

The British case for joining regional pacts is historically related by Mr MacDonald to 'the bitter experiences of military and semi-military aggressions in our own life times in Europe committed by nations who professed to be peace loving'. The purpose of these pacts, Mr MacDonald said, was firstly to 'protect the freedom and independence of the small nations of the areas concerned.... Secondly, the military clauses of these pacts are wholly defensive. They will never be used for aggression.... Thirdly, the provisions of these pacts are not only military: there are important economic and social clauses as well .... Their grand purpose is to strengthen peace and spread prosperity'.

There will be much sympathy in India with the historical reasons that make Europe in general and Britain in particular not to want to place themselves at the mercy of any nation that might embark on a career of military adventurism. Indian comment, which ignores this aspect of the matter, may be safely put down to political innocence and ignorance of facts of recent history. But, even when all allowances are made, the real issue is not why Britain feels in a particular way but whether the pacts will serve the purpose that Britain has in mind.

For instance, has not an entirely new situation emerged since Hitler's aggression in Europe and Japan's aggression in the Far East, or even from the North Korean aggression in Korea, that makes regional pacts an anachronism? Surely, Mr MacDonald cannot be forgetting the historical enunciation by Winston Churchill of the thesis of the nuclear stalemate and its logical consequences. Does not this stalemate make nonsense of regional pacts? Far from promoting unity in the regions concerned, have not these pacts divided the areas concerned into hostile groups? Could there be a greater argument against the pursuing of the current policies in this regard than the confusion in the Middle East today?

So much for the British point of view on the question and our doubts on its utility from Britain's own premises. And what about the Indian point of view? Mr MacDonald puts it in the following words: "You Indians, on the other hand, think with equal sincerity that such pacts are a mistake, that they are more provocative, that they increase international tension instead of decreasing it, that they might stimulate the very aggression and war which they intend to prevent."

All this is admirably put, but there are some reasons that are not entirely altruistic that make India want to have the pacts scrapped. India is gravely concerned that its neighbour, Pakistan, with whom it is having a number of long standing disputes, including disputes which might directly involve military intervention, should be a member of both the SEATO and MEDO and thus bring the cold war to its very steps. Even such a remote thing as the NATO is invoked by Portugal in its dispute with India on Goa and American policy on Goa is still wobbly. In the circumstances, Indian anxiety over regional pacts nearer home is understandable.

Recent pronouncements of responsible Americans, notably the American Ambassador in Pakistan, about the scope of the military supplies to Pakistan have alarmed India to the extent of making it have second thoughts on the defence allocations under the Second Plan. No one who knows what store we set by rapid industrialisation of our country can fail to see what a sacrifice this involves and, by extension, the real depth of feeling over these pacts. And this diversion is doubly unfortunate because, as recognised by Mr MacDonald himself, the ultimate deterrent of communist aggression in the underdeveloped areas of the world is economic prosperity, which cannot be won if funds are to be diverted to defence. Thus, both self interest and altruism would compel India to press for the scrapping of these pacts.

It is, perhaps, too much to hope that any inconvenience over the Second Plan that India might experience would make Britain change its attitude over its commitments in regard to these pacts, since its

Indo-US Agreement

Last week saw the signing of a new civil air transport agreement between the United States and India which brought to a happy close long-drawn out, almost stalemated, negotiations over the past two years. The previous agreement, under which American airlines enjoyed the right to increase their frequencies without reference to India was terminated a year ago.

From India's point of view the most gratifying feature of the agreement is that the main point to which it persistently held on throughout the discussions has been secured. It was based on the principle that the development of India's own air transport should receive prior consideration and that the traffic between any two countries must principally go to the air services of those countries. It is now laid down by the agreement that Government of India's prior approval is necessary before the frequency of American airlines can be increased. Consistent with India's stand, the airlines could ask for an increase in frequency mainly on the ground of increase in direct traffic between India and United States.

In its outline, the agreement is not in any way different from India's air agreements with other countries with the exception of Japan. But Japan, has at the moment no international air service and therefore the unrestricted frequency allowed it does not operate.

Certain procedural rules are also set forth in the Indo-US pact with would serve as a guide in interpreting and carrying out the agreement.

Airlines designated by each of the two Governments would operate air services on two specified routes via intermediate points in both direction and make scheduled landings at certain points. Provision is also made for mutual consultations between Governments from time to time and for ensuring the rates to be reasonable, due regard being paid to relevant factors such as cost of operation, reasonable profit, and the rates charged by other services.

According to the pact which comes immediately into force, each of the two US Airlines, The Trans-World Airlines and the Pan-American World Airways, would operate two round trips per week as at present until increased later by mutual agreement.

There can be little doubt that the agreement provides a suitable basis for a possible increase in the volume of services between the two countries. At present India has no air service to the US. It is to be hoped that an exaggerated notion of the difference between the economic philosophies of the two countries, the unrestricted competitive freedom of the one and the controlled growth of the other, will not prevent a fruitful and enduring implementation of a scheme which has been arrived at in a spirit of compromise, but, fortunately, without the sacrifice of principles.

*

International fund for Education:

It is too early to foresee what will happen to Maulana Azad's suggestion last week for the creation of a special fund to enable backward countries to catch up with the others in education, science and cultural activities. He was speaking at the second conference of the Indian National Commission of the UNESCO. The world organisation, which came into being late in 1946, was meant to contribute to peace and security by promoting collaboration among nations through education, science and culture.

As the Maulana was careful to point out, the prerequisite for this organisation to fulfil its objective is the solution of major issues over which there is either divergence of opinion, or little enthusiasm and inadequate funds. Relevant in this context are the question of universality of UNESCO membership, peaceful co-existence, removal of conflicts, the utilisation of atomic energy for peaceful purposes and better mutual understanding of the cultures of the East and West.

The entire budget of the UNESCO comes to about 21 million dollars, which does not compare with the expenditure on armaments by some of the member countries. Augmentation of UNESCO's material resources is a task of the highest priority.

Most of the backward countries are engaged in accelerating the process of economic development. All the internal resources they could muster are hardly sufficient to make posible an appreciable rise in living standards. Understandably then, education and scientific and cultural pursuits are likely to suffer unless fresh resources are injected from outside. The gap between needs and resources has alreay shown itself in those underdeveloped countries which have taken to economic planning. Discrepancy between practice and profession, some instances of which were pointed out by India's Education Minister, is likely to continue unless UNESCO is strengthened by substantial funds. There is also much validity for the criticism that the organisation chould concentrate on a few basic objectives rather than put its hands on to a wide range of problems.

NORTH INDIAN MARKETS

Sugar Markets Depressed

DEPRESSED conditions prevailed in Sugar markets due to slack outside buying enquiry. All mills in North Bihar are reported to have been hard pressed following accumulation of stocks of sugar and molasses, and the situation is described as alarming. It is even reported that, if no steps are taken for the movement of these stocks, it will become impossible for the mills to carry on further crushing.

On account of bumper sugarcane crop this year, there is going to be a record production. Up to January 15, the sugar produced was 2,516,331 maunds as against 1,572,122 maunds during the corresponding period of last year. The total cane crushed in North Bihar up to January 15 this year was 26,775,404 maunds as against 25,754,075 maunds last year The percentage of sugar recovery was 9.40 per cent as against 9.50 per cent last year.

In Uttar Pradesh, factories have preferred booking business at lower rates on account of the pressure of the comparatively large release allowed to them by the Government. This has resulted in a decline of As 8 to Re 1 per bag in the prices quoted by several mills. Following were the rates (per maund) quoted:—Jaswant Rs 28-8; Simbhauli Rs 28¾; Mowana Rs 29; Daurala Rs 29¼; Amroha Rs 27¾; Bijnore Rs 27¾; Mansoorpur Rs 29-8 and Rampur Rs 30-8.

Dealers are generally cautious in their fresh purchases in view of the persisting rumours of an increase in the excise duty on the sweet commodity. Although there are rumours that the forthcoming Budget will impose an additional excise duty of Rs 2 to Rs 3 per cwt., informed circles are confident that a further upward revision of the excise duty is unlikely; because an increase in the duty will run counter to the Government's anxiety to keep consumer prices at reasonable levels. It is stated that, since the excise duty was raised from Rs 3-12 to Rs 5-10 per cwt only a year ago, a further increase is obviously unjust. Moreover, the industry has to pay, apart from this heavy excise duty, other levies such as the cane cess, Co-operative Societies' commission, Sales Tax, etc.

In the midst of subdued activity, the Bombay sugar market has displayed an easier undertone with the prices of certain grades of the indigenous qualities registering a loss of about As 8 per bag during the last one week. This is attributed to the downward trend in prices in Uttar Pradesh markets.

Prices in Deccan are expected to come in line with the rates quoted by other factories as the crushing is stated to be in full swing.

The Meerut market remained depressed as demand was negligible. The Punjab and Delhi brought small quantities. Bold variety was quoted at Rs 32 per maund, Medium at Rs 30-8 and Small at Rs 28-8.

*

Quiet conditions prevailed in the Gur market at Hapur despite easy loading facilities to Gujerat and Assam via Pakistan. Outside buying enquiry at the prevailing rates was very slack; and traders had to cancel some of the allotted wagons to Gujerat. Ready gur was quoted at Rs 10 to Rs 10¾, according to quality.

Total arrivals, during the past week, were about 20,000 maunds, while stocks were estimated around 50,000 maunds. Arrivals, since the beginning of the season, were put at 3.5 lakh maunds as against 4.2 lakh maunds at this time last year.

*

Foodgrains markets in Uttar Pradesh ruled quiet. Wheat recorded a fall of Rs 8 per maund to Rs 14-8 for average quality following the ban on wheat products exports. Imported fine quality wheat was quoted at Rs 14-14 per maund. Outside buying enquiry was slack.

Rice also ruled a shade easy on comfortable supply position. The all-India second estimate of Rice for 1955-56 puts the current year's area and production of the crop at 72,332,000 acres and 23,775,000 tons as against the adjusted second estimate of 69,456,000 acres and 22,126,000 tons during 1954-55. This shows an increase of 2,876,000 acres in area and 1,649,000 tons in production.

Gram ruled easy and the stock position remained unchanged. Small arrivals from the Punjab found ready offtake by local consumers. Paucity of stocks accounted for an improvement of As 4 per maund in the prices of Barley. Jowar eased fractionally on the latest ban on exports, while other foodgrains ruled quiet.

Prices in the Bombay grains market showed a mixed trend. The Government's decision to ban exports of wheat products had a sobering influence on the trading in the Wheat section. Prices registered a

Madras Review

The Peninsula

The UN Secretary-General in India

BESIDE the ECAFE Annual Session, for the second time conducted in India, the visit of the UN Secretary-General to the country is generally apt to be regarded as an event of subsidiary importance. There is a great deal of justification in taking that view; for, there is no specific mission involved in the visit.

The Secretary-General, theoretically at least, does not enjoy the official capacity to make any commitment on any question, national or international, beyond the narrow sphere of his administrative responsibilities. The ECAFE, on the contrary, has become a potent regional organisation, already claiming a good record of work. This work and particularly its importance to India are relatively of greater interest than the visit of a personage who, however exalted and estimable, has apparently very little voice in the shaping of human affairs.

The above assessment would have been fully correct, but for one significant factor, the rare personality of Mr Hammarskjoeld. Mr Hammarskjoeld has shown that the UN Secretary-General can be much more than a mere administrative head; he has successfully acquired and applied what has come to be known as "quite diplomacy", taking full advantage of the office he holds.

The unostentatious role he played in the matter of releasing the US airmen imprisoned in China, following the initiative taken by the Indian Union has won for him a recognition and an informal diplomatic status, which he can utilise in similar conditions at the highest levels. In a way, the Secretary-General is enabled to pursue a line of action which is denied to "national" diplomats. As one who understands the absolutely neutral character of his office, his counsel is likely to command a measure of attention which the regular contestants in a controversy could scarcely be able to secure.

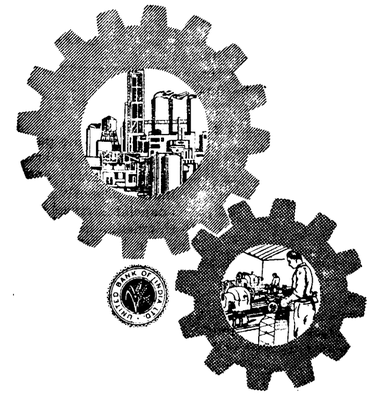
It is for this reason that Mr Hammarskjoeld's visit gains an extra interest; the Indian Union was welcoming not merely the top official of the UN organisation, but a skilful diplomat, who has demonstrated his capacity to utilise a privileged position for the easing of international tensions, in howsoever small a measure. There can be little doubt that the release of the US airmen from China has cleared up to some extent Sino-US illwill.

During his brief visit in India, Mr Hammarskjoeld was obliged to speak on a few issues which were uppermost in the minds of his hosts and on which not every one of them could look upon without some emotion. After going through all that he said in his speeches, and the answers he gave to Pressmen for the questions put to him, one has come to admire all the more deeply the impregnable serenity and the intellectual agility of the visitor.

The Pressmen were obviously keen to elicit from him some opinion on regional military pacts, in which he could be trapped; but he proved to be more than an equal to the occasion. His reply to the demand for greater representation of Indians in the superior cadres of the UN service is another example of a negative answer which drowns the disappointment of the other party in the general courtesy of his words and the selective emphasis on facts. Here is a man who can turn down your demands and leave you pleased all the same.

In his first public address in India, which was in reply to a civic welcome given by the Corporation of Bangalore, he praised the city, the country and the continent in terms which were dignified and constructive. Saying that the UN had great responsibility to safeguard the interests of all people, he added that there was cooperation between the UN and the Government of India and the latter had made a great contribution to the work of former.

He expressed his desire to learn much more about the great effort of India to build up a strong economy and provide for the well-being of her people and enable them to live in human dignity and comfort. "I hope in all humility that we in the UN through the ECAFE and through the headquarters will be able to assist in that great work." At the same time, he was not reluctant to admit that the UN could do certain things.



At his Press Conference at Bangalore, one journalist asked him if the United Nations was not inclined to neglect Asia as had been manifested in the delay in establishing the Special United Nations Fund for Economic Development. The reply was that, while the allegation implied in the question was completely unfounded, the concept of international control of movement of capital provided by national governments was new and they had found difficulty in its being accepted. Mr Hammarskjoeld said that he was not surprised that such control had not gone far.

Addressing the opening meeting of the ECAFE Session, the UN Secretary-General dwelt on this subject. "The concept of the SUNFED (Special UN Fund for Economic Development) on which many members of this Commission set high hopes is also solely moving forward". He also took care to point out that the UN at present was primarily concerned with preparing the groundwork and plans and training the builders. The acquisition of capital was a complementary work and has not become an equally important concern of the UN just now.

Incidentally, one cannot fail to notice the gulf between the UN Secretary-General's clarification on this question and the description of the needs of the undeveloped countries by Pandit Nehru. Pandit Nehru, in his address to the ECAFE Session, categorically stated that the world had enough resources, energy and capacity to satisfy every need of everyone. "People have realised it. They are not agreeable to remain where they are. So the problems of the under-developed countries have to be viewed from a very special point of view. To some extent I believe there has been a tendency to look at these problems from the point of view of the far more developed countries whose background and problems are entirely different. The under-developed countries have to learn, of course, from the developed countries. They have to learn the basic things of science which, ultimately leads to development. We have to learn their technology. Besides we should also have their close co-operation."

South Indian Notes

Administrative Reorganisation

Mr A. K. Chanda, Comptroller and Auditor General of India said at a meeting in Madras last week that the time had come for undertaking a review of the administrative organisation of Government with a view to bring it in tune with the directive principles of State policy.

Even from a purely practical point of view, there was urgent need for a readjustment of the Government machinery as well as the Services. For, it would be agreed on all hands that sound planning coupled with careful and economic execution of programmes would result in an optimum utilisation of resources. Such efficient use of available resources was of paramount importance especially when there was a fairly big gap between resources and the Plan.

Before approaching the task of reorganisation and reorientation, it was essential to get rid of some misconceptions. While it was true that the remnants of the All India services were doing highly important work both in the States and in the Centre, the sooner persons in authority and others realised that those services were by no means superior to other Services, the easier would be the pace of reform. At the same time it should also be recognised that urgent steps were needed to resusciate those services on an all-India basis if the efficiency of the administration were not to be impaired.

There was also urgent need for bestowing careful thought on the advisability of integrating all the Services into a single Civil Service with sufficient flexibility to allow the maximum interchangeability between the Services.

Reform was called for in respect of rules and regulations governing recruitment and the transaction of Government business with a view to balancing independence of judgment with response to responsible public opinion.

Reorientation was indicated in the relations between the central and state governments. In this connection Mr Chanda pointed out that the system of obtaining officers from the provinces on a tenure basis should not only be retained but rigidly enforced. The system had the advantage of bringing the Central Government officers in close touch with reality and the officers from the states to get acquainted with the outlook, the methods and the difficulties of the Central Government. The same applied in a slightly modified way to the administration of major projects in the country. Administrative posts and executive posts in the field should be put on an identical basis, taking care to ensure that there was "judicious distribution" of available talent between the policy making authority and the field organisation.

✱

Cochin Port:

With the inauguration by Dr Rajendra Prasad on Monday last of the two new tanker berths, an important item in the Rs 3 crore development project for the improvement of facilities at Cochin port, has been completed. Hereafter ships which used to take two days to discharge oil will be able to finish the work in a single day. The new tanker berths are capable of handling an estimated 12 lakhs tons of petroleum and other oils a year.

Apart from the new facilities the process of development has been continuous so far as this port is concerned. In the course of the last 30 years, great strides have been made and the harbour has grown both in its size and importance. The fact that a big naval base is located here has given it added significance. Cochin has now "attained the position of one of the important ports in the country".

As Dr. Rajendra Prasad has pointed out, the two new tanker berths have further enhanced the importance of Cochin to the country as a whole. The new oil refineries that have been established in the country and the others that are in the course of being constructed in various places have to be supplied with crude oil that now comes from outside India. The oil that thus comes from abroad is to be sent to the refineries without delay. Further the refined oil has to be sent to the various parts of the country. For all this the new tanker berths will be extremely useful by cutting down the time taken to discharge oil from the ships.

The facilities that are now available in the port will naturally result in furthering the development of the commercial activities in the harvour. With the tremendous improvement envisaged in the country under the second five year plan, Cochin is bound to grow in its importance.

It is gratifying to note that Dr Rajendra Prasad has given the assurance that the Government of India will continue to take active interest in the development of Cochin Port.

SOUTH INDIAN MARKETS

Over-Production in Hides & Skins

FOR some time past, United Kingdom was not entertaining offers of tanned Hides and Skins from India properly. For reasons of financial stringency due to heavy shipments in recent months, buyers in the UK had themselves suggested to shippers at this end to hold out offers till the situation had improved. As a matter fact, there was no shipment of tanned skins bales to the UK during November. With the result, there was a shipment of only about 7,000 bales in December. There was, therefore, a tendency on the part of the UK buyers to quote selling prices lower than the market rates, thus developing a demoralising effect on the trade.

In this connection, shippers and representatives of tanners, at a meeting held toward the end of last week, decided to request all shippers to refrain from making any offers or accepting any orders or sending any consignments of E.I. Tanned Kips and Calf Skins for a period of a fortnight. The meeting also a passed a resolution to request the tanners in the State to reduce soaking of Cow, Cow Calf, Buff and Buff Calf hides to 50 per cent, subject to a minimum of 10,000 pounds of tanned Kips and Calf skins per month and that tanners, already producing less than 10,000 pounds per month, should confine themselves to their normal production. Soaking figure from July 1, 1955 to December, 1955 should be taken as the basic figure and that soaking should be reduced as aforesaid from February 20, 1956 for a period of three months when the situation will be reviewed.

It is, however, reported that the present crisis in the market, brought about by over-production and larger shipments, has not so far become complicated. But, on the other hand, it is reported from the UK that shoe factories and Dressers have enough orders in their books. It is, therefore, a question of re-establishing confidence of the London buyers in Madras prices and a curtailment of production leading to lesser exports.

Meanwhile, arrivals of Cow hides in the market, during the past week, were normal. There was a sizeable clearance, while prices were lower by six pies per pound. As arrivals of Cow Calf and Buff Calf were on the previous week's levels, prices ruled easier by one to two annas per pound. Buff hides were available in fair quantities with prices quoting down by three pies per pound.

In the export section, sales were reported in 10-12 lbs on the basis of 37d and 8-8½ lbs runs, fourths and fifths at 43d, 40d and 37d respectively.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair; and there was good clearance at unchanged prices.

In the export section, buyers were rather hesitant though one or two good marks of goat skins were sold at better prices. Some enquiries for sheep skins were coming from Japan, and business was reported done around 7sh 3d to 7sh 6d for "fifths".

✱

The Madras Groundnut market ruled quietly steady in the absence of any buying or selling. The rate for superior oil-quality seeds, after improving at one time to Rs 145 from Rs 137, finished the week at Rs 140 per candy. Similarly, the rate for bold varieties closed at Rs 139 after touching a high of Rs 143 from Rs 134. Arrivals averaged 25 to 30 tons a day. Stockists are reported to be holding back in anticipation of higher prices.

In the Groundnut Oil section, there were no free sellers. Buyers, too, were not operating due to the high prices prevailing, while shippers were buying to meet only their immediate requirements. The rate for ready oil was quoted at one time upto Rs 282 from Rs 270, to finish the week at Rs 273. The rate for February delivery hovered around Rs 270 per candy.

✱

The Coffee Board's ad hoc Committee on planning has been examining the draft Coffee plan; and, it is reported, that tentative decisions have been taken. One of the proposals is to reduce the plan period from 15 to 5 years. If the anticipated increase in production is to be absorbed, a great promotional drive will be called for, and this is being taken into consideration.

Meanwhile, the Coffee Board has released 300 tons of coffee, consisting of 150 tons of Plantation "A", 75 tons of Plantation "B" and 75 tons of Plantation Triage, for export during the current month.

THE KINNISON JUTE MILLS CO. LTD.

Notice is hereby given that the Ninety-ninth Ordinary General Meeting of THE KINNISON JUTE MILLS CO. LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta at 10 A.M., on Saturday the 3rd day of March, 1956, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half year ended 30th September 1955, declaring the Dividends recommended by the Directors, and for transacting any other Ordinary business of the Company.

The Share Transfer Registers of the Company will be closed from 21st February to 3rd March 1956, both days inclusive.

NORTH INDIAN MARKETS

(Continued from page 246)

fall of about Rs 10 per candy. With the free availability of the commodity from Government godowns, there was little inclination among dealers to hold on to their supplies.

With the suspension of exports, the business in Jowar tended to be dull and dealers were inclined to effect sales at slightly lower rates.

Despite the ban on exports of husked rice, the Rice section presented a comparatively steady front with the old crop supplies finding a moderate demand. Some shipments are expected to take place during the next few days; but the export trade has come to a standstill.

The Delhi Grains market showed quiet conditions. Wheat prices remained steady as arrivals from the Punjab were small. Buying of the commodity by flour mills was, however, slackened following the Government decision to ban export of wheat products.

After early steadiness, Gram eased owing to increased arrivals. Bajra lost about Re 1 per maund on lower offtake. Urad and Maize rates were slightly better.

THE LAWRENCE JUTE CO. LTD.

Notice is hereby given that the Ninety-ninth Ordinary General Meeting of THE LAWRENCE JUTE CO. LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 10-20 A.M., on Saturday the 3rd day of March 1956, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half year ended 30th September 1955, declaring the Dividends recommended by the Directors, and for transacting any other Ordinary business of the Company.

CLIVE STREET GOSSIP

(Continued from page 242)

this question of a ceiling, have always said that it should be achieved, at the earliest, after the expiry of five years from now. All this leads one to the conclusion that on incomes exceeding Rs 150,000 (or Rs 200,000) a super-tax of ten annas in the rupee is perhaps being thought of as a first step in the ceiling to come. Further, an increase in the super-tax rates in respect of incomes of Rs 30,000 to Rs 40,000, and also in respect of incomes of Rs 50,000 to Rs 100,000, so as to approximate more closely to the recommendations of the Taxation Enquiry Commission is also possible.

As regards import and export duties, the directions in which changes may take place are anybody's guess.

✱

The present excise duties, in so far as their rates are concerned, closely follow the recommendations of the Taxation Enquiry Commission. Hence, presumably, there may be no enhancement of existing rates.

✱

We may now turn to the question of new taxes. Quite some time ago, the Finance Minister stated in Parliament that he was not committing himself to "no taxation of bonus issues". With so much increased economic activity in the country, one cannot avoid toying with the idea whether more could not be got out of corporate taxation. "Let me get a little more from companies: taxing bonus issues will cause least harm": thoughts could well run on these lines despite the Taxation Enquiry Commission's finding that bonus shares do not form income in the hands of the recipient. Nor will the similar finding by the Royal Commission on the Taxation of Profits and Income in the UK deter our Finance Minister from taxing bonus issues, once he has made up his mind to do so. Something of this nature might come.

✱

A tax on net wealth has been suggested by the Congress Party. In Japan, prior to 1953, there used to be a tax on net worth, annually. All the property of the assessee, both movable and immovable, is first converted to money value, on the date of the assessment. The assessee's liabilities as on that date are then deducted therefrom. On the net balance, where it exceeded Rs 75,000, a tax was levied at ½% on the first Rs 75,000, at 1% on the next Rs 1½ lakhs, at 2% on the next Rs 4½ lakhs, and at 3% on the balance. This was the system which formerly prevailed in Japan. Our Taxation Enquiry Commission considered this as an attractive tax, but they said that the administration of the tax presented insuperable problems. It may be stated, however, that a tax on net wealth is in harmony with a "socialistic pattern of society". Such a tax is bound to come, sooner or later. If its beginnings are seen in the 1956-57 budget, it should cause no surprise.

✱

The Taxation Enquiry Commission had suggested a number of new excise duties. Several of them were adopted in the 1955-56 budget. Among those recommended by the Commission, but not adopted, were excise duties on aerated waters, biscuits, ceramics and glassware. Biscuits and aerated waters are indulgences of the "common man". With the general elections coming on next year, it is unlikely that these will be taxed. The Commission recommended a "substantial rate of duty" both for ceramics and glassware. According to the Commission, the total production of both together was about Rs 9 crores. An extension of the Central Excise to these commodities is indicated.

✱

In Japan, there is a tax on travel. The Taxation Enquiry Commission recommended that a tax on railway fares may be a new source. Recently, several leading persons connected with the ruling party in our country have spoken about levying a tax on "conspicuous consumption". From all this, it would appear that a tax on plane fares, on travel by air-conditioned coach and on luxury motor vehicles could be likely.

✱

Before concluding, another serious possibility has to be mentioned. The revenue from Estate Duty goes mostly to the States. The States also are expected to increase their tax revenue. An upward revision of the Estate Duty may, therefore, be expected.

EAVESDROPPER.

THE AUCKLAND JUTE CO. LTD.

Notice is hereby given that the Ninety-fourth Ordinary General Meeting of THE AUCKLAND JUTE CO. LTD. will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 11.05 A.M. on Saturday the 3rd day of March, 1956, for the purpose of receiving the Directors' Report, passing the Audited Accounts for the half year ended 30th September, 1955, declaring the Dividends recommended by the Directors, and for transacting any other Ordinary business of the Company.

Note:—The Dividend, if sanctioned, will be paid on or after the 27th February, 1956 to those Shareholders whose names are registered in the books of the Company on that date, or to their Mandatees.

Stock Exchanges

SLIGHT IMPROVEMENT IN GENERAL SENTIMENT

Watch-dog Writes:

ALTHOUGH conditions in stock markets are again dull, there are some signs of returning confidence; and prices of selected issues have shown improvement over the recent low levels. Dealings are, however, thin and slow due to settlement considerations. Budgetary uncertainties and bearish implications of the revised final draft of the Second Plan.

The volume of business on the Calcutta Stock Exchange continued to be small. Apart from the Miscellaneous section, which provided a few firm spots, conditions remained generally unchanged.

Although the Bombay Stock Exchange made a notable headway in the early part of the week, prices were marked back toward the close due to lack of follow-up support.

There was some improvement in the general sentiment on the Madras Stock Exchange. Planting and Textile issues being marked up on a wide front.

Trading on the London Stock Exchange was dull, but the strength of Gold shares provided some relief.

Wall Street closed barely steady.

✱

Calcutta

Calcutta, Thursday Evening.

WITH operators hesitant to do any business in the absence of any improvement in settlement affairs, the turnover on the local Stock Exchange, during the past week, was again at a minimum. The underlying causes for the market's depression were many.

Apart from the fact that the market has not fully found its way out of the recent settlement difficulties, Budgetary uncertainties and the bearish implications of the revised final draft of the Second Plan also depressed sentiment in the market. There was, therefore, a general inclination on the part of operators to await further developments before entering into fresh commitments. The only redeeming feature of the week's trading was the consistent support lent to selected scrips in the Miscellaneous section.

The Giltedged market remained steady. There was sustained demand for medium and long-dated issues. 3 per cent 1986 Conversion Loan, after being taken upto Rs 80-11, finished the week at Rs 80-4. Among other Loans, 3 per cent 1970-75 changed hands at Rs 88 to Rs 88-7 and 4 per cent 1960-70 at Rs 101-15.

Bank shares ruled better following the publication of encouraging working results for 1955. The rise in Punjab National was more marked, being done upto Rs 44-8 from Rs. 43-4. United Commercial changed hands at Rs 49-8, while United Bank of India "D" ruled steady at Rs 4-14.

Despite steadier advices from the jute goods market, Jute shares lacked any interest in view of the rising tendency of raw jute prices. Howrah were better at Rs 25-7 against Rs 25-4, while Belvedere were well maintained at Rs 182. Bengal met with some enquiry at Rs 18 and Presidency at Rs 6-4.

Coal shares fared better following the announcement of the increase in dividends by some of the companies. Amalgamated were taken upto Rs 23-8 from Rs 23-2 and Equitable upto Rs 33-6 from Rs 32-14 Central India hovered narrowly around Rs 7-7 and Talcher around Rs 3-7. Western Bengal changed hands at Rs 7-2 to Rs 7-5.

Textile shares ruled quietly steady, the only exception being Elgins which met with consistent support upto Rs 27-9 from Rs 27-4. Kesoram moved narrowly between Rs 16-14 and Rs 17-2. New Victoria were rather sticky at Rs 2.

Tea shares were no exception to the general trend of the market; and only a few transactions took place. Brooke Bond changed hands at Rs 19-10 to Rs 19-12; Dhelakhat at Rs 18-2 to Rs 18-6; Hantapara at Rs 241 to Rs 246; Bishnauth at Rs 36-14 to Rs 38-12 and Methoni at Rs 20-11 to Rs 21-2.

Sugar shares were practically neglected on quieter advices from the commodity market. There was, however, some support at lower levels. Cawnpore were quoted at as low as Rs 21-14; Carew at Rs 11-8 and Darbhanga at Rs 22-3. SKG were, however, remarkably steady at Rs 12-12.

In the Engineering section, trading in Indian Irons continued to be prohibited, pending the settlement for last clearing. Shares were, however, privately quoted around Rs 32-11. Among other Engineering scrips, Jessops continued to be in good demand upto Rs 60 from Rs 57 following the recent publication of excellent results and the increase in dividend. Richardson were pushed upto Rs 27 from Rs 25-13, while Kumardhubi were quoted better at Rs 11-12 against Rs 11-2. TEXMACO met with some speculative buying upto Rs 20-13 against the settlement rate of Rs 20-8.

In an otherwise dull market, the Miscellaneous section, provided a number of firm spots. Orient Paper, after staging a spectacular rise to Rs 35-12 from Rs 33-9, finished the week at Rs 35-4 on profit-taking. Titaghur met with business at Rs 45-2 and India Pulp at Rs 23-3 to Rs 23-12.

In Minings, Orissa Minerals changed hands at Rs 24-2 to Rs 24-12, while Metal Corporation were quoted around Rs 11.

In Oils, BBP developed a hardening tendency to Rs 4-2 from Rs 3-15, while IBP changed hands at Rs 42-6 to Rs 42-8.

Among other scrips, Indian Cable recovered partially to Rs 30-12 from Rs 30; Rohtas Old to Rs 22-12 from Rs 22-0; New shares to Rs 21-4 from Rs 20-11; Dunlop Rubber to Rs 33 from Rs 32-10 and Angelo Brothers to Rs 24-10 from Rs 23-12. BIC were a narrow market around Rs 11-12, while India Steamship fluctuated between Rs 8-6 and Rs 8-9.

✱

Madras

Madras, February 7.

THERE was improvement in the general sentiment on the local Stock Exchange during the past week when Planting and Textile sharss came in for attention and were marked up on a wide front. Business, however, continued to be thin.

TEXTILES:—Although shares in this and Textile shares came in for attention selling in the early part of the week, a few buyers were forthcoming and taking shares at the lower levels. Bangalore Woollens were marked down at one time to Rs 540 and Buckinghams to Rs 169, to finish better at Rs 543-8 and Rs 171 respectively. The maintenance of the dividend had no effect on Maduras, which received support upto Rs 49-4. Dhenalakshmis were better at Rs 178; Balasubramanias "B" at Rs 119-0 and Coimbatore Spinnings at Rs 80. Travancore Rayons noted demand at Rs 15-4.

PLANTINGS:—The section was also subjected to selling pressure; but, at the close, a few Rubber shares were picked-up at the lower levels. There was a sharp improvement in Midlands to Rs 18-4 and TRTs to Rs 12-8 on buying support. Kalpettas were in demand at the market rate. Demand was also noted for Rajagiris, though there were some sellers of Cochin Malabars and Thamarapallys.

In the Tea section, all the shares were marked down, though there were only a few exceptions. Coorgs were lifted to Rs 9-8 without attracting sellers. Highlands were taken up to Rs 15-0 and Periakaramalais upto Rs 8-0-6. United Nilgiris improved recovered to Rs 302-8 on improved demand, while Haileyburias were quoted around Rs 25-2.

SUGARS:—Except Mysores which were on offer at Rs 50-8, all other shares in this section met with good support with Deccan improving to Rs 8-6 and Travancores to Rs 12-8

MISCELLANEOUS:—In this section, FACTS ruled steady at Rs 6-11. India Cements Deferreds were offered at Rs 6-6 without attracting buyers. Travancore Cements met with some demand upto Rs 11-6. Mysore Golds and Bangalore Transports had sellers at the market rates.

✱

London

London, February 7.

FEARS of an intensification of the credit squeeze and restraint on dividend payments dominated the stock market during the past week. Although the general picture was one of dullness, the strength of Gold shares provided some relief.

Industrials were again out of favour and losses were general, although a number of leading equities closed above the worse on limited support. Imperial Tobaccos were an outstanding bull spot on the disappointment of the maintained dividend, while British American Tobaccos were easier in sympathy. Oils were dull under the influence of Wall Street.

Giltedged securities were depressed by credit restriction uncertainties and closed with small losses. Following were the closing rates of selected stocks and shares:—2½ per cent Consols £55 (£55½)—previous week); 3½ per cent War Loan £74 (£74-9/16); Imperial Chemicals 44/10½ (45/6); Imperial Tobacco £3-1/16 (£3-3/32); Calcutta Electric 20/0 (19/4½); Calcutta Tramways 25/6 (23/6); Assam Teas 19/0 (19/3); British Petroleum 107/10½ (110/4½) and Indian Copper 9/10½ (10/0).

✱

New York

New York, February 6.

ACTIVITY on Wall Street, during the past week, was at a low ebb. Despite occasional increases in profit-taking and other offerings, the recent advance was continued after initial indecision had been overcome.

In a generally dull trading, Radio Corporation advanced by a minor fraction, with some interest in the issue being developed on its colour television hopes. Sears Roebuck advanced similarly, aided by its record January and financial year's sales. Westinghouse Electric advanced by $1½ on hopes of a settlement of its nearly four-month-old strike.

Improvements in Oils and Natural Gas issues were aided by hopes of favourable Senate action on a Bill to free independent gas producers from direct Federal regulation. With almost all observers agreeing that the oil industry was headed for another record sales year in 1956, Gulf Oil was further aided by the indication of an important oil discovery in Kuwait. This company advanced $2½.

Following were the closing rates:—Anaconda Copper $69½ ("68¾—previous week); General Motors $44¼ ($43¾) and U. S. Steel Common $53⅜ ("54⅛).

THE HOWRAH-AMTA LIGHT RAILWAY CO., LTD.

NOTICE is hereby given that the One Hundred and Nineteenth Ordinary General Meeting of the abovenamed Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 27th February, 1956 at 11-12 a.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half year ended 31st March 1955 and the Balance Sheet as at that date.

(2) To declare a Dividend.

(3) To elect Directors.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 17th to the 27th February 1956, both days inclusive.
