In the auction held at London this week, offerings amounted to about 30,625 packages including 25,145 packages of Northern India teas. The sale opened with an easier tendency in prices for all kinds with the exception of good medium teas which were about steady. The demand for the best liquoring teas has completely fallen away; and prices for these were 4d to 8d per pound lower than those ruling before the Whitsun holiday. Common and thin medium types also met with an irregular market and rates were 2d to 3d per pound below the previous level. Clean Common Broken Pekoe was nominally quoted at 3sh 1d per pound.

✱

NORTH INDIAN NOTES

(Continued from page 1013)

to leave this matter to be settled by an uncommitted understanding rather than through categorical definitions, which the Government naturally feel disabled to offer.

✱

Better Camaraderie

In their relations with their women colleagues the male members of the Indian Parliament seem to be on the whole much happier than their counter-parts in Pakistan. Last week a brief tussle ensued between the two sexes in the Pakistan Assembly. A male member in a rather unchivalrous mood protested against the female members shaking hands with the speaker, who apparently is a male. The protest was supported by references to Islamic prohibitions. The same member also found it difficult to tolerate the heterodox manner in which the majority of the female members were dressed. The latter however, refused to bow either to the protest or to the Koranic sanction behind it.

Without the least remorse, they shook hands with the speaker one after the other; and the most daring of them did it twice. As far as the incident goes, it is undoubtedly a victory for the modernised fair sex. Long-term repercussions cannot be predicted.

In pleasant contrast to the above incident is the full and uninhibited equality displayed between the men and women members of the Indian Parliament. At an at-home given by the latter a week-end, proportionate to the total strength of India's sovereign legislature the women hosts number forty-two. It was however a pity that not even one among them could sing a song to entertain the guests. The legislators who pressed for a song were treated with the national Anthem in chorus. Pantit Nehru good-humouredly took it as "a good way of sending us away" and the Party dispersed.

SOUTH INDIAN MARKETS

(Continued from page 1015)

mer crop have begun in Tanjore district; and they totalled 1,000 bags in all centres. The condition of the standing crop in Pollachi is reported to be good.

In the Groundnut Oil section, activity was restricted. Although sizable quantities were taken up by Calcutta interests toward the close of the week, it had no effect on market sentiment. The rate for the ready position declined to Rs 326 per candy from Rs 333 quoted in the previous week. Rumours of a possible ban on the export of vanaspati and the feeling that there would not be any large-scale export of groundnut oil this year due to prevailing high prices, were contributory factors to the easier trend in prices.

✱

In the Madras Tanned Hides market, arrivals of Cow hides showed no change, while clearances were slow and restricted. Prices were quoted again one anna per pound lower, while those of Buff hides were three pies per pound lower. Arrivals of Cow Calf and Buff Calf were in fair quantities, but clearances were restricted.

In the export section, conditions remained dull with UK importers bidding 1d per pound lower for all weights. In common qualities of cow hides, London prices were on the basis of 46-47d for 5-5½ lbs; 37½d for 8-8½ lbs and 34½d for 10-12 lbs.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate, but clearances were made at unchanged prices to As 2 per pound lower.

In the export section, there were some enquiries for good quality Goats of 11-12 lbs, aad business was reported done at prices ranging from 12sh to 12sh 1½d. In Sheep skins, there were some enquiries for light weights, primes and semi-primes.

In general, business, especially in Kips, with the UK buyers has been dull during the past many weeks. The wide variation in the prices at the London auctions of skins has somewhat unnerved the market, resulting in important interests urging that the auctions should hereafter be held in Madras, though there are others who still prefer the auctions to be held in London.

✱

According to the US Department of Agriculture, production and exports of Coconuts and coconut products in Ceylon in 1956 are expected to be adversely affected by the prolonged recent drought. Although the results of the dry weather will not be felt until the end of the year, the decline in production will be considerable.

The Ceylonese production of coconuts and coconut products reached a record high in 1955. Exports of copra and coconut oil were also at an all-time high of 222,680 tons. Exports of copra alone totalled 68,353 tons—almost 50 per cent higher than 1954 exports with 93 per cent of the total going to India.

✱

GATEWAY MARKETS

(Continued from page 1010)

requirements of the Second Plan, will not simply allow it.

Meanwhile, arrivals and offtake of silver were estimated around 44 and 50 bars respectively. Silver Jeth delivery, after touching a low of Rs 167-1 from Rs 167-9, finished at Rs 167-4. Silver spot, after touching a low of Rs 170-1 and a high of Rs 170-12, closed at Rs 170-4.

Arrivals and offtake of Gold were estimated around 2,000 tolas and 5,000 tolas respectively. Gold Jeth delivery, after touching a low of Rs 98-9-6, finished better at Rs 99-14. Ready was quoted at Rs 102-4. Mysore Gold ruled firm and was quoted at a premium of As 4 over bullion at Rs 101-12. Sovereign was quoted at Rs 66-4.

✱

Metals

There was a further break in the price of Copper after the special clearing last week. The steep fall in the price of this metal is not difficult to understand in view of the definitely bearish outlook for the metal in the world markets. Although the stock position in the local market does not seem to warrant any such precipitous fall, sentiment appears to have been influenced by the conditions on the London market. The London price has dropped by more than £100 to £307 per ton since February last as a result of increased supplies from the mines. Copper ready was quoted at Rs 235; Vaisakh delivery at Rs 221 and Jeth at Rs 219 per cwt.

In sympathy with the trend in Copper, prices of Zinc also declined to Rs 66 per cwt, while the London quotation declined to £33¼ from £96. Stocks of the metal in Bombay are said to be quite normal.

Among other metals, Lead ready was quoted at Rs 81-0: Vaisakh delivery at Rs 80 and Jeth delivery at Rs 80. In London, the price was quoted at £112⅜ per ton for half-May delivery. Tin ready was quoted at Rs 127, while the London price was quoted at £741 per ton for the spot position.

✱

Art Silk Yarn

The Yarn market continued to rule easy, the daily turnover being limited due to meagre demand. Stocks of Art Silk Yarn, staple-fibre yarn and rayon cones were stated to be increasing, while the demand for rayon cloth did not show any improvement.

The market for imported raw silk was, however, firm with the Japanese quality filature silk of 20/22 deniers ruling at Rs 58-8 per pound. Shanghai quality was placed at Rs 47-8 per pound.

FOR THE INVESTOR

(Continued from page 1000)

managements have shown efficiency in day-to-day affairs as well as in planning ahead.

£ R$

Hindustan Commercial

Investment Special:

The Hindustan Commercial Bank Limited has reported a good year for 1955, with deposits rising by Rs 70 lakhs, or 16 per cent, to Rs 4.92 crores. In consequence, the balance-sheet total has risen by a little over half a crore to Rs 7.63 crores. On the other side of the ledger, cash balances are at Rs 62 lakhs, investments are placed at Rs 2.99 crores, and advances are shown at Rs 3.06 crores. The profit and loss account discloses the peculiar problems that had to be faced by Hindustan Commercial in respect of its business in Pakistan. The Chairman of the Bank, Sir Padampat Singhania, explained these matters in detail when he addressed the shareholders at the twelfth annual general meeting.

Sir Padampat also utilised the opportunity offered by this forum to indicate his impressions on the Second Plan; and these merit our study as being the viewpoint of one of India's more important industrialists.

Sir Padampat has spoken interestingly and with logic on what may be called the private sector's attitude to the Second Plan. There will be few who will disagree with the statement that India's plans are moulded by not merely economics, but economic philosophy. Fewer still will question Sir Padampat when he asserts that we have yet to "evolve an economic philosophy....suited to our genius and resources." Hindustan Commercial's Chairman takes the extreme view that, as a result, "we are laying the foundations for the growth of a vested interest in that class of bureaucracy which is attached to government sector." There is, again, agreement that the danger we have to avoid is such a vested interest. Mr Nehru has time and again shown himself to be keenly alive to this problem. May we, therefore, suggest that there are hopeful signs that India will be able to avoid that future in which we may be slaves in a totalitarian state?

£ R$

Investment Notes:

An important news for the week is the amalgamation of the Standard Coal Company with the Burrakur Coal Company. Full details with regard to this are lacking.

Orient Papers have already crossed the Rs 40 level. The scrip, after touching Rs 40-7, is presently quoted around Rs 38-13. There are persistent rumours with regard to the dividend, bonus and reconstruction plans.

Clive Row Investments are now lifted up to Rs 11-12 buyers. The results for the year ended 31.3.1956 are expected to be extremely good, mainly due to company's substantial holdings in tea. An interim dividend of 5 per cent has already been paid. The final dividend is expected to be another 5 per cent at least, or probably 7½ per cent.

Among Engineering scrips, the BBJ group of shares—Braithwaite, Burn & Co., and Jessop—continues to meet with good demand at steadily advancing levels on investment account. There are reports that heavy orders have already been booked with these companies by the Government.

There are now talks that Jessops will be included in the clearing list shortly. With the result, the scrip has been ruling very firm at Rs 36-10 with only few sellers in evidence.

Indian Aluminiums are now quoting better at Rs 22-2. There are hopes that right shares may be offered shortly.

Shipping shares have returned to favour. In Calcutta, India Steamships are forging ahead to Rs 9-11 from Rs 9-4 quoted last week and Rs 8-14 a fortnight ago. In Bombay, Steamships have improved to Rs 18-6 from Rs 18-3. Apart from the recent announcement of the increase in coastal freight rates, another important news for the week is the Government's proposal to reserve the coastal tanker trade for the "Indian Flag". With the establishment of oil refineries in India, the coastal tanker trade is expected to expand.

In Bombay, Shivrajpur Syndicates are ruling better at Rs 101. There are hopes that the contemplated bonus issue scheme may be put through.

Mr P. H. Kutar, Technical Director of the TISCO, has flown to west Germany for technical consultations with West German manufacturers, who are to supply Rs 10 crores worth of equipment for the Steel Company's two-million ton project, scheduled for completion by mid-1958. It will be recalled that Tatas placed an order for a blooming mill with Schloemann, a sheet bar and billet mill with Demag and a medium and light structural mill with Sack—all the three West German firms with head quarters at Dusseldorf. It is understood that construction of the mills has already commenced, and the details of plant layout are to be finalised during Mr Kutar's present visit.

In Madras, Mettur Mills have registered a rise of 30 points to Rs 500-0. The dividend announcement is expected to be made shortly. Anticipations are, that it will be fairly higher than the previous year's 35 per cent.

£ R$

Investment Briefs:

Bateli Tea has announced an interim dividend of 2 per cent for 1956.

Bengal Flour has halved the dividend to 7½ per cent, for the half-year ended 31.12.1955.

Dena Investment, Bombay, has raised the dividend from As 12 to As 13 per share for the year ended 31.3.1956.

Spencer & Company, Madras, has declared an interim dividend of 5 per cent for the year ended 30.6.1956.

£ R$

CORRIGENDUM

In reference to an Investment Note about the East Anglia Plastics (India) Ltd. in our issue of 14th April 1956, a contrary impression was conveyed by the omission of a word. While indicating that certain plastic compounds were to be manufactured by East Anglia Plastics (India) Ltd. we had intended to stress that these compounds had NOT been manufactured previously in this country. We regret the omission of the word "not" in the Investment Notes referred to.

✱

EQUALITARIANISM IN BRITAIN

(Continued from page 1004)

under inflation. So long as there appears to be a good possibility of earning bigger and bigger profits during a period of inflationary business boom, this provides an incentive for expansion, even if most of the profits is taken away in taxation and the purchasing power of what remains is reduced by the non-stop rise in prices. It remains to be seen what would happen during a prolonged period of stagnation.

Excessive equalitarianism tends to hold up British industrial expansion even during a period of inflation. Its effect on the volume of savings has been very unfavourable, for recipients of small incomes have not got into the habit of saving, even though the increase in their earnings would enable them to save. This means that there is not enough risk capital available. It also means that the volume of capital expenditure by the public and private sectors of the economy is in excess of the volume of savings, and this necessarily means inflation.

The future of Britain depends on the possibility of increasing the producing capacity of industry. This is all the more necessary as Britain is gradually losing her Colonial empire. It is necessary to increase productivity, in order to maintain the standard of living in spite of the losses of the Colonies. But the equalitarian trend gravely handicaps the increase of productivity, through its effect on saving and investment. Owing to the inadequacy of saving, the inflationary trend stimulated by the excess of investment over saving calls for disinflationary measures from time to time, and this again tends to hold up investment.

Moscow has duly realised that it is well worth their while to renounce equalitarianism for the sake of economic expansion. But the British Labour leaders want to be more socialistic than the Communists of the Kremlin. They disregard the advice of their chief economic expert, Professor Arthur Lewis, who is in favour of accepting higher profits and unequal distribution of incomes as the price that must be paid for progress. It remains to be seen how the British electorate will respond to the "new look" in Socialist policy.—(Copyright).

"Where now the city stands,
there was once naught but the city's site." OVID

Bombay February 18, 1665. Only a small island of mud-flats and fishing villages, was what Humphry Cooke took over from the Portugese, as part of the marriage portion of the Infanta Catherine of Portugal for her husband, King Charles II of England. During the centuries that have passed there has risen in that place a modern city of steel and concrete—a mighty industrial centre. Thousands of tons of STEEL have gone into the making of this city.

For the Investor

Prospects of Coal in the Second Plan

Investment Gossip:

IF, in this catalogue of industries directly and favourably affected by the Second Plan, I list Coal after steel, engineering and cement, the average reader is likely to think that my reasoning and arguments are apt to be far-fetched. Coal has, so recurrently and for such long spells, been a particularly depressed industry that it is hard to believe that it can have a future justifying its inclusion in this series.

Yet, a little reflection will convince every one that coal is an obvious choice in this context.

It has been pointed out, again and again that the Second Plan's success depends largely upon the coal industry being able to achieve the prescribed target and upon the transport system being equal to the vastly increased load it will be called upon to carry. Coal has, thus, a fundamental place in the Second Plan.

I am not here concerned with the controversy as to how much will be and can be produced in the public sector, and how much the private sector will be allowed to produce. The dispute on the relative magnitudes does not affect the main point I wish to make.

The existing coal companies will find it necessary and profitable to expand their raisings to the maximum extent practicable; and they will find the demand always outstripping the supplies they can effect.

Likewise, I am not concerned here with the likely controls and restrictions that are likely in the case of metallurgical coal. It is right and proper that every ton of metallurgical coal is used only for metallurgical purposes. To the extent that utilisation of metallurgical is to be restricted, it is a bull point for other kinds of steam-rising coal.

There is no gainsaying the fact that this very circumstance will increase the demand that the producers of steam coal will be required to meet.

As for the argument that some of the large coal concerns will be obliged to reduce their raisings of metallurgical coal, there is not much substance in it. Firstly, the requirements of coking coal for the two expanded plants at Jamshedpur and Hirapur and for the three Steel plants in the public sector will be so vast that every producer of metallurgical coal will need to put in his best effort. Secondly, these large producers have also a number of mines rich in steam coal and will find it worth while to increase the production from such mines.

I am equally unconcerned by the Tribunal's award, which, admittedly, will put up the cost of production. But, we may be sure that the price of coal will be more than correspondingly raised.

Nor am I unduly worried about the so-called transport bottleneck. It is as much the solicitude of the Government, as it is the concern of the collieries, that the coal as produced and as required is swiftly transported from mine to factory. The Government are keenly aware of their responsibility in this matter. A special agency is being set up to guide, control and facilitate coal traffic.

In sum, let us forget the past of the coal industry. And let us envisage the future of this industry as, in its key role in the Second Plan, it sets out to achieve prodigious expansion, year by year.

We have to regard the coal industry in this new light. It is no longer a neglected industry; on the other hand, it has a strategic place in the Second Plan. It is no longer a regressive industry; it has, on the contrary, all the attributes of a progressive industry. For the time being, the sword of Damocles in the shape of threat of nationalisation is no longer there.

The industry has received the green signal to go full steam ahead. And it has the capacity, the reserves, and the resources.

1957 may well prove a landmark in the annals of the Indian coal industry.

It will be hazardous to examine the position of each company, big and small, good, bad and indifferent, from this point of view. Leave that task to the men on the spot. Leave it to the man with the inside knowledge.

The average investor will be perfectly justified if he diverts his preference mainly to the well-established veterans in this section. They are: Bengal, Equitable and Burrakur.

Let me repeat: These companies have ample and diversified reserves, ample resources, requisite technical skills and personnel, and years and years of experience. They have always been well managed; and they will continue to be well managed.

The custodians (of nationalised life insurance companies) have served as a beacon-light to investors. Let this column reciprocate the service. They will do well to investigate the potentialities and possibilities of these and similarly placed coal shares.

Bengal Paper: Developments

Investment Exclusive:

About three months ago, I wrote of certain matters affecting the Bengal Paper Mill Co Ltd, and especially as relating to the move afoot, by some quarters, to gain control of the company by means of a corner of its shares.

At that time, I felt it important to advise the investor of the issues involved; these were for him to judge dispassionately, and it was his choice whether or no Balmer Lawries were to continue as Managing Agents.

The investor had his say at the meeting that considered the man-

Record Sales by Larsen & Toubro

Balance-Sheet Reviews:

LARSEN & TOUBRO LIMITED has produced excellent working results for the year ended 31st March, 1956. The company's total sales amount to as much as Rs 2.80 crores—highest on record—as compared with only Rs 2.09 crores in the previous year. The continuous increase in the sales over the past years reflects the steady expansion of practically all the company's sales departments and of the manufacturing and servicing activities.

During the year under review, the sale of Caterpillar tractors and earth moving machinery continued

HIGHLIGHTS

There is a time for tears, said somebody, and there is a time for laughter. Indeed, there is a time for everything.

So somebody has to judge whether the time is opportune: a time for sowing, another for reaping.

In India, the auspicious hour, as far as concerns religious ceremonies and the like, is easily found out: there are special publications which proffer the required information.

Government, too, have to judge time to a nicety. When, in the past, they embarked upon a borrowing programme, the success or failure of the loan depended not to a little extent upon the timing of it.

Too much haste—and the busy season, yea to slacken, would not have allowed sufficient funds to find their way to giltedged.

Too much leisure—and the slack season might already be yielding place to the busy season that inevitably followed it.

But, today, Government have little need to consult the astrologer or to be too finicky about the timing of the New Loan.

Why is this so? The Leading Article provides the answer, in asserting that, for Government, any time is—thanks to the Reserve Bank's Investment Portfolio and the Centre's cash balance Investment Account—New Loan Time.

to increase. Large orders for mobile cranes for Ports were dully executed. Similarly, important orders for tube-well drilling equipment and tube-well pumps were completed. Many substantial orders were executed; and several new orders have been secured for industrial plant and equipment.

The net profit for the year, before providing for Taxation and Depreciation, amounts to Rs 16,46,155 as against Rs 14,66,628 in the previous year. Except for Depreciation which has been reduced to Rs 2.25 lakhs from Rs 2,57 lakhs, other allocations have been raised, Taxation from Rs 5.00 lakhs to Rs 5.80 lakhs and General Reserve from Rs 2.75 lakhs to Rs 4.00 lakhs. The dividend on the Ordinary shares has, however, been maintained at 10 per cent.

The balance-sheet, as at 31st March 1956, shows a paid-up capital of Rs 55.00 lakhs—Rs 40.00 lakhs in Ordinary shares, Rs 13.00 lakhs in 5% Preference shares and 2.00 lakhs in 5% Redeemable Preference Shares. The gross block at Rs 26.70 lakhs is depreciated by as much as Rs 15.43 lakhs to show a net block value of only Rs 11.27 lakhs. Liquid assets at Rs 2.07 crores are substantially higher than sundry liabilities, at Rs 1.53 crores.

According to the directors' report, the work on the tube-well drilling contract, undertaken in North Gujerat for the Bombay Government, has been progressiving well; and the Bombay Government have placed another order whereby, in addition to the wells under the original contract, a number of additional wells has to be drilled for them. It is expected that the work will be completed in June/July, 1956.

Referring to the outlook for 1956/57, the directors strike a note of cautious optimism. The competition is keen and time of deliveries of the overseas manufacturers, whom the company represents, tends to increase although inventories of stock-in-trade will be maintained at a high level to meet this situation.

With the requirements of the Public and Private sectors under the Second Five-Year Plan and the steady progress of the company in the field of sales, local manufacture and service, however, justify the directors' confidence in the continuing expansion of the company's business.

Dividend Maintained by Andhra Cement:

Despite a considerable increase in power tariffs, increase in the cost of raw materials and labour charges, the working of the Andhra Cement Company, during the year ended 31st December 1955, has resulted in an increase in net profit, before providing for Taxation and Depreciation, to Rs 19,88,394 from Rs 17,15,305. This is mainly due to the fact that production and despatches have been maintained at the same rate as in the previous year.

Thanks to an increase in profits, the Depreciation amount has been raised to Rs 5.00 lakhs from Rs 3.50 lakhs; Taxation to Rs 7.25 lakhs from Rs 6.00 lakhs and Rehabilitation and Expansion Fund to Rs 2.43 lakhs from Rs 2.16 lakhs. The dividends, both on "A" and "B" Ordinary shares, have been maintained at 10 per cent, including a bonus of 2½ per cent.

With regard to the programme of expansion, the directors have placed orders for machinery with a leading firm in West Germany and made arrangements for the execution of the civil works at the factory. It is hoped that the expansion work will be completed before the end of this year.

£R$

Kamani Engineering

Kamani Engineering Corporation Limited has reported an increase in net profit from Rs 3.36 lakhs to Rs 5.42 lakhs for the year ended 30th September, 1955. Sales are shown higher at Rs 2.34 crores against Rs 2.09 crores, while purchases are higher by about Rs 42 lakhs at Rs 1.81 crores.

Out of the profit, a sum of Rs 3.21 lakhs has been transferred to Depreciation as against nil in the previous year. Provisions for Doubtful Debts and Gratuity have remained unchanged at Rs 10,000 and Rs 40,000 respectively.

From an available balance of Rs 1.81 lakhs (including the carry-over of Rs 10,124 from the previous year), the directors have recommended payment of arrears of dvidends on Cumulative Preference Shares for two years ending 30th September, 1954, leaving a balance of Rs 16,000 to be carried forward to next year.

New Suggestions for the New Loan

THE general expectation is that the New Loan will make its debut in a month's time. This is, broadly speaking, conditional upon the emergence of signs and proofs that the slack season has been truly and firmly established.

Current signs suggest the return of funds from the mofussil to the money market centres. In the intervening weeks of May, active note circulation has contracted, rupee coin is returning, though in a tiny stream, from circulation to currency, banks' advances show some decline, banks' deposits exhibit a rising trend, and the indebtedness of member banks to the central banking institution is being gradually liquidated.

The relevant proofs are yet to materialise. Money rates continue to hold firm and bidding for short credits and term money shows no abatement. Stringency for money has in no way relaxed. The money market sentiment and undertone are still those of the busy season.

It is clear that the 1955-56 busy season, as was the case in the earlier year, is proving to be of more than normal duration. It is quite on the cards that, likewise, the 1956 slack season is late in coming and turns out to be less slack than the norm. This is a development which was indicated in a recent issue of Indian Finance which, at the same time, examined the circumstances which have wrought the change in the seasonal pattern.

The annual review on the "Trend and Progress of Banking in 1955" draws attention to this phenomenon and confirms the analysis made earlier in this journal. The conclusion is drawn that diversified and intensified economic activity has shortened the duration, blurred the contours, and lowered the tempo, of the slack season.

The traditional slack season, with the sentiment and influences associated with it, was of vital import not only to the timing, but to the requisite psychological setting, of the New Loan. This important factor has undergone significant change; and the financial authorities have to make allowance for it while tackling new loan programmes.

What is currently happening is the reverse of the trends that were markedly manifest in the forties. In the latter period, it was the busy season that was in vogue for shorter spells, and that was in force with less intensity. Slack season conditions prevailed for a good part of the year; and the result was that, in many years, any time was New Loan time.

We see indications now that, while busy season conditions prevail for a good part of the year, any time is New Loan time. If the Reserve Bank's operations in the last two years be closely studied, the conclusion emerges that, irrespective of money market conditions, there is more or less continuing demand for securities sold through the tap. The ways and means resources of the Government are now dependent not only on the subscriptions of the New Loan, but on the proceeds of tap sales.

Sales through the tap comprise the securities in the Reserve Bank's investment portfolio, as well as the securities in the Centre's cash balances Investment Account. The demand from the market has been so persistent that the Reserve Bank's investment portfolio now stands at an unusually low level, and the Centre's cash Investment Account is denuded more or less completely.

Herein is an indication of the technique suitable for a seasonal pattern in which the attributes of the slack season will not be such an apt aid to the New Loan's success as heretofore. To the extent that the money market's response to a New Loan at the time of its issue will be adversely affected by the absence of the sentiment that used to prevail in the slack season in its complete manifestation, the Reserve Bank and the Centre's cash balances Investment Account should subscribe for large parcels of the New Loan, in the confident expectation that, in the ensuing months, the stock so taken could be disposed of through the tap.

If the cash balances Investment Account has no surplus funds for this purpose, the requisite resources must be secured by selling additional ad hoc Treasury Bills to the Issue Department of the Reserve Bank.

Our proposal will be understood more clearly if we explain it in the direct context of the impending New Loan. Let us suppose that the target of the loan (or loans) is Rs 100 crores. It is a reasonable assumption that public subscriptions will amount to at least Rs 60 crores. The balance of Rs 40 crores can be taken up, as to Rs 20 crores on the investment account of the Reserve Bank and as to Rs 20 crores on the Centre's cash balances Investment Account. From past experience, the hope is justified that, in the coming months, the Reserve Bank will be able to sell through the tap most of this Rs 40 crores.

If conditions in the money market ease appreciably in the interim, and if giltedged prices rule at firm levels, the Central Government can consider the possibility of a reissue later in the year.

In line with the changed seasonal influences, it is necessary to recognise that the pressure of Plethoric funds may be of diminishing importance as a decisive factor in the New Loan's success. This recognition must lead to the search of a decisive factor of equal value.

We suggest that this new factor can, appropriately, be a pattern of steadily improving giltedged prices. Such a pattern is fully in consonance with an expansionist economy, rising note circulation, and the upward trend in bank deposits. It is also to be added that we have developed bullish reserves in this respect in the form of nationalised Life Insurance Corporation and extended provident fund system.

A rising (steady and slow) trend in giltedged prices is well within the power of the Reserve Bank to sustain. It has been proved, time and again, that, not through the old-fashioned practice of purchasing securities from the open market, but by the scientific method of sales at taprates skillfully stepped up at every suitable opportunity, giltedged prices can be assured of gradual appreciation.

Official policy has, so far, frowned at price-advances in giltedged. This arises from the fallacious thesis that, the higher the yield on a new Loan, the greater is the likelihood of its success. In the conditions which are materialising in the money market, the attraction of yield is less decisive than the prospect of capital appreciation.

This was the cardinal point in the planning of loans between 1940 and 1946. In the planning of the borrowing programme for the current quinquennium, the same emphasis on a rising giltedged trend can be expected to produce like success.

"The Wise Man in 'His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

An Uphill Task

AT Bombay, the AICC had one of its most turbulent sessions. Maharashtrian Congressmen took part in the session; but under the agony of divided loyalties. Some of them were belaboured by the Samyukta Maharashtrian agitators and there could have been very few even among the Maharashtrian members who attended the AICC, who looked with uncompromising hostility to the demonstrations held against the Congress. Leaders like Pandit Nehru could maintain their presence of mind but anyone could discern the undercurrent of anxiety and concern behind the firm and thoroughly logical speeches made by them.

It was this concern which goaded Pandit Nehru to hasten from the AICC meeting to the Chowpathi foreshore and deliver an impassioned public appeal to the citizens of Bombay and of Maharashtra in particular, wherein he implored them to forget the past and to live like one family'.

It would be most unwise to belittle the national crisis which the troubled Bombay session symbolised. Even the immediate presence and the anxious appeals of the country's most beloved and influential leaders could not ensure a peaceful atmosphere for the AICC meeting. No sooner had the session ended than a respectable body of Maharashtrian Congress leaders announced their intention to launch a revolt against the Congress leadership. All the non-Congress parties in Bombay have offered to unite in a challenge to the AICC decision on the future of Bombay City. Even a disciplined Civilian like Sir Chintaman Deshmukh has been carrying a letter of resignation in his pocket, for the last few months.

How has the Congress met the situation? Undaunted by the hostile demonstrations, AICC has passed a resolution condemning in very strong terms violence of any kind and for any purpose. The Resolution is quite in keeping with the hallowed tradition of the Congress Party and is the least that the AICC can do to vindicate the inestimable legacy of the Mahatma. Even the least suspicion that the Congress would bow to violence or be tempted to compromise on the issue will knock the bottom out of the very fundamentals of the Party's creed. Whatever be the merit of or justification for the demand made by the Samyukta Maharashtra group, resort to violence in support of its demand is inexcusable and has to be checked by every means within the power of the State.

To this extent, the stand taken by the AICC is morally and politically right. No government worth the name can give room for the feeling

that it would submit to violence, if only there is a sufficient dose of it. Certain mistakes have been made in the past. It is no use bemoaning them. It is a matter for congratulation that Pandit Nehru has displayed firmness, where the lack of it would have set a most dangerous precedent.

But all this does not offer a solution to the most pressing domestic problem of the country. The announcement that for another five years Bombay would be Centrally administered after which its future will be determined by the decisions of its own citizens springs from the desire to compromise; and compromise in this case means that the Congress is willing to accommodate the wishes of the Samyukhta Maharashtra party to the utmost possible limit.

The Maharashtrian demand for the location of their capital in Bombay is also conceded to the extent that there would be a common High Court and a Common Public Service Commission. Besides, there is the assurance that no body working in the City's offices would be thrown out of employment. In explaining this decision on Bombay, Pandit Nehru also took care to recognise the strong feelings among Maharashtrians about the City and the force of the arguments based on geography and material circumstances. He maintained that the City could not be asked to decide its future immediately, only because the people were not in the proper mood for it.

There is no doubt that this decision marks a clear advance toward the aspirations of the Samyukta Maharashtra group, though the uncertainty is only accentuated. In the course of the next five years the Maharashtrians can hope to win over all India-sentiment in sufficient measure to make a parliamentary revision of present decision a mere matter of course. The continuance of an agitation which could not avoid violence will only estrange the sympathy of the rest of the country and undermine national solidarity and prestige. The very fact that all Maharashtrians are not equally enthusiastic about this agitation shows that the area is suffering from a poignant conflict of sympathies and attitudes.

Having left back the SRC recommendation and having resiled from their original stand, it must now be the concern of the Government of India to facilitate a smooth adjustment between rival claims over Bombay. The initiative should not be left entirely to any group of people. The decision to refer the issue to a deferred vote of the citizens of Bombay, though superficially just, is carrying self-determination to the extreme and denying the very principle on which the official stand has hitherto been based, namely the national as against the exclusive local or State interest in the future of the City. To concede the principle of referendum for one small area will be to tempt other similar areas and border districts to clamour for like treatment. Possibly, some forgotten issues can re-emerge. The best way out is to call together all the interested parties and with the help of the good offices of Pandit Nehru and a few of his eminent colleagues, to search for an agreed settlement till it is found, one which will wipe out all the rancour and bitterness of the recent past.

The larger problem for the Congress Party goes deeper. For various reasons, the pull and prestige of the party has waned in more than one important State. In West Bengal, the Premier had to sound a hasty retreat with the merger proposal, as soon as the Congress candidate was defeated in a Parliamentary by-election. In the Travancore-Cochin State, the Congress had always had a ricketty tenure. In Bombay, opposition parties have exploited the linguistic situation to discredit the Congress in the eyes of a none-too-critical public. The State Congress party itself is lukewarm in its discipline and loyalty to the Central organisation.

An all-India majority for the Congress will be no compensation for possible decisive setbacks in these three strategic States. From now on, it must be the sincere endeavour of the party to recapture its hold on the affections of the public of these States by every method at its disposal. If without detriment to the prestige of the party, final settlement on controversial issues could be speeded up, it must be attempted at all costs. If the Congress were to fail in securing an unassailable majority in these three coastal States, the resulting political situation is likely to be most embarrassing. This task must therefore secure the highest and immediate priority.

The growing atmosphere of violence in the country, on which a leadership wedded to non-violence must necessarily look with horror and dismay, will not spontaneously respond to mere verbal appeals. It is worthwhile doing a little rethinking on India's own history with a view to understand fairly clearly where non-violence is a virtue and violence a necessity. It is a simple historical truth of nearly universal validity that when a question of survival comes up, people have not been too fastidious about the choice of methods.

The Government of India have found that shooting is necessary under certain domestic situations and that the military budget cannot be cut under certain international situations. These are matters which involve the survival of the nation. The impact of the same policy on the mass mind too is reflected in the sporadic outbursts of violence, especially when passions are aroused by interested opposition groups, who openly disclaim faith in non-violence. In India, the great hold which religion had, has of late been running out. In most places where God alone was the police-man, there is now none. The brutalities of the Second World War, the mass killings in different parts of undivided India before and after partition, the pervasive hold of the materialistic attitude towards life and the very impoverishment and misery of the masses now getting self-conscious, all these, directly or surreptitiously tend to eat away whatever faith the people used to have in non-violence.

The urge for violence receives additional stimulus and inspiration from the little "revolutions" that are taking place almost all over the world. In Pakistan, in Ceylon, in Burma, in Malaya, in Indo-China, in Cyprus, in the Middle East and in several parts of Africa let alone the remoter countries of the world, violence struts about remorselessly, casting its dark shadows over human minds far and near. There are a few countries like the UK where highly controversial issues are even now settled without bloodshed or any serious internal disorder. In such countries political maturity has brought with it the habit of settling problems without breaking heads.

The non-violence which the Congress professes is a highly sophisticated creed. The apparent contradictions in its application in public life are not a little confusing to the simple-minded masses. In the East, if at all any country is capable of practising non-violence sincerely, it is India. There is a congenial tradition. But then the people must be made to realise two things—that no Government can abjure violence totally, and what is even more important, that violence must be a State monopoly, a luxury completely denied to the private citizen. Unfortunately, this conviction has to be pressed against the subtle influence of large numbers of those who think and propagate otherwise.

The Companies Act, 1956

By K. V. IYER

The Companies' Act, 1956, is an outstanding performance of the Legislature, considering how rapidly it was passed by the two Houses of Parliament. From the comparative novelty of some of the matter contained in it and the speed of legislation, there are bound to be snags which time and experience will disclose. For the time being it behoves the companies to look on the provisions of the Act with sympathy and to try to work them in a spirit of co-operation and the Government to look on delinquents and their delinquencies with charity.

Here are set a few points which have come to notice on first perusal.

Sec. 39 and 118 prescribe that a company shall on so being so required by a member send to him within seven days of the requirement a copy of certain documents which he is authorised to call for, as compared with the 14 days' time allowed in the old Act and further lays down a penalty for delay in doing so. It would be more appropriate to fix the time limit as commencing from the date of receipt by the company of the member's requirement. Date of requirement may mean the date entered on it or the date of its posting and in view of the possible delays in post, the date of receipt is better: it will give the company adequate time to take action.

Sec. 93 which reads "a company may . . . pay dividends in proportion to the amounts *paid up* on each share . . . " requires, in the light of Regulation 88(2) to read "a company may . . . pay dividends in proportion to the amount *called and paid* up on each share."

Sec. 230 lays down that the Auditors' report shall be read before the company in general meeting and shall be open to inspection by any member of the company. As under Sec. 219 a copy of this report is required to be sent to every member along with certain other documents, the essence of the requirement of the former Section is apparently to ensure that the Auditors' report (in original) with his signature is read out and made available for inspection by the members.

Sec. 274 and 283 lay down respectively the disqualifications of directors and the circumstances in which their offices shall be vacated. Under sub-clause (3) therein, no public company is competent to add to these items. In the Articles of Association of certain companies is to be found an Article, apparently based on the authority of Palmer's Company Precedents, that the office of a director shall be vacated if he is requested by all co-directors to resign. Such an Article is now ultra vires.

Sec. 314 deals with the appointment of the relatives of directors, managing agents etc. The difficulties in the way of working this Section in practice has been dealt with in a note which was published in the issue of this journal dated the 14th April 1956.

A similar snag would appear to lie in the practical working of Sec. 293(1)(d). The details of a concrete case are as follows. A company the aggregate of whose paid up capital and reserves runs to several crores of rupees tabled a resolution in the following terms for consideration at an Extra-ordinary general meeting of its share-holders:—

> Resolved that the Company do consent to the Board of Directors borrowing from time to time moneys for the purposes of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company, (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid up capital of the Company and its free reserves,

(Continued on page 1094)

The Second Plan—II

Agricultural Production

IN India, the economic planner seeking clues from statistics is least sure of his ground, when he turns to agriculture. In any country, to isolate precisely the contribution of each of a number of factors contributing to the increase in agricultural production will be a complex task. Where this technique has yet to be perfected, current calculations would necessarily be vague and imprecise.

For this reason, the Planning Commission and the Central Ministry for Food and Agriculture have been content to draw tentative conclusions from the results obtained during the First Five Year Plan. When the further studies proposed to be undertaken on the working of the agricultural programme in each State and region with reference to crop patterns, land and water resources, irrigation national extension and other fields, it might be possible to proceed on firmer statistical terrain. As far as broad results are concerned, the estimates given in the Final Second Plan should be acceptable both as indicating achievements and as forming the starting point for further development.

Looking forward to the future, during the Second Plan, 21 million acres of land will receive irrigation; another 1.5 million acres will be reclaimed; 2 million acres will be brought under land improvement measures through various schemes and methods. These figures provide a rough idea of the expansion of the agricultural area contemplated under the Second Plan. During the First Plan, the total crop area increased from 326 million acres to 352 million acres. The total increases in area under both the Plans are nearly equal.

The percentage of total increase in all commodities envisaged in the Second Plan is slightly higher than the total for the First Plan. Quantitatively, it will be higher still. It is assumed that there will be a gradual shift from the expansion of average to the utilisation of concentrated methods of production. This shift will not be so conspicuous in the Second Plan. After the period, it is bound to assume great prominence.

While increases in agricultural production held paramount importance in the First Plan, in the Second the interdependence of the industrial economy and agricultural production has come to be more sharply emphasised. The Planning Commission have fixed targets in a more detailed manner. With a keen eye on items which earn foreign exchange, commodities like acrecanut, black pepper and cashewnut have come in for detailed study.

The following table gives the production targets for the Second Plan.

PRODUCTION TARGETS.

The principal targets of agricultural production for the Second Five-Year Plan are set out in the following statement:

Commodity Unit.	Estimated production in 1955-56.	Target of additional production.	Estimated production in 1960-61.	Percentage increase.
Foodgrains (million tons)	65.0	10.0	75.0	15
Oilseeds (million tons) ..	5.5	1.5	7.0	27
Sugarcane (gur) (million tons)	5.8	1.3	7.1	22
Cotton (million bales) ..	4.2	1.3	5.5	31
Jute (million bales) ..	4.0	1.0	5.0	25
Coconut, oil (lakh tons)	1.3	0.8	2.1	62
Arecanut (lakh maunds)	22.0	5.0	27.0	23
Lac (lakh maunds) ..	12.0	4.0	16.0	33
Tobacco (lakh tons) ..	2.5	..	2.5	..
Black Pepper (thousand tons)	26.0	6.0	32.0	23
Cashewnut (thousand tons)	60.0	20.0	80.0	33
Tea (million pounds) ..	644.0	56.0	700.0	9

The targets for commercial crops raise scarcely any controversy at this stage. Perhaps at some time or other, international conditions may dictate a revision of the targets as in the case of tea; but just now, the realistic character of the hopes embodied in the targets seems beyond question. A 22 per cent increase in sugar, a 31 per cent increase in cotton, and 25 per cent increase in jute are unobjectionable, in relation to the expansion envisaged in the corresponding industries. For Jute, the First Plan recorded a set-back in total production, from 4.7 million bales in 1951-52 to 4.0 million bales in 1955-56. There is a self-evident case for pushing up jute production to 5 million bales, which is about the irreducible minimum for feeding the Indian industry. Likewise the cotton target accompanies the vast increase provided for, for textile Production.

Food grain production rose from 51.2 million tons in 1950 to 65 million tons in 1955. Even with this increase, the country is not yet completely out the woods. At least for buffer stocks, imports are still necessary. In the Second Plan, the foodgrain target is 75 million tons representing an addition of 15 per cent. The actual increase targetted for is less than that of the First Plan. But this difference is explained by the fact that the country is much more favourably placed—there is virtual self-sufficiency now—than at the commencement of the First Plan, when food imports were running at the rate of more than Rs 100 crores in value.

The Prime Minister does not seem to be satisfied with a 15 per cent increase. He would like to have it raised to even 40 per cent, an ambition which has somewhat scared a section of opinion both in the Central Government and in the Planning Commission. Taking the world as a whole, and considering the prospective increase in population, self-sufficiency in food is likely to remain more an aspiration than an achievement. But, from the stand-point of particular national economies, surfeits and price declines cannot be ruled out. It is the latter consideration which constitutes a powerful objection to a further steep increase in the food grain target. For the present, the Final Plan figure at 75 million tons stands.

FOR THE INVESTOR

(Continued from page 1035)

aging agency agreement; and Balmer Lawries are still the Managing Agents.

But, subsequently, it would appear that a parcel of shares in Bengal Paper has changed hands; and the transfer in this regard might enable a change in the composition of the Board of Directors.

Thereafter, Mr A. T. Montgomery, in his capacity as Director of Bengal Paper, filed a complaint before the Central Government to the effect that, as a result of the change in ownership of the shares, a change could be effected in the composition of the Board which, if allowed, would prejudicially affect the working of Bengal Paper.

In terms of the new company law, Government are empowered to take action in such a case under section 409. Specifically, section 409 of The Companies Act 1956 provides as follows:

"409. Power of Central Government to prevent change in Board of directors likely to affect company prejudicially. (1) Where a complaint is made to the Central Government by the managing director or any other director, the managing agent, or the secretaries and treasurers, of a company that as a result of a change which has taken place or is likely to take place in the ownership of any shares held in the company, a change in the Board of directors is likely to take place which (if allowed) would affect prejudicially the affairs of the company, the Central Government may, if satisfied, after such enquiry as it thinks fit to make that it is just and proper so to do, by order, direct that no resolution passed or action taken to effect a change in the Board of directors after the date of the complaint shall have effect unless confirmed by the Central Government; and any such order shall have effect notwithstanding anything to the contrary contained in any other provision of this Act or in the memorandum or articles of the company, or in any agreement with, or any resolution passed in general meeting by, or by the Board of directors of, the company."

Obviously, it is necessary for Government to be empowered to order an "interim" stay. This is contained in sub-section (2) of section 409, and reads as follows:

"(2) The Central Government shall have power when any such complaint is received by it, to make an interim order to the effect set out insub-section (1), before making or completing the inquiry aforesaid."

A Government notification, issued by the Department of Company Law Administration in the Ministry of Finance, indicates that action has been taken under sub-section (2)). It would appear that the inquiry under sub-section (1) has not yet been completed. Pending the completion of the inquiry, Government have directed that "no resolution passed or action taken to effect a change in the Board of Directors" of Bengal Paper "shall have effect unless confirmed by the Central Government."

I hail this action on the part of the Department of Company Law Administration as the first major implementation of the new law.

£ R$

Investment Notes:

Indian Coppers continue to be easily absorbed upto Rs 7-0. It is believed that the recent decline in foreign copper prices will not affect the company's profits since its production is much below the domestic demand. The final dividend will be a cheering one. A total of 35 to 40 per cent can be safely expected.

India Steamships are ruling firm at Rs 9-5. It looks as if the company is making some good progress. In this respect, the announcement of an interim dividend of As 8 per share for the year ended 31-3-1956 is an encouraging news. The dividend is payable on or after 20th July, 1956.

Alkali -Chemicals have developed a hardening tendency to Rs 21-7 from Rs 20-0 quoted in the previous week. There are hopes of a right issue in the near future on favourable terms to the shareholders.

Duffiaghur Tea Company has decided to capitalise Rs 1.40 lakhs from Reserve and issue bonus shares in the proportion of one for four. Meeting, in this connection, takes place on the 21st June.

Punjab National Bank has proposed to raise the authorised capital from Rs 1 crore to Rs 2 crores and to capitalise Rs 37.50 lakhs from the Share Premium Account for the distribution of bonus shares in the proportion of three for seven shares held. In this connection, a meeting has been convened on the 22nd June.

Bengal Potteries are offering 9,45,508 new shares of Rs 2-8-0 each to existing shareholders at par.

Hindustan Electrics have improved to Rs 98-0 from Rs 94-0. Although the company has not proposed a dividend on the Ordinary shares, its working during the year ended 30-4-1955 has shown satisfactory progress.

Editorial Notes

Tito's Russian Visit

It is possible to read too little or too much in Marshal Tito's visit to Moscow. Some of the fundamentals of post-war Soviet policy have been taken up for revision. The present leadership has disowned what is vaguely described as the personality cult of Stalin. Since 1930 international and Russia's domestic circumstances were such that Stalin had to take all the reins of power in his own hands and meet grave emergencies in a manner which he personally thought best.

Barring this phenomenon of one man decisions, there was very little in the Stalinist regime which militated against any of the principal elements in Communist ideology. The posthumous disowning of Stalin can likewise be interpreted as the dictate of changed circumstances. Co-existence was found a more suitable alternative to a mounting armament race and the aggravation of the cold war. The dissolution of the Cominform and the formal denial of Soviet intentions to interfere in the domestic politics of other countries were necessary offshoots of the principle of co-existence. Without these gestures the non-communist powers would scarcely take Russia for what it professes.

The widening flow of trade between the Communist countries and the rest of the world has provided a new pattern of mutual impact and influence which has been rather disturbing to the big powers ouside the communist bloc. In Russia this new development should offer fruitful possibilities even in spheres outside commerce. Incidentally, the building up of a communist market for the production of capitalist countries is an idea whch Stalin conceived. It would not be unrealistic to assess the present situation as a careful reshuffling of methods and tactics in a fight which is certainly not abandoned by either party. Perhaps, both are keen to avoid it as far as possible but an uneasy co-existence will surely not lead to that result.

Hopes have now risen that the stern monolithic character of the communist state would give way gradually and accommodate the dignity and liberties of the individual to the extent to which it would not militate against egalitarian attitude and conduct. Marshal Tito has raised a banner of revolt against totalitarian hegemony: he represents a deviation in communist doctrine which originally envisaged a common communist brotherhood.

The visit of Marshal Tito and the timely resignation of Molotov a couple of days earlier hold promise of a relaxation of the father-nation's hold on the destinies of the other members of the family. Tito himself has not gone very far toward the liberalisation of individual rights. Even if the visit were to lead to no significant development, it should be welcome as it adds to the growing number of diplomatic courtesies between the world's most strategically placed men.

*

Call to Middle Classes

In Britain a new political group has made its debut. Sponsored by some of the leading liberals, the group styles itself as the People's League for the Defence of Freedom. It seeks to fight the State with its all-pervasive bureaucracy on the one hand, and the trade unions described as a 'state within a state' on the other. The party hopes to capture the sympathy and support of the middle area of society, the professionals and fixed income classes who now look on helplessly when prices, taxes and wages are spiralling up and frequently production is paralysed by strikes, official and unofficial.

The League hopes to bring down rates and taxes, to put public expenditure to a searching scrutiny and to ensure for all citizens personal rights and living standards now being threatened by the State and working class unions. The group does symbolise an urge for action in Britain's middle classes who have reason to feel overwhelmed by the enormous growth of trade union authority and influence and the colossal power of the State.

But how far a discontent, howsoever genuine, in a class which has hitherto looked upon demonstrative and agitational tactics as contemptible, could be transformed into effective political pressure is a matter for experiment. After the first flush of enthusiasm and vigour, the party may sink into practical impotence, a fate seemingly inexorable for the liberal intellectual, organised or unorganised.

The Liberal Democratic Party of India, a new organisation with its headquarters in Bombay, claims to have similar aims and directs its appeal to the same social group. Among the major planks of the party's programme are the scrapping of prohibition, vigorous encouragement to housing and instalment buying and account-selling system for the permanently employed working population. It offers to save the citizens from high taxes, high prices, and high rents, as also from the growing State interference in commerce, trade and industry.

*

Accidents on Railways

During the last four years, there has been a steady decline in the number of accidents on Indian Railways. From 16,090 in 1951-52 the total dropped to 10,431 in 1954-55. When the character of the accidents is analysed, it would be obvious that quite a large proportion of them could have been averted, if the railway staff had exercised greater attention and care. Cases of wrecking and attempted wrecking seem to have settled to a norm. Against 90 in 1952-53, the number of such cases declined to 80 in 1953-54 to rise again to 85 in the succeeding year. It is on the Southern and Eastern Railways that wrecking and attempted wrecking are most frequent.

Sixty per cent of the total accidents are caused by collisions, derailing, failure of engines and rolling stock. An engine fatigue machine, which the Railway Board has long been thinking of installing, has yet to arrive. Though accidents due to engine and rolling stock failure have been on the decline, their number is still considerable. The Estimates Committee takes the view that accidents attributed to flaw in metal of rolling stock is really due to either faulty workmanship or negligence in running maintenance.

A Departmental Committee which went into this question could not offer much concrete guidance for improvement. The Railway Ministry takes the view that discipline and a sense of responsibility are wanting. The Accidents Enquiry Reviewing Committee finds fault with the level of efficiency of train examination in its various aspects. The Estimates Committee suggests adequate training and periodical refresher courses, adequate supervision and inspections, award of adequate and prompt punishment for mistakes, provision of adequate facilities for staff, elimination of unreasonable conditions of work, uprooting of indiscipline and improvement of psychological background among staff.

Having had to wait for seven months to secure from the Ministry of Communications a consolidated note on the suggestions and proposals made by the Railway Inspectorate on certain specific points, the Estimates Committee is impelled to suspect that this much delay would not have occurred if everything was well with the functioning of the Inspectorate. There is one novel suggestion advanced by the Estimates Committee. Inspired by the example of the Japanese National Railways, where certificates and medals are awarded to marshalling yards for a record devoid of accidents, the Committee suggests copying this procedure in the more important marshalling yards.

Squeeze *Versus* Control

A well-known song advises us to "count our blessings." The policies of the Finance Ministers in some of the Western countries seem to be designed with a view to running away from blessings. They are frightened, not by the night-mares of depression, but by the rosy dreams of prosperity. While industry is working to full capacity, labour is fully employed, trade is humming; and while wages and salaries and profits are satisfying, we are constantly reminded that all this is maya or illusion; that, at any rate, it cannot last for long; that danger is ever-present under the surface; and that the slump is round the corner. In brief, it is unfashionable to be happy if the nation's economy induces a sense of contentment. "Be afeared of prosperity"—this is the attitude which orthodox economics aims to instil and inspire.

Throughout 1954, the economies of the USA, the UK and most European countries were experiencing booming conditions. All the same, gloomy prophets kept uttering recurrent warnings. 1955 maintained continuing favourable conditions, though the Jeremiahs were louder and more insistent in their predictions of impending calamity, and though, in some countries, Authority was moved to drastic action on the plea that inflation threatened to get out of hand. "Credit squeeze" is the phrase which came to command excited vogue in all discussions of the state of the economy. If results were not commensurate, Authority was told to tighten and reinforce the credit squeeze. 1955 will stand out as the year of rampant and virulent credit squeeze.

Government securities were the first casualty of this policy. Government borrowings became more difficult; and the rates offered for securing funds rose sharply. In some of the stock exchanges, industrials and equities suffered a landslide. Banks found themselves obliged to leave uncovered the widening gap between the book values of their investments and their market values. Still, the results in the spheres that mattered were not commensurate with the efforts or with the damage the latter produced on various sectors of the economy. The sponsors of the credit squeeze strategy counselled yet more squeeze. Authority is now in dilemma.

Governments have to face indignant representatives of the people. Treasury officials are reluctant to pursue this unpopular and damaging policy any further. Sharp cleavages are materialising between the Treasury and the central banking authority. The latter has no angry elected representatives to face. As we are approaching the middle of 1956, some of the countries have had nearly 1½ years' experience of squeeze, more squeeze and yet more squeeze. The Chancellors are not impressed by their results. They dread to proceed further. They cannot beat a retreat, either.

In the USA, the dilemma is of a special character. This is the election year. Continued prosperity would have been a winning slogan for the Republicans. No longer is that slogan available to them. On the other hand, the economic situation is beset with uncertainties, puzzlements and vague fears that the worst is in store. Is this the setting for the ruling party claiming top marks for its performance in office? Credit squeeze has brought many of the governments in power into a situation in which they do not know which way they should turn.

Authority in India has wisely refrained from tamely following the policies pursued by other countries. In the place of credit squeeze, India has practised selective credit control. This kind of control has proved the correct policy for this country, situated as it is in the midst of an expansionist economy and broadening development plans. The Reserve Bank has all the powers necessary, and all the leadership, to frame and enforce policies appropriate to conditions in India.

+

Borrow from Strength

THE giltedged market has fully maintained its strength and shows some improvement in prices. The Reserve Bank has stopped tap-sales in 3½ per cent 1965 loan and stepped up the rate for 3½ per cent 1964 by one anna to Rs 98-13. At the time of the suspension of the sales of 3½ per cent 1965 loan, the cent 1965 loan. In the last week's despatch appearing in Gateway Gossip section, it was pointed out that the Reserve Bank's capacity to indulge in open market sales was getting more and more limited, what with its own Investment portfolio at a low ebb, and with the Centre's cash balances Investment Account denuded of securities. On both these accounts, therefore, there is a substantial potential reserve for subscriptions to the New Loan. It is now believed that, as the maturities in 1966 are heavy, the medium-term New Loan may be an eleven-year loan maturing in 1967.

If the open market operations of this week be, in part, in the nature of grooming, we would urge that further scope exists for the stepping-up process in the tap-rate of 3½ per cent 1964. It will be a welcome demonstration of Government's borrowing from strength if the issue price of the medium-term New Loan this year were a few annas higher than the issue price in earlier years. To achieve this, it will be helpful to frame the open market policy to such effect that the 3½ per cent 1964 loan is quoting near par by the time the terms of the New Loan are announced. The motto for the New Loans this year and in the coming years must be: Borrow from strength.

+

Slack Season Sets in

THE returns of the Reserve Bank for the week ended June 1 are unusual for a period which covers the first day of a month. Active note circulation has contracted; the inflow of rupee coin to currency is maintained; balances under all heads register increases; and, though banks have had further recourse to the Central Banking Institution for loans, their deposits show a moderate rise. These trends provide further testimony that the return of funds from the mofussil is in full stride. This may well be construed as final proof that the slack season has set in.

Due to the Centre's requirements of cash in the till, rupee securities have been augmented by ad hoc Treasury Bills for Rs 5 crores; and, due to the Reserve Bank's comfortable cash position, this expansion has been offset by transfer of sterling securities for a corresponding amount from the Issue Department to the Banking Department. The latter operation

---

The money markets of the world have, once again, been speculating on the future of sterling. Devaluation is a contingency for which specialists in international exchanges are building up precautionary position. Commentators in Britain appear to be mostly puzzled; and they are unable to give any clear lead. The feeling is widespread that the steps so far taken have not produced much of an effect. If this sense of despondency and even helplessness should take firmer rest, the pronounced weakness of sterling in recent weeks may prove difficult to cure. The causes for the present weakness of sterling are shrewdly examined in this week's despatch of Dr Paul Einzig. He provides no pointed answer to the poser: Will there be early devaluation? But, then, even the British Chancellor of Exchequer can give an unhesitating answer. Meantime, exporters in this country would do well to cover the relevant sterling accruals, present and prospective. Importers can afford to leave open the sterling exchange position. An oversold rather than an overbought position in sterling is indicated.

Reserve Bank's rate for this stock was Rs 98-11. Dalal Street has construed this action as pre-Loan grooming. While this is true, it is also necessary to realise that the Reserve Bank's investment portfolio, at its present low level, may have run short of stock in 3½ per

ECONOMIC SURVEY OF ASIA AND THE FAR EAST 1955

The Survey is a publication of exceptional value to those concerned with the economy and trade of Asia and the Far East. The regional economic situation is fully covered. The subjects reviewed are: agricultural and industrial production, transport, trade and payments, monetary developments, and development planning and implementation.

In addition to the overall study of the regional situation, detailed surveys are given of seventeen countries in the area which analyze their economic problems and developments. 235 pages.

$2·50 per copy
(Payable in local currency)

For continued and current economic analysis of the area.

ECONOMIC BULLETIN FOR ASIA AND THE FAR EAST

Quarterly reviews of economic developments and special articles in the Bulletin, which is issued three times a year, supplement the annual Survey. A subscription includes a copy of the Survey.

Annual subscription $3·00 Single copy of Bulletin $0·50
(Payable in local currency)

Obtainable from:
ORIENT LONGMANS
CALCUTTA, BOMBAY, MADRAS, NEW DELHI
OXFORD BOOK & STATIONERY COMPANY
NEW DELHI, CALCUTTA

MADRAS

is also connected with a fairly substantial net loss of sterling resources over the week. As the expansion against rupee securities is matched by contraction against sterling securities, the status quo is maintained.

Thanks to created money the Centre has met month-early disbursements; and the overflow of these payments will be reflected in the next week's return of the Reserve Bank.

The Reserve Bank's Investments reveal an increase of over Rs 1½ crores; and this is, perhaps, due to purchase of securities maturing in 1956 or 1957. Which poses the possibility of this year's New Loan being, besides a cash loan, a conversion loan with option made available to the holders of the 1956 and 1957 loans.

+

The returns of the Reserve Bank for the week ended June 1 show an increase of Rs 4.97 crores to Rs 703.72 crores, and a decline of Rs 4.97 crores to Rs 676.48 crores in sterling securities. Rupee coin has risen to Rs 105.06 crores from Rs 104.89 crores. Active note circulation has declined by Rs 4.29 crores to Rs 1,501.84 crores. In the result, notes held in the Banking Department have expanded by Rs 4.46 crores to Rs 23.44 crores.

In the Banking Department, the balances of the Centre, States and others are all higher by Rs 1.13 crores; Rs 0.68 crores and Rs 0.57 crores to Rs 10.26 crores; Rs 51 89 crores and Rs 13.10 crores respectively. Foreign balances have declined by Rs 1.83 crores to Rs 28.86 crores in spite of the transfer of Rs 4.97 crores from the Issue Department. "Other Loans and Advances" have registered a rise of Rs 1.72 crores to Rs 80.25 crores, possibly due to temporary accommodation needed by banks for the month. Investments are higher by Rs 1.65 crores at Rs 37.03 crores.

+

The statement of the State Bank of India for the same week discloses a drop of Rs 1.26 crores in deposits at Rs 226.55 crores. Borrowings from other banks have, in contrast to last week, risen by Rs 4.00 crores to Rs 19.50 crores, while other liabilities, including inter-office adjustments, are higher by Rs 0.25 crores at Rs 3.16 crores.

On the assets side, cash balances are shown at Rs 16.79 crores against Rs 17.60 crores and Investments at Rs 101.01 crores against Rs 101.52 crores. Advances have declined by Rs 1.54 crores to Rs 138.66 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 2.86 crores, and "Bills Discounted and Purchased" for a rise of Rs 1.33 crores.

+

Both Demand and Time Liabilities have recorded increases, the total of bank deposits now touching Rs 1,080 crores. The return of the Scheduled Banks for the week ended May 25 contains indications of the progress toward slack season conditions. Borrowings from the State Bank are higher by Rs 0.25 crores at Rs 9.89 crores, while those from the Reserve Bank have declined by Rs 3.64 crores to Rs 63.95 crores. Cash and balances with the Reserve Bank have risen by Rs 1.45 crores to Rs 88.25 crores. Investments are shown at Rs 352.79 crores against Rs 353.55 crores. "Advances in India" have declined by Rs 1.06 crores to Rs 613.70 crores. Inland Bills Purchased and Discounted" are higher by Rs 1.51 crores and "Foreign Bills Purchased and Discounted" by Rs 0.51 crores, at Rs 109.11 crores and Rs 46.23 crores respectively. Money at call and short notice stands at Rs 9.94 crores against Rs 9.06 crores.

+

The Weakness of Sterling

By PAUL EINZIG

AT the end of May, development of a weak trend in sterling added yet another worry for the Government, on top of its growing concern over the wages spiral, the actual or pending labour disputes, and the general inflationary situation. Until recently sterling remained remarkably steady, and the Treasury was able to increase its gold reserve month after month since December. The weakening trend of sterling foreshadows less favourable gold movements even though it may have developed too late to affect the figure for May. Yet Britain could ill afford to lose much gold, and there is good cause for the Government to worry about this latest deterioration of the exchange situation.

Possibly the explanation of the unfavourable change is in accordance with the rules in the old fashioned text books which regard the balance of payments as the main factor determining exchange rates. There is indeed a great deal in that time-honoured rule. It is not sheer coincidence that since the turn of the year there was an improvement until recently both in the British trade balance and in sterling. And it would not be surprising to see a deterioration of trade figures to follow the relapse of sterling even though there may be a time lag owing to normal delays in payments for imports and exports.

An alternative explanation, which is also in accordance with the classical rules, is that the rising trend of money rates abroad has diverted from London some funds which were attracted there in February as a result of the increase in the British bank rate. In particular, the recent increases in the bank rates in the United States and in Germany have made a difference from this point of view. If so, it only goes to show futility of trying to defend the gold reserve by attracting foreign funds with the aid of high bank rate. There is a limit beyond which this policy could not be pursued. And in any case the presence of large amount of "hot money" is a source of weakness not strength.

A much more popular explanation of the weakness of sterling is that it is due to fears of a business recession in the United States. Such a recession would result in a fall in British exports to the United States. What is even more important, it would force American manufacturers to pay more attention to their export market, and the chances are that American exports would then expand largely at the cost of a decline in British exports in general. Even the vague anticipation of such developments is sufficient to generate pessimism manifesting itself in a decline in sterling and a setback on the London Stock Exchange affecting particularly Government Loans.

This psychological factor is capable of producing such a pronounced effect, because even in the absence of it the British economic situation would be far from strong. It is true, for some months, prices remained reasonably stable. But during the last month there was a further sharp rise in the cost of living, and there are indications that this rise will continue owing to the substantial increase in the price of coal from June 1st and to the series of wages demands which are being pressed with increasing vigour by the Trade Unions.

THE INDIAN TUBE COMPANY (1953) LIMITED

A TATA-STEWARTS AND LLOYDS ENTERPRISE

GENERAL SERVICES	Screwed and Socketed Tubes, Class 'A', 'B' & 'C' (Galvanised and black) to B.S. 1387, upto and including 6" n.b., and Pipe Fittings.
POWER	Cold drawn, Hot finished and Electric Resistance Weld Boiler Tubes.
POLES	Tramway, Transmission, Lighting.
PUBLIC SERVICES	Air, Gas, Water and Sewage Mains.
MECHANICAL	Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other mechanical purposes.
STEEL STRIP	High Tensile Steel Box Strapping and Cold Rolled Steel Strip for manufacturing purposes.

Enquiries and Orders for Screwed and Socketed Tubes and fittings ex-stock should be addressed direct to our Warehouse Offices.

Head Office : 41, Chowringhee Road, P.O. Box 270, Calcutta. Telephone : 44-5224 (5 Lines).

Branch Offices and Warehouses :

18, Fosberry Road, Sewree, Bombay-15

39, Hide Road, Kidderpore, Calcutta. Telephone : 45-4561

Works : Jamshedpur, Bihar.

STEWARTS AND LLOYDS OF INDIA, PRIVATE LIMITED

Fabrication and Erection of complete pipework installations for Steam, Gas, Compressed Air, Fuel Oil etc.
Coils for Refrigeration and other industrial uses.
Light Structures of Tubular construction.
Water Well Casing.
Oil Country Goods.

Head Office : 41, Chowringhee Road, P.O. Box 270 Calcutta. Telephone : 44-5224 (5 Lines).

Works : 39, Hide Road, Kidderpore, Calcutta. Telephone : 45-4561.

World of Jute

1955-56: Four Talking Points

THREE weeks remain before we come to the end of the current jute year; it is, therefore, apposite that we take stock of the season that we are nearing the end of; and it is proper that we try to look some distance into the future, and guage what the jute year 1956-57 might have in store for us.

It seems to me that the characteristic attribute of the jute year 1955-56 will be the controversy as to whether or not it could be termed a satisfactory year. Opinion will not easily agree: there will be many according to whose yard-stick 1955-56 would be measured as one of the more disquieting seasons since partition: there are others who, in taking a longer-term view, might be able to see in 1955-56 the foundation for a revived Indian jute goods industry.

I fall into the latter category; but first, however, let us examine the reasons that might be advanced by the dissentients. The first point that would be raised is prices: that levels have disappointed, that raw jute relatively to the price of jute goods has been selling at a higher rate, that demand for jute goods during the closing months of the year has been poor in spite of stagnantly and reasonably low quotations—all these cannot be denied.

A second source of disappointment lies in the fact that rumour has failed to materialise, and what appeared at one time to be extremely favourable prospects for business on a large scale have been falsified. The plethoric interest evinced in gunnies from time to time by Argentina has been noticeably absent. Talk there was a lot of about impending (not to say imminent) transactions involving enormous quantities of jute goods with Russia, but no more than talk.

A third source of disquietude could be said to be the news, every now and then, that this country or other was making do with less of jute goods, that, perhaps, the beginnings of a jute goods industry were being established. In this regard, it was contended that long-term prospects for Indian jute goods were bleak.

Fourthly, the steady rise in jute goods stocks since the tail-end of 1955 is being referred to as indicating, if not a diminished demand for Indian gunnies, at least an inelasticity in world demand for this variety of packaging materials.

Having conned these four-fold 'tribulations' of the Indian jute goods industry in 1955-56, let us now move on to analysing these and to discovering whether an extreme pessimism is justified.

First, as to prices. I must admit that I personally have been disappointed about the range of prices that obtained in 1955-56, particularly in hessians. It is also true that the mills industry has been hard put to it merely in avoiding a loss, least of all in ensuring for itself a slim margin of profit. The relatively firmer condition of the raw jute market, accompanied as it was by an equally firm resistance to higher jute goods prices, was inevitably responsible for reducing the margin of mills, and in some cases for making it disappear altogether.

But this is not to say that mills cannot hope to work economically, unless jute prices are lower or world consumers are prepared to pay a bit more for jute goods. The laws of supply and demand for jute goods have fixed the economic price at the level that did obtain in 1955-56; the same laws operated in respect of raw jute, and if the bidding was a trifle keener for the raw material, the consequence could not be otherwise than an unfavourable turn in the terms of trade of IJMA mills.

It needs, however, to be remembered that raw jute is only one of the components of a mill's cost of production. I concede it is the most important: but the other constituents of cost of production are, I maintain, capable of such reduction as to enable once again a margin that the mill industry could not grumble at. Higher efficiency and mechanisation, rationalisation and modernisation—these are the avenues through which, by an improvement in productivity, the jute goods industry should strive for economic production and working.

In this regard, the mills industry has already achieved some measure of success in its endeavours toward modernisation: and the units which have completed the job of work will, I am confident, not be experiencing the sorry tale of woe that belongs to the unit which is labouring with obsolete machinery.

Long-term, therefore, if we have reached the stage where it is difficult to foresee either a reduction in raw jute prices or an increase in jute goods quotations, the impetus thereby provided for achieving savings in costs in other directions may be a blessing, in that it will foster and quicken the pace of modernisation.

As to the second source of disquietude, ours has always been the need to wait upon a bountiful Argentinian crop, so that demand for jute goods would ensue. Argentinian demand is like Shakespeare's description of death: it will come when it will come. You can't hurry it. As to the much talked about Russian interest in jute goods, we have again to wait

(Continued on page 1057)

World of Tea

Final Sale of the 1955-56 Season

THE final Export Sale of the 1955-56 season was held this week when the majority of the offerings were disposed of at satisfactory prices. The first sale of the New Season's teas will be started next week, i.e. on the 11th June, 1956

It is expected that tea will have a comparatively better time during the coming season in view of growing consumption in India and lower stock position abroad, especially in the United Kingdom. Much, however, depends on production trends in North-East India where the season has only just commenced. If North India does not increase her production over last year's, tea prices are likely to remain more or less at the current levels.

Although prices recently have fallen in the London market, they have, over many weeks, shown a welcome measure of stability. This, in turn, had been of great benefit to United Kingdom blenders who have, in consequence, been able to retail their packet tea at steady prices. For some time now, retail prices have remained unchanged, and this fact can possibly prove helpful to consumption. As a matter of fact, according to some reports, sales of tea are rising.

It cannot be denied that prices in London have been closely linked to quality. But, although on quality grounds alone the fall in London prices is understandable, it comes at a time when stocks of tea are very low. Normally, stocks reach a seasonal peak at this time of the year. This may be due entirely to the credit squeeze: but there is obviously a point below which stocks cannot go even if it is expensive to keep them.

Not without some significance is the fact that stocks, as on May 25, totalled about 116.4 million pounds as compared with 116.6 million pounds a week ago. Deliveries, during the past four months, have averaged about 10½ million pounds weekly; and, on this basis, deliveries for the whole of this year, will amount to about 546 million pounds as against 518 million pounds in the previous year. It, therefore, seems reasonable to suggest that the United Kingdom is drinking now more tea.

Despite record output of 49.8 million pounds in April, production of tea in Ceylon is lagging behind last year's. Total production for the season, up to the end of April 1956, are only 134.2 million pounds as compared to 147.9 million pounds during the corresponding period of last year. Although this steep fall in production, during the first three months of the year, is mainly due to heavy drought, the deficit will probably be covered during the rush period. The South Indian crop is also lower at 32.9 million pounds during this period as compared to 36.3 million pounds in the first four months of last year.

Meanwhile, in the final Export Sale of the 1955-56 season, held this week, offerings amounted to 5,300 packages. There was little demand from the main export buyers for the very few better teas on offer; but there was more competition from the internal buyers for the poorer kinds, which were generally sold at very irregular rates. Some lots were sold at considerably below valuations.

In the Internal Sale, offerings consisted of 21,150 packages of Dusts for which there was a fair demand, but at generally easier rates. Black leafy teas, suitable for export, were the strongest feature and sold at dearer rates. CTC Assams received fair support, but at irregularly easier rates apart from the few very best sorts which were about steady.

Good liquoring grainy Assams were one to two annas easier, but other sorts were generally a full 3 annas easier except for residue dusts which were sold at about valuations. Following rates were quoted per pound: —Medium Dooars Dust Rs 1-4; Medium Assam Grainy Dust Rs 1-6 and Best Assam CTC Dust Rs 2-8 to Rs 2-10 (Nominal).

The offerings of Leaf grades consisted of only 167 chests, which met with a fair enquiry at generally easier rates.

In the Export Quota section, the rate for Old Season's teas was quoted steady at 7 pies per pound. There were buyers of New Season's teas at 33 pies with sellers at 36 pies per pound.

In the Internal Sale, held at Cochin last week, offerings were about 350,000 pounds. There was a good general demand for all descriptions. Best liquoring sorts received fair support at lower rates. Travancore Mediums met with a useful enquiry at around valuations, while Wynaad descriptions advanced by half to As 1½ per pound. Residuals were irregular and often registered slight decline in prices. Black Leaf Middle East types were the strongest feature of the sale, being keenly competed for by exporters. Export Sale No. 15 will be held on the 12th June, 1956.

No auction was held at Colombo last week due to "Buddha Jayanti" holidays.

In London auctions held this week offerings consisted of about 27,875 packages, including 16,108 packages of Northen India teas. There was a little better enquiry although considerable irregularity was still in evidence. The light liquoring sorts were slower of sale and prices for these were a shade easier than last week. There was, however, good competition for the better quality teas and good mediums possessing useful colour. Clean Common kinds met with an irregular market, and rates for these were barely steady.

World *of* Business

Commodity Price Trends: Need for Vigilance, but no Alarm

THE recent uptrend in commodity prices in the country has given rise to the apprehension in some quarters that it is the harbinger of worse things to come. Speaking recently at the Bangalore Rotary Club Professor B. R. Shenoy, the well known economist, said that the recent upsurge in prices was an ominous precursor of price movements in the immediate future.

Such a view, however, does not find support in official circles. Intervening in the debate on the Second Five Year Plan in the Lok Sabha, the Finance Minister, Sir C. D. Deshmukh, said that there was no reason to view with alarm the present trend of prices in the country and declared that the situation on the whole was well in hand.

As against these two views, we have now a set of figures supplied by the Office of the Economic Adviser to the Government of India, which will enable us to arrive at an independent conclusion.

The review of the movement of commodity prices for 1955-56 shows that the index of wholesale prices for all commodities during the year 1955-56 has recorded a rising trend. From May 1955 when it was 342.0, the index has touched 387.3 in March 1956. During the previous year, the index had recorded a declining trend.

Though it is undeniable that from month to month in the past twelve months, the index has shown an almost continuous increase, the fact remains that the annual average of the index for 1955-56 is lower than that for 1954-55, at 360.4 as against 377.5. Over the year, Food Articles have fallen by 7.8 per cent to 313.2; industrial raw materials by 3.8 per cent to 419.8; Semi Manufactures by 3.5 per cent to 338.2; Manufactures by 1.2 per cent to 372.9 and the Miscellaneous group by 10.8 per cent to 546.4.

Taking the year 1955-56 alone, we find that the increase in prices is most prominent in the case of Food Articles, the month by month index rising almost continuously from May when it was 276.1 to 351.6 in March 1956. Among the items in the group, both cereals and pulses have recorded substantial increases, the former from 327 in April 1955 to 439 by the end of the year and the latter from 217 to 373. Among cereals, rice has moved up from 412 in April 1955 to 504 after having touched a high of 509 in September. Wheat, after an initial fall from 402 in April to 352 in May 1955 has moved upward almost steadily and in March 1956 the index has stood at 545.

The comparative steadiness of Other Food Articles (April 1955—235 and March 1956—233) has been brought by the decline in Tea from 508 in April 1955 to 335 at the end of the year and the decline in sugar from 268 to 265.

In the group covered by industrial Raw Materials, prices of cotton have moved upward, the index rising from 376 in April 1955 to 478 in March 1956. Prices of raw jute fell sharply in the first half of the year but in the latter half there was an upward trend, with the result the average for the year is about 1 per cent higher at 426. Oilseeds displayed a rising trend from 338 to 511 as did minerals from 414 to 453. Other industrial raw materials, however, have declined from 461 to 406.

Among Semi Manufactures, leather has moved up from 393 to 408 but mineral oils have declined to 208 from 221. Vegetable oils have recorded a sharp increase at 486 from 330. Cotton yarn is also higher at 452. Metals have moved up from 244 to 282.

In the Manufactures Group, jute has receded to 418 from 448 as also cotton from 415 to 403. On the contrary Rayon and Silk has gone up from 469 to 485. The index for metal products has increased by 6 per cent to 359 as a result of an upward revision of maximum prices of Iron and Steel by Government in July and October 1955 and higher prices of machinery.

The Miscellaneous Group's annual index has declined by 10.8 per cent to 546.4 from 612.4 mainly due to fall in prices of vanaspati, pepper, chillies, cummin, betelnuts, brick and tiles and tobacco leaf.

It will be seen from the above figures, that though over the year prices have been moving steadily higher, taken for the whole year do not appear alarming as the annual average index is below the level for the previous year.

At the same time, it is to be noted the price trend in the past few months is rather disquieting. The following table brings out in bold relief the wide disparity obtaining between price levels during March this year and the corresponding month of the previous year.

	March, 1955.	March, 1956.
I. Food Articles	297	351.6
Cereals	339	439.0
Pulses	229	37310
Others	249	233.0
II. Industrial Raw Materials	412.7	475.6
Fibres	452	471
Oilseeds	338	511
Minerals	417	453
Others	480	406
III. Semi-Manufactures	333.5	369.4
Leather	390	408
Mineral Oils	221	208
Vegetable Oils	354	486
Cotton Yarn	440	452
Metals	242	282
Oilcakes	284	370
Others	377.8	374.8
IV. Manufactures	377.8	374.8
Textiles	422	408
Jute	468	410
Cotton	411	403
Rayon and Silk	468	502
Woollen	310	274
Metal Products	340	371
Others	287	285
V. Miscellaneous	553.3	508.1
VI. All Commodities	354.2	387.3

From the above table it will be seen that compared to the corresponding period of last year, prices in March have been considerably higher especially in the two important groups. Since Food articles and Industrial raw materials account for nearly 50 per cent of the country's economy the fact that prices in these two groups are showing an upward trend for several months now seems to indicate urgent need for strict vigilance.

World Overseas

US Notes

THE United States Department of Agriculture is drawing up plans to put a new "soil bank" into effect on a limited scale this year. The soil bank is the central feature of a new Farm Bill. Its aim is to discourage over-production of farm commodities by taking land out of production and reimbursing farmers for the crop loss. To qualify, farmers must reduce acreage of cotton, wheat, corn, rice, peanuts, and tobacco below allotments previously approved under Government's crop control programme.

The rate of payments to farmers will average $40 an acre on corn, $24 on wheat, $70 on cotton, and $34 on rice. Payments are designed, on average, to be equal to or a little higher than farmers' net returns on these crops.

American farmers heard some other cheering news this week. The Agriculture Department announced that farm prices in the US increased three per cent between mid-April and mid-May. One of the sharpest monthly upturns reflects large gains for potatoes, fruits, hogs, lambs and cattle. April to May advance, reversing downtrend of recent years, brought prices back to the level of a year ago, but they were still about 22.5 per cent below the record high of February 1951. Meanwhile, prices paid by farmers for the goods and services they buy increased less than 1 per cent during the month.

The recent rise in farm prices was chiefly responsible for a slight increase in the US consumer price index by 0.2 per cent in April; food prices advanced by 0.6 per cent. Maintaining the marked overall stability of the past three years, the consumer price index for April, at 114.9 per cent of the 1947-49 average, was only 0.6 per cent higher than in April 1955.

Meanwhile, average American factory workers' take-home pay—his wages after deductions for such purposes as taxes and retirement benefits—and amount of goods and services it could buy were setting new records for the month in April. The US Department of Labour has estimated net spendable earnings of a worker with three dependents at $71.94 a week, those of a worker with no dependents at $64.61—a gain of about 4 per cent in each case. With his higher earnings, a factory worker could buy better than 3 per cent more goods and services in April 1956 than he could a year earlier.

Reflecting robust demand for goods in United States is the continued high level of factory sales. The US Department of Commerce reports that manufacturers' sales in April reached a total of $27,400,000,000 or $1,000,000,000 higher than in April 1955. After adjustment for seasonal expectations, deliveries of durable goods were up 1 per cent from March, while non-durables showed little change. New orders placed with manufacturers in April also totalled $27,400,000,000 or $1,000,000,000 more than in April 1955.

To help American industry meet legitimate financing needs growing out of demand for production and requirements of record expansion programmes, the US Federal Reserve Board acted to add funds to the commercial banking system last week. The Board—which acts as the nation's central bank and its monetary policy—increased its holdings of US Government securities by $198,000,000 in its largest open market purchase in two months. Previously, it had sold securities, which had the effect of tightening the supply of lendable funds in the banking system. Last week's move was not intended to signal a general relaxation in monetary policy, but to keep credit conditions from growing tighter than they are in the face of heavy demand for funds.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

AGAIN stressing the qualification that I am relying on my memory of a distant past, I would like, in continuation of the giltedged theme of last week, to recall the autumn of 1925. The reference is to the debentures issued then by the Calcutta Port Trust; and the marvellous transformation in the credit-rating of this public authority between the fall of 1925 and the spring of 1926 merits close study in this respect. Local bodies like port trusts, improvement trusts and corporations did not then have any fixed pattern for their periodical borrowing programmes. There were instances of tender system as in the case of new loan issued by the Calcutta Port Trust late in 1925. The type of loan would be announced; and tenderers had to indicate the issue price they would pay for the loan and the amount they would subscribe for. Unsuitable tenders would be rejected; and applications at and over a specified price would be accepted. Another system in vogue was to fix up, by private arrangement, the taking up of the whole issue by a bank. In the mid-twenties, the Bengal National Bank, thus, subscribed for the entire loan issued in one year by the Calcutta Corporation; and, in the early twenties a loan of the Bombay Improvement Trust was taken over by the Bank of India. A third pattern which may be mentioned in this context was for the local body to throw open for public subscription a loan of a specified description, with a specified amount on offer, and at a specified issue price. This was in consonance with the procedure invariably adopted for Government loans.

✱

The loan issued by the Calcutta Port Trust late in 1925 was on the tender basis. The issue was six per cent thirty-sixty year loan; and offers invited were for a total of Rs 1,40 lakhs. If I remember right, the prospectus was widely published in the papers; and the response was considered unsatisfactory. All tenders at and over Rs 98 per cent were accepted; and the total amount thus subscribed fell short of the target by something like Rs 40 lakhs. The Port authorities had been following the practice of investing their sinking fund accumulation in their own debentures as far as possible. So, of the gap of Rs 40 lakhs, a moiety could be taken up on Sinking Fund Investment Account. Even so, a portion of the six per cent loan was left on the hands of the Port Trust. It was in such circumstances that my friend Mr V. J. Bhide, then a prominent and large-scale dealer in government securities operating under the name and style of Bhide Sons and Company, saw in the six per cent loan a great opportunity for a profitable transaction.

✱

At the threshold of the 1925-26 busy season, Mr Bhide had formed the view that 1926 should witness a sharp decline in the borrowing rates of Government and public authorities; and that this would be brought about by a progressive and sustained rise in giltedged and semi-giltedged prices. In that period, his instructions to his agents used to be: "Buy any security, any quantity, any price." A more daring and a more uncannily prescient operator I had not come across. Mr Bhide happened to be in Calcutta in the middle of December 1925; and, as he and I were driving along the Strand, the Calcutta Port Trust Building acted on him like a sudden inspiration. He asked the driver to stop, and, turning to me, enquired if I knew anybody of importance in the Calcutta Port Trust. My reply in the negative did not put him off; for, he said: "Why not step in, see the Chief Accountant and put the proposal to him that a Bombay dealer was willing to take up the entire unsubscribed lot of the six per cent loan?" Saying "why not?" I sent in my card to the Chief Accountant whom I did not know from Adam.

✱

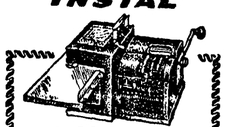
As I entered the official's room, his deputy, Mr John Dand, with whom all the relationship I had was that we were staying at the same hotel, nodded to me in recognition and, evidently not expecting me there, asked: "What brings you here?" This exchange between Mr Dand and me seemed to have impressed Mr Parks, the Chief Accountant, that I could not be altogether a stranger. He received me cordially; and, when I stated the purpose of the mission, he said that he could sell Rs 15 lakhs of the six per cent loan. I said that my party could take the whole lot at Rs 99. Mr Parks was visibly impressed; and I was passing on to him a memo confirming the transaction, when I enquired, "What about delivery?" He said that the scrips were to be printed; and he could deliver the securities in the space of two months. I said that the price I had quoted was for ready delivery; and that, if the scrips could be made available only after two months, the price should be Rs 98-12. He agreed and closed the transaction.

✱

Mr Bhide was exultant over the conclusion of the deal, though he was disappointed that he could get only Rs 15 lakhs. Characteristically, he suggested that he would arrange a bank-guaranteed delivery order to be given to Mr Parks the same day, so that, on the due date, all that remained to be done was for the Calcutta Port Trust to present the scrips to the bank and get paid.

✱

I called on the Chief Accountant that afternoon, armed with the bank-guaranteed delivery order and twitted him with concluding a big deal without taking the usual and necessary precaution of getting the references of the purchaser. "I wanted to reciprocate your trust," I said, "and I have brought the delivery order duly guaranteed by an important bank." To which Mr Parks retorted: "Is not my trust justified? Has not my judgment been vindicated?" Thus was concluded a contract, and thus was begun a contact, which was to prove of great mutual benefit to the Calcutta Port Trust and to Mr Bhide



✱

Soon thereafter, Mr Bhide introduced the Calcutta Port Trust debentures in the Bombay Giltedged market, which, then as now, set the pace and pattern for giltedged sentiment and prices. CPT loans sprang into great popularity with the Bombay investors, who had always prized the debentures of well-managed local bodies like Port Trust and Improvement Trust. Believe it or not, the price of the six per cent thirty-sixty year loan of the Calcutta Port Trust established a premium of over Rs 10 in less than as many days. By the time the securities sold to Bhide

became due for delivery, the scrip was quoting at Rs 115. That is to say, on this deal of Rs 15 lakhs, Mr Bhide had made a profit of Rs 2,40,000 even before he had paid for the securities. And the problem of finance had solved itself. As the security at the time of delivery was Rs 115 against the purchase price of Rs 98-12, and as bank accommodation in those years was available at five per cent margin, Mr Bhide did not have to find any finance of his own; on the other hand he could draw from the bank a major portion of his profit!

Meantime, Bombay was a greedy buyer of whatever CPT loan came on the market for sale. Mr Parks, too, diverted to Bombay any scrips offered to him by Calcutta brokers. In fact, not only was a free and lively market created in Bombay for Calcutta Port Trust Debentures, but Bombay investors came to play a dominant part in inducing a strident advance in CPT prices on the Calcutta Market, too. Mr Parks was quick in realising the advantage of securing vogue and popularity for CPT debentures in the strategic gilt-edged market of Bombay. He was doing everything necessary to facilitate, encourage and accelerate this westward trend.

*

These developments were of invaluable help in the pilotting of the next loan of the CPT. Proposals in this behalf were taken up for consideration in the spring of 1926. Mr Parks advised the Commissioner that a drastic reduction in the borrowing rate from six per cent to five per cent was made possible by the keen interest which Bombay had come to evince in CPT debentures. So, he set about fashioning a five per cent thirty-sixty year loan; and the amount of the loan was to be Rs 100 lakhs. In recognition of the key role which Mr Bhide had played in popularising CPT debentures in Bombay and in bringing about price-advances of 10 to 15 per cent in the whole range of CPT loans, Mr Bhide was consulted by Mr Parks on the best way of placing the new issue on the market. Mr Bhide advised the offering of the loan for public subscription at an issue price of Rs 100. He added that he could arrange for the issue to be underwritten by a bank. Mr Parks, as well as Sir Thomas (then Mr) Elderton, who was Deputy Chairman, jumped at Mr Bhide's offer. But, for reasons which, to this day, I have not understood, the Chairman (Mr Stewart Williams) decided in favour of dispensing with underwriting, but placed the loan on the market at an issue price of Rs 97. Against Rs 1 crore offered, applications received totalled over Rs 80 crores. There were many applications which were for the entire amount of Rs 1 crore: the one-crore applications were allotted Rs 80,000 each: and, before the allotment basis was made known, the five per cent loan was quoting Rs 105, that is, Rs 8 above the issue price! It was, thus, clearly proved that there was no justification for issuing the loan at a discount of three rupees. The clear loss to the Calcutta Port Trust was at least Rs 3 lakhs. As for the Chairman who thus gave away the loan at a sacrifice price—was he reprimanded? No. He was knighted!

*

Soon after the list for the five per cent loan opened came the Easter holidays. And every applicant was anxious to take back, before the holidays, the excess application money. Mr Parks was besieged by such suitors; and the aptest comment on this exciting episode was made by the office-bearer of Mr Parks, who said: "when the last loan was issued some six months ago, this place was a desert. Look at the crowd now. It is all the work of the Saheb from Bombay."

*

Yes. It was all the work of one man. And Mr Bhide was able to achieve this sensational success because (1) he had the right "hunch"; (2) he knew how to take full advantage of a lively and active

Gateway Gossip

Bombay Review

An Exciting Session

SINCE the transfer of power, there was only one other occasion when public excitement in Bombay ran so high as it did on the eve of and during the Congress Committee Session. One recalls the occasion of the announcement of the SRC report. The tragic events which followed that announcement are too fresh in one's memory. The Government of Bombay and that part of the Government of India which moved to the City to participate in the Working Committee and the AICC meetings were aware of the possibility of recrudescence of trouble in a like manner if not in a like measure.

The Prime Minister and the Bombay Premier met sufficiently early and came to certain decision as to how any eventuality should be met. Luckily the police organisation was as perfect as could be imagined and inspite of the vehemence in the speeches and conduct of the Samyukta Maharashtra leaders, particularly of the non-Congress parties, it cannot be denied that the presence of the all-India leaders did make a difference. From the very outset, almost everyone who counted knew that this time Bombay was not going to be a paradise for the goondas and that the price of violence would be severe. There is now great relief that the situation passed off with a few sporadic outbursts here and there, though it could well have deteriorated into a major crisis.

Turning to the AICC session it bore all the usual dignity and pomp. A huge statue of Mahatma Gandhi was installed in front of the rostrum which amidst its flowery decorations and neon lights presented almost a divine look. Images of Lord Buddha were placed on the two sides of the rostrum and when the elders streamed in, one after the other, there was a continuous and thundering applause. Barring a handful, the leaders present in the dais could be recognised as having filled that role for the last fifteen to thirty years. This circumstance could well have aroused mixed reflections on anyone who contemplated the future of the Congress Party.

The weather at first hostile and threatening to be destructive, could do little more than delay the completion of the pandal by a few hours. Subsequently, it turned friendly.

Thousands of Samyukta Maharashtra agitators thronged at all the approaches to Siddartha Nagar (as the AICC venue was christened) and were waving banners and shouting slogans almost all the time that the Committee was in session. A few Congress members who were coming to the session were manhandled on the first day and there were also a few skirmishes between the crowd and the police. Churchgate provided the greatest exitement; where on Saturday the PSP organised a meeting and some fiery speeches were made. Stone throwing continued for some time though it looked rather half-hearted.

About 15 to 20 thousand persons attended the AICC session which started with the usual blush of "Vandemataram" and "Mahatma Gandhi ki Jey". The Congress President's speech which recognised room for differences of opinion in the Congress and outside, stressed the need for vigilant care on national unity and democratic processes. Mr. Dhebar pleaded for a cooperative attitude for the conciliation of all differences.

In his first speech, the Prime Minister showed some emotion. He spoke vehemently on the immorality of violence, asserted that he would give no quarter in the battle against goondaism in any form and declared that no matter what became of the elections, the Congress or even the country, there would be no brooking of violence anywhere.

Among the resolutions passed, one should consider those condemning violence and dealing with international problems and Portuguese colonialism as the most significant, especially in relation to the immediate gravity of the concerned problems. Mr V. K. Krishna Menon who seconded the Resolution on international affairs, gave a lucid explanation of India's foreign policy and pointed out that it was positive on the side of peace and peaceful cooperation among nations.

The Resolution condemning violence recalled the inspiring example of Gandhiji for disciplined revolutionary action without swerving from high moral standards of public behaviour and the strength and reputation which that example brought to the country. It deplored the deterioration in standards, the mounting violence and stressed the need for unity, discipline and responsible leadership in all fields of activity and a strict adherence to peaceful methods without which India's voice would count for little in other countries. The Resolution appeals to the nation and every party and organisation in the country to work against all these tendencies towards violence, indiscipline and adventurism. There is a warning that if these are not ended, it may well imperil democracy and progress.

One Resolution appealed to "civilised nations" and the peoples of the world to express their disapproval of Portuguese policy and conduct in Goa; another, in sharp contrast, conveyed to the French people India's congratulations for the treaty of cession of the French Settlements and the assurance that the people of India would seek to promote further friendship and good relations between the two countries; a third expressed concern over the grave developments in Algeria, and the confidence in the possibility of an amicable settlement. Military pacts were condemned through another resolution.

The importance of the Second Five-Year Plan was stressed and the role of a small savings emphasised in two other resolutions. The resolution on the Plan says that it "aims at progressively greater social equality and the lowering of economic disparities within the nation, by planned betterment of the living standards and earnings of the less privileged providing them greater opportunities on the one hand, and on the other, by limiting the economic power at the higher levels, restricting monopolistic tendencies and high incomes by fiscal and legislative measures aimed at social equality".

The AICC did not refer to the SRC report or to the Bombay issue

Gateway Notes

Food and Catering Industry

THE shape of things to come in India's food and catering industry is having its diminutive replica in the work of and instruction given in the College of Catering and Food Industry at Andheri. The problem of dietics in India is as much one of unbalanced eating as that of insufficient per capita avaliability of food. It is not enough if food is produced; it must be taken in such proportions as would ensure the maximum health of the individual. The training imparted in this college is intended mainly to teach how a balanced food industry and diet could be maintained and how in the development of the art of catering utility could be combined with refinement. The college, the only one of its kind in South East Asia, has for its Principal an expert lent by the Food and Agricultural Organisation of the United Nations. He is also pioneer in the catering industry. Catering as a profession is still in its infancy in India, where even the institutional caterers have not hitherto been keen on employing persons with the requisite training. In fact, recruitment to this occupation has remained conventionally haphazard. The future may tell a different story. The possibility of any revolutionary change in the habits or the outlook of the people must, however, be discounted. Out of the 48 students who passed out of the college last year, the first batch from the institution, six are reported to be still out of employment. In the UK, where in 1948 there were only two colleges of this kind giving instructon to 200 students, now there are 120 colleges and about 10,000 students pass out of them after graduation every year. Indian food habits are not similar to those of the UK and the catering industry is not likely to develop as fast. Still with the increasing urbanisation of society and the growth of industrial centres, with canteens attached to every factory and office establishment, this occupation should attract more and more people and acquire a status of its own. In the college at Andheri, the students learn among other subjects cookery, hygiene, nutrition, book-keeping, reception and housekeeping.

✱

State and Drug Manufacture

Addressing a special convocation of the College of Physicians and Surgeons at Sunderbai Hall, Bombay, Pandit Nehru suggested that the State should undertake the organisation of medical services in a more complete measure, and take charge of the manufacture of drugs, so that adequate medical treatment could be made available to all classes of people all over the country. Just now the rural areas, in particular do not receive sufficient medical attention. While conceding that an adequate number of doctors could not be immediately produced, the Prime Minister seemed to favour the suggestion that some kind of "assistant doctors", competent to treat common illnesses could be trained under short-term courses and dispensed in the rural areas. He spoke kindly of the indigenous system of medicine, and mentioned having read an article how hundreds of years ago, courses in surgery used to be taught at the university of Taxila. If the indigenous system were to develop with the aid of modern scientific methods, they could progress effectively and be of great use to society.

From the point of view of private industries, the Prime Minister's reference to the manufacture of drugs can be a bit irritating. This field, with certain specified exceptions, is placed in the joint category under the latest industrial policy. Some basic drugs are to be the exclusive concern of the State. The immediate environment in which the Prime Minister spoke must have provoked him to make an observation favouring further nationalisation. While due importance has to be attached to this observation, it would be far too premature to place it on a par with a regular policy statement.

GATEWAY MARKETS

A Marked Recovery in Bullion Prices

THE bullion market, after suffering a sharp setback early in the week due to selling pressure, recovered remarkably toward the close. The initial weakness of the market was mainly due to reports of arrivals of Tibetan silver, the selling pressure from Calcutta and easier advices from produce markets. Toward the close, however, the market gave an encouraging performance and prices showed a marked recovery following a flurry of general buying, influenced by the rumours that further licences for the import of Tibetan silver would not be granted. Bears were compelled to cover their sales, while signs of encouraging offtake accelerated the upward trend. Gold followed the pattern of the counterpart and the advance in its prices was aided by the revival of spot demand.

The recovery in Gold prices from the recent setback was rapid, mainly due to a spurt in demand for the ready metal from Madras in the face of lower arrivals. The belief, that the unauthorised arrivals after the commencement of the monsoon would be less, provided further stimulus. Arrivals were 5,000 tolas, while offtake was 3,000 tolas. Unrefined metal receipts amounted to 5,000 tolas. The price for Jeth delivery opened at Rs 101-4 and, after touching a low of Rs 100-13, finished at Rs 101-11. Spot gold was marked upto Rs 104-2 from a low of Rs 103-7, to finish steady at Rs 104-1. Mysore Gold was quoted around Rs 104-3, while sovereign was higher by As 12 at Rs 66-12.

According to the latest available figures, India produced 212,000 fine ounces of gold in 1955 as compared to 241,000 ounces in 1954. The world production, during the year under review, totalled 2,715,000,000 fine ounces, showing an increase of 5 per cent over 1954. This figure, of course, excludes production in the Soviet Block countries.

Continued flow of Tibetan coins in recent weeks and reports of fresh inflow despite the import duty, undermined sentiment in the Silver section in the initial stages of the week. But scattered bull support coupled with some bear-covering at lower levels on the belief that the transport of silver coins from Tibet to India would be arduous and take a long time to reach the markets of India, caused a remarkable recovery in prices. Arrivals were 25 bars, while offtake was as much as 30 bars. The price for Jeth delivery opened at Rs 167-10 and, after touching a high of Rs 171-6, finished the week at Rs 170-6. Silver ready touched a high of Rs 170-12 and a low of Rs 169-1, to finish at Rs 169-6.

✱

Oils & Oilseeds

Easy conditions prevailed on the Oils and Oilseeds markets. There was a general inclination on the part of bulls to book profits at the recent high levels. The advent of rains in the growing centres gave ground for assumption that a future higher crop might be expected.

Market circles are now assessing the full implications of the futures trading prior to extending their commitments. It is learnt that the Forward Markets Commission will grant permission to the Oilseeds Exchange to commence hedge trading in Groundnut, in the first instance, in the next few days. Hedge trading in Linseed is expected to start after a few weeks, whereas that in other oilseeds will take some time.

With intermittent profit-taking readily absorbed, Castorseed futures registered a noteworthy recovery on persistent trade demand. The turnover was 10,000 candies. Castorseed September delivery opened at Rs 145 and, after touching a low of Rs 141-4, improved at the close to Rs 143-2. Castor Oil, commercial, was quoted around Rs 15-3 per quarter. There is a belief that the USA will enter the market in the course of the next few days.

Groundnut ruled nearly steady. Ready bold was quoted at Rs 32-8, while Oil ready was quoted at Rs 17-8. Operators are generally nervous about the immediate future in view of the imminent start of hedge trading.

Trading in Linseed reflected an easy trend, mainly due to the increasing pressure of stocks of ready oil in the absence of overseas demand. Linseed bold ready was quoted at Rs 30-14 and Linseed Oil ready at Rs 17-10.

✱

Art Silk Yarn

The Yarn market remained irregular and unsettled, and prices fluctuated within a narrow range. Traders were awailing import policy for the June/December 1956 period since there were strong rumours that imports of Art Silk yarn would be substantially cut as a result of increasing domestic output.

In the case of Staple Fibre Yarn, prices fluctuated narrowly within a range of six pies per pound. Reports from all consuming districts were moderately satisfactory. But, on account of increasing stocks and fears of further deliveries from the mills, prices showed a tendency of a general decline.

Following rates were quoted:—120 spot Japan Rs 3-13-3; 150 spot Rs 4-4-0; 120 spot Italy at Rs 3-13-0 and 150 spot at Rs 3-14-0. Dull Cone Snia June delivery moved between Rs 802 and Rs 804, while Staple Fibre yarn 40 ×2 was quoted at Rs 671 to Rs 680.

Traders in Indian cotton yarn showed increasing resistance at the current high levels. Moreover, reports from Coimbatore and other important producing centres to the effect that there had been a decline in prices to the extent of about As 4 per bundle, were also a contributory factor. But, most mills were reported to be maintaining their prices as their order books had been filled up to the end of August.

Bombay Review

World of Cotton

Restricted Activity in Spot Section

ACTIVITY on the spot Cotton market, during the week under review, remained restricted with buyers inclined to wait and watch. Demand was generally confined to limited lots of needy requirements. The fall in mill buying was also attributed to the commencement of the monsoon earlier than usual.

The demand for foreign cottons was also limited on account of the growing resistance of the mills at the current high prices. Another bearish factor was provided by the passing of the new Farm Bill by the US Congress, envisaging a reduction in the minimum sale price of the Commodity Credit Corporation to 25.50 cents (basis Middling 15|16" at Ports) from 27.50 cents hitherto. Indian importers apprehended the possibility of a further cut in American cotton prices in the coming months. They had, therefore, to adopt a cautious purchase policy in spite of the fact that American cotton is at present the cheapest cotton in the world.

For obvious reasons, buying enquiries in the spot section were not encouraging as operators preferred to watch the trend of prices after the resumption of forward trading. Some were inclined to the view that, given normal favourable weather, the domestic crop would be at least 50 lakh bales (of 400 lbs each). Consequently, daily turnover was reduced and prices slightly declined although those of popular growths remained almost unchanged, mainly due to the limited quantities of good quality cotton now on offer. Shippers also showed little buying interest during the past few days and only a small business was reported done in Zoda and Yellow Pickings. Bengal Deshi was quoted at B. 640 to 710; Oomra at Rs 730 to Rs 770. Dhollera at Rs 750 to Rs 755; Jharilla at Rs 790 to Rs 840 and Vijay Broach at Rs 980 to Rs 990.

In the foreign cotton section, deals put through in new crop US styles were only moderate and prices drifted lower, thanks to the bearish view of the American cotton situation. Good Middling 1.5|32" was done lower at Rs 1,370 as against Rs 1,405 quoted a week ago and Rs 1,435 to Rs 1,445 a fortnight ago. There were no enquiries for East African and high-priced Egyptian varieties, Karnak being quoted at Rs 2,800 to Rs 2,850 and Bushoga at Rs 1,595 to Rs 1,605.

×

HEDGE CONTRACT:

At a meeting held on Wednesday this week, the Board of Directors of the EICA decided to resume futures trading in cotton from June 13. The following other decisions were also made:—To run two contracts simultaneously instead of one; to assess the view of the members in regard to cotton contracts; and that Fine MG Jharilla with staple length 25 to 32 inches will be the basis of the first contract and Fine MG Vijay with staple length 27 to 32 inches will be the basis for the second contract.

Pending the Government announcement, the EICA Board was understood to have decided that the "ceiling" and the "floor" for the first contract would be Rs 820 and 495 respectively; and Rs 970 and Rs 565 respectively for the second contract.

×

STATISTICS:

According to the official figures released this week, the monthly average consumption of Indian cotton, for the first seven months of the current season 1955-56, is higher at 3.7 lakh bales as against only 3.4 lakh bales in the corresponding period of last season. In spite of the recent rise in the consumption of foreign cotton, the monthly average during this period is lower at 48,490 bales as compared to 56,560 bales in the corresponding period of the previous season.

The total consumption for the seven months of this season has now been placed at 25.68 lakh bales of Indian cotton and 3.39 lakh bales of foreign growths. If the same trend is maintained, the total consumption for the season is expected to exceed 50 lakh bales.

Many mills are now reported to have sufficient stocks of cotton, at least for two months' requirements. With the result, no acute scarcity of cotton is likely to be felt toward the end of the season.

Exports by Rail from 1st September 1955 to 31st May, 1956 were 317,276 bales. Estimated mill consumption in Bombay, during the same period, were 932,866 bales as against 954,690 bales in the corresponding period of the previous year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 31st May 1956, were 687,882 bales as against 722,418 bales on the corresponding date of last year.

×

WORLD COTTON ESTIMATE:

According to the latest estimate, world cotton production in 1955-56 is expected to be around 39.3 million bales—a new peak. This is slightly larger than the previous record crop of 39.1 million bales in 1953-54. As usual, the lion's share of the increase in production is accounted for by the USA where the crop is now placed at 14.7 million bales—a million bales larger than the 1954 crop.

Among the countries which have reported a decline in cotton production, as is well-known, India is one. As a result of wide-spread excessive rains, considerable damage is reported to have been done to Indian crop, which is now estimated at only 43 lakh bales as against the original estimate of 52 lakh bales. Pakistan has also reported a decline in production.

×

KARACHI COTTON MARKET:

There was no notable development in the Karachi cotton market. Although there was a recovery in prices, it was not marked enough to make up for last week's losses. Sind Deshi was quoted at Rs 101; Punjab Deshi at Rs 95; 4F Punjab Rolling at Rs 86-12; LSS Punjab Rolling at Rs 91-12 and NN Rolling at Rs 91-8.

×

NEW YORK COTTON:

Conditions in the New York cotton market were distinctly easy, thanks to a reduction in the minimum acceptable price by the CCC and the approval of the Farm Bill. Although values declined on Commission house liquidation and hedging, there was a slight recovery toward the close. This was attributed, partly to the announcement by the Secretary of Agriculture, Mr Benson, on agreement to pay farmers to plough in growing crops and fixed payment rates for the programme, and partly to the postponement until June 19 of the next round of bids on export cotton, which were scheduled for June 5. July delivery was quoted at 34.59 cents and Middling spot at 36.70 cents. New Orleans July was quoted at 34.63 cents.

×

LIVERPOOL COTTON:

Trading on the Liverpool cotton market was restricted and price movements were confined to a narrow range in the absence of any buying or selling pressure. New Crop July-August delivery was quoted at 27.40; Egyptian Karnak July-August at 63.00 and Sudan Contract July at 50.25.

×

CLOTH AND PIECEGOODS:

Conditions in the Cloth market may be said to be far from satisfactory. Demand from the consuming centres slackened considerably due to the end of the marriage season and in view of the impending monsoon. The trade, however, expects a revival of demand after about four or five weeks. Mills, however, continue to quote higher prices. Some of them are reported to have sold their output up to September. They are, therefore, not in a mood to sell at lower prices.

On the export front, the price factor continues to be the main handicap against increased exports, and even the abolition of the export duty on coarse cloth had little or no effect. But a slight recession in prices is not, however, ruled out if the offtake does not improve in the ensuing weeks when new goods arrive in the market.

"Taxation Without Tears"

"TAXATION without tears" is the title and description that a wag gave for the comprehensive and closely-argued report presented to Government by Professor Nicholas Kaldor. This view may appear to be in startling variance from the impression created by the press reports of the brief discussion which took place in the Parliament, and by the scrappy press summaries of the report and of the Central Board of Revenue's note thereon, subsequently released. This impression is inevitable in view of the emphasis, given in the press reports, to the professor's asseverations on tax-evasion and recommendations of new taxes.

Hardly any prominence has so far been given to the two important suggestions of Mr Kaldor: (1) that the income-tax should be reduced from the present maximum of 92 per cent to a new maximum of 45 per cent; and (2) that the new taxes will but lightly affect those whose incomes are below a specified level which should be considered quite a high level, or whose wealth is below a specified level which, too, should be deemed a sufficiently high level. It is only the super-earners and the super-rich who are brought within the purview of the new taxes; but, in their case also, the proposed reduction in income-tax amounts to very substantial relief.

Let me, therefore, recite, at the very outset, a summary of Mr Kaldor's suggestions: It is suggested that the maximum rate of tax on income should not exceed 45 per cent (as against the present 92 per cent), the maximum rate of annual capital tax one and half per cent (on the excess of capital value over Rs 15 lakhs), the maximum rate of the personal expenditure tax 300 per cent (on a net personal expenditure per head of over Rs 50,000 per annum) and the maximum rate of gift tax 80 per cent (on gift received by the persons whose total estate, including gift, exceeds Rs 40 lakhs). It is suggested that all realised capital gains should be taxed at the same rate as income (i.e., subject to a maximum rate of 45 per cent).

Realising that my function is very much less of a reviewer and commentator than that of a chronicler and reporter, I may still draw attention to these outstanding facts:

(a) The maximum rate of tax on income is not to exceed 45 per cent tax against the present 92 per cent.

(b) The maximum rate of capital tax does not apply to assets of the capital value of below Rs 15 lakhs. Only the excess over Rs 15 lakhs is liable to the maximum.

(c) The maximum rate of the personal expenditure tax does not apply to expenditure below Rs 50,000 per annum per head.

(d) The maximum of the gift tax is payable only by persons whose total estate, including the gifts, exceeds Rs 40 lakhs.

What is drastic in these proposals is not the range and sweep of the new taxes, as the halving of the maximum rate in regard to income-tax. Big Business has been clamouring for tax-relief; the recommended reduction from 92 per cent to 45 per cent must come as a pleasant surprise even to Big Business. As for the new taxes, tax on wealth has been "in the air" for quite a considerable time; and it is idle to pretend that this suggestion comes as a shock. The capital gains tax is no innovation. It had figured in the late Mr Liaquat Ali Khan's budget, though it was withdrawn in the following year. If a betterment levy on rural lands and an improvement tax on urban property are considered appropriate fiscal measures, what possible objection can there be to capital gains tax? Expenditure tax is to be appreciated in the context of the need to control consumption and to refrain from luxuries so as to avoid disturbances to the smooth execution of the Second Plan. The point to note in this connection is that the proposals are so framed as to invite constructive and calm thought.

These recommendations are the result of the Professor's two-fold approach to the task assigned to him. The first is the raising of the additional tax revenue needed for the implementation of the Second Plan. The second is the character of the present taxation system in India. It will be admitted that the approach is the correct one. The Taxation Enquiry Commission headed by Dr John Matthai adopted a more or less similar approach to their task; and it is significant that, while, in both the enquiries, tightening and broadening of the tax system figures prominently, Mr Kaldor outlines his arguments with unreserved vigour and states his conclusions, likewise, without any reservation.

As Mr Kaldor sees it, the problem of tax revenue from the point of view of the Second Plan is of vaster magnitude than what is assumed by the Government's assumptions in the Outline of the Plan. He advocates a lesser reliance on deficit financing and thereby increases the amount that must needs be secured by new taxation. He is not, however, daunted by the vaster problems which he has, thus, posed for himself. Efficient and impartial enforcement of taxes is an important element contributory to bigger tax yield.

The financial assumptions of the Second Plan include Rs 450 crores by way of new taxation by the Centre and the States in the Plan period, deficit financing to the amount of Rs 1,200 crores, and an unfilled gap of Rs 400 crores. Mr Kaldor would like to effect a reduction in the size of deficit financing and considers an annual recourse to this method only to the extent of Rs 150 crores. The maximum limit to deficit financing in the five-year period is to be Rs 800 crores. In other words, the Professor understands his task to be the finding of new tax avenues for a total of Rs 1,250 crores in the Plan period or Rs 250 crores a year.

The general view has so far been that additional taxes will aim to secure Rs 450 crores in the course of five years. Even this target has caused shudders in advance, and loud protests that it will be beyond the capacity of the country to bear. Professor Kaldor coolly suggests a target of Rs 1,250 crores and confidently declares that it will not be "impossible." That is to say, the target can be attained, given certain conditions and granting certain reforms and new levies.

This leads Mr Kaldor to an examination of the present taxation system in India. He condemns it as inefficient and inequitable. He finds in it the perpetuation of a vicious circle. This is what the Professor says of the present system:

"The present system of direct taxation in India is both inefficient and inequitable. It is inequitable because the present base of taxation, "income" (as statutorily defined) is defective and biased (as a measure of taxable capacity) and is capable of being manipulated by certain classes of tax-payers. It is inefficient because the limited character of the information furnished by the tax-payers, and the absence of any comprehensive reporting system on property transactions and proper income makes large-scale evasion through concealment or understatement of profits and property-income relatively easy."

Of the vicious circle character of this system, Mr Kaldor says:

"India like most Western countries has been in the grip of a vicious circle as far as progressive taxation is concerned—evasion and avoidance by cutting down the potential revenue led to higher nominal rates of taxation and this in turn to further evasion and avoidance and still higher rates. It is a vicious circle of charging more and more for less and less."

These considerations lead him to the conclusion that:

"....from every point of view it is far better to have a foolproof system of taxation with a moderate rate schedule, than a system which has the appearance of high progressivity, but which cannot be effectively or impartially administered."

To render the system efficient and equitable and to break the vicious circle, he suggests an integrated base of five taxes and, equally emphatically, a moderate scale of tax:

"The five taxes—income tax, capital gains tax, annual capital tax, personal expenditure tax and the gift tax—would all be assessed simultaneously on the basis of a single comprehensive return; and they are "self-checking" in character, both in the sense that concealment or understatement of items in order to minimise liability to some of the taxes may involve an added liability with regard to others, and also in the sense that the information furnished by a tax-payer in the interest of preventing over-assessment with regard to his own liabilities automatically brings to light the receipts and gains made by other tax-payers."

What will be the effect of these proposals on the tax revenue? Mr Kaldor explains that his proposals should "provide the greater part of the requirements to ensure the success of the Second Five-Year Plan" and indicates that his expectation of yield ran on the following lines:

"Rough calculations suggest that the net yield of the suggested reforms of personal taxation (taking into account both the revenue from the new taxes and the additional yield due to greater efficiency of assessment and collection) would be of the order of Rs 100 crores a year or more—though it would take some years before the full benefit is reaped. It is not possible to make any proper estimates

Delhi Review

North Indian Notes

Indo-Nepalese Trade

The Prime Minister of Nepal, Mr. Tanka Prasad Acharya, says that his Government have informally intimated to Delhi their desire to get the Indo-Nepal trade treaty revised. The treaty was concluded in 1950, when Nepal was feeling friendless and facing internal chaos. At that time, India felt obliged to extend every possible help. In view of the traditional relationship obtaining between the two countries, Nepal agreed through this Treaty to levy customs duties on imports from and exports to countries outside India at rates at least as high as the rates levied by India. As the products of Nepal are comparatively cheap, Nepal also agreed to impose export duties on all products exported to India at such rates as would avoid unfair competition with the Indian counterparts subject to Central excise.

Apparently it is these two provisions which the Government of Nepal are keen on revising. As far as India is concerned, the countervailing export duties being imposed by Nepal could be replaced by import duties in India. The change would be profitable for this country. This cannot be said with reference to the Clause insisting on comparable custom duties on imports from, and exports going to countries outside India. Nepal feels compelled to re-open this question on the eve of the arrival of a Chinese delegation which has the object of signing a new treaty, comprehending trade and friendship.

The special arrangement with India would be irksome to both Nepal and China. The framework of the proposed treaty with China has yet to be disclosed. Anyway, the offer of financial aid and commercial concessions from a number of powerful States including the United States, Russia and China should induce some stern thinking in Nepal over possible non-commercial implications. This small strategic country now moving toward a democratic set-up is for the first time confronted with the need to clarify international preferences and to choose between offers of help and assistance, all of which could not be disinterested.

*

Coal Personnel

The Ministry of Production is reported to be considering a detailed scheme for the training of technical personnel for the coal industry in the public sector. In the Second Plan Period this sector is committed to supply the bulk of the additional out-put of 22 million tons. The paucity of trained technical staff is an acknowledged handicap, which has to be removed in record time. The scheme now under consideration envisages the immediate opening of four training centres at State collieries of Kargali and Giridih in Bihar, Talcher in Orissa and Kurusia in Madhya Pradesh. The prospective trainees are classed into four broad categories.

The first consisting of skilled workmen such as electric fitters and welders, mechanical fitters and operators for various machinery. The second category would consist of junior technical staff such as electrical chargemen, electricians and foremen: the third would cover junior overmen and surveyors. In the last category would come under-ground mining sirdars, timber layers and track-layers. Appropriate minimum qualifications and age for the different categories are prescribed and a good proportion of the trainees would be receiving stipends of various amounts. All the trainees would be having hostel facilities. It goes without saying that employment is virtually guaranteed.

*

"Use Less Cement"

In Uttar Pradesh an acute shortage of cement has obliged the Government to start a cement saving campaign. In the first stage the appeal goes only to Government departments. The departments have been told to economise the use of cement as much as possible, and to use lime and mortar instead. It is expected that a similar appeal will shortly be addressed to the public also.

Shortage of cement is an all-India phenomenon, but in U.P. it is all the more acutely felt in view of the innumerable construction programmes which the Government have taken up. Against a total requirement of nearly 60,000 tons per month, the Government of India's allocation is of the order of 29,000 tons. This allocation is of course from the domestic output in which that of the Government factory at Churk (U.P.) is included.

In another month some relief is in sight as the imports from East European countries would start arriving: from these the State has secured a quota of 56,000 tons. The price of imported cement is substantially higher than that of the domestic product, and naturally this factor also impels economy both on the part of the Government and that of the public. It is hoped that the representations which have been made for increased allocations for the State would evoke a favourable decision from the Government of India, in which case the belt could be slightly loosened.

Party Groupings

The remote rumblings of the next general elections are already seen in Uttar Pradesh politics. The Praja Socialist Party, which after its rift with the Socialist Party led by Dr Lohia is numerically reduced, has started bidding for a colossal expansion in membership. Just now, the party has on its roll less than 30,000 members. A target of 2,50,000 has been set. This target should be attained well ahead of the elections, so that the party could put in the field a sufficient number of candidates who can count on a major share of electoral support in each of the concerned constituencies.

Meanwhile, there is some speculation on the party's stand vis-a-vis alliances. Some leftist groups including the Communist Party would be putting up a united front against the Congress. At the outset the Chairman of the PSP Parliamentary Board had stated that his party was not interested in sponsoring a united front or in joining one when it came into existence through the initiative of others.

Subsequently another well-known leader is reported to have issued statement to the effect that the PSP was also in favour of a joint electoral front against the Congress. There is no dout that this development has caused confusion in the party ranks and in spite of the categorical assurance given by the Parliamentary Board Chairman, many members feel intrigued over the emergence of what appears to be an incipient split of opinion. The Joint Secretary of the PSP has come forward with a statement challenging his colleague's in favour of a united front. As the official functioneries in the party are known to be nearly unanimous on this matter, the prospect of the PSP joining the united looks remote: At the same time, the existence of differences of opinion cannot be overlooked.

NORTH INDIAN MARKETS

Short-Lived Activity in Sugar Markets

THE activity in the Sugar market, that was noticed last week, proved short-lived for want of loading facilities. Despatches to South India were hampered, but there was demand for small quantities. Following were the mill-delivery rates (per maund):—Jaswant Rs 27-14; Simbhauli Rs 28-0; Mowana Rs 27-13: Daurala Rs 29-0; Amroha Rs 27-8; Bijnore Rs 27-8; Mansoorpur Rs 28 to Rs 29-0 and Rampur Rs 30-8.

Production, during the current season up to the end of May 15, is placed at 17.25 lakh tons as against 15.37 lakh tons for the corresponding period of the previous season. Total despatches, during the same period, were estimated at 8.75 lakh tons as against 5.29 lakh tons. Stocks with the factories, as on the 15th May, were estimated at 12.63 lakh tons as against 10.50 lakh tons on the corresponding date of last year.

Sugar production in Bihar this season, at 306,000 tons, has already exceeded last year's production by 30 per cent. It is understood that, by the time all the sugar factories in the State close for the season, the output will be 2.25 lakh tons as against the same last year. This will be the highest production in the State for the last 15 years.

According to available reports, the sugarcane situation in the Khadder area of Uttar Pradesh has become serious as most of the cane is still standing and is likely to remain uncrushed. The increased sowing of cane, due to a fall in prices of foodgrains last year and to low prices obtained for gur throughout the season, has resulted in a surplus of cane. It is even reported that some of the factories in the State will be made to run up to the end of June.

Meanwhile, reports from Bombay have stated that prices of imported British-refined sugar have firmed up to Rs 89-8 on account of apprehensions that stocks of this quality might pass only into a few hands if the reported move to take over the entire Government stocks by three parties materialises. The Government have not taken any final decision in this matter. The general feeling is that it will be well for the Government to proceed slowly as hitherto in the matter of disposal of this stock of sugar so as to provide a brake against rising prices.

The Government of India have decided to release about 1.45 lakh tons of sugar for free sale. The total release so far made for free sale, out of the 1955/56 production quota, beginning from November 1, 1955, to 8.11 lakh tons. In addition, 1.77 lakh tons of sugar had been made available for consumption from imported stocks.

Madras Review

The Peninsula

Financial Corporations in T-C & Andhra

LAST week, the annual reports of two Financial Corporations were published along with the Chairman's speeches. The Travancore-Cochin Corporation has reviewed its third year of working. The Andhra State Financial Corporation was having its first annual general meeting after 2½ months since the share capital of the Corporation was received.

The progress and problems referred to in the two reports would therefore differ. The Andhra Corporation's Chairman feels gratified that the shares allocated to financial institutions and others were oversubscribed. The Corporation has also made a net profit though small, during the 2½ months. This was possible through the prompt investment of all surplus funds in Government Securities and in deposits-with-interest in approved banks. Expenditure too was kept at the barest minimum. The Corporation has already recommended the transfer of a sum of Rs 1000 to the statutory fund, which in the words of the Chairman. marks a humble beginning.

At this stage, the Corporation finds it impossible to make both ends meet and to issue a dividend of 3½ per cent. A Government subvention has therefore been requested for. The Chairman thinks that resort to subventions will be unavoidable even if a large proportion of the funds are employed in advances, as Income-tax and Corporation tax to which State Financial Corporations are subject under the Act, will absorb over 43 per cent of their income. Apart from the four loans transferred to the Corporation by the State Government out of the advances assigned to them by the Madras Industrial Investment Corporation Ltd., no fresh loans have been made during the period.

One reason for this is that applicants for loans were not completing the various formalities with reasonable promptness. Considerable delay was experienced in securing the necessary documents from the applicants. inspite of frequent reminders from the Corporation. Few of the applicants seemed to be in possession of the chain of documents in support of their title to property: nor were the accounts up-to-date. The Chairman rightly holds that enthusiasm for business should not outrun discretion and that care was required to ensure that advances restricted to credit-worthy parties.

There is dissatisfaction over the number and variety of loans. The applications so far received were disappointingly small, probably explained by the fact that there are not many industrial concerns in the State. The applicants are mainly confined to two industries, namely tobacco drying and the manufacture of groundnut oil.

A revision in the floor and ceiling limits for advances by this Corporation and by the Industries Department respectively under the State Aid to Industries Act in view of the liberalised scheme of assistance to small-scale industries announced by the Central Government, has been effected recently and arrangements are in hand to bring out, for information of existing and potential industrialists, a brochure in English and in Telugu giving salient information regarding the financial assistance which the Corporation would render to industries and the formalities which applicants were required to comply with.

The older Travancore-Cochin Institution presents a livelier story. though the number of applications received during the year was only 26 as against 34 in the previous year. The number of applications disposed of this year was 29 as against 24 in the previous year, leaving only 10 applications pending disposal at the end of the year. Out of these 7 applications were received only during March. The loans sanctioned during the year amounted to Rs 43.248 lakhs against Rs 37.155 lakhs.

The profits for the year comes to Rs 4,33,926 as againstt Rs 3,70,028 for the previous year. A good portion of the increased profits has to be allotted for paying income tax. Out of the balance, Rs 21,690 is proposed to be added to the General Reserve, the balance being available for payment of dividend. The Corporation has therefore to approach the State Government this year for a subvention of Rs 1,27,438 as against Rs 1,47,835 during the previous year.

In his speech at the annual meeting, the Chairman points out how even with all the expenditure proposed to be incurred under the Second Plan unemployment in the State may not be relieved to any considerable extent. He is dissatisfied with the Plan allocation of Rs 72 crores to the State, which works out at the same per capita rate as is applied to the much better developed and prosperous Bombay State. There is however, a gleam of hope drawn from the assurance given by the Finance Minister that whatever unexpended allotments remained with other States would be diverted to States such as Travancore-Cochin.

The amendment of the State Financial Corporation Act by which the Corporations are enabled to advance loans for starting new industries, is welcomed by the Chairman. He also points out that the periodical discussions in the conference of the representatives of the Corporations are helpful for the conduct of business.

With the ensuing realignment of State boundaries, the redistribution of the assets and liabilities of the Madras Industrial Investment Corporation Limited and the Travancore-Cochin Corporation will have to take place.

*

NORTH INDIAN MARKETS

(Continued from previous page)

Gur

The Gur market at Hapur remained dull: and restricted loading facilities again accounted for a slight fall in the price of the commodity to Rs 10-4 per maund. Demand at the prevailing rate was also reported to be slack.

Arrivals were small at an average of 125 maunds daily, while stocks were estimated at 85.000 maunds.

*

Foodgrains

Following the Government of India's announcement to check the rising trend of Foodgrains, prices of all cereals recorded a fall during the week under review. Wheat prices eased by As 10 per maund. Arrivals in the Hapur market amounted to an average of 3,500 maunds daily, which were all absorbed by stockists as outside support was wanting. Rice prices also recorded a quiet trend.

With stock position continuing unchanged due to poor local arrivals and no further imports from the Punjab, Gram prices recorded a modest fall. The increased production of the commodity, expected in 1955/56, also acted as a depressing factor. Barley and Bejhar prices also eased fractionally, while Arhar recorded a fall to Rs 11-5 per maund as a heavy quantity of this commodity was still reaching Hapur from the Punjab and East Uttar Pradesh. The market for other Pulses ruled quiet.

In the Bombay grains market, steadier conditions were noticed. Supplies of wheat, supplied by the Government, continued to be in good request with prices moving up by Rs 5 to Rs 135 per candy. Demand for indigenous wheat was, however, small.

Demand for Rice was somewhat subdued, party due to smaller consumer demand and partly on account of the traders' desire to keep down their stocks to the minimum in the context of present conditions in the City. Raw qualities were placed higher at Rs 185 per candy as against Rs 180 quoted in the previous week.

EDITORIAL NOTES

(Continued from page 1040)

losing some years of life for the reason that they eat more than their ancestors. He has also arrived at a tentative conclusion that aging could be artificially postponed by systematic under-feeding. Experiments on rats have shown that a state of artificial childhood could be kept up through under-feeding for the whole span of normal life, after which normal feeding could prolong the life at least as much.

If man responds in the same manner as rats, the result will be disaster for the world. Those who wish to keep perpetually young will go all out for it, but the painful necessity of having to eke out a normal life in the normal way would rob the artificial youth of much of its attraction. For a world confronted with an ominously high rate of population growth, the general doubling of the average length of life would be a calamity beyond words. FAO experts must be feeling terribly alarmed.

SOUTH EASTERN RAILWAY.

ENLISTMENT OF NAMES IN APPROVED LIST OF CONTRACTORS.

Large civil engineering works are envisaged in the second Five-Year Plan period on the South Eastern Railway. There will be heavy earth work for doubling and new lines, construction and extension of bridges, construction of staff quarters, supply of stone track ballast, supply of Kiln Burnt bricks and other works of Miscellaneous nature. A substantial portion of these works will be between Khargpur and Nagpur and Khargpur and Waltair.

Applications are invited from contractors with adequtae experience and financial resources for handling such works, for enlistment of their names in the approved list of contractors of South Eastern Railway. Applications should be sent to the Chief Engineer, South Eastern Railway, Garden Reach, Calcutta—23, specifying whether the applicants wish to be registered as contractor for one or more of the following classes of works. (a) Earth Work, (b) Bridge Work, (c) Building Work, (d) Supply of Kiln Burnt Bricks and (e) Supply of ballast for track and other purposes, sand etc.

Applications should be accompanied by the following documents:—(i) Certificate of experience as contractor in this line stating his capacity to undertake and carryout works of aforesaid nature satisfactorily as vouched for by a responsible official or Firm, (ii) Proof of financial position. (iii) Up-to-date Income-tax clearance certificate and (iv) in case of a registered company or a limited concern a copy of constitution of the firm is also to be furnished.

Applications will be received by the Chief Engineer, South Eastern Railway, Garden Reach, Calcutta—23.

E-32. CHIEF ENGINEER.

Madras Review

South Indian Markets

Pepper 'Turns the Corner?

INDIAN Pepper is having a testing time now with Sarawak new crop arriving in the world market. The rate for Sarawak Pepper is now quoted 5 cents per pound less than Indian Pepper in the New York market. As oversets demand is very poor, transactions on the terminal markets in India are very few and prices remain more or less stationary. In the Alleppey market, the rate is quoted around Rs 125 per candy.

With the increase in competition from Sarawak and Lampong, growers in India will naturally find it difficult to sell their pepper unless they are prepared to make substantial concessions in prices or something unexpected turns up in their favour.

The main topic of discussion among trade circles is, therefore, when pepper will turn the corner or whether the present phase is only a temporary one. But some circles believe that the worst is now over and their belief is based on the following facts:

1. Scarcity of stock in the USA and Europe;
2. Eagerness on the part of American and European buyers to buy in advance against the possible expansion of demand during the coming autumn:
3. Unwillingness on the part of Sarawak assemblers to sell forward: and
4. Possibility of Russian and Chinese buying.

The short-range view for pepper, however, appears to be bullish in view of the approaching autumn demand and resistance to lower prices from both Indian and Sarawak growers. The arbiter of prices is, no doubt, New York.

Reports from New York have come to the effect that the market there has been displaying a steady undertone on improved dealer interest and scattered grinder demand, which hold values slightly over sellers' ideas. Sarawak spot and 'awaiting release' are quoted at 30 cents per pound; 'afloats' as 28 to 28½ cents and Lampong June delivery at 28½ cents.

Meanwhile, forward trading in pepper is expected to begin in India shortly. It is understood that the Indian Pepper and Spices Trade Association at Cochin will be granted recognition under the Forward Contracts Act, 1952, for conducting forward trading. Initially, forward trading in this commodity may be confined to Cochin only.

*

This is the time when Ginger will be cultivated on West Coast. Export demand for this commodity has been exceptionally strong during the past few years; and many times it has realised higher prices than pepper. This may be evident from the fact that, when pepper is quoting around Rs 725, ginger is quoted higher at Rs 800 per candy.

Short supply in the world has been responsible for the steep rise in the value of Indian Ginger. As many are attracted by the handsome price of the commodity, more land is expected to be brought under the crop during the current season.

*

Although there has been a slight fall in the production of world Rubber, the year's prospects are being assessed on the basis that a larger quantity of rubber than last year can be produced. The aggregate output, during the first four months of the current year, is 6,164 tons as compared with 5,741 tons in the corresponding period of last year. Consumption for the same period amounts to 9,630 tons as against 8,911 tons.

The estimated deficit in requirements of rubber for the current year as a whole is estimated at 3,000 tons. India has, therefore, to rely on imports for some years to come till the full benefit of the replanting schemes, drawn up by the Rubber Board, materialises.

*

The Madras market for Groundnuts ruled quiet with prices showing an easier tendency, Despite lower prices, business done was on a small scale as crushers were taking up only small quantities to meet their immediate requirements. The rate for superior oil-quality seeds was quoted at Rs 160, while the bold variety was quoted at Rs 156 per candy. Arrivals ranged between 20 and 45 tons a day.

Crop reports from Coimbatore show that the early-sown winter crop is good with the recent showers. Harvest of the summer crop is in progress in Tanjore and South Arcot districts and arrivals are increasing.

In the Groundnut Oil section, the rate for the ready position declined to Rs 320 per candy from Rs 326 quoted in the previous week. Calcutta interests took up only small quantities, while local consumers showed only limited interest in their purchases. There was no business with overseas buyers in the absence of export quota.

*

In the Madras Tanned Hides market, arrivals of Cow hides were fair, while clearances were moderate with prices quoting six to twelve pies per pound lower. Arrivals of Buff hides were fair, but clearances were reported to be limited. Arrivals of Cow Calf and Buff Calf showed no change, clearances being small: and prices for these were quoted one to two annas per pound lower.

In the export section, enquiries were patchy and price movements were rather irregular. UK prices were quoted at 46½d for 5/5½ lbs; 37½d for 8/8½ lbs and 35d for 10/12 ibs runs. Although there was some enquiry for Buff hides, business failed to develop.

In the Tanned Skins section, prices of all qualities were quoted one to two annas lower; and the only exception were good middle class tannages in Sheep, which were unchanged.

In the export section, there was fair demand for 11/12 lbs goats run in prime tannages, business being reported at 12sh 3d to 12sh 6d. In Sheep skins, business was reported done in light weights of middle class tannages in fifths selections at 9sh 9d to 10sh in the averages of 6/6½lbs.

Prices of Raw Hides were slightly lower with Calcutta dealers quoting As 4 lower.

In the Raw Skins section, prices of light weight goat skins were quoted Rs 20 to Rs 20 per 100 skins lower. Prices of Sheep skins ruled, however, firm.

*

In the Madras Foodgrains market, prices, especially of Pulses, ruled firm due to limited supplies. Moreover, crop estimates for the period up to December 24, 1955, released by the Madras State, were also a contributory factor for the firmness in prices. Small arrivals were, therefore, easily absorbed then and there. Following are the figures:

Acreage:	1955	1954
Blackgram ...	122,100	128,500
Greengram ...	127,000	128,000
Horsegram ...	534,100	564,800
Production (in Tons):		
Blackgram ...	12,800	13,500
Greengram ...	10,100	10,300
Horsegram ...	50,000	48,900

TEZPORE TEA COMPANY, LIMITED

Notice is hereby given that the period for submission to the Company of Fractional Certificates for allotment of fully paid Ordinary Shares in lieu thereof in regard to the issue of Bonus Shares on 12th December 1955 has been further extended to 11th August 1956.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.,
Managing Agents.

Calcutta, 6th June, 1956.

DALMIA CEMENT (BHARAT) LIMITED

DALMIAPURAM

NOTICE

IS HEREBY GIVEN THAT THE FOURTH ORDINARY ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT DALMIAPURAM (DIST. TIRUCHIRAPALLI) on FRIDAY the 20th July 1956 at 12 Noon to transact the following business.

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December, 1955.
2. To declare dividend.
3. To elect Director in place of the retiring Director Shri M. Satyanarayana who retires by rotation and is eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., the retiring Auditors are eligible, for re-appointment.
5. Any other business that under the Articles of Association of the Company may be transacted at an Ordinary Annual General Meeting.

The share transfer books of the Company will remain closed from THURSDAY the 21st June 1956 to FRIDAY the 20th July, 1956 both days inclusive.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LTD.,
For HARI BROTHERS PRIVATE LIMITED,
J. DALMIA
Director,
Managing Agents.

Dated: 22nd May, 1956.

NOTE:—The Dividend if declared will be payable on or after 10th August, 1956 to the Registered Shareholders as on 20th July, 1956.

Every Shareholder entitled to attend and vote is entitled to appoint proxy to attend and vote instead of him|her and such proxy need not be shareholder. The proxies should, however, be deposited at the registered office of the company not later than 42 hours before the commencement of the meeting.

OLYMPUS

(Continued from page 1050)

of the various changes suggested in the taxation of business profits. The combined effect of the narrower definition of deductible expenses and of the various measures suggested for the control of evasion, might yield at least a further Rs 20-30 crores a year."

The shortfall between the yields from Mr Kaldor's proposals and the goal of Rs 1,250 crores is referred to by the Professor thus: "The remainder of the additional revenue would have to be raised from land revenue and excise duties, which are outside the scope of the present report." Although the anticipated increase in tax revenue might take some years, an important desideratum, the need for the restraint on consumption as recommended by the Taxation Enquiry Commission, is capable of immediate achievement: "In terms of their restraining influence on private expenditure the new taxes will begin to take effect from the moment the liabilities are imposed."

Mr Kaldor has been alive to the need for giving relief to the middle-class Indian. The maximum of income tax is recommended to be 45 per cent; super-tax would be abolished—but, instead, there would be four taxes primarily affecting the super-tax cadre of assessees. For example, the Professor recommends that, in respect of the progressive expenditure tax (which would achieve a maximum rate of 300 per cent), the lowest limits should be such as "would exempt reasonable middle class living standards from liability to this tax altogether."

The Professor's conclusion is clearly drawn, and he is emphatic on this point, that moderate rates alone can help to break the vicious circle of progressively higher tax rates accompanied by as sharp an increase in tax evasion. As he points out, "when the marginal rate of income tax is 90 per cent, the net profit on any particular concealment is a 1,000 per cent of the post-tax income." If it is recognised that it is necessary and desirable to break that vicious circle, how this may be done is described by Professor Kaldor:

> "The adoption of a comprehensive tax-base would be a great deal easier—imposing fewer strains on the social fabric and on the administration of the tax system—if it were introduced with a moderate rate schedule; and this would nevertheless inaugurate a more truly equitable and progressive tax system, as well as bringing in a good deal of additional revenue."

Such, then, the important features of the Kaldor recommendations which so far have suffered neglect, if not distortion, in the press. It would be a pity if, as some quarters are already speculating, the Kaldor report were to be sabotaged even before the suggestions have been examined in detail. How far official comment in this regard is a straw in the wind is anybody's guess: Sir Chintaman Deshmukh and the Ministry of Revenue, we may recall, were both at some pains to refute certain sets of figures cited by Mr Kaldor.

I needs must add two postscripts to this Olympian despatch. The first is, that Professor Kaldor is more worried that his proposals will be considered too lenient—his is not an anxiety that they will be thought too onerous. It would be strange, consequently, if the Report is attacked both because leftist Parliamentarians consider it to appease capitalism and because Big Business believes that the new levies are too onerous! In urging that moderate scales of tax best suit Indian conditions, Professor Kaldor says:

> "I realise that these moderate rates (especially when set against the high normal rates in force at present) may arouse opposition in political quarters for being unduly lenient in appearance. Nonetheless, I am strongly of the opinion that India should not at the present stage impose taxation on capital and income at heavier rates than I have suggested here."

Secondly, Mr Kaldor is not the impractical economist then an academician so often is. The strongest debunking of the idea of a ceiling on incomes is to be found in his Report. Impliedly, he has also expressed the view that indiscriminate "official" statements can be harmful. The following quotation is of interest in this regard:

> "It would serve important national interests if public pronouncements on this subject could, as early as possible, be veered round towards the objective of a reduction in the inequalities of wealth through comprehensive and effective taxes on wealth instead of the spectacular but meaningless (and indirectly harmful) notion of an income ceiling.
>
> "The authors of these proposals never stop to inquire just what is the meaning and definition of the term 'income' which they so light-heartedly wish to be subject to an absolute upper limit; and how such proposals could serve to reduce social inequality so long as wealth continues to be privately owned."

In fine, Mr Kaldor may be said to have emphasised the need for enforcement of the Income Tax Act; and, to this end, his recommendations have taken the form of levies which will facilitate administration and enforcement of tax law.

CLIVE STREET GOSSIP

giltedged market like Bombay's; and (3) he received apt aid from Mr Parks who, so to say, made him an instrument of an open market policy. To Mr Don (on whose successful initiative in 1923 I dilated in the last issue) and to Mr Parks, belongs the credit of a correct appreciation of a favourable psychological setting for the new loan and of an energetic application of suitable techniques for preparing the ground on the eve of a loan. The atmosphere, or "hawa" as the professionals would describe it, is an essential element in success.

✱

Death has removed another old associate of Indian Finance. Mr A. S. Iyengar stood, once upon a time, paraphrasable with the Associated Press of India on the one hand, and with Mr Durga Das on the other. Time also was when Iyengar and Durga Das were paraphrasable with Hill-Bird, for long associated with Olympus. Both of them conquered fresh fields and branched out into careers of high distinction and notable achievement. But, I have no doubt that their lively partnership in the API days, under the leadership of veteran K. C. Roy and the sub-leadership of debonair Usha Sen was prized by them, as by the whole press, for work alertly undertaken, competently done, and performed in the finest team spirit. In the early years of this journal, Delhi-Simla notes were in their charge; and it would be difficult to say whether it was Iyengar's despatch or Durga Das's. For my part, I valued the connection; and the readers appreciated the insight and the inside information of Olympus. It is a great consolation that Durga Das is still going strong like Johnnie Walker; and the Hindustan Times bears on its pages the impress of his vigorous and versatile personality.

✱

I would like to wind up this week's Gossip with a tribute to another old friend. Mr Das Gupta, who has just retired from the Statesman, is the oldest living Bengalee friend I have; and, throughout the forty years I have known him and in his ascent to the Chief Reportership, step by step, I have been struck by his quiet but confident competency and by his unruffled poise in any situation, and in every relationship. He has earnt this freedom from routine responsibilities; but he is active as ever and more mellowed than at any time. The Statesman will, I am sure, continue to avail itself of his sagacious counsel and his speciality for objective covering of big events and promising developments.

Nearly twenty years ago, Das Gupta's hunch led him to a vision of jute's future; his two-column story, based on skilful research, placed Bengal's golden fibre, firmly and impressively, on India's economic map. —EAVESDROPPER

THE HOWRAH-SHEAKHALLA LIGHT RLY. CO. LTD.

NOTICE is hereby given that the one hundred and twentieth Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta 1, on Friday, the 29th June, 1956, at 11-25 a.m. for the following purposes.

1. To receive and consider the audited Accounts for the half-year ended 30th September, 1955, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a dividend on the Ordinary Shares.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 19th to the 29th June, 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta,
the 5th June, 1956.

NOTE: The dividend, if declared will be paid on or after the 29th June, 1956, only to those persons who are registered as the holders of Ordinary Shares as at that date, or to their mandatees.

Transfers to qualify for the dividend must be LODGED at the Registered Office of the Company by 4 p.m. on the 18th June, 1956.

EXPLANATORY STATEMENT.

This meeting is being convened to consider the Accounts for the half-year ended 30th September, 1955 in accordance with the provisions of the Company's Articles of Association. Consolidated Accounts for the year (including this half-year) ended 31st March, 1956 will be submitted at the Annual General Meeting in due course.

THE TATA IRON AND STEEL COMPANY LIMITED

NOTICE

The transfer books of the Company will be closed from Friday, the 6th July to Monday, the 30th July, 1956, both days inclusive.

The dividends for the year ending 31st March, 1956, when sanctioned will be made payable to those shareholders whose names stand on the Share Registers of the Company on Monday, the 30th July, 1956.

By Order of the Directors,
TATA INDUSTRIES PRIVATE LTD.,
, MANAGING AGENTS,
J. R. D. Tata,
DIRECTOR.

BOMBAY,
5th June, 1956.

Indian Trade & General Insurance Co., Ltd.

✱

A Satisfactory Year

✱

Dividend Increased

Statement by the Chairman, Lala Karam Chand Thapar, on the accompanying Report, Accounts and Balance Sheet for the year ended 31st December, 1955.

Once again I am happy to be able to report further expansion of your Company's business, and if this has not been so marked this year as in the last few years, I hope you will agree that the accounts presented disclose a continued strengthening of your Company's reserves which will enable us to play a full part in the increased tempo of industrial expansion which plays such a large part in the Government of India's Second Five-Year Plan.

What is of paramount importance is that we have been able to maintain our place amongst the leading Indian Insurance Offices, an achievement which should not be lightly disregarded in these highly competitive days. Our gross world-wide Premium for the year fell a little short of a Crore of Rupees and our Nett Premium in all Departments totalled Rs. 58,63,163 as against Rs. 57,10,597 in 1954.

To the Nett Premium income of Rs. 58,63,163 must be added Interest and Dividends (less Income Tax) amounting to Rs. 1,91,571 and Miscellaneous Receipts of Rs. 13,587; the total income of the Company thus amounted to Rs. 60,68,321; Claims Paid and Outstanding take Rs. 31,40,787 (53.5 per cent.), Commissions, Expenses of Management and Foreign Taxes Rs. 23,75,359 (40.5 per cent.); and Bad Debts and other debits account for a further Rs. 1,19,803 (2.04 per cent.) leaving a balance of Rs. 4,32,372 to which must be added the balance carried forward from the previous year amounting to Rs. 17,211, making a total credit balance of Rs. 4,49,583 (7.67 per cent.). Out of this balance an amount of Rs. 2,59,303 (4.4 per cent.) has been placed to the Reserve for Unexpired Risks in all Departments, and after making a provision of Rs. 43,033 for Taxation there is an available balance at the end of the year of Rs. 1,45,247.

Having regard to the satisfactory underwriting results combined with the favourable margin between the aggregate Book and Market Values of our Investments at the close of the year, your Directors have decided to recommend an increase in the Dividend from Rs. 1-8 to Rs. 2 per Share, free of tax.

The sum of Rs. 1,20,000 which it is proposed to distribute to Shareholders is well covered by Nett Interest earned by the Company on its Investments which amount to Rs. 1,91,571.

FIRE DEPARTMENT.

	Nett Premiums	Surplus	Percentage of Premiums
	Rs.	Rs.	
1955 ..	28,87,406	2,13,827	7.4
1954 ..	27,67,331	3,25,415	11.7
1953 ..	25,97,027	2,47,346	9.5

In my statement to Shareholders last year I said that consequent upon the reduction of Fire premium rates combined with some serious Fire Losses reported in the early months of 1955 it was unlikely that the very favourable underwriting results of 1954 would be repeated this year and my prediction has unfortunately been justified in the event.

In the circumstances, however, results can be considered satisfactory and credit is due to those in charge of the Company's Underwriting in this department.

That there was only a modest increase of 4.3 per cent in the Premium income is to an appreciable extent due to the devaluation of the Pakistan Rupee and the substantial reduction in the Fire premium rates to which I have already referred.

Indications this year point to an increase of business in this branch and a possible improvement in the Underwriting results; let us hope that events will in due course justify my guarded optimism in this regard.

MARINE DEPARTMENT.

	Nett Premiums	Fund as at 31st December	Percentage of Premiums
	Rs.	Rs.	
1955 ..	19,77,035	18,97,941	96
1954 ..	18,80,133	16,92,120	90
1953 ..	16,75,458	13,25,967	80

There is little change in market conditions since my statement last year.

There are possibly some signs of a slight improvement in claims for theft and pilferage but on the other hand the very small profit margin on which shippers are operating in the present "buyer's" market is undoubtedly reflected in the volume of damage claims received and one is sometimes led to believe that we are now expected to cover trading losses however they may arise.

One welcome event is the reintroduction of a limitation of the period of cover after discharge of cargo but current rates are still below those prevailing in 1939 when conditions all round were infinitely better and there has been no halt in rate cutting notwithstanding the substantial reduction in "War" rates.

The continuation of the present competition for Premium income irrespective of results can serve nobody's interest but the assured's.

Once again we have thought it prudent to strengthen the Marine Fund by a transfer from the Profit and Loss Account which brings our Reserve up from 90 to 96 per cent. of our premium income—it is not out of place, however, to remark here that had your Directors decided to maintain the previous level of Reserve at 90 per cent there could have been a small Underwriting profit on the account.

ACCIDENT DEPARTMENT.

	Nett Premiums	Surplus	Percentage of Premiums
	Rs.	Rs.	
1955 ..	9,98,722	48,843	4.9
1954 ..	10,63,133	(1,43,726)	(13.5)
1953 ..	9,03,662	36,104	3.9

I said in my statement last year that as a result of more selective Underwriting there was likely to be a fall in premium and this has proved to be the case; on the other hand, we have as a result succeeded in reducing our loss rate from 63.9 to 52 per cent and are once again able to make a transfer to Profit and Loss Account.

Private Motor Car business, however, continues to be unremunerative and the level of premium rates bears no economic relation to the ever-increasing cost of claims; in this context it is astonishing to find people occupying positions of responsibility saying in the same breath that whilst the loss experience displays an upward trend and a further increase of rates for Private Car Comprehensive Cover is warranted, we should not rely on increased rates to enable us to put this business on a profitable basis. With more and more Private Car traffic on the roads and the ever mounting cost of repairs, premium rates have fallen once again well below an economic level and an upward revision of rates is already well overdue.

It has only been by developing other branches of Miscellaneous Accident business that we have been able to produce a surplus in this account.

BALANCE SHEET

The Balance Sheet follows the same pattern as the previous year and calls for no particular comment; interest and dividends less tax deducted at source give the satisfactory return of 4.23 per cent on the aggregate Book Value of our Investments.

On these occasions I am expected to say something about major events which may directly or indirectly affect our business and of course the nationalisation of Life Assurance early this year must take pride of place; however, so much has already been said on this subject that there is little point in my adding to the many and various views already so freely ventilated; in two or three years' time we shall be in a position to judge whether this experiment, which has proved a failure in almost every other country in the world where it has been tried, can be a success here in India.

The repercussions are twofold, first, composite companies are now undergoing a surgical operation which will separate the Life from the General section of their business and whilst I have no doubt that the operation will be pronounced successful, I fear that many of the weaker patients will not long survive the surgeon's knife.

Secondly, General Insurance Offices such as yours are now in the limelight and those who think that nationalisation is the panacea for all ills now focus their gaze on us.

At a time when it is fashionable to decry private enterprise and those who have devoted all their time, talent and energy to building it up, I may perhaps be permitted to present a few facts about your own Company which if they prove nothing else may convince the discerning few that far from having anything to be ashamed of we can, on the contrary, take pride in the sound and conservative lines upon which we have managed and continue to conduct our business.

I set out below an analysis of the total Nett income and Outgo of your Company over the period of 12 years since we commenced business in 1944:

	Rs.
Total Premium Income	3,26,72,376
,, Interest and Dividends ..	13,17,874
,, Miscellaneous Receipts ..	2,30,437
	3,42,20,687

	Rs.	%
Total Claims paid and Outstanding ..	1,48,13,904	43.29
,, Commissions paid —Nett ..	33,73,278	9.86
,, Expenses of Management ..	1,08,53,843	31.72
,, Reserves for Unexpired Risks	38,41,005	11.22
,, Other Provisions and Reserves ..	9,49,557	2.77
,, Dividend ..	3,90,000	1.14
	3,42,20,687	100%

The total Commission and Management Expenses at 41.58 per cent. of the Nett Premium will bear comparison with almost any company anywhere in the world and there can surely be no room for criticism on this account whilst the claims ratio most certainly reflects the soundest Underwriting principles.

As against just over Rs. 21 lakhs of Reinsurance Premiums ceded abroad in 1955, we received Rs. 38 lakhs of Nett Premiums from our Overseas connections—surely this does not justify criticism on account of mismanagement.

We give employment to a staff of over 300 to whom we paid last year in salaries, wages, contribution to Provident Fund and Bonuses in the aggregate a sum exceeding Rs. 10 lakhs; it will not be out of place to add here that we paid bonus to our staff long before Shareholders received any return on their investment. The Founder of your Company, your ex-Managing Director and present Chairman, has throughout this period of 12 years entirely waived the remuneration of Rs. 20,000 a year to which he was entitled under the Articles of Association. I sincerely hope that these few facts and figures will be sufficient to convince you that we are quite capable of running our business in accordance with the best traditions and hardly merit the wild allegations constantly levelled against the industry from certain ill-informed quarters.

Although the Government have recently repeated their assurances that they have no intention of nationalising General Insurance, it cannot be denied that our industry suffers from certain long-standing ills which must be put right; in this connection I strongly deprecate the feeling, often expressed by some executives of Insurances Offices, that we should ask Government to put these matters right for us: surely it is not impossible for Indian Offices acting together with patience and forbearance to find an equitable solution to their problems, and it is a terrible confession of inaptitude and weakness in the trade if we cannot put our heads together and find a remedy for our own ills.

I sincerely hope that those now seeking a remedy will have learned from the lessons of the past these can in my view be summed up very simply as follows:—

(1) No amount of legislation will turn bad management into good management.

(2) What might be termed "Police methods" are no more likely to be successful in the future than they have proved to be in the past.

The present state of affairs arises entirely from the lack of confidence between one company and another and it is quite obvious that an entirely fresh approach must now be made; any new approach to be successful must spring from the utmost good faith for without this any measures taken, no matter what they may be, are foredoomed to failure; I feel confident, however, that before very long commonsense and the hard school of experience must succeed, as it has done in other countries of the world, in building up a sound and virile Indian Insurance Industry.

Another milestone in the history of Insurance in this country is the formation of an Indian Reinsurance Corporation which it is expected will shortly commence operation; there is no doubt that, properly managed, as I have every reason to believe it will be, such an institution will perform a useful function in our domestic affairs and there is no reason why in the course of time it should not broaden its activities to embrace the larger markets of the world.

Your Company has expressed its confidence in the future of this Corporation and as Promoters have already agreed to take shares of the total face value of Rs. 5,70,000 which is the maximum amount to which we are entitled to subscribe on the present basis of allocation of shares; I would like to take the opportunity here afforded to wish this brave new venture every success in its operations.

What of the future? I firmly believe that if we continue to apply all our energies and resources to the proper fulfilment of our functions as a necessary adjunct to the industrial and economic progress of the country we cannot but grow and prosper with it.

Within the limits of our resources we are doing what we can to train and build up a body of young men who will be technically and otherwise equipped to fill responsible positions in our organisation in the future, and we are also doing everything we can to support and encourage the recently formed Federation of Insurance Institutes (J. C. Setalvad Memorial) which gives such excellent opportunities to those in our profession who wish to equip themselves with that technical knowledge of the various branches of our business which is so essential to sound management in the future.

One of our greatest assets and one which does not figure in the Balance Sheet must always be in the persons of those who represent us in India or abroad, and if this is a tribute to them for good work put in in the past I hope it will also act as a spur to even greater efforts in the future.

I cannot conclude without once again paying tribute to Mr. T. M. Sturgess, our General Manager, and the Executives and Staff of the Company, wherever they may be, for their continued devotion to the interests of your Company, and finally I must thank those good friends of ours at home and abroad whose confidence in us has contributed so largely to the position which your Company has been able to build up and maintain amongst the leading Insurance Offices in India.

THE HOWRAH-AMTA LIGHT RLY. CO. LTD.

NOTICE is hereby given that the one hundred and twentieth Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta 1, on Friday, the 29th June, 1956, at 11-20 a.m., for the following purposes:

1. To receive and consider the audited Accounts for the half-year ended 30th September, 1955, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a dividend on the Ordinary shares.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 19th to the 29th June, 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

T. LESLIE MARTIN,
Governing Director.
Managing Agents.

5th June, 1956.

THE WEAKNESS OF STERLING

(Continued from page 1042)

The reason why industrial equities have been affected to a relatively less extent than Government Loans by the adverse tendency towards the end of May, lies precisely in the fact that the contti-nuation of inflationary conditions is now generally taken for granted. Evidently the Government's disinflationary measures have not been sufficient to check the wages spiral. Unless more drastic steps are taken this means not only higher wages but also large turnovers and higher profits. Taking a short view, that it is a bull point for equities even though the adoption of additional disinflationary measures might at any moment affect them unfavourably. Moreover, they would be bound to suffer through a sharp decline in Wall Street or through a trade recession in the United States.

That the trend of wages has a decisive effect on the economic situation is at last beginning to be realised. Some years ago Professor Hicks, in an address before the British Association for the Advancement of Science, put forward a theory that, instead of being on the gold standard, we are now on the wages standard. This means that the volume of credit and the trend of prices, which depended on the size of the gold reserve when we were on the gold standard, now depends on the level of wages. It is utterly futile to tackle the symptoms of inflation unless we are able and willing to deal with the fundamental cause, which is the non-stop rise in wages. So long as purchasing power continues to expand as a result of the unending succession of wages increases, no amount of credit restriction or high bank rate can discourage industrial firms from producing to the limit of their capacity, from expanding their capacity with the aid of capital investment, and from putting any wages increase on the prices of their products.

The supreme test of the effectiveness of the Government's measures lies not in the trend of the volume of bank loans or deposits or in the behaviour of sterling and of the gold reserve, or even in the trend of prices, but in the ability of these measures to check the wages spiral. From this point of view the result has been to date entirely negative. Possibly it was because of the slight improvement in the position regarding sterling, the gold reserve and prices, that the Government has been reluctant to take really drastic masures to break the wages spiral. If so then the weakening of sterling and the deterioration of the gold position and the balance of payments position which probably accompanies it, may yet prove to be a blessing in disguise. In face of an acute menance, Mr Macmillan stands a better chance of over-ruling his more timid colleagues in the Cabinet, who have hitherto opposed drastic measures on the ground that the situation was not sufficiently grave to justify them.

HERCULES INSURANCE COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the TWENTY-FIRST ORDINARY GENERAL MEETING of the shareholders will be held at the Registered Office of the Company, 16, Hare Street, Calcutta on Thursday the 5th July, 1956 at 3-30 P.M. for the purpose of receiving the Directors' and Auditors' Reports, adopting the Statement of Accounts and Balance Sheet for the year ended 31st December, 1955, declaring a Dividend, electing Directors and appointing Auditors and fixing their remuneration.

Two of the Directors retiring by rotation, namely, Sir Badridas Goenka and Rai Bahadur Moongtu Lall Tapuriah are 73 years and 70 years of age respectively. Special Notices have been received by the Company of the intention to move resolutions proposing their re-election to the Board and specifically declaring that the age limit under Section 280 of the Companies Act, 1956 shall not apply to them.

The Share Transfer Register will be closed from the 25th June to the 5th July, 1956, both days inclusive.

By order of the Board,
G. RAMABADRAN,
Secretary.

Calcutta,
5th June, 1956.

Note:—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Registers as on the 5th July, 1956.

★ WORLD OF JUTE

(Continued from page 1043)

until the USSR is good and ready to do business in this regard. Russia can't be hurried: but demand from this source is inescapable. As the flow of goods from the Soviet Union gathers in volume, then and only then may we expect any large-sized purchase in the Calcutta market.

Discount. I suggest the third source of diffidence, I do not see how, in the forseeable future, any packing material can measure up to the inexpensiveness and strength of jute goods; nor do I see how, in the next decade or so, any country could count with confidence on Pakistan as a source of raw jute. Demand for jute goods will be maintained—it will increase—and India will continue to be the most important supplier of gunnies to the world.

Turning now to the final point, it needs to be borne in mind that rises in stocks of jute goods were registered only after IJMA mills had decided upon, and embarked upon, a substtantially higher level of production. The first quarters in the calendar year are notoriously prominent for the lower tempo of interest and demand for jute goods. It may be a fool-hardy prediction on my part, but I think it is very likely indeed that the accretions to stocks during the first six months of 1956 will be absorbed in the second half of the year.

I am contenting myself, for the current week, with the brief analysis I have given of the four main talking points about the World of Jute, 1955-56. In subsequent issues, I shall be dealing in greater detail with each one of them.

★

After a steady opening, the Calcutta jute goods market closed the week on a quiet note. Sentiment in earlier dealings had been helped by persistent rumours about IJMA also recommending fixation of minimum export prices for jute goods. Erratic fluctuations marked trading after midweek when every day produced a fresh rumour. In the first place there was the report about Sterling devaluation, which on Tuesday was responsible for heavy speculative activity in the fatka. Wednesday found the market somewhat confident as reports had then been received about the heavy rainfall in Assam. The gain had, however, been offset by rumours of increase in goods stocks with mills as at the end of May. With Thursday confirming the rumours—stocks had risen by 11,200 tons to 119,100 tons—the decline had been halted by a fresh rumour to the effect that IJMA had decided to curtail production.

The following table shows the trend of prices during the week:

	Week's Opening		Week's Closing

Chartered Bank Buildings,
Calcutta, 25th May 1956.

Note: A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his place. Such proxy need not be a member of the Company.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO. LTD.

NOTICE is hereby given that the Fifty-first Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday, the 29th June, 1956 at 3-35 p.m. for the following purposes:—

1. To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 30th September, 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.

The Register of Members of the Company and the Transfer Books will be closed from the 23rd June, 1956 to the 29th June, 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

By Order of the Board,
MARTIN BURN LTD.
S. N. MUKERJEE
Managing Director,
Managing Agents.

CALCUTTA,
The 31st May, 1956.

EXPLANATORY STATEMENT.

N.B.—This meeting is being convened to consider the accounts for the half-year ended 30th September, 1955, in accordance with the provisions of the Company's Articles of Association. A consolidated account for the year (including the half-year) ending on 31st March, 1956, will be submitted at the Annual General Meeting in due course.

Stock Exchanges

PROFIT-TAKING AT BULGES: BUYING AT DIPS

Watch-Dog Writes:

ONCE again, activity in stock markets has been generally restricted, and price movements have been irregular with profit-taking at bulges and buying at dips. Nevertheless, there are a few scrips which continue to receive good support on dividend and other considerations.

The Calcutta Stock Exchange showed a mixed pattern of trading, but the undertone remained fully steady.

Activity on the Bombay Stock Exchange was confined to a few selected scrips, which made strident advance.

On the Madras Stock Exchange, selected Textile and Planting issues continued to meet with good investment enquiry at steady levels.

Prices on the London Stock Exchange, after suffering a sharp setback, recovered partially toward the close.

Wall Street closed barely steady.

*

Calcutta

THE local Stock Exchange made a mixed showing during the past week when the turnover was somewhat on a reduced scale. The view, that the yield obtained on various scrips on the basis of the current high level of prices was unattractive, was the main check on a further rise in prices. Operators were, therefore, inclined to book their profits at the recent high levels and to enter the market to make purchases at the lower levels in view of the prospects of higher dividends by some companies. The market finished the week with minor losses on balance.

The improvement, noticed in the Giltedged market in recent weeks, was carried a stage further during the week with some medium and long-dated issues recording fractional gains. 3 per cent 1986 Conversion Loan, after touching a high of Rs 78-0 from Rs 77-7, finished the week at Rs 77-8. 3½ per cent 1964 changed hands at Rs 98-14 and 4 per cent 1960-70 at Rs 101-8.

The only bright feature in the Banking section was Punjab National which were easily absorbed upto Rs 55-8 from Rs 54-0 on the announcement of the bonus issue. United Commercial moved between Rs 50-8 and Rs 50-12, while Hind were enquired upto Rs 32-0.

Jute shares, after maintaining increased activity till mid-week, turned a shade quieter toward the close, pending definite news with regard to the export price minimum scheme. Howrah improved to Rs 24-3 from Rs 23-13 and Birlas to Rs 19-0 from Rs 18-8. National touched a high of Rs 25-10 and a low of Rs 25-4, to finish at Rs 25-6, while Nuddea changed hands at Rs 42-8 to Rs 42-12 Barnagore at Rs 148 to Rs 150; Delta at Rs 212 to Rs 215 and Chitavalsah at Rs 15-3 to Rs 15-6.

Following the recent announcement of the recommendations made by the Industrial Tribunal, Coal shares continued to be neglected though a few scrips recovered some of the losses toward the close due to moderate support extended at lower levels. Bengal, after being marked down to Rs 534 from Rs 539, recovered to Rs 536, while New Beerbhoom shed only a few annas to Rs 19-3. Despite the maintenance of the dividend, Burrakur were on offer at Rs 13-1, to close better at Rs 13-6. Equitable were done at Rs 29-6 against Rs 30-4 quoted in the previous week and Raneegunge at Rs 11-2. Central India moved narrowly between Rs 7-2 and Rs 7-4. Katras Jherria met with some enquiry upto Rs 60-4 from Rs 59-0 following the increase in dividend from Rs 3 to Rs 3-8 per share for last half-year.

Although Textile shares recorded only moderate business in view of the declining trend in exports, prices remained mostly unchanged due to higher prices obtained for cloth in the domestic market. Kesoram changed hands at Rs 18-3 to Rs 18-5; Cawnpore at Rs 8-13 to Rs 8-15; Elgins at Rs 27-4 to Rs 27-8 and New Victoria at Rs 2-8 to Rs 2-10

Tea shares remained neglected and turnover was moderate. Operators were inclined to await the results of the first sale of the new season's teas before extending their commitments. Banarhat were slightly cheaper at Rs 369 against Rs 372 quoted last week; Brooke Bond at Rs. 23-2 against Rs 23-14; Bishnauth at Rs 25-10 against Rs 25-14 and Teliapara at Rs 170 against Rs 176. Jayshree and Patrakola remained, however, steady at Rs 12-4 and Rs 181 respectively.

Sugar shares came in for selective enquiry. Darbhanga were taken upto Rs 23-3 from Rs 22-14; Ramnugger upto Rs 29-2 from Rs 26-8 and Carew upto Rs 8-14 from Rs 8-10. SKG were a narrow market around Rs 13-6 with Belsund marked down to Rs 11-4 from Rs 11-10.

(Continued on page 1094)

SHREE GOPAL PAPER MILLS LIMITED

Notice is hereby given that an Extra-Ordinary General Meeting of the Members of the Company will be held on 25th June, 1956 at 3 P.M. at the Registered Office of the Company at 5, Royal Exchange Place, Calcutta—1, to pass the following resolutions, with or without modification:—

(i) As an ordinary Resolution:
"Resolved that with effect from the date of commencement of the companies Act, 1956 and in compliance with Section No. 294 of the companies Act, 1956, the company doth hereby approve and consent to appointments of the persons, firms and/or companies detailed in the appendices A & B herewith attached who are at present working as sole distributors of the company for different areas for sale of paper and stationary products of the Company on terms and conditions on which they are working and that the Directors be and they are hereby authorised, to enter into and complete agreements with all or any one or more of them, at their absolute discretion for such periods (not exceeding five years, and subject to the provision of Section 361 of the said Act wherever applicable) as the Directors may deem proper, and at their discretion to cancel any one or more of such appointments, and or from time to time to vary the terms and conditions of such appointments."

(ii) As Special Resolution:
"Resolved—that the Articles contained in the printed document submitted to the Meeting and for the purpose of identification signed by the Chairman thereof be & are hereby approved and adopted as Articles of Association of the Company in substitution for and to the exclusion of all the existing Articles of Association of the Company.

(iii) As Special Resolution:
"Resolved—that with effect from the date of commencement of the companies Act, 1956, the company accords consent to M/s Radha Kishan Balkishanlal in which Seth H. P. Poddar, a Director of the Company is interested continuing to hold a place of profit as a Distributor of the Company."

(iv) As Special Resolution:
"Resolved—that with effect from the date of commencement of the companies Act, 1956, the company accords consent to Messrs. Lakshmi Agencies, in which Shri R. P. Agarwal, a director of the Company, is interested, continuing to hold a place of profit as distributor of the Company."

(v) As Special Resolution:
"Resolved—that with effect from the date of commencement of the companies Act, 1956, the company accords consent to M/s. Himalayan Commercial Co., Ltd., Katamundu (Nepal) in which Bramha Shum Shere J. B. Rana, a Director of the Company is interested continuing to hold a place of profit as a Distributor of the Company."

(vi) As Ordinary Resolution in compliance with the requirements of section 359 of the Companies Act, 1956:
"Resolved—that Messrs. Karamchand Thapar & Bros. Private Ltd., and any of its associates (as defined in sub-section (3) of section 2 of the Companies Act, 1956,) be and are hereby authorised to retain any commission or any remuneration earned or to be earned by them respectively as Managing Agents, Secretaries and Treasurers, Managers, Agent, Secretary or Selling or Buying Agent of any firm, body corporate, or other concern in respect of any goods, power, freight, repairs or other services including insurance, for sale, purchase, supply or rendering of which a contract has been, or is to be entered into by such firm, body corporate or other concern with the Company, provided that the prices, or the rates or the amounts charged or to be received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

By Order of the Board,
KARAM CHAND THAPAR & BROS. Private Ltd.,
Managing Agents.

Calcutta, 16th May, 1956.

NOTE:—
(i) The draft of the New Set of Article of the Company and arrangements with the Distributors are open for inspection of the members at the Registered Office of the Company during the business hours.
(ii) The Share Transfer Books of the Company will remain closed from 25th June, 1956 to 11th July, 1956 (both days inclusive).

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and that a proxy need not be a member.

that is to say, reserves not set apart for any specific purpose.

It was pointed out that a resolution in such wide terms was a clear flouting of the provisions of the new Act and was therefore undesirable and it was suggested that the resolution should be amended so as to authorise the Board to borrow up to a limit of one and a half times or twice the aggregate of the company's paid up capital and its free reserves. The Company replied as below:—

"Under the new Companies' Act, the position with regard to advances on cash credit accounts from the Banks is not quite clear. Opinions differ whether such advances are temporary loans or not. The Banks also desire as a safeguard that by passing the resolution proposed, the position of such advances become clear and there is no apprehension of any contravention of the provisions of the Companies' Act."

The same explanation has been received in one or two other instances also. Between the Bank in question, apparently the State Bank of India, and the companies, it is obvious that the provisions of the Act are being nullified.

The Companies Act, 1956

(Continued from page 1038)

In this connection it is necessary to note that the term "free reserves" mentioned in the Act means "reserves not set apart for any specific purpose" and to be careful in the nomenclature adopted in respect of the several reserves of a company and to define the purpose each of them is intended to serve.

Table A. Under Regulation 16 if a call on shares is not paid by the due date, the Board of Directors is competent to levy penalty interest at a rate not exceeding 5 per cent per annum whereas under Reg. 18 the Board is competent to pay interest on money paid in advance of call at a rate not exceeding 6 per cent per annum. This looks topsy turvy. When a call is made, it means that the company is in need of the money and the only way to ensure that the call money is paid promptly is to levy a rate of interest which will make the member take effective steps to pay the money. On the oher hand, when a member offers to pay share money in advance, the comoan can fix its own terms and there is no need to offer a high rate.

Reg. 96 deals with the capitalisation of profits and lays down that when a company decides that it is desirable to capitalise any part of the amount standing to the credit of any of the reserve accounts or of the profit and loss account, such amount shall be applied (vide. cl. (2)(ii)) in paying up in full unissued shares or debentures of the company. The latter course viz: of issuing fully paid debentures cannot add to the company nor mean capitalisation of profits, for the issue of debentures means an eventual disbursement of cash from the coffers of the company.

Sub-clause (3) prescribes that a share premium account and a capital redemption reserve fund may be applied only in the paying up of unissued shares to be issued to members as fully paid bonus shares. There appears to be no reason such money should not be applied in paying up uncalled money on issued shares and thereby making them fully paid up.

Schedule V Part II prescribes that the profit and loss account shall contain further information (vide. cl. 4. (iii)) regarding the total of the amounts payable as fees, percentages etc to the directors, managing director etc as remuneration for services rendered. Any remuneration or other emoluments in certain other circumstances are also required to be shown therein. Though the significance of the term remuneration can be gathered from Reg. 65 (i), that of the latter is nowhere explained.

STOCK EXCHANGE

(Continued from page 1058)

In the Engineering section, there was again a good deal of speculative activity in Indian Irons. The scrip opened at Rs 37-14 and, after touching a new high of Rs 38-14, receded again to Rs 38-9 on profit-taking, finishing the week at Rs 38-10. After market hours on Thursday, there were buyers at Rs 38-10 with sellers at Rs 38-10-6. Among other engineering scrips, Jessop continued to be in good demand upto Rs 36-9 though the closing rate was a shade easier at Rs 35-14 due to profit-taking. Richardson were marked down to Rs 27-0 from Rs 27-8, while TEXMACO lost nearly half a point at Rs 24-10. Burn were, however, in good enquiry upto Rs 382 from Rs 377 with Braithwait hardening to Rs 28-10 from Rs 28-4.

The Miscellaneous section provided a few firm features on dividend and other prospects, Amongst these were Indian Copper which consistent buyini support upto Re 7 from Rs 6-13 on expectation of a higher final dividend. Alkali Chemicals hardened further to Rs 21-7 from Rs 20-10 on hopes of an early right issue on favourable terms. India Steamship had buyers at Rs 9-2 to Rs 9-5 following the announcement of an interim dividend of As 8 per share for 1955-56. Orient Paper were subject to considerable profit-taking following the official contradiction with regard to the right issue, the scrip being marked down to Rs 38-14 from Rs 39-10. Titaghur, India Pulp and Shree Gopal were, however, well held at Rs 44-12, Rs 25-13 and Rs 19-7 respectively. Indian Cable were rather quiet at Rs 35-4 in the absence of fresh enquiry, while BIC changed hands at Rs 11-3 to Rs 11-6 Dunlop Rubber at Rs 30-8 to Rs 30-10; Rohtas at Rs 24-15 to R 25-1, Rallis at Rs 44-8 to Rs 48-8 and National Carbon at Rs 27 to Rs 27-8, National Tobacco were a firm feature at Rs 13-12, Martin Burns were quoted around Rs 25-5.

✱

Bombay

BOMBAY, June 6.

PRICE movements on the Bombay Stock Exchange, during the past week, were irregular and business was rather restricted in view of the uncertainty of political situation. Reports about the World Bank accepting in principle TISCO's application for a development loan did not help the market much as no major difficulty was expected in this regard in view of the sound financial position of the company and Government guarantee. There were no doubt, a few features, mainly attributed to special influences. Interest in the market now centres round as to when the Central Government will enter the market with their loan,

TEXTILES:—Except for a few selected scrips which were buoyant on speculative support, Textile shares remained generally quiet as operators were cautious in their commitments in view of the downward trend in exports. Bombay Dyeing, after opening at Rs 653-12, rallied toward the close to Rs 666-14 on hopes that the abolition of the export duty would generally help textile mills and the good effects would be felt soon, Century met with knowledgeable buying on favourable corporate rumours, to be marked up to Rs 567-8 from Rs 558-8, while Swadeshi continued to be absorbed up to Rs 241-8 from Rs 231-8. Kohinoor were sold up to Rs 378 from 373-8, while India United, at Rs 13-4-6, were featureless in view of the consideration of higher carryforward charges Tata Mills were fully steady at Rs 54-12 with Central India better at Rs 141-8 against Rs 139-8 and Gokak at Rs 233 against 231-8.

HYDRO-ELECTRICS:—This section experienced scattered investment buying, and the main inspiration was provided by the reassurig reports about Government's nationalisation policy, Ahmedabad Electrics, which had declined to Rs 95-10 last week, moved up to Rs 97½, while Andhra Valley closed Rs 2½ higher at Rs 1,225, Tata Power, however, lost Rs 2½ at Rs 1,317½, while Tata Hydro remained almost unchanged at Rs 132.

STEELS:—In this section, Tata Steel Ordinaries, on the eve of being listed Ex-right, provided a bright spot. In view of the high disparity in the price of old ex-right shares and new shares, there was a general inclination to buy new right shares against sales of old shares,

On the prevailing price of Rs 57 for renunciation from the total cost for new shares comes to about Rs 162, while the old shares, on ex-right basis, are quoted around Rs 199. The apparent disparity in prices of both these shares is about Rs 37. Consjdering the fact that the old shares will get a dividend of at least Rs 10-8 this year, the disparity is reduced to Rs 26-8. Thus, either the price of renunciation form should move up or the price of old issue should go down. This will be adjusted in the coming weeks.

Meanwhile, right shares were bought heavily around Rs 63 at the close on Wednesday, Tata Ordinaries moved on the ex-right basis between Rs 197-6 and Rs 202, to finish at the latter level,

MISCELLANEOUS:—Hopes that the interim dividend would be maintained and the reports of higher prices obtained for tea in London induced active buying of Bombay Burmah, which spurted to Rs 661-4 from a low of Rs 650-10. Scindia Steam evoked keen fresh interest and forged ahead to Rs 19-1 from Rs 18-10. Premier Constructions were taken up to Rs 190 from Rs 188-4 on encouraging corporate news, Tata Oils looked up to Rs 54 from Rs 53 on better dividend prospects Tata Locomotives, after being marked upto Rs 157 from Rs 154 on hopes of a maiden dividend, eased off at the close to Rs 155 on profit-taking.

Automobile shares showed measurable rises, Hindustan Motors being enquired upto Rs 10-8 from Rs 9-10. Premier Automobiles were quoted upto Rs 94-8 from Rs 93.

Cement shares lost some ground with ACC easing off to Rs 214-4 from Rs 218½. Digvijay, after touching a high of Rs 193, finished lower at Rs 190.

Among other scrips, Belapur Sugar were nearly maintained at Rs 236-8 with Phalton better at Rs 157 against Rs 155-8, Alcock were easily absorbed upto Rs 363-12 from Rs 351-4, Tata Chemical moved narrowly between Rs 18-8-6 and Rs 18-10.

✱

Madras

MADRAS, June 5.

THE Madras Stock Exchange was in good form during the past week when continued buying support for selected Textile and Planting issued led to mild hardening of rates,

TEXTILES:—This section accounted for a moderate turnover with prices generally looking up. Metturs remained very firm at Rs 500 without much busjness passing, pending the announcement of the dividend. Adonis were in demans upto Rs 11-6 without attracting sellers, while Coimbatore Cottons were marked higher at Rs 350; Dhanalakshmis at Rs 390; Premjers at Rs 215 and S. K. Rajendras at Rs 108, Loyals were quoted at Rs 51-4 and Travancore Rayons at Rs 15-7,

PLANTINGS:—Trading in this section showed a mixed pattern. In the Tea secton, Nilgiris improved to Rs 14-10 while there was some demand for Peria-karamalais upto Rs 9, There were, however, some sellers of Coonoors, Coorgs, Neelamalais and Kil Kotagiris at quoted rates, Peermades moved narrowly around Rs 37-2 with Kalasas quoting Rs 16-12,

Among Rubber shares, Cochin Malabars were a steady feature at Rs 9-8, There was buying support for TRTs at Rs 13-14 c/d, with little offerings of the scrip, Thirumbadis changed hands at Rs 2-5-6 and Rajagiris at Rs 25-4,

In the Coffee group, Coffee Lands met with good support upto Rs 24-10 and Consolidateds upto Rs 24-14, Amalgamateds and Bababuddins had buyers at Rs 10-12 and Rs 11-8 respectjvely, Ouchterlonys were a narrow market around Rs 5-7, Sheveroys were quoted at Rs 2-12-6,

✱

London

LONDON, June 6.

PRICES on the London Stock Exchange suffered a considerable loss in the early part of the week, majnly due to renewed weakness of Giltedged securitjes which touched at one time the bottom level. Redundancy notices, issued to the workers of the Standard Motor Works, were also a contributory factor, which generally kept buyers away, In mid-week, however, steadjer conditions developed due to bear-covering although there was only a modest increase in business.

✱

New York

NEW YORK, June 5,

TRADING on Wall Street was largely featureless and prices fluctuated narrowly. The movement was upward earlijer in the week and under the lead of selected industrials, a fair predominance of gajns were recorded, Toward the close, however, profit-taking reduced or more than erased earlier gains,

GATEWAY GOSSIP

(Continued from page 1047)

except to the extent of pleading for the enforcement of clauses relating to minority rights. In fact there was some disappointment that the AICC purposely omitted the Bombay issue and the delegates felt relieved only when the Prime Minister announced a decision on Bombay. Maharashtrian Congress leaders did not miss any opportunity to press their claims on Bombay before the Prime Minister.

It is interesting to recall that all through the Session of the All India Congress Committee, a number of other meetings were being held in the City to voice the Samyukta Maharashtra demand. The Pataskar formula, which received consideration at an MPCC executive meeting and probably in an interview between Pandit Nehru and the MPCC President, finally turned out to be a casualty. In a meeting of the pro-United Maharashtra Congressmen's Conference held at Shivaji Park, a resolution was passed re-affirming the demand for the formation of a United Maharashtra State including Bombay City, Karwar and Belgaum. Needless to say that the decision announced by the Prime Minister was received disappointingly by the Maharashtrians.

A young man with 90 years' experience

How Standard-Vacuum's technical sales staff help make industry more efficient and productive

LUBRICANTS are a vital need for every factory, power plant and machine shop. But it is not enough just to buy the best lubricants. Expert advice on lubrication is also needed.

Trained Standard-Vacuum specialists render complete lubrication service, by studying each problem, no matter how large or small, and finally recommending the correct GARGOYLE Industrial Lubricant. The customer gets the benefit of 90 years' experience, gained in solving lubrication problems throughout the world.

Standard-Vacuum's Lubrication Service helps to keep machinery running at peak efficiency, and eliminates costly breakdowns—thus increasing the productivity of Indian industry.

Rights Issue at the Right Premium

Investment Gossip :

According to a notice issued by Messrs Martin Burn Ltd, the Indian Iron and Steel Company Limited has been given permission to issue rights shares on the following terms:

(1) It will be on a one-for-one basis.
(2) The rights issue is to be at the price of Rs 13-8 per share.
(3) The issue is not to be made earlier than November this year.

The long-awaited rights issue must, one would think, have been greeted with the utmost jubilation. Far from it. It aroused disappointment. The prices fell from over Rs 39 to Rs 37. Second thoughts took up the price to Rs 37-12.

Why this adverse reaction? The simple fact of the matter is that Stock Exchange operators have developed an unwarranted and perverse sensitiveness to rights shares issued at a premium. In the case of TISCO, ACC and, now, IISCO, a rights issue at par has been the general clamour. This sentiment that a rights issue at par is a bull point and that such an issue at a premium is a bear point is of recent origin.

In 1936, Indian Iron and Steel Company Limited issued rights shares. The issue price was at a premium of Rs 15 per share—or 150 per cent. There was no howl of disapproval then.

I would like to take the reader back to the circumstances of that issue. Indian Irons had, from giddy heights, come down below Rs 30. The rights issue was imminent. And the price of the rights shares had been fixed at Rs 25. Some shrewd operators started dealings in the impending dividends; and the market's psychology was so influenced that the dividend expectation rose to Re 1 per share.

The company had not paid a dividend for years; and this hope of a one rupee dividend pulled up the price of the share. In the better atmosphere thereby created, the rights issue was made; and it was a success.

If, at a time when the company had paid no dividend for a number of years, and when the market rate of the share was barely Rs 32, a rights issue at Rs 25 was considered right and proper, what can be wrong with a rights issue at Rs 13-8 when the market quotation is near Rs 40 and when, over a period, the dividend has been one rupee per share?

Till recently, a company used to consider that a rights issue at a premium conferred prestige. When, some years ago, United Commercial Bank Limited made a rights issue on the basis of one-for-one, the original intention of the Directors was that the rights shares must be issued at a premium, thus enabling the Bank to build up a substantial Reserve. The Government insisted that the new shares must be issued at par.

Again, the Directors of Calcutta Insurance Limited sought permission to make a rights issue at a premium of Rs 7-8 per share of Rs 10. The Controller of Capital Issues insisted on the reduction of the premium. Appealing unsuccessfully against this decision, the company had to issue the rights shares at a price lower than it had planned on.

These are all instances well within the memory of the Stock Exchange operators. Why have they suddenly developed a vehement preference for a rights issue at par? The causes will not bear scrutiny.

I suggest, therefore, that markets must take in their stride the new rights shares of well-established companies at suitable premia.

Indeed, positive reasons can be given that would justify the investor preferring a premium issue. Let us remember that, when a company invites fresh capital, it is because it is embarking upon expansion. If the profit-earning capacity of a company is such as to afford a reasonable expectation of a satisfactory dividend on the new shares as well, surely it is that company's duty to secure as much by way of capital from shareholders as possible: this reduces the loan commitments of the company and, indirectly, means that the shareholder benefits because loan liability is to that extent saved. Specifically, in IISCO's case, the premium issue will mean that nearly Rs 2 crores or so will be obtained additionally. I pose the question to the investor: Should he not welcome the fact that his company's loan capital requirements will, to that extent, be less?

Secondly, if it is conceded that a premium issue will be morally justified only if a commensurate return is offered on it to the investor, and if Government are insisting on a premium, is it not implied that the new shares will be permitted to pay a rate of dividend in consonance with the price at which the rights shares are issued? In this view, isn't it insurance For the Investor, in that a satisfactory dividend is implied, that the rights issue is to be at a premium?

Lastly, let us understand clearly the implications of the present communique that contains the Government directive to the effect that fresh capital may be called for by IISCO only at a premium of 3-8 per share and not before November this year. It may be recalled that, for some many many months, the rumour had recurrently been making the rounds that fresh capital would be issued by IISCO. Indeed, at the last

Motor Vehicles Industry

Investment Gossip :

IN the list of industries beneficially affected by the Second Plan to a conspicuous extent, the motor car and motor truck industry has a high place. The shares of the concerns in this industry were, till recently, an insignificant feature in the Indian Stock Exchanges. The position at the threshold of the Second Plan is, gratifyingly, one of appropriate grooming for the industry.

While, a decade ago, there was hardly any concern worth mention in this context, we are now able to bring into this study quite a few companies whose present performance is satisfactory and whose future is full of promise. They have well-equipped plants and machinery; they have gained the necessary experience; they are provided with adequate and competent technical personnel; their labour has learnt the skills; their production is rising; and they are progressing fast toward self-sufficiency in the manufacture of components.

Government's policy has been a powerful aid and ally in the progress achieved, and in the attainment of a position satisfactory as to the present and superlatively satisfactory as to the future.

The first name suggested by the mention of the motor car industry in India is Hindustan Motors. I hope to provide, in a later issue, a full length study of this premier company in the field. I shall content myself, on this occasion, with indicating the salient features.

The company has an elaborately equipped plant. It is already producing over 7,000 cars; and they sell like hot cakes. It is also producing motor trucks. They sell, if I may coin the phrase, like hotter cakes. Road haulage, to aid the solution of the transport problem, will constitute a major development in the Second Plan period. The cry will be: trucks, more trucks and still more trucks.

As for motor cars, the vehicle now being turned out at Uttarpara is a finished product. The Government are urging the company to step up production to 15,000 cars a year. The company would aim to produce at least 12,000 vehicles in 1956. And 15,000 vehicles in 1957. The profit margins at the increased production levels would be in geometrical progression. Particularly because a steadily—I would say, rapidly—rising proportion of components is being manufactured in the factory.

Hindustan Motors is also equipped to take on hand fabrication work in steel; and, I understand, it has received, and I am sure, it will receive, large orders in connection with the setting up of new steel plants.

It is not unlikely that the company is able to secure licence for the manufacture of the British type of jeeps.

The opportunities for expansion are, in brief, stupendous. Hindustan Motors has the equipment, the men, the leadership, the enterprise and the resources.

To ensure the adequacy of financial resources, the company has issued preference stock for Rs 5 crores. Reports in the market speak of a hefty application for shares from the Nizam. It is beyond doubt that the new issue is assured of success.

Fortunate is the investor in these preference shares. For, mark you, they are convertible into ordinary stock. With all these prospects ahead, the ordinary shares may be expected to show considerable appreciation. The preference shares, thus, confer a sure 6 per cent free of tax on the safety-first type of investor, and a more or less assured chance of capital appreciation to those who prize a "growth" stock.

My Marwari friends have al-

(Continued on page 1116)

HIGHLIGHTS

IF a share is selling at a premium, it is hardly to be doubted that the investor thinks highly of it, that he prizes it.

The share that is at a discount—even the scrip that quotes at par—these are not greatly favoured in the Stock Exchanges.

Yet, the Royal Exchange looks askance at a premium—the premium of Rs 3-8 which Government have directed that IISCO must exact on any fresh issue of capital.

Watch-dog asserts that the distaste for premia is a recent phenomenon. It was not so in days bygone—IISCO itself successfully pilotted an issue at a premium of Rs 15 per share some years ago.

This week's Investment Gossip—One makes the point that the IISCO rights issue is at the right premium, and concludes that it is the best news the shareholder has had in a long time.

The pre-eminent justification for a premium issue by the premier company on the Royal Exchange—this is Watch-dog's topic for gossip this week.

Dividend Raised by Indian Galvanizing

Balance-Sheet Reviews:

THE Indian Galvanizing Company (1926) Limited has produced excellent working results for the year ended 31st December, 1955, thanks to increased production of the Drum and Metal Window Shops of the Calcutta Works. The rehabilitation of the Drum Shop was completed toward the end of the year, and the drums from the new plant are in every way superior to those previously produced.

Although the production of steel windows and doors showed a considerable increase, this was below the level necessary to meet the volume of orders obtained during the latter half of the year. The Bombay Drum Plant continued to work satisfactorily; but, at times, production was restricted due to the difficulties experienced in procuring sufficient drum sheets.

The net profit for the year, before providing for Taxation and Depreciation, amounts to as much as Rs 8,59,684 as against only Rs 3,95,705 in the previous year. After setting apart Rs 66,798 for Taxation and Rs 75,000 for General Reserve, the Depreciation amount has been raised to Rs 3.13 lakhs from Rs 2.26 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares to 10 per cent from only 4 per cent paid in the previous year.

The balance-sheet, as at 31st December 1955, shows a paid-up capital of Rs 39.77 lakhs against which General Reserve is shown at Rs 4.35 lakhs and Stock Reserve at Rs 2.30 lakhs. The gross block at Rs 59.70 lakhs shows a net block value of only Rs 37.75 lakhs, being depreciated by Rs 21.94 lakhs. Liquid assets amount to Rs 69.63 lakhs as against sundry liabilities of Rs 59.38 lakhs.

*

Hooghly Mills

It might be recalled that the annual general meeting of the Hooghly Mills Company relating to the reports and accounts for the year ended 31st March 1955 was delayed for some time past due to an injuction order of the Calcutta High Court. The injunction was, however, withdrawn by the Court on April 23, 1956; and the meeting has now been convened.

The working of the company during the year under review has resulted in a net profit of Rs 5.30 lakhs as against Rs 2.32 lakhs in the previous year, while sales are shown at as much as Rs 1.41 crores against Rs 1.28 crores. The directors have, after setting aside Rs 1.51 lakhs (Rs 24,033) for Taxation, maintained the General Reserve at Rs 1.00 lakh. The interim dividend of 12½ per cent announced in September last has been declared as final. With the result, the total dividend is 12½ per cent as against 5 per cent paid in 1954.

*

Seebpore and Kalapahari Coal Results

The working results of both the Seebpore Coal Company and the Kalapahari Coal Company, in Andrew Yule group, are satisfactory.

Thanks to a rise in sales from Rs 10.66 lakhs to Rs 12.31 lakhs, the Seebpore Coal Company has earned a net profit, before setting aside for Taxation and Depreciation, of Rs 3,11,112 for the half-year ended 31st December 1955 as against Rs 2,77,776 in the previous half-year. The directors have, after maintaining General Reserve at Rs 50,000, raised the Depreciation amount to Rs 69,000 from Rs 67,000 and Taxation to Rs 1.36 lakhs from Rs 1.00 lakh. The dividend is, however, maintained at Rs 1-4-0 per share on Ordinary shares.

In the case of the Kalaphari Coal Company, sales are shown higher at Rs 3.23 lakhs for the half-year ended 29th February, 1956 as against Rs 24,407 in the previous half-year. The net profit amounts to Rs 1,53,658 as against a loss of Rs 1,00,030. A sum of Rs 15,528 (Rs 13,620) has been allocated to Depreciation and Rs 63,106 (nil) to Capital Reserve. The dividend is again passed over.

*

Assam Saw Mills

Despite a substantial increase in sales from Rs 26.96 lakhs to Rs 41.51 lakhs, the Assam Saw Mills and Timber Company Limited has reported a profit, before providing for Depreciation, of only Rs 81,443

Virtues of an Insulated Money Market

IT HAS been charged against us that, in the prospects we envisage for industrial shares and in the outlook we present for government securities, we make the assumption that India can remain an oasis of unchanging rates in the money market, of advancing prices in equity shares and of reinforced pattern for giltedged values, in a desert of higher bank rate, intensified credit squeeze, disrupting giltedged and wilting stock exchanges. We plead guilty to this assumption. We would urge, however, that this assumption is not only justified, but the only basis on which we can, as we are now doing, plan our future.

We may, first, deal with the plea of justification. What time the Bank of England, some months ago, raised its official minimum to 5½ per cent, there was excited speculation in India if the Reserve Bank would follow suit. As a matter of fact, the Bank Rate or, as it is also called, the discount rate was increased in a large number of countries in the past many months: and, in some, the stepping-up was effected more than once. Yet the Reserve Bank rate has remained at the unvarying level of 3½ per cent since November 1951, when the last change occurred from the level of 3 per cent.

While taking this action in November 1951, the Reserve Bank was at pains to explain and establish the independence of the move. In particular, its protest was emphatic and pointed that the coincidence between the Bank rate rise in India and that in England was purely accidental. In effect, it was an open declaration that India was no longer tied to the apron strings of the Bank of England. A proclamation to all concerned that India was not tied to the apron strings of any economy whatsoever would have been equally valid; for, this country has the need and the ability, to pursue a policy determined by its circumstances and suited to its requirements, and to frame plans in consonance with its aspirations and in reference to its resources.

India secured this initiative only on the attainment of independence in 1947: but, for two decades prior thereto, there had been progressive materialisation of conditions in which the exercise of that initiative was possible and could be beneficial. The first significant development in the creation of such conditions was the move to repatriate foreign investments hitherto held in India. Toward the end of the twenties, some of the retired British industrialists (or their estates) started the process of gradual liquidation of their assets in this country. This movement gathered momentum in the early thirties, so that, by the middle of that decade, the investment markets in India had achieved an impressive measure and a new pattern of self-sufficiency.

This process was further helped by the double taxation and other irritating disabilities. A generation ago, foreigners, who had worked and saved in India, continued to hold their rupee investments even after returning to their homes. The recent and current practice is to sell out all investments and to repatriate their funds along with themselves. Foreign capital of the long-term kind is no longer an element worth mention in the Indian investment markets.

Short-term foreign capital has undergone a similar transformation. Twentyfive years ago, the bulk of the funds that flowed into Treasury Bills was short term money from London that took advantage of the difference between cheap British money rates and dear Indian money rates. Exchange banks made a noteworthy contribution: and their technique was to sell ready TT and buy three months forward TT. The difference in interest rates left a margin of profit after covering the loss in exchange. The considerable recourse to the exchange mechanism for investment of short-term funds became a thing of the past by 1932-33. Thus did the Indian money market, too, attain a measure and pattern of self-sufficiency.

By the mid-thirties, there was hardly any foreign capital suitable and ready for repatriation—and there was even less of 'hot' money to take wings and fly.

At the time of India's independence, the Indian money and investment markets had a twenty years' experience of functioning as more or less self-contained units. What they lost in the briskness of turnover and liveliness of operation, they gained in stature and self-confidence. Conditions in these respects were, thus, auspicious for India's confident exercise of initiative when it won that initiative, along with freedom, in 1947.

To say that the Indian investment and money market are largely self-sufficient or self-contained is, therefore, in no way derogatory either to the status of this country or the stature of its economy. It is just a historical fact. The events of three decades have brought about a kind of insulation for India's economy.

We shall readily admit that, thus insulated, we lack the dazzle and splendour, the stir and excitement, the give and take, the inflow and outflow, the range and sweep of the London or New York or Amsterdam money markets. Our money market is tame, dull, insipid, unspectacular: we concede all that. Yet, we would like to urge that this very limited character has its advantages. In times like these, our insularity can confer on us the welcome amenities of an oasis.

We are indebted to this insularity for our having an unchanged bank rate while bank rates all around us are shooting up, for our giltedged maintaining an even tenor while giltedged values in London, New York and elsewhere have gone to pieces, for the brave showing of our industrial shares while Wall Street and Throgmorton Street are overwhelmed with apprehensions and forebodings. Insularity secures immunity.

In the regime of planning to which India is committed, we shall be insular whenever possible; we shall be international only when absolutely necessary. Our foreign policy, and the integrity on which it is based, will promote and protect our interests in such international relationships as we must needs cultivate and sustain. In all other respects, India's insulation and the resultant immunity should be our shield and safeguard.

This leads us to an assessment of future requirements.

Being an under-developed country, and resolved to march, democratically but rapidly, toward full development, we need an expansionist economy. The leading countries of the world, on the other hand, are over-developed and seek to cut back expansion.

We need to build up wealth; there are countries which are afeared of prosperity.

We need abundant credit supply. We need to raise large loans. Other countries are grimly practising credit squeeze.

We are afraid of deflation: the problem for others is inflation.

We are committed to economic planning and recognise the role and function of controls in that context. We shall not hesitate to introduce controls as and when and where necessary. Other countries pride themselves on abolition of controls and are resolved to avoid controls if that were possible.

We are, thus, obliged to take an independent line for ourselves. And we are confident that, under God's grace, our independent line of action will secure for us the achievement of our objectives.

So, the major criterion for our appraisal of the future, be it of our economy or our industries, our shares or our government securities, is the effect and repercussions of our plans and projects, of our initiative and independent courses of action.

To answer the question: What is the future of our industries, and what the outlook for our shares and Bonds?—we may pose another question: What are the likely repercussions from an annual expenditure of the order of Rs 1,000 crores in respect of the Second Plan?

There can be no two opinions about the answer to the latter question. Indian industry will be affected profoundly beneficially—some in a general way, and some directly and to a noteworthy extent. Expanding industry and rising industrial profits, with their direct and indirect repercussions elsewhere and everywhere —this is the dominant factor in the Indian economic situation. India has the need, and the initiative and resolve, to maintain and strengthen the dominance of this all-important influence.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

New Pattern for Steel & Cement

THREE important industries are now faced with significant changes whose financial implicaions may be briefly examined in this review.

The new pattern of selling prices for steel and pig iron will seek to equalise selling prices at the ports and at mofussil centres. It is obvious that the bulk of the consumers will hereafter have to pay the resultant higher prices as Bombay and Calcutta account for nearly 70 per cent of the sales of iron and steel. These consumers, however, must draw comfort from the thought that, even at the higher prices now proposed, they are doing well when import prices are taken into account. By this change, the Steel Equalisation Fund may expect to be richer by anything like Rs 4 crores a year.

The cement industry is to be invested with the kind of apparatus which has functioned in regard to sales of steel for a number of years. There will be a Cement Controller, a cement retention price, a cement selling price and a Cement Equalisation Fund. We also understand that the State Trading Corporation will figure prominently in the new arrangements. We may be sure that the Corporation is not called upon to take up this responsibility for the sake of its health. In other words, the Corporation has the opportunity to make a good start in a paying business.

The cotton textile industry is likely to have the freedom to expand its loomage by 10 per cent. At the same time, the price for this privilege is an additional excise duty of half an anna per yard. As extra production will not involve increased overheads, this impost can be taken by the industry in its stride. The additional revenue will be considerable.

In sum, the changes proposed or considered this week may yield an extra revenue of the order of Rs 20 crores per annum.

Rail Transport in 1960-61

Modest Planning for Next Quinquennium

THE programmes for expansion of the Railways in the Second Five-Year Plan have attracted the greatest attention and provoked the keenest controversy. Touching at many points in the life of the individual and the nation alike, directly or indirectly, there is a relative familiarity with the functioning and requirements of this greatest nationalised industry. and every expressed view on the plans is seemingly authoritative both to its author and a very large section of the readers. The same cannot be said of the means to finance the Plan or the socialistic content therein, the other topics of controversy: there are fewer who rise to the requisite levels of knowledge. There are those who, from the bitter experience of scarcity of railway transport in the past, consider the expansions projected all too inadequate; others who, interpreting the demands in terms of availability of safe resources, find them inflated and all too unrealistic in terms of money, materials and man power. The latters' ranks have recently been strengthened by the report of Professor Galbraith of Harvard University, an endorsement with a foreign weight of all that has been expressed in this country.

The Railways' Stand

In the face of this turmoil, the Railways have not wavered: sure of their facts and strong in their experience, they have already stated what they can do for so much money finally allotted—out of the 60 million tons of additional traffic expected, they can carry no more than 43 million tons. It is for others to decide which goods shall be left out, but in their assessment of the priority requirements, they feel this would be general goods and general coal. As private sector's share of development is largely in this line, organised business is troubled by the spectre of overflowing godowns and locked up capital.

The answer to this stand by the critics of the Railway plan is that the railways must improve their efficiency and do more for less money. Professor Galbraith has come out with the idea of labour replacing investment, and technological ability delaying rehabilitation. Attainment of higher efficiency is not a unilateral process, but a product of effort and environment. The cleverest doctor cannot, without medicines, bring fresh vigour to a withered body, and all the labour in the world cannot produce a new line or new rolling stock without materials and money; they may more easily transport the merchandise on their backs!

The tentative internal distribution between the important items of work of the railway development expenditure is roughly as follows:

	Original proposal by the Railway Board.	Approved by Planning Commission.
	(In Crores of Rs.)	
Doublings and Conversions	152.5	109.0
New Lines	195.0	66.0
Electrification	130.0	80.0
Additional Stations, Yard and Goods Shed Expansions, etc. ..	87.5	87.0
Locomotives, wagons and passenger coaches:		
(a) New	324.5	250.0
(b) Rehabilitation ..	142.5	130.0
Track and Bridge renewals	150.0	118.0
New Bridges	20.0	15.0
Workshop, Stores, etc. ..	75.0	72.0
Training Facilities ..	5.0	3.0
Signalling Improvements ..	20.0	10.0
Staff Welfare	50.0	15.0
Users' Amenities	15.0	15.0
Miscellaneous	125.0	120.0
Total say ..	1492.0	1125.0

It will be seen that the provisions have been kept in tact under Staff Welfare and Users' amenities. It will not do, when such heavy burdens are thrown, for staff and daily users to feel that their lot is not going to be materially bettered, by giving more houses, better water, recreation, education and hospitalisation facilities and generally more congenial conditions of working and travel.

Volume of Transport

In examining the railway plan, it is necessary to understand the pattern of movements connected with the economic expansion that is planned. The volume of transport called for, its source and destination, and the present condition of the routes through which it has to move—all these call for study. The targets of production in the Second Five-Year Plan run as follows:

	Estimated Production (In million tons	
	1955-56	1960-61
Foodgrains, Oilseeds, Cane, etc. ..	76.3	89.4
Cotton and Jute	1.6	2.5
Iron Ore	4.3	12.5
Coal	36.8	60.0
Finished steel, etc. and their products	1.7	5.6
Cement	4.8	10.0
Miscellaneous goods	1.1	6.0
Total ..	125.0	186.0

The railways carried about 115 million tons in 1955-56. Over current performance, then, 60 million tons more have to be transported by 1960-61, allowing for a similar lag in the full realisation of the targets. On the roughest estimate, they must then have 50 per cent more rolling stock. They have now about 250,000 wagons and 6,500 locomotives (all gauges) to haul them, and asked for 3,300 additional locomotives and 127,000 wagons for lifting the 60 million tons extra traffic. The expenditure under rolling stock was first Rs 467 crores but is now reduced to Rs 380 crores.

Ore and Coal Haulage

The steel industry, which claims the largest share of transport, will be located mostly in Central India, the heart of the ore area, and needs larger haul of coal than of ore. The average ore lead is 150 miles and of coal 280 miles. In the choice of the sites of Rourkela, Bhilai and Durgapur, the most efficient utilisation of line capacity and wagons has been a fundamental consideration. The requirements of new lines and other line capacity works as also of wagons and locomotives are the lowest compared to any other alternates and there is no scope of a further cut in these.

The ore and coal have to come mostly from new mines: they as well as the supplementing tonnages from existing mines are to be carried over routes worked to maximum capacity. New lines, doublings and capacity works are thus inescapable from Jharia coal fields to the Rourkela and Bhilai Plants, and from the new ore fields of Central India to these works. A section of the Eastern Railway, from Jharia to Barkakhana, is to be doubled and a new line from Barkakhana to Rourkela laid to provide the shortest and quickest lead. Had the devious routes via the Adra and Tatanagar areas the ability to carry all these extra trains—12 in number each way—then, a postponement of nearly Rs 20 crores in opening up the new routes would be possible. But these lines are

An Indian Finance Special Study

saturated, and are even now a curb on expansions in this area.

Next to steel, coal claims attention. Of the 23 million tons extra production, 20 million tons will require rail transport, the balance being taken up by pithead losses, local use and short road hauls. Of these, 13 million tons are to reach industries other than steel, distributed far and wide in the country. From the Bengal and Bihar coal fields alone, nearly 5 million tons extra coal have to move west of the big rail junction of Mogul Sarai from the Central India coal fields, another 4 million tons beyond Nagpur and Katni to western India, and between the two about 1 million tons have to move South, the rest being consumed in areas closer to the coal fields and toward Calcutta.

The finished steel has also to move in all directions from the centre of the country where production is concentrated. To the distant places 22 trains of coal and about 10 to 12 trains steel and steel products have to be despatched. It is not as though the areas through which these trains run will be in a static state of production—they are humming with development activity even now. These areas generate the additional food grains and oilseeds, cotton and jute, cement and fertilisers, cloth and yarn and hundreds of other consumer goods. Many of them will move more than once in the search of the best markets and the transport load is not the mere 25 million tons or so that the production increase in these sectors represents.

Cross-Country Movement

The difficulties of moving goods freely from the North to the South, or from any part of India to the West are too well known to the users and railwaymen. 2,500 miles of doubling at a cost of Rs 125 crores, 600 miles of conversion of metre to broad gauge at a cost of Rs 27 crores and other improvements by way of expansions to yards and increase in the number of block stations, etc., to cost in all Rs 195 crores in the first proposal were to eliminate these bottlenecks.

Doubling between Allahabad and Kanpur was calculated to open up free movements to the North and Northwest, mainly for coal: the return from the granaries of India to East India would put that region above scarcity in food grains and oil seeds. Coal movements to the industries in Bombay—Ahmedabad region are restricted by the single line section Katni—Bina—Bhopal—Ujjain—Ratlam—Baroda. Doubling of these sections is essential for coal, steel, cotton and textiles. Similarly, for free movements between North and South, the single line stretching between Delhi and Itarsi must yield place to a double line.

Coal supplies to the South for industrialisation of the peninsula can never be satisfactory without doubling selected lengths between Waltair and Gudur—and only these were proposed, and not any indiscriminate long lengths, where alternate routes for diversion can be used to fuller capacity.

Everywhere, the proposals were intensely purposive, and from a railwayman's point of view unnecessarily stingy, as both for convenience of execution as also for long term developments, it is better that continuous stretches are improved to have a cushion for absorption of surges in traffic inevitable in a vast country in the throes of industrialisation.

Modest Development

With the allocation cut to Rs 1,125 crores, the western route will be doubled only from Ratlam

An Indian Finance Special Study

to Baroda, from the North only in patches between Delhi and Agra, on the East coast only 30 miles out of a total of 124 between Waltair and Rajahmundry, though Bezwada—Gudur is retained. Almost unaltered, only the doubling between Kharagpur and Nagpur stands as it must with three steel plants in between. In all 1,000 miles of doubling had to be axed out of 2,600. Similarly, conversions have come down to 265 miles from 600 between Bhimavaram and Bezwada and Guntur to disperse the traffic of Masulipatam by broad gauge but similar needed relief to Mormagoa harbour by doubling upto Poona and larger movements in Saurashtra by broad gauge are denied. These will not suffice: for, free movements will still be modulated by priorities and modified by restrictions.

The original proposals attempted to open up vast areas of undeveloped land with no communications. But curtailment to 850 from 3,000 miles has restricted these to the requirements of the big industries. Nearly 350 miles are for serving new sources of raw materials, and 130 miles for carrying them. Other diversionary needs account for another 100 miles, leaving only 270 miles for opening up the country; even this is not in the backward areas and may be looked upon more as short cuts except perhaps Guna—Ujjain link in Madhya Bharat. There is no scope for any further reduction.

Similarly, the outlay on electrification has been reduced from Rs 130 crores to Rs 80 crores; from 1,500 miles to 826 miles. What is left now is mainly the Calcutta Suburban Sections and a small length of main line from Burdwan to Gomoh, a distance of about 120 miles, Igatpuri to Bhuswal 191 miles and Madras to Villipuram 100 miles. The earlier proposals were intended to create the needed capacity for coal and ore movement between the Asansol and Barajamdah areas.

The Cost of Diesels

The palliatives that now have to be devised still leave the routes saturated and make movements less sure. The use of diesel locomotives on these sections becomes inescapable and thus a dependence on foreign fuel is created. The locomotives themselves cost more than the electric, are more difficult to maintain and spares have to come from abroad. Except for the longer time involved in electrifying the routes owing to the heavy site works involved, this postponement of electrification has no merit either in terms of ultimate capital outlay or operation costs; in fact, both will be more, and any small works done by way of additional stations, etc., would represent avoidable expenditure, as electrification is inevitable and these works are redundant when electrified. But, in view of the experience in diesels this will give, the expenditure may be justified as educational.

The overall cut has also affected signalling improvements, training facilities and track rehabilitation. The last item has been the most suspect. Provision was made for the renewals of 2,000 miles per annum, or 10,000 miles in five years. Against a total railway mileage of 34,000 this at first glance is high. But renewals are not confined to the main running routes alone, but to the yards and loops also, in fact to the 50,000 miles of total track in the rail system. There are in the 34,000 miles alone, nearly 1600 miles of rails, over 40 years, the balance represents essential renewals or condition basis due to metallurgical defects, and fatigue making them unfit for the higher speeds and loads called for in the heavier movements of traffic.

In reducing the expenditure from Rs 125 to Rs 100 crores, a risk is taken by postponing renewals or alternately in preventing higher speeds, both retrograde steps in the light of continued and accelerated expansion proposed in the country. The high speed de luxe Janata due to be introduced this October was accepted with hesitation by the railways due to old track condition, and the speed had to be reduced to 65 from the 75 or so originally contemplated. Railway engineers know how quickly the permanent way deteriorates beyond a certain age and what extra labour and anxiety then go behind its uneconomic maintenance. The slow movements and hold ups to traffic owing to the inability of the old engines to maintain speeds or to haul full loads immediately after the war can be forgotten only at the risk of bringing railways to a standstill when they must move so much more. Yet it is such rehabilitation that many theoreticians would seek to postpone. They have their eyes besides the track on the 900 locomotives, 24,000 wagons and 7,000 coaching units due to be replaced.

Demand, Volume, Costs

The criticisms epitomised by Professor Galbraith seek to direct attention on three aspects of railway investment. Are the estimates of investment requirements reliable in respect of the general nature of the traffic demands, their volume and the cost of works? Have the works been planned with an eye to save or at least postpone expenditure? Is it necessary that the railways should carry all the load instead of diverting some to other agencies costing less in capital outlay? There is almost a subconscious conviction that railways have an insatiable hunger for capital and by clubbing private ownership with public all over the world, Professor Galbraith has given it the indisputableness of a habit. Against the carefully computed figures, what is the more revealing data, that a visitor has at his command in so short a time? Against a richness of experience born of struggles under difficult conditions and reinforced by the success of a healthy post independence growth, what is the intuitive knowledge that puts a finger so unerringly on the chink? The pattern of development in any sector has to be designed to suit the temper and circumstances of a country, and from this angle, the second and third questions must be examined in greater detail.

It has been suggested that doublings and electrifications are more than what are essential. The reasons behind the proposals under the first head have already been explained. Without improving the movement capacity in these regions, prosperity cannot be spread. More distant areas have to be supplied with more coal and steel, for these regions to improve their standard of living and capacity of earning. The average leads of goods being more, the number of wagons and locomotives has to be greater than what a mere proportion of the lifted tonnage will indicate.

Electrification in the curtailed programme is essentially to ease the suburban travel conditions round Calcutta, and the balance to enable more trains to be run in certain busy sections without having to increase the number of lines, a costlier process. Every work that is proposed is the most economical of several alternates examined. Urban overpopulation has to be relieved by suburban development possible only with quick and cheap transport from the city. With rapid industrialisation around, business houses in Calcutta are bound to increase. The city can stand no further population pressure and residential areas must be dispersed and placed remote from the place of work.

Curb Passenger Traffic?

Nor is the suggestion to curb passenger travel to release capacity for goods movement very apt. The Five-Year Plan relies for its resources on the small savings it can tap and the unbacked money it can safely create. It is a picture of the future that the present can draw which must enable both measures to succeed. Such a picture must be filled in by the people themselves, all that Authority can put forward being an outline; to attempt any detailing will be fruitless as it will be branded visionary. People must thus move about and see with their own eyes the practical results of sponsored objectives, verify by mutual contact all that is publicised after editing, share the mutual experiences of pleasure and pain in the process of transformation. The success of loans is in a large measure thus dependant on travel. Only the confidence in ability and possibility these contacts promote can offset any misgivings at the creation of much paper money. For this to be non-inflationary the first requisite is the faith of the common man that it is going to yield the results expected; he can then hold himself. It would be imprudent, then, to place any curbs on his free movements or on his acquainting himself of the progress. Sharing the knowledge of prosperity or happiness is a traditional urge of the Indian people; it is necessary to capitalise this as a policy to show what is on the way. Checks will breed only suspicion and undermine the flow of saved money to conserve which Railway expenditure is sought to be curtailed.

Optimum Utilisation

The argument that better efficiency can offset needed capital expenditure has its limits. Every industry has a level of optimum utilisation, and in common with many others in the country, the railways have used up all surplus installed capacity. Comparisons of a few most material yard sticks of performance during the war, in 1950-51 and 1954-55, will show how efficiency has improved though very little additional equipment has been provided.

	1941-42	1950-51	1954-55
Coach miles (in four wheeler units) for passenger traffic (in crores) ..	106.7	95.7	107.8
Loaded wagon miles for goods traffic on Railways (in crores)	173.7	144.0	172.2
Coaches in daily use (in four wheeler units) ..	16918	13222	14287
Wagons in daily use ..	153000	152687	161569
Coaching vehicles miles per day	141	164	166
Net ton miles per wagon day	441	434	485
Engines available for use ..	4337	4257	4340
Net ton miles per loco-motive in use ..	36642	37361	39345

(Figures for Broad Gauge. Other gauges show similar trend).

It will be seen that the total goods and passenger traffic has grown in four years and the increase in locomotives, wagons and coaches has not been in proportion. The greater traffic as represented by the coach and wagon miles has been handled owing to more efficient working as revealed by the locomotive, coach and wagon miles per day. The last two, the real index of active use are appreciably higher than the peak was years efficiency.

It is common knowledge that productivity has come down due to a certain temper of the labour, and improvements are attributable largely to managerial and technical skill. To hope for more, when signs of labour unrest are more marked, will be unwarranted, and basing a large scale industrialisation on any such raise expectations would be extremely dangerous. Yet in computing rolling stock requirements higher targets of performance are assumed. In fact, an over equipment would be an effective measure against the greater bargaining power that a mounting demand on transport will give to the railworkers. What is most essential now is the achievement of the industrial and agricultural targets so as to spread greater contentment and employment over a larger number, that the resulting enlightenment and fear of losing what is gained might be a sober check on hasty agitation. The supply of raw materials and

distribution of finished products for consumption must be placed on an undisturbable footing: a seeming extra cost, if any, will be balanced by the overall dividend.

"Building for Eternity"

To condense railway thinking on expansion into the two alternates of "building for eternity or to get safely by the next bulge of traffic," as Professor Galbraith has put it, is an over-simplification of the problem, at least as far this country is concerned. In the passage from an agricultural to an industrial economy, the several hurdles on the way have to be cleared one by one and in an order of priority. Business interests know how their plans for expansion are thwarted by the inability of the railways to guarantee the requisite transport. There are occasions when the scope of activity has been severely curtailed by the rationing of railway wagons. There are others where past failures have scared investment and available surpluses have been turned over as banker's credit to finance imports.

The history of every industrialised country shows that industrialisation had advanced rapidly only when transport was ahead of industries or when that had been assigned first priority in planned progress. The fears of the private sector that, in the event of shortage of rail transport, the available quantity would be preferentially siezed by the public sector cannot lightly be brushed aside. Scared by the experience of the past when coal wagon scarcity every day threatens to shut down power stations and accumulations in the godown block up capital, free enterprise has reason to be reluctant to expand its activities. This is very serious in the light of the heavy deficit financing necessary, as the private industrialists because of their familiarity and experience in the line are better fitted to flood the market with goods earlier than a striving State enterprise. That the plans of the railways are unnecessary or overambitious has not been proved on any solid data: the case is rather that they are not far reaching enough to place the transport capacity ahead of demand to give the fillip to industrial expansion.

Sea or Road Transport

The contention that either sea or roads can replace rail transport in India cannot be serious. In a country of long distances and distant coast lines, transport is synonymous with railways. The rich ore and coal areas are in the centre of the country. Ore processing or conversion has necessarily to be close by and the products are to move far and wide. Coal as a prime source of heat and power has to move all over, against small or big demands. The bulk of the materials precludes road carriage; iron and steel and its raw products are examples. Nor are there roads of the size and standard for moving what may be termed general goods. These have to be made and then the vehicles found and hauling agencies arranged. Against experience in transportation that the railways command, road transport organisations have yet to learn the skill. And it is not as though all this can be purchased at no cost.

The computations are simple. A six ton diesel lorry covers 20,000 miles of loaded movement a year; the average load on the round trip is reckoned at 4.5 tons from investigations. This means that its annual capacity in ton miles is 90,000. Assuming the average lead of goods to be 260 miles as found from railway statistics, to lift 1 million tons, 3,000 lorries will be required. At Rs 35,000, this costs Rs 10.5 crores. The net ton miles per wagon per annum is about 175,000. To move 1 million tons an average distance of 260 miles requires 1,500 wagons at a cost of nearly Rs. 2 crores and locomotives and miscellaneous stock valued at an equal amount at the most. The operating costs of road haulage are considerably higher: a Government study has put this at 72 pies per ton mile against a freight range of 21 to 40 pies for railways. Petrol and diesel are imported, whereas coal is indigenous. While Railways have moved fast toward self sufficiency in equipment, road trucks and spares have to be imported to almost the full extent of such expansion requirements. Apart from all this, experience in sound management of roads is yet to be gained.

There is something in short hauls being diverted to roads, as also short distance passenger traffic. Various factors, including rooted trade habits, stand in the way of a quicker change over, and these are best left to absorb the additional haulage that may be demanded in local areas as the economy grows in the course of years rather than to relieve the railways in the immediate years: with the best of efforts the change over will be slow and only small. The USA with such good highways and abundant production of both cheap fuel and lorries carries only 10 per cent of its goods by road. The Indian road system is inadequate even at the present level of traffic and needs some Rs 400 crores for immediate expansion to moderate standards. To carry any sizeable share of the 60 million tons of additional goods or divert any significant percentage of the 125 crores passengers on railways, the amount may have to be trebled or more. Road equipment wears down quicker and with an average life of five or six years compared to 35 or 40 of railway stock, the rehabilitation expenditure in the Plan period itself can upset all the capital saving relied on by Professor Galbraith.

Travel for Pleasure?

The deterrents to passenger travel are increased fares, deliberate overcrowding and pious propaganda. It does not logically follow that rail travel should be rendered dearer, with an all round price increase: one cheap item at least is soothing; that this should be the product of a State enterprise, may be particularly satisfying in an era of nationalisation. A comparison of rail fares in India with other countries is misleading without the corresponding figures of per capita income, rural, urban and average. The remedy of higher fares follows an assumption that people travel for pleasure. The recent concessions introduced provide a good test of this. The number of circular tour tickets sold and the passenger miles covered thereby are insignificant. Then again, had travel been not of necessity, there should have been a marked drop in the number of passengers and passenger miles after the fares were raised from 1st April, 1951 to the extent of about 20 per cent. Comparative figures are:

	1949-50	1950-51	1951-52	1952-53	1953-54	1954-55
Passengers carried (in crores)	123.9	129.9	124.7	120.4	123.8	127.5
Passenger miles (in crores) ..	3846.5	4023.1	3903.0	3553.6	3909.5	3831.6

Though immediately following the fare increase there was a drop, from 1953-54 travel started increasing. The drop has not been anything to enable withdrawal of trains to run more goods trains or coaches to reduce the replacement. 1953-54 registered a feelable expansion of economic activity and progress of engineering projects and it is reasonable to deduce that the increase was on business. As the Second Plan activities gather momentum, more men must travel on business. The 15 per cent increase now planned just covers the expected demand on this score. An increase in fares may only be a source of revenue, not of carrying capacity. With such an inevitable demand for passenger accommodation, failure to provide more trains can act as an irritant. Not providing the means to satisfy a legitimate urge to verify, publicity of success elsewhere may be suspect for want of contact with progress. The suggestion of 'selective travel' is extremely impractical. Any such control has in it besides a large corruption

An Indian Finance Special Study

content. The larger volume of fruitless work that must be tackled by a greater number of staff is wasteful of manpower. Having promised for five years to improve passenger comforts and marking progress therein by special action like the annual allocation of Rs 3 crores exclusively for their amenities and high level check and supervision of the progress, it is risky now to attempt a reversal of the tide of expectation. It will be unwise to do so: it has taken all this special attention to get railwaymen to get back to the habit of attending to passenger comforts.

The goods offering must then be cleared by augmenting railway equipment and resources. The extent of more improvement in utilisation than can be secured must be left to the Railways to assess. The line capacity works and rolling stock necessary and the replacements due to age and condition that are inescapable. are for calculation by those who know and not the millions who presume. A continued rise in efficiency has been assumed by them in their estimates: those outside cannot substitute their figures for these.

Public tributes unstintedly have been paid to the Railways for their achievements after Independence. They at least have been extremely realistic in the assessment of their capacities or the costs of their statements: that the present outlay can move only 43 million tons out of the 60 million tons extra production is an authoritative and awesome pronouncement.

Need for Deliberate Cushion

All estimates are on averages. but when the slower rate of production in labour intensive plans gets replaced by machines either to catch up with lags as in Ambar-Charka yarn still under experiment in the first year of the Second Plan, or for greater supply of goods in the earlier years to offset the paper money created to finance the construction of heavy industries, surges in transport demand arise. These can be met only by providing for a deliberate cushion by a calculated over-development. It is also forgotten too often that a Rs 4,800 crore developmental expenditure involves considerable movements of construction materials, and these may at times be superimposed on the products of expansion. The peak of this expenditure will be in the 4th and 5th years, when a figure of Rs 1,200 crores per annum may be assumed. From an analysis of successful projects, specially on railways, executed in record time and within estimated costs, it is possible to compute roughly the transport requirements—30,000 wagons daily will have to be found for the construction traffic which will amount to 90 crores wagon miles in the year, which is 40 per cent of the traffic handled in 1954-55 with a construction share of Rs 500 crores expenditure only. By this time, steel industries would be demanding their full raw materials, coal production would have gone up considerably and agricultural targets nearly hit; in other words, about 45 million tons of new traffic would have developed. With the pace set by this time for construction activities, the tempo would go on to the Third Plan and impinge on the full production from the Second. Allowing rail transport capacity to remain so utterly inadequate is to check the speed of growth for ever. When they press for their full demand, the Railways have all this in view. When Trade pleads for the cause of the Railways, these fears are before them. The National Development Council, in bringing this up in its last discussions, had a partial knowledge of these facts. A lower rate of development of the railways by a smaller allocation does not help a faster development elsewhere, in spite of diverted funds, but rather cripples all expansions.

Editorial Notes

Farce and Folly

Government's decision to import foreign cement, to supplement domestic production, has led to the next logical step, the system of a retention selling price and cement equalisation fund. The devising of the appropriate machinery is facilitated by the analogous scheme which has been functioning in the case of steel. In simple terms, the import price is decidedly higher than the price of cement produced in India. Therefore, the selling price is fixed betwixt and between; and the excess of this price over the retention price, that is, the price paid to the Indian producer, is utilised for meeting the shortfall between the selling price and the price at which foreign cement is imported.

This may be said to be protection in reverse. When an indigenous industry is protected on the basis of the Tariff Commission's recommendation in this behalf, it involves a case of the foreign product being cheaper than the domestic product. In order to safeguard the Indian producer from the damaging effects of dumping by the foreign manufacturers, higher import duties are imposed so that the imported article is thereby made dearer. In the case of steel and cement, it is the Indian product that is to be made dearer. In either case, the consumer pays more. The difference is that the benefit of the higher price does not accrue either to the producers of steel and cement or the Government.

Who, then, is the beneficiary? In whose interest, then, is the Indian producer deprived of a price in parity with world price, and in whose interest is the Indian consumer called upon to pay a price higher than that at which he would have got his supply from the domestic manufacturer if there had been no contraption of retention price and equalisation fund? The usual answer is that all this is being done out of solicitude for the consumer, who, it is claimed, would otherwise be compelled to pay through the nose.

In any case, is he not paying through the nose now? Controls mean black market; and black markets make profiteering a thriving business and rampant vogue. The bigger consumers like Governments, organised industries, powerful institutions and puissant magnates are in a position to get quotas and allocations at controlled prices. But the average consumers, the hundreds and hundreds of small men who need cement or steel for essential needs, have to buy from the black market and pay the prices demanded by the profiteers.

Fair price shops solve the problem to some extent in the case of foodgrains. A similar device in the case of cement and steel must be set up; and its honest functioning should be ensured. Otherwise, control is a farce and folly, so far as the man in the street is concerned. Eternal vigilance is the price of controls. As more and more controls may become necessary, the Government's vigilance division should be put in proper trim, so that it can be commissioned and its heavy hand may act as a deterrent the moment the ubiquitous profiteer starts his thriving business, and the furtive black market starts springing up all over the place. As a matter of fact, both the black market and the profiteer have made themselves already felt largely in cement and partly in steel.

*

With-hold Wagons!

The tactics of the profiteers in sugar show ingenuity and variety; and, though the hectic prices last for only a brief spell, the havoc they cause on public morale is immense. There can be no justification or occasion for sugar shortage in 1956-57; but this does not mean that Authority's vigilance can be relaxed.

New sugar factories are being set up, especially in areas where there is less crowding in this respect. Government's licensing policy is rightly framed; and, in a year or two, regional inequalities will be less marked. It is propitious that the new entrants in this industry are assured of an encouraging start.

The longer crushing season this year and the higher production have involved a higher scale of bank accommodation. The funds utilised for this year's production are being released later and slower than usual. This development has significantly affected the pattern of seasonal finance.

The sugar industry has had one of the longest crushing seasons; and the domestic production should prove adequate for the greatly increased demand. Consumers have, so to say, stealthily and startlingly affected a fifty per cent increase in their fondness for sugar. Present consumption is of the order of 18 lakh tons.

Government stocks of imported sugar are being released; and there should be no tightness in the supply position. It should not be forgotten, however, that sugar is the one commodity in which the common man has, frequently, been victimised on the plea of a supposed scarcity of stocks. Dealers and traders have perfected the science of creating artificial shortages and art of exploiting the so-called shortage. We have heard of bribes being paid for the securing of wagons; in the sugar trade, bribes are known to have been paid for the with-holding of wagons.

IFC Dilemmas

Mr K. R. K. Menon, now Chairman of the Industrial Finance Corporation, utilised his Calcutta Rotary address to an exercise in thinking aloud. The Corporation is enjoined to help industrial concerns which are not able to get accommodation from the usual commercial banks and, at the same time, are not in a position to raise the requisite capital from issues of shares to the public. In other words, the original intention is that IFC should help the lame dog over the stile. It is permissible to draw the inference that it should not concern itself with dogs in sound health and of stout limb. Such was the purpose of the legislators who helped place the IFC Act on the statute book.

Their successors in Parliament apply the criterion of accountability to the institution which functions under a special act of the Parliament. If, in helping lame dogs, IFC is not able to effect cure as expected, it is blamed for taking on hand the wrong type of lame dog.

There is another equally disturbing dilemma. The concern helped by the IFC, by supposition, is in none too good a financial shape. That it is the IFC from whom it has taken financial assistance, is admission that other kinds of aid would not have been easily available to it. So it secures the IFC "umbrella." Suppose it is not able to keep up its payments as stipulated in the agreement between the Corporation and itself? Or it is obliged to default after paying the first few instalments? The IFC, in protection of its interest, must ask for the return of the umbrella. And it may well be just the time when the company has real use for this protection.

In brief, KRK is now heading an institution which should keep his active brain fully busy. And, we may add, he should be of great help in the building of traditions to such effect that Parliament does not allow its admitted responsibility for policy to be translated into vexatious probe and humiliating inquisition.

Flexible Credit Control

WHILE the policy favoured in the Western countries for dealing with the current tendencies toward inflation is general credit squeeze, India has preferred to guide and mould the money market through a scheme of selective credit control. While, therefore, borrowers in India have to pay rates in consonance with the demand-supply position from time to time, famine conditions in the money market have been avoided. Money is not cheap; nor is it scarce. Stringency denotes a state of affairs in which money is available at the price determined by the relevant conditions. During the busy season which now appears to be nearing its end, banks had to pay dear rates for their deposits; they could also charge dear rates on the credit they extended; and, besides, they could secure additional funds according as they had need, at ¼ per cent below bank rate.

This kind of control is rendered effective because, through the intimate knowledge of the affairs of every bank on the basis of the periodical statutory inspections. and through the discretion it exercises in making advances against usance bills, the Reserve Bank is in a position to make its views known and enforced with regard to limits, magnitudes and categories of bank advances. The increasing vogue on the part of banks to borrow from the central banking institution on the security of commercial bills, therefore, is greatly to be encouraged from the point of view of the success of the credit control practised in India. The experience of earlier years goes to show that, with the termination of the busy season, banks cease to be insistent on their borrowers taking a moiety of their advances on the basis of usance bills. So, banks' bill portfolios reach low levels; and recourse to the Reserve Bank for accommodation on this type of security becomes non-existent for the larger part of the slack season.

We suggest that current conditions favour measures designed to effect a gradual transformation of the usance bill from a seasonal convenience into a money market instrument of continuing (and not merely fitful) value. The central idea of such measures must be to offer banks such inducements as will make it worth while for them to prefer at all times this mode of borrowing from the Reserve Bank and as will, therefore, result in banks maintaining their bill portfolios at fairly satisfactory levels.

This objective is capable of attainment if the rate which banks have to pay for loans against usance bills is fixed at different levels for the seasons. That is to say, if the advance rate in the busy season is ¼ per cent below bank rate, the rate for this kind of advances in the slack season must be ¾ per cent below bank rate. Such a difference in seasonal rates is no novelty. This suggestion merits the careful consideration of the Reserve Bank at the threshold of this slack season.

As the contour, stark outline and duration of the slack season are undergoing significant changes, the tendency will be for money rates to be dominated by the Reserve Bank's advance rate both for floor and ceiling. In other words, if money is usable in the slack season, the minimum rate for deposits will be at or near the Reserve Bank's minimum. If the latter minimum is lowered, there will be a corresponding relaxation in money rates. The disparity in rates between the busy season and the slack season is worth maintaining from every point of view.

Deficit Financing: Rs 10½ crores

The returns of the Reserve Bank for the week ended June 8 bear the real impress of month-early disbursements. The previous return covered only the first day of the month. It follows that the cheques issued in respect of the bulk of the payments were cashed or cleared only in the period covered by the returns as on June 8. The Central Government have had recourse to created money to the extent of Rs 10.44 crores. To offset this expansion, the Reserve Bank has transferred Rs 9.94 crores from the Issue Department to the Banking Department. The outflow of rupee coin is also considerable at Rs 1.01 crores. Active note circulation has gone up by Rs 12.98 crores; and this is due mainly to the beginning-of-the-month payments. In the result, notes held in the Banking Department show a substantial decline of Rs 13.99 crores. To the extent that the changes in the currency position in the week ended June 8 are mainly influenced by the fact that it is the first week of the month, the Reserve Bank returns, to be issued next week, may show a decline in active note circulation and, possibly, also a return of rupee coin to currency. It is significant that, though the balances of member banks have gone down by Rs 1.71 crores, "Other Loans and Advances" have been reduced by Rs 5.33 crores. This may be taken as an indication that the funds as they return from the mofussil centres are being utilised by banks to reduce their indebtedness to the Reserve Bank. From this point of view, progress toward the slack season is significant.

In the week ended June 8, rupee securities have gone up by Rs 10.44 crores to Rs 713.66 crores, thanks to ad hoc Treasury Bills created for the ways and means position of the Central Government. Foreign securities have gone down by Rs 9.94 crores to Rs 666.54 crores, thanks to the transfer to the Banking Department. Rupee coin shows a decline of Rs 1.01 crores to Rs 104.05 crores. Active note circulation has expanded by Rs 12.98 crores to Rs 1,514,82 crores. As a result of these developments, notes held in the Banking Department have fallen by Rs 13.99 crores to Rs 9.45 crores.

In the Banking Department, all categories of deposits have registered a decline: Central Government's deposits by Rs 2.01 crores to Rs 52.47 crores, State Governments' deposits by Rs 5.33 crores to Rs 4.93 crores, banks' deposits by Rs 1.71 crores to Rs 50.18 crores and miscellaneous deposits by Rs 0.63 crores to Rs 12.47 crores. As the transfer from the Issue Department amounts to Rs 9.94 crores, it follows that the net loss of foreign assets is Rs 5.70 crores. "Other Loans and Advances" have declined by Rs 5.33 crores to Rs 74.92 crores. Investments have declined by Rs 0.70 crores to Rs 36.33 crores, possibly due to sales of 3½ per cent 1964 Loan.

The consolidated statement of the Scheduled Banks for the week ended June 1 reflect the month-early payments only to a small extent. The statement for the week ended June 8 may be expected to reflect the effects of overflow payments.

Total demand liabilities have declined by Rs 6.49 crores to Rs 638.59 crores, while time liabilities have risen by Rs 5.67 crores to Rs 441.22 crores. Borrowings from the State Bank are lower by Rs 1.23 crores at Rs 8.66 crores, while those from the Reserve Bank are higher by Rs 1.81 crores at Rs 65.76 crores. Cash and balances with the Reserve Bank have declined by Rs 0.87 crores to Rs 87.38 crores. Investments are down by Rs 3.11 crores at Rs 349.68 crores; and it is likely that some of the banks took advantage of the firm giltedged prices of last week so as to prepare themselves for the New Loan. "Advances in India" have risen by Rs 1.20 crores to Rs 614.90 crores and "Foreign Bills" by Rs 2.10 crores to Rs 48.33 crores. "Inland Bills are shown at Rs 104.92 crores against Rs 109.11 crores. Money at call and short notice stands at Rs 9.65 crores against Rs 9.94 crores.

The statement of the State Bank of India for the week ended June 8 reveals a drop of Rs 1.92 crores in deposits to Rs 224.63 crores. Borrowings from other banks have declined by Rs 4.50 crores to Rs 15.00 crores, while other liabilities, including inter-office adjustments, have risen by Rs 1.91 crores to Rs 5.07 crores.

On the assets side, cash balances are shown at Rs 16.64 crores against Rs 16.79 crores and Investments at Rs 100.84 crores against Rs 101.01 crores. Advances have moved up by Rs 0.77 crores to Rs 139.43 crores—"Loans, Cash Credits and Overdrafts" accounting for a rise of Rs 0.11 crores and "Bills Discounted and Purchased" for Rs 0.65 crores.

SOUTH EASTERN RLY TENDERS.

Tenders invited by the General Manager, South Eastern Railway, Garden Reach, Calcutta—23 against Tender No. GM6/56/1373B(56) for the supply of Ellis Patent Lock Spring and Cotter Universal for Wagon locking, the quantity of each item should read '1,38,000 Nos.' instead of '61,000 Nos.' as advertised previously in this paper. The closing date of the tender is 22-6-1956 at 12 noon.

S-8. CONTROLLER OF STORES.

SOUTH EASTERN RAILWAY.
ENLISTMENT OF NAMES IN APPROVED LIST OF CONTRACTORS.

Large civil engineering works are envisaged in the Second Five-Year Plan period on the South Eastern Railway. There will be heavy earth work for doubling and new lines, construction and extension of bridges, construction of staff quarters, supply of stone track ballast, supply of Kiln Burnt bricks and other works of Miscellaneous nature. A substantial portion of these works will be between Khargpur and Nagpur and Khargpur and Waltair.

Applications are invited from contractors with adequate experience and financial resources for handling such works, for enlistment of their names in the approved list of contractors of South Eastern Railway. Applications should be sent to the Chief Engineer, South Eastern Railway, Garden Reach, Calcutta—23, specifying whether the applicants wish" be registered as contractor for one or more of the following classes of works. (a) Earth Work, (b) Bridge Work, (c) Building Work, (d) Supply of Kiln Burnt Bricks and (e) Supply of ballast for track and other purposes, sand, etc.

Applications should be accompanied by the following documents:—(i) Certificate of experience as contractor in this line stating his capacity to undertake and carryout works of aforesaid nature satisfactorily as vouched for by a responsible official or Firm, (ii) Proof of financial position, (iii) Up-to-date Income-tax clearance certificate and (iv) in case of a registered company or a limited concern a copy of constitution of the firm is also to be furnished.

Applications will be received by the Chief Engineer, South Eastern Railway, Garden Reach, Calcutta—23.

E-32. CHIEF ENGINEER.

No Devaluation of Sterling

By PAUL EINZIG

AT the beginning of June a minor sterling devaluation scare developed on the Continent, as a cause and effect of the weakness of sterling. The view gained ground in Zurich, Frankfort and other Continental foreign exchange markets that the Government would be unable to hold sterling in face of the adverse effect of a further rise in wages on the balance of payments. This wave of pessimism derived stimulus from recent public speeches by the Prime Minister and the Chancellor of the Exchequer, emphasising the adverse consequences of further wages increases. Needless to say, these official warnings were made for domestic consumption. As is usually the case, however, they produced more effect abroad than at home.

Nothing in the immediate technical situation would justify the anticipation of a devaluation of sterling. Devaluation scares in recent years were preceded by an outflow of gold. In the present instance there has been a moderate but steady inflow of gold in the past six months or so. Even though the gold reserve is far from adequate, it has been increasing gradually. Notwithstanding its recent depreciation sterling was still a shade above its dollar parity of $2.80, at a time when speculators were canvassing rumours of its prospective devaluation. As far as is known the Exchange Equalisation Account has not supported sterling since December last. So the technical position does not in itself justify pessimism as far as the immediate future is concerned.

It is understood to be Mr. Macmillan's policy to maintain sterling at its present parity notwithstanding any adverse pressure. Although his predescessor. Mr. Butler, was at one time flirting with the idea of widening the margins of permitted fluctuations around the parity, Mr. Macmillan has no such intentions. He realises that to do so would serve no useful purpose, for an adverse pressure would bring the sterling dollar rate to its lower limit, no matter what the figure of that limit would be. So that the Exchange Equalisation Account would lose gold in any case.

Persistent speculative pressure on sterling would of course materially weaken its defences. From this point of view the recent influx of foreign balances has become a source of potential weakness. These funds were returned to London towards the end of last year and early this year when their owners realised that the devaluation scare of the last summer was unjustified. Unless the Government's policies inspired them with sufficient confidence they may withdraw their funds once more which would mean a decline of the gold reserve, even if as the Chancellor believes, the balance of payments is now in equilibrium.

It goes without saying that unless the Government succeeds in checking wages inflation British goods might become priced out of their overseas markets, in which case a devaluation might become necessary to adjust sterling to its changed purchasing power parities, and thereby to restore the competitive capacity of British exports. The Government is only too well aware, however, that such a remedy would be purely temporary. In existing conditions the rise in the prices of imported goods that would follow a devaluation would be succeeded, after a very brief interval, by a more than corresponding rise in wages. Before very long sterling would become once more overvalued compared with its purchasing power parties, and the devaluation would have to be repeated once more. The Government is determined to take a stand against devaluation precisely because it is aware that devaluation would not solve the problem except purely temporarily.

A revival of the sterling scare to an extent to which it would reduce the gold reserve to danger level might facilitate Mr Macmillan's task of dealing with domestic inflation. The moderate improvement that has taken place during the last six months is about the worst thing that could have happened from this point of view. The improvement has not been sufficient to make a fundamental difference, but it has been more than sufficient to make it politically and socially difficult for the Government to resort to drastic and unpopular remedies. Had the outflow of gold continued during the

(Continued on page 1129)

how much does a pair of eyes cost ?

Eyes belonging to able administrators ... trained technicians ... skilled craftsmen ... how much are they worth to *you* and your business ? Difficult to calculate in terms of money. Yet if you consider the effect of good lighting on efficiency and output, you will see why you must ensure that everything is done to prevent eye-strain and fatigue. Merely adequate lighting is not enough. Your office or factory must have *good* lighting. Free from glare, free from harsh shadows, and planned in such a way that every pair of eyes have the light they need to do their job ... without eye-fatigue to hamper their efficiency.

World of Tea

First Export Sale Disappoints

THE first Export Sale of the New Season's teas was held in Calcutta this week; and, contrary to expectations, the sale had a poor start and nearly 60 per cent of the total offerings had to be withdrawn without bids in the absence of any buying interest. Buyers showed preference to quality and gave support to only the few Dooars teas showing useful first flush quality.

Of course, the trend of the market noticed this week, cannot be considered as a true guide since most of the offerings were of the first-flush quality. There is a general belief that better qualities of the first flush teas will be offered in the coming weeks when reasonable prices may be obtained. There is also a belief that the market may take some time to settle at its proper level, since buyers will be watching closely one auction after another to make up their mind.

In this connection, Messrs J. Thomas & Company Private Limited, in their annual review, have stated that prospects for the current season are bright as estates are adopting a policy of fine plucking, though the buoyancy of the market must always be conditional on certain factors being favourable. Providing world producing countries' crops are kept within reasonable bounds, and costs of manufacture are not allowed to rise above their already dangerous levels, the coming season should prove better than that of 1955-56, and profitable to all owners of India tea estates.

The review adds:

'One particular factor, which must be considered to have a bullish influence on the market is the full absorption by the world markets of the surfeit of production in 1955. In the UK, absorption was evidently larger, resulting in the stock position at the end of May coming down by no less than 36.5 million pounds below the last year's figure at the same date. This pronounced drop in the figure is indicative of the fact that the UK buyers have not been stock-piling, but buying for their immediate requirements. The same is the case with other large out-market consumers, none of whom appear to be holding any excess of tea above their normal requirements at this time of the year'.

'Another factor, which must have had also influenced improving the statistical position or the industry, is the increased domestic absorption of tea in India. Although prices of tea, both in London and Calcutta, have, of late, seen some definite improvement, yet this improvement has been more or less of a sober and controlled nature. The absence of any hectic rise in prices, which featured the previous two seasons, must be taken to be a healthy sign for the future'.

It has now become apparent that producers are aware that the production of a large amount of ill-manufactured tea is not a profitable policy; and there are indications that increase in crop are being tempered by improvements to quality and manufacture. Apart from this, there is another bullish factor for the industry in the current season. There is the likelihood of a Russian order for Indian tea which, it is rumoured, may amount to 20 to 30 million pounds under her barter agreement.

The report also mentions that a new International Tea Agreement is being considered and is likely to be signed shortly. The maximum permissible quantities for export will be raised from 1,091.3 million pounds to 1,182.5 million pounds. India will be assigned 560 million pounds against 470.1 million pounds; Ceylon 400 million pounds against 339.6 million pounds; Indonesia 175 million pounds against 234.3 million pounds and Pakistan 47.5 million pounds against 47.2 million pounds. There will be no restrictions on extensions and replacements under the new Agreement.

According to the forecast of the Pakistan Tea Association, the 1956-57 season will be a satisfactory one for the Pakistan tea industry. The tentative estimate made by the Association puts the tea crop at 54 million pounds in 1956/57 as compared to 52.5 million pounds in the previous year. The quantity of tea available for auction in Chittagong will, however, be lower at 26 million pounds as against 32 million pounds in 1955/56. Forward contracts are expected to absorb 2 million pounds as against 4.25 million pounds in 1955/56, while sales ex-garden will remain unchanged at 6 million pounds. The quantity of tea, to be shipped for auction in London, is expected to rise to 20 million pounds from 10.25 million pounds in 1955/56.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 24,759 packages of New Season's teas and 123 packages of Old Season's teas. The market was very discriminating and buyers gave good support to only the few Dooars teas showing useful first flush quality. These were often sold above brokers' valuations. Invoices which showed a marked decline in quality and the bulk from Cachar and Assam which carried plain liquors were almost neglected and heavy withdrawals of these types were experienced. Stylish Whole Leaf grades were sold well. Darjeelings, especially those with flavour, were fairly well supported.

In the Internal Sale, offerings comprised of 21,500 packages of Old season's teas. There was a good general demand with black leafy exportable types once again being the strongest feature. A very few good CTCs, on offer, were sold well; but the remaining CTC teas, which were very ordinary, were considerably weaker. Clean Common and Medium teas were well supported and prices were a full one anna per pound dearer, while residue kinds were keenly competed for and were often As 2 to As 3 per pound dearer. Following rates were quoted per pound: Medium Dooars Dust Rs 1-5-6; Medium Assam Grainy Dust Rs 1-7-0 and Best Assam CTC Dust Rs 2-6-0 (Nominal).

Offerings of other grades consisted of 327 chests, which met with a fair demand at prices which were generally fully firm to dearer.

In the Export Quota section, business was done in Old Season's teas at 4 pies and New Season's teas at 34 pies per pound.

In the Cochin market, offerings were abuut 1,050,000 pounds. Again, the seasonal decline in quality was noticeable in teas from all elevations. There was a fair demand for all Fannings grades and the better liquoring Brokens. Withdrawals were, however, heavy of the lower Brokens.

Nilgiri descriptions received useful enquiry at irregularly easier rates with buyers following quality closely. Good Medium Brokens were one to two annas per pound easier, while their Fannings registered declines of up to one anna per pound. No interest was shown in Medium, Low Medium and Plain Brokens, and the majority of teas

STATE BANK OF INDIA

Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be — can be made to run more smoothly with the help the Bank can offer.

Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

World of Jute

Prices in 1955-56

FOR the greater part of the jute year that is about to draw to its close, the raw material has been quoting within very narrow margins and at a level which must be reckoned to be satisfactory to the producer. Assam bottoms were scarcely on offer at rates below Rs 26 per maund: the only two months when they did so were September and October, the late start of arrivals in the current jute year having been responsible for raw jute having reached Calcutta in substantially larger quantity during these two months. The upper margin has been about Rs 29, with two break-throughs to Rs 31 in February and March when, as a result of the decision to unseal looms long dormant, it was apprehended that there could possibly be some shortage of the material for the season.

How are we to explain this unusual stability in the raw jute market? Secondly, why is it that quotations have tended to be firm, that there was hardly any sign of decline in prices, that no weakness was displayed in raw jute in spite of the down-trend fluctuations in jute goods?

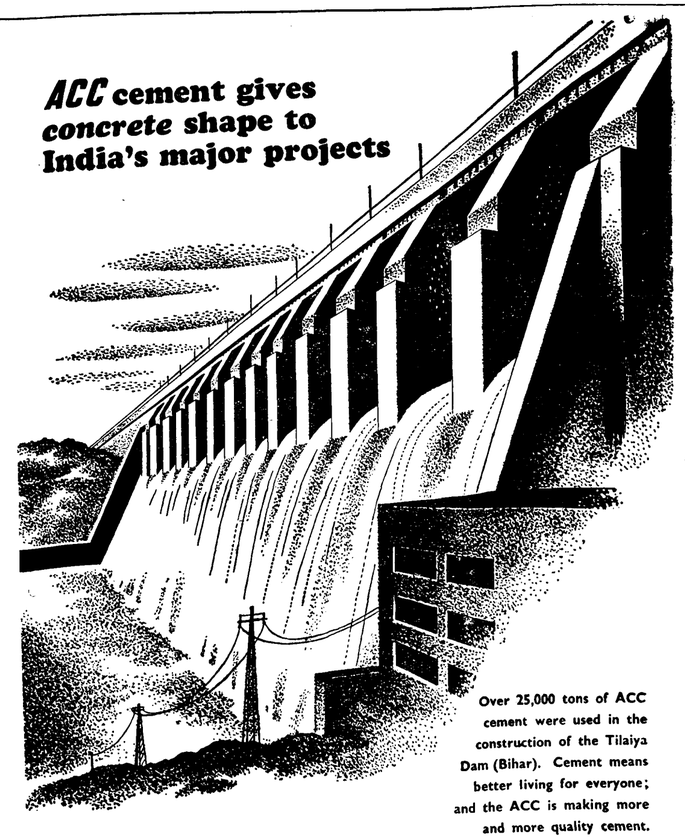
Perhaps, to some extent, it is arguable that, with increased production of jute goods decided upon, the confidence that the year's crop would be fully taken up (as far as the cultivator is concerned) and the anxiety, on the part of the mills, that they had as soon as possible to secure their supplies of the raw material combined to infuse the raw jute market with an unwonted firmness.

In the second place, I fancy that the bulk of IJMA purchases of raw jute was made by the end of the first quarter of the jute year; thereafter, business passing has, I think, been extremely restricted. Thus, it would not be wrong to suggest that raw jute quotations, for may be the last six months, have been largely nominal.

Thirdly, with never a suspicion that the season's crop would remain unabsorbed, there could be no question of a decline in raw jute prices.

Finally, since the supply position has consistently been one in which there would be no plethora of raw jute, the market for this commodity was not influenced by the lower trend of jute goods prices.

The steadiness of 1955-56 in this regard is to be welcomed in that incentive will have been provided to the cultivator in March-April this year; consequently, we can count on an even larger crop for 1956-57—which possibly will entail a lower price level, thus enabling the disparity between raw jute and jute goods to be restored to a level that brings a satisfactory return to the mills industry.



Similarly, the prices of hessians 10 oz have been moving within a small range. The lowest point it touched was Rs 38, in October: and the highest of Rs 43-1 ruled in July and August last. The average has been between Rs 40 and Rs 41. The question that arises in respect of this variety of jute goods construction is this: How is it that the range of prices in 1955-56 has been fully Rs 5 lower than in the previous year?

I might suggest that two factors have contributed to this lower level of hessians prices. In the first place, the 'special' demand that Calcutta is fortunate enough to have made on it every odd year or so has been missing: the Argentine has not been figuring as a substantial purchaser. As a result, speculative activity largely let hessians alone. It is the anticipation of orders from Argentina that, in the past, has always attracted speculaive interest to hessians. With this element conducive to speculation missing, it follows logically that stability should have marked the prices in hessians.

Secondly, it is true that Indian production of hessians has been largely absorbed; but the important difference is that the main customer for hessians is particularly sensitive to higher prices and shows great resistance. As an example, we may cite the standpoint of a firm of American bag-manufacturers: Henry W. Peabody of Boston have made it known in their review that they consider ill-advised any measure to set a floor for hessians prices. It is termed suicidal; I do not, at this juncture, wish to discuss whether or no a plan of floor prices is practicable or desirable. I have merely quoted this as indicating the strong American resistance to higher hessians prices. The Calcutta market has, therefore, been left no alternative to allowing the prices to remain at low levels!

Turning, finally, to B. Twills, we see in this commodity a much wider range of prices and a great deal more of fluctuation as well. A high of Rs 119-6 was touched in B. Twills in November: the low of Rs 101-8 was marked in September. It is interesting to note that the disparity between the high and low in July was as large a one as Rs 10-10. There is little need to explain the range of fluctuation: speculative activity was concentrated on B. Twills; and whether it was rumour about likely purchases by Russia or conjecture on floor prices or speculation about increasing pro-

US Notes

THE purchasing power of the consumer's dollar in the United States has held at steady levels for more than years. A study by the National Industrial Conference Board, a private research organisation, reveals that, in the 40 months from January, 1953 through April, 1956, the value of the dollar has fluctuated within a narrow range of only 1.3 cents. Using the 1945 value as base, the Board finds that the value of the dollar had declined to 70.6 cents by 1952. Today, it is worth 69.5 cents.

Significantly, the consumer's dollar can buy more in food and clothing today than it could in 1952. In the case of housing and transporation, the value of the dollar is somewhat lower than it was four years ago. It is noteworthy, however, that the big drop in both these latter classifications occurred before 1953 and changes since then have been relatively slight.

The businessman has not fared quite as well as the consumer in regard to the purchasing power of his dollar, which he uses to buy raw materials, meet electric power costs, pay the wages of labour and construct new plants. The same pattern is found, however, as in the case of the consumer's dollar—a drop in value prior to 1953 and a far more moderate decline since then. In fact, the businessman's dollar can purchase slightly more in way of materials and power today than it could in 1952.

Another study of considerable interest has been released by the Port of New York Authority. In a research booklet entitled 'The Port And The Community', the Authority notes that out of a total population of 13 million in the Port district—which embraces parts of the States of New York and New Jersey—3,120,000, or one out of four, owe their livelihood to the handling of waterborne commerce.

According to US Government calculations, each job in effect provides two other jobs bringing the port's employment to 1.3 million. On the average, each job holder has 1.4 dependents. Result—3,120,000 persons directly and indirectly dependent on the port for their economic well being.

A fourth of all earnings on commerce in the port of New York generates a local income of 6,300 million dollars, or more than a fourth of the 23,000 million dollars in wages earned in all occupations in the port district.

US Government reports, meanwhile, indicate that American trade with the rest of the world—which contributes substantially to port activity both in the United States and other countries—continues to outstrip the levels of other years. The Commerce Department last week estimated US imports in April at 991 million dollars, some 14 per cent more than in April, 1955. This brought the import total for the first four months of 1956 to a record of 4,210 million dollars, which is some 14 per cent above last year's January-April total. Treasury Department reports on customs receipts for May continue to indicate high trade activity also during that month.

American exports also are continuing at a record pace. The Commerce Department has estimated the value of US exports in April at 1,551 million dollars, which is very close to the March, 1956 level and a full 23 per cent above April, 1955. In the first four months of 1956, US merchandize exports had a value of 5,760 million, which is more than 10 per cent above the comparable 1955 total.

*

Britain

FOR the fifth month in succession, the gold and dollar reserves of the Sterling Area have shown a sharp increase.

The figures for May, published in London by the Treasury, show that the reserves rose by $41,000,000 and stood at $2,369 million on the last day of the month.

During May, defence aid estimated at $3,000,000 was received from the United States; $29,000,000 was received in gold or dollars from the European Payments Union (EPU) for April; and $2,000,000 was paid to creditors of the Union in bilateral settlements.

On the provisional figures for May, the UK has a surplus of £8,000,000 with the European Payments Union, which will fall to be settled in June as to 75 per cent in gold or dollars and as to 25 per cent by a reduction of the debt to the Union. In April, there was a surplus with EPU of £14,000,000—the first surplus since May last year.

Although the May surplus shows some decline on the figures for March and April, too much should not be made of month-to-month movements, say London observers. The result is considerably better than in May 1955.

Altogether, over the past five months, there has been a $249 million rise in the reserves, and this is considered to be moderately satisfactory. In the corresponding period of 1955, there was a fall of $76,000,000.

The EPU surplus is lower than in April, but this follows the usual May pattern. It is certainly no worse than in May last year, when the United Kingdom's position in EPU was a good deal stronger than it has been recently.

The results of the gains made by the United Kingdom in the last five months in the gold and dollar position (up by $249,000,000) and in the balance of payments position "give us great confidence in the future", declared the Chancellor of the Exchequer, Mr Harold Macmillan, in the House of Commons.

He was replying to a question asking for a reduction in the Bank Rate—a request to which he replied that "monetary policy remains flexible, and the Bank Rate will be varied as circumstances require"

In reply to further questions on the subject, Mr Macmillan added: "I am not saying we have absolute proof as to whether the reintroduction of these (monetary) methods is going to succeed or not, but I am very confident, as a result of the last few months, that we are beginning to overcome our difficulties".

*

Australia

RECENT adverse movements in Australia's balance of trade and external payments, and the consequent imposition of severe import restrictions as a remedy, have focussed attention on the need for greater export earnings.

In the last financial year—1954-55—commodity export income totalled £A780 million. The import bill for this period was £A846 million, and this amount, with net outgoings on "invisible" payments, left Australia with a total balance of payments deficit for the year of £A256 million.

To prevent this state of imbalance from becoming chronic, and to avoid further recourse to restrictive trade measures, ways and means of achieving and maintaining higher export income have received considerable attention.

The recently established Ministry of Trade was created to foster a fullscale attack on these problems, and is now promoting a series of trade drives to increase exports and overseas earnings.

In overseas trade Australia has two main concerns, and these were briefly outlined by the Minister of Trade, Mr J. McEwen, when he recently discussed Australia's relation to the General Agreement on Trade and Tariffs.

Mr McEwen said: "The first is that our opportunities to sell our great bulk commodities must be preserved, subject only to our capacity to quote against competitors' unsubsidised prices....the second is that pastoral and agricultural industries are not adequate themselves to ensure great population growth."

Mr McEwen added that the manufacturing industries "must continue to develop as a great medium for enabling population to increase. Our position and need in this regard are almost unique in the world."

It is often stressed that Australia's high cost structure is detrimental to any marked expansion in industrial exports and that greater concentration on rural production in those industries in which she has natural advantages for competitive trade is the only fundamental way to increase export income.

At this stage of Australia's industrial development this is obviously true, but industrial expansion could ultimately contribute to a permanent improvement in the export-import relationship, not necessarily by producing a greater share of export earnings, but as a factor in reducing our need for imports.

The Bureau of Agricultural Economics has stated that "in view of the likelihood of an eventual decline in per capita import needs as a result of the increased local production of goods now imported, export requirements will increase with population growth, but less than proportionately."

This is the hub of the long-term prospect. Increased total exports will be essential to maintain Australia's overseas trade as the population and local demands expand, but the per capita level may not be as high as it is today.

Export earnings in 1954-55 totalled £A780 million, of which rural products, including factory-processed foodstuffs, brought in 83%. This is a natural condition derived from the advantages enjoyed by Australia in the competitive production of wool and major foodstuffs.

These form the basis of Australia's export trade, and any significant expansion in export earnings depends on their continued and increased availability for export.

According to the present indications, Australia is on the verge of remarkable progress in rural production, if she has not already entered a new era. The rapid expansion in pasture improvement, and its greater efficiency, is raising the pastoral and dairy output to new levels, while crop production is generally well maintained in spite of reduced crop acreages.

Industrial exports, though individually insignificant alongside the huge earning capacity of the chief rural products, cannot be overlooked in total. In 1954-55 they earned some £A131 million—17 per cent of the total export income.

The manner of Australia's industrial growth indicates that in some directions the development of export markets will be necessary to maintain the prospective levels of output from the currently expanding productive capacity.

It is also probably true for some industries that their most satisfactory economic operation will only be obtained by producing at levels in excess of local demand.

Sustained prosperity abroad, and industrial growth at home, rule out the possibilities of a serious recession in Australia in 1956, states the Bank of New South Wales in a recent review.

The bank says that for the first time in several years the New Year opened with some doubts about the immediate economic prospects. The severity of credit restrictions, the deficiency in the Government's loan programme, and the state of the balance of payments, raised difficult issues for the future course of business.

But the business community entered 1956 on a wave of high turnover and prosperity, perhaps diminishing in intensity, but still strong enough to ride for some time while economic policy is reviewed and readjusted.

The bank ascribes the recent slowness in raising public loans to the growing financial stringency, and to a lack of balance within the capital market. The loss of international reserves was less than expected, but there was little room for complacency because the financial year's deficit would still be considerable.

Even if exports were confined to the targets set by licensing, it would be difficult to expand exports. Keener sales promotion would be of little use unless exports were competitive in price, quality and delivery.

ready made the calculations with the shrewdness which is their speciality: and a keen stock exoperator explained to me how a lakh of rupees invested in the preference shares now may snow-ball to eight times the amount in the space of a few years.

Premier Automobiles, likewise, merit our attention. They are producing cars and trucks for which there is a hungry market. Output is increasing; and profit margins, too, must increase.

TELCO is a recent entrant in the field of motor trucks. Plans for expansion follow in quick succession; for, the demand for these trucks is insatiable. I understand that there is a black market premium of Rs 2,000 for these trucks.

Finally, Mahindra and Mahindra. They are associated with Willys Jeeps; and they have now a monopoly in this field. Besides, M & M have valuable connections with foreign steel manufacturers, and figure prominently as importers of steel. In this and other respects, M & M are tailor-made for the kind of business which will grow and grow in the Second Plan period.

Investment Notes:

Share market optimism about the working of the Indan Copper Corporation has proved fully justified. The company has now decided to pay a final dividend of 35 per cent, making a total of 45 per cent for 1955 as against only 25 per cent paid in the previous year. The dividend is payable on or after the 28th September, 1956. The net profit is substantially higher at £416,758 against £263,987. The sum set aside to Depreciation has been raised to £175,000 from £100,000; taxation to £683,046 from £264,396 and General Reserve to £200,000 from £150,000. The amount carried forward is higher at £117,083 as against £111,715 brought in from the previous year. Judged by the excellent working results, bumper dividend declared and the recent announcement of the bonus issue, Indian Coppers at the present price of Rs 7-1 appear to be a good buy.

Thanks to a substantial rise in net profit from Rs 22.02 lakhs to Rs 31.82 lakhs, Metal Box has raised the dividend from 12½ to 16½ per cent for the year ended 31.3.1956. The outlook for the company is generally considered bright in the light of the growing industrialisation. Shares are presently quoted around Rs 28-14.

At the extraordinary annual general meeting of the shareholders of the Associated Cement Companies Limited, it was unanimously decided to issue 6,35,928 shares of Rs 100 each at a premimum of Rs 20 per share. It is proposed to call up Rs 50 per share on application together with half the amount of the premium. The remaining Rs 60 will be called up later, either in one instalment or in such instalments as the Board of Directors may think fit.

India Cements, Madras, have proposed to issue fresh capital to the extent of Rs 40 lakhs by the creation of 1,60,000 shares of Rs 25 each. The new shares will be issued at par to the existing shareholders in the ratio of four shares of Rs 25 each for every Rs 175 paid-up capital held. Those holding less than Rs 175 paid-up will be offered one new share of Rs 25 for every Rs 50 paid-up capital held.

Hind Cycles have moved up to Rs 162-8 from Rs 145. The accounts for 1955 reveal a handsome rise in net profit and the dividend is maintained at Rs 10 per share on the increased capital. In the context of the targets of the Second Plan, the company has decided to raise the capacity of the factory to two lakhs cycles per year.

Sirpur Paper Mills have proposed to convert both the Ordinary and Preference shares from Hyderabad to Indian currency. The ordinary shares have been active around Rs 123.

Transfer Books of the Tata Iron & Steel Company will be closed from the 6th to 30th July, both days inclusive, for the purpose of the annual dividend.

AFTER devoting this column, over the past two weeks, to an exultant phase of giltedged in which were demonstrated the virtues of borrowing from strength, I am led, alike for chronological reasons and for emphasis on my main thesis, to the study of a spell of adverse forces of which borrowing from weakness was the most conspicuous. The twenties could broadly be described as an unedifying record of the Battle of the Ratio. Every phase of economic policy was bedevilled by Government's preoccupation with the exchange value of the rupee and fouled by their recurrent manipulations to "monkey" with the ratio question. As I shall show presently, the period covered by the last two instalments of Gossip was an interregnum of relaxation in this respect; and the Loan programmes and borrowing techniques could be attended to without the exchange conundrums diverting all energies and monopolising all thoughts. This period of relative freedom from the much-vexed controversy and convulsion of the ratio was put by Sir Basil Blackett to the most effective use for building up the credit of the Government and for fashioning strategy designed to translate the improving credit to the field of new loan issues increasingly favourable to the Treasury. The sway of such auspicious elements was, however, in the nature of an oasis in the desert of the twenties.

✱

That decade opened with frenzy and chaos so far as the ratio was concerned. In the popular mind, rupee-sterling exchange meant, for years and years, sixteen pence to the rupee. The First World War had caused disruption in these, as in several other, respects. The Babington-Smith Committee was set up to study the resultant position and to make suitable recommendations. It was an all-white Committee save for Sir Dadyba Dalal, who was the only Indian member. Its main recommendation, which followed the pattern of its composition, pertained to the ratio. The Chairman and his British colleagues made the fantastic recommendation that the appropriate level for the exchange was two shillings gold to the rupee. The Indian member, in a minority of one, argued vigorously against this imposition, and pleaded unsuccessfully for the traditional sixteen pence. The entire country backed the minority report; but the Government were determined to foist the two-shilling (gold) ratio on the country. So, the higher ratio was placed on the statute book despite protest from every section of Indian opinion.

✱

Fixing the ratio is one thing; maintaining it is quite another thing. The rupee-sterling exchange would just not stay at the two-shilling altitude. It was slipping all the time. And, all the time, the Government, in their ruthless resolve, put into motion counter-measures. To bolster up the ratio, intensified deflation was forced upon the economy; repeated doses of contraction were resorted to; sales of reverse councils were made on a Brobdignian scale; our accumulated reserves of foreign assets were recklessly squandered, and monetary stringency was the order of the day. The exchange, however, defied Government's bidding as did the waves in King Canute's story. After dissipating millions and millions of our foreign exchange reserve, after inflicting on the country deflation, currency-contraction and money-scarcity of the severest kind, the Finance Member of the day (Sir Malcolm Hailey, if I remember right) threw up his hands and confessed failure of the two-shilling ratio.

✱

The mad efforts not only to scale but to sustain an impossible height had perforce to be abandoned. Let the ratio find its own level, declared Authority, not because it was the right policy, but because it was impotent to force any other policy. So long as this sense of impotence prevailed, national economy could breathe a sigh of relief. It was while this sense of relaxation lasted, that Sir Basil was free and able to devote his time and undoubted skill to the credit mechanism and loan techniques. The resolve to let exchange alone was very much like the behaviour of the Devil who, when he was ill, would decide that a saint he would be.

✱

When the Devil got well again, the devil in him would reassert itself. So did the proclivity of the Government to favour a higher ratio. If time, the healer, is balm, time, the memory-eraser, is opiate. The India Office forgot, soon enough, the humiliation and contrition of the Finance Member who had, in effect, to admit that two-shilling ratio was a ghastly fiasco and monumental folly. The decision to set up the Hilton-Young Currency Commission revived in the India Office the urge and passion for the higher ratio. Came the edict that all necessary measures should be taken to present the Commission with a de facto eighteen pence ratio. London, for its part, had decided on effecting a retreat from two shillings, but also made up its mind that it would not retreat below eighteen pence. From the mid-twenties, the exchange pre-occupation with the higher ratio at eighteen pence became, once again, the dominant influence in official economic policy. There is evidence, in the papers published as appendix to the Hilton-Young Commission's report, to show that Sir Basil, the man on the spot, protested, that it went very much against his grain to apply the screw, as bid by India Office. The Hilton-Young Commission, however, do not appear to have had any such qualms.

✱

The Hilton-Young Commission differed from the Babington-Smith Committee in pigmentation, but not in outlook. While the latter contained only one Indian member, Hilton-Young had no less than four Indian colleagues. Of these, Sir R. N. Mookerjee, Sir M. B. Dadabhoy and Sir J. Coyajee were disposed, by temperament and training, to follow the line of least resistance, that is, to say yes to the majority. So, in this instance also, the minority report was a one-man affair. The majority recommended eighteen pence, while Sir Purshottamdas Thakurdas was, without qualification or reservation, for sixteen pence. It was a foregone conclusion that the Government would plum for the higher ratio. In haste worthy of a better cause, what was hitherto the de facto rate was given the de jure status—but after one of the bitterest struggles in the Central Legislative Assembly.

✱

The monetary engine was worked with resolute thoroughness. Its effects began to gather increasing momentum with the passing of the mid-point in 1926. The first half of that year witnessed the peak of the buoyant phase in giltedged prices and New Loan triumphs. In the spring, the five per cent Calcutta Port Trust Loan was subscribed 81 times over. In the summer, the Government of India loan, 4 per cent 1960-70 at an issue price of Rs 88, received a response of Rs 25 crores in three hours. But, the conversion aspect of this loan, for which 6 per cent 1927 and 5 per cent 1928 loans were given the option and the list of

which remained open throughout June, was a flop. The shadow of deflation was already casting shadows and causing shudders.

*

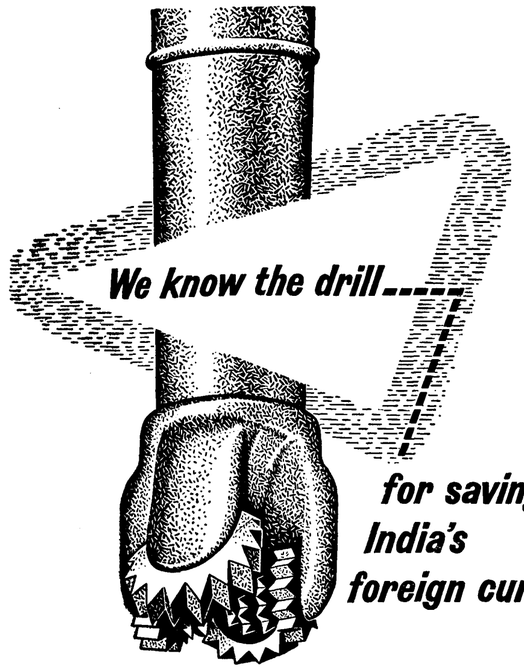
In their unholy zeal to sustain and maintain the eighteen pence ratio, the Government inflicted on the country an extended spell of repeated currency contraction, frenzied treasury bill sales at fantastic rates, declining giltedged prices, rising borrowing rates and diminishing realisations from New Loan issues. The havoc caused by this policy was comparable to, but more intensified than, that which ensued in the UK by the stabilisation of the pound at the pre-war parity. The second half of the twenties was noteworthy as the period during which the war-shattered currencies of Europe were rehabilitated and placed on a firm footing in relation to gold. Some countries were wise in fixing parities suitable to the conditions then prevalent in the domestic economies. Britain, however, was influenced by the consideration that the pre-war parity was a question of prestige. Sir Winston (then Mr) Churchill was responsible for the restoration of the British currency to the pre-war parity. This was bad enough, as it is now admitted that the ensuing Great Depression was largely due to the resultant deflation.

*

India was the only country in regard to which restoration to the pre-war parity, that is, sixteen pence, was not considered sufficient. A rate which was 12½ per cent higher than the pre-war rate was imposed in the teeth of opposition from every section in the country. It was axiomatic that deflation in India had to be far severer than that in the UK. In the monetary sphere, everything else was subordinated to this ruthless fad of the Government. All the gains of the mid-twenties in regard to improving credit, declining borrowing rate, and confidence-inspired and confidence-inspiring New Loan programmes were sacrificed at the altar of exchange.

*

I am concerned, in this study with the damage in respect of New Loan programmes. The New Loan issued in 1926 was, as I have already indicated, a four per cent long-term stock. That of 1927 was a short-term 4 per cent issue. In 1928, the rate had to be stepped up to 4½ per cent. This process was more pronounced in subsequent years: 5 per cent in 1929, 6 per cent in 1930, and 6½ per cent in 1931.



*

The 6½ per cent stock was kept open for subscription for a number of months. It was a four-year loan. Realisations were a bare Rs 15 crores. Compare this with the Rs 25 crores secured in 3 hours on a 4 per cent long-term loan (though, I must add, the issue price was Rs 88); and it gives an idea of the wanton abandonment of the gains in credit to the zeal for exchange. With exchange considerations relegated to the background, Sir Basil Blackett could frame and strengthen a policy of borrowing from strength. Bothered and battered by the over-valued rupee, Sir George Schuster found himself continuously in the predicament of borrowing from weakness. By the autumn of 1931, an intolerable and untenable position had been reached.

*

I hope, in subsequent issues, to continue this series of articles on the Indian money market. My purpose in these reminiscences is to show clearly the advantages that may be reaped from a planned giltedged policy as well as to warn of the danger that is inherent in a haphazard borrowing programme.

for saving India's foreign currency

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

Bombay Review

Oriental's Mr Vaidyanthan

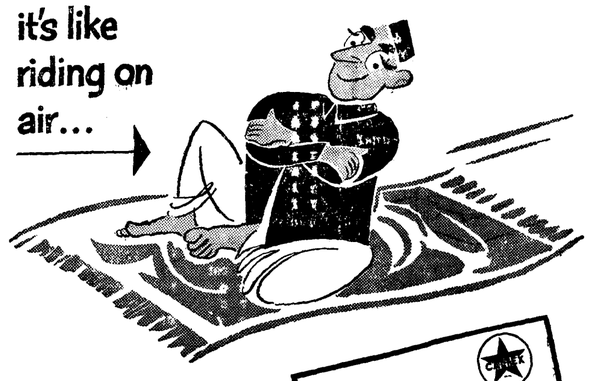
THE tributes paid to Mr L. S. Vaidyanathan on his retirement from the stewardship of the Oriental were genuinely heart-moving and conspicuously heart-warming. So moving that the distinguished actuary pleaded that his feelings might get ahead of his words and choke them. The sentiment which he thus expressed was the dominant note of one and all who were present at the farewell function to him. It was fitting that the speech, on behalf of the staff, was made by Mr K. R. Srinivasan, though, technically, he is now a New India man; and it was appropriate that the directors were present in full force and invested the occasion with the authority of participation by every one, high or low, associated with the Oriental.

I have attended some of the mammoth celebrations of Oriental's jubilees, golden, diamond, etc., and was always struck by the jubilation and pride which the unique status, stature and achievement of the Oriental imparted to the atmosphere of the functions. The farewell to Mr Vaidyanathan was distinguished, no doubt, by this special brand of Oriental pride, but more particularly by the emotion of personal affection and esteem. Vaidyanathan, the man, was very much more in the thoughts of the gathering than Vaidyanathan, the beloved chief of a beloved company.

Destiny has favoured the Oriental with pre-eminence in several respects, right from its inception and throughout its long and distinguished career. Destiny has equally been kind to Mr Vaidyanathan in the process of mutual reinforcement between himself and his company. It is true to say that Oriental made him what he was, and no less true that he made the Oriental what it was at the end of its chapter as unit in the private sector. The history of the Oriental and the story of Vaidyanathan must need the constant use of the superlative, and, in the language of the farewell address, constitute a record in "firsts".

Graduating from the famous Kumbakonam College, he took his Master of Arts degree in the first class; and he was also the first in the presidency. He was the first Indian to qualify as a Fellow of the Institute of Actuaries. He was the first to introduce mechanisation in the field of insurance in India. He was the first Indian to be Superintendent of Insurance. He was, likewise, the first Indian to be General Manager of the Oriental. Above all, in the field of insurance, where thugs and crooks came to gather increasing power and command expanding sway, Mr Vaidyanathan was, first, foremost and to the last, a perfect gentleman. He would not swerve this way or that way from the razor-edge path of rectitude which he had chosen from his earliest days.

Wedded to noble ideals, inspired by high principles, unwavering in integrity, rooted in rectitude, Mr Vaidyanathan provides the beacon-light that illuminates the path to success that is uplifting to oneself, to one's associates, one's profession, and one's entire environment. Of such permanence and beneficence is Mr Vaidyanathan's imbued. Mr Srinivasan sums up the Oriental and its chief thus: "It is as much a tribute to the sterling qualities of Mr Vaidyanathan as to the Institution which he has served for so long a period with such conspicuous ability and success that, on taking over control of all life insurance business in India, Government adopted the terms and conditions of the policies issued by the Oriental and the rates of premium charged by it as the basis for Nationalised Insurance. No higher tribute can be paid to any individual or institution."



From the farewell address given by the staff, I would like to cull two passages so as to indicate the uniqueness as well as the outstanding quality of his work in the cause of Indian Insurance:

> 'Your second great service to the 'Oriental', nay, to Indian Insurance generally, was the investigation into the Mortality of Indian Assured Lives based on the experience of the Company for the decade 1925 to 1935, an extremely valuable contribution which earned for you the coveted research grant from the Sir George Hardy Memorial Fund of the Institute of Actuaries. What greater tributes in acknowledgement of this valuable work can there be than the fact that the Mortality Table so constructed soon came to be adopted as the basis for the Valuation of Life Insurance Companies operating in this country'.
>
> 'It is given only to a few to crowd so many achievements into so short a span of time as a little over three decades. To fewer still is it given to see these achievements recognised in their own lifetime. The Government of Free India has, in recognition of your great ability and valuable services to the cause of Indian Insurance, done you the rare and signal honour of leaving you—the Chief Executive of the largest Life Insurance Company in India—undisturbed even after they took over the management of Life Insurance Companies. What is more, because of the impress they bear of your personality, the Oriental's premium tables, policy conditions, agency terms and organisational set-up form today the pattern for Nationalised Insurance'.

While the termination of this thirty-one year association creates a sense of poignancy in proportion to the great affection which he commanded from everyone, there is an under-current of relief, and satisfaction that retirement in this case is not a clean-cut affair. The Oriental itself loses its identity with the setting up of the State Insurance Corporation, say, in two months' time. So, this formal retirement is essential to put on a business footing such questions as the provident fund dues, pension, gratuity, etc.

But, the point to note is that, whereas Mr Vaidyanathan, Oriental's General Manager, has retired, Mr Vaidyanathan, Oriental's custodian, continues to be in service. What is more, Mr Vaidyanathan remains charged, officially, with the task of investing life funds in the public sector. Sir Dhiren Mitra

Road Transport

A vicious circle exists in road transport today: high taxes, inadequate road system and a steep price for the fuel combine to deter road-transport mindedness; and, so long as this lasts, the purchase of motor vehicles is in turn affected, with the result that these vehicles inevitably cost more.

How is this circle to be broken? According to the Indian Roads and Transport Development Association, the answer lies in a reduction of the taxes on motor transport by at least 20 per cent, not to speak of a specially geared road policy which would make much more attractive the transportation of goods by highways. Another suggestion was that authority should foster and encourage the creation of an organisation to supply motor vehicles, on credit, on the instalment plan. These are suggestions that the Association have advanced in a memorandum published by them, the occasion being a reception to Mr O. V. Alagesan, Deputy Minister for Transport and Railways.

The Deputy Minister was at pains to indicate that there could be no question of the railways being placed in or seeking a competitive role with the part played by road transport. Surely, India's need encompasses the optimum utilisation of all available transport potential. Indeed, there would be sectors, particularly short leads, which could be handled by motor vehicles, and not by the railways. To what extent loads could be carried across distances by this mode of transport, of course, depends on a substantial reduction in the costs of petrol, taxes and maintenance. It is, however, undeniable that, although restricted, scope does exist for road transport.

It would, it needs to be remarked, be folly to anticipate the three desiderata of the Association being soon realised: so long as Government are in need of tax revenues, the imposts and levies on motor vehicles are most unlikely to be reduced. So long as petrol continues to be an imported commodity, albeit in crude form, the cost of the fuel cannot be but at a relatively high level.

There is, however, no gainsaying the need for road transport to have a voice in such policy deliberations as may be contained in meetings of the Transport Advisory Council. Collaboration is essential in such matters, and it was, consequently, reassuring to hear from Mr Alagesan that road and other modes of transport would be admitted into the Council.

Seamen's Welfare

The welfare of seamen was the subject that Mr Lal Bahadur Shastri, Union Minister of Railways and Transport, addressed himself to, while he was inaugurating in this city the first meeting of the National Welfare Board for Seafarers. This Board has, it may be noted, been set up in ratification of the recommendation to this effect which was made at the Asian Maritime Conference held at Nuware Eliya three years ago. Thereafter, the Union Minister revealed, an ILO expert had helped to prepare a social security scheme for seamen. Unfortunately, that scheme has had to be pending, because a prerequisite need has been the reorganisation of the system of recruitment.

This primary need was recognised by the Asian Maritime Conference and India has, therefore, been attending to the eradication of the malpractices in this regard which make it difficult (or costly!) for the seamen to obtain a ready berth. Accordingly, Government had seen to it that statutory recruitment offices had been set up for seamen at both Calcutta and Bombay. Mr Shastri termed the setting up of the Board as another of the steps being taken to secure the welfare of seafarers, the first having been the reorganisation in recruitment procedure.

In referring to another resolution passed at the Asian Maritime Conference, which recommended welfare arrangements being made in Asian ports, Mr Shastri stressed that there was, if anything, greater need for adequate facilities of this nature in the European or non-Asian ports. For India's part, three Welfare Officers had been appointed in London; another was stationed in Australia; and the desirability of locating an officer for the West European ports is being looked into.

As the Union Minister pointed out, however, what the seamen in transit in a European Port needs is hostel accommodation and recreational facilities; these are by no means conspicuous by their existence. Secondly, it needs to be remembered that an essential aspect of welfare is the treatment of the seaman on board ship. In this context, Mr Shastri contented himself with the remark that whether they were ratings or officers, seamen should prize discipline and devotion as being of the utmost importance in the key industry that shipping is. As such, he urged that disagreements and disputes should be made to disappear by the presence of goodwill in mutual discussions.

*

Foreign Liabilities and Assets

The Reserve Bank of India has recently undertaken a Survey relating to India's foreign liabilities and assets as at the end of 1955 under the powers vested in the Bank by Government's Notification No. D-II-1869-EF-47 dated 23rd October 1947 issued under the International Monetary Fund and Bank Ordinance, 1945. It may be recalled here that the previous Survey was as at the end of 1953 and the report on it was published in November last year.

The Survey is mainly confined to long-term foreign liabilities and assets which include the net liability (or assets) abroad of branches of foreign institutions working in India, securities of foreign and Indian Governments and shares of foreign and Indian joint stock companies and other obligations maturing on or after 1st January 1957. All branches of foreign firms and companies, all scheduled banks, all insurance companies and all Indian Joint Stock Companies having any of these long-term foreign liabilities and/or assets are required to file returns on special schedules designed for the purpose. Individuals and Indian partnerships are not covered under the new Survey.

The institutions concerned are being approached individually by the Reserve Bank. However, if any institutions having long-term liabilities and assets of the above description to report, have so far failed to receive the official communication, they may kindly get in touch with the Director, Balance of Payments Division, Department of Research and Statistics, Reserve Bank of India, Bombay, 1. The last date for filing the return is 30th June 1956.

As with the previous Survey, arrangements have been made for ensuring that the information reported in each return is kept strictly confidential. The Reserve Bank, therefore, invites the co-operation of the institutions concerned in making this Survey a success.

Bombay Review

World of Cotton

Deadlock Ends

THE six-month old deadlock in the Cotton futures market has ended, thanks to better understanding of each other by both Government and traders. Forward trading in the commodity (1956/57 crop) will be resumed in Bombay on June 18. The important feature is that, by a majority vote, the Committee of the EICA has decided in favour of having two contracts simultaneously. Two separate contracts, one based on Fine Jharilla 25/32" (for short-staple growths) and the other based on Fine Vijay 27/32" (for medium-staple growths) will have their delivery months as March and April. Other delivery months will be announced later: but it is presumed that they will be May and July in the case of the first contract; and June and August in the case of the second.

The cases for two hedge contracts are based on the assumption that the assessment of the present production, consumption and export statistics have shown that the present single hedge contract does not provide adequate protection. In the case of the single hedge contract, there is said to have been occasions when varieties, having a premium value of about Rs 400 over the lowest variety, were tenderable against the contract. This would mean that there is no relation between the contract price and the actual spot value. If these two contracts are adopted, it is suggested that the premium values will hardly exceed Rs 100 to Rs 150.

As the stage is now set for the resumption of futures trading, traders have started speculating the possibilities of technical adjustments under the new system. While the general feeling is that everything will work out as planned, traders are not unaware of a potential setback in the crop outturn. It is feared that, if the new crop outturn is not fairly substantial, there will be some difficulty in the running of the contracts. With all steps that are being taken toward the resumption of forward trading, belief has been strengthening in the minds of spot operators that forward cotton will be cheaper than the spot. As a result, there is a tendency to sell cotton which have already been bought at relatively higher prices.

×

SPOT COTTON:

Conditions in the spot market ruled quiet with hardly any demand from the mills, who adopted a cautious attitude in their purchases in view of the recent slow offtake of textiles. They also felt that the resumption of futures business might bring down the current high prices. It is generally stated that, unless and until the cloth situation improves, mills may continue to be chary of entering the market. Reports from the South, however, suggest that some mills may enter the market for both Indian and foreign cotton since power-cut in the South has been restored.

Business in foreign cotton was slow as mills were generally reluctant to buy. Despite the high prices of Egyptian and Sudan cotton, stockholders offered to mills some concession. A small quantity of business took place in Zoda and Yellow Pickings. Rumours, however, persisted that the authorities might shortly release some quantity of Bengal cotton for export in view of the unsold balance of about 20,000 bales of this variety. There were also rumours that the export licences, which expired in March last, would be revalidated and the extension period would be about three months.

Following rates were quoted:—Bengal Rs 620 to Rs 630; Vijay Rs 970 to Rs 990; Bushoga Rs 1,550 to Rs 1,555; Karnak Rs 2,750 to Rs 2,850; Sudan Rs 2,200 to Rs 2,600; and American 1⅛" Rs 1,240 to Rs 1,245 and Good Middling Rs 1,340 to Rs 1,345.

×

STATISTICS:

Exports of cotton by rail from the 1st September 1955 to the 7th June 1956 were 326,286 bales. Estimated mill consumption in Bombay during the same period were 955,616 bales as compared to 979,190 bales in the corresponding period of the previous year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 7th June 1956 was 712,366 bales as compared to 751,803 bales on the corresponding date of last year.

×

KARACHI COTTON MARKET:

Conditions in the Karachi cotton market remained dull. The recent undue rise in prices restricted enquiries from foreign buyers. Following rates were quoted:—Sind Deshi Rs 99-0; Punjab Deshi Rs 93-8: 4F Punjab Rolling Rs 85-4; LSS Punjab Rs 97-12: NT Rolling Rs 87-12 and 289F Punjab Rolling Rs 93-12.

×

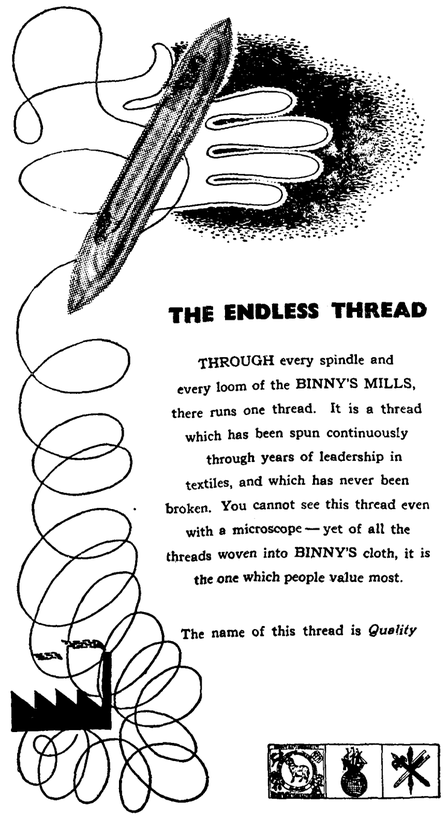
NEW YORK COTTON MARKET:

In the New York Cotton market, the volume of trading dwindled considerably, and narrow and irregular price changes followed the small amount of intermittent buying and selling. Most traders were content to look on and await a clearer view of the Government's raw cotton export policy. The US Government have now stopped the scheme of surplus cotton disposal with a view to enable the Agriculture Department to evolve new terms and conditions and to effect sales of cotton in an orderly manner conforming to the new Farm Act.

Old crop July eased slightly under light liquidation, while New crops were steady with scattered trade and commission house demand. July delivery was quoted at 34.55 cents. October, after quoting up to 32.54, finished the week at 32.51 cents.

×

LIVERPOOL COTTON MARKET:



Prices in the Liverpool cotton market fluctuated within a narrow range, the near position holding firm on continued trade covering. The Egyptian contract remained at limited decline with no business attempted, while the Sudan contract eased under hedge selling to close quietly steady. Old contract July-August was quoted at 26.10 cents and New contract July-August at 28.50 cents. Egyptian Karnak July-August was done at 58.50 and Sudan contract July-August at 46.75.

×

CLOTH AND PIECEGOODS:

The spurt in domestic prices has adversely affected Indian cloth exports which have been running at a lower level as compared to the performance in the preceding years. It is, however, satisfactory to note that the downward trend was arrested during May when the quantity of cotton goods passed for shipment from Bombay alone amounted to

(Continued on page 1129)

Gateway Markets

Silver Erratic: Gold Steady

THE pattern of trading in the bullion market, during the past week, was generally irregular on alternative bouts of buying and selling. Early in the session, silver lost some ground with bulls apparently switching over to new delivery; but the downtrend was halted and values advanced rather briskly toward the close on talks that the price of Tibetan silver had shown a slightly upward tendency. Similarly, in the early stages, Gold followed the counterpart, but steadied up eventually on slackening pace of arrivals.

Silver rates opened higher as compared to the last week's closing and moved up further on persistent support from Calcutta speculators. Renewed buying in spot from Madras, Surat and other centres, in view of the onset of the monsoon throught the country, also acted as a contributory factor. Arrivals and offtake were respectively 9 and 35 bars out of which 10 bars were despatched to Madras, 11 to Surat and the rest were accounted for by the City dealers. Meanwhile, Jeth delivery moved between Rs 168-9 and Rs 169-13, to finish at the last level. Silver ready was done at Rs 170-7 against Rs 170-13 last week.

Activity in the Gold section was rather restricted. Talks about fresh arrivals of unauthorised gold from Russia introduced an element of uncertainty. The inflow and outflow amounted to 2,000 and 6,000 tolas respectively, while kutcha recepts were 4,400 tolas. Jeth delivery moved between Rs 101-13 and Rs 101-0, to finish at Rs 101-9. Ready was quoted at Rs 103-1. The National Bank of India is reported to have sold 1,000 tolas of Kolar gold around Rs 103-0.

*

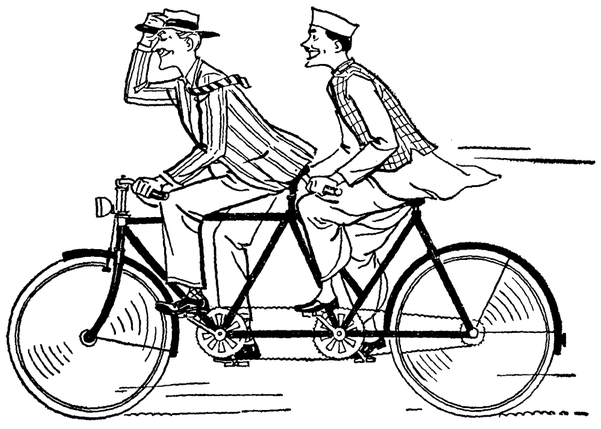
Oils & Oilseeds

Oilseeds prices, after ruling steady, developed a slightly easier tendency toward the close due to selling pressure from Rajkot and Akola traders on reports of cloudy weather in those centres and restricted support from the trade quarters. Moreover, operators were inclined to wait for a full assessment of the effects of opening futures trading in Ahmedabad and three centres in Saurashtra, prior to extending their commitments.

Castor ready and futures moved up on reports of US purchases of about 2,500 tons of castor oil at around 15.75 cents per pound and small business on Japan's account. The delay in the setting of the monsoon in the producing regions of Gujerat also helped in pushing up prices. Toward the close, however, rates eased due to selling pressure at higher levels. Castor September delivery, after moving up to Rs 144-2 from a low of Rs 139-4, finished the week at Rs 143. Ready castor was easy at Rs 27-4, while Castor Oil, commercial quality, was quoted at Rs 15-4 per quarter.

The initial strength in the Groundnut section was attributed to the keen demand from the vanaspati manufacturers in the face of the continued small arrivals. It was stated that the vanaspati manufacturers, who had deferred their purchases in the hope of lower prices following reports of an earlier monsoon, were obliged to replenish their stocks. Bold variety for August-September delivery, after touching a high of Rs 34-6, declined at the close to Rs 33-10 due to selling pressure from Rajkot and Akola. Groundnut Oil was quoted around Rs 17-12 per quarter.

Prices of Linseed moved in sympathy with other oilseeds. Ready was available at Rs 30-12, while August-September delivery was quoted around Rs 30-6 to Rs 30-14. Linseed Oil was placed at Rs 17-2 per quarter. Shipments of linseed oil from Bombay, during the last month, have been nearly twice as much as those in April and are placed at 3,687 tons. With these shipments, the total exports in the last five months have amounted to more than 12,300 tons.



The overseas quotation for linseed oil has declined from £154 to £140 per ton during the last few weeks. There is a general feeling that supplies from other sources, such as Canada and Argentine, will be bigger than in the previous season. Indian prices have remained out of parity even with the near positions in spite of the recent domestic fall.

*

Metals

Copper prices in the local market declined in sympathy with the London Metal Exchange where prices fluctuated between £297 and £312 per ton. The outlook for this metal remains somewhat uncertain with speculations whether American wage negotiations can be concluded without strikes at the end of the month. Moreover, consump-

Debate on Life Insurance Corporation Bill

REPLYING to the Life Insurance Corporation Bill debate, Sir Chintaman Deshmukh, the Finance Minister, said that, in the matter of life insurance nationalisation, there were no precedents—at any rate, in this country—and a certain amount of latitude should, therefore, be allowed to the executive to suggest the best form which such institutions should take because they were undertaking a very big responsibility on their own initiative.

This statement holds the key and forms the explanation to several of the attitudes taken by Sir Chintaman on various issues that arose during the debate. To him, the prime issue was to ensure "flexibility" in a personalised undertaking like life insurance, and to free it as far as possible from the bonds of red-tape. These two are natural requirements of a trade which deals with the varying requirements of an individual.

He could not, thus, accept the recommendation of the Comptroller and Auditor-General endorsed by many members of the Lok Sabha, that the audit machinery of the Government of India should have jurisdiction over the affairs of the Life Insurance Corporation. He described the audit normally carried out by the Auditor-General as "too mechanical" and totally unsuited to an organisation like life insurance. He is reported to have gone so far as to advise the Cabinet, when the question of nationalisation was behind discussed, that, "if the affairs of the Corporation were going to be audited by the ordinary audit machinery, then I would not recommend the nationalisation of life insurance."

The contrary view that audit by the Comptroller and Auditor-General should be accepted, expressed by a large section of opinion in the country, was partly based on the ulterior motive of discrediting Government management of life insurance with the hope, however remote that, in that event, it would ensure the return of the business, in some form, to the private sector. The opposition knew that life insurance, as a trade, is completely different from others, that a "too mechanical" system of audit runs counter to flexibility in administration which, it was all along held, is unattainable in Government hands. By devious means, it was sought to make this flexibility still more unattainable. The opposition to private audit was a castigation of the audit machinery available to private trade and industry. This indirectly constitutes a slur and a vote of no confidence against the audit that private industry itself employs. It is meaningless to imply that private audit machinery is liable to abuse in Government hands, but will be pure in the case of the private sector.

Moreover, as the Finance Minister correctly pointed out, the system of functioning of insurers is different from that of any Government department, or even any other industrial concern, and requires the exercise of a very large measure of judgment and discretion by the executive authorities and the controlling authorities.

The debate has also raised the general issue—important and pertinent and which will require to be resolved at tne earliest opportunity—whether the Government audit machinery is at all suited for many Government ventures—the "private limiteds"—where the State is progressively delving into the spheres of the private sector. A mechanical system of audit will hamper initiative and result in harassment if effective functioning is sought to be regulated from the enclaves of hide-bound bonds of red-tape. Either the character of the Government audit machinery must undergo very radical changes, or the machinery must confine itself to its presently assigned role.

The executive authorities must have the freedom to make mistakes and errors; for, in life insurance, or indeed in any other trade, no progress is possible if expenses cannot be incurred presently with the hope of earning dividends in the future. The build up of a field force and salaried field officers can be ensured only through a system of trial and error. Likewise, service to the insured cannot be vouchsafed if one is a mechanical stickler for rules.

For precisely similar reasons, Sir Chintaman could not accept the recommendations, and urged, in a minute of dissent to the Select Committee's Report, and later on the floor of the Lok Sabha, that limitation of expenses as incorporated in the Insurance Act, Section 40B of which applies to private insurers, should also apply to life insurance under Government management. There is considerable theoretical force in this approach. There seems no reason why the same limitations should not apply. But Government, as stated by the Finance Minister, are inheriting the legacy of a large staff, including a legion of Chief Agents. The salary bill will make a sizeable inroad on expenses. Besides, the initial period of reorganisation must inevitably necessitate a high level of expenses. The process of integration will require large-scale movement. To invoke, therefore, limitation of expenses for the initial period of confusion and in the stale-mate resulting in slackened new business and processes involving integration, is only to prejudice the Corporation and its working. When the Corporation gets into its stride and settles down, with all the fictitious expenses alleged to have been indulged in by private insurers eliminated, the Corporation should be well within the expense ratio fixed by the Insurance Act. Even then, allowance should, in fairness, be made for the surplus in staff.

Limitation of expenses was urged presumably on other grounds. Apart from the fear held in certain quarters that Government management is inherently expensive, the continuous emphasis by Government on rural business had led many to think that Government will presumably be spending, out of a theoretical bias in favour of ruralised insurance, large amounts in combing a field where, in fact, business of the character acceptable to insurers does not exist. There is considerable force in this view. Life insurance connotes a certain standard of living. It will prejudice the life insurance fund if insurance is extended to a sector of population which has no standard at all. Life insurance does not precede a certain minimum standard of living; on the contrary, the minimum precedes life insurance.

In the matter of compensation to shareholders, in reply to the extremists, who advocated reduction in its quantum, Sir Chintaman deprecated the tendency of first thinking in terms of compensation and then of trying to work out various ways by which it could be decreased. His view is based on granting fair compensation; and he added that the compensation that was being offered was fair and reasonable to the insurers and not unfair to the community. Mr Tulsidas Kilachand urged, through a series of amendments, that the insurers should be paid compensation with interest at 3½ per cent from the date on which life insurance was nationalised. He suggested 31st December 1956 as the target date for payment of compensation. The Finance Minister could not agree to this proposal, and pointed out that Government were anxious to make the payment, and that he did not anticipate any delay.

The total compensation likely to be paid to the companies would be, in round figures, Rs 4½ crores.

With regard to displaced companies, Sir Chintaman accepted the proposal to pay additional amount, but only "in the nature of an ex gratia payment." He accordingly moved an amendment detailing the procedure for paying additional compensation to displaced insurers.

No material change was, therefore, effected in the controversial compensation formula. The Indian Insurance Companies Association, Bombay, has, in a lengthy memorandum, detailed the shortcomings of the Government measure. The Association has calculated that the formula in the Bill reduces compensation to 41.7 per cent of what "shareholders might reasonably expect to receive on a proper appraisal of the value of their interest." It was admitted by the Finance Minister that enlightened insurers allocated 5 per cent or less to shareholders. The Act permitted 7½ per cent. Normally, 10 per cent allocation was customary in India. But the 7½ per cent level has been reduced to 5 per cent. A formula whereby business of 1954 and 1955 could be taken into account in determining the quantum of allocation to shareholders would have been fairer and more reasonable.

The memorandum of the IICA could not convince the Government. The Bill has, therefore, been accepted by both the Houses as amended at the Select Committee stage. Compensation will, however, not be liable to income-tax in the hands of the insurance companies as it will be a capital receipt; and, to the extent that it does not represent the equivalent of past undistributed profits, it will not be liable to income-tax in the hands of the shareholders also.

Those who are critical about the compensation formula would do well to ponder over the significant proposition in life insurance, one that is easily lost sight of, that entrepreneural capital progressively lose its value and, at a point of time, loses its risk bearing character. The first few companies of the world have no share capital. Capital has been remunerated so far, and with the measure of compensation proposed in the Bill, that

Tourism in India

That Government were alive to the growing attraction of India to tourists and that they had recognised the desirability of, as it were, promoting tourism, was indicated by Mr O. V. Alagesan, Deputy Minister for Transport, when he addressed the tenth session of the Central Tourist Traffic Advisory Committee. Steps had been taken to equip and to strengthen organisations and offices which looked after the inquiries of tourists: and it was sought to make these offices "commensurate with the resources available."

Propaganda or publicity in this regard has two aspects. On the one hand, the visitors in India must be able to secure all information that a tourist would be in need of from a Centre located for the purpose in India's cities of tourist interest. In this matter, Mr Alagesan was able to report that, within the country, there were today a dozen tourist offices: and proposals were being examined for opening up three more at Bhopal, Bhubaneshwar and Cochin.

On the other hand, service of this sort can be made available only after the tourist has been successfully enjoined to visit this country. As such, offices for 'promoting' India were necessary in the countries whose citizens might be expected to show a greater interest in India. In this regard, too, the Deputy Minister could claim that, in the course of the past fourteen months, substantial progress had been achieved in that tourist offices had been opened in London, San Francisco, Paris and Colombo; moreover, offices were shortly to be set up in Australia and in West Germany.

Mr Alagesan expressed the view that tourism had assumed such importance as to justify the upgrading of the Indian tourist organisation by making it into a 'regular Directorate-General.' Obviously, however, all these measures of Government will be of no avail, and no increase in exchange earnings will be possible, unless hotel accommodation and facilities in this country reach a standard that will satisfy the tourist.

This was emphasised by the Deputy Minister, when he stated that the entire tourist industry was built round the hotel industry. Government were, consequently, anxious to encourage and foster the growth of the hotel industry in this country on lines that would assure the most modern of amenities and the most personalised of services.

Trade Figures for 1955

Publication of the official figures for 1955 by the Import and Export Trade Control Organisation has nothing unexpected to offer to the reading public, and serves merely to confirm what had all along been known—that the volume of trade showed a distinct rise, and that the improvement in exports far outpaced the higher level of imports. Total trade was marked at Rs 1,248 crores as against Rs 1,179 crores in 1954. Exports went up by Rs 41 crores to Rs 604 crores, the while that imports registered a rise of Rs 28 crores to Rs 644 crores.

It is noteworthy that the value of exports has made a fine showing in spite of, firstly, reduction or abolition of some export duties and, secondly, a decline in the prices of many of the export items. Chiefly, jute manufactures contributed Rs 4.77 crores more by way of exchange earnings; and manufactured goods in the sphere of woollen and cotton textiles (including carpets and rugs, but excluding cotton piecegoods) marked a smart rise of Rs 22 crores.

On the import side, the Indian emphasis on industrialisation is seen reflected in a rise of Rs 23 crores in the value of capital goods and plant and machinery purchased by this country. A significant saving to the import bill was made possible by the increased production of foodgrains indigenously, the value of whose imports fell sharply by Rs 14 crores. Similarly, a better sugar year reduced the import bill under this head by Rs 22 crores.

As far as the direction of trade is concerned, India improved further upon its dollar trade balance. With an increase of Rs 5 crores in the exports to the dollar area, the favourable balance in this regard was placed at Rs 16 crores. The bulk of Indian exports—43 per cent—was absorbed by the UK and the USA. While the UK's offtake from India showed a decline—as also did purchases by Burma, Pakistan and Kenya—the USA, Japan, Australia, Holland and Germany all bought more.

In the matter of imports, we increased our purchases from the UK, the USA, Australia, Canada, Pakistan, Kenya, Japan, France and Ceylon: but reduced our import bill in respect of Egypt, Italy, Burma and Saudi Arabia.

An index of the efficiency of this important Department of the Ministry of Commerce and Industry is to be found in its disposals of applications. The Report says that almost all applications for export licences had been disposed of, while, in the case of import licences, a scant 505—or less than half a per cent—were outstanding and pending out of a total of 133,890 applications received in the second half of 1955.

★

OLYMPUS

(Continued from previous page)

should adequately answer requirements. Capital that has little or no risk bearing value has hardly any moral right to compensation.

The plea about representation of policy-holders' representatives in the body of the Corporation was rejected by Sir Chintaman Deshmukh on the ground of procedural difficulties. He pointed out that a system of correct representation would involve so large a measure as to present before the House a Bill similar to the Peoples' Representation Bill. In the past, representation of policy-holders' directors in the Boards of the companies was abused. Nominees of directorial groups could alone find representation. It would be still more difficult in a constituency many times larger. Nevertheless, it would have been fairer if it could be arranged. The fifteen men in the Corporation would be Government nominees. Some portion elected from the people would have met the ends of democracy. It seems to be even more essential as life insurance is nothing more than policy-holders' property. It will be stretching the meaning of democracy too far if it is suggested that Government nominees in the Corporation will be peoples' representatives chosen by a Government elected by the people.

The other highlights in the debate relate to organisation and matters of procedure. There are to be five instead of four zones. Government intend to avoid over-centralisation. The important matters alone, such as investment and similar affairs that impinge on policy-making, will be dealt with at the Centre. Almost all other matters will be delegated to the zones. There will be further delegation of authority to the divisional offices. "It is our intention," said the Finance Minister, "that they should more or less function as head offices of the Corporation with a wide measure of autonomy." The provident fund and gratuity schemes of employees will be integrated; and, in every zone, there will be employer-employee relation Committees to ensure co-operative and smooth administration.

Sir Chintaman Deshmukh reiterated his earlier view that Government have no intention of taking over general insurance. This question will be re-examined only on the issue of malpractices. Further, the Finance Minister stated that the total funds available in general insurance amounted to less than Rs 50 crores.. A fund of such small dimensions, concluded Sir Chintaman, is not of matterial consequence to the Second Plan.

GATEWAY GOSSIP

(Continued from page 1119)

performs the like task for the eastern region; but it is in pursuance of an understanding, and not of a GO.

That Mr Vaidyanathan retains the special status in nationalised life insurance, is the point I seek to make out. He will continue to hold this status until the Corporation is launched. When will this be? Official intention is that this significant enterprise should be inaugurated on the Independence Day, or soon after August 15 next. It is doubtful if, at the rate at which things are proceeding, and with the pace that marks the making of decisions, the target of August 15 could be kept.

What next? Every one is agreed that Mr L. S. Vaidyanathan should be, and is sure to be, the first Managing Director of the Corporation. It will be another "first". And Mr Vaidyanathan's "first" in this context will receive universal acclaim.

Delhi Review

North Indian Markets

Renewed Firmness in Shellac Prices

THE upward trend in Shellac prices, noticed last week, gathered further momentum during the week under report despite the lack of demand from overseas consumers. Apart from the disparity of prices between London and Calcutta, there are other factors which have imparted renewed strength to the market.

One factor is the late arrival of Shellac, from the Bysakhi crop, on the market and the other is the possibility that the total crop may fall well short of the original estimate.

Latest estimate puts the crop at 210,280 packages which, though lower than last year, are above the average yield of about 198,800 packages. In some circles, it is even being suggested that the actual crop will be little more than half the estimate.

The above two factors may be related. It is true that both Standard No. 1 and TN Shellac are in rather short supply and that the crop is not smaller, but that upcountry growers have been holding on to their supplies of sticklac while the prices rose.

In the Calcutta market, Pure TN variety is now quoted around Rs 136. In the London market, Pure TN, for immediate delivery, is now above £290 per ton and Standard No. 1 £20 per ton higher.

It is reported that trading in future delivery of FO Pure TN Shellac in London is to start on June 22; in December 1956; February 1957 and April 1957 positions. The unit of contract will be 50 packages of Shellac.

Shipments from Calcutta, during June till the 8th, were 7,472 packages.

★

Sugar

Sugar markets continued to rule quiet. Despite some demand from Madras which could not be met due to want of loading facilities, there was poor offtake from the factories. Following were the mill-delivery rates per maund:—Jaswant Rs 28; Simbhauli Rs 28; Mowana Rs 28-2; Daurala Rs 29-0; Amroha Rs 27-10; Bijnore Rs 27-10; Mansoorpur Rs 28 to Rs 29-4 and Rampur Rs 30-8.

It is expected that production during the 1955-56 season will beat all previous records. According to the latest figures, production upto May 22 aggregated 17.56 lakh tons as against 15.53 lakh tons in the corresponding period of the previous season. Closing stock, as on the 22nd May 1956, was 12.56 lakh tons as against 10.39 lakh tons on the corresponding date of last year. Due to ample supplies of cane, factories in Uttar Pradesh are being made to run their season till the end of June.

Meanwhile, the Government's sales policy regarding imported sugar has caused a stir in the Bombay market. The authorities have decided to sell nearly 1.10 lakh bags of British-refined sugar to a few dealers at Rs 30-8 per Bengal maund or about Rs 85-11 per bag. The terms and conditions are reported to have been such that only a few traders have been able to avail of the offer.

The accumulation of supplies in a few hands has already its effect on the market in so far as the prices of the British-refined sugar are indicated at Rs 89-8 per bag. This is stated to be the result of the move of those who have secured supplies to form a Syndicate to handle their sales in the market in future. This method is aimed at securing the best possible rates for the Government and a speedy solution of the problem of disposing the entire stocks.

★

Gur

The Gur market at Hapur ruled steady with prices showing a slight improvement over last week, thanks to better loading facilities to Gujerat and East Uttar Pradesh. The rate for the ready position was quoted at Rs 10-7 per maund. Stocks at Hapur were estimated around 83,000 maunds.

★

Foodgrains

In the Hapur market, prices of Foodgrains showed a mixed trend during last week. The Wheat section ruled steady, quoting Rs 13-10 for the average quality and Rs 15-4 for the farm quality. Rice prices, which recently had shown a firm trend, turned quiet following the Government's decision to sell Burma rice in Bombay. The rates moved between Rs 24-0 and Rs 32-0 per maund, according to quality.

Gram prices recorded fractional gains on the Punjab and Madras advices and due to poor arrivals. Other coarse grain prices also improved in sympathy. Jowar touched a new high following good local demand and poor stock position. The final estimate of Jowar for 1955-56 putting the year's production at 6,940,000 tons showing a fall of 23.7 per cent over last year, also acted as a bullish factor.

In contrast to the hardening trend in grains prices, Pulses showed a downward tendency with Peas dara quality quoting Rs 10-3 and white variety Rs 11-12 per maund. Arhar prices remained unchanged at Rs 11-5 per maund, while other pulses were devoid of notable activity.

In the Delhi grains market, improved conditions were witnessed. Wheat, both dara and farm qualities, hardened by As 12 and As 4 per maund to Rs 14-4 and Rs 16-4 respectively an encouraging advices from the neighbouring States. Gram rates also improved due to good outside buying interest and small arrivals. Other coarse grains also improved on hopes of good demand in the near future. Among Pulses, Gram was steady while other varieties were quiet for want of buyers.

The Bombay grains market presented a quietly steady appearance with prices hovering within a narrow range around last levels. The decision by the Government to sell Burma rice at Rs 18 per Bengal maund caushed a sharp decline in the price of this quality from Rs 183 to Rs 167 per candy. The tendency in the Wheat section continued to be steady in spite of a smaller offtake, mainly attributed to firm advices from the Punjab and other wheat-growing areas. Pissi quality was placed at Rs 145 to Rs 165 per candy. In the Coarse grains section, prices of Jowar and Bajra were more or less unchanged, Jowar Sholapur quality quoting Rs 140 to Rs 150 per candy and Bajra Uttar Pradesh variety at Rs 130 to Rs 150 per candy.

SOUTH INDIAN MARKETS

Prospects for Coffee

ACCORDING to the Coffee Board's latest statistics, Pool receipts out of the 1955/56 season's crop are placed at over 32,000 tons. The Board was holding a stock of more than 27,000 tons on May 31. A heavy surplus for export is, therefore, visible.

Meanwhile, reports have come to the effect that, in many Latin-American countries and Africa, new coffee planting is going on and a rising surplus is feared by the trade. With the result, the world coffee market is now softening against a possible surplus of over 3 million bags, not to speak of the 6½ million bags carried over by Brazil from 1954 and 3 million bags placed on Government account in 1955.

Against this background, the trade in India is naturally reluctant to commit itself to any large-scale coffee contracts. But India, with a substantial internal market, is in a safer position. Moreover, the export price in recent auctions has been encouraging, roughly twice the internal price.

According to a recent survey, consumption of coffee in the United Kingdom is steadily going up, the actual figure being 633,823 cwts for 1955 as compared with 453,653 cwts in 1954 and 499,103 cwts in 1953. Total imports for the first three months of this year were almost double that of the same period last year.

Coffee has made this progress at the expense of tea, which suffered to some extent from the public resentment due to the high prices prevailed in 1954. Russia is also showing some interest in Indian coffee. As a matter of fact, the

Minerals in the Private Sector: Prospects

A SECTOR of the Indian economy which, in terms of the revised industrial policy statement, is—at least as far as future expansion and development are concerned—closed to private enterprise is the mineral industry; or such has been the general understanding of the statement when it was issued. In the course of the past week, some clarification has become available, thanks to the meeting of the Mineral Advisory Board at Bangalore.

In his capacity of Union Minister for Natural Resources, Mr K. D. Malavaiya seized the opportunity offered by the meeting of reassuring the private sector in this regard. This was surely necessary, for, the co-operation of private industry is essential to the successful achievement of targets in mineral production; and, in the words of the Union Minister, the role of minerals in the Second Plan is as the foundation on which the edifice of India's heavy industries has to be built.

It is not merely that the earth will have to be made to render up its treasures of minerals for indigenous use in heavy industry; the Second Plan will occasion the import of capital equipment on an increasing scale, and it is on minerals that we must rely for a part, even a significant proportion, of the exchange earnings to pay therefor.

When we study the targets under each head of minerals, and set against it the development already decided upon whether under State or private auspices, it will become apparent that there is substantial scope for further efforts at covering a "gap" between present targets and what it could be possible to produce.

In the matter of coal, for example, the Second Plan has set a target of 60 million tons. After a long measure of discussion, it has been indicated that the State would assume responsibility for mining 12 million of the additional 22 million tons, leaving the remainder to be raised by collieries in the private sector. Mr Malavaiya went a step further at Bangalore, and expressed the view that "this target may have to be increased"; in this regard, "I am looking to the private sector" to give the impetus to additional production.

Similarly, the target for iron ore production is 12.5 million tons; provided the transport situation improves, the Minister said we could hope to mine an additional 1.5 million tons. Is the help of the private sector needed? "....the private sector may examine how best it can co-operate with the Government to increase the target of iron ore production with a view to augmenting the export trade."

Whether it is manganese or bauxite, lead or zinc, copper or mica, the Union Minister indicated that we may have to plan for production in surplus of the targets we have presently set for ourselves. It is against this background that we should appraise, if not the long-term prospects, at least the immediate outlook for the private sector in minerals.

Mr Malavaiya has stressed that the new Industrial Policy Resolution does not shut out the private sector: leases would continue to be given for areas being prospected already by it, as well as renewals of existing mining leases if it were entitled to them under the existing rules.

In other words, the minerals mentioned in Schedule A of the Resolution would be the responsibility of the State in the matter of new mining units. The saving clause is in respect of "those cases where their establishment in the private sector has already been approved."

Secondly, minerals mentioned in Schedule B would be open to private enterprise for development either on its own or in co-operation with the State.

Finally, the minerals not covered in Schedules A and B would be available to the private sector to work and to mine.

The Union Minister said that Government policy in minerals was formulated with a view to balancing, not only "our internal requirements of minerals and the exportable quantities, but also designed to maintain a healthy balance between the private and the public sectors."

Moreover, there were features in existing leases which are "considerably out of line with current prescribed limits." That is to say, the duration was sometimes for "unconscionably long periods" and area covered, in some cases, "100 square miles or more." Such leases would have to be revised in terms of draft rules, now approved, and due to be promulgated at the next session of Parliament. The integrity that marks Government policy is indicated by Mr Malavaiya's statement that "particular care has been taken to provide in these rules for payment of compensation on an equitable and even liberal basis to the holders of old leases, whose areas are likely to be reduced as a result of the operation of these rules."

For the mining industry, the facts are clear: There is the determination on Government's part that high targets of production are sought to be attained. There is exciting scope for the private sector to share in this endeavour, and to increase indigenous production. Time will tell whether the private sector will display the necessary degree of enterprise.

Kolar Compensation

If ever there was evidence of a difference of opinion between the State Government and the Centre, the decision of Mysore to nationalise the Kolar Gold Fields provides it. Although the controversy had been raging for some time, it nevertheless came as a surprise decision, when the State Government announced that they intended to proceed with the nationalisation of the foreign companies that were mining gold in Mysore; indeed, at the time, indications from New Delhi were to the effect that, possibly, thought of nationalisation was being deferred, if not altogether given up.

In a press conference at Bangalore, the Centre's attitude on this question was given expression to by the Minister for Natural Resources, Mr K. D. Malavaiya. In his answers to questions is to be discerned an undercurrent of feeling that the Central Government had not quite been in favour of nationalisation. But, as the Minister explained, once Mysore had decided, and made public its decision, it was up to the Centre to help the State in every possible way and by every possible means.

The present developments suggest that aid from the Centre is sorely needed. For, the State Government and the companies have been unable to reach agreement on the question of compensation. The companies feel that they are entitled to an amount of Rs 4 crores; the State Government have revised their figure from Rs 50 lakhs to Rs 80 lakhs; and the gap between these is uncomfortably large.

It is a compelling necessity that the foreign companies are satisfied with the compensation paid for the expropriation of their properties; as Mr Malavaiya put it, "we do not want to create any feeling amongst our foreign friends who have been developing our industries that we want to be hasty and unfair to any party." While it is futile to argue, at the present stage, as to whether the State Government are better befitted to run the undertaking, apposite care should be taken to ensure that the compensation offered and paid is fair and just. Foreign capital in India will not object to nationalisation in strategic spheres; but foreign capital will be even less attracted to this country, if it appeared that recompense was not based on just lines.

Fortunately, compensation is a matter of policy that has to be decided at the Centre. The philosophy of compensation has been stated in clear-cut terms by both Mr Nehru and Sir Chintaman Deshmukh: it is now up to the concerned Ministry, and Mr Malavaiya in particular, to see that the foreign capital represented by the gold mining companies will be satisfied by the compensation offered.

*

Liaison in London

The visit to this city of the First Secretary-designate (Commercial) for India in the UK was marked by memoranda being presented to Mr A. K. Mukherji by the four pre-eminent Chambers of Commerce in the Peninsula. Each of these was able to stress the difficulties in particular spheres that had been experienced; and each made the suggestion that the liaison offices of Mr Mukherji could most usefully contribute to an improvement in Indian, and especially South Indian, trade with the UK.

At the Southern India Chamber of Commerce, concern was expressed at the trend of declining exports to the UK of such goods as coir mattings, cashew kernels, goatskin, leather and pepper. According to Mr Haja Shareef, who addressed the gathering in his capacity of Vice-President, it was up to the Commercial Secretary to inquire into and discover the causes which had led to the reduced level of offtake by the UK. Also, suggestions as to the manner whereby Indian exports could be restored to their erstwhile level would be welcomed. Another suggestion made by Mr Shareef was that an arbitration panel should be attached to the Trade Commissioner's office in London: this panel could be of help in resolving disputes.

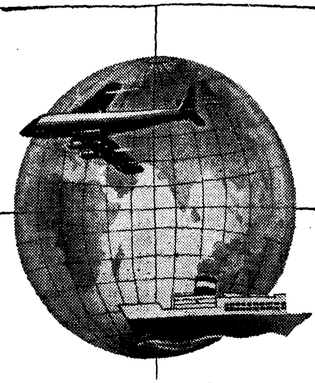
Mr J. V. Somayajulu, President of the Andhra Chamber, focussed attention on what seemed to be British reluctance to allow free imports of grey cloth from India; his suggestion to Mr Mukherji was that the Board of Trade in London should be prevailed upon to permit a scale of import at least as large as the present quantum sent out from India. It was proper for Mr Somayajulu to urge that efforts to export tobacco to the UK should be intensified, seeing that the forum was the Andhra Chamber.

Export of hides and skins from India is of the order of Rs 25 crores annually; but, as Mr M. P. Subramaniam, Vice-President of the Tamil Chamber, pointed out, prices have been slumping badly. The suggestion was mooted that auctions should be held in India: but it is debatable whether this would be possible or practicable. It is, however, interesting to note Mr Subramaniam's contention that the decline in hide prices is to be attributed to a lack of proper machinery to study the conditions of demand prevailing in England.

At the Hindustan Chamber, its President, Mr N. T. Patel, was content to draw attention to the shift in commodities imported from the UK and to express the belief that there was substantial scope for the import of capital goods, instead of consumer goods as heretofore, from the UK.

Mr Mukherji gave all these representations a patient hearing. In his view, while it would be his "constant endeavour" to foster Indian imports into the UK, an increase in the flow of Indian goods to that destinaton would, in the final analysis, depend, not on any set of actions taken by Government or the Trade Commissioner's office in London, but on the initiative and enterprise shown by the private traders. The potentialities are there; but it is for private enterprise to exploit them.

*



Neiveli Project: Progress

Prospects there were last week that the Peninsula's hopes of a greater emphasis on industrialisation in the future would materialise in a forseeable period of time. Neiveli represents for South India the promise of a substantially accelerated tempo of industrial activity; but, so far, ambition and anticipation have been curbed by reports, every now and then, that the lignite at Neiveli might not be of a sufficiently high quality or that it would be uneconomic to mine.

Last week, the Union Deputy Minister for Production, Mr Satish Chandra, took a trip to Neiveli and, at Chidambaram, he indicated that this part of the country might be fortunate enough to be able to mine the lignite. He revealed that Government projects in terms of the Second Plan envisaged an expenditure of Rs 70 crores on Neiveli, the present schemes calling for the establishment of a thermal station with a capacity of 211,000 kw, a fertilizer plant and a carbonizing unit.

Mr Satish Chandra also made it known that the mining of lignite, according to present anticipations, would be commenced toward the end of 1959. This is heartening news for the Peninsula.

WORLD OF COTTON

(Continued from page 1121)

70.39 million yards as compared to 63.16 million yards in April from all the major Ports and 64.35 million yards in March. The total quantity passed for shipment for the first five months of the current year has amounted to 315.67 million yards. Trade circles are now awaiting Government's policy with regard to the expansion of the mill industry.

It is generally believed that the mill industry will be allowed to step up the output by about 10 per cent to 5,500 million yards. While the proposed increase is mainly designed to meet the growing domestic demand, it is believed that the Government will permit the installation of further additional looms if extra production arising thereby is earmarked wholly for export.

Meanwhile, conditions in the cotton piecegoods market experienced again a dull week in view of lack of enquiries from upcountry centres. Rates of seasonal cloth, however, remained unchanged. Mill rates remained steady as most units are reported to have orders on hand for delivery up to August and some even up to September.

★

NO DEVALUATION OF STERLING

(Continued from page 1111)

last six months, the situation would be by now sufficiently grave to make it physchologically possible for the Government to resort to a really drastic credit squeeze. It would have become politically possible to deal with the problem of rent control and to discourage excessive demand for housing accommodation by raising rents to economic levels. This would make it possible for the Government to restrict house building, thereby reducing excessive pressure on labour, steel supplies etc. It is now realised that the Government should have taken the opportunity of last year's sterling scare to deal with rent control. A revival of a major sterling scare would provide another opportunity.

The real danger is not a major crisis but a continued moderate but chronic crisis. Unless and until the danger of a depletion of the gold reserve and of an ensuring unemployment through a curtailment of raw material imports, becomes sufficiently absolute, British public opinion will not stand for the drastic remedies needed for putting the situation right. If each time the situation is just patched up and Britain carries on with a narrow safety margin, she will continue to be exposed to a series of minor crises none of which is sufficiently grave to arouse the nation; but each one of which is sufficient to weaken further the national economy. It would be incomparably better to have a major crisis and get it over.—(Copyright).

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Tenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on Wednesday, the 11th July, 1956, at 3 p.m. for the following purposes:

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December 1955.
2. To declare a Dividend on the Ordinary Shares.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.

The Transfer Register of the Company's Ordinary Shares will be closed from 30th June to 11th July, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy who need not be a Shareholder of the Company. If it is desired to use a Proxy, the same should be completed in the manner described by Section 176(5) of the Companies' Act, 1956 and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,
C. A. CUNLIFFE,
Director.

4, Bankshall Street, Calcutta.
14th June, 1956.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

Notice is hereby given that the Board of Directors has sanctioned payment of the dividend on 6% 7% Preference Shares of the Company for the half-year ending 30th June, 1956. Payment will be made on or after the 10th July, 1956, to those shareholders whose names appear on the Company's Registers on the 30th June, 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.
Managing Agents.

12, Mission Row,
Calcutta,
16th June, 1956.

THE INDIAN IRON & STEEL CO. LTD.

NOTICE

Notice is hereby given that in connection with the financing of the cost of the further expansion which the Company is required to undertake in contribution towards the increase of steel production under the Second Five Year Plan, application was made to Government for consent to the issue of further Ordinary shares at par on the basis of one new right share for each Ordinary share held. Advice has now been received that Government have sanctioned the issue of new Ordinary share capital at a price of Rs 13-8 per share.

In according their sanction Government have stipulated that no fresh issue of capital shall be made until after the 1st November 1956.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. Liversedge,
Managing Director,
Managing Agents.

Calcutta,
12th June, 1956.

GATEWAY MARKETS

(Continued from page 1122)

tion has been showing a declining trend in America, while scrap prices continue to be marked down for want of buying support.

Locally, Copper ready was quoted at Rs 228 and Jeth delivery at Rs 214-8 per cwt.

Lead and Tin prices remained steady on renewed demand, thanks to higher prices ruling in Calcutta. Ready Lead was quoted at Rs 79-0 and Jeth delivery at Rs 78-0. Tin ready was quoted at Rs 124-8 and Ashad delivery at Rs 123-0.

The market for Zinc remained steady, local prices being comparatively lower than Calcutta. Ready was quoted at Rs 66-0 and Jeth delivery at Rs 65-0.

On the London Metal Exchange. Lead prices improved due to shortage of stocks and continued diversion of the metal through the US stock-piling programme. Zinc prices also improved on rumours of strike in Australia. The market for Tin was steady on account of fair dealer interest in the US and some Continental enquiry.

✱

Yarn

Easy conditions continued to prevail in the Yarn market and the turnover was limited. Prices of all varieties showed a declining trend in the absence of sufficient demand, while most of the upcountry buyers adopted a cautions policy since the outlook for rayon cloth was not very promising.

Despite the rumours that imports of Art Silk Yarn would be cut during the second half of the year, prices for these showed a weaker tendency. 120D touched a high of Rs 804 and a low of Rs 801, to finish at the last quoted level. 120D Japan was quoted at Rs 3-11-6; 150D at Rs 4-4: 120D Italy at Rs 3-12-3 and 150D at Rs 3-14.

Staple-fibre yarn June delivery remained easy throughout the week and declined to Rs 672 from Rs 680 on nervous selling by some bulls.

The fall in prices was heaviest in Cotton yarn. This was attributed to fresh relaxation in the power-cut in South India, and the belief that full power is likely to be restored shortly. The rate for 40s moved down from Rs 28-8 to Rs 27-0 per bundle, while 60s declined with the average quality ruling lower at Rs 46 to Rs 47.

✱

WORLD OF JUTE

(Continued from page 1113)

duction, the impact of all these was felt in and by B. Twills.

One fact needs to be recorded: relative to the firm condition of the raw jute market, both hessians and B. Twills did display some weakness; in consequence, the margin for mills as between costs and the selling prices of jute goods was steadily whittled down. I indicated, in the last week's issue, what the answer to this conundrum for mills could be: and I do not think that, in a quick analysis of price trends such as we have made, a discussion on the subject is called for or is appropriate.

In the next issue, I propose to take up production trends, stocks and general demand for Indian Jute goods.

✱

The Calcutta Jute goods market ruled quiet during the past week with prices especially in ready positions developing a sagging tendency. In the absence of foreign business, the market had been entirely in the hands of speculators who utilised the various rumours regarding the joint action proposed to be taken by IJMA and the Central Government on export prices, to serve their own ends.

Meantime the publication of production figures for the month of May had also depressed sentiment. In view of the unhealthy statistical position in the industry, there were rumours that IJMA might after all be forced to curtail production. In that connection, a proposal to suspend mills working by a week had been mentioned. Sentiment, tained by the hope that Government would soon be finding a however, had been somewhat susway out of the difficulties of mills.

The following table shows price trends during the week:

	Week's Opening	Week's Closing
Hessians:	Rs. a.	Rs. a.
40"×10 oz Ready	37 15	37 13
,, July-Sept.	38 3	38 9
,, Oct.-Dec.	38 3	38 3
Sackings:		
B. Twills Ready ...	105 8	104 14
July-Sept. ...	105 8	104 14
Oct.-Dec. ...	104 8	104 8
Hy cees Green ...	103 8	103 8
Cornsacks ...	106 0	105 8
Cubans ...	129 8	128 8
A. Twills ...	128 8	127 6
L. Twills ...	118 0	117 0
D. W. Flour ...	121 8	121 2
Sugar Bags ...	119 8	118 0

Fair quantity mill business was reported done during the Second half of the week in Bimli FAQ at Rs 24-8 per maund for June-July shipment and New Crop Assam Bottoms at Rs 25 and Middles at Rs 27-8 per maund for August-September shipments. Toward the close sentiment was raher quiet in sympathy with the goods section.

✱

SOUTH INDIAN NOTES

(Continued from page 1127)

It is also good to know that, at the same time, thoughts are being turned to the need for training the personnel who could man the Neiveli project, once it gets under way. For example, the question is being seriously considered whether Annamalai University, by virtue of its proximity to Neiveli, should not inaugurate a special course in mining.

What, we may ask ourselves. emboldened Mr Satish Chandra thus to draw what must surely be considered a favourable picture of prospects? The answer lies in the fact that the results, as they have so far made themselves known, of the pilot project and first experimentations justfy responsible planning on a larger scale for the new centre of industry in the Peninsula—Neiveli.

WORLD OF TEA

(Continued from page 1112)

in this category were withrawn without bids.

Little enquiry was shown in Black Leaf Middle East Brokens; but their Fannings were well supported at easier rates. The better liquoring Whole Leaf grades met with good support at last levels, but lower sorts came to an easier market. Following rates were quoted per pound:—Plain BP Rs 1-8-0 (nominal); Low Medium BOP Rs 1-10-6; Medium BOP Rs 1-12-0; Good BOP Rs 2-3-0 and Well-made OP Rs 2-2-0.

In London auctions, offerings this week were 29,310 packages, including 18,793 packages of Northern India teas. There was a strong general demand for teas of character and prices for these were occasionally dearer. Good Black Leaf Medium teas met with a firm market. Quotations remained, however, unchanged.

Tea stocks in London, as on 1st June 1956, were 104.43 million pounds as compared with 103.1 million pounds in the previous week and 148.7 million pounds a year ago. Landed between 26th May and 1st June 1956 were 10.8 million pounds, while deliveries during the same period were 9.7 million pounds.

The amount of tea afloat to the UK has risen quite sharply in the last fortnight, whereas usually it reached a low point at this time of the year—the corresponding figure for last year is about 17 million pounds. Some quarters believe that buyers of poorer quality teas may well be holding off the market in anticipation of lower prices for these orders.

✱

BALANCE-SHEET REVIEWS

(Continued from page 1104)

for the year ended 30th September 1955 as against a loss of Rs 97,411 in the previous year. In this connection, the directors have stated that, although the tea trade continued to prosper during 1954-55, indigenous manufacturing capacity continued to be greatly in excess of demand. With the result, selling prices were forced down to an uneconomic level. This factor coupled with the definite limitation on output and consequent increased costs caused by inadequate all-weather communications with the Works, led to a further loss for the year. The amount set aside for Depreciation is Rs 1.78 lakhs against Rs 2.01 lakhs. For obvious reasons, the dividend is again passed over.

According to the directors' report, some time must elapse before suitable roads can be constructed although there is now every likelihood of adequate communications with the mill being provided. It is unlikely that any profit can be realised from the current year's operations.

Haileyburia Tea Maintains Dividend

The Haileyburia Tea Estates have maintained the dividend at 25 per cent for the year ended 31st December, 1955 despite a substantial decline in earnings. Sales amount to only Rs 23.43 lakhs as against Rs 26.56 lakhs in the previous year, while the net profit, before providing for Taxation and Depreciation, is lower at Rs 9,06,651 as against Rs 14,89,190. These were attributable to the fact that, although the crop produced is higher at 1,603,876 pounds against 1,322,680 pounds, the net average price realised is only 212.05 cents per pound against 285.27 cents.

A sum of Rs 80,973 (Rs 34,823) has been provided for Depreciation; Rs 1.75 lakhs (nil) for Development Reserve and Rs 3.26 lakhs (Rs 5.50 lakhs) for Taxation. No provisions have, however, been made for General Reserve, Dividend Equallsation Fund and Debenture Redemption Fund as was done in the previous year when Rs 2.00 lakhs, Rs 1.00 lakh and Rs 2.50 lakhs respectively were allocated to these items.

The stock of tea remaining unsold, as at 31st December 1955, was 538,657 pounds, all of which have since been sold. The estimates for the year 1956 provide for a crop of 700,000 pounds, to be produced at a cost of 162.39 cents per pound from Haileyburia and 870,000 pounds at a cost of 164.30 cents from Semni Valley Estate.

THE METAL BOX COMPANY OF INDIA LIMITED

Notice is hereby given that the Twenty-third Annual General Meeting of the Company will be held at 59C, Chowringhee Road, Calcutta, on Wednesday, the 18th day of July, 1956, at 4 P.M., for the following purposes.

1. To receive the Report of the Directors, the Statement of Accounts for the year ended 31st March, 1956 and the Report of the Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

Proxies, in order to be effective must be received by the Company not less than 48 hours before the meeting.

The Ordinary Share Register of the Company will be closed from 1st to 18th July, 1956, both days inclusive.

By order of the Board,
A. B. BASU,
Acting Secretary.

59C, Chowringhee Road, Calcutta.
8th June, 1956.

Stock Exchanges

A MODEST RECOVERY AFTER A SHARP SETBACK

Watch-Dog Writes:

STOCK markets have, in general, experienced a widespread setback during the week under review due to selling pressure. The announcement of the Government decision to introduce uniform prices for all categories of steel as well as pig-iron, the permission sanctioned to the Indian Iron and Steel Company to issue the right shares only at a premium, rumours of the proposal to raise the excise duty on cloth and settlement adjustments—all these factors caused renewed selling pressure. A slight recovery was, however, noiced toward the close, thanks to some short-covering and replacement buying at lower levels.

Prices on the Calcutta Stock Exchange developed an easier tendency and the turnover was further restricted.

Equities on the Bombay Stock Exchange, after a steady opening, suffered a sharp setback due to lack of support coupled with long liquidation.

Except for selective support visible in the Planting section, trading on the Madras Stock Exchange was limited.

The London Stock Exchange gave a satisfactory performance, being encouraged by the good May overseas trade figures.

Wall Street closed barely steady.

✱

Calcutta

ACTIVITY on the local Stock Exchange, during the past week, was again restricted and the general tone was somewhat easier. The setback in prices was more pronounced in the speculative than in other scrips, mainly due to settlement considerations. Also, notification with regard to increased prices for certain goods of iron and steel, the news of the Government stipulating a premium of Rs 3-8 per share in the event of a right issue by the Indian Iron and Steel Company and rumours of a proposal to raise the excise duty on cloth, also depressed sentiment in the market where operators were generally inclined to book profits at the recent high levels. The only redeeming feature of the week's trading was the remarkable steadiness in some of the Miscellaneous scrips, thanks to dividend and other considerations.

The Giiltedged market ruled quietly steady and prices moved within a narrow range as support was lacking from institutional investors who seemed ti awaiting the New Loan. 3 per cent 1986 Conversion Loan, touched a high of Rs 77-12 and a low of Rs 77-7, to finish the week at Rs 77-11. Among other Loans, 3 per cent 1963/65 changed hands at Rs 95-1 to Rs 95-6 and 3 per cent 1970/75 at Rs 90-4 to Rs 90-6.

Bank shares ruled steadier, Punjab National changing hands at Rs 57-8 to Rs 58-0. United Commercial at Rs 50-8 to Rs 51-0 and Hind at Rs 32-12 to Rs 33-0.

Limited interest was shown in the Jute section where prices of most of the scrips develpped an easier tendency in the absence of any definite news with regard to the minimum export price scheme. National touched a low of Rs 25-0 from Rs 25-8 to finish better at Rs 25-2, while Nuddea had some support upto Rs 40-12 from Rs 40-4. Birlas were a steady feature at Rs 18-11, while Alliance were marked down to Rs 136 from last quoted Rs 140; Belevedere to Rs 166 from Rs 168 and Bally to Rs 135 from Rs 137.

Coal shares met with a slight revival of activity on the belief that the industry would have brighter prospects under the Second Plan; but higher levels could not be retained till the close due to general profit-taking. Market circles are now awaiting the announcement of the fixation of selling price for coal by the Coal Tribunal. Burrakur moved narrowly between Rs 13-7 and Rs 13-13, while East India and some support upto Rs 33-4 from Rs 32-12 and Bengal upto Rs 544 from Rs 538. Raneegunge turned ex-dividend (As 6) at Rs 10-12. Union were quoted around Rs 12-4 with Western Bengal hovering around Rs 7-0.

Textile shares improved haltingly to finish on a steady note. Operators were inclined to restrict their commitments in view of the fresh rumours with regard to the proposal for raising the excise duty on cloth. Elgins were the only exception, which remained firm at Rs 28-7. Kesoram, after improving to Rs 19-10 from Rs 18-14, receded again at the close to Rs 18-11 with New Victoria moving narrowly between Rs 2-9 and Rs 2-11.

The Tea section continued to record only moderate business as operators were rather disappointing at the poor start of the first export sale. Support was, however, continued to be given to selected scrips on the belief that better prices would be obtained at the next few sales. Basmatia had buyers at Rs 40-4 to Rs 40-8; Banarhat at Rs 359-0 to Rs 362-8; Brooke Bond at Rs 23-0 to Rs 23-4; Hansqua at Rs 23-4 to Rs 23-6; Hantapara at Rs 220 to 223 and Tezpore at Rs 25-12 to Rs 25-14.

Except for continued support for Carew which firmed further to Rs 9-1 from Rs 8-12, other scrips in the Sugar section remained practically unchanged. SKG changed hands at Rs 13-3 to Rs 13-6.

In the Engineering section, there was a good deal of speculation in Indian Irons. Apart from settlement adjustments, the scrip was subject to heavy selling pressure following the Government sanction to the company to issue the right shares only at a premium of Rs 3-8. The Government notification with regard to increased prices for certain categories of iron and steel was also a contributory factor. The scrip, after opening steady at Rs 38-15 and firming up to Rs 39-2 on Tuesday, suffered a sharp setback to quote as low as Rs 37-5 on Wednesday. The closing rate for the week was, however, better at Rs 37-10, thanks to some short covering and replacement buying. After market hours on Thursday, however, there were buyers at only Rs 36-12 with sellers at Rs 36-12-6.

Among other Engineering scrips, TEXMACO touched a low of Rs 24 from Rs 24-14; Jessop Rs 35-0 from Rs 35-14 and Richardson Rs 26-6 from Rs 26-13 to finish better at Rs 24-5; Rs 35-4 and Rs 26-8 respectively. Braithwaite were, however, a very steady feature at Rs 28-8 with Britannia quoting at Rs 15-10.

In contrast to the trend in other sections, Miscellaneous shares ruled fairly steady. The announcement of the increase in the dividend from 25 to as much as 45 per cent by Indian Copper had no marked effect on the share scrip which remained rather stickly around Rs 7-1, to quote better at Rs 7-5 at the close. This may be due to a heavy bull position which had already been built up in anticipation of a bumper dividend. Operators were naturally anxious to book their profits when the actual announcement was made. Orissa Minerals were taken upto Rs 27-12 from Rs 26-12, to finish at Rs 27-2 on profit-taking. Among Paper shares, Orient touched at one time Rs 39 and and Shree Gopal Rs 19-11, to finish easier at Rs 38-13 and Rs 19-6 respectively. India Pulp continued to have good support upto Rs 25-13 for Rs 25-9. Elsewhere, Alkali Chemicals were a very steady feature at Rs 21-9. Indian Cable turned cheaper at Rs 34-10 against Rs 35-8. India Steamship turned ex-dividend (As 8) at Rs 9, while Metal Box were wanted upto Rs 28-14 following the increased dividend. Rallis scored another point at Rs 51. Rohtas chaged hands at Rs 24-8 to Rs 24-11; National Carbon at Rs 26-14 to Rs 27-8; BIC at Rs 11-3 to Rs 11-6; Sone Valley at Rs 8-13 to Rs 9-0; Dunlop Rubber at Rs 30-6 to Rs 30-12 and Anglo Brothers at Rs 21-7 to Rs 21-14.

✱

Bombay

Bombay, June 13.

EQUITIES on the Bombay Stock Exchange experienced a widespread setback during the week with selected scrips losing substantial ground due to various adverse factors. Mainly amongst these were, the rumours of a proposal to raise the excise duty on cloth, the reports of the Government permitting the Indian Iron & Steel Company to issue right shares only at a premium,

(Continued on page 1141)

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England)

Dividend No. 29 (Final)

NOTICE IS HEREBY GIVEN that at the Thirty-second Ordinary General Meeting to be held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday, the 12th September, 1956 at 11-30 A.M. the Directors will recommend payment of a Final Dividend (No. 29) for the year ended 31st December, 1955 of 10% and Bonus of 25% (8.4 pence i.e. 7 annas 5.6 pies per unit of stock) free of Income Tax payable by the Company in respect of the existing Issued Capital of £914,200. Subject to confirmation of members, the dividend will be paid on the 28th September, 1956 to all members registered in the books of the Company at the close of business on the 23rd July, 1956.

The Registers of Members will be closed from the 24th July to the 6th August, 1956 both days inclusive.

The nett profit for the year ended 31st December, 1955 was £416,758 (against £263,987 for previous year), after providing £175,000 for Depreciation (£100,000 last year), £683,046 for Taxation (against £264,396), £200,000 for General Reserve (against £150,000) and £ Nil on other accounts (against £120,000). With £111,715 brought in from 1954, there is an available balance of £528,473 (against £340,265). After providing £411,390 for Interim dividend (No. 28) of 10% already paid on 10th February, 1956 and for proposed Final dividend of 10% and Bonus of 25%, free of Income Tax payable by the Company (Dividend No. 27 of 15% and Bonus of 10% free of tax last year £228,550) the balance carried forward is £117,083 (against £111,715 brought in from previous year).

It is also intended to propose the necessary resolutions to effect capitalisation of the Reserves at the aforesaid Annual General Meeting to be held on the 12th September 1956 and after the resolutions have been approved by the stockholders, to close the Registers of Members from the 3rd to 14th November, 1956 for the purpose of allotment of Bonus shares on the 14th November, 1956.

BY ORDER OF THE BOARD,
G. A. Carver,
SECRETARY.

Clive Buildings,
Netaji Subhas Road,
Calcutta.
Dated the 14th June, 1956.

SOUTH INDIAN MARKETS

(Continued from page 1125)

first consignment of 500 tons, valued at Rs 40 lakhs, is reported to have been sent by the coffee-curing centres in Mangalore.

At the retail sale held at Tanjore toward the end of last week, about 8½ tons of Plantation and 8 tons of Robusta were offered. Out of this quantity, 7¾ tons of Plantation and the entire quantity of Robusta were sold. Following were the range of prices (per cwt):—Plantation Peaberry Rs 241-7 to Rs 242-5; Plantation "A" Rs 217-13 to Rs 220-0 Robusta Peaberry Rs 165-1 to Rs 167-2 and Robusta Flats Rs 159-0 to Rs 163-2.

In the auction held at Tiruchi, following prices were realised (per cwt):—Plantation Rs 232-6 to Rs 255; AR Cherry Rs 190 and Robusta Rs 156-13 to Rs 153-0.

*

Rubber

The high level of consumption of Rubber, during the past few months, has now reduced the position of stocks which, at the end of April, were less than 5,300 tons as compared to the figure at the end of April last year. This hand-to-mouth stock position may improve if all the manufacturers, who have been provided with import licences, utilise them to the full extent.

Altthough there has been a slight fall in production of world rubber, the year's prospects are being assessed on the basis that a larger quantity of rubber than last year can be produced. For, it is reported, that a considerable amount of replanting and new planting is going on in Malaya under the stimulus of the subsidy scheme. A new direction in rubber research undertaken in this country is the effort to produce improved natural rubber to meet market requirements.

Malaya will probably have an advantage over Ceylon rubber, especially in regard to freight, but that will be offset by increased world demand for the commodity. Although the ban on Malayan rubber shipments to China has now been removed, the immediate prospects of China buying very large quantities are remote as she is tied down to Ceylon by contract this year. The absorption of surplus by China will, therefore, result in more competitive buying in the Singapore market which is the epicentre of the rubber world, and this is bound to be reflected in higher London and New York prices.

*

Pepper

Pepper markets, both in Alleppey and Kozhikode, ruled quiet with prices showing little change over last week. Most of the exporters and dealers were bullishly inclined, while growers were feeling optimistic about expansion of demand from New York in the coming weeks and a pick-up in inland demand too. At the present prices, neither bulls nor bears are aggressive as both of them prefer to watch the developments at New York as well as at Singapore. In the Alleppey market, business was done at Rs 737-8 per candy. In the Kozhikode market, rates were quoted around Rs 810 per candy for Wynaad quality and Rs 790 for the Country variety.

In New York, the market for black pepper ruled steady, reflecting higher overseas advices and a little better feeling among dealers and grinders. Malabar and Lampong spot were quoted at 30½ cents per pound, while Sarawak spot was quoted at 29½ cents ex-dock.

According to the latest figures, total imports of black and white pepper into the USA were 15,775 tons in 1955 as compared with 16,937 tons in the previous year. India's exports to the USA dropped by a greater quantity than that country's total fall in offtake, while Indonesia's exports increased from 2,679 tons to 3,805 tons. Exports from Malaya rose from 3,512 tons to 3,595 tons. India's exports were lower at 6,897 tons against 9,975 tons.

*

Groundnut

Steady conditions prevailed in the Madras Groundnut market with prices moving within a narrow range. Small quantities were taken up by small crushers, while big crushers were still out of the market. The rate for superior oil-quality seeds was quoted around Rs 162 per candy, while bold variety was done at Rs 157.

Reports from Pollachi have confirmed the news of the excellent crop prospects for this season, the recent rains having benefitted the standing crops. Arrivals of new crop Coromandel variety on a large scale are expected within a fortnight. Light rains, reported in parts of South Arcot district, should assist harvesting operations of the crop sown earlier in the season.

In the Groundnut Oil section, a fair quantity of business was reported done, thanks to the buying interest shown by Calcutta parties and buyers from Andhra. The rate for the ready position was quoted around Rs 315 per candy, while June delivery was nominally quoted at Rs 316 per candy.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were as usual, but clearances were very few. Prices, where settled, were about one to two annas per pound less. Buyers from the UK did not show any interest and were holding back in anticipation of still lower prices. There was also no demand locally and the few goods, that were sold to the UK, were mostly 5/5½ lbs average.

Arrivals of Buff hides were as usual, while clearances were slow without any change in prices. In the case of Cow Calf, arrivals continued to be of a poor selection and fresh business with the UK was extremely difficult to conclude. The demand for Buff Calf was poor and stocks in Madras were reported to be plentiful, though a few lots were cleared at prices at about one to two annas per pound less than the previous week.

In the Tanned Skins section, Sheep skins of better quality were easier by one to two annas per pound. In the export section, there was very little change to report as enquiries from overseas buyers were patchy. In the case of Goat skins, there was a better demand for 11-12 lbs. and 13-14 lbs. average with a lesser demand for 5½/6 lbs average.

Exports during May were as follows:—Goat skins 945 bales and Sheep skins 414 bales.

FOR THE INVESTOR

(Continued from page 1113)

year's annual general meeting, Mr T. Leslie Martin, the Chairman, felt it necessary authoritatively to issue a statement on rights shares prospects. Mr Martin explained the circumstances in which the company would call for new capital; the following quotation needs to be carefully studied:

"There have been many rumours of late concerning the question of the Company raising further capital and I would take the opportunity of warning you that expectations entertained to the effect that rights or other share capital will be raised by the Company are premature and may prove to be without foundation. In order to explain the position I would remind you that there are two schemes of extensions which, though from a technical point of view may be regarded as one, are, on financial grounds, to be treated as entirely separate and independent of each other. The first one is described as the 1953 extensions in respect of which, as you know, we have incurred heavy liabilities to the World Bank and the Government of India. This scheme is in progress and is expected to be completed, all going well, in 1958. The second scheme described as the 1955 extensions, visualizes the increase over the 1953 project, of the production of saleable steel by 100,000 tons, the enlargement of the finishing capacity of the existing rolling mills and the addition of some new finishing capacity, in order to make the production more flexible to meet the varying conditions of the market. This scheme is still under consideration and negotiation with Government, and no definite plans can be formulated until we know what the future retention prices, which are now under investigation by the Tariff Commission, are likely to be. It is for the implementation of this second scheme that the raising of further capital would be required, supplemented by means of such special element consisting of an increase in the new retention prices, as the Tariff Commission may recommend and the Government may allow, in order to fully cover the position. It will be clear to you, therefore, that no decision as to the necessity or otherwise of raising further capital can be made until the Tariff Commission's Report and the Government's Resolution thereon have been received by us."

I want to draw important attention to the following points:

(1) Mr Martin has insisted that new capital was required and would be invited only in respect of a second scheme of expansion.

(2) The second scheme envisages an increase in overall steel capacity as well as enlargement of finishing capacity.

(3) At that time, this scheme was "under consideration and negotiation with Government"; in other words, Government approval had not been received.

(4) For the company's part, implicitly, it hesitated to take on more responsibility until the publication of the Tariff Commission Report on retention prices.

If we bear in mind these four considerations, it becomes apparent that the significance of the communique on IISCO rights shares is on the following lines:

(1) Following the publication of the Tariff Commission's Report, the company must have indicated its willingness and its anxiety to embark upon the second scheme.

(2) The negotiations with Government have obviously been completed; and Government approval for the second scheme has been obtained.

and the fears of heavy "budla" TISCO's Transfer Books. Most of the shares, therefore, succumbed to sizeable realising although some short-covering and replacement buying caused rates to recover partially at the close. The turnover was moderate and the closing tone was steady.

Textiles:—This section displayed considerable strength and sharp gains were recorded early in the week on suggestions that the Government was considering the revision of the target of mill production with a view to meet the growing competition in the export sector. But higher levels could not be retained in mid-week due to heavy selling pressure following the uncertain implications of the new cotton textile policy and the rumours of the Government proposal to raise the excise duty on cloth in order to mop up part of the increased profits from the current boom in cloth prices.

With the result, Bombay Dyeing declined sharply from a high of Rs 671 4 to Rs 647-8; Kohinoor from Rs 379 to Rs 368-8; New Great from Rs 255 to Rs 251; Central India from Rs 147 to Rs 144-8; Finlay from Rs 341 to Rs 338 and Standard from Rs 445 to Rs 441-4. Svadeshi, however, were active and had sustained support upto Rs 245-8 from Rs 241 on encouraging corporate news. Century were placed better at Rs 560 against Rs 555, while Tata Mills were well maintained at Rs 54-8.

Hydro-Electrics:—Sentiment in this section was rather subdued as there was hardly any enquiry. Tata Hydro were the only steady feature at Rs 131. Andhra Valley were lower at Rs 1,217-8 against Rs 1,220 and Tata Power at Rs 1,292-8 against Rs 1,312-8. Ahmedabad shed a few annas at Rs 97-3 and Bombay Suburban at Rs 112-13.

STOCK EXCHANGES

(Continued from page 1131)

Steels:—Official dealings in Tata Steel Ordinaries have already started on ex-right basis. Looking to the demand for the right shares at a considerable premium, it may safely be assumed that the market is set for a rise. Another favourable factor includes the satisfactory production figures for May.

Meanwhile, Tata Ordinaries went ex-right at Rs 198-12 on Monday last. After opening firm at Rs 201¾ due to sustained demand, the rate gradually receded toward the close to Rs 196-8 due to selling pressure. The Right issue was in demand at one time upto Rs 67-0, to quote finally around Rs 62-8.

Miscellaneous:—This section developed many good features, although higher levels could not be retained till the close in sympathy with the general trend of the market. Associated Cements, after being taken upto Rs 220-12 following the optimistic observation made by the Company's Chairman, declined at the close to Rs 217-12. Digvijay lost about Re 1 to finish at Rs 190-8.

Enquiry was well maintained in the Sugar section where Belapur were taken upto Rs 235-8 and Phalton upto Rs 155. Walchandnagar Industries were quoted around Rs 253-12.

Automobile shares were nearly maintained at last week's levels. Premier changed hands at Rs 92 to Rs 93, while Hindustan Motors eased off by a few annas to Rs 10.

Elsewhere, National Rayons ruled steady at Rs 248-0 Tata Oils continued to have support at Rs 52-0 to Rs 52-8. Bombay Burmah Old, after touching a high of Rs 658-12, eased off at the close to Rs 647-8 on profit-taking. Alcock were marked back to Rs 357-8 from Rs 363¾ and Premier Construction to Rs 184¾ from Rs 189½. Tata Locomotive shed nearly 4 points at Rs 150-8.

(3) The stipulation that capital should not be raised before November has been made only because new money will be required for the "1955 extensions".

(4) The financial arrangements for the "1953 extensions" are complete; and the rights issue will not be applied toward them.

(5) IISCO, thus, is thinking in terms of adding to capacity by 100,000 tons of saleable steel, besides an enlargement of finishing capacity.

(6) Since the 1953 extensions will soon begin to pay their way, in the sense that increased production will be achieved, the higher dividend burden indicated by a premium issue can most easily be met from the substantially improved earnings that will be reported by the company.

In brief, I put it to the investor: the premium issue, for all these reasons, is the best news that he could get, and certainly the best he has had in a long time.

*

Madras

Madras, June 12.

TRADING on the local Stock Exchange, during the past week, was slow and thin and prices moved within a narrow range. The trend was indecisive.

Textiles:—Except for a few shares which continued to be in good demand on investment account, prices of other shares ruled generally easy. Metturs were still absorbed upto Rs 502-8 from Rs 500, while Adoni scored another full point at Rs 12 on renewed buying. Vasantas were in demand up to Rs 300; Balasubramanias upto Rs 145; Dhanalakshmis upto Rs 402 and S. K. Rajendras upto Rs 112-0. Lakshmis 'A' and 'B', however, declined to Rs 220 and Rs 110 respectively on some selling pressure.

Planting:—Prices in this section showed a mixed trend. In the Tea section, Haileyburias were marked lower at Rs 28-8 despite the maintenance of the dividend, while Twyfords and Highland Produces had sellers down to Rs 24-8 cd and Rs 18-13 cd respectively following the reduction in dividends. Buying support was visible in Neelamalais at the market rate, while there were some sellers of Coorgs, Coonoors and Nonsuch at quoted rates.

Miscellaneous:—In this section, Cement shares met with selective support. India Cements were offered at the market rate, while Travancore Cement were lower at Rs 12-14 against Rs 13-2. FACTs had sellers at Rs 7-0 and Standard Motors at Rs 12-8. Rane continued to receive good support, quoting Rs 11-8. Among Sugar shares, there was some demand for EIDs upto Rs 29-12; Indian upto Rs 17-14 and Travancores upto Rs 13-10.

*

London

London, June 12.

THE London Stock Exchange, after an undecided start, firmed up toward the close. Sentiment was helped by the May overseas trade figures and the improvement on Wall Street.

Industrials and Oils provided the best features and a fairly lengthy list of gains was established with the leaders attracting most attention.

*

New York

New York, June 11.

WALL STREET recorded losses ranging to one dollar or more in early dealings, reflecting the news that President Eisenhower cancelled all his engagements. Also, caution over the President's re-election intentions limited any substantial recovery in prices. The entire list, however, held a predominance of gains at the close reflecting less concern over the President's health.

For the Investor

Cotton Textiles—Beacon-Light

Investment Gossip:

THE list of Beacon-Light industries may be broadened to include, particularly by virtue of this week's official statement thereon by Mr T. T. Krishnamachari, cotton textiles. Even if the present liberalisation had not been announced, I had intended to suggest that the trend of profits of textile companies as well as the certainty of the continuance of such conditions are both factors which imbue the cotton textile industry with a beacon-light attraction For the Investor.

Now, it is official that the organised sector in cotton textiles may expand production, to the extent of 350 million yards. It is also official that the industry must, besides, provide yarn in quantity sufficient for handlooms to turn out a further 700 million yards. It is inescapable that these two factors will add substantially to cotton mill profits.

There are other considerations as well. During the Second World War, even on the basis of controlled prices and similar paraphernalia, textile companies amassed profits at an incredible pace. The next five years will be like to a war—a war waged in this country against poverty. The influence released and the purchasing power generated will make their demand, first and foremost, on cotton textiles.

For this reason, the investor has good grounds for hoping that, over and above the satisfying dividend that will inevitably be his on account of high earnings, his may be a growth share as well. Do not rule out the possibility that, from time to time, further increases in production by the organised industry will be sanctioned.

Indeed, Mr T. T. Krishnamachari has already hinted at Government's preparedness so to permit further expansion. If the investor believes, as I do, that per capita consumption of cotton textiles in the next quinquennium is likely to be nearer 20 yards than the present estimate of 18½ yards, he can confidently count on growth prospects for his investments in the textile companies.

Still another imponderable factor is the success or failure that will be the experience of the handloom sector in textile production. If, due to organisational or any other difficulties, the situation should come about wherein the handloom sector is unable to deliver the goods, we can count upon the Government to take speedy action to remedy the shortfall in the availability of cotton textiles. The only possible remedy: yet further allocation of production potential to the organised industry.

Emboldened by the highly commendable performance of textile companies in 1955, and reassured about prospects by Mr Krishnamachari's statement of this week, the investor will surely desire to have, in his basket of investments, some of the golden eggs constituted by scrips of blue-chip cotton textile companies.

I do not wish unduly to indicate the preference that the investor should have in this regard. For one thing, it is unnecessary because the shareholder is a knowing and wily bird. For another, it is a difficult task, because legion are the companies that the investor can with faith and confidence entrust his moneys in.

It is, nevertheless, my duty to list what I personally consider to be the blue-chips in the textile world. And such a tabulation, I append at the end of this article. For the general guidance of the investor, I might remark that his choice should be moulded by (a) the integrity of the management; (b) the experince and standing of the company; (c) the rate of dividend declared: and (d) the condition of the plant and machinery. This last is easily discovered by a perusal of balance-sheets for recent years: the extent of additions to block reflects the degree of modernisation achieved.

£ R$

MIDA Means the Midas Touch

Beacon-Light List

AS I have indicated earlier, the number of companies engaged in the manufacture of cotton textiles is legion—that is, companies in which the shareholder can with every confidence invest his moneys in. I append a select list of companies which I consider to be the bluest of blue-chips.

I suggest that the investor should, before he decides upon the purchase of a scrip, apply what I should call the MIDA test. If this test is applied, and a share chosen on that basis, I would not be surprised if the shareholder found that he was possessed of the secret of the Midas touch.

The MIDA test, briefly, means that the shareholder should appraise himself of the following facts about a company: Management, is it efficient? Integrity, is it the characteristic of those who direct the company? Dividends, are they of size and substance? Additions, are they sizeable in recent years?

Apply the MIDA test: and you would like the Tata textile scrips generally, with a particular fondness for Svadeshi because (D) is a satisfactory 17½ per cent and (A) amount, in the last two years, to Rs 72.30 lakhs—thus suggesting improved profits with the use of modernised machinery.

So, too, with the Birla scrips, and Birla Cotton especially, because (D) is 30 per cent and (A) for the last two years amount to Rs 27.68 lakhs.

Travelling south, a Binnys must is Bangalore Woollen—(D) of 30 per cent and (A) of Rs 42.84 lakhs in two years.

Still in the South, Madura Mills attracts with a Dividend of 20 per cent and Additions to the tune of Rs 28.10 lakhs in two years.

A brief sortie to the west, to glance over Gold Mohur, Finlay and Swan, but (out of personal preference) to hit upon the last-named, with its record of 25 per cent Dividend and Rs 35.53 lakhs of Additions in the last twenty-four months.

Back to the South, for one more look, and the eye is caught by Lakshmi Mills, for its 25 per cent Dividend and Additions aggregating, in two years, Rs 16.19 lakhs.

A Sirur certainty is Modern Mills—(D) being 16 per cent and

HIGHLIGHTS

Some years ago, Watch-dog wrote in this column that the movement of prices on the Calcutta Stock Exchange did not depend on the state of the economy.

Nor, for that matter, on prospects for industries, or company performances, or dividend announcements.

No, these were not the considerations that weighed with the Phatkarams (as Eavesdropper would call them) that walk the curbs beside the Calcutta Stock Exchange.

What did influences was the side of the bed that our friends got up on. The wrong side—sell was the order; and, of course, vice versa.

More recently, the wonders of a mechanical age available, the procedure (reported Watch-dog) changed. Started, then, the flash news era.

The teleprinter service faithfully conveyed statement of every statesman.

Since a new economic philosophy was being evolved, nationalisation became an over-used word.

The news flashed across the country and on to the teleprinter. The phlegmatic order, once again, was sell.

Today, it is, we think, a combination of both systems. Result? The Stock Exchange in Calcutta never reflects or mirrors the investment trend, but is merely an index of the whims and caprices of the speculative fraternity.

No lions strut about on Lyons Range; the Leading Article reports why it is more akin to a gambler's den, and suggests how this undesirable situation may be remedied.

Handsome Dividend by Mettur Industries

Balance-Sheet Reviews:

METTUR INDUSTRIES have produced excellent working results for the year ended 31st March, 1956. Thanks to uninterrupted power-cuts, the mill was able to work throughout the year under review. Also, the demand for the company's cloth continued to be keen and is still being sold at fixed retail prices through their distribution organisation of wholesalers and retallers.

Sales for the year have shown a rise to Rs 1.56 crores from Rs 1.54 crores in the previous year, while the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 48,17,131 as against only Rs 37,35,060. Taxation has been raised to Rs 21.77 lakhs from Rs 13.50 lakhs, though Depreciation has been reduced to Rs 1.88 lakhs from Rs 1.92 lakhs. The dividend is, however, increased to 42½ per cent from 35 per cent.

The balance-sheet position is extremely satisfactory. Against a paid-up capital of Rs 60.00 lakhs, General Reserve is shown at Rs 38.00 lakhs and other Reserves at Rs 31.00 lakhs. The gross block at Rs 63.80 lakhs is depreciated by as much as Rs 43.30 lakhs to show a net block value of only Rs 20.50 lakhs. Liquid assets at Rs 1.62 crores are substantially higher than sundry liabilities, at only Rs 53.09 lakhs.

The shares held in Orissa Cement Limited having been mostly distributed among the shareholders of the company, Orissa Cement Limited is now more a subsidiary of this company. The company, however, still holds 77,454 Ordinary shares of Rs 10 each in Orissa Cement Limited which are proposed to be distributed at par among the members holding Ordinary and Deferred shares against dividend to the extent of 75 per cent of the dividend amount payable to them on Ordinary and Deferred shares, if they so desire and exercise their option. In the case in which 75 per cent of the dividend on the Ordinary and Deferred shares is not a multiple of Rs 10, such shareholders can ask for payment in specie to the extent of the amount which is a multiple of Rs 10 immediately below 75 per cent of their dividend on the Ordinary and Deferred shares. The option forms duly completed have to be sent to the registered office of the company at Dalmiapuram before the 7th July, 1956.

In common with the cement industry in this country which, as I wrote some time ago, constituted a beacon light industry, Dalmia Cement (Bharat) Limited has every prospect of adding steadily to profit and of declaring steadily higher dividends. In the last two years, addition to block have been of the order of Rs 15 lakhs. The prospects for the share-holder are further improved in view of the statement in the Director's Report that negotiations with regard to the expansion of the cement Works at Dalmiapuram are proceeding with the machinery suppliers, and orders are expected to be placed shortly.

£R$

Dalmia Cement Raises Dividends

Although Dalmia Cement (Bharat) Limited has reported a slight decline in sales from Rs 2.07 crores to Rs 1.95 crores, the net profit, before providing for Taxation and Depreciation, for the year ended 31st December 1955, shows an increase to Rs 61,95,083 from Rs 59,47,216 in the previous year. The profit would have been still higher, but for the power-cut throughout Madras. The directors have, after providing Rs 5.38 lakhs (Rs 10.61 lakhs) for Depreciation; Rs 26.00 lakhs (Rs 24.00 lakhs) for Taxation; Rs 10.00 lakhs (Rs 3.00 lakhs) for General Reserve and Rs 5.00 lakhs (Rs 7.00 lakhs) for Other Funds, raised the dividends, both on the Ordinary and Deferred shares, to 12½ per cent from 10 per cent.

Satisfactory Coal Results

Thanks to a rise in sales from Rs 10.88 lakhs to Rs 13.53 lakhs, the Borrea Coal Company has reported a net profit, before providing for Taxation and Depreciation, of Rs 3,14,072 as against Rs 2,48,345 in the previous half-year. Raisings are higher at 77,981 tons against 75,187 tons and despatches at 85,503 tons against 69,844 tons. The directors have, after setting apart Rs 45,717 (Rs 34,722) for Depreciation; Rs 1.37 lakhs (Rs 82,238) for

The Lilliputian Investor *versus* The Brobdingnagian Professional

LAST week's developments with regard to Indian Irons and Indian Coppers have mystified, and even horrified, the average investor. The announcements made by the two companies are, the layman would have thought, such as not only to cause satisfaction but also to excite jubilation. The behaviour of the Stock Exchanges would appear to suggest that the news was, in fact, of a disappointing kind.

Let us first deal with the Indian Iron and Steel Company Limited. For over a year, the investor has been hearing of the imminence of a rights share issue. The position in this regard was clarified for him by Chairman Leslie Martin in his address at the last annual general meeting. Mr Martin indicated that the Directors were, at that time, considering the economics of further extensions which he compendiously described as the '1955 extensions'. He added that, if the Directors were satisfied that the 1955 plan was satisfactory from every point of view, they would then decide, for financing the project, to make a rights issue of shares. In this connection, investors have regarded the following passage (from Mr Martin's speech) as an adequate basis for knowing for themselves what they could expect and what they could not expect. Mr Martin said:

"There have been many rumous of late concerning the question of the Company raising further capital and I would take the opportunity of warning you that expectations entertained to the effect that rights or other share capital will be raised by the Company are premature and may prove to be without foundation. In order to explain the position I would remind you that there are two schemes of extensions which, though from a technical point of view may be regarded as one, are, on financial grounds, to be treated as entirely separate and independent of each other. The first one is described as the 1953 extensions in respect of which, as you know, we have incurred heavy liabilities to the World Bank and the Government of India. This scheme is in progress and is expected to be completed; all going well, in 1958. The second scheme described as the 1955 extensions, visualizes the increase over the 1953 project of the production of saleable steel by 100,000 tons, the enlargement of the finishing capacity of the existing rolling mills and the addition of some new finishing capacity, in order to make the production more flexible to meet the varying conditions of the market. This scheme is still under consideration and negotiation with Government, and no definite plans can be formulated until we know what the future retention prices, which are now under investigation by the Tariff Commission, are likely to be. It is for the implementation of this second scheme that the raising of further capital would be required, supplemented by means of such special element consisting of an increase in the new retention prices, as the Tariff Commission may recommend and the Government may allow, in order to fully cover the position. It will be clear to you, therefore, that no decision as to the necessity or otherwise of raising further capital can be made until the Tariff Commission's Report and the Government's Resolution thereon have been received by us."

It would thus be clear that the rights issue was conditional upon the 1955 plan being financially and economically feasible and desirable; and that the 1955 plan was conditional upon Government's approval. The Managing Agents have now released a notification to the effect that, while they applied for permission for the issue of rights shares at par, the Examiner of Capital Issues has given his consent on the stipulation that the rights share must be at Rs 13-8, and that the rights issue must be made after November.

So far as the average investor is concerned, the point that strikes him is that the present premium on the rights share is Rs 3-8 as compared with the premium of Rs 15 in the rights shares issued in 1936; and that the premium now suggested by the Government is favourable and can by no means be considered onerous as is sought to be made out by the professional operators. He cannot understand why so great a point is being made out with so regard to so small a premium. If, in the circumstances of 1936 as regards the capacity, resources and stature of IISCO, a premium of Rs 15 per share was justified, why should there be all this fuss about a paltry premium of Rs 3-8 at a time when the company has admittedly a stronger position from every point of view?

Nor is the average investor much impressed with the opinion, canvassed in some quarters, that the notice issued last week means that the Directors have not yet made up their minds about the 1955 plan. It is commonsense to infer that the very fact of the company making an application to the Examiner of Capital Issues is proof (a) that the Directors are now satisfied about the economics of the 1955 plan; (b) that the necessary negotiations with the Government have been successfully concluded; and (c) that the funds from the rights issue will complete the programme of financial resources for this plan. All of which is final and conclusive proof that the 1955 plan is to be translated from blue-print to concrete buildings and machinery.

Nor, again, is the lay investor worried about the uncertainties that are said to shroud the company's shares standing in the name of Dalhousie Holdings. It has been suggested that Dalhousie Holdings would not be able to take up the rights shares; and that, therefore, they would sell out the rights shares in the open market. This line of argument has further stressed that such sales of rights shares constitute a bear point for Indian Irons. The average investor, however, has taken due note of the performance of TISCO rights shares and would welcome an opportunity to buy the rights shares of IISCO at a more favourable rate than he would have to pay for the original shares and with the possibility of making payment in instalments. From this point of view, if Dalhousie Holdings decide on selling rights shares (letters of renunciation), this should provide an excellent investment opportunity for bonafide investors.

In the light of these considerations, the average investor would like to regard the present moment propitious for buying Indian Iron shares; but is perplexed and puzzled to find that, whereas the shares should advance stridently, they seem afflicted with a downward trend.

In respect of another share, too, the investor is beset similarly by perplexities. Indian Copper Corporation Limited has reported a record year of working. Profits and undistributed profits, taxation paid and depreciation provided, the level of production and the rate of dividend —all these factors that the investor looks to show a remarkable rise.

Indian Copper's net profit, after taxation and depreciation, rose thunderingly from £263,987 to £416,758. This was after raising the provision for depreciation by £75,000 to £175,000, and after increasing the allocation for taxation from £264,396 to £683,046. The transfer to the General Reserve is higher by a third at £200,000. The dividend declared has exceeded market expectations, having shot up to 45 per cent from 25 per cent. The amount absorbed is £411,390 as against £228,500 in the previous year.

Yet, Lyons Range did not greet the news as enthusiastically as might have been supposed or anticipated. For a company with its growth prospects and for the dividend that it pays, Indian Copper should be offering a yield very much less than the current 8 per cent or so obtainable.

We have, for purposes of this analysis, chosen two scrips that undoubtedly receive the lion's share of activity on Lyons Range; Indian Irons and Indian Copper are, moreover, scrips that are dealt in on other Indian stock exchanges as well. But, for its price fluctuations, both scrips have to depend upon the lead provided by the Calcutta Stock Exchange; and the lead that Lyons Range is capable of has scarcely ever been other than a bearish one.

Why is this so? Why is it that a Stock Exchange should be unable to fulfil the expectations of investors, but instead falls in with every whim and caprice of the speculative fraternity?

For answer, we would suggest that Lyons Range is, as presently circumscribed by the rules under which the Calcutta Stock Exchange can authorise transactions, scarcely fitted as a market for shares on a forward list. Once upon a time, Calcutta prided itself on the fact that all dealings were on a cash basis: and shares on a forward basis are a relatively recent phenomenon. Once a purely investment market, when the notion of forward trading was mooted, the rules did not make sufficient provision for enabling such transactions to be legitimate, as distinct from unhealthy, speculation. Moreover, the special accoutrements, such as adequate availability of outside finance for accommodating those who required it on settlement days, do not exist in respect of the Calcutta Stock Exchange. Finally, it is the fact that the badla system places a premium on bear operations, and discourages anything but speculative activity, which is responsible for disabling the Calcutta Stock Exchange.

We can ill afford Lyons Range to set a regressive pattern for share markets at a time when the Second Plan, in whose implementation industry will be seeking capital from the investor, vitally requires a healthy investment climate in the country. The recent failure of the Calcutta Stock Exchange adequately to reflect the encouraging news that it has received on every front must compel action from the Stock Exchange Committee. As it presently functions, the Calcutta Stock Exchange is no paradise for investors; the only nomenclature that Lyons Range can lay claim to is "gamblers' den."

"The Wise Man in his Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

A New Official Language for India

Hindi—How Soon?

By K. N. SUBBARAMAN

EARLY in 1955, just five years after India gave itself a Republican Constitution, President Prasad appointed an official Language Commission under the chairmanship of Mr B. G. Kher, a distinguished Congressman and scholar from Ratnagiri, Bombay State, for some time Chief Minister of that State and later High Commissioner for India in London.

Though the Indian Constitution lays down that the official language of the Union shall be Hindi 15 years after the commencement of the Constitution, this time limit is not inflexible. What measures are necessary to implement this provision then or thereafter, or if possible even before, are to be the subject of periodical assessments, and Article 344 makes mandatory the appointment of a Commission every five years to recommend to the President '(a) the progressive use of the Hindi Language for the official purposes of the Union, (b) the restriction on the use of the English language for all or any of the official purposes of the Union' and other subsidiary issues. The Kher Commission is the first under this provision. Like all others, it sent out a questionnaire, recorded evidence from representative public men, educationists and Government servants in States capitals and University towns, and has now retired to digest the material collected and write its report. It is promised in July, just over 12 months after it started active work. If it sticks to its target date, it will be a good record.

The Insistent North

To change a language in which a country had sailed to liberty is no easy task. Creative and contributory thoughts habituated to birth in certain media cannot be ordered to spring up and thrive in a new matrix by any enactment. Such changes have to be grown into naturally, a light pressure, if any, being just to preserve the direction. The Constitution reveals a general awareness of this, but betrays in places the power of blocs addicted to dogmas. An unabashed clamour to hasten growth quicker than is good springs out of these; and, at the other end, a resistance to accept even what is rationally sound and practicable inevitably develops. The published evidence tendered before the Commission exhibits both. The insistent North sees in it an instrument to further the restrictions to the use of English, while the aggrieved South presses to extend its use even after fifteen years.

That nothing should impede the industrial, cultural and scientific advancement of the country or cloud the idea of the essential unity of India is the concern of the Constitution and should, therefore, be the ultimate test which any recommendation should satisfy. The fears of those not born to a Hindi tongue that a change over from English as the language of the public services, law courts and legislatures will impair their chances of acquiring distinction in these fields, nay even deny their participation in these, are real and the Constitution consequently enjoins that the Commission in its recommendations "shall have due regard . . . to the just claims and the interests of persons belonging to the non-Hindi speaking areas in regard to the public services".

High Court Language—English

To avoid the creation of any vacuum or vortex by passionate votaries of change, Article 348 recognises only English as the language for the Supreme Court and High Courts, and "authoritative texts of all Bills introduced, Acts passed, orders, rules and regulations and bye-laws issued under the Constitution or under any law passed by Parliament or legislature". Even where conduct of business in Hindi or any other language is authorised by the President, the judgment decree or order should be in English.

The use of an alternate language is not made easy either: the very introduction of a bill in the legislature to that purpose is subject to the President's prior sanction which is circumscribed by the recommendations of the five-yearly language commission and the screening of a Parliamentary Committee of thirty elected for the purpose.

Hindi has a long way to go before it is fully equipped with a vocabulary and idiom suited to the modern world. Attempts to evade the spirit of the Constitution by recourse to loopholes in drafting to replace English in interdepartmental work in certain States and in subordinate law courts therein met with near disaster compelling abandonment or retention only for saving face, translation texts replacing originals for practical work. The Constitution sanctions the assimilation of expressions, forms and styles found in other languages to enrich Hindi. The Commission is to contribute in this direction also, before it can boldly recommend any change in the language of enactments or High Courts.

Where there is maturity of thought, reforms are easy. A new-found liberty breeds an aggressive individuality: rights loom large and responsibilities are argued out. This mood pervades groups also, civic consciousness being set in narrow confines. The balance of power, along with natural resources, rests with the North where Hindi or some close variation of it is the medium of communication. There was an unmistakable tendency on the part of these groups summarily to impose their language on the rest; there still is to do so with inadequate preparation and the harsh tones of the earlier Constitutional debates echo back.

View of the Enlightened Few

Enlightened voices crying against this are but few: the Prime Minister with sincere conviction, a small number personally loyal to him, some thinkers and educationists of international stature, who having enjoyed the sunshine of world thought opened by the English language, would not shut that door. Against them are ranged the hoarsely shouting mass, cheaply appealing to their electorates through crusades against the English language. And worse is the silence of men in power.

On the other side, there are the many who freely talk of a language tyranny, attributing to this the mean aim to deny to them and theirs the opportunities they had and excelled in. Yet, all of them recognise the necessity for a national language, which is of the soil. The claim of Hindi to this position is not disputed. It is clear that, without proficiency in the national language, participation in public life or Government machinery is difficult and advancement therein impossible. Measures to propagate Hindi are, therefore, not neglected. Several translations of standard texts have been brought out and more are under way. The non-Hindi areas have an abundance of brains and ambitions and Hindi, whatever its place in the

An Indian Finance Special Study

curriculum of studies, will claim almost a monopolistic attention and interest. There is no need to force its pace and spoil the chances of a happy acceptance. The advantages of allowing time for a natural assimilation are becoming increasingly clear to more and more though still not enough.

Cleavage Continues

The views placed before the official Commission leave no room to doubt the cleavage still existing. The Bengal National Chamber of Commerce suggested that Hindi should not be introduced as the official language for another 20 years in view of the several practical difficulties in the conduct of commerce and trade and the lowering of administrative and educational standards due to the present inadequate standard of Hindi to cope with the demands of a developing state in the modern world.

The Bharat Chamber of Commerce, also in Calcutta, consisting solely of the North Indian group of businessmen, advocate the conduct of the Union and inter-State business in Hindi, but so long as it is not possible to exclude the English language completely, authoritative translation in English of the rules, regulations, etc., may be supplied. They do not think the immediate introduction of Hindi would affect progress.

The Patna University in the North holds that Hindi should be the medium of instruction and examination in the Universities by 1964, a view shared by the Bharat Chamber.

In the South, opinion is strong that an early change over to any language other than English will be suicidal, a view shared by many elsewhere though not voiced by all who hold it. Mr C. Rajagopalachari, a respected politician and an ex Chief Minister of Madras, told the Commission that, whatever the advantages of Hindi, English should not be discarded. The Vice-President of India, Dr. Radhakrishnan, an eminent philosopher, holds similar views. The Madras University wanted the time limit to be extended to 30 years at least. The Mysore Government's evidence was on similar lines. The Amrita Bazar Patrika of Calcutta wrote an editorial to prove that 15 years was inadequate to develop Hindi. Prime Minister Nehru advises caution, a sentiment echoed by Home Minister Pant: but virulent protagonists of the Hindi oligarchy continue this campaign which finds sympathy with quite a few in the Union Cabinet and many more in Parliament.

Parallel Languages

The suggestions put forward to the Commission to further the use of Hindi and ultimately instal it in the place of English follow a uniform pattern. In the progressive stage, they advocate authoritative texts in English and Hindi running in parallel. But, in the absence of an adequate richness and exactitude of words and expressions, how this can be done is not discussed. They advocate the publication of suitable dictionaries, text books, enlargement of the vocabulary by borrowing from regional languages and, in the last resort, even English, without admitting that this takes a longer time than forecast judged by a few performances.

The realists in the non-Hindi areas admit the inevitability of the replacement and plead for a longer time for equipment of the language to fit the role of a national language. An ex-Chief Justice of the Supreme Court, Mr M. Patanjali Sastri, is the latest of such powerful advocates. How will the opportunities for public service of the people from the South, Maharashtra, Gujerat, Bengal, Assam and Orissa be preserved? The Bharat Chamber would recognise all the major languages for competitive examinations to recruit public servants, and many others share the view. But, in the absence of instruction in these of adequate standards, how far this will be fair competition is eschewed from discussion. Under such a system, they will in practice be debarred from holding positions under the Government of India is the view of the Bengal National Chamber, many leading newspapers, and unbiassed public men.

An Indian Finance Special Study

The Lead from Madras

In this maze of conflicting opinions, Madras has come out with a practical lead. Its regional language is Tamil. The White Paper on languages issued by this State Government on the 26th March states 'Tamil will be the compulsory first language, English will be compulsory second language and Hindi, the optional third language in Schools and Colleges ... ... planning must be based between now and 1965, on the above assumption.' The Government make bold to say that it is practically certain that Andhra, Karnataka and Kerala (the last two yet to be formed partly out of Madras in combination with other areas on 2nd October, 1956) will follow the pattern, Telegu, Canarese and Malayalam the respective State languages taking the place of Tamil. Bengalees heaved a sigh of relief and leading Bengal papers commended the wisdom of the step.

How the wind will blow here and elsewhere is now clear. Earlier, the All India Council for Secondary Education on the 11th of January, 1956 adopted a similar resolution for trilingual studies in the secondary schools—English, Hindi and the regional language. A body in contact with student minds and abilities thus thought it well within their capacity to attain proficiency in the languages, much against the interested propaganda of English opponents and theoretical fears of cybernetical experts to eschew all attempts at three languages.

On the 24th of April, Mr Nehru said, in inaugurating the Radio Forum in New Delhi ... ... 'we should know, and know adequately foreign languages, if we want any place in the world. And obviously it is easier for us to continue to know the English language ... ... Therefore let us have not any sense of hostility to English ... ...".

The other reasons adduced for the retention of English in all cases, including the Madras White Paper, are identical: scientific and technical subjects cannot be profitably studied except in English. The Indian Science Congress Association recently declared that the replacement of English within any foreseeable period will 'affect seriously the scientific and industrial advancement of the country". English is not merely the language of the erstwhile rulers of India, but that of world thought.

Political Implications

These developments give a lead to the Commission. The South—the large chunk of non-Hindi speaking India—is sore at the apparent inequitable distribution of developmental expenditure, and this was bitterly expressed at the recent meeting of the National Development Council while considering the draft of the Second Five-Year Plan. Hasty suppression of English will shift far to the North the centre of gravity of opportunities for public service, the only point of gratification for the Southerners.

Politically, in view of the growing Communist influence at the tip of the Peninsula (Travancore-Cochin), it will be suicidal to the ruling party to add another handicap. The Congress President's statement on the 28th of April at Ernakulam, the second city in Travancore-Cochin, is significant. Hindi, he said, should be 'popularised' in the South in the next 15 years. The first extension of five years, permissible under the Constitution, can be read in this. The Commission should have no difficulty in recommending it both on the evidence before it and on appraisal of the present climate.

But the Commission's recommendation is to be considered by a Parliamentary Committee of thirty elected by the two houses: and election in a nascent democracy causes misgivings about calibre and detachment from dogmas. If those addicted to Hindi and prejudiced against English as a creed find themselves in numbers here, the President will be placed in a dilemma. Will the Government risk another measure unacceptable to large sections of population and to the thoughtful and discerning at large?

Unseemly Hurry

There is unseemly hurry, probably as a counter to the sober moves and statements, to banish English from Universities. The Baroda University resolved on 29th April to replace English by Hindi. Some others had done so earlier. Lip service is usually paid to the preservance of standards, but none is deceived by these. Different States, in spite of the resolution of the All India Council, adopt different media for teaching the sciences and history in secondary schools, without regard to the language policy of adjacent Universities. Pending the decision on the Commission's recommendations, more haste and hurry can be logically expected. If the deterioration of standards already in full evidence is to be arrested—and it must be, if the Second Plan is to succeed—the Union should abandon its policy of indifference to what takes place in the educational sphere at the States level. Linguistic issues must not cloud the idea of India's unity or measures for its progress and prosperity.

The Commission would do well to devote more attention to measures for the progressive extension of Hindi rather than for the replacement of English. Meanwhile, the publication in Hindi as well as in English of the latest administration report on the railways is a good experiment at presenting complicated statistics and tabular statements accurately in Hindi.

Stop Press Editorial

Next Week is Too Late

THREE weeks have passed since copies of the All-India Industrial Tribunal (Colliery Disputes) Award were readily available for study by the mining interests. A little less than three weeks have passed since the mining industry realised that a burden heavier than it can bear —the Award envisages an increase in wages of 40 per cent on previous figures—was to be imposed. Ten days have gone by since a delegation of mining interests from all coal-fields in India waited upon the Ministry of Production. For a similar period, representations made for an increase in selling prices have been lying with the concerned Ministry. A few scant days remain before the Award, in terms of the Industrial Disputes Act, becomes enforceable.

Mining associations are uncertain as to the action they should take. It is open for them to obtain a stay order: but they must do so before June 26th, failing which the Award cannot be appealed against.

Let us be clear in our minds as to the various contingencies that face the colliery industry. On the one hand, the Award will tantamount to an increase of Rs 1¼ crores in the monthly wage bill. On the other, the industry is expected to expand production by 10 million tons during the course of the Second Plan.

Let there be no doubt on this matter: the colliery industry will find it difficult to obtain the resources (by profits ploughted back) for proceeding with development projects. As for the increase in the wage bill, the current selling prices will, most certainly, not enable the added burden to be borne by the industry.

The industry may, it is true, move the Courts for a stay order: but the consequences of such an action, of which the industry is aware, may disrupt and disturb labour conditions to an alarming extent. For this reason, the industry is hoping to avoid recourse to this last resort action.

Government seem to be unaware of the Hobson's choice with which the colliery industry is left. Authority does not appear to sense the real urgency that attaches to the matter. If, as a result of Government inaction, industry is compelled to appeal to the Courts, the blame for resultant disruption must rest on authority.

There is still time to avoid what may turn out to be coal's worst crisis in this country. All that is needed is a Government announcement that selling prices of coal will be suitably revised to cover the additional expenses arising from the Award.

Reaction to the Rise in Bank Rate

By Dr Rudolf VOGEL, M.o.P.

THE increase of the discount rate from 4½ to 5½ per cent, and the sharp restrictions imposed on the rediscount possibilities of the banks, have created a far greater stir in the German public than the raise of the bank rate from 3½ to 4½ per cent some weeks ago. There can be no doubt that the new sharp brakes applied to the exuberance of the German boom by the Bank deutscher Lander found the approval of the Federal Minister of Economics Professor Erhard and Federal finance Minister Dr Schaffer. It was to be foreseen that business would at first cry out in protest. It is the way the economy in every country reacts to such a raise in the discount rate. On the other hand, very notable finance experts and financial journals have expressed their appreciation of the courage displayed by the Bank deutscher Lander. They point out that the Bank deutscher Lander had taken the initiative before the Federal Government acted. All agree that the Federal Government would have to follow up this step by putting curbs on the boom, since the buoyant development cannot be stayed solely by a raise of the discount rate.

What are the immediate effects of the new credit restrictions? The curbs on rediscounting will have a far greater effect than the increase of the discount rate. In this connection the decisive factor is that the restraints placed on rediscounting also apply to foreign trade acceptances, with the exception of special bills of the Ausfuhrkredit-AG and the Import and Supply Agency for Grain, Fats, etc. of the Federal Ministry for Food and Agriculture. It is estimated that the foreign trade acceptances with the banks range from DM 1,000 to DM 2,000 million. Thus, the total credit volume of the banks will be restricted at once by at least this sum. The credit shortage resulting therefrom doubles the effect arising from the increased interest rate on credits. How will the banks react? Unfortunately, it must be feared that the credit of large enterprises with the banks will suffer less under the new restrictions than that of the middle-sized and small enterprises. These apprehensions, which already had political repercussions in consequence of the first raise in the discount rate, will perforce assume bigger proportions. This will become visible only after some time, when the withdrawals of credits

(Continued on page 1153)

Editorial Notes

Mr Eisenhower's Illness

Earlier this year, when President Eisenhower announced his intention to seek re-election, there were few political commentators in America who would have thought a Democratic victory in the 1956 Presidential elections either feasible or possible. For, Mr Eisenhower's personal popularity has always been the dominating phenomenon in the American political scene; and, even though the Republican party met with reverses in the Congressional elections of two years ago, it has been taken for granted that the American President would be elected to serve a second term.

Even the health issue was not expected to make things difficult for Mr Eisenhower. The Democratic party was, perhaps, moved by chivalry not to draw pointed attention as to the desirability or otherwise of electing as President a man who has a heart condition; more likely, these tactics were not adopted, because there was the danger that they would boomerang: the American does not take kindly to insinuations on one who, for particular reasons, is the underdog.

But the latest illness of Mr Eisenhower, necessitating as it did major surgery, has raised uncertainties about the 1956 elections which, for the Republican party, are more unsettling and disquieting than when Mr Eisenhower had his heart attack last year. All and sundry spokesmen have been almost embarrassingly eager to insist that the President will be fit to seek re-election, and that ileitis (the illness for which he underwent surgery) by no means caused a setback in his heart condition.

The Democratic party, for the first time since Mr Eisenhower's decision to run again for office, is now disposed to take a cheerful view about its prospects in November. This time, however, its strategy does not eschew the health issue. Indeed, cries have been raised to suggest that, for party political reasons, Mr Eisenhower's illness has been minimised as to its seriousness.

This has provoked rebutting arguments of a strange nature from Republicans. The illnesses of and the surgical operations undergone by the most important of the Democratic candidates aspiring office have been noted down by Republican spokesmen, and are quoted distressingly frequently. The object is to prove that, in the matter of health, Mr Eisenhower is as favourably (or unfavourably!) placed as any of the Democratic aspirants.

The greatest element of uncertainty, however, is yet to be resolved. For all the debate that is now in progress on the President's health, the views of the man round whom the discussion is taking place are yet to be heard. It is not improbable that Mr Eisenhower should review his decision in consequence of his recent bout of illness. If, ultimately, the President should, in spite and in the face of all the attempts to persuade him otherwise, set his mind against seeking re-election, the heated words by both parties on the health issue will have been much ado about nothing.

Mr Mehta Reassures Foreign Capital

The Indian Ambassador in Washington, Mr Gaganvihari Lal Mehta, is assured of respectful hearing whenever he makes an address; for, there has always been the desire in that country to understand India. But, in recent times especially, his task has been a more demanding one, because Indian policy, whether in the international or internal spheres, is not easily understandable unless one is appraised of the background as well.

As an instance, mention may be made of the inferences drawn in sections of the American press that the nationalisation of the Imperial Bank, of the insurance companies and of the gold mining companies all constitute a less favourable climate for foreign capital to operate in India. These actions are taken to mean that this country, in pursuance of its objective of a socialistic pattern of society, will increasingly use the instrument of nationalisation and that, consequently, scope for foreign capital safely to be invested over a long-term period of time is largely diminished. Indeed, the conclusion is sometimes reached that India is dogmatically committed to a policy of nationalisation.

When Mr Mehta was invited to address the National Business Conference, held under the auspices of the Harvard School of Business, the Indian Ambassador clearly recognised an opportunity that was not to be missed for emphasising and reiterating that India was in need of foreign capital, that we invited foreign investment, and that we are by no means guilty of discrimination against it.

This was the subject that Mr Mehta addressed himself to. We do not embark upon nationalisation for its own sake, but for strategic and compelling reasons only. Economic growth has to be planned, especially if a country is bent upon a measure of progress to be attained "in decades what had been achieved elsewhere in over a century." If planning is absent, "the limited resources available might be utilised for purposes not socially desirable and needs which are not urgent."

Mr Mehta stressed that, for India's Second Plan, foreign capital and technical knowledge would be required in increasing measure. We seek co-operation from our friends overseas. The Indian Ambassador was careful to assure his audience that foreign capital was not discriminated against. Its investment was licensed in this country in the same manner as Indian capital. His assurance was conveyed in the following words: "Once foreign enterprise is set up in the country there is no discrimination between Indian and non-Indian concerns. Foreign enterprise is free to remit its current earnings without any restriction as well as repatriate all investments made in the country after 1950 at any time the investors chose."

Addresses like these may be counted upon to correct any mistaken impression about hostility in this country to foreign capital.

*

Disorder in Ceylon

The problem of an official language, it has happened, offers up a crisis very early in the young life of a country that has just won independence. In Pakistan, disorders were the order of the day before statesmanship intervened, and Urdu and Bengali were made joint official languages. In India, long debates preceded the inclusion of sections in the Constitution that direct policy on the official language for the country. In Ceylon, matters have been brought to a head soon after the change in Government; and, the while that scenes of violence, arson and sabotage were being enacted in the countryside, the House of Representatives has passed a controversial Bill.

According to the Bill, which was passed by 65 votes to 28, Sinhalese is to be the sole official language of Ceylon. This has evoked considerable opposition in Parliament; and, besides, grave trouble spots have erupted in the predominantly Tamil areas, where feeling runs high at the exclusion of their language.

Dynamite is reported to have been stolen; the injured are numerous; those killed are not a few; arrests by police have run to three figures; and panic stricken refugee peasants from the affected areas are in thousands.

It is not clear why the Bandaranaike Government have forced the issue at a grave cost in terms of disorder. Surely they must have

World of Finance

An Impending Loss

THOUGH it was known that there was but slender chance of Sir Chintaman Deshmukh withdrawing his resignation unless the Government met the Maharashtrian demands more or less in their entirety; and that there was but slim hope of the Government being able to do so, unless they were prepared to be faced with other grave problems as the price of solving one problem, the Prime Minister's final acceptance of his resignation will evoke the most profound regret in all sections of the country. Sir Chintaman has been a steward of India's finances for over six years; and, during this period, he has discharged his onerous and complicated responsibilities competently and consummately and to the satisfaction of every one concerned.

These six years have been momentous; particularly, for the Finance Minister whose activities have had to embrace many new fields. The first great task was, as member of the Planning Commission, to get together an integrated plan for the first five years, and, as Finance Minister, to find the requisite resources for the implementation of the Plan. He has done this work with such conspicuous ability that the financial problem was least worrying so far as the First Plan was concerned.

Sir Chintaman has been in overall charge of three ministries: the Ministry of Expenditure, the Ministry of Economic affairs and the Ministry of the Company Law Administration. In the first capacity, he has put through six Budgets not only with the approval but with the approbation of the Parliament.

In his capacity as Minister for Economic Affairs, Sir Chintaman has pilloted the legislation for the nationalisation of the Imperial Bank of India and for nationalising Life Insurance.

In his capacity as the Minister dealing with Company Law Affairs, he secured the Parliament's acceptance of the longest and most complicated piece of legislation on the Statute book.

While kept busy with legislative matters involving clear thinking and able expounding, the Finance Minister has been keeping alert watch over the economic situation in the country lest inflationary forces should spring to life in some one or other of the economic sector. From the point of view of inflation, Sir Chintaman has shown easy and complete mastery.

Sir Chintaman is responsible for making deficit financing an acceptable and respectable way of finding resources for development projects in an under-developed country. Such differences as there may be between him and his critics is only with regard to the how much, and not to the whether, of deficit financing. This is an experiment which will be watched by the whole world with great interest. If it succeeds and has no evil consequences in India, deficit financing, with changes suitable for each case, is likely to be adopted in many other countries.

\+

The returns of the Reserve Bank for the week ended June 15 bear the impress of a normal 'transition' week. There is a conspicuous absence of any large transactions of a special nature like currency expansion or contraction, transfers between the Issue Department to the Banking Department, transfers between the Centre's balances and the States' balances, deficit financing or month-early disbursements. From this point of view, the returns under review tell a plain unvarnished tale of funds returning to the banking system and, therefore, of a decline in active note and coin circulation. The adverse balance of trade persists; and we are losing foreign assets on a substantial scale.

During the week ended June 15, active note circulation has declined by Rs 10.51 crores to Rs 1,504.31 crores. Rupee coin shows a rise of Rs 0.79 crores to Rs 104.64 crores. Rupee securities and foreign securities are unchanged. As a result, notes held in the Banking Department have risen by Rs 11.30 crores to Rs 20.75 crores.

\+

In the Banking Department, all balances show increases: the Centre's by Rs 3.33 crores to Rs 55.80 crores; the States' by Rs 0.35 crores to Rs 5.28 crores; the banks' by Rs 1.00 crore to Rs 51.18 crores and miscellaneous by Rs 0.70 crores to Rs 13.17 crores. Foreign balances show a decline of Rs 4.55 crores to Rs 28.55 crores. 'Other Loans and Advances' are reduced by Rs 1.56 crores to Rs 73.36 crores.

\+

The statement of the Scheduled Banks for the week ended June 8 shows further evidence of the progress toward the slack season. The tendency to transfer funds from current accounts to fixed deposits continues. Total Demand Liabilities have gone down by Rs 2.23 crores to Rs 636.36 crores, while Time Liabilities have risen by Rs 2.99 crores to Rs 444.21 crores. Borrowings from both the State Bank and the Reserve Bank are lower by Rs 0.64 crores and Rs 5.34 crores at Rs 8.02 crores and Rs 60.42 crores respectively. Investments are shown at Rs 349.00 crores against Rs 349.68 crores and Advances at Rs 612.62 crores against Rs 614.90 crores. Inland Bills have risen by Rs 3.93 crores to Rs 106.55 crores, while Foreign Bills have declined by Rs 0.78 crores to Rs 47.55 crores Money at call and short notice stands at Rs 10.81 crores against Rs 9.65 crores.

\+

According to the statement of the State Bank of India for the week ended June 15, deposits have shown a decline of Rs 0.71 crores to Rs 223.92 crores. Borrowings from other banks are higher by Rs 0.50 crores at Rs 15.50 crores while liabilities, including inter-office adjustments, have declined by Rs 1.64 crores to Rs 3.43 crores.

On the assets side, cash balances remained almost unchanged at Rs 16.86 crores and Investments at Rs 100.76 crores against Rs 16.64 crores and Rs 100.84 crores respectively. Advances have declined by Rs 1.66 crores to Rs 137.77 crores—'Loans, Cash Credits and Overdrafts' accounting for a drop of Rs 0.88 crores and 'Bills Discounted and Purchased' for Rs 0.78 crores.

As far as the State Bank is concerned, therefore, demand on its funds continues to be tight, and its recourse to borrowings from the Reserve Bank continues at a high level. That, in a middle-of-the-month week, it has to increase its borrowings from banking companies reflects this fact. Unless, by that time, there is a rise in deposits, of a shrinkage in advances, the ability of the State Bank to subscribe for the New Loan this year may be limited.

*

REACTION TO THE RISE IN BANK RATE

(Continued from page 1151)

will begin to show their effects on the small business men.

Big enterprise, too, and also a number of credit institutions, will be very strongly affected. Even the extraordinary liquidity of money at the stock exchanges immediately after the raise of the bank rate cannot conceal this fact.

What is to become of the fixed-interest-bearing securities under these circumstances? Trading in this type of securities has not been able to pick up since the first raise of the bank rate and the increase if the minimum reserves with the banks in the autumn of 1955. Little had been done by the Federal Finance Ministry with regard to the regulation of prices for this kind of securities. However, it will be difficult to maintain the high level of 500,000 housing units planned for 1956 unless there is an orderly market for debenture bonds. Even if, in view of the new situation, the mortgage banks will insist on 6 per cent mortgage debentures, they will hardly be able to avoid a reduction of the rate of issue. It is only natural that hardly any use will now be made of the opportunity, announced by the Bank deutscher Lander just before the raise in the bank rate took effect, to purchase foreign securities. On the contrary, the high rate of interest in the Federal Republic will of necessity attract foreign capital into the country.

Let us sum up: in future, the German businessman will have to pay his bank roughly 10 per cent, including expenses and commission, for his new current account credit. An increase of the credit interest paid by the savings banks and other banks to their depositors seems unavoidable. Will this prove a new incentive to promote the lagging will to save? In March 1956, only DM 190 million were saved as against DM 363 million in March 1955, although this sum does not take into account the increased payments to the building savings banks. Will it be possible under these conditions to dispose of, in the same manner as heretofore, the new share issues, which are so very urgent, that is to say the conversion of the firms' medium-term debts into capital? Enough trouble was caused already by the last big stock issues.

The decisive question, however, is whether these severe measures were the right way of handling the situation from the political-economic point of view. For the moment, all experts in Germany are agreed that there is no acute danger for the German currency. The present money in ciiculation is covered more than 100 per cent by gold and foreign currencies. At all times, the Federal Government is in a position to increase the imports to meet consumption requirements by lowering the customs duties by 30 per cent, a measure which had been planned in any case. This is a sharp weapon in the hands of the Federal Minister of Economics. No general agreement exists on whether it should be used in view of an increase of the production index by only 9 per cent in the first quarter of 1956, and of an increase of the cost of living in the past 12 months by only 4 per cent. Agriculture at once reacted sharply to any reduction of customs duties with regard to food imports.

However, it seems far more important that close cooperation between the Federal Government, the Lander and Communities is achieved in that sector in which overexpansion has its actual origin: The building industry. Already, rumours are current that a ban on the construction of public buildings is being planned which, however, in 1955 affected only 19 per cent of the total building volume of roughly DM 22,000 million. According to German Law, such a halt can only be called by way of a "gentleman's agreement" between the Federal Government, the Lander, and Communities. The shortage on the mortgage market, as well as the big difficulties the building trade will experience in the disposal of its bills, will in any case have a telling effect. The majority of the German people, however, will approve all measures calculated to protect the currency from inflation and to secure the savings deposits of DM 21,000 million which have been scraped together since the monetary reform in 1948. For, in the final analysis, this is what really counts.

Instalment Credit Restrictions in Britain

By PAUL EINZIG

IT seems that the restrictions imposed on instalment credits early last year, and reinforced on repeted occasions since, are producing their desired effect, even though not to the desired extent. It is in the sphere of the automobile industry that the restrictions are the most effective. In other trades they are circumvented on a large scale through the granting of ordinary book credits. But the amount involved in the case of the sale of motor vehicle units is too large for that type of financing. It is largely because instalment credit restrictions are effective that the demand in the automobile industry has declined. Its decline has not been sufficient, however, to affect the overall inflationary position. Although consumer demand as a whole has been curtailed to some extent, it is still sufficiently large to make it worth while for employers to concede wages increases.

The restrictions on instalment credits are unpopular and even though most people realise that they are a necessary evil, they are subject to much criticism. The latest attack on them is based on the contention that their effect is largely nullified by dissaving. If potential buyers have to pay a larger initial deposit, if they are keen enough to buy, they simply draw upon their accumulated saving. To the extent to which this is done the restrictions are, according to the critics, ineffective.

Apart from the fact that a good many potential buyers do not possess the savings on which to draw or are not prepared to draw on savings even to be extent to which the additional initial deposit comes out of the savings, the situation is not nearly as simple as critics of the restriction would like us to believe. Their criticism is based on a confusion between 'saving' and "savings". The first means the process of putting aside part of our current income. The second means the accumulated amount which was put aside in the past.

Now the criticism of instalment credit restrictions is based on the assumption that from the point of view of the inflationary pressure a reduction of "savings" has the same effect as a reduction of "saving". Yet there is a quite considerable difference between the two. It is undoubtedly an unmitigated evil if during a period of inflation we save less of our current income. On the other hand, the situation is different if we dissave some of our accumulated savings. While the process of savings is disinflationary, the existence of accumulated savings represents pent-up inflation. It was the large extent of such pent-up inflation which accumulated during the war that was primarily responsible for the inflationary trend during the immediate post-war years.

Admittedly, from the point of view of current consumer demand it makes no difference whether the demand originates from a reduction in current saving or from the spending of accumulated savings. Nevertheless there is a considerable difference, because dissaving means a reduction of the extent of pent-up inflation. To the extent to which instalment credit restrictions produce that effect they contribute toward the achievement of the desired end, even if this contribution is not as effective immediately as would be curtailment of the immediate demand. In addition to preventing many people from engaging in instalment buying, the increase in the amount of initial deposits reduces the potential spending power of others.

Moreover it seems reasonable to assume that a large proportion of those who draw upon their accumulated savings to finance the increased initial deposit will endeavour to restore the amount of their savings to its former level. To the extent to which this is done their current purchases will have to be curtailed.

It is true, on the other hand, that larger initial deposits mean smaller subequent instalments, unless the period of repayment is also curtailed. This is, in fact, what is done in Britain. As a result of the curtailment of the repayment period, the larger initial deposit has to be fol-

(Continued on page 1178)

World of Jute

Production, Despatches, Stocks

I have compiled a table of the important statistics relating to stocks, production and despatch of jute goods in the first eleven months of the current jute year as compared with 1954-55. These comparative figures indicate that, statistically, 1955-56 measures up as one of the best.

STOCKS.

(In thousands of tons)

	at the end of June 1955	May 1956
Hessians ..	48.6	40.6
Sackings ..	36.0	71.1
Other Varieties ..	3.0	7.4
Total ..	87.6	119.1

Stocks have, it is true, risen by 31,500 tons in eleven months. Hessian stocks are reduced by 8,000 tons, sackings are higher by the sharp margin of 35,000 tons, and other varieties, too, show a rise of 4,400 tons.

PRODUCTION.

(In thousands of tons)

	First 11 months of 1954-55	1955-56	1954-55
Hessians ..	365.0	368.0	399.2
Sackings ..	509.6	565.6	557.5
Other Varieties	34.5	62.5	39.1
Total ..	909.1	996.1	924.8

Against this has to be set the fact that production has been running at a much, much higher level. Hessians turned out are placed at 368,000 tons—or 3,000 tons more than in the corresponding period of 1954-55. The output of sackings has gone up by more than 10 per cent: 565,600 tons against 509,600 tons; indeed, sackings production in the eleven months exceeded the figure of 557,500 tons, which was the total production for 1954-55. Production of other varieties has been almost doubled, from 34,500 tons to 62,500 tons. Total output in 1954-55: 38,100 tons. Production of all varieties of jute goods in the eleven months of 1955-56, at 996,100 tons, marks a rise of 87,000 tons over the figure for the corresponding period of 1954-55, and even exceeds the aggregate for the full year 1954-55.

Thus, though total stocks are higher by 31,500 tons, production has gone up by 87,000 tons. Despatches have, consequently, absorbed nearly 65 per cent of the additional production, a mere 35 per cent representing the increase in stocks.

DESPATCHES.

Including Internal Consumption

(In thousands of tons)

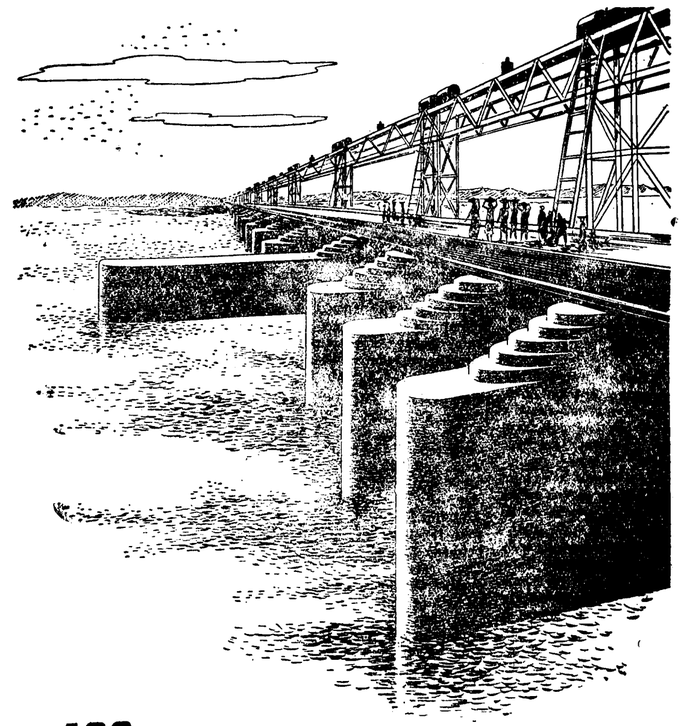
	First 11 months of 1954-55	1955-56	1954-55
Hessians ..	361.3	375.2	388.1
Sackings ..	519.0	533.0	573.7
Other Varieties	24.1	48.3	26.6
Total ..	904.4	956.5	988.4

Hessians despatched from Calcutta are better by nearly 14,000 tons at 375,200 tons. There is a similar increase of 14,000 tons in sackings to 533,000 tons. In the result, total despatches are up by something just short of 52,000 tons.

It needs, however, to be noted that, for the better performance of despatches, internal consumption can claim all the credit. In fact, but for the substantial improvement in shipments to centres within the country, total despatches would have registered a decline. Despatches of hessians have gone up by 5,400 tons to 23,500 tons; of sackings by 45,200 tons; of other varieties by 5,200 tons; and the total of internal despatches has risen by nearly 56,000 tons to 176,700 tons.

This trend is much to be welcomed; and, as far as I can make out, we are likely to witness an even greater utilisation of gunnies within the country in the course of the next five years. If there is an ambitious increase in the target of foodgrains production, it hardly needs to be said that, correspondingly, we shall need more gunnies for internal consumption.

INTERNAL CONSUMPTION.



(In thousands of tons)

	First 11 months of 1954-55	1955-56	1954-55
Hessians ..	18.1	23.5	20.3
Sackings ..	86.6	131.8	99.1
Other Varieties	16.2	21.4	18.2
Total ..	120.9	176.7	137.6

Although, in my last week's article, I did not consider it necessary or proper to discuss, while analysing price trends, the proposal for the fixation of minimum prices, I think that we may, at this juncture, *profitably study the implications of current rumour that* some part of the looms are to be sealed once again. It is this rumour which has been responsible for what activity has passed in jute goods markets, and it is this rumour that contributed to the slightly firmer trend to be noticed therein.

The argument is, that we are over producing jute goods; that stocks have risen steadily and substantially; that demand is not equal to the increased output; that so long as stocks increase, prices stagnate at the lower levels at which mills can scarcely make both ends meet; and that, for all these reasons, it is imperative for IJMA to re-seal some

World of Tea

Production and Export Figures

ACCORDING to the figures released this week, production of Northern India teas has shown a rise to 34.50 million pounds during May from 32.91 million pounds in the previous month. Total production in April-May this year amounts to 53.98 million pounds as compared with 51.80 million pounds in the corresponding period of the previous year, the average for the last three years being 52.85 million pounds. The following table shows the production figures for other countries (figures in million pounds):—

Countries.	Total.	1956.	1955.
South India ..	Jan.-April	32.90	36.30
Pakistan ..	April	3.6	7.7
Ceylon ..	Jan.-April	134.2	147.9
Indonesia ..	Jan.-March	22.9	26.9

Tea imports into the USA during March 1956 totalled 10.58 million pounds as against 14.98 million pounds in the corresponding month of last year. Out of this decline of 4.40 million pounds, India alone accounted for 3.26 million pounds. Imports from Indonesia also fell to 689,462 pounds from 1.28 million pounds. On the other hand, supplies from Ceylon were well maintained at 5.04 million pounds, while imports from other countries did not show any material change. Total imports during the first quarter of the current year were lower at 28.84 million pounds as against 33.01 million pounds in the corresponding period of last year.

Meanwhile, there is considerable speculation about the probable impact of the reported Russian entry into the Calcutta market shortly. It is understood that Russia will be concentrating on the New Season's Darjeelings and Leaf grades, and purchases may have to extend into commoner grades to reach the total of 20.00 million pounds. Some circles believe that, if this quantity is bought, it can have a steadying influence on the Mincing Lane auction prices which, for some weeks past, have been steadily declining. Plain Broken Pekoe is now quoted nominally at 2sh 11d per pound—a fall of about 7d per pound during the past six months. Common tea is now quoted at a level which is extremely embarrassing to many producers.

It was, however, satisfactory to note that a better demand, particularly for the better liquoring Dooars teas and flavoury Darjeelings, was experienced in the Export Sale held in Calcutta this week. Offerings consisted of 19,600 chests of New Season's teas and 626 chests of Old Season's teas. Plain and Medium Brokens and Whole Leaf grades, except for the most stylish kinds, met with a poor demand and were one to two annas per pound easier and withdrawals of these descriptions were again quite heavy.

The CTC Assam teas were mostly of early quality and green in character, but were fairly well supported and invariably sold above brokers' valuations. The few lines of Tippy teas, on offer, were sold well. Plain Broken Pekoe was nominally quoted at Rs 1-9 per pound.

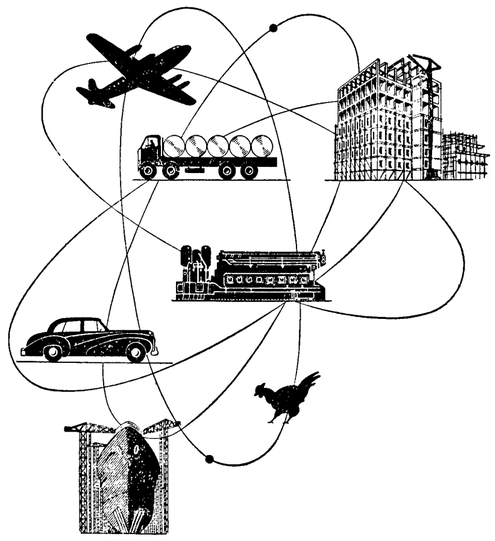
It was also satisfactory to note that the quantum of tea offered rose to a new record high level of 3.19 million chests during the season just ended as compared to only 2.77 million chests in the previous season. While offerings for exports rose sharply from 1.59 million chests in 1954-55 to 2.28 million chests during 1955-56, those for internal consumption declined from 1.18 million chests to 0.92 million chests. The average price realised in the export auction was, however, lower at Rs 2-0-4 per pound as against Rs 3-1-6 per pound in the previous season.

In the Internal Sale, offerings consisted of 21,241 packages of Dusts, consisting of typical end-of-season types. There was a good general demand for all descriptions, Middle East types being again the strongest feature of the sale. CTC teas were slightly dearer, while poor residue types were very strong and were one to two annas per pound dearer. The remaining sorts were firm to an anna dearer. Following rates were quoted per pound: Medium Dooars Dust Rs 1-6-6; Medium Assam Grainy Dust Rs 1-7-6 and Best Assam CTC Dust Rs 2-6 (Nominal).

The offerings of other grades consisted of 538 chests of old Season's and 323 chests of New Season's teas, which met with a fair demand at irregular rates.

In the Export Quota section, the rate for New Season's teas moved between 32 and 34 pies per pound. The rate for Special Licence against Old Season's teas was quoted at 2 to 4 pies per pound.

In the Cochin market, offerings amounted to 1,271,462 pounds in Sale No. 15. A further falling away in quality was evident, particularly for teas from the lower elevations. There was less general demand from the outset at rates which were one to two annas per pound less, but withdrawals of the Lower Brokens were again heavy.



Nilgiri teas were well supported at levels which were slightly easier following quality. Good Medium Brokens were barely steady, but their Fannings declined fully by As 3 per pound. Medium, Low Medium and Low-grown Brokens and Fannings met with a fair demand at a drop of upto As 2 per pound, but withdrawals of these descriptions were considerable.

Black Middle East type Broken and Fannings met with fair demand at lower levels. The better liquoring Whole Leaf grades were a strong feature and were keenly competed for at enhanced rates, but the lower sorts were generally easier. Following rates were quoted per pound:—Plain BP Rs 1-8 (nominal); Low Medium BOP Rs 1-11-6; Good BOP Rs 2-2 to Rs 2-4 and Well-made OP Rs 2-2.

In the auction held at Colombo, offerings were 6,505,191 pounds. With the exception of poorest liquoring sorts and low-grown teas which were lower, there was a strong demand for other sorts at generally dearer rates. The demand for Nuwara Eliya teas was strong and all grades were dearer. With the exception of poor liquoring rush teas, there was strong demand for high-grown teas. Among low-grown teas, small Leaf Brokens showed a decline of 10 to 15 cents per pound. High and medium-grown Fannings followed the trend in the corresponding BOPs at dearer rates.

The first sale of New Season's teas was held in Chittagong toward the end of last week when 4,744 chests were offered. There was widespread demand and bidding was brisk. Well-twisted Leaf grades and Tippiest sorts were keenly sought after, as also were the better liquoring Fannings. The

World Overseas

US Notes

CURRENTLY appearing in leading American periodicals is a public service advertisement on the nature of the US economy. Prepared by General Electric, one of the outstanding industrial corporations in the United States, the advertisement is entitled 'Peoples Capitalism—What Makes It Work For You.' It points out that the 'American brand of capitalism is distinctive and unusually successful' because 'all the people share in its responsibilities and benefits.'

The company sees eight distinguishing characteristics of this 'Peoples Capitalism'—characteristics that have been the subject of considerable comment in recent years by American economists and businessmen, including Philip D. Reed, General Electric's Board Chairman, and Ralph P. Cordiner, its President. In fact, Mr Cordiner had occasion to expound at length on this theme only recently in the course of a series of lectures he delivered at Columbia University, in New York.

The advertisement observes that 'we in America' have: (1) opportunities for each individual to develop himself to his maximum potential; (2) high volume of goods and prices within the reach of all. High wages, high productivity and high purchasing power occurring together, 'they spell dynamic growth and progress.' 'By re-investing earnings in research and in production facilities, American business is creating more jobs, better products, and high living standards for everyone.'

The development of instalment sales techniques, to a degree unparalleled elsewhere, has helped to develop new industries and enhance economic activity. Not specially stated, but definitely implied, is the boost given to demand by consumer ability to buy and use goods while paying for them our current earnings over a period of time.

This has led in turn to 'great new industries which provide means for entertainment, for cultural pursuits or sports of all kinds.' The American economy keeps business 'endlessly urgently searching and researching for new and better products, more efficient methods of production and improved marketing techniques.'

General Electric itself can be described as a typical example of 'Peoples Capitalism' at work. The company has 358,000 shareholders or owners. Among them are people from all walks of life from every income level and from every part of the country. More than half are women. Some 50,000 are employees of General Electric—and plans are under way to make another 65,000 General Electric employees the owners of the Company for which they work.

Another company in the same category is the Ford Motor Company which recently held its first stockholders' meeting after putting its shares up for public sale earlier this year. At the meeting held at company's headquarters in Dearborn, Michigan, it was disclosed officially for the first time that Ford now has 319,006 shareholders.

Emphasising the wide distribution of these holdings, only 1,658 Ford stockholders own more than 300 shares each, fewer than 16,000 own from 100 to 300 shares, and 310,411 own fewer than 100 shares. About 460 institutions, insurance companies and research foundations own Ford stock.

Many of the Ford stockholders are workers in Ford factories and offices. Interestingly enough, a large number of these dropped in to attend the stockholders' meeting during their lunch hour, or before reporting for work during the afternoon or night shifts. One family was represented by a teenage son who bought six shares with his own money. Perhaps nothing illustrates th's trend to popular stock-ownership more eloquently than a fascinating but true little titbit of a story about a Ford stockholder who works for Chrysler—a Ford competitor—and drives an automobile made by General Motors—another Ford competitor.

*

Britain

BRITAIN set up an all-time record for exports in May, according to provisional figures just issued in London by the Board of Trade. The total value of exports in the first five months of this year was 6½ per cent higher than in the corresponding period of 1955.

The value of exports in May was £283,800,000, imports £329,100,000, and re-exports £13,500,000.

The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b.) was £31,900,000. The monthly average of January/May, at £51,100,000, was £14,500,000 less than in the corresponding period of 1955.

The export figures for May include the value of the liner Empress of Britain, recently delivered to Canada, and also some silver bullion repayments to the U.S.A.

British exports to North America in May were valued at £47,100,000 —over £13,000,000 more than in April. Even excluding the value of the Empress of Britain and the silver bullion repayments, exports to North America in May were the highest so far recorded. In the five months January/May, exports were over 32 per cent more than in the same period of 1955.

Exports to the USA amounted to £24,000,000 in May. In the first five months of the year they were nearly 33 per cent higher than in the corresponding period of 1955.

Exports to Canada amounted to £23,000,000 in May. In the first five months of the year they were over 32 per cent more than in the same period of 1955.

*

Satisfactory as these figures are, the improvement is no more than the United Kingdom needs if the country is to be sure of the surplus which the Chancellor of the Exchequer, Mr Harold Macmillan, has pointed out is necessary for the stability of sterling and for oversea development. For these reasons, the figures should be looked at with modified optimism, say London observers.

There are, of course, certain exceptional features. On the export side, there is the sum of £5,000,000 representing the delivery of the Empress of Britain. There is also the further instalment of silver bullion repayment to the United States amounting to £2,500,000.

The European Payments Union (EPU) settlement for May disclosed a UK net surplus for the month of £7,753,928, says the Treasury.

This surplus has been settled as to 75 per cent by receipt of gold from the Union, and 25 per cent by reduction of the credit previously extended to the UK by the Union.

*

The Daily Telegraph (June 13) comments: "Even when allowance is made for the delivery of the Empress of Britain and the transfer of £2,500,000 of silver bullion to the United States, the trade figures for May are good.

"There has been virtually no change in imports: indeed, it looks as though a bill of around £325,000,000 a month is the minimum needed to maintain production. But the rate of exports is now definitely upwards. With the record earnings of May, the average value of all exports in the first five months of the year has risen by 6½ per cent. Dollar exports in the same period have risen by nearly a third.

"This good news must be put in the right perspective. The gold and dollar reserve last month showed the smallest increase for some time. This means that the rise in our own dollar exports is being offset by difficulties which the other countries of the Sterling Area are encountering. In the dollar balance it is the performance of the Sterling Area as a whole that counts.

"More important, the rise in exports, with the consequent drop in the adverse trade balance, is encouraging only when compared with the performance of last year. Though the invisible account is probably improving as well, there is still a long way to go before the deficit of just over £100,000,000 last year is converted into a surplus of between £300,000,000 and £400,000,000, which we need to meet our debts and finance our oversea investment. We need a surplus of this size, moreover, not just for a month or two, or even for a year or two, but permanently."

The Telegraph adds: The best way of interpreting the May trade figures is by saying that they show we have turned back from the brink of an immediate economic crisis. We seem to be getting in the right trim for moving away from it."

*

The Yorkshire Post (June 13) says: "Satisfactory as the oversea trade figures for May are, the most satisfactory thing about them is they are one set in a series. The statistical year is now five months old, and, almost without exception, month by month the balance of trade has been better this year than last. By the end of May, the improvement aggregated about £75,000,000, which is equivalent to an annual improvement of £175,000,000. At this rate the country should show a modest surplus in its balance of payments at the end of the year.

"On the strength of these figures we can draw a breath and rejoice in the fact that we have not priced ourselves out of the world's markets. But the pleasure must be tempered by a chastening thought. Our industries enjoy the benefit, even now, of exceptionally cheap coal and steel. And world trade is at an abnormally high level. If we cannot find markets now, we never shall."

*

Canada

The gross national product of Canada in the calendar year 1955 was Can$26.6 billion, an increase of more than 10 per cent over the $24.1 billion achieved in the recession year 1954. Since prices were relatively stable, most of the increase reflected changes in the volume of output, which was some 6 per cent above that in the previous peak year, 1953. Of the increase over 1954, about $300 million was due to a larger grain crop, and the remaining $2.2 billion to nonfarm production. The expansion in nonfarm production was especially marked in the primary industries, notably mining, but there were also strong increases in building and in manufacturing industries, especially in durable goods and textiles, which were particularly affected by the 1954 recession.

The rise in production was the result of a gain of $2.5 billion in final sales, accompanied by a $700 million increase in inventories; of this increase in demand, $800 million, or approximately one quarter, was met by additional imports. Most of the increase in nonfarm production took place during the first half of the year, the rate of increase slackening in the second half as a number of industries approached capacity output. Total

World *of* Insurance

New India

By "GUARDIAN"

The expungement of life figures from the New India Assurance Company Limited's balance-sheet has failed to deprive the accounts of their wonted ability to arouse admiration as to its presentation and to exact praise as to its performance. For, progress (as usual) of prodigious proportions (and this, too, running to norm) is the distinguishing mark that singles out New India as the foremost among the general insurers in the country.

Premium income has expanded in all three departments. In fire, the increase falls just short of 10 per cent over 1954, the relative figures being Rs 2.74 crores and Rs 2.50 crores. Although claims, as a percentage of premium, rose somewhat to 37.5 per cent from 36.1 per cent, a reduction in commission and expenses of management attributable to the Fire Department from 46.1 per cent to 43.0 per cent has enabled the surplus carried to the balance-sheet to be increased to Rs 40.40 lakhs from Rs 35.36 lakhs. The Reserve for unexpired risks (at 42.1 per cent) is placed at a figure that is Rs 10 lakhs higher at Rs 1.15 crores; and the additional reserve has been increased by Rs 2.68 lakhs to Rs 65.68 lakhs.

In the marine department, premium improved by roughly 13 per cent to Rs 1.14 crores. Claims are marked 1.5 per cent higher at 75.6 per cent; expenses have been sharply pruned down to 22.3 per cent from 26.8 per cent. The Reserve for unexpired risks is at 100 per cent of the premium income; and there is, besides, an additional reserve of Rs 41.48 lakhs. The high level of claims made it inescapable that the department should report a loss; thanks, however, to the reduction in expenses, the loss transferred to the profit and loss account has been cut to Rs 7.92 lakhs from Rs 14.11 lakhs.

The improvement in the premium of the miscellaneous department exceeds 25 per cent, income having risen from Rs 85.5 lakhs to Rs 1.09 crores. Claims are almost unchanged at 49.6 per cent; expenses are marked higher by 2.7 per cent at 35.3 per cent. The reserve for unexpired risks is at 40 per cent; moreover, the additional reserve amounts to Rs 30.43 lakhs—an increase of nearly Rs 3 lakhs. As a consequence of the rise in expenses, the surplus is lower at Rs 5.37 lakhs against Rs 9.36 lakhs.

After increasing the provision for taxation by Rs 5 lakhs to Rs 18.05 lakhs, the balance transferred from profit and loss to the appropriation account has gone up by exactly Rs 6 lakhs to Rs 36.58 lakhs. Almost the whole of the increase in profit has been allocated to Reserve, the relevant transfer having risen by Rs 5 lakhs to Rs 15 lakhs. A transfer of Rs 3.46 lakhs to the Exchange Reserve replaces last year's provision of Rs 3 lakhs to the Dividend Equalisation Reserve. The dividend is maintained at Rs 2-8 per share.

The balance-sheet has marked a rise of nearly Rs 2 crores to Rs 12.17 crores. In round figures, a quarter of this is accounted for by a rise in funds. On the other side of the ledger, the important changes are a decline in holdings of Central Government securities to Rs 1.65 crores from Rs 2.13 crores; and increases of Rs 57 lakhs in foreign government securities; of Rs 3 lakhs in debenture and debenture stock; of Rs 10 lakhs in ordinary shares; and of Rs 43 lakhs in the holdings in subsidiary companies. The last item relates to the acquisition by New India by purchase of shares of Bombay Fire and General and Jayabharat Insurance.

The progress achieved in general business suggests that New India's performance in life insurance during 1955 must be even more spectacular. We may be able to judge this for ourselves, as it is understood that the Custodian will make a separate report on New India's life business in 1955.

*

Hercules

In a manner of speaking, Hercules Insurance Company Limited has come of age—the twenty-first annual general meeting is to be held next week. But a major status among the Indian insurance companies has long been Hercules's and it has, for many years, proved to its shareholders that prudent management, efficient under-writing and a careful concern for the business that it accepts have enabled it to achieve prodigious strength. The accounts for 1955, just released, are very much in the pattern of Hercules performances—a substantial dividend, a high level of profits and a sizeable transfer to Reserve.

The balance carried down from profit and loss to the appropriation account has risen slightly to Rs 6.88 lakhs from Rs 6.73 lakhs. How this was enabled, may be discovered from a study of the three revenue accounts.

The fire account discloses that premiums showed a fall of Rs 1.40 lakhs to Rs 31.77 lakhs. At the same time, however, claims, including the estimated liability on those outstanding at the end of the year, are lower by Rs 2.61 lakhs at Rs 11.01 lakhs. With the specific reserve for unexpired risks maintained at 50 per cent of premiums, and with expenses slightly higher, the profit transferred is fractionally higher at Rs 7.22 lakhs against Rs 6.87 lakhs in 1954.

Premium income in the accident department shows a rise of Rs 1.09 lakhs to Rs 7.39 lakhs. Here, too, claims are shown at a smaller figure, at Rs 2.88 lakhs as compared to Rs 3.65 lakhs. But, with the specific reserve being placed more than half a lakh higher, by reason of the increase in premium income, and with expenses also showing a rise, the profit has been shaded to Rs 1.02 lakhs from Rs 1.31 lakhs.

Similar is the experience in the marine department. Prmium rose by Rs 1.33 lakhs to Rs 7.85 lakhs; claims are placed at Rs 5.62 lakhs against Rs 5.28 lakhs; expenses of management have risen, and the profit transferred is, consequently, reduced.

The appropriation account reveals that the transfer to Reserve is maintained at Rs 2 lakhs; and so, too, is the dividend at 20 per cent, absorbing Rs 4.80 lakhs.

The investment portfolio continues to make impressive showing. The total of shareholdings is placed Rs 84,000 lower at Rs 88.35 lakhs. Of this, quoted investments had a book value of Rs 81.12 lakhs: their market value, Rs 86.89 lakhs.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

IT was a hot summer's day. The telephone rang, and the person at the other end of the line was Mr B. L. Jalan. The formal pleasantries done with, Mr Jalan, as is his habit, quickly got down to business. There was something important he had to discuss with me, he said, Could I spare some time, and when could we meet? What this matter was, I did not know then; but I confessed I had the leisure, and we agreed to meet the next week. In the interim, I was seeing in my mind's eye the probable subjects that we should be discussing. Perhaps, the new industrial policy; certainly, something on the Second Plan, and the scope under it for the private sector; the state of the Indian economy, and the prospects before it; tax reform, and the anticipated form of additional taxes for financing the Second Plan. Surely, I thought to myself, these are the matters that are agitating Mr Jalan's mind. And so the week passed.

*

Let me confess that I was quite off the mark. What I had forgotten was that Mr Jalan had what could almost be described as a consuming passion for tackling the problem of unemployment. He seized opportunities as they offered themselves for giving practicable suggestions that sprung from an acute intelligence. In common with Indian industrialists, Mr Jalan has been anxious to evolve some plan toward relieving the intolerable burden of unemployment that is borne by the country. But Mr Jalan's outlook on the problem, and his attitude to it, are, as I found, most, refreshing. I admit that, as general opinion of industry has it, the only long-term and permanent cure is to reduce the pressure on agriculture by the provision of employment opportunities in the new urban centres that will inevitably be built up in a programme of industrialisation. But, whatever the ambitious pace that we may set for ourselves in this regard, neither in administrative ability nor in entrepreneural efficiency, nor yet in monetary resources, have we the wherewithal to attempt any more than the creation of jobs to match the increase in labour force merely by virtue of the increase in population. The present unemployment problem cannot burke delay in its resolution; it is essentially a short-term cure that we need to discover, and we have, at the same time, to take reasonable care that we do not, in the process, expend what resources we have in an uneconomic manner. It is, indeed, this fact that is behind the disapproval in certain quarters of the emphasis placed on cottage and hand industry in the Second Plan. But, as I say, an enormous number of jobs—ten milion of them—have got to be created; and, if industry cannot so provide, we have little alternative to espousing cottage industry.

*

It has happened that Mr Jalan has been applying himself to an energetic study of this problem. For a starting point, he brushed aside the notion that, essentially, India's teeming millions "are a source of weakness to our economy." On the other hand, labour to him is wealth. How best that wealth may be drawn out, how best labour could be put to work in order to create wealth even as it found employment—these are what Mr Jalan concentrated on. A scheme having been evolved, the next step was entirely logical. It had to be tried out, the scheme had to prove that it was practicable. As such, a pilot project was brought into being; in a group of villages, with scarcely anything more provided than initiative and supervision, the experiment commenced. Conceived as a programme that would require two years for its implementation, Mr Jalan waited, not on the side-lines, but very much on the spot to see how the scheme was proceeding. Two years then passed; and the pilot project could be termed a success. It was at this juncture that Mr Jalan felt it desirable to acquaint me with the scheme; and hence the phone call.

*

In all expressed comment on the plan, one sine qua non for its success has been reiterated more than once. True, there may be the financial bottle-necks; but these may be overcome by the good fortune of substantially improved revenue arising from the beneficent influences of an expansionist economy. Possibly, we shall have to bridge an exchange gap; but that shortfall may be minimised by a better showing of exports, on the one hand, and by our receiving more bountiful foreign aid, on the other. The administrative machinery may, it is wise to warn ourselves, prove inadequate in numbers or in efficiency; but here, too, we are fortunate enough to being fore-warned, and measures are being taken suitably to forearm ourselves. No, it is not these factors, the what I might call strictly material factors, which will spell the difference between triumph and failure for the Second Plan. It seems to me that, resting heavily as the Second Plan does on the rural sector to provide new jobs for the unemployed and underemployed, the achievement of the Second Plan will be in direct proportion to the co-operation that we shall be able to secure from the mass of our village-dwelling countrymen. There is recognition of this fact in the emphasis placed on Community Development Projects and National Extension Services. What we have to remember is that co-operation is easiest secured if it is proved to the villager that, by so doing, he will improve his own lot.

*

Mr Jalan explained that his scheme called for each villager being persuaded (not in the sense in which that word may be used in a Communist country!) to volunteer an hour daily during the busy season, and two hours during the slack season, toward endeavours that unambiguously contribute to his own as well as the community's welfare. The thought that coursed through my brain was that this persuasion was going to be a fairly colossal task! But Mr Jalan anticipated the unvoiced thought, and said gently that he personally did not doubt that the requisite co-operation would be vouchsafed by the villager; in fact, he went on, his pilot project had proved that nearby villages outside the orbit of the scheme, struck as they were by the progress being achieved, had pressed to be included. I may be pardoned for having been somewhat sceptic; but one's credulity is stretched when one is advanced the suggestion that a scheme relying on voluntary labour would increase national income by Rs 1,000 crores annually. The next half an hour or so, I listened as Mr Jalan related the specific achievements in respect of the scheme. He gave me a brochure that detailed the progress; and, as we parted, I promised to

study it. Other preoccupations were responsible for the lapse of several weeks; but, at the earliest opportunity, I set out on a conducted tour of the villages, with Mr Jalan as guide. It was an exciting morning's drive; and what I saw impels me to describe, albeit briefly, how the scheme works and what it sets out to do.

"Insist for your containers on "BHARAT". They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 "BHARAT BARRELS" price is Rs. 25-8 ex-factory. If you do not get BHARAT BARRELS, Write to Box No. 247 BOMBAY."

*

Mainly, it is a self-help scheme. Use is sought to be made of the materials readily available in any the remotest villages: these are manpower and mother earth. Let us read what Mr Jalan has written: "The programmes under the scheme are very comprehensive. They aim at the provision of all basic necessities to the entire mass of rural people. Thus they must have housing, education, medical facilities, good roads, adequate food, fair amount of clothing and a general rise in the income." Mr Jalan's magic formula in this behalf is: Make Bricks. I am sorry if I have been abrupt about suggesting the way in which the programme is sought to be implemented—it came equally as a shock to me. What surprised me even more was, however, the fact that villagers making bricks have, indeed, benefitted substantially by making bricks. The pilot project that I visited covers nearly a dozen villages. The programme of work for each village consisted primarily of the construction and manufacture of bricks. In all, this cluster of villages produced 430,000 bricks valued at Rs 14,675. Co-operative effort produced, moreover, 5¼ miles of new road, not to speak of some houses. The net value of work done, according to Mr Jalan, is just over Rs 20,000. In brief, such bricks as are necessary for building roads, schools and houses would be retained; the excess sold to buy the other materials, such as tiles and sand, and to pay for supervisory staff, etc. Mr Jalan feels that the success of the pilot project proves the validity of the scheme. He suggests, consequently, that it should be extended to other parts of India.

As he puts it, the community development projects "have to be supplemented by voluntary efforts which are inexpensive and where the success is assured on a nation-wide scale."

*

Personally, I am persuaded to think that brick-making on the basis of volunteered labour may conceivably achieve results, if not in as immense a measure as the pilot project, at least in dimensions that would make a worthy contribution to the economy. I am wondering whether, in short, brick-making and contributed labour should not form part of the community projects in this country. The organisation of village workers would be called upon for very little in extra effort: the fruits of such endeavours may be sizeable. It is for the Planning Commission to examine Mr Jalan's scheme more closely, and to discover whether his ideas can be incorporated in India's community projects.

WORLD OF TEA

(Continued from page 1156)

commonest and stalky kinds met with little demand and were barely steady. In view of the small quantity on offer, rates were nominal as follows:—OP Rs 2-4 to Rs 2-6; Pekoe Rs 2 to Rs 2-1; BOP Rs 1-13-6 to Rs 1-14; BP Rs 1-9; BPS Rs 1-9 and OF Rs 1-15.

There was a useful demand for the small quantity of Dusts offered. Most lots were sold at about As 2 to As 4 per pound above valuations. Plain Sylhet Dust was quoted at Rs 1-14 per pound (nominal).

In London auction held this week, offerings were 28,588 packages, including 16,690 packages of Northern India teas. Good liquoring teas, especially coloury Fannings and Orange Fannings, opened strongly; but some irregularity and sometimes an easier tendency was noticeable where quality showed a decline. The rest of the offerings met with a very quiet market and prices for Low Medium and Common kinds were about 1d per pound below last week. The Commonest and stalky kinds were somewhat neglected and many lots were withdrawn. Clean Common Broken Pekoe was nominally quoted at 2sh 11d per pound.

Stocks in London and Provincial Warehouses, as on June 8, amounted to 103.14 million pounds as compared to 104.27 million pounds in the previous week and 143.86 million pounds a year ago. Landed between 2nd and 8th June 1956 were 9.45 million pounds, while deliveries during the same period were 10.57 million pounds. Total afloat, on the 8th June 1956, were 38.57 million pounds—20.02 million pounds from Calcutta, 1.58 million pounds from Chittagong, 2.42 million pounds from Cochin and 11.56 million pounds from Colombo. The average price realised at the auction, during the week ended June 15, was 50.95d per pound as against 51.87d in the previous week and 45.02d in the corresponding period of last year.

*

EDITORIAL NOTES

(Continued from page 1152)

been aware of the temper of the important minority in Ceylon; and a little compromise and tact and diplomacy might have enabled easier, not to say less trouble-provoking, passage for the Bill. Moreover, the Government can scarcely consider it an urgent matter to effect the change-over to Sinhalese within a period of five years.

Boycott is in the air, and threats have been uttered. Mr C. Sundharalingam, of the Tamil Resistance Front, has stated in belligerent tones that his work is outside the Parliament, that he would wage a war for justice and righteousness, and that the Bill, far from unifying the country, would divide Ceylon.

The opposition maintains that the exclusion of Tamil will, in the course of years, exterminate the language and extinguish its culture in Ceylon. But it is wrong to impute to the Government the motive of a desire to crush Tamil. We suggest, however, that less of haste would have been seemly on the part of Ceylon. If, in the House of Representatives, Government spokesmen cited India as an example of a country with a single official language, Ceylon could as easily have adopted India's patience in respect of the change-over.

The passage of the Bill does not mark the end of the controversy. Reports are that its implementation is to be resisted by the opposition. If these are true, then the outlook is for unsettled conditions to continue in Ceylon.

Inquisition Methods

I AM in a position to confirm the authenticity of the report (which appeared first in The Times of India) that Mr S. K. Handoo, the Managing Director of the State Bank of India, has submitted his resignation to the Board of Directors: that this matter will come up for consideration at the Board's meeting to be held at the end of this month; and that the resignation is an expression of Mr Handoo's resentment over the questions and answers (and particularly the answers) in Parliament with regard to his emoluments.

Mr Handoo was the first Indian to be appointed Managing Director of the Imperial Bank of India. At the end of its 25 year career, this State-associated Bank was able to complete its Indianisation up to the topmost level. Mr Handoo had, thus, a special measure of responsibility to prove himself deserving of his choice as the successor to such veteran bankers as Hunter and Warren and Sitwell. Osborne Smith, Lamond and Chisholm. No one was more conscious that Mr Handoo of the key position which he occupied in circumstances in which his success or failure would be in the nature of a verdict on the policy of Indianisation. He studied with care the traditions and techniques that were handed down to him; and, during his brief tenure as chief and head of India's leading bank, he gave ample evidence of dynamic leadership, complete mastery of details and facile confidence in dealing with any situation. In a word, he proved himself as worthy as the stalwarts that had gone before him.

Mr Handoo is the first Managing Director of the State Bank of India. The new task implied a change from a commercial banking policy to a national credit policy. Vision, courage, initiative, adaptability and originality in fashioning new techniques and versatility in exploring new fields—these are the qualities required in the leadership. Mr Handoo has the qualifications and the outlook to furnish that kind of leadership. In his address at the last general meeting of the State Bank, Chairman Dr John Matthai paid eloquent tribute to Mr Handoo's services in effecting a smooth transition from a State-associated bank to the State Bank. There are no two opinions about Mr Handoo's ability and personality for the role assigned to him in the comprehensive development of credit among all sections and sectors of the community.

With regard to his public spirit, however, the public have been kept in ignorance. I shall narrate the relevant details in this respect. Up to the time of Mr Handoo becoming the Managing Director of the Imperial Bank, this office carried emoluments which were free not only of income-tax but super-tax as well. How onerous was the burden thrown upon the Imperial Bank by this income-tax and super-tax requirement, will be gathered from the extract from the note appended to the published accounts of the Bank. The 1951 accounts carry this footnote:

> Includes income-tax and super-tax amounting to Rs 1,07,136-12-0, i.e. net salary and allowance amount to Rs 43,306-10-6. In addition provision has been made for a bonus amounting to Rs 6,500-0-0 and tax thereon amounting to Rs 17,251-9-0.
>
> Includes income-tax and super-tax amounting to Rs 2,03,583-5-0, i.e. net salary and allowance amount to Rs 87,192-2-3. In addition provision has been made for bonuses amounting to Rs 13,000-0-0 and tax thereon amounting to Rs 34,503-2-0.

That is to say, in order that the Managing Director might get a net of Rs 87,192 as salary and Rs 13,000 as bonus, the Imperial Bank had to pay nearly Rs 2½ lakhs as income-tax and super-tax thereon.

Mr Handoo, on his appointment as Managing Director, was willing to forego the tax benefit. The Imperial Bank was thus benefitted to the extent of Rs 2½ lakhs on this one item. I am yet to see any reference of appreciation of the tremendous public spirit shown by Mr Handoo in this matter.

Not less notable is the like attitude to emoluments shown by Mr Handoo when he became the first Managing Director of the State Bank. His monthly salary was reduced from Rs 7,500 to Rs 4,500, but he was given a personal allowance which might be described as ulta promotion. This personal allowance was to be Rs 2,000 in the first year, Rs 1,000 in the second year and nil in the third year. In the light of this record, nobody could accuse Mr Handoo of a greedy, grasping spirit.

Yet, such was the insinuation in the questions asked on the floor of the Parliament. The Government spokesman should have welcomed this opportunity to reveal the true facts that tell their own tale and to express appreciation of the public spirit shown by Mr Handoo. The official reply was apologetic—and definitely not eulogistic. The question was raised about an enterainment allowance of Rs 500 sanctioned at a later stage by the Board of Directors. Crime of crimes! Why should the chief of the leading bank of India be allowed to spend Rs 500 on entertainment? This kind of probe of an unseemly kind will leave less and less of an urge on the part of deserving and distinguished people to accept responsible offices in State enterprises.

The danger in this regard is now recognised in knowledgeable official circles. In his Rotary address, Dr Matthai gave expression to his misgivings lest public accountability should degenerate into public inquisition. Sir Chintaman Deshmukh, for similar reasons, would not accept the suggestion that the audit of the State Life Insurance Corporation should be done by the Auditor General: and, when pointedly asked whether the probe into the Industrial Finance Corporation had not done good, he emphatically replied, No.

Prime Minister Nehru is equally concerned about developments that are calculated to have unwholesome effects with regard to securing the right personnel for offices of responsibility. In his opening speech on the resolution on the Second Plan, Mr Nehru did a great deal of thinking aloud in connection with the various facts of this issue. As Mr Nehru's remarks on this question have not received the attention they deserve, I give below the full text of the relevant portion from Mr. Nehru's speech.

> Now, referring to the public sector, the question often comes up in this House for discussion, criticisms of the public sector, something wrong that happened—and many wrong things happen naturally in big undertakings. Another question comes up: How can Parliament control the public sector? Well, one can very well understand the desirability and even the necessity of proper controls, of checks and controls over these vast undertakings where hundreds of crores of rupees are spent. But there is one other aspect of this question which I should like to lay before the House.
>
> The way a Government functions is not exactly the way that normally business and enterprises function. A Government rightly has all kinds of checks, as it deals with public money, and perhaps, normally speaking, it has time to apply those checks. But when one deals with a plant and an enterprise, where quick decisions are necessary which may make a difference of large sums of money, which may be a difference between success and failure, the way a Government functions is not a suitable way for it. And I have no doubt that the normal governmental functioning applied to a public enterprise of this kind will ensure the failure of that public enterprise, because of the delays, because of other limitations of working.
>
> Therefore, we have to evolve a system for working public enterprise, where on the one hand there are adequate checks and protection—that is inevitable—and on the other there is enough freedom given to that enterprise to work quickly without delay. Ultimately judge it by the results. You cannot judge a Government by the results you cannot judge in that sense—I mean financially—because it is a very mixed affair. Therefore, in Government, you have to be careful about the pennies, because if you are not careful about the pennies, the pounds and the rupees and what not will go wrong.
>
> But in judging a big enterprise, you have to judge by the final results. Suppose a mistake is made. To-day, a thing may be a mistake. To-day, a step is taken which causes loss. Somebody in Parliament will raise the question. 'Who took that step? Why was there loss of lakhs of rupees' or what ever it is. Well, the executive in that plant will never take a step afterwards. He will say, 'I will be hauled up before Parliament', so that there will be no spirit of enterprise left there, no experimentation, and he will work cautiously.
>
> It is interesting to see countries where there are public enterprises and everything is a public enterprise and there they have arrived at this conclusion that you must give freedom to the man, who to the executive, in charge. Tremendous freedom is given there. Of course, if there is a major loss, if the whole thing goes to pieces, then the man in charge will suffer no doubt. But the point is he is given responsibility. Every person who has advised us, whether it is an American like Dr Graham, or a great Russian leader like Mr Mikoyan, has told us, do not interfere with your enterprise, give them responsibility, give your executives responsibility, do not interfere. Mr Mikoyan came to me—you know they are putting up the steel plant, it is only at the initial stage yet, but in discussing it—and said, 'You do not mind my saying this. But if you do not trust your executive, do not give him much fuller responsibility. the work will be delayed and you will suffer'. He said, 'we have come to the conclusion after considerable experience that we must trust our executives and allow them to go ahead'. Of course, there are checks and all that, but checks come afterwards—checks and audit and all that, but the chief man there must be able to do what he wants to do quickly.
>
> If we are to go in for public enterprises in future in a big way, we must realise this fact. We cannot sit down every day and control public enterprises from Parliament. It cannot be done. Sometimes it may be useful; you save some money, but you will loose a great deal of money and the thing will not function rapidly at all, and it will develop a kind of static atmosphere, which is worse for a growing industry.

Gateway Notes

National Rayons

Some three weeks after it was scheduled to be held, the ninth annual general meeting of the National Rayon Corporation Limited took place last week in this Gateway city. It may be recalled that fresh notices of meeting had to be sent, since the original date fell on a public holiday which, in terms of the new company law, is debarred for purposes of holding of general meeting. It was on this note that Mr Kasturbhai Lalbhai began his address to shareholders in his capacity of Chairman of National Rayon; and what he said later was of even greater interest.

It would seem that the company has yet to derive the advantage bestowed by Section 15C of the Income-tax Act, which exempts from tax profits up to 6 per cent on capital of new industrial undertakings for a period of 5 years. And this is the last year for which the benefit is available. Moreover, said Mr Kasturbhai, "the company does not expect that the profits hitherto made will catch up with the depreciation and unabsorbed depreciation" and hence "the dividends to be received by the shareholders this year also will continue to be liable for tax in their hands though there will be no deduction of tax at source." The average shareholder is not likely to be greatly upset by this fact, especially if he were sure that there would be a continuing and expanding demand for his company's products.

Such expansion in demand for rayons is not to be doubted. Unfortunately, Government policy, in the recent past, in the matter of imports has not been helpful. The National Rayon Chairman has pointed out that imports of rayon yarn during 1955-56 are likely to be placed around 51 million lbs—against the estimated indigenous demand of 45 million lbs. The figures indicate that the imports are not "salutary", in that they were meant to keep down prices. Surely, import allowed should bear some proportion to the indigenous demand less production in the country.

Indeed, Government action on import of rayon yarn is the more emphasised when we learn, as Mr Kasturbhai informed us, that foreign manufacturers were resorting to unhealthy competition. They are now being permitted to "sell the two popular deniers of 150 and 120 at the same rates in this market maintaining much higher rates for their domestic sales".

Mr Kasturbhai had some good news for shareholders. This is what he had to say about development envisaged for National Rayon:

"The expansion of the Rayon Plant and also putting up of the Caustic Soda Chlorine plant are progressing at the Plant site according to schedule. Recently steps have been taken to order out further machinery and with the placing of this order the duplication of the Rayon Plant as originally envisaged is likely to be achieved in the near future."

*

Plea for Lower Priced Cars

At the recently held annual general meeting of the Western India Automobile Association, its Senior Vice-President, Mr M. B. Madgavkar, emphatically stressed the need for a reduction in the prices of motor vehicles; for, this alone could encourage and foster the purchase of vehicles by the average man. In his view, lower prices were 'essential for the development of the industry.'

In this regard, Mr Madgavkar referred to the inquiry shortly to be taken in hand by the Tariff Commission on the working of the motor vehicles industry: and, on the basis that a low-priced car best suited Indian conditions, the Vice-President urged that all bodies and organisations interested in the industry's future should equally impress upon the Tariff Commission the need for a scaling down of prices.

It is, however, problematical whether, on their assessment of costs, the Tariff Commission will discover that the ex-works prices are unfair. For, as far as the industry is concerned, its standpoint is that, unless demand improves, it is in the helpless position of having to charge more because of the heavier overhead charges spread over a smaller number of vehicles.

Which is to come first is a moot question: a reduction in prices to give a fillip to demand, or increasing demand enabling a lowering in the costs of production. It is all too true that the motor vehicles industry is unfortunately placed in a vicious circle. And it seems difficult to envisage either contingency—a quick and substantial improvement in demand, or any possibility, in the immediate future, of a reduction in working costs of the industry.

It is, rather, to be suggested that it is by other means that the vicious circle can be broken. As Mr Madgavkar pointed out, taxes on motor vehicles had, on account of the Centre, gone up nearly eight times; while those appertaining to State taxes had been multiplied by 26 in the course of the last 25 years or so. Secondly, thanks to a high excise, petrol is a costly commodity. If Government could persuade themselves that it is in the larger national interest to exact slightly less by way of taxation on motor vehicles, it would appear that the beginning toward breaking the vicious circle would be made. Again, it is the cash down capital expenditure which is alarmingly large. If a proper organisation could be created for arranging sales of motor vehicles on the instalment plan, we do not doubt that, as a direct consequence, demand would improve and thus, directly and in short shift, lead to lower costs of production for the Motor Vehicle Industry.

*

A Subway for Bombay

The BEST Undertaking has been busy for some months in a discussion as to whether Bombay should have an underground railway system. Roughly three months ago, a conference held with representatives of the Western and Central Railways reached the conclusion that a metre gauge would best suit a subway system.

Since then, it would appear that BEST has not been idle. Its Chief Engineer, Mr T. S. Rao, has been on a study tour of Japan, and now reports that the estimated cost, as relating to the engineering aspect, would be around Rs 1.4 crores a mile. This does not differ greatly with the estimate of Rs 1½ to Rs 1¾ crores a mile given by the Chief Engineer of the Central Railway, Mr N. M. Thadani.

But, whatever the costs, the Railways would be unable to take it up as part of their development work under the Second Plan: this was made clear by Mr M. Ganapati, the General Manager of Western Railway. Obviously, therefore, it is for the Municipal Corporation to urge the allocation of funds upon the Planning Commission. In assuring BEST that the railway administration would co-operate in every way possible, Mr Ganapati indicated that, with Bombay's acute problems of traffic congestion. it was high time to think of a subway system.

At a conference, Mr Rao explained that the scheme envisaged a subway system being placed under roads that, for the most part, had a minimum width of 80 feet. As such, while the subway was in the process of being built, road traffic would not greatly be affected, since only small sections would be opened up at a time, and since, moreover, half of the road would remain untouched.

It is generally believed that the subsoil in this Gateway city is firm enough to allow of a subway system. In Calcutta's case, the Gangetic plain makes it difficult for similar thoughts to be entertained. With this natural advantage, Bombay can aspire to have the first underground system in the country. But it has to be remembered that the capital cost will be high, although the relief offered by way of a reduction in the traffic congestion will be considerable.

It has been announced that BEST is to invite foreign experts to examine the possibility of a subway system for Bombay: there are, no doubt, many technical points that have to be discussed, and it may be a fond hope to believe that it will be possible to travel by tube in Bombay by the end of the Second Plan.

World *of* Cotton

Resumption of Futures Trading

AFTER a break for about six months, futures trading in Cotton was resumed on Monday this week. An important feature of trading was the running of two hedge contracts simultaneously instead of only one as before the suspension of the business in January last. The bases of the two new contracts are Fine Jharilla 25-32" staple length and Fine Vijay 27-32" staple length.

In getting permission from the Government to start forward trading, the East India Cotton Association has had to adopt almost all the amendments to its bye-laws proposed by the Forward Markets Commission. The purpose of these amendments is to provide a better hedge and offer protection to a larger quantity of cotton. The delivery months for the contracts have been advanced so as to ensure larger supplies of tenderable cotton during the delivery period. The margin system has been tightened up and a provision has been introduced. Provisions regarding the reporting of informations by members have been made more comprehensive. The Association is also said to have accepted the Commission's view relating to the fixation of tendering differentials on the basis of forward, rather than spot prices.

A section of the market, however, continues to feel that the timing of the resumption of futures trading is not opportune. According to this section, permission for forward trading should not have been given before a clearer idea of the crop is available. It is said that mills are not likely to take much interest in the new contract unless they are able to get some idea about the probable size of the harvest. Moreover, there is no cotton to be hedged now. This section, therefore, feels that speculators will be the main operators in cotton futures in the next two months or so. But, considering the determined attitude of the Government to put down undue speculation, fears of a recurrence of the trouble seem to be rather exaggerated.

The opening session in futures witnessed lively dealings, with Jharilla showing a quieter tendency and Vijay inclining to be firm. The first contract initially slumped heavily with traders apparently carrying bearish ideas about the contract. Scale-down covering, mainly in sympathy with Vijay, however, ultimately aided a partial rally. Vijay also suffered a sharp setback in early trading, but the downtrend was checked and, under resurgence of extensive general support, values advanced rather sharply, sentiment partly influenced by the Commerce Minister's announcement of textile production for export purposes. The turnovers in Jharilla and Vijay were 15,000 and 5,000 candies respectively.

ICC Jharilla March opened at Rs 681-4 and, after declining to Rs 660 on extensive selling, recovered at the close to Rs 667 on short-covering. ICC Vijay April opened at Rs 825-4 and, in the absence of support, landslided to as low as Rs 808 on liquidation. Toward the close, however, there was a recovery to Rs 832, the highest touched being Rs 834.

Along with Bombay, futures trading should have opened at Akola and Indore. Chances for an early opening of the markets there, however, do not seem to be bright. It appears that even preliminary arrangements have not yet been completed at Akola, while only a little progress has been made at Indore. Informed circles, therefore, believe that Bombay will continue to have its monopoly in futures trading in cotton throughout the 1956/57 season.

×

SPOT COTTON:

The spot section, after ruling quiet early in the week, steadied up toward the close, thanks to continued demand from mills. The initial weakness was mainly due to the absence of any interest from leading buyers, who paused to study the impact of the resumption of forward trading in new cotton crop. Spinners' interest also considerably declined as their recent heavy purchases appeared to have filled in their nearby requirements. The small turnover that took place consisted mainly of Vijay, Jharilla, Surti and Jayadhar varieties.

In the foreign section, prices of East African cotton declined by Rs 20 to Rs 25 per candy in sympathy with reports of easier American advices. Only spot lots of medium and higher Gezira Sudans found some buyers, while no interest was shown in Egyptians or Californians.

Following were the price movements:—Bengal Rs 640 to Rs 700: Oomra Rs 740 to Rs 770: Dhollera Rs 755 to 775; Jharilla Rs 790 to Rs 820; Vijay Broach Rs 970 to Rs 980; AR/BP/52 Rs 1,590 to Rs 1,600; Bushoga Rs 1,490 to Rs 1,495; Karnak Rs 2,700 to Rs 2,800; Sudan Rs 2,100 to Rs 2,600; American 1⅛" Rs 1,260 to Rs 1,265 and Good Middling 1 5/32" Rs 1,355 to Rs 1,365.

STATISTICS:

Exports by Rail from 1st September 1955 to 14th June 1956 were 335,246 bales. Estimated mill consumption in Bombay during the same period were 978,366 bales as against 1,003,690 bales in the corresponding period of last year. Estimated stock of raw cotton held by exporters, dealers and mills in Bombay on the 14th June 1956 were 705,709 bales as compared to 804,083 baies on the corresponding date of last year.

×

KARACHI COTTON MARKET:

The Karachi cotton futures market, after initial firmness due to good demand from China, developed an easier trend toward the close following higher official estimate for 1955/56 crop.

The spot section ruled steady with prices tending to look up. Following rates were quoted (per 82 lbs):—Sind Deshi Rs 100; Punjab Deshi Rs 94; 4F roller Rs 85-2; Punjab Roller Rs 88-10; NT Rollers Rs 86-2 and 289F Punjab Roller Rs 93-2.

×

NEW YORK COTTON MARKET:

Trading conditions on the New York cotton market were very quiet with both buyers and sellers content to await the outcome of quantity and price resulting from the CCC sales. The action of July unsettled the balance of the list although additional hedging and selling by chart readers was reported in new crops with a leading spot firm absorbing a good part of the offerings on scaledown. Selling in July was eventually lifted and prices rallied on short-covering. October delivery, after touching a low of 32.08 from 32.20 cents, finished the week at 32.37 cents. July was quoted 342.1 cents.

×

LIVERPOOL COTTON MARKET:

The Liverpool cotton futures market, after opening quiet, improved at the close due to some trade and commission house buying. Demand was centred mainly on USA cotton from CCC stocks, covering a wide range of grades and staples for both ready delivery and for shipment. In other growths a moderate trade was concluded in Mexican, Brazilian, Peruvian, Nigerian and Belgian Congo. Sales of Pakistani cotton consisted of a few hundred bales of selected lots of 4F and NR Roller ginned. Stockholders of Indian cotton found it difficult to place any growths other than rough Bengal styles due to the relative cheapness of many other growths.

The Egyptian contract remained inactive. In Sudan, prices were nominally unchanged with mill buying orders noted rather below current rates. Old contract July/August was quoted at 26.10 cents, while New contract July/August was quoted at 28.50. Egyptian contract July/August was quoted at 57.80.

×

CLOTH AND PIECEGOODS:

Trade circles have welcomed the new cotton policy of the Government. The decision to increase mills' output of piecegoods by automatic looms is considered realistic in view of the growing shortage and foreign competition. In spite of sentimental arguments in favour of outmoded methods of manufacture, the fact is that cloth shortage cannot be relieved except by mechanised mill production, and mils will not be able to compete unless they are allowed to rationalise and modernise equipment. It remains to be seen how far the expectations, particularly on the export front, will materialise with the strings attached to the expansion.

The emphasis on the need for augmenting exports to the target figure of 1,000 million yards is welcomed, but this fundamental objective will not be realised by the proposed restrictions and other

GATEWAY MARKETS

Forward Trading in Groundnuts

FORWARD trading in Groundnuts was resumed on the Bombay Oilseeds Exchange on Monday this week after a break of over 12 years. The contract provides for groundnut-growing areas in the delivery at thirty-eight centres in the country. According to the amended bye-laws, approved by the Forward Markets Commission, the margin system will be operative over all the oilseeds for which trading is permitted. Trading up to 7,500 candies in each oilseed, as well as for all oilseeds taken together, will be free of margin, and graded rates will apply thereafter. The different oilseeds will be permitted to be offset against each other.

The start of forward trading has been hailed by traders as an important landmark in the recent history of the oilseeds trade in

Liberalised Policy for Cotton Textiles

IT seems clear that the agonising re-appraisal in New Delhi of Government's policy on cotton textiles has enabled a more realistic understanding, on the one hand, of the need for flexibility in planning in this sphere and, on the other, of the distinct possibility that production targets may have to be raised more than once. That, during the last two weeks, this aspect of the economy received an extraordinary amount of studied attention, is common knowledge. But, in no quarter was the belief entertained that, when Government announced a modification of textile policy, so many of the standpoints of the private sector would find acceptance. Pleasurable surprise, therefore, greeted the announcement early this week by Mr T. T. Krishnamachari of a substantially liberalised cotton textile policy.

The suggestions pressed in this journal are mirrored in the Government policy. Our contention has been that, in fixing a target for cotton textiles production, Government had underestimated the consuming power that would be released by the Second Plan and, consequently, had proceeded on the basis of a lower estimate of anticipated per capita consumption. Secondly, we have also urged that the organised industry should be permitted to add to its capacity for purposes of increasing, if possible, its quantum of exports. Such increase in productive capacity also amounts to an insurance premium against a shortfall in the output of cloth by the cottage industry. At a pinch, cloth produced with a view to export could be released on the domestic market, and thus successfully ward off any sudden emergence of inflationary pressures.

These are the two points that have been emphasised by TTK. Government have now decided that the target of cloth production is to be raised to 8,400 million yards from the present figure of 6,700 million yards. Even this target is provisional, and the Union Minister for Commerce and Industry has hinted that a revision (on the basis of 20 yards per capita consumption) would be made if called for by an increase in demand. The figure of 8,400 million yards has been arrived at by estimating per capita consumption at 18½ yards and providing 1,000 million yards for exports.

The organised industry is to participate to a considerable degree in the additional target. On the one hand, the mills industry is to be permitted to increase output by 350 million yards—though the whole of this production will be reserved for export. On the other hand, mills will be expected to make available a quantity of yarn sufficient to enable the production of 700 million yards by the handloom industry.

A further 300 million yards are proposed to be manufactured by the handloom industry from yarn spun on Ambar Charkas. Powerlooms would be expected to increase production in the handloom sector by 200 million yards. And a balance of 150 million yards remains unallocated under any one of these four heads.

Two attendant decisions about the organised industry are entirely logical. In order that mills may be in a position to feed yarn to the handloom industry, new spindleage is to be permitted to the extent of 2.1 million. Secondly, the proviso that the additional output of 350 million yards be reserved for export requires both that the quality of the cloth is assured and that some attempt is made to reduce costs of production. The additional production, therefore, is to be rendered possible by the authorisation of automatic looms (whose number is subject to a maximum of 14,600). For, the automatic loom produces coarse and medium qualities (the varieties for which there is export demand) of an even standard and free from defects; also, costs of production are lower.

Mr Krishnamachari showed a nice awareness of the manner in which demand for consumer goods generally, and cotton textiles in particular, might increase at a pace that we have not planned for. In this context, he said:

> "As a result of the rise in the standard of living by the end of the First Five-Year Plan, the demand for commodities such as textiles, bicycles, sewing machines, electric lamps, tyres and tubes of automobiles has increased far beyond the levels estimated four or five years ago. If inflation is to be avoided, the supply and demand position for consumer goods will have to be continually watched and targets adjusted where necessary."

In this view, said Mr Krishnamachari, Government were not "unprepared" to accept a higher target of consumption if, during the next twelve months, the trends indicated a rise in demand. It was at that time, also, that Government would make known the sector which would be entrusted with the responsibility of producing the 150 million yards of additional cloth that presently is unallocated.

TTK is equally alive to the need for the maintenance of quality, whether for exports or indigenous consumption. Government may be forced to take action in this regard, but so far such a contingency, as he relates, has been avoided:

> "We have now a system of inspection which is voluntary. I have told the textile interests that if the voluntary system is not taken advantage of we will have to make it compulsory both for export and internal consumption. I am told the voluntary inspection has been successful. An awareness is coming on the part of the textile interests."

The Government view on the prospects for exports, formed two or three years ago, has turned out to be somewhat optimistic. At that time, TTK reported, we were counting on an export of 1,250 million yards. But, in the past two years, with Japan especially emerging as a strident competitor, the export figure had declined substantially. Mr Krishnamachari, however, added:

> "Undoubtedly there is some contraction in the market in textiles. But, at the same time, we think that, given all these aids and if prices are reasonable, it should not be beyond our competence to get 1,000 million yards." This figure of 1,000 million yards is described by TTK as "not a very tall target."

Mr Krishnamachari's press conference has been hailed in all cotton textiles circles as bespeaking a realistic and progressive Government policy. Mr Neville Wadia, Chairman of the Cotton Textiles Export Promotion Council, welcomed both the expansion allotted to the mills industry and the manner in which the expansion is to take place. Government have, he said, "decided to take steps which will improve both quantity and quality of our cloth for export."

An erstwhile chairman of the Bombay Millowners' Association, Mr G. D. Somani, considers the target of 18.5 yards per capita as still on the modest side; but, he added, he welcomes "the assurance that this will be revised within a year if found necessary."

Mr Madanmohan Ruia, who is President of the EICA, was particularly gratified by the decision to raise production in the mills sector through automatic looms. According to him, "the introduction of automatic looms for the production of cloth should certainly help India to expand her export market and once the expansion of export market takes place it will lead to starting of third shifts in the mills." Mr Ruia could not resist a reference to raw cotton. Obviously, increasing production of cloth will make a greater demand on cotton. The EICA President has suggested that Government should immediately move in the matter, and seek to secure foreign (presumably American surplus) cotton at competitive rates.

A year ago, at this time, when discussion on the Draft-Frame was at its most controversial, the particular complaint by the private sector was that too much of a reliance was being placed on cottage industry for contributing to the Indian target of textiles production; it was rightly suggested that the degree of short-fall in production by handlooms would correspondingly increase the scope for inflationary pressures. That, within three months of the beginning of the Second Plan, a major revision in cotton textile policy should have taken place, must now drive home the point to the private sector that Government meant what they said when they announced that the Second Plan was to be a flexible plan.

*

WORLD OF COTTON

(Continued from previous page)

negative measures. It is generally believed that the condition pertaining to exports for securing additional loomage and the clause regarding penal excise will remove the bulk of the attraction attached to the modest expansion now proposed.

Meanwhile, the piecegoods market presented a quiet trend as enquiries from upcountry centres were somewhat subdued. Although trading conditions were not satisfactory, there was no material change in the price structure, except in dhoties and saris. There is, however, a hope that there will be a revival of demand before long as the stock position in upcountry centres is stated to be not large.

Conditions were not encouraging on the export front. Although enquiries continued to be received from the UK for medium greys, the price factor hampered materialisation of business to some extent. Modest business was passed for Indonesia in grey sheetings against the issue of limited imported licences.

Delhi Review

North Indian Notes

Unemployment & Employment Potential

Continuing attention is being paid by authority to the tasks that face the country in respect of the unemployment problem. Special studies are carried out, fresh estimates made regarding accretions to labour force and new sets of figures are compiled about the potential number of jobs that will open up in the course of the Second Plan.

Last week, for example, an official estimate placed the number of jobs that had to be created at 15.3 million. This figure comprised 10 million as representing additions to the labour force in the next five years and 5.3 million as appertaining to the level of unemployment at the present stage.

On the other hand, data submitted by State Governments and Central Ministries, together with estimates for the private sector, place the number of jobs which will be created by the Second Plan at 8 million. Moreover, 1.6 million jobs will be made available on the land by reason of schemes for reclamation and irrigation facilities. Present planning, therefore, does not envisage the elimination of the unemployment problem during the next five years.

A particular aspect of the problem which benefitted by a study instituted by the Planning Commission is the prospect before the educated unemployed. The study group has now reported that those without a job in this sphere number 550,000. It is anticipated, furthermore, that additions, to their ranks during the Second Plan will be another 1.45 million. Thus, the total number of jobs that have to be provided, if educated unemployment is to be eradicated, will be 2 million.

The expectation, however, is that no more than 1 million jobs will be created. Besides, retirements will cause 240,000 vacancies, and the private sector may be able to absorb an additional 200,000.

SOUTH EASTERN RLY TENDERS.

Tenders invited by the General Manager, South Eastern Railway, Garden Reach, Calcutta—23 against Tender No. GM6/56/1373B(56) for the supply of Ellis Patent Lock Spring and Cotter Universal for Wagon locking, the quantity of each item should read '1,38,000 Nos.' instead of '61,000 Nos.' as advertised previously in this paper. The closing date of the tender is 22-6-1956 at 12 noon.

S-8. CONTROLLER OF STORES.

It will be seen, consequently, that unemployment among the educated will, at the end of 1960-61, be at more or less the same level as obtained at the beginning of the Second Plan period.

It would, thus, appear that the capacity of the second quinquennium of planned endeavour for the creation of new jobs will be no more than, at the most, to take care of accretions to the labour force. If so, it is by no means a rosy picture that is drawn. The only consolation is that, in the process of implementing the Plan, a rise in per capita income is foreseen; and this rise could conceivably alleviate the financial burden of the wage-earner who has to take care of an unemployed dependent.

*

Cottage Industry Conference

Cottage industries are, it is conceded, an important sector of development to be covered in the Second Plan. But there are not merely the stupendous organisational problems which have to be tackled; there exists today, besides, but a vague indication of the responsibilities and an unclear demarcation of the fields that shall belong to the various Boards set up by the Central Government to foster cottage industry.

These boards, broadly speaking, relate to khadi, village industries, handicrafts and sericulture. The six Central Boards are enjoined to offer assistance to the State Governments through the offices of the State Boards. Twenty-three States possess cottage and village industries boards. But, we repeat, some sectors of industry benefit by virtue of the favour being shown to them by, not one, but two boards. Of such is leather, whose development is fondly attended to both by the Cottage and Village Industries Board and the Small Scale Industries Board. In manner similar, pottery and soap and match are blessed with an affluence of interest and solicitude.

This is duplication of effort and dissipation of energy. And the confusion results, not unnaturally, in some industries being accorded a step-motherly treatment; in yet other cases, the wooing by two Boards at the end of it sees the industry neglected and forgotten by both!

Clearly, co-ordination is called for. A primary need is a clear-cut allocation of its field of activity to the respective Board. No industry should henceforth be perplexed by the question: Which of two Boards to approach for help?

Secondly, there must be smoother liaison as between the Central Boards and the State organisations. We are not sure that the constitution of these bodies either at the Central level or the State level is sufficiently efficient to deal with the organisational routine of dealing expeditiously with specific applications for aid.

Finally, and most important, the promotion and development of cottage industries will be a task ensured of success only if the machinery at the State level is capable of even further decentralisation. A central policy—but decentralised activity—this surely is necessary.

For considering all these questions, a conference is to be held in this city during the course of the week; and those attending it are to be the various State Ministers holding the relevant portfolios. The conference has been called by the Production Ministry, and present plans are for Mr Govind Vallabh Pant, the Home Minister, to inaugurate the proceedings.

*

'Grow More Quick"

Mr A. P. Jain, the Union Minister for Food and Agriculture, was not greatly demanding when he inaugurated the meeting at Simla of the Crops and Soil Wing of the Board of Agriculture and Animal Husbandry in India; all that he wanted of the experts who had gathered on the occasion was that they should help the peasants "to make two ears of corn and two blades of grass grow where only one grew before"!

But there is no doubt that the soil expert in this country has it in his power to contribute significantly to the national interest. Yields in India are poor, whether it be of sugarcane or jute or foodgrains. But that is not to say that we shall not be able to improve them. On the contrary, the last five years offer proof of the magnificent scope for effecting substantial increases in production. The use of fertiliser is gaining popularity—though slowly. If proper advice is forthcoming, and if it is made available to the farmer, and if, besides, measures are taken that vouchsafe for the cultivator a just return for his produce, there is no reason why we may not expect production in the agricultural sector so to improve as to offset the inflationary gap represented by the deficit financing and the uncovered Rs 400 crores of resources for the Second Plan.

It was proper that Mr Jain should have utilised the occasion to express the official viewpoint on the recent upward trend in foodgrains prices. The Food Minister did not doubt it that "part of the rise in prices....is due to the speculative activities of the trade to hoard." Government were aware of this trend, and were seeking to create buffer stocks which would force the hands of the gambling fraternity. Long-term arrangements had already been made for the import of rice from Burma, and large quantities of wheat were to be imported from Australia and the USA. Additionally, negotiations are now under way for the long-term purchase of wheat from America. These would help to build buffer stocks—the buffer stocks which would put a quick end to the get-rich-quick minded.

Mr Jain spoke at length on two aspects of agriculture. Firstly, he thought it an essential part of the plan that co-operative societies should be brought into being. The Government are presently planning that 18,000 of these societies should be set up in the course of the next five years. With rural finance enabled by the State Bank, and with the programme for warehousing on an extensive scale, Mr Jain is confident that the agriculturist will benefit substantially.

Secondly, the Japanese method of cultivation has already proved itself: yields had improved wherever it had been tried out. Mr Jain thought that a second desideratum was for the sowing of better seeds. The Union Minister's conclusion in this regard is that, by the end of the Second Plan, the whole country should "have the benefit of improved seeds."

Motto for the Soil Expert? Grow More Quick.

SOUTH EASTERN RLY TENDERS.

The General Manager, Garden Reach, Calcutta—23, invites tenders for supply of 9,630 Rft. of M.S. Pale fencing complete as per CE's Drg. No. 15889; 100 Nos. M.S. Pales 18G and 2 Nos. M.S. Pale Fencing gate 8'×5' double fold suitable for the above pale fencing. Tender form No. GM7/56/389R(56) is obtainable from the Controller of Stores, Garden Reach, Calcutta—23 (I.B. Section) on remittance of Rs. 5/- (not refundable) by Money Order or to him direct by outside firms and on production of Cash Receipt from the Chief Cashier, Garden Reach Calcutta—23 by local firms. Closing date is 6-7-56 at 12 noon. Firms not on the Railway's list of approved contractors must submit a Valid Income-tax Clearance Certificate with the tenders.

Delhi Review

North Indian Markets

Hardening Tendency in Foodgrains Prices

THE hardening trend in Foodgrains prices continued to be in evidence during the past week. In the Hapur market, Wheat recorded a further rise of As 6 per maund to Rs 14 for average quality and to Rs 15-6 for farm quality. Although buying enquiry at these levels was rather slack, stockists continued to build stocks for off-season. Arrivals from the producing areas this year have been below last year's level. Total arrivals, this season, are estimated at only 85,000 maunds as against 122,000 maunds last year.

Rice also recorded small improvements with the rates moving between Rs 25 and Rs 33 per maund, according to quality. Gram continued to rule steady, quoting Rs 10-14 per maund for local quality and Rs 11-4 for the Punjab quality.

Divergent trends were, however, observed in Pulses. While Peas dara quality ruled quiet at Rs 10-3 and white quality at Rs 11-12 per maund, Arhar prices went up by As 6 to Rs 11-11 per maund.

The Bombay grains market ruled quietly steady with prices moving within a narrow range. Trading in Wheat was featured by a further modest improvement in forward deliveries, Pissi quality quoting Rs 15-7 per maund. Prices of ready wheat, however, ruled quiet due to limited demand from retailers. Pissi quality was quoted at Rs 145 to Rs 165 per candy and those from Madhya Pradesh at Rs 150 to Rs 190 per candy.

In the Rice section, the rates for Burma rice moved between Rs 167 and Rs 170 per candy with demand satisfied from stocks obtained from Govenment godowns. The possibility of any immediate decline in prices is ruled out in view of the continued strength displayed by upcountry centres and the reports that fresh supplies are not likely to arrive before the middle of July.

Among coarse grains, the price of Sholapur Jowar was maintained at Rs 145 to Rs 155 per candy. Although superior qualities of Bajra continued to be in short supply, prices for this commodity remained unaffected in view of limited demand. Trading in Pulses was quiet, resulting in only small changes in prices over last levels.

*

Sugar

Prices in the Hapur market recorded further small gains during the week due to brisk buying enquiry following the approach of the monsoon season. Following mill-delivery rates (per maund) were quoted:—Jaswant Rs 28-8; Simbhauli Rs 28-7; Mowana Rs 28-5; Daurala Rs 29-8; Amroha Rs 28; Bijnore Rs 28; Mansoorpur Rs 28-4 to Rs 29-8 and Rampur Rs 30-12.

*

Gur

Better loading facilities and appreciable improvement in futures accounted for a further rise in ready Gur prices, being quoted upto Rs 10-10 per maund for dry quality. Arrivals increased to 1,000 maunds, while stocks were estimated around 80,000 maunds.

The standing cane crop for the next season is now reported to be in need of rains, while good rain reports have been received from East Uttar Pradesh.

*

Shellac

After remaining active during the past two weeks, the Shellac market in Calcutta turned a shade quieter this week in the absence of any fresh enquiry. Pure TN shellac was quoted at Rs 131 per maund. Shipments, during June till the 15th, were 11,853 packages.

In the London market, the rate after recording a drop of 2sh 6d per cwt early in the week, recovered toward the close when traders realised that leaflac for immediate shipment was in tight supply. Sellers were not disposed to accept low bids. June delivery was quoted at 290sh per cwt with sellers at 297sh 6d; August deli-

(Continued on page 1168)

The prices quoted below are ex-bags, ex-works, exclusive of Sales Tax. Customs duty and Central Excise duty.

The monthly auction was held at Palayamcottai last week when 575 cwts of coffee seeds were offered. Out of this quantity, 185 cwts 28 lbs were withdrawn. Following were the price range (per cwt):—Plantation PB Rs 229-14 to Rs 240-12; Plantation 'A' Rs 212-8 to Rs 214-15; Plantation 'B' Rs 2.08-6; Arabica Cherry Flats Rs 189-2 to Rs 190-4; Robust Cherry PB Rs 167-0 to Rs 170-10 and Robusta Cherry Flats Rs 160-4 to Rs 166-3.

*

Pepper

Pepper prices firmed up slightly during the week as growers were banking upon the reappearance of Russia entering the market shortly. In the Alleppey market, the rate was better at Rs 737-8. In Cochin, the rate firmed up to Rs 750 from Rs 737½ quoted in the previous week.

For want of any new development, most of the exporters are, however, sidelining. They refused to offer below parity to meet foreign buyers, because they were not certain to get pepper in quantity from the growers if once the market began to move up.

Meanwhile, reports have come to the effect that new crop in Sarawak is in full swing and, as a consequence, arrivals at Singapore are increasing from week to week. Sarawak growers are weak holders, and they want to sell at the best market price. This is making the position of the Singapore market rather precarious. There is a general feeling that, unless the Singapore market steadies up, there is little chance of good buying by the USA.

The black pepper market in New York was mostly neglected. Malabar, Lampong and Sarawak spot and 'awaiting release' were all quoted at 30½ cents per pound.

*

Groundnuts

The Groundnut market at Madras ruled steadier during the past week when business in superior oil-quality seeds was done at Rs 162 per candy and in bold varieties at Rs 157 per candy. Big crushers did not show any interest.

SOUTH INDIAN MARKETS

Prospects for Cashew

INDIA ranks as the most important producer of Cashew, accounting for more than 95 per cent of the international trade in cashew kernels. The present production is not enough to meet the demand for export and is only sufficient to keep the cashewnut-curing and processing industry going for only about seven months in a year. Large quantities are, therefore, imported every year, mainly from Portuguese East Africa, to be processed and exported as cashew kernels.

The current year is considered to be a below-average year for production although there is no indication that it is a below-average year for consumption also. The maximum consumption season begins in September and shipments must commence in July to meet the demand. It is generally expected that prices are likely to go up during the next few months when the pressure of American demand is likely to be felt.

Meanwhile, dealers in the commodity are reported to be feeling nervous about the possibility of the Government taking over the cashew trade under the charge of the State Trading Corporation. It is felt that, if the State takes over the export part of the business, the processors will be left with only the margin allowed on manufacture and packing.

*

Coffee

There has been a strange behaviour in Coffee prices during the past few months as against the present statistical position. According to available reports, production and stock during the year are stated to be well above possible world demand, but prices are still kept at a high level. Short supply of higher-grades and renewed demand for the same are mainly attributed to the new feature in the market.

Although the stock position in India came down by about 2,000 tons, it was still at the high figure of 25,000 tons at the middle of May, while the season's total crop is expected to be around 34,000 tons—a record for the industry. Total receipts into the Pool from new crop up to May 15 were estimated at 32,715 tons. It is, therefore, felt that exports will be kept in abeyance when the monsoon begins.

At Bangalore, the Coffee Board effected the sale of five different qualities of coffee of the 1955-56 crop, totalling 1,100 tons, for export purposes. The quantity, the range of prices (per cwt) and the average prices of the five different qualities of coffee were as follows:—

Quality:	Quantity Tons	Price Range Rs. a.	Rs. a.	Average Price Rs. a.
Plantation 'A'	400	379 11 to	393 8	381 14
Plantation 'B'	200	341 15 „	369 12	354 14
Plantation Triage	200	280 0 „	312 10	292 12
Robuta Parchment Flats	262	185 1 „	205 0	189 6
Robusta Cherry Flats	38	186 15 „	214 8	200 0

Arrivals averaged about 40 tons a day. According to latest reports, the recent rains had helped digging operations of the summer crop and also benefitted the standing crop in the Coimbatore-Pollachi area. About 30,000 tons are expected to be har-

Madras Review

The Peninsula

Cauvery Sugars Issue

IN the Peninsula's relative backwardness in industrialisation, it is significant that, even in the matter of sugar mills, the South lags behind other parts of the country. This is in spite of the fact that the raw material, sugarcane, is available in fairly adequate quantities. If, therefore, even in such a industry, there has been hesitancy in progress and development, it is a clear indication of the lack of entrepreneural efficiency and enterprise. The one relieving feature about what I might call the sugar situation in the South is the leadership given and the success achieved by sugar mills under the management of Parry & Company Limited.

Recent events, however, have compelled an increase in investment interest, particularly in sugar mills. For, the threat of a ceiling on land holdings inherent in land reform has impelled the zemindars or, as they are known in the South, the mirasdars, to think of means by which they could reduce their holdings in such manner as to anticipate any subsequent acquisition by measures relating to a ceiling on land. In this view, more than ordinary interest accrues to the sugar mill industry, because lands could be transferred to a sugar mill company, which would find it useful and desirable so to make arrangements for its own supply of sugarcane.

Indeed, such a combination of a sugar mill which owns or has leased land sufficient for purposes of obtaining its own sugar cane already exists at Tiruvalur. It is in such a setting that the Peninsula has had its most important corporate announcement in recent years.

Some eight years ago, the Cauvery Sugars and Chemicals Limited was formed for the particular purpose of turning out factory-made sugar, for which plant was to be secured, from sugarcane grown on its own land, for which, also, arrangements have been made. Eight years have passed since; but the dry land secured, on which sugarcane was sought to be grown, remained unutilised, as the company was unable to make adequate arrangements for irrigational facilities.

Eight years have elapsed, and the company had made little or no progress toward a state of successful operation. At this juncture, it became obvious that, unless a vigorous re-organisation and an experienced management were assured for the company, Cauvery Sugars had little other prospect than to continue its, as it were, suspended existence.

The dry land was sold, the Board was re-constituted, the previous managing agents resigned. This paved the way for a reconstitution of the Board of Directors and the securing of expert help and experienced advice.

The first step, in re-constituting the direcorate, was to obtain the prized time and the invaluable abilities of Sir T. S. Venkataraman as Chairman of the company. Its new Chairman, may I suggest, is Cauvery Sugars's most important asset. For, Sir T. S. Venkataraman is renowned as a sugarcane expert non pareil in India. In the years that he was the sugarcane expert with Government, he has amassed a fund of practical knowledge about this raw material, that yields sugar. There are few men today in India, who can judge the quality of the cane better or who can ensure, by correct advice and appropriate direction, the measures to be taken to improve the yields as well as quality of the sugarcane being grown.

The next asset of Cauvery Sugars is the obtaining of the offices of Parry & Company Limited as the Secretary, and the East Indian Distilleries and Sugar Factories Limited as the technical advisors. A history of sugar in South Innia may be said to coincide with the history of the Parry managed sugar mills companies in this part of the country. For, the South has long known to think of Parrys and factory sugar as synonymous. Indeed, the reputation of Parrys is much more than that the company has had an enviable record of successful and efficient management of sugar mill companies.

I remember that, not so many years ago, Travancore Sugars were very much in the position that but yesterday obtained in respect of Cauvery Sugars. Travancore Sugars, as a company, had been brought into being. Perseverance was not enough, because the company failed to respond to perseverance with a bountiful reply of profits. Clearly, then as now, the specialised services of a doctor who could prescribe for an ailing sugar mills company were required. Then, as now, the original management realised that the wisest thing that could be done was to entrust Travancore Sugars to Parry & Company for guidance and direction. It is thus that Parrys have come to be known as a management which can help to recover even an ailing sugar mills factory.

The third asset that the Cauvery Sugars freshly starts out with is its name and the area in which it is located. The Cauvery is the religious river of the South; but its beneficence includes material gifts to the inhabitants on its banks as well. The Cauvery is, perhaps, the best used river in the world.

From ancient days, a system of canals has been in operation; these canals branch off from the parent river to irrigate the lands in the vicinity and to provide sustenance thereby to the inhabitants of these parts. By the time the Cauvery reaches the sea, its width is not of a mighty river but of a slender stream. The land through which the Cauvery passes is good soil; the people that reside here are cognisant of the zestful pleasure in work; the river provides the water wherewith man can exact a better crop in quality and in yield.

With these important assets, it is logical that the other arrangements in respect of the new issue should have been attendd to with a nice concern and with detailed care. The share capital of the company, issued or in course of issue, is Rs 60 lakhs. Of this, Rs 11 lakhs, or the bulk of it, is held by those connected with the new management of Cauvery Sugars. The balance of Rs 49 lakhs is now offered for subscription by the public. The issue is fully underwritten, with the ICIC having taken the responsibility for Rs 10 lakhs of preference shares and Rs 20 lakhs of ordinary shares. The Hercules Insurance Company now gives a lead in respect of the services that this sector of the economy can contribute to investment, by under-writing Rs 5 lakhs of ordinary shares and a further Rs 5 lakhs of preference shares.

Sundry other arrangements have also been completed for the underwriting of the balance of Rs 5 lakhs of preference shares and Rs 4 lakhs of ordinary shares.

The financial requirements of the company are stated to be just over Rs 1 crore. Against this, the present issue, balance of funds on capital issued prior to the date of the prospectus and calls on capital issued prior to the prospectus will, in the aggregate, make available Rs 59.44 lakhs. The correct procedure has been adopted for obtaining the help that the Industrial Finance Corporation is meant to provide. An arrangement has been made for a loan of Rs 35 lakhs from the IFC. This more or less completes the picture as relating to the financial requirements and the manner in which the proceeds of the issue are to be utilised.

Madras Review

South Indian Notes

Scandalous Cancellations

The Peninsula's traders and merchants have, for two weeks past or so, been vociferous in their complaints of a wagon shortage; and it was this fact, they urged, which was responsible for holding up transport of rice to southern areas. Indirectly, therefore, the blame for the recent increase in rice prices was sought to be foisted upon insufficient availability of wagons.

An authoritative announcement has now been made, by the Civil Supplies Department, which vigorously rebuts all such charges. Indeed, the statistics released by the Railways, which had instituted an inquiry, suggest that there may have been a deliberate creation of shortage—with the Railways as scapegoat therefor.

In the last week's issue, an editorial note indicated that sugar traders were at pains to create a new kind of railway corruption—the bribe for the strategic withholding of wagons. Apparently, this is not possible in the Peninsula. In the result, it would appear that ingenious tactics have been adopted to delay the despatch of rice from and about the Andhra districts to areas south.

There has, according to the railway communique, been an epidemic of cancellation of wagons. Indeed, in the Bezwada area, the number of cancellations was considerably greater than the number of wagons loaded. Disregard for or disinterest in loadings is indicated by the fact that, on the 1st of June, deposits forfeited by merchants—in fifteen cases—was almost equivalent to wagon loadings at sixteen.

The cancellations, as the Civil Supplies Commissioner, Mr S. Venkateswaran, described them, are "terrific." In the first twelve days of June, merchants and traders who decided, for some reason or other, that they did not need wagons they had earlier booked, cancelled 706 wagons in the Bezwada area; and these included 25 forfeitures. The figure of loadings during the same period? A bare 253 wagons!

At a time when, undoubtedly, there is genuine demand and need for wagons, and at a time when the success of endeavours under the Second Plan rests upon the optimum utilisation of wagons, it is scandalous that so much of last minute waste of capacity should have been brought about by whims, caprices and the dictates of speculative greed. The Railways would be justified if they drew up a black-list of traders and merchants who indulged in indiscriminate cancellations. Indeed, this is a measure which, in fairness to those who genuinely suffer from lack of wagon availability, the Railways must adopt.

*

Mysore: 1st Plan Balance-sheet

Mysore's Commissioner for Economic Development and Planning, Mr S. Muninanjappa, is responsible for a brief review of the progress achieved by the State in its implementation of the First Plan. The fact that expenditure has totalled nearly Rs 40 crores (or 84.5 per cent) of the target of Rs 47 crores is testimony to the success that has attended efforts in the State.

An important achievement is the production of an additional 2 lakhs odd tons of foodgrains as against the target fixed of just under 1 lakh tons. This, of course, was rendered possible, to some extent, by the irrigation facilities provided by the projects in this behalf. Expenditure on irrigation in the first quinquennium of planning has been just under Rs 14 crores as against the revised estimate of Rs 15.9 crores. The major projects represented by Bhadra and Ambligola reservoirs are making good progress, while the Tunga anicut and the Nugu reservoir, both near completion, contributed water for irrigation to 10,000 acres and 2,000 acres respectively in 1955-56.

The Tungabhadra reservoir, with its system of field channels and distributaries partly completed, is now in a position to supply water to nearly 40,000 acres of the 93,000 acres in Mysore that are ultimately to be covered by the project. Of the 35 projects taken up, 20 have been completed, good work has been done on another 13, and work is pending on two more which cover areas in zones in which the Andhra Government have a say.

In the field of power, expenditure aggregated Rs 11¼ crores as against the target of Rs 13.41 crores. With the completion of the major projects appertaining to the Mahatma Gandhi hydro-electric works at Jog, electricity generated from this works is of the order of 120,000 kw. In all, the number of villages to which the benefits of electrification have been brought exceeds three hundred.

Not much progress, however, has attended the schemes evolved to make of the Mysore Iron and Steel Works a more economical unit. These twelve schemes were estimated to cost Rs 7.8 crores, but the sum spent in 1951-55 is no more than Rs 1.2 crores. It is in this regard that the schemes will spill into the Second Plan. Erection of the plant for spun cast iron is under way; and, with the machinery to be obtained from Germany, it is expected to be installed by the middle of 1957. Similarly, the sintering plant, for which an order has also been placed in Germany, is expected to go into production soon after it is completed in March 1958.

For the Second Plan, the original draft prepared by the State envisaged an expenditure allocation of Rs 251 crores. The Planning Commission ruthlessly pruned this down to Rs 80 crores; and this is to be the allocation for Mysore, excluding, however, expenditure on the Iron and Steel Works.

*

Traders & the Second Plan

Another note in this section indicates that the price increases in rice were occasioned, not by a shortage of wagons, but by a spate of booking cancellations. To what extent such cancellations were deliberately resorted to by traders and merchants, is debatable. The evidence, however, suggests that some proportion of the blame for the rice scarcity must rest with the the trading community.

In the next five years, with the substantial release of inflationary pressure, the temptation to get rich quick by means of manipulated shortages will increase. It is, therefore, necessary that the leading traders should impress upon their fraternity the self-defeating nature of such tactics. In this view, it is reassuring to have heard a responsible spokesman holding forth on the duties and responsibilities of the trading class in the course of the Second Plan.

At the annual meeting of the Madras Trades Association, its Chairman, Mr M. V. Venkataraman, showed himself alive to the important role that had to be played by the trader. Before, however, he touched on this, Mr Venkataraman dwelt on the developments in the Indian economy which would affect members of the Association.

The new company law, the new tax measures, the Kaldor proposals—all these were briefly reviewed by the Chairman. Of especial interest to the MTA is the tax that did not materialise in Sir Chintaman Deshmukh's Budget for 1956-57: a single point levy of sales tax.

Although this is a question that has been debated almost to a stalemate, it is generally recognised that it is patently unfair to impose the sales tax at many points. Mr Venkataraman drew attention to a reported statement of a Cabinet Minister, who is said to have announced the Government intention to adopt a single-point sales tax on half a dozen commodities. This would be in the nature of an experiment, presumably to be followed by an extension of the list. But, as Mr Venkataraman ruefully pointed out, no more had since been heard on the matter.

A fresh headache in the offing for traders is the decimalisation that this country has decided upon. As from next year, the complexities of dealing with two sets of perfectly legal tender would be met. In the not distant future, similar problems will be thrown up when the weights system in this country is reorganised. The burden of the difficulties in this regard will largely have to be borne by the trading class.

The keynote of Mr Venkataraman's speech was that, in order to ensure that India's Second Plan was successfully implemented, "members of our Association would have to play their not inconsiderable part as the distributors of the consumer goods which new industries were expected to produce."

*

NORTH INDIAN MARKETS

(Continued from page 1166)

very at 293sh 9d with sellers at 301sh 3d and October delivery at 295sh with sellers at 303sh 9d.

According to a report, issued by Indian Lac Cess Committee, the yield of the Baisakhi lac crop in India for the current year is expected to be lower than the previous two years. The yield is put at 672,000 maunds as against the preliminary estimate of 751,000 maunds, issued in March last, and the final estimate of 813,000 maunds for 1955. The normal yield, based on the average production of 10 years preceding 1955, is 710,000 maunds.

In the Manbhoom and Singhbhoom districts of Bihar, the biggest lac-producing State of India, the arrivals of the new crop are lower than expected. The revised estimate for Bihar has been reduced to 425,000 maunds. In major lac-growing areas of Madhya Pradesh also, the crop suffered damage due to excessive heat in the months of April and May. Hence, the estimate for this State, too, has been reduced to 139,000 maunds. As far as other States are concerned, the arrivals of the crop in the market have been up to expectations.

GATEWAY MARKETS

(Continued from page 1163)

Bombay. It is expected to widen the scope of the market and contribute substantially to the revival of the City's tradition of all-round commercial activity, because the contract is of an all-India nature. Besides, it is felt that the contract for groundnut will serve as a model for linseed and cottonseeds in which futures business will commence in the near future. It is also felt that the rates prevailing in the Bombay market will provide a barometer of the conditions of demand and supply obtaining in the country.

The first day's trading in February contract revealed a smart improvement. The rate commenced at Rs 131-4 at which level there was considerable speculative buying. Bulls, however, turned sellers at the close with a view to booking profits; and the rate fluctuated between Rs 129-12 and Rs 135, to finish at Rs 134-8. The turnover was estimated at 1,500 candies. August-September ranged between Rs 31-14 and Rs 32-6. Groundnut Oil was steady at Rs 17-4 per quarter.

The moonsoon has begun in some of the growing areas, such as Hyderabad, Gujerat and Saurashtra. Market circles, therefore, feel that at least two to three weeks will have to pass before the trade is able to have even a preliminary indication of the prospects for the new crop. Till then, the price movement will be shaped by conditions in the ready section and the sentimental effect of the progress of the monsoon.

Castor futures gave rather a dull appearance with prices barely maintained. The turnover was negligible and the undertone remained quiet. Reports of the commencement of monsoon in Hyderabad and the decline in the US rates for castor oil served only to accentuate the bearish trend. Castor September delivery fluctuated between Rs 132-6 and Rs 134 to finish at Rs 133-10, the highest level touched last week was Rs 144-2.

The Linseed section also revealed a bearish tendency in sympathy with castor futures. Linseed ready was offered at Rs 29-2, while August-September delivery was marked down to Rs 29-0. Linseed was available at Rs 16-8 per quarter.

The market for Kardi and Niger seeds ruled steady with small business reported done. Kardi ready was quoted at Rs 18-12 and Niger-seed ready at Rs 26.

*

Gold & Silver

Starting with a firm note, bullion prices advanced on brisk buying and bear-covering on favourable spot advices. The offtake in both the metals was higher than arrivals. Excellent demand from Madras and Calcutta in spot also gave a fillip to sentiment in futures. The undertone was encouraging at the end.

Spot demand in Silver was, on the whole, fairly well maintained. Although there was occasional setback provoked by rumours regarding the arrival of fresh Tibetan coins, scattered bull support was in evidence at every decline in prices. While arrivals amounted to 7 bars, the offtake was heavy at 22 bars. Unrefined metal receipts amounted to 46 bars. Silver Jeth delivery moved between Re 170 and Rs 171-2, and Ashad delivery between Rs 169-6 and Rs 170-7, to finish at Rs 170-9 and Rs 169-15 respectively. Silver spot (below .996) moved between Rs 170-8 and Rs 171-7 to finish at Rs 170-15.

Gold remained generally dull with prices moving within a narrow range although scattered support was in evidence at lower levels. Gold Jeth delivery moved between Rs 101-5 and Rs 102-0-6 and Ashad delivery between Rs 100/1 and Rs 100-11-6, to finish at Rs 101-15 and Rs 100-11 respectively. Gold spot was available at the start at Rs 102-7; but, with improved demand, the rate hardened at one time to Rs 103-1-6, to finish at Rs 103-1-0. Sovereign was quoted around Rs 67-4.

*

Metals

Price movements in the local Metal market were rather irregular due to the absence of sustained support. In sympathy with foreign advices, the market for Copper moved within a narrow range between Rs 215 and Rs 221 for Jeth delivery early in the week, to finish at Rs 219-8. The offtake was good as local market continued to be quoting below Calcutta. Barring any unforeseen circumstances, the position of ready goods appeared to be healthy, rate being quoted at Rs 227 per cwt.

Despite firm London advices, Lead prices did not record any appreciable rise as stocks were heavy and not in strong hands. The rates fluctuated between Rs 79 and Rs 82 to finish at Rs 81 per cwt.

Ready Zinc was quoted around Rs 66, while Jeth delivery was quoted at Rs 65-12 per cwt.

The position of Tin was quite healthy with ready quoting higher at Rs 126 per cwt. Demand continued to be moderate and it is generally believed that, if foreign prices hold steady, any appreciable fall in prices is considered unlikely.

On the London Metal Exchange, the price of Copper depicted considerable strength both for ready and forward positions in the early part of the week. This was mainly due to bear-covering and new purchases by consumers in view of the impending strike in the USA as a result of the new wage demands there. Copper spot was quoted at £301 per ton with sellers at £301½. Lead prices recorded a net rise of about £4 per ton, to quote at £114½ for half-June delivery. With improved Continental demand, spot Zinc moved up to £99, to react toward the close to £95. Tin spot improved at one time to £750 from £736 quoted in the previous week, mainly due to purchase of tin concentrates on behalf of the Texas City Smelter, to finish at £748 buyers.

*

Yarn

The Yarn market continued to rule depressed as speculators and weak holders were found to be busy clearing their stocks—a natural phenomenon on the eve of the monsoon. The decline was shared by all kinds of yarns, the only exception being fine counts which met with good demand due to shortage of supplies.

Rayon yarns were also subjected to heavy selling, induced by considerable slackness in demand in the wake of continued large arrivals from abroad. It was reported that even the well-known brands were difficult to find buyers at any reasonable prices, not to speak of unknown brands which were not saleable at all. 120 DS June delivery was quoted at Rs 783: Staple yarn June delivery at Rs 667; Spot Japan at Rs 3-11-6; 150 spot Japan at Rs 4-4-0 and 150 spot Italy at Rs 3-14.

*

SOUTH INDIAN MARKETS

(Continued from page 1166)

vested from the summer crop in South Arcot district.

In contrast to the seeds section, the market for Groundnut Oil ruled quiet with prices developing a slightly easier tendency in the absence of sustained enquiry from Calcutta interests. The rate for the ready position was quoted lower at Rs 310 per candy, while June delivery was quoted around Rs 312 per candy.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were as usual and there were good clearances, but at prices easier by a further nine pies per pound. A certain amount of business was reported to have been confirmed with the UK.

Arrivals of Buff hides were as usual, but clearances were slow and prices were easier by three to six pies per pound. In Cow Calf, there were some clearances at a further decline of about six pies to one anna per pound.

Stocks of Buff Calf in the market were reported to be plentiful, but there were good clearances at lower prices;

In Tanned Skins section, market quality Goat and Sheep skins showed no change in prices.

In the export section, there was little change to report. There was, however, a reasonable demand for 11-12 lbs and 13-14 lbs average; but prices for 5½-6 lbs average were easier.

It is learnt that about 900,000 tanned goat skins and 525,000 sheep skins will come up for sale in the London auction, to be held in July. As the quantity is large, there is a certain amount of uneasiness in the market as to whether prices can be maintained.

In Raw Skins section, Bangalore goat skins were quoted down by Rs 15 per 100 skins. In Bezwada, goat skins were easier by about Rs 10, while sheep skins remained unchanged.

WORLD OVERSEAS

(Continued from page 1157)

demand, however, especially for building up inventories, continued to rise through the end of the year, and the slackening of domestic production in the second half was largely compensated by a rapid increase in imports. Over half of the increase in final sales was due to personal consumption and housing outlays, which together rose by $1.3 billion; exports accounted for a further $600 million, and business investment and government purchases for $300 million each. Of the increase in inventories, part was due to increased farm stocks, but the greater part, some $400 million, was in business inventories, which had been reduced sharply in 1954. This increase, which was mainly at the manufacturing and trade levels, was necessitated by the rising level of activity and was not excessive in relation to demand, since stock-sales ratios were, in general, lower than in 1954.

Accompanying the increase in output and employment was a 7 per cent increase in labour incomes and a 20 per cent increase in investment income, with corporation profits rising by about 24 per cent. While the accrued net income of farmers rose with the increase in production, much of the additional grain produced went into inventory, and farm cash income actually declined slightly. Personal incomes as a whole rose by 9 per cent, with real income per capita showing the sharpest gain in any postwar year: despite the rise in consumption, savings (excluding farm inventories) rose from 6.1 per cent of personal income in 1954 to 6.4 per cent in 1955.

*

Nonresident long-term investment in Canada, held mainly in the United States, amounted to Can$13.2 billion at the end of 1955, an increase of $6.1 billion since 1945; Canadian long-term investment in other countries was $4.8 billion. The recent period of accelerated development in Canada has been accompanied by a notable rise in foreign-controlled concerns, especially in industries where risk capital and advanced technology are involved and where there is a high rate of growth. Since 1948 over half of the increase in investment in manufacturing, and even higher proportions in mining and petroleum, have been provided by non-residents, either through transfers of capital or the retention of profits, and the proportions of non-resident ownership have increased appreciably. At the same time there has been a rapid expansion in Canadian investment in other fields, such as railroads, public utilities, and commercial establishments, as well as in residential real estate and agriculture where non-resident participation has been negligible. As a result, the ratio of nonresident financing to total capital investment has been lower in recent years than in any earlier period of expansion, while non-resident ownership of all Canadian industries is about one third, much the same as in 1948 and lower than in earlier years.

Stock Exchanges

A MILD RECOVERY IN PRICES

Watch-Dog Writes:

AFTER the recent setback, stock markets have once again staged a rally under the lead of Steels and Textiles. The main inspiration has been provided by the announcement of the new cotton policy and the proposal to postpone the proposed additional excise duty on cloth for the time being. The reports of Mr Deshmukh's resignation after Mr Nehru's return from abroad is also bullishly construed as it is apparently taken that there will not be any jolts on the financial front for some time. On the whole, trading has revealed a bullish trend.

Equities on the Calcutta Stock Exchange registered a sizable recovery from the recent low levels.

Although the Bombay Stock Exchange recorded widespread gains early in the week due to renewed speculative buying, there was a slight reactionary tendency toward the close, induced by the easiness of seeds and cotton.

Activity on the Madras Stock was again confined to the Planting and Textile sections.

The London Stock Exchange failed to develop a definite trend and prices generally moved within narrow limits.

Price movements on Wall Street were rather irregular, showing fractional changes either way.

Calcutta

QUITE in contrast to last week, trading on the local Stock Exchange, during the week under review, was brisk with almost all scrips recovering most of the lost ground, thanks to the emergence of bull support and bear-covering at the recent low levels. The recovery in prices was, however, more marked in Coal, Tea, Textile and Engineering scrips.

The main inspiration for bulls was provided by the Government announcement of the new cotton policy and the postponement of the proposed additional excise duty on cloth. Contrary to expectations, the reports of Mr Deshmukh's resignation, after Mr Nehru's return from abroad, had no bearish effect on market sentiment and prices generally tended to higher levels due to renewed speculative buying. Toward the close, however, scattered profit-taking pared down some of the extreme gains and the market finished the week at slightly below the best levels for the week.

The Giltedged section continued to rule dull with business on a very restricted scale. Institutional investors preferred to stand aloof in view of the New Loan, which is expected to be announced shortly. 3 per cent 1986 Conversion Loan moved narrowly between Rs 77-2 and Rs 78-0 to finish the week at Rs 77-7. Among Other Loans, 3 per cent 1959-61 changed hands at Rs 98-1-6; 3 per cent 1963-65 at Rs 95 to Rs 95-3 and 4 per cent 1960-70 at Rs 101-5 to Rs 101-8.

Bank shares were a shade quieter with Punjab National quoting Rs 58 against previous week's rate of Rs 60. United Commercial changed hands at Rs 51-4 to Rs 51-8; United Bank of India 'D' at Rs 4-5 to Rs 4-8 and Bank of Bikaner at Rs 15-4.

Coal shares continued to be active and and selected scrips forged ahead on renewed support on the belief that the selling price, to be recommended by the Coal Prices Inquiry Committee, would cover not only the additional cost resulting from the latest Tribunal Award, but also extra costs to be incurred in the purchase of machinery, equipment, etc. Higher levels could not, however, be retained till the close due to general inclination to book profits. One estimate places the general increase in the selling price by Rs 4 per ton in respect of Bengal and Bihar fields where the bulk of the coal is mined and to about Rs 6 in the case of Orissa. In the case of other outlying fields, the increase is estimated between the above two figures.

Meanwhile, Bengal improved further to Rs 557 from Rs 544; New Beerbhoom to Rs 20-12 from Rs 20; Raneegunge to Rs 11-15 from Rs 11-5 and South Karanpura to Rs 10-1 from Rs 9-6. Burrakur, after being marked upto Rs 14-9 from Rs 13-15, eased off at the close to Rs 14-1. East Indian had buyers upto Rs 33-8 from Rs 33; Amalgamated upto Rs 23-14 from Rs 23-10 and Central India upto Rs 7-14 from Rs 7-4.

Enquiry for Jute shares continued to be restricted, pending any definite news with regard to the minimum export price scheme. Howrah moved between Rs 23-3 and Rs 23-6. National, after touching a low of Rs 24-9 and a high of Rs 25-2, finished at Rs 24-12. Anglo-India changed hands at Rs 169 to Rs 171; Belvedere at Rs 163-8 to Rs 165; Delta at Rs 210 to Rs 213 and Lansdowne at Rs 116-8 to Rs 118.

Textile scrips continued to be a firm feature on renewed demand, reflecting the encouraging view taken with regard to the new cotton policy and deferment of the proposed increase in excise duty on cloth. Dealings in Elgins were very

(Continued on page 1181)

McLEOD & CO. LTD.

The Board of Directors of the above Company has sanctioned the payment of the following Interim Preferential Dividends in respect of the year ending 31st December, 1956:—

INSTALMENT CREDIT RESTRICTIONS IN BRITAIN

(Continued from page 1154)

lowed up by more or less unchanged subsequent instalments. The reduction of the permitted period of repayment means that the transactions liquidated during a shorter period. Credit is a two-dimensional magnitude. Its size depends not only on the amount granted, but also on the period for which it is granted. Even if the instalment credit restrictions should utterly fail to deter a single potential buyers from engaging in instalment credit transactions, the restriction on the period of repayment would therefore tend to produce a disinflationary effect.

Even to the extent to which instalment credits are replaced by book credits, the restrictions contribute toward the achievement of the desired end. For generally speaking it is true to say that the periods for which open book credits are granted are shorter than those of the customary instalment credits.

The operation of the restrictions is of course far from perfect. There are other loopholes besides the one mentioned. Critics of the restrictions may quote many instances of evasion. It is reasonable to assume, however, that, in many times, in more instances, the dealers and purchasing public comply with the letter and the spirit of the law.

Most criticism of instalment credit restrictions is based conciously or otherwise on indeological dogmatism. Conservatives and Liberals are opposed to it because it does constitue an interference with the free play of economic forces. Socialists are opposed to it because it prevents lower income groups from acquiring consumer durable goods. In the circumstances, it is something of a political miracle that opposition to the restrictions is not more active and effective.—(Copyright).

WORLD OF JUTE

(Continued from page 1155)

of the looms that have been put to work again in the past six months or so.

I do not, I am afraid, favour this line of argument. I am not convinced that demand is not capable of absorbing the increased production; I do not agree that curbed production is a prerequisite to more favourable rates for jute goods and, therefore, for IJMA mills; and I am against the current proposals to re-seal any proportion of the looms.

Moreover, the timing is wrong. For, we are on the threshold of the new jute season, and the prospect of a good crop has already caused the raw jute market to be quieter in tone and sentiment. Just as, in the current year, prices of the raw material refused to follow the trend in the finished goods market, I expect that, in the year we are about to start, the quotations for jute goods will not be influenced to any substantial degree by declines in raw jute prices. This lack of a corresponding drop in goods prices should itself restore a better margin for the mills industry.

The timing is wrong, secondly, if we consider the fact that July/December are the months of peak shipments. In 1954, for example, stocks fell from 86,900 tons at the end of June to 69,600 tons at the end of December. Again, in 1955, jute goods stocks registered a decline from the June-end figure of 87,600 tons to 63,500 tons by December-end. It is inevitable that the better shipments in the second half of 1956 will, at the least, ensure that stocks are not further added to.

For a third reason, the timing is wrong. There is still the confidence that Russia will emerge, sooner or later, as a large-sized customer. It may be sooner than we believe, especially if Russian exports to India in the immediate future turn out to be substantial. If stocks are, in fact, reduced by the artificial method of controlling production, the sudden emergence of a Russian order will cut deeply into the then current stocks, and enable speculators to have a heyday in jute goods markets.

Finally, I do not believe that stocks at a level of around 120,000 tons are too high. I prefer, if I may say so, such a level. For, so long as stocks are around 120,000 tons, even a sudden order will not permit of a speculative bull squeeze. In other words, a higher level of stocks guarantees more stable price conditions: and stable markets more than any other factor will ensure stable demand for India's jute goods.

✱

THE PENINSULA

(Continued from page 1167)

As to the prospects, over and above the three assets that I have enumerated, there are a number of other considerations that should attract the attention of the investor. The land in the vicinity of the new factory site is known to be, as I have already pointed out, most suitable for the growth of sugarcane. The company has purchased 500 odd acres, and has taken a lease in respect of another 1,200 acres. This acquisition of land, by purchase and lease, ensures the regular availability of sugarcane to the company.

Secondly, the fact that Sir T. S. Venkataraman is the Chairman guarantees that, on the technical side, the sugarcane grown will be the best possible in quality and the highest possible in yield.

Thirdly, the percentage of recovery in Madras is just below the all-India recovery, at 9.21 per cent. The all-India percentage, of course, is placed higher partly because of the fact that the extraction in Bombay is at the substantially better level of 11.68 per cent. In Bombay, most of the sugar mills have arrangements for the growth of sugarcane on their own farms: this is responsible for an improvement in the quality, and, consequently, the company expects that its recovery will, for this reason, be not less than 10 per cent.

Fourthly, it is hardly necessary for me to point out that, with the increase in national income and per capita income envisaged by the Second Plan, demand for sugar is bound to increase. On this score, therefore, the company can confidently expect that its production will find a ready market.

Fifthly, the directors expect that, on the basis of a 200 days crushing season and a recovery of 10 per cent, it will be possible to produce 15,000 tons of sugar. In these circumstances, the profit anticipated, after making provision for taxation, is Rs 10 lakhs.

Finally, the profits earned by the company in its first full year of production, in 1959, are held to be sufficient to pay the preference dividend, and any arrears thereof, as well as the beginning of a return to the ordinary investor.

The second start for the Cauvery Sugars is, for reasons that I have indicated, by all means most auspiciously attended in terms of management, of site and of the Board of Directors.

STOCK EXCHANGES

(Continued from page 1170)

Bombay

Bombay, June 20.

AFTER the recent setback, equities on the Bombay Stock Exchange registered widespread gains during the week under report. This was mainly due to speculative buying induced by improved sentiment. Although profit-taking at higher levels reduced some of the earlier gains, the market finished the week on a steady note.

The initial firmness of the market was mainly due to the announcement of the new cotton policy, while the reports of Mr Deshmukh's resignation after Mr Nehru's return from abroad was bullishly construed. It was felt that there would not be any jolts on the financial front for some time and this induced a measure of confidence; and speculators came out to support the market, resulting in widespread gains. The closing levels for the week showed, however, a mixed trend.

TEXTILES:—Following the announcement of the new textile policy by the Government and the postponement of the proposed additional levy on cloth, Textile shares staged a spirited rally accounting for a handsome recovery. Operators were, however, found to be cautious in their commitments on the feeling that the effect of modernisation and expansion could not adequately reflect on the export offtake for some time to come.

Bombay Dyeing, after improving at one time to Rs 660-10 from Rs 642-8, finished the week at Rs 659-6. Central India rose to Rs 150 from Rs 148; Century to Rs 570-12 from Rs 563-8; Svadeshi to Rs 257-8 from Rs 251 and Kohinoor to Rs 374 from Rs 367-8, to finish the week at Rs 151; Rs 568-8; Rs 254-8 and Rs 371-8 respectively. Simplex met with good demand upto Rs 220-8 from Rs 217 following the increased dividend, to finish at Rs 219. Indu Ordinary changed hands at Rs 13-13-6 to Rs 13-15; Poddar at Rs 183-12 to Rs 185; Ahmedabad Advance at Rs 200 to Rs 201-4 and Tata Mills at Rs 56-4 to Rs 56-12.

Steels:—Prices in this section fluctuated widely due to speculative buying and selling. Tata Ordinaries opened at Rs 198-12 and, after alvancing steadily to Rs 205, receded again to Rs 204-8, finishfor the week better at Rs 204-12. Similarly, Indian Irons moved between Rs 36-11 and Rs 38-1, to finish at Rs 38.

Opinion is sharply divided about the dividend outlook for 1955-56. While the long-term outlook for Steel shares remains optimistic and the shareholders are bound to reap the benefits of the current expansion in the long run, it is becoming increasingly clear that both the TISCO and IISCO will have to adopt a conservative policy in the matter of dividend until the programme is fully completed, that is, around 1959.

Miscellaneous:—In this section, Cement shares ruled generally steady. ACC changed hands on the ex-rights basis at Rs 195 to Rs 197. Digvijay were marked slightly higher at Rs 193 against Rs 190-8.

Sugar shares were a steady feature, Belapur changing hands at Rs 236-8 to Rs 238 and Phalton at Rs 156 to Rs 157. Bhopal were marked at Rs 13-12.

Shipping shares were rather quiet, Scindia hovering narrowly around Rs 18-11 and Great Eastern around Rs 18-1.

Among Automobile shares, Hindustan Motors were maintained at Rs 10-2 and Premier at Rs 83.

Miscellaneous shares came into limelight and there were signs of broadening interest, thanks to the belief that satisfactory prices would be obtained in the next few sales in view of the possibility of better quality teas arriving on the market There was a marked expansion in turnover at enhanced levels. Most prominent scrips were, Banarhat rising to Rs 380 from Rs 364 quoted in the previous week; Hantapara to Rs 240 from Rs 222; Patrakola to Rs 198 from Rs 191 and Tellapara to Rs 175 from Rs 170. Brooke Bond changed hands at Rs 23 to Rs 25; Dhelakhat at Rs 22-6 to Rs 23; Hasimara at Rs 39 to Rs 39-10; Basmatia at Rs 40-8 to Rs 41 and Teloijan at Rs 31 to Rs 32-8.

Sugar shares developed a hardening tendency on better advices from the commodity market. Carew met with renewed buying from interested quarters, resulting in a further rise to Rs 104 from Rs 9-2. Belsund hardened to Rs 12-1 from Rs 11-5; Cawnpore to Rs 29-5 from Rs 20 and Champarun to Rs 30 from Rs 29-4. Ramnugger, after touching a low of Rs 26-12 from Rs 28-14, recovered partially at the close to Rs 27. SKG remained almost unchanged at Rs 13-6.

In the Engineering section, Indian Irons were subjected to alternate bouts of buying and selling; but the scrip closed at the slightly below the best level for the week. This is mainly due to the fact that the market has now fully digested the effects of the Indian Iron's possible issue of capital at a premium. The scrip opened at Rs 37-2 and, after touching a high of Rs 38-4, finished the week at Rs 37-14. After market hours on Thursday, there were buyers at Rs 37-12 with sellers at Rs 37-13.

Among other Engineering scrips Braithwaite were a very steady feature at Rs 28-8, while Jessop recovered to Rs 35-6 from Rs 34-14 and Richardson to Rs 26-12 from Rs 26-2. TEXMACO after touching a low of Rs 23-13 and a high of Rs 24-11, finished at Rs 23-15.

Miscellaneous issues, after ruling quiet early in the week, steadied up toward the close in sympathy with the general upto Rs 7-7 from Rs 7-5. Orissa Minerals general trend of the market, Indian Copper were a bright spot and firmed scored Rs 2 at Rs 28-12 and Karanpura Development As 8 at Rs 25-4.

In the Paper section, Orient recovered to Rs 39-6 from Rs 38-10, while India Pulp hardened further to Rs 26-2 from Rs 25-12. Titaghur, after being marked back to Rs 44 from Rs 44-10, closed better at Rs 44-1. Shree Gopal were enquired upo Rs 19-12 from Rs 19-6 following the maintenance of the dividend.

Elsewhere. NICCO forged ahead to Rs 36-14 from Rs 24-12 on renewed demand in view of the brighter outlook for the company. BIC moved narrowly between Rs 11-2 and Rs 11-5; India Steamship between Rs 9-3 and Rs 9-6; Sone Valley between Rs 8-13 and Rs 8-15 and Dunlop Rubber between Rs 30-6 and Rs 30-10. Indian Cable were rather quiet at Rs 34-10 due to lack of fresh support, while Martin-Burn, Metal Box and Angelo Brothers were nearly maintained at Rs 24-13; Rs 28-10 and Rs 21-12 respectively. Celer were better at Rs 11-2 against the recent low of Rs 10-13. Rallis were neglected around Rs 45 as against Rs 48-4 quoted in the previous week. Rohtas changed hands at Rs 24 to Rs 24-5; National Carbon at Rs 27 to Rs 27-8 and Alkali Chemicals at Rs 21-10 to Rs 22-8

FOR THE INVESTOR

(Continued from page 1147)

(A) of the order of Rs 8 lakhs in two years.

Forbes Forbes Campbell? Take Simplex. The (D) of 20 per cent and the (A) of Rs 15.11 lakhs in two years justify the choice.

Figures are unnecessary to make of Bombay Dyeing a choice.

Killicks is enough to warrant serious consideration of Kohinoor.

The list is almost done: Other companies which, I think, fulfil MIDA: Arvind, and Bradbury, Elgin and Khatau, Shorrock Spinning and Standard, Sassoon Spinning and Vishnu Cotton.

£ R$

Investment Suggestion

AT roundabout Rs 70, TISCO's renunciation letter would cost the investor Rs 175 for a full share.

In the first place, this is 12½ per cent to 15 per cent cheaper than the ex-rights share quoted in the forward list.

In the second place, by so investing, the investor gets the opportunity to buy Tata Ordinary on the instalment plan.

In the third place, once the instalments are all paid, the two classes of shares will have an identical status and get the same dividend.

In the fourth place, and meantime, the partly-paid shares will get a dividend on a pro rata basis.

In brief, an investor through the process of the letter of renunciation gets, on an easy payment basis, a security with a present yield of over 4 per cent free of tax and with all the glamour of a growth stock.

✱

BALANCE-SHEET REVIEWS

(Continued from page 1148)

Taxation: Rs 3,000 (Rs 2,500) for Taxation Contingency Reserve: Rs 1,000 (same) for Development Reserve and Rs 75,000 (nil) for Coal Washing Plant Reserve, maintained the dividend on the Ordinary shares at Re 1 per share.

In the case of the Ondal Coal Company, raisings from the Karanpura Mining Syndicate's quarries have risen to 75,768 tons from 70,460 tons and despatches to 75,993 tons from 71,389 tons. The net profit is, however, substantially lower at Rs 22,197 against Rs 1.08 lakhs; but the dividend is maintained at As 8 per share, thanks to a large sum of Rs 1.06 lakhs brought forward from the previous half-year.

The Standard Coal Company has reported a net profit of Rs 50,410 as against a loss of Rs 1.23 lakhs in the previous half-year. The dividend is maintained at As 8 per share, the previous half-year's dividend being paid out of transfer from Reserves.

The Pench Valley Coal Company, in the managing agency of Shaw Wallace & Company, has also maintained the dividend at As 12 per share for the half-year ended 30th September, 1955. Raisings are higher at 2.22 lakh tons against 2.08 lakh tons and despatches at 2.26 lakh tons against 2.07 lakh tons. Sales have shown a rise to 34.63 lakhs from Rs 31.72 lakhs, while the net profit, before Taxation and Depreciation, amounts to Rs 5,46,254 as against Rs 4,70,593 in the previous half-year. The Depreciation is provided Rs 1.28 lakhs (Rs 1.42 lakhs): Taxation Rs 2.05 lakhs (Rs 1.52 lakhs) and Development Reserve Rs 1.00 lakh (Rs 75,000).

✱

WORLD OF INSURANCE

(Continued from page 1158)

Once again, as Mr Karamchand Thapar puts it, the company of which he is Chairman, the Indian Trade and General Insurance Company Limited, has been able to report a further expansion in business. Premium income shows a favourable trend. And, though the surplus reported in the Fire Department is reduced, this is much more than offset by the transmutation of a loss of Rs 1.44 lakhs in the Accident Department to a surplus of Rs 48,843. After making the usual provisions to reserves for unexpired risks, Indian Trade and General has been able to increase its dividend payment from Rs 1-8 per share to Rs 2 per share.

In thus describing Indian Trade's performance in 1955, Mr Thapar has gone on to make some delightfully provocate statements. His reference to the nationalisation of life insurance is pithy, for the reason that "so much has already been said on the subject." But it is this point which leads him to the consideration of general insurance —which is now "in the limelight" with "those who think that nationalisation is the panacea for all ills" now focussing their gaze on this sector.

Mr Thapar has adduced facts and figures to prove that, whether relating to provisions for reserve or commission and management expenses or the claims ratio, the company can "take pride in the sound and conservative lines upon which we have managed and continued to manage our business."

Indian Trade's Chairman concedes that the industry 'suffers from certain long-standing ills which must be put right'. Though he is silent as to what these are, Mr Thapar has urged that it is wrong to approach Government for help to set matters right. His contention is that no amount of legislation 'will turn bad management into good management' and that at police methods 'are no more likely to be successful in the future than they have proved to be in the past.

His suggestion, rather, is that 'it is not impossible for Indian offices acting together with patience and forbearance to find an equitable solution to their problems'; and he asserts that 'it is a terrible confession of ineptitude and weakness in the trade if we cannot put our heads together and find a remedy for our own ills.' Perhaps Mr Thapar will act on his own suggestion; he certainly has the stature, as an industrialist and in insurance, to give a lead in this respect.

UNIQUE IN LUXURY . . . IN SPACIOUSNESS . . . IN ELEGANCE
President Classic AND Commander 1956
PRODUCTS OF
STUDEBAKER-PACKARD

The big new PRESIDENT CLASSIC and COMMANDER are stand-outs in comfort, performance and safety. Designed and produced after the merger of the Studebaker and Packard Corporations, they carry the impress of Packard's prestige engineering and craftsmanship and Studebaker's leadership in styling.

They are powered by the world's most efficient V8 Engine. The conventional six cylinder engine, designed in pre-war years, is an out-dated type of power unit now being discarded by leading automobile manufacturers in America.

In India, the President Classic and the Commander alone are powered by a perfected Over-Head Valve V8, which is the most powerful engine manufactured in this country.

New features like the Pyramid design low-level ride, dual safety-action brakes, new safe-lock doors, "Cyclops-eye" speedometer, plus all-steel "shield of protection" body, make these cars ideally suited to today's motoring needs.

The COMMANDER is a unique car in its price-range and the grand new extra-spacious PRESIDENT (120 1/2" W.B.) is the only LUXURY car available in India.

WITH THE ALL-NEW V8 (Over Head Valve) ENGINE

For the Investor

Paper and the MIDA Test

Investment Gossip:

IN the Lyons Range, the bearish touch was very much in evidence during the earlier part of the week. At that time, I was told that this was the sign of a weakness that derived from the squaring of commitments by those who had a position that was slightly more overbought than was comfortable. I was reassured that, once the settlement was left behind, the market should improve once again. But Lyons Range, over the past two days, has proved the veracity of the comment expressed in a leading article of Indian Finance, which suggested that movements on the stock exchange were determined and influenced by the snap decisions of speculative elements, without regard to the reactions that are normally to be expected from the investor's point of view. Lyons Range, in the grip of the bears, gets fresh sustenance for depressed rates by virtue of the intolerable badla system.

I wish to deal with the weaknesses exhibited by Lyons Range only to the extent that the investor is thereby precluded from normal activity and to the degree that such conditions are by no means conducive to a healthy investment climate. Reform of the Calcutta stock exchange, and in particular of such of those rules and regulations that refer to the badla system, is most urgent. I cannot lay too great a stress on action being considered and taken by the Committee; and I personally do not have any doubt that, unless the Committee bestirs itself, New Delhi, which, indubitably, is looking askance at the antics of the Calcutta stock exchange, will move in the matter and issue directives and require action to be taken on lines that may not be very pleasant to those that thrive on Lyons Range.

Leaving aside the state of the market, I should like to proceed with my discussion of beacon-light industries; and few sectors of the Indian economy are more fitted for consideration from this view-point than the paper-making industry.

The prospect for this industry is again brought out in the statement made last week by Mr C. C. Mukharji, in presiding over the annual meeting of the Calcutta Paper Traders Association. According to Mr Mukharji, the Second Plan target of doubling the production of paper to 350,000 tons was an assessment that, to him, appeared to be not quite realistic. In other words, the selling organisations for paper have, through their representative associations in Calcutta, indicated that their estimate of the demand for paper over the next five years is substantially higher than the production being aimed at.

So, as with cement and coal and steel and cloth, paper in the next five years will have no trouble at all in finding a ready market. The danger is not that there will be insufficient demand for paper, but that Indian production will not be able to satisfy indigenous demand.

In this background, it is obvious that the paper companies are assured of the brightest prospects. All the major units have in this regard, embarked upon expansion programmes which will increase production and, therefore earn bigger profits. The MIDA test which, I pointed out last week, would by its application, enable the investor to possess the Midas touch may be favourably applied to all the major paper producing companies.

At the head of the list, of course, is the Titaghur Paper Mills under the managing agency of Heilgers. The combination of Titaghur and Heilgers is a by-word for efficient management and integrity of the highest order. The DA of MIDA is also significantly satisfactory with the last dividend at an annual rate of 20 per cent and additions over the past year amounting to Rs 68.66 lakhs.

The Karamchand Thapar—managed Shree Gopal attracts the investor with its dividend at 12½ per cent per annum, and points to a growth prospect with its additions over the last 12 months of Rs 15.3 lakhs.

The Birla Orient, a favourite in the Calcutta Stock Exchange, is justifiably so with its dividend at 12½ per cent per annum and with additions aggregating Rs 35.78 lakhs during the last year.

India Paper Pulp, whose managing agents, are Andrew Yule and Co., pay out the good dividend of 14 per cent per annum and the company has additions to block of the order of Rs 4½ lakhs—during the last year.

The appeal of Bengal Paper—managing agents, Balmer Lawrie & Co.—cannot be measured in the figures pertaining to balance-sheet. The dividend of 20 per cent per annum attracts; additions seem insignificant, but the investor should remember that the company issued a circular which stated that large-scale expansion was to be taken in hand.

Star Paper (Bajoria) should engage the investors' attention with its dividend of 15 per cent per annum and additions to block of Rs 12½ lakhs in the last two accounting periods.

Moving down South, there are two paper companies which merit

HIGHLIGHTS

The foot-and-mouth, if we remember right, is a disease that afflicts the bovine population.

In the case of Mr Dulles, the malady can more properly be called foot-in-mouth.

For, that is exactly what happens every so often: Mr Dulles has only to open his mouth, and the danger is that he will put his foot into it.

Look at the record: Goa, inclusion of Kashmir in the SEATO agenda and now...but let us proceed slowly and step by step.

Some weeks ago, Mr Eisenhower defended the neutralist nation—a standpoint which he said did not necessarily mean indifference to right and wrong, to decency and indecency.

The US President added that Mr Dulles would shortly be clarifying American policy in this regard.

Came the clarification; and with it the deluge of disapproval—from the American press as well.

For, what the US Secretary of State did was to take the diametrically opposite stand.

Neutralism, to Mr Dulles, is immoral. The *timing* of the statement? A few weeks before Mr Nehru and Mr Eisenhower were to hold discussions that could be calculated to improve Indo-US relations!

Again, however, we are straying from the point. What *exactly* are we to understand by such contradictions in high US office? Eavesdropper seeks to answer the question, launching a broadside in passing at Mr Dulles.

attention. Firstly, the Harveys-managed Punalur Paper, although the dividend rate is low at 5 per cent, is well thought of in Madras circles, especially for its growth prospects, as its additions to block are Rs 18 lakhs in the last two years.

Finally, Mysore Paper, director managed, has increased its block by nearly Rs 75 lakhs in the last two years—an index of the expansion that the paper industry has embarked upon and will continue to embark upon.

Investment Notes:

British Burma Petroleums continue to receive good support at rates varying from Rs 4-5 to Rs 4-7. It is generally expected that the dividend for the year ended 31st March 1956 will be higher than that of the previous year. The announcement may be made sometime next month.

Premier Constructions, in Bombay, are ruling firm at Rs 192. There are hopes that capital reconstruction scheme will be finalised at an early date.

The Great Eastern Shipping Corporation has decided to increase the Ordinary capital, subject to the sanction of the Controller of Capital, Issues, by offering one new share for every share held. The Government permission is expected to be received by the end of July. It is felt that the company may make the issue at par. Shares are presently quoted around Rs 18.

Bombay Burmahs are subjected to alternate bouts of buying and selling, mainly due to conflicting rumours with regard to the forthcoming dividend. But there is a general feeling among most circles that the dividend will be maintained despite the fall in earnings on tea.

The Ordinary shares of the Delhi Rohtas Light Railway, Hukumchand Mills of Indore and 5½ per cent Debentures of Burmah Shell have been admitted to cash dealings on the Bombay Stock Exchange.

Cauvery Sugar & Chemicals have proposed to offer for public subscription a capital of Rs 49 lakhs in the form of 29,000 Ordinary and 20,000, tax-free, 6 per cent Cumulative Preference shares, both of Rs 100 each, at par.

There are reports that the question of the sale of Emerald Valley Estates, mentioned in these columns a few weeks ago, has now been dropped as the offer has not been passed by the general body at the recently-held meeting.

£R$

Investment Briefs:

Alembic Chemicals have maintained the dividend at 8 per cent for 1955.

Emerald Valley Estates have reduced the dividend from 30 to 25 per cent for last year.

Lakshmi Mills, Coimbatore, have maintained the dividend at 25 per cent for the year ended 31-3-1956.

Alcock Ashdown, Bombay, has maintained the dividend at Rs 12-8 per share for 1955.

Excellent Results of Metal Box

Balance-Sheet Reviews:

THANKS to a rising demand for packaged goods—paints, pharmaceuticals, baby-foods, processed fruits and vegetables, and lubricating oils, etc—the Metal Box Company of India Limited has produced excellent working results for the year ended 31st March, 1956.

Sales have shown a substantial rise to 4.95 crores from Rs 3.49 crores in the previous year. It is encouraging to note that, despite the rise in manufacturing expenses from Rs 21.65 lakhs to Rs 33.21 lakhs and in "Salaries and Wages" from Rs 83.25 lakhs to Rs 1.00 crore, the net profit for the year, before providing for Taxation and Depreciation, has amounted to as much as Rs 74.11 lakhs as against only Rs 45.02 lakhs.

Due to increased earnings, the amount set aside for Depreciation has been raised to Rs 11.28 lakhs from Rs 9.74 lakhs; Taxation to Rs 31.00 lakhs from Rs 13.25 lakhs and General Reserve to Rs 10.00 lakhs from Rs 5.00 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares from 12½ to 16¼ per cent.

The balance-sheet, as on 31st March 1956, shows a paid-up capital of Rs 1.45 crores—Rs 1.15 crores in Ordinary shares of Rs 10 each and Rs 30.00 lakhs in 6 per cent taxable Redeemable Cumulative Preference Shares of Rs 100 each—against which General Reserve is shown at Rs 69.74 lakhs. The gross block at Rs 1.88 crores is depreciated by Rs 78.01 lakhs to show a net block value of Rs 1.10 crores. Liquid assets at Rs 241.87 lakhs are substantially higher than sundry liabilities, at Rs 137.50 lakhs.

Prospects for the current year are good. In this connection, it may added that national investment, during the Second Plan, will create an expanding level of demand, and the supply of goods to satisfy this will be a condition both of the success of the investment programme and of continued political stability To this end, the Metal Box and its customers have a major contribution to make, the processed food industry in particular being strategically placed. It is to receive active encouragement in the Second Plan, and the allocation for horticulture has been increased from Rs 1 crore to Rs 9 crores. The development of this industry involves co-operation between large and small-scale industries since the safe preservation of food requires precision-made cans that only high-speed equipment can produce. In this respect, the Metal Box has got bright prospects.

The company has made good progress in new developments. The expansion in demand for aluminium pilferproof seals has been satisfactory, and manufacture in Calcutta has now commenced with consequent savings in freight costs to many customers. Also, progress in the manufacture of polyethylene bags has continued; some printing machinery has been installed and more is in order. The potential demand for products made from this material is considerable and plans have been announced by two world famous manufacturers for production in India of polyethylene flake—the basic raw material required.

McLeod Jute Crop Results

The difficult trading conditions generally experienced by the jute industry, during the half-year ended 31.12.1955, are fully reflected in the working results of the jute mills in McLeod group. First, a further increase in working costs as a result of the Third Tribunal Award, which came into force as from the 6th November 1955 granting an increase of about Rs 3-12-9 per worker per month and increasing the mills' working costs by about Rs 12 per ton, adversely affected the competitive position of the industry. Secondly, raw jute prices continued at a level at which it was not possible to transact business in manufactured goods at a profit simultaneously although there was a steady demand for manufactured goods throughout the period.

For obvious reasons, Chitavalsah has reduced the dividend from As 12 to As 10 per share; Empire to As 8 from As 12; Kelvin to Rs 7½ from Rs 10 and Waverley to one anna from two annas. The only exception is Alexandra, which has maintained the dividend at Rs 5 per share. The following table shows the comparative figures of the sales made and the profits earned:

SALES.

Companies.	Half-year ended 31-12-1955	Half-year ended 30-6-1955
	Rs.	Rs.

£R$

Dividend Reduced by Shaw Wallace

Messrs Shaw Wallace and Company Limited has reported a decline in earnings for the year ended 31st December, 1955. The net profit, before providing for Taxation and Depreciation, amounts to only Rs 37,23,019 as against Rs 44,35,954 in the previous year; and this is mainly due to the recession in world tea prices.

Except Depreciation amount which has been raised from Rs 1.03 lakhs to Rs 1.37 lakhs, all other allocations have been reduced: Taxation from Rs 20.18 lakhs to Rs 16.03 lakhs; General Reserve from Rs 4.00 lakhs to Rs 3.00 lakhs and Investment Reserve from Rs 6.50 lakhs to Rs 6.00 lakhs. The dividend on the Ordinary shares has been reduced by 2½ per cent to 10 per cent for the year.

The directors have, in their report, stated that, since the close of the year, business continues at a satisfactory level. Provided this tendency is maintained, it is anticipated that the 1956 results will not show a substantial difference, notwithstanding the adverse effect of the 1956 Companies Act on the earnings from Managing Agencies.

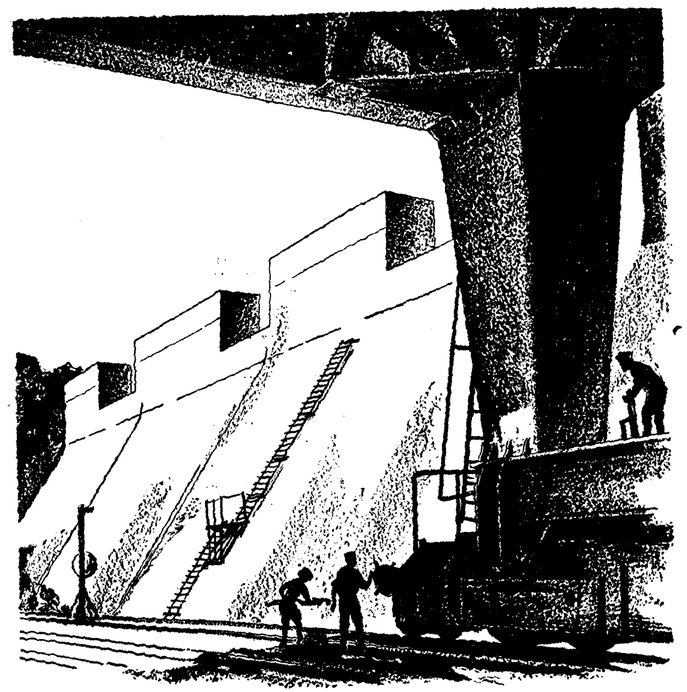
£R$

Shree Gopal Paper Maintains Dividend

The Shree Gopal Paper mills Limited has presented the reports and accounts for the half-year ended 31st December, 1955. Production is slightly higher at 6,895 tons as compared to 6,880 tons in the previous half-year. Efficiency is kept up at a high level and the mills continue to turn out paper of a uniformly high standard throughout.

Sales of paper and stationery have risen to Rs 1.14 crores from Rs 1.10 crores in the previous half-year, although sales of hydrogenated oil and cans have declined to Rs 25.77 lakhs from 40.92 lakhs. The net profit, before setting aside for Depreciation and Taxation, is slightly lower at Rs 26,22,909 against Rs 28,42,244. The directors have, after providing Rs 5.33 lakhs (Rs 6.21 lakhs) for Depreciation; Rs 9.50 lakhs (Rs 9.30 lakhs) for Taxation; Rs 96,695 (Rs 33.078) for Development Rebate Reserve and Rs 2.50 lakhs (Rs 5.00 lakhs) for General Reserve, maintained the dividend on the Ordinary shares at As 10 per share.

In respect of expansion scheme, the directors state that further headway has been made in the modernisation of the existing paper machines. Orders for almost the entire equipment, required for the reconstruction of the three machines, have been placed. The reconstruction programme is likely to be completed by April, 1957 when the production will be stepped up to about 50 tons per day.



The Hydrogenated Oil factory worked regularly, though at a reduced capacity; and produced 1,666 tons of vanspati as compared to 2,439 tons in the previous half-year. The position in respect of sales is satisfactory; and the company has sold all that it produced during the period under review.

£R$

Sri Krishnarajendra Mills

Despite the acute competitive conditions that prevailed in the textile trade, Sri Krishnarajendra Mills, Mysore, have produced excellent working results for the year ended 31st March, 1956. There has been an increase in production in all the departments of the mills—production and profits being the highest obtained for the past several years.

Sales for the year have risen to as much as Rs 1.17 crores from only Rs 97.52 lakhs in the previous year. Naturally, the net profit, before Taxation and Depreciation,

is substantially higher at Rs 24,41,095 as against only Rs 17,77,697. Apart from setting aside a sum of Rs 1.00 lakh for General Reserve and the Depreciation amount being reduced to Rs 5.46 lakhs from Rs 6.00 lakhs, Taxation has been raised to Rs 10.00 lakhs from Rs 5.44 lakhs and Dividend Equalisation Fund to Rs 2.00 lakhs from Rs 30,000. No provision has, however, been made for Cotton Price Fluctuation Reserve as was done in the previous year when a sum of Rs 2.35 lakhs was allocated to this item. Even after these increased allocations it has been found possible to raise the dividend from 10 to 14 per cent (including a Bonus 4 per cent) for the year.

The gross block stands at Rs 81.44 lakhs. After deducting the total depreciation provided from time to time amounting to Rs 65.63 lakhs, the net block is Rs 15.81 lakhs.

The directors have decided to expand the mills by installing an additional Spinning Unit of 12,180 spindles, involving a capital outlay of about Rs 22 lakhs. Arrangements are in progress to erect and to put into commission the said plant as early as possible. It is very encouraging to note that the directors have been able to put through this expansion programme without having recourse to any borrowing.

£ R$

Other Textile Results

The working results of the Elphinstone Spinning and Weaving Mills, Bombay, for the year ended 31st December 1955, are encouraging, thanks to a better off-take and higher prices obtained for cloth. Sales have risen to Rs. 1.89 crores from Rs 1.78 crores in the previous year, while the net profit is substantially higher at Rs 15,73,363 against only Rs 6,29,677. The Depreciation amount has been raised to Rs 5.00 lakhs from Rs 1.75 lakhs and Taxation to Rs 5.00 lakhs from Rs 85,000. Even after these increased allocations, the directors have found it possible to raise the Ordinary dividend from 6 to 10 per cent for the year.

The Coimbatore Murugan Mills Limited has reported a sizable increase in sales of yarn and cloth from Rs 48.32 lakhs to Rs 56.64 lakhs for the year end 31st December, 1955. The net profit, before Taxation and Depreciation, amounts to Rs 6,94,577 as against Rs 4,98,135 in the previous year. The directors have, after allocating Rs 2.27 lakhs (Rs 2.54 lakhs) to Depreciation: Rs 2.19 lakhs (Rs 2.35 lakhs) to Taxation and Rs 44,535 (Rs 57,121) to Contingency Reserve, raised the dividend on the Ordinary shares from 17½ to 20 per cent.

£ R$

Twyford Tea Reduces Dividend

Despite an increase in production from 905,478 to 970,321 pounds, the Twyford Tea Company has reported a substantial decline in earnings for the year ended 31st December, 1955. This was mainly due to the fact that the net average sale price realised per pound was only 200.83 cents as against 276.76 cents in the previous year, while the cost of production was higher at 166.72 cents per pound against 152.80 cents.

The net profit for the year, before Taxation and Depreciation, is only Rs 2,89,616 as against Rs 9,82,939 in the previous year. A sum of Rs 32,104 (Rs 16,693) has been set aside for Depreciation and Rs 1.05 lakhs (Rs 3.65 lakhs) for Taxation. No provision has been made for General Reserve as against Rs 2.60 lakhs set apart in the previous year. For obvious reasons, the dividend is reduced from 25 to 20 per cent.

£ R$

Bridge & Roof Maintains Dividend

Bridge & Roof Company (India) Limited had a very successful period during the half-year ended 31st December, 1955. The item "Work Completed" is shown higher at Rs 70.79 lakhs against Rs 63.27 lakhs, while the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 6.73,473 as against only Rs 3,45,233 in the previous half-year, thanks to renewed demand for Structural and Civil Engineering products. The directors have, after setting aside Rs 57,226 (Rs 55,931) for Depreciation; Rs 2.91 lakhs (Rs 1.16 lakhs) for Taxation and Rs 2.00 lakhs (Rs 75,000) for General Reserve, maintained the dividend at 7½ per per cent for the half-year.

The directors have, in their report, stated that, in view of the need to add to the company's plant and finance stocks and work-in-progress, recommended a substantial addition to Reserve in preference to any increase in dividend.

First Fruits of Flexibility

ONE distinct advantage of the last meeting of the Central Advisory Council of Industries is that there is better prospect now than before of a good hearing for the critics of the Plan both from the Government and the public. Formerly, there was a degree of intolerance of criticism and suggestion for change due primarily to the belief that the motive behind them was to whittle down the value of the Plan for the common man. This, in turn, was due largely to the manner in which the original Plan-frame was conceived and presented to the public. While, today, there may be a general feeling of thankfulness that the authors of the Plan-frame taught the country to think in terms of thousands instead of hundreds of crores, they also did a certain amount of disservice in importing an element of demagogy in a context in which dispassionate academic interest is more appropriate.

It is quite possible that we owe all the ambitious aims of the Second Plan to the eagerness to please the public at large. But, once the good work has been done, it would be wise to sift it from the bad and eliminate the latter as completely as possible. That process is, in the nature of things, a complicated one, liable to frequent stagnation and even setback. But, it must be persisted in by the Government and helped forward by the press and the intelligentsia. The first step toward that end is to understand how it began, and what course it has so far followed and should follow in the future.

Its origin lies in the realisation by the Government that not only was the Leftist bias of the Plan overdone, but that its basic assumption in its financial and production aspects are out of touch with the realities. While the Government were fully in sympathy with the high targets and the policy of encouraging cottage industries at the expense of mills and factories, they also recognised the folly alike of appearing lukewarm about new employment and accepting the Plan-frame as the last word on the subject. Though the criticisms of the time were not then accepted, there is no doubt that they went home. A signal success was achieved when the idea of flexible planning and planning on a year-to-year basis was accepted; which meant that the Government would be ready to effect changes as soon as the first sign was visible that the critics were right. Flexibility in other words means responsiveness to experience instead of obduracy.

The question, therefore, is: When at what stages and to what extent will experience bring about the necessary changes? On the financial side, the last budget showed that the Government were making their plans only for a year and that they expect the nation's fiscal system as a whole, and the financing of the Plan particularly, to change with the impact of economic development on national income, distribution and taxable capacity. Taxation, public expenditure and treatment of private enterprise have so far been determined by the suddenly awakened social conscience of a popular Government new to power. Though it has not been followed by any untoward consequence, its value as a motive power of economic development is yet to be ascertained accurately. Even its impact on taxation and savings is, from this point of view, yet unknown

The main value of Dr Kaldor's Report on taxation lies in the prospect of Government approaching the question in the future from a new standpoint, and not merely from the hide-bound ideas of the Taxation Enquiry Commission. If it is found, at a not distant date, that the adoption of some of Dr Kaldor's suggestions would lead to less tax evasion, bigger tax yields and greater enterprise in the private sector, a very significant modification of the old ideas will surely be effected

It is, however, on the production side that modifications are of more direct importance to the masses and to private industry. Here, Mr Nehru himself initiated the process of rational reconsideration. In the classic fight between the enthusiasts for khadi and Ambar Charka, on the one hand, and those who wanted to ensure the production of cotton textiles, on the other, the Prime Minister declared himself against mere considerations of sentiment. Though not much has been gained since then, it is a matter for gratification that the targets for new Ambar Charkas have been reduced and that the ceiling for new spindles and mill cloth production have been raised. It is still possible that the claim made for the Ambar Charka may be proved true and that, as the Plan progresses, it may be introduced in larger numbers over wide areas. In that case, it should be welcomed and not regretted.

What is important is that adherence to the policy of bolstering cottage industries has now been breached and that the Government have recognised that risks of shortage for home consumption or for export market should on no account be incurred. The policy of flexible planning has, thus, begun to gain concrete shape. Industrial targets are being revised as new evidence of larger demand than was formerly assumed begins to accumulate. All the discussions on the Plan-frame were restricted to questions like the scope for increased taxation, the limits of deficit financing, the scale of new employment and the relative claims of cottage and factory production. These are precisely the questions in which biassed thinking, as a result of class affiliation, has the largest scope.

It is no wonder that the earlier discussions could do little more to shake the Government out of their former certitude and induce them to have a healthy doubt on controversial questions. What was required was a genuine attempt to visualise the actual working of the various forces which the Second Plan would release and the extent to which cross-purposes would threaten the very success of the Plan. That attempt has now begun to be made.

While the revision of the plans for cotton cloth production is significant, the most important is the recognition of the inadequacy of transport facilities as at present planned. The Railway Minister could do no more than hint at the possible shortage at the time of the Budget. But now, it is agreed, in the Central Advisory Council of Industries, that Rs 1,125 crores would be insufficient for expanding the transport facilities to the requisite extent. It would appear that the Railways have implicit sanction for spending the whole of the five year appropriation in three years and then ask for a further allocation. The first fruits of flexibility are encouraging. But more, much more, remains to be cultivated and garnered.

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius

Iron Ore & Geonkhalli

THERE are indications that Government are aware of the grave problems that will have to be tackled in the contingency that the present allocation for the development of the Railways will prove insufficient to make available the requisite transport capacity. In this light, it would appear that, if the allocation is expended by the Railways within the first three years, an additional budget may be provided. But, as we have pointed out in this week's World of Finance, trends in the foreign exchange holdings of Government are disquieting. This serves merely to emphasise the need for a vigorous export drive.

Conceivably, the recently announced Government policy on ores is partly motivated by the desire substantially to improve earnings of foreign exchange from export of ores. If so, we suggest that it is chicken hearted to think in terms of an export figure for iron ore around one million tons. Courageous planning will envisage a target that is nearer 10 million tons; and businesslike arrangements for the sale of such a quantity can be concluded without difficulty. Indeed, the foreign consumer is so anxious to obtain a regular supply and sizeable quantity of iron ore, that he would be prepared to extend both help and co-operation toward creating the transport facilities that would be necessitated by a higher level of ore exports.

To put it briefly, not only would we be able to increase our exchange earnings, but we would also be able to find some finance toward the development costs of transport at the same time.

Iron ore as an important exchange earner suggested itself to us two years ago: and, in recognition thereof, we published a special supplement that detailed India's ability to spare considerable quantities of the ore, and which also contained a fully-drawn scheme for a subsidiary port at Geonkhalli for the purpose.

The Commerce and Industries Ministry has been proving its mettle in gratifying manner; and it is for Mr Krishnamachari to consider whether a target of 12 million tons is not feasible; if it is, the next step is to proceed with a mechanical port at Geonkhalli—which, incidentally, would be able to take care of the ore exports the while that it relieved the congestion in Calcutta port in the matter of imports.

Geonkhalli and iron ore can, if afforded the opportunity, contribute in a large measure toward the solution of the transport and the foreign exchange problem.

Foreign Trade Trends in Post-war Japan

*

Significance to South-East Asian Countries

By P. V. N. ACHARYA

MR T. T. Krishnamachari, India's Minister for Commerce & Industries, has raised quite an amount of alarm amongst the planners of India's Second Five-Year Plan, by his casual remarks anent the possible incursion of Japanese trade on the export volume of India. He said, while addressing the Export Advisory Council recently, that India should see that its raw cotton would not reach the hands of Japanese Textile Mills. Presumably, Japan is proving a very powerful competitor to India in its export trade of cotton textiles.

Probably, this alarm may, in course of time, prove justified; and South East Asian countries like India, who have just been freed from colonial rule and who are trying to build their economy for the first time, may raise the cry that Japan has once again reverted to its "Pre-war Trade Imperialism."

In this article, we shall examine some of the basic factors that are affecting Japan's Foreign Trade policy. By this means, we will be able to know whether Japan will really be in a position to precipitate such a situation.

Export of Japanese textiles was 52.1 per cent of Japan's total exports in 1934-36, and 36.1 per cent in 1953. This happens to be the biggest item in its Export list. This single factor, however, need not create so much of an apprehension, as the basic economy of post-war Japan itself is not so very promising as to enable it to revert to anything like 'Trade Imperialism."

Japan in World Trde

Before we examine these factors we shall, in order to have a clear appraisal of the situation, see Japan's position in relation to world trade in general and to that of Asia in particular. It is estimated that the total world trade in 1952 comprised 67.4 billion dollars in imports and 84.6 billion dollars in exports. In that year, Asia's exports totalled 8 billion dollars and imports 9.7 billion dollars, leaving an import excess of 1.7 billion dollars. Asia's share of the total world trade was 10.5 per cent of the exports and 11.6 per cent of imports that year. Even before the war, Asia's share of the total world trade was not greatly at variance. It was 14.5 per cent of the exports and 12.9 per cent of the imports.

A very important peculiarity of the trade of these Asian countries is that, while most of them are politically independent, they are economically dependent on their former colonial masters.

In 1952, out of the total imports made by the total Sterling area countries in this region, imports from Great Britain comprised 20.3 per cent for Pakistan, 22.5 per cent for Ceylon, 22.4 per cent for Burma, 21.2 per cent for Singapore and Malaya combined and 18.8 per cent for India (Source—Ministry of Foreign Affairs—Government of Japan).

Further, Indonesia's imports from Netherland comprised 28 per cent of its import trade, Philippines' imports from the US form 73 per cent of its total imports, Indochina's purchases from France form 78.6 per cent of total imports.

In the pre-war period in 1938, Japan's share of the total trade of Asia was 6.3 per cent of the exports and 8.9 per cent of the imports.

Since the end of the war, Japan's share of the total trade of Asia has been even smaller. In 1949, it was 2.4 per cent of the exports and 3.8 per cent of the imports.

Since 1950, Japan's Asian trade is recovering but it is still below pre-war levels. In 1953, out of the entire exports made by the countries of Asia, 15.7 per cent went to Japan, 20.8 per cent to the US, 10.2 per cent to Great Britain and 13.6 per cent to the continental West European countries. As for Asia's imports, 14.9 per cent came from Japan, 18.7 per cent from the US, 13.9 per cent from Great Britain, and 18.9 per cent from Continental West European countries.

In 1953, the share of Asian countries in the total rade of the US, Great Britain, Germany, France, the Netherlands and Japan was as follows: Exports 9.6 per cent and imports 9.7 per cent from the US, exports 11.1 per cent and imports 8.7 per cent from Great Britain, exports 6.4 per cent and imports 8.8 per cent from Germany, exports 4.0 per cent and imports 9.8 per cent from France, exports 7.6 per cent and imports 2 per cent from Netherlands and exports 43.8 per cent and imports 26.7 per cent from Japan.

Thus, we see that Japan's trade with Asia accounts for almost half of its exports and one-fourth of its imports while, in the case of other countries, the percentages are around 10 per cent.

Again, in the total of Japan's 1937 Foreign Trade, Asian countries accounted for 53.5 per cent of the exports and 46.4 per cent of the imports.

Japan in Asian Trade

Japan has a relatively smaller part in the overall structure of Asian trade as compared with the other Western countries. This part, however small, forms a very vital factor for its economic survival both before and after the war.

Although Japan's trade position in Asia as a whole appears to be relatively good it is not very bright, if only South and South-East Asian countries were taken into consideration. In 1953, Japan's trade with the South-East Asian sphere is only 6.3 per cent of this region's exports and 7.3 per cent of its imports.

Before the war, the North-East Asian markets were much more important to Japan than those of South and South-East Asia.

In the total of Japan's 1946 foreign trade, out of 53.5 per cent exports and 46.4 per cent of imports accounted by Asia, the North-East Asian countries accounted for 31.8 per cent of the exports and 21.4 per cent of the imports.

This position was almost completely reversed after the war.

This is because of the loss of such former territories of Japan as Korea and Formosa and the retreat of Japan's influence from Continental China and also on account of various political circumstances in the North East Asian countries.

In order to determine what part Japan can play, in the post war years in the economic pattern of Asia, it is necessary for us to examine in detail some of the basic structures of Japan's foreign trade.

Postwar Changes

The entire economic structure of Japan is characterised by the following basic factors:

1. Increased industrial activity over the pre-war period.

An Indian Finance Special Study

2. Scarcity of industrial raw materials.
3. Rapidly increasing population of 1¼ million heads a year.
4. Scarcity of foods, causing an increase in import by 50,000 tons of foodgrains a year.
5. Limited domestic market owing to poor purchasing power, with an unemployed population of 650,000 in 1954.

As a result,, the only means by which the Japanese economy can survive is by its foreign trade, as shown in the following table:

AMOUNT OF FOREIGN TRADE AND ITS RELATION TO NATIONAL INCOME

Year:	Exports (in million dollars)	% to National income	Imports (in million dollars)	% to National income
1934-36 (average) ..	928	22.6	951	23.7
1947 ..	174	2.8	534	7.0
1951 ..	1355	12.7	2047	12.7
1953 ..	1275	7.9	2410	14.8

The fact that, in the post-war years, the ratios of both exports and imports to national income have fallen steeply from the pre-war figures, does not, however, show that Japan's economic dependence on foreign trade, has been minimised. On the contrary, post-war trade volume is far from being adequate to stabilise the national economy and maintain pre-war living standards. The reasons for this situation are complex, and may be enumerated as the following five factors:

1. Unequal and discriminated position of Japan in international relations, e.g. unfavourable position in regard to trade agreements concluded with countries directly after the war and its relations with the GATT.
2. World-wide structural changes in export and import markets, e.g., expansion of Communist areas and industrialisation of hitherto underdeveloped countries.
3. Restrictions of the clearing system.
4. Weakened competitive power of Japanese commodities partly due to high production cost in basic industries and partly due to the foreign exchange rate which does not reflect the real position of Japanese currency.
5. Decline in the ability of firms engaged in foreign trade due to lack of adequate financial sources, and a score of Japan's other international commitments which require post-war adjustments in many respects.

Abnormal Factors

At present, Japan's foreign trade contains many abnormal factors, such as the special procurement by the US Security forces and the spending of their personnel and dependents.

Before the war, the main trade zones for Japan were the US, South-East Asia and China. But both exports and imports with all the three zones were comparatively balanced and mutually interrelated so that, as a whole, the resulting trade returns have been agreeable to Japan.

However, after the war, Japan's foreign trade is being affected by a large import from the USA while no gainful exports are made to that country. For example, during 1934-36, imports from the US averaged 24 per cent of Japan's total imports and, in 1953, they rose to 31.2 per cent. Japan's export to the US in 1934-36 formed 18 per cent of its total exports, but remained at 17.8 per cent in 1953.

An Indian Finance Special Study

As regards trade with China, whereas exports and imports from Japan amounted to 18 per cent and 11 per cent respectively of total exports and imports in 1934-36, they fell to 0.5 per cent and 0.7 per cent in 1952.

The fact that the American market is far from being adequate as a substitute for the lost Chinese market, is a major cause of Japan's post-war trade deficit.

The cold fact remains that Japan's exports to the US cannot balance its imports. For example, Japan export's were $227 million, but imports amounted to $756 million in 1953.

Seventy per cent of Japan's trade deficit in that year is on account of this unfavourable trade with the US alone.

Again, Japan's efforts to regain its markets in South-East Asian countries after the war are being thwarted by heavy competition from various European countries. Consequently, two lines of economic thought have emerged in Japan: One favouring resumption of normal trade with China and Soviet Russia, and the other favouring Japan's economic dependence on the US.

No practical answer has yet been found.

Composition of Markets

The 'White Paper', issued by the Ministry of International Trade & Industry in 1954, poses this alarming situation. Especially in view of the fact that the year 1953 witnessed an enormous trade deficit, i.e., 755.4 million dollars, its f.o.b. exports amounting to 129.2 million dollars and f.o.b. imports to 2049.6 million dollars. This deficit is the highest in the post-war period.

As we saw, a special feature of Japan's Foreign Trade pattern is that it is extremely dependent on the US especially for imports. Japan has to depend on the US not only for staple food stuffs such as rice, wheat, soyabean, corn, etc., but also for industrial raw materials like coal, iron ore and raw cotton.

Japan's loss of trade with China is another important feature. During the pre-war period of 1934-36, 68.4 per cent of Japan's import of coal, 26 per cent of iron ore and 61.3 per cent of soyabean were coming from China; and, of its exports, 30 per cent of machinery and 49 per cent of rolling stock were annually absorbed by China. However, with the outbreak of the Korean War, Japan's trade with China has dropped to less than 1 per cent of its total trade.

AMOUNT OF FOREIGN TRADE BY MONETORY AREAS IN MILLION DOLLARS.

	Total.				Dollar Area.				Sterling Area.				Open A/c. Area.

1952 ..	1273	100	2028	100	337	31.2	1221	60.2	540	42.4	562	24.7	336	26.4	306	15.1
1953 ..	1274	100	2409	100	490	38.4	1305	54.2	317	24.9	602	25	467	36.9	502	20.8

Exports: Exports to Dollar Area countries amounted to 490 million in 1953. During the first half of the year, exports were in a boom owing to more prosperous conditions in the US and the unusual volume of steel ship exports from Japan to Panama and Liberia. However, exports to the Dollar area, starting with US, remained stagnant during the latter half of the year.

Imports: The large amount of payment to the dollar area in 1953 of $1305 million, was built mainly in the second half of the year. During the first half, there was surplus holding of pound sterling causing a switch of the import market from dollar to sterling area. However, this surplus pound reserve soon dwindled and the import market was reverted to the Dollar area. To add to that, there was a nation-wide failure of food crops in 1953, causing large volumes of food to be imported.

Sterling Area

Exports: Exports to the Sterling area during 1953 were extremely unfavourable. Pound receipts dropped to £317 million. This is due to the following reasons:

Firstly, other countries importing Japanese goods did not remove import restrictions on them to the extent originally proposed by them. This was true especially in the case of Commonwealth countries.

Secondly, the majority of South East Asian countries, belonging to the Sterling area as they do, could not import much of Japanese goods because of a serious drop in the prices of their own principal raw materials such as rubber, tin and cotton which could be exported.

Further, a ban was imposed on Japanese goods being re-exported to the Sterling area through transhipment at Singapore, Hongkong and Aden.

Imports:—With the exception of Malaya, Aden and East-Africa, imports from all other countries of the Sterling area increased in 1953 over the preceding year. They are: from Australia (Barley, wheat and wool) from Burma (rice and cotton), Hongkong (iron ore and metal scrap), India (iron ore and coal), Pakistan (cotton), Great Britain (woollen yarns, pharmaceuticals and automobiles), South Africa (wool) and Singapore (petroleum).

Open Account Area

However dismal the picture is for Japanese trade in 1953 with respect to Dollar and Sterling areas, the Open Account Area countries provided some relief. Japan's exports to this area in 1953 were 467 million dollars as compared to 336 million dollars in the previous year.

South Korea and Indonesia imported more from Japan in this year. Also, Japan explored the Argentinian and Brazilian markets.

With the exception of France, Italy, Sweden, Germany and Indochina Japan's exports to all countries of Open Account Area increased over the previous year. Worthy of note were the sharp gains registered in exports to war-devastated South Korea as its rehabilitation programme required textile products, machinery, steel and amonium Sulphate.

Exports to Thailand and Indonesia were also favourable to Japan. This was greatly due to the measures then in effect, to curb re-export to these countries through the transit ports of Hongkong and Singapore. Such restrictions resulted in the placing of direct import orders to Japan from these countries. The bulk of exports to Indonesia consisted of cotton fabrics and other textile materials and to Thailand steel products and machineries. Other exports gained were, in the case of Brazil (raw silk, steel, and copper products) Philippines (cotton fabrics and steel products), Finland (raw silk) and Netherlands (raw silk and textiles).

On the other hand Japan's overall trade with Sweden, France and Italy during 1953 was not favourable to her. Exports to those countries have dwindled over the previous year, especially in steel and metal products.

Imports:—As we see in the table, despite the general increase in exports and imports in 1953, they were far from being balanced. With all these countries except Indonesia, South Korea and Finland, the balance was an excess in imports: and, with certain countries, such excess was beyond the limit set by the "Swing Account Agreement" concluded with them.

In order to alleviate this situation, Japan has, since early in 1954, adopted a policy of strengthening its efforts to enter into reciprocal trade agreement with the countries concerned, to the maximum extent.

Triangular trade is also adopted as a medium to gear up its efforts to adjust this unbalance.

As regards its trade with Argentina, a new $90 million worth "Japan-Argentina Trade Agreement" was concluded in February 1954, which has been preceded by the issue of 20 million dollars worth of import licences to Japan in late 1953.

With the progress of Argentina's Five year Development Programme, increased imports by Argentina of steel products and machinery are anticipated under this agreement.

A similar Trade pact was concluded with the French Union calling for 28.9 million dollars worth of Japanese exports and 24.4 million dollars worth of imports from French sources.

Other trade pacts included the 74.5 million dollars one way agreement with Nationalist China in March 1954 and the Japanese-Sweden Agreement under which Japan was to export 12 million dollars worth and import 8 million dollars worth from Sweden.

Further, a good amount of dollar commodities such as Canadian wheat and American Soyabeans were re-exported by Japan to Sweden and Germany under the Intermediary Export system. Since June 1954, Japan has been employing deferred payment system in clearing account to alleviate its unfavourable trade balances with countries of Open Account Area.

With South Korea and Indonesia, Japan, on the contrary, has to settle a considerable credit in its favour. To curtail its out-standing credit with South Korea, Japan is now employing Barter-system without any draft, in parallel with the open account system. With Indonesia, Japan revised the link rate on textiles—especially raw silk and synthetic textiles—and put into practice 'switch-import' system on February 1954.

With the Open Account Area, various forms of trlangular trade agreement are also being worked out to ease its unbalanced trade accounts.

Further, during 1953, some countries which had excess export against Japan (Brazil, Finland, Sweden and Netherlands) re-exported Japanese goods such as raw goods and synthetic textile fibres to countries in the dollar areas. Since that practice hindered Japan's exports to that area, the Government took firm measures in 1954 against those countries.

Trade Composition by Commodities

As we see, Japan's pattern of foreign trade is that of an industrialised nation importing food stuffs and industrial raw materials and exporting finished goods.

Textile products constitute the main bulk of the nation's exports and textile raw materials are the principal items of its imports, although these have taken a downward trend recent years.

During the pre-war period, export of raw silk was 11.1 per cent of the total export. But, in 1952, it fell to 3.5 per cent and 3.4 per cent in 1953. It is generally agreed that, at present, it is impossible for raw silk exports to come to the pre-war level.

Cotton yarn and fabrics comprise 42 per cent of all textile exports in 1953. A particular problem relating to cotton textile trade is that Japan imports raw cotton chiefly from the dollar area (US) and exports the finished products to the sterling area—notably Iran, Hongkong, Burma and the Union of South Africa.

Second in the import list is foodstuffs. In 1953, the import of rice, wheat, barley, soyabean, sugar, etc., amounted to one-quarter of all imports. There was a nation-wide failure of good crops in 1953. In 1954, under Japan-USMSA Agreement, an arrangement was made to import 50 million dollars worth of surplus US food products including wheat.

In the field of exports, second to textile products, come machinery and metal products. The main items in this category were steelships, sewing machines, electric machines and applicaances, optical machines, textile machines and rolling stock, totalling 188 million dollars in 1953. Of the metal products, export of steel and steel products amounted to 853 thousand tons valued at 182 million dollars. This was a sharp fall from 1952, when the figure was 1,630,000 tons, due to the state of the world steel market and owing to European countries increasing their exports.

The New Trade Measures External

(1) Policies directed externally: Of course, Japan has restored normal relations with many nations outside the Communist block. But, as on June 1953, it had concluded treaties of commerce and navigation with only 13 nations as against 48 nations before the war. This is a factor deterimental to the expansion of its post-war trade.

The treaty with the US came into effect only in October 1953, and that with Canada in June 1954. The 'US—Japan Treaty' accorded Japan, on the basis of reciprocity, the most 'Favoured Naton' treatment in regard to tariffs and customs also, Japanese businessmen were qualified to enter the US and reside there for an indefinite period. The treaty also provides for the removal of many restrictions which otherwise fostered monopolistic trends, and it limits foreign exchange activities. This treaty provides a stable basis on which mutual capital investments between the two nations can be made.

During 1953, Japan concluded trade agreement with 17 nations. The breakdown of these agreements is as follows: New pacts were concluded with Syria and Egypt; revisions were effected with 9 nations—3 in the Serling area and 6 in the Open Account area: and extension of existing agreements was arrived at with 6 nations, two each for dollar, Sterling and Open Account areas.

Of these Treaties and Agreements, the most noteworthy is the 'Japan-US Agreement' whereby Japan could import 500,000 tons of wheat and 1,000,000 tons of Barley for a total value of 50 million dollars by June 1954 under Article 550 of USMSA. It was also agreed that the US would earmark 80 per cent of the Yen-purchase cost for off-shore purchases. Of course, by this way, Japan's receipts of dollars through US special procurement orders would proportionately decrease. The remaining 20 per cent would be used for US investments in Japan's defence industries.

The second important pact is the Anglo-Japanese Payment Agreement concluded in January 1954. Before the conclusion of this agreement, Japan's imports from Great Britan increased during the latter half of 1953, while its exports to Great Britain have decreased, with the result that Japan's Sterling Reserves dwindled to 24 million dollars. However, with the conclusion of the above Agreement, Japan's Sterling position began to improve, as many restrictions placed on Japanese goods were eased. Negotiations were also under way with other members of the Commonwealth.

The Japan-Canada Commerce Pact was concluded on April 1, 1954. The basic principle of this pact being to apply equal treatment in regard to the handling of all restrictions on trade and foreign exchange controls, the conclusion of such an agreement is very significant for Japan.

The year 1953 witnessed another significant event when, for the first time, Japan was admitted as an un-official member in the GATT.

Trade Policy—Internal

(2) Domestic Policies:—Imports—To adjust its unfavourable balance of payments position, Japan has taken many measures to curb imports. The foreign exchange budget for October 1953 to March 1954 was slashed by 160 million dollars to a low of 1,335 million dollars. However this initial budget was exceeded by 224 million dollars by the end of March 1954 due to 190 million dollars worth of emergency purchases in food stuffs necessitated by heavy storm and flood damages in 1953.

Japan had a trade deficit of 313 million dollars in 1953, despite these controls on import traffic. The ratio between planned-import-items and automatic-approval-import-items,

An Indian Finance Special Study

which stood at 73 to 27 during the latter half of 1952 and first half of 1953, had dropped to 80 to 20 during the latter half of 1953.

Since the outbreak of the Korean War, substantial preference was given to import finance with a view to stocking essential raw materials whose prices tended to rise by speculation. This policy was effectively carried out on account of a good amount of foreign currency reserves caused by brisk exports in the 'Korean Boom'.

However, as Japan's balance of payments position worsened, it had to adopt various money-tightening measures, particularly on imports. Major money-tightening measures were taken in October 1953 and in January and March 1954. These measures were aimed at tightening the 'Foreign Currency Special loans', 'Import Settlement Bills' and 'Stamped Bills'. (Stamped Bills are the bills guaranteed by the Bank of Japan.)

EXPORTS:—The 'Exports Trading Law' was revised to 'Export-Import Trade Law' in August 1953 to allow some measure of concerted action in trading which had so far been strictly restricted under the 'Anti-Monopoly Law'. As a result of this revision, about 37 Exporters' Associations came into being, representing practically all the major export enterprises of the mtion in almost all fields such as textiles machinery, non-ferrous metals, agriculture and fishery products, chemical products and sundry goods.

Further, in order to encourage the nation's exports, the Export-Import Bank reduced its interest rate in August 1953. As a result of this, loans extended to various exporters increased to 18,200 million Yen in 1953 or approximately 3 times the 6,000 million Yen figure of the previous year. (1 dollar is equal to 360 Yen approx).

Various export insurance systems were also improved, including 'The Export Draft Insurance system' in August 1953.

Further, measures were taken to adjust import of materials to the requirement of promoting exports. A system of linking export and import was extended to many commodities. Barter-trade arrangements were also made. A new item was also included in the foreign currency budget to finance import of such materials as are to be re-exported after processing.

Impact of Government Measures

The 'Annual White Paper on Trade' issued by the Government early in May 1955 analyses the foreign trade of Japan in the last fiscal year. It mentions that Japan's trade marked a big advance over 1953 fiscal year.

The 'White Paper', however, draws attention to the fact that the apparent prosperity in the trade position following the governmental measures in 1953-54 is built on a very 'fragile foundation'. It also warns that the trends to 'Free Trade' will expose the weakness of Japan's national economy.

On April 12, 1955, the Bank of Japan issued statistics on foreign exchange balance for the fiscal year 1954—April 1954 to April 1955. According to the statistics, Japan's exports amounted to 1,602,000,000 dollars more than in the preceding year, while its imports totalled 1,767,000,000 dollars, or 475,000,000 dollars less than the preceding year. As a result, the excess payment in the last fiscal year was limited to 165,000,000 dollars or 832,000,000 million dollars less than in the preceding year.

This favourable trend continues into fiscal 1955. According to the Bank of Japan, the opening of "export Letter of Credit" during April amounted to 150,000,000 dollars. Exports

An Indian Finance Special Study

to the Dollar area reached 58,000,000 dollars, which is the post-war peak figure. The "import Letters of Credit" totalled 147,000,000 dollars. It is expected that the favourable balance of trade will be maintained for the coming few months.

The latest figures indicate that Japan's trade situation is continuing to improve. During January-June 1955, exports totalled 88.7 million dollars, up by 23.2 per cent over the corresponding period of 1954 and the highest recorded in post-war Japan. Again, imports totalled 905.5 million dollars, down by 229 million dollars from the corresponding period of 1954.

The foreign exchange balance for January-June in receipts is 1,205 million dollars, and in payments 1,065 million dollars with a balance in favour of 140 million dollars. This was possible by the maintenance of a high level of exports to the dollar and sterling areas with a marked decline in imports.

The Government believe that this brisk export activity will continue for some time to come, and feel optimistic that the nation's exports in fiscal 1955 will amount to 1.7 to 1.8 billion dollars. Actually, the original estimate at the beginning of the fiscal year was 1.6 billion dollars only.

The Bank of Japan, however, cautions against undue optimism. Just like the White Paper, the Bank of Japan points out that Western nations are applying "a brake" on its growing economy.

Reasons for Expansion

Analysing the expansion of exports, the White Paper attributes this phenomenon to the following causes.

1. Consequent to the enforcement of the Government's Deflationary Policy in the fall of 1953, the nation's domestic purchasing power dwindled. Some surplus goods have been exported even at prices below cost.

2. Exports to the "pound-sterling area" increased because of the lifting of import restrictions on Japanese goods by some Commonwealth nations. The increase of exports to the "pound area" accounts for 69 per cent of the total increase of exports.

3. At the beginning of the fiscal year 1955, it was not foreseen that the world economy was heading toward prosperity. But, due to the world-wide trend toward prosperity, the export of steel and non-ferrous products sharply increased in the latter half of the year. The brisk export of ships is also attributed to the same cause.

4. A set of measures for promoting trade, such as the Barter system "Loss Compensation Link System," have been no doubt criticised by certain foreign nations as "unfair practices". But these measures greatly contributed to the promotion of Japanese trade.

It is difficult to weigh the importance of the above causes. It is a safe guess, however, that the external factors, e.g., the recovery of prosperity of world-trade and the lifting of import restrictions on Japanese goods, played the most important role.

Imports last year decreased by 475 million dollars from the preceding year. But this decrease has also been due to external factors. The stringent financial policy of the Government was not fruitless. The decrease attributable to the Government policy, however, is estimated to the 100 million dollars. The analysis of this import decrease shows that the import reduction will be partly off-set by a future increase in imports.

Conclusion

We may now come back to our original question. Will Japan destroy the growing economy of the newly free South-East Asian countries? A natural corollary of this question will be,—will Japan continue to export its consumer goods to these countries in order to acquire enough foreign exchange for itself? A very familiar contention is that, in Japan, the cost of labour is very low, and that consumer industries are mainly small scale and cottage industries, where only family people are employed. So, Japan can afford to dump its consumer goods abroad, sometimes even below the ruling international prices. This will breed a double danger to South-East Asian countries. Most of these countries are yet to develop their consumer industries and launch on a programme of heavy construction projects. Since these countries also need to import capital goods from advanced countries, they have to export whatever they can to earn the required foreign exchange. After all, they can export, at present, foodstuffs, industrial raw materials, and consumer goods. If Japan comes into open rivalry with these under-developed countries in the "world of consumer goods," they will find the competition difficult to withstand. The second danger is that, since the purchasing power of the masses of these South-East Asian countries is very low, if Japanese consumer goods are competitive to their own ones, naturally the young consumer industries in these countries will be killed, thereby causing more unemployment in such nations.

From what we have seen above, after having carefully analysed and examined the structure of Japanese foreign trade against the background of Japan's potential economy, we can safely come to the conclusion that Japan cannot come to a position of adopting the above course for a long time to come. The most important problem for Japan today is to keep its industries running. For that, it needs to import almost all industrial raw materials whether for basic industries or for consumer industries. Japan's main import market for industrial raw materials is, again, to a good extent these very South-East Asian countries who will be more and more reluctant in future to drain away their natural resources while their own industrial programmes are in progress.

It may be that, today, America is backing Japan substantially in its trade. But, it is also the main concern of America to see that Japanese markets are developed in South-East Asian countries only lest Japan should strengthen normal trade relations with China and other Communist countries.

In order to improve the markets of the South-East Asian countries, their own consumer industries and the purchasing power of the people need to be not only protected but improved. Also, the heavy construction projects that these countries have undertaken should be put through successfully. From this viewpoint, America cannot continue to lend its support to Japan for a long time to come if Japan's trade might, in any way, go against the interests of South East Asian countries.

New Trend

Japan trends to the export of capital and producers goods to the South-East Asian countries instead of consumer goods like textiles. We have seen that most of these countries are economically dependent upon their former Colonial masters in respect of import of these goods from them. Also, they are not in a position to concentrate on making these goods as that would entail huge capital investments and technical know-how.

Though textile products form the overwhelming proportion of Japan's post-war export trade, there is a complementary trend to the above drift in these recent years.

In the export of the capital goods to this area from Japan, iron and steel and metal products totalled $93 million in value, on average, between 1950 and 1953, and amounted to 38 per cent of Japan's total export trade. Machinery and transport equipment came second, amounting to $61 million forming 50.8 per cent of the total capital goods. Amongst machinery, textile machinery ranked first.

However, Japan's principal competitors in the export trade of capital goods to the South-East Asian countries are the UK, the US and Germany. They account for 53.3 per cent, 31.7 per cent and 9.2 per cent respectively, of the total amount while that of Japan accounts for no more than 5.8 per cent.

Also, as the White Paper and the Bank of Japan point out, Japan's main concern today is to live in such a way that the "fragile foundation' on which its current prosperous export trade is built should be strengthened. This can be done when it follows a trade policy which is congenial to the economic prosperity of the South-East Asian countries.

Editorial Notes

States Finances

In the estimates made with regard to the raising of additional taxes toward meeting expenditure on the Second Plan, the original intention was, and so it continues to be, that State Governments should be able to secure Rs 225 crores from fresh imposts—or a sum equal to the amount envisaged as the target for new taxes to be collected by the Centre. While, in the case of the Central Government, the first budget of the Second Plan period has already succeeded in finding sources of revenue which would yield roughly Rs 35 crores, and while, therefore, the prospect is very favourable for the realisation of its target of Rs 225 crores in the five-year period, trends in the States' finances show the contrary possibility. If the immediate past is a safe guide in this matter, it is more or less certain that the States will by no means be able to raise anything like the Rs 225 crores of new tax revenue.

For, during the First Plan period, the tax revenue of Part "A" States increased by the bare amount of Rs 10 crores. Secondly, far from having reached the position where they would be able to place some reliance on an expansionist economy to swell tax collections, the States had perforce to budget, in the last two years of the First Plan, on the basis of a revenue deficit. According to the Reserve Bank, which has made some figures available in this context, while the States had a revenue surplus in the first three budgets of the First Plan period, deficits were reported in the last two years. Indeed, for 1956-57, the budgetary deficit of Part "A" and "B" States is expected to be Rs 76 crores, as compared with the figure of Rs 65 crores in the last year of the First Plan. Such is the outlook for 1956-57 in spite of the adoption of new accounting procedure which has enabled the transfer to capital account of expenditures which had formerly figured in the revenue budgets.

It is undoubted that the Planning Commission would be studying this aspect of finances pertaining to the Second Plan. Obviously, in the circumstances of economic conditions as they presently obtain, the target of Rs 225 crores as additional tax revenue to be secured by the States has been set too high. It is a moot point whether, in the light of the more encouraging experience in the Centre's ability to increase collections from new taxes, the suggestion might not be advanced that the target for Centre's revenues should be raised while the target for States is reduced.

This, however, brings up another point. The aim should be, not only for the aggregate target of tax collections to be achieved, but for the States themselves to be able to attain a measure of balance in their revenue budgets. As such, it may be a question for the Planning Commission to consider whether some increase is desirable in the States' share of Central taxes. But, whatever may be the rationalisation under consideration, the budgetary practices of particular States deserve to be considered by the Central Government. Whether any State Government may be allowed to frame a budget that envisages a revenue deficit of Rs 20 crores, while its total revenue is barely Rs 43 crores, should surely engage the attention of the Centre.

The Planning Commission consider it desirable, and they have emphasised it, that "it is of paramount importance that the revenue budgets of the States should be balanced". If the States find it difficult to raise revenue in pace with the higher level of expenditure, then, surely, it is for the Planning Commission to issue such directives as will enable States' revenue gaps to be reduced.

*

The WAS

In the United Nations, thoughts are now being turned to the creation of an administrative task force composed of the pooled talent of the countries with some spare administrative potential. Mr Dag Hammarskjold, the Secretary-General of the UN, recently stated that the dearth of administrative personnel offered so serious a problem that many Governments would be kindly disposed to a scheme of this nature. In this wise is the embryo being conceived of a World Administrative Service—or, if we may proceed on lines that the UN will doubtless adopt and suggest the abbreviation, of WAS. It is scarcely to be expected that WAS can easily be brought into being, or that it is assured of immediate popularity and wide use. On the contrary, the pooled utilisation of talents in public administration is likely to present more troublesome problems than has been the case, in the past, with the sharing of technical experts.

In this context, the UN has, in a Report made by the Technical Assistance Board, claimed that "a valuable contribution to economic development can be made by an expansion of the international interchange of technical knowledge through international co-operation among countries"; and this is a conclusion drawn to adduce the success that has largely attended the interchange of technical experts. But the Report also confesses that some of these experts have failed and suggests that, in such instances, "their failure has generally been due to faulty social attitudes, to inability to adjust themselves to strange conditions of life and work, or to some lack of humility in the presence of problems which do not yield to dogmatic assertion". This, of course, is the human element, and similar difficulties will doubtless be encountered by WAS, if ever such an organisation achieves the status of the present tense.

That, however, seems doubtful. There are additional complexities which may prevent WAS from achieving its existence. In the first place, technical know-how is largely one-way traffic, with the expert making available, in the country to which he is assigned, the fund of knowledge that he has gained by training and from experience: there is hardly ever the need for modification to suit local conditions. In public administration, however, specialised knowledge is insufficient—unless a complete reform of the system is undertaken or action taken on lines suggested some years ago by Dr Paul Appleby in his Report to the Government of India. Secondly, even if such piece-meal administrative proficiency could be useful and was desired, there would be greater reluctance on the part of Governments to pay for services rendered on scales that are far higher than those obtaining in their own country; moreover, resentment might also be generated in the indigenous administrative personnel. In short, while WAS is a good idea, we doubt, for practical reasons, whether it will ever be.

A Yank at Oxford

Eight years ago, America was occupied with its leap year fever—the presidential elections. During that summer, however, excitement did not reach as high a pitch as on former occasions, beause the political seers aud opinion samplers were, for once, unanimous as to their predictions. Mr Harry S. Truman, who had had greatness thrust on him, was not given even an outsider's chance of achieving greatness. In the early hours of a November morning, history will record the achievement, eight years ago by Mr Truman, of a political upset even more difficult to comprehend than Mr Churchill's defeat in the British elections of 1945. In the four years that Mr Truman was a President in his own right, he won admiration and respect among the statesmen of the world. In his own country, a prophet therein being without honour, Republican resentment, having grown in volume during Mr Roosevelt's election to the White House for a

World of Finance

Persistent Loss of Foreign Assets

THE current returns of the Reserve Bank continue to show a declining trend in foreign balances. In spite of the transfer of Rs 10 crores of foreign securities from the Issue Department to the Banking Department, foreign balances in the Banking Department show a net rise of only Rs 3.72 crores. It has, therefore, to be inferred that the net loss in foreign assets in the week is Rs 6.28 crores. This loss has been persistent, week after week, throughout the first quarter of this financial year. Taking the foreign securities in the Issue Department and the foreign balances in the Banking Department, there is a loss of Rs 56.33 crores between March 30 and June 22. Apart from the magnitude of this loss, the disquieting feature is the persistence of the drain all through the period.

The following table shows the figures for the total of foreign securities in both the Departments, week by week:—

(Figures in Crores of Rs.)

Week ended	Foreign Securities.	Foreign Balances.	Total.	Difference
30-3-1956	656.42	89.72	746.14	
6-4-1956	686.42	62.09	748.51	+ 2.37
6-4-1956	686.42	62.09	748.51	
13-4-1956	681.45	58.73	740.18	— 8.33
13-4-1956	681.45	58.73	740.18	
20-4-1956	681.45	52.71	734.16	— 6.02
20-4-1956	681.45	52.71	734.16	
27-4-1956	681.45	44.20	725.65	— 8.51
27-4-1956	681.45	44.20	725.65

15-6-1956	666.54	28.55	695.09	— 4.55
15-6-1956	666.54	28.55	695.09	
22-6-1956	656.54	32.27	688.81	— 6.28
		Total ..		—56.33

The attention of the Government must be forcibly drawn to this unfavourable situation with regard to our foreign assets. There is no doubt that we are losing foreign assets at what must be considered an alarming rate. In this connection, it is worth bearing in mind that the food situation in the country has led the Government to the decision to import 900,000 tons of foodgrains in the coming months. The Burma deal for rice has already been announced; and 200,000 tons of this rice are due to be received in India in the course of the autumn. It is quite likely that arrangements are finalised for securing wheat from the US surplus. Payment for this may be part adjustment against the sanctioned foreign aid. But the point to note is that, whether this wheat is secured through normal channels or through the agency of the surplus commodity plan, the foreign exchange that will be available to India out of the US aid will be to that extent used up. By the same token, it is also possible that a portion of the additional requirements of cotton on the part of the Indian textile industry is arranged for out of the US surplus; but this will not prevent loss of foreign exchange.

Free enterprise in India has a considerable programme of expansion and modernisation of industrial plant. All these will need increased foreign exchange. The projects in the public sector may be financed to some extent by special ad hoc credit arrangements; but even after making allowance for this, some expenditure of foreign exchange is unavoidable. Industrial raw materials and industrial spares and components for machinery will be shortly on the increase owing to sustained tempo of industrial production. Taking all these factors into account, the prospect for arresting the decline in foreign assets seems dim.

The export promotion drive must be carried out with greater vigour and in a more determined spirit. Mineral ores will prove to be of signal service in this connection. Iron ore and manganese in particular can make much better showing than in the past; but the matter has to be thought of in terms of reciprocal arrangements between India and each of the buying countries. Japan, Poland and Czechoslovakia, for instance, are prepared to supply transport and other equipment in advance of the supply of iron ore by this country. We need to put through a number of arrangements of this kind. We must aim at higher targets for mineral exports. From this point of view, it is a wise decision that the State Trading Corporation would figure prominently in this export business. For, it is only at that level that reciprocal arrangements on the lines we have suggested are easily practicable and speedily executable.

So far as imports of consumer goods are concerned, the Government's policy for the second half of the current year may be expected to be made known before the week-end. We may be sure that the new policy implies a suitable reversal of the earlier liberalisation. The consumer industries in this country have greatly increased their production; and reduction in the import quotas of goods, with regard to which domestic manufacture is steadily coming up, must be progressively effected as the domestic production advances step by step.

Currency Contraction

THE returns of the Reserve Bank for the week ended June 22 reveal currency contraction for Rs 10 crores by the transfer of foreign securities from the Issue Department to the Banking Department. Active note circulation has declined sharply by Rs 17.44 crores to Rs 1,486.87 crores. Even more striking is the considerable return of rupee coin from circulation. Rupee coin in the Issue Department shows a rise of Rs 1.49 crores to Rs 106.33 crores.

In the Banking Department, excepting miscellaneous deposits, which are lower by Rs 0.15 crores at Rs 13.02 crores, all other deposits have risen: Central Government's by Rs 6.78 crores to Rs 62.58 crores; States' by Rs 2.73 crores to Rs 8.01 crores and banks' by Rs 0.70 crores to Rs 51.88 crores. Balances held abroad have shown a rise of Rs 3.72 crores to Rs 32.27 crores. "Other Loans & Advances" have declined by Rs 1.74 crores to Rs 71.62 crores, which includes Rs 41.91 crores advanced to Scheduled Banks against Usance Bills. The amount of advances availed of

Lessons of the Trinidad Oil Deal

By PAUL EINZIG

ON June 20, the House of Commons approved, by a substantial majority, the decision of the Chancellor of the Exchequer, Mr Macmillan, not to oppose the sale of the Trinidad Oil Co., to the Texas Oil Co. The debate was the culmination of a stormy controversy that was going on ever since the announcement of the Texas Oil offer on June 6. At first the deal encountered violent opposition not only among Socialists but also among the Government's own supporters, most of whom would have voted against authorising it if the Government had announced its intention immediately after the terms became known. But for nearly a week the Government itself was far from certain about the line it should take. As Mr Macmillan himself admitted, his first impression was decidedly unfavourable, and it was only after a careful study of the circumstances that he reluctantly agreed to let the interests concerned proceed, subject to certain safeguards.

The main reason why the deal is unpopular is that it means handing over to non-British interests one of the none too numerous oil producing areas within the Commonwealth. It is true, compared with the capacity of the British Borneo oilfields, and of the Canadian oilfields, the actual and potential oil output of Trinidad is relatively small. Even so, for sentimental rather than economic reasons, most people in Britain are reluctant to give up what is, after all, one of the chief economic assets of the proposed Caribbean Federation.

Many other arguments could be quoted against the deal. But since neither the British Petroleum Co., nor the Shell concern were interested in acquiring the Trinidad Oil Co., and since the prospects of raising the capital required for the development of its oil concessions in Trinidad and in Canada were anything but favourable, Mr Macmillan had no choice but allow the sale to take place. It is true, the Opposition would have preferred it if the British Government itself decided to take over the company, or to finance its capital projects. But that solution did not appeal to a Conservative Government, and it is doubtful whether the Labour Party, had it been in office, would have adopted it.

It goes without saying that the acquisition of some $180 million as a result of the deal is not without attractions, having regard to the low level at which the gold reserve stands in spite of its increase during the last six months. But this strengthening of the gold reserve at the cost of selling out a capital asset is not exactly an ideal way of solving the problem.

It is very tempting for this Government, and for any future Government, to take the line of least resistance by reinforcing its gold reserve with the aid of such sales instead of strengthening the economy for the sake of improving the balance of payments. And the increase in the gold reserve resulting from the Trinidad Oil transaction is likely to encourage the Trade Unions to press forward with

World of Business

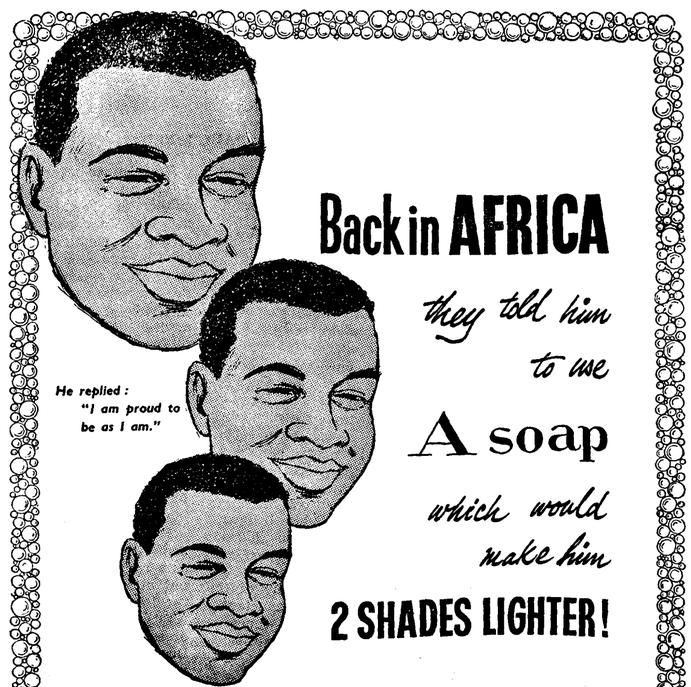
Ore Export Policy

According to a Government announcement of early this week, the responsibility for the export of ores from this country is increasingly to be assumed by the State. The State Trading Corporation is to be entrusted with the task of handling this business. Undoubtedly, ores are a commodity that it is proper and profitable for Government to undertake export of and trading in. It may be added that, by concluding many more bilateral agreements on the line of the pact with Poland (which envisages export of Indian iron ore in exchange for and against imports of cement), Government could increase substantially the exchange earnings from ores. Also, no exception can, in view of the demarcation of industries as between the public and private sectors in the Industrial Policy Statement, be taken to the Government intention of ultimately ousting private trading in ores as far as concerns exports. But the reasons given in justification of the Government notification to this effect are far from convincing.

For, it is contended that the primary motivation is the desire to see that foreign demand is not disappointed by the inability of private traders in India to meet the commitments that they might have entered into. It has also been suggested that such an inability might stem from the difficulty that might be experienced in securing the necessary wagon capacity. If the implication is that the State can more readily ensure wagon availability, but only if the State Trading Corporation or similar body is in need of it, then a disquieting inference can be drawn. In such matters as the transport of foodstuffs or the transhipment across the country of coal or cement, Government have every right to accord top priority in the allocation of wagons. But, where the State has undertaken commercial enterprise, and especially in fields competitive with the private sector, the most judicious care has to be taken to avoid discrimination. Consequently, if it is conceded that, in the world of commerce, there is to be no distinction between private and public sectors, it follows that the responsibility for exports of ores need not be taken over by the State for the reason that private traders may not be able readily to command the requisite transport facilities.

But, as we have said, we welcome a gradually increasing Government interest in the export of ores. We suggest, moreover, that the State should be able substantially to improve upon the relative targets in this regard set by the Second Plan. In this connection, we may also reiterate our plea for a subsidiary port to Calcutta, at Geonkhalli, which could be mechanically equipped to handle ore exports on a bulk scale as well as to relieve Calcutta port of some of the congestion that is inevitable in the light of the steel projects, the aluminium projects, the cement projects and the envisaged development at Durgapur. It is already apparent, and official statement has confirmed it, that the facilities at Calcutta port will be unable to cope with the estimated strain upon it. Both for this reason, and for an ambitious increase in the export of ores (particularly iron ore), we once again commend, for urgent consideration and early implementation, a plan for the establishment of a mechanical port at Geonkhalli.

*



Heavy Industries

Of late, the question of expansion of heavy industries, and the manufacture of machinery therefor, has been engaging the more concentrated attention of Government. When the Plan-Frame was released last year, the emphasis therein on heavy machinery was generally welcomed. Later, however, when there was a reappraisal of thoughts in this regard, from the point of view of financial resources and similar approaches, there was the indication that targets might have to be revised downward. The pendulum has swung the other side once again, and current thought is laying greater importance on the establishment of heavy industry and heavy machinery manufacture.

Perhaps, this change in mental attitude took place when Mr Mikoyan, First Deputy Prime Minister of the USSR, made his salesmanship visit to this country in March this year. Directly as a result of that visit, during which Mr Mikoyan had discussions with Mr T. T. Krishnamachari, a Russian team is expected in this country for the purpose of studying the possibility of establishment of a factory lor the manulacture of heavy machinery. Moreover, British interests have also signified their desire to offer what help they are capable of, and a team of experts is to visit India later in the year to make a general survey of heavy machinery manufacture and heavy industries.

For its part, the National Industrial Development Corporation has proceeded with the subsidiary pro-

Re-sealing the Looms

I AM thankful for the tender mercy that the decision to reseal looms is to affect and has been restricted to 2½ per cent. Indeed, re-sealing of this order does not amount to anything more than nominal action taken by the IJMA. That the current measure does not help in any considerable extent to solve the problem of a high level of jute goods stocks is evident in the less than lukewarm, positively pessimistic, reaction in jute goods markets.

As forcefully as I could in the last week's issue, I suggested the reasons which, it appeared to me, clearly indicated that re-sealing of looms would be a retrograde step. I have not changed my view. I still think that the practice of putting a brake on production will not be helpful from the long-term point of view. But, in presenting my case last week, I overlooked an important factor, the pressure that was being brought to bear upon the IJMA. That pressure came indirectly from Government.

What time the jute goods markets had every appearance of declining prices, the suggestion was seriously mooted that Government should fix floor prices. How this could ensure that the industry would begin to make profits in place of the losses that it had sustained, is beyond my comprehension. If it was argued that an imposition of minimum prices, at a level that would enable a satisfactory margin of profit for IJMA mills, was itself sufficient for the industry to enjoy better prosperity, let me point out that the profits depend not only on a margin between the costs of production and selling prices, but also upon demand being of sufficient size to take care of the output of the industry. From this point of view, if one thing was certain, it was that, in the currently more competitive condition of the world jute goods market, there would be an immediate consumer reaction which might tell, if not substantially, at least considerably, upon the level of our exports.

Thus, the fixing of floor prices would in no way have solved the problem for IJMA mills. Such a measure might have shortened the longevity of the Indian jute mills industry.

But, nevertheless, from the Government stand-point, some action had to be taken. If it was not desirable to fix minimum prices, the Government very properly wanted to know what the IJMA could do to strengthen the jute goods markets. The issue for the IJMA was very clear. In order that it might avoid the undesirable paraphernalia relating to floor prices and the like, a measure that had to be decided upon and implemented was some restriction on production. Consequently, therefore, it has been announced that 2½ per cent of the looms are to be re-sealed—that is to say, the average monthly production is to decline by roughly 3,000 tons.

Not only is the decline in production of negligible proportions: the manufacturing industry is not likely to be disrupted to any great extent by re-sealing such a proportion of looms. Moreover, if the demand should improve sizeably, necessitating increased production, the looms could be opened up again expeditiously. I am still prepared to stick my neck out, gaze into my crystal, and assert that the second half of 1956 will not, over the period, witness an accretion of jute goods stocks. At the most, the current level of stocks may not be reduced. But current production over the next six months will be fully met by demand. The IJMA, I repeat, has taken the correct step in difficult circumstances. And the jute goods market's reaction, I repeat, was to depress prices.

*

The second important item of news in the World of Jute was a statement made by Mr Abu Hossain Sarkar. Mr Sarkar, who is the Chief Minister of East Pakistan, was inaugurating a meeting in Dacca of the Jute Advisory Committee, and, in so doing, he embarked upon a dissertation on Pakistan's jute policy. Let me briefly record the main points made by Mr Sarkar as well as my comments thereon.

Firstly, says Mr Sarkar, the earlier dependence of Pakistan on Calcutta's jute goods industry for the offtake of its raw jute had been reversed. True, and this is as it should be, because I do not think that, in view of the Pakistani jute policy, especially toward India in the years since partition, India could afford to be dependent on Pakistan for the supply of the raw material.

Secondly, according to Mr Sarkar, the crop has been regulated for improving quality and not for creating any artificial scarcity. Again, true, but Mr Sarkar should have also mentioned that the crop has been regulated not so much physically as by official estimates of crop! Unless weather is particularly unfavourable in any one year, and unless these conditions obtain both in India and Pakistan, we can rule out the possibility, in the future, of any undue scarcity of raw jute.

Thirdly, in 1955-56, the world was able to utilise one to one and a half million bales more of raw jute. I trust that Mr Sarkar realises that almost the whole of this amount is represented by a higher level of Indian consumption of raw jute and that, for this purpose, it has not been necessary for IJMA mills to increase their dependence on Pakistani jute.

Fourthly, Mr Sarkar talks of the supply of raw jute to the world as a Pakistani monopoly, adding that it is conditional upon the continuance of a relative cheapness in the price of raw jute. Very rightly, Mr Sarkar has chosen his words carefully. Pakistan's monopoly of today is only in respect of the supply of raw jute to the world—by no means is it the sole producer of raw jute. India is now in a position to grow raw jute almost sufficient for its needs; and I do not doubt that, over the next five-year period, we shall be able to attain self-sufficiency both in the matter of quality and in quantity; and I am ambitious enough to envisage the possibility of export of Bimli and Mesta!

Fifthly, the East Pakistan Chief Minister was not too happy about the weakness in the country's raw jute markets, which was derived from the cultivator's inability to hold up his supply to the markets. India, fortunately, seems to be better placed; and, I dare say, the cultivator is getting a fairly satisfactory price, whether at the beginning or toward the middle of the raw jute year. As to the close of the year, it is my contention that there is scarcely any raw jute left to be sold by the cultivator. To remedy this weakness, according to Mr Sarkar, open market operations were being conducted on a large scale. As far as I know, the only result of such open market operations is, if the state of the jute market conduces to hardening prices in March/April, that the pockets of a few, but a few, are richly lined thereby!

Finally, Mr Sarkar resents that the profits in the jute trade are largely being made by foreign interests, that these profits are being repatriated and that it leaves the country's economy so much the poorer. On this, I have no comment.

*

The third point that I wish to discuss is the end of the jute year. 1955-56 will, in a few days time, represent no more than sets of figures, tables of statistics that will give a clue to world trends and conditions in the jute year 1955-56. In a few days, 1956-57 is to make its debut. How will these statistics look? To me, looking at the figures in perspective, the main conclusion that can be derived is that jute goods as a packaging material will have proved to have attracted an expanded demand. The world production of jute goods has risen, the world's larger crop of raw jute has largely been consumed, and the world demand for jute goods has risen, if not to the full extent of the increased production, at least in substantial manner.

The statistical tables relating to the World of Jute will also record that 1955-56 was a year of weakness in prices, of a steadily declining trend in hessians and of ups and downs in sackings, with a close marked by a fall.

World *of* Tea

Better Auctions: Improved Demand

THE New Season's Tea auctions are now getting into their stride and a good general demand has been experienced during the past two weeks although only quality teas have been fetching very good prices. This is mainly due to reports of not only Russia buying certain quantities of tea, but also to the buying interest shown by Czechoslovakia, Holland and Poland.

According to tea circles in Calcutta, Russia has already entered the tea market in India with an initial deal of about two million pounds. A further 15 to 20 million poun'ds are expected to be purchased later.

The general feeling is that the tea industry will do better this year; because production is well under control, growers are concentrating on quality and demand shows signs of improvement. But, some circles feel that, unless the International Tea Agreement is signed regulating crop production according to demand and supply, no steadying effect is likely on the Indian tea price.

In the Export Sale held in Calcutta this week, offerings consisted of 24,339 packages. There was a very strong demand for the best liquoring CTC grades which were sold at prices up to Re 1 per pound above brokers' valuations. The good liquoring Medium Assams were also strong and these were sold at dearer rates.

The weakest feature of the sale were the plain and Low Medium teas and these were one to two annas per pound easier; and withdrawals of these descriptions were rather heavy. Stylish Leaf grades were dearer by As 2 per pound, while the more ordinary types were about firm.

The Tippy teas on offer met with very good demand from buyers, while Darjeelings were rather irregular and generally easier in price. Following rates were quoted per pound:—Clean Black Pekoe Rs 1|13|0 to Rs 1|15|0; Plain BP Rs 1|7|0 to Rs 1|8|0; Medium Assam BP Rs 1|14|0 to Rs 2|0|0 and Best CTC Assam BP Rs 3|0|0. These rates should, however, be regarded as nominal owing to the small quantity of truly representative teas on offer.

Offerings in the internal sale consisted of 20,688 chests, which comprised mainly of plain and unattractive old season's teas. The sale opened with a good general demand but weakened as it progressed and closed at one to two annas per pound easier for poor liquoring sorts.

The strongest features of the sale were once again the black leafy exportable types and the very few best CTC teas. Poor residue kinds met with a fair demand, but were irregular and generally easier. Following rates were quoted per pound;—Medium Dooars Dust Rs 1|6|0 (nominal); Medium Assam Grainy Dust Rs 1|7|0; and Best Assam CTC Dust Rs 2|6|0.

Offerings of other grades amounted to 170 packages which met with a fair demand at irregular rates.

In the Export Quota section, the rate for Special Licence against Old Season's teas was quoted at 2 to 5 pies per pound, while the rate of New Season's teas was quoted at 30 to 32 pies per pound.

A total of just over 1,525,000 pounds were offered in the Cochin market. A further decline in quality was noticeable in teas from all elevations and a large quantity of "rush" teas was offered. Demand was limited throughout the sale, withdrawals being extremely heavy.

Nilgiri descriptions again met with useful support, their Brokens selling at a drop of As 2 to As 3 per pound, while similar Fannings declined by As 4 to As 6 per pound. Good Medium Brokens were sold at rates which were As 2 to As 3 per pound below last levels, while their Fannings received only restricted enquiry. Medium, Low Medium and Low-grown teas were largely neglected and withdrawals of these types were considerable.

Black Leaf Middle East Brokens were sold at easier rates, while less interest was shown in their Fannings which declined by As 2 to As 4 per pound. Whole Leaf grades were irregular, but generally sold at around last rates. Following rates were quoted per pound:—Plain BP Rs 1|6|6; Low Medium BOP Rs 1|8|6; Medium BOP Rs 1|10|0 (nominal); Good BOP Rs 2|2|0 to Rs 2|4|0 and Well-made OP Rs 2|2|0.

In the Colombo market, offerings were about 7,001,180 pounds. Demand was quiet and prices generally showed a considerable fall. There was a wide selection of Nuwara Eliya teas with quality showing little change. Prices of Broken grades fell slightly, while Pekoes were firm.

The sale of high-grown teas opened with fairly heavy withdrawals, but later prices stabilised at a drop of 20 to 50 cents per pound. Invoices from Uva showed improvement in quality and met with good competition. Poorer Mediums of medium-grown teas followed the lines of high-grown teas. Among low-grown teas, there was fair demand at a decline of about 15 cents per pound for BOPs and Pekoes. Best liquoring Fannings were firm, while other sorts declined sharply, particularly those with poor liquor and leaf.

In London auctions, buyer's attention continued to focus on better liquoring invoices and prices for these were generally firm to dearer. Poorer qualities moved, however, irregularly lower. According to trade sources, the recent generally lower trend of British African teas was partly due to heavier offerings and partly to the decline in quality.

In the meantime, the quantity of tea afloat to the UK suggests that sales of Old Season's teas will not be cleared until around the middle of July unless, of course, the quantity includes large amount of tea on blenders' account and which, presumably, will not be put up for auction.

Tea stocks in London, as on the

The Issue of Malpractice in General Insurance

IICA Suggestions

AFTER Mr M. C. Shah gave the indication in the floors of Rajya Sabha, whilst piloting the Life Insurance Corporation Bill, that Government have in view an amending of the Insurance Act 1938 with a view to curbing malpractices said to vitiate trading in general insurance, insurers have actively engaged themselves in examining ways and means to eliminate corrupt practices. The need of elaborate codes of conduct and many regulations relative thereto prove conclusively that profession and practice differ.

In this dilemma of clothing unfair practice with all the garb of professional honesty, insurers, in many cases, have been known to have gone quite far. And yet, it is they who assign to themselves the task of diagnosing and providing a cure for their own ailments and diseases. The dilemma remains unresolved because the disease is known and the cure is known and everybody is anxious to be cured and yet nobody applies the medicine they know will cure themselves. Instead, they beat around the bush and end up by prescribing large sedatives, having a good soporific effect. The prescription offered by Indian Insurance Companies Association, Calcutta, in their lengthy and important circular issued last week, follows the pattern and contains no large variation.

The issue of malpractice was discussed in some detail in these columns a few weeks ago. The problem was then sought to be examined from the scientific plane. The main point of the note was that illegal money going into circulation has its source in the trading surplus. Therefore, if the drains from the surplus can be canalised into reserves, there will be hardly any available illegal money to go into circulation. Such canalisation can be effective only if actuarial experts delve into the trading accounts of companies and formulate views upon which legislative enactment will have to be based. Section 17 of the Banking Act will provide the cue.

The suggestions of Indian Insurance Companies Association are, however, not on this mathematical plane. They have a different approach and a different outlook. It will be helpful if the approach of IICA, Calcutta, is examined.

The main suggestion made by IICA, is for the maintenance of Section 40C relating to limitation of overall expenses in some modified form and removal of the terms relating to limitation of commission altogether. "It is the Committee's view", the circular goes on to say, "that so long as the Government finds that Companies work within a particular overall limit of expenses, it should not further restrict how that overall is expended. Though the Act presently has restriction on commission payment, it is more honoured in the breach than in observance and companies manage to pay more than the statutory commission by various devious means but at the same time manage to keep themselves within the overall expense limit."

This recommendation has the distinct advantage that, should it be given effect to, it will at once render redundant and unnecessary all the restrictive rules and regulations, most of the provisions of the Code of Conduct and even the Administrative Machinery. Companies will thus be freed from onerous rules and regulations and will be able for once to have a breath of fresh air. But the elimination of limitation of commission provisions only clothes the present practices, considered illegal and unwholesome, with legality. In other words, it will be regularising transactions considered irregular so long. Therefore, if the present irregularities were only of a technical nature and formal in character, the recommendation of IICA has great virtue and has thus to be specially commended.

It, therefore, follows that, if the IICA recommendations were correct, the alleged malpractices, or most of them, are not malpractices at all, but only malpractices in form. IICA apparently hold this view as they rely on limitation of expenses and argue that, once limitation of expenses is there, any other regulation guiding expenses is unnecessary.

Experience bears out the fact that limitation of expense is not enough. What is really required is limitation of total outgo. No measure is effective unless it stimulates reserves. Expense is only an item in total outgo. All measures which limit outgo and stimulate reserve are thus commendable.

There is nothing in the IICA recommendation which will foster stimulation of reserves. Its only virtue lies in the fact that it makes working conditions less difficult, but even then it is not wholly effective. There are many items in expenses which require study. The main item is field expense. With all the limitations in agency commission eliminated, there will be no end to field expense. That will result ultimately in companies overbidding one another, and very soon most of the companies will find that the limit of expenses has been reached. There will be large diversion of accounts. The companies with large tied accounts and similar sized portfolios will be able to smother the smaller ones for the permissible quantum of expenses for them will remain high. Very soon, the limit will be reached for many.

Then will begin the struggle for survival and exploration of means for defeating the regulations relating to limitation of expenses. Malpractice will thus assume subtler and a more devious course. It must also be realised that, once a climate of unrestricted commission is brought into being, it will be most difficult to reintroduce limitation of commissions, if later found necessary. The present tendency to demand more commission is a legacy of British days when there was virtually no limitation in prescribed agency commission. Great care, therefore, should be exercised in carrying out so sweeping a reform. The remedy must not be worse than the disease.

With malpractice, as can be reasonably anticipated, assuming a more devious course with the proposed reform, the moral basis of trading will be highly jeopardised so much so that it will be impossible to permit it any longer. That will only strengthen the hands of the Government of India who have been, for some time past, gazing upon general insurance with an acquisitive eye. Anything that corrupts the moral basis of the community will be resented. A government with socialist inclinations will inevitably socialise general insurance on grounds of social necessity.

If it is conceded that, even within limitation of expenses, with such modifications as may be necessary, a larger quantum can be spent on procuration, there is an indirect admission that rates of premium can stand further reduction. It has been conceded all the world over by experience that marine rates, through the automatic pressure of competition, have reached the bottom level. The move is now for upgrading marine rates, and not reduction thereof. Fire and miscellaneous insurance rates require collection of statistics in proper form before a verdict on these rates can be pronounced. The logical course would seem to be in delving into the required statistics before proposing additional field expense. If it is admitted that there is additional surplus which can be conceded to field force even within the permissible limit of expenses, it will be morally indefensible if the insureds are deprived of the benefit. There is little logic in robbing Peter to pay Paul.

The future of the industry lies in organising the field service. That will require postings of field officers in various parts on a salary basis. Principal Agencies are likely to go out of existence by August 1957 unless the law is changed in the meanwhile. Houses of Brokers as in the UK have not flourished in this country. The only basis of organisation will, therefore, be to have regional field officers. Without limitation of commission, the procuration cost will rocket sky high. A mathematical evaluation of daily cost to cope with overall limitation of expenses will neither be possible nor practicable. The result inevitably will be that most of the companies will thus be inexorably forced to examine devious ways to defeat statutory regulations relating to expenses. That will only hasten the doom of the private sector in general insurance.

It will thus be seen that the main prescription of IICA is nothing more than a sedative. A sedative has a good soporific effect and thus conceals symptoms. It does not cure.

The cure, again, does not lie in additional police measures, as recommended by many, and in some form by IICA. Insurance is not the appropriate purview of the Criminal Investigation Department nor is the Department of Insurance a wing thereof. The powers in the hands of the Government of India are already too many. If they have not exercised many of their prerogatives, there should be no moaning from the industry. On the contrary, the industry should take care to see that there is no occasion for the exercise of prerogatives. Those who build their fond hopes on additional police measures, merely discredit their own selves. Can there be anything more humiliating than this, that, in your daily trading, you require a police officer to sit opposite you every moment? Additional police measures will only ensure alleged corruption to go still further undergrond.

The cure—apart from the simplest and therefore most difficult, namely, "be good and forget about it"—lies in approaching the issue on a mathematical and statistical plane. The build-up of premiums has to be carefully analysed. Computation of premium is dependent upon adequate compilation of statistics. In the build-up of premiums, there must be cost, claims, profits, loading for reserves and additional loading for contingencies. The loading for reserves and additional loading for contingencies should be carefully sifted and automatically transferred to reserves by a statutory enactment, on lines of Section 17 of the Banking Act, from all gross direct premium income written by the company. Eventually, reserves will grow to such proportions that the

(Continued on page 1214)

World Overseas

US Notes

WITH sales of new automobiles showing a moderate increase in recent weeks. American automobile makers have begun to set up their production and employment schedules. This is the first time in 1956 that schedules have been revised upward. The gain in sales compared with earlier 1956 months is estimated at about 5 per cent.

While US auto sales are still more than 10 per cent below last year's record pace, manufacturers are encouraged by the new trend. They believe that the automobile decline of early 1956 is about over. General Motors, largest of the manufacturers, has called back 7,300 workers in the past few weeks, and expects to continue re-hiring for the rest of the year.

Rising sales and reduced output succeeded in cutting the inventory of unsold cars by about one-tenth in May and early June. Stocks now are down to an estimated 800,000 units. The trade paper 'Automotive News now expects automobile production to total nearly 3.2 million in the first half of 1956. While this is some 30 per cent below last year's phenomenal rate, it compares favourably with other years.

American steel output and demand, meanwhile, continue strong. Industry analysts believe that present peak ingot operations reflect a good flow of orders in the face of supposedly heavy inventories and possibly higher prices this summer. Pressure for deliveries has been unrelieved, they note. Some steel consumers who would accept increased volume as a hedge against a steel strike at the end of June—a possibility if labour management negotiators cannot agree on a new union contract by then—are unable to get larger supplies. The greatest impetus to a continued strong ingot rate in the third quarter of the year comes from unusually stable demand by the construction industry, the oil and gas industry, freight car builders, and makers of tin cans.

So insistent has been the domestic demand for tinplate that many requests have had to be denied. This demand was intensified by a strike at the US Steel Corporation's plants in the State of Alabama, which produce nearly 10 per cent of American tinplate.

Mill shipments of tinplate in the United States came to 1.53 million metric tons in the first quarter of 1956, nearly 23 per cent more than in the corresponding period of 1955. Makers of tinplate—despite economies being achieved in the quantity of tin used to coat the steel—used 8,799 long tons of primary tin during the period, some eight per cent more than a year earlier. The total US consumption of primary tin in the first quarter of 1956 came to 15,985 long tons, about 11 per cent more than in the same period last year.

The overall industrial production in the United States moved along at a steady pace in May and early June. The US Federal Reserve Board esimates output, after seasonal adjustment, at 142 per cent of the 1947 to 1949 average, compared with 143 per cent in April. The April figure represents an upward revision of one point from earlier estimates. The Board points out that general expansion in equipment-producing industries has tended to offset reduced output of automobiles and other consumer goods. Since last September, US industrial production has ranged between 141 and 144 per cent of the base period average.

As far as consumer spending is concerned, total sales by American retail stores in May are estimated by the US Commerce Department at $16,200 million. This advance figure, after adjustment for seasonal factors, is one per cent above April, 1956 and 3 per cent above May a year ago. Sales of durable goods were little changed from April to May, but sales of non-durable rose to a new high.

*

Sweden

FOR most Swedish companies 1955 was characterized by a growing volume of business, the export industries in particular reporting peak output and sales, says Svenska Handelsbanken's monthly Index in a survey of company activities during the past year. Industrial companies, whose shares are quoted on the Stockholm Stock Exchange, increased their aggregate turnover by 12 per cent to over Kr. 8,000,000,000 (£550,000,000 $1,600,000,000).

The largest increase in turnover—33 per cent—was registered for the iron, steel and other metal manufacturing industries. The domestic output of commercial iron and steel rose by 20 per cent in volume. The forest industry, which had a peak year for the volume of exports of both timber, pulp and paper, showed an increase of 12 per cent.

For the engineering industry, the biggest industrial group, 1955 was not quite so favourable. Although a rise was noted for both production and exports, foreign competition was keen and the 10 per cent increase in turnover was largely a result of higher product prices due to increased costs for raw materials and wages. The food and chemical industries registered minor increases in turnover, and for the textile industry the rise was only about one per cent. The higher level of freight rates is reflected in an aggregate 15 per cent increase in the net shipping revenues of the shipping companies. The three leading department stores showed an increase in turnover of 23 per cent.

In an analysis of the net profits and dividends of 88 companies quoted on the Stock Exchange the Index finds that net profits have risen by over 9 per cent to Kr. 685.300,000, as compared with an increase of 13.5 per cent in the preceding year. Provided that no major changes have taken place in reservations before the closing of the books the figures indicate that in 1955 the rate of increase in net profits had considerably slowed down.

Aggregate dividends rose by Kr. 42,000,000, or 12 per cent. However, account has to be taken of the fact that no less than 18 out of the 88 companies increased their share capital through new issues during the year. The corrected figures then show an increase of Kr. 23.000,000, or 6-7 per cent as compared with 1954. The advance is of about the same magnitude as the rise in consumer prices during the year. By way of comparison, it is being mentioned that the average annual wage for industrial workers rose by about 10 per cent in 1955.

The development during the past year has corroborated previous estimates that on the whole the shareholders have not received any increase in real incomes since the pre-war period, the Index says. The rises in quotations have, by and large, compensated for the deterioration of the value of money, while, on the other hand, the real wage level of male industrial workers has gone up by about 65 per cent.

*

Employment in the Swedish engineering industry, reckoned in number of working hours per week, reached a new peak of 10,070,000 hours in April. This means an advance of 0.35 per cent over March and close on 2 per cent over the figure for April, 1955.

At the shipyards the level of employment in April was about 5 per cent higher than a year ago, the corresponding figures for the electrical engineering works and the mechanical engineering works being 4 and 3 per cent respectively. Employment in the steel and other metal manufacturing works registered a decline of about 3 per cent. The share of export orders in overall engineering employment has remained practically unchanged at 24 per cent throughout the past 12 months.

*

The Swedish Riksbank's gold holdings decreased by Kr. 17,000,000 to Kr. 1,374,000,000 in May, while the foreign exchange reserves went down by Kr. 72,000,000 to Kr. 852,000,000. The combined holdings thus totalled Kr. 2,226,000,000 (£140,000,000 $432,000,000) on May 31, as compared with Kr. 2,315,000,000 at the end of April. The figure for the end of May 1955 was Kr. 2,209,000,000. The note circulation decreased by Kr. 162,000,000 to Kr. 4,968,000,000 with a corresponding increase in the note issue reserve to Kr. 832,000,000.

Germany

Confidence that the economic upswing will continue, though possibly at a less rapid rate, is expressed in the annual report of the Federal Association of German Industry (Bundesverband der deutschen Industrie) covering the period from May 1, 1955, to April 30, 1956.

Pointing to the thriving business conditions in Germany which have been achieved through "extensive expansion and sustained economic progress" the report states: "Thus the Federal Republic has caught up with what other industrialized countries of the West, less hampered by the consequences of the war and its attendant destruction, had already achieved earlier."

Notwithstanding the economic boom, the report points out that German economy has its tensions and anxieties to cope with, the two main concerns being the procurement of capital and sufficient manpower. To overcome the latter bottleneck, the report commends as the best remedy "rationalization methods with the aim of expanding productivity."

The report adds that German industry recognized the worker's claim to a full share in the profits arising from increased productivity; moreover, economic progress should be attended by improved working conditions and shorter working hours.

Germany's economy, the report says, is "embedded within the European economic community." In the years from 1952 to 1955 the industrial production of the OEEC countries increased by 15 per cent, which is twice as much as the relevant rate of increase in the United States. With 42 per cent, the Federal Republic is far above the average figure for the OEEC countries.

Comparing Germany's economic situation with that prevailing on the world markets, the report remarks that Germany's industrial production increased at a quicker rate than could have been foreseen. The report then publishes figures disclosing the production growth in the various branches of the German industry;

The importance external trade has for Germany's industries is illustrated by the export quotas of the various branches of industry mentioned in the report. Thus, the share of exports in the total sales of the machine building industry for 1955 amounted to 32.8 per cent. The export quotas for some types of machines were far above this average, as for instance printing and paper machines (67.8 per cent), locomotives (56.9 per cent), textile machines (56.5 per cent), and testing machines (55.3 per cent). During the same period the relevant figure for the electrical engineering industry was 16 per cent and for the shipbuilding industry 43 per cent.

Annual Rate of Increase

	Total Industry	Basic Industries	Investment Industry	Consumer goods industries	Building trade
1952/53 ..	+ 9	+ 9	+ 3	+16	+21
1953/54 ..	+11	+15	+17	+ 8	+ 4
1954/55 ..	+16	+16	+24	+12	+11

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

I BELIEVE I am not particularly superstitious, but I cannot help yielding to a momentary uneasiness over the sinister fatality that seems to dog every fresh effort at setting right the queered relationship between India and the United States. As I write, news is to hand that the projected meeting of Mr Nehru and Mr Eisenhower has been postponed. It is a pity in many ways. The encounter of two such fastidiously honest minds would have constituted the beginning of a new chapter of mutual appraisal.

*

But my uneasiness was not entirely due to the latest unforeseen difficulty of Mr Eisenhower's illness making the postponement of the meeting inevitable. It was due to the series of "accidents" that seems to have made every fresh effort at the creation of healthier relationship between the two countries something of a swimming against the current. It is common knowledge that Indo-American relations of the last few years, and more especially of the past two years, have been far from satisactory. It is a fact—though it may be difficult for Americans who see things through the eyes of their more tendentious news magazines to believe—that there are more people in India than they suspect to whom this state of affairs is extremely distressing. Likewise, I have no doubt that there are far more people in the United States, than is allowed by some of our papers, who are not habitually thinking of us as incorrigible apologists of the Devil. The depressing fact for both these classes of people is the periodical blizzards of misunderstanding that frost the patiently nurtured plant of mutual goodwill.

*

It is true that there are certain questions on which India and the United States do not think alike. These differences are most pronounced in our respective foreign policies, and most of our difficulties arise from this divergent approach to world problems. More particularly and in more recent times, there have been aspects of the American foreign policy that have stirred Indian sentiment deeply: American foreign policy, based on its own appraisal of the international situation, has had, whether intended or not, the unfortunate consequence of introducing factors that impinge powerfully on Indian security. Until developments relating to the formation of SEATO and the direct military aid to Pakistan brought not only the cold war to our very steps but also brought America perilously near getting embroiled in our disputes with our not too friendly neighbour, our criticism of American policy was largely of a rarified and academic kind. But the last two years have seen developments that India cannot view with equanimity.

*

This source of irritation, important as it is, would still not explain wholly the almost continuous acerbity in the relationship between the two countries. To my mind, the real reason for this unhappy state of affairs is the periodical occurrence of some event which succeeds in undoing nearly all the patient good work done since the last occasion when a similar wholly insignificant or thoughtless utterance by some one put all friends of India and America on the defensive. It is the seeming inescapability of such periodical untoward development that made me, as I said in the beginning, wonder whether there was not something weird about it all.

*

Be that as it may, it seems to me that a great deal of our present difficulties would be solved if only people in position of responsibility talked less. I shall readily concede that there is a good amount of loose and uninformed criticism of America in this country, much of which we should resent were it directed at ourselves. But I do believe that none with any sense of responsibility in India so far forgets himself as to say things that would hurt American sentiment except when he discusses American policy as such.

*

But can the same thing be said of all responsible Americans? Take Mr John Foster Dulles, the American Secretary of State. I am beginning to think that we must make some allowance for a man who has shown himself so consistently a victim of a particular disability which is analogous to what the psychologists term "accident-proneness." He is the sort of man—folk-lore of all ages and countries has his archetype—that would contrive to get involved in an accident even in the safest of passages. Mr Dulles has, in his comparatively short tenure of high office, shown a fatal gift for saying the precisely wrong thing in contexts where nothing, right or wrong, need have been said at all. His observations on Goa, for instance, were a gratuitous gift to Russian propaganda; and, coming as they did at a time when the Russians had so pointedly shown themselves as friends of India—indeed, Mr Dulles was merely reacting to such Russian gestures—their chilling effect on Indo-American cordiality was disastrous. It is no secret that the American ambassador to India, who was not consulted before the observations were made, was as completely taken by surprise by the statement as were the rest of us. The consequence was that, at a time when he had his hands full with the task of combating the rising tide of enthusiastic admiration for Russia in the country, he found himself incommoded with the embarrassing chore of explaining that Mr Dulles did not mean any harm, Once again, the good work had to be started all over again. Then, Mr Dulles came here early this year, in the wake of the SEATO meeting in Karachi, where again he successfully abetted Pakistan's effort to involve the other signatories to the treaty in the Kashmir dispute. This naturally created a furore in the country, though Mr Dulles tried to assure us that we were getting alarmed without any reason. And then came the acceptance by Mr Nehru of Mr Eisenhower's invitation to Washington for talks. It was confidently expected that, as a result of this meeting of the two statesmen, a great deal of the misunderstanding that clouded the mutual relations of the two countries would be cleared and a workable relationship would be evolved.

*

But, even before the meeting could take place, there were indications that, either deliberately or unwittingly, the atmosphere was being fouled by comments wholly uncalled for. For some reason, American commentators started precisely at this moment to wonder about the ethics of neutrality. Once again, the star performer was Mr Dulles. According to him, neutrality among military alliances is "except under very exceptional circumstances....an immoral and short-sighted conception." He made it clear, in a later passage, that the exception he had in mind was Switzerland (whom no one ever bothers to think of as anything except a natural neutral). It is, thus, plain that he was in no doubt about the neutrality of certain other countries about which,

one would have thought, the point was still arguable. Mr Dulles's sweeping generalisation includes, confining ourselves to the countries in Asia and the Middle East, India, Burma, Indonesia, Ceylon and all the Arab states except Iraq. One can only ask, in exasperation, as Walter Lippmann did recently, "Why was it necessary for the Secretary of State to speak on the subject from mountain tops? Do other Heads of States and Foreign Ministers anywhere feel that they must generalise and declare moral judgment about the policies of other Governments?"

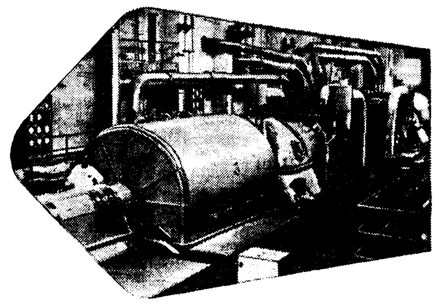
*

The most charitable interpretation of this sudden curiosity on the subject of the moral basis of neutrality is that there had been an interested querulousness on the part of some of the SEATO powers, notably Pakistan. The USA, it had probably been complained, was treating the "neutrals", who had not been too anxious to take sides in the cold war, with the same consideration as was accorded to friends who had thrown their lot with it. Indeed, there even seems to have been the complaint that these neutrals were being treated with greater respect than the "friends." Mr Dulles, whose protective impulses toward his brainchildren, the regional military pacts, verges on the maternal, promptly obliged by telling the whole world what he thought of the neutrals.

*

Whether this is the real reason behind the preposterous holding forth on the ethics of other nations' policies is not entirely free from doubt. If it were merely Mr Dulles laying down the international moral law, we may safely put it down to the reason I have just discussed. Or it may be attributed to his incorrigible moral priggishness that has made him, in his own estimation, God's chosen instrument for the destruction of the ungodly doctrine of Communism. But what makes the whole episode perplexing is the fact that it followed certain observations of Mr Eisenhower on neutrality at a press conference which are in sharp contrast to what the Secretary of State had to say. That, in itself, is not an uncommon occurrence in US Government circles; but what makes it most intriguing is that the President asserted, at the press conference, that his statement on neutrality would be amplified and made clear by Mr Dulles, "'so that we can all understand what it is we are trying to do in waging this peace." Does the President now accept the responsibility for the preposterous gloss that Mr Dulles has put on his words? Is that what the President meant at his press conference? Are we to understand that the position taken up by Mr Dulles is where America stands in "waging this peace"? Then, apart from the disturbing implications of the stand, the plain words used by the President have no meaning.

The President stated expressly that a neutrality that refuses to align itself to a military pact does not imply an indifference to moral values, an unconcern as "between right and wrong, decency and indecency." How this could be amplified in terms that Mr Dulles used, is a poser—unless we assume a complete confusion in high places in America or an irreconcilable difference between the President and his Secretary of State.



*

The pity of it is that such generalisations about the ethics of national policies are entirely irrelevant and uncalled for in the conduct of affairs. Men of affairs, we had always thought, were people whose personal experience of the intractable facts of life would have demonstrated the futility of generalisations and the folly of their public avowal. Some allowance must be made for the persistence with which newsmen, who are out for interesting copy, manoeuvre modern politicians into statements that they would much rather not have made. Moreover, in America, the preoccupation with the moral implications of the cold war is, for some reason, terribly and embarrassingly insistent. It may have something to do with their Puritan antecedents, but the practical consequences of such a preoccupation are quite unnecessary exacerbation of feeling. What particular concrete political result was sought to be achieved by this discussion of the ethics of neutrality, is not at all clear to me. If it was reassurance of "friends", I think it would have been best done privately. On the other hand, all that has happened is that a hornet's nest has been stirred by a condemnation, on general and largely untenable grounds, of the policies of many Governments with whom the US is nominally on friendly terms; who have done the US no harm beyond disagreeing with it; and who certainly are more fitted, than Mr Dulles himself, to know what is best for them. The episode has won the US not one friend it did not have before, but has considerably embarrassed many who are, in the face of great difficulties, trying to remain friends with it.

*

Perhaps I am being too harsh. American affairs are not, at the moment, as ship-shape as one could wish. Firstly, this is an election year in which, traditionally, the impossible attempt of squaring the circle must, in the interest of winning the highest office in the land, be made. Moreover, this year, the situation has been made even more unpredictable because of the President's illness. Meantime, the Russians are making sensational diplomatic conquests all over the place, with the result that American efforts at winning friends look, both in their eagerness and their pique at re-

Disturbing Development

QUICKLY in the wake of the resignation submitted by Mr S. K. Handoo to the Central Board of Directors of the State Bank of India, Dr John Matthai, the Chairman, is also reported to have written to the Finance Minister expressing his desire to be relieved of his office by the end of August. Though no confirmation is available, it is believed that Sir Vithal N. Chandavarkar, the distinguished director of the bank, has likewise resigned. Of each one of these three gentlemen, it may be said that his past career rules out snap decisions, and that his known sense of values precludes theatrical gestures. It must, therefore, be assumed that it is their careful and calculated aim to draw pointed attention to what must be deemed an issue of national and fundamental importance.

The full text of the letters of resignation has not been released to the press And it is proper that this has not been done. The correct etiquette will be for the directors in the one case and for the Finance Minister in the other two cases to release the letters at the appropriate time. Meanwhile, it is useful to mention that there is even the possibility of the resignation letters being merely indications to be relieved of office. This means that the full particulars will be revealed at the stage of personal discussions for which, doubtless, opportunities will be available. In fact, an opportunity for free and frank expression of views must be so created that the Prime Minister himself should be enabled to participate in the talks and thereby acquaint himself with a development which is undoubtedly of grave significance to the future administration of the State institutions in the economic sphere.

As I had stated in the last despatch, Pandit Jawaharlal Nehru has himself been thinking seriously of the various issues involved in the management of the State enterprises. In the long passage that was quoted in this column last week from Mr Nehru's speech in the Parliament, the Prime Minister has taken a definite line with regard to the nature and measure of independence and responsibility that must be conferred on the executives of State enterprises. The present episode in regard to the State Bank is, therefore, a matter which is more than an important detail that needs to be attended to by the Prime Minister; and is a question of policy that must firmly and decisively be dealt with at the highest level.

Mr Nehru is clear in his mind, and is convinced by authoritative advisers, that a business undertaking, even if under Government auspices, can be run efficiently and successfully only if the executive is given full responsibility and, therefore, full authority. Suppose mistakes are made? The system of Government controls and checks s no guarantee that mistakes will not occur. Moreover, the mistakes of today may turn out to be advantages of tomorrow. All that audit on the lines of Government procedure can do is to save a penny; but it cannot help to earn a pound. A business undertaking, whether under Government auspices or private management, must be judged by results. From this point of view, the running of a business enterprise by the State is governed by considerations other than those that are kept in view in administering an office of the Government. The mechanics of the routine controls and checks will not conduce to the dynamics of business management and success.

Holding these views, Mr Nehru is equally emphatic that, if the executive is hampered and pulled up all the time, he will cease to take decisions. He will become a specialist not in getting things done, but in getting files passed on. The visit of the Russian leaders has, without a doubt, been helpful to Mr Nehru for clarifying his ideas in regard to the degree of autonomy which State enterprise must have.

The State Bank episode will, accordingly, present the first test for the application of the principles which Mr Nehru has learnt, particularly from the Russian leaders. The questions that the Prime Minister has to find the answers for are: How far do interpellations in Parliament cripple and impair the sense of responsibility of the executives of State undertakings? How far do directives from Government disturb the autonomy of State enterprises?

While it will be improper to speculate, at this stage, on the exact reasons behind the resignations, it is clear beyond all doubt that interpellations in Parliament and directives to the State Bank by the Finance Ministry figure largely in the circumstances leading to the resignations. That something of this kind might happen, was foreshadowed by Dr John Matthai's speech at the Bombay Rotary Club. To get the correct impression, not much reading between the lines is necessary so far as the following passage from that speech is concerned:

"A convention has grown up in the British House of Commons that interpellations regarding public corporations, like directives, should apply only to matters of policy. But, at the present stage of public corporations in India, an unjustifiable measure of latitude appears to be allowed.

"The wide interpretation placed on public interest leads Ministers to assume a degree of responsibility for the working of public corporations which constitutes an abuse of the right to issue directives and to answer questions in Parliament. In certain matters with which I happen to be personally acquainted, replies by Ministers have been not merely unwarranted but almost invariably actually inaccurate".

Apart from the appropriateness of a convention of this kind, there is the serious charge that the answers given in Parliament by Ministers have been factually inaccurate, This is a matter which admits of simple verification. If the Prime Minister should find that ministerial replies have been inaccurate, it is up to the Government to make suitable amends.

The stage has certainly been reached when the Prime Minister should take the lead in developing and enforcing a convention whereby, so far as public corporations are concerned, interpellations in Parliament and directives by ministries are permitted only on questions of policy. It is unedifying to see MPs indulging in envious attacks on the emoluments of the officials of this State enterprise or that public corporation. It is sufficient, for this purpose, that an impressive directive has been given by the Prime Minister to the country at large that he totally disapproves of fancy salaries and even fancier allowances This directive, though not couched in an official resolution, is making itself felt in quarters that count. As a matter of fact, the inappropriateness of fantastic salaries in a country which acclaims Mahatma Gandhi as the Father of the Nation has been obvious for the past few years.

When Dr Matthai was the Finance Minister, it was his task to make a suggestion of this nature to Sir B. Rama Rau, who was then our Ambassador in Washington and who had been offered the Governorship of the Reserve Bank of India. Sir B. Rama Rau readily and gladly agreed to a cut in his emoluments. Later on, he has submitted himself to a further voluntary cut.

The details I gave of the emoluments of Mr Handoo, then and

CONFIRMATION of industry's contention, that legislation in behalf of labour in this country has been proceeded with so swiftly in recent years that it is today on a par with that of any industrially advanced countries, came from an unexpected source in the Gateway City last week. In addressing the local Rotary Club, Mr N. S. Mankikar, Chief Adviser of Factories, Union Ministry of Labour, asserted that, although such progress had been achieved in labour legislation, the accident rate in factories in the course of the last decade, has more than doubled.

Yet, neither management nor organisations of workers seem to be perturbed about what quite clearly should be an alarming phenomenon in labour welfare conditions in factories. Of course, the fact that the accident rate has gone up sharply is not a reflection of the lack of safety measures in this regard by management. Nor, on the other hand, can it be maintained that the workers themselves are prone to be more careless than they used to be. Partly, the reason is that the introduction of new and complex machines, and the addition to the ranks of workers, have both been responsible for a slight increase in the ratio. Secondly, it would also appear that there is not sufficient liaison between management and labour for the purpose of the education of the latter as to the safety approach to the machines on which they work.

The industrial environment in the country has vastly improved, envisaging the factory as a social unit and the workers thereof as proper partners in enterprise. This awakening of what we might call labour consciousness should, in itself, have contributed to an improvement in the accident experience. But, as we have pointed out, the technological advance in industrial life has not been matched by an equal development in the social aspect, a pre-requisite to which is better liaison between the partners in industry—management and labour.

In this regard, Mr Mankikar drew attention to the evolution of enlightened thought, over the last 30 or 40 years, on the social aspect of the worker in industry; in consequence, in other industrially advanced countries, a number of organisations have sprung up—voluntary, trade and professional, not to speak of research bodies as well—whose primary function is to promote and develop a progressive outlook on human problems in industry. Particularly, said Mr Mankikar, the research bodies were greatly useful in that the data and information collected, pooled and disseminated by them "helped the employers and workers to realise the community of interest between them."

What is necessary in this country is a more intensified application of the technique of Training Within Industry. As it is, the TWI, the new tool of management as Mr Mankikar described it, is being applied and put profitably to use by the most progressive of the industrial undertakings in India. But TWI cannot succeed unless there is co-operation of both management and labour in the education sought to be given to the workers in the use of the latest machinery and the safety measures pertaining thereto. It is to be hoped that, in the next five years, greater interest will be evinced in TWI by management and labour, and that TWI will be enabled to discharge its mission of providing greater safety for the worker.

*

Gujerati Controversy

The problem of language has raised a furore once again, this time in Gujerat. When the new academic year commenced last week, in implementation of decisions made and schedules adopted in 1954, the University of Gujerat is to have, as medium of instruction, the regional language in the second year course in all the Arts, Sciences and Commerce colleges affiliated to it. This decision, and the change over, affect 25 colleges in the region; but the change-over is being resisted by a number of enlightened educationalists, who have tabled five resolutions to stay the adoption of Gujerati for a further period; and the resolutions are to be considered at a requisitioned meeting of the Senate of Gujerat University.

The enlightened few held that an "unprecedented controversy" has been raging in Gujerat ever since the time, some two years ago, when a decision was made to switch over to Gujerati as the medium of instruction. Four resolutions have been tabled by Principal A. M. Trivedi, who is the head of M. G. Science Institute. These called for the extension of the time-limit when English is to be replaced. Another Principal Trivedi with the initials T. K., has suggested that no change over to Gujerati should take place beyond the intermediate stage until such time as further decisions about lingua franca, regional languages and English have been taken.

The most telling argument adduced by these educationalists is that text books of standard are not available for all the different courses. We suggest that, in any case, whether or no the relevant text books are available, there is no need for this unseemly hurry to oust English in the intermediate stage. Indeed, even the fact that, at the high school level, English does not figure as the medium of instruction is to be deplored.

The Centre has yet to make known its decision on the retention or otherwise of English, on the extension of the time-limit or otherwise for replacing English. We have yet to be clear in our minds whether, for the fact that English is a language of great international value, especially in the sciences, it is something that we can discard lightly or without considered judgment. At this stage, haste in doing away with English altogether is something that Gujerat University may have to repent at leisure, if it sticks to its decision of introducing Gujerati as the medium of instruction as from the current academic year.

*

Loose Talk

Mr Nehru is capable of writing with restrained anger when occasion warrants it. The occasion did so warrant when a representation was made by 38 organisations in Gujerat in respect of the future of Bombay City. A note in this behalf addressed to Mr Nehru has provoked a reply from the Prime Minister which, as to its tone and content, is eminently justified. Mr Nehru says that he has read the memorandum "with some surprise and regret because the tone and temper it displays does not exemplify the spirit in which any vital problem should be approached". Words used in the memorandum are "shocked", "appeasement", and "betrayal". This is difficult for Mr Nehru to stomach, because the charge is one of Government, his Government, having been guilty of appeasement and of betrayal and, therefore, of having shocked the interests in Gujerat.

It is not necessary that we should here take note of the manner in which Mr Nehru has denied these charges. It is the attitude that is wrong, because it betrays a parochial approach that it would be dangerous for Indian States to fall prey to. Loose talk about democracy, generalisations about principles, and excited accusations of appeasement and betrayal reflect a lack of maturity in thought and expression and are an index of a narrow provincial bent of mind which India cannot afford to have. Mr Nehru has thrown back at the memorandum words that it contains. For, the memorandum has been at pains to point out that the Gujeratis have a proud past with a noble role played by them in the struggle for the Indian freedom. "I take it", writes Mr Nehru, "that the people of Gujerat are not only proud of Gujerat and her tradition, but rather even more proud of India as a whole and do not wish to stress on their separate individuality". It is this concept of national India, and not that of the provincial Gujerati or Tamilian, that can truly pave the way for Indian greatness.

*

Nuclear Tests

Queen Victoria, on a certain occasion, was not amused. Dr Lohia is, and so he has said, at the Government of India's intention of ordering a paper to be written on one aspect of the problem of nuclear tests. Dr Ram Manohar Lohia, self-described Asian and world citizen, is amused at the action taken by the Government of India, but alarmed at certain pertinent facts relating to nuclear tests.

Dr Lohia feels hurt that tests of the atomic bombs and the hydrogen bombs are invariably carried out in the Pacific Ocean although the bombs themselves are manufactured on the Atlantic sea-board. And this, to Dr Lohia, is most insulting to the coloured races of the world. For, the Pacific Ocean region is the homeland of the coloured races, while the Atlantic seaboard is the area largely white. We should like to go a step further. The fact that nuclear tests are carried out—in the Pacific Ocean or elsewhere—is an insult to mankind and a threat to its existence. We are agreed with Dr Lohia that the concentration of nuclear tests in the coloured races' region is not quite cricket. But we wonder whether a similar spirited protest should not be addressed to the Russians, for the air they are polluting over Asia with their nuclear tests at—is it Siberia?

Mr Rajagopalachari, who was the first statesman of world calibre to call for an end to nuclear tests and experimentation in this field, has freshly made reiterated suggestions to that end. With a hot war seemingly less likely, as

World of Cotton

Triangular Deal

IT would be recalled that the Government of India, on May 11 last, announced their policy permitting the import of American cotton with stapling 1 1/16", which was valid for shipment up to 31st December, 1956. The Government have now announced that, with immediate effect, licensing for the import of this variety is suspended and no applications will be entertained. Trade sources in Bombay have interpreted this decision as a measure to take stock of the situation and have pointed out that, in the announcement, the key word 'suspended' means resumption of imports of American cotton at a later date. They believe that another factor might have been the recent fall in the prices of Egyptian and East African cotton, bringing them down very nearly to the level of those of American cotton of the same variety.

Whatever may be the factor, the above decision seems to have been taken with a view to facilitating early shipment of US cotton to this country under the proposed triangular arrangement among the USA, India and Burma to process US cotton in this country and reship it to Burma as finished products. It is said that, out of a total quantity of 200,000 bales to be shipped from the USA for processing and re-shipment to Burma as finished goods, Japan will be assigned 50 per cent and the UK and India 37½ per cent. The remaining 12½ per cent goes to West Germany. Negotiations are still under way and it is not known whether the whole scheme will be worked out on mill or trade account.

But the above decision has caused a bullish effect on comparable foreign growths in the Spot market, particularly the East African cotton prices of which have gone up by 15 to 30 points. Also, good business was reported to have been done with uncountry mills.

Following rates were quoted:—Bengal Rs 640 to Rs 700; Oomra Rs 740 to Rs 760: Dhollera Rs 740 to Rs 770; Jharilla Rs 790 to Rs 825; Vijay Broach Rs 970 to Rs 980: AR/BP/52 Rs 1645 to Rs 1650; ER Bushoga Rs 1535 to Rs 1540: Karnak Rs 2,700 to Rs 2,800; Sudanese Rs 2,100 to Rs 2,600 and American Good Middling 1 5/32" Rs 1,350 to Rs 1,360.

×

FUTURES TRADING:

Ever since the resumption of futures trading, there had been an obvious tendency for prices to move erratically on alternate bouts of buying and selling. This was due to the fact that the events, that followed the speculative rise in prices during December last, were still in the minds of the operators who did not like a repetition of the cotton crisis. The changes incorporated in the bye-laws of the EICA also restrained the operators.

Despite the fact that nothing had been known about the 1956-57 crop, speculators hammered the market following the start of the monsoon in certain cotton tracts and on technical considerations. The comparatively less decline in Vijay was explained by the inclusion of the popular varieties required by mills in the growths which were tenderable against the Vijay contract. On this view, it was felt that the shortage of tenderable varieties might impart strength to Vijay futures.

ICC Vijay, after touching a high level of Rs 824 and a low of Rs 817-8, finished at Rs 818. ICC Jharilla lost about Rs 40 per candy within four days and closed quiet at Rs 654—the highest touching being Rs 660 and lowest Rs 653.

×

1956-57 CROP:

Nothing has so far been known about the 1956-57 crop. According to reports received, sowings have just been completed in the Punjab and some parts of Rajasthan, where the crop matures earlier. In other areas, even the preliminary arrangements have not been completed and the South is still busy with marketing the current crop. It is, however, expected that the 1956-57 crop will easily exceed 50 lakh bales.

×

COTTON STATISTICS:

Exports by rail from 1st September 1955 to 21st June 1956 were 344,206 bales. Estimated mill consumption in Bombay, during the same period, were 1,015,355 bales as compared to 1,028,190 bales in the corresponding period of last year. Estimated stock of raw cotton held by exporters, dealers and mills in Bombay on the 21st June 1956 was 674,881 bales as compared to 816,343 bales on the corresponding date of last year.

The following table gives the mills' consumption figures (in bales of 400 lbs gross):—

Varieties:	1.9.1955 to 30.4.1956	1.9.1954 to 30.4.1955
Indian Cotton	2,910,601	2,718,938
Foreign Cotton	390,673	443,122
Grand Total of all cottons	3,301,274	3,162,060

KARACHI COTTON MARKET:

The Karachi Cotton market remained weak on reports of poor export demand. There are, however, reports that the Soviet trade delegation, which is touring Pakistan, has offered to buy 2,000 tons of medium-staple cotton from that country. It remains to be seen whether this deal will be successfully completed. Meanwhile, following rates were quoted:—Sind Deshi Rs 101; Punjab Deshi Rs 96: 4F Punjab RG Rs 84; LSS Punjab Rolling Rs 86-12: 289F Punjab Rolling Rs 92 and SG Rs 100.

×

NEW YORK COTTON MARKET:

Activity on the New York cotton market remained restricted. Trade buying was centred in new crops by leading spot firms who purchased December and May. Commission Houses were also buyers in new crop with some support based on a belief that the parity price would rise, which would mean a higher loan on the 1956 crop. Offerings were, however, light and were confined to liquidation and hedging. Spot was quoted at 36.75 cents per pound and July at 34.62 cents.

Shipments of cotton from the US in April 1956 aggregated 379,000 bales as compared to 249,000 bales in the corresponding month of last year. But shipments, for the eight-month period ending April, 1956, are still below those of the same period in the previous year—1.57 million bales as compared to 2.99 million bales. The increased movement, noticed in March and April, is attributed to the special million-bale export sale of cotton 15/16" and shorter-staple in January and February.

×

LIVERPOOL COTTON MARKET:

The Liverpool cotton market is still considerably under parity with the CCC selling prices, but the near positions are likely to remain steady due to the possibility of delays in clearing the August-September delivery purchases from the US Ports. Moreover, there is bound to be considerable congestion and perhaps confusion with the outgoing cotton from CCC sales and the incoming new crop against the loan.

The Egyptian contract continued inactive, July-August quoting 57.80 cents per pound. The Sudan contract eased on light hedging offerings. July-August delivery was quoted 49.00.

Meanwhile, the Liverpool Cotton Association has made final decisions on the technical side of the new mixed growths futures contract in which trading is scheduled to start on July 16.

CLOTH AND PIECEGOODS:

Conditions in Cloth market continued to remain dull. While the prices in general have not appreciably fallen from the recent peaks, the tendency is easy with buyers unwilling to conclude any appreciable business even at slightly lower prices. But mills, who have hitherto been unwilling to reduce the prices, are now said to be in a mood to show a concession in the rates, provided the orders are on a large scale. Although stocks with the mills and the trade are presently still not large, they are likely to accumulate if there is no improvement in demand within a fortnight.

The prices of several medium and coarse varieties have already dropped by about 2 per cent. The export quotations for Sassoon sheetings and drills have, however, staged a modest rally after the recent setback caused by false reports about China's sales to Sudan.

The production of cloth during May showed a substantial rise of nearly 20 million yards over that of April and was higher by about 44 million yards as compared with May last year. Total production, during the first five months of the current year, is higher at 2,128 million yards as compared with 2.087 million yards in the corresponding period of last year.

According to Ahmedabad millowners' sources, the Government decision, on the allocation of 14,600 additional automatic looms and 2.9 million spindles to the cotton textile industry, is likely to be announced in about three weeks' time. The Saurashtra millowners are reported to have urged that preference should be given to small units in the allocation of additional looms and spindles. They have also demanded that priority should be given to units with less than 600 looms. The Ahmedabad team is reported to have demanded that any allotment should not be less than 100 looms and a proportionate number of spindles, as that will be economical for any unit of the industry.

Meanwhile, the Government of India have requested State Governments to draw up schemes for the introduction of powerlooms in the handloom sector on lines indicated by them. Out of the additional production of 1,700 million yards of cloth required during the Second Plan, 200 million yards are to be obtained by the introduction of powerloom in the handloom sector. The Centre will give financial assistance to meet the cost of the powerlooms, for the share capital and working capital of the weavers-members of Co-operative Societies and the capital expenditure for prepartory and processing plants and for workshops.

Bombay Review

Gateway Markets

Rally in Castors: Firmness in Groundnuts

PRICES of both Oils and Oilseeds suffered a sharp decline in the early part of the week in the face of mounting selling pressure; but the trend was reversed toward the closing stages with Castorseed and Groundnut futures regaining most of the lost ground on short-covering accompanied by moderate fresh support. The initial weakness of the market was mainly attributed to the favourable reports of the monsoon in some of the major oilseeds-producing areas and the measure of risk involved in the export business in the absence of any indication of New Delhi's future policy. But the more enterprising shippers were reported to have entered into deals for about 2,000, tons on the presumption that the export policy would be extended without any material change and on the belief that the present gloom might prove only temporary.

As a matter of fact, the news of extension of free licensing of castor oil exports up to the end of this year gave fresh stimulus to trading on the castorseed futures market. In expanded activity, values scored a strident advance on resurgence of bull support and frantic short-covering with paucity of offerings accentuating the upturn. The turnover was fairly large. Castor September delivery, after touching a low of Rs 125, firmed up toward the close to Rs 137-8, the highest touching being Rs 137-10. Ready position was quoted at Rs 26-12 and Castor Oil at Rs 14-10.

After initial signs of easiness reflecting accumulation of selling orders, Groundnut futures took a turn for the better on sustained support, mostly by way of covering promoted by firmness of castorseeds. The recovery in prices was aided by the continued shortage of spot supplies arising from the smaller arrivals. The interest shown by Gujerat was considered very significant in the context of the present supply position in the country. Groundnut February made a disappointing start at Rs 131½, but firmed up toward the close to Rs 133-14. Ready quality was quoted at Rs 33-4; Bold at Rs 32-4 and Groundnut Oil at Rs 17-8.

With castor and groundnut futures stealing the limelight, interest in Linseed and other oilseeds was limited throughout the week. Linseed ready was quoted at Rs 28¾ and Linseed Oil at Rs 16. The Government of India have decided that export of Linseed Oil will continue to be licensed freely, as hitherto, to all permissible destinations up to the end of October 1956 only. Exporters are warned not to enter into long-term commitments against which they consider they will not be able to complete shipments by the end of October, 1956.

*

Gold & Silver

Silver and Gold adopted a divergent pattern of trading during most part of the week.

Although Silver displayed an easier tendency in the early part of the week, it gave a cheerful performance toward the close and values developed a hardening tendency on support from Calcutta interests coupled with covering by short sellers. The support was presumably based on a belief that there would be a restricted inflow of Tibetan coins. The turnover was fairly large, the inflow being 33 bars and the outflow 10 bars. The stock is reported to be about 600 bars.

Forward silver began slightly higher at Rs 170-3 reflecting better Calcutta advices and, after faltering a while around Rs 169-15, prices steadily edged up to Rs 171 on short-covering, to finish at Rs 170-13. Spot silver was quoted at Rs 171—the lowest touched being Rs 169-15.

Gold also put on a more lively disposition and finished with a small but noteworthy advance. Improved demand for spot metal, notably from Madras, and rumours of seizure of some contraband supply, were the twin factors mentioned on the advance. The turnover was moderate. Arrivals were put at about 1,000 tolas as against an offtake of 4,000 tolas.

Forward gold started around Rs 100-3 and stepped up to Rs 100-12 on short-covering, before closing at Rs 100-11. Spot gold was quoted at Rs 102-9. Sovereign moved narrowly between Rs 67-4 and Rs 67-6.

*

Metals

Conditions in the Metal market were better following higher advices from the London Metal Exchange. The tone of the Copper market as also upcountry reports suggested that there would be a good demand for the ready metal. Demand for scraps was also good. Ready, after touching a low of Rs 213, recovered at one time to Rs 220, to finish at Rs 218 per cwt.

Ready Zinc was quoted around Rs 64-8, and the demand for the metal continued to be good. Tin ready was quoted around Rs 503 per cwt and the firmness in the metal was due to the higher trend in Singapore following American intention to purchase tin concentrates from Indonesia and Bolivia. Lead moved between Rs 81 and Rs 82.

On the London Metal Exchange, Copper was quoted at £294½ and £296 for cash and forward positions respectively. The outlook for the metal still appears to be uncertain. The demand for Lead was unsatisfactory and the ready rate after touching £118, reacted to £115 per ton. There was very limited demand for Zinc which declined at one time to £93 from £95, to finish better at £94. Tin registered an advance of about £6 to quote £755 per ton due to the decision of the American Government to continue the operation of Texas Smelting Plant up to 31.1.57.

*

Yarn

Conditions in the Yarn market continued to remain dull and prices fluctuated within a narrow range in the absence of sizable buying from uncountry dealers. The products of the National Rayon Corporation were also adversely affected with prices of 150 and 120 denier qualities losing further ground during the last few days.

In general, the seasonal depression in the yarn cloth market appeared to have deepened with prices of grey linen and nilon falling by As 1½ to As 2 per yarn. Prices of Georgette and other varieties also eased similarly.

Art Silk Yarn 120 July was quoted at 772, the highest touched being 775 and the lowest Rs 772. Stable yarn July, after being marked up to Rs 658, finished at Rs 657. 120-D Japan was done at Rs 3-11-3; 150-D Japan at Rs 4-1-6; 120-D Italy at Rs 3-12-6 and 150-D Italy at Rs 3-14-6.

Olympus

Zestful and Purposive Activity

IT does not appear to be generally realised that the period when the Second Plan was merely a matter for academic debates—good humoured or acrimonious depending on whether you agree with its main assumptions or not—has passed almost unperceived. Officially, the Second Plan is already in operation and departments of Governments are bending their administrative energies to the tasks under the Plan. The most energetic, by a long way, are the departments under the pressure of the unceasing and restless energy of Mr T. T. Krishnamachari. In the course of the last few days, he has taken a series of steps which have given him a flying start in the implementation of the various duties assigned his departments. I am not at the moment thinking of the series of well-co-ordinated moves taken by the Ministry of Steel.. I am thinking of the activities of the Ministry of Commerce and Industries, the other key responsibility of Mr Krishnamachari and about which he had a great deal to say in a press conference here last week.

Mr Krishnamachari indicated the three-fold functions of his Ministry and explained the steps taken to streamline the smooth working of each of these. These functions are: firstly, the co-ordinated development of heavy industries; secondly, the provision of adequate supply of consumer goods; and, thirdly, the securing of essential imports and the promoting of export to earn foreign exchange needed for the Plan. In view of the many imponderables involved in the very nature of the tasks and in view of the controversy over the assumptions of the Plan in regard to at least the last two functions, the responsibility of this Ministry particularly is onerous. But Mr Krishnamachari did not appear daunted by the fact.

The first step taken by the Government of India in ensuring the smooth and flexible functioning of this Ministry was to demarcate its three functions with some degree of precision and place each under a Minister. Each of these divisions has a State-owned Corporation through which it will function to a considerable extent. This will ensure greater expedition than would be the case when departmental red-tape coils itself round urgent tasks.

The pattern of development of the heavy industries and basic producer goods industries has been indicated in the industrial policy statement of the Government announced a couple of months ago. Developments in this sphere are envisaged in both the public and private sectors. The National Industrial and Development Corporation will shortly be setting up mechanised steel and iron foundry. In a matter of months, Mr Krishnamachari expects to take concrete steps in setting up plants for building heavy machinery for the needs of the producer goods industries. The private sector will be assisted largely by assistance in increasing plants and installation of new machinery.

The heavy machinery division of this Ministry will also be responsible for another vital task: the uninterrupted supply of raw materials for industrial development, especially steel and cement. Production of basic chemicals is another responsibility; and, in this, the Government have had valuable advice from the Russians which, Mr Krishnamachari said, will be followed up. He also disclosed that, besides the aluminium plant to be set up by private enterprise at Hirakud, the Government were planning to set up another at some unspecified locality. The team of experts who will advise the Government on the project are arriving shortly from the US and steps will then be taken to decide on the exact location of the plant or plants.

The greatest amount of interest is attached quite naturally to what Mr Krishnamachari had to say about the consumer goods, especially textiles. This was due to the fact that the greatest amount of uncertainty surrounded the future trend of Government policy with regard to cloth. The situation had further been aggravated by controversies over the relative allocation of targets between the organised textile industry and the handloom and over the use of the Ambar Charka for the production of yarn. The uncertainty over the whole question had led the Planning Commission to be silent on the question, leaving it to be decided later in the light of fresh data. It is also no secret that ideological pulls in different directions were responsible for a good deal of confusion on the subject. Now, the whole question has been set at rest, at least for the time being, by the tentative decisions announced recently by the Government.

Mr Krishnamachari amplified these decisions at the press conference. The first assumption behind the targets fixed is that the per capita consumption of cloth at the end of the Second Plan period would be 18.5 yards. On this basis, the internal consumption of cloth is expected to be of the order of 7,400 million yards; and, with the export target of 1,000 million yards, the total cloth requirements would be of the order of 8,400 million yards. The present production from all sources is about 6,700 million yards, which means that provision will have to be made for an additional production of 1,700 million yards.

It is quite on the cards that all these calculations may be an underestimate both in their assessment of internal consumption and in their expert forecasts, especially of the handloom variety. But Mr Krishnamachari has stated that the Government are not unprepared for a target of 20 yards per capita and would, if necessary, revise targets accordingly. This is quite a sensible view of the fact that, in all probability, the per capita target is more likely to be nearer the higher figure.

On the question of relative allocation of the additional production, a compromise that must be acceptable to all interests has been reached. I gave the relevant figures in my last week's article.

Two important aspects of the present allocations are worth noting. The first is the stipulation that entire extra allocation to the mills is intended for export. This is a rather ingenious device to secure several advantages and to call several bluffs. In the first place, it secures the pegging of the mill production at present levels concerned, and the decentralised sector has been put on its mettle by its being conceded the substance of its demand and by its being given the additional responsibility of clothing the country without giving rise to inflationary distortions. The organised industry, on the other hand, which had been urging the evil consequences on the export market of the pursuit of restrictive policy, is now required to make good its implied assertion that it will earn valuable foreign exchange if only the Government would so permit.

The other aspect relates to the place of Ambar Charka in the new set up. The Khera Committee's Report on the Ambar Charka has made it clear that the whole idea is very much in an experimental stage and that it is not possible to assess the economic and technical consequences of the Ambar Charka without further experience. It has suggested, however, the immediate introduction of 75,000 Ambar Charkas during the current financial year, and this suggestion has been accepted by the Government. As at present, it looks as if the arrangements contemplated by the Government are the very opposite of the idea of decentralised cottage industry that the Ambar Charka was intended to be. The expectation is that it will produce yarn that will look after 300 million yards of handloom cloth. The problems connected with fitting in the Ambar Charka in the scheme of cloth production cannot be overestimated. Handloom weavers will need a good deal of persuasion to use the Ambar yarn; and it will never do to allow the yarn to accumulate without any buyer, for, it will completely demoralise the people engaged in its production. Technical problems connected with it need closer and continual scrutiny; there is, again, the appallingly low expectation of wages—a pittance of nine annas per day—which is sure to make it uneconomical as a source of whole-time employment. All these are questions which need further consideration. But, if the Ambar Charkas now introduced succeed in producing the yarn of the requisite quality required for weaving 300 million yards, their first and almost decisive battle for a place in the economy of Indian cloth would have been won.

The third aspect of the tasks of the Ministry of Commerce relates to foreign trade. On this, Mr Krishnamachari has spoken often enough in recent months at meetings of Advisory Councils and other germane occasions. During the press conference, Mr Krishnamachari referred to a number of agreements the Trades Division of his Ministry was entering into with other countries to obtain key commodities required for our development. There were also agreements regarding exports, and every effort was being made to increase the export not only of traditional items like ores, oils, oilseeds, etc., but also to develop new lines of exports like manufactures and semi-manufactures. In this connection, he referred to State Trading, and gave some interesting particulars about its recent and forthcoming activities. It has imported gypsum from Pakistan for use at Sindri. It is going to take over import and distribution of cement from next month. It will be shortly negotiating with Japanese interests for the export of iron ore. Discussions are tak-

Delhi Review

North Indian Notes

Flood Control

India is a land of extremes, of drought that withers away the peasant's crops and of floods which wash away all that he has sown. As such, multi-purpose river projects assume an importance of their own, having regard to conditions in the country. Firstly, the flow of waters in the rivers had to be controlled, so that banks will not be over-run, the fields flooded, the crops, destroyed, and houses washed away. Secondly, the same project had to undertake the provision of adequate water for irrigational purposes. But, on the part of the peasant, what he feared in the past, more than a lack of rainfall, was the sudden incursion made by flood waters over the lands that, perhaps, were ready for harvest. Flood control measures have, consequently, been invested with a top priority importance, and Government have given their due recognition of this fact by the existence of, and the works sought to be done through, the Central Flood Control Board.

Mr Gulzarilal Nanda, the Union Minister of Irrigation, Power and Planning, last week presided at the Fifth Meeting of the CFCB. In the forum, Mr Nanda stated that, although the allotment for flood control schemes had been cut sharply to Rs 60 crores as against the proposal by the Ministry of Rs 117 crores, he would not hesitate to secure, or try to secure, more moneys if this were necessitated by the progress of work done.

The problem relating to flood control measures, however, is that India may be forced to implement what are essentially short-term measures, though these are obviously not economical in the long run. On the other hand, Government cannot proceed with long-term measures for the very simple reason that detailed data and information are necessary as prerequisites to the implementation of any schemes of this nature. And, as for such inormation, as Mr Nanda has put it:

"As we came face to face with the problem in the country, we discovered that not only what was feasible and possible in the way of flood protection programme had not been carried out in the various parts of the country but also that the basic data and information, which one derives from investigations and on the basis of which schemes can be evolved or carried out, were almost totally lacking. So that even with money, it was not possible to carry out any schemes."

Undoubtedly, then, we shall have to make do with survey work and short term measures. The more ambitious projects, like the DVC, but differing only in that the primary purpose will be flood control, can be taken up only at a much later date. For the present, Mr Nanda revealed that Rs 8 crores would be spent in the current year on flood protection schemes and that a further Rs 5 crores would be expended on study and investigations.

For flood control to be effective, the States have to possess well-knit and ably-bodied administrative boards. Eleven boards for flood control already exist, and there are besides a number of technical advisory committees and river commissions. The work done by these agencies has, according to Mr Nanda, been highly satisfactory. A notable example: "At Dibrugarh, the position was retrieved by the efforts of all agencies".

*

Fertilizer Prices

THE pool issue price of fertilizers has, it was announced last week, been raised by an average of Rs 15 per long ton. The Government notification states that the upward revision had to be made in consequence of higher procurement costs. It would, thus, appear that, in yet another sphere, a system of selling prices has to be enforced which will pay for the difference between the indigenous price and the cost of the imported commodity. But how far an increase in the fertilizer price is desirable in the circumstances of Indian economic conditions as they obtain today, is debatable.

It is true that, in agricultural production, we have not been able, in this country, to extract from the land the best either in yield or in quantity. Several factors have contributed to such a state of affairs. Firstly, saving the rich deltaic regions, in which the cultivator has scarcely to take any great pains for the raising of his crops, neither manure or irrigational facilities had, in the past, been available in sufficient measure to help the agriculturalist. Moreover, while irrigational facilities have been improved substantially, and particularly in the course of the First Plan, a more difficult problem faced by Government was to educate the peasant that the extra cost involved in the utilisation of fertilizers would more than pay for itself in the better yields thereby made possible. Here, too, however, there is now a better appreciation of the value of fertilizers; and, in the recent past, consumption of ammonium sulphate has more than doubled. From a figure of 275,000 tons, utilisation of ammonium sulphate has increased from the 1950 figure to 600,000 tons in 1955. The extent to which India continues to be backward in this regard may be inferred from the fact that, according to expert estimates, consumption of nitrogenous fertilizers in the country should be five times the 1955 figure at a little over 3 million tons.

As such, it is to be anticipated that, with the emphasis placed on the use of fertilizers by those who superintend community projects, the demand for sulphate of ammonia should increase at a sharper pace. But Government would scarcely seem to be preparing themselves or the country for meeting such increased demand. As it is, one-third of the indigenous consumption has to be met by imports. It is the higher cost of imports, which, we repeat, has necessitated the current increase in the fertilizer pool prices. Consequently, the prospects are that Government will have to import even larger quantities of fertilizers in the future. That suggests that the inevitable increase in selling prices will, in turn, generate some consumer resistance and, thereafter, the pace of the improvement in demand for fertilizers might diminish somewhat.

*

Cottage Industry Conference

Hum-drum recommendations were the outcome of the Conference pertaining to cottage industries, reference to which was made in these columns last week. Of course, some good has come of it, especially the achievement of greater co-ordination. Suggestions emphasised the need for smooth liaison as a sine qua non for efficient functioning of the Central and State Boards. But, whether it will be useful or practical to have time-table assessments (in the form of monthly progress reports) of work done, is problematic.

At the concluding session, Mr K. C. Reddy was particular to stress the usefulness of progress reports on the Ambar Charka. It may be recalled that plans are for the introduction of 75,000 Ambar Charkas during the year. It is in this sphere that we believe such periodical stock-taking to be both necessary and desirable. For, should there be a shortfall in production of textiles in this sphere, an urgent decision to fill the gap by output in the organised industry will have to be taken. For this reason, we suggest that Mr Reddy's recommendation should be implemented.

*

New Aid Offensive

The foreign aid stakes is a handicap race in which America leads by several lengths, if measured in the quantity of aid provided. Late entrants in the race are Russia and China. But there are indications that the course is more to the liking of the late entrants, and also that the track conditions suit them better. For, China has just announced what appears to be its first parcel of aid—£8 million worth—to a non-Communist country, Cambodia. As far as America is concerned, the event is proving to be a steeple—chase, with the obstacles provided by Congress wrangling and cuts in appropriation. The latest hurdle—a deep slash in the current American appropriations by Congress—has, thanks to President Eisenhower's entreaties from his hospital bed, been safely got over with the partial restoration of aid by the Senate. The danger, however, is that smaller bouts of aid from the Communist bloc may conceivably be more impressive than the exceedingly generous help from America. It would be most unfortunate if the foreign aid stakes should prove a handicap event with unique attributes: the one entrant faced with the arduous jumps and obstacles of the steeplechase, with the other finding that the event is no more than a flat-race.

*

WORLD OF BUSINESS
(Continued from page 1198)

jects which can enable a heavy machinery industry to be set up on firm foundations. Schemes in this regard have been submitted by a number of foreign firms and Government are expected shortly to finalise specific projects for foundries and forge shops.

Moreover, Government are expeditiously setting about the establishment of an aluminium plant in the public sector, over and above projects already sanctioned for the private sector, which would have a capacity of 10,000 tons a year. But work on all these projects is not likely to commence before the middle of 1957, since reports in this behalf have yet to be submitted by the relevant teams of experts. *It is, therefore, possible that there will be a spill over into the Third Plan of projects under the head of "Heavy Industries"—at least as far as concerns schemes for the public sector.

Delhi Review

North Indian Markets

Record Sugar Production

ACCORDING to the figures released by the Indian Sugar Mills Association, production in India, during the month of May, was about 1.33 lakh tons, bringing the total production for the seven months of the current season to 17.89 lakh tons against only 15.69 lakh tons in the corresponding period of last season.

The offtake of sugar from factories, during the same month, was about 1.48 lakh tons as against 1.26 lakh tons in the corresponding month of last year. The total offtake of indigenous sugar, during the seven months of the current season, was about 9.53 lakh tons as against 5.91 lakh tons in the previous season. The closing stock of indigenous sugar on May 31 was 12.41 lakh tons.

Meanwhile, prices have recorded modest gains on good buying enquiry from the South, but loading to that centre is still tight. The Centre has, therefore, arranged for regular movement of sugar by special trains from factories in Northern India to destinations in the South. The specials will start running from this week. Moreover, it is proposed to maintain an adequate stock of sugar at important centres for distribution in Southern India.

Market circles believe that the supply position will improve, especially when a further quantity of 1.50 lakh tons has been released by the Government for free sale. This brings the total release, so far made for free sale out of 1955|56 production, to 9.68 lakh tons. Again, the formalities regarding the deal of British-refined sugar for 1.10 lakh bags are practically over and delivery orders in favour of the tendering parties are expected to be issued soon. No indication is, however, available as to how the successful tendering parties will dispose of the stocks in the market.

Following mill-delivery rates are quoted (per maund) in the Hapur market:—Jaswant Rs 28|8; Simbhauli Rs 28|7; Mowana Rs 28|6; Daurala Rs 29|8; Amroha Rs 28|0; Bijnore Rs 28/0; Mansoorpur Rs 28|8 to Rs 29|8 and Rampur Rs 30|12.

*

Gur

After recording a fall to Rs 10|8 per maund on good rain reports in east Uttar Pradesh, ready gur, in the Hapur market, improved toward the close to Rs 10|11 for dry quality.

Daily arrivals amounted to 150 maunds, while offtake aggregated 15 wagons. The stock position remained low at the estimated 60,000 maunds.

*

Foodgrains

Quietly steady conditions prevailed in the Foodgrains market at Hapur. Wheat average quality was transacted at Rs 13|14 and farm quality at Rs 15|4 per maund. Farm quality wheat had buyers from east Uttar Pradesh, Bihar and Gujerat, while average quality was mostly picked up by local stockists. Arrivals averaged 1,000 maunds daily. Heavy quantity of average quality wheat is reported to have gone out of Uttar Pradesh, and the stock position in the State is not very comfortable; but the Centre has already sent 30,000 tons of wheat from its reserves to this State.

Rice prices also recorded steady trend with rates quoting from Rs 25 to Rs 33|0 per maund, according to quality.

Large arrivals from the Punjab accounted for a small decline in Gram prices to Rs 10|8 per maund for local quality and Rs 10|14 for the Punjab quality.

Prices of other coarse grains ruled steady at the previous week's levels, Barley quoting Rs 10|4 and Bejhar Rs 10|0 per maund. The stock position of these cereals remained very poor. Jowar firmed up on poor stocks in a market faced with brisk demand up to Rs 19 per maund.

Peas ruled quiet at Rs 10|3 for dara quality. Arrivals went down to an average of 1,000 maunds daily. Arhar prices eased off to Rs 11|4 per maund due to lack of support at the prevailing high rate.

In the Delhi grains market, Wheat prices showed a mild setback owing to better arrivals against lower offtake. Gram rates softened slightly. Though the demand from Madras was good, the commodity could not be despatched due to loading difficulties. Stocks were, therefore, better. Maize steadied up by about As 8 per maund, while other coarse grains moved down modestly.

A sharp fall in the prices of Burma rice provided the main feature in the Bombay grains market. After ruling steady in the early part of the week, Burma rice declined sharply from Rs 160 to Rs 146 per candy following the Government's decision to reduce the issue price of this quality from Rs 18 to Rs 16 per maund. Toward the close of the week, however, there were buyers upto Rs 152 per candy following the excellent demand from the consuming centres in Maharashtra and Gujerat.

In the Wheat section, the tendency in forward deliveries continued to be firm with prices of Pissi quality from the Punjab and Madhya Pradesh improving slightly from the previous week's levels. The demand for spot wheat was, however, limited and Pissi quality was quoted at Rs 145 to Rs 160 per candy.

Among coarse grains, Bajra continued to be in short supply. A moderate business was reported done in Uttar Pradesh quality at Rs 138 to Rs 155 per candy. The tendency in Jowar was, however, easy with Sholapur variety losing Rs 3 per candy at Rs 142 to Rs 152, mainly due to better arrivals from Maharastra.

Trading in Pulses remained dull and traders were inclined to buy only to meet their immediate requirements.

*

LESSONS OF THE TRINIDAD OIL DEAL

(Continued from page 1197)

their excessive wages demands. Once they are satisfied that the danger of unemployment through cuts in raw material imports, that might be necessitated by a decline in the gold reserve, has receded, it will be much more difficult to persuade them to moderate their appetite.

If there is one lesson that has emerged from the Trinidad Oil episode ,it is that, so long as taxation of corporation earnings and of large personal incomes remains substantially higher in Britain than elsewhere, American and other interests will be in a position to buy up on advantagesous terms the operating mainly abroad. One of the reasons why it appears worth while for the Texas Oil Co. to pay for Trinidad Oil shares twice the price at which they were quoted on the London Stock Exchange before the offer was made was that, to an American holder who is not subject to British taxation, the shares of the company, once its headquarters are removed from Britain, must be worth a great deal more than to a British holder.

The Trinidad Oil deal has certainly made British opinion realise the dangers and disadvantages inherent in the high taxation of British firms operating abroad. Apart from the taxation point referred to above, the excessive taxation of undistributed profits deprives these firms of capital resources which they could use for developing their assets. Under the influence of this realisation Mr. Macmillan agreed, on the day before the debate on the Trinidad Oil deal, to make a small tax concession in favour of British firms operating in the commonwealth. He was not prepared to promise definitely the much larger concession demanded by many of his supporters, but he was willing to promise to examine the matter. From this point of view the attitude of the Socialists toward the Trinidad Oil deal might in the long run prove helpful, because they are now less likely to make political capital out of tax concessions for firms operating overseas.

Curiously enough, none of the critics of the terms on which Mr. Macmillan agreed to allow the deal to proceed have noticed that one of the "safeguards on which the Government insists is utterly worthless for practical purposes. The Chancellor announced that the Texas Oil Co. would have to agree to sell Trinidad oil to Britain against payment in sterling, in conformity with the agreed terms of the sale of oil from the Dollar Area in general. Since the sterling paid for the oil will not be blocked, it is bound to be used for purposes for which sterling would have been bought against dollar. So the net result from the point of view of the dollar and gold holding of the Treasury is bound to be precisely the same as if the oil had been paid for in dollars. The only difference is that, instead of spending dollars, and receiving a corresponding amount of dollars, the Treasury would neither spend nor receive dollars. On balance, the arrangement would make no difference to the size of its gold and dollar reserve.

One aspect of the Government's attitude is particularly gratifying. Had Mr. Macmillan vetoed the transaction it would have discouraged American investment in the Commonwealth. It would have also stimulated American opposition to British investment in the United States. The Government's decision must be therefore welcomed from the point of view of Anglo-American financial relations.

Madras Review

The Peninsula

T-C State under Central Tutelage

ANY passenger in a bus or train in the T-C State will be quick to perceive the absence of political controversy among the travelling group. When the 'popular' Governments were in the saddle, a quiet bus journey used to be an impossible phenomenon. Either one is inexorably drawn into the heated babel over the bonafides of this or that Minister, the propriety of this or that policy or the scandal behind this or that appointment; or one feels the insignificant witness to a cross fire sustained with noisy vehemence from beginning to end. For those who seek political education from these inevitable parleys, the change which has occurred since the advent of Mr P. S. Rau may be unwelcome. For the vast majority of the people of the State, it is a genuine relief. The people had too much of politics, too much of the pre-election promises, of the visionary future and of the blank disappointment which stared every ministry in the face. Central intervention, though democratically undesirable, did come as a God-sent to a population simply fed up with the confusion and feud of a highly over-worked party politics.

The Adviser has had a promising start. He quickly saw, the need for oiling the administrative machinery, and for eliminating corruption. During my brief stay in the State, I heard of innumerable instances where complaints pending for over five years were disposed of in a couple of weeks. A gentleman in North Travancore, who had been petitioning Ministry after Ministry for the sanction of a small amount due to him from the Government as rent for a building, could secure within a week of his file reaching the Adviser's office. All over the State, such cases are gratefully mentioned. A talented police officer from outside has been brought in to deal with the more difficult cases: and the Inspector-General of Police, an officer of considerable repute, has been granted enlarged powers to enable him to deal more effectively with erring subordinates and to bring to book more promptly offenders against the law. There is an unmistakable improvement in the tone of the Police Department. State transport routes have been overhauled to reduce congestion; and overloading is no longer a matter of choice for the driver or conductor. The Secretariat, and at least the higher cadres of officers, are aware of a new impulse for expedition and quicker turnover of work.

The people of the State are sincerely thankful for all this, though they are not inclined to look upon the adviser's regime for any permanent answer to the deeper economic problems of the State. And yet the Adviser has become extremely unpopular with the Hindus of the residual State. The gods are responsible!

Let me explain. Mr Rau took a decision on the division of the Devaswam Fund, which has aroused the almost universal protest of the Hindus of the residual State. Out of the Rs 51 lakhs, which were set apart for the administration of the temple from the general revenue of the State under the Integration Covenant, Mr Rau recommended that Rs 13 lakhs must be handed over to Madras, for the use of the temples situated in the four Southern Taluks, which are to form part of Madras under reorganisation. The Congress Ministry assessed the legitimate portion belonging to these Taluks at Rs 4½ lakhs. an assessment which was also approved by the States Reorganisation Commission.

The Devaswam Fund is administered by a three-man Board, of which the present President happens to be a gentleman from one of the ceding Southern Taluks. This gentleman advised the Adviser that Rs 13 lakhs was the proper amount. He happens to be, in the eyes of the residual population, a biassed authority. The Raj Pramukh is also reported to have approved of the figure, but public sentiment is to overlook this approval on the plea that the Raj Pramukh is not expected to know all the details of the administration. The Adviser could argue that he went by the proportion of current expenditure. a claim which is technically correct expenditure, but morally indefensible, if the most important fact of the situation is not left out of consideration. During the last two years, the Board was revising expenditure for temples from one end of the State to the other. Viewed in the light of the Reorganisation, the wrong end was chosen. The Southern temples were first upgraded, in respect of expenditure, and the Adviser possibly did not care to go behind what he saw.

There is now a growing agitation in the State, backed by several influential newspapers and political leaders, for the modification of the recommendation in favour of the residual area. Hitherto, the Adviser has not given any indication of an inclination to resile. If he does not, it is not unlikely that he will have to go with a bad name, in spite of the many good things he is doing. As is natural in such situation, the fact that he is a non-T-C citizen and that his regime means a direct negation of democracy, are being played up, with the embellishments needed for easy public consumption. Some have gone to the extent of suggesting that he could be trusted with no big issues and that he has already developed a bias against the State. It is quickly forgotten that he is in the State on account of an emergency, which is wholly a local creation, and his presence is intended to facilitate conditions for the next election. Meanwhile, the Adviser himself may be imbibing some frustration which is the spontaneous outcome of understood good, combined with ill-considered folly. The limits of a Caretaker Government are, therefore, being preached from all quarters. The dilemma of the Centre has to be sympathised with.

After the trip to Travancore, my itinerary took me to Madura. Here, I found, pitiful contrast to the havoc caused by floods in North India, the existence of water scarcity in the area around Madura. In this second city in the Madras State, a tiresome queue forms about daybreak, almost every hundred yards on the roads, awaiting the uncertain arrival of the water van, which is the only source of drinking water to the majority of the city households. On some days, this van arrives as late as midnight and water is rationed at one pot per head in the queue. The Vaigal used to oblige those who had patience enough to dig deep; but, this year, this holy river has been unusually cruel. For several days in succession, the residents of the city have been undergoing this ordeal, some blaming the local authorities, others the State Government, still others the T-C Government for not agreeing to part with more water of the periyar and a few throwing the blame on the Union Government for inaction. It is a blatant fact that, if the fate of the District were left to depend solely on the Periyar waters, this dispute should soon be settled, somehow or other. The Cauvery is not too far off to forbid the thought of the utilisation of its waters for the benefit of the population of Madura. The latest techniques are competent to achieve what might have been considered impossible a decade or two ago. The Second Plan would be a mockery for this District if, for a considerable part of the year, the people have to look up to the heavens for relief from thirst.

*

WORLD OF TEA

(Continued from page 1200)

15th June 1956, were 109.00 million pounds as compared to 103.14 million pounds in the previous week. Total amount to be landed on June 15 was 11.62 million pounds. Deliveries during the week totalled 9.59 million pounds, while landings were 15.49 million pounds. Total afloat on June 15 were 37.69 million pounds—24.85 million pounds from Calcutta; 4.50 million pounds from Cochin; Rs 1.25 million pounds from Chittagong and 7.09 million pounds from Colombo.

The average price realised at the auction, during the week ended June 22, was 49.11d against 50.95d in the previous week and 43.70d quoted a year ago.

In the auction held this week, about 27,389 packages, including 19,583 packages of Northern India teas, were offered. Price movements showed a mixed trend. The best liquoring sorts continued to be fairly steady, while Fannings grades were sold well, some times at advanced rates. The market for Medium and Common descriptions was easier and prices showed a decline of about ½d per pound. Teas valued under 3sh met with very little demand, and those sold were at a considerably lower level than last week.

CLIVE STREET GOSSIP

(Continued from page 1204)

buff, painfully and embarrassingly like the overtures of an adolescent. To add further to the confusion, the Services are deeply divided about the shape of the (ironically enough) war that will never come; and not a day passes without fresh evidence of the terrific pace of technological advances in Russia. In a democracy, unlike in a totalitarian regime, these difficulties have necessarily to be aired in public, giving the impression of a deeply divided nation. The contradictions that one notices may, therefore, be quite conceivably the consequence of thinking aloud—a public glimpse of a reappraisal that is going on, the inevitable difficulties of maintaining continuity with a policy that has, in the light of changed circumstance, to be drastically revised. If this reading is correct, then it is to be fervently hoped that the postponed meeting between Mr Nehru and Mr Eisenhower will take place in the near future. The consequences of such a meeting may well turn out to be more momentous than were imagined when it was mooted.

EAVESDROPPER.

Madras Review

South Indian Notes

On the Food Front

One of the problems on which the Central Government have been obliged to bestow urgent attention in recent months is the rise in the price of foodgrains in general and of rice in particular. The main rice consuming areas, like Madras, Travancore-Cochin and Mysore in the South and West Bengal in the north are feeling the pinch much more than other parts of the country.

In Madras, the position is daily deteriorating as the price of good quality rice continues to be at an unconscionably high level. Various explanations are given for the present predicament on the State's food front. The whole-saler attributes the scarcity and the consequent rise in prices of rice to wagon shortages and purchases on behalf of the Army. The State Government put the blame solely on speculators. The real cause, however, seems to be a mixture of the first and the third with the initial momentum derived from the knowledge that food production in the State has been below last year's level by about 64,000 tons. There have been rather heavy purchases on behalf of the Army and, no doubt, the speculators have utilised the opportunity to corner stocks. Afterwards the matter has been simple. Blaming one thing and another, the stockholders have been able to release supplies intermittently so that they can make as much profit as possible.

The intervention of Government upto now has been ineffective. It is no doubt true that adequate supplies have been made available in the open markets; but the quality of the rice available is far from satisfactory, with the result that people who would like to have tolerably good quality rice continue to be victimised.

It is to be regretted that, inspite of their having the food situation in the country well in hand, the Central Government have not been successful in meeting an emergency such as the one that is prevailing in rice consuming areas in the country quickly and effectively. The conclusion is inescapable that our Government departments have yet to learn many more lessons in co-ordination. The requirements of the Army could have been met through the Food Ministry, thereby avoiding dislocations in regional markets. The Ministry and their State counterparts have had ample experience of the special needs of each and every part of the country; and they hardly need to continue to indulge in trial and error methods.

It is gratifying to note that Mr M. V. Krishnappa, Union Deputy Minister for Food, has hastened to remedy the defect by arranging to make available better quality rice in the fair price shops. There is every reason now to believe that, not only will normal conditions be restored soon, but measures will be initiated so as to make a repetition of the present state of affairs an impossibility.

Plans to combat the currently unsatisfactory position have been outlined by Mr Krishnappa. The State Government will immediately be given 22,000 tons of rice, both boiled and raw, not at one place but as requested by them at various important centres in the State Rice worth Rs 40 crores will be released in the course of the next four months. In terms of quantity, it will mean an additional seven to nine lakhs tons. Good quality rice is also coming from Burma from next month.

Mr Krishnappa's reassuring statement is bound to restore confidence, but it will enhance the prestige of the Central Government many times only if they combine expedition with attention to details.

*

Agricultural Banks

Good beginnings have been made in the Madras State in the reorganisation of credit facilities for ryots as recommended by the Rural Credit Survey Committee. It may be recalled that the State Government had inaugurated, some time ago, a pilot scheme which envisaged the setting up of 12 large-sized credit societies in the six districts of South Kanara, Malabar, Coimbatore, Chingleput, Ramanathapuram and Tirunelveli. With the declaring open last week at Cheyyur, in the district of Chingleput, of the Co-operative Agricultural Bank by the State's Health Minister, the pilot scheme's target has been achieved. The eleven societies which are functioning for some time now have already recorded good progress.

The new societies will cater to the credit needs of the ryot with a liberal outlook. Both short term and medium loans for cultivation purposes will be granted on the security of anticipated crops and on the pledge of agricultural produce. This radical change in the attitude of the credit institutions toward judging the creditworthiness of the cultivator is bound to bring co-operative credit within the easy reach of even small farmers who form the back-bone of the nation. The new credit societies have been so designed as to succour to these erstwhile economically weak units. Hence forward they will be enabled to function more effectively with a consequent increase in production. Since the institutions are part of an integrated system, which includes marketing facilities, the small farmer will be assured of a fair price for his produce as well.

*

Popular Science

Among the various schemes drawn up for the rejuvenation of our villages, the new institutions for bringing the benefit of science to the rural population that are being set up by Government all over the country, may be expected to play an increasingly important role in coming years. The Vigyan Mandir Scheme envisages the spreading of scientific education through science popularisation centres in the rural areas. It will be part of the work of the institutions to collect scientific data on the area, such as local diseases of crops and human beings, the nature of the soil and water and information on the general conditions of health and hygiene of the locality. Arrangements for the dissemination of scientific information and education on general matters of science will also be undertaken through audio-visual methods.

When a sufficiently large number of institutions under the Vigyan Mandir Scheme begin to function in various parts of the country, their usefulness will become more apparent. For, apart from bringing popular scientific information to the rural areas, the mandirs will be in a position to supply valuable data to other important departments like Agriculture, Education and Health. Properly developed, they will serve as a two-way link between the Government and the people, first by popularising among the rural population scientific methods of agriculture, education and health and secondly by supplying to Government reliable data on the special needs of particular regions.

During his recent visit to Madras Mr K. D. Malaviya, Union Minister for Natural Resources and Scientific Research spoke very enthusiastically about the Vigyan Mandir Scheme and its immense potentiality. He said that, though the scheme had a late start, indications were that, in view of its great possibility, the State Governments would show a keen interest in the scheme. Mr Malaviya disclosed that Government had planned for the establishment of 120 Vigyan Mandirs during the Second Plan. *

An Overdue Reform

The report of the Committee on publication of text-books just released by the Andhra Government deserves the closest attention not only in the State for which it is primarily intended, but by the entire country as well. For, many of the defects in the present system of prescribing text books for schools in Andhra are also to be found in most parts of India.

Though it is generally accepted that the printing and get up of books that are placed in the hands of children count a good deal in their mental growth, little seems to have been done in this direction. In the absence of any stipulation as to the standard of printing, the paper to be used, etc, there is nothing to prevent the publishers from using any cheap paper available. It is not uncommon in this country to find text books intended for school children to be printed on newsprint. Little, if any, thought seems to have been bestowed by those who are responsible for prescribing text books, on the technique of text-book production.

The Committee rightly points out that production of text books for use in elementary and secondary schools in India has not been given the care it deserves. Research in text book writing is practically non-existent and there is no proper organisation, either Governmental or otherwise, for making available to the publishers what little that has been done in this direction. The Committee has also drawn attention to the non-availability of technical advice on book printing and production.

The Committee, therefore, has come to the conclusion that "text book production should not be left to private publishers, that a Government Department also is not suitable for the purpose and that it should be entrusted to an autonomous statutory corporation."

Referring to the composition of the proposed corporation, the committee has recommended that it should consist of 11 members. Three of these shall be Government officials in ex-officio capacity, the Director of Public Instruction, the Vice-chancellors of the Andhra and Sri Venkateswara Universities three persons nominated by the Government one representing teachers in schools, one representing printing, publishing or book trading concerns, one from the teachers in training colleges and two other persons nominated by the Government.

Madras Review

South Indian Markets

Record Coffee Crop in 1955-56

THE 1955-56 Coffee crop has outstripped the previous record of 1953-54. According to the Chairman of the Coffee Board, receipts into the Pool so far were 33,172 tons; and it is possible that receipts may be further improved to some extent, while the revised estimated was originally placed at 30,000 tons.

The next year's prospects seem to be equally optimistic for all accounts as far as one can see now; and the very rough preliminary estimate is round about 33,000 tons. The seasonal conditions have been fairly satisfactory although, in certain areas, the rains were premature or delayed.

One remarkable feature this year is, that the proportion of Cherry coffee to Plantation variety produced is low, perhaps the lowest so far. The total receipt of Cherry coffee into the Pool, as on May 31, was 5,030 tons, representing only about 23 per cent of the total Arabica coffee delivered into the Pool.

The Chairman of the Coffee Board in this connection, states that, with a more than usually good crop, fairly good prices for export coffee and judicious release for export and internal markets, internal prices will remain stabilised during the rest of the year and also give a reasonable return for producers.

The total offtake in the internal market each month, since January 1956, had ranged from 1,700 tons to 1,900 tons at an average of about 1,825 tons, the monthly sales through the various channels being 1,300 to 1,600 tons in Pool sales: 160 to 250 tons in local sales; 75 to 160 tons through Co-operative Societies and 70 to 130 tons through propaganda department.

According to a decision taken by the Board at the recently-held meeting, the present minimum release price of coffee will continue for a further period of six months from October next, the present minimum release price being based on Rs 2-2-0 per pound. The final payment on 1954/55 crop will be made on the same basis as that adopted for 1953/54, subject to the award of four points as bonus to Robusta.

It has also been decided to continue the existing price differential scale for a period of three years commencing from the season 1955/56 and that the price differential scale should not be taken up for revison at intervals of less than three years. With regard to final payments to planters in all future years commencing from 1955/56, the Board feels it necessary that the existing basis, adopted for the purpose, needs to be re-examined.

The Coffee Board has also decided to request the Government of India to permit export of another 3,700 tons out of the 1955/56 crop, bringing the total exports of coffee for the season to 7,800 tons. The question of further exports will be reviewed after three months.

Meanwhile, there are reports to the effect that Brazil has, in view, the prospect of a 20½-million bag crop and will not like to take the whole burden of stabilising the coffee market by some of the practice resorted to by her during the thirtees. The USA absorbs over 60 per cent of the world coffee and the reactions in that market will have a tremendous effect upon the coffee world in general.

*

Pepper

Pepper markets continued to rule quiet on easier foreign advices. In the Kozhikode market, the rate for Wynaad quality was quoted at Rs 730 and the Country variety at Rs 775 per candy.

Singapore report indicates that, from January to May 1956, about 7,000 tons (including 5,000 tons of new crop) have already been exported from Sarawak, thus leaving an exportable balance of about 10,000 tons, if the crop reaches the figure of 15,000 tons and about 7,000 tons in case it turns out to be 12,000 tons. New Crop of Lampong and Muntok are estimated to be about 6,000 and 5,000 tons respectively. It is, therefore, felt that, on the face of these figures and in view of the smaller stocks, both in the USA and Europe, the statistical position of Sarawak cannot be called unsatisfactory. On the whole, the future of pepper, in general, does not warrant such diffident feelings in the commodity as at present. *

CASHEWS:

According to available data, total production of Cashew in India, during 1956, is expected to be 11 lakh cases of processed kernels of which over 6 lkhs cases have already been exported. Of the 5 lakh cases remaining, nearly 2 lakh cases have been processed, but remain in stock.

The market for the commodity, which has been ruling quiet, turned active following the reports of Russian purchases. Toward last week-end, 20,000 cases were reported to have been shipped to Russia from the Cochin Port—the first consignment of such a size to be shipped to that country. The trade expects a revival of demand from July onward. The rate, which was steadily dropping down to 46 cents per pound, has now recovered to 47½ cents.

*

Groundnuts

The Groundnut market in Madras ruled quiet during the past week with prices moving within a narrow range. The rate for superior oil-quality seeds was quoted around Rs 163 per candy, while bold variety was quoted at Rs 159 per candy. Only small crushers showed interest, while big crushers did not operate in view of the dull conditions prevailing the oil section.

Of the total normal area of 394,000 acres raised under groundnuts in South Arcot district annually, about 55,000 acres are reported to have been raised under irrigated, and the rest is raised under rain-fed, conditions. The area under groundnuts in 1956 is estimated at 48,640 acres as against the normal area of 55,000 acres. This is short of the normal by 9 per cent.

In the Groundnut Oil section, the rate for the ready position was quoted nominally at Rs 310 per candy. Turnover was small as buyers from Calcutta and Circar Districts did not show much interest.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides, during the past week, were fair with steady clearances. Prices of all weights remained, however, unchanged. Arrivals of Buff hides were moderate with prices ruling unchanged. Arrivals of Buff Calf and Cow Calf were in fair quantities, but clearances continued to be restricted.

In the export section, trading was irregular; but more enquiries were noticed in 8/8½ lbs runs, fourths and fifths. Business was reported done in 5/5½ lbs at rates varying between 45d and 46d. Restricted business was noted in 10/12 lbs on the basis of 33d and in 8/8½ lbs fifths at 32d.

In the Tanned Skins section, arrivals of both Goat and Skins were fair, but there was only moderate clearance. Prices were unchanged for Sheep skins, while those for goat skins were As 2 per pound lower.

Trading in the export sector was restricted. Business was reported done in prime quality goat skins 11/12 lbs inferior fifths at 8sh 3d to 8sh 9d. Light weight skins were difficult to sell as buyers were not showing any interest.

The pattern of trading in sheep skins was the same as in the previous week. Business was done in middle class 6/6½ lbs fifths at 10sh and good middle class 5½/6 lbs run selections at 14sh 9d.

WORLD OF INSURANCE

(Contiued from page 1201)

undistributed profits, invested properly, will ensure a steady return to shareholders. The proportion of debitable claims can be sifted by analysis of results of companies over the past few years. It should be ensured by statutory enactment that a proportion must always be available to meet normal claims: exceptional losses may be permitted to be debited to reserves. For costs, commission expenses will be fixed as hitherto and the balance will be for further overheads. It may be desirable, taking into account all these factors, to fix a ceiling on total expenses calculated not on direct premium income but on net premium income of companies on the whole.

If the rates, on this computation, appear to be inadequate, the answer will be to enhance the rates. At any rate, the rates must answer and equal compilation of statistics.

This is a very brief resume of what should be arrived at. A careful probe into the details and working thereof will answer all the requirements. It will not be necessary to have Administrative Machinery, Code of Conduct, etc. They will be unnecessary as there will hardly be any scope to indulge in malpractices.

EDITORIAL NOTES

(Continued from page 1196)

period of four terms, would not permit of an unbiased assessment of Mr Truman's achievements.

Thus, Mr Truman's stature outside America has been higher than the reputation or prestige that he commanded within the country. Recently, Oxford University paid its tribute to Mr Truman with a ceremony, which reportedly brought tears to Mr Truman's eyes, conferring an honorary doctorate on him. Later that day, in a speech at the Annual Dinner of Christ Church College, Mr Truman once more offered forceful evidence of his firm personality. He called for a new magna charta that would include economic well-being and security, health and education and decent living standards among "our inalienable rights". The ex-President has drawn particular attention to the great awakening in Asia, whose peoples "are determined to enjoy the benefits that we know, now in their life times, in this year, this decade, this generation". How far the aspirations of new Asia can be realised, it is difficult to make predictions about. But Mr Truman has a record, in the little short of 8 years that he was President of America, as a defender of human rights; and it was proper that Oxford University should have bestowed rightful honour on one who has the distinction both of having greatness thrust on him and of having achieved greatness in his own time:

PROSPECTUS

A copy of the prospectus has been delivered to the Registrar of Companies, West Bengal, for registration together with the necessary documents which are required by Sec. 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office (Head Office) of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them. A Licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to public inspection at the Registered Office (Head Office) of the Company. It must be distinctly understood that in granting the Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to

The subscription list opens on Monday, the 18th June, 1956. All applications for shares must reach the Registered Office of the Company by 21st of July, 1956.
The Directors may extend the date for receipt of applications, as they may at their discretion think fit.

KESORAM COTTON MILLS LIMITED

	Rs.	A. P.
AUTHORISED CAPITAL:—

REGISTERED OFFICE:
8, Royal Exchange Place, Calcutta.

QUALIFICATIONS AND REMUNERATION OF DIRECTORS:

Under the Articles of Association of the Company as amended by the Shareholders at the Extraordinary General Meeting held on the 6th June, 1956, each Director is to hold 200 Ordinary Shares on which all calls shall have been paid and each Director will receive by way of remuneration a sum of Rs. 200/- for each meeting of the Board attended by him, provided, however, until the sanction of the Central Government is received the aggregate of such payment to each Director in any financial year will not exceed Rs. 1,200/-.

PARTICULARS ABOUT THE MANAGING AGENTS:

The Managing Agents is a Private Limited Company with a subscribed and paid-up capital of Rs. 50,00,120/-.

Under Article 101 of the Articles of Association, the Managing Agents were entitled to a commission on the basis of gross sale proceeds of manufactured products of the Company and purchases of cotton and certain guaranteeing commission. The said basis became inapplicable from 1-4-1956 under the provisions of the Companies Act, 1956.

The term of office of the present Managing Agents will expire on the 15th January, 1957. An application is intended to be made to the Central Government for a fresh agreement renewing the appointment of the Managing Agents for another term of ten years and to fix their remuneration @ 10% of the net profits on the basis of the provisions of the Companies Act, 1956.

RIGHTS ATTACHED TO DIFFERENT CLASSES OF SHARES:

According to the provisions of Section 87 of the Companies Act, 1956, every member of the Company holding any equity (ordinary) share capital has a right to vote, in respect of such capital, on every resolution placed before the Company and his voting right on a poll shall be in proportion to his share or the paid-up equity (ordinary) capital of the Company.

Every member of the Company holding any Preference Share capital has, in respect of such capital, a right to vote only on resolutions placed before the Company which directly affect rights attached to his Preference Shares.

The Preference Share capital carry preferential right to the fixed amount of dividend, but does not carry any right to any further participation in profits.

In case of winding-up of the Company, the rights of the shareholders as regards dividend and return of capital shall, subject to the provisions of the Companies Act, 1956, be governed by Article 127 of the Articles of Association of the Company which provides as follows:

"If the Company shall be wound-up the assets available for distribution among the members of the Company shall be applied in the first instance in payment of the cumulative dividend or dividends on the Preference Shares which may be unpaid or in arrear at the commencement of the winding-up and thereafter the balance, if any, of the assets available for distribution as aforesaid shall be distributed in manner following, as to one-quarter thereof among the holders of Preference Shares in proportion to the capital paid-up thereon at the commencement of the winding-up and as to three-quarters thereof among the holders of Ordinary Shares in proportion to the Capital paid-up thereon at the commencement of the winding-up."

RESTRICTIONS ON MEMBERS' RIGHTS:

So long as any money is due from a member of the Company in respect of any shares held by him, he shall not be entitled to vote at any meeting of the Company in respect of such shares.

The Directors may, without assigning any reason, decline to register any transfer of shares not fully paid-up or upon which the Company has a lien.

OBJECTS AND BUSINESS OF THE COMPANY:

The main objects are inter alia the following:—

"To carry on all or any of the following businesses, namely cotton spinners and doublers, flax, hemp and jute spinners, linen and cloth manufacturers, flax, hemp, jute and wool merchants, wool combers, worsted spinners, woollen spinners, yarn merchants, worsted stuff manufacturers, bleachers and dyers and makers of vitriol, bleaching and dyeing materials".

"To purchase, comb, prepare, spin, dye and deal in cotton, flax, hemp, jute, wool, silk and any fibrous substances".

The Company has been carrying on business since about the last 36 years. The Company suffered loss upto the year 1930 as a result of which the values of the assets of the Company were written off as on 24th January, 1931, as per Reduction Scheme and the value of the Ordinary Shares was reduced to Rs. 2-8-0 per share from Rs. 10 per share. Since then the Company has made steady progress. Consequently in 1948, the Company capitalised a sum of Rs. 5,00,000/- from its reserves and issued fully paid-up bonus shares of Rs. 2-8 each on the basis of one such bonus share to every holder of 3 Ordinary Shares of Rs. 2-8-0 each. Further the face value of the Ordinary Shares was raised from Rs. 2-8 per share to Rs. 20/- per share by the capitalisation of the profits of the Company from time to time on four different dates between 1948 to 1954 amounting in all to Rs. 1,40,00,000/-. In 1955, the entire 8,00,000 Ordinary Shares of Rs. 20/- each were sub-divided into 16,00,000 Ordinary Shares of Rs. 10/- each. The present market quotation for these shares is about Rs. 19-8 per share

The assets of the Company consisting of land, buildings and machinery, etc., were re-valued in the year 1950 and a surplus of Rs. 1,45,87,000/- lies to the credit of capital reserve account of the Company as on 31st March, 1956.

PURPOSE OF PRESENT ISSUE:

The Company has so far been engaging itself in the manufacture of cotton yarn and cloth and hosiery goods. After carefully studying all the pros and cons of the matter, the Company has now decided to extend its activities and with

KESORAM COTTON MILLS LIMITED, PROSPECTUS—*Contd.*

that end in view it is proposed to instal a Plant for the manufacure of Continuous Filament Viscose Rayon Yarn. There is a good demand for rayon cloth and it is expected that the rayon yarn, which will be manufactured by the Company, shall fetch a good return to the Company. A licence necessary for the establishment of a 10 ton plant for the manufacture of the said goods has been obtained from the Government of India. It is, however, proposed to instal for the present a plant of 6/7 tons capacity only. The cost of the installations of the said 6/7 tons plant is estimated to be about Rs. 3,70,00,000/- as per particulars below:—

	About Rs.
(i) Land, buildings, roads and other constructions	80,00,000
(ii) Machinery and equipment	2,50,00,000
(iii) Working capital ..	40,00,000
Total About Rs. ..	3,70,00,000

Out of the above sum the Company proposes to meet about Rs. 2,70,00,000/- for the purchase of land, machinery and equipments and certain construction work from its existing resources, bank loan, deferred payments, etc. The balance amount is proposed to be met by the present issue of shares. In the opinion of the Directors, the minimum amount which must be raised by the issue of these shares is Rs. 60,00,000/- inclusive of the 50,000 shares which have already been subscribed and allotted which sum together with the said sum of Rs. 2,70,00,000/- will cover all the expenses except working capital.

It may be stated here that a portion of land required for the purpose aforesaid has already been acquired at Mouza Raghunathpur (where the said Rayon Plant is proposed to be located) in the District of Hooghly near Calcutta. Negotiations for the rest of the required land as well as for the purchase of the plant and machinery from various parties, are in progress.

Copies of the Balance Sheet and Profit and Loss Accounts on which the report of the Auditors is based and Memorandum and Articles of Association of the Company may be inspected at the Registered Office of the Company during office hours until the subscription list closes.

The Directors may, at their discretion, pay brokerage and/or commission at a rate not exceeding 2% of the face value of the shares in respect of shares already allotted or to be allotted by them.

The financial position of the Company will appear from the Auditors' Report set out below:—

AUDITORS' REPORT.

Messrs. BIRLA BROTHERS PRIVATE LTD.

Managing Agents,
Kesoram Cotton Mills Ltd.,
Calcutta.

Dear Sirs,

We have examined the books and accounts of (a) Kesoram Cotton Mills Ltd., as kept in Calcutta and Gwalior in which are incorporated the certified returns from the Mills and retail shops for the five years ended 31st March, 1956 and (b) Bharat Kala Bhandar Limited, a wholly owned subsidiary of Kesoram Cotton Mills Ltd., which is audited by Messrs. Singhi & Co., Chartered Accountants, Calcutta for the five years ended 31st March, 1956 and report that subject to the completion of the audit for the year ended 31st March, 1956 of both the Companies the profits are as set out below. The audits of the Company and its subsidiary for the year to 31st March, 1956 have not yet been completed. These profits have been arrived at after charging all expenses of working and management including provision for normal depreciation on the basis allowable for Taxation and after making such adjustments as are in our opinion, appropriate.

Stock Exchanges

UNEVENTFUL WEEK

Watch-Dog Writes:

IN the absence of any fresh interest, activity in stock markets has been restricted during the week under review, and renewed offerings have caused prices to drift to lower levels. General sentiment is, however, bullish though operators are cautious in following the rise in prices. This means, that bulls may once again lend support to the market at scale-down.

Following a sharp setback in speculative issues, prices on the Calcutta Stock Exchange were marked down sharply in reduced activity.

The Bombay Stock Exchange displayed an easy undertone due to tired long liquidation and absence of support.

The Madras Stock Exchange gave a mixed performance and the general trend was subdued.

Except for the renewed strength of Oil shares, trading in all other sections of the London Stock Exchange remained dull.

Wall Street closed barely steady with a fair distribution of losses ranging to $1.

*

Calcutta

Calcutta, Thursday Evening.

CONDITIONS on the local Stock Exchange, during the past week, remained quiet and dull. Apart from the fact that operators were generally cautious in following the rise in prices, the absence of any fresh support, a sharp setback in speculative issues in view of clearing adjustments and the delay in the announcement of the coal price increase, caused prices to develop a reactionary tendency due to renewed selling pressure. Even the news of the IJMA's decision to reseal 2½ per cent of the looms had no effect on market sentiment. The only redeeming feature of the week's trading was the comparative steadiness of the Tea section which showed a marked expansion in turnover.

The Giltedged section showed the same features as in the preceding weeks: paucity of business, unimportant price movements and a general absence of enquiry from institutional investors. 3 per cent 1986 Conversion Loan moved between Rs 77-2 and Rs 77-5 to finish at the former level.

In sympathy with giltedged securities, Bank shares ruled quiet with Punjab National shedding quarter of a point at Rs 57-12. United Bank of India 'D' were enquired at Rs 4-7.

Jute shares met with little or no interest and the announcement of the IJMA's decision to reseal 2½ per cent of the looms had no effect on market sentiment. There was a general feeling among operators that the cut in production was too small to make a material difference to the industry's working. Howrah were offered at as low as Rs 22-8 against Rs 23 and National at Rs 24-12 against Rs 24-6. Orient were marked down to Rs 135-8 from Rs 149; Barnagore to Rs 136 from Rs 148 and Champdany to Rs 158 from Rs 162.

Activity in the Coal section was rather restricted and almost all scrips were marked back to recent levels in the absence of any fresh support following the delay in the announcement by the Coal Price Inquiry Committee. Also, the feeling, that the price increase would not be substantial enough to cover the rise in costs, induced profit-taking at recent high levels. Burrakur were marked back to Rs 13-10 from Rs 14-2; East Indian to Rs 32-12 from Rs 33-3 and Central India to Rs 7-2 from Rs 7-7. New Beerbhoom, after being pushed down to Rs 19-11 from Rs 20-1, recovered at the close to Rs 20-0. Raneegunge met with some enquiry upto Rs 12-5 from Rs 12-1.

Textile shares were no exception to the general trend of the market, although Elgins were the only exception and the shares were easily absorbed upto Rs 28-12. Kesoram, after being marked down to Rs 18-13 from Rs 19-5, finished better at Rs 18-15, while Bowreah lost three points at Rs 165. New Victoria moved narrowly between Rs 2-9 and Rs 2-11.

Sugar shares came in for selective support on better advices from the commodity market; but higher levels could not be retained till the close due to general profit-taking. Cawnpore were at one time taken upto Rs 20-8 and SKG upto Rs 13-9 from Rs 20-5 and Rs 13-6, but closed at Rs 19-11 and Rs 13-6 respectively. Belsund, however, had continued support upto Rs 11-13 from Rs 11-3 and Balrampore upto Rs 7-8 from Rs 7-7. Ramnugger recovered to Rs 27-4 from the recent low of Rs 26¾.

Quite in contrast to the trend in other sections, Tea recorded a marked increase in turnover at enhanced levels although profit-taking pared down some of the gains at the close. The belief that better prices would be obtained for tea in the coming weeks and the anticipation that Russia would enter the market shortly for large-scale purchases, imparted renewed strength to the section. Following were the opening and closing rates for the week, the figures shown within brackets being the highest level touched by a few prominent scrips:—Baghmari Rs 30-11—Rs 29-10 (Rs 29-7); Bateli Rs 24-10—Rs 25-8 (Rs 25-8); Brooke Bond Rs 24-10—Rs 24-4 (Rs 24-10); Dhelakhat Rs 23-0—Rs 22-14 (Rs 23-6); Dhumseri Rs 23-10—Rs 24-5 (Rs 24-10); Hasimara Rs 39-6—Rs 39 (Rs 39-10); Hantapara Rs 248—Rs 241 (Rs 249); Patrakola Rs 197—Rs 205 (Rs 205) and Tezpore Rs 28-8—Rs 28-8 (Rs 28-13).

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Settlement considerations, weaker Bombay advices and heavy selling by a prominent operator—all these factors caused a sharp setback in Indian Irons. The scrip opened at Rs 37-9 and, after touching a high of Rs 37-11, receded gradually to Rs 36-10 at the close. After market hours on Thursday, there were even sellers at Rs 36-6-6 with buyers at Rs 36-6-0.

Among other Engineering scrips, TEXMACO eased off to Rs 22-11 from Rs 23-11 and Jessop to Rs 34-10 from Rs 35-6. Braithwaite, after being marked lower at Rs 28-0 against Rs 28-12, recovered partially at the close to Rs 28-4. Kumardhubi moved narrowly between Rs 10-6 and Rs 10-8; Britannia new between Rs 15-15 and Rs 16-4 and Marshall between Rs 6-8 and Rs 6-11.

The Miscellaneous section provided a few bright spots on encouraging corporate news. Most prominent amongst these were Alkali Chemicals, which continued to be supported upto Rs 23-10 from Rs 23-5. Dunlop Rubber met with good investment enquiry upto Rs 30-8, while Metal Box hardened to Rs 29 from Rs 28-11 following excellent working results. NICCO were a firm feature around Rs 24-12 on expectation of a bonus issue.

In the Paper section, Orient were marked down to Rs 38-8 from a high of Rs 39-4 and India Pulp to Rs 25-6 from Rs 25-11. Shree Gopal eased off to Rs 18-14 from Rs 19-3 and Titaghur to Rs 43-8 from Rs 44.

Elsewhere, BIC were cheaper at Rs 10-12 against Rs 11-1; India Steamship at 8-15 against Rs 9-4; Indian Copper at Rs 7-2 against Rs 7-5 and Karanpura Development at Rs 21-15 against Rs 24-15.

Bombay

BOMBAY, June 27.

TRADING on the Bombay Stock Exchange, during last week was dull in the absence of any noticeable activity. In general, sentiment remained depressed in view of the various domestic political uncertainties and prices tended to soften. Even scattered short-covering at dips proved futile in the face of persistent bull unloading. There were, however, signs of selective support, influenced by encouraging corporate news.

Textiles:—Conditions in the Textile Section remained initally firm. In general, the section responded creditably to the Government's new textile policy which was so devised as to pemit expansion in the mill sector. The best rates were, however, not maintained till the close as realising pressure developed at higher levels.

Bombay Dyeing opened at Rs 652½ and, after being taken up to Rs 655-10, were marked down at the close to Rs 646-14. Similarly, Century moved up to Rs 571 from 567-8; Kohinoor up to Rs 379 from Rs 373; Simplex up to Rs 219 from Rs 218-4 and Svadeshi up to Rs 254-4 from Rs 253-0, to finish at Rs 569-8; Rs 377; Rs 217 and Rs 251-8 respectively. Central India declined to Rs 154-8 from Rs 160 and Swan to Rs 432-8 from Rs 435. Tata Mills were, however, maintained at Rs 57-8, Gokak at Rs 233-8 and Poddar at Rs 132-8.

Hydro-Electrics:—This section recorded further losses. Andhra Valley declined sharply to Rs 1,180 from Rs 1,188-12 and Tata Power to Rs 1.265 from Rs 1,272-8. Tata Hydro shed half a point at Rs 128-8 with Ahmedabad ruling almost unchanged at Rs 96-9.

Steels:—After a notable recovery early in the week on speculative buying and bear-covering, prices eased somewhat on profit-taking. Tata Steel Ordinaries opened lower at Rs 203-12 and, after recovering to Rs 204-12, relapsed against at the close to Rs 201-4 on selling pressure. Right shares were quoted around Rs 65-8.

Banks and Insurances:—Although business in the Banking section was restricted, the undertone was setady. Bank of India gained about Rs 2 at Rs 160-12, while Central were unchanged at Rs 51-8 and Bank of Baroda at Rs 97-4.

In the Insurance section. New India eased off slightly to Rs 45-12 from Rs 46-0. Oriental were quoted around Rs 3,855.

Miscellaneous:—This section provided a few bright spots. Bombay Burmah, opened at Rs 652-8 and, after improving at one time to Rs 656-4 on expectation of the maintenance of the dividend, declined sharply at the close to Rs 648-2 on conflicting rumours. Alcock shed Rs 2½ at Rs 350, while Premier Construction were a firm feature at Rs 191 on hopes that capital reconstruction scheme would be finalised at an early date.

Sugar shares continued to meet with good enquiry on better advices from the commodity market. Balapur had buyers at one upto Rs 239-8, to finish a shade quieter at Rs 236 on lack of fresh support. Phalton were nearly maintained at Rs 155.

Automobile shares were a steady feature with Hindusthan Motors having support upto Rs 9-14 and Premier Automobile upto Rs 93-8.

Shipping shares were in good demand. Great Eastern being lifted upto Rs 18-9 from Rs 18-1 on reports regarding a right issue. Scindia moved narrowly between Rs 13-12 and Rs 18-13-6.

Elsewhere, National Rayon were offered at Rs 232-8 against Rs 235 on weaker advices from the rayon market. Shivrajpur Syndicate were depressed to Rs 100 from Rs 107-8 on adverse rumours regarding the bonus issue. Tata Locomotive were nearly maintained at Rs 147; Tata Chemicals at Rs 18-13 and Tata Oil at Rs 56-4. WIMCO closed better at Rs 186-4 against Rs 185-0 touched in mid-week.

*

Madras

Madras, June 26.

ACTIVITY on the local Stock Exchange, during the past week, was subdued and only sporadic buying support was witnessed in selected scrips.

TEXTILES:—This section came in for increased attention following the encouraging dividend announcements made during the week. Buckinghams were marked higher at Rs 202, while Jawahars

(Continued on page 1221)

*

WORLD OF FINANCE

(Continued from page 1197)

by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 164.86 crores. Investments are slightly lower at Rs 35.99 crores against Rs 36.38 crores.

*

The statement of the State Bank of India for the same week shows a drop of Rs 0.30 crores in deposits to Rs 223.62 crores. Borrowings from other banks have risen by Rs 1.00 crore to Rs 16.50 crores, while other liabilities, including inter-office adjustments, are shown at Rs 3.33 crores against Rs 3.43 crores.

On the assets side, cash balances have improved by Rs 0.67 crores to Rs 17.33 crores. Investments are slightly lower at Rs 100.63 crores against Rs 100.76 crores. Advances have declined by Rs 1.88 crores to Rs 135.89 crores—"Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 1.93 crores and "Bills Discounted and Purchased" for a rise of Rs 0.05 crores.

*

According to the returns of the Scheduled Banks for the week ended June 15, total demand liabilities have declined by Rs 1.04 crores to Rs 635.32 crores, while time liabilities have risen by Rs 2.53 crores to Rs 446.73 crores. Borrowings from both the State Bank and the Reserve Bank are lower by Rs 0.50 crores and Rs 2.05 crores at Rs 7.53 crores and Rs 58.37 crores respectively. Cash and balances with the Reserve Bank remain almost unchanged at Rs Rs. 86.91 crores. Investments are shown at Rs 348.86 crores against Rs 349.00 crores. "Advances in India" have declined by Rs 0.43 crores to Rs 612.19 crores and Inland Bills by Rs 4.96 crores to Rs 103.89 crores, while Foreign Bills have risen by Rs 0.37 crores to Rs 47.92 crores. Money at call and short notice stands at Rs 11.14 crores against Rs 10.81 crores.

*

GATEWAY NOTES

(Cintinued from page 1206)

judged by the state of East-West political relations, is it too much to hope that the vexing problem of disarmament will be accorded a more considered deliberation by the two parties, and that we shall have a measure of agreement on a truce in respect of atomic and nuclear weapons? Nuclear weapons and the tests thereof, are, may we repeat, not only insulting to mankind but a threat to our existence.

GATEWAY GOSSIP

(Continued from page 1205)

now, and of his emoluments as compared to those of his predecessors, are convincing proof that Indians accepting high offices in State undertakings are imbued with a high sense of public spirit. It is positively unhelpful if the interpellations and observations of MPs give the impression that the old order has in no way changed. It was incumbent on the spokesman of the Finance Ministry to have inspired and fostered the correct impression. That this was not done, is something of suppressio veri.

Though India has had the biggest State undertakings in the Railways, there has so far been no clear understanding of the issues involved in the autonomy of a Government enterprise. Interpellations and directives have been the normal thing in the case of the Railways. It is no surprise that this habit has persisted and spread to the new entrants in the public sector. Now that undertakings in the public sector will grow in number and in importance, it is imperative that no time should be lost to have clear ideas of the conventions that should be developed and of the way in which they should be respected.

The Prime Minister is now in London; and he may profitably utilise his stay to make an on-the-spot study of the administration of public corporations and the range and limitation of their accountability.

*

OLYMPUS

(Continued from page 1209)

ing place with the trade representatives of Soviet Russia for supply of consumer goods to that country. One aspect of these arrangements is that the exports will be used to obtain directly much-needed essential capital requirements. Thus, the Soviet purchases will be paid for by them with steel, and arrangements with Japan would be for the exchange of iron ore for steel. A similar arrangement with Poland already exists.

The general impression given by Mr Krishnamachari's survey of the activities and plans for the next year of his Ministry are two-fold. First, the various seemingly unrelated acts of the Ministry during the last year fall into position as part of an intelligent pattern of planned preparedness for the tasks of the Second Plan. Nothing was done too soon or too late. The industrial policy declaration was timed to precede the beginning of the Second Plan, neither before nor after. The decision on cloth, despite pressure from all sides, came only when it was necessary. Likewise, on a number of other things, the Industries Ministry gives the impression of being the one Ministry best prepared for its tasks.

The second impression is of a zestful and purposive activity and a serene sense of equality to the tasks in the near future. It augurs well for the success of the Second Plan that some of its crucially important practical tasks are being capably directed.

*

Memo on Coal

The 26th of June has been left behind; and that was the last date for the filing of an appeal against an Award that, since it is now deemed to be in force from the date exactly a month earlier, has already cost the coal industry roughly Rs 1½ crores more in wages.

We are now at the end of June; and no announcement has been forthcoming as to a revision of selling prices. If Government are slow in taking the requisite action, the consequence may be that, by that time, the selling prices will apply to a smaller number of collieries—because, in the interim, the units with little of staying power will have closed down.

The reason for the decision by Industry not to prefer an appeal is clear: if, from the profit-and-loss point of view, an appeal would have solved the problem, such action would have raised another of more fundamental importance to the nation: the distinct possibility that disgruntled labour would have disturbed what industrial peace now obtains.

Memo to Government: revised selling prices are necessary because (1) the industry cannot afford the higher expenses arising from the implementation of the Award; (2) anxiety on this matter will inevitably retard development work; and (3) the weaker units have but limited financial resources and staying power.

*

WORLD OF JUTE

(Continued from page 1199)

What will not be recorded is that the increasing production and the increasing demand for jute goods was not as much to the liking of the Indian jute mills industry as could have been expected. For, with the relative firmness of raw jute prices, the jute goods industry's profits were squeezed out—since there was not a corresponding firmness in the prices of jute goods.

What are the prospects for 1956-57? I think that, on the whole, world production of jute goods will be more or less maintained at the 1955-56 levels; that jute goods prices will be stable, but at a higher average level than obtained in the year that we are just about to close; that the Indian jute goods industry will have cause to be much more satisfied with prospects and profit margins in 1956-57.

SHAW WALLACE & COMPANY LIMITED.

DIVIDEND ~~ON PREFERENCE~~ SHARES.

The Directors have declared an Interim Dividend of 3%, less Income Tax, on the Company's Preference Shares in respect of the year 1956, payable to Members whose names appear in the Preference Share Register on the 16th July 1956. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 9th to the 16th July 1956, both days inclusive.

By Order of the Board,
C. A. CUNLIFFE
Director.

4, Bankshall Street,
Calcutta,
20th June 1956.

THE FORT GLOSTER JUTE MANUFACTURING CO. LTD.

NOTICE

The Half-yearly Ordinary General Meeting of the Company will be held at the Registered Office, No. 21, Strand Road, Calcutta on Tuesday the 31st July, 1956 at 3-40 P.M.

BUSINESS:—

STOCK EXCHANGES

(Continued from page 1219)

moved upto Rs 12; Coimbatore Pioneers upto Rs 307 and Adonis upto Rs 12-12 on renewed buying support. Mettur Industries had, however, sellers at Rs 535 as also Travancore Rayons at Rs 15-7. Trichinopolys were done at Rs 13-2; Bangalore Woollens at Rs 572 and Loyals at Rs 49-12.

PLANTINGS:—Shares in this section, particularly of Tea and Coffee, failed to react to the news of favourable outlook for the commodities. Among Tea shares, Emerald Valleys were quoted lower at Rs 9-4 cd., while Chembra Peaks hovered around Rs 5-7. Nilgiris were done at Rs 14-10 and Periakaramalais at Rs 9-5-9. In the Rubber section, small buying was witnessed in Midlands at Rs 22-8 and Gokuls at Rs 2-9. TRTs were offered at the market rate with Pullangodes slipping back to Rs 4-10.

Among Coffee shares, Consolidated Coffees changed hands at Rs 20-11 to Rs 20-14. Amalgamateds, however, improved slightly to Rs 12-4 from Rs 12-0.

MISCELLANEOUS:—Trading in this section was dull and featureless. Chemical shares were stagnant. FACTs hovered idly around Rs 6-12 and Metturs around Rs 9-8. In the Cement section, India Cements were offered at Rs 35-14. Among Sugar shares, Travancores were marked at Rs 13-7; Deccans at Rs 10-10 and EIDs at Rs 29-4. Elsewhere, Binny were enquired at Rs 187; Parrys Confectionery at Rs 2-15 and Radio and Electricals at Rs 6-9. Andhra Scientifics noted some demand at Rs 2-8.

London

London, June 27.

APART from the marked strength of Oil shares, it was an uneventful week on the London Stock Exchange where operators proceeded cautiously following fresh fall in the sterling-dollar rate.

Oils displayed considerable strength under the lead of British Petroleum, which closed 8s. 1½d. higher at 181s. This rise was influenced by strong American and local buying. Other Industrials met with selective buying. Giltedged securities continued to slide. Following were the closing rates for the week:—2½ per cent Consols £52¼ (£52-9/16—previous week); 3½ per cent War Loan £71¼ (£71 5/16); Calcutta Trams 25/0 (24/03; Calcutta Electrics 19/6 (19/4½); Imperial Chemical 44/7½ (44/1½); Imperial Tobacco 47/0 (47/1½) and Indian Copper 10/6 (10/10).

New York

New York, June 25.

ACTIVITY on Wall Street was restricted last week and prices declined due to profit-taking following labour uncertainties. Notable among the issues showing large losses were Kennecott Copper which declined by $2. inspired by continued pressure against the metal price. Aircrafts continued to reflect the impending increase in the defence programme. Rails were well supported, reflecting a new 1956 high in freight loadings.

Following were the week's closing rates:—Anaconda Copper $72¼ ($72½); Ford Motor $55¼ ($54½); General Motor $45¼ ($44½) and U. S. Steel Common $57 ($55½).
