(a) Includes Rs. 60,460 being refund of E.P.T.
(b) Includes Rs. 2,80,113 being liabilities provided for in previous years written back.
(c) Includes Rs. 12,6 lakhs and issue the ratio of one new share for every three shares held, each as fully paid-up, to the shareholders in the ratio of one new share for every three shares held.
(d) Includes Rs. 1,06,714 being refund of E.P.T.
(e) Includes Rs. 61,673 being unclaimed dividends forfeited and Rs. 23,466 being refund of E.P.T.
†Depreciation Fund.
(a) Is proposed to capitalise a sum of Rs. 1,25,000 Bonus shares of Rs. 10 each as full
(b) Includes Rs. 61,673 being unclaimed dividends forfeited and Rs. 23,466 being refund of E.P.T.

OLYMPUS

(Continued from page 245)

convictions are at least as strong as ours. But it is necessary that Britain should bring its good offices to bear on members of these pacts and persuade them to pursue simultaneously alternate modes of settlement. The Geneva spirit, of which we heard so much at one time, has, unfortunately, congealed into sullen iciness. Britain and India have both a duty to perform in unfreezing these stiff attitudes.

As for Indo-British relations, though greater efforts at mutual understanding are undoubtedly necessary, there is no reason why, with patience and comprehension on both sides, relations should not continue to be as cordial as before. Indeed, it is of utmost importance that India and Britain should pull together. In Mr MacDonald's words: "This partnership between India and Britain is important not only for our two selves, but also for the other peoples round the globe, because our partnership is perhaps the strongest link binding the East and the West together in fraternity. It is the most powerful influence working for mutual understanding and friendship and co-operation between the old democracies of Europe and America and the new democracies of Asia."

ence the decision in each case on its own merits. What, I think, we should get from the private sector is enterprising development—development that is made possible by Government aid. To say that it is the threat of nationalisation which prevents development is merely to discover a scapegoat on which the blame could be foisted for failure to carry through development.

Personally, I do not think that the shipping industry is in danger of being nationalised. I suggest, consequently, that it should, with the guarantee of Government aid, proceed full steam ahead on development and expansion. To my mind, nationalisation jitters are unjustified so far as the shipping industry is concerned.

WORLD OF TEA

(Continued from page 239)

market for high-grown teas, after opening lower, firmed up toward the close with prices quoting to about Rs 3.30 per pound for improved quality. There was, however, less demand for medium-grown teas, particularly for plainer or light liquoring Brokens, which declined by about 15 cents per pound. There was less demand for Persian Gulf types, which were fully 15 cents per pound lower, while corresponding Leaf grades were steady.

There was active demand for all high-grown Fannings and Medium Fannings except the plainer sorts, prices being appreciably dearer. Low-grown black leaf Fannings declined by about 10 cents per pound. Tippiest kinds were irregularly dearer.

At the sale held at Chittagong, Leaf offerings consisted of 12,309 packages and Dusts 2,951 packages. Except for Whole-Leaf grades which were always much dearer, all earlier lots were sold at fractionally above brokers' valuations. Orange Fannings were As 1½ to As 2 per pound dearer, while Orange Pekoes and Pekoes were As 3½ to As 4 per pound above previous rates.

Really useful teas with good liquors were sold well. Commonest kinds and those with faulty leaf or liquor again proved to be difficult of sale; and some of these descriptions had to be withdrawn. Following rates were quoted per pound:—OP Rs 2-7-6; Pekoe Rs 2-3-6; BOP Rs 2-0-0; BP Rs 1-12-6; BPS Rs 1-13-0 to Rs 1-13-6; OF Rs 2-0-6 and Pekoe Fannings Rs 1-12-0 to Rs 1-12-6.

Although the market for Dusts was occasionally slightly dearer, the rate for Plain Sylhet Dust remained unchanged at Rs 2-4-6. Once again, the popular nonwither types were in keenest demand at about As 2 per pound about valuations.

In the London auctions held this week, about 24,183 packages, including 22,769 packages of Northern India teas, were offered. Buyers were found to be more selective. Good liquoring Fannings and Broken Orange Pekoes were generally fully firm and prices were much about the same as last week. Broken Pekoes were, however, often 1d to 2d per pound lower. Medium and Common teas met with considerably less support and prices declined by about 2d per pound. There were many withdrawals. Clean Common Broken Pekoe was quoted at 3sh 3d per pound.

Tea stocks in London, as at 27th January 1955, are shown at 99.20 million pounds as against 101.61 million pounds in the previous week and 108.20 million pounds a year ago. Landed between January 21 and January 27, 1955 were 7.72 million pounds, while deliveries during the same period were 10.13 million pounds.

WORLD OVERSEAS

(Continued from page 240)

and oils are being produced from oil products. Vegetable oils are now being considerably less used for the manufacture of lubricants. A process for the production of additional agents has been introduced for lubricants which considerably improve their properties. Considerable success has been achieved in the production of high quality oil products from sulphurous oil.

The oil industry of the Soviet Union is today confronted with new tasks aimed at further improving techniques and the organisation of production, to increase drilling speed, increase well productivity and to extract more fully the oil from the stratum.

EDITORIAL NOTES

(Continued from page 235)

Discontent in the vital frontier region might have serious consequences and it is naturally a matter of great concern to the Government of India. Surprisingly the Naga rebels possess modern weapons, the source of which remains a mystery despite plausible explanations. It has to be stressed that interested people will not scruple to foment trouble so as to have a dagger poised at India's flank. The goodwill and active cooperation of the Nagas can at all times effectively contribute to the strength and confidence of the Union.

EDITOR'S NOTE

For the convenience of investors we publish below a list of companies whose accounts have been incorporated in the Tabulated Balance-Sheet section.

This now makes it possible for investors to keep track of the latest balance-sheets and enables them immediately to make a comparison with other companies in the section.

WORLD OF FINANCE

(Continued from page 236)

ed January 27, both total demand and liabilities have declined by Rs 6.58 crores and Rs 1.20 crores to Rs 648.88 crores and Rs 409.88 crores respectively. Borrowings from the Reserve Bank have risen by Rs 1.83 crores and those from the State Bank by Rs 0.35 crores to Rs 29.37 crores and Rs 11.56 crores respectively. Cash and balances with the Reserve Bank are lower by Rs 0.15 crores at Rs 99.36 crores. Investments have improved from Rs 381.60 crores to Rs 381.77 crores. Advances show a sharp rise of Rs 11.80 crores to 677.60 crores. Money at call and short notice stands at Rs 9.45 crores against Rs 9.97 crores.

LAW FOR THE LAYMAN

(Continued from page 234)

ordinary shares of £1 each and that such reduction be effected by extinguishing the said redeemable preference shares".

The Company in due course applied to the High Court by way of petition for sanctioning the reduction. The interesting question the Court had to consider on this petition was whether redeemable preference shares that had been redeemed by the Company pursuant to Section 46 of the English Companies Act 1929, nevertheless continued to form part of the nominal capital of the Company.

It is well established that the effect of redemption is, that the shares cease to form part of the paid up capital, as well as the issued capital of the Company. But is the effect of redemption the same on the nominal Capital of the Company? Or do the redeemed shares still form part of the nominal capital of the Company? The learned Judge, Uthwat J categorically holds that the effect of redemption of preference shares, is not merely to extinguish them as issued capital and paid up capital but also to get rid of them entirely as part of the nominal capital of the Company. This conclusion is arrived at by the learned judge on the terms of Section 46 Sub-section 4 of the English Companies Act (the corresponding provision in our Act is Section 105(B). it is to be noted the shares redeemed disappear altogether.

The learned judge then states the powers of the Company, after redemption, as regards share capital thus: "The power given is not to re-issue the shares redeemed, but to issue shares, and those shares may be issued on any terms justified by the Companies Articles. That power, on exercise is not to attract stamp duty and stamp duty is never payable on the occasion of the issue of share capital, but only on its creation".

To sum up, the nominal capital as well the issued and paid up capital represented by the Cumulative Preference shares that have been redeemed disappears on redemption. The act of redemption itself reduces the capital. The aforesaid decision of Uthwat J was approved and applied by the House of Lords in Commissioners of Inland Revenue v. Universal Grinding Wheel Co. Ltd., reported in Tax Cases Vol. 38 at page 567, on similar facts.

GOVERNMENT OF INDIA TREASURY BILLS

Tenders for Rs. 1,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 7th February 1956. Total amount offered was Rs. 1,68,25,000. Tenders at Rs. 99-6-0 per cent were accepted in full and those at Rs. 99-5-9 per cent allotted approximately 36 per cent. Total amount accepted was Rs. 1,00,00,000 the average rate of accepted tenders being Rs. 2-8-3 per cent per annum.

Tenders for Rs. 1,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bombay, Calcutta, Madras, Kanpur, Delhi and Bangalore) up to the close of business on Monday the 13th February 1956. Successful tenderers should make payment on Friday, the 17th February 1956. Other conditions are as usual.

During the week ended the 3rd February 1956 Government of India Treasury Bills for Rs. 35,14,50,000 were sold in favour of the Reserve Bank of India.

STATE BANK OF INDIA
Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

For the Investor

The JS's Spark of Hope

Investment Gossip:

CAESAR was warned of the Ides of March by a passing soothsayer. There was bravado in Julius, when, on that day, he pointed out to the soothsayer that the Ides of March had come. He did, it is true, dread the day, as Shakespeare reported it.

The Ides of March, and the horrors they held to Julius Caesar, are as nothing when compared with the mesmeric effect that February 29, 1956 seems to be having on stock exchange operators.

You wouldn't have to hunt far to find the word to describe current stock market sentiment: jittery.

And it is based on Fears of Burdens. The capital letters in both cases are used with just reason.

Thus, it has happened this time that the pre-budget corrections in prices have been spread over a period of several weeks.

And, today, some knowledgeable tipsters are about, advising that investors will not come on better prices for blue-chips: the market could scarcely move further down.

Personally (not that I claim to be a tipster), I share the feeling that Sir Chintaman Deshmukh's budget for 1956-57 has been fully discounted, that the bleak news that the Finance Minister might have at the end of the month has already had adjustments made thereagainst.

Even in the Jittery School, incidentally, the spark of hope is not altogether missing. This is despite the fact that as much as Rs 450 crores have to be found toward the Second Plan by way of additional and fresh imposts.

For, they are not without hope that the guardian of India's finances may persuade himself to be lenient—at least as far as 1956-57 is concerned. The JS (for short) advance three reasons for this their belief, their meagre stock of hope.

First reason: revenue in 1955-56 will prove to be heartening past all previous expectations. The current budget should, as a natural consequence, reveal, not an uncovered deficit as envisaged by Sir Chintaman last February, but a fairly substantial surplus.

Reason number two: Sir Chintaman indicated some time ago that deficit financing will assume the largest proportions in the first year of the Second Plan.

The final clincher: Surely, the Finance Minister will recognise and realise the importance of keeping up morale. So, at just the time when the all round beneficial influences of an expansionist economy are being felt, wouldn't he (a muttered please) go easy for 1956-57?

If, in fact, the revised estimates are found by Sir Chintaman to be astonishing in the swing away from deficit to surplus; if, secondly, the Finance Minister is going to stick to his intention of making most use of the Nasik press in 1956-57; and if, finally, he thinks it helpful and necessary to keep up morale in the first year of the Second Plan, conceivably, the budget for 1956-57 may have a much smaller quantum of accross than now anticipated.

If, in brief, the Finance Minister is convinced that there will be no financial resources problem for the first year of the Second Plan, it may be, well, the Budget for 1956-57 may be less. . . . .

£ R$

Investment Notes:

THE Tata Iron & Steel Company has called an Extraordinary General Meeting of the shareholders on March 12 to obtain the permission for an increase in the capital. In a circular to the shareholders, the managing agents have stated that the meeting will also be asked to pass a resolution which will provide for the issue of the new Ordinary shares at a premium of Rs 30 per share and for offering them to the existing ordinary shareholders (with right of renunciation) in the ratio of one new share for each existing Ordinary share.

Granting consent to the issue of these shares at a premium, the Controller of Capital Issues has stipulated that the directors may allot shares not taken up by the shareholders (and their nominees) only with the previous permission of the Controller and on terms specified by him. This restriction does not apply to nominees under renunciation forms signed by shareholders, who may, therefore, dispose of their rights to the new shares.

It is learnt that the response to the Rs 1.5 crores Debenture issue by the TELCO has been good despite the sluggish conditions in the share market. The offer of Rs 1.35 crores to investors other than shareholders has been fully subscribed. The shareholders can subscribe up to Rs 15 lakhs on or before February 25.

As usual, the Brady group of textile mills are first to release their balance-sheets for 1955. The working results of all the mills in the group are quite satisfactory. New Great has raised the dividend from Rs 7½ to Rs 10 per share, while New City has maintained the dividend at Rs 10 per share.

Gwalior Rayons are quoted around Rs 13 with only few sellers at this level. There is a general

HIGHLIGHTS

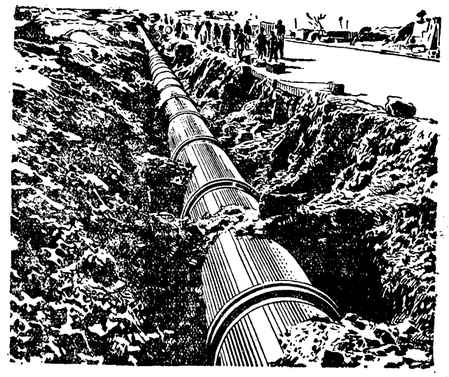
In the old, old days, d-o was just a basic two letter word in English.

In the old days, d-o in capital letters came to represent, in the budding days of bureaucracy, license for one Government official to address another (whom he didn't know from Adam) by his first name: the d-o in this case was the so called demi-official letter.

Later yet, d-o was, in the days of the blitzkrieg over Britain, the only alternative to dying.

Today, in India, d-o has become more important than any of these. The letters stand for Draft Outline; and the outline they refer to is of the Second Plan.

The DO is nothing if we don't do something about it: a courageous document, an ambitious document, indeed a vital document.



There are fourteen chapters to the Draft Outline; much as we would have liked it, we can't find the space to analyse each one of them in the present week's Indian Finance.

We have made a start on them; the Comments section is lavish in the space it allots to a discussion of the DO of the Second Plan.

Other sundry references are available on almost any other page.

Do read this issue even more carefully than is your wont; and you will realise that the motto of the Draft Outline of the Second Plan is simply contained in the two letters that this paragraph has started with: DO.

longevity

Pipe mains conveying water and distributing gas, providing sanitary services and carrying oil, are the lifelines of civilisation.

Today the Cast Iron Pipe, with Spigot and Socket Joints, provides the most widely used medium for the transmission of water and gas.

feeling that the company will declare its maiden dividend for 1956-57. Market circles believe that an interim dividend of As 8 per share will be paid after some months.

£ R$

Investment Briefs:

In Andrew Yule Jute group, Delta has maintained the dividend at Rs 5 per share, while Cheviot has reduced the dividend from Rs 6 to Rs 4 and Orient from Rs 5 to Rs 4, all for the half-year ended 30-11-1955.

Standard Jute has passed over the dividend for the half-year ended 30-9-1955 as against Re 1 per share paid in the previous half-year.

Angelo Brothers have, apart from maintaining the dividend at 12½ per cent, recommended an additional bonus of 7½ per cent for the year ended 31-8-1955.

United Breweries have announced an interim dividend of 10 per cent for the year ended 31-3-1956. Transfer Books are closed from the 25th to the 28th February, 1956.

Walchandnagar Industries have raised the dividend to Rs 18 per share for the year ended 30-9-1955 from Rs 16 paid in the previous year.

Ouchterlony Valley Estates, Madras, have reduced the dividend from 30 to 20 per cent for the year ended 31-10-1955.

Dividend Raised by Alkali & Chemical Corporation

Balance-Sheet Reviews:

THANKS to a very satisfactory production at all units of the Rishra factory, the Alkali & Chemical Corporation of India Limited has presented excellent working results for the year ended 30th September, 1955.

The Chlorine/Caustic Soda plant ran at almost rated output and the usage of Chlorine on site for the manufacture of other products increased substantially. The Hychloric Acid plant worked on maximum output throughout the year. The 'Gammexane" Benzene Hexachloride series of plants also had a good year. The output of Crude BHC and of "Gammexane" formulations, particularly Water Dispersible Powder, increased steadily.

Also, there was a keen demand for "Duco" and "Dulux" Paints and the company had no difficulty in disposing of its production. This plant worked at maximum capacity and is being extended.

Sales for the year have, therefore, risen to Rs 1.55 crores from Rs 1.18 crores, while the net profit, before providing for Taxation and Depreciation, is substantially higher at Rs 31,28,246 against only Rs 17,21,003 in the previous year. In view of the increase in profits, the allocation to Depreciation has been raised to Rs 9.49 lakhs from Rs 8.84 lakhs and to the Reserve for Deferred Income-Tax Liability to Rs 12.50 lakhs from Rs 3.00 lakhs. Even after these increased allocations, the directors have found it possible to raise the dividend on the Ordinary shares from 6 to 8 per cent.

The balance-sheet, as at 30th September 1955, shows a paid-up capital of Rs 93.00 lakhs in 6,20 lakh Ordinary shares of Rs 10 each and 31,000-5 per cent Cumulative Preference shares of Rs 100 each. Against this, Capital Reserve is shown at Rs 14.75 lakhs; General Reserve at Rs 23.00 lakhs and Dividend Equalisation Reserve at Rs 4.96 lakhs. The gross block at Hs 1.89 crores is depreciated by Rs 38.98 lakhs to show a net block value of only Rs 1.50 crores. Liquid assets amount to Rs 101.25 crores as against sundry liabilities of Rs 114.76 crores.

£ R$

Rallis India Limited

Again for the year ended 31st August 1955, Rallis India Limited has not been able to pay the dividend either on the Ordinary or Preference shares. The result of the year's working, after providing for all expenses but without charging Depreciation, was a loss of Rs 21.02 lakhs as against a loss of Rs 43.15 lakhs in the previous year.

Although the reorganisation and curtailment of the company's trading activities was effected during the year under review, substantial losses had been incurred before the reorganisation was completed; and the accounts for this period also bear the heavy cost of compensation payable to retrenched staff amounting to no less than Rs 14.70 lakhs.

Turnover was slightly below the corresponding figure for the previous year, but the gross profit made by the company showed a considerable increase, i.e. Rs 15.79 lakhs, over the gross profit for the year ended 31st August, 1954.

Sales for the year are lower at Rs 29.98 lakhs as against Rs 30.82 lakhs in the previous year. A debit balance of as much as Rs 64.00 lakhs is carried forward to the next accounts.

Jute Mills' Results

Three jute mills, viz., Budge-Budge, National and Agarpara have presented their reports and accounts—the first two mills for the half-year ended 31st October 1955 and the last one for the half-year ended 31.3.1955.

Due to a substantial drop in sales from Rs 91.85 lakhs to Rs 87.62 lakhs, the Budge-Budge Jute Mills Company has reported a loss, after De-

The Second Plan: Draft Outline

Indian Finance
Established 1928
February 18, 1956

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

WHEN the Draft Plan-Frame was published last May, it was anticipated by certain knowing quarters who, for reasons of their own, caused agitation to be set afoot charging that it was undemocratic; the storm of criticism was at some pains to insist that the implementation of the plans then envisaged would be possible only if totalitarian methods were adopted by Government. Thus, the attempt was rigorously made that the Draft Plan-Frame pertaining to the Second Plan should be still-born.

Fortunately, wiser counsel has prevailed; the detailed re-thinking on the development necessary for this country, as well as a level-headed consideration of the objectives that should govern planning, have both resulted in an almost universal approbation being accorded to the schemes presented last May.

At the time that the Plan-Frame was released to the Press, we suggested in these columns that the basic thinking on which the planners had framed their objectives was sound; and it may be said that the better reception to the Plan since then is primarily due to the recognition of this fact, that the guiding principles adopted by the planners are unexceptionable.

In this light, it was to have been expected that, when the Draft Outline of the Second Plan was released, it would pay due heed to the same considerations. But there appears to be one important distinction. If the Plan-Frame heavily accentuated the need to provide for the unemployment problem, there is now to be discerned a slight shift in emphasis. According to the Draft Outline, "The principal objective of the Second Five-Year Plan is to secure a more rapid growth of national economy and to increase the country's productive potential in a way that will make possible accelerated development in the succeeding plan periods." Although we can read into this objective as great an awareness of the unemployment problem, the enunciation of the principal objective in this new fashion is most heartening indeed.

For, it is clear now that what is to be attempted is the overall improvement and development of the economy; and that task is to be undertaken, not from any short-term view, but on the basis that, over a sufficiently long period of time, as much progress as possible is to be achieved. At the same time, however, the aims of the Second Plan will themselves be of no inconsiderable ambition: and the reason for this is vouchsafed in the following words: "A country like India, which starts late on industrialisation, has to encompass within a relatively brief period processes of development which took several generations in countries which had an early start."

The objectives, as they relate to the long-term development of this country, will obviously meet with some conflict when Government find themselves urgently pressed by problems which need to be solved in the immediate future. But this is not to say that specific intentions as to the targets set for the Second Plan cannot be envisaged in such manner as to render possible the tackling of the short-term problems while in no way deviating from the objectives. We may recall, in this regard, that the Plan-Frame was formulated by Professor Mahalanobis with eight objectives in view. In the Draft Outline we find that the terminology defining the objectives has been revised. It is useful to compare these.

Mahalanobis Plan-Frame	Draft Outline
The Second Five-Year Plan is therefore being formulated with the following objectives in view:	The Second Five-Year Plan has been formulated with reference to the following principal objectives:
(1) to attain a rapid growth of the national economy by increasing the scope and importance of the public sector and in this way to advance to a socialist pattern of society;	
(2) to develop basic heavy industries for the manufacture of producer goods to strengthen the foundations of economic independence;	(b) rapid industrialisation with particular emphasis on the development of basic and heavy industries;
(3) to increase the production of consumer goods as much as possible through the household or hand industries; and to provide an adequate market for the products;	
(4) to develop factory production of consumer goods in a way not competitive with hand industries;	
(5) to increase productivity in agriculture; and to speed up agrarian reforms with an equitable distribution of land to peasant cultivators so as to stimulate the increase of agricultural production and of purchasing power in rural areas;	
(6) to provide better housing, more health services, and greater opportunities for education especially for the poorer sections of the population;	
(7) to liquidate unemployment as quickly as possible and within a period not exceeding ten years;	(c) a large expansion of employment opportunities;
(8) and as the result of such measures, to increase national income by about 25 per cent over the plan period, and achieve a more equitable distribution of income.	(a) a sizeable increase in national income so as to raise the level of living in the country;
	(d) reduction of inequalities in income and wealth and a more even distribution of economic power.

It will be seen that the Draft Outline, in listing the "principal" objectives, has omitted four contained in Professor Mahalanobis' Plan-Frame. There are three significant points to note. Firstly, the emphasis on the growth of the public sector for achieving a "socialist pattern of society" is no longer to be found in the Draft Outline. Secondly, the Plan-Frame's references to an increase in production by "household" and "hand" industries and to the restrictions on factory production of consumer goods are not considered in the Draft Outline to be principal objectives. Thirdly, while the Plan-Frame sought a more equitable distribution of income, the Draft Outline calls for a "reduction of inequalities in both income and wealth." A study of these three important differences in the two sets of objectives will help to clarify the approach adopted by the planners.

Although there is no reference to the socialist pattern in the "principal" objectives, it has been made clear that its achievement is, as it were, the guiding star of the plan. In this context, the Draft Outline defines the rationale of planning in the following words:

"....the process and pattern of development should reflect certain basic social values and purposes. Development should result in a diminution of economic and social inequalities and should be achieved through democratic means and processes. Economic objectives cannot be divorced from social objectives, and means and objectives go together. It is only in the context of a plan which satisfies the legitimate urges of the people that a democratic society can put forward its best effort."

With the achievement of a socialist pattern of society accepted as the objective of economic policy, the Draft Outline adds that "this means that the basic criterion for determining the lines of advance is not private profit but social gain." It would appear, also, that the achievement of this goal cannot be assured merely by the growth of the public sector. It is implied that private enterprise, too, would be expected to set more store by social gain. And a number of passages in the Draft Outline are so suggestive:

"Major decisions regarding production, consumption and investment—and in fact the entire pattern of socio-economic relationships—must be made by agencies informed by social purpose."

"The public sector has to expand rapidly and the private sector has to play its part within the framework of the comprehensive plan accepted by the community."

"....existing units have also to fall in line with the emerging pattern."

But "the socialist pattern of society is not to be regarded as some fixed or rigid pattern." There are no prejudices or predilections in this regard. The aim is the raising of living standards and the enlargement of opportunities for all, the promotion of enterprise among the disadvantaged classes and the creation of a sense of partnership among all sections of the community. Again, in such a growing economy, "which gets increasingly diversified, there is scope for both the public and the private sectors to expand simultaneously." Indeed, the two sectors have to function in unison, and "are to be viewed as parts of a single mechanism." There is appropriate recognition that "the plan as a whole can go through only on the basis of simultaneous and balanced development in the two sectors." This idea of co-operative co-existence is even more forcefully expressed, when the Draft Outline suggests that "it is appropriate to think more and more in terms of an interpenetration of the public and private sectors rather than of two separate sectors."

The conclusion that is clearly drawn for us is that we should no longer think in terms of one sector measured off against another. They both are part of the cohesive whole of the

Indian economy. But, as befits a welfare state, Government would inevitably assume a major role in fresh development, especially in fields that impinge on social welfare. This is not, however, to mean that the private sector will have its scope for development drastically curtailed. On the contrary, the Draft Outline urges that, even in the fields more or less reserved to the State, it may be necessary for Government to seek the co-operation of the private sector. For example, although the ownership and the right to exploit minerals vest in the state, "there may be special cases where the importance of the mineral concerned may not warrant public ownership and management." What is more, "there may be others where the State may desire to associate private enterprise with it for reasons of public interest." Here, we find the important recognition of the fact that the private sector's co-operation and, to coin a word, co-management will be in public interest. While the production of basic capital goods and heavy machinery by new units is to be reserved to the State, the Draft Outline qualifies this statement by suggesting that, even here, "there may be scope in particular cases and in certain circumstances for undertakings owned and operated jointly by the State and private enterprise."

The Draft Outline's references to the socialist pattern are, thus, in the nature of a challenge to the private sector. It is true that, in certain fields, ownership and fresh development are to rest with the State. But the responsibility for advance in other fields has been categorically left with the private sector: moreover, even in the fields reserved for the State, the help and co-operation of the private sector may be sought. It is now for the private sector to prove that it is mindful of the need to tone down the emphasis on private gain, on the one hand, and that it is aware of the necessity, on the other hand, to have more regard for social gain. If the private sector shows itself capable of seizing the opportunity offered by the present challenge, then we in India shall have co-operative co-existence in fact—and it is, as the Draft Outline points out, "only on the basis of simultaneous and balanced development in the two sectors" that the plan can be successfully implemented.

We may now turn to the second important difference in the two sets of objectives. Here, also, the Draft Outline omits mentions of increasing production by "household" and hand industries in its list of principal objectives. Rapid industrialisation, as the core of development, makes it necessary for the country to aim "at developing industries which make machines needed for the large number of industries in the field of consumer goods and intermediate products." For this reason, emphasis has to be placed on the development of heavy industry. This, however, is by no means an undertaking which will provide sizeable opportunities for employment. Secondly, investment in basic industries "creates demands for consumer goods, but it does not enlarge the supply of consumer goods in the short run." It is in this view that, in a balanced pattern of industrialisation, also required is a "well-organised effort to utilise labour for increasing the supplies of much-needed consumer goods." It is recognised that "reliance on relatively labour intensive modes of production might mean a smaller increase in the supply of consumer goods than might be possible otherwise." Thus, it will become necessary, as the Taxation Enquiry Commission urged, to place some curbs on consumption. But the sacrifices inherent in such self-imposed restrictions on consumption will diminish "as more power, more transport, and better tools, machinery and equipment become available for increasing the productivity of consumer goods industries, and in the long run the community gets increasingly large returns."

The capital intensive industries, then, will not offer much scope for employment opportunities. But the stress that has been laid on mining and transport, among others, should result in the relatively faster expansion of the working force in these spheres than in agriculture and allied pursuits. This is to be welcomed because, "over a period, a larger shift in the occupational pattern away from the primary sector into the secondary and tertiary sectors will be necessary and is to be expected."

Since, however, the provision of employment opportunities is an important need, and since the cottage and small industries lend themselves admirably to expanding the utilisation of labour, these are termed as a "crucial sector of the economy"; and, consequently, "the need to promote, modernise and reorganise these industries is paramount." The objection that was first raised when, in the Plan-Frame, the suggestion was mooted that cottage industries should, for the reason that they were labour intensive, be fostered, was that, as a result, the national economy would suffer because productivity in this sector could never approach output by organised factories. The Draft Outline very firmly answers this objection: "This is not to suggest that a freezing of existing techniques or a preference for inefficient techniques is at all indicated by considerations of economic or social policy." What is sought is merely that, in the process of industrialisation, there should be a smooth, gradual and orderly transition from the low levels of production of cottage industries to the higher productivity made feasible by adoption of modern techniques.

The Draft Outline adds in this context: "It is the promotional rather than the protective aspect of policy which has to become more and more important in the adaptation and reorganisation proposed in this sector." That the Planning Commission have recognised this fact is assuring. For, in this important sector, financial resources will not alone be sufficient to ensure the attainment of objectives. Great administrative ability is called for, as well as a legion of efficient administrators. This point has been discussed in some detail by Eavesdropper in Clive Street Gossip. While, thus, "the development of small industries deserves special attention" the demands that it will make on administrative ability are sure to assume enormous proportions.

The second objection raised in the matter of the intensive fostering of the cottage and small scale industries is that, if this sector should fail to produce the quantities set as targets, the resultant shortfall as between supply of and demand for consumer goods will release inflationary pressures. This objection is a more telling argument, especially since the possibility does exist of such a shortfall in production in the event that the administrative machinery for the purpose is found to be inadequate. The Draft Outline admits that "there are naturally uncertainties attached to the various estimates that can be made in advance for a period of five years." But the Planning Commission have emphatically made it clear that "a Plan covering a five year period has to be regarded as essentially flexible." If, therefore, the contingency does arise that production by cottage and small scale industries falls short of demand in any specific commodities, the flexibility in planning will allow of Government immediately to permit the tap of factory production to be turned on.

This procedure is entirely feasible; for, there is firstly an existing excess of capacity as against production in many fields; and, in other industries, it should not prove difficult to run a third shift of production. In both cases, without much ado or great strain, factory production could make up for any shortfall in output by the cottage and small scale industries.

The third point at which the principal objectives in the Draft Outline differ from those enumerated by Professor Mahalanobis relates to a "reduction of inequalities in both income and wealth." The professor referred to the socialist pattern of society in his objectives; but he did not seek any more than a "more equitable distribution of income." The reference to the socialist pattern is missing in the principal objectives of the Draft Outline; but the latter's emphasis is, if anything, heightened on the achievement of a socialistic pattern of society. We have already seen that the Planning Commission assert that the pattern of development should be informed by basic social values and purposes. But the advance to the socialist pattern has two facets, one of which is positive and the other negative. The positive aspect is revealed in the following extract from the Draft Outline:

"The benefits of economic development must accrue more and more to the relatively less privileged classes of society, and there should be a progressive reduction of the concentration of incomes, wealth and economic power."

Community development and rural regeneration, the cottage and the small scale industries—all these are aimed specifically at increasing the employment opportunities for the "relatively less privileged", or, to put it bluntly, the have-nots. This building up, of course, is proper, it is the target of the raising of the standard of living being worked to. But we must remember that, in a country whose masses are the have-nots, great disparities in income and wealth may, if they continue to exist, easily turn out to the strongest talking points of Communist propaganda. The Planning Commission have quoted the Taxation Enquiry Commission as having "stressed the point that the attainment of a wider measure of equality in incomes, wealth and opportunities must form an integral part of economic development and social advance currently." The rate at which the standard of living can be raised is, unfortunately, not of such dimensions that we can complacently content ourselves with the thought that the present disparities will, in due time, be reduced. The Planning Commission, therefore, consider that the problem "is not merely one of reducing existing inequalities, it is the positive one of creating conditions in which great disparities in income will not develop."

If, by achieving the socialistic pattern of society, Government have in mind a perhaps slow but exceedingly sure improvement in the standard of living of the masses of our people, it surely connotes the greatest good for the greatest number. With the Draft Outline's stress on co-operation, there is the implication that this development is to be made possible and brought to fruition by the people for the people. These are undoubtedly democratic aims; and there is scarcely any reason to shy away from the phrase "socialist pattern of society": the economic pattern that is being evolved in India will not be hemmed in by rigid dogma or unbending doctrine. Indian development and Indian industrialisation are the means whereby we are to strive to improve the living conditions of our masses: and this is to be achieved by the democratic process of the people's active participation in the Second Plan, and the plans to come thereafter.

Rural Programme for the Second Plan

CHANGES in the economic landscape of rural India introduced by the First Five-Plan will be carried forward with greater tempo by the policies and the outlay contemplated in the Draft Outline of the Second Plan. Since 1951, multi-purpose projects, community development and national extension work have figured most conspicuously in the reconstruction and improvement of the rural economy. In the First Plan outlay, agriculture secured the biggest single slice. The results have, on the whole, been such that the State can, with the assurance of enthusiastic public support, embark on a new phase of activity which will wipe out the lingering traces of inequities and strengthen the foundations of production under the most congenial organisation and technique.

The Governments are emboldened by the achievement of the First Plan in many spheres. There has been a very satisfactory measure of public co-operation with labour and money in the Community Projects. These projects have created a universal awakening to the call of the new order, so to say. The Extension Movement has provided a normal and smoothly workable pattern of the welfare state in action. That voluntary public contribution to community projects expenditure has been nearly 60 per cent of what was incurred by the Government is of no mean significance. Village Panchayats, Co-operative Societies and Union Boards have been trained to undertake new and wider responsibilities and acclimatise themselves to a new form of give-and-take not only between the members but between these bodies and the Administration.

In terms of material results, foodgrains production increased by 11 million tons, cotton by 1.3 million bales and jute by 0.7 million tons, increases which have not only kept inflation in check but, by timely stabilisation of the economy, prepared the ground for the next phase of development. Between minor and major irrigation works about 17 million acres have been added to the total irrigated area of the country. Figures of the consumption of chemical fertilisers, of the response to the Japanese method of cultivation, etc, are also encouraging.

Installed electric capacity increased by 1.1 million kw to 3.4 million kw. By the end of 1956, another 0.2 million kw would be added. The per capita consumption of electricity has risen from 14 to 25 units.

Striking progress has been recorded in the sphere of land reform. Zamindaries have been abolished, multiplicity of tenures reduced, tenancy rights strengthened and improved, and legislation for ceilings on ownership has either been completed or is in process in a number of States. These changes have introduced an outlook among the rural population which will facilitate the more drastic steps envisaged in the Second Plan.

The distribution of outlay in the Second Plan for agriculture is intended to strengthen the subsidiary and supplementary spheres like horti-culture, animal husbandry and diarying, forests and soil conservation, fisheries and co-operation. Expenditure allocated under these heads is higher by 2 to 9 times the allocations in the First Plan. The change would impart a marginal balance to the entire agricultural economy and provide extra work in different avocations. It is a sound calculation that, having attaind a dependable measure of sufficiency in cereals and the major raw materials production, future efforts can be directed to diversification and improvement in productivity and yields in agricultural crops.

The Planning Commission are careful not to hug too closely to this calculation. There is provision for a 15.4 per cent increase in foodgrains; 27.3 per cent increase in oil seeds; 22.4 per cent increase in sugar; 31.0 increase in cotton and 25.0 per cent increase in jute. What is being attempted on new lines is not at the neglect of the primary aim of adding to food and fibre production. The above-mentioned increases are expected to lead to a per capita rise in consumption of 1.3 oz in foodgrains and 0.3 oz in sugar per day.

In the field of irrigation and power, the Draft Outline represents two major changes. There is a shift from the multi-purpose to the medium sized projects.

Out of the 188 new irrigation projects, as many as 136 will be absorbing less than Rs 1 crore; only nine cost more than Rs 10 crores and one, more than 30 crores. There will also be greater regional balance.

As against the total provision of Rs 661 crores in the First Plan on irrigation and power, the Second Plan allocation is Rs 900 crores. The large and medium-sized projects under the Second Plan will carry facilities to 12 million acres. The electric capacity is scheduled to rise by 3.4 million kw, and the per capita consumption in electricity is expected to double from 25 to 50 units in the meanwhile. Against the First Plan target of electrifying 95 per cent of towns with a population of more than 20,000, the Second Plan seeks to do the same for nearly 90 per cent of the towns between 5,000 and 20,000.

The National Development Council takes the view that, during the Second Plan, the entire country should be served by the National Extension Service and that no less than 40 per cent of the National Extension Blocks should be intensively developed on the line of the Community Development Blocks. The Council has also visualised the possibility of similarly converting up to 50 per cent of the National Extension Blocks. The Draft Outline has tentatively allocated Rs 200 crores for this purpose against Rs 263 crores estimated necessary if the Council's target is to be completely fulfilled. It is calculated that development in this field will involve new employment opportunities for about 2 lakhs of persons.

The Draft outline recognises an inescapable necessity to hasten agrarian reform. Ceilings, co-operative cultivation and leasing and reduction of rent to one-fifth of the produce are likely to be the main features of the Second Plan. In respect of ceilings, the first step will be the rounding up of legislation, as far as future acquisition of land is concerned. From there, Governments will proceed to implement ceilings on present holdings. Three family holdings, approximately equivalent to a gross annual return of Rs 4,800 per annum, would be the general all-India limit, with States having some discretion in the nature of minor variations. Residual land will be taken over by the State on compensation. The resumption of land for personal cultivation by the owner will also be restricted; and the State will take up ownership rights on non-resumable lands cultivated by the tenants.

These steps will unavoidably form one of the most controversial aspects of the Second Plan. The State will, however, have the satisfaction that, in the resulting picture, the socialistic pattern will be realised in a much more impressive measure in the rural sector than in the industrial or administrative ones. From this standpoint, it is significant that there will be insistence on personal participation by the owner or members of his family in agricultural occupations, especially in land resumed for personal cultivation from the tenants.

Timely Disillusionment

THE Amritsar Session of the Congress met under the shadow of the incipient revolt of one of the Pradesh Committees, disconcerting cracks in the organisation elsewhere and a spell of violence, for which the agitational tactics employed by some Congress leaders were directly responsible. Both Pandit Nehru and Mr Dhebar were obliged to refer to the possibility of a civil war. All the elders who spoke in the session felt called upon to make a formal appeal to preserve the Unity of India.

The mention of chaos and civil war by men who shoulder the ligest responsibilities of the State and of the party must cause anguish in the minds of every patriotic Indian. It is not even a decade since the attainment of freedom and the country has been taking legitimate pride on its economic and social progress during this brief period and equally on the estimable status it has achieved in international councils. There is nearly universal recognition of the outstanding calibre of the present leadership. When, therefore, a person like Pandit Nehru gives expression to misgivings about the future unity of India, does it mean that he is losing faith in himself and in the country over whose destiny he presides? Opponents of the Congress will seize the opportunity to interpret it that way. Sections in the foreign press may also be too ready to play up these references as betraying an unmistakable weakening of morale in the Congress.

We do not subscribe to any alarmist view. The tragic incidents which followed the decisions on States reorganisation reveal certain inherent weaknesses in the social and political build-up of this State, weaknesses to which, amidst their innumerable and pressing preoccupations, the national leadership found neither the compulsion nor the time to pay sufficient heed. These incidents also indicate the need to re-examine certain principles in the light of new situations. To read more into them is to distort perspective. The incidents call for a dynamic approach to problems for which the Congress felt content with the application of principles formulated under a totally different set-up.

To discard a principle and commitment which has grown with the party and which has become interwoven with popular emotions is not easy in a democracy. Everything that was done till two months ago by the State was in faithful, though somewhat guarded, acceptance of the paramountcy of language as the basis of States reorganisation. Though far-sighted persons realised in time the dangers of such acceptance and raised their voice against it, neither the Congress nor the Government seem to have understood fully the implications in terms of mass conduct. These implications were pressed home by the January incidents in Bombay and Orissa. When the Prime Minister himself acknowledged his responsibility for the Bombay riots, he was not speaking for mere courtesy. There has been some measure of under-estimation of risks.

The harsh words spoken at the Congress Session by the Prime Minister and the Congress Presideht therefore betoken the advent of just that realism which was lacking before

and without which a healthy deviation in policy cannot be thought of or put across as a national necessity. The people must be told with brutal frankness what a certain policy involved in terms of human well-being.

The most important achievement of the Amritsar Session is that the Congress as the party in charge of the administration of the country has repudiated the unilingual State and has given its unequivocal preference to multi-lingual States. The concerned Resolution says that unilingual rigidity tends to fix an unchanging pattern for the country which may conform to a static condition, but is wholly out of place in a dynamic and developing economy.....in the existing circumstances in India, and under rapid development of various areas, it is desirable wherever feasible to form bi-lingual States with regional councils for each linguistic area" The Resolution welcomes the proposal for mergers. The Union Home Minister has gone a step further, when he said that certain mergers were bound to take place.

The Resolution embodies a sound and indispensable change in policy and is the only answer that the Congress can think of as a safeguard against further threats to national unity. But, welcome as the Resolution is, the question will be asked why this did not come earlier. Mr Deogrikar, the President of the Maharashtra Pradesh Congress Committee, says that Mr Nehru's impassioned appeal has gone deep in the hearts of the Maharashtra Congressmen and wishes that if the appeal had come much earlier, the whole situation would have been different today. Implied in this wish is the subtle charge that the top leaders of the Congress have failed to give timely direction to popular emotions. Our democracy, there is no use pretending, is fully grown up. The masses have to be directed strenuously.

The Congress has now decided that the mistake should not be repeated; nor will the rank and file be left to wait for guidance from the personal appeals or hints from high-ranking persons. There will be steady and vigorous effort on the part of the Congressmen to get into the emotions of the people with a view for more complete reciprocal understanding and guidance.

The discussion on this Resolution is no less significant from the stand-point of the healthy functioning of democratic institutions. Rightly or wrongly, the Union Government had given the impression for having yielded to the pressure of violence in the formation of Andhra. Perhaps, this impression had lent further impetus to those who took to demonstrative tactics to gain certain demands. Even if a specific demand is not conceded in response to violence, the very leniency with which the Government respond to such tactics is liable to undermine public confidence in authority.

The digression which the Prime Minister made into the realm of political methods and their propriety is much more than a formal homily, it has a bearing on the immediate situation. It is high time that not only violence but every other form of public persuasion, militating against free decisions taken on the majority principle, are completely eschewed in India. Frequently violence is the direct outcome of individual or collective conduct which is apparently inoffensive. There is, for instance, the fast. Even the Mahatma seldom felt too sure of the fast as a political weapon. The same is the case with Satyagraha. The Congress must give a courageous new lead, in these matters.

The emphasis on unity found a place even in the Resolution on Foreign Policy. The prestige of India's counsels in international affairs is almost solely dependent on the fact that the Prime Minister commands spontaneous and overwhelming support from the people. Any impression to the contrary will lower the Prime Minister in the eyes of the world and thereby the country too, which will be bad as much for the world as for India. For, the international prestige of India has never been so great as now.

The reasons could be found in the unflinching loyalty to the principle of a positive peace and the policy of dynamic neutrality flowing from it. The Congress has again registered its opposition to competitive armaments and regional military pacts, particularly the SEATO and MEDO. The fruits of this steady and consistent opposition to the extension of the cold war have not been wholly negative. There is a positive challenge to military alliances, in the Panch Shila, whose frontiers were at least, in theory, extended widely during the last one year.

Thus, in respect of internal affairs, the Congress has courageously given up a policy which turned out to be less wholesome than originally supposed, and in the international sphere, reaffirmed its preferences. Is the party strong enough to enforce the changed policy within and pursue the enlightened path, unhindered, without?

The proposed organisational changes are helpful, in that they relax the rigidity of the

Law for the Layman

Damages for nervous shock caused by negligence

By K. N. VISWANATHAN

WHAT is meant by negligence in Law? There are many definitions of the term, but it is enough for our purpose to have the definition given by Mr Charles Worth in his book on Negligence. He defines it as "breach of duty to take care imposed by statute or common law". It follows, therefore, that unless there is a duty to take care, there could be no negligence though injury might have been caused to a person by the act of another.

If a person sustains damage from nervous shock, as a result of the negligent conduct of another, he has undoubtedly a right of action against that other person, whose negligence caused the shock. There need be no physical impact. The shock suffered is enough to fix the negligent party with liability. But there is one important qualification to this liability. of the negligent person, namely, that he should have been in a position reasonably to foresee that his negligent act would cause shock to the party complaining.

This is the gist of the decision of the House of Lords in England in the case of Bourchill v. Young (1943 A.C. 72). Their Lordships in this case state the legal position thus: (1) "That the duty of the motor cyclist on the public road, to other persons using it, was to drive with such care as would avoid the risk of injury (including injury by shock although no direct impact occurred) to such persons as he could reasonably foresee, might be injured by his failure to exercise that care; (2) that the appellant (the injured party) was not within the area of potential danger arising as the result of negligence and accordingly he (the party complained of) owed no duty to her, and was not guilty of any negligence in relation to her." So that the liability of the person causing the shock is governed by the test of foreseability.

A fine illustration of this limiting factor is the case of King v. Phillips (1953, 1 Q.B. 429); here the defendant was exonerated from liability for the shock suffered by the plaintiff by reason of the negligent driving of his taxi cab by his driver, on the principle enunciated in Bournhill v. Young, namely, that the taxi driver could not have reasonably foreseen that his negligent driving could cause shock to the plaintiff.

The facts of this interesting case briefly are: The defendant's taxi driver backed his taxi cab without looking where he was going and ran into a small boy (the son of the plaintiff Mrs King), who was riding on a tricycle on the road. His mother, Mrs King, who was in her home 70 or 80 yards away from the scene of accident, heard her little son's scream and, looking out of the window, saw his danger. There-upon she suffered a nervous shock. As a result of the shock, she began to have trembling fits and depression for which she had to be medically treated. She instituted this case against the defendant for damages for shock sustained by her as well as for the physical injury suffered by her son.

The court of first instance dismissed her claim for damages for shock, but allowed some damages for the physical injury suffered by her son. On appeal, the Court of Appeal unanimously confirmed this decision of the court of first instance on the ground that the taxi driver could not have reasonably foreseen that his negligent act could cause shock to the plaintiff, who was 70 or 80 yards away from the scene of occurrence. Lord Denning, one of the learned judges who decided this case, makes the following important observations on the aspect of foreseeability.

"However that may be, whether the exemption for shock be based on want of duty or on remoteness, there can be no doubt since Bournhill v. Young that the test of liability for shock is foreseeability of injury by shock. But this test is by no means easy to apply. The test is not what the negligent party himself could reasonably have foreseen, for he rarely has time to foresee anything. The test is what a "hypothetical reasonable observer could reasonably have foreseen": See Bournhill v. Young, per Lord Wright. But where must this hypothetical observer be situate? In the driver's seat, or in an observation post on high? It is obvious that much must depend on his powers of observation and the scope of his imagination. One judge may credit him with more foresight than another One juge may think that he should have foreseen the shock. Another may not. In both Hambrook v. Stores Brothers and Chester v. Waverley Corporation the Judges were divided in opinion on the question whether the shock to the mother could reasonably have been foreseen. Some cases seem plain enough. A wife or mother who suffers shock on being told of an accident to a loved one cannot recover damages from the negligent party on that account. tNor can a bystander who suffers shock by witnessing an accident from a safe distance. But if the bystander is a mother who suffers from shock by hearing or seeing, with her own unaided senses, that her child is in peril, then she may be able to recover from the negligent party, even though she was in no personal danger herself: Hambrook v. Stokes Brothers. Lord Wright said that he agreed with that decision. So do I".

Lord Denning sums up the legal position as regards emotional shock thus:

'The true principle, as I see it, is this: Every driver can and should foresee that, if he drives negligently, he may injure somebody in the vicinity in some way or other: and he must be responsible for all the injuries which he does in fact cause by his negligence to anyone in the vicinity, whether they are wounds or shocks, unless they are too remote in law to be recovered".

Editorial Notes

Success Without War

Mr Khrushchev's Report to the Communist Party Congress, of which a brief summary is available, must evoke some confusion in the minds of neutral powers. The First Secretary of the Russian Communist Party has endorsed his faith in peaceful co-existence and an improved relationship with non-communist nations. On these two points the statusquo gets reaffirmed.

He could have modified the stand on these two vital aspects of Soviet Policy; that this was not done is agreeable. On the face of it, the repudiation of the orthodox interpretation of the future as involving an inevitable war with capitalist countries is also welcome. But, when alongside it is claimed that communism is eventually bound to triumph throughout the world as a result of the economic collapse of capitalist States, it is difficult to conceal the impression that the abandonment of war is only on the ground that it is superfluous.

There are countries which are neither capitalist nor communist; for them, the Soviet faith in the automatic conversion of the whole world to the communist creed cannot be a matter of willing approval. The Report is likely to stiffen attitudes among the Atlantic Powers, where suspicion of Soviet motives has ever been an article of faith. The inevitability of universal communism, as enunciated by Mr Khrushchev even as propagandist tactics, does not soften the cold war.

*

Taming Nepotism

The Union Home Minister has issued an order which insists that every senior official must secure Government's permission, before his sons or near relatives take employment with private firms. The order has come obviously in answer to the widespread feeling that commercial firms are getting glaringly obliged to the official world in the matter of distributing their patronage. When the grip of the State on commercial life is steadily hardening, it is only natural that private firms would seek to 'oil' the wheels of the administration through methods above legal reproach. The present order is intended to control this subtle exchange of influence.

But why should senior officials alone be subjected to scrutiny in this respect? Ministers and politicians closely associated with them are equally capable of attracting the obliging attention of interests ever in need of official sympathy. In the case of the Ministers, there is the aggravating stimulus of insecurity. The order has a limited scope, viewed from another angle. There are contracts, trade licenses, and scholarships for foreign study, with which a favour can be induced or gratefully reciprocated.

A skilful person keen to avoid public scandal is also capable of doing a favour without his opponents catching the least scent of it. While the Government's intentions are laudable, they should not rest on the assumption that they are dealing with a simple form of corruption. When all is said, the interest of the scions of officers should also be kept in view. Merit and brilliance should not be penalised or pushed out from legitimate opportunities merely because of its blood ties. With salary-scales going down and all rosy perquisites kept under scrutiny, officers under the Government will become much less attractive.

*

Independence for Malaya

Tengku Abdul Raheman's mission to London has been largely successful and Malaya will be granted independence within the British Commonwealth on August 31, 1957. Once again, Britain has demonstrated its robust realism in conceding the inevitable with grace. The present step is the more remarkable, considering the vital importance of Malaya to the Commonwealth as the largest dollar earner by virtue of its rubber and tin.

The tasks facing the interim government to be set up shortly are, to say the least formidable. The civil service, is largely constituted of Britishers and all-out efforts must be made to train Malayans in their place. Of prime importance will be the appointment of a Constitutional Commission to study the situation on the spot and make its report. The reaction of the nine Princely States, as yet uncertain, is of great significance, since the present agreement is subject to their veto. It is to be hoped they would not try to block the country's progress by clinging on to feudal self-interest. The case of the Princes of India, confronted by a similar situation, giving priority to the larger national issues should serve as a precedent worthy of emulation to others.

Internal security is likely to be the new administration's biggest headache. The communists still hold sway in the impenetrable jungles and the future prosecution of war against them would be the responsibility of a Malayan Minister. During their recent parleys wth the Chief Ministers of Malaya and Singapore, the Reds expressed willingness to eschew violence, when the defence-security of the country came solely under native guidance. But in the light of the Tengku's obligation to afford Britain the right to maintain armed forces in Malaya "necessary for the fulfilment of Commonwealth and international obligations", the Communists are more like to denounce the London Agreement and intensify their activities. This clause might also prove disconcerting to Malaya in her relations with neighbours and others willing to help and cooperate.

There is yet no indication of the merger of the Governments of Malaya and Singapore. Mr Marshall is to go to London next April to demand full self-government and in all probability he will succeed in his mission. A link-up of the administrations can be of great mutual benefit.

*

Back to Unemployment

The retrenchment in the DVC provides a significant side-light on the Indian unemployment problem. As the construction works get completed on any project, big or small, a substantial proportion, if not the bulk, of the labour employed in many grades will automatically be rendered superfluous. Invariably, such staff are recruited on a temporary basis. But that does not absolve the authorities from a moral obligation to provide new jobs for them, though nothing could be claimed as a matter of right.

This phenomenon of disemployment was seen in Nilokheri and Faridabad, where too original estimates of employment potential had to be drastically revised once the townships got into being. Such unloading of employed persons back into the market for jobs has to be reckoned as an important and permanent factor, particularly when a large part of the new development created through development schemes, is of an ephemeral character.

When there is dearth of trained personnel, this unloading can be a positive blessing. The only difficulty will be in the matter of adjusting the persons concerned to new and unfamiliar places of work. The controlled migration of workers from one area to another promotes inter-provincial understanding, wherever competitive local labour is not available.

But the total national picture is not brighter on a balance. There will arise a stage in planned economy, when the prospect of offtake in new construction works will either become stagnant or contract. There is only one ultimate answer to the problems. As the ECAFE Session emphasised once again, there will have to be vigorous efforts to control population with a view to get the unemployment situation under control, at least in another two decades. As far as the Second Plan is concerned, the improvement will be limited.

THE NEW COMPANY LAW

By

C. S. RANGASWAMI

and

G. BASU

The New Company Law, which is intended to be a practical handbook for company managements and commercial students, will contain detailed commentary on the new Act. The first volume has an exhaustive introduction, while the second will include a number of relevant appendices

---

Pre-publication price is Rs. 25 for a set of 2 volumes.
Post-publication price is Rs. 30 plus postage.

Advance orders at pre-publication price may be booked with "Indian Finance", 116 Lower Circular Road, Calcutta—14. Orders must be accompanied by a cheque to cover the price.

Publishers: Oxford Book & Stationery Co.

World of Finance

Resources for the Second Plan

THE pattern and magnitude of the financial resources needed for the Second Plan are indicated in the following table:

	(Rs Crores)
1. Surplus from surplus revenue	800
(a) At existing rates of taxation	350
(b) Additional taxation ..	450
2. Borrowings from the public ..	1200
(a) Market loans	700
(b) Small Savings ..	500
3. Other budgetary sources ..	400
(a) Railway's contribution to the Development programme	150
(b) Provident Funds and other Deposit Heads ..	250
4 External Assistance ..	800
5. Deficit financing	1200
6. Uncovered Gap	400
Total ..	4800

The estimates now given may, in broad terms, be said to be revisions of the Plan-Frame's estimates in accordance with a policy of bolder planning for market borrowings and small savings, and more confident expectations of the response of taxable capacity to developmental disbursements. Such upward revisions were urged in this column in the articles dealing with the financing of the Second Plan as outlined in the Plan-Frame. While we invite the readers to a re-perusal of the arguments and suggestions we put forward at that time, we hope to deal, in the next issue, more fully with estimates of resources as now presented in the Draft Outline. Suffice it here to draw pointed attention to the following two paragraphs which contain the crux of the matter so far as the financing of the Second Plan is concerned:

"Resources are not a fixed or static quantity; they lie unknown or partially known unless conscious and organised efforts are made to locate them and develop them."

"The initial effort to find resources for large developments in the public sector is naturally beset with difficulties. But, as public enterprises start bringing in surpluses, the resources for further investment become available in increasing degree."

+

Further Instalment of US Aid

THE returns of the Reserve Bank seem to indicate the receipt of a further instalment of US Aid. Foreign securities in the Issue Department show a rise of Rs 15.00 crores, while foreign balances in the Banking Department are lower by Rs 10.35 crores. The net increase in foreign assets is, therefore, Rs 4.65 crores. It may be due either to a seasonal net acquisition of foreign exchange by the Reserve Bank or to a further instalment paid by the US Government in terms of their promised aid. The latter alternative seems more likely as the balances of the Central Government with the Reserve Bank show an increase of Rs 7.67 crores. In the week under review, the overflow of month-early disbursements should have made a cut in Government balances. Owing to the proximity of the end of the final year of the First Plan, accelerated payments in connection with the Plan should also have caused a heavy drain. On the other hand, the second week of February must have accounted for a substantial excess of current revenue over current expenditure. But, taking all these factors together, a fall rather than a rise in the Centre's balances is indicated. Instead of a fall, these balances have actully risen by Rs 7.67 crores. We are inclined to think that this expansion in deposits is attributable to a credit received in respect of transactions under US Aid. It was only a few weeks ago that the Reserve Bank returns indicated the receipt of a fairly substantial instalment of US Aid. There is, from this point of view, reason to think that payments in respect of US Aid are being expedited so as to maximise the amount that can be shown as help contributed by the US Government to the First Plan.

+

5½ per cent

THE raising of the Bank of England rate to 5½ per cent has been awaited for a considerable time. So, the announcement on Thursday was in no sense a surprise or a shock. It has also been announced that the British Chancellor of the Exchequer will, on Friday, outline measures designed to reinforce the drive against inflation. How far the higher bank rate, the intensified credit squeeze and the other measures of tougher techniques will provide the solution for Britain's balance-of-payments ills, only time can show. Though partly vanquished, the advocates of the higher bank rate keep arguing still and continue to insist that this, and nothing else, is the right remedy.

India is more fortunately placed in every respect. We have an expansionary economy, but no inflationary pressures. We have credit control, but no credit squeeze. We have, when necessary, dear money, but, always, adequate credits for bonafide business. Avoiding the doctrinaire approach, unseduced by economic pundits, India's financial authorities have pursued a realistic policy; and this policy has worked smoothly and satisfactorily since November 1951.

Conditions in India have demanded such a policy, and responded to such a policy. The relative insularity of the Indian capital market and of the Indian money market may be the sign and symbol of an economy which is only partly developed; but it has secured for us an immunity against the vicissitudes and fluctuations which have afflicted most financial centres in the world. Oscillations between dear money and cheap money, between active ease and an ease not so active, have been guarded against; and the result is that Bank of England's 5½ per cent rate need not necessarily mean a higher than 3½ per cent Reserve Bank of India rate. The situation faced by the UK after Thursday's raising of the Official Minimum to 5½ per cent was already anticipated by the Reserve Bank of India's action in raising of the rate it charges on advances against usance bills. This week, banks operating in India are contemplating a rise of ½ per cent to 1 per cent in the rate on loans and advances. This step has been advocated in this column since a long time; and it is should prove adequate for the situation caused by 5½ per cent in London.

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on February 14. Total amount offered was Rs 1,53,00,000. Tenders at Rs 99-6 were accepted in full and those at Rs 99-5-9 were allotted approximately 88 per cent. Lower tenders were rejected. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-3 per cent per annum.

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs a. p
1956:			
February:			
7th	1,68,25	1,00,00	2 8 3
14th	1,53,00	1,00,00	2 8 3

+

The Reserve Bank returns for the week ended February 10 show expansion of currency for Rs 15.00 crores against foreign securities. Foreign securities for this amount have presumably been transferred from the Banking Department. Active note circulation has risen by Rs 15.28 crores to Rs 1,407.65 crores. Rupee coin has declined by Rs 0.83 crores to Rs 104.55 crores. As a result, notes held in the Banking Department are down by Rs 1.14 crores to Rs 7.31 crores.

In the Banking Department, the balances with the Central Government have risen by Rs 7.67 crores to Rs 60.55 crores, while those of the State Governments and member banks have gone down by Rs 3.40 crores and Rs 10.22 crores to Rs 11.00 crores and Rs 53.01 crores respectively. This decline of Rs 10.22 crores in the deposits of banks, coupled with the increase of Rs 4.74 crores in "Other Loans and Advances", provides a measure of the intensified seasonal demand for money.

+

The seasonal pattern is even more forcibly indicated in the consolidated statement of the Scheduled Banks for the week ended February 3. The Scheduled Banks have increased their borrowings from the Reserve Bank by Rs 15.42 crores to Rs 34.79 crores and from

(Continued on page 312)

How Wages Increases Finance Themselves

By PAUL EINZIG

THE latest phase in the frantic search for the causes and remedies of inflation in Britain is the discovery that the large amount of Treasury Bills is the principal villain of the piece. The suggestion was first launched out by one of the leading bankers in his annual chairman's speech, and since then experts and pseudo-experts all over the country have become extremely Treasury Bill-conscious. The correspondence columns of newspapers and the mailbags of Members of Parliament contain scores of suggestions that the Government should end inflation simply by converting a certain proportion of its Treasury Bills into long-term loans, or at any rate by financing in future any deficit by means of long-term issues instead of by Treasury Bills. It is suggested that the latter are practically equivalent to paper money, and that their issue is little better than covering deficit by means of the printing press.

Treasury Bills are not used, of course, in payment for purchases, in the same way as notes or cheques are used. But an increase in the banks' holdings of Treasury Bills enables them to expand credit. During recent years increasing importance has come to be attached to the "liquidity ratio" of banks—that is, the proportion of their easily realisable assets to their total assets. It has become a practice to regard 30 per cent as the minimum. In the old days the banks were only concerned with their cash ratio—that is, the percentage of their cash plus their deposits with the Bank of England to their sight liabilities. The conventional minimum is 8 per cent. Even today the cash ratio is considered more important than the liquidity ratio, but increasing importance is attached to the latter.

This means that if the banks' holding of Treasury Bills increases they are able to expand credit, always provided that in doing so

they do not reduce their cash ratio below 8 per cent. It is now suggested that, by reducing the volume of Treasury Bills, the Government could force the banks to intensify the credit squeeze. But, then, the same result could be achieved in various other ways, too. It seems doubtful, however, whether such a reduction in the volume of bank credit could directly affect the main cause of inflation, which is the wages spiral. By curtailing credit, the authorities could prevent an expansion of production, in so far as the additional working capital required for that purpose is financed with the aid of bank credits. They could also reduce the volume of money available for capital expenditure. But they could not prevent industrial firms from granting wages increases. It has come to be realised that such increases do not depend on the willingness of banks to increase credit facilities to the firms concerned. Most firms are in a position to finance any additional monetary requirements due to wages increases without having to borrow more from their banks.

In existing conditions it is easy for producers to add to the prices of their goods any additional cost of production. They can do so from the moment they conceded a new wages demand. This means that they can sell any previously produced goods they may hold at the higher price even though they had been produced on the basis of lower wages. As and when the new output emerges from the pipeline, it is sold on the basis of the higher wages, even though during the earlier stages part of their cost was based on the lower wages.

The higher proceeds usually amply cover the additional wages. There is no need for the firms to raise additional credits. There are, of course, exceptions. Possibly some firms are engaged in selling goods ordered previously on the basis of the lower costs. But in the majority of cases British industrial producers insist on inserting in the agreement a clause under which they are entitled to add to the agreed price any increase of cost due to higher wages.

The possibility of financing wages increases without the aid of additional bank credits is illustrated by the experience of 1955. The credit squeeze resulted in a fairly appreciable reduction of bank deposits and bank advances. In spite of this, there was an increase in the volume of production, in prices and in wages. There was also an increase in the note circulation, which is the result of the higher wages. Most wage-earners have no bank accounts, so that higher wages mean an increased requirements of Bank of England notes.

It must also be borne in mind that non-bank resources have come to play an increasingly important part in financing business. The industrial and commercial firms themselves possess fairly substantial reserves, and they are in a position to borrow from non-banking lenders.

Taking into consideration all these circumstances, it appears that the credit squeeze can only produce a limited effect on the progress of inflation. In so far as it succeeds in curtailing production tends to reduce the extent of overfull-employment, and to that extent it tends to weaken the bargaining position of the Trade Unions. But the idea that, in addition to this, the credit squeeze can check inflation by reducing the volume of money available for paying higher wages is entirely mistaken. The granting of higher wages increases the volume of purchasing power of consumers, so that they are able to buy up the unchanged output at higher prices. It is only indirectly, by weakening the bargaining power of the Trade Unions, that the credit squeeze can affect wages demands and inflation.

it's a BIG job...

prospecting for oil

Crude oil is not found everywhere in the world. Here and there it may occur in rocks that were once at the bottom of ancient seas and lagoons. But finding an old sea-bed is no guarantee that oil will be discovered there; *that* can be decided only by drilling a test well.

In some areas, likely clues to buried rock conditions may be found on the surface of the earth, but where surface features are absent, as in the Assam Valley, the search for oil possibilities is aided by geophysical surveys.

Three different methods of geophysical surveying for oil are being employed by the Assam Oil Company to "feel" for suitable rock conditions under the Brahmaputra's thick blanket of Alluvium.

By aeromagnetic, gravity and seismic surveys, scientists can form a picture of the type, depth and attitude of buried rock layers.

But none of these can point to oil —even if it is there. The scientists, after studying the results, can only say—there *may* be oil there. The only absolute way of finding out is to drill a test well. Frequently the answer then is—no oil. The prospector must try again elsewhere . . . and so the search goes on, in the hope that India's petroleum requirements may be supplied to an ever increasing extent from her own resources.

Nationalised Life Insurance: Constructive Suggestions

THERE should be no surprise that the Government of India should wish to take direct charge of a community service like life insurance, pledged as they are to the formation of a welfare state. To them, in the context of their avowed objectives, it is more a social issue than a fiscal weapon. The role of insurance is to keep the economic fabric of the community in a state of constant repair. It is but proper that insurance sould be allowed to play its assigned role unhindered. The instinct of private enterprise is profit. Thus, service to community inherent in life insurance is rendered, not for the sake of service, but because it stimulates profit. There is no emphasis on the social role of insurance. Government, committed to the formation of a welfare state and to the the achievement of a socialistic pattern of society, wish to give a positive character to the social content of insurance. Their taking over insurance is to emphasise that socially necessary utilities cannot be left to private enterprise, which necessarily has a limited and parochial outlook. It is by itself unethical and demoralising that constituents of community welfare should be a source of monetary gain to a few individuals.

Controversy, therefore, over the propriety or otherwise of nationalisation of life insurance is born of muddled thinking. There can be no course other than socialisation of socially necessary services for a state wedded to community welfare. In taking over life insurance, Government have, in this view, merely lived up to their specified role.

There is no gainsaying that it is, by and large, a vast undertaking, particularly for a machinery already on the point of severe strain by reason of many nation-building projects. The role of criticism, therefore, should be constructive, intended to assist rather than to hinder. Government need constructive suggestions which can lead to success—not arm-chair criticism, whose only use would be to flounder Government into a mass of entanglements. It may be that such criticism hopes to reverse the process, thereby again to link up the trade with profits, as well as to gain the power constituted by control of life insurance funds.

To carry out successfully the obligations of past insurance on company basis and the projection of life insurance in many untapped sectors, an organised administrative machinery is the first requisite. All the cadres of policy-holders have to be efficiently served. The multiplicity of rates, differing policy conditions of scores of companies are all factors that pose a difficult task for any centralised administration. Constructive thinking on administrative needs is, therefore, necessary.

In the first place, an All-India Insurance Service should be organised. Different cadres of officials and assistants on the basis somewhat similar to existing central services should be established. Existing personnel in insurance offices will have to be absorbed in the new cadres with re-adjustment of salaries as may apply. A high-powered Pay Commission composed of officials and non-officials in the insurance trade should be entrusted with the task of drafting the scheme in as much detail as possible.

In view of the multiplicity of rates obtaining in the country, and the differing policy conditions, companies should be grouped as far as possible. The emphasis should always be on rendering efficient service to thousands who have been policy-holders for the last 30 years. Thus, there might be two or three offices, and for Indian companies with head offices formerly located in this city, a similar number.

Every sub-divisional town must have at least one office with a sub-divisional officer. There should be a chain of offices in the pattern of Administrative units of Government. Sub-divisional offices will be under the zonal office at the State capital. The SDO will be an experienced insurance man, competent to attend to the normal routine of receipt of premiums, assignments, nominations, loans, render policies, etc. With a view to rendering personalised service, acceptances and claims, up to a specified figure, may be the responsibility, where there is no exceptional circumstance, of SDOs.

It will take some time to sort out the existing policy records on the basis of sub-divisions and zones. The present offices as they exist today can be instructed, if the scheme is immediately drawn up, to sort out their own records and to prepare lists on the basis of which sub-divisional offices can be started.

Gradually, sub-divisional offices will take many more responsibilities. Decentralisation is called for by the logic of circumstances. When insurance is planned on the widest scale, centralisation will defeat the purpose. Therefore, SDOs will work with minimum of interference, with agents and inspectors in their own jurisdiction. The number of agents and inspectors in each sub-division will be statistically fixed on the basis of population.

The zonal office in the State capital will deal with all queries raised by SDOs and will be mainly responsible for under-writing and total quota of business, apart from business in its own assigned area.

1956 Shipments: 4 Considerations

The sharp rise in the jute goods stocks as at the end of January gave a jolt to market sentiment; and, when the figures relating to jute goods production in January were released, it was obvious that shipments had fared even worse than originally anticipated.

It has fortunately happened that the unusually sharp accretion in stocks has not given rise to troubled whispers that jute goods production ought to be restricted; also fortunately, a Government announcement was forthcoming that output by fly-by-night jute mills would soon be put a stop to.

The increase in stocks is nearly 15,000 tons, and is largely attributable to a substantially higher level of sackings stocks at the end of January (45,300 tons) as contrasted with 34,400 tons at the end of February. This has been accompanied by a decline in sackings production from 56,600 tons in December to 52,600 tons.

Hessian stocks are shown higher by 2,100 tons at 25,600 tons; furthermore, production of this variety fell by 3,700 tons to 30,300 tons.

In the result, of course, shipments of both categories are shown to be sizeably lower in January 1956. Does all this mean that, with calendar 1956 off to a bad start, we shall experience a poor year for jute goods exports?

To pose the question is the work of moment; the answer, it is not a little difficult to provide. It will be foolhardy to suggest, off-hand, that shipments of jute goods will be maintained more or less on the levels of the two previous years; on the other hand, it is not impossible that, given some fortunate confirmation of new business expected, off-take by foreign countries should show some improvement; in the third place, we cannot rule out the possibility of keener competition being offered by other producers of jute goods, such that net clearances from India may be affected not inconsiderably.

It is dangerous, consequently,—as I have shown—to attempt any categorical prediction about prospects for exports. But it is nevertheless necessary to make some assessment of the future; and, in this regard, all that it may be possible or fruitful for us to do is to take note of all the considerations on which depend the trends in shipments over the next 12 months or so.

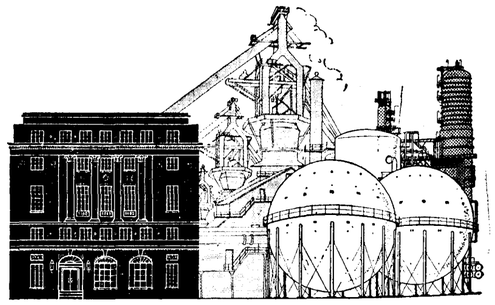
Let us take up the various points one by one.

RUSSIA: The prospects of this country emerging as a large-sized customer for Indian jute goods are mainly the reason for such steadiness in markets as is being displayed even in the face of the big accretions to stocks in January. It is well nigh taken for granted, and as certain, that Russia is bound to purchase jute goods from India to set off, at least in part, its exports to this country. But the capacity for Russia to take Indian jute goods is anybody's guess; to please India more, it may be that Russia will take a prominent interest in hessians and sackings; on the other hand, if there are other goods on offer in India, of which Russia has greater need, hopes of Russia purchasing large quantities may turn out to be no more than wishful thinking.

For another reason, however, I am disposed to be more optimistic as regards the size of Russian purchases. I have been given to understand that the steel plant to be erected by Russia will be packed and sent in two container media: crates and gunny cloth. And, in the Russian trade offensive, the export of the steel plant to India is likely to pave the way for other such wares being offered by Russia to under-developed countries. One packing medium for whatever the exports that Russia may decide upon will be jute goods; and, as such, I anticipate that increasingly keener interest in the Calcutta jute goods markets will be evinced by the economic department of the Kremlin.

BURMA:—This friendly neighbour to our East has been meeting with problems of plenty. Rice production is exceeding all demand. And, for a while, the outlook was bleak for the successful export of the quantities being harvested. Here, again, however, the Russian trade offensive is likely indirectly to benefit India. It is already known that Russia is prepared to absorb quantities of Burmese rice in exchange for the capital goods that Burma will need. This means, of course, that packaging material will be in demand. So long as Burma continues to a prolific producer of rice, and so long as the Russian trade offensive continues, prospects are good for demand from Burma for Indian jute goods being maintained, and perhaps even intensified.

CONTINENTAL COMPETITION —It may be said with confidence that in the current jute year, there is not the slightest possibility of Continental jute producers being able to under-quote India, and for that reason to make inroads into our jute goods exports. For this happy position, a number of factors are responsible. Not the least of this was the Pakistani decision, after the devaluation of its rupee, to maintain the status quo of jute prices in terms of sterling. In the second half of this calendar year, however, it may be that continental competition will stiffen. For, it may happen that, again, the Pakistani crop will be a bumper one— without an adventitious, not to say fortuitous, visit of floods. In such case, Pakistan may find itself with a larger quantity of raw jute than it knows what to do with. In consequence, the possibility of Pakistani raw jute being made available to continental mills at slash, discount rates is not to be ruled out. But the advantage to the continental mills under this head will largely have been offset by the brisk modernisation of IJMA mills. Thus, in my view, not much to fear, in this year or in the future, about competition from the Continent.



PAKISTAN:—As being in possession of better quality raw jute, and as also being in the position of bringing into production more and more of loomage, the threat of Pakistani competition will soon become a reality. But I am now no longer down-hearted about this. Long range, I am of opinion that demand can be depended upon both for Indian and Pakistani production of jute goods. For, a great new market for jute goods is in the process of being opened up: the vast potential demand represented by the Iron Curtain countries. And, in this market, India starts off with a definite advantage. Even if Pakistan should succeed in pecking away at what are presently India's customers, this should be more than counterbalanced by fresh demand from what is almost virgin territory.

ARGENTINE:—You never can tell with the Latins of South America; not only politics, but weather too, is temperamental. As such, bumper crops and crop failures in wheat are the accepted pattern of weather behaviour. Vast export of hessians to the Argentine? Or hardly anything at all? Let's wait for the weather to report and then we will know.

*

Listless conditions prevailed in the Jute Goods market during the past week when prices, after initial firmness, developed an easier tendency toward the close due to profit-

World of Tea

Present Statistical Position

TEA markets, in all centres, have been ruling very steady despite an increase of 24 million pounds in the crop of the major producing countries in 1955. This surplus has had considerable effect in upsetting the demand and supply equilibrium. The surplus, however, in the case of India, is not so excessive as to cause any further depression in prices. especially as it is quite possible that a greater quantity will be consumed in India itself on account of the lower price level ruling during the season.

According to the monthly review, issued by Messrs. J. Thomas & Co., well-known tea brokers, the present statistical position does not justify any major recession in prices. Teas, suitable for the UK market, should continue to find favour with the buyers during the current month, and any drop in price will be due to a decline in quality. It is possible that the market may become more selective and prices of better grades should show a further recovery. Prices of Common and Low Mediums should also, apart from minor fluctuations, be largely sustained. With the exception of poorer stalky descriptions, the balance of offerings on the Calcutta market may be absorbed at about current levels.

The Voluntary Crop Regulation plans are expected to provide some definite relief to the Indian tea industry, and it is hoped that a system of restriction will be adopted during the current year, at least to the extent that better quality standards are attained. Again, this season's working has made it abundantly clear that, with the substantial gap between the price of good and bad tea, it is a commercial proposition to pluck finer leaf and to make crops which do not prove to be excessively strenuous loads on the limited factory equipment at the height of the season.

The surplus produced this year has brought down the average for all common and Low Medium teas and it would seem rather unremunerative to produce incorrectly fired, thin liquoring stalky teas, which are unwanted by the world's markets. It is also hoped that the destruction of 2 per cent Residual teas, which has been recommended by some Producers' Associations, will be carried out as it will have a very salutary effect on the prices to be realised for the balance of the 1955 crop, available for disposal.

A careful analysis of the UK imports and stock figures also provides a cheerful picture. The UK offtake from the Calcutta market, at any rate to the end of December 1955, had been smaller than usual. In view of the fact that larger quantities of teas are being placed on the Calcutta market, there is every possibility that the UK buyers will remain active for the rest of the season. Their total off-take, during the next three or four months, should, therefore, be heavier as compared with the averages for the same period in 1953 and 1954. Assuming that the UK will only absorb the same quantities of North Indian teas as during the last four seasons which averaged 250 million pounds, there is still a shortfall of 80 million pounds, most of which must be made up with the purchases on the Calcutta market.

Meanwhile, offerings in the Export Sale held at Calcutta this week, amounted to 61,000 packages. There was only a limited demand and very little interest was displayed by bazar buyers. There was only poor support for the Commonest and Common Brokens, which were from one to two annas per pound easier. Medium Brokens were about an anna per pound easier. Medium Assam BOPs were sold from one to As 1½ per pound below last rates.

Fannings grades were once again the strongest feature of the sale; but they received less support than in recent weeks and were half to one anna per pound easier, except for a few selected lines of clean black Fannings which were slightly dearer. The best CTC Assams, on offer, were fully firm; but the more ordinary sorts were one to As 1½ per pound easier.

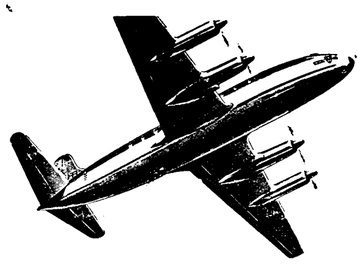
Darjeelings with any flavour were sold well and were generally dearer; but plain liquoring teas from this district were usually easier. Whole Leaf grades were neglected. There were heavy withdrawals of this type, amounting approximately to 55 per cent of the offerings. Following rates were quoted per pound:—Clean Black Pekoe Rs 1-11 to Rs 1-12; Plain BP Rs 1-5-6 to Rs 1-6; Medium Assam BP Rs 1-8-6 to Rs 1-9 and Best CTC Assam BP Rs 2-5 to Rs 2-6.

In the Internal Sale, offerings were 19,300 packages of Dusts. There was a better general demand, especially for black Leaf teas suitable for the Middle East, and the very best CTC Assams with good liquors. Teas of these descriptions were a very strong feature of the sale and sold several annas above valuations. There was fair support for all clean and evenly-sorted Dusts and these were fully firm and occasionally up to an anna per pound dearer. Brown leaf teas from the Dooars were sold at about last rates. Poor CTC teas were an irregular one to two annas easier, while residue teas from all districts received very little support. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-7 to Rs 1-8; Medium Assam Grainy Dust Rs 1-8-6 to Rs 1-9 and Best Assam CTC Dust Rs 2-5 to Rs 2-7.

There were 4,000 chests of Leaf grades on offer, which met with only fair demand. Clean and well-made teas were As 2 to As 3 per pound easier, while there was virtually no support for Residue grades.

In the Export Quota section, rates moved narrowly between 7 and 9 pies per pound with buyers at the former level.

In the Internal Sale held at Cochin, offerings were about 450,000 pounds. There was a strong general demand. Best liquoring high-growns and Good Mediums advanced by one to two annas per pound. Low Mediums and Residuals were sold at about valuations, while black grainy descriptions were well-supported at around last rates. Internal Sale D' will be held on the 21st February, 1955.



At last week's auction held in Colombo, offerings were about 5,216,055 pounds. There was an improvement in the quality of Nuwara Eliya tea offerings, which met with good competition at substantially dearer rates. Also, there was a strong general demand for high-grown teas, Broken grades being fully firm to dearer.

There was a strong general demand for medium-grown teas, plain liquoring Brokens being firm. Brighter liquoring and coloury sorts were generally 5 to 10 cents per pound dearer. There was, however, less demand for low-grown teas, Leaf Brokens showing a drop of 10 cents per pound. There was a good demand for high and medium-grown Fannings.

In London auctions held this week, offerings were about 21,669 packages, including 18,839 packages of Northern India teas. The demand for coloury qualities was still to the fore, while the best quality kinds were generally about 1d per pound dearer. Good Medium coloury teas were also in good demand and prices ruled fully firm on last week's rates.

Low Medium and light liquoring descriptions were rather neglected and prices showed a decline of 1d to 2d per pound. The market for Clean Common varieties was again easier. Clean Common Broken Pekoe was quoted at 3sh 1½d per pound.

US Notes

FOR 1955 as a whole. Americans earned five and five-tenth per cent more than 1954. Non-agricultural income rose $16,500 million, while farm income fell about $1,000 million. Wages and salaries, which accounted for three-fourths of the increase in non-farm income, rose six per cent. The sharpest payroll rise was in manufacturing industries. The dividend disbursements also advanced six per cent, while the net rental income showed little change.

The American Corporations paid out more in dividends in 1955 than ever before, the Commerce Department has reported. The total came to $10,400 million, about 13 per cent above the previous record set in 1952. Dividend payments rose throughout the year, an increase ranging from five per cent in the first quarter to 19 per cent in the fourth. Virtually, every industry group reported gains in payments, led by iron and steel non-ferrous metals, automobiles, chemicals and mining. The market value of outstanding common stocks of America Corporations rose by $50,000 million last year, as industry achieved record operating and earning rates and more Americans than ever—an estimated eight million from all income levels —invested in securities.

With their risng incomes last year, Aemricans were able both to buy and save on an increasing scale. President Eisenhower's Council of Economic advisers estimates that Americans spent a total of $252,4000 million in 1955, with the annual rate rising from $245,800 million in the first quarter to $257,500 million in the fourth. Their savings came to $16,800 million for the year, with the annual rate rising from the first quarter's $15,300 million—five and nine-tenth per cent of their income after taxes—to the fourth quarter's $19,400 million—seven per cent of their income after taxes.

Thus, Americans have been putting more money into banks, insurance companies and stock and bonds. During 1955, for instance, they put an estimated $6,100 million into private insurance, bought $4,700 million worth of shares in savings and loan associations, added some $600 million to their holdings of government savings bonds, deposited nearly $2,000 million in mutual savings banks, and invested about $6,000 million insecurities—including corporate stocks, issues of state and local governments and US government obligations other than savings bonds.

In addition to individual investors, another group—institutional investors—accounted for $1,500 million in net stock purchases in 1955. This group includes trusts, banks, insurance companies, savings and loan associations, and mutual investment funds. The Trusts and Estates magazine estimates that, at the end of 1954, institutional investors were administering securities with an aggregate value of $265,000 million. Since there is hardly an American who does not have some of his savings in an institution of this type, virtually the entire population directly or indirectly shares incorporate ownership. Increased interest in investment by individuals and institutions also helps supply the funds needed for expansion of private and public facilities, including roads, schools, homes, factories and stores.

Farm incomes and prices was halted, temporarily, at least, during January this year. The strength in the general category of agricultural products and foods has accounted for practically all the upturn in the Department of Labour's wholesale price index since December, 1955—from one hundred eleven and three-tenths to one hundred twelve per cent of the 1947 to 1949 average. Prices of other types of commodities have registered little change so far this year. Price rises for livestock and poultry have been the primary factor, and grain, coffee, wool, soybeans and copra also have been higher.

Another boost was given the US farm economy when the Department of Agriculture announced this week that it will offer its stocks of surplus farm products now estimated to have a total value of more than $8,666 million —for sale to commercial exporters on credit. Heretofore, except for barter transactions, all surplus sales have been for cash. The decision to extend the credit was made in an effort to spread up the disposal of surpluses that are helping to keep down farm prices and income. Credit will be extended up three years, with sales terms providing that the exporter furnish assurance of payment of the dollar sales value plus interest. It is expected that maximum credit benefits will be passed on to foreign importers. The customary channels and facilities of trade and commerce will be used on carrying out the programme.

The American cotton growers and manufacturers, however, have been rebuffed in their efforts to receive special trade treatment that is at variance with the long-accepted US policies. President Eisenhower has given his firm backing to the Agriculture Department in its refusal to impose quota restrictions on textile imports At his news conference this week, the President told reporters that he does not believe in quantitative restrictions and has always opposed their use, although it is necessary to employ them in a few cases—those in which some agricultural imports might conflict with internal US price support laws.

The reluctance of the US Government to invoke protectionist trade devices has been scored by the American Tariff League, the foremost spokesman for protectionist interests. In its current monthly bulletin, the League rebuked the Eisenhower Administration for its failure to increase tariffs on imported goods that are competitive with American production. It points particularly to the infrequent use of the Escape Clause of the US Trade Agreements Act, under which American companies can appeal for withdrawal of tariff concessions granted to other countries. The League characterises the President's increase in tariffs on bicycles last year, and on watches the year before, as "exceptions" to the Government's low tariff policy.

*

Britain

TASK FACING BRITISH ECONOMY

By PAUL BAREAU

WHAT are the economic facts which Britain faces as she moves further into the year 1956? They are, as usual, a mixture of good and inspiring developments on the one hand, of less good and cautionary warnings on the other.

In assessing this mixture, it is all-important to avoid the all too easy temptation of exaggerating, of focussing on one or other of the extremes. At the present moment there is, perhaps, an undue tendency to fasten on the darker side of the picture and to evoke and use the word "crisis", which fits all too well into the politician's and journalist's language.

The word "crisis" does less than justice to realism and truth at the present moment. It has just been announced that industrial production in the United Kingdom in 1955 was nearly five per cent greater than in 1954. Gold losses, which gathered such momentum in the early and middle months of the year, have recently shown a reassuring tendency to disappear. Industrial investment has never been higher, and there is every indication that in the coming year it will again break all records.

Employment has remained higher. British goods are still competitive, as witness the fact that experts last year were five per cent higher than they had been in 1954 and created a record both in respect of values and volume. All this is hardly the context in which to speak of "crisis".

And yet it would be idle to pretend that Britain does not face considerable difficulties. Strong and weak points in the economy were recently subjected to a realistic diagnosis by Mr Harold Macmillan, the new Chancellor of the Exchequer, who was not inclined to understate the difficulties with which he is being called upon to deal.

It would not have helped him in the psychological aspect of his task to give undue prominence to the favourable factors in the situation. If he is about to apply the brake to British economy, the mood he wants to create is one of awareness of the difficulties and of the dangers that threaten if these difficulties are not overcome in the reasonably near future.

Mr Macmillan certainly painted a rosy picture of the state of the consumer. Nearly everyone, he said, is dong very well. Sixteen per cent. more household goods had recently been going into the average home than two years

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

DISCUSSING the working papers on the Plan-Frame in these columns last June, I wrote: "There is every reason why the Second Plan must succeed even more spectacularly than the first: there is responsible enthusiasm: the objectives governing it are clearly defined and generally acceptable: its targets, both physical and financial, are, as I have already indicated, capable of realisation. But there is one important proviso to this almost automatic assumption of success: and that is the forthcoming, in human and organisational terms, of the stupendous effort required for the realisation of the targets set....I believe that, in the ultimate analysis, the need for the greatest amount of planning will be in the sphere of organisational detail and of streamlining the administrative machinery for the job on hand. ..My greatest anxiety, not to say misgiving, about the Plan is in regard to the ability of the Government to produce the machinery adequate for the enormous tasks the Plan has set for it....That is why I am endlessly bothered with the inadequate discussion of organisation in all the current cerebration about the Plan. I am afraid that there is a tendency either to escape into the dizzy raptures of figure juggling, or to retreat into cosy regions of sterile discussion of theory. You can talk endlessly and interestingly about the rival theories of conspicuous consumption and conspicuous belt-tightening. But development is a job of work to be done."

*

From this point of view, I had suggested that the Planning Commission should set up immediately a panel of administrative experts and entrust them with the task of providing the "organisational frame" of the Plan. For, it is necessary that the organisational frame should be discussed as carefully as the economic and statistical frame that has been placed before the public.

*

Though no comprehensive organisational frame was prepared and placed before the public, there is clear evidence that the Planning Commission have accepted the view enunciated in these columns. In the Draft Outline of the Second Plan published last week, they say: "In a very real sense, the Second Five-Year Plan resolves itself into a series of well-defined administrative tasks." It is evident from the Draft Outline that the Planning Commission have acted in the last few months on this excellent premise and undertaken a series of investigations to determine the nature and requirements of organisation and personnel for the different kinds of tasks set for the administration under the Plan. Inevitably, it is not possible to discuss adequately all the issues involved in a document which is merely a rough outline of tasks to be attempted. But the Planning Commission have set out the principal administrative tasks during the Second Five-Year Plan as follows:

(1) Ensuring integrity in administration.
(2) Building up administrative and technical cadres.
(3) Organising large-scale training programmes.
(4) Streamlining of methods, devising of supervisory and evaluation techniques.
(5) The tasks connected with the regeneration of our rural lives by the development of agriculture and rural industries.
(6) Organising the management of public enterprises.
(7) Securing of local enthusiasm for development.
(8) Strengthening of the co-operative sector.

*

Obviously, the relative importance of the various tasks listed above varies. Personally, I consider that the most important and in some respects unprecedented jobs will be those in connection with the creation of the administrative force with adequately trained personnel and the elimination of organisational bottlenecks in the re-organisation of rural lives sought to be achieved by the Plan. In the limited space at my disposal, I shall confine myself to these two questions.

*

From the studies conducted by the Planning Commission, of the requirement of administrative personnel of the Second Plan, they have come to certain conclusions which are eminently sensible. They desire that the State Governments should make a fairly detailed estimate of their personnel- requirements over a sufficiently long period so that necessary training facilities may also be devised. It is also necessary that the estimate takes note of the likely expansion of responsibilities as the Plan proceeds apace, so that we are never again caught unawares and unprepared for our tasks. The tasks of public servants will become more and more complex as the role of the public sector in the country's economy is progressively becoming more and more important. Consequently, it would become increasingly necessary to think of modes of recruitment and training that are not strictly orthodox. The Planning Commission have worked out a proposal for constituting an "industrial management pool" to meet the principal direct needs of the Central Government and the indirect needs of the State Governments. Since the State is going into 'business" in a big way, the Plan envisages the increased use of the "Business Administration" courses initiated recently in Bombay, Calcutta, Madras and Delhi. An administrative staff college is also to be established for the purpose of studying techniques of organisation. A "Management Association" with branches at important places is also contemplated.

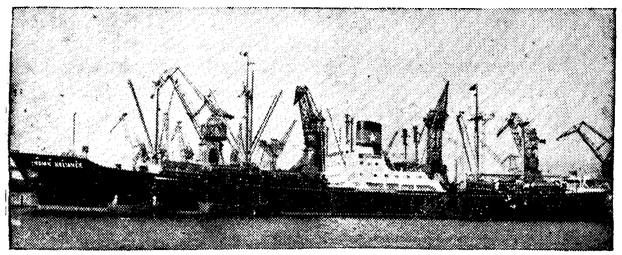
*

While all these ideas are admirable, it is necessary to see that institutions created in their pursuance do not become mere showpieces to impress visiting dignitaries. Bureaucratic effort in the past has so often been associated with a certain air of unreality that it is necessary to utter this warning.

*

On the question of technical personnel, the Planning Commission have had some detailed assessment made by experts. As is well known, the First Plan revealed serious inadequacies of technical skill at all levels and some of its programmes were seriously upset for this reason. The Planning Commission have had the problem of technical personnel studied by an "Engineering Personnel Committee" set up in September last. This Committee has made certain interim recommendations which are of tremendous importance. It has not only given details of requirements of personnel of all sorts, but also made some suggestions for continuous assessment of technical manpower and the speedy meeting of any fresh need for technical skill. These suggestions deserve the closest consideration of the Government.

*



The other problem relating to the administrativte tasks of the Second Plan that I mentioned earlier is connected with the aim of a significant improvement of the lot of the rural population of our country. The problem of regeneration of the villages has assumed tremendous significance in the Second Plan not only because of its intrinsic claims to priority, but also because of its being tied up with one of the major problems sought to be tackled by

the Second Plan, namely, unemployment. The basic strategy of the Plan, as has been repeatedly stated, is to make extensive use of village and home industries for the purpose of providing substantial employment opportunities to as large a number of people as possible. I shall deal more specifically with the implications of this basic assumption on a later occasion, but, at the moment, I should like to point out how complex are the administrative problems connected with the working out of this idea. Merely to enumerate the number of persons who would be required to carry out the increased duties of the enlargement of Community Projects would give an impressive picture of the task. At the end of the First Five-Year Plan, there would be nearly 84,000 persons employed in the various grades of Community Projects administration. At the end of the Second Plan, this is expected to go up by an additional two lakhs of persons. The effort involved in the training of these persons can easily be imagined. And yet, this is merely an infinitesmal portion of part of the job. There are other aspects of even the organisational tasks of Community Projects, and Community Projects are only a part of the programme for rural regeneration. There are, for instance, the problems connected with rural credit, supply of raw materials to the units of small-scale and home industries, marketing facilities for the end products both of agriculture and rural industries. These involve tremendous efforts at physical and human organisation for which detailed working out in advance is absolutely necessary. For instance, warehouses are to be built to keep these products, and collection agencies are to be set up and emporia opened up. These are, again, but initial tasks: there are the tasks connected with devising of methods of continuous, smooth and automatic working of this machinery.

*

Obviously, it is impossible to write into the Draft Outline all the details of the steps that are being taken by the Planning Commission and the Government to create the necessary administrative frame-work for the working of the Plan. But a perusal of the Plan makes it abundantly clear that the Planning Commission are aware that, more than any other single factor, it is the administrative resourcefulness of our people that will determine the ultimate success of the Plan. In this, the Planning Commission have the root of the matter. That they have it is the surest hope for the Plan's success.

Bombay Review

TISCO Developments

DALAL Street was given the news that it was so long waiting for. The shape of things to come for the Tata Iron and Steel Company Limited was made known to shareholders last week firstly in the form of a notice calling an extraordinary general meeting to be held in the second week of March and secondly by a circular published by the company in this regard.

Brisk activity is characterising every aspect of progress in the TISCO scheme for expansion. Scant days have passed since the Government announcement was made that the TISCO rights shares could be issued, not at par, but at a premium of Rs 30 per share. The circular confirms that the management's intention, and thus its application to the Controller of Capital issues, was for the rights shares to be made available to shareholders at par.

I need not carp on this decision. In the section For the Investor, Watch-dog made it clear some weeks ago that what was important was the attitude that Government would take when it came to the question of dividend payments. Indeed, if Government have insisted that a premium must be collected from shareholders, the latter in turn can justifiably expect that a commensurate dividend payment will be forthcoming on the shares so issued.

In this view, the Government decision to extract a premium may even be doubly hailed. Firstly, it will undoubtedly benefit the company, in that it lightens the task of finding the financial resources. To the extent that the premium will fetch an additional Rs 4 crores or a trifle less, certainly, to that degree the company's indebtedness on loan capital account will stand reduced. In the second place, as I have just pointed out, a premium issue can be taken to presage what I call a commensurate dividend payment.

It is to be anticipated that the extraordinary general meeting to be held in Bruce Street about the middle of next month will largely be a formality. Shareholders will be asked to approve a resolution raising the authorised capital from Rs 17.39 crores to Rs 27.02 crores; and a second resolution calls for the appropriate change being made in the Articles of Association.

As far as the issue proper is concerned, the resolution indicates that the shares are to be issued at a premium of Rs 30 to existing shareholders at a one-for-one basis, with the right to renounce in favour of nominees approved by the Board. On application, a sum of Rs 35 is to be paid, with Rs 10 of this amount as applied to the premium. The balance of Rs 70 would be payable on allotment and|or as and when called up by the Directors from time to time at their discretion.

It is interesting to note that the resolution does not explicitly state that the new shares would rank for dividend as from April 1956 of the company's working. Instead, it is merely indicated that these shares would not possess any rights in dividends "declared at or prior to the Annual General Meeting to be held in the year 1956." But this, of course, is merely another way of asserting that the premium shares will not, naturally, benefit from 1955-56 results.

Holders of the new ordinary shares will be entitled to all dividends declared in meetings after the one held in 1956—but there is a proviso. In the event that interest is paid on such shares in accordance with Section 107 of the Indian Companies Act, "an amount equal to the gross amount of such interest shall be deducted from the actual (net) dividends so payable."

This would seem to suggest that, should interest be so paid, shareholders will not be entitled to refund. But it is scarcely likely that TISCO will not announce a dividend on the new ordinary shares in respect of the company's working in 1956-57.

Another interesting tit-bit in the resolution affects the shares not taken up by rights-holders. Normally, provision is made for the "lapse" in rights shares to be taken up by the other shareholders on the same terms and conditions pertaining to the issue. In the present case, there is departure from the norm.

It is only with the previous permission of the Controller of Capital Issues that the shares not taken up may be disposed of by the Board. And these shall be disposed of "at such price or prices and on such terms as may be approved by the Controller and to such persons, whether shareholders of the Company or not, as the Directors may think fit." In other words, non-shareholders in TISCO may have an opportunity to subscribe for that part of the new issue which is not taken up by the present shareholders.

The certificates would be completed and be ready for delivery within nine months after the last allotment; and the final clause to the first resolution empowers the Directors to prescribe the various forms relating to application, etc.

Activity, thus, as relating to the new ordinary shares. Brisk, too, is the progress in the working out of the expansion programme. Little of a preliminary nature remains to be done; what is more, they that are in the know are saying that tenders have also been invited for almost all the major items required for the expansion programme. If we add to this hum of activity the confidence reportedly expressed by the contractors of finishing their task well within the stipulated time, we can better appreciate the rate at which the work is likely to be completed.

All, however, is not smooth sailing. A calm here, or a storm there, is to be expected when expansion of such size is undertaken. One report has it that prospects are none too hopeful of obtaining equipment from America either in terms of swift delivery or in the way of favourable prices. It is true, TISCO is not committed to the purchase of plant and equipment from America; unfortunately, the utilisation of funds that may be available by the Export-Import Bank is restricted to purchases in America.

But there is no need for us to rush to the conclusion that, in this contingency, we have to make do with the higher costs and later delivery by America. India is so situated today that we can confidently hope to effect contracts that are more favourable from other sources.

Both prices and delivery are important factors. As to the former of those, we need not fear that, by denying ourselves the funds from the Export-Import Bank, we shall run short of financial resources. It should be possible, without much difficulty, to obtain equipment from other supplying countries on a long-term credit basis.

If, therefore, we find that, say, West Germany is able to supply the necessary equipment at a much earlier date than America, finance need not be the consideration that would make us prefer America. Especially is this so, if the prices quoted are, besides, more favourable.

We need, however, to pay due heed to one fact: if plant and equipment is to come piece-meal from many countries, the task of erecting it and bringing it to production may be more difficult; and, in consequence, the expansion programme may, in fact, take more time to be completed.

While all these are developments in TISCO news that the investor should be apprised of, we may rely upon the management to weigh every factor and to reach the optimum decisions in every case.

The Draft Plan Welcomed

It is one of the most heartening, and one hopes enduring, features of the present trend of opinion on the draft Second Plan that there is general agreement on the relative emphasis given to the various sectors of national development, while formerly, there was consensus only as to the ultimate objective in view. The private sector is inclined to shed much of its undue pessimism and the erstwhile flurry of apprehension is no more. This has come about more from the realisation of commonness of purpose than from a tacit sufferance of the inevitable. The draft plan, it is being recognised, gives sufficient stimulus to the industrialist and the agriculturist in the bid to increase national product, to the trader to expand and diversify exports, to the scientist to help harness new sources of energy and above all, to the common man to practise, effectively, an unprecedented measure of productive self-help.

It is natural and to be expected, therefore that the spokesmen of the business community should come out to welcome the new plan. Last week Mr N. L. Kanoria, President of the Indian Chamber of Commerce extended wholehearted support to the national programme. And now, Mr Morarji Vaidya, President of the Bombay Indian Merchants' Chamber has joined in the expression of approval and welcome. The plan targets are, he considers, realisable and not overzealous. Nor does he think that the huge expenditure planned for the next five years would create a run-away inflation in the country.

Mr Vaidya's word of praise, is however, not unmixed with a note of caution. Past performance rather than political and ideological considerations should weigh with the planners in the matter of allocating expenditures for the private and public sectors, he said. He then went on to add that looking from such an angle, the private sector deserves a much greater emphasis than has been laid in the plan. This would create the impression that the wings of this sector are clipped which is as untrue as to say that the public sector has wrested a monopoly in the industrial field. What Government have done is to demarcate to the extent possible the respective areas of action for the two sectors without infringing upon the almost unlimited scope for the expansion of each in its own field.

There are also envisaged domains in which private and public enterprise have to work in close co-operation and in a complementary nature. The engineering indusry, and the shipping industry are typical examples.

Referring to the economic policy resolution of the Congress working Committee Mr Vaidya said, 'if it is intended that Government should subscribe to the equity capital rather than the loan capital in the private sector, the pace of virtual nationalisation will be accelerated'. Such fears can be allayed only by a full-scale restatement of the Government's industrial policy. There are indications that such a clarification of the 1948 resoluton on industrial policy in relation to the new set of circumstances may soon be expected.

✱

Progressive Self-Government

It is unlikely that the temporary spell of perverted patriotism and mob-rule in Bombay will stain the State's good record for able administration and progressive reform. In fact, the presence of a stable and efficient administrative apparatus prevented the further spread of violent agitation. Events have come to such a pass that it has become necessary for the Government to take over the administration of fourteen municipalities in the State, all of which have failed to function as a result of the resignation of the majority of councillors. This was made possible by an ordinance issued by the Governor.

This brings to the front the possibility of similar action in the case of the panchayats, should they give evidence of incompetance. At present there is no provision to dissolve or supersede such of them. This question, and much besides, will be set straight when the new Bill suitably amending the Bombay Village Panchayats Act 1933, comes into force. The Bill puts on a deeper interest when it is remembered that the powers and duties of village panchayats are to be widened in order to enable them to function efficiently and to play an important role as a basic unit of local self-government.

The Government have set to themselves the target of establishing a panchayat in each and every village within a period of three years. This would call for the lifting the present restriction that a village should have a minimum population of two thousand in order to establish a panchayat.

Functionally, the panchayats will have to bear a greater burden than before. The change will come mostly by making obligatory, duties which are now only discretionary. Effecting improvement is agriculture, active association with the work of the community development and extension service, the organisation of voluntary labour, for carrying out community works, assistance in the implementation of land reforms, these are some of the functions which will become obligatory.

By clamping such obligations on to the panchayats, it may reasonably be doubted whether the freedom of opinion and of action of these self-governing bodies will not be curtailed. This seems to be a wrong angle of looking at the new reform. In fact new opportunities are opened up for local talent and initiative. But these can be utilised only if the panchayat is rid of its uninterestedness and lax responsibility on the one hand, and, on the other, of deep-rooted conflicts by vested interests. It has to become a live forum for debate and discussion, agreement and action, recapturing the thoroughly democratic character that was its in the recorded past.

✱

The Tata Institute of Fundamental Research

Ten years ago, Sir D. J. Tata Trust got the happy idea of starting a research centre for advanced study in mathematics and physics. Such a venture was evidently remote from the other work in which the House of Tata was engaged. The universities apart, it represented an enterprising innovation in the field of higher education. The Bombay Government were prompt in associating themselves with the institution, adding immensly to its stability and usefulness to aspiring scientists. The Government of India too took an active interest in it and supported it with a substantial grant in the very first year of its existence.

From then on, the Institute tells the story of speedy and unimpaired growth. Besides fundamental research in mathematics and physics, fresh and fruitful studies are being taken into the wonderland of nuclear physics and cosmic radiation. The Institute provides excellent facilities for students with natural aptitude and talent in this field. to pursue freely their studies. Special scholarships are being given for students to go abroad and gain acquaintance with the latest developments in scientifically advanced countries.

It did not therefore take long for the Government of India to recognise the Institute as the national centre for advanced study and fundamental research. At present, the Government of India contribute 90 per cent of its budget. It was indeed natural that the original sponsors, the Sir D. J. Tata Trust and the Bombay Government should feel that the Union Government should become an official partner in the enterprise, taking a bigger share in its running. This has culminated in a tripartite agreement now finalised whereby the three parties would jointly run the Institute.

The recently held international conference on Zeta Functions, attended among others by top-ranking mathematicians from USA, USSR China, Germany, Norway, the UK and Japan, Holland and France, shows that the Institute has come to be recognised as an inter-national centre for mathematics. With the greater help and inspiration now assured it, it is to be hoped that equal success will attend researches now being made for the peaceful utilisation of nuclear and solar energy. Collaboration with friendly countries advanced in the field seems to be desirable.

✱

Rs 7 Crores for Slum Clearance

Municipal authorities in Bombay may show how sprawling slums in large cities can be effectively handled. It is being proposed that the additional revenues accruing from taxes on land property and increase in rents as a result of the new Rent Control Act be set apart for financing the civic body's slum clearance programme. Disclosing this in a radio broadcast, Municipal Commissioner, Mr P. R. Nayak pointed out that a sum of Rs 20 to 25 lakhs is being received annually by way of the additional taxes. Rough estimates of the total expenditure for clearing the City's slums place it between Rs 30 crores and Rs 40 crores.

A beginning will be made this year with Kamatiputra, one of the worst affected areas. This 60-acre area will be cleared of its slums and 5,400 new tenements in four-storeyed structures will go up at a cost of Rs 7 crores; this expenditure would also cover provision of other civic amenities.

The rent problem is not likely to create any serious difficulty. At present the majority of the tenants pay between Rs 10 to Rs 15 a month. It is calculated that the new tenements will be let out at Rs 36 a month; but the Corporation seems to be prepared to subsidise the rent up to 50 per cent.

News from Amritsar

ANNUAL sessions of the Indian National Congress have so often and so automatically been described in the past as 'historic" that one is hard put to it to describe a session which is really of crucial significance to the future of that party and of the country. The Amritsar session of the Congress, that has just concluded, met at a time when, by every account, the organisation was convulsed by the manifestation of basic weaknesses. In a sense, the present phase may be said to be the climacteric of an organisation which has had a glorious record of robust and full life. On how the organisation responds to the new challenges that have been thrown before it during the last few months would depend its future and the future of the country. It is, by any manner of reckoning, a responsibility of staggering magnitude.

It was evident that both the leadership and the rank and file assembled at Amritsar were aware, in varying degrees, of this burden. In all the utterances of the leaders, repeated emphasis was laid on the need for a dedicated act of regeneration on the part of the Congress, the elimination of basic weaknesses of group considerations that jeopardised gravely larger national interests.

In his address, the Congress President, Mr Dhebar, said that the disturbances over the States Reorganisation have brought the Congress "face to face with realities." In another striking phrase, he referred to "the slumber which had brought us to the brink of a civil war."

Mr Nehru considered that the situation arising over the States Re-organisation proposals gave us a glimpse of basic weaknesses in our national character that require to be eradicated. Though there were lengthy resolutions on world affairs and economic problems, it was clear that the thoughts uppermost in the minds of all the leaders were those connected with how best to impress upon every Congressman the need for looking upon the country as one whole, and not be allowed to be swayed by local consideration to a degree that will endanger the unity and security of the country.

For the first time, Congress leadership shed its preoccupation with the British period in Indian history. In all speeches, there was a strong underlying sense of our earlier history, which records the manifestations of some of the fundamental weaknesses of our national character. This glimpse beyond the usual range of vision had the salutary effect of showing the real preciousness of what we have at the moment and the need for saving it at all costs.

Among the rank and file, one discerned a deep sense of gloom, confusion and bewilderment. Apparently, many did not know how to cope with the shifting changes in emphasis on the subject of State boundaries. They were also but dimly conscious of the need in politics for giving a firm intellectual basis for one's convictions.

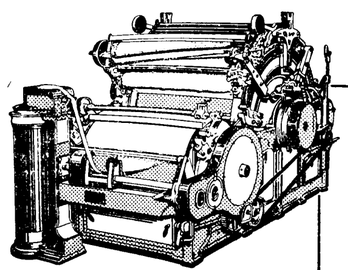
Mr Dhebar pleaded, in a different context, for an 'emotional cohesion" with the people of the country. But, in the context of confused emotional commitments on this subject, the need was rather for hard thinking and balancing of interests—a discipline that would strain greatly this very emotional cohesion.

Members who came from areas that had behaved scandalously during the recent troubles over reorganisation were genuinely contrite, and the leadership, sympathetically sensing the deep regions in which the impulses for these acts originated, were willing to overlook the lapses of local leadership.

But the resolution recommending modification of the linguistic principle puzzled and distressed quite a few, and the uncertainties regarding the immediate future merely added to the confusion. None would care to assess the possibility of the emergence of the larger units on the pattern of the proposed union of Bihar and West Bengal, and there was no unanimity about its feasibility and desirability.

At the end of the session, however, there was evidence that the week's exhortation has had some effect on the leaders from the various parts of the country. The Maharashtrian delegation, especially, is stated to have been deeply impressed by Mr Nehru's appeal for healing the deep wounds inflicted by recent events and the need for burying the hatchet and being friends once again. If the immediate response to an appeal to old comradeship in many a doughty battle lasts, and the leaders go home determined to do their best, there should emerge an atmosphere in the internal situation of the country clear from the miasma of political unreason.

The resolution reversing the traditional policy of the Congress on linguistic states was persuasively argued by Maulana Azad, whose eloquence had visible effect on those gathered. The resolution, though long-winded as all Congress resolutions, set out the case without any undue attempt at self-justification. It clearly enunciated that new situations needed new policies, and therefore it urged the formation of larger bi-lingual and multi-lingual units.



But it is not the political and practical attractiveness of the idea that needed emphasis. Ultimately, it is the ability of the leaders to carry the people with them in the pursuit of the idea that will determine the success of the idea. It is to be hoped that the Congressmen returning home from Amritsar will not imagine that their duty was done when they voted for the resolution.

On the contrary, their task has just begun. There will have to be intense effort at persuading the people at home to accept the idea, They must make the new idea part of the common thinking, and what is more, the common feeling of the people. If this consequence follows from the Amritsar session of the Congress, it may be stated that it crossed its "change of life" period without great damage to its vitality and resilience.

I have not dealt with the other resolutions on foreign affairs and economic policy and planning at the session, not because they were unimportant, but because I am reporting on the dominant and almost exclusive preoccupation of those assembled at Saheednagar. So exclusive was this preoccupation that neither the publication of the Draft Outline of the Second Plan during the week nor the more specific resolution discussing it at the session evoked any interest in the majority of delegates. This shows, again, a lamentable lack of perspective, but there is no use deploring it. Another duty of the leadership would seem to be to educate its followers in the relative importance of national tasks.

In a very real sense, the Congress party as such has been put to its most severe test on the eve of what will undoubtedly be the most important task that Government have before them. As I said, the chastened mood was very much in evidence; and I would like to repeat that, if Government are to carry through the Second Plan without political strain and stress, a prerequisite would be a directive from the Congress High Command that parochialism in leadership cannot be countenanced.

MMC revolving flat cards

are now being extensively used in Textile Mills in India.

Outstanding features

1. Five distinct setting points, used singly or in combination, to control setting to .001 inch.
2. Johnson bronze bearings, for cylinders and doffers. Roller bearings to cylinder; ball bearings to doffer and ball bearing comb box also provided as optional equipment.
3. Ball bearings to licker-in pedestals.
4. Self-lubricating 'Olite' bearings at several locations.
5. William's patent stripping motion for flats.
6. Drop lever with new disengaging handle.
7. Fluted lap roller with positive gear drive from feed roll helps uniform feed of lap at the back with minimum possible stretching.
8. Cards can be geared for any production in a mill organization.

North Indian Notes

Mr Shastri's Call to State Governments

Criticism of the methods and rates of taxation of motor vehicles have come often in the past from many quarters in strong terms, but not, till now, from a member of the Government. So, when Mr Lal Bahadur Shastri admits at the Transport Advisory Council, fully and frankly, that the direct and indirect incidence of taxation on motor vehicles is responsible, in part at least, for retarding the growth of motor transport in India, it instils justifiably the hope that something at last is going to be done to reduce and systematise a multiplicity of levies in motor owners at the various levels of the Centre, the States and the local bodies.

Following as it does the findings of the Taxation Enquiry Commission, the Motor Vehicles Taxation Enquiry Committee and the Planning Commission's Study Group, the Minister's statement is no cause for surprise. Nor is his pronouncement that the taxation in the different States is not based on any clearly defined principle or accepted policy, a revelation.

The Bill recently introduced in the Lok Sabha provides for some concessions to the motor transport mainly in the form of relaxation of restrictions on inter-State road travel, payment of compensation, extension of licences, etc. But the measures it embraces do not touch the heart of the problem. Unless the heavy fiscal burden is lightened, so that the price of a new vehicle comes down to an appreciably lower level, the growth of the automobile industry and the expansion of road transport are bound to suffer. The Motor Vehicles Taxation Enquiry Committee's recommendation to simplify the whole tax system by the adoption of a uniform fuel tax and a uniform system of vehicles tax is yet to be adopted. The study group's plan for a reduction of 20 per cent of the total burden of tax has not so far gained official acceptance.

Mr Shastri's statement, however, was more in the nature of a call to the State Governments to revise their fiscal policies which are disparate to an absurd degree. But, as such there is little additional reason to expect that the States are prepared to forego a slice of their present revenue in order that motor transport may rapidly develop. In fact, lower rates leading to such development will, in the long run, bring a larger revenue into the exchequer. On account of the vital part road transport has to play in the coming years, it is highly necessary for the Centre to persuade the States to adopt the major recommendations of the MVTEC. The present system representing a jumble of taxes at numerous levels is a standing hurdle for the realisation of a universally accepted objective.

✱

A National Emergency

The recent meeting of the Central Council of Health provided a suitable forum for the Health Minister to present a connected account of the various health schemes proposed to be taken up under the next plan. As these have been published in bits from time to time, there was nothing in the form of fresh information, or for that matter, any clue to an integrated policy for health and medical programmes, or as to how it is going to be pursued on an all-India basis, assuring an even regional distribution of facilities. The programme as now outlined leaves uncovered vital aspects, which makes one wonder whether results will tally with expectations. The sense of national emergency now doubtless keenly felt does not seem to be accompanied by sufficient prescience which would enable to picture the country's health needs in 1961.

Seventyfive per cent of the medical profession live in urban areas, pointed the Vice President, whereas eightyfive per cent of the population live in non-urban areas. How is this imbalance going to be corrected in the next five years? The recently published report on the working of the employment exchanges mentions a widespread shortage of compounders, midwives, nurses, doctors, vaccinators, pharmacists, surgeons and laboratory assistants. Government have now on hand a scheme to set up or expand a number of colleges and other institutions to train such personnel. But, evidently, the problem is not to be solved by a mere increase in numbers.

The Health Ministry should now draw up an order of priorities and ensure a proper balance between promotion of nutritional standards, environmental hygiene, and preventive measures. Personnel and material and monetary resources have then to be called into play in a planned way. Otherwise, measures will bear little proportion to the country's needs.

Paucity of money is a deterring factor. The creation of special funds came up for lively discussion in the Council. Among other measures, it suggested the issue of price bonds, sale of special stamps and levy of a small health cess. Extension of the age of superannuation of medical officers with special experience was also recommended. It is high time that decisions are taken on them and similar other details so that what resources there are will not be frittered on incoherent and incomplete plans. If as the next plan starts, the Health Ministry could claim to have made a right beginning there is little room for a gloomy appraisal of health prospects; for, with betterment of living standards, the incidence of deficiency diseases will be less forbidding.

✱

More About Neiveli

More details are now known of the Neiveli lignite project in South Arcot. The Rs 62 crore venture will begin under the Second Plan. On it is based the prospects of an industrialised South. The first part of the integrated scheme, which as approved, includes a fertiliser factory and which is approved by the project co-ordinating committee, is expected to produce 3.27 million tons of lignite, 211,000 kilowatts of electricity, and 200,000 tons of lignite briquette.

It is estimated that lignite from Neiveli will cost only Rs 8 per ton compared with Rs 40 to Rs 70 which is to be paid per ton of coal moved from Bihar to South India. The difference is considerable even allowing for the fact that the calorific value of lignite is only half as that of coal.

Governmental decision regarding mining operations has already been taken and preliminary investigations have been highly promising. It now remains to secure the necessary equipment, world tenders for which are to be invited on March 1. The equipment falls into two categories, the conventional and the non-conventional types and the tenders are expected to be issued in two sets respectively.

Firms that can supply the non-conventional equipment, which has to be specially manufactured for the purpose, are reportedly confined to Germany. In this connection the recent visit of the East German team of experts must have helped Government in deciding future course. However, Government have not thought it necessary to have other consultants in addition to Messrs Powell and Duffryn who now act in that capacity. A decision on the form of the permanent organisation needed for the project is yet to be taken.

✱

Co-operators Meet

The recommendations of the regional conference on Co-operating and Marketing which concluded last week in Jaipur, mostly echoes the prosposals of the rural credit survey. in particular, the conference has expansion of land mortgage banking, in particular, the conference has to made some specific suggestions. The constitution of a technical committee to inquire into the legal technical and administrative implications of the task is one. It is pointed out that there should be the maximum degree of co-operation between the regional committee and the Central Committee on land reform. This is indeed essential to safeguard the interests of the co-operative institutions, particularly the land mortgage banks, in so far as their interests are affected fy the land reform legislations in the States.

It is pertinent to recall the distinctive role allotted to the primary marketing society by the rural credit survey. While conceding and emphasising that the co-operative organisation, as a whole, should undoubtedly be multipurpose, it is made clear that there is neither need nor justification for the primary credit societies to take upon themselves highly specialised tasks or embark on business undertakings such as marketing or processing. These involve an element of financial risk unconnected with its ordinary credit functions. Such risk is to be strictly avoided by it. The position thus calls for the creation of primary marketing societies to be entrusted with the provision of marketing finance. The Jaipur Conference has recommended that the maximum share capital of such societies should generally be not less than Rs 20,000, but every effort should be made to increase this share capital as quickly as possible. The maximum credit limit should ordinarily be eight times its owned capital.

Coming to inter-State trade, it is pointed out that the marketing co-operative in surplus areas should establish business contacts with consumer societies in different regions. The logical sequence of this step will be export promotion of agricultural produce enabling the growers to secure a better price.

Touching the functional role of land mortgage banks in land development, the conference suggests that State Government should guarantee for a specified period the difference between the value of land before and after the improvement, especially in areas where cultivators have to incur heavy investments.

The rural credit survey has envisaged State partnership in primary land mortgage banks mainly through contributions in the form of an addition to the share capitals of Central Land Mortgage banks which will take up the shares of the primary banks. But without minimising the desirability of developing these institutions at the primary level, the survey does not give top priority to their establishment, because, it should be based mainly on the willingness of a sufficient number of persons in each area to come forward to form the primary land mortgage banks.

There are at present several States in which land mortgage credit is yet to be deceloped on the co-operative basis.

Delhi Review

North Indian Markets

Easier Trend in Foodgrains Prices

FOODGRAINS markets have ruled quiet with prices developing an easier tendency. The Government of India are liberally selling wheat from their godowns, and the supply position will be further strengthend by the arrivals of about 30,000 tons from abroad by the end of the month. The Utter Pradesh Government has also made arrangements to sell the commodity in big towns through relief shops at the rate of two seers 10 chhataks per rupee.

In the Hapur market, Wheat prices continued to show a downward trend, though the closing rate for the week was a shade better owing to heavy offtake by Bihar. After touching a low level of Rs 14-2, Dara quality closed at Rs 14-4 per maund.

Rice prices also eased slightly on better supply position, Basmati being quoted at Rs 24-0 to Rs 31-8, according to quality. Gram prices eased in line with wheat prices to Rs 9-8 per maund for local quality and Rs 10-0 for the Punjab quality. Other coarse grains recorded fractional fall in prices. The markets for Maize and Bajra were depressed due to falling seasonal demand.

Following the Government's ban on the export of pulses, prices of all pulses recorded sharp declines during the week. Dara quality sagged by As 6 per maund to Rs 8-3, while Urad were quoted at Rs 15-8 to Rs 17-0 and Moong at Rs 13-4 per maund.

Meanwhile, it is learnt that the Government of India have decided to allow export of Pulses, Gram and Gram flour against pre-ban commitments in the case of:—(1) firms which have filed the shipping bills complete in all respects as required; (2) firms which are able to produce valid firm sale contract concluded and supported by a letter of credit opened upto February 7, 1956; and (3) firms which are able to produce evidence of sale in the nature of cable offer and cable acceptance received up to February 7, 1956. Shipments against the pre-ban commitments will be allowed up to the end of June, 1956 only, and no extension will be granted under any circumstances.

Dull conditions are observed in the Delhi grains market.. Although the State Government has been selling foreign wheat to check the rising trend in prices, people generally prefer to buy indigenous wheat, which is quoting around Rs 17-0 per maund.

With the ban on the export of maize products, Maize prices are quiet in the absence of buying. As offtake of Bajra has declined, the rate has fallen by about As 8 per maund. Moong, Urad and Masoor are week following the ban on export of pulses.

A moderate improvement in the price of Rice provided the main feature of the last week's trading in the Bombay grains market. With the Government's permission to allow shipments of rice against firm commitments entered into before the announcement of the ban on exports, the market succeeded in staging a fair recovery.

The Government's decision to ban the export of pulses from the country had a bearish effect on the market for this commodity, prices registering a fall of Rs 5 to Rs 7 per candy. The trade feels that the lack of exports will lead to a further decline in prices and hit the farmers who are about to market the new crop. In this connection, some traders are reported to have already represented a case to the Government.

The Wheat season ruled steady with supplies from Government godowns being quite adequate. Most of the flour mills were out of the market.

✱

Revival of activity, promoted by rumours that the forthcoming Budget would impose an additional excise duty, accounted for small improvement in the mill delivery prices of new quality Sugar the quota for which has already been released.

Crushing of sugarcane is now in full swing. Because of depressed conditions in ready Gur prices, it is expected that the production of sugar will increase and may surpass the last year's record production. Following were the latest mill delivery rates (per maund):—Jaswant Rs 28-8; Simbhauli Rs 28-12; Mowana Rs 29-0; Daurala Rs 29-0; Amroha Rs 28-4; Bijnore Rs 28-6 and Mansoorpur Rs 29-8 to Rs 30-0.

✱

Restricted loading facilities and slack outside buying enquiry at existing rates accounted for a shap fall in Gur prices at the Hapur market. The rate for the ready position, after touching a low of Rs 10, improved toward the close to Rs 10-8 per maund as against Rs 11-0 quoted in the previous week.

Daily arrivals averaged 3,000 maunds, while stocks were estimated around 75,000 maunds. There was only small offtake by the Punjab and Rajasthan.

WORLD OF BUSINESS

(Continued from page 301)

An audit department should be evolved, which will make continuous audits and make surprise checks in sub-divisional towns.

The zonal or State offices should be integrated into one unified whole under the Central Directorate. The Directorate would deal with all central problems like treaties, re-insurance valuation and investment of funds in consultation with the Central Government. The Directorate would evolve the general policies to be followed throughout the country.

A large part of the complications arises from the existing contracts with varying rates, terms and conditions. A constructive suggestion that has been made in this regard is to bring all policies to the same level by reducing premiums on existing policies and introducing uniform conditions. The assumption here is that there is likely to be little objection to reduction of premiums. In view of varying terms, past premiums already paid, each policy will require to be separately valued. Acturial objections are likely to be so large that, despite its attractive simplicity, it may not be possible to carry out the scheme in practice.

Life insurance in India has been largely an urban trading. The selective character of business has been based upon prudent underwriting in a country with a very low standard of living. Computation of premiums depends upon mortality, returns on investment, costs, bonuses and contingencies loading. Should there be a large inroad on the Fund due to adverse mortality experience, actuarial surplus will be reduced. The State bias for rural insurance is understandable. But insurance presupposes a certain standard of living which is lacking in the rural sector, barring possibly a few traders, farmers and artisans. It is not possible at this stage to bring the agriculturists within the purview of the insurable class. Their traditional thriftlessness and borrowing propensities will only lead them to be denuded of what little they have as they are more likely than not to lapse policies in the first one or two years. Unless, therefore, a reasonable standard of living can be ensured for the agriculturists, it will be penny-wise to foist insurance on them. This obvious issue is stated here at some length as it will be in the interest of the State to conserve the Life Fund, not to see it progressively denuded by an exhaustion programme based on emotion.

A more correct forum for insurance is likely to be industrial labour. For the last decade or so, the shift in income has been progressively toward industrial labour, more so in the categories of skilled and semi-skilled. While, thus, the middle class of the early twenties is showing positive signs of deterioration, the industrial labour is having more money income. The money it squanders can be canalised if vigorously attacked. Here is a field of life insurance which has possibilities.

WORLD OF JUTE

(Continued from page 302)

taking. The sizable increase in January-end stocks caused an uncertainty in the market. Again, overseas buyers, who anticipated the increase in stocks, were reluctant to enter the market as they felt that prices would decline further once the full weight of the increase in production was felt. Another contributory factor was that some expected overseas orders did not materialise. Even the news of the acceptance of a tender for Sackings from Burma and the encouraging US stock figures for January, had no effect on market sentiment. Mills were, on their part, keen to sell at higher levels; but withdrew when prices declined. The following table shows the price trends during week:—

	Week's Opening Rs a	Mid-Week Rs a	Week's Closing Rs a
Hessian:			
40" × 10 Ozs.			
Ready ..	41 0	40 8	40 10
March ..	41 4	40 10	40 13
April-June	41 6	40 12	41 0
40" × 8 Ozs. ..	33 10	33 4	33 6
40" × 7½ Ozs. ..	31 2	30 14	31 2
Sackings:			
B. Twills ..	114 8	113 8	113 12
Heavy Cees (Green) ..	114 0	111 8	112 8
Cornsacks ..	117 0	115 4	115 12
Cubans ..	139 0	136 0	138 0
A. Twills ..	141 4	139 8	139 0
L. Twills ..	131 0	130 0	130 0
D. W. Flours ..	136 8	135 0	133 8
Sugar Twills ..	130 8	130 0	130 0

Although factors such as, low stocks with the mills, poor arrivals into upcountry centres and higher advices from the Pakistani market, imparted sustained strength to the Raw Jute section, prices showed a slightly easier tendency toward the close in sympathy with the fall in manufactured goods prices. Sellers, however, continued to be reserved and, taking advantage of the fact that a large amount of covering had to be done, were reluctant to release any of their holdings in anticipation of higher prices. But, mills made only limited purchases in order to meet their immediate requirements. Mill business was reported done in Deshal Mesta Bottoms and Deshi Mesta Bottoms at Rs 27-8 per maund and Pakistani Cuttings at Rs 130 per bale. Assam Bottoms were nominally quoted at Rs 30-0 per maund as against Rs 31-0 in the previous week.

Madras Review

The Peninsula

Industrial Expansion for Hyd'bad

FOR the Second Five-Year Plan Period, the Hyderabad State has prepared and got approved by the Planning Commission an industrial blue-print. The prospective disintegration of the State would make splinters of this blue-print. All the same, the programmes will be implemented as part of the Plans for this or that State to which the particular area will be attached. If in the meanwhile a merger were to take place leaving Hyderabad as a compact single entity, the present State Plan will remain as it is, though it will be submerged in a wider framework.

Hitherto industrial development in Hyderabad has been most lopsided. An official review on this subject presents a consolidated picture of the reasons therefor. Till the transfer of power and the reconstruction which started three years later, the economy of the State was mostly feudal in character. There were a few industries dotted here and there in the State. But there was no keen, competitive or planned development of the vast resources which were remaining idle and even undetected for centuries.

The cottage industries of which Hyderabad has her quota were run mostly with an eye to satisfy a market composed of rich landlords and money-lenders. Not only was the market stagnant but it throttled the springs of change and modernisation. Savings were mostly confined to the feudal landlords and the small community of money-lenders on the fringe. With neither was the habit of industrial investment attractive.

The few Managing Agents, who ran the big industrial concerns with or without the assistance of the State had no incentive to put money on ventures with only long-term prospects. The "easy-profit" industries monopolised their attention. An Industrial Fund was constituted in 1929 to finance the private industrial concerns. Most of the medium-scale industries which received help from this Trust have come to grief. Even among the major concerns, there were casualties.

The result is that a richly-endowed State like Hyderabad has to import even such bare necessities as soap and matches, and per-capita consumption expenditure remains the lowest in India; and in contra-distinction with other States such as Bombay, West Bengal and Mysore, there is a shift of population from the non-agricultural to the agricultural field.

For a long time past, the State has been taking a leading role in industrial participation and direct management. The State owned the Railways, road transport and electricity. Of these, the Railways have now been transferred to the Union. The State Government have lent large amounts to several private industrial concerns, either in the form of loan or through purchase of shares.

Industrial policy was lukewarm in the first Five-Year Plan. But most of the major concerns such as Nizam Sugar Factory, the Alwyn Metal Works, the Sirpur Paper Mills, and the Hyderabad Chemical and Fertilizers are now Government-owned, in the sense that more than 50 per cent of the paid-up capital belongs to the Government. The Sirsilk Limited received a loan of more than Rs 4 crores Sirpur Paper Mills received a loan of Rs 116 lakhs. The State Finance Corporation is gradually extending the range of its help.

One of the interesting features, of one rather exceptional of industrial policy in Hyderabad during the First Plan Period was the transfer of the ownership and management of a few of the biggest concerns from the State to private hands. This policy was the outcome of the Report submitted by a well-known industrial magnate deputed by the Union Government for making a special study of certain aspects of the industrial set-up in the State.

For the Second Plan period, a large number of schemes are envisaged. Among these are a cotton spinning mill, a plant for the manufacture of fertilizers, a glaze-kid tannery, a cooperative sugar mill, a clay refining industry, solvent extraction plants for oil, sheet glass industry, manufacture of quality electric fans, fractional motors and electric clocks, timber seasoning plant, the expansion of the Praga Tools Corporation the Singareni Collieries and the Hutti Gold Mines. The following provisions have been tentatively agreed to by the Planning Commission for this purpose: The expansion of the Praga Tools Corporation, exploratory work for Hyderabad Gold Mines, expansion of Singareni Collieries, Tannery and a Co-operative Sugar Mill. The total outlay involved on all these schemes is Rs 11.3 crores.

With the availability of bagasse in large quantities near the Nizam Sugar Factory and of cheap coal to replace it, there is good prospect for the manufacture of paper from bagasse. The Ministry of Commerce and Industry is examining this prospect. A low temperature carbonisation plant at the Singareni Collieries is another economic proposition.

The private sector can get interested in cement, rerolling mills, cycles, sewing machines, oil refineries, paints and varnishes and Vanaspati. There is a suggestion that the iron ore available in Hyderabad could be utilised for the manufacture of spongy iron.

Besides, there is vast scope for the expansion and diversification of cottage industries such as handloom, wool, silk, tanning, sericulture and carving. From the standpoint of industrial potential, Hyderabad is one of the most favourably placed States in India. Labour is plentiful and cheap. Cheap power would soon become available almost all over the State. There is abundance of raw materials like clays minerals, and vegetable oils, which facilitate industrial expansion for coal, gold, iron and steel, cement, rayons, paper, sugar oil, textiles and cigarettes. In the third cotton-growing State in India, the prospect for the textile industry has been exploited only to a limited extent.

WORLD OF FINANCE

(Continued from page 299)

the State Bank by Rs 2.17 crores to Rs 13.73 crores. The Scheduled Banks have their advances increased by Rs 5.44 crores to Rs 683.04 crores during a week in which demand liabilities were reduced by Rs 13.12 crores to Rs 635.76 crores. Time liabilities, however, have increased by Rs 2.42 crores to Rs 412.30 crores. The banks have reduced their Investments by Rs 1.32 crores to Rs 380.45 crores.

+

The statement of the State Bank of India for the same week reveals a drop of Rs 1.08 crores in deposits at Rs 235.60 crores. Borrowings from other banks are slightly higher at Rs 0.95 crores against Rs 0.90 crores, while other liabilities, including inter-office adjustments, have declined by Rs 5.58 crores to Rs 5.93 crores.

On the assets side, there is a sharp decline of Rs 8.52 crores in cash balances to Rs 21.33 crores. Investments are shown at Rs 11.37 crores against Rs 116.91 crores. Advances have risen by Rs 1.73 crores to Rs 119.44 crores—'Loans, Cash Credits and Overdrafts' accounting for a drop of Rs 1.02 crores and 'Bills Discounted and Purchased' for a rise of Rs 2.75 crores.

DO NOT WAIT

INSURE NOW

The main objective of nationalisation of Life Insurance is "safeguarding of funds of the *policyholders*."

The Finance Minister, Mr. C. D. Deshmukh said :

"To the policy-holders, I wish to give the assurance that their policies will be as safe as they are today, if not safer. Private Insurers may fail, but The State cannot fail."

"Proceed with confidence," "step up your proposals". "Your policies will have the full backing of the Government and acquire a new element of absolute safety".

South Indian Notes

Madras Review

The Size of the State Plan

Whatever be the earlier claims of the Madras State regarding the size of its Second Ptan, it is now pointless, perhaps positively dangerous, to feel disgruntled over the Planning Commission's allocation of Rs 170.3 crores, out of a total of Rs 2,214 crores shown in the Plans of the States. Now that the State Budget is soon to be presented, Government departments are closely engaged in studying the details of the draft outline of the finalised plan. In the first year of the next plan, reliable sources testify, a sum of Rs 35 crores will be spent as part of the implementation programme.

This proposed expenditure for the ensuing year breaks up as follows: electricity, Rs 12 crores; irrigation, Rs 7 crores; community projects Rs 3½ crores; roads, Rs 1½ crores; medical Rs 1 crore; public health, Rs 1 crore; small-scale industries Rs 1½ crores. Other smaller items absorb the balance. The provision under electricity includes expenditure for the first year on the Kundah project.

Major industrial ventures will be shared betwen the public and private sectors. Neiveli lignite project and the allied fertiliser factory would come under the former; and the private sector is entrusted with the development of the bauxite and aluminium industry.

It may be noticed that the outlay on major industries does not stand comparison with other states that have a plan of like size. This is in part due to the fact that there is greater concentration of, and therefore greater emphasis on small-scale industries in the State. Cottage industries too are relied upon to a very large extent. This prompts the hope that a substantial financial allocation will be made to the State in accordance with the recommendations of the Karve Committe. It is superfluous to say that in its absence the industrial sector will suffer comparative neglect' with the consequent curtailment of opportunities for new employment.

*

The Tobacco Industry

The eighteenth meeting of the Indian Central Tobacco Committee, held last week at Anand, is noteworthy for some far-reaching decisions taken. Among other things, it was decided to offer financial assistance to the extent of 50 per cent of the recurring expenditure to the tobacco co-operative marketing societies. Financial grants were made to certain co-operative societies in the States of Bihar and Orissa.

The tobacco industry is coming increasingly into the country's economic picture as an earner of foreign exchange, and, no less important, on account of the excise revenue of Rs 33 crores a year derived from it. Naturally, attention is focussed on competitive improvement in the quality of the tobacco, and on research activities for evolving better strains and better processes of curing.

Viewed in this light, Government of India are extending a well-deserved and well-timed support to the industry. Under the Second Plan, they propose to give a special grant of Rs 26.5 lakhs to the Committee for tobacco research. Another Rs 5 lakhs is scheduled for expenditure on tobacco extension service schemes.

Mr M. S. Randhava, Additional Secretary, to the Union Ministry of Food and Agriculture and President of the Committee, pointed out that after the war, there has been a shift in tobacco transactions from quantity to quality. The trade was in fact no longer in the hands of the seller. This position was brought about by the easing of dollar availability in hard currency countries, and secondly, the rapid strides made by Rhodesian tobacco in quality improvement.

An acute problem which the trade now faces is the lack of proper warehousing facilities which leads to deterioration in the quality of exportable tobacco. This is promised to be set right by making provisions for tobacco in the State Warehousing Corporations which are proposed to be set up. It is worth the mention that the Committee is successfully engaged in promoting manifold activities such as research, crop contests, marketing, improved packing methods, warehousng, etc. A fair start has been made and it now remains to accelerate the pace.

The tobacco industry in India ranks third in the world for production, and fifth in the world for export. The annual production comes to over five hundred million pounds. Annual exports are valued at Rs 10 crores. The interests of the trade may be better secured now that tobacco has an Export Promotion Council. A proposal for the creation of statutory monopoly agency for tobacco exports is being forwarded to this Council for consideration.

*

Needs of Hyderabad

The Hyderabad Chamber of Commerce at its general meeting last week, has placed before Government its points of view in respect of four important issues currently engaging the attention of the business community in the State. These relate to price control on coal, rates of road transport, the rumoured entry of the State into the field of trade, and finally, the formulation of a long-term export policy for oils and oilseeds. By sheer genuineness of the arguments made out, it is difficult to turn down any of the appeals which the Chamber makes to Authority.

It is argued that coal output in the State should not be allowed to go out of it until requirements of public utilities and industries in the State are fully met. It is common knowledge that the acute power shortage coupled with the limited chances of developing more power has retarded the growth of industries in the State. In order to make coal available at the lowest possible price it seems necessary that the price control on it should go. Government are requested to withdraw as soon as possible the 30 per cent increase in the freight on coal.

Equally legitimate is the grievance over the abnormally high fares charged by the Road Transport Department. The relatively lower rates in the neighbouring States of Bombay and Madras are all the more reason why the State Government should think seriously of a downward revision.

As regards the word of caution given to the Union Government about State participation in foreign trade, the Chambers' resolution does not offer more than a forceful restatement of familiar arguments. However it is important to note that almost all the Chambers of Commerce in the country and a substantial slice of public opinion hold that such a step would be unnecessary, hasty and hazardous.

Coming to export of oils and oil opportunity which Government of India allowed crushers in the State went a begging for reason of non-availability of transport facilities, within the short time specified. Exporters from Hyderabad could derive legitimate benefits and the industry could develop at the desired pace, only if a long-term export policy is formulated taking into account the conditions and requirements of the industry and the trade in the State.

South Indian Markets

Better Turn for Pepper

THE markets for Pepper have taken a turn for the better, thanks to sizable buying by exporters. In South Malabar, most of the exporters are covering their requirements. In the Cochin market, the rate has risen from Rs 775 to Rs 800 per candy, while garbled variety is quoted around Rs 140 per cwt. At Alleppey, however, trading has been rather dull with buyers holding off. In the Kozhikode market, Wynaad quality was quoted at Rs 925 and the Country variety at Rs 900 per candy. In North Malabar, growers are unwilling to bring down pepper in large quantity until the demand from overseas buyers broadens.

Looking to the export during November to January, which is estimated at 4,250 tons, analysts in the market are of the opinion that about 11,250 tons out of the total production of 23,000 tons will be absorbed by export and inland consumption during November to March 1956, leaving 11,750 tons as stock on the 1st April, 1956. This quantity is considered to be not so heavy for the requirements from April to October, 1956. Traders, therefore, expect an improvement in prices after March, though the future of pepper will largely depend on the prospects of the new crop in Sarawak, Lampong and Muntok and on the attitude of New York buyers.

The recent decline in New York prices was ascribed to the operations of Indian shippers, who were believed to be bent on forcing prices down in order to cover up their advance sales to Russia and other countries for shipment during February and March. But, according to latest reports, stocks in this country are about 2,000 tons less than what they were at this time last year.

The situation is expected to change by March at the latest, for two reasons. First, New York already sees signs of Malabar growers adopting a holding policy and not letting themselves to be hustled by shippers to sell. Secondly, once their commitments to other countries have been fulfilled, the pressure on shippers themselves, to force New York prices down, may have eased. By that time, stocks on hand, too, would have been consumed.

Moreover, there had been sizable buying by exporters who had booked freight in one more Non-Conference steamer, which was loaded on the 9th instant. Non-conference is reported to be booking freight with further reduction in competition with Conference. If the freight war between Conference and Non-Conference is continued, it is possible that Conference lines will also be forced to give larger rebate.

A Guide to

The Indian Companies Act

By

A. RAMAIYA, *Advocate, Madurai*

Published by

THE MADRAS LAW JOURNAL OFFICE MADRAS 4

The changes in Company Law effected by the new Act are so thorough and voluminous that it cannot be called a mere amendment of the previous Act. The new Act will call for frequent and constant reference to its provisions from those concerned with the management of Companies. We have pleasure in offering the GUIDE TO THE INDIAN COMPANIES ACT which explains lucidly the changes made by the new Act.

The book is written by a lawyer with wide experience in this branch of Law for many years and brings to bear on the subject his vast practical knowledge.

An indispensable Guide and Book of reference to Managing Agents, Directors, Secretaries, Accountants, Company Lawyers, and Top executives.

Prices in the Madras Groundnut market, after showing a steep fall early in the week, recovered partially toward the close. This was mainly due to the erratic trend of the oil section and suspension of working in several crushing factories. The rate for superior oil-quality seeds, after touching a low of Rs 131, improved toward the close to Rs 135 per candy.

Sowings of summer groundnuts have commenced in some parts of South Arcot; and plentiful supplies of water in irrigation tanks have encouraged larger sowings in "nanjai" lands this year.

In the Groundnut Oil section, the rate for the ready position, after touching a high of Rs 276 per candy on speculative buying, receded to Rs 260 on rumours of an increase in the export duty on oil. At the lower levels, however, there was some buying by a local European shipper, resulting in an improvement in the rate to Rs 270 at the close. The latest foreign indications for oil are:—£120-10 to £121 per ton, in bulk, for the UK.

*

In the Madras Tanned Hides market, both arrivals and clearances of Cow hides, during the past week, were on a moderate scale. There was very little fresh business confirmed with London on account of the resolution recently passed by the Southern India Skins and Hides Merchants' Association. The general opinion in London, however, appears to be that such resolutions are unlikely to do any good and that the law of supply and demand will prevail.

Clearances were fair in Buff hides with prices unchanged. Arrivals and clearances of Cow Calf were as usual and prices were easier by about 6 pies to one anna per pound. Prices of Buff Calf were easier by about one anna per pound.

In Tanned Skins section, Goat skins showed no change in price. As regards market quality Sheep skins, adulterated skins showed no change; but skins from adulteration were one to two annas per pound easier.

In the export section, business continued to be quiet. Buyers both in London and the Continent were trying to buy at lower prices; and in a number of cases a reduction in price was conceded by Madras.

In Raw Skins section, Goat skins were Rs 20 to Rs 25 and Sheep skins by Rs 10 to Rs 15 easier, per 100 skins.

*

In the Coffee Pool auction, held at Bellary this week, good demand was noticed. Out of 300 cwts of Robusta exposed, 297 cwts were sold. In all, 560 cwts of coffee were exposed and 495 cwts were sold. Following were the price range (per cwt):—Plantation "A" Rs 210-5 to Rs 225-8; Plantation "PB" Rs 230 to Rs 242; Arabica Flats Rs 185 to Rs 195; Arabica PB Rs 201-14 to Rs 204; Robusta PB Rs 168 to Rs 175-8 and Robusta Flats Rs 164-4 to Rs 168-8.

It is learnt that the bidders have submitted a memorandum to the Chairman of the Coffee Board requesting him to increase the quantity exposed for sale.

*

Export income from Tobacco is likely to shrink by about 10 per cent during the 1955-56 season. It is feared that, in terms of value, exports might amount to only Rs 11 crores in 1955-56 season as against Rs 1,275 crores in the preceding season. This season's quality is good; but, with heavy unsold stocks of the last two seasons, the Indian market is expected to display an easier trend

According to shippers, the deterioration in quality of Virginia tobacco, recently shipped, has already earned for India a bad name in the export market. More important buyers, such as the UK and Egypt, are now reported to be insisting on a prior inspection of the bales, while Germany and Netherlands have switched over to the higher prices. Doubts are also expressed about the precise quantity China will buy this year.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED

NOTICE TO MEMBERS

The following additional business will be included for consideration at the Nineteenth Ordinary General Meeting of the Members to be held on Wednesday, 7th March 1956, at 3-30 P.M., at the Registered Office, 34, Chowringhee, Calcutta:—

"(5) Resolved that Dr. Edward Cooper Fairhead, a Director of the Company, be and is hereby permitted to hold an office of profit under the Company."

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) LIMITED,
Secretaries.

Calcutta,
15th February, 1956.

WORLD OVERSEAS

(Continued from page 304)

earlier. Eight per cent. more clothing was bought and 5½ per cent more food in the first 11 months of 1955, and 75 per cent more new cars were registered, than in the corresponding period of 1954.

In its turn, this has encouraged industry to launch out on big new development schemes. All this has meant an improvement in the British way of life, which, said Mr Macmillan, "is a very fine thing while it lasts—if it lasts".

What did the Chancellor mean by this ominous little reservation? His meaning was made abundantly clear in the figure of speech in which he compared the British economy to the electric circuit in the household. It was a highly appropriate figure of speech since it was uttered at a time when Britain lay in the grip of a truly Arctic spell, when the pressure put on the available supply of electric current was at times such as to cause momentary breakdowns.

In Britain's "electric circuit", said Mr Macmillan, power was supplied by the productive efforts of the nation. That power was tapped for various needs of the nation—food and clothing, roads and schools, factories and machines and a vast defence programme. Every time the nation made some further demand, it was like plugging in another appliance. If the circuit was overloaded the fuse blew and there was a blackout.

The fuse, said Mr Macmillan, is confidence in the pound sterling all over the world on which the functioning of the whole economy depends. In 1949 the system was grossly overloaded by the many demands made upon it, the fuse blew, and the pound was devalued. That, said Mr Macmillan, must not be allowed to happen again, and that was why he would be deciding very soon "which plugs to pull out" so as to reduce the pressure on the somewhat overloaded economy.

The point to bear in mind in this metaphor is that even a small overload can blow the fuse. That is precisely the problem with which Britain is struggling at the moment, excessive—but not by more than, say, three per cent. Between 1953 and 1954 wage rates and output of goods per person in industry went up more or less equally by four to five per cent; but last year while output per person went up by three per cent, wage rates went up by seven per cent, while dividends reported by industrial companies rose at an even higher rate.

With this additional purchasing power let loose in the economy, in excess of the real increase in output, the inevitable result was to draw in more imports and to encourage consumption at home of all kinds of goods that ought to have been exported. The margin may have been small, but its effect on the balance of payments was substantial, as may be judged by the fact that the reserve of gold and dollars fell by £229,000,000, or by nearly 23 per cent, last year.

That is a state of affairs which cannot continue for long, and it is to the credit of the Government that in contrast with some of the earlier balance of payments crises remedial measures have been taken at this stage. Credit restriction has been put into effect, and an attempt is being made to curtail the overall purchasing power of the country.

Additional measures may yet have to be resorted to, and the new Chancellor of the Exchequer hinted at them when he said he would soon have to make up his mind which "plugs to pull out" to reduce the load on the domestic electric circuit. The problem is marginal. A relatively unspectacular effort super-imposed on measures already taken should be sufficient to put the British balance of payments back into some semblance of a reasonable equilibrium during the coming year.

*

Sweden

ACCORDING to the Swedish news agency, Commercial News, employees of the Addo Company, one of Sweden's leading enterprises, have taken up the greater part of a new share issue, amounting to no less than 30% of the total share capital, which the Company is about to put on the market.

Addo, known throughout the world as one of the foremost European producers of adding machines and other office machinery, has hitherto been exclusively a family business. Its new share offer aims at strengthening still further the spirit of co-operation for which the firm is justly noted.

These shares, which employees can pay for by instalments, (a new and attractive form of save-as-you-earn), have proved more popular than even the most sanguine prophets had foreseen, and also aroused such keen outside interest that eager would-be purchasers went to the length of inserting conspicuous advertisements in the daily press.

Of the shares on offer, the majority were reserved for Addo's employees, and this parcel was fully subscribed very shortly after the lists were opened.

Sweden's volume of imports increased by 11 per cent in 1955 as compared with the preceding year, according to a report by the Swedish Economic Research Institute. The volume of exports went up by 5 per cent.

Imports of iron and steel increased by 27 per cent and reached a new peak in 1955. Considerable increases were also registered for imports of machines and instruments, fuels and agricultural products. On the export side, shipments of timber rose by 16 per cent, pulp by 3 per cent, iron ore by 11 per cent and iron and steel by 23 per cent.

Export prices in 1955 were on an average 4 per cent higher than in 1954, while import prices went up by about one per cent. This means an improvement in Sweden's terms of trade by approximately 3 per cent. From the last quarter of 1954 to October-December 1955 the improvement was about 5 per cent.

Sweden's total gold and foreign exchange holdings increased by Kr. 38,000,000 to Kr. 2,551,000,000 (£176,900,000; $495,300,000) in 1955, as compared with a decrease of Kr. 111,00,000 in 1954. The relative share of gold and dollars in over-all holdings went up from 87 to 90 per cent.

The increase in the gold and foreign exchange holdings is entirely accounted or by the commercial banks, whose net sight claims on foreign banks rose by Kr. 82,000,000 to Kr. 121,000,000. The Riksbank's holdings, on the other hand, decreased by Kr. 44,000,000 to Kr. 2,430, 000,000.

The gold holdings showed an increase of Kr. 56,000,000 to Kr. 1,426,000,000 in 1955, while the dollar reserves went up by Kr. 68,000,000 to Kr. 872,000,000. The holdings of EPU currencies showed a decrease of Kr. 40,000,000 to Kr. 313,000,000. The debt for other currencies rose from Kr. 19,000,000 to Kr. 65,000,000.

TEZPORE TEA COMPANY, LIMITED

Notice is hereby given that the period for submission to the Company of Fractional Certificates for allotment of fully paid Ordinary Shares in lieu thereof in regard to the issue of Bonus Shares on 12th December 1955 has been extended to 11th April 1956.

By Order of the Board,
SHAW WALLACE & COMPANY LTD.
Managing Agents.

Calcutta,
11th February, 1956.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

Closing of Share Register & Transfer Books

Notice is hereby given that Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Thursday, the 8th March to Wednesday, the 28th March 1956, both days inclusive.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta,
13th February, 1956.

ROHTAS INDUSTRIES LIMITED

NOTICE is hereby given that the Twenty-third Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar, On Tuesday, the 20th March 1956 at 11-30 A.M. to receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st October, 1955, to declare dividends, to elect Directors in place of the retiring Directors, to appoint auditors for the current year and fix their remuneration and to transact any other business that under the Articles of Association of the Company may be transacted at an Ordinary General Meeting.

Share Transfer Books of the Company will remain closed from 20th February 1956 to 6th March 1956 both days inclusive.

By order of the Board,
SAHU JAIN LTD.
Managing Agents.

Calcutta,
8th February, 1956.

Dividends when declared will be payable to those Shareholders whose names stand on the Register on 6th March, 1956

Stock Exchanges

UNCERTAIN CONDITIONS PERSIST

Watch-dog Writes:

CONDITIONS in stock markets continue to remain subdued and all attempts for a recovery have been foiled. With the settlement difficulty in Calcutta still reported unsolved, apprehensions of prospective revision of the Government's labour policy in the context of the Second Plan and Budget uncertainties, operators have been hesitant and cautious in their commitments. Prices have, therefore, been moving narrowly in generally thin and slow dealings.

Lacking any incentive, prices on the Calcutta Stock Exchange continued to drift idly in listless trading, with the general trend still undecided.

Turnover on the Bombay Stock Exchange was restricted although selective issues encountered some short-covering and replacement buying toward the close.

The Madras Stock Exchange ruled steady though the general trading pattern was a mixed one.

The increase in the Bank rate from 4½ to 5½ per cent caused no violent reaction on the London Stock Exchange as the recent fall in markets appeared to have discounted an even higher rate.

Wall Street closed barley steady.

Calcutta

Calcutta, Friday Evening.

WITH interest at a minimum, the local Stock Exchange started the week on a subdued note and prices continued to display a sagging tendency in reduced turnover. Though expectations were held high of the settlement crisis being successfully tided over earlier, yet the odds were heavy in its path. There were reports that two prominent parties had not yet settled their accounts with regard to Clearing No. 206 at the settlement rates recently fixed by the Committee. Operators were, therefore, still hesitant and cautious in their commitments. Again, reports of heavier taxation in the Second Plan period and Budget uncertainties chilled their enthusiasm and kept their morale at a low ebb.

Meanwhile, it is learnt that the Committee of the Stock Exchange has removed the restriction on trading at the minimum price levels in the following clearing shares:—TEXMACO, National Jute, Orient Paper and Indian Copper. With the result, TEXMACO met with business, towards the close of the week, at Rs 20; National Jute at Rs 28-6 to Rs 28-8; Orient Paper at Rs 33-8 to Rs 33-10 and Indian Cppper at Rs 6-4 to Rs 6-5.

It is also learnt that current Clearing No. 207 will end on the 20th instant. Members are requested to file their statements on the 21st instant. There will be compulsory carry-over of business in Indian Irons and Burrakur Coal at Rs 33-8 and Rs 14 respectively, carry-over charges being As 2 and Anna one respectively. Rates for other clearing shares will be fixed on the 20th instant.

The Giltedged section ruled steady. Activity was well maintained with demand concentrated on most of the popular issues. Enquiry from the nationalised insurance companies continued as in the previous week and the turnover was substantial. 3 per cent 1986 Conversion Loan changed hands at Rs 80-6 to Rs 80-13, to finish the week at Rs 80-8.

Bank shares, after initial quietness, steadied up a little towards the close on hopes that banks would not be nationalised. Punjab National recovered to Rs 43-12 from a low of Rs 43-4, while United Commercial changed hands at Rs 49-4 to Rs 49-8, Hindusthan Commercial were done at Rs 9-8 and United Bank of India "D" at Rs 4.

Jute shares were practically neglected in view of the growing disparity between raw jute and manufactured goods prices. Moreover, the flow of disappointing dividend announcements by some important mills also contributed to the depressed sentiment in the section. Bengal, after touching Rs 18, eased off at the close to Rs 17-13. Northbrook met with some enquiry at Rs 25-10 to Rs 25-12; Kanknarrah "B" Ordinary at Rs 119 and Kinnison at Rs 191.

Trading in the Coal section, continued to remain dull though a few selected scrips were well maintained at recent levels. Amongst these might be mentioned East Indian having support at Rs 31-12 to Rs 31-14; New Beerbhoom at Rs 19-12 to Rs 20-2; Central India at Rs 7-1 to Rs 7-3 and Bharat at Rs 8 to Rs 8-3. Bengal, however, lost 9 points at Rs 540.

Textiles shared the general trend of the market, though a few scrips tried to emerge with minor losses on balance. Elgins shed As 2 at Rs 27-2, while Cawnpore, after touching a low of Rs 8-15 from Rs 9-2, closed steady at Rs 9. Kesoram eased off at the close to Rs 15-15 from Rs 16-10 due to profit-taking.

Tea shares were quietly steady with prices moving within a narrow range. Brooke Bond changed hands at Rs 19-14 to Rs 20-2; Dhekiakhat at Rs 18-2 to Rs 18-5; Hantapara at Rs 237 to Rs 240; Jutlibari at Rs 28-2 to Rs 28-5 and Tezpore at Rs 21-6 to Rs 21-12.

Prices of Engineering shares showed no significant change. Indian Irons and TEXMACO were nominally quoted at Rs 26 and Rs 29-8 respectively. With the removal of the minimum price, the latter scrip was quoted at Rs 20 at the close. Among the Engineering scrips, Indian Standard Wagon had support upto Rs 160 and Marshalls upto Rs 6-13. Jessop, after improving to Rs 58-8, were again marked back to Rs 57-8 at the close. Richardson, after recovering to Rs 26, eased off to Rs 25-12.

Miscellaneous issues were no exception to the general trend of the market. Orient Paper were better at Rs 33-11 against the settlement rate of Rs 33-8, while Titaghur were marked down to Rs 44 from Rs 45-2 and India Pulp to Rs 22-14 from Rs 23-5. Shree Gopal were rather sticky at Rs 18-1.

Among other scrips, Indian Cable were a shade cheaper at Rs 30-1 against Rs 30-4 quoted last week; Alkali Chemicals at Rs 21-2 against Rs 23-10 and BIC at Rs 11 against Rs 11-5. India Steamship and Sona Valley were nearly maintained at Rs 8 and Rs 7-8 respectively. Rohtas turned ex-dividend and changed hands at Rs 19-7 to Rs 19-11. Dunlop Rubber were on offer at Rs 31-10 against Rs 22-4.

✱

Madras

Madras, February 15.

THERE was moderate activity on the local Stock Exchange during the past week though price movements were confined to a narrow range. The undertone was quietly steady.

Textiles:—This section met with a mixed reception. Loyals were wanted at Rs 37-12, while Coimbatore Cottons were bid higher at Rs 352. Cambodias were, however, on offer at Rs 13-2; Mysore Silks at Rs 2-7 and Buckinghams at Rs 170. Maduras changed hands at Rs 49-8 c.d.; Dhanalakshmis at Rs 358-8 and Bangalore Woollens at Rs 556.

Plantings:—There was selective buying support in this section. Among Tea shares, Peermades met with support at Rs 35-8 with Coorgs attracting demand at Rs 9-6. Cottanad noted buyers at Rs 15. Highlands were done at Rs 15-8; Periakaramalais at Rs 8-2 to Rs 8-3-6; Talayars at Rs 12-5 and Nilgiris Old at Rs 12.

In the Rubber section, Malankaras declined to Rs 26-12 due to lack of support, while Midlands continued to be offered at Rs 18-2. There were some sellers of Thamarapallys; TRTs and Be Bes at market rates. Kalpettas were quoted at Rs 26-4 and Cochin Malabars at Rs 8-1-6.

Among Coffee shares, there were sellers of Chandramalais and Coffee Lands at the market rates. Consolidated Coffees were marked at Rs 20-14, while Ouchterlonys changed hands at Rs 5-4-6 c.d.

Miscellaneous:—In this section, Aluminium Industries were a shade cheaper at Rs 20-12 against Rs 21, while Mysore Tobaccos improved by As 2 to Rs 11. Mysore Papers declined to Rs 17-2 on continued selling pressure. Indian Steel Rollings were on offer at Rs 12-8. Andhra Cements "A" and Rallis continued to attract sellers at the market rates. India Cements moved narrowly between Rs 32-2 and Rs 32-4. FACTS were rather sticky at Rs 6-11. Mysore Golds were quoted around Rs 1-14-6.

✱

London

London, February 16.

SENTIMENT on the London Stock Exchange, during the past week, remained depressed, being influenced by the Chancellor of the Exchequer's statement that further measures might be necessary in combating inflation. Another contributory factor was the renewed weakness of sterling. The increase in Bank Rate, however, caused no violent reaction as the recent fall in markets appeared to have discounted an even higher rate.

Widespread losses were recorded in industrials; and most prices closed at the lowest levels. Steel and Engineering issues were particularly depressed, while Motors were dull under the lead of Rolls-Royce. Oil shares moved narrowly. In Breweries, Ohlssons advanced on news of a take-over bid despite denials by Glaziers' London agents. Kaffirs proved disappointing after a firm start.

Giltedged securities were hard hit and closed with losses extending to £1¼.

Following were the closing rates of selected stocks and shares, the figures shown within trackets being the opening rates for the week:—2½ per cent Consols £52⅝ (£53⅛); 3½ per cent War Loan £71¼ (£72⅛); Dunlop Rubber 20/9 (21/7½); Imperial Chemicals 42/7½ (43/9); Imperial Tobacco £2 25/32xd. (£2 31/32); Calcutta Electric 19/3 (20); Calcutta Tramways 25/6 (25/6x.) and Assam Teas 19/3 (19/3).

✱

New York

New York, February 14.

PRICES on Wall Street, after showing initial steadiness, developed a downward trend toward the close. With both buyers and sellers showing an inclination to await the President's re-election decision, business was almost at a standstill.

Some building shares were, however, contrary to the general trend of the market and responded to predictions that 1956 would see the eleventh successive high in new construction work. In later dealings, Proctor and Gamble advanced by $2⅞ on recurrent rumours of a stock-split. Glenn Martin gained a large fraction initally, following an award by the Air Force for a jet spares contract. This gain was maintained till the close. Westinghouse Electric declined, reflecting the company's continued failure to end its strike. Following were the closing rates: Anaconda Copper $68⅛ and General Motors $43 2/3.

THE MEGNA MILLS COMPANY, LIMITED

NOTICE

Notice is hereby given that the Sixty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 16, Strand Road, Calcutta, on Tuesday, the 28th February, 1956, at 11-00 A.M., for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the half year ended 30th September, 1955.
2. To declare Dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other competent business that may be brought forward.

The Share Transfer Books of the Company will be closed from the 18th day of February, 1956, to the 28th day of February, 1956, both days inclusive.

Holders of scrip under blank transfer are reminded to send in their shares for registration in the books of the Company as soon as possible.

PUNJAB NATIONAL BANK LIMITED.

Subject to audit, the working of the Punjab National Bank Ltd., for the year ended 31st December, 1955, shows that the Bank has made outstanding progress and achieved record figures in its history. The deposits of the Bank, as on 31st December, 1955, improved to Rs. 90 crores, showing an increase of over Rs. 14 crores or about 19 per cent over the deposits as on 31st December, 1954, against an increase in deposits in case of other scheduled banks by 8.87 per cent. The increase in deposits in the case of this Bank, during the year 1954, amounted to Rs. 10.33 crores or 15.8 per cent.

The profits of the Bank for the year, including Rs. 4.99 lacs brought forward from the previous year's account, amount to Rs. 73.6 lacs, showing an appreciable increase of Rs. 16.7 lacs over the profits of the year 1954.

The Bank opened 14 more offices during the year under review, bringing the total number of offices now serving the nation to 326.

★

Timely Disillusionment

(Continued from page 296)

past and open several doors for entry into the party membership. The impressive strides taken on the road towards a socialistic pattern of society must draw more and more of the youth of the country into the Congress fold, in calculated preference to rival organisations. The contemplated ceiling on incomes and the new forms of taxation in the air should maintain the tempo of the march towards the new order.

Where hitherto, the party has been woefully lagging behind is in the matter of propaganda on its achievements. Inspite of these being solid and often spectacular, the Congress Party is for some mysterious reason looked upon as the protector of vested interests and essentially conservative in outlook. This misimpression could be fought, only by enabling the lay man to see the differences between the programmes and methods of the Congress and those of others. These differences are subtle, are not easily intelligible to the unsophisticated mind and are concealed in a thick volume of smoke from rival propaganda. Pandit Nehru sought to explain the differences in a brief speech at the Session. The theme has to be elaborated and conveyed to every hamlet and hut.

On the question of bilingual States, even the Congress leaders are not fully reconciled to the change. There are mental reservations which have to be coaxed away. The leftist parties have also sounded the bugle for a large-scale agitation against the move. Only a sincere and skillful mass contact movement from the Congress will ensure the smooth passage of changes considered vital for the preservation of unity and the development of the economy on a planned basis. The Amritsar Resolutions contain a challenge which have to be fulfilled, without creating fresh difficulties in the process.

£ R$

FOR THE INVESTOR

(Continued from page 292)

preciation, of Rs 2,62,392 for the half-year ended 31st October 1955 as against a net profit of Rs 5,17,054 in the previous half-year. The sum set aside for Depreciation has been maintained at Rs 65,000. After making a transfer of Rs 2.90 lakhs from various Reserves, the directors have been able to declare a dividend of Rs 2½ as against Rs 5 per share in the previous half-year.

The National Company has, however, reported a net profit of Rs 2,61,465 for the same half-year, thanks to an increase in sales from Rs 71.17 lakhs to Rs 74.99 lakhs. After making a transfer of Rs 1.00 lakh from Dividend Equalisation Reserve, the directors have been able to provide Rs 26,000 (Rs 25,000) for Depreciation; Rs 1.20 lakhs (Rs 2.50 lakhs) for Taxation and to declare a dividend of As 12 (Re 1) per share.

The Agarpara Company has presented the accounts only for the half-year ended 31st March, 1955. Sales are shown at Rs 1.05 crores against Rs 1.02 crores, while the net profit, before providing for Taxation and Depreciation, amounts to Rs 6,97,749 against Rs 6,92,632 in the previous half-year. The Depreciation amount has been raised to Rs 1.60 lakhs from Rs 1.03 lakhs, but Taxation has been reduced from Rs 1.80 lakhs to Rs 1.40 lakhs. No provisions have been made either for General Reserve or for other Reserves as in the case of the previous half-year when a sum of Rs 50,000 each was allocated to these items. The dividend is maintained at As 6 per share. The carry-forward is substantially higher at Rs 2.42 lakhs as against only Rs 1.04 lakhs brought in.

£ R$

South Karanpura Coal Passes Dividend

The South Karanpura Coal Company has reported a loss, before Depreciation, of Rs 35,115 for the half-year ended 31st August 1955 as against a net profit of Rs 52,254 in the previous half-year. This is mainly due to the fact that working conditions in the Quarries have become difficult owing to exhaustion of economic workings and that raising costs now exceed selling prices.

Raisings, during the half-year under report, were lower at 84,571 tons as against 90,000 tons and despatches at 85,487 tons against 93,324 tons. Sales have declined to Rs 12.80 lakhs from Rs 13.55 lakhs. A sum of Rs 26,164 (Rs 31,486) has been aside for Depreciation. The dividend is passed over as against As 2 per share paid in the previous half-year.

According to the Directors' report, the proposal to change over from Quarry to Undercover Mining is now in the process of implementation; but it will require a minimum of two years to obtain an economic output from this development. Provided transport facilities become available in due time, it is hoped progressively to increase output from the colliery from the present average of 12,000 tons per month to 30,000 tons.

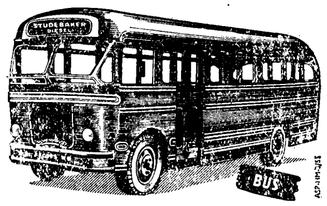
The VERSATILE, COST-CUTTING
Studebaker
TRUCKS & BUSES (PETROL & DIESEL)

Specially designed to meet every one of your specialised trucking and transportation requirements, the Studebaker trucks are stand-outs in utility and economy. Rugged and reliable, these are vehicles you can trust to keep your big loads rolling regularly and dependably at a surprisingly low operating cost. And yet, these unbeatable Studebakers are the lowest-priced in the market.



STUDEBAKER TRUCKS & BUSES
Sturdily built for the toughest jobs

STAR FEATURES:
- High-powered special Studebaker V8 engine for top economy and efficiency.
- Four-speed synchro-mesh transmission for fast and easy gear-shifting
- Extra-strong chassis for tough heavy duty.
- Big, heat-treated pre-cision-cut gears for smooth, silent operation.
- Liberal use of anti-friction bearings for long life.
- Wide range of wheel bases from 112" to 212" and GVW from 4,600 lbs. to 19,000 lbs. to suit your specific requirements.
- Special full forward control diesel chassis—ideal for passenger transportation.

For the Investor

The Desperate Hours

Investment Gossip:

LESS, very much less, than a week to go for Sir Chintaman Deshmukh's Budget for 1956-57. The interim is a period of desperate hours to some; they believe bleak news will come, but cannot prepare themselves for the wait.

Progress toward a socialistic pattern of society? Certainly—but will it mean, in terms of the 1956-57 Budget, a harsh set of taxation proposals?

Take advantage of the momentum released by an expansionist economy? Surely—and, in this view, would it not be proper for Sir Chintaman to postpone the less agreeable of his measures?

Hesitation: To grieve in anticipation that the socialistic pattern will be demanding, in the form of new taxes?

The meagre stock of hope: A not too unpleasant a Budget, because of the sizeable achievements of expansionist influences?

Dilemma: What view to take? And what betokens a Railway Budget that, by any yardstick, is satisfyingly free of onerous burdens?

Net result, Torn by indecision, there are those to whom the time to February 29, 1956 constitutes desperate hours of waiting, alternately cheered and grieved as they are by Dame Rumour.

£R$

Investment Notes:

Bowreah Cotton Mills have decided to raise further capital by issuing 12,000 Ordinary shares of Rs 100 each, ranking in all respects paripassu with the existing Ordinary Shares save and except that any dividend declared in respect of any period ending on or before 31st December 1955. These shares will be issued at par and offered, in the first instance, for subscription to the Ordinary shareholders in the proportion of 3 new Ordnary shares for every existing Ordinary share held by them. The balance if any, of the new share not taken up in response to such offer, shall be disposed of by the Board of Directors in such manner as they think most beneficial to the company. Transfer Books will be closed from the 21st March to 28th March, 1956.

Messrs Gillanders Arbuthnot & Company have resigned their managing agencyship of the Arcuttipore Tea Company with effect from the 16th February, 1956. The company will, in future, be controlled by the directors.

It is learnt that the Central Electricity Authority has given a favourable verdict on the controversial move by certain State Governments to limit the distribution of dividends to 3 per cent by electricity companies in cases where there are arrears of depreciation. This body has now laid down that, so long as all sums allowed in respect of depreciation for the year in question as also instalments in respect of arrears of depreciation have been appropriated, there is no bar on payment of dividend above 3 per cent and that no previous sanction of the State Government is necessary.

Premier Constructions are quoted around Rs 177. This company has raised the dividend from Rs 7 to Rs 8-8 per share for year eended 31-12-1955, thanks to satisfactory earnings which are placed around Rs 12.69 lakhs as compared with Rs 11.9 lakhs in 1954.

The Ordinary shares of Mahindra & Mahinda Limited, which were were recently offered to the public, have been admitted on the cash list of the Bombay Stock Exchange. The paid-up value of the shares is Rs 10; and these shares are presently quoted around Rs 12-11.

The Sassoon Spinning & Weaving and the New Union Mills are to merge into a single unit on the lines of the recent amalgamation of the Shamrock Mill and New China Mill. It is expected that this merger will bring down overhead charges to a certain extent and materially aid joint modernisation programme.

Meanwhile, Sassoon Mill has proposed to maintain the dividend at Rs 1-12 per share for 1955, while New China Mill has raised the dividend from Rs 1-4 to Rs 1-12 per share. The shares are presently quoted around Rs 39 and Rs 37 respectively.

Bird-Heilgers Jute Group Results

Balance-Sheet Reviews:

THE difficult conditions generally experienced by the jute industry during the half-year ended 30th September 1955 are fully reflected in the working results of the Bird-Heilgers group of jute mills. During the initial part of the period under review, prices of raw jute and manufactured goods drifted lower in the expectation of a bumper crop of good quality low-priced jute and the removal of the fear of a tight position developing for old crop. But the advent of serious flooding in the jute-growing districts with a consequent disruption of communication resulted in a shortage of the raw material at consuming centres where prices advanced substantially. Even after communications were restored, imports were small, and near-delivery jute commanded a premium, making it difficult to dispose of the manufactuded goods at a profit.

Thus, during the period under review, simultaneous business in standard constructions could only be concluded at a loss, and the earning of even gross profits in the industry was dependent on taking correct speculative views as to the course of raw jute and goods prices.

Against the above background, it will be interesting to know that the approximate cost to the Bird-Heilgers group of jute mills of the benefits, apart from wages and

HIGHLIGHTS

You might call this an anticipatory highlight; but this anticipation has in it no tinge of sooth-saying.

For, it relates more to the next week than the current one; and this raises the question: Why no highlight for this issue?

At this time of the year, the week before the Budget, custom has been for Indian Finance to think aloud on the likely contents of the Finance Minister's brief-case.

But, anno domini 1956, sooth-saying in such specific issue of Indian Finance has to be marked absent.

Why this state of affairs? Watch-dog, in his column, has answered this question more than once.

The Budget for 1956-57 does not hold much of a mystery; and, in the current year, conjecture on excise duties and the like has been of surprisingly small dimensions.

It is known that Sir Chintaman will be guided by the need to raise enormous sums of money for the Second Plan and by the determination to work toward a socialistic pattern of society.

The only speculation is whether Sir Chintaman, satisfied with the improved revenues resulting from expansionist influences, will decide upon a postponement of measures (new) for purposes of additional revenue.

The missing higlight is the highlight this week: for, the market expectations have been known for some time, and it is also patent that price corrections have been effected in line with these expectations.

But, highlighting the next issue will be, firstly, a thorough analysis of the Budget and, secondly, a realistic indication of how to interpret the significance of the Budget.

dearness allowance now granted to jute mill labour, is as follows:—

	(Rs. per annum)
Statutory Leave	11,00,000
Festival Leave	9,00,000
Sick Leave	3,00,000
Provident Fund	15,50,000
Retiring Gratuities	5,00,000
State Insurance	2,50,000
Total	46,00,000

In addition to the above, the latest Tribunal Award has also increased the Wages Bill by about Rs 14.00 lakhs per annum.

Naturally, eight of the nine mills in the group have had to transfer funds from various Reserves in order to pay even nominal dividends as well as to make small allocations. Thus, Northbrook has been able to maintain the dividend at As 12 per share without any transfer from Reserves, while Union has maintained the dividend at Rs 5 per share only after transferring a sum of Rs 1.21 lakhs from General Reserve. Auckland has reduced the dividend from Rs 6 to Rs 4 per share; Dalhousie from Rs 3 to Re 1; Kinnion from Rs 7 to Rs 6; Landsdowne from Rs 5 to Rs 2 and Lawrence from Rs 5 to Re 1. Naihati has again passed over the dividend. Standard has passed over the dividend against Re 1 paid in the previous half-year. The following tables show the full particulars relating to the accounts of all the companies in the group:—

SALES (In Lakhs)

Companies	H-Year ended 30-9-'55 Rs	H-Year ended 31-3-'55 Rs

£ R$

India Sugars & Refineries to Issue Fresh Capital:

This company is going to issue fresh capital in order to finance its expansion programme, the sanction for which has already been obtained from the Government of India.

The total cost of the scheme is estimated at Rs 58 lakhs, which includes additional working capital of Rs 10 lakhs. More than half the expenditure is on imported plant, for which firm contracts have been made in Germany and elsewhere. The programme envisages the receipt, erection and setting to work of all parts of the factory by the 1st December, 1956, commencing (from the date the present season ends) in the beginning of May this year. In implementing the expansion programme, the company will have a modern and efficient factory to crush 1,000 tons per day and capable of crushing 1,500 tons a day, with comparatively minor additions.

Part of the capital expenditure is proposed to be met from the internal resources of the company. The working capital will be borrowed from the company's bankers on cash-credit basis as at present. As regards the balance, Rs 4,77,100 worth of Preference Shares were issued in September last and fully subscribed. An application has, therefore, been made to the Controller of Capital Issues to permit the issue of Rs 32 lakhs face value of Ordinary shares at a nominal premium of As 8 per Rs 10 share.

The present authorised capital of the company is Rs 60 lakhs of which Rs 10 lakhs are Preference shares and Rs 50 lakhs are Ordinary shares. The authorised capital is now going to be increased to Rs 1 crore, divided into Rs 80 lakhs of Ordinary shares and Rs 20 lakhs of Preference shares.

Meanwhile, the company's working results for the year ended 30th September 1955 reveal a net profit, before providing for Depreciation and Taxation, of Rs 11,85,126 as against Rs 11,05,830 in the previous year. Cane crushed, during the year, is higher at 127,609 tons against 97,155 tons, while sugar

Hopeful Outlook for Railways

Indian Finance
Established 1928
February 25, 1956

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

IT is heartening to see that, on the eve of the Second Five-Year Plan, the Indian Railways reflect and foreshadow a steady and all-round increase in economic well-being. If the record of earnings in the last three years is to be a clue, railways have become a robust milch-cow of the economy. Gross traffic receipts show a steady improvement. From Rs 287 crores in 1954-55, they are expected to rise to Rs 314 crores in 1955-56; for 1956-57 the receipts are estimated at Rs 345 crores. Working expenses having risen at a smaller pace, it has been possible to secure an appreciable addition to the annual net surplus. Between the current and budget years, this surplus will take a high jump from Rs 9.58 crores to Rs 22.99 crores.

When it is remembered that the appropriation to Depreciation Reserve has been raised from Rs 30 crores in 1954-55 to Rs 45 crores in the revised estimates for 1955-56 and is proposed to be maintained at that level for 1956-57 and that the dividend to general revenes has to be raised from Rs 34.96 crores in 1954-55 and Rs 39.67 crores in the budget year, the residual surplus of nearly Rs 23 crores would bespeak an excellent performance. It would be all the more so in view of the fact that there is only a single increase in rates, a sur-charge of one anna in the rupee on freight traffic. Grains and pulses, fodder, manure, khadi, newspapers, newsprint and books are exempt from this surcharge. The anticipated yield of this increase is Rs 11.6 crores.

The new levy thus makes a 50 per cent contribution to the total net surplus. That it does so without any serious addition to the freight incidence is indicated by the fact that the increase will not amount to more than about 8 pies per maund or less than ¼ of a pie per seer. The Railway Minister claims that in the case of individual movements the increase in freight would be small and should cause little or no hardship. On vegetables and fruits, which are carried at concessional rates the incidence will be considerably less.

It is evident that the Railway Minister is keen to avoid increasing the burden on passengers or freight. The sur-charge on freight has to be looked upon as something unavoidable and as the least that could be expected by way of additional charge for service. For, the Railways are confronted with the need to foot a bill of Rs 375 crores out of their own earnings if the relatively modest allocation of Rs 1,125 crores for the Second Five-Year Plan has to be met. Against the total demand for Rs 375 crores, the Depreciation Reserve Fund is expected to provide Rs 225 crores while another Rs 100 crores would be found from revenue. This would still leave a gap of Rs 50 crores; and this is reason for Mr Shastri's lone budget proposal.

Mr Lal Bahadur Shastri, who is frankly disappointed over the curtailment of expenditure on the Second Plan for the Railways from Rs 1,480 crores to Rs 1,125 crores, is anxious not only to bridge this gap but to augment resources further, so that the outlay on development and expansion could be enlarged. Under the revised allocation, additional transport capacity would go up by 15 per cent for passenger traffic and 47 million tons for goods. These increases will be inadequate, if passenger traffic and freight are to increase as anticipated. For this reason, the Ministry is not inclined to accept the allocation as final. In this attitude it is encouraged by the assurance given by the Planning Commission that the position would be kept under constant review with the door open to whatever adjustments were found necessary as the Plan progressed.

Mr Shastri has therefore proposed to proceed with the survey of new lines on the original programme of 3,000 miles and to keep the position ready for new construction work whenever extra funds became available. This is undoubtedly a laudable outlook and policy. There is also the gentle hint of further attempts to find funds. These, however, will be postponed for some years to come.

Meanwhile, there will be no soft-pedalling of efforts to improve passenger amenities. The Railways still face acute over-crowding in most of the sections; and the extension of amenities and incentives for travel have to be coordinated with the provision of new trains, additional carriages, and, wherever possible, new lines.

In fact we could think of scarcely another budget with an equal number of new proposals in the direction of passenger amenities and a quicker flow of goods traffic. To the latter sphere belongs the introduction of express goods trains in which wagon loads and smalls would be carried on the important trunk routes within a guaranteed period on payment of an extra charge; if the guarantee was not fulfilled the extra charge would be refunded.

RAILWAY BUDGET AT A GLANCE.

(Rupees in Crores).

	Actuals 1954-55	Budget 1955-56	Revised Estimate 1955-56	Budget 1956-57
Gross Traffic Receipts	286.78	292.50	314.10	345.00
Working Expenses	206.09	206.80	214.41	224.30
Net Miscellaneous Expenditure	6.63	7.49	8.95	13.04
Appropriation to Depreciation Reserve Fund	30.00	35.00	45.00	45.00
Total	242.72	249.29	268.36	282.34
Net Railway Revenues	44.06	43.21	45.74	62.66
Dividend to General Revenues	34.96	36.07	36.16	39.67
Net Surplus	9.10	7.14	9.58	22.99

Already operating performance has recorded spectacular improvement; thanks to an intense drive started from November 1954, there has occurred over the first nine months of the current financial year an 8½ per cent increase in the tonnage lifted on the broad gauge and an 18 per cent increase on the metre gauge. With the further improvements contemplated under way an additional increase of 10 to 20 per cent is deemed attainable during the current year. It is also noteworthy that the net ton miles per wagon during the year over the broad gauge reached the record figure of 483, representing an 8 per cent improvement over the war-time peak of 451, which had hitherto held the field.

Similar satisfactory results are also observed in the net ton miles per day per engine both on the broad gauge and the metre gauge. In the light of these improvements, it is indeed tragic that mob-violence has sometimes led to large-scale destruction of railway property and rolling stock and set the clock of progress back. If the behaviour of the public were less harmful, the Railway Protection Police might not have had to play so conspicuous a role as it is now being called upon to do; but there is also a more agreeable side to the picture. Pilferers and thieves are having a less easy time; and in 1954-55 compensation paid by the Railways was Rs 50 lakhs less than in the previous year.

The long distance passenger is offered new concessions. If he travels between the 15th July and 30th September, he can take advantage of return tickets for distances over 300 miles at 1½ single journey fares and with a graded period of availability. The student community should be thankful for the extension of concession facilities on an individual basis instead of to groups of four as hitherto. Season tickets have been extended to new routes.

During the current year, passenger traffic has improved by 7½ per cent. It is pleasing to reflect that this increase has to some extent been the result of more people marrying and travelling on account of marriages. The third class passenger is promised an up-grading in status. In accordance with the aim of reducing class distinctions, the intention is to abolish the third class by renaming it as second; and there would be, where possible, new amenities.

By far the most significant announcement the budget contains is in respect of labour relations. The Minister could record with pride the uniform cordiality which the Railway Board was able to maintain with the National Federation of Indian Railwaymen. The proposal to send a special team including representatives of railway workers, on a study tour to foreign countries where workers' participation in management has been tried, contains the promise of a radical change in the relationship between the Railway workers and the Government. The Minister has made no secret of the fact that workers' participation in the management of Railways was under consideration. He has now disclosed Government's decision to take a few important steps in the direction of such participation. The experiment would probably begin with the railway workshops. As harmony between the workers and the Government is a fundamental prerequisite of economic progress, the Government are to be whole-heartedly congratulated on this move. They are also setting a fine example to private industry, confronted with the same problem.

West Bengal Budget

THIS year, interest on the West Bengal Budget is to some extent obscured by the public excitement over the question of merger. On Monday, Dr B. C. Roy's reply to the debate on the Governor's address inevitably gripped the attention of the Assembly more intensely than the budget speech. If the merger is to go through, the present will be the last budget of West Bengal as such.

In one respect, the Chief Minister's speech is marked by deep distress, which has been the lot of this State ever since partition. The influx of refugees has created a problem, which he feelingly describes as "tremendous, heart-rending and looks like a never-ending one". This problem has cast a permanent shadow over the economic life of the State and of India in general. Hitherto, West Bengal has spent by way of grants and loans to the refugees over Rs 67 crores, a sum which normally could have been turned to much-needed development expenditure.

It is sad to contemplate that no constructive solution has been forthcoming from any side. The Union Rehabilitation Minister has suggested the despairing possibility of a situation in which India may be called upon to accommodate the entire Hindu population of East Bengal. If this were to happen, conditions in Eastern India already not very satisfactory would become intolerable. It is a responsibility which belongs to the Union Government.

For West Bengal, deficit budgets seem to have become the rule. It is some relief that the revised estimates for 1955-56 show a smaller deficit than the original estimates. In the revised estimates, revenue has gone up to Rs 50.69 crores from Rs 45.76 crores in the budget; the increase in expenditure has been less, with the result that the budgetted deficit of Rs 17.12 crores would be curtailed to Rs 15.09 crores. In the budget estimates for 1956-57, revenue is estimated at Rs 49.36 crores and expenditure at Rs 63.55 crores, leaving an adverse gap of Rs 14.19 crores. There is thus a small decrease in the annual deficit.

Provision for capital expenditure for 1956-57 is Rs 25.62 crores against Rs 14.42 crores in the revised estimate for the current year. Budgetted capital receipts amount to Rs 22.92 crores, leaving a deficit of Rs 2.70 crores. The Government have thus to face an overall deficit of Rs 16.89 crores. Outside the DVC, West Bengal's Second Plan is estimated to involve an expenditure of Rs 138 crores, out of which the allocation for the budget year is Rs 28.6 crores. The expenditure on DVC will take another Rs 11.67 crores, to be wholly met by a Central loan.

Actually, the size of the Second Plan for West Bengal is much bigger than is indicated by the amounts of State expenditure. Most of the heavy industries, which carry a large outlay, fall in the Central sector. It is for this reason that the total outlay in the State plan on industry and mining falls short of the all-India percentage. The outlay on irrigation and power, on agriculture and community development and on social services in the State plan is higher in varying measures than the respective all-India percentage. The fact that the State is already in a comparatively advanced state of industrial development has in no way proved a handicap; compensating considerations have been given sufficient weight.

Outlay on the Second Plan for the year is to be financed by Central assistance to the tune of Rs 18 crores and a State loan of Rs 5 crores. For the rest, the Government intend to raise additional taxation. The Chief Minister has disclosed proposals for an entry tax on teas, or extending the coverage of sales tax and for irrigation rates. There is no assurance that he will not lay his hands on other sources. On the contrary, he hopes that additional taxation will bring in Rs 12.1 crores annually by the end of the Second Plan Period. This means that there will be a relentless search for new sources. In the meanwhile, the yields of existing taxes are expected to go up.

The new levies betray the general inadequacy of scope in the matter of adding to current revenues, through taxation. Commodity taxation in India is largely in a chaotic state. Hitherto coordination has not been seriously attempted and whatever attempts were made have turned futile. West Bengal also cannot boast of maximum yield from the sales tax. Extension of this tax must proceed apace with its vigorous enforcement. If the Union Government succeed in securing from the State governments the acceptance of uniform rates all-India for the sale tax, the effect on West Bengal's revenues may not be quite favourable. But that depends on where the rates are pegged.

One heartening feature is that the State-owned industries and services disclose a better showing. For the first time, state transport is paying its way. The State's total debt to the Union Government is expected to go up from Rs 136.65 crores at the end of 1955-56 to Rs 162.86 crores at the end of the next financial year. There is an internal debt of Rs 14.94 crores. These two amounts represent the long term liability of the State. In the five years, the internal debt is expected to increase by at least Rs 5 crores a year.

Club's Right to Expel A Member

By K. N. VISWANATHAN

BEFORE considering this question, let us note the definition of a Club. Halsbury (Simmonds Edition) defines it as "a Society of persons associated together for social intercourse, for the promotion of politics, sport, art, science, literature or for any purpose except the acquisition of gain".

We are concerned in this Article only with un-incorporated Member's Clubs and incorporated Clubs as regards this question of expulsion from membership. In both kinds of Clubs aforementioned, the expense of the Club is met out of subscription of the members. In the case of incorporated Clubs, there are certain additional legal facilities in filing suits, etc.

The right of expulsion was judicially condered in England in the famous case of Labouchere v Warncliff (13 Ch.D 346). The legal position in regard to this matter is this. A member can be expelled only if the rules provide for it. The power of expulsion must be exercised in accordance with the rules; otherwise the expulsion will be invalid. Further, it must be exercised in good faith and in the interests of the Club and not from any other motive. If any of the above conditions are not satisfied in a given case of expulsion, the courts will interfere at the instance of the aggrieved party and put him back. But, if the above conditions are satisfied, the courts will not interfere even though the courts feel that the particular decision of the Committee was erroneous.

Now, in the case of Labouchere v Wharncliff, Labouchere was expelled from a Club known as The Beefsteak Club for violating the rule of the Club in the following terms. "In case the conduct of any member either in or out of a Club shall in the opinion of the Committee, after enquiry, be injurious to the welfare and interests of the Club, the Committee shall call upon him to resign" It appears there was a quarrel between Mr Labouchere and Mr Lawson, another member of the Club, and Mr Labouchere complained to the Committee of the Club against Mr Lawson.

This letter as well as a letter of Mr Labouchere appearing in his paper "Truth" were considered by the Committee and, at a special meeting, they decided upon expelling Mr Labouchere and the other member. Against this decision, Mr Labouchere sued the Club for an injunction restraining them from removing him from membership and he succeeded.

In granting the injunction, the celebrated English Judge Jessel M. R. states the legal position thus. "In a case where a decision depended upon the opinion (the opinion of the Committee) in other words upon their judgment, it was most important that the materials on which the judgment was formed should be accurately ascertained and of course that could only be done by a proper investigation, by giving due notice to the accused and by taking I do not say legal evidence or that evidence not strictly legal might not be admissible but by taking evidence on the question of fact before them and satisfying themselves as to the truth. They could form their opinion That was not done in the present case and in my view the Committee have not followed in substance their own rule at all. The judgment of the Committee with the facts of the case fully before them might be right or might be wrong—with that the court has nothing to do. If having given the accused fair notice and made due enquiry the Committee came to the conclusion that the conduct of one of the members of the Club was injurious to its welfare and interests no judicial tribunal could interfere with any consequences which might arise from an opinion thus fairly formed".

To sum up, the Committee may be right or wrong in expelling a member; but they must comply with the rules of the Club and give the member concerned due notice of the charge against him and give him a fair opportunity to defend himself.

Income Tax Policy

Need for Realistic Approach

An Indian Finance Special Study

WHEN the Taxation Enquiry Commission made their recommendations as they related to further taxation of personal incomes, it was felt that some of the suggestions were radical in character. In some quarters, there was a measure of surprise that such recommendations were made by a Commission which was headed by Dr John Matthai, who is known for his realistic understanding of economic conditions in this country and a correct appreciation of the taxable capacity of the community.

It was represented by the interests concerned that the assessees bearing the brunt of the burden of direct taxes were already heavily soaked and that, in relation to countries which were much better placed and whose per capita incomes were much higher, the incidence of taxation was heaviest, next only to the UK, in India. There is much force in this argument; and it may be said that, having regard to the small minority which accounts for the major portion of the receipts by way of direct taxes, the scope for a further increase is largely, perhaps even strictly, limited.

But, apart from the revenue aspect, it has also been considered necessary by the Taxation Enquiry Commission to use the machinery of taxation for reducing inequality of incomes as far as possible and for "compelling" the better placed section of society to contribute to a greater extent than others for meeting a good part of the requirement for developmental expenditure in the public sector. The Taxation Enquiry Commission have, in this view, suggested that there should be a readjustment of the slabs of income-tax and super-tax, and that the regressive effect of the higher rate of income and super taxes has been exaggerated. They have, however, observed at the same time that "the proportionate room for increase in respect of the topmost brackets is correspondingly smaller than for upper middle brackets and that broadly a maximum marginal rate of 13½ annas in the rupee or 85 per cent on incomes above Rs 1.5 lakhs seems to us as far as one can go in present circumstances." They have also stated that "a higher measure of increase in direct income-taxation would not be a practical expedient and, therefore, is one which could not be recommended at this stage."

As regards the annual tax on total wealth, it was pointed out that, "theoretically, there is something to be said for an annual tax on total wealth at a lower rate as a complement to income-tax and estate duties as such a scheme would lead to a better balance in the incidence of taxation among individuals than through taxation of income alone." But it was indicated, at the same time, that the assessment and valuation of capital assets "bristles with administrative difficulties which would, for the time being, appear to be decisive against the adoption of such a levy."

The recommendations regarding the imposition of a ceiling on incomes have also been made on a cautious note. While it was suggested that there should be a ceiling on net personal incomes after tax which, generally speaking, should not exceed 30 times the average prevailing per family income in the country, it was also made clear that this was not capable of immediate application and that it was important to strive for its implementation over a period. What is more, "the accomplishment of this objective cannot merely be the result of tax changes, but must be related to an integrated approach along several directions. The most important phase of this approach would be an acceleration of the tempo of economic development and a widening of employment and production opportunities. Fiscal policy has an important place in it; but this is necessarily subject to economic circumstances and practical possibilities of achievement at any given time."

The Commission also made constructive suggestions in regard to the grant of family allowances. It was indicated that the tax free slab should be increased to some extent for incomes in medium slabs as it would give a tax rebate on a portion of income at the average rate of tax appropriate to total income subject to a maximum tax rebate. The aim would be to have some elasticity in the amount of tax rebate without entailing too great a loss of revenue. In order to offer incentive for saving, the maximum amount of life insurance premium plus contributions to provident fund, was increased to 1/5th of the total income from 1/6th, subject to a maximum of Rs 16,000 for Hindu undivided families and Rs 8,000 for other assessees. This maximum would exclude the employer's contribution to the provident fund. The above are among the more important recommendations concerning further taxation of personal incomes and grant of reliefs.

There was naturally speculation for a time about the course that would be adopted by the Union Finance Minister and the extent to which the recommendations of the Taxation Enquiry Commission would be implemented, especially as there was a fear that the adverse recommendations would be taken notice of first. It was announced by Sir Chintaman Deshmukh, when the budget for 1955-56 was presented in February last year, that there would be a revision in the slabs of income-tax and super-tax. In regard to lower income groups, some adjustments were effected. Also, a beginning was made in respect of family allowances by increasing the tax free slab to Rs 2,000 from Rs 1,500 in the case of married assessees. Bachelors were allowed a tax free slab of only Rs 1,000. Thus, in 1954-55, on an assessable income of Rs 20,000, no tax was payable on the first Rs 1,500, 9 pies in the rupee was payable on the next Rs 3,500, 1 anna and 9 pies in the rupee on the next Rs 5,000, 3 annas in the rupee on the next Rs 5,000 and 4 annas in the rupee above Rs 15,000. In 1955-56, on the first Rs 2,000, no tax is payable in the case of married persons, on the next Rs 3,000 nine pies in the rupee; between Rs 5,001 and Rs 7,500, 1 anna and 9 pies in the rupee; between Rs 7,501 and

TABLE 1.

An Indian Finance Special Study

Rs 10,000, 2 annas and 3 pies in the rupee; between Rs 10,001 and Rs 15,000, 3 annas 3 pies in the rupee and, above Rs 15,000, four annas in the rupee. As the surcharge was retained, notwithstanding the grant of an allowance for married persons, the incidence was higher. It may, however, be said that there is scope for further adjustment on the basis of the rate structure suggested by the Taxation Enquiry Commission. In that event, the question of granting further liberal family allowances will have to be considered. Otherwise, the burden will prove to be heavy on the lower income groups.

The super-tax slabs also have been adjusted, but if there are further changes, the upper middle income groups will be adversely affected. Already, the maximum rate, inclusive of the surcharge of 5 per cent, is more than the marginal maximum rate recommended by the Taxation Enquiry Commission. The total amount paid by way of income-tax and super-tax, inclusive of surcharge, on an income of Rs 2 lakhs is even now nearly equal to the burden that will have to be borne if the rates of super-tax under Illustration II of TEC were applied. That is, tax amount on an assessable income of Rs 2 lakhs works out to 70.7 per cent on the basis of 1955-56 rates against 71 per cent that will have to be paid under Illustration II. The position will be clear from Table 1 accompanying this study.

As regards the annual tax on total wealth and a ceiling on incomes as proposed by the Planning Commission, the experience of Japan has not been satisfactory; and, in Sweden, the Capital tax is levied because of lower income-tax rates. The yield will be negligible and the administrative work involved will be such that the Income-tax department will be taxed heavily. Even though the Taxation Enquiry Commisson stated that, theoretically, there is something to be said for an annual tax on total wealth, it will be found, on a closer examination of the tax structures of the UK, USA, Sweden, Japan and other countries, that the practices followed vary in the different cases; thus, the anxiety to levy all forms of taxes out of context will result in needless hardship for the taxpayer without any corresponding benefit to the Exchequer.

The incidence of income and super-tax on typical incomes in India is heaviest next to the UK. In Japan and Sweden, the higher income groups, which are sought to be soaked, are paying relatively lower taxes. Thus, on an income of Rs 2 lakhs, in India the tax payable on the basis of 1955-56 will work out to 70.7 per cent, in the USA 34.1 per cent, in the UK 69.3 per cent, in Japan 60.2 per cent and in Sweden 45.7 per cent if the State income-tax only is taken into consideration and 57.6 per cent if the State and Local Income-taxes are taken together. (See Table II). In respect of an income of Rs 10 lakhs, the percentages are 85, 67.3, 87.9, 64.0, 59.4 and 71.4 respectively.

In Japan, the Shoup Commission concluded that there was something to be said in favour of a net worth tax, which is analogous to the annual tax on total wealth, if it could be levied as a complement to lower income-tax rates. The tax was first levied in 1950 and the rates suggested by the Shoup Commission were adopted.

The large size of the population and the distinctive distribution of the various income groups in Japan were probably responsible for the short-lived experiment in regard to the net worth tax. After it was repealed income-tax rates have been revised upward. But the maximum tax is only 65 per cent on incomes above 5 million yen against 55 per cent previously on incomes above 2 million yen.

In Sweden, since 1946, the State Capital tax has been levied and the rates now in force are lower than those obtaining in 1948. The present tax rates vary between 0.5 per cent on capital owned above 50,000 Kronor, and 1.8 per cent on capital owned above 1 million Kronor. There is also a special clause which stipulates that the maximum liability in regard to State Income-tax, State Capital tax and the local income-tax cannot exceed 80 per cent.

It will, thus, be seen that, where the annual tax on total wealth is levied, the incidence of income-tax is very much lower. As there is no similar tax in the UK, Australia and elsewhere, whose tax structures are followed by us, there is no clear case for levying an annual tax on total wealth.

The force of this argument will be understood if it is pointed out that the burden will become oppressive if the capital tax on the lines of Sweden were levied over and above the current income-tax and super-tax rates in this country. Thus, in respect of an income of Rs 60,000, which includes an investment income of Rs 10,000, the amount payable by way of income-tax, super-tax and capital tax, on the basis of a yield of 3 1/3 per cent on capital owned will work out to 43.6 per cent against only 32.7 per cent, in Sweden. On an income of Rs 1 lakh, which includes Rs 50,000 by way of investment income, and on a similar capitalisation, the burden of income-tax, super-tax and capital tax will work out to 76.2 per cent against 58.6 per cent in Sweden.

As regards ceilings on income, the Taxation Enquiry Commission, it is true, have made recommendations to the effect that the ceiling on incomes might be fixed at 30 times the average prevailing per family income and that it could be implemented over a period. There is already a sort of a ceiling on incomes through the levy of heavy taxes in the case of higher income groups; and, with estate duties and other taxes, the objective of reducing inequalities in income and wealth will certainly be achieved over a period. Any attempt to rush the pace will prove to be costly, because the discouragement to initiative and enterprise will make it difficult to achieve the targets outlined in the Second Plan.

These are all facts that should be borne in mind by authority when new taxation is considered. Clearly, there should not be an attempt to levy taxes in advance of the times or copy particular features of tax systems which are wholely unrelated to one another. There is an evolutionary process in every case, and new features can be introduced only after a careful study of the various issues involved. Before concluding, it is necessary to emphasize that the budget for 1956-57 has more than ordinary significance: the Finance Minister, while attempting to gather more revenues, should also be mindful of the impact that his new proposals will have on the economic and investment climate in the country.

Editorial Notes

The Presidential Address

In his address to Parliament, the President has taken in his sweep a wide range of internal and international issues with which India is immediately concerned in some way or other. The Presidential address reaffirmed ideas which only a couple of weeks before were stressed in the Congress Session.

In the present public mood, the emphasis on national unity cannot be overdone, and when the President makes an appeal on this behalf, it must carry a weight beyond that of a Party appeal. His is a straight call to the entire country, and for that reason has to be accepted in a non-partisan and truly national spirit. It is the task for Parliament to conduct the debate on States reorganisation in such a way that the country will imbibe the message of unity without being distracted by fanciful cross-purposes.

The address underlines the determination of the State to proceed steadily toward the goal of a socialistic pattern. At Amritsar also, the term 'socialistic' was discarded in favour of 'socialist', to indicate the future pattern for India. It may be that the change was purposefully introduced. At least, it can be a more effective answer against those who attribute luke-warmness to Congress policies. What material differences this change is going to imply could be seen in the course of the next few years.

In his review of the general international situation and India's role therein, the President was obliged to point to some of the lapses and indiscretions of the Western Powers and their spokesmen. The US Secretary's reference to Goa as a Portuguese Province was keenly regretted. The policy of military pacts was disapproved as militating against the cause of world peace. The concerned powers were also taken to task for keeping China out of the UN.

As the spokesman of the new unity which Asian Powers were seeking to build among themselves, the President was justified in focussing his resentment on one of the two sides to the cold-war to the total exclusion of the other. Expressing his concern over the mounting exodus from Pakistan, he has voiced the hope that the latter country would take appropriate measures to check it.

*

Unimaginative Policy

The insistence in the Draft Second Plan on personal cultivation by owners of land is not going to be an unmixed good. The motive is praiseworthy; it is obviously intended to check absentee landlordism. But, after the abolition of the Zamindaries and the imposition of ceilings, absentee landlordism will no longer be so serious an evil as it had been and is still represented as likely to be in the future.

After the first generation, most of the holdings now curtailed by ceiling are bound to be broken up, unless, in the meanwhile, the State decides to enact suitable legislation against division of ownership. The grant of property rights to women will only hasten and aggravate this process. The result will be the creation of uneconomic ownership, under which individual owners can neither stick to the land nor equip themselves for other avocations.

Even as it is,widows, aged men, minor sons and daughters and persons otherwise enfeebled for active life will all be penalised for no fault of their own. By far the gravest objection to compulsory personal labour by the owner of land is that it will tend to create a stagnant division of the population between agriculturists and towns-men. There will be no free mobility, which is essential. All the social changes, now being sponsored, will be throttled.

Industrial employment, the services and agriculture will become more or less watertight compartments and it is also not unlikely that a new consciousness of separation and difference will develop, to add to the innumerable points of social conflict already in existence. Besides, there is the very sound argument that to the extent that the land owners' personal cultivation becomes a reality, the agricultural labourer is denied scope. Before the Plan is finalised, the Planning Commission and the Governments concerned should feel obliged to reopen this question and examine all the relevant consequences in a spirit uncontaminated by theoretical bias. From the stand-point of social stability and mobility, the idea of compulsory personal cultivation seems to be full of uncalculated risks.

*

Conditional Merger

The proposal for the merger of West Bengal and Bihar has been debated in party and legislative meetings in both the States during the last two weeks. The most outstanding impression flowing from these debates is that opinion in favour of the merger is stronger in Bihar than in West Bengal. In the latter, division of opinion runs more or less on party lines, but the sense of danger to local culture is not confined to the Opposition parties.

Even Congress members of the West Bengal legislature have expressed misgivings, though in less challenging terms than those employed by the Leftist representatives. Dr B. C. Roy himself had suggested a number of steps to allay the fear of the "minority" State being swamped by its neighbour. The choice of Calcutta as Capital, the Chief Minister's office going by rotation, recruitment to lower grades exclusively from the residents of each State, regional councils for the protection of culture, the preservation of the status quo for the land system, modes of taxation etc and provision for social services form the principal ingredients of the balancing mixture which Dr Roy proposed.

Many new additions to this list have subsequently been made by the West Bengal Congress legislators. Of these, two at least are important, namely parity of representation in the Upper Chamber and freedom for unilateral repudiation of the merger. These suggestions frankly represent reluctance and fear and the effort to minimise the adverse impact of a permanent majority. It is to be wondered if the Congress party's ardour for merger is as strong as that of the Leftists against it. The Governments of the two States have by now gained a full idea of the extent and depth of public feeling for and against the proposal. The West Bengal Chief Minister, in the course of his speech on Monday, has answered effectively the questions raised. Whatever step is finally decided on, it cannot be a leap into the dark.

*

Capital Punishment

The British House of Commons has decided by a free majority vote that capital punishment should be done away with. Party whips did not operate for the issue and by an all-party agreement, each member was allowed the free expression of opinion and exercise of vote. It is significant that the motion was opposed by the Government. On a former occasion, under the Labour Government, a similar decision by the Commons was negatived by adverse vote in the House of Lords. This time, there seems to be an assurance that the Lords will agree. The procedure adopted may well be a model for the determination of public opinion on fundamental social issues in other countries.

In Britain, the issue of capital punishment has always remained a matter of live controversy. Even now, neither psychologists nor administrators seem to agree on its value as a deterrant against murder. At the same time, it will be too facile to draw analogies, in view of the fact that social conditions differ violently between one country and another. The picture is indeed baffling, when there is no decisive clue to the distinguishable effect of capital punishment in any society.

Unchanged Bank Rate

AS, in some quarters, there were apprehensions that, following the rise in the Bank of England rate, the Reserve Bank of India might also raise the official minimum, the news, made known on Wednesday evening, of no change in the Reserve Bank rate was received with considerable relief. It has been made clear, in more than one context and on more than one occasion, that the Reserve Bank is by no means tied to the apron strings of the Bank of England. It may be recalled that, when the Bank Rate was raised in India from 3 to 3½ per cent in November 1951, the Indian authorities took care to explain that their action in this regard was the result of careful and independent thinking over a number of weeks prior to the putting up of the rate to 3½ per cent. In other words, it was claimed that the higher Bank Rate in India was in response to the economic conditions in India. It may also be recalled that, soon after the rise in the Bank Rate in November 1951, the Reserve Bank of India initiated various measures which had a distinctive quality of their own.

Taken all in all, the Reserve Bank authorities have definitely shown a strong disinclination to make hurried or panicky changes in the Bank Rate. In its existence of over two decades, the Reserve Bank has altered the official minimum only on two occasions. In the early years, the change was in the direction of lowering the rate from 3½ to 3 per cent. When the rate was thus brought down, the Reserve Bank authorities demonstrated a policy which was independent not only of London, but even of New Delhi. The Governor of the Reserve Bank of India at that time was Sir Osborne Smith. In the autumn of 1935, he came to the view that the Bank Rate, which was then 3½ per cent, was out of tune with the pattern of interest rates; and that it should be brought down to 3 per cent. Sir Osborne gave advance intimation of his intention to Sir James Grigg who was then the Finance Member. Sir James was of the opinion that the Bank Rate must continue at 3½ per cent. In a line-clear message on the 'phone, he communicated his views to Sir James (then Mr J. B.) Taylor who was the Deputy Governor. Mr Taylor had a hurry consultation with his chief who instructed him to inform the Finance Member that the Bank Rate was being reduced to 3 per cent on the following day. In a fit of anger, characteristic of him, Sir James replied: 'Then it is open war between Sir Osborne and me'.

This incident serves to show that the Reserve Bank's policy is to be co-operative where possible, and to be independent where necessary. In line with such a policy, it stands to reason that a 5½ per cent Bank of England rate does not necessarily mean that it should be higher than 3½ per cent Reserve Bank of India rate. What the rate in India should be has to be governed by the economic position and requirements, present and prospective, in India. The supreme requirement is that, in each of the next six years, the Central Government have to borrow anything between Rs 150 crores and Rs 200 crores (including conversion) in the form of market loans. Another significant factor is that there are no maturing Central Government loans this year; and that 1956-57 provides an important opportunity for maximising the target of the New Loan. Any increase in the Indian Bank Rate will undermine the strength of the giltedged market and cannot but disturb giltedged prices. In the context of the Second Five-Year Plan, for whose success we should strive might and main, any upward move in the Reserve Bank of India rate will be fatal.

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on February 21. Total amount offered was Rs 1,00,75,000. Tenders at Rs 99-6-0 per cent were accepted in full and those at Rs 99-5-9 per cent. were allotted approximately 99 per cent. Lower tenders were rejected. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-6 per cent per annum.

Week ended	Total Amount offered (In '000 Rs.)	Total Amount accepted (In '000 Rs.)	Rate Percent per annum Rs a. p.
1956:			
February:			
7th	1,68,25	1,00,00	2 8 3
14th	1,53,00	1,00,00	2 8 3
21st	1,00,75	1,00,00	2 8 6

+

The returns of the Reserve Bank for the week ended February 17 reveal a decline of Rs 0.83 crores in active note circulation to Rs 1,406.82 crores. Rupee coin is higher by Rs 0.06 crores at Rs 104.61 crores. As a result, notes held in the Banking Department have risen by Rs 0.89 crores to Rs 8.20 crores.

In the Banking Department, Central Government's deposits have risen by Rs 4.00 crores to Rs 64.55 crores; Provincial Governments' deposits by Rs 2.06 crores to Rs 13.06 crores and bank deposits by Rs 1.11 crores to Rs 54.12 crores. Other deposits are, however, lower by Rs 0.23 crores at Rs 15.70 crores. Balances held abroad are shown at Rs 71.12 crores against Rs 71.06 crores 'Other Loans & Advances' have declined by Rs 0.85 crores to Rs 53.51 crores which includes Rs 18.72 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 16.70 crores. Investments have moved down by Rs 0.37 crores to Rs 49.39 crores.

+

The statement of the State Bank of India for the same week shows an increase of Rs 2.67 crores in deposits to Rs 238.27 crores. Borrowings from other banks remain unchanged at Rs 0.95 crores, while other liabilities, including inter-office adjustments, are lower by Rs 1.28 crores at Rs 4.59 crores.

On the assets side, cash balances have declined by Rs 0.72 crores to Rs 20.61 crores. Investments are higher by Rs 0.34 crores at Rs 116.71 crores. Advances have risen by Rs 1.38 crores to Rs 120.82 crores—'Loans, Advances and Cash Credits' accounting for a rise of Rs 0.57 crores and 'Bills Discounted and Purchased' for Rs 0.82 crores.

+

According to the returns of the Scheduled Banks for the week ended February 10, demand liabilities have shown a sharp decline of Rs 7.68 crores to Rs 628.08 crores, while time liabilities have risen by Rs 1.20 crores to Rs 413.50 crores. Borrowings from the Reserve Bank are higher by Rs 4.67 crores at Rs 39.46 crores, while those from the State Bank are lower by Rs 1.03 crores at Rs 12.70 crores. Cash and balances with the Reserve Bank have declined by Rs 10.65 crores to Rs 87.23 crores. Investments are shown at Rs 378.99 crores against Rs 380.45 crores. Loans and advances have risen by Rs 2.95 crores to Rs 685.99 crores.

+

Mr Macmillan's Medicine

By PAUL EINZIG

THE Bank of England announced on February 16 the increase of its Bank Rate from 4½ to 5½ per cent. The announcement did not come altogether unexpected. For some weeks, an increase of the Bank Rate was vaguely expected every Thursday, owing to the growing feeling that the measures taken by the Government to fight inflation were not sufficient. It took Mr Macmillan some seven weeks to familiarise himself with his new post, and to obtain the Cabinet's approval of his proposed disinflationary measures. Foremost among them was the increase of the Bank Rate. The bankers were becoming more and more critical of the Treasury's attitude in the matter of the credit squeeze. They did not like to incur unpopularity among their customers, by taking the initiative for cutting their credit facilities. The increase of the Bank Rate has now relieved them of this task. There are bound to be a number of borrowers who will now prefer to

Horrockses

The Name When You Need What We Offer

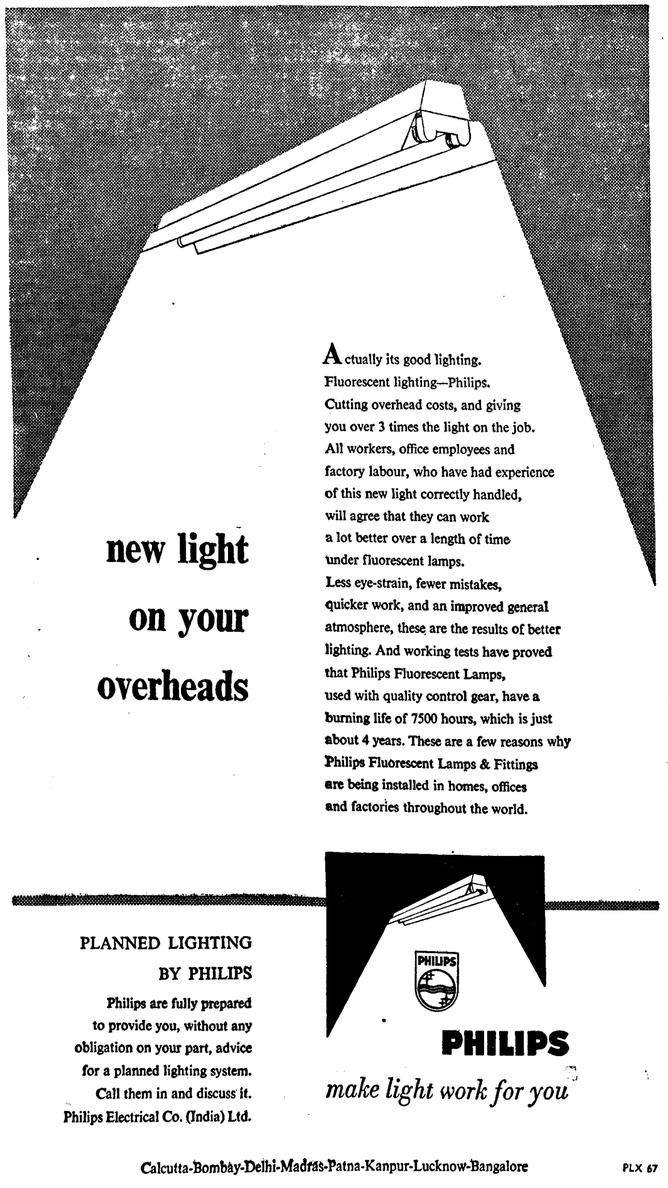
ANDERSON WRIGHT, LTD.,
7, Wellesley Place,
Calcutta, 1.

their loans rather than pay higher interest rates, and many would-be borrowers will prefer to abstain from asking for loans.

The question is, will the 5½ per cent Bank rate provide sufficient deterrent to business expenditure? Possibly, in the building trade, there will be less activity both by private builders and by Local Authorities engaged in housing schemes. A number of marginal cases are likely to be affected in many branches of business. But, so long as the rise in prices is expected to continue, even the present interest rate fail to deter most borrowers. In order that dear money should produce its effect, it would be necessary to convince the public that the rise in prices has now come to a halt. In view of the large wages demands which are being pressed forward, most people are inclined to doubt whether the rise in prices could in fact be halted, expect at the cost of much more drastic measures.

Mr Macmillan's measures, announced after the increase of the Bank Rate, do not appear to go far enough to bring about a turn of the trend. The sum total of the cuts in capital expenditure and current expenditure by the Government is about £100 million this year, which is about equal to the increase of the Budgetary Estimates for 1956-57 over the Estimates for 1955-56. On the other hand, the Chancellor expects the Local Authorities to cut their capital expenditure by a considerable amount, and the private sector of the economy, too, is expected to curtail its planned capital investment.



To achieve that end, Mr Macmillan repealed a concession made by his predecessor less than two years ago when, in order to encourage capital investment, an 'Investment Allowance' was granted for the purposes of taxation. Moreover, the Capital Issues Committee was instructed to scrutinise more closely applications for authorisation of public issues and of credit exceeding £50,000. And the banks were called upon not to relent their credit squeeze. Possibly these steps, together with the Bank Rate, will cause some reduction of business spending. But it is far from certain whether it will be sufficient.

What matters is that Mr Macmillan has already proved that he is made of a tougher fibre than his predecessor. It is understood that he wished to go much further, but that the Cabinet has vetoed some of his proposals. In the absence of the desired degree of improvement in the near future, he is likely to be able to persuade the Cabinet to allow him to proceed. The Budget statement on April 10 will provide him with an opportunity for introducing another batch of measures. It is understood that he will then announce, among others, some new measures aimed at making saving more attractive. Such measures were foreshadowed by Sir Anthony Eden in January, and even if no information is available about their nature, it is assumed that Mr Macmillan has something original and unconventional in mind.

A further increase in the Bank Rate is distinctly a possibility. Before the announcement of the increase on February 16, it was widely believed that the Chancellor would resort to shock-tactics by raising it to at least 6 per cent, and possibly even higher. There is a feeling that he is quite prepared to go up to 7½ per cent, and the anticipation of a further increase provides a powerful deterrent to borrowers.

Even allowing for this, the impression remains that he has not gone far enough. There is no comparison between the sum total of the measures taken by him and by Mr Butler and the breath-taking Draconian measures adopted in 1931 when sterling was in danger, or in 1940-41 when Britain itself was in danger. But then, those were occasions of acute crises, and the public almost enjoyed submitting to brutally harsh measures. Today the position is different. For years, Britain has been struggling with a chronic inflation, but in spite of the losses of gold during 1955, and the unexpectedly bad trade balance figures in January 1956, the public is not sufficiently frightened to face a major shock. So the bitter medicine has to be administered in relatively small doses.

It is widely felt that, if only Mr Macmillan were allowed a free hand, he would solve the problem. The second instalment of his measures is awaited with much interest, especially as there are indications that the influence of his opponents within the Cabinet is weakening. Meanwhile, the effects of his present measures should be sufficient to hold sterling and slow down inflation, even if they could not bring it to a halt.—(Copyright).

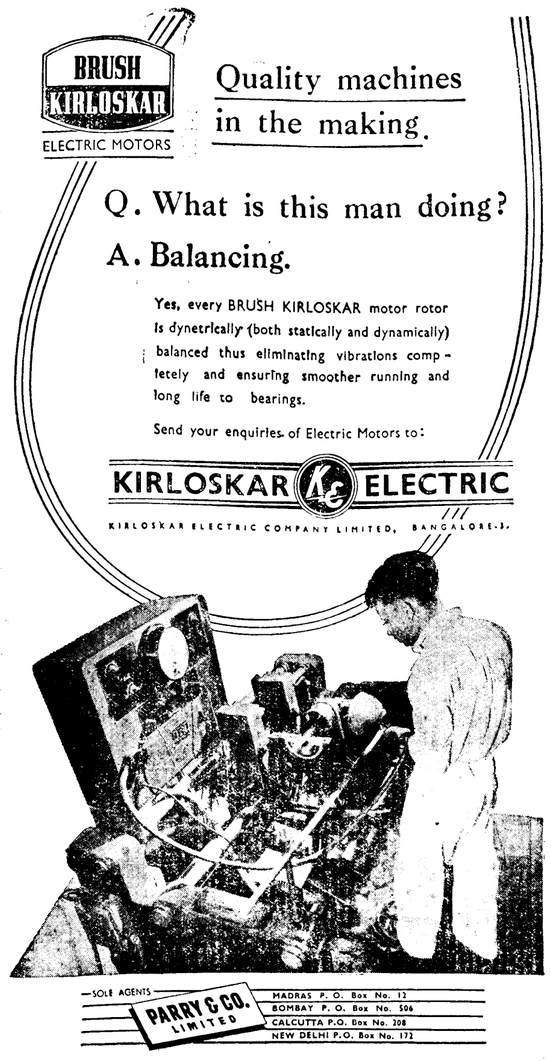
World *of* Business

Provisions of the Life Insurance Corporation Bill

A CENTRAL Directorate for the conduct of nationalised life insurance was visualised in these columns last week while considering the administrative frame-work for life insurance in Government hands. The Life Insurance Corporation Bill, introduced in the Lok Sabha last Friday, provides for a similar body called the Life Insurance Corporation consisting of not more than 15 members. In a statement of objects and reasons, emphasis has been laid on absolute security to the policy-holders, on the spread of insurance more widely, particularly in rural areas, and on the mobilisation of public savings. The Corporation will, thus, be the Central body to carry out effectively these basic objectives.

The Corporation, which will have a share capital of Rs 5 crores entirely subscribed by the Central Government, will transact life insurance in India as the sole insurer. All existing life offices will be integrated and incorporated in the new body.

The general superintendance and direction of the affairs and the business of the Corporation will be entrusted to an Executive Committee, which may have a Managing Director as a whole-time officer. Zonal offices of the Corporation will be established in Bombay, Calcutta, Madras and Delhi; and, subject to the previous approval of the Central Government, the Corporation may establish such other zonal offices as it thinks fit.



There is no further indication in the press report about the organisational side. In life insurance, organisation is supremely important, particularly in India where insurance continues to be a forced sale. Nor is too centralised an administration good for this country of vast distances. It is to be hoped that the proposed executive committee of the Corporation will, with real practical thoroughness, devise an administrative system based somewhat on the scheme outlined here last week. The fundamental point about the scheme was devolution of authority. Each sub-division constitutes the base of the proposed pyramid. An operational system, with authority descending from the Centre but with the separate units nevertheless remaining more or less independent within the allotted sphere, is likely to be more responsive to individual needs than a single system where units are mere agencies for carrying out the mandates of the Centre; for India, a decentralised system is inexorably associated with its needs. The Directorate of the Corporation, when formed, will do well to ponder over the effective methods of decentralisation. That will ensure service—so essential for stimulation of savings in insurance.

One of the functions of the Corporation will be to arrange re-insurances. The Indian Re-Insurance Corporation is shortly going to be established. It is being mooted by the private sector and is essentially for general insurance business. There is no reason why the proposed Re-Insurance Corporation should not be able to absorb a part of the re-insurances of the Life Corporation, or why the Life Insurance Corporation should not avail of its services, even though the Re-Insurance Corporation is proposed as a private enterprise. A healthy co-operation between the two will redound to the benefit of both; and, for India as a whole, it will mean considerable saving in foreign exchange which otherwise would have gone to the credit of re-insurers overseas.

The Corporation, in the discharge of any its functions, shall, it is stated, act as far as possible on business principles. This, indeed, should be the keynote; and, once the Corporation can cut through the forest of files and red tape, and frame the approach to the common man with an understanding anxious to render promptest service, age-long prejudice, born of understandable reasons, against governmental handling of affairs will slowly die away. If anything can stimulate the flow of insurance under Government hands, the surest evidence of quick service will do so. Therefore, the Corporation will do well to emulate the ways of a commercial house in its daily dealings and, as emphasised earlier, embark on a scheme of devolution of authority. A sub-divisional office with proper responsibility in every sub-divisional town will be a good starting point.

In accordance with the assurance of Sir Chintaman Deshmukh, all whole-time employees of insurance companies become employees of the

(Continued on page 360)

World of Tea

Unrestricted Sale Through Foreign Auctions

IT might be recalled that the Indian Tea Planters' Association had, toward the end of last year, suggested to the Government of India that an additional release of tea should be granted for direct export to London auctions to relieve partially the congestion in the Calcutta market. The Association also added that the "credit squeeze" compelled most of the UK buyers to confine their purchases in London auctions alone. Hence, the disparity of prices between auctions in London and in producing centres were increasing.

The amount of tea, which was permitted to be sold through foreign auctions previously was restricted to 140 million pounds of North Indian crop. It is now officially announced that there will be no restriction on the amount of tea to be sold through foreign auctions during the current season, which may extend upto May 31. The main reasons for this relaxation are an increase in production of tea this year and the piling up of unsold stocks in Calcutta since last autumn.

The above decision is generally welcomed in Calcutta tea circles as, they say, that it will allow greater freedom to people to send their tea to the auctions where they will get the best price. It is estimated that about 100 million pounds of this season's tea remains to be sold at the Calcutta auctions. If the current rate of offering—estimated at 90,000 packages—at the weekly auctions is absorbed, the 1955 crop is expected to be sold by the end of May.

Considering that stocks in the UK have been showing a declining tendency during the past few weeks, it is hoped, that the demand from this country will improve in the coming weeks though buying interest will be concentrated on better quality teas. It is also hoped that the fairly satisfactory level of prices, which were obtained during January, may be maintained for some weeks to come. It is also learnt that negotiations for an International Tea Agreement between the producing countries are continuing. It is expected that the parties concerned will arrive at a settlement soon. The countries concerned are India, Pakistan and Indonesia.

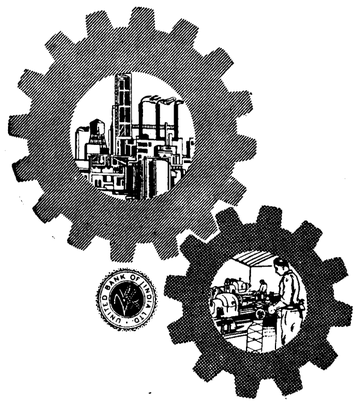
Meanwhile, offerings in the Export Sale held at Calcutta this week were 61,300 packages. There was less demand, and the market opened quietly with prices As 1½ per pound below last sale's level, except for the best liquoring CTC teas which were firm and sometimes dearer and selected lines of Fannings which were about steady.

The market strengthened, however; and, at the close of the sale, prices were from one to As 1½ per pound below last rates for Common teas and Low Mediums. The better liquoring sorts and blackleafed Fannings were fully firm and sometimes dearer.

There was, however, only moderate support for the poorer CTC teas; and these were sold generally from one to As 1½ per pound below valuations. Stylish Whole Leaf grades were in much stronger demand than in recent weeks and prices often advanced by several annas per pound, while any useful Darjeelings were sold well. Following rates were quoted per pound:—Clean Black Pekoe Rs 1-13-0; Plain BP Rs 1-5-0; Medium Assam BP Rs 1-7-6 to Rs 1-8-0 and Best CTC Assam BP Rs 2-5-0 to Rs 2-6-0.

In the Internal Sale, offerings amounted to 19,000 packages of Dusts. There was a good general demand. Black leaf types, suitable for the Middle East, were well supported, but at lower rates. Dooars and Medium Assam Dusts were in keen competition and were an irregular half to one and a half annas per pound dearer.

The strongest feature of the sale were the best CTC Assams with good liquors which were sold well above brokers' valuations, while poorer teas of this description were from ½ to As 1½ per pound dearer. Following rates were quoted per pound:—Medium Dooars Dust Rs 1-7-6 to Rs 1-8-6; Medium Assam Grainy Dust Rs 1-8-6 to Rs 1-9-6 and Best CTC Assam Dust Rs 2-7 to Rs 2-9.



In the Export Quota section, rates moved narrowly between 7 and 9 pies per pound.

In the Cochin market, about 1,180,000 pounds were catalogued for sale last week. There was again a fair selection on offer, but quality was generally irregular. Best high-growns were well supported at irregularly dearer rates, while improved bright liquoring Mediums advanced by As 3 to As 4 per pound. Low Mediums and Commons were sold at about last rates; but a slightly easier tendency was seen for these descriptions toward the end of the sale.

Clean black-leafed Middle East types were sold readily at fully firm prices, but Whole Leaf grades met with a rather restricted enquiry and were irregularly easier. Following rates were quoted:—

Jute Statistics

IT IS some time since I took up for analysis, and recorded here for the information of readers, the various kinds of figures that are to be found in the Monthly Summary of Statistics published by the IJMA. And, as we note each figure of importance in the issue for December, let us see whether we can draw conclusions that would enable us to peek some distance into the future.

The first set of tables, relating to world jute crops, may be said to be an emphatic avowal by industry of disbelief in the official figures. The Pakistani crop for 1955-56 is officially 5.592 million bales. The trade estimate suggests that the figure should be 7.250 million bales. It would appear that Indian estimates today are more realistic than they used to be. The official estimate for jute in India is 4.137 million bales; and the trade figures, which includes the mesta crop, is placed at 5.050 million bales.

No anxiety at all is being entertained about raw jute availability in the current season. The total supply, on the basis of trade estimates, is calculated at 13.977 million bales. Indian requirements, inclusive of IJMA and outside mills consumption as well as other demands, are put at 6.578 million bales. Pakistan is expected to export 4 million bales and to utilise for its jute goods production another 700,000 bales. In the result, the carry-over into 1956-'57 is anticipated to be 2.639 million bales, as compared with 1.323 million bales brought into the present jute year.

That the Indian Jute Mills Industry is not beset by anxiety as to the raw material is attested to in another set of two tables. The first of these indicates that import of raw jute into Calcutta and mill stations in the six months to December 1955 are but negligibly higher than the figure for the corresponding period in the previous year. In fact, import of Indian jute is slightly lower, with the figure for Pakistani jute shown some 200,000 bales higher. The total of import into Calcutta in the first half of the jute year was 3.170 million bales as compared with 3.032 million bales in July-December 1954.

Stocks of raw jute at Calcutta, which had fallen as low as 386,000 bales at the end of September, improved by the end of 1955 to 1.010 million bales; these were due to better arrivals in the last quarter of 1955. Arrivals in July-December aggregated 3.080 million bales—just slightly higher than the 2.965 million bales of the previous year.

Purchases by IJMA mills, however, are running at a faster clip. These were of the order of 3.4 million bales as against 3.1 million bales in the latter half of 1954. Decisions to higher production, favourable prices, and demand for jute goods may, all three, be assumed to have motivated the greater interest in raw jute purchases.

Export of raw jute from Pakistan totalled 2.042 million bales in the first five months of the jute year. This is more or less in conformity with the trade estimate of shipments by that country in the current year.

In the first six months of the jute year, stocks of jute goods were run down by over 17,000 tons. Of course, there was a larger-sized increase in January; but, generally, shipments have been keeping pace with production.

Production of jute goods is running at an annual rate of more than 1 million tons. In the second half of 1955, production was placed at 519,500 tons, or nearly 24,000 tons more than the figure for the relative period in 1954. Strangely, the higher production is largely accounted for by goods other than hessians and sackings: the figure for other products has risen by nearly 15,000 tons to 31,400 tons.

Despatches of gunnies for export purposes show that clearances are 8,000 tons better in hessians in the period July-December 1955; but sackings are, disappointingly, at a level 17,000 tons lower at 228,000 tons; and other goods have fared tremendously well, despatches having mounted from 4,700 tons to 12,300 tons. For gunnies taken together, export despatches are fractionally lower at 454,300 tons against 456,300 tons.

Internal consumption has, however, more than saved the day. Demand for hessians rose by 4,500 tons to 12,900 tons, and for other goods by 3,600 tons to 11,500 tons. Despatches of sackings have expanded substantially from 37,900 tons to 61,500 tons. In the result, total despatches have improved by exactly 30,000 tons to 540,200 tons. It is to be remarked, incidentally, that despatches are running at an annual rate very near 1.1 million tons.

Hessian stocks in the US are remaining steady around 240 million yards. And consumption, except in July, has been consistently above the 70 million yard mark. Consumption in the six months to December 1955 show, at 417 million yards, an improvement of 13 million yards over the previous year.

A hopeful sign for prospects of jute goods in America lies in the prices of packaging materials. While paper is unchanged, over the six month period, at 9.25 cents, cotton has been fluctuating, and the trend is upward: the December 1955 price of 24.48 cents shows an almost continuous rise from 22.17 cents in July 1954. The trend is the reverse in regard to burlap. A high level of 17.47 cents was marked up in February 1955; thereafter, the quotation fell to 14.67 cents in October and, having recovered somewhat, is placed at 15.25 cents in December.

American import of burlap from the Continent is, almost without exception, lower in 1955. But it is to be recorded that imports from Japan in January/September 1955 improved upon the previous year by 4 million yards to be placed at 8.5 million yards. In this period, India has supplied 16 million yards more, and India's share in the total of US imports has risen from 83.2 per cent to 84.5 per cent.

Finally, prices: Assam bottoms touched a high of Rs 28-8 in November 1955, a low of Rs 23-8 in September and were placed, at the end of December, at Rs 27 per maund. The price range for Pakistani Jat bottoms extends from the maximum of Rs 29-8 in November and the low point of Rs 25-8 in August. The end-of-1955 quotation is Rs 28-8 per maund.

Hessian 10 oz have ranged between Rs 37-12 and Rs 42-15; the December price was Rs 41-8. B. Twills fluctuated between Rs 102-8 and Rs 119-4, with the December quotation at Rs 113-12.

*

Listless conditions prevailed in the Jute Goods market during the past week. The reports of an increase in freight rate and the rumours of Russian order excited the market on the opening day of the week; but higher levels could not be retained till the close due to selling pressure in the absence of any confirmation of the Russian order. Moreover, shippers as well as professional operators showed no interest to do any business.

Mills, on their part, could not take advantage of the initial rise in prices as they had little to offer for near delivery. Although they showed some keenness to sell forward, hardly any business materialised.

It is, however, still believed that the increased output which the mills have planned from the 20th February will be marketed without any difficulty whatsoever.

Following were the price ranges:

	Week's Opening Rs. a.	Week's Closing Rs. a.
Hessian:		
40" × 10 Ozs.:		
Ready ..	40 12	40 4
March ..	40 14	40 7
April-June ..	41 0	40 10
40" × 8 Ozs. ..	33 10	33 12
40" × 7½ Ozs. ..	31 6	31 4
Sackings:		
B. Twills—		
Ready ..	115 0	113 8
March ..	115 4	113 14
April-June ..	115 8	114 4
Hy. Cees (Green) ..	113 8	112 0
Cornsacks ..	117 0	116 8
Cubans ..	141 8	140 8
A. Twills ..	139 8	137 4
L. Twills ..	130 8	129 0
D. W. Flours ..	134 0	132 8
Sugar Twills ..	130 8	130 0

In sympathy with the manufactured goods section, the Raw Jute market turned a shade quieter. Although mills showed limited interest in their purchases, sellers were disinclined either to reduce prices or increase their quantities. In general, they appear-

US Notes

INDUSTRIAL production in the United States so far this year has continued at the 1955 record levels despite declines in automobiles and housing. The United States Federal Reserve Board reported this week that January industrial output, adjusted for seasonal variations, equalled the December 1955 level of 144 per cent of the 1947-49 agerage, completing the 19th consecutive month without a decline. The slight decreases in total manufacturing and in durable goods production were offset by high output levels in non-durable goods and in minerals.

Indicative of the strength of overall industrial activity in the United States is the operating rate in steel industry. Steel production in January and early February reached record tonnage levels and was better than 99 per cent of 1956 rated capacity. Outstanding production increases also were registered in lumber and lumber products, paper and printing, crude oil and natural gas, and oil and coal products. Declines were felt in such industries as transportation equipment, metal fabricating and electrical machinery.

Even in automobiles and housing, the January declines were moderate. The number of private housing starts was close to the December annual rate of 1.2 million, while the total of construction contract awards for all types of building continued at an unusually high level for this time of year. Nearly all the decrease in consumer durables output was due to declines in auto assemblies. But, at the rate of about 140,000 a week, these were still close to the record 1915 levels and well above the levels of other years.

There are, moreover, signs of renewed strength in automobile and housing industries. The US Federal Housing Administration has reported, for instance, that more mortgage money has been available so far this year than in the closing months of last year. The officials had been pointing to the shortage of mortgage funds as a reason for recent declines in home building. In addition, F. W. Dodge Corporation construction news and marketing specialist, reports that the January contract awards for residential construction in 37 eastern states totalled $634.4 million, a new high for the month and 3 per cent above the January 1955. Still another January record was set by residential buildings awards, which increased 17 per cent over the January 1955.

Automobile makers and dealers are finding encouragement in the used car market; which has been gaining strength for the past month. Prices of late model used cars have gone up 5 to 10 per cent at wholesale, reflecting relatively low inventories and good consumer demand. One large manufacturer reports that used car sales in January were 13.6 per cent above January 1955.

The recent cutbacks in automobile production may call into play, for the first time, supplemental unemployment, or modified guaranteed annual wage. Provisions were written into industry's contracts with the United Automobile Workers Union last year. So far, layoffs in the industry have affected fewer than 50,000 of the Union's 1.5 million members. Laidoff workers only receive state unemployment compensation, and after June 1 they will be eligible for additional unemployment pay from the auto companies. This additional, or supplemental, compensation will provide 65 per cent of regular take-home pay for a maximum of 26 weeks.

Word that California had approved integration of employers supplemental unemployment payments with state unemployment benefits brought an announcement this week from the Autoworkers Union that Ford Motor Company will be the first manufacturer to put guaranteed wage plan into effect. The California State approval provided the required two-thirds majority of all Ford workers needed to make the plan effective. Nine states in which 70 per cent of Ford employees live and work now have approved the integration. These are Michigan, Pennsylvania, Florida and California.

The annual outlays under supplemental unemployment compensation plan are expected to be rather modest. However, the American automobile workers are looking forward to at least a seasonal upturn in sales and production this spring and summer. Moreover, new 1957 models, expected to be another invigorating factor, will be coming out earlier than usual this year—as early as August in some cases.

Paralleling high levels of domestic activity, the United States trade with the rest of the world also is showing strength in 1956. The Treasury Department reports that US customs receipts in January came to nearly 58 million dollars, about equal to the December 1955, and some 28 per cent above the January 1955 total. These receipts usually are indicative of the import trend. The actual imports last December came to $1,000 million, while in January 1955 they had a value of $870 million. The monthly average for all of 1955 was about $947 million.

The ratio of US imports to the gross national product and the total output of goods and services rose slightly in 1955, according to data released this week by the Commerce Department. In 1954, imports were equivalent to 2.83 per cent of the total output, but last year, while the gross national product was rising 7.5 per cent to a new high of $387,250 million, imports were increasing 11 per cent to a new record of $11,368 million. This brought the 1955 US import level to 2.94 per cent of total national output.

*

Britain

A nuclear reactor, the first in the United Kingdom to be privately owned, designed and built, is to be erected at the laboratories of Associated Electrical Industries (AEI) at Aldermaston, Berkshire, by the AEI-John Thompson nuclear energy group.

The reactor, which will be called "Merlin", is of the water-moderated "swimming pool" type, and will have a maximum power rating of five megawatts. It will use uranium fuel supplied by the UK Atomic Energy Authority. The firm has already selected and cleared the site for "Merlin", and it is hoped that the reactor will be in operation by the end of 1957.

'Merlin" will be used for research purposes, and as the prototype for the research reactors which the group hopes to sell in considerable numbers.

*

Special arrangements had to be made, and a police escort provided, when a giant isoflow furnace for asphalt-mixing was sent on a motor trailer by road from Billingham, Kent, north-west across England to Birkenhead, Cheshire, to be put aboard a steamer for shipment to India.

The cylindrical furnace weighs 12½ tons, and is 12 feet in diameter and 40 feet long. Owing to the length and bulk of the furnace, a police escort was provided to divert other traffic on the narrower stretches of the road to the north-western port.

The furnace, manufactured by a Gillingham firm, is bound for Visakhapatnam for the Caltex Oil Company plant.

*

A contract worth about £750,000 has been awarded by the Tata Iron and Steel Co., Ltd., Jamshedpur, to Simon-Carves Ltd., of Stockport, Cheshire. The order covers the reconstruction of two large coke-oven batteries and the building of 18 new ovens.

Simon-Carves has had a long association with the Tata interests, and has built a total of 216 ovens with an annual carbonising capacity of about 2,000,000 tons of coal. The first three coke-oven batteries were built by Simon-Carves about 20 years ago, and the fourth in 1953.

Under an earlier contract the British firm is already engaged in reconstructing the oldest of the first three coke-oven batteries, and the second and third batteries are to be reconstructed under the new contract. These three batteries comprise 124 coke ovens.

Much of the materials to be used will be of Indian origin, and the work will be done by Indian labour under the direction of Simon-Carves' resident technical staff.

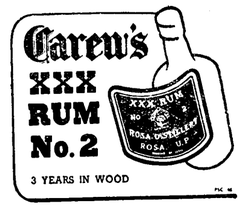
Besides this coke-oven reconstruction, Simon-Carves has recently completed, or is at present engaged in, a number of contracts placed with it during the last two or three years for the building of new steelworks equipment for Tatas at Jamshedpur, including a new steel-melting shop, blast furnaces, ore bins, open-hearth furnaces, soaking pits, and the relining of blast furnaces.

*

Britain's contribution to the scheme for technical cooperation under the Colombo Plan passed a significant milestone this week, with the arrival at London Airport of the 1,000th trainee. "Mr One Thousand" proved to be Mr B. P. Singh a 50 year old blast furnace specialist from Messrs. Tata's big steel works in Jamshedpur, Bihar.

At the request of the Indian Government Tatas have launched out on a vast development scheme designed to boost output to two million tons of steel ingots a year or roughly double present production. The latest plant and equipment going into this £49,000,000 scheme includes a new 28 foot hearth blast furnace with pressurised top arrangement and two units of sintering plant of 2,000 tons per day capacity each. Mr Singh will make a special study of this type of plant during his six months course in Britain, commencing at the Clyde Iron Works, Glasgow.

Mr Singh is generous in his acknowledgement of the help given to him by British experts under whom he has worked at different periods of his career. He looks forward to meeting many of them again as he tours the main steel production centres of Britain this summer.



In his view the Colombo Plan scheme for technical cooperation is a most enlightened gesture by the British Government and industry which is proving of the utmost value to India.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

OFF and on for nearly a year now, I have been discussing in these columns the working papers relating to the Second Plan and the reports of committees set up by the Planning Commission. Now that the Draft Outline is before us in its final shape, I should like to summarise my scattered views. I should also like to examine how far the final draft shows evidence of responsiveness to constructive counsels from the public, including those offered in this journal.

*

To my mind, the most important thing to remember is that the task of national planning should not be conceived in terms of assessment of resources and achievements of targets divorced from the context of basic assumptions on what constitutes a desirable pattern of life. Economic policy being merely an instrument of social objectives, it is necessary to see that social forces released by particular economic acts pursued under the plan are consistent with the needs of the kind of human organisation we consider desirable for our country.

*

The basic values that should inform the human organisation that we desire to build, I suggested in the course of my cerebrations last year, can be tersely summarised in Albert Schweitzer's phrase, "Reverence for Life". In political terms, this would mean a passionate concern for liberty and other democratic values. In the context of economic organisation, it would mean the desire for a mode of organisation that does the least violence to personal relationships by avoiding as far as possible the exploitational nexus between man and man.

*

The realisation of this consummation, I suggested, meant strenuous creative thinking about many things that are not strictly related to the concept of raising of the standard of living. I argued that we now had a historic opportunity to create a pattern of economy that was not a fatalistic copy of the western technocracies but something uniquely Indian. In concrete terms, the idea is to create a balanced economy (which is a better description than the more common "mixed economy") in which the village and the town, the small and large units are governed by the co-operative rather than exploitational relationship to the benefit of the entire community. The Planning Commission have accepted this position as can be seen from some of their observations in the Draft Outline. "The basic criterion for determining the line of advance is not private profit but social gain.....Major decisions regarding production, consumption and investment—and in fact the entire pattern of socio-economic relationships—must be made by agencies informed by social purpose"—statements like these can proceed only from premises of the sort I have indicated earlier.

*

Once economic planning is accepted as an instrument for the creation of an integrated economy, in which no part will be able to live at the expense of another, then the problem is reduced to one of finding out the best way of achieving this end. My suggestion in this context was that our approach should be one of severe practicality without any kind of a priori ideological affiliations. The Draft Outline reveals, in almost every one of its pages, evidence that the Planning Commission have accepted this point of view. The Plan-Frame and the connected papers originally presented for public discussion gave, probably because of the fact that they were necessarily brief and almost in the nature of jottings, an impression of undue rigidity of approach. If this had caused alarm, there is every reason to be reassured that the Draft Outline now published shows a lively awareness of imponderables of the situation. Again and again, the draft emphasises the need for considering the targets as subject to revision as and when the situation demands it. In the words of the draft, "A plan covering a five year period is to be regarded as essentially flexible. The Second Five-Year Plan outlined in this document indicates the magnitude and significance of the tasks to be undertaken, the order of benefits resulting from the developments proposed, and the means and techniques by which resources have to be mobilised and harnessed to the tasks undertaken. The policy implications of the Plan have also been brought out in broad terms. There are naturally uncertainties attached to the various estimates that can be made in advance for a period of five years. It is also possible that some of the programmes set forth in the Plan may take a little more time to complete. In a Plan of the dimensions envisaged, experience may indicate fields where expenditure should be speeded up and others where progress may turn out to be somewhat slower. The Plan has, therefore, to be adjusted and adapted from time to time.....What is required is balance between requirements and availabilities, especially of key resources at all stages. A great deal of continuous technical and statistical work is necessary for this purpose. Moreover, as development proceeds, new problems emerge on account either of development within the economy or of factors operating from without.....In view of these considerations, the Plan must be regarded as a frame work within which more concrete and detailed plans for each year have to be worked out and implemented."

*

After such unequivocal assurance of realism, misgivings of the Plan being a dogmatic steam-roller attempting to mow down inexorably intractable facts of economics as they may unfold themselves are entirely misplaced.

*

The third point stressed in this column was the need for detailed thinking on the administrative and organisational problems connected with the targets of development. I have emphasised that ultimately the Plan is to be considered as a job of work to be done and the hardest thinking will have to concern itself with the creation of appropriate human and physical agencies for the tasks set. I am gratified to find from the Draft Outline that the Planning Commission's approach to the problem is also similar. In the words of the Draft Outline, "In a very real sense, the Second Five-Year Plan resolves itself into a series of well defined administrative tasks." The definition of these tasks, the formulation of the details of the most appropriate physical agencies for carrying them out, the devising of suitable modes of finding the necessary personnel, the actual re-

cruitment of this body of men and the creation of the physical agencies are some of the preliminary tasks: and then follows the more formidable undertaking of the realisation of the ends themselves. If it is remembered that detailed thinking on the lines indicated and full and precise formulation of needs and availabilities on every single target attempted, (including the financial ones) are an essential pre-requisite, some measure of the administrative complexity involved in the execution of the Plan will be had.

★

The next most important aspect of the Plan, and one that may well determine whether the plan will succeed or fail, is its attempt to revitalise our rural life. So much emphasis is laid on the industrial bias of the Second Five-Year Plan, that it is not commonly realised that, in terms of the ultimate ends postulated, the most significant developments will be in the rural economy of the country. It is true that, in terms of investments and allocations of funds, the Second Plan is definitely oriented toward industrialisation. But this is an aspect of our planning which has no uniqueness about it since almost every country that wants to improve its standard of living wants to develop its industrial resources. What would ultimately give Indian planning its distinctive characteristic, and would make it the harbinger of a new way of life, would be the translation in practice of the decentralised pattern of human organisation in which human beings would be able to find their significance both as individuals and as members of a community. The great inequalities of wealth and power that undoubtedly exist among us, and whose reduction is a major objective of the Plan, is to be achieved not merely by increased "socialism" (about which alone we hear querulous complaints all the time), but also by restoring to the common man his humanity by making his activity individually and socially significant. The "atomistic life" to which most people are condemned in an economic set up predominantly urban and industrialised is to yield place to a fuller personal and communal life in smaller and smaller communities. "A vast network of agro-industrial communities producing their vital needs in small co-operative units with the aid of small machines" is the ideal that is to be attempted by the Second Plan. The pattern of economic activity that is to emerge from the pursuit of these aims would be groups of villages having their natural industrial and urban centres which are in their turn related to larger units. There would be a constant process of mutual feedback of prosperity in this pyramidal structure of industry built on a strong and progressive rural base. The town would no longer exploit the village nor would the village remain a stagnant pool of economic misery. The natural equilibrium and co-operative interaction between agriculture and industry, between town and village, would ensure a harmonious economy based on values that prize man's humanity above everything else.

★

In the pursuit of this aim (with which no reasonable man can quarrel), the Planning Commission have shown, as in other things, their severely practical approach. Unlike even the Karve Committee, which seemed to be obsessed with the notion that the case for the small scale industry needed special pleading and was, therefore, inclined to be truculent at the expense of its large scale counterpart, the Draft Outline sensibly desires that the approach should be flexible. The concept of common production programmes is commended and, in the demarcation of spheres of production, it

Bombay Review

"Apparent" Short Supply

I HAVE been feeling for some time that we should have, from representatives of industry, a well considered analysis of what planning, in any particular sphere, would or should entail; and I have been the more keen in looking forward to some such expression, because I believe that, if the Second Plan is to be successfully and triumphantly implemented, we need an awareness on the part of industry of two or three significant prerequisites. Although the Plan-Frame was released to the public last May, I am afraid that mine was a long wait.

True, some addresses and speeches emphasised the need for a proper correlation between activity in the private and public sectors; true, there were other statements which correctly visualised a prosperous India based on the co-operative co-existence of private enterprise and the State. But these, in the past, have largely been in the nature of generalisations; there seemed an unexpressed reluctance to get down to brass tacks, a hesitation to delve into the details wherein it is that both confused thinking and controversy are most likely to prevail.

The last week, in this regard, is much to be welcomed in that it produced just the address that I had been hoping for. The Gateway city was playing host to the annual general meeting of the Indian Electrical Manufacturers Association; and Calcutta's Mr A. R. Driessen has, in my view, pioneered what should be correct viewpoint on industry's attitudes and modes of behaviour.

For, Mr Driessen's point is that, for planning to be productive of optimum results, there is need for co-ordination, firstly as between Government policy and industry's expansion, and secondly as impinging on the industry's production programme and the demand from the end producer or customer. Unfortunately, however, the details in this regard have so far been overlooked.

This is especially so in the industry that Mr Driessen represents. The IEMA, within its eight years of existence, can already speak for 80 per cent of the industry. But the usefulness of the association is being tapped inadequately by Government.

As Mr Driessen puts it, "an increase in production . . . must mean the development of greater strength of associations such as ours and greater co-operation with all Government Departments, if planning and production is to be effective." The failure to realise this need for co-operation will result in 'the pressure of economc forces, the spread of uneconomic and foreign competition" hampering "the progress of the manufacturing industry."

The IEMA President, in indicating that the association could proffer advice and help in a number of ways, has also suggested that it would be able to facilitate Government's task of exerting influence in "whatever direction is deemed wise." Illustrative in this context is the list of methods in which the IEMA could help:

Firstly, in the standardisation and maintenance of quality;

Secondly, in meeting targets set by the implementation of the Five-Year Plans;

Thirdly, in drawing up fair conditions of sale:

Fourthly, in promoting research and development and the standards set by the Indian Standards Institution by adopting the Certification Marks Scheme wherever practicable; and

Fifthly, by developing the electrical export trade.

I should expect that, with such a ready-made association all willing and eager to extend its fullest co-operation, a thoughtful authority would exploit its undoubted usefulness. What has happened, it is sad to relate, is quite to the contrary.

Today, the motor industry is, "heartened and encouraged by the protection granted", in a position to meet the country's requirements up to 100 H.P. Just at the stage when the industry had touched a production level that assured the country's self-sufficiency, the sudden decision came from Government that restrictions on the import of motors from three to ten H.P. had been relaxed. Consequence?

> "As it now stands, a policy has been dictated which will without doubt mean hardship to manufacturers, geared to manufacture this range, and create doubts in the minds of others as to the wisdom of investing further capital in expansions which can be brought to naught by Governmental decisions which are made without taking the affected industry or its Trade Association in its confidence."

If the IEMA's President had, as his only talking point, the complaint that a policy of protection had been reversed, my sympathies would not have been with him. But his contention is quite different. It is accepted policy that Government should, by guiding all planning activity, ensure the best utilisation of resources and thus vouchsafe the swiftest as well as the most co-ordinated industrial development of this country. But it would be folly to think that Government's task lies merely in drawing up targets of achievement; in assessing and, where necessary, mobilising resources; and, finally, in indicating the division of endeavours as between the two sectors. Nor, again, is it enough that Government should, by licences or by incentives, create the conditions in which over-production would be avoided the while that, in another field, output could be raised to the necessary rate.

In planning, it is Government's duty to guard against the possibility of artificial scarcity; for, the consequence would be a decision by New Delhi to allow imports of goods which are apparently unavailable in sufficient quantity indigenously. This is exactly what has happened in regard to electric motors. The Government decision to relax restrictions on imports is almost certainly based on the case made out by a section of the consuming industries that indigenous electric motors are in short supply." This, says Mr Driessen, is "the apparent position because of lack of planning by the indentors in respect of their motor requirements." How this comes about is best described in his words:

> "It has been observed that, while much planning is done by certain industries to increase productivity by investing in new machinery, little thought is given to the prime movers, the electric motors, so, it happens that modern fast machinery is installed, and the motors, without which the most modern piece of machinery is apt to become something extremely useless, not placed on order until the machinery is in position and ready to start. When in these instances, and they are quite numerous, the indigenous manufacturer quotes a delivery from 3/5 months, there is an immediate outcry for imports."

What happens in the motor industry, may quite as easily be the experience in other sectors; and, it may be that, although we might possess the installed capacity, we may be forced to fritter foreign exchange on import of goods for which orders had not been placed in time with indigenous manufacturers.

Frankly, we cannot afford any misuse whatever of foreign exchange. Planning presupposes foresightedness; it is the negation of the eleventh hour order. There are not a few items of manufacture whose production can be taken on hand only against specific orders; and, in a country such as ours, there is unlikely to be that comfortable surplus of production always available for meeting demand. What, thus, is needed is co-ordination along the lines I have indicated at the beginning of this Gossip.

On the one hand, liaison between industry and Government must improve. Indian industry can produce the goods, and in many spheres ensure that development is not impeded because of material being unavailable; it, however, is entitled to some notice of demand. If Government and industry are in close touch, then the former could be fully seized of the capacity of the latter to meet demand, and would, consequently, avoid being misled about indigenous availability. Mr Driessen asks: "May I prevail upon Government, therefore, to scrutinise more closely requests for import licences not only for motors but for all manufactured goods that are submitted on the plea that the delivery quoted by the indigenous manufacturer is too long?"

On the other hand, there is the need for co-ordination between production by the primary industry and the anticipated demand of the end manufacturer. It is here that emphasis has to be placed on the details of planning. The industrialist who plans for expansion sees his duty clearly that he has to obtain the necessary sanction from Government for the import of goods not made within the country. But it is as much his duty to make appraisal of the goods which he will need, and which are available indigenously. And, for this second set of goods, the industrialist should see to it that his orders are placed well in time.

Here, Government too may be said to have a responsibility. If planned development is their aim, they should also insist that foresighted planning is also part of the industrially-minded entrepreneur's thinking. This is what Mr Driessen says: 'May I prevail upon Government to answer such requests (for import of goods apparently in short supply) by insisting on better forward planning so that an equitable even machine loading is assured for those whose business it is to keep the wheels of industry turning?"

There are many other points discussed by the IEMA President; but I do not have space for them. What I consider is most important in his speech is that he should have drawn attention to the neglected aspect of planning. I am hopeful that Government will take due heed of the necessity for co-ordination.

Gateway Notes

What Aggravates Unemployment

Analyses of the unemployment situation frequently seem merely to skim the surface, finding vent in generalisations and tracing the evil entirely to the curse of over-population. The assessment recently given by Bombay's Regional Employment Liaison Officer is certainly of a different sort and is based on his own personal experience of the working of the employment exchanges.

During the past three years, the number of persons registered with employment exchanges was steadily mounting while number of vacancies, particularly in the clerical cadres remained almost stationary. Giving exact figures Mr Kokral said that the number of the registered unemployed has risen to 6,95,000 from 4,37,500 in 1952. It is in finding the reasons for this intractability of the situation despite the apparently full-fledged governmental attack, that Mr Kokral's views are helpful.

The main reasons are the large influx of rural population into urban areas and secondly, the growing reluctance of educated people to take up jobs in rural areas or those which had anything to do with manual labour. These facts are not new but it is doubtful if they are being sufficiently appreciated by those seeking to set matters right. The word 'educated' is understood to include matriculates also. If the current plan to train matriculates into skilled labour is to succeed the widespread apathy toward manual labour must go. For this a lead can come only from the upper classes of society. Otherwise, the psychological barrier, which Mr Kokral refers to, will remain impregnable.

Influx into urban areas is due therefore to preference to soft jobs, but, as is well-known it is also the effect of pressure on land and under-employment in agriculture. The land reforms, however much they promote distributive justice, cannot claim to counter this trend. What is possible is to secure proper balance between rural and urban development.

Regionalisation in respect of new undertakings with employment potential is necessary in view of the extreme immobility of candidates which Mr Kokral reveals. This is a difficulty which the candidates as well as the exchanges feel acutely. It is pointed out that often a candidate in Bombay, asked to appear for an interview at Jamshedpur at his own cost, is compelled by the cost involved to decline the chance of getting employment.

Another fact about the employment exchanges cannot be overlooked. They have to depend mainly on Government departments, because many employment avenues such as municipal corporations, port trusts, railways and most of the private firms do not refer to the exchanges at all. The number of candidates available being large, it is not infrequently that private employers could pick and choose their staff at sub-standard wages.

*

Governor's Stock-taking

Bombay's legislators made a business-like start last week on the budget session which is likely to be one of the most important in the State's history. The Governor's inaugural address made a thorough stock-taking of achievements under the First Plan. Bombay's record in this respect is as impressive of that of any other State. The Governor also paid handsome praise for the law and order machinery which, few would deny, tackled a politically serious situation with commendable agility and resourcefulness.

The fact that the State achieved the target for development expenditure in the First Plan, while many other States have not, is a tribute to the administration. Apart from the originally proposed figure of Rs 146.31 crores, the State could muster and spend Rs 1 crore on projects taken on hand and also divert another Rs 6 crores toward community development and other Centrally sponsored projects . All these bespeak careful and efficient husbandry, the most important feature of which was a gradual increase of additional taxation accompanied by expenditure cuts in strictly non-developmental fields.

Some of the legislative measures pushed through during the last five years are so progressive and far-reaching as to deserve special mention. The Bombay Tenancy and Agricultural Laws (Amendment) Bill, which awaits Presidential assent is one. It fixes ceilings on agricultural lands, confers occupancy rights on tenants, and promotes more equitable and economic distribution of holdings and also gives an impetus to cooperativisation.

The Co-operative Movement provides yet another unique achievement by the State. The present number of societies stands at 18,847. The implementation of the Rural Credit Survey's recommendations has gone the longest way forward in the State. The pride which the Governor felt is quite justifiable.

The improvement in public health, testified by a significant lowering of death rate and infantile mortality, is another feather on the administration's cap. Big strides have also been taken in the provision of housing particularly for industrial labour. An example was set by the State in fostering harmonious industrial relations; the bonus pacts of Bombay and Ahmedabad (covered earlier in these columns) have chalked out a direction which other industrial centres may profitably follow. The spread of higher technical education is indicated by the fact that the State has at present eight engineering colleges, whereas in 1947 it had only one.

A fair beginning has been made but great leeway remains to be made up. Tremendous effort from all sections of the public is called for the realisation of the State's Second Plan which is of the size of Rs 264.4 crores, the biggest plan for any State in the country. It is hoped that this will be forthcoming in spite of any division of the State.

*

Sugar Industry Reviewed

The Chairman of the Bhopal Sugar Industries Limited was able to strike a generally encouraging note about the position and prospects of his own company as well as the industry as a whole. The 1954-55 season was phenomenal in that sugar production in the country reached a record figure of 1.6 million tons which represents a rise of as much as 57 per cent over the previous season's output of 1.02 million tons. The main reason for this result was the increase in the supply of sugarcane to the mills following the diversion of more cane from gur to sugar manufacture. To a lesser, but significant, extent, the crop-position has improved, the aggregate crop for the season being 49.91 million tons as compared with 46.11 million tons showing a 8 per cent increase.

Equally commendable was the performance of the Company. The turn-over rose in 1954-55 to 40,242 bags from 36,289 bags in 1951-52 and 37,900 bags in 1953-54.

The import position is also tending to become more satisfactory as a result of the sizeable stock that is being built as reserve. During the season 5 lakh tons of sugar was imported. This enabled to have a carryover of 4,50,000 tons. With this carry-forward position it might be possible to do away with imports in the near future.

The repercussions on the sugar market were however, not equally satisfactory. Higher production led to a sharp fall in prices. Government encountered difficulties in disposing their imported stocks. This was aggravated by poor storage facilities. Consequent on the low prices the additional excise duty of Rs 1-14 per cwt fell entirely on the industry. Also as the buying capacity of the farmer fell the tendency is to switch over to gur from sugar. This last aspect evidently does not lend itself to any quick remedial measure.

Neither Government nor the industries however, deterred from pursuing the ambitious scheme for stepping up the production capacity by over 56 per cent in the next five years. Already licenses have been issued for 39 new factories and for the expansion of 44 existing ones. More licenses are reportedly in the process of being issued. It is a gratifying feature that many of the new factories are to be set up on cooperative lines. In such an event, extra care will have to be taken to see that delays do not occur in the process of implementation.

Regarding the shifting of unsuitably located factories, it is being realised that it would be more economical to develop cane cultivation in the area of the factories.

Seth Amersey aired a special grievance when he criticised the Bhopal state levy of five annas in the rupee on agricultural profits of companies, without making provision for depreciation of machinery or for the carry-forward of losses.

The internal finances of the company are as strong as ever. The working during the year resulted in a profit of Rs 2,79,190 after providing for the statutory depreciation of Rs 1,60,680. With a carry-over of Rs 38,000 from the previous year, the company has for appropriation a sum of Rs 3,17,191. As the crushing capacity of their plant at 1,00,000 bags is much ahead of current production, expansion programmes do not come up immediately for consideration.

*

Mr Desai on Nationalisation

Declaring open the Ahmedabad Mill Owner's Association's Rs 12 lakh Le Corbusier building, Bombay's Chief Minister was in a mood to stray into sociological digressions. He was addressing the representatives of an industrial group which produced one-fourth of India's total cloth output, employed 1,30,000 workers and had building and machinery worth Rs 38 crores.

Olympus

Distorted Perspective

AS at Amritsar last week and in the rest of the country for the last few months, there was, in the debates this week in both houses of Parliament, a general lack of sense of relative priorities in national tasks. While there was much in the President's address that could and should interest the law-makers, there was an almost automatic tendency to deal exclusively with the issue of re-organisation.

The President himself had made but the barest reference to it, as indeed he could hardly have helped in view of the happenings in Bombay and Orissa. But he had put it in its proper place by stating that "States Re-organisation was an important matter and we must apply all our wisdom and tolerence to it: but in the larger perspective of India's future, it is a small matter what administrative foundaries we prescribe for a state."

In the debate that followed, however, there was little evidence that the truism had gone home. In many respects it is a pity, because it reveals a lamentable sense of relative urgency and importance in a body that is supposed to represent the best political talent in the country. It is true that none can ignore the fact that States Re-organisation has constituted the greatest single challenge since independence to our political maturity. It is true that incidents line those that happened in Bombay and Orissa in the last few months cannot just be ignored.

But there was much else that has happened in the country since the last occasion the President spoke to the Parliamentarians, and much of it was at least as important as the proposals for realigning state boundaries. There was, to confine ourselves to internal affairs, the publication of the draft of the Second Five-Year Plan, the successful implementation of which can without exaggeration be considered the acid test of our ability to order our affairs satisfactorily. Almost next to nothing was said about it.

Again, the millions of persons who have worked hard to make the First Plan the success it has been would be puzzled at the legislators' indifference to what they were told was a matter of life and death for the people of this country. Surely, these people deserved a word of thanks from the men who rule the country.

The predominant impression that one has of this session of Parliament (which, however, is only a week or so old and may, therefore, get livelier) is a certain listlessness and lack of parliamentary and legislative purpose. Almost everyone is obsessed with the confused political picture the country presents today; but few have the serene confidence that the current confusion will clear up.

The news of the sudden death of Dr Saha, one of the more informed and active members, and later of Acharya Narendra Deva, and also the news of the illness of Mr Mavlanker, the Speaker, have added to the atmosphere of mournful apprehensiveness. With vital legislative business in front of it, including the debate on the budget of the first year of the Second Plan, the legislators have to shake themselves free from the apathy that has apparently taken possession of them, if they are to do anything useful at all.

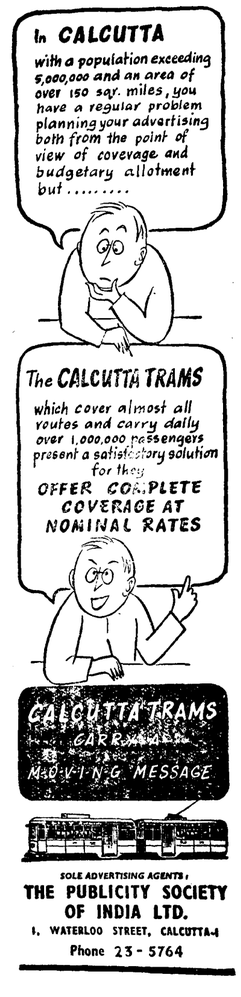
On the subject of States Reorganisation itself, the most bewildering variety of counsel was heard. The opposition was also not unanimous, and even members of the same party gave different solutions.

Mr Kripalani suggested that the whole affair be shelved for some years, so that the entire question can be considered in a calmer atmosphere. Mr Ashoke Mehta suggested that the only solution for Bombay was to make it a bilingual state, a suggestion interesting because of his earlier views regarding enlarged powers for Bombay corporation within Samyukta Maharashtra and also because of his party's adherence to the principle of unilingual provinces. This view contrasts also with Jayaprakash Narain's stand against the proposed merger of Bihar and Bengal.

The Communists, whose spokesmen in both the houses of Parliament came from West Bengal, concentrated their attack on the proposal for merger of Bihar and West Bengal. They repeated their thesis that the only solution was linguistic provinces and held out all manner of dire threats if the "struggle they do not want is forced on them."

Mr Gadgil, who spoke with evident emotion, wanted an inquiry held on the Bombay incidents in view of the Bombay Chief Minister's accusation that the disturbances were directed at taking Bombay by force.

Mr Kripalani also was stung to the quick by suggestions, especially from Mr Pant at Amritsar, that the disturbances were engineered by the opposition. He argued, with some logic, that passions were whipped up as much by Congressmen (and responsible congressmen at that) as by the members of the opposition. He singled out the activities of the Maharashtrian Congress Committee for special mention in this context. He also criticised the Government for not having consulted the opposition and for having generally allowed the situation to drift toward confusion by lack of a firm policy. More constructively, he suggested that the whole question should be allowed to await a calmer atmosphere and, meantime, the economic tasks should be pursued with vigour.



As already stated, the other aspects of the President's address were hardly debated expect in the most perfunctory way. Foreign affairs, which used to evoke a great deal of interest in the past, was not debated seriously at all. The President's reference to 'his Government's deep regret" at the American Secretary of State's reference to "the Portuguese conquests abroad as provinces of Portugal" and his other references to the Baghdad Pact and refugee influx from East Pakistan evoked but little comment.

The Communists, who usually spread themselves over foreign affairs with condescending and qualified praise of Government's policy, showed surprisingly little interest on the subject. One explanation may be that they were too exercised about the linguistic provinces, in which they rate the prospects of their party political fortunes as bright, to bother about other things. Another cynical explanation that is heard is that the most recent volte-face in Kremlin, shattering to smithereens the venerated icon of Comrade Stalin, has the Indians Communists guessing still about the most appropriate thing to say about foreign affairs.

The subject of economic planning was almost entirely ignored except by Mr Kripalani, Mr Ashoke Mehta and Mr Nanda. Mr Nanda made a serious attempt to turn the attention of members from States Reorganisation to Planning. Mr Mehta, who is always a rewarding debater to listen to, argued that the full benefits of planning have not been reaped by the people. He described the economic development in the country as one of "growth and stagnation" at the same time. None will quarrel with his suggestion that the Government should not, in matters of economic development, think in terms of "this side or that side of the House," and that 'we should put all our energies and thoughts together and find out what will be proper solution for the various problems."

The President, summed up the events at home and abroad thus: "The past year had been one of considerable endeavour and achievement for us, both in the domestic and international spheres. Our people and our Parliament may, with reason, look upon them and their own labours with satisfaction and cautious optimism." This, as any reasonable man would agree, is a fair assessment.

But that is not the impression that one gains from the mood of the parliamentarians gathered here. It is of utmost importance that, if they are to justify the trust put in them by their constituencies, they should make a determined effort to shake themselves free from obsessions over state boundaries and address themselves to the strenuous tasks of thinking on more important problems. In a session in which important legislation settling the pattern of future development is to be debated, apathy to their real tasks would be inexcusable.

North Indian Notes

New Deal for Labour

By and large, industrial relations have improved perceptibly in the past few months; and the stimulus has come not mainly from statutory measures. Therefore one of the criteria that has to be employed in viewing the chapter on labour in the draft of the Second Plan should be whether the proposals are conducive to industrial peace through the voluntary effort of labour and management.

The Planning Commission's Labour Panel endorsed last week almost all the proposals included in the Draft Outline. One of the major decisions taken was that 'management councils' consisting of representatives of management, technicians and workers should be set up. Incorporating a suggestion from the Finance Minister, it was agreed that it should be the responsibility of the management to supply all relevant information to enable the councils to function effectively.

Secondly, it was decided to set up wage boards for the various industries and to undertake a wage census to be followed up later by a wages commission. The stipulation of minimum wages may be presumed to have received high priority.

Thirdly, the employees' provident fund scheme is to be extended to all industries and commercial establishments having a minimum complement of 10,000 workers within the country. The rate of contribution is to be increased from 6¼ per cent to 8 1/3 per cent. This step is calculated to serve a dual purpose: to provide better security to the workers and to secure more funds for investment.

Fourthly, suitable special machinery in the form of a standing industrial tribunal is to be set up. Parties mus have direct access to this body in order to get awards implemented. The present system of punishment by fines for non-implementation is considered insufficient.

Finally, efforts are to be made to strengthen the trade union movement. But efforts toward this end have, to come primarily from within the movement. For this, the internal finance of the unions have to be improved.

These proposals constitute only an outline which will be filled in the course of the plan.

✱

Railway's Annual Report

The outstanding feature of the Railway Ministry's annual report for 1954-55 is the new peak touched in both goods and passenger traffic. This indicates a trend that is likely to continue and bring unprecedented pressure on railway capacity. It also strengthens the hope that the railways will be able to cope with the demands of the future.

During the year, the goods traffic handled reached amazingly high figures which have not been reached even at the height of the war-effort in undivided India. Passengers numbered 1259 million and the number of passenger miles increased by more than 1,000 million over the previous year to reach the all-time record of 37,549 million. It is important to note this improvement was possible as much by the implementation of the Efficiency Bureau's recommendations as by expansion of the system. Even then the railways do not claim that the standards of efficiency have been as high as desirable. Therefore, the contention that much of the scarcity of finance for railways under the Second Plan can be made good by tightening efficiency measures, stands to gain greater practical validity.

The significant rise in earnings has to be viewed in the background of the new undertakings already taken or to be immediately taken on hand. The gross traffic receipts amounted to Rs 286.78 crores. Passenger earnings totalled Rs 102.62 crores, the goods earnings Rs 158.67 crores, the balance of receipts amounting to Rs 25.47 crores being contributed by parcels, luggage and other miscellaneous sources of revenue. The ordinary working expenses came to Rs 205.87 crores which is Rs 4.40 crores more than during the previous year. The appropriation to the Depreciation Fund was Rs 30.37 crores inclusive of Rs 37 lakhs chargeable to capital. Payments to worked lines as their share of net earnings amounted to Rs 22 lakhs. The operating ratio was 81.77 per cent as against 85.06 per cent the previous year. The net surplus which is being allocated entirely to the Development Fund was Rs 9.10 crores compared to Rs 2.56 crores in 1953-54 and Rs 13.19 crores in 1952-53.

The total capital outlay, at the end of March 1954, on all lines including those under construction was Rs 910.91 crores against Rs 878.46 crores in the previous year.

Fresh strides were taken in several new directions. Bringing in some uniformity in the type of amenities given to the different classes of passengers is one. Chittaranjan Locomotive Works turning out one locomotive every third day is another cause for just pride. Commendable progress has been achieved in the provision of staff quarters.

Looking to the future, the most important task of the Ministry seems to be improving the level of operational efficiency. Results so far achieved in this respect are encouraging but far from what seems to be possible.

✱

TCM to help Education

That good sense prevails in Indo-US relations is once again demonstrated by the signing of an agreement last week between the US Technical Co-operation Mission to India and the Government of India. It provides for technical tassistance and instruction equipment and supplies to help the programme to reorganise and strengthen secondary education in India. The agreement operates for a three-year period, from 1956—1959.

Primarily, the programme intends to train secondary school teachers in both the pre-service and in-service levels. This would mean that the existing training institutions will have to be expanded and the training extended, detailed plans for which have already been finalised. The assistance of the Ford Foundation will be called in planning, financing and conducting the schemes. The whole programme is under the supervision of the Ministry of Education. This is as it should be, for otherwise it would be found difficult to dovetail the new scheme with the existing system, which however inadequate, can be disrupted only at peril.

Among the specific objects sought to be achieved are the introduction of modern curriculum, planning procedure, production of various curriculum materials and aids and improvement in the methods of examination and evaluation.

The outline of the scheme given to the press leaves the agreeable impression that the change is to be effected in stages spread over three years. During the period, 53 training institutions will be covered. Uniform response and co-operation from the State Governments are necessary for the success of the programmes. All the States should be called in at the earliest stage itself for participation. It is necessary to emphasise this as there have occurred disparities between the approaches of the Centre and the States in planning education.

It would be wise that the Centre keep itself in the background and interfere only to the extent of giving financial assistance and general guidance necessary to co-ordinate the work in the different regions.

Specialists from American Universities are to be assigned to India and the total cost of the project is estimated at 1,206,900 dollars. This is to be met by the International Co-operative Administration and the Government of India.

✱

Power for Kashmir

Power generation in Kashmir has gone up significantly during the last five years, but still the capacity bears little proportion to the barest of needs. There are still major towns unelectrified. Several stations, where the possibility of power from water is very remote, call for installation of deisel engines. As for the Jammu area a reliable source of power will be the Punjab Hydro System and already an agreement is reached with the Punjab Government for the supply of 1,500 Kwts. A 70 mile single-circuit line has been constructed between Pathankot and Jammu town.

Two of the five public utility power stations which served the State before the commencement of the plan are now in territory held by Pakistan. The condition of the remaining were bad and consequently the supply position became unsattisfactory. Besides the Jammu-Pathankot line, the First Plan, took up four other schemes, namely, the Sindh Valley Scheme, the Lakhampur-Aknur Line, the hydro-electric power station at Mohampur and, finally, small power houses at Badarwah Basohli, Ramnagar and Rajouli.

The Sindh Valley scheme comprices a diversion weir across the Sindh River, some 20 miles off Srinagar. The total cost is over Rs 30 lakhs. Two sets of 3,000 Kwts each have been commissioned and two more at a cost of Rs 46 lakhs are blue-printed under Second Plan.

Sugar Production Estimate for 1955-56

REPORTS about Sugar point out to a record output in the 1955-56 season and the possibility of a huge carry-over again in view of the demand likely to remain unchanged. Output in the 1954-55 season was itself an all-time record of 15.94 lakh tons as against only 10.01 lakh tons in the previous season. Production prospects for the current season are even better and are estimated at around 23 lakh tons.

The latest available figures show that the production of sugar upto 22nd January 1956 totalled 609,969 tons as against the corresponding production last year at 569,037 tons, while the closing stocks on the same date were 688,970 tons as against 482,995 tons last year.

According to recent official statements, 42 existing factories have already been licensed to expand their capacity. Moreover, licences for setting up 39 new factories with a total capacity of 3.9 lakh tons have also been granted. Thus, a total additional production capacity of 6.25 lakh tons has so far been licensed.

The ultimate production, however, depends upon the supply of cane to the factories. But there are reports that a sizeable quantity of cane is now being directed to sugar factories during the current season in view of the low prices obtained for gur. Another favourable factor is an increase in cane production. It will, therefore, be fairly correct to guess that supplies will be steady.

Provided prices remain remunerative—there is every reason to expect them to be so—the output of indigenous sugar will be around 18 lakh tons. Including the carry-over, the total available supply will be a little over 23 lakh tons, while consumption is unlikely to be more than 18 lakh tons.

Meanwhile, pre-Budget caution accounted for small trading and dull conditions in Sugar markets. Prices, however, ruled steady on persistent rumours of an increase in excise duty. Following were the mill delivery rates (per maund):—Jaswant Rs 28-11; Simbhauli Rs 28-14; Daurala Rs 29-4 to Rs 31-0; Amroha Rs 28-4; Bijnore Rs 28-4; Mansoorpur Rs 29-8 to Rs 31-0 and Ramyur Rs 32.

✱

Conditions in the Gur market continued to remain depressed though a slight improvement in prices was noticed toward the close of the week in view of the restrictions on loading facilities. Also, outside buying enquiry was slack. The rate for the ready position was quoted at Rs 10-4 per maund.

Daily arrivals have, however, increased to an average of 3,500 maunds, while stocks are estimated at as much as 95,000 maunds. Total arrivals, since the beginning of the season, are estimated at 3.85 lakh maunds as against 4.5 lakh maunds by this time last year.

✱

In the Hapur market, Foodgrains prices ruled steady. The ban on the export of foodgrains and the decision to expedite imports suggest that the Government of India are determined to check the upward trend in prices. The immediate possibility of direct control being reimposed is, however, ruled out.

Wheat recorded a gain of As 4 to Rs 14-8 per maund for average quality. Despite easy supply position, Rice also recorded a modest gain, and the rates moved between Rs 24-0 to Rs 32-0 per maund, according to quality.

All other Coarse cereals recorded gains, Barley quoting Rs 10-4; Bejhar Rs 9-12; Maize Rs 10-8; Bajra Rs 8-14 and Jowar Rs 10-8.

Fast decreasing stocks on good offtake accounted for an appreciable rise in the prices of Pulses. Peas dara quality improved to 9-8 and Arhar to Rs 11-4 from Rs 8-8 and Rs 10-8 per maund respectively.

The Delhi Grains market ruled quietly steady and rates moved within a narrow range. Farm wheat prices were steady, while dara quality was quoted As 4 per maund higher. Rice steadied up by about As 8 to Re 1 per maund. Gram strengthened by about As 10, induced by higher outside reports and better demand. Jowar, Maize, Barley and Bajra were in good demand. With the result, the rates improved modestly. Owing to better stocks, dara Moong remained unchanged.

A smart all-round rise in Pulses provided the main feature of trading in the Bombay grains market. The Government's permission for the export of pulses against commiments entered into before the announcement of an earlier ban imparted fresh strength to the market where exportable qualities recorded a sharp rise in prices. The shortage of ready stocks was another contributory factor.

The bu'k of the business in the Wheat section was mainly confined to deals in the supplies bought from the Government godowns. These stocks were reported to have fe'ched prices ranging from Rs 130 to Rs 135 per candy. Arrivals of indigenous wheat from upcountry centres were small due to availability of good quality supplies from Government godowns.

Higher upcountry advices and good local demand accounted for a rise of Rs 5 to Rs 10 per candy in the prices of old crop Rice. Rates of Burma rice, however, kept quietly steady.

SOUTH INDIAN MARKETS

Hides and Skins Market in Doldrums

IT might be recalled that the Southern India Skin and Hide Merchants' Association recently passed a resolution to stop business for a period of two weeks. Last week, however, they decided to re-open trading, but shippers were requested not make large offers so as to tone up the market. But cabled advices from London indicate that, in spite of this resolution, large offers were made, resulting in a further set-back in prices. It is reported that even at the low prices at which offers were made, business failed to materialise.

In spite of the dull conditions of the market, production of Kips by tanners does not seem to have been curtailed as arrivals have continued to be as before. While E. I. Kip linings are the cheapest in the world today, the factories in the UK are taking up to a large use of chrome leather for the upper purposes also. Thus, the market for hides and skins is still in the doldrums, and even signs of any recovery in prices are not visible.

Meanwhile, arrivals of Cow hides in the market were fair during the past week though clearances were slow. There was a further decline in prices by one to As 1½ per pound. Although arrivals of Cow Calf and Buff Calf hides were fair, trading was difficult, resulting in a drop in prices by one to two annas per pound. Buff hides were available in fair quantities and prices for these were easier by three to six pies per pound.

In the export section, UK buyers showed limited interest. 5/5½ lbs were offered at 50d, 47d and 45d respectively for runs, fourths and fifths. Although run selections of Cow Calf were being sold 3d lower than the peak levels, fourths were cheaper by 6d. Top selections of Buff Calf registered a decline of 1d to 2d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were fair; and there was satisfactory clearance though prices were cheaper by As 2 to As 3 per pound.

In the export section, foreign buyers were reported to be making bids for Goat skins at 6d less though stray transactions at unchanged prices were also done.

✱

The Madras Groundnut market ruled quietly steady. As there were no keen byers or sellers, turnover was small. Daily arrivals amounted to 40 tons a day, and these were taken up by small crushers. The rate for superior oil-quality seeds was quoted around Rs 136 per candy, while bold variety was done at Rs 131 per candy.

In the Groundnut Oil section, the rate for the ready position, after opening at Rs 272, declined toward the close to Rs 264 per candy. February delivery was quoted at Rs 262 and March at Rs 261. Business was mainly cofined to the ready and near-delivery positions.

There was no business with foreign buyers. Rates were nominally quoted at £120 per ton for the UK and the Continent, and £124 to £125 per ton for Italy.

✱

The market for Pepper continued to improve, the rate being quoted better at Rs 875 per candy for Wynaad quality and Rs 850 for the Country variety in the Kozhikode market. The lowest rate touched so far was Rs 750. China is reported to have purchased 300 tons, while Russia has purchased 1,000 tons for February shipment and 1,000 tons for March delivery.

Abatement of selling pressure at this time of the season is viewed with optimism, as opinion among the trade is veering round the fact that the crop in the Calicut area may be less than expected earlier. Moreover, a broadening of demand is expected, particularly from New York where dealers are reported to be awaiting Malabar to reach the bottom before putting in any sizeable buying.

Earnings from the export of pepper during 1955 were about

Madras Review

The Peninsula

Prospects for Dakshina Pradesh

THE hartal organised by a combination of Opposition Parties in Madras has ended in such a way that both the organisers and the Government who opposed it could both claim success. It was by no means a full-fledged hartal; in the City transport service ran fairly smoothly and large sections of the workers did not respond to the call for a general strike. But some factories remained closed; and a large number of shops and restaurants.

Considering the traditional pattern of similar demonstrations in Madras, it cannot be denied that the hartal was a partial success; the Government have the satisfaction that they could effectively limit its scope. The demonstration was intended as a protest against the formation of Dakshina Pradesh State and against the decision of the Union Government in respect of certain border adjustments between Kerala and Madras.

Strangely enough, the proposal for Dakshina Pradesh has yet to take a precise and stable content. It can be a combination of Kerala and Madras, the Tamil and the Malayalam speaking areas. It can as well be a combination of Kerala and Mysore, in which case it will be Malayalam and Kananda going together. It can also be a combination of all the three.

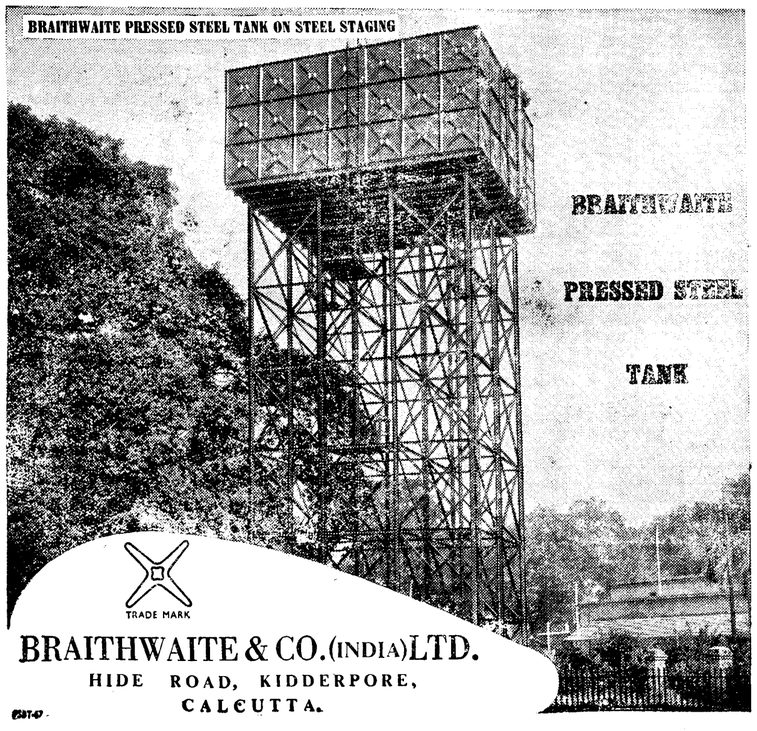
There is still a further possibility. A combination of Mysore and Andhra was suggested as an extra incentive for the recalcitrant leaders of Telangana, with a view to secure their approval for the immediate formation of a single Andhra State. The re-union of Andhra and Madras is also not wholly ruled out. Nor is the exaltation of the zonal council for the South into a regular Southern State, including all the four linguistic regions.

What is significant and remarkable about the proposal for Dakshina Pradesh is that except the Chief Minister of Travancore-Cochin, no other head of Government has made even an informal commitment. The Madras Chief Minister, though apparently personally favourable to the move, has indicated his desire to have a full idea of the measure of public response. Mr C. Subramaniam, Madras Finance Minister, is openly enthusiastic; but is restrained enough not to make any revelation of his Cabinet's intentions.

Amidst the many-sided talks, which are reported to be in progress, it is difficult to determine the source and direction of certain initiatives. For instance, talks are going on betwten the Mysore and the Travancore-Cochin authorities for a mutual merger. If these talks are being carried on simultaneously with similar parleys between Travancore-Cochin and Madras, there is bound to be all-round uncertainty and embarrassment.

The potential Kerala States; (or to be more precise, the Congress executive there), would give the impression of being keen on winning the affections of one or the other of its two neighbours, no matter which, irrespective of other important material considerations. Offer of a merger with Mysore will weaken the position of Kerala in its talks on a similar purpose with Madras, especially when there is strenuous opposition from non-Congress parties to the union of States anywhere. Though the Congress Party, on the whole, is willing to abide by the directive of the High Command and the Union Government, there will be scarcely any support in Andhra for a merger with Madras.

Two parties, claiming to be motivated by the desire to uphold local culture are keen on changing the name of the Madras State into Tamil Nad. These parties, who along with the leftist groups are wedded to the linguistic idea, resist the proposal for a Union with Kerala on the ground that there will be an inevitable mixture of cultures in which the purity of the State language will be completely destroyed and the State's administrative service swamped by a section which is now being looked upon as exotic. The greatest argument for a merger between Madras and Kerala is that the affinity and "mutual understanding" between no other two languages is as close as between Malayalam and Tamil.



A definite lead was given by the Mysore Pradesh Congress Committee which met soon after the Congress Session. The Committee has expressed itself in favour of a multi-lingual State, including all the four linguistic units of the South; and in the event of such a common unit failing to receive all-round support, the creation of two by-lingual States namely, Mysore and Andhra and Kerala and Tamil Nad.

The latter suggestion is inspired mainly by the fact of natural affinities between the two groups. The Committee is not averse even to a union of Kerala and Mysore, as it sees obvious advantages in such a State. For instance, it is pointed out that the combined Kerala and Mysore State will have one of the longest sea-boards in India, a continuous stretch of the Western Ghats and a more or less uniform agricultural pattern.

Mr M. V. Krishnappa, Union Deputy Minister for Food and Mr H. C. Dasappa, M.P., who have issued a joint statement on this meeting of the Mysore Pradesh Congress Committee, are happy that Mysore has taken up a very liberal attitude "worthy of imitation by other linguistic groups. We only hope that should any other State wish to join the United States of Kerala and Karnataka, it should be open for it to do so."

Meanwhile, it is reported that settlement has already been reached for the formation of a single Andhra State with Telangana

Madras Review

South Indian Notes

Land Development Banks

With increasing emphasis being laid on agricultural production, attention has naturally been bestowed on the essential prerequisites to such development. It has been found that one of the requirements —the availability of medium and long-term credit—is insignificant. The inadequacy in this regard is all the more glaring because land mortgage banking, an eminently suitable system for reaching the necessary credit facilities to the agriculturists, has been in existence in the country for the past fifty years.

In common with the Cooperative Movement, land mortgage banking in India, has also followed an irregular course and has made some headway only in five or six states. More than half of the States are without a single land mortgage bank. In Madras and Andhra however, it has found congenial soil. Out of a total of 269 primary and large land mortgage banks in the whole of India, as many as 130 are accounted for by the above two States.

Even in the case of the two southern states in which the movement has apparently taken root, land mortgage banks have not brought much benefit to the main agricultural population. The All-India Rural Credit Survey Committee have found that land mortgage banks in Madras and Andhra are completely lacking in the machinery for coordinating their loan policies with that of a programme of land development in one or more areas. A study of the purpose-wise classification of loans from these banks in the two states shows that 95 per cent of the loans is given for repayment of old debts. A more detailed examination of the loans advanced in recent years will reveal that the percentage of small and medium sized loans has fallen while that of the large sized ones has increased. In other words, the banks are increasingly catering to the needs of the big landowners. Other drawbacks found by the Committee in the system are the lack of provisions for the grant of loans for shorter periods for the purchase of machinery and equipment and for land improvement.

The Committee have recommended that each state should have a Central land mortgage bank. In this connection they have suggested that in view of their main function, the banks should be more appropriately called land development banks. They have further recommended that land mortgage banks should align themselves to a positive policy of giving loans for productive purposes such as land development and improvement including bunding, digging of wells and acquisition of pumps, agricultural machinery etc.

Speaking at the 26th Conference of land mortgage banks in Madras State, Mr M. Bhaktavatsalam, Minister for Agriculture, endorsed many of the main recommendations of the Committee. Accepting their suggestion, he pointed out that it was time land mortgage banks were renamed "Land Development Banks." He also assured the conference that the Government of Madras would take such steps as might be necessary to ensure that the supply of credit by land mortgage banks was not in any way jeopardised by the introduction of land reform legislation.

The Madras Central Land Mortgage Bank has on its rolls 73 land mortgage banks and 331 individuals and its working capital on June 30, 1955 is Rs 486.38 lakhs. The bank raises its funds by floating debentures with the guarantee of the State Government and the value of the debentures in circulation on June 30, 1955 amounts to Rs 429.29 lakhs. The 73 land-mortgage banks among them have a membership of 92,717 and a paid up share capital of Rs 27.5 lakhs. The working capital of the banks on June 30, 1955 is 377.61 lakhs.

Mr Bhaktavatsalam, in tracing the working of the banks in the state, said that though in recent years there had been an increasing awareness on the part of the banks of the need to reorientate their loan policy, the progress had got to be accelerated to shift the emphasis to loans for land development instead of to loans to discharge of prior debts. He further pointed out that a way should be found by which the agriculturists could be given loans at a low rate of interest. One of the lines of development in the future suggested by the minister was the promotion of schemes of thrift and self-help among members.

*

The Handloom Industry

With the inauguration of the third All-India Handloom week, public attention has again been focussed on the importance of the industry for the economy of the country. As President Rajendra Prasad has pointed out in his message the vital role of the industry in expanding employment opportunities in the country has been fully recognised by Government and the Planning Commission have allotted Rs 100 crores for the development of the industry in the Second Plan.

In Madras the industry provides employment for about two million people whose position has considerably improved in the course of the past few years, thanks to the various steps taken by the Central and State Governments. Mr P. N. Nachimuthu, President of the Madras State Handloom Cooperative Society, pointed out at a press conference early this week that Government were doing their best to bring weavers into the cooperative fold.

Tracing the progress of the movement among weavers in the state he said that as against 49 members and a share cpital of Rs 16,400 at the beginning, there were 807 primary weavers' cooperative societies with a share capital of Rs 63.3 lakhs and a reserve fund of Rs 71 lakhs producing goods worth about Rs 4 crores a year. There are about 28.7 lakhs of handlooms in India out of which Madras accounts for 5.6 lakhs including 1.04 lakhs of looms under the cooperative fold. The Madras State Handloom Weavers Cooperative Society has opened a number of depots in India and four depots in Colombo, Singapore, Rangoon and Aden for marketing of goods produced by its members. Six weaving factories and four dyeing factories are also attached to the Society and plans have been completed for setting up a calendering plant. Apart from these, there will be a cooperative mill with 16,000 spindles to supply yarn to weavers. Production has also increased during the year and at present the societies are producing handloom goods worth about Rs 40 lakhs per month as against a monthly production worth about Rs 30 lakhs last year.

*

Land Reforms

Though a number of solutions have been suggested to the problem of land-reform, none seems to be entirely satisfactory. The conditions prevailing in the rural areas of India are so varied from state to state that no single measure can be applied to the whole country without seriously disturbing some local set-up or other. It has now been generally accepted that collective farming of the type in vogue in Russia will not be suitable for Indian conditions.

There does not seem to be general agreement on the necessity of ceiling on agricultural holdings. In the first place this matter raises the fundamental issue of the ceiling on capital.

Speaking at a meeting in Madras, Mr S. K. Chettur, Secretary, Revenue Department, Government of Madras, examined the trend of present-day thinking on the question of land reforms and arrived at the conclusion that for gaining the objective of increased agricultural production, an easier and better way would be persuasion and guidance rather than legislative action.

Considered from the standpoint of the Planning Commission, Mr Chettur said, that the Madras Government's new Fair Rents Bill quite justified its name. For, the Planning Commission had opined that a rate of rent exceeding one-fourth or one-fifth of the produce should be regarded as requiring special justification.

Considerable difficulty was also encountered in the matter of deciding the equitable size of land holdings. Though the Planning Commission had been unambiguous in regard to future land acquisitions in all states, there was no suitable guide for dealing with existing holdings. The argument that if land was regarded as a form of capital what justification was there to impose a ceiling in one sector of national activity while no such restriction was operative in other sectors, had also to be met.

*

GATEWAY NOTES

(Continued from page 352)

They had patched up very successfully their labour-management disputes; and looking forward, as they do, to increased cooperation and quick development in all aspects of the industry's working, Mr Morarji Desai's words of exhortation and assurance were doubly welcome.

Mr Desai reiterated that socialistic pattern of society was not a political catchphrase but was meant for practical implementation. He called upon labour and management to make some sacrifice to this end. He pleaded for a new yardstick to evaluate profit and loss. He urged a reorientation of outlook among the proverbial haves and have-nots. Philosophically, he asked them to realise that true happiness lies in giving and not taking. He then congratulated the Ahmedabad Textile Labour Association and the Ahmedabad Millowners' Association on their sensible accord.

But perhaps the most important point he made clear was regarding nationalisation. He believed, that nationalisation of all industries was not proper, necessary or even profitable to the country. This avowed policy of mixed economy is frequently restated by Congress and Government spokesman, but does the Chief Minister's latest assurance mean unequivocally that private industries do not presently stand in danger of being nationalised?

World *of* Books

"Social Welfare in India"—Publications Division New Delhi. Page 850. Price Rs 8-8.

The above publication is a massive volume compiled under the aegis of the Planning Commission by an editorial committee headed by Srimathi Durgbbai Deshmukh, Chairman, Central Welfare Board, Government of India. The Book deals with the diverse aspects of social welfare work in India and is expected to satisfy the need for a comprehensive reference book on the subject.

Ths book is conveniently divided into five parts. The first deals with the history of social welfare work in India during the last century and a half. The Second part forming the bulk of the book contains 39 articles by well known persons such as Hannah Sen and Kamaladevi Chattopadhyaya and the third part is a Directory on voluntary social welfare institutions in India. The next presents the life and work of eminent social workers like Rammohan Roy, Keshab Chandra Sen, Vidyasagar, Gokhale, Gandhi, Andrews and several others. The final section is a select bibliography.

Thousands of workers and students of social sciences stand to benefit by this publication. It serves to draw attention to the multitudinous evils which are on their last legs. The book abounds in suggestions for the quick liquidation of these distressing features in the nations life.

✱

The Ills that Beset the Income Tax—By Nakuleshvar Nandi 127, Banamali Naskar Road, Behala, Calcutta-34. Pp 451. Price Rs 6.

The author has utilised his long association with the ITD to expose the deficiencies and shortcomings in its working. There is avowed anxiety to improve the calibre of the officers, the state of public relations, and to secure much more revenue for the Department than is actually done. The author has gone deeply into details. Probably he has voiced earlier than anyone else the need for increase in staff and greater accommodation for the Department in Calcutta.

Some of the points raised by him have subsequently found support in the Report of the Taxation Enquiry Commission. On the whole, the book should serve as an extremely useful piece of reference to those who wish to tackle in earnest the internal problems of the Income Tax Department. The book would have created a better impression on the reader, had the author shown greater restraint in interpolating personal anecdotes drawn from the less fortunate side of his official career. Lavish quotations from classics impart a scholarly flavour to the writing.

✱

Kurukshetra—A symposium on Community Development in India (1952-55). The Publications Division, Government of India—Pages 525, Price Rs 7-8.

An intimate study of the layout of the gigantic experiment of community development is presented in the form of selective collection of eminent articles, most of which have appeared in the regular issues of the journal of the Projects Administration. Contributors to this handsomely bound and imposing volume include Rajendra Prasad, Jawaharlal Nehru, Chester Bowles, C. Rajagopalachari, Canadian High Commissioner, Escott Ried, and some of the country's finest organisers and administrators actively connected with community development. Different aspects of the programme are discussed threadbare, the administrative organisation, training for service and leadership, development of village industries, the role of women, the care for children, etc. The psychological approach receives due emphasis. The 'assessment' toward the end of the book does not mince words in spotlighting weaknesses, errors and failures. Through the articles runs an unbroken thread which forms the main gospel of the plan, and and that is hard work.

✱

The Eastern Metals Review—Annual Number. Published from 38, Strand Road, Calcutta, Price Rs 5.

The rapidly growing importance to the national economy of the metallurgical and mineral industries is faithfully reflected by almost all the 39 learned articles which this annual comprises. The non-ferrous metal industry in India is ill-developed and reliance on imports is the order of Rs 25 crores. This is a pointer to the need for fresh exploration and research. Reserves of managanese, copper, lead-zinc ore and magnesite, to the extent they have been spotted, are promising; not to speak of rich possibilities regarding iron ore (estimated iron content 12,022 million tons) and bauxite (25 million tons of high grade alone), or regarding new-found deposits of thorium and uranium; techniques for the manufactre of the latter have yet to be developed. These possibilities apart, the issue gives a good coverage of the world metal market. A comparative study is possible by glimpses into the metallurgical industries of the US, Australia, Italy, USSR and Japan. Copious statistics given at the end add to the usefulness of the publication.

Tax Relief Bulletin—Monthly Journal published from 5, Hare Street, Calcutta by Mr Lajpat Rai Sahgal. Yearly subscription Rs 10.

The journal represents an attempt to present tax problems, from the point of view of the payer. Cartoons and lighter vein articles impart liveliness and more than usual interest to a subject which is normally drab and insipid. "Dedicated to the relief of the tax payers" the publication contains much that is of practical use to all persons on whom the ITD has a claim.

✱

Insurance World,—Silver Jubilee Number: 15, Chittaranjan Avenue, Calcutta—Price Re 1-8.

The Silver Jubilee Issue of Insurance World contains a number of noteworthy contributions on the various aspects of Indian Insurance. Prospects of Nationalisation of Insurance by Sir Dhiren Mitra, Social Insurance in a Developing Economy by Mr P. N. Talukdar, Life Assurance during the last 25 years by Mr H. K. Sen are a few of them. There are a few interesting graphs. The Editor and his associates can have the satisfaction of a work well done.

✱

Cultural Foundations of Indian Democracy.—Y.M.C.A. Publishing House, Calcutta-16. Price Rs 1-8.

This is a symposium of articles from eight scholars of repute, each representing a creed. There is a more or less complete picture of the leading strands of social thought and practice, which promote faith in and acceptance of democracy. The pity is that this background is not reliable as a prop for democracy in India. It is however useful to know that there is a background. The publication serves to communicate that knowledge.

✱

Indian Sugar—I.S.S.T. 9th Congress Number, January 1950. Published by J. S. Mehta for the Indian Sugar Mills' Association, 23B, Netaji Subhas Bose Road, Calcutta. Price Rs 3.

Indian Sugar is the only journal which deals authoritatively with the different aspects of the industry in all its stages from farm to factory. This bumper issue marking the Ninth Congress of the International Society of Sugarcane Technologists, in New Delhi, goes a step further in viewing the industry in perspective and in sketching out a direction for the future. The specialised articles cover sugar technology, sugar research mechanical cane cultivation, sugar confectionery, and subsidiary and allied chemical industries in which sugar can be used as a raw material. A section is devoted to labour relations. A highly useful review of the industry abroad as well as in India makes this special Number nearly complete in itself.

✱

Textile Industry in South India—Compiled by Dalal & Co., Post Box No 149, Esplanade, Madras. Pp 215. Price Rs 5.

Since the transfer of power, the cotton mill industry in South India has made remarkable headway. The book gives comparative figures of development for undivided Madras, in a suitable all-India setting. There is a detailed account of the origin and development of the mill and the handloom industry, export trade in textiles and a survey of the latest phase of official policy. The major part of the book consists of the working results and the capital and profits position of individual mills. Particulars of 77 mills are given.

✱

Guide to Current Official Statistics (Bombay State) Bureau of Economics and Statistics Government of Bombay, Price As 12.

The growth of statistical organisation in Bombay and its present set-up, the source of data and their manner of collection, relevant sections of legislative enactments insisting on different data and the range of statistical information which the Government of Bombay normally publish form the subject matter of this guide. Though dealing with only one State, it is of wider interest because of the uniformity in procedure in the collection and dissemination of official data.

✱

THE PENINSULA

(Continued from page 356)

thrown in. Pandit Nehru and his colleagues seem to be keen on avoiding the name Visalandhra for this State. Hyderabad is a likely preference. The Andhras themselves might vote for a title which has less awkward associations. The special interest of Telangana, particularly in the matter of economic development, are to be protected by suitable agreed arrangements and through a special Advisory Council. Thus, in South India the reorganisation of States is more or less complete and has proceeded generally on the lines of the SRC recommendations. The only serious alteration lies in the immediate fusion of Telangana and Andhra, instead of a possible merger, five years hence.

✱

WORLD OF JUTE

(Continued from page 347)

ed to be content to watch the market rather than effect sales. They were governed in this attitude by reports from the upcountry centres which continued to indicate that prices in the agencies showed no signs of falling and that they were still about Rs 2 above the parity of Calcutta rates. Some business was done in Cuttack Bottoms at Rs 30-8 per maund. Assam Bottoms were nominally quoted around Rs 30-0 per maund for Feb/March delivery.

STATE BANK OF INDIA

Balance Sheet as at 31st December, 1955

CAPITAL AND LIABILITIES	Rs.	a. p.	Rs.	a. p.
1. Capital:

REPORT OF THE AUDITORS.

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1955.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

S. B. BILLIMORIA & CO.,
RAY & RAY, } Auditors.

9th February, 1956.

WORLD OF BUSINESS

(Continued from page 345)

Corporation from "the appointed day" of taking over business. The Central Government, however, retain the right, for the purpose of rationalisation, to reduce pay-scales or alter the terms of service of the employees.

This must be a complex undertaking. The declared objective of Government is to reduce disparities in income and, at the same time, to raise the standard of living. Disproportionately high income (salaries plus allowances of all kinds) permeate the upper strata in life insurance offices. Also, differing emoluments of employees' unions have to be brought to a rational level. A high-powered Pay Commission, as suggested in these columns last week, can be entrusted with the task of integrating the various pay scales and of formulating cadres in which the existing employees can be classified. The Pay Commission's recommendations can be the basis of the contemplated rationalisation.

The most controversial issue arising out of the Bill will be the basis of compensation to existing shareholders. In life insurance, share capital plays an unimportant part. The cumulative Life Fund is many, many times higher than the share capital. There is hardly any rational explanation as to why the share capital should have at its exclusive control the accumulated savings of policy-holders, and not a body of policy-holders themselves. The first seven life offices in the world, it is reported, have no share capital at all. Nevertheless, compensation as a policy has already been decided, although the ethical justification behind life shares is less strong.

The basis of compensation has been elaborately laid down. In brief, the position seems to be that shareholders will not get more than 20 times five per cent of allocated surplus to shareholders or less than 20 times three per cent of allocated surplus.

The proposal to have a tribunal to take action on cases referred to it by the Corporation, where the insurance company had acted prejudicially within two years before January 19, 1956 leads on to the view that Government have in their possession many cases of misfeasance and misuse of funds; these cases, Government may feel, can be attended to better by a tribunal of the nature described. The press summary is somewhat vague on this issue, and comments have, thus, to be deferred.

Stock Exchanges

PRE-BUDGET CAUTION

Watch-dog Writes:

STOCK markets have witnessed another featureless session during the week. In the absence of any fresh incentive, prices generally have drifted to lower levels. With the Central Budget so near and several uncertainties looming large on the horizon, investors as well as professional operators have preferred to await further developments before entering into fresh commitments.

Conditions on the Calcutta Stock Exchange, after ruling better during most part of the week, turned a shade quieter at the close.

Activity on the Bombay Stock Exchange was mostly confined to the Textiles section, where a few selected scrips met with good support following the firmness in Ahmedabad shares.

Prices on the Madras Stock Exchanges showed a mixed trend.

The London Stock Exchange ruled firm due to steady investment demand.

Wall Street closed firm with a broad front of gains, ranging mostly to $2 or more.

*

Calcutta

Calcutta, Thursday Evening.

THE local Stock Exchange had another dull session during the past week and, with interest still at a low ebb, price variations were not large. Despite the fact that the Committee of the Stock Exchange had removed the restrictions on trading in four of the six clearing shares, operators were generally inclined to lighten their commitments due to a number of adverse factors. Mainly amongst these were the uncertainties about the Central Budget proposals. The reports, that operators had been experiencing some difficulties in realising "Satta" in respect of the clearing held on Monday, were also a contributory factor to the depressed sentiment in the market. Business, as a result, was reduced to small dimensions. The closing tone was on a quiet note.

Conditions in the Giltedged section, were appreciably quieter and there was a gentle downward trend of prices on apprehensions about an increase in the Reserve Bank Rate though it was later denied by the official announcement. 3 per cent 1986 Conversion Loan, after opening at Rs 80-4, receded at one time to Rs 79-15 to finish better at Rs 80. Among other Loans, 3 per cent 1970-7½ changed hands at Rs 88-11 to Rs 88-13; 3½ per cent 1961 at Rs 99-2 to Rs 99-7 and 3 per cent 1957 at Rs 99-10.

Although business in the Banking section was limited, price changes were in favour of holders. United Commercial, after dropping down at one time to Rs 48-12 from Rs 49-8, recovered at the close to Rs 49. Hind met with business at Rs 35-12 and United Bank of India "D" at Rs 4-12 to Rs 4-14.

There was very little activity in the Jute section, where operators were generally inclined to enter into commitments due to the growing disparity between raw jute and manufactured goods prices. There was also a feeling that the working results for the current half-year would not be encouraging. With the removal of the minimum price level, National came in for some business upto Rs 28-12 at which level profit-taking brought down the rate at the close to Rs 27-10. Howrah shed quarter of a point at Rs 24-12, while Bengal were held steady at Rs 18. New Central were enquired upto Rs 15-8.

Coal shares were listless though a few scrips maintained their levels on dividend considerations. Amongst these were Bengal which were taken upto Rs 539, New Beerbhoom, after touching a low of Rs 19-12 from Rs 20-2, improved to Rs 19-15 following the increased dividend, Central India; Bharet and Western Bengal hovered idly around Rs 7-2; Rs 8-3 and Rs 6-15 respectively.

Textile shares, after ruling quiet during most part of the week, steadied up toward the close on better Bombay advices. Cawnpore touched at one time a low of Rs 8-15 and Elgins Rs 27-3, to finish the week better at Rs 9-1 and Rs 27-7 respectively. Kesoram were, however, sticky at Rs 15-14 with New Victoria hovering narrowly around Rs 2.

Tea shares ruled comparatively steadier on reports of the removal of restrictions on direct exports to London though the turnover continued to be restricted. Brooke Bond were taken upto Rs 20-1 from Rs 19-14; Hantapara upto Rs 239 from Rs 237; Banarhat upto Rs 321 from Rs 319 and Terpooe upto Rs 22 from Rs 21-10. Bishnauth were, however, steady at Rs 35-8, while Jutlibari were a shade cheaper at Rs 26-2. Teloijan were quoted at Rs 24-12 and Murphulani Preferred Ordinaries at Rs 30 to Rs 30-4.

Little or no interest was shown in the Sugar section, where the only bright spots were Carew which had some support upto Rs 10-13 from Rs 10-9 and SKG Old upto Rs 12-7 from Rs 12-2. Dyer Meakin were enquired at Rs 6.

Thanks to the removal of the fixed price levels, Engineering shares met with a moderate revival of activity with prices showing a marked improvement over the recent low levels. Although new business in Indian Irons would be allowed only with the permission of the Association, the rate was unofficially quoted at Rs 32-10 on Thursday. Some cash business was, however, reported to have taken place at rates varying from Rs 32-4 to Rs 32-10.

Among other Engineering issues, Jessops were a bright spot having sustained support upto Rs 60-6 against Rs 58-8 quoted in the previous week. Richardson were marked higher at Rs 27 against Rs 25-12. Burn, after improving to Rs 306 from Rs 303, receded again at the close to Rs 299. Similarly, TEXMACO, after being marked upto Rs 20-9 from Rs 20, finished at Rs 20-1.

Trading in the Miscellaneous section, was generally featureless. Orient Paper, after touching a high of Rs 34 and a low of Rs 32-14, finished the week better at Rs 33-3. Titaghur were a quarter point better at Rs 44-2 with Shree Gopal ruling unchanged at Rs 18-1.

In Minings, Indian Copper moved narrowly between Rs 6-3 and Rs 6-5; Orissa Minerals between Rs 24-14 and Rs 25; Karanpura Development between Rs 18-10 and Rs 18-12 and Metal Corporation between Rs 10-14 and Rs 11.

In Oils, BBP were a narrow market around Rs 3-15 with IBP quoting Rs 41.

Among other issues, Indian Cable were dull at Rs 29-12. Dunlop Rubber were offered at Rs 31-2 against Rs 31-6, while BIC changed hands at Rs 11-6 to Rs 11-8. Rohtas received good support upto Rs 20-2 from Rs 19-9 following the publication of excellent working results for 1955, the closing rate being a shade easier at Rs 19-12 due to profit-taking. Imperial Tobacco changes hands at Rs 14 to Rs 14-2; India Steamship at Rs 8 to Rs 8-3 and Martin Burns at Rs 26-6 to Rs 26-15.

*

Madras

Madras, February 21.

ACTIVITY on the local Stock Exchange was confined to select shares in the Planting and Textile sections. The trend was, on the whole, mixed, and price variations were not large.

TEXTILES:—There was fair activity in this section, where the most outstanding feature were Bangalore Woollens which were taken upto Rs 580 from Rs 555 following the news of the issue of bonus shares in the ratio of 2 : 1. There was also demand for Buckinghams, Lovals, Travancore Rayons and Vijaykumars at the quoted rates. Cauvery Spinnings were in request upto Rs. 12-8, while Janardhanas were offered at Rs 86-8.

FOR THE INVESTOR

(Continued from page 336)

manufactured amounts to 13,067 tons against 9,985 tons.

With regard to allocations, the Depreciation amount has been raised to Rs 45,588 from Rs 37,770 and Taxation to Rs 6.00 lakhs from Rs 5.50 lakhs. A dividend of 14 per cent has been recommended on the Ordinary shares as against 17½ per cent in the previous year. In this connection, it may be added that the present dividend is on an increased capital of Rs 31,47,780 as against only Rs 27,78,008 as at 30th September, 1954.

The balance-sheet, as at 30th September 1955, shows the gross block at Rs 30.55 lakhs, which is depreciated by Rs 18.71 lakhs to show a net block value of only Rs 11.84 lakhs. Liquid assets at Rs 99.83 lakhs are substantially higher than sundry liabilities, at Rs 59.74 lakhs.

According to the directors' report, the Government of India have not yet finalised their bonus-payment formulae for sugarcane purchases. The SISMA formula has possibly to be adopted till then; and the company is committed to pay a bonus of about Rs 2 lakhs for the last season to its sugarcane suppliers if the Government of Mysore adopt the same formula in their factory at Mandya.

£ R$

Ouchterlony Valley Estates:

The Ouchterlony Valley Estates (1938) Limited has reduced the dividend from 30 to 20 per cent for the year ended 31st October, 1955 in view of the sharp fall in profits. The tea crop for the year amounted to 987,979 pounds as against 934,600 pounds in the previous year and the coffee crop to 10,707 cwts against 13,825 cwts. "Sales and stocks" are shown at Rs 41.54 lakhs against Rs 48.10 lakhs.

The net profit for the year, before providing for Taxation and Depreciation, amounts to only Rs 10,07,366 against as much as Rs 17,66,766 in the previous year. Although the Depreciation amount has been increased to Rs 2.07 lakhs from Rs 2.02 lakhs, Taxation has been reduced to Rs 4.40 lakhs from Rs 5.60 lakhs. No provision has been made for General Reserve as in the case of the previous year when Rs 4.50 lakhs was allocated to this item.

£ R$

Thirumbadi Rubber:

The Thirumbadi Rubber Company has raised the dividend from 10 to 12½ per cent for the year ended 30th September, 1955, thanks to an increase in profits. The outturn of Rubber is higher at 323,000 pounds as against 315,000 pounds, while sales have risen to Rs 3.64 lakhs from Rs 3.55 lakhs.

The net profit, before Taxation and Depreciation, is higher at Rs 1,79,438 against Rs 1,52,944 in the previous year. The directors have, after setting apart Rs 56,800 (Rs 48,671) for Taxation; Rs 14,269 (Rs 11,116) for Depreciation and Rs 25,000 (same) for General Reserve, have recommended the dividend mentioned above.

£ R$

Investment Briefs:

Bengal Coal has maintained the dividend at Rs 17-8 per share for the half-year ended 31-10-1955.

In Andrew Yule Jute group, Caledonian has reduced the dividend from Rs 4 to Rs 2-8 per share and Belvedere from Rs 5 to Rs 2-8 per share, both for the half-year ended 30-11-1955.

Kohinoor Mills have maintained the dividend at Rs 18 per share for 1955.

United Motors (India) Limited has maintained the dividend at Rs 2 per share for 1955.

Cipla Limited has raised the dividend from Rs 5 to Rs 6 per share for the year 1955.

WORLD OF TEA

(Continued from page 346)

Plain BP Rs 1-8-6; Low Medium BOP Rs 2-0-0; Medium BOP Rs 2-6-0 to Rs 2-8-0; Good BOP Rs 3-8-0 and Well-made OP Rs 2-6-0. Export Sale No. 5 will be held on the 28th February, 1956.

In the auction held at Colombo, offerings were 5,155,635 pounds for which there was a strong demand; but prices were very irregular. There was a good demand for the comparatively small selection of offering, but prices were irregular except for the finest corresponding Pekoes which were dearer. Among high-grown teas, top quality flavoury Dimbula/Dickoys type Brokens were appreciably dearer, but those below best declined by about 10 to 15 cents per pound.

Medium-grown teas were in strong demand, particularly for useful coloury BOPs which were 5 to 8 cents per pound dearer. Among low-grown teas, small Leaf Brokens declined by about 5 cents per pound.

All useful liquoring high-grown and medim-grown Fannings were in strong demand at appreciably dearer rates and some high prices were paid for the best flavoury kinds.

At Chittagong, offerings consisted of 12,528 packages of Leaf grades and 3,110 packages of Dusts. Whole Leaf grades were always As 3 to As 4 per pound easier; but there was a fair general demand for all Brokens at As 2 below previous rates. Fannings grades shared in the general decline although Pekoe Fannings were never more than As 1½ to As 2 per pound. Withdrawals amounted to 24 packages. Plain Sylhet Dust was quoted around 2-6-0 per pound.

Five Hundred packages of Green teas were also offered and these met with a useful demand at just below previous rates.

In London auctions held this week, offerings were 23,300 packages including 17,700 packages of Northern India teas. The market for good liquoring Assams was again very strong and prices tended dearer. Thin liquoring and stalky teas met with little competition and prices declined by about 2d per pound.

Good Mediums and clean plain teas were irregularly easier, showing a drop of about 1d per pound. Teas from the Dooars were the weakest feature, especially red fibry types with plain liquors, which often showed falls of up to 3d per pound. Withdrawals were fairly heavy. Clean Plain Broken Pekoe was quoted at 3sh per pound.

Tea stocks in London, as at 10th February 1956, were 96.04 million pounds as compared to 97.54 million pounds in the previous week and 113.81 million pounds on the corresponding date of last year. Landed between the 4th and 10th February 1956 were 9.44 million pounds, while deliveries during the same period were 10.94 million pounds.

SOUTH INDIAN MARKETS

(Continued from page 355)

half of what they were in 1954. In 1954, 23,424 tons were shipped as compared with 11,799 tons in 1955. The value realised was Rs 8 crores 16 lakhs in 1954 and Rs 4 crores 48 lakhs in 1955.

In the New York market, pepper values softened in spot and near-delivery positions as grinder interest remained virtually at a standstill. Spot Malabar and Lampong were quoted at 32 cents per pound, while Sarawak spot and "awaiting release" were quoted at 30½ cents.

✱

At the monthly Coffee Pool auction held at Palayamcottai last week, 585 cwts were offered. Out of this, 124 cwts 56 lbs of Plantation, 6 cwts 91 lbs of Arabia Cherry and the whole of Robusta Cherry were accepted by the bidders.

Following were the price range (per cwt):—Plantation PB Rs 229-8 to Rs 232; Plantation "A" Rs 212-8 to Rs 217-4; Plantation "B" Rs 208-4; Arabica Cherry Flats Rs 190-8; Robusta Cherry PB Rs 171 to Rs 172-5 and Robusta Flats Rs 163-15 to Rs 168-8.

✱

In the Cochin market, prices of Cashewnut have gone up to Rs 950 per ton; and this is out of parity with the kernel price of 49 cents per pound, presently quoted in the USA. It is stated that there is only 15 per cent of this year's production unsold and that the quotation of 49 cents is only nominal.

It is also stated that the expectation of a record crop of 85,000 tons from Africa till about two months ago has now dropped to 55,000 tons. A like estimate of the Indian crop, placed at 70,000 tons, will be less than 50,000 tons. About 80 to 85 per cent of cashew kernel for this year has been sold forward, thereby transferring the vigour of speculation to the raw nut market.

The total shipment of of kernels for the whole of 1955 was about 12 lakhs cases. Export demand is estimated at 14 lakhs cases. Shipments from the Cochin Port, during the year, were 25,511 tons as against 27,885 tons in the previous year. The value of exports has, however, increased to Rs 9.80 crores from Rs 7.80 crores in 1954.

✱

WORLD OF FINANCE

(Continued from page 343)

Following the pattern of Polonius' advice against both borrowing and lending, the Reserve Bank is, at the moment, neither a seller nor a buyer in most of the securities which used to figure in open market operations. This phase of quiescence in the open market strategy has called for comment particularly with regard to 3 per cent 1986 loan. Convention had taught the market to regard Rs 80 as the level at which the Reserve Bank will intervene to buy. This level was touched this week; but the Reserve Bank was not disposed to lift its little finger. Down came the price to Rs 79-10; the Reserve Bank remained unconcerned. Does this signify a change in Authority's ideas of the pattern of giltedged yields? Does it portend a desire on the part of the authorities to let 3 per cent 1986 attain a level which will, so to say, prepare the ground for a 4 per cent long-term loan by the Centre? We can only pose the questions at this stage. The implications of the Budget may provide part of the answers; and in any case, these posers are best discussed in the context of the financing of the Second Plan. This latter discussion, in its turn, will be greatly helped by the ways and means budget whose secrets will be revealed in less than a week.

✱

CLIVE STREET GOSSIP

(Continued from page 350)

suggests that the position should be reviewed from time to time. It is quite sensibly suggests that it is the promotional rather than the protective aspects of these arrangements inter se that should be the determining factor.

✱

Conclusive evidence, if such were wanted, of the Planning Commission's responsiveness to suggestions and readiness to examine afresh and in greater detail matters on which there are strongly held opposite views is to be seen in the Draft Outline's remarks on cloth production. Both the Plan-Frame papers and the Karve Committee had suggested the freezing of cloth production by mills at existing levels. It will be recalled that it was repeatedly urged in this journal, in these columns and elsewhere, that such inflexible arrangements would be injudicious in the extreme even from the point of view of promoting hand-loom interests. The Draft Outline says that the targets in the output of yarn and cloth in the organised textile industry (and, therefore, in the small scale industry) are to be determined only after assessing the possibilities under the Amber charka. This is an eminently sensible attitude, and shows that the Planning Commission have no dogmatic prejudices on the subject.

✱

On the administrative aspects connected with the working out of the policy of promoting small industries, the Draft Outline gives details of steps already taken and shortly to be taken. These are more or less along expected lines, with heavy emphasis on the co-operative mode of production, finance and marketing. If the massive effort that the organisation of these agencies entails is forthcoming, there is no reason why this crucial undertaking of the Plan should not succeed.

—EAVESDROPPER.

STOCK EXCHANGES

(Continued from page 361)

PLANTINGS:—In this section, Rubber shares were a steady feature, while Tea and Coffee shares showed small recovery due to some covering purchases. Cochin Malabars were better at Rs 8-1 as also Travancores at Rs 12-8. There were, however, some sellers for Malankaras at Rs 26-10. Rajagiris were done at Rs 21-8; Be Bes at Rs 4-6; Vaikundams at Rs 26-8 and Gokuls at Rs 2-6.

In the Tea group, there was support for Peermades, Nilgiris and Nonsuch at market rates. Devasholas were taken at the higher rate of Rs 27. Periakaramalais met with business at Rs 8-1 and Meelamalais at Rs 6-10-6.

Among Coffee shares, Coffee Lands and Consolidated Coffees looked upto Rs 18-8 and Rs 21-10 respectively. Mysore Coffees were quoted higher at Rs 1-10-6, while Ouchterlonys moved narrowly between Rs 5-2-6 and Rs 5-4 c.d. and Chandramalais between Rs 5-10-6 and Rs 5-11.

MISCELLANEOUS:—Shares in this section, accounted for only a small volume of business. There was some demand for Parrys, General Papers and Travancore Cements at market rates. India Sugars were a shade lower at Rs 21-2 c.d. following the reduction in dividend, while Travancore Sugars were quoted around Rs 12-2. FACTS ruled steady at Rs 6-12. Aluminium Industries met with business at Rs 20-8 c.d.; Mettur Chemicals at Rs 8-13; Mysore Papers at Rs 16-8 and Indian Steel Rolling Mills at Rs 12. Mysore Golds hovered idly around Rs 1-14.

✱

London

London, February 22.

FIRM conditions prevailed on the London Stock Exchange during the past week, when there was a steady investment demand, resulting in widespread gains being established.

The firmness of the market was due to the strength of Mr Macmillan's statement that the new disinflationary measures were adequate for the present although his request for dividend restraint was a restrictive influence. Price in all sections moved higher as a result of bear-covering, but the move was not fully sustained till the close.

Giltedged issues moved ahead strongly on renewed investment buying. War Loan recording a gain of £7-8. Dominion and Colonial stocks followed in sympathy.

Following were the closing rates of selected stocks and shares, the figures shown within brackets being the opening rates:—2½ per cent Consols £54¼ (£52½); 3½ per cent War Loan £78½ (£71½); Imperial Chemical 44/9 (42/4½); Imperial Tobacco £2-23/32 (£2[illegible]); Dunlop Rubber 22/1½ (20/9) Calcutta Electric 19/0 (19/3); Calcutta Tramways 23/6 (24/0); Assam Teas 18/9 (19/0); Burmah Oil 69/0 (67/1½); Burma Mines 2/10½ (2/10½) and Indian Copper 9/4½ (9/4½).

✱

New York

New York, February 22.

CONDITIONS on Wall Street were firm, with a broad front of gains ranging mainly to $2 or more. Trading was, however, limited as traders were cautious in their commitments, being anxious with regard to the President's second-term plans.

National gas shares and those of some companies interested in natural gas development, after initial firmness, developed an easier tendency towards the close. Declines in prices ranged upto $3 following the President's vetoing of a Bill to free independent gas producers from Federal curbs.

Coppers were prominent, reflecting the domestic price rise. Contrary to the trend, however, was Kennecott Copper which was over $2 lower at the close. Among Motors, Chrysler declined by more than $1, reflecting the effect of its production cutbacks following declines in sales. Westinghouse Electric showed a drop of 50 cents in recognition of the stalemate in its protracted strike. Following were the closing rates:—Anaconda Copper $73¼ ($68¾—previous week); General Motors $43¼ ($44); Ford Motors $63¼ ($62 bid) and U. S. Steel Common $55¼ ($53¾).

The importance of banking to the COFFEE INDUSTRY

COMMERCIAL cultivation of coffee in India dates from about 1830, and is still almost entirely confined to South India. The yearly crop varies between 20,000 and 30,000 tons, most of which is consumed in India. When a surplus of Indian coffee is available for export, it finds ready buyers in fastidious foreign markets.

Without banking, the growth of the coffee industry would have been impossible. The availability of ready funds when needed, the collection of dues in any part of the country, and the other facilities and guidance offered by a good bank—these are an integral part of the structure of the coffee industry.

We at Palai are proud that so many leading coffee plantations, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investment—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

* * * *

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

For the Investor

The Budget and the Investor

ONE

Investment Gossip:

SORE disappointment was the portion of the bulk of stock exchange operators last Wednesday evening; what had been anticipated was a good, stiff dose of taxation; and the bears in plenty were all prepared to depress prices like nobody's business, and depart from the Budget session with a good evening's work to their credit.

The fact that none of the major imposts, fearfully anticipated, materialised should have been reason enough for an upsurge in market sentiment; as it happened, prices were just barely restrained, thanks to the tax on bonus issues and on dividends in excess of 6 per cent. The sense of relief may be gleaned from the inability of operators to push down rates—in spite of the new imposts.

What, then, are we to expect of the future? What are the prospects before the investor? The answer to these questions will be available only if we undertook a thorough analysis of the Budget, and if we understood clearly the implications of the new tax proposals. On other pages in this week's Indian Finance, a comprehensive analysis of the Budget will be found.

As far as this column is concerned, one point is abundantly patent: taxation will take away a slice of undistributed profits in the future. Personally, I do not think the bonus share taxation as fair; and I also feel that a new formula should be evolved for the tax on dividends.

But these two imposts should not be allowed to obscure the bright future that nevertheless is in store. For the Investor. True, higher dividends will be bearing tax; but why should he forget that, consequent to the swift rising tempo of the Second Plan, the earnings by the generality of industry will be rising substantially?

True, bonus issues will be bearing a tax: but how much is this to be preferred to an increase in this income-tax liability of the individual!

Cheerfully, the investor should accept the fact of higher corporate taxation; and, for him, the certainty of higher dividends accruing from enlarged earnings.

Last year, I described the Budget as providing incentive to industry, but as being irksome to the individual. By all counts, the description of the 1956-57 Budget would be vice-versa.

£R$

The Budget & Corporate Earnings

TWO

Investment Gossip:

The reaction to the budget speech of Sir Chintaman Deshmukh in the stock markets is not quite clear. It may be said, however, that there is a sense of mixed relief and some surprise as it was feared that the upper middle income groups and the very rich would come in for special attention. None of the dreaded levies like the annual tax on total wealth and higher estate duties has been proposed.

In fact, even though the adjustment in respect of super tax rates means a considerable increase over the maximum marginal rate of 13¾ annas suggested by the Taxation Enquiry Commission, these adjustments are taken to be a more straightforward method of gathering revenues and furthering the socialistic pattern of society. The incidence of the higher super taxes on typical incomes will be evident from the figures given in Table I. There is no doubt that the burden will prove to be heavy. On incomes above Rs 1.5 lakhs, the average rate, in many cases, will be higher than even in the UK.

Big business is probably thankful for small mercies and the reason for the partial "welcome" to the budget proposals might be said to lie in the absence of drastic proposals for taxation on personal incomes. The surprise, however, has been provided by the methods proposed to be adopted to tax corporate profits. In spite of the definite recommendation by the Taxation Enquiry Commission to the effect that there should be no tax on bonus issues, it has been announced that capitalisation of reserves will be subject to a levy of 2 annas in the rupee or 12½ per cent.

It is actually stated in the Finance Bill that, "on the amount representing the face value of any bonus shares or the amount of any bonus issued to its shareholders during the *previous year* with a view to increasing the paid up capital" a tax will be levied at the rate of two annas per rupee. That is, such of those companies as have recently issued bonus shares will be affected. In the quarter ended September 1955 alone, bonus shares issued amounted to Rs 4.16 crores of which industrial joint-stock companies accounted for Rs. 2.65 crores. This means the tax will be retroactive, and the Finance Minister has been true to his word. It may be recalled that the Finance Minister stated in Parliament a few months ago that the consents for bonus issues were given without prejudice to the right of Government to tax such issues with retroactive effect if a decision were taken toward that end at a later date.

The ethics of levying a tax on bonus issues has been discussed so widely that no special arguments need be advanced here. If the rebate on undistributed profits had been continued, there was probably some justification for public limited companies, in the true sense of the term, bearing a nominal tax of 3 to 5 per cent. Even here, there is no justification for taxing the company as such because the gain, if at all, will be derived by the shareholder, probably very different from the shareholder who was affected by bonus tax. Only the gains, which are stated to accrue to the shareholder, can be taxed through a capital gains tax, which has been difficult of ad-

HIGHLIGHTS

The country was prepared for the worst, all right; and it had not the temerity to hope for the best.

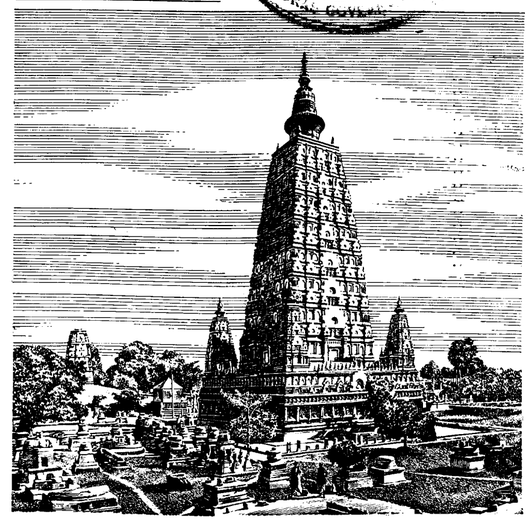
What dreadful taxes would be conceived in the fertile mind of Sir Chintaman Deshmukh? This was the question that nobody could answer.

It would have been wishful thinking, if the thought had been entertained that the Finance Minister would be easy on raising additional taxes in the first year of the Second Plan.

Thus, realistically, and even philosophically, preparations were made to listen to a Budget, on Wednesday last, which would conjure up all manner of new taxes.

The fact, however, is that the best has happened. For, Rs 34 crores of additional revenue by way of new taxes are sought to be raised by Sir Chintaman—without unduly harsh measures.

The fact, also, is that the worst relating to tax measures for the Second Plan has been left behind us.



The 1956-57 Budget is a triumph of balance achieved by Sir Chintaman; of course, there are a few points which are debatable, and worth discussing.

This is what the current issue of Indian Finance seek to do. And the lesson is, there is much mercy in the new Budget.

In America, not so long ago, dentists were wont to advertise their capacity for painless extraction.

In India, to-day, we may say that Sir Chintaman has distinguished himself for (almost) painless extraction (of the necessary amount of additional taxation).

Around India with Brooke Bond

The Shrine at Bodh-Gaya ...

During the heyday of Buddhism in India, countless tall towers, each marking a Vihar or monastery, were to be seen in Northern India. Of these structures, only one stands intact today—the shrine at Bodh Gaya. It consists of a pyramidal tower—180 ft. high—standing on a rectangular plinth with replicas of the main tower at each corner. To this shrine, every day, visitors and Buddhists from all over the world come for sightseeing and on pilgrimage.

Here, as everywhere in India, fresh Brooke Bond Tea is made available through a unique system of fast distribution from factory to shop.

Brooke Bond have thousands of acres of their own tea gardens—more than any other firm of tea distributors in the world. And Brooke Bond is the only tea firm with five blending and packing factories, each serving its own part of the country, from which fresh stocks are rushed to every shop.

More people buy Brooke Bond Tea than any other brand, and over 55 million cups of Brooke Bond Tea are drunk everyday in India.

Brooke Bond Tea

ministration. The short-lived experiment in 1947-48 only led to complications and not much of revenue was gathered.

As regards the levy of an additional super-tax on dividends in excess of 6 per cent or 10 per cent, the intention of the authorities would seem to be different on the present occasion. The idea of dividend limitation is nothing new to Indian investors as the effort was made as early as 1946-47 and heavy penal rates were levied. In that year, the super tax started with 1 anna in the rupee and rose to 7 annas in the rupee.

But it was the intention to allow normal payment of dividends and even the ruthless Liaqat Ali Khan pointed out in his budget speech that "the dividend tax was imposed not for the purpose of raising revenue but in order to discourage the dissipation of a company's resources in excessive dividends. The idea underlying the scheme is that a company should be penalised if it distributed roughly *more than one half of its profits left after taxation.* So far as we have been able to ascertain from completed assessments, the policy which this tax seeks to enforce has been followed in the great majority of cases". There can be no better tribute to the dividend policy pursued by the more responsible companies.

Under the present proposals, the companies having a highly geared capital structure like Orient Paper, BIC and Dunlop, to mention only a few, will be more severely affected than others. The objective of these companies was to secure a larger share to the ordinary shareholders in the equity value by undertaking the risk of a heavy prior charge. The dividends might appear large expressed as a percentage, but would be considerably smaller if the capital employed is taken into consideration.

This point of view also was borne in mind when the last proposal was made It was suggested in 1946-47 that no additional super tax would be payable if the dividend paid did not exceed 5 per cent of "the paid up capital plus any reserves other than depreciation reserves and reserve for bad and doubtful debts as diminished by the amount on deposit with the Central Government under Section 10 of the Indian Finance Act, 1942 or Section 2 of the Excess Profit Tax Ordinance, 1943." There is no corresponding provision on the present occasion. Actually, the expression paid-up capital means the paid-up capital (other than capital entitled to a dividend at a fixed rate) of the company as on the first day of the previous year relevant to the assessment for the year ending 31st day of March, 1957.

What is more, capital formation is "encouraged" only in a negative way. On the one hand, the rebate on undistributed profits has been denied. On the other, dividend payments, even if they are normal or less than 50 per cent of the disposable profits, will be subject to a higher super tax if they exceed 6 per cent. To avoid this super tax, there would normally be an anxiety to capitalise reserves and bring the paid-up capital more in relation to the capital employed in the business. Now, however, an attempt toward this end would attract the bonus tax. If it were possible to see ahead, there may be an anxiety to capitalise reserves to reduce the burden of corporation tax on a penal basis, especially in marginal cases. The Government would, therefore, secure revenues either way and the corporate sector would be poorer to that extent.

*

The yield that would be obtained from these levies is naturally difficult to estimate. But, even if the capitalisation of reserves is on half the basis of 1955-56, and there are a good many cases pending, the Government will be able to realise at least Rs 2 crores. The saving in respect of the withdrawal of the rebate on undistributed profits would amount to at least Rs 1.5 crores. In 1953-54, for which year income-tax revenue statistics are available, the rebate granted was Rs 2.27 crores. It may be that, with the stricter application of Section 23A, the rebate allowed was on a considerably smaller scale in 1954-56. In any case, it may not be very much less than Rs 1.5 crores.

As regards the dividend tax, the yield may be at least Rs 3 crores. Which means that, 'along with other adjustments in tax and the withdrawal of the initial depreciation allowances, the corporate sector would be losing Rs 8 crores a year. To that extent, the estimate issued under the Second Plan regarding the availability of internal resources will be affected.

At the present moment when existing funds are fully employed and there is need for larger capital formation to meet the higher rate of developmental expenditure, the diversion of resources will prove to be a great hardship.

It will now be appropriate to study a few cases which will indicate how the proposals would mean an increase in the burden of corporate taxation.

In the case of the Associated Cement Companies, Limited, a dividend of 10 per cent on the ordinary capital involving a payment of Rs 1,27 crores is taxed. The paid-up capital as at the end of that year was Rs 12.71 crores and, on a 6 per cent basis, the company can distribute only Rs 76.26 lakhs. The excess amount of Rs 51 lakhs will, therefore, attract the payment of an additional super-tax of 2 annas in the rupee, that is, nearly Rs 6½ lakhs will have to be paid. In respect of profits ploughed back, it may be taken that on Rs 26 lakhs a rebate was obtained. This would have meant a saving of over Rs 1½ lakhs. The additional burden thus amounts to Rs 8 lakhs.

The total provision for taxation was Rs 2.14 crores. The tax burden, therefore, increases by 4 per cent. The small increase in the case of ACC is due to the fact that the paid-up capital is fully in the form of ordinary shares and the dividend policy has always been conservative. If the proposed new issue of shares at par is made, the liability in regard to the dividend tax will be reduced because the dividend amount expressed as a percentage would be lower.

In the case of TISCO, a dividend of Rs 10-8 per share or 14 per cent was paid for the year ended 1954-55. The amount involved was Rs 1.35 crores. The tax liability in respect of 1955-56 will increase by at least Rs 12½ lakhs. On profits ploughed back of at least Rs 50 lakhs, which was eligible for rebate purposes, over Rs 3 lakhs was saved. The liability, therefore, increases by over Rs 15 lakhs. The provision toward taxation in 1954-55 is Rs 2.4 crores. The increase in tax liability will, therefore, be of the order of 6 per cent. The company will, no doubt, benefit from the increased capitalisation as a result of the issue of new shares at a premium. But any benefit will be derived only in respect of earnings for 1956-57. These are the favourable cases.

In the case of Dunlop Rubber, the dividend of 15 per cent for 1954, required Rs 24 lakhs. The dividend tax will amount to Rs 4.5 lakhs. The loss of rebate on undistributed profits will be Rs 2 lakhs. The tax liability increases by Rs 6.5 lakhs. On the total provision of Rs 37.75 lakhs, it represents an increase of over 17 per cent.

£R$

The Budget and the Markets

Investment Gossip:

THREE

JUDGING by the prevailing pattern of prices on the Stock Exchanges as also commodity markets, the majority among marketmen appeared to be confident that the Budget for 1956-57 would not be "too unpleasant a Budget". This confidence was particularly significant in view of the fact that, with 1956-57 marking the first year of the Second Five-Year Plan, higher taxes all round were taken for granted. Moreover, the pre-Budget corrections in prices of stocks as well as commodities had, this time, been spread over a period of several weeks.

As a matter of fact, stock markets reacted, on the whole, favourably to the new tax proposals when they were presented. Some circles held the view that the private sector of industries would be badly squeezed and that the bonus and dividend outlook would be rendered obscure by the heavy taxation, while others hoped that the dividend restraint might encourage companies to capital structures as their individual development proceeds and thus bring them gain, though this gain would be wiped off by the tax on bonus shares.

Another encouraging feature of the Budget was that greater reliance was placed on indirect taxation; and it was hoped that the impact of this would be small on producers. These might probably be the reason for the fact that movements in share values were rather erratic as operators appeared still confused over the Budgetary picture

Prices on the Bombay Stock Exchange, after suffering a sharp setback due to nervous unloading immediately after the announcement of the Budget proposals, recovered most of the lost ground, and the entire list finished better than the post-Budget closing levels. Activity was, however, brisk in Steels and Textiles. Tata Steels, after touching Rs 228, slumped to Rs 219, to quote better at Rs 222/8 on Thursday. Similarly, Bombay Dyeing see-sawed within a wide range of 33 points before closing at Rs 523/12.

On the Calcutta Stock Exchange,, Indian Irons opened the pre-Budget session at Rs 32/2, and, after touching a low of Rs 31/2 in the Budget session, recovered smartly to Rs 32/7 on Friday. Similarly, TEXMACO recovered to Rs 21/1 and Orient Paper to Rs 34/11 from the low of Rs 20/5 and Rs 33/2 respectively.

As far as commodity markets were concerned, the Budget was received with great relief by the Bombay Oilseeds market, thanks to the absence of any change in the export duties on oils. Castor May delivery started the post-Budget session at Rs 119/4 as against the official session's closing of Rs 118/6 and declined temporarily to Rs 116/8 due to the imposition of an excise duty of half an anna per lb on non-essential oils. The market, however, rebounded to Rs 120, to close finally at Rs 119/8. The omission of the feared export duty on linseed oil imparted fresh strength to the Linseed section where April/May delivery gained more than As 10 upon the pre-Budget closing of Rs 31/14, while Linseed Oil rose by As 4 to Rs 20/12 per quarter.

Bullion prices remained unaffected during and after the Budget session. Both Gold and Silver continued to be quoted higher, but closed slightly lower on profit-taking. The fact that some of the major operators were concentrating their attention on other markets, also accounted for generally sober trading. Gold spot, after touching a high of Rs 101/8, declined at one time to Rs 100/14, to improve again toward the close to Rs 101/5. Silver spot (below .996) opened at Rs 176/4 and ranged between Rs 175/10 and Rs 176/6, to finish at Rs 175/12.

It was felt that the uniform increase in excise duty by half an anna per square yard on all cotton textiles, barring dhoties and sarees, might not prove a very large burden on the textile industry in view of the current tight supply position and it might be able to pass on the burden to the consumer. It was also felt that, as the actual increase in the duty on super-fine varieties was not to the extent of earlier expectations, their prices were likely to decline in the immediate future; because there would be an inclination on the part of stockholders to unload their goods acquired in the recent past.

The Yarn market was happy to find that there was no excise duty on art silk and staple-fibre yarns.

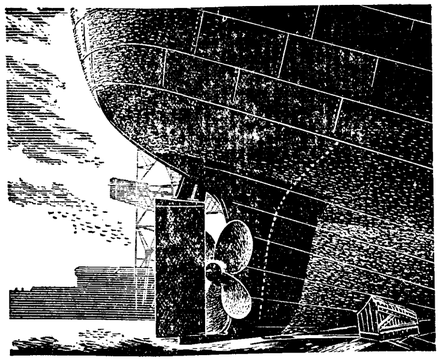
Investment Notes:

Bishnauth Tea Company is going to increase its authorised capital from Rs 16.50 lakhs to Rs 40.00 lakhs by the creation of 2,35,000 new Ordinary shares of Rs 10 each. It is decided to capitalise a sum of Rs 16.50 lakhs from General Reserve and issue 1,65,000 shares of Rs 10 each as capital bonus in the ratio of one for one to those shareholders whose names stand on the company's register on the 3rd March, 1956. These new Ordinary shares will, in all respects, rank pari passu with the existing Ordinary shares save and except that they shall not be entitled to participate in any dividend declared in respect of any period ending on or before 31-12-55.

Similarly, Gohpur Tea Company will be capitalising its Reserves to the extent of Rs 3.38 lakhs and issuing bonus shares in the ratio of one for one to those Ordinary shareholders whose names stand on the register on the 3rd March, 1956. Other conditions are as in the case of the Bishnauth Tea Company.



Messrs. Gillanders Arbuthnot & Company have resigned their managing agencyship of the Cherra Chhatak Ropeway Company with effect from the 27th February, 1956. The company will, in future, be controlled by its directors.

Premier Construction Company, Bombay, has already raised the dividend from Rs 7 to Rs 8½ per share for 1955. It is now learnt that, as the company has come under the rules of the Section 23A of the Income-Tax Act, an additional dividend of the order of As 12 per share will be declared for 1954.

Dividend announcements, for 1955, by Ahmedabad textile mills have started in a promising fashion. Shree Ambica has raised the dividend from Rs 20-0 to Rs 25-0 per share in addition to a bonus of Rs 2 per share.

The Gillanders group of Tea companies has reported encouraging crop reports for the period ending 31-12-1955, as will be clear from the following comparative figures:—

Companies:	1955 OUTPUT (Lbs.)	1954 OUTPUT (Lbs.)	1955 Average Price Realised Rs. a. p.	1954 Average Price Realised Rs. a. p.

New India Industries Limited, another concern to come under the same Section 23A, is also expected to raise the dividend to Rs 16 for 1955 from Rs 12 per share paid in the previous year.

It is understood that the Associated Cement Companies Limited will take up the question regarding the new capital issue within a fortnight's time. Although the company wants to issue the shares at par, the indications are that the Government will insist on a premium of Rs 25 per share.

Investment Briefs:

In Jardine-Henderson Jute group, Howrah Mills have reduced the dividend from As 10 to As 4 per Ordinary share for the half-year ended 30-9-1955. Reliance has again passed over the dividend, while Bally has passed over the dividend against Rs 3-8 paid in the previous half-year.

Martin-Burn Limited has raised the total dividend to Rs 1-12-0 per Ordinary share (including a cash bonus of As 4) for the year ended 30-9-1955 from only Rs 1-6-0 paid in the previous year.

Shree Krishna Gyanoday Sugar has raised the dividend from Rs 1-8-0 to Rs 1-12-0 per share for the year ended 31-7-1955.

Braithwaite & Company has raised the dividend to Rs 1-12-0 on Ordinary shares for the year 1955 from Rs 1-8-0 (including an additional dividend of As 6 now announced) paid in 1954.

Bank of India has raised the dividend from 14 to 16 per cent for 1955.

Orissa Minerals Development have maintained the dividend at 20 per

More Jute Results

Balance-Sheet Reviews:

FOUR more jute mills, viz., Anglo-India, Cheviot, Delta and Orient, have presented their reports and accounts for last half-year. All the mills have reduced their dividends from the previous half-year's levels on account unsatisfactory working results, mainly due to the high price of raw jute in relation to the market for manufactured goods.

Although Anglo-India Jute Mills Company, in Duncan Brothers group, has reported a slight increase in sales and earnings during half-year ended 30th September 1955, the directors have reduced the dividend on the Ordinary shares to Rs 3½ per share from Rs 5 paid in the previous half-year, because of larger allocations to funds. Sales are shown at Rs 2.51 crores as against Rs 2.49 crores, while the net profit, before providing for Taxation and Depreciation, amounts to as much as Rs 16,19,776 against only Rs 11,04,813 in the previous half-year. After setting apart Rs 5.00 lakhs for General Reserve, the directors have raised the Depreciation amount to Rs 5.00 lakhs from Rs 4.00 lakhs and Taxation to Rs 2.25 lakhs from Rs 1.25 lakhs. Machinery Replacement Reserve is, however, reduced to Rs 1.00 from Rs 2.00 lakhs.

The Cheviot Mill's Company, in Andrew Yule group, has reported a loss of Rs 77,959 for the half-year ended 30th November 1955 as against a net profit, of Rs 1,47,596 in the previous half-year. Sales are lower at Rs 46.22 lakhs against Rs 50.94 lakhs. The sum set aside for Depreciation is maintained at Rs 50,000. After making a transfer of Rs 1.00 lakh from Dividend Equalisation Reserve, the directors have declared a dividend of Rs 4 against Rs 6 per share.

Despite a decline in earnings, the Delta Jute Mills Company has maintained the dividend at Rs 5 per share for the half-year ended 30th November 1955. Although sales are nearly maintained at the previous half-year's level of Rs 64.65 lakhs, the net profit amounts to only Rs 1,09,558 against Rs 2,57,096. The Depreciation amount has been reduced to Rs 30,000 from Rs 31,500 and the provision against loss on forward contracts to Rs 5,750 from Rs 25,000.

In the case of the Orient Jute Mills Company, sales are lower at Rs 47.51 lakhs against Rs 52.14 lakhs, while the accounts show a loss of Rs 18,672 against a net profit of Rs 2,03,450 in the previous half-year. The Depreciation amount has been raised to Rs 44,000 from Rs 42,000, but no provision has been made for Taxation. After transferring a sum of Rs 1.00 lakh from Dividend Equalisation Reserve, the directors have recommended a dividend of Rs 4 against Rs 5 per share.

The Budget & the Public interest

Indian Finance
Established 1928
March 3, 1956
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

SIR CHINTAMAN DESHMUKH had no unenviable task in front of him when, early this year, he must have set about framing the budget proposals for 1956-57. It appeared that whatever he did was bound to arouse indignation from one quarter or resentment from another. On the one hand, it was necessary for him to create an economic and investment climate which would enable the triumphant execution of the schemes envisaged for the Second Plan. On the other hand, it was as vital for him to hit upon what would prove to be new sources of revenue from which he could garner in the additional sums necessary by way of fresh taxation for the financing of the Second Plan. Again, while he had to keep these two considerations in view, his economic thinking and philosophy had to be conditioned by the need for Budget policy to work for the achievement of a socialistic pattern of society.

It was, thus, incumbent upon the Finance Minister to ensure that incentive was left with industry and the individual, so that the simultaneous development by the private and public sectors could result in the implementation of the Second Plan. If, for this purpose, the Finance Minister had allowed himself to be greatly sparing in fresh imposts, it could have been charged that he was guilty of disregarding the other two considerations which called, firstly, for the raising of additional revenues, and secondly, for the achievement of a socialistic pattern of society. Sir Chintaman Deshmukh's task, therefore, consisted in resolving this conflict.

The Budget for 1956-57, as announced on February 29th, bears testimony to the astute manner in which, in fact, Sir Chintaman has been able to achieve poise and balance in the proposals he has drawn up. By no means can it be said that the taxation measures that have been proposed will be in the nature of a shocking disincentive to developmnt. It has been urged, in some quarters, that the withdrawal of the rebate on undistributed profits, the taxation of bonus issues and the tax on dividends are all measures calculated to milk corporate profits to the last drop possible. There can be no gainsaying the fact that, in the future set up, the taxation liability on corporate bodies will increase not insubstantially. It may also be argued that, with the withdrawal of rebate on undistributed profits, corporate bodies will not have an extra incentive to plough back profits. But, what we have to consider is whether the rates of taxation are inequitable or no. Taxation of corporate bodies has been reorganised completely, and this aspect of the Finance Bill is analysed in detail elsewhere in this issue.

But what we should note is that, if we take into account the income-tax refunds available on dividends, the incidence of taxation on companies is not unnaturally high. Out of the total of As 10-9, plus surcharge, which would be payable by a company as tax, firstly, credit is being given to the shareholder in respect of the income-tax of As 4; secondly, for the generality of companies, a rebate of As 4 is available to the company, less any reductions as relating to taxes to be paid on bonus issues and on dividends exceeding 6 per cent. In fact, in our view, the increased rates of taxation on corporate bodies is justified; but, we would add one proviso. As we pointed out in the Emergency Budget Bulletin, issued last Thursday, the position of Section 23A companies has been made most difficult and paradoxical.

On the one hand, the Statute requires the disbursement by way of dividends of the bulk of assessed profits; on the other hand, because of such requirements, it also happens that Section 23A companies would attract the burden of the super-tax on dividends exceeding 6 per cent. The following quotation is taken from the Emergency Budget Bulletin of Indian Finance:

> An allied issue that is of great relevance in this context is in reference to Section 23A Companies. They are compelled to pay maximum dividends. If they fail to declare maximum dividends, they have to pay the penal tax imposed in the 1955-56 Budget. If they pay the maximum dividend, they will have to bear the tax now included in the 1956-57 Budget. Surely, this is most unfair. Section 23A Companies must be exempt from the dividend tax.

From the point of view of the individual, the super-rich are agreeably and pleasantly 'disappointed" that the much-feared ceiling on income has not figured in the 1956-57 Budget; the average rich, that the equally universal fear of a tax on wealth and a levy on capital gains has been falsified; the mass of the population, that the anticipation of a variety of excise duties on this, that and the other commodity has not materialised. The middle-class in particular is relieved that the super-tax limit has not been stepped down to Rs 15,000.

These are not small mercies. In fact, we believe that Sir Chintaman's choice of methods by which he has raised Rs 34 crores a year from new and additional taxes reveals that he is mindful of the need to leave room for private profit and personal advancement even though the individual philosophy of the future must have, as its main tenet, social gain. It cannot be suggested that the 1956-57 Budget has left no room for incentive. On the contrary, we repeat, the general feeling is one of relief. We may add that it is apposite for us to view the future, not merely with relief, but with confidence. For, in the first year of the Second Plan, Sir Chintaman might, thanks to the improved budgetary position consequent to the additional revenues made possible by expansionary forces, have attempted to postpone measures calculated to raise any large amount of additional taxes. But, the fact of the matter is that Sir Chintaman has successfully avoided what may be termed disincentive measures, while, at the same time, raising substantial revenues.

As against the need for Government to raise an average of Rs 45 crores per annum by way of additional taxation, without difficulty, without too great a stress or strain on the individual or on industry, Sir Chintaman has been able to lay his hands on the bulk of the amount—Rs 34 crores. Thus, for the Second Five-Year Plan as a whole, the Centre has merely to find Rs 50 crores more in the form of additional taxation. In other words, Sir Chintaman's proposals may be summed up thus: The bulk of what you have to pay as new taxes, we shall be collecting from the very first year of the Second Plan. The horrors of new taxes in the future have, therefore, been minimised, if not eliminated altogether. Surely, both investors and industry have reason to be confident that the fresh imposts of the future will touch them even more lightly than have the budget proposals for 1956-57.

The second fact of importance is Sir Chintaman's shrewd decision to leave part of the revenue deficit uncovered at Budget time. The Finance Minister, it would appear, has great belief in the ability of an expansionist economy to contribute a substantially larger amount by way of revenue. In the past, the Finance Minister's conservative estimates of revenue have far been exceeded in the actuals. Thus, when we have his implicit confidence that the expansionary forces can be relied upon to make up for uncovered deficits, it would appear beyond all doubt that the Finance Minister is certain in his own mind that, without imposing strain on the Indian economy, he will come by all the additional revenue that he will need.

Let us see this lesson of the 1956-57 Budget clearly: the worst that we need to fear in regard to fresh taxation for purposes of the Second Plan has already been left behind. The additional imposts for the future cannot, it may be taken as certain, prove to be intolerably onerous. Thus, it seems that the financing of the Second Plan will be achieved by Sir Chintaman Deshmukh by painless extraction of the necessary revenue.

In our view, the only proposal for new taxes made by Sir Chintaman which is questionable is that relating to the levy on bonus issues. There is, otherwise, a well considered tapping of the resources that could be made to yield fresh revenue. It is not our belief that the bonus tax can be held to be in furtherance of the achievement of a socialistic pattern of society; and, in fact, the additional impost might, by putting a brake on industrial activity, have the contrary effect.

We have already indicated, in the Emergency Budget Bulletin, that such taxation "cannot find any justification whatsoever." Apart from the morality or otherwise of the new impost, it is necessary to bear in mind the fact that, in the immediate future, the revenue under this head is unlikely to be of considerable dimensions. Thus, even if the ends of revenue dictated the new levy, the present is not the time when hopes of large-sized collections in this regard could be fulfilled.

We suggest that there is everything in favour of withdrawing the proposed taxation. In the first place, the charge levelled at the Budget that some of its features are unjust would melt into thin air. Secondly, the Budget would then be even less prone to be termed disincentive. Thirdly, the loss in revenue would not seriously upset Sir Chintaman's Budget calculations.

We trust that the Finance Minister will, by withdrawing the tax on bonus issues, make his Budget for the first year of the Second Plan an irreproachable one. And we entertain this hope in spite of the fact that Sir Chintaman has described the taxation of bonus shares as "an

integral part of the scheme" that he had proposed.

We would go so far as to suggest that 1956-57 is an incentive budget. The incentive lies in the fact that the need on the part of Government to raise additional taxes in the remaining years of the Plan has been minimised. It may even be that the remaining Rs 50 crores of taxation required for financing the Second Plan can be met wholly by additional revenue accruing from the new imposts of 1956-57. In other words, there is a distinct possibility that, for financing the Second Plan, Sir Chintaman will not need to devise fresh measures for laying his hands on the Rs 50 crores shortfall as between the target of additional taxes to be raised and the amount that may be anticipated from the new taxes of 1956-57.

NOTE:—Important sections of the Finance Bill are analysed and commented upon elsewhere in this section.

Personnel for the Plan

IN his Presidential address at the Annual Meeting of the Bengal Chamber of Commerce, Mr G. A. S. Sim expressed guarded satisfaction on the Second Five Year Plan, as being envisaged now. He concedes that the Plan is sufficiently realistic but warns that its fulfilment would depend on the creation of certain conditions, mainly calculated to ensure an adequate supply of skilled personnel. The Bengal Chamber President is inclined to lay great emphasis on this aspect of the Plan requirements. Not only should the best skill and brains be attracted, but there should be a general level of effort inspired by the big and arduous aims of the Plan.

In relation to the type and quality of skill which the Plan has to enlist, Mr Sim is rather sceptical about some of the recent economic trends. A number of reasons have been given for this scepticism: Taxation on personal incomes is high and there is the prospect of its becoming still higher. Current trends in labour and industrial policy have led to a general sense of frustration. Particularly in north East India, managerial staff has become frequently exposed to violent assaults. There are cases where on important matters affecting industry and trade, judgements of courts are sought to be negatived by Central Ordinances. The jute, tea and coal industry in North-East India have a special interest in the new company law, in so far as it is in these industries that the managing agency system prevails most.

Mr Sim voices the fear that the implementation of the new law is being rushed through, without giving sufficient time for the companies concerned to comply with its provisions in letter and in spirit; many companies may find it hard to be on the right side of the law technically in every respect. The Bengal Chamber President is inclined to think that "the effect of all this is to make the skilled technical and managerial staff wonder whether the game is worth the candle." He also feels that it would serve the State better, if the incentives for those in whom the practical fulfilment of the Plan depends are liberalised. Not to do it is considered clearly short-sighted.

Mr Sim's address represents an out-spoken and, at the same time, restrained criticism of aspects of State policy which impinge adversely on the interests for which he speaks. There is no doubt that private business, not excluding foreign business in India, feels that the redistributive aim is being too hastily pursued. If, however, the entire range of national problems and national aspirations are kept in view, the logic behind the more controversial aspects of current economic policy could be more sympathetically viewed. Foreign business interests in India have now been completely rescued from whatever stigma they had through an inconvenient political association. There is scarcely any differential treatment worth mentioning. In minor instances, where a sense of injustice is legitimate, as for example in the matter of double taxation, the Government of India have shown their willingness to accommodate reasonable demands.

Nor are the Government of India insensitive to the enormous importance of skilled personnel for the Second Plan. In fact, on this question, Mr Sim's observations read almost like those of Government spokesmen. For the first Five Year Plan which left many things to be desired by way of coordination, the flow of technical and managerial personnel, except in the initial stage, was not unsatisfactory, though bottlenecks still exist. The Colombo Plan was one answer to the problem and is a striking example of Commonwealth understanding and cooperation. Individual foreign industries and groups have also found it worthwhile to associate themselves in the planning and building up of new industries in India. The electrical assessories industry the steel plants and the oil industry are notable instances. More of similar organised cooperation is in sight. International institutions such as the World Bank are keen on supplementing this kind of service. That the acquisition of technical personnel has of late begun to extend in territorial range is all the more significant.

As for taxation, two considerations are paramount, the needs of the State, consistent with the requirements of capital formation and the social outlook which a democratic Government can overlook only at their peril. In respect of personal and company taxation even at the 1956-57 levels, the position obtaining in India is not wholly unfavourable from the point of view of the tax payer, in comparison with the UK. If the latest budget contains certain new taxes and enhancement of rates, the restraint shown should also be appreciated. This restraint is, in part the answer to some of the complaints voiced by the Bengal Chamber President.

Law for the Layman

Clauses Exempting Liability in Contracts

By K. N. VISWANATHAN

IT is perfectly open to a party to a contract to put into the contract, clauses, exempting him from liabilities arising under the contract. This device, to escape liability, is frequently resorted to in Garrage contracts and contracts of hire.

In RUTTER v. PALMER, case of Garrage contract (a decision of the court of appeal in England, reported in (1922) K.B. 87), the Appellant RUTTER, owner of a Garrage, received the car of Palmer (the respondent) for sale. There was a written contract between the parties in printed form and the contract included an exemption clause that customers cars will be driven, by the owners' staff at the customer's risk. The car was taken out by the driver of the garrage owner to be shown to an intending purchaser. While it was being so driven it came into collision with a lamp post and both car and lamp post were seriously damaged. It was held by the Court of Appeal that the exemption clause (referred to above) protected the garrage proprietor even from liability for the negligent acts of his driver.

In WHITE v. JOHN WARWICK, a case of contract of hire of a cycle, (a decision of the court of appeal in England reported in 1953 W.L.R. 1285) the plaintiff, White, entered into a written contract with the defendants John Warwick & Co., whereby he took on hire a tradesman's cycle from them for the purpose of his business of supplying newspapers to customers. There was an exemption clause in this contract that nothing in the contract shall render the owner liable for any personal injuries to the riders of the machines hired nor for any third party claims nor loss of any goods belonging to the hirer in the machines. The defendant supplied a cycle to the plaintiff as per the aforesaid contract. The cycle was defective and in consequence of the defect the plaintiff was thrown off the cycle and injured. The plaintiff therefore claimed damages for breach of contract or for negligence. The Court of appeal unanimously held that the exemption clause quoted-above protected the defendant against liability in contract for the damage suffered by the plaintiff, but the court of Appeal sent the case back to the High Court for determining the question whether the defendant (the owner) was liable in damages for negligence independently of the contract. In coming to this decision, Lord Justice DENNING one of the learned Judges who decided this case states the legal incidences of exemption clauses in contracts thus:—

"In this type of case two principles are well settled. The first is that if a person desires to exempt himself from a liability which the common law imposes on him, he can only do so by a contract freely and deliberately entered into by the injured party in words that are clear beyond the possibility of misunderstanding. The second is: if there are two possible heads of liabilty on the part of the defendant, one for negligence, and the other a strict liability, an exemption clause will be construed, so far as possible, as exempting the defendant only from his strict liability and not as relieving him from his liability for negligence."

In conclusion it must be borne in mind that exemption clauses will only apply, where the damage in respect of which they are operative, takes place within the four corners of the contract.

The Knotty Clauses

SUB-SECTION (b) to Section (1) of Clause (2) of the Finance Bill prescribes that the rates of super-tax shall be those specified in Part II of the first schedule. On page 391, the extract relating to the super-tax leviable on companies has been published in full. This indicates that, over and above the income-tax at As 4 in the rupee, super-tax would be charged at a rate of As 6-9 in the rupee. A rebate is, however, allowed; and this will be reckoned according to formulas set down. Companies generally with a total income exceeding Rs 25,000 would be permitted a rebate at the rate of As 4, provided that due and formal arrangements about the deduction of super-tax on dividends to non-residents have been made. The amount of this rebate, however, will be diminished by the taxes that may be payable in respect of, firstly, As 2 per rupee on any bonus issue and, secondly, dividends which are in excess of 6 per cent. In no case, however, will the tax liability on bonus issues and on dividends above 6 per cent be greater than the amount of rebate allowed—i.e. As 4 in the rupee. Moreover, some relief has been provided for marginal companies.

The explanation states that the paid-up capital will mean the paid-up capital (other than capital entitled to a dividend at a fixed rate) of the company as on the first day of the previous year relevant to the assessment for the year ending on 31st March. 1957. Thus. the paid-up capital to be taken into account will be the ordinary or risk capital as on 1st April, 1955.

The question of taxation on bonus and tax on dividends is considered later. Here, we may remark that the paid-up capital by definition includes capital that might represent a bonus issue of an earlier period. There are, in this context, two points of discussion.

In the first place, it would seem to us that, for the purpose of calculating the 6 per cent of dividend which would not bear the additional taxation on dividend, there must be inclusion of any subsequent bonus issues which, by terms of the new Finance Bill, would have been separately taxed. In other words, if a company issued bonus shares, say, in September 1955, it is, of course, clear that the bonus shares would not be taken into account for computation of the dividend permitted free of tax for 1955-56. But, in the accounts of that company for 1956-57, we suggest that it should be made clear that the bonus shares, with tax thereon having been paid, will be considered part of the paid-up capital on which the percentage computation of the dividend would be made.

Secondly, we would urge that, in the cases of companies which had issued their shares at a premium, and which, consequently, showed the share premium in a separate account on their balance sheet, the share premium should also be included in the calculation relating to paid-up capital. For, obviously, from the shareholder's point of view, the premium formed part of the price that he had to pay for his share; and he expects the return on his investment to be commensurate with the extra amount that he has paid as share premium. Take, for example, the impending Tata Ordinary issue. The face value of the share is to be Rs 75; the balance representing premium to the extent of Rs 30 per share will, obviously, be credited to a separate account. We suggest that, when computation of TISCO capital for 1956-57 is being made, it should include not only the face value of the Ordinary shares, but of the premium that has been insisted upon by Government.

*

As far as the tax on dividends is concerned, we would like to suggest that this tax must be viewed in the right perspective—that is, the perspective of profit-acceleration under the direct and powerful impetus of the colossal disbursements made by Government in the execution of the Second Plan. The analogy is between expanding profit margins in the context of large-scale war expenditure and the equally striking profit-margins in the context of gigantic developmental expenditure.

In war conditions, the stimulation provided by defence expenditure to corporate profits is considered the raison d'etre for excess profits tax. To the extent that a substantial element in the earnings of industry is directly attributable to Government's disbursements on war requirements, it has been rightly claimed that a moiety of that additional profit must accrue to Government in the form of taxation

It is admitted that, particularly since 1953-54, every industry in this country is assured of superlatively favourable conditions for making profit; and that such favourable conditions are largely the result of the mounting disbursements made by Government in the accelerated execution of the planned projects. It can, therefore, be rightly contended that, to the extent that a substantial element in industrial profits is attributable to Government's outlays on the Plan, a proportion of the additional profit must accrue to Government in the form of an appropriate tax.

If Excess Profits Tax is recognised as a correct fiscal measure in times of war, a development tax is no less an appropriate measure in an era of planning.

We suggest that the tax on dividends must be viewed in this light and from this perspective. If this point of view is appreciated, any charge of harshness against this tax will melt into thin air.

While we are, thus, of the view that there is a good case for a tax on dividends in the years in which industry will benefit from Government spending anything like Rs 1,000 crores a year on the projects comprised in the public sector, we suggest that, to make this tax more scientific, the analogy to the excess profits tax must be completed in the sense and to the extent that the tax must have reference, not to an arbitrarily selected rate of dividend, but to a 'standard' rate. That is to say, a company must be permitted to choose a 'standard' year, say, between 1953, 1954 and 1955; and the excess over the dividend paid in the 'standard' year so selected should attract the tax on a slightly graded scale.

We strongly commend this suggestion to the careful consideration of the Finance Minister.

*

Next, in respect of the tax on bonus issues, we must stress that such a levy cannot find any justification whatsoever. Mr Nehru has often emphasised in the past that Indian development must be achieved through democratic processes, that the ends of Indian development are to be sought only by means that are above reproach. Judged in this context, Sir Chintaman's decision to levy a tax on bonus issues would appear to be misconsidered.

An expert body, the Taxation Enquiry Commission, carefully examined the implications of raising revenue against bonus issues. And the TEC came to the unequivocal conclusion, stated in unambiguous terms, that there was no case for the taxation of bonus issues. Let us remember that bonus issues represent the capitalisation of reserves which have already borne the rates of taxation applicable. The reserves are the property of shareholders. Their capitalisation does not amount to a cash dividend or the distribution of amassed profits. Largely, the bonus issue is the bookkeepers' rationalisation of the balance sheet. It is, therefore, unjust and inequitable that undistributed profits—the property of the shareholder—capitalised and rendered unto the shareholders in the form of a bonus issue should be subject to taxation. Then, from the point of view of the company, profits that have already attracted taxes should surely not bear a further burden at a later date.

We can understand that the rebate allowable on undistributed profits may, for this purpose, be withdrawn. And, in fact, Sir Chintaman's Budget proposals for 1956-57 do include this measure. As such, in the future, there is no question of undistributed profits not having attracted their fair share of taxes, or of the reserves so having been built up having been allowed some rebate in taxation.

In this view, we oppose the present intention to levy a tax on bonus issues. But, in line with the decision to withdraw the rebate on undistributed profits, it appears to us that Government would be justified in framing a new policy in respect of reserves, built up with the benefit of the rebate, which later may be capitalised; in such cases of capitalisation, Government may enforce the repayment by the company of the rebate in taxation that had earlier accrued. For the future, in respect of the profits which will not benefit by the rebate, there can be no question of taxation upon the capitalisation of such reserves.

It is important that the Finance Minister should pay proper heed to the means to be applied. For India, with a path chosen that is moral and upright and democratic, we cannot afford to take any step which has in it the suggestion of means that may be unjust or unfair. Incidentally, it is not as if Government could secure enormous revenue by the taxation of bonus issues. For the paltry sum that it may be possible to raise by a levy on bonus issues, it would be sad if India were to decide on a measure that is patently inequitable. India has decided that the ends do not justify the means. Let Sir Chintaman make sure that the levy on bonus shares is not in contradiction of this principle.

Let us remember that, in another country, this particular tax on bonus issues has been tried in the manner that we have indicated. It is unjust that taxed profits should bear a second burden of taxation, either in the hands of the company or in the hands of the individual. At the same time, it is open to Government to decide upon a measures that is wholly just and one that none could quarrel with, which is to obtain a repayment of the rebate that had been permitted in the earlier undistributed profits.

While we are aware of the fact that revenue statutes the world over are not governed by principles of natural justice, the present levy on bonus shares violates even the ordinary principles of human ethics: for, bonus shares cannot, even by the wildest stretch of imagination, be termed income. It is small consolation if Legislature were to suggest that the tax on bonus issues is a levy in the nature of a penalty deductible from rebate—and not a tax as such

But a perusal of clause 12 (which amends Section 16 of the Income-tax Act), shows that the legislature has no intention of allowing any credit to the shareholder in respect of the tax borne by the company on a bonus issue of shares. While we are opposed to the very idea of taxation of bonus shares as presently suggested, we feel that the least that Authority can do would be to ensure that due credit is given to the shareholder, in the event of winding-up, of the amount represented by the tax paid on bonus shares.

*

Sub-section (a) of Clause (3) introduces the substitution of a new clause in Section (2) of the Income-tax Act. The significance of this amendment is that, upon the liquidation of a company, the distribution to the shareholders, except to the extent of the repayment of capital, will be deemed to be dividend taxable in the hands of the individual. For the purposes of this section, all distribution "attributable to accumulated profits of the company immediately before its liquidation, whether capitalised or not" is to be taken to mean income. In other words, bonus capital will not be reckoned as capital, but as income, in the event of liquidation.

Sir Chintaman Deshmukh's Sixth Budget

*

Extracts from Finance Minister's Speech (Part A)

The current year's budget provided for a capital expenditure of Rs 223.3 crores. This was inclusive of Rs 29 crores for State Trading schemes, mostly in regard to foodgrains. These schemes are now estimated to yield a net credit of Rs 11 crores owing largely to reduced imports of wheat and sugar. Capital outlay in respect of Railways is now expected to be Rs 72 crores against the budget figure of Rs 66 crores, but this increase has been more than offset by a shortfall in expenditure under a number of other heads. Thus cash compensation to displaced persons shows a saving of Rs 6 crores in the budget provision of Rs 15 crores. The revised estimates of capital outlay for the current year now stand at Rs 170 crores.

For the next year, capital expenditure is estimated at Rs 316.7 crores including Rs 9.5 crores for Government Trading schemes, mostly for our normal purchases for the Central Reserve of foodgrains.

Provision for the capital outlay of Railways amounts to Rs 113 crores against Rs 72 crores in the current year. Provision for the three steel plants at Rourkela, Bhilai and Durgapur amounts to Rs 44 crores. A provision of Rs 5 crores has been made for investment in the Life Insurance Corporation which is being set up following the decision to nationalise life insurance. Cash compensation to displaced persons is estimated at Rs 20 crores. There is also an increase of Rs 6 crores on the capital outlay on Defence next year.

In addition to the provision for capital outlay, the estimates include, against the original Budget provision of Rs 355 crores for the current year, a revised figure of Rs 327 crores this year for loans to State Governments and others, mostly for the execution of projects in the Plan. The provision made for the next year on this account is Rs 386 crores. Honourable members will find the broad details of these loans in the Explanatory Memorandum.

With the large and growing outlay in the context of the Plan, both on revenue and on capital account, the question of securing the maximum possible economy and avoiding wastage owing to delays and inefficiency assumes added importance. Honourable Members have naturally been taking keen interest on this question and the Taxation Enquiry Commission had also stressed the need for a thorough and careful enquiry, both in the Central Government and in the States, into the whole question of public expenditure. As I have explained on various occasions we are keeping a continuous watch over the growth of expenditure and securing economy, wherever possible, as part of our day to day control over expenditure. We have an Economy Unit set up under the Home and Finance Ministries continuously re-assessing the staff requirements of various Central Ministries and an Organisation and Methods Division in the Cabinet Secretariat engaged on a continuous review of organisation and methods of work in the various Central Offices, so that wastes resulting from uneconomic methods are avoided. We have also the assistance of the Estimates Committee in the pursuit of economy. Any net reduction in the administrative expenditure in the Centre or in the States can hardly be expected during the course of implementation of the Second Five Year Plan. Nevertheless, this very tempo of rising expenditure during the next five years would open up many possibilities of extravagance and waste and it is necessary to keep a still closer watch over such expenditure to ensure that the tax-payer gets the maximum benefit out of the planned outlay. We have been in consultation with the Planning Commission and have come to the conclusion that the best way of dealing with this matter would be to set up a special high-powered committee of Ministers and the Deputy Chairman of the Planning Commission at the Centre to organize a thorough investigation, including inspection in the field, of the important projects in hand both at the Centre and in the States (with the approval of the National Development Council), through specially selected teams. These teams will be composed of officials as well as non-officials specially selected for each group of related investigations and may be assisted by outside experts. As the results of each investigation are received the High-powered Committee at the Centre will examine them with a view to formulating proposals for effecting economy to be implemented by Central Ministries or in the States, as the case may be. The orders of the Cabinet or guidance from the National Development Council will be obtained wherever this is considered necessary. Such proposals may conceivably include the setting up of economy units for different categories of projects, preferably in the Planning Commission.

This brings me to the somewhat related question of the resources of the States for financing the Plan. It is of great importance that the revenue budgets of the States, as indeed of the Centre, should be balanced. While it is reasonable to borrow for investment outlay and for a time even some measure of deficit financing may be necessary for financing such outlay, ordinary prudence demands that current expenditure should be met by taxation. Capital expenditure has also to be phased so that it corresponds to the results of special efforts to increase resources for development. The States have been advised to bear these considerations in mind in framing their budget estimates for 1956-57. Some measure of relief to the revenue budget of most of the States may result from a re-classification of expenditure between revenue and capital. This question was examined carefully by us in consultation with the Comptroller and Auditor General and, with a view both to uniformity and also because of the large and abnormal expenditure necessitated by the Plan, we have suggested to the States that certain items of expenditure might appropriately be transferred from revenue to capital, as for example, expenditure on permanent assets of a concrete nature costing Rs 20,000 and over. The Centre has also been able to make grants to the States over and above the transfer of resources which it had to make as a result of the last Finance Commission's Award, but the Centre's ability to make such grants is conditioned by its own revenue position. In any case, the allocation of revenue resources between the Centre and the States is a matter for the Finance Commission for which the Constitution specifically provides. For the year 1956-57, Central assistance towards the schemes falling on the revenue budgets of the States is being continued on the current pattern, although part of this assistance will necessarily have to be re-allocated among the re-organised units which will come into existence later in the year as a result of the decisions on the recommendations of the States Reorganisation Commission. The year 1956-57 will be the last of the quinquennium covered by the Award of the first Finance Commission. How far the Centre can continue or increase the present scale of assistance to the States will depend on the Award of the next Finance Commission. The President has approved the appointment of Sri K. Santhanam as the chairman of the next Finance Commission. Other members of the Commission will be appointed shortly and the Commission is expected to start its work in the near future. The Commission will have to consider the finances of the reorganised States and its recommendations would normally take effect from the year 1957-58. In addition to its normal duty to make recommendation about the distribution of Central taxes and of Central grants, it is proposed to seek its advice on a few other important subjects. The first of these, as was indicated in the last Budget Speech, is the distribution of proceeds of Estate Duty in respect of which we are, at present, tentatively following the last Finance Commission's formula about income-tax. Another subject is the terms which can appropriately be fixed for different kinds of loans to the States. A large number of loans are being and will continue to be sanctioned to the States for financing their Plan. The terms of each loan have so far been fixed ad hoc and it is possible that, in some cases, they have proved onerous. An independent body which will go into the question of the finances of State Governments would be able to make a proper assessment of the burden of these loans on the States and also to advise upon their appropriateness. Whatever relief these adjustments and the Finance Commission may bring to them, it is clear that the States have to raise additional revenue to cover the growing recurrent liabilities which the present and the next Plans will involve on their revenue budgets. In this they may have to go beyond the lines recommended by the Taxation Enquiry Commission which was visualising a much smaller Second Five Year Plan.

WAYS AND MEANS

The current year's budget provided for an overall deficit of Rs 327 crores to be met by expansion of treasury bills. On the basis of the revised estimates, the overall deficit is now expected at Rs 222 crores. As the opening balance of the year was about Rs 18 crores less than the minimum of Rs 50 crores the expansion of treasury bills will amount to about Rs 240 crores.

Unlike the previous year when a combined loan was floated to cover the requirements of both the Central Government and the State Governments, this year the normal procedure of separate loans by the Centre and the States was followed. The Central Government floated a 10-year loan, the 3½ per cent National Plan Bonds—Second Series. This loan which was for Rs 100 crores was fully subscribed the amount accepted being Rs 103.7 crores. Small savings have shown substantial improvement, the collections now expected being Rs 65 crores against Rs 52 crores in the budget. While the response so far has been encouraging, the task set for the next Plan is much bigger. As the members will have seen from the Draft Outline of the Plan, Small Savings are expected to yield Rs 500 crores during the next Plan, which is more than double the target for the current Plan. Government have been taking various steps to intensify the Small Savings movement. In the rural

areas, the agency of Panchayats, Union Board Presidents and Village Teachers is being utilised. The Women's Savings campaign under the Central Advisory Committee has been maintaining its progress and over 150 voluntary social and women's organisations have been appointed as agents for the sale of Certificates. The State Governments are co-operating in the movement and some of them have created special offices to intensify the small savings drives in co-operation and co-ordination with the National Savings Organisation. Advisory Committees are being formed, both at the State and the district level, to assist the movement and a system of Savings Groups is proposed to be introduced in all offices and organisations.

The higher target for the next Plan can only be achieved, however, if there is full and whole-hearted co-operation on the part of every citizen of the country. This is a task of vital national interest about which there can be no two opinions and I hope that the fullest co-operation will be forthcoming freely from all. I, therefore, renew once again my appeal for greater effort on the part of every one to save and invest in small savings and thus contribute towards the successful implementation of the Plan.

The improvement in the Ways and Means position this year is due largely to the surplus in the revenue account and the savings in the capital expenditure and loans to State Governments and others which I have mentioned earlier. Foreign aid this year is now expected to amount to about to Rs 56 crores against Rs 74 crores in the budget, but this has been more than offset by improvement in other heads. Two loans which fell due for repayment this year were duly repaid, the amount involved being Rs 69 crores.

The overall deficit next year is estimated at about Rs 390 crores. This follows the larger provision for development expenditure in the revenue and capital budgets. Credit has been taken for a new loan of Rs 100 crores next year. Small Savings next year may amount to Rs 70 crores and foreign aid Rs 85 crores. There is no loan maturity next year. Allowing for other miscellaneous transactions under Debt and Remittance heads, it will be necessary, on these estimates, to expand treasury bills by Rs 390 crores to cover the overall deficit.

I might summarise the Ways and Means position for the coming year. Government need Rs 52 crores for meeting the revenue deficit and Rs 703 crores for financing the capital outlay and loan requirements of State Governments and others. Against this, they hope to raise Rs 100 crores from the market loan and Rs 70 crores from small savings. Foreign aid expected next year amounts to Rs 85 crores and other miscellaneous Debt and Remittance transactions may bring in Rs 110 crores. This will leave a gap of about Rs 390 crores in the available resources to balance the budget.

*

Budget for First Year of Second Plan

*

Taxation Proposals made by Sir Chintaman

The position for the coming year is briefly that the deficit on revenue account is estimated at Rs 51.83 crores and the overall deficit at Rs 390 crores. The immediate question is how much of this deficit should be covered by additional taxation.

I referred earlier to the question of re-classification of expenditure between revenue and capital. At the Centre, Honourable Members will recall, we are already taking to capital temporarily a number of grants to States and there is not much scope for further transfers from revenue to capital without straining unduly the rules of classification. I believe also that, with the administrative machinery both at the Centre and in the States getting increasingly geared to the execution of the Plan, shortfalls in expenditure of the order which have occurred in recent years will tend to diminish. The estimates for the coming year have been framed with as much care as possible; in particular, substantial reductions have been made under heads which have shown persistent savings and the provision for grants to States for various development schemes has been based on a proper assessment of the ability of the States to find their share of the resources required to finance those schemes. Although, therefore, it is not possible to say categorically that the shortfalls will be entirely eliminated, or that there will be no variations in estimates of revenue, the margin of fluctuations is likely to be narrower than in the past. Indeed, it may be said that the cuts that have been made in some of the demands for next year may prove to be too fine. I cannot but stress again the principle that current expenditure should, as far as possible, be met from current taxation. It is, therefore, necessary to cover the gap on revenue account in the coming year, if not wholly, at least substantially. My proposals for additional taxation are related to this objective.

CHANGES IN CUSTOMS DUTIES

I shall first deal with the changes I propose to make in Customs Duties.

In regard to import duties, a number of minor changes are being made and I need only mention a few of them. The duty on liquid gold for glass making is being raised from its present level of 31¼ per cent to 62½ per cent. The duty on flash-lights and flash light cases is being raised from 39⅜ per cent to 50 per cent. These changes will help the indigenous industries in these goods. Certain changes are also being made in the items in the Import Tariff affecting mineral oils, mainly with a view to rationalising the existing headings. The existing item in the Import Tariff relating to spectacle frames and parts thereof is being amended so as to include complete spectacles within that item. The net effect of the changes proposed will be an addition to revenue of about Rs 1 crore.

As regards export duties, the only change I propose to make is by way of affording relief to the Tea Industry. The House will recall that a slab system of export duty on tea was introduced last year. It is too early to say how that system has worked. In the meantime, however, our exports of tea have suffered a setback during 1955 as a result of a number of factors, including a comparatively high production and keen foreign competition. In order to afford some relief to the Industry and to step up our exports of medium teas, I propose that the existing duty for the slab relating to the price range of Rs 3-4 to Rs 4 per lb be reduced by two annas per lb that is, from eight annas per lb which is the present rate, to six annas per lb. The effect of this will be that all teas ranging in price from Rs 2-8 to Rs 4 per lb will bear a uniform duty of six annas per lb. The change is being given effect to by a notification, which is being issued immediately. On the basis of the present scale of exports, the loss of revenue involved is expected to be about Rs 1 crore.

UNION EXCISE DUTIES

Turning to Excises, I shall first deal with changes in the existing duties. My main proposal is to raise the duties on all categories of Cotton Fabrics by 5 pies per sq yd except on Dhoties and Sarees of the coarse category, the duty on which would remain unchanged. The Taxation Enquiry Commission had recommended enhancement of the excise duties on all varieties of Cotton Fabrics and I had accordingly proposed in last year's Finance Bill an increase in the duties on medium and coarse Cotton Fabrics from 6 pies per sq yd to one anna per sq yd. It was, however, then represented that prices of agricultural commodities had been falling for some time, and the purchasing power of the rural population was low. The offtake from the mills had also declined at the time and the mills were carrying large unsold stocks. The proposals were accordingly withdrawn. Conditions have since noticeably improved. Although mill production of Cotton Fabrics has reached a level higher than ever before, the offtake from the Mills has steadily risen. In the context of an expanding demand for cloth, this position is likely to improve still further. The prices of agricultural commodities have also risen. After the most careful weighing up of all relevant factors, I have come to the conclusion that an increase in the Excise Duty on medium and coarse cotton cloth is fully justified. The yield expected from the proposed increase is Rs 14½ crores.

I also propose to make minor changes in the existing duties in respect of Soap, Strawboard and Art Silk Fabrics.

The duty on Soap is at present confined to soap produced with the aid of power. Since this duty was first imposed year before last, surveys conducted have shown that the non-power operated units are producing substantial quantities of soap. Some of the larger units amongst these are offering appreciable competition to the smaller power operated units. I have accordingly proposed new excise duties for non-power operated units at somewhat lower rates than the existing rates for power operated units. In the matter of exemptions to the small-scale units also, it is proposed to put the non-power operated units in a slightly better position than the power operated units.

Strawboard at present enjoys an exemption from excise duty. Enquiries have shown that this exemption is hardly justified.. Strawboard and cheap Millboard compete with each other. A substantial proportion of Strawboard is actually produced by well organised units which hardly need any special protection. I accordingly propose to tax Strawboard, at the same rate as that at present applicable to Millboard, namely, 6 pies per lb. As a measure of relief to the small producer, I also propose to give, by executive notification, an exemption for the first 500 tons of Strawboard and the cheaper varieties of Millboard cleared by any manufacturer during the financial year.

In regard to Art Silk Fabrics, it has been found that the exemption given to units employing not more than 24 looms has placed them in a position considerably more favourable than the small units in the sister industries producing cotton or woollen textiles. This has further enabled them to offer unfair competition to the taxed sector of the Industry. I have, therefore, proposed the abolition of this exemption in its present form. It is being replaced by an executive notification, in a modified form, exempting the production of the first 9 looms by any manufacturer.

The total revenue effect of these small changes is an increase of Rs 50 lakhs.

For new excise duties, I propose only two items, namely, Vegetable Non-essential Oils, and all kinds of Diesel Oil, Vapourising Oil and Furnace Oil.

Vegetable non-essential oils figure in the list of commodities recommended by the Taxation Enquiry Commission for an excise duty, and I propose a duty of half an anna per pound on all such oils. This duty will be levied only on factories operated by power. Even among these, it is proposed to grant exemption by notification for the first 125 tons per year cleared for home consumption from any factory. This will ensure that all ghanies and other small units are exempted from the duty. The yield expected is Rs 5½ crores.

Production of diesel oil and other fuel oils at the new Refineries at Bombay is soon expected to outstrip the internal requirements for such oils. The import duty on these oils should, therefore, be replaced by an excise duty. The excise duties I propose are 4 annas per gallon on High Speed Diesel Oil and Vapourising Oil used primarily in driving heavy motor vehicles, and Rs 30 per ton and Rs 15 per ton, respectively, on other Diesel Oils and Furnace Oils. These new duties are expected to yield Rs 4½ crores.

Countervailing Customs Duties will be imposed wherever necessary.

The net additional revenue from the changes in Excise Duties will amount to Rs 25 crores.

INCOME TAX

I now come to Income Tax. The only change I propose in personal taxation is a slight adjustment upwards of the super-tax payable on incomes above Rs 70,000. With this adjustment, the rate of tax on the highest slab of income, that is, above Rs 1,50,000 will be 91.9 per cent against the present figure of 88.6 per cent. The extra revenue on this account will be about Rs 1 crore.

In this connection, I may mention that the Taxation Enquiry Commission had recommended that the tax on the highest slab of income should not be more than about 86 per cent. They had, however, recommended that, in addition to this rate of tax, there should be a surcharge cum compulsory deposit at a graduated rate on incomes above Rs 25,000—the maximum being 5.6 per cent as surcharge, and the same amount as deposit. Their scheme envisaged, however, that against the surcharge a long-term loan, say, for 45 years, might be given at a nominal rate of interest under certain conditions and that the deposit should be repayable with interest after 45 years. The net additional amount that the tax-payer would have to pay in any year is thus represented by only one of these. Considered purely as a tax burden, the effect of the Commission's recommendation, is thus a tax of 86 plus 5.6 per cent that is to say, about 92 per cent on the highest slab of income. This will also be the position under my proposals in respect of these incomes.

I propose also to introduce a tax on Registered Firms. The Income Tax Act recognises two kinds of Partnership Firms; those which are registered and those which are not registered. In the case of the former, no tax is imposed on the firm as such, but its profits are taxed in the hands of the partners according to their respective shares and at rates applicable to them individually. In the case of the latter, that is, the unregistered firms, the tax is imposed on the firm as such at rates applicable to personal incomes. The registered partnerships, therefore, enjoy an advantage over the unregistered partnersips, and they do not also pay any Corporation Tax which is payable by Companies. I think there is adequate jujstification for imposing a small tax on the registered firms as such. I propose that the rate of such tax should be nine pies per rupee up to Rs 75,000, one anna up to Rs 1,50,000 and one anna six pies for incomes above this figure. The partners of the firm will get abatement on their proportionate shares of this tax for the purpose of income-tax, but not for super-tax. In order that small partnerships may not be affected by this, I propose to exempt incomes upto Rs 40,000. In other words, registered firms whose income is Rs 40,000 or less will not be required to pay this new tax. The extra revenue from this tax is expected to be Rs 1 crore.

The other field of direct taxation is the taxes on corporations. About half of our direct taxes comes from this source and there has been no change in Company taxation during the last five years. In view of the large development expenditure that has taken place in the First Plan Period and the even larger expenditure contemplated in the next Plan, I think there is adequate justification for putting a small extra burden on Companies. I propose, therefore, to effect three changes. **First**, the rebate of one anna of income-tax at present given to non-Section 23-A Companies in respect of undistributed profits will be withdrawn. **Second** while the rate of super-tax payable by Indian companies will remain unchanged, there will be levied, in addition, a super-tax at a graduated rate on the dividends declared by them above a certain limit, namely, 6 per cent. This rate I propose to be 2 annas in the rupee on the amount distributed in excess of 6 per cent but up to 10 per cent of the paid-up capital. On distributions above 10 per cent of such capital, the extra super-tax will be 3 annas in the rupee. **Third,** there will be a tax of two annas on bonus issues. I have taken due notice of the recommendation of the Taxation Enquiry Commission that there should not be any tax on bonus shares. I consider, however, that there is adequate justification for imposing such a tax and, in any case, such tax is an integral part of the scheme I have proposed.

Incidentally, I am also taking this opportunity of completing the process which we started in 1953 of equating the tax payable by a foreign company operating through a branch and that payable by another company operating through a subsidiary Indian company which remits the whole of its profits as dividends to the foreign parent company. The net effect is that the tax payable by a foreign company operating through a branch will go up from 53 per cent to 62 per cent.

Another change I propose is an increase in the penal super-tax payable by a Section 23-A company which deals wholly or mainly in investments. I propose to raise it from the present figure of four annas in the rupee to eight annas in the rupee on the amount of undistributed profits. The rate applicable to other Section 23-A companies will remain unchanged.

The net effect of all these changes in corporate taxation will be an increase in revenue of about Rs 8 crores. I also hope that the scheme proposed will have some anti-inflationary effect.

In addition to these, the Finance Bill contains several other proposals some of which give relief to the tax-payers and some others which are intended to plug loopholes. In general, they are in implementation of some of the recommendations of the Taxation Enquiry Commission. I do not propose to weary the House with the details of these amendments and for the convenience of the Members I have appended to the Budget papers a Memorandum explaining in detail the provisions of the Bill.

At this stage, I should like to refer to only one of these amendments. The House will remember that, shortly after Section 5(4) of the Investigation Commission Act had been declared invalid by the Supreme Court, we issued an Ordinance on the 17th July 1954 enacting a new Section 34(1A) in the Income Tax Act to enable us to take over the cases which had been started under the provision declared invalid. Under this Ordinance, which was subsequently ratified into law by Parliament, we took powers to reopen all cases of tax evasion during the war years of more than Rs 1 lakh. As the law stands, this power can be exercised only up to the 31st March 1956. There have been, since then, two other judgments of the Supreme Court, one in October 1954 declaring Sections 5(1) of the Investigation Commission Act invalid from the 17th July 1954, and another in December 1955 declaring that Section invalid from the 26th January 1950. This means that the Department will now have to take over again a large number of cases previously dealt with by the Investigation Commission. We have carefully reviewed the position arising out of the judgments of the Supreme Court in consultation with our legal advisers. As a result, it is now proposed to have a re-draft of the existing provisions of the law enabling the Department to reopen old cases. Substantially, the position remains unchanged—the only difference being that, while the existing law lays down a time limit up to the 31st March 1956 for the exercise of the Department's powers to reopen cases of concealment beyond eight years, the proposed amendment fixes no time limit. This is being done for three reasons; firstly, the latest judgment of the Supreme Court having been given only in December 1955, it is not possible for the Department to issue all notices within the short period of three months left since then; secondly, the validity of the new Section 34(1A) is itself being challenged in several High Courts and it is not known when we shall get a final decision on this point; and finally, the Taxation Enquiry Commission have recommended that, as in other countries, there should be no time limit to the reopening of cases of fraudulent tax evasion. This is a desirable reform which has been long overdue. The power of reopening cases beyond eight years will not be exercised unless the amount of total tax evasion exceeds Rs 1 lakh and then only with the sanction of the Central Board of Revenue. This will ensure that the powers are exercised after proper scrutiny and only in cases of substantial evasion. It is also proposed to give the Department powers of search and seizure of accounts and documents which the Investigation Commission had and which the Taxation Enquiry Commission have recommended the Department should have. The experience of the last year and a half has shown that unless the Department is armed with these powers, it is not possible effectively to investigate cases of tax evasion. I have no doubt that the House will give its whole-hearted support to measures taken to prevent and detect large-scale tax evasion and it may take my assurance that the new powers taken now will not be exercised unless they are absolutely necessary.

The net effect of these changes in income-tax is an increase of Rs. 10 crores, of which the States' share will amount to Rs. 1.8 crores.

CHANGES IN POSTAL RATES

The Postal and Telegraph branches of the Posts and Telegraphs Department have been working at a loss for some years. The net loss

during the three years ended the 31st March 1955, was Rs. 222 lakhs in the Postal Branch and Rs. 65 lakhs in the Telegraph, and the losses during the current year in respect of these two Branches are estimated at Rs. 49 lakhs and Rs. 82 lakhs, respectively. The main reasons for the losses are the opening of unremunerative post offices and telegraph offices as part of the Department's expansion schemes under the First Five Year Plan on the one hand, and the charging of uneconomic rates on the other. The rates charged at present are, in many cases, well below the cost of the service. A review of the existing postal and telegraph rates has, therefore, been carried out with reference to the cost of the service, and, as a result of the review, it has been decided to increase the fee for registration on postal articles and the rates for inland telegrams. The existing registration fee of As. 6 per article will be raised to As. 8 and on inland telegrams the minimum charge will be raised from As. 12 to As. 13 for "Ordinary" and from Rs. 1-8 to Rs. 1-10 for "Express". These enhanced rates for telegrams are the same as those that were in force prior to the 1st April 1950. The additional revenue expected from these increases is Rs. 95 lakhs.

NET EFFECT OF THE PROPOSALS

The net effect of the proposals may now be summarised. The changes in Customs Duties will not have any net effect on revenue. The new and increased Excise Duties will yield Rs. 25 crores. Changes in Income tax will result in an additional revenue of Rs. 10 crores of which the States' share will amount to Rs. 1.8 crores, and changes in postal rates will yield Rs. 95 lakhs. In the result, Central revenues will increase by Rs. 34.15 crores.

My taxation proposals will still leave a deficit of Rs. 17.68 crores on revenue acount. This is a large amount, but unforeseen marginal improvement in revenue and savings in expenditure may yet be possible, and I propose to leave it uncovered. I must repeat, however, that additional taxation is inseparable from a bolder plan of economic development. The Taxation Enquiry Commission had in mind an order of expenditure on the Plan amounting to Rs. 3,500 crores. The size of the Plan is now larger and a correspondingly larger tax effort is necessary. The findings of the Commission have shown that in real terms, there has been little addition to the national tax effort relatively to national income over the last two or three decades. Even to maintain the proportion of tax revenues to national income more or less constant, additional taxation of the order Rs. 350 crores over the five year period would be necessary at the Centre and in the States. This proportion has, however, to be raised, moderately. What I have proposed this year by way of tax effort is, in my judgment, the minimum that must be attempted in view of the requirements of the Plan.

Including the additional taxation, the overall deficit for the year will stand at Rs. 356 crores. I think it is important to bear in mind the limitation I mentioned earlier in regard to deficit financing. There is not, at the moment, any great slack left in the economy which would justify anything more than a reasonable amount of deficit financing. Up to a point deficit financing is not only permissible, but even desirable in a developing economy. Experts differ as to the permissible limit, but it would be quite unrealistic to assume that deficit financing of this order can be maintained for any length of time without inviting inflation. The road to inflation is easy enough, but it opens floodgates which it would later be impossible to close. We are, in fact, taking a measure of risk with the deficit financing proposed for 1956-57 and we shall have to watch its effects carefully and adjust subsequent programmes in the light of these effects.

The budget I place before you is, as I have said, the first step towards the implementation of the Second Five Year Plan. A big Plan requires a big effort, and to make a good beginning with it will be, to vary the old adage, almost to ensure its accomplishment. The objective we have set to ourselves is that primary and ineluctable duty of every modern Government, namely to raise the living standards of the people and to create in the process a progressive and equitable economic and social order. This objective, moreover, is to be attained by democratic means. The sanction behind the Plan is not will of Government but will of the people. Democracy is for us a means as well as an end. It defines our objective, and it indicates the approaches and techniques to be adopted for the fulfilment of the objective.

The problem is not merely one of raising the statistical average of per capita incomes which could easily be a will o' the wisp; it is one of raising the lowest incomes and of opening out to the younger generation avenues of growth and advancement that will bring out the best in them. For this, the present generation has to make sacrifices. It has to work harder and it has to abstain from asking for immediate returns. A plan verily, is a yajna

अनेन प्रसविष्यध्वमेष वोऽस्त्विष्टकामधुक्.

This is the essence of the process of capital formation, of building up the infra-structure of development and of equipping the community with the tools and implefents needed for increasing the national product. We shall succeed in this task to the extent that we bring to bear on it in judicious proportions all the idealism and all the practical realism that we possess.

The Second Five Year Plan will be followed by several other Plans and it is only after we have fulfilled, shall I say, the Third Five Year Plan that we shall see a marked and unmistakable improvement in living standards all round and in the capacity of the country to go ahead more rapidly on its own momentum. The burdens that the Plan imposes upon the people are by no means light nor can their weight be mitigated by any assurance that they are temporary. On the other hand, our people stand, so to say, on the threshold of a golden age; we have to build well and truly for them; and we have to raise, ungrudgingly and unhesitatingly, all the moneys necessary therefor. Money is, after all, mainly a measure of effort; and the success of our monetary calculations, whether for our taxation measures, or for our deficit financing, or for anything else for the matter of that, depends vitally upon the measure of productive effort put forth in the community. It is the responsibility, if I may with all respect say so, of every member of this honourable House and of similar chambers all the country over, to adjudge every proposal on this basis, that is, not of what Government seeks to take from this sector or from that (indeed Government cannot take anything for itself) but of what that proposal in terms of mobilising the real efforts of the country means and of whether by any alternative proposal we could call forth equal effort without greater sacrifice.

The success that has attended on the first Plan makes it clear, I believe, that the people of this country are capable of, and willing to put forth, the effort necessary to achieve bigger things and to make for themselves and for their children an India befitting of her great heritage. Our destiny is now in our hands. Our people have throughout history been known for their almost infinite patience and perseverance. Given the leadership, they have never failed to respond in more than adequate measure. It is these people, sir, that have now girt their loins and stand ready to launch forth on their new, and so far their greatest endeavour. They can rightfully expect us, their chosen leaders and representatives, to give them of our best counsels, loyal guidance and informed direction.

SUMMARY OF FINAL ESTIMATES.

*Effect of Budget Proposals.

Notes on Clauses of Finance Bill

Clause 2 prescribes the rates of income-tax and super-tax and surcharge thereon for the financial year 1956-57. The variations from last year are:

(1) under personal rates, a small increase and steadier graduation in super-tax rates on incomes of over Rs. 70,000;

(2) under corporation rates, for Indian companies additional super-tax at 2 annas per rupee on bonus issues and at 2 annas and 3 annas per rupee on dividend distributions in excess of 6 per cent and 10 per cent of paid-up capital, and an increase of 1 anna 6 pies per rupee in super-tax for Indian branches of foreign companies; and finally

(3) a new small graduated income-tax of 9 pies to 1 anna 6 pies per rupee on registered firms.

Clause 3 amends section 2 of the Income-tax Act.

Sub-clause (a) amends the definition of 'dividend' so that accumulated profits on distribution (whether capitalised or not) would be treated as dividends in the event of liquidation of a company.

Sub-clause (b) makes an amendment to section 2 (6AA) which is consequential upon the amendment of section 22 (5) (b).

Clause 4 substitutes for the existing clause (xiva) of section 4 (3) a new clause relating to tax exemption to foreign technicians in the employment of Government or local authority or a corporation set up under any special law, and defines the expression "technician" for determining eligibility for tax exemption under the clause.

Clause 5 amends section 7 of the Income-tax Act relating to salaries.

Sub-clause (a) raises the exemption limit for contributions to deferred annuity and family provision schemes under the first proviso to section 7 from 1/6th to 1/5th which is also the limit for abatement in respect of provident fund contributions and life insurance premia under section 15(3).

Sub-clause (b) inserts a new clause (iia) in section 7(2) relating to deductions from salary income; and provides for a proportionate allowance in respect of the maintenance and normal wear and tear of a conveyance used by an employee for the purposes of his employment.

Clause 6.—The changes made to section 8 will secure the deduction of reasonable sums expended by an assessee (including a bank) in the realisation of interest on securities.

Clause 7 amends section 10 of the Income-tax Act.

Sub-clause (a) secures that initial depreciation allowance will not be available for new buildings erected and new plant and machinery acquired after 1st April, 1956.

Sub-clause (b) inserts a new provision specifically authorising disallowance of a portion of the expenditure and allowances of a company attributable to the amenities provided to a director or a substantial shareholder in certain circumstances.

Clause 8 amends section 12 of the Income-tax Act and is consequential upon the insertion of new sub-culase (4A) in section 10.

Clause 9 inserts a new clause (aa) in section 14(2) exempting from tax the proportionate share of a partner in the income-tax payable by a registered firm. This is consequential upon the amendment made in section 23(5) (a) making a registered firm liable to income-tax.

Clause 10 makes a formal amendment.

Clause 11 extends the tax exemption at present available to new industrial undertakings by a period of five years, i.e. upto 31st March, 1961.

Clause 12 makes a clarificatory amendment to the proviso to section 16(2) in regard to the procedure to be followed for the grossing up of dividends paid out of amounts which are only partly liable to tax.

Clause 13 raises the flat rate of super-tax applicable to non-residents under section 17(1), from the existing rate of 1 anna, to 3 annas in the rupee, thereby restoring the rate which was applicable before the 1st of April, 1955.

Clause 14 amends section 23(5).

Sub-clause (a) amends sub-clause (a) of section 23(5) making a registered firm liable to pay income-tax (but not super-tax) independently of the tax payable by the individual partners of the firm on their share of profits.

Sub-clause (b) amends clause (b) of section 23(5) in order to exempt unregistered firms from payment of income-tax to which registered firms will now be liable.

Clause 15 amends section 23A.

Sub-clause (a) raises the flat rate of super-tax payable by investment companies on their undistributed profits if their distribution of dividends falls short of the prescribed minimum, from 4 annas to 8 annas while retaining the existing rate of 4 annas for other companies.

Sub-clause (b) makes a clarificatory amendment securing inclusion of accumulated profits not transferred to reserves for determining the applicability of the proviso to section 23A(1) to the case of a company.

Sub-clause (c) makes a formal amendment.

Clause 16 makes amendments to section 24 which are consequential upon the amendment made to section 23(5)(b).

Clause 17 amends section 28 and is consequential upon the amendment to section 23(5)(b).

Clause 18 amends section 34.

Sub-clause (a) and (b) remove, subject to certain conditions, the time-limit of 8 years in section 34(1) for concealment cases and for cases of total escapement of income arising from non-submission of returns of income under section 22.

Sub-clause (c) amends section 34(1B) giving the right of settlement, now available in cases re-opened under section 34(1A), to cases re-opened under section 34(1)(a) also in respect of re-assessments for the war period (1939-40—1947-48).

Sub-clause (d) amends section 34(3) and removes the time-limit for completion of assessments involving concealment, whether relating to original proceedings or re-assessment proceedings.

Clause 19.—The amendment to section 35(9) is consequential upon the amendments to section 34.

The new section 35(9) enables the amount of income-tax deemed to have been paid by a shareholder in respect of dividend under section 49B or section 18(5) on the presumption that the full tax assessed on the company would be paid by it, to be reduced in the event of any portion of the tax not being paid by the company within three years from the financial year in which the dividend was declared, and consequential recovery to be made from the shareholder.

The section 35(10) authorises recovery of the rebate of income-tax allowed in respect of profits retained by a company in any year, if such profits are subsequently distributed as dividends.

Clause 20 substitutes a new section for section 37.

The new section clarifies the pwers of Income-tax Officers in regard to examination of witnesses and production of accounts, and gives powers to search and seizure, etc., to Income-tax Officers specially authorised by the Commissioner.

Clause 21 amends section 38 and empowers the Income-tax Officers and Assistant Commissioners to obtain general information or verified statements of accounts and affairs from any person for the purpose of the Act. The amendments are on the lines of a similar provision in the Taxation on Income (Investigation Commission) Act, 1947.

Clause 22 amends section 49B of the Income-tax Act in order to bring it in line with the proviso to section 16(2).

Clause 23 amends section 49D and enables unilateral relief to be given with effect from the assessment year 1948-49 in respect of agricultural income-tax paid in Pakistan on incomes liable to assessment in India also.

Clause 24 amends section 58.

Sub-clause (a) renders clause 14(2)(aa) inapplicable for purposes of super-tax. This amendment is (consequential upon the amendment to section 23(5)(a) as only income-tax and not super-tax will be payable by a registered firm.

Sub-clause (b) makes a formal amendment.

Clause 25 which amends section 58F raises the limit for abatement in respect of contributions to recognised provident funds from 1/6th to 1/5th, consistently with the limit for rebate on life insurance premia, etc.

Clause 26 makes a formal amendment.

Clause 27 amends section 59(2)(c) and enables the Central Government to prescribe a procedure in respect of double tax relief agreements also.

Clause 28 provides for the coming into force of the various amendments to the Income-tax Act.

Clause 29 seeks to increase the duties on certain items and to rationalise the items relating to certain kinds of mineral oils, as set out in the Second Schedule. The import duty on liquid gold for glass making and on flash lights and flash light cases is being enhanced in the interests of the indigenous manufacturers of these goods. The duty on spectacles complete is being brought up to the same level as that on spectacle frames to prevent evasion of duty. India being a signatory to the "International Convention Facilitate the Importation of Commercial Samples and Advertising Material", the scope of the exemption hitherto accorded to trade catalogues, advertising circulars, etc., is being amended so as to bring it into line with the obligations undertaken under that Convention. A duty equal to the excise duty is being added to the Customs duty in respect of some articles on which excise duties are now being imposed.

Clause 30 continues for another year the existing surcharges on Customs duties.

Clause 31 seeks to maintain for another year the 'status quo' in regard to the commitments under GATT.

Clause 32 seeks to amend section 6 of the Central Excises and Salt Act, 1944, for the purpose of making it clear that that section applies to all the goods specified in the First Schedule notwithstanding that no excise duty is leviable thereon in certain cases for the time being. It also seeks to enlarge the scope of section 6(b) in order to cover all the goods specified in the First Schedule.

Clause 33.—The amendment proposed is consequential upon the amendment made to section 6.

Clause 34.—The amendment proposed in item (a) seeks to substitute a more precise definition for the existing definition of 'kerosene' in the First Schedule.

Similarly, the amendment in item (b) substitutes a more precise definition for the existing definition of 'motor spirit'.

Item (c) proposes an increase of six pies per square yard in respect of all varieties of cotton fabrics except coarse dhoties and sarees.

Item (d) proposes the discontinuance of the exemption from excise duty on rayon or artificial silk fabrics manufactured by or on behalf of the same person in one or more factories in which less than twenty-five powerlooms in all are installed.

Item (e) proposes an excise duty on soap manufactured without the aid of power by any manufacturer. It also seeks to amend the definition of 'soap' so as to remove certain exemptions contained therein.

Item (f) discontinues the existing exemption from excise duty in respect of 'strawboard' and places it in the same category as 'millboard'.

Item (g) amends the definitions of 'paints, pigments, etc.' in order to remove therefrom the exemptions in respect of manufacturrs, whose output of some of the said articles does not exceed fifty tons per year.

Item (h) brings under duty vegetable non-essential oils, refined diesel oils, vaporizing oil and industrial fuel oils.

Clause 35.—The amendment proposed is consequential upon the amendment to sections 6 and 8.

Clause 36 continues the existing surcharge of 5 per cent on motor spirit.

Clause 37 is the usual provision for the discontinuance of the salt duty for another year.

Extract from Part II of the 1st Schedule to the Finance Bill

Rates of Superiax in the corporate sector:

D. In the case of every company—

On the whole of total income — Rate

Six annas and nine pies in the rupee:

Provided that—

(i) a rebate at the rate of five annas per rupee of the total income shall be allowed in the case of any company which—

(a) in respect of its profits liable to tax under the Income-tax Act for the year ending on the 31st day of March, 1957, has made the prescribed arrangements for the declaration and payment within the territory of India, of the dividends payable out of such profits and for the deduction of super-tax from dividends in accordance with the provisions of sub-section (3D) of section 18 of that Act, and

(b) is a public company with total income not exceeding Rs. 25,000 to which the provisions of section 23A cannot be made applicable;

(ii) a rebate at the rate of four annas per rupee of the total income shall be allowed in the case of any company which satisfies condition (a) but not condition (b), of the preceding clause; and

(iii) a rebate at the rate of three annas and six pies per rupee on so much of the total income as consists of dividends from a subsidiary Indian company, and a rebate at the rate of one anna per rupee on any other income included in the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses:

Provided further that—

(i) the amount of the rebate under clause (i) or clause (ii), as the case may be, of the preceding proviso shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be, computed as hereunder:—

(a) on the amount representing the face value of any bonus shares or the amount of any bonus issued to its shareholders during the previous year with a view to increasing the paid-up capital; and

at the rate of two annas per rupee.

(b) in addition, in the case of a company referred to in clause (ii) of the preceding proviso which has distributed to its shareholders during the previous year dividends in excess of six per cent of its paid-up capital, not being dividends payable at a fixed rate—

on that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital;

at the rate of two annas per rupee.

on that part of the said dividends which exceeds 10 per cent of the paid-up capital;

at the rate of three annas per rupee.

(ii) where the sum arrived at in accordance with sub-clause (a) or sub-clause (b) or both the sub-clauses of clause (i) of this proviso exceeds the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of the preceding proviso, only so much of the amounts—

(a) issued as bonus shares or as bonus, and

(b) distributed as dividends,

as is sufficient, in that order, in accordance with the rates specified in clause (i) of this proviso, to reduce the rebate to nil, shall be deemed to have been taken into account for the purpose:

(Continued on page 394).

Editorial Notes

The Punjab Talks

The failure of the Central Government's talks with the Akali leaders is most regrettable. On the subject of States reorganisation, no set of negotiations has gone so long and raised so great hopes of success. Particularly after the Amritsar Congress Session, the public was impelled to believe that Master Tara Singh had laid aside his fanatical attitude and was ready for a compromise solution; and till the last day of the negotiations, the atmosphere remained one of elusive cordiality. It appears that the two parties could not agree on the status and functions of the regional council—a body which, in this case, comes lower down the level of the State.

The Government are reported to be adamant on investing these councils with no more than an advisory and consultative status, at the same time leaving their evolution toward more functions and higher status, to convention and usage. The Akalis are not willing to have anything less than regional councils invested with well-defined and extensive authority. As there was an air of finality in the announcement after the conclusion of the talks last week-end, it does not seem likely that the question would be reopened at least for some time to come.

The interval might be devoid of trouble, if the Government omit to make mention of any arrangement for the Punjab in the forthcoming Reorganisation Bill and if the Akalis in their turn respond to such a gesture in a friendly spirit. It is in no one's interest to precipitate a conflict, because besides language, communities are also involved. Strategically peace in the Punjab is of greater value than in most other States.

The Government are undoubtedly wise in showing reluctance to make commitments which may become inconvenient precedents. For the moment, the residue of these talks has only thrown the idea of a fresh tier of authority into the arena of wrangles, and to that extent rendered a bad situation worse.

*

Swing Back to Leninism

The twentieth Congress of the Russian Communist Party marks an unmistakable departure in policy which might produce reverberations far and near. Repudiating much of the Stalin heritage, it has adopted the doctrine of collective leadership. The cult of infallibility associated so long with Stalin is buried and for the first time he has been openly criticised for errors. Mikoyan has frankly admitted mistakes in foreign policy which resulted in strained relations notably with Yugoslavia.

The playing down of Stalin is, no doubt, the inevitable reaction to the adulation so lavishly heaped on him while alive. With the return to collective leadership Lenin has been fully reinstated as the 'leader, teacher and inspirer' of Soviet Communism. Henceforth the Party will control the State apparatus; the leaders will merely be its servants. This switch over from one-man dictatorship is likely to impart a certain flexibility to the political organisation.

Foreign policy will be based on the 'unshakable Leninist legacy' of peaceful co-existence. The triumph of Socialism everywhere is considered certain and it is only a matter of time. The Congress has conceded the right of every nation to progress according to its own genius. The doctrine of class war is modified and war is not regarded unavoidable. Another spark of realism is the dismissal of the dictum of the absolute stagnation of capitalism. The present leaders seem anxious to foster amity with all. The recent offer of friendship to USA by Bulganin gains significance in this light. Non-Communist countries, however, are prone to view Soviet reiterations of peace with suspicion as long as the Cominform continues to exist. Professing friendship and non-intervention but at the same time accusing others of preparing 'new bloody wars' is a disconcerting feature of Soviet diplomacy even now.

The disavowal of Stalinism, doubtless, has caused embarrassment and confusion in international Communist dovecotes. Communists have in the past displayed amazing adaptability to tow the line of Moscow, no matter how flagrant the change of front. What followed the Hitler-Stalin non-aggression pact is an instance to the point. It wont be the least surprising, if Communist parties the world over set their tune to the new orchestra.

Asian Trade Prospects

The Report of the Andhra Chamber Trade Delegation to Japan and Far-East is not a discouraging document. In spite of the fact that recently there has been an adverse trend in India's balance of trade with the rest of this region, the total volume of trade is on the increase. The Delegation could testify to the existence of a fund of good-will among the people of most of these countries toward India and a keen desire to buy Indian products. This circumstance could be taken advantage of, provided the Indian business community and the State go about it in a proper manner.

The Report is useful in that it brings into the compass of a single thesis the various problems connected with the development of India's trade with its immediate neighbourhood. Many of the recommendations contained in the Report are of the routine kind, asking for better and more organised publicity, liaison between Indian Consulates and exporters, prompt supply of business information and more accurate investigation of conditions in different markets.

Special importance must however go to two findings. The Delegation reiterate the point that manufacturing costs in India are rather rigid and comparatively high on account of various internal factors. They also draw attention to the changing aspect of the national economies in this region, which calls for a new pattern of commercial give-and-take between these countries and India. Not only are some of these countries attempting to grow cotton and jute and go ahead with the establishment of textile mills but they are showing the beginnings of industrial development on an increasingly broad basis.

In this situation, India has to re-examine the nature of her export possibilities. The delegation have furnished details of products which are immediately marketable in the different countries. In view of the supreme importance of quality in exports, the suggestion to penalise those, who willfully overlook or tamper with the quality of their exports, comes none too early.

*

Essentials for Democracy

In the Seminar on Parliamentary Democracy, a number of eminent persons, including Pandit Nehru and Dr Radhakrishnan spoke on the indispensable virtues people keen on maintaining democracy must cultivate. Among the items mentioned are a self-imposed social discipline, economic democracy, respect for the rights of minorities, cooperation and tolerance between individuals and groups and, above all, the dignity of the individual.

According to G. M. Trevelyan, one of the factors contributing to the success of democracy in Britain is the average Britisher's "habit of obedience to the law". In an article contributed to a recent issue of the British Magazine 'Encounter', Mr Peregrine Worsthorne has argued how democracy can flourish only on a strong foundation of liberalism and that without a long liberal tradition, the chances for democracy are slender. He would be an incorrigible optimist, who would apply these criteria to Indian conditions and maintain that the future of democracy is safe and assured here.

The habit of disobedience to law is a standing source of discomfiture to the Government in India. Eco-

World of Finance

The Budget and the Money Market

From the point of view of the money market, the significant passage in Sir Chintaman Deshmukh's budget speech is the following:

> The overall deficit next year is estimated at about Rs 390 crores. This follows the larger provision for development expenditure in the revenue and capital budgets. Credit has been taken for a new loan of Rs 100 crores next year. Small savings next year may amount to Rs 70 crores and foreign aid Rs 85 crores. There is no loan maturity next year. Allowing for other miscellaneous transactions under Debt and Remittance heads, it will be necessary, on these estimates, to expand treasury bills by Rs 390 crores to cover the overall deficit.

This assessment of the overall deficit is given in the chapter on Ways and Means, which is sandwiched between Part A and Part B of the speech. Part B sets out the new and additional taxes; and the revenue expected therefrom is of the order of Rs 34 crores. So, the overall deficit is correspondingly reduced. Deficit financing on the basis of the additional revenue thus provided for will, therefore, be of the order of Rs 356 crores. In this connection, we would like to emphasise, as we did in the case of the original estimate in earlier years of deficit financing, that the actual quantum of ad hoc Treasury Bills issued in 1956-57 may turn out to be substantially lower than the estimate now given. It is now known that, whereas the budget estimate of deficit financing for 1955-56 was Rs 327 crores, the revised estimate reduces the figure to Rs 240 crores. Taking the five years of the First Plan as a whole it may be said, in broad terms, that the actual expansion of ad hoc Treasury Bills fell short of the original estimates by anything like Rs 200 crores. This is at once a reassuring sign that deficit financing is resorted to only with the utmost circumspection, and a gratifying measure of the carry-forward of unutilised reserve.

There is also another significant carry-over of unutilised resources. The actual foreign aid figuring in the First Plan period is now estimated at Rs 200 crores while the total authorisation of funds is Rs 300 crores; thus, Rs 100 crores remains unutilised; and this becomes available for the Second Plan period. It may also be stressed that the climate in Washington is now markedly favourable for a sizable contribution toward the finance required for the Second Plan; and there is reason to hope that Ambassador Cooper's plea for a long-term commitment of an increased annual allocation specifically for the Second Plan will evoke adequate response. The budget estimate of foreign aid (Rs 85 crores being the budget estimate for 1956-57 as compared with the 1955-56 budget estimate of Rs 74 crores and the 1955-56 revised estimate of Rs 56 crores) does not, obviously, take into account any likely increased contribution from the US Government. Mr Dulles's visit to New Delhi may prove decisive in this respect; and it is quite on the cards that, when the Finance Minister outlines the revised estimate this time next year, the figure he indicated for foreign aid utilised in the first year of the Second Plan is well in excess of Rs 100 crores. Such a development will mean (a) lightening of the exchange problem, (b) added smoothness to the functioning of the ways and means machinery, and (c) corresponding reduction in deficit financing.

A closer analysis of the other proposals in the ways and means budget points to the possibility of further relief to ways and means and further reduction in deficit financing. Market loans issued by the Centre are, on present assumptions, expected to yield Rs 100 crores. In a year in which created money may go to swell currency in circulation by Rs 300 crores to Rs 350 crores, the right approach to the new issues market can be relied upon to produce much more than Rs 100 crores from market loans. The rising trend of bank deposits will receive further powerful stimulation. Nationalised life insurance should make more funds available for investment in government securities. The snow-ball expansion of provident fund accruals should enable PF institutions to contribute even more substantially to new loan issues. The gilt-edged portfolio of the Reserve Bank is at the low level of Rs 50 crores; and there is scope for its replenishment, especially in pursuit of its policy of buying early maturing loans whenever there is opportunity. These are all factors which, in the first place, sustain a continuing buying pressure in the gilt-edged market and, in the second place, augment the resources that are available for new loan issues.

The emphasis is on the right approach to the new issues market. In this context, we must needs refer to the disquieting development, in recent weeks, in regard to the 3 per cent 1986 loan. The Reserve Bank has given the clearest possible indication that it is no longer willing to intervene with measures which had the effect of making Rs 80 the floor price for this stock. The price has precipitately declined to Rs 77-8. The significance of the Reserve Bank's attitude in this respect may well be that Authority would like to see the establishment of a 4 per cent yield for a long-term loan. In November 1951, there was a violent disturbance to the pattern of gilt-edged yields; and it needed special measures, and it took considerable time, for confidence to be restored in the revised pattern of yields. Is this the time, and are these the conditions, in which another serious disturbance is to be allowed to take place? If the market loans of the Centre and of the States in the Second Plan period are to be assured of success to such effect that they achieve targets considerably in excess of those indicated in the Draft Outline, any disturbance of the pattern of yields will be ill-timed and ill-considered. The Centre should persist with the 3½ per cent loans. This provides a sensible and accepted demarcation; and the great advantage is that the 3½ per cent loans have their attraction for a certain class of investors and that the 4 per cent loans have their own sphere of attraction.

Improvement in the budgetary position is, likewise, calculated to reduce the quantum of deficit financing. The present estimate in this respect is on the assumption that the 1956-57 Budget will have a deficit of Rs 17.68 crores. If past experience be any guide, the actuals may show a goodly surplus in the place of the expected deficit of Rs 15.36 crores; the revised estimate reduced the deficit of Rs 15.36 crores; the actuals show a surplus of Rs 33.51 crores. For 1955-56, the original estimate anticipated a deficit of Rs 8.49 crores; the revised estimate, now given, turns the deficit into a surplus of Rs 12.31 crores; and, who knows, the actuals may raise the surplus to over 25 crores. The swing between original budget estimate and the actuals is of the order of Rs 40 crores to Rs 50 crores. If a similar experience is repeated in the case of the 1956-57 Budget, two important consequences follow: (a) so much extra finance becomes available for the Second Plan; and (b) so much increase in the carry-forward of unutilised reserve in the shape of created money.

In brief, a comfortable ways and means budget spells smooth functioning of national economy and confident outlook for the money market.

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on February 28. Total amount offered was Rs 1,02,75,000. Tenders at Rs 99-6-0 per cent were accepted in full and those at Rs 99-5-9 per cent. were allotted approximately 95 per cent. Total amount accetpted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-6 per cent per annum.

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs. a. p.
1956:

28th	1,02,75	1,00,00	2 8 6

+

The returns of the Reserve Bank for the week ended February 24 reveal a drop of Rs 3.98 crores in active note circulation to Rs 1,402.85 crores. Rupee coin is higher by Rs 0.42 crores at Rs 105.04 crores. In the result, notes held in the Banking Department have risen by Rs 4.39 crores to Rs 12.59 crores.

In the Banking Department, all deposits have risen, of the Central Government by Rs 1.96 crores to Rs 66.51 crores; of the Provincial Governments by Rs 3.06 crores to Rs 16.12 crores; of banks by Rs 1.04 crores to Rs 55.16 crores and other deposits by Rs 0.28 crores to Rs 15.98 crores. Balances held abroad have declined by Rs 3.45 crores to Rs 67.66 crores. "Other Loans and Advances" show a rise of Rs 2.64 crores to Rs 56.15 crores, which includes Rs 21.64 crores advanced to Scheduled Banks againstt Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 21.68 crores. Investments have risen by Rs 5.90 crores crores to Rs 49.29 crores.

+

The statement of the State Bank of India for the same week reveals a drop of Rs 1.34 crores in deposits at Rs 236.93 crores. Borrowings from other banks are shown at Rs 1.00 crore against Rs 0.95 crores, while other liabilities, including inter-office adjustments, are higher by Rs 1.88 crores at Rs 6.47 crores.

On the assets side, cash balances have risen by Rs 3.17 crores to Rs 23.78 crores. Investments are lower at Rs 114.87 crores against Rs 116.71 crores. Advances have declined by Rs 0.40 crores to Rs 120.42 crores—'Loans, Cash Credits and Overdrafts" accounting for a drop of Rs 2.23 crores and "Bills Discounted and Purchased" for a rise of Rs 1.82 crores.

+

The stringency in the money market is reflected in the latest returns of the Scheduled Banks for the week ended February 17, which show a further advance of Rs 5.00 crores to Rs 690.99 crores. Borrowings from the Reserve Bank stand at Rs 38.65 crores against Rs 9.02 crores at this time last year and from the State Bank at Rs 13.06 crores against Rs 6.37 crores last year. Cash and balances with the Reserve Bank have recorded a further decline of Rs 1.02 crores to Rs 86.21 crores. Both demand and time liabilities are higher by Rs 2.03 crores and Rs 3.39 crores at Rs 630.11 crores and Rs 416.89 crores respectively. Money at call and short notice stands at Rs 7.14 crores against Rs 7.48 crores.

The Pandyan Bank Limited

FROM strength to strength: a very apt description indeed of the performance of the Pandyan Bank Limited as measured on the balance-sheets released over the years.

In the quinquennium corresponding to the First Plan, the rise noticeable in the tempo of activity of the Pandyan Bank Ltd is most satisfactory. In the period, Reserves have been almost doubled, from Rs 5 lakhs at the end of 1951 to Rs 9.5 lakhs at the end of 1955.

The ratio of increase is greater in regard to deposits, which have mounted from Rs 84 lakhs to Rs 1.95 crores. This higher level of resources has been utilised by the Bank in manner suggesting enterprising, but at the same time prudent, management.

First, investments have more than quadrupled to Rs 73.12 lakhs. Second, cash balances have been added to by Rs 17 lakhs to Rs 42.62 lakhs. And third, loans and advances are at twice the 1951 level, being today placed at Rs 1.01 crores.

The rising tempo, we may be sure, was the cause as well as the effect of the increase in the number of branches—the relative figure having gone up from 12 to 36.

As reflected in the profit and loss account, the balance of profit has improved by nearly 50 per cent from 1951's Rs 2.20 lakhs to Rs 3.22 lakhs in 1955. The Bank has been careful to set by large appropriations to Reserve; and the result is that, today, the Reserve, at Rs 9.50 lakhs, is almost equivalent to the capital of Rs 9.99 lakhs.

The dividend, incidentally, has been increased in the meanwhile from 3-1/8 per cent to 7½ per cent: a performance that will, undoubtedly, be as manna to shareholders. And, as for the clients and constituents, the balance-sheet strength and the rising level of advances are both endearing features.

+

The Bank of India Limited

TO the Bank of India Limited belongs the credit of being the first of the big banks to publish their accounts. And, if we may be emboldened to think that the reports which will follow could approach the performance of the Bank of India, we should sit back and wait for most satisfactory Bank results indeed for 1955.

As for the Bank of India accounts, deposits are just about 12½ per cent higher at Rs 67.55 crores—a rise of Rs 7.17 crores over the previous year. Current and contingency accounts, in this regard, are nearly Rs 5 crores higher. There is a sharp rise of Rs 4.22 crores in acceptances, endorsements and other obligations. In the result, the total resources of the Bank are more than Rs 12 crores better at Rs 89.24 crores.

Cash balances are more or less unchanged, with the decline in cash offset by an increase in balances with other banks. What, however, is surprising is that the investment portfolio is only Rs 63 lakhs higher. This suggests that the increasing demand for money occasioned by the higher tempo of economic activity in the country was particularly felt by the Bank of India.

In point of fact, advances have mounted by Rs 6.34 crores. Loans, cash credits and overdrafts are higher by Rs 4.18 crores, and the rest of the rise is accounted for by bills discounted and purchased being placed at Rs 8.60 crores against Rs 6.43 crores.

The contra relating to acceptances is, of course, similarly higher on the assets side of the balance-sheet. Thus for the accounts as to the position of the Bank of India at the end of 1955. We may now turn to the profit and loss account.

The income has risen by Rs 46 lakhs; and interest and discount account for Rs 29 lakhs of this amount, with commission, exchange and brokerage fetching an additional Rs 15 lakhs.

As to expenditure, interest paid is marked higher by Rs 17.62 lakhs; salaries and allowances by Rs 12.93 lakhs; and the balance of profit is nearly Rs 8 lakhs higher, being placed at Rs 84.91 lakhs against Rs 77.01 lakhs.

Inclusive of the brought forward of Rs 9.11 lakhs, the balance available is Rs 94.01 lakhs. The provision for tax is lower by Rs 4 lakhs at Rs 25 lakhs.

Bonus for staff absorbs Rs 1.55 lakhs more at Rs 12.75 lakhs. A sum of Rs 3 lakhs is placed to the Bank's Landed Property Account.

Shareholders also participate in the Bank of India's increased prosperity. A rise in dividend of 2 per cent to 16 per cent takes the amount absorbed for this payment to Rs 40 lakhs from Rs 35 lakhs; and the carry forward is Rs 4 lakhs higher at Rs 13.27 lakhs.

The substantial rise in advances suggests that the Bank of India, keenly aware of its duty to the national economy, will duly fulfil its role as financier to the rising tempo in trade and commerce, business and industry.

+

Consumption or Investment?

By PAUL EINZIG

TWO days' economic depate in the House of Commons on February 20 and 21 drew attention to the Government's dilemma arising from the conflicting claims of consumption and capital expenditure. One of the few points on which there was universal agreement was that during recent years there has been an excess of purchasing power leading to a rise in the cost of living and to a balance of payments deficit. The opinion of experts (and pseudo—experts) differed, however, on the question whether this inflation was brought about mainly by excessive consumer spending or by excessive capital investment. The latter view was strongly canvassed by all Keynesian economists. They appear to have succeeded in convincing the new Chancellor of the Exchequer, Mr Macmillan, that the difficulties of 1955 were almost entirely the result of the increase of industrial capital expenditure by some 18 per cent during that year. Yet in view of the fact that in 1954 the proportion of the national income spent on capital investment was appreciably lower in Britain than in any other Western European countries or in the United States seems to indicate that an increase by 18 per cent was if anything inadequate.

In spite of this the main burden of Mr Macmillan's disinflationary measures fell on investment. It is true, consumption was aimed at by the reduction of subsidies on bread and milk and by the reinforcement of restrictions on instalment selling. But the sum total of these measures is negligible compared with that of the measures directed against capital expenditure by the Government, the nationalised industries, the local authorities and by private firms. Mr Macmillan, like all his predecessors at the Treasury, found it easier to cut capital expenditure, and to force others to cut capital expenditure, than to attack excessive consumer spending. Needless to say, cuts in capital expenditure react on consumer incomes in due course. Indeed, it is mainly through that effect that they lead to a curtailment of demand, a mitigation of the rise in prices, and an improvement of the balance of payments. If that result could be achieved through direct cuts in consumer spending it would have the advantage of maintaining investment programmes instead of sacrificing them for the sake of remedying the immediate situation.

Mr Macmillan was sharply criticised for concentrating his disinflationary drive mainly on investment. The Socialist critics of the official policy were not very consistent however. The last thing they wanted is a curtailment of consumption, apart from cutting down the spending power of the rich. In this latter respect nobody during the debate pointed out the elementary fact that the spendings of tens of thousands of rich, or even of hundreds of thousands of moderately rich, on the primary and secondary necessities whose prices affect the cost of living are negligible compared with the spendings of the tens of millions of lower income groups. Anybody who seriously believed that the inflationary situation in Britain could be corrected by cutting down the spending of the rich must have found disillusioning a recent statement of the Chancellor of the Exchequer in which he said that if all incomes over £2,000 were to be distributed among those whose incomes are under £2,000, the latters' share would be two pence a day per head.

The Government's Opposition critics have failed to realise that one cannot eat one's cake and invest it. Like the Medieval eclisiastics who, when confronted with the dilemma of determination versus free will, decided that there is both free will *and* determination, the Socialist speakers during the economic debate argued in favour of an increase in the proportion of both investment and consumer spending. All the remedies they proposed would tend to aggravate the inflation instead of mitigating it.

From the point of view of future prospects the Government's policy of concentrating mainly on cutting capital investment is to be deplored. In particular, British industries will find it difficult to proceed with their automation projects. The withdrawal of tax concession on new investment and the curtailment of credit facilities for that purpose, are bound to result in a setback in the installation of automatic equipment which has shown encouraging progress during the last year or two. It is true, owing to the peculiar technological character of automation there will be strong inducement for industrial firms to complete the project already initiated; because otherwise the amount already spent would be wasted. If a firm ordered £1 million worth of machine tools a credit squeeze or a decline in consumer demand might make it appear profitable to cancel part of the order, to the extent to which the work on a number of machine tools has not yet been started. On the other hand it is impossible to expect the engineering work to accept cancellation of an order for the unfinished half of an automatic transfer machine costing £1 million. What will probably happen is that few new orders for automatic equipment will now be placed during the duration of the disinflationary drive.

It is altogether detrimental from the point of view of automatic production that it should be necessary to resort to drastic disinflationary measures. As Mr Peter Drucker rightly pointed out in an article in Harpers Magazine last year, automation necessitates continuous flow of production not only in a technological sense but also in an economic sense. Production schedules for automated works are fixed for a relatively long periods so that the output cannot be easily reduced in response to a temporary fall in demand. It is unfortunate from the point of view of the progress of automation in Britain that, owing to excessive inflation, it should become necessary to interrupt that continuous flow.—(Copyright).

★

(Continued from page 391).

Provided further that the super-tax payable by a company the total income of which exceeds Rs. 25,000 shall not exceed the aggregate of—

(a) the super-tax which would have been payable by the company if its total income had been Rs. 25,000, and

(b) half the amount by which its total income exceeds Rs. 25,000.

Explanation.—For the purpose of Paragraph D of this Part—

(i) the expression 'paid-up capital' means the paid-up capital (other than capital entitled to a dividend at a fixed rate) of the company as on the first day of the previous year relevant to the assessment for the year ending on 31st day of March, 1957;

(ii) the expression 'dividend' shall be deemed to include any distribution included in the expression 'dividend' as defined in clause (6A) of section 2 of the Income-tax Act.

World *of* Business

Mr Khatau Urges Policy Revision

There is genuine anxiety on the part of Mr Dharamsey M. Khatau, Chairman of the Scindia Steam Navigation Company Limited, over the factors that have led to less satisfactory working results of this company in the past year. It is highly important to note that none of these factors, dock strikes, slowing down by port and stevedore labour, delay in the construction of ships at the Vishakapatnam Ship-yard, are not new or being emphasised for the first time. Mr Khatau's speech gives at the same time, unmistakable evidence of a determined bid by his Company to increase tonnage.

The Company's Reserves and Surplus now amount to Rs 6.51 crores against Rs 6.27 crores the previous year. Specific Reserves have risen from Rs 5.29 crores to Rs 5.94 crores during the year under review. In view of the financial needs for modernisation of tonnage, the company has requested the Government to relase Rs 2.47 crores invested in the shares of Hindustan Ship-yard Limited and Eastern Shipping Corporation Limited.

Underlining the need for greater incentives for tonnage expansion, Mr Khatau pointed out that Government's sanction for a 5 per cent increase in the freight rates of coal and general cargo in coastal shipping was but a meagre concession, considering the costs of operation, normal depreciation, reasonable provision for rehabilitation and fair return on the capital invested.

That the Directors consider the prospects for the future as good is borne out by the fact that they do not intend to go back on the plan to have a complement of 18 fast ships to ply in the India-UK-Continent trade, even though this might mean additional borrowing from the Government to the extent of Rs 5 crores. A positive decision is expected soon to be taken. The increased requirements of the country in the next plan-period is a factor which undoubtedly encourages a programme of expansion.

★

Calcutta Port Finances

The revised estimates for the current financial year of the Calcutta Port show a surplus of Rs 34.7 lakhs as against a deficit of Rs 28.98 lakhs foreshadowed by the original estimates for the year. Coming as it does after two successive years of deficit, the change is noteworthy. It is brought about mainly by the variation in the pattern of traffic, together with an anticipated increase in the volume of traffic and the increased income expected from storage charges. The year is expected to close with a higher volume of traffic at 77.1 lakh tons as against th original estimate of 73.6 lakh tons. The total income shows a gain from Rs 8.38 crores to Rs 9.55 crores. The revised estimate of total expenditure is likewise higher by Rs 53 lakhs at Rs 9.21 crores.

Though it is difficult to forecast accurately the probable trend of traffic during the coming year, Government's export drive and demand for import of machinery etc. for various industrial projects in Calcutta's hinterland, might help to maintain the traffic level. The Port Commissioner's will however be obliged to enforce rigid austerity on all items of port expenditure.

Lack of detailed information about the possible extent of increased flow of exports and imports about Calcutta has necessitated a more modest budget estimate in the year 1956-57. The traffic during the 1956-57 is expected to be about 7.57 lakhs tons and the income to be Rs 9.20 crores. The total expenditure anticipated for the year being Rs 9.27 crores, the budget shows a deficit of little less than Rs 7 lakhs in the revenue account. Small increases in expenditure under certain heads have contributed to this shortfall.

The total revenue reserve fund at end of the year 1956-57 is expected to be Rs 4.14 crores which is not much when compared with an annual expenditure of over Rs 9 crores.

The rehabilitation and development schemes during the First Plan were largely financed by loans to the extent of Rs 8 crores from the Centre. A similar loan is expected to finance development work in the Second Plan. Meanwhile, the Port authorities had to resort to borrowing in the market for capital expenditure.

★

Fifty Years

Round the turn of the century, Indian needs of sugar and molasses had to be met from imports; and traders of the time found that a source that would suit them admirably was Java, because a highly satisfactory two-way traffic in goods could be built up. The Indian demand for sugar was counter-balanced by exports of gunnies and coal, not to speak of rice, to Java.

Enterprising business suggested that, in the event of reliable service being made available to shippers, the quantum of trade could be substantially increased. It thus happened that two Dutch companies decided to open a direct line between India, Burma and Indonesia under the style of Java Bengal Line. The name, of course, explains itself.

As the years passed, and demands in countries shifted in accordance with the pattern of their industrial progress, Indian development of the sugar industry was responsible for a rapid decline in the importance of the trade with Java. And, as far as Indonesia is concerned, the ravages of war were such that the country has yet to attain the position of exporting sugar on the scale obtaining before the war.

Enterprising business consists in an ever alert development in new dirctions. Thus, the principals of the Java Bengal Line extended their activities to other areas. In the early 'thirties, the Java Pacific Line was instituted, and is today being maintained in conjunction with the Hoegh Line. Moreover, the Java Bengal Line are also Agents for two other services, which constitute regular shipping between the Indian ports and the East Coast of the USA, on the one hand, and from India to the Continental ports, on the other.

Last week, with a record of continuing and expanding service to and in behalf of Indian trade, the Java Bengal Line celebrated its golden jubilee.

★

THE KNOTTY CLAUSES.

(Continued from page 385).

Clause D of Part I of the First Schedule, Clause 9 and Clause 14 of the Finance Bill all relate to assessment of registered firms. A direct levy has been made on registered firms with incomes exceeding Rs 40,000. On the first Rs 75,000, the registered firm would have to pay an income-tax at the rate of 9 pies in the rupee; on the next Rs 75,000, the rate would increase to 1 anna in the rupee; and on all income over Rs 1,50,000, the rate applicable would be at 1¼ annas in the rupee. According to Clause 9, the tax borne by the firm would be included in the total income of the partner for rate purposes only.

Clause 9 of the Finance Bill seeks to exempt the tax, borne by the firm in the hands of the partner; but, in effect, the abatement in the tax liability of the partner in respect of the tax borne by the firm is negligible. For, on the one hand, his share of the income from the firm as reduced by his share of the tax borne by the firm would be taxed at the higher rate applicable to his share of income before such deduction of tax. On the other hand, no attempt has been made to extend such relief to super-tax as well.

We are not, however, very confident about the ability of these changes in the Act to raise fresh revenues. Since registered firms are to bear the tax only if their income exceeds Rs 40,000, it is to be anticipated that, in order to avoid incidence of the tax, the larger registered firms are likely to be split up in such manner that income of the individual firm will fall below the taxable minimum.

Clause 18 amends Section 34 of the Act and removes the deadline for assessment or re-assessment of concealment cases; it may be recalled that Section 34 was amended, after the invalidation of the Income-tax Investigation Commission, to extend the time limit for re-opening concealment cases from eight to 15 years; but a deadline had been set for such re-opening. We may mention that assessees might experience considerable difficulty in producing the accounts and documents for a period extending as far back as 17 years ago.

Clause 20 seeks to confer powers of search on income-tax officers. We have no substantive quarrel with the increase in the powers of ITOs; for, sufficient safeguard has been provided against the misuse or abuse of the new powers.

A few reliefs have been granted in the Finance Bill. Firstly, foreign technicians will be exempt from tax for a prescribed period, if certain conditions are fulfilled. Moreover, in the case of technicians whose contracts have been approved by Government, the tax exemption will extend to two years.

Secondly, provisions have been made for some tax relief to salaried persons in respect of expenditure on conveyances owned by them so long as they do not draw a specific conveyance allowance.

Thirdly, expenses incurred for the purpose of realising interest on securities and debentures are now deductible.

Horrockses

The Name When You Need What We Offer

Since 1791 the exceptionally fine quality of "HORROCKSES" fabrics have attracted an ever increasing popularity. We can offer from stock a wide range of White, Khaki and Satin Drills, White and Self Coloured Poplins, White and Khaki Twills, Longcloth and Sheetings, which give years of service and pleasure. World of Jute

"Relatively"—Not "Superlatively"

"...Since 1953-54, every industry in this country is assured of superlatively favourable conditions for making profit...."

—Emergency Budget Bulletin Indian Finance, March 1956

This sentence drew a wry smile from somebody who is certainly Somebody in the World of Jute: and the chiding message was gently passed on to me that Indian Finance had, in making this summation, not taken the Indian jute goods industry into the reckoning.

I am afraid he is right—that is, unless we may disregard the adverb in the quotation. For, by no means can it be said that the industry is today enjoying a bonanza—as "superlatively" would suggest. At the same time, and this is the thesis of my article this week, I am not quite sure whether the quotation would not hold true of the jute goods industry as well—provided the adverb were omitted.

Instead of "superlatively", the word applicable, as far as concerns the World of Jute, should be "relatively." And, as to the relatively favourable conditions that the industry today can claim to, I doubt whether any would deny.

It has never been my purpose or intention to wax unduly optimistic about prospects; and I have, time and again, drawn attention in these columns to the need for constructive action such as would enable the Indian jute goods industry, shorn now of its erstwhile near monopoly, to assure itself a secure future—even if that future were not one replete with 'superlative" prospects.

But, relatively, the progress that we have been able to achieve does provide grounds for a promising, albeit subdued, future. In 1949, the word on every lip was that the industry's days were numbered; Indian production of raw jute was nowhere near sufficient, in quality and in quantity, to satisfy requirements of the raw material. To understand what abject depression meant, you had only to look at or listen to a jutеman in those days.

And what have we not done since that gloomy winter of 1949? Indian raw jute production has increased substantially; the querulous complaint the indigenous raw material was not of the standard to manufacture quality hessians is scarcely ever heard today.

*

Back, now, to the time when the export duties levied by this country were onerous and crippling. Another crisis; the continental mills slipped easily into the habit of underquoting Calcutta markets. Locally, stocks of goods mounted; and the word, again, was that the jute goods industry—why, its days were numbered.

We survived that crisis as well. Down came the duties. Up went the demand for Indian gunnies. So much so, in fact, that there was the premature experiment of increasing working hours.

Slowly, after working hours were reduced once more, sustained demand cut into the heavy stocks built up. Conditions were all right—nothing to complain about. But no, we had to have an even more severe shock, one of our own contrivance. The November 1952 Phatka is bound to have a place in the jute history books; speculative orgies that I am not quite sure have been paralleled were witnessed at the time. Demand from the foreign customer was no determinant factor for prices; the jockeying of rates to suit the wiles and strategems of the speculative tribe alone mattered.

Even that storm, we weathered. But the calm that followed the storm enveloped Calcutta markets for quite a considerable time before purchasers of Indian goods could conclude that prices had stabilised.

There has been one more test in the recent past; and that was the rising threat of competition offered by Pakistan as a manufacturer and exporter of jute goods. In Clive Street, as if your ear was not tired enough of the phrase already, you were told—what else?—that the days of the Indian jute goods industry were numbered.

We have countered that threat as well. The main reason advanced for Pakistan's superior position was that our competitor, just in the process of industrialisation, was able to produce goods at very low costs because of the modern equipment installed in the mills. In India, quietly, unobtrusively, we have gone about the task of modernisation of mills; and, already, the programmes and schemes completed are not a few.

What reason, then, have we to fear the future? The world demand for jute goods, far from showing a shrinkage consequent to the adoption (it was feared) of bulk handling methods, has shown steady signs of expansion; and there is room for both India and Pakistan to figure as suppliers to the world of the best packaging material that there is.

I shall, undoubtedly, be told that the days are numbered, etc.; reason increasing Pakistan production will deprive us of many a customer. But let us remember that the world as a whole is more than ever before expansion minded: that is to say, there is hardly a country which is not making sure of its development, planned or otherwise. As such, I do not see why we should fear that demand for jute goods should dwindle; quite on the contrary, it is not an unreasonable assumption that the world will be able to absorb more and more of jute goods.

A coupe of final words: there is the real prospect that, with the Russian economic effensive, fresh, sustained and quite considerable demand for jute goods will be created. It is also more than a distinct possibility that the Iron Curtain countries themselves will enter markets as substantial customers for jute goods.

The last word: Certainly, not superlatively; but, as certainly, relatively favourable conditions do exist for the Indian jute goods industry.

*

Activity in the Jute Goods market, during the past week, was at a low ebb in the absence of any fresh support. Operators were anxiously awaiting confirmation and details of the reported barter deal with Russia involving jute goods. Apart from some covering in Cornsacks and small purchases of woolpacks in ready and April-June delieveries by Australia, no business of importance took place. Reports of poor shipments during February and lack of interest from shippers, caused tired bull liquidation resulting in an easier tendency in prices. On the whole, there was an air of expectancy regarding the Russian order which proved a helpful factor for speculators to manipulate prices to their advantage. The following table shows the price trends during the week:—

	Last Week Rs	a	Week's Openin Rs	a	Week's Closing Rs	a
Hessian:						
40" × 10 Ozs.						
Ready ..	40	2	40	4	40	2
April-June ..	40	8	40	12	40	12
40" × 8 Ozs. ..	33	6	33	10	33	10
40" × 7½ Ozs. ..	31	0	31	4	31	4
Sackings:						
B. Twills—						
Ready ..	113	8	114	4	113	12
April-June ..	114	0	115	0	114	12
Heavy Cees						
(Green) ..	112	0	113	0	112	0
Cornsacks ..	115	12	117	0	116	4
Cubans ..	140	8	140	8	142	0
A. Twills ..	136	8	137	0	136	8
L. Twills ..	128	8	129	8	128	8
D. W. Flours ..	132	0	133	0	132	4
Sugar Twills ..	130	0	131	0	132	0

Conditions in the Raw Jute section remained practically unchanged. Mills showed very little interest, mainly due to the fact that the gap between raw jute and jute goods was uneconomic. Although sellers showed some keenness for business, they were not at the same time inclined to reduce their rates on reports of smaller arrivals into the mofussil centres.

World of Tea

Attempt to hold Prices

THE decision made by the Government of India with regard to the removal of restriction on Tea exports, mentioned in these coloums last week, is only a temporary measure which, it is hoped, will help to stabilise the prices. Although sales for export at Calcutta have been higher this season than they were last season—over 170 million pounds compared to 159 million pounds in 1954-55—they have still not been sufficient to absorb all the extra tea coming on to the market.

In this connection, the 'Financial Times', London, states that the Government decision has come too late. The paper adds that, had the Indian Government relaxed their restrictions a little earlier, it might have received some benefit from the higher prices in London.

But, the price of plain tea, which had held at around 3sh 6d a pound from the beginning of November 1955, has now dropped down to 2sh 11d. Yet this has not indicated a general in prices. Quality teas have remained well in demand and are, if anything, slightly dearer than they were at the end of January.

On the whole, producers of good quality teas are doing quite well; but those gardens, which produce mainly the poorer types, find themselves now selling below the cost of production with little prospect of improved prices. Thus, the present dilemma gives renewed importance to restriction schemes for tea, as the world today is faced with an excess production of something like 142 million pounds more than the needs. An authoritative estimate, by an international source, of the relative production and consumption estimates in 1954 and 1955 is given below:—

	(In million pounds) 1955.	1954.
World Production ..	1,350	1,326
World absorption ..	1,259	1,275
Excess of Supply ..	91	51

It is believed that almost half of the surplus tea is in Calcutta and in tea estates of North India, and the other half is elsewhere scattered over the world. The 1955 Indian production figures are:—

	(In million Lbs.)
North India ..	533
South India ..	132
Total ..	665
Amount allowed to be exported	480
To be left in India ..	185

Considering that the actual consumption of tea in 1953-54 was 176 million pounds and that in 1954-55 169 million pounds, it cannot be taken that the 1955-56 consumption will be anything above 175 million pounds. This will add to the weight by another 10 million pounds.

Trade circles, therefore, believe that, when there is a glut of tea, the announcement regarding the removal of all restrictions after the season is nearly over and when the UK has got the tea from other countries, is not helpful. They feel that regulation of production in India is necessary, if possible with the co-operation of Ceylon—if not even without it.

Meanwhile, there were heavy withdrawals at the Export Sale held in Calcutta this week, resulting in the quantity offered to only 59,240 packages as against as much as 61,300 packages offered in the previous week. There was a fair general demand. The best CTC Fannings and stylish Whole Leaf grades were often several annas per pound dearer. Other types of Fannings, except the poorest types, met with good demand and were fully firm. Any teas showing seasonal improvement were well supported.

Medium and Low Medium BOPs were the weakest feature of the sale and were a full one anna per pound lower. Following rates were quoted. Clean Black Pekoe Rs 1-13 to Rs 1-14; Plain BP Rs 1-4 to Rs 1-4-6; Medium Assam BP Rs 1-7 and Best CTC Assam BP Rs 2-5 to Rs 2-6 (normal).

In the Internal Sale, offerings were 19,000 chests of Dusts. There was a fair general demand. The very best CTCs were the strongest feature of the sale, selling often several annas above valuations The more ordinary teas of this description were also dearer. Black leaf teas, suitable for the Middle East, were also in strong demand. The remaining teas were firm except for the poor liquoring types which were from ½ to 1 anna per pound easier. Following rates were quotetd per pound:—Medium Dooars Dust Rs 1-7 to Rs 1-8; Medium Assam Grainy Dust Rs 1-8-6 to Rs 1-9 and Best Assam CTC Dust Rs 2-9 to Rs 2-11.

Also, 4,370 chests of Leaf grades were on offer which met with fair demantd, but at very irregular rates. Prices were generally easier. The 155 chests of Green Tea, on offer, received fair support, but at lower rates than in the previous sale.

In the Export Quota section, rates moved narrowly between 7 and 9 pies per pound.

In the Internal Sale, held at Cochin last week, offerings were just over 350,000 pounds. The market opened to a good general demand, but weakened considerably as the sale progressed and closing prices were generally one to two annas per pound below last rates.

Best Liquoring high-growns were strongly competed for at As 2 to As 3 per pound above valuations, while Good Medium and Black grainy sorts were well supported at steady rates. Travancore Mediums and residuals, however, received a more restricted enquiry and were irregularly easier. Calicut teas, which opened at firm rates, met with a weaker enquiry at the close of the sale, being quoted at one to two annas per pound easier. Internal Sale "E" will be held on the 6th March 1956.

Ceylon's tea production totalled 26.8 million pounds during January 1956—high-grown teas 11.1 million pounds, medium-growns 9.7 million pounds and low-growns 6.0 million pounds. Production during February is estimated at about 5.0 million pounds lower than 31.35 million pounds produced during the corresponding month of 1955.

At the sale held at Colombo, offerings were 5,061,430 pounds. There was an active demand for the small selection of Nuwara Eliya teas at substantially dearer rates for improved quality and flavour. There was also active demand for high-grown Dimbula/Dickoya type Brokens, particularly the finest types.

Among medium-grown teas, there was a strong demand for Best Medium Brokens at firm rates; but those below best advanced by 5 to 8 cents per pound. Low-grown teas met with a strong demand, Persian Gulf types being 10 to 15 cents per pound dearer.

In London auctions, offerings this week were 24,138 packages, including 20,659 packages of North Indian teas. There was a livelier market, especially for good colour CTC types, which advanced from 3d to 6d per pound. Good Medium teas were about 1d per pound dearer than the best liquoring Dooars. The market for light plain descriptions and more fibry teas was, however, irregular. Clean Plain Broken Pekoe was quoted at 3sh 1d per pound.

Tea stocks in London, as at 17th February 1956, were 96.42 million pounds as compared to 96.14 million pounds in the previous week and 121.68 million pounds on the corresponding date of last year. Landed between the 11th and 17th February 1956 were 10.95 million pounds, while deliveries during the same period were 10.57 million pounds.

US Notes

IN a review of 1955 trade patterns, the US Department of Commerce has reported that raw materials were mainly responsible for sharp rise in US imports and exports. The total imports and total exports both increased about 10 per cent over 1954, with imports setting a new record and exports falling just short of the 1953 high. The manufactured goods also showed significant increases, but materials accounted for a larger share of the totals than either 1954 or 1953.

The net US import gain of $1,000 million in 1955 was the result of larger business purchases of industrial materials. These were $1,200 million higher than 1954, while the Government acquisitions of such items declined by more than $200 million—a reflection of record activity in private sectors of economy while Government outlays continued to drop. At the same time, the aggregate value of food and beverage imports fell by $150 million, a decline attributed chiefly to drop in coffee and cocoa prices from extraordinarily high levels of 1954.

Last year's increase in US imports of manufactured goods—notably consumer items—produced abroad was in line with the generally rising trend of finished goods imports throughout the post-war period. The gain in 1955 was $250 million over 1954, the result of stepped-up purchases of a wide range of items. Notable among these were textiles, automobiles, and diamonds.

The advance in US raw material exports in 1955 stemmed from sharp rises in shipments of coal, steel and steel scrap. Other gains came in shipments of chemicals, wood pulp and synthetic rubber. These shipments reflected to a large extent the rising needs for industrial materials in Western Europe and other parts of the world where economic activity was reaching new highs. US cotton exports, on the other hand, fell 33 per cent below 1954 levels, as greater output in other countries helped meet the demand. While the foreign demand for non-ferrous metals increased, heavy, US domestic requirements limited their export in significantly larger amounts. The upturn in capital goods exports during the year was moderate, while exports of consumer durable goods such as automobiles and appliances increased only slightly as other free nations were expanding their own consumer industries.

The Commerce Department also has taken a closer look at patterns of economic activity in the United States last year. To the surprise of no one, it has reported that the $16,000 million increase in consumer expenditures accounted for more than half the total rise in national output in 1955. The jump in consumer spending to a record $252,500 million represented the largest year-to-year gain since 1946.

The largest single factor in rise in US consumer spending was sale of a record number of automobiles. This was accompanied, the Commerce Department notes, by a shift to larger and more expensive models as consumer income reached new highs. Another strong factor was the purchase of clothing, which had fluctuated within a narrow range for the previous three years but advanced some $800 million in 1955. The consumer outlays for food and services continued their increase of recent years. The total retail sales reached a record $185,000 million, a gain of nine per cent over 1954, with new highs registered in every major category of retail business.

The record US economic activity last year successfully absorbed the growth in the nation's labour force. The Commerce Department notes that the 1955 advance in business activity raised the average civilian employment by two million to a record 63 million. At the same, unemployment was reduced from an average of 3.2 million in 1954 to 2.7 million in 1955. The Department reports important reductions in unemployment in all parts of the country, including those few still classified as labour surplus areas.

The 1955 advances in production and sales in United States were achieved, moreover, without appreciable disturbance to stability of average prices. At $387,000 million, Commerce Department points out, nation's total output of goods and services surpassed the 1954 total by 7.5 per cent and the previous peak of 1953 by 6 per cent.

US economic activity in 1955 also absorbed the additional production capacity provided by business investment . The Securities and Exchange Commission reports that corporate offerings of new securities reached a record high last year, when $10,500 million worth were sold. This represented a 10 per cent gain over 1954 level.

Corporations raised $8,100 million for capital expenditures and working funds, a gain of $1,300 million cover 1954. Offerings of manufacturing companies accounts for the bulk of the issues, amounting to $3,100 million or about 30 per cent of the total; this was about $900 million more than in 1954. Indicative of the widening investment base, practically in all increase in corporate offerings took form of common stock.

EDITORIAL NOTES

(Continued from page 392)

nomic democracy may be attainable and for that matter, far more quickly, than most people may be prepared to conceive. But under any democracy with a per capita income of less than Rs 300 a year, the dignity of the individual can remain but a distant dream. Neither the majority nor the minority, in whatever sphere, seems to have settled into the habit of spontaneous respect of the rights of others.

To boot, there are social tensions of all kinds which cut at the root of the sense of a common historical tradition, which in turn is the emotional bulwark behind a national democracy. All told, there is a great deal in the emotional and intellectual content of contemporary life which needs merciless weeding; the Seminar has thrown in useful ideas and directions. It is for the patriotic politician to imbibe them in correct spirit, to be transplanted amidst the masses. This is one of toughest jobs awaiting.

Carew's DRY GIN

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

Carew's DRY GIN

OVER the week-end, I came across two acutely perceptive, and yet in some respects contrasting, views on what might be described as the personality of India. One of them was by an Indian, and no ordinary Indian at that, and the other by an Englishman who, to judge by this effort of his, must be a man of remarkable insight. The Indian view is stated by Mr Nehru with his customary translucence in a foreword to a book in Hindi entitled "Sanskriti ke char adhyaya" (The Four Phases of Culture). The English view was broadcast over the BBC sometime ago by Francis Watson, and has been reprinted in the Listener.

✱

There were a number of interesting, not to say uncanny, things about the coincidence of these two contrasting views swimming into my ken. Firstly, its timing is remarkable, though, in Mr Nehru's case, deliberation in the matter is arguable. Both these articles have been extremely timely because very many people in this country and elsewhere are deeply exercised about precisely this problem at the moment. I think it is unnecessary and unavailing to hide the fact that, never since the dark days of communal frenzy, have we, as a nation, had such depressing moments as the in the last few months. The massively intimidating demonstration of politcal infantility over the redrawing of State boundaries has jerked violently out of the cupboard of history skeletons we had put away in decent hiding. For the first time in many many years, the mind's eye ranged beyond the immediate past, and basic national weaknesses assumed, as in a nightmare, oppressive dimensions. A certain smugness which we had pardonably developed over the last few years was violently shattered and a vague and undefined fear of unplumbed depths of political unreason assailed even the most optimistic. Elsewhere too, the uneasy fear that India was not as well provided with reserves of political wisdom as appeared at first sight seemed to have bothered friendly observers. It is in this context that these two views appeared; and, as I said earlier, the timing and the trend of Mr Nehru's foreword would even seem to indicate a certain calculation.

✱

The second interesting point about these two views is the fact that the Indian analysis, though not despondent, is on balance more critical of the Indian mind whereas the Englishman is deeply impressed by its enormous inner resources. Indeed, as I shall show presently, many of Mr Nehru's criticisms are obliquely answered by the broadcast talk.

✱

Let me take Mr Nehru's views first. There is nothing in this particular foreword of the casual and condescending patronage that one associates with the usual "forewords" by the eminent. In fact, this sustainedly brilliant analysis of the basic weaknesss of the national character is informed by a note of unmistakable urgency and immediacy. This is not surprising in view of the known reactions of the Prime Minister to the recent happenings in the country. Very unusually for him, Mr Nehru recently expressed himself as overcome by a sense of profound frustration. It would, therefore, appear that the foreword represents Mr Nehru's agonised reappraisal of the spirit of India.

Mr Nehru's thesis has two aspects: the historical, which seeks to draw an inference about the basic characteristics of the Indian mind and character on the basis of historical evidence, the other, the contemporaneous, which deals with the crisis in spirit that is currently encountered in the country. Asking himself the questions, "What is India? What is the essence of India? What are the forces that have gone to make India and how are they related to the major dominant influence of the world in the past and in the present?", he traces the growth of a "composite" culture which successive influences have enriched. He then makes his central point about what has struck other observers also—a certain dichotomy, not to say contradiction, in India's "personality." In Mr Nehru's words, in India, we developed at one and the same time the broadest catholicity of thought and opinion as well as the narrowest social forms of behaviour. This split personality has pursued us and we struggle against it even today. We overlook and excuse our failings and narrowness of custom and habit by references to the great thoughts that we have inherited from our ancestors. But there is an essential conflict between the two and as long as we do not resolve it, we shall continue to have this split personality."

✱

From this historical generalisation, the transition to the contemporary situation is via an examination of our schizophrenic ineffectiveness in dealing adequately with the problems of a dynamic age just as ours. In Mr Nehru's words, "In the atomic age, at the threshold of which we stand, we are compelled by overwhelming circumstance to put an end to this conflict. To fail to do so is to fail as a nation." Mr Nehru speaks nostalgically of the massive intellectual traditions "that dared to scale the highest peaks and pierce the heavens" and the exuberant vitality in art and life of our people in the millenium after Christ, and mourns the all but complete drying up of this stream. In this context, he has some tart things to say about our intellectuals who have failed to provide, as they ought, a frame of reference to our current experience with the consequence that "we have neither the old nor the new and we drift not knowing whither we are going."

I shall discuss Mr Nehru's historical generalisation first: In an immediate and practical sense, Mr Nehru's indictment is true and opportune and none will quarrel with his view that we would all be better men if our actions corresponded more approximately with our professions. There is also an urgent need for cutting out a great deal of intellectual and spiritual dead wood in our lives. There is also a case for the argument that there is still considerable narrowness in our social outlook, though, I fear, Mr Nehru is inclined to overlook the enormous changes that have taken place in the last two generations. Our current malaise is not so much stocial exclusiveness represented by 'Casteism' (an ugly word and perhaps an ugly thing) as a certain manifestation of primitive impulses which are by definition and by experience not confined to ourse'ves. Whatever you may say about the Caste system, the one thing you cannot say is that it is primitive, for, caste and class distinctions are products of highly civilized and artificial societies. (Those who have been following the extremely interesting controversy currently going on in Britain

about Brittish Class structure, the 'U' and 'Non-U', that is, those who belong and those who don't, would agree with me.) But linguistic passion, which is our current problem, is the manifestation of impulses that hold primitive societies together, and is not unknown to occur elsewhere even these days. Part of the histtorical Franco-German feud is traceable to linguistic considerations. It is possible (and is already happening in our country), that, under the inexorable egalitarian pressure, artificial distinctions of caste and other forms of social exclusiveness are breaking up. But it is questionable whether linguistic exclusiveness will yield to similar pressure.

For the rest, I hope Mr Nehru does not, in this stern and unsparing introspection, mean anything as trite as the gulf that divided men's professions from their practice. For, that is a failing from which hardly any individual is free. And, even when one admits to a strain of more than usual self righteousness among us, its roots lie deeper than can be plumbed by a superficial hypothesis of a certain national tendency to puritanical unction. A certain amount of priggishness is, human nature being what it is, inescapable in any high-minded profession even when the action is suited to the word. Take, for instance, the case of Gandhiji. Here was a man who was something of a seamless garment, a person whose literal application of his professions was the secret shame of many of his namby-pamby followers. And yet, men who were no fools were extremely exasperated by what they honestly thought was Gandhiji's cant. Winston Churchill, who had an eye for certain types of greatness (as shown by his befriending Lawrence of Arabia at a time when not many politicians would care to be associated with him) could never get over his profound aversion for a man who had no squeamishness about stating in unclouded terms the moral issues involved in any situation. Mr Jinnah, who was an honest-to-God politician, if anything, was exasperated by the "wiles" of the Gandhiji who was all the time trying to trap him with his moral "hocus pocus". And take the case of Mr Nehru himself. There is a widely and genuinely held opinion even in quarters not recognisably unsympathetic to the Indian foreign policy that Mr Nehru is only too ready to strike an attitude and lay down the law on international conduct all because he has the courage to state the moral issues involved clearly and without embarrassment.

*

Clearly, therefore, the question is more complicated than can be disposed of in terms of a mere hypothesis of hypocrisy. If you look at the question a little more closely, you will notice that, throughout history, certain nations are conventionally supposed to be given to unctious humbug in professions while cannily following a policy of narrowest self interest. In the extremely hazardous generalisations about National Character, we have theories of nations whose 'temperament" is supposed to correspond to one or the other of two seminal ideas of European thought, "Classicism" and "Romanticism". I have no space to develop the ideas adequately here; but, roughly speaking, the classical attitude is supposed to imply a limited view of human nature whereas a romantic is a perfectionist, a person who conceives of life as something touched with "glory". The difference between

looking for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil ? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aeromagnetometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

Bombay Review

Bombay's Surplus Budget

IF fresh testimony is needed of Bombay's traditionally sound finances, Dr Jivraj Mehta's budget for 1956-57 provides it. The budget with a small surplus of Rs 23.43 lakhs has come as an agreeable surprise to those who had doubtful faith in the State's financial policy, the guiding principle of which has, perhaps, been the curtailment of non-development expenditure to a minimum. The taxpayer, will have just cause to be thankful, as no new levy is proposed. Other States can take a lesson from Bombay's careful and efficient husbandry; for, most of them are showing serious shortfalls even after going in for additional taxation, while, Bombay, without adding to the fiscal burden, shows a neat surplus.

The budget for 1956-57 places revenue receipts at Rs 78.10 crores and revenue expenditure at Rs 77.86 crores. Both revenue and expenditure are at a lower level, the former only to a meagre extent, than the revised estimates for the current year.

In the current year the revised revenue estimate is less by about Rs 39 lakhs at Rs 79.72 crores than the original revenue estimate of Rs 8.10 crores. Correspondingly, expenditure also stands reduced by Rs 99 lakhs from Rs 79.88 crores to Rs 78.89 crores. But Dr Mehta hastens to add that this apparent reduction is due to the exclusion of some Rs 3 crores from both receipts and disbursement side, on account of the absence of provision for transfer from the fund for development schemes. Actually, the revised estimates show an increase of Rs 2.61 crores in receipts and of Rs 2.01 crores in disbursements. It can be seen that toward this increase in revenue, better realisation from sales tax, recovery of arrears, less provision for refunds and larger receipts from electricity duty and sugarcane cess have contributed.

On the basis of the revised estimates the capital expenditure of the order of Rs 17.6 crores breaks up mainly as follows:—major irrigation schemes Rs 2.49 crores; capital outlay on electricity schemes Rs 2.2 crores; civil works Rs 87 lakhs; housing schemes for displaced persons Rs 20 lakhs. To the extent of Rs 8.99 crores, this will be met by a loan assisfance from the Centre and the balance from borrowing in the open market.

Incidentally, the record over the past five years of open market borrowing in mobilising resources is particularly encouraging. The First Plan target was Rs 25 crores and this has been exceeded by Rs 3.92 crores. The annual level of borrowing has increased from Rs 3.72 crores in 1951-52 to Rs 10 crores in 1955-56. The Second Plan envisages a target of net borrowing twice as large as that of the First Plan. This would mean that the centre of gravity of the campaign has to shift from large cities, which alone were hitherto drawn upon.

Before considering the salient features of the new budget, it is necessary to review the financial position of the First Five-Year Plan. With a target of Rs 146.31 crores it has been the largest for any State. And, what is more, while many States are falling short of their targeted expenditure, Bombay will be able not only to realise it but is likely to exceed it by a small margin of Rs 90 lakhs. But even these figures do not fully represent the outlay under the First Plan. An additional amount of Rs 46.44 crores is expected to be spent, before the next plan commences, on State schemes undertaken at the special instance of the Centre. The total outlay will thus reach the figure of Rs 193.65 crores.

The Finance Minister is careful to add that there had been times since 1951, when the financial scene was all but rosy. "The most striking and also comforting feature of public finance operations in the State," he remarks, "is the resilience and readiness to assess and overcome financial difficulties." Fulfilling the First Plan meant an increase of over 50 per cent in annual development expenditure from Rs 22 crores in 1951-52 to Rs 35 crores in 1955-56. In the first two years, scarcity conditions curtailed Plan resources to the extent of Rs 7.4 crores. The annual tax revenue and the ways and means position was at a low ebb. The State Government helplessly watched sales tax and land revenue fall for reasons beyond their control.

In effecting a change from scarcity to surplus, three factors have contributed: good harvests, the resilience of the people and the efficiency of the administration. The most impressive retrieval was made perhaps in 1954-55 when, as against an overall budget deficit of Rs 1.89 crores in the revised estimates, the actuals showed a surplus of Rs 9.87 crores. "Neither prohibition, nor the plan responsibilities", says Dr Mehta, "have left us poorer."

The Second Plan is about twice the size of the First Plan at Rs 264.4 crores. This is again the largest outlay for any State in India. According to the States' Draft Plan (Though this envisages a slightly higher level of expenditure at Rs 282.86 crores, the proportion of allocations in it are unlikely to be changed.) Rs 121 crores or nearly 43 per cent of the total outlay goes to development of irrigation and power facilities. Estimated demand for power at the end of the Second Plan is 752 mw. against the available power facility of 512 mw.

Minor irrigation works, agricultural research for the development or sugar-cane, cotton, oilseeds, and horticulture, extension of agricultural credit, cooperative marketing, cooperative farming, cooperative sugar factories, extension of compulsory education and integration of curative and preventive medical relief, figure prominently in the Draft Plan.

It is interesting to note the significant rise in the proportion of capital expenditure to total outlay from 40 per cent in the First Plan to 76 per cent in the Second. In absolute terms, capital expenditure has increased from Rs 8.13 crores in 1951-52 to Rs 28.77 crores in 1955-56. There need be little doubt whether the administrative organisation will be equal to the task of fulfilling the even higher level of spending envisaged in the future.

As for the budget for the coming year, we have seen its broad outline. There is an apparent reduction of Rs 1.03 crores on the expenditure side as compared with the revised estimate of the current year. But if allowance is made for a change in classification and accounting procedure, there is actually an increase of Rs 4.29 crores under this head. Excluding schemes for State Trading, the budget provides a capital expenditure to the tune of Rs 26.74 crores. This apart, another Rs 3.55 crores comes from the State Road Fund to develop the roadways. The capital expenditure is proposed to be met from (1) a loan of Rs 9.79 crores from the Centre (2) withdrawal of Rs 2 crores from the fund for development schemes (3) Rs 39 lakhs from the Milk Fund (4) open market borrowing (5) the share from the small-savings scheme and (6) the State's own balances.

Highlighting the budget proposals is a pioneering scheme for the establishment of industrial estates, at an estimated cost of Rs 85.75 lakhs, for the plan-period. Selected plots will be supplied with electricity, water, drainage, and roads and made available to industrialists desirous of setting up factories. As a first step, the budget provides Rs 20 lakhs for acquiring and developing an area of 2,500 acres near Kalyan. Other items calling for special notice are the provision of Rs 2.5 crores as loan to the Bombay Municipal Corporation for Tansa-Vaitarna Scheme, Rs 3 crores as loan to the Bombay Electricity Board and Rs 1.4 crores for industrial and low-income groups housing schemes.

The year 1956-57 is expected to close with a balance of Rs 5.45 crores inclusive of investment in Treasury Bills. This will, however, increase to the extent of borrowings from the open market, the small savings and Central assistance. For the Second Plan, Central aid required will be of the order of Rs 175 crores.

It is a tribute to Bombay's fiscal policy that the Taxation Enquiry Commission's recommendations generally support the measures already taken. Controversial taxes like stamp duty on forward markets and electricity duty are specific instances to the point. There is however little room for complacency in that Bombay will have to play its full part in the raising additional income through taxation for which a credit has been allowed in the Second Plan resources to the extent of Rs 6.8 crores. The greatest possible measure of public cooperation will be called for to fulfill the Plan with its ambitious though realisable targets.

DADABHAI NAOROJI MEMORIAL PRIZE

The Dadabhai Naoroji Memorial Fellowship of the value of Rs. 3,000/- (three thousand) established by the Trustees of the Dadabhai Naoroji Memorial Prize Fund is to be awarded for the yeaer 1956 in the subject of Economics. Nominations are now sought for this award. Persons of Indian nationality who have contributed to the science of economics or done their best to advance the economic interests of the Indian Union during the period of five years ending 31st December, 1955 are eligible. The contribution may have been through publication of significant professional literature, participatin in professional activities or valuable achievement in any other manner.

All nominations should be made together with four copies of (i) publications, if any and (ii) a detailed statement containing information upon which recommendation is based, not later than 30th May, 1956 to the Secretary, Dadabhai Naoroji Memorial Prize Fund (Bombay Presidency Association Rooms), 107, Mahatma Gandhi Road, Bombay—1.

The selected Fellow shall have to deliver in Bombay a series of not less than three and not more than five lectures on the subject. Travelling and halting allowance will be paid to the Fellow.

Gateway Notes

Madhya Pradesh Budget

Madhya Pradesh's Revenue Minister may derive the satisfaction that the deficit budget for the ensuing year, presented last week, shows a much smaller gap than that of either Bihar or West Bengal. The revenue has been estimated at Rs 30.93 crores and the expenditure on revenue account at Rs 34.75 crores, leaving a shortfall of Rs 3.82 crores.

The policy of additional taxation which is bound to be put through on an appreciable scale during the Second Plan-period, takes a cautious tone, though, unlike West Bengal, Mr Mandloi has refused to mark time. The measures to augment revenue includes standardisation of land revenue assessment, betterment levy and increase in water-rate, introduction of multipoint-sales-tax system (instead of the single-point levy now in existence), levy of electricity duty on energy consumed for industrial purposes, increase in rates of motor vehicles tax and tax on passengers. These would strengthen the exchequer by about Rs 1.64 crores during 1956-57. A heavier fiscal burden may be expected to be imposed in the years immediately to come as the Government intend to raise some Rs 12 crores by way of additional taxation during the next plan-period.

The Revenue Minister gave no hint as to the shape or nature of fresh taxes which would make possible the realisation of this important plan-target. Apparently, the Taxation Enquiry Commission's recommendations are receiving serious thought at the hands of State Governments, which between them, have to raise Rs 225 crores during the next five years through new taxes, to fulfill the Second Plan's financial requirements. Perhaps, Mr Mandloi is awaiting more clues regarding the taxable capacity of the community.

The State's Second Plan, to the extent the Planning Commission have approved of it, entails a financial outlay of Rs 123.3 crores. The emphasis would be on development of heavy industries, power and transport. The most important industrial projects are the steel plant at Bhilai and the coal fields at Korsa.

Significant among Government's new proposals is the construction of 2,000 residential quarters for industrial workers in Nagpur, and a smaller number each at seven other centres. Free education will be provided to all children in the State in the age groups 6—14. Primary schools will be more by 1000 in another year and their teachers will be upgraded from a monthly pay of Rs 30 to Rs 40. The policy of prohibition will be carried through in stages. Now that the insistence on uniformity in this regard for the different States is relaxed the programme can be so phased as to minimise its impact on the State's coffers.

*

Uneven Industrial Expansion ?

The 48th annual general meeting of the Indian Merchant's Chamber provided an occasion for Mr Lal Bahadur Shastri, who inaugurated it, to defend the surcharge on freight traffic, the only new levy in the railway budget for the ensuing year. The Chamber's President, Mr Bhabubai Chinai was critical of the surgharge particularly when the finances of the railways were in a "fairly comfortable position", having contributed on an average Rs 34 crores to the general revenue. Incidentally, this contribution will go up to about Rs 50 crores.

Mr Shastri replied that the position has to be viewed not from the theoretical angle of allocation of expenses but against the background of the limited finance which the Planning Commission have been able to allot to the railways. The railways, certainly, could not run the risk of a possible shortfall in their transportaion capacity.

In his presidential address, Mr Chinai made a comprehensive survey of agricultural and industrial production and offered an able commentary on the draft Second Plan with particular reference to transport. He also gave some useful observations on trade and payments position and the commodity markets. An objective analysis of basic agricultural statistics leads Mr Chinai to the conclusion that "the situation provides a reasonable basis for the feeling of confidence that efforts in the direction of planned development would continue to yield favourable results."

The progress in the industrial field is spectacular in patches. The high production index of 167 in 1955 against 117 in 1951 is explained mainly by the strides taken by the steel, cement and textile industries. Significantly, the rate of increase in this rising trend is not being kept up in the years just past. This is because the scope for fuller utilisation of unused capacity has diminished greatly, while the part played by additional installed capacity continues to be relatively small, at any rate, in the private sector. Such industries as superphosphates, glass, sulphuric acid, jute, automobiles, electric fans, radio receivers, mechine tools etc have got to fare much better in 1955-56 targets are to be realised.

The agreement by the signatories of the GATT to approve of quota restrictions, (subject to periodical scrutiny by under-developed countries) as a means of developing their economy, was welcomed by Mr Chinai.

In respect of commodity prices, the past year showed a general decline in prices of almost all commodities except rice, tea, sugar, and gur, which recorded a mixed trend. The total index for agricultural commodities, fell from 397.5 in 1953-54 to 377.4 in 1954-55. Consequently the index for semi-manufactures fell from 359.2 to 350.3 while the index for manufactures showed a rise from 367.4 to 377.30.

Regarding the Draft Plan, Mr Chinai dealt at some length on the risk involved in deficit financing to the extent now contemplated. He echoed the feelings of the entire business community when he said that they are prepared to assist whole-heartedly the implementation of the Plan, leaving aside individual reactions to matters of detail.

*

Exporters Meet

Another important body to hold its annual meeting last week was the All India Exporters' Association. The timing was conducive to make a proper assessment of a payments position in the background of the requirements of foreign exchange under the Second Plan. A good part of Mr C. C. Jhaveri's speech from the chair was devoted to this subject.

The Plan estimates requirements of foreign exchange for capital goods at Rs 1600 crores, inclusive of 400 crores for imports of equipment for replacement. It may be assumed that Rs 600 crores worth of capital goods can be financed from current earnings and also that some Rs 200 crores of foreign exchange can be saved on import items in which domestic production is likely to increase. Some Rs 200 crores may be tapped from sterling balances. This leaves a balance of Rs 600 crores out of which, it is assumed, credit can be taken for Rs 400 crores of foreign aid. There remains thus an uncovered foreign exchange gap to the extent of Rs 200 crores, which can be met only by substantially larger exports. Are the available means and resources sufficient to meet the challenge? This indeed poses a formidable question mark.

Consistent with the avowed objective of raising the general standard of living which at any rate means the avoidance of austerity conditions, there is at present little scope for retrenching the current level of imports. There is correspondingly the greater need for increasing exports. Even a determined policy of subsidies can give only a temporary fillip. There are, of course, several factors such as international competition, the change in pattern of world trade, and the quality of exportable goods to reckon with. A vigorous planned drive to develop fully the potentialities of our export trade seems to be the only recourse. Mr Jhaveri is specific in his diagnosis and pointed in his suggestions. Cashewnut, a valuable dollar earner, is slipping out of India's hands, following direct links, hitherto non-existent, being established between the US and East Africa. The latter country throws yet another challenge by doubling, in the last 14 years, its tea acreage. The threat, can be met by the Indian tea industry only through improving quality and bringing down the cost of production.

The improved food position spelt hopes for exports, but this is countered by the recent ban on export of foodgrains. There is also scope for export of oils, which lately have have made a good showing. Cotton crop can be considerably increased (the Second Plan target is by no means very ambitious) and greater encouragement should be given to export of yarn as distinct from cotton. Trade relations have to be established with Russia and other communist countries. Shipping could both save and earn foreign exchange. Subsidies in this respect should be increased as is done by other advanced countries. These broad facts, intricate in their relation and portentous in their significance to the economy, Mr Jhaveri's suggestion for setting up a panel of experts to watch, study and tackle the new trends and developments in foreign trade.

*

Importers and the Customs

Hard on the heels of the All-India Exporters' Meeting was the annual general meeting of the All-India Importers' Association. The main burden of Mr Shantilal M. Shah's presidential speech was the large requirements and, as seen at present, the limited availability of foreign exchange for the Second Plan.

The import policy for the licensing period, January-June 1956 found warm approval from trading interests in as much as greater opportunities were afforded by extending the basic period 1954-55 to 135 items and provision was made for the enhancement of small value licenses giving a stimulus to the small importer.

Mr Shah echoed the protest of some trade bodies and members of the Import Advisory Council, in criticising the extension of the 'monopoly imports' system. To the extent this system damages the normal trade channels, Government

The Father of Indian Parliament

SOME evil spirit seems to be haunting this session of the Parliament, overwhelming it with a succession of calamities. I wrote last week about the atmosphere of mournful apprehensiveness in both the houses owing, among other things, to the illness of Mr Mavlanker. The medical opinion, however, had been reassuring even the evening before the day he passed away, and everyone here was hoping that he would recover completely. But that was not to be, and he died after a fresh heart attack at about 8 A.M. last Monday.

The news of his death, conveyed to Mr Nehru by Mr Mavlanker's son from Ahmedabad, was received with universal grief here. Mr Nehru, speaking with barely controlled emotion, referred to the succession of 'misfortunes descending upon us this month from all directions" and paid an eloquent tribute to the many-sided personality of the late Speaker. He referred to him as the Father of the Lok Sabha and "the guiding diety of the parliament", 'trying to keep us on the right path and moulding the development of parliamentary life in India." His firmness, courtesy, and his complete command of any situation were also praised by the Prime Minister. Mr Nehru also referred to Mr Mavlanker's close association with a number of social activities, especially the Gandhi Memorial and Kasturba Memorial Funds, his fierce and fastidious integrity and concern for the minutest detail. It was very evident that Mr Nehru was deeply moved by the disappearance from the scene of an old colleague.

With striking unanimity every section of the Lok Sabha paid warm tributes to Mr Mavlanker's great qualities as a Speaker. But the most remarkable speech was that of Mr Hiren Mukherji, Deputy Leader of the Communist group in the house. He referred to Mr Mavlanker's death as a "cruel blow" and that it was 'inconceivable that we shall come to this House and not see him in the Chair, not see his smile, his gracious bearing, his dignity and the shine of his personality." Most hopefully for the future of parliamentary democracy in this country, he spoke of Mr Mavlanker's "passion, which very few people have—at least I have met nobody else who had that passion in this measure—to see parliamentary forms work in this country in a form which would be in conformity with our political traditions."

Anyone who knows anything at all about the traditional attitude of communists to Parliamentary forms would realise what a remarkable tribute this is. And it is breath-taking to listen to a communist referring to "our political traditions." If all Mr Mavlanker's other achievements were naught, this conversion of communists to a faith in parliamentary respectability, and continuity in national political traditions would entitle him to the permanent and continuous grateful remembrance of the Indian people. For, if Mr Mukherjee's tribute represents the considered view of his party, the greatest single danger to the future of parliamentary democracy in the country has been removed.

Other members of the Opposition who spoke referred to the fair and impartial way in which the late Speaker conductd the proceedings, his scrupulous concern for the rights of the opposition and his other great parliamentary gifts. Mr Ashoke Mehta paid him the striking compliment of saying that, in retrospect, he finds that on most of the occasions in which he had disagreed with the Speaker, Mr Mavlanker was right and he was wrong. Mr N. C. Chatterjee, who has participated in some lively battles in the Lok Sabha in his time, referred with obvious pride at the impression made by Mr Mavlanker in Commonwealth Parliamentary Conferences. He also referred to Mr Mavlanker's watchfulness against inroads that the Executive was trying to make into legislative powers of the Parliament.

In the Rajya Sabha, the Vice President, Dr Radhakrishnan, paid warm tribute to Mr Mavlanker's vast knowledge of parliamentary practice and procedure and his unceasing efforts to build healthy traditions and conventions of parliamentary life in our young democracy. The leader of the House, Mr Govind Vallabh Pant, spoke feelingly of Mr Mavlanker's other activities pursued in the true Gandhian spirit of unspectacular but vital constructive endeavour.

In the Press Gallery, the sense of loss was equally keen. Reporting on legislative business, it is not commonly realised, is an exceedingly wearing job. Casual readers of newspapers, who skip the endless and often repetitive arguments of the more prolix legislators, and who look for 'breezes', have no conception whatever of the long hours of weariness of having to listen to and report on legislative proceedings. Some of the misery of the task was alleviated by the late Speaker's thoughtfulness, and conditions have improved beyond relognition over a period of years. Most of the members of the press have had occasion to watch one or the other of the ticklish situations that arose in the House, and have developed a great admiration for the Speaker's tact and adroitness in dealing with difficult situations. Many will recall the short-lived (one hopes) feud between the two Houses of the Parliament, which would have had undesirable consequences but for the tact of Mr Mavlanker and Dr Radhakrishnan.

Of the many gifts of Mr Mavlanker his endowments of temperament for the job he carried on for nine years with such conspicuous distinction, his unruffled poise will be naturally best remembered. Many associates think that his heart was in constructive work and it was freely mentioned that Mr Mavlanker had made up his mind not to contest the next elections and that he, was planning to join Vinobha Bhave. In fact, Mr Mavlanker's most recent heart attack occurred while he was touring Andhra in pursuit o his other vocation as a constructive worker.

But, in spite of all this, India will remember him as the first guiding spirit of the parliamentary forms and practice. His achievements in specific matters, as the strengthening of the committee system, of the development of an independent parliamentary secretariat, and in the daily conduct of legislative proceedings, were significant. But more important that even these was the success that attended his effort at acclimatising these forms to our political climate. A true measure of his success in this regard is to be seen, as I stated earlier, in the communist leader's implied acceptance of the methods and forms of Parliamentary democracy.

North Indian Notes

Simplifying Parliament's Work

Considerable thought was given, among other things, at the Seminar on Parliamentary Democracy in Delhi, to the need for saving more of parliament's time, so that it can confine strictly and more fruitfully to matters of policy and principle. In this search for time-saving devices, it is true that there are precedents of other countries like Britain to fall back upon. But opinion is naturally strong that a mere replica of parliamentary procedure elsewhere is unlikely to suit the needs of India.

The system of appointing commitees to consider bills has apparently come to stay. It was argued that more bills should be sent to committees, but with the present procedure changed. If verbatim records of the evidence and proceedings of committee meetings are kept and circulated among members of parliament, it would avoid the same things being repeated when the committee's report comes later to the House. But one participant of the seminar characterised the system of referring bills to select committees and joint committees as 'unnecessary and useless.' When the motion of consideration of the bill was adopted, the House could as well convert itself into a committee so that members interested in the bill could take part in the discussions. It is clear that the present system which involves much avoidable delay and duplication of work has to be replaced by more efficient, but not rigid, procedural practices.

One aspect of Parliament's concern in financial matters was touched by the suggestion to have a larger number of subcommittees of both the Estimates Committee and the Public Accounts Committee, so that a bigger field of public finance could be covered. A subcommittee might be made responsible to one ministry or a group of ministries. Another proposal to complete the budget in parts over the year obviously draws its inspiration from the British practice. The advantage claimed is that public affairs will be under the constant scrutiny of Parliament for the good part of a year.

Mr N. C. Chatterjee had sufficient justification for pointing out that in spite of the sovereignty of the legislature, its financial control over the treasury was to a large extent theoretical and not very effective. More than anything else perhaps, the time-lag in Parliament being informed through official reports (for instance, those of State-owned enterprises) contribute to this situation. The elimination of such delays should be a first step toward a more vigilant control by parliament on financial matters.

The plea for higher emoluments to MPs, on whatever ground it is made, cannot draw support from the corresponding practice in Britain where MPs seem stoically to put up with a comparatively lean allowance.

*

Madhya Bharat Budget

The Madhya Bharat Finance Minister's budget for 1956-57 showing a small surplus of Rs 2 lakhs contains nothing spectacular. Though he did not announce any specific taxation proposal, the estimate of receipts at Rs 19.07 crores, includes Rs 55 lakhs of 'additional revenue'. There is reason to infer that a beginning has been made in the implementation of Taxation Enquiry Commission's recommendations. Expenditure on revenue account is placed at Rs 19.05 crores.

There are several welcome features in the new budget. A sum of Rs 1.5 crores is provided for revision of the pay-scales of Government servants. Bus passenger fares in the northern region are reduced and brought to a uniform level. The policy of gradual introduction of prohibition will take another major step during the budget year.

The revised estimates for the current year show that both expenditure and receipts are at a lower level than originally estimated. Also a deficit of Rs 18 lakhs gets converted into a surplus of Rs 12 lakhs in the revised budget. The estimated capital expenditure of Rs Rs 8.25 crores also suffers a shrinkage to Rs 7.40 crores. The capital outlay in the budget year is Rs 10.18 crores, but this is inclusive of Rs 4.41 crores for zamindari compensation.

*

Indo-British Co-operation

Mr T. T. Krishnamachari had given earlier the assurance that the possibility of setting up a steel plant at Durgapur need never be in doubt. Negotiations with a British Consortium of engineering firms had been in progress for some months past. These have now culminated in a general agreement reached between the Government of India and the visiting delegation of the Consortium, the Indian Steel Works Construction Company.

Incorporated in the agreement is a special arrangement for financing goreign eychange cost of the one million ton steel plant. More than half the foreign exchange cost, estimated at £50 million will be met by a loan of £15 million offered by the UK Government and credits of £11.5 million agreed to by a syndicate of British banks. But it is understood that these resources will be drawn upon only in the latter half of the Second Five Year Plan. The balance of £23.5 million in foreign exchange will be met by India out of internal resources and will be utilised for payments for the plant during the first two years.

The member firms of the British consortium will supply the plant, machinery and equipment and considerable part of the steel structures, refractories and other materials. The entire work of erection and civil engineering at site is also to be underaken by the British firms, under the supervision of Government consultant engineers. The rupee cost of erection, engineering and materials, freight, etc in India is expected to be about Rs 39 crores.

The Ministry for Iron and Steel is anxious to speed up the preliminary work in this connection. All details of the present agreement will probably be sett'ed in another three months. Meanwhile, fruitful discussions are taking place between the Ministry and representatives of the USSR Government for finalising particulars of the Bhilai Steel Plant. These will conclude in the very near future.

*

Words of Assurance

Mr A. D. Pandit's address to the annual general meeting of the Punjab and Delhi Chamber of Commerce was evidently calculated to restore confidence which the private sector might have lost as a result of the greater proportion of investment in the public sector under the Second Plan. The total investment in the private sector is estimated to be about Rs 620 crores, and production was to be expanded in a number of consumer industries including paper, sugar, vegetable oils and pharmaceuticals. The Delhi Chief Commissioner contended therefore, that the contribution of the private sector will have to be corresponding'y greater than in the past.

Turning to more local problems, Mr Pandit said that no further move for nationalisation of Delhi's road transport system is likely to be taken in the near future. There was however a proposal from the Planning Commission that road transport should be managed by corporations in which railways and transport operators participated along with the State Government. At any rate the possibility of nationalisation of goods transport may safely be discounted. In fact, this is true of the general policy under the Second Plan. The Government participation in this field will mainly be in the development of roadways; some 1,150 miles of additional roads other than the national highways, missing links in the net-work of the national highways and the improvement of about 1,700 miles of existing roads.

Earlier in the meeting the outgoing president of the Chamber Mr Bharat Ram suggested now that nationalisation of insurance is a fait accompli, every effort should now be directed toward the avoidance of red-tape and delays usually associated with government departments.

*

The Delhi School of Economics

The Delhi School of Economics is seven years old. From the time the Delhi University resolved to make it an all-India centre of specialised studies and research in economics, it has grown steadily into one of the finest centres of its kind in India. It is now housed in its own building. It has a large and well-equipped teaching and research staff. A learned journal is published by it. Advanced students from almost all the States of India and a few foreign countries are on its rolls. A practical bias is given to the studies though periodic investigations and analyses of important current economic problems. By creating a community, in the warmest sense of the word, of students and staff the school is imbued not only with an intellectual character but also with a social purpose 'to serve the country and its poverty-striken masses.'

The achievement so far has been impressive. But the Director, Dr V. K. R. V. Rao describes what has been achieved as 'only a beginning, and a rather modest one at that.' This bespeaks not so much modesty as faith in the future and in progress.

North Indian Markets

Progressive Decline in Wheat Imports

ACCORDING to an official Press Note released this week, there has been a progressive reduction in the imports of Wheat from foreign countries during the first Five-Year Plan period. From April 1951 to March 1952, India importetd 3,517 lakh tons of wheat and wheat flour. Imports of these suddently went down to 1.806 lakh tons in 1952-53 and 1,255 lakh tons in 1953-54. There was again a marked decline to 379 lakh tons of wheat only in 1954-55; and there will be a still further fall to 326 lakh tons in 1955-56.

This significant decrease in imports of wheat from 3,517 lakh tons to 326 lakh tons, in the course of the past five years, had taken place in spite of the increase in population and the partial failure of the recent 'khariff' crops due to heavy rains and floods. This is a clear indication that internal production has been steadily improving every year.

As a matter of fact, the first estimate of the overall acreage position of Cereals in India in 1955-56 has shown an increase of 2,441,000 acres or 1.4 per cent as compared to the previous year. This increase in 'rabi' cereals has made up substantially for the decrease in 'khariff' cereals.

The all-India first estimate of 'khariff' cereals (Rice, Jowar, Bajra, Maize, Ragi and small Millets), released some days ago, showed a decrease of 32,000 acres during the current year as compared to last year; but the all-India first estimate of 'rabi' cereals (Wheat and Barley) for 1955-56, released this week, puts the current year's area at 36,019,000 acres as against 33,546,000 acres in the adjusted first estimate.

The all-India first estimate of Gram for 1955-56 puts the current year's area at 22,185,000 acres, which shows an increase of 12.9 per cent over last year.

Meanwhile, prices of Foodgrains, in the Hapur market, continued to show a hardening tendency with Wheat recording a gain of another As 8 to Rs 15 per maund. Rice also recorded modest gains in sympathy with the rates moving between Rs 24 to Rs 32 per maund, according to quality.

Gram improved further on firm Punjab and Madras advices to Rs 10-6 per maund for deshi quality and Rs 10-12 for the Punjab quality. Other coarse grains also recorded modest gains.

Among Pulses, Peas dara quality improved to Rs 9-12 and white variety to Rs 10-8 per maund. Arhar showed an improvement of As 4 to Rs 11-8 per maund, while other pulses ruled steady.

In the Delhi grains market, Wheat, both dara and farm qualities, registered a rise of about As 4 and As 12 to Rs 15-4 and Rs 17-8 per maund respectively, mainly due to lower arrivals from the producing areas. Also, reports of small stocks in Uttar Pradesh, the Punjab and PEPSU were a contributory factor.

Demand for Rice was good and the rate improved by Re 1 to Rs 2 per maund. After initial steadiness, Gram rates eased modestly in the absence of buyers on reports of increase in area in 1955-56.

In the Bombay grains market, the demand for exportable Pulses registered a substantial fall, while trading in Wheat, Rice and coarse grains was of a routine nature. In the Pulses section, there was a general tendency on the part of traders not to hold large supplies in view of the expected increase in the arrivals of the new crop during the next few weeks.

Rates for Gram were lower by about Rs 10 per candy, while prices of most qualities of Rice were maintained around previous week's levels, being influenced to some extent by continued steadier advices from terminal markets in growing areas.

In the Wheat section, the bulk of the consumer demand continued to be met from the stocks bought from the Government. Prices of these supplies ranged from Rs 130 to Rs 149 per candy, according to quality. Rates for indigenous qualities were steady.

Among coarse grains, prices of Jowar declined by Rs 5 to Rs 7 per candy following the increased arrivals of the new crop from Uttar Pradesh. The Sholapur variety was done at Rs 115 to Rs 125 per candy, while inferior qualities were placed at Rs 108 per candy.

*

Sugar markets continued to rule steadier with rates showing fractional improvements over last levels. This was due to improved offtake as buyers seemed to be anxious to secure stocks before the announcement of the Budget following the persistent rumours regarding the increase in excise duty. Some traders, however, felt that it was futile to buy more as they did not hope to get the commodity before the Budget. The latest mill-delivery rates (per maund) were:—Jaswant Rs 28-14; Simbhauli Rs 28-14; Daurala Rs 30-4; Amroha Rs 28-4; Bijnore Rs 28-8; Mansoorpur Rs 30-4 and Rampur Rs 32-0.

It is reported that more than 60,000 bags have been purchased during the past ten days on condition of 'despatch before the Budget'; but many mills in Uttar Pradesh and Bihar have found it profitable not to send the commodity in time.

Traders are also worried about the increase of one anna in railway freight though this surchage will enable the Deccan factories to compete more successfully with the Uttar Pradesh and Bihar industries in Southern markets.

Stocks of foreign sugar are reported to be limited and are expected to last only a few months. The Government have also decided to reduce the selling price of British-refined and French sugar for exgodown delivery at Poona, Indore, Ujjain, Jaipur, Jamshedpur and Ratlam, from Rs 30-8 to Rs 29-8 per maund with immediate effect.

Persidential addresses of the two rival Sugar Merchants' Associations in Bombay agree on one point that, in the near future, there is no possibility of any rise in the prices of sugar. The President of the Bombay Sugar Merchants' Association has stated that, at the end of this year's season, there will be an unsold stock of over 4 lakh tons of sugar, while the President of the Shakkar Vyapari Mandal, Bombay, has stated that, by the end of this year, the country will be faced with a carry-over of about 40,000 tons of sugar.

Giving the reasons for his prediction, the President of the Bombay Sugar Merchants' Association has stated that there is an estimated 4.32 lakh tons of carry-forward of old stocks with the sugar mills. The stocks with the Government are estimated around 1 lakh tons. There is a forecast that the new sugar production will exceed 17 lakh tons. Consumption is estimated at about 18 lakh tons. He, therefore, states that, at the end of the year, there will be an unsold stock of over 4 lakh tons.

Meanwhile, production of sugar is running at a record level. The output, till the end of January, amounted to 7.12 lakh tons as against 6.6 lakh tons in the corresponding period of last year. This higher output is attributed to easy and ample availability of cane as a result of falling Gur prices and to good demand for sugar. The industry, therefore, hopes to break the 1954-55 season's record of 15.89 lakh tons.

*

The Gur market at Hapur remained depressed, the rate for the ready position being quoted at Rs 10 per maund. Daily arrivals declined to 1,500 maunds, while total arrivals to date amounted to 16,000 maunds. Outside slack buying enquiry and increasing local stocks were the main depressing factors. An appreciable fall in the futures section was also a contributory factor.

SOUTH INDIAN MARKETS

Rubber Consumption Exceeds Output

THE consumption of Rubber by manufacturers has exceeded production by 376 tons in January, 1956. There is, however, a steep fall of over 700 tons in the production of indigenous rubber under the various grades during the same month as compared to production in December last.

According to a statement, issued by the Rubber Board this week, production and consumption figures for January are 2,083 tons and 2,459 tons respectively, while figures for the previous month are 2,787 tons and 2,721 tons respectively. Consumption of imported rubber during the month is only 13 tons.

Stocks with the estates and dealers and stocks with the manufacturers, as on January 31, 1956, are 4,822 tons and 2,265 tons respectively. These figures include stocks in transit sold to the manufacturers and imported rubber held in stocks.

The following table shows the production, consumption, stocks with the estates and dealers, and stocks with the manufacturers during the past three months (in tons):—

	Jan., 1956.	Dec., 1955.	Nov., 1955.
Production ..	2,083	2,787	2,680
Consumption ..	2,459	2,721	1,837
Stocks with the Estates & Dealers	4,822	4,758	4,452
Stocks with the Manufacturers	2,258	2,696	2,936

*

Pepper markets ruled steadier with the undertone healthy, there being no pressure of arrivals and consequently no anxiety to press sales. In the Alleppy market, the rate moved between Rs 825 and Rs 850 per candy.

The general opinion among the trade is for a sizable improvement during March when New York is likely to enter the Indian market after the liquidation of the heavy unsold consignments shipped during January. Rumours are also current in the market regarding the imposition of export duty on pepper in the coming Budget.

The Peninsula

The New Budget

THERE is a rumour that the Union Finance Minister has sent a Circular to the States Governments to balance their budgets and to tap additional sources for taxation to the maximum extent possible. The majority of Part A States have already announced their budgets; in most cases, the Central directive, if one exists, seems to have become a cry in the wilderness.

In the 1956-57 Budget, presented by the Finance Minister in the State assembly on Monday, there is a deficit of Rs 311 lakhs at the existing level of taxation. Additional taxation involving four items is expected to wipe out nearly half this amount, the remaining, larger half, estimated to amount Rs 166 lakhs, is left uncovered. This is about the same level of deficit budgeted for the current year. The current year's deficit has, however, gone up from Rs 166 lakhs to Rs 221 lakhs in the revised estimate.

Against Rs 4,792 lakhs of revenue budgeted for 1955-56, the revised estimate shows Rs 5,268 lakhs and against the budgeted expenditure of Rs 4,859 lakhs the revised estimate shows Rs 5,489 lakhs. The major deviations are an improvement in revenue under stamps of Rs 71 lakhs, explained as the result of more suits being filed in Courts, after the lifting of the moratorium, Rs 60 lakhs increase under forests owing to higher price of sandalwood and Rs 50 lakhs increase under agricultural income tax. The principal increase in expenditure is Rs 150 lakhs on the outlay on cyclone relief and expansion and development of social services.

The budget estimate for 1956-57 shows both revenue and expenditure on a substantially higher level; revenue is estimated at Rs 6,078 lakhs, and expenditure at Rs 6,244 lakhs. Here, there is an intrusion of a revised procedure in accounting which renders the real increase largely fictitious. Hitherto, land cess and sur-charge on stamp duties payable to local bodies were deducted from the receipts under the respective heads. As per instructions from the Auditor General, the entire receipts from these heads are now being shown in the budget as revenue and there is a corresponding entry on the expenditure side covering the disbursements to the local bodies, with the result that figures on both sides are inflated.

The real increase in revenue consists, of Rs 40 lakhs from electricity schemes due to enlargement of the grid; Rs 50 lakhs from agricultural income tax and Rs 110 lakhs in Central Grants.

There is another change of procedure which has interfered with the dimensions of the revenue budget. Again, according to the instructions of the Auditor General, certain items of expenditure hitherto debited to the revenue account are now included in the capital account. The resulting relief to the revenue account in the budget is estimated at about Rs 350 lakhs. Under the old procedure the revenue deficit, with this amount thrown in, would have been about Rs 6½ crores. New taxes proposed include enhancement of the tax on diesel oil from As 1½ to As 4 a gallon to yield an additional Rs 30 lakhs per annum; an additional sales tax of one anna in the rupee on sugar at any suitable point to yield Rs 40 lakhs; 30 per cent increase in the rate for electricity supply in hydro-electric areas for bulk consumers and licencees to yield about Rs 45 lakhs and assessment of inam lands on ryotwari basis in lieu of quit rent to yield Rs 30 lakhs. The one tax relief proposd is exemption from sales tax of sale of palm gur at all points.

The Finance Minister is not apologetic about the few increases in taxation, he is obliged to resort to. The transfer to the capital account of nearly 3½ crores of outlay hitherto met from current revenue leaves the liability on the revenue account more pressing; and the residual deficit of Rs 311 lakhs is too much to be left as it is. In respect of the increase in rate on electric energy, the railway administration and new industrial concerns, the latter for the first three years after the commencement of production, are offered exemption.

Against these enhancements and new levies, there is a solitary item of tax relief. Palm Gur is the beneficiary in this case. Sales tax on palm gur is to be lifted at all points. The Government are obviously interested in encouraging the consumption of palm gur at least as a matter of duty which is owed to the ex-toddy tappers.

Capital expenditure for the year outside the revenue account is estimated to be of the order of Rs 27,61 lakhs against Rs 20,56 lakhs in the revised estimate for the current year. This is made up of Rs 13,07 lakhs on Electricity, Rs 593 lakhs on Irrigation, Rs 415 lakhs on Roads and Buildings, Rs 191 lakhs on Industrial Development. Rs 133 lakhs on Public Health and Rs 122 lakhs on other items. Of the expenditure on buildings, a sum of Rs 85 lakhs is for the construction of quarters for police subordinates in the City and mofussil. The Government have drawn up a housing programme for policemen costing about Rs 5 crores to be implemented during the Plan period, "so as to ensure for the personnel of this Security Service fair living conditions in all the districts." Another significant item in the Capital head is the provision of Rs 67 lakhs for the purchase of about 150 new motor vehicles for augmenting the City Transport.

Loans from the Centre and from the open market are expected to bring in Rs 34½ crores, which together with the opening cash balance and the net credit within the year under deposit heads, both amounting Rs 346 lakhs, would balance the capital expenditure, the net disbursements under loans and advances, repayment of debts to the Government of India and the public, and the revenue deficit.

Mr C. Subramaniam has described his budget as "a Plan Budget". He is happy that with some last minute adjustments in outlay, the First Five Year Plan targets are being generally fulfilled. On irrigation and electricity works which together account for 60 per cent of the First Plan outlay, there is no short fall at all.

The Finance Minister was not in a position to give any final picture of the Second Plan for the State. The Planning Commission have left things at a tentative stage and even when finalised, the Plan is not going to be a rigid framework devoid of scope for adjustments from time to time. All that Mr Subramaniam could indicate in this respect was that in the budget year the State Government have proposed to take up certain schemes. As an Appendix to the Budget memorandum, there is a list containing nearly 500 schemes. The more important among these found mention in the budget speech.

There is going to be an expansion of agricultural colleges in the State along with institutions for agricultural research. A central sugar-cane Research Station at Nellikuppam and a substation at Trichirapoly are already being set up. Horticulture development will receive more substantial encouragement. Amongst intensive manuring schemes, there is one for the distribution of one lakh tons of ammonium sulphate. Under the Key—Village scheme, country bulls in selected villages will be castrated and servicing will be done entirely through pedigree bulls and artificial insemination. A subsidy of Rs 10 is proposed for the proper maintenance of calves born in the key-villages. Details for a dairy scheme for the Madras City are being worked out. It is expected that a farm of 4000 milch cows will be established near the city.

A great deal is intended to be done by way of forest development. During the budget year there will be a start by taking up 35,000 acres for soil conservation and planting, accompanied by systematic afforestation, cashew, casurina and other valuable timber cultivation. Nearly Rs 3 crores is to be spent on the extension of Community Blocks of which quite a large number will be opened in the areas affected by the recent floods and cyclone.

In the field of irrigation the Manimuthar, Mettur canals, the Araniar, the Mangalam and Wayalar projects are expected to be completed in the budget year. A few other works are in progress. The Meenakarai Scheme of Malabar costing Rs 50 lakhs will be started during the year. In the sphere of road development, progress has not kept pace with expectation. Outlay during the first plan period has remained considerably behind schedule. A new cess and a State grant of Rs 45 lakhs to the local bodies are expected to take care of the requirements of village roads. About 450 miles of District roads is to be taken over from local bodies by the State Government. There is a provision of Rs 109 lakhs for the improvement of State roads and bridges. Extension of fee concessions notably to the children of public servants, is one of the conspicuous features of the proposed reforms in education.

The Finance Minister could not say anything definite on the schemes for larger industries; he only hopes that in view of the special needs and resources of the State the Union Government will be sufficiently sympathetic in the matter of the location of new plants. The only positive reference was to the lignite project, costing Rs 50 crores.

TEA BOARD

(Licensing Committee)

REGISTRATION OF QUOTA TRANSFERS 1955-56

PRODUCERS OF TEA are hereby notified that the last date for the filing of applications for registration of transfers of Export Quota Rights in respect of the year 1955-56 is the 20th March, 1956. Quota transfers will not be registered unless the necessary transfer forms from both the parties to the transfer are received by that date by the Controller of Licensing, 27 and 29, Brabourne Road, Calcutta—1.

K. SENTHIAPPAN,
Controller of Licensing.

Madras Review

Labour Participation in Management

Ever since the Avadi session of the Congress, private enterprise has had a number of indications to show that radical changes are taking place in the conditions under which it has to function in the future. The acceptance of the objective of Socialistic pattern of Society by the party in power has been followed by the Amendment to Article 31 of the Constitution empowering the state to take over property on payment of such compensation as the legislature may deem fit and the nationalisation of the Imperial Bank. The New Company Law and the nationalisation of life insurance are other major changes affecting the business community.

Though Government spokesmen have been all along saying that no serious departure from the industrial policy resolution of 1948 has been contemplated, the Avadi resolution and what followed thereafter have completely unnerved entrepreneurs. Even so, the private sector has not lagged behind in making its contribution toward the achievement of the targets laid down for it under the First Five-Year Plan.

As though the prevailing uncertainties are not enough, the Amritsar Congress has shown undue haste in bringing about other far-reaching changes that will have but one effect—the disappearance of the private sector altogether.

Speaking at the annual conference of the Mysore Chamber of Commerce, Mr D. N. Hosali, the president of the Chamber, reminded Government that the business community in India was second to none in accepting the ideal of a Welfare State. It accepted that a certain amount of levelling down and a great deal of levelling up were inevitable in the process of raising the living standard of the people. At the same time it should be realised that if the interests of the whole community were to be served efficiently by the business community, conditions should be made conductive for their smooth functioning.

In three essential respects, incentives, ownership and labour relations, there was continued uncertainty. The already heavy burden of taxation was sought to be made heavier by new proposals for a ceiling on income. The measure if carried out would permanently put a stop to the expansion of private enterprise. The absence of a guarantee that fruits of an individual's labour would not be taken away from him, was another serious handicap. In the field of labour relations also, Government had not been following a clear cut policy.

The fears of private enterprise in that regard were confirmed by Mysore's Chief Minister, Mr Hanumanthaiya, who also addressed the conference. He disclosed that his Government had decided in favour of the introduction of labour participation in the management of Government industrial concerns. He went on to say that the business community would be inevitably asked to take men from labour ranks to participate in the management of their concerns also.

It must be a matter of some satisfaction to the business community that at the moment the Mysore Government have decided to apply the principle of labour participation in the management of industry to state concerns. The question of its extension to all industries will arise only when its suitability and efficacy are proved.

*

Export Promotion

Several valuable suggestions for the promotion of India's export trade with South East Asian countries have been made by the Andhra Chamber of Commerce Trade Delegation to Japan and the Far East in their report released last weekend. They point out that while there no doubt has been a sizable increase in the volume of trade between our country and this region in recent years, it is necessary for India to develop new lines in order to secure a greater share in the intra-regional trade.

It may be recalled that the Andhra Chamber of Commerce sponsored a 20 member trade delegation headed by its president, Mr J. V. Somayajulu in the summer of 1955 to visit countries in South Asia, to survey their economic conditions, to study the potential markets for Indian products in these countries and to suggest ways and means for the development of India's trade with these countries. The delegation had also the object of studying the structure and progress of medium and small scale industries in Japan and other countries with a view to finding out the extent to which we could adopt these methods in our country to promote further industrialization.

After expressing satisfaction at the measures initiated by the Government of India for the promotion of exports, the report goes on to emphasise the need for inspiring confidence in the quality of Indian goods abroad. In this connection it cites the example of Japan where there are inspection organisations set up by the Government and also by private agencies.

Some of the other more important suggestions in this regard are the exemption of a portion of the export earnings from income tax, simplification of customs formalities, exercise of restraint in the matter of any cess, duty or other tax on export cargo, creation of a free trade zone in Madras and institution of an export credit guarantee system to promote export trade, especially with South East Asian countries.

Referring to industrial development, the Report again commended the example of Japan as worthy of emulation by India. The rapid progress made by Japan is largely due to the supply of cheap energy, easy transport and the close co-operation between the Government and industry.

*

Pharmaceutical Industry

Though the history of the Indian Pharmaceutical industry, in the modern sense of the term, dates as far back as 1820, it took nearly 100 years for it to established itself on a firm footing. The acute scarcity of drugs that was felt in the country in the wake of the First World War gave encouragement to many an entrepreneur in the country to venture into the new field, and consequently a number of pharmaceutical concerns made their appearance. The expansionist movement continued throughout the inter-war years. With the declaration of the Second World War, the industry gathered fresh and further momentum. Other conditions were also conducive to the rapid growth of the industry.

Speaking on the occasion of the Silver jubilee of the Alembic Distributing Agency, Madras, Dr K. Vasudeva Rao, Chairman, Development Council (Drugs) traced the growth of the industry. The Indian industry catered to the needs of the domestic market only to the extent of 13 per cent before 1939. That position underwent a radical change during the war years and by 1949 it was capable of supplying 70 per cent of the demand. By the end of 1953, there were in the Indian Union 75 large-scale pharmaceutical industrial concerns and 1568 small concerns. Of the large concerns, Bombay had 25, West Bengal 25 and Madras 5. Of the small concerns Bombay had 556, West Bengal 539 and Madras 130.

It is, however, rather disquieting to note that the paramount need for maintaining high standards of purity in the manufacture of drugs has not always been realised by some of the smaller units in the industry. While it is true that the menace of spurious and sub-standard drugs will soon be removed by the actions being taken by Government on many of the recommendations of the Pharmaceutical Enquiry Committee such of those smaller units as are now engaged in unfair competition may do well to follow the advice of Dr Vasudeva Rao and join together in groups of four or five. The merger, while giving the partner companies increased resources, will also be helpful in avoiding duplication of the same drug by several small companies and the consequent unfair competition.

Apart from the urgent need for improving standards, the indigenous industry has to make headway in other important directions as well. The survey carried out by the Pharmaceutical Enquiry Committee has revealed that the Indian industry has completely neglected the production of bulk drugs starting from basic chemicals with the result it is even now largely dependent on foreign imports.

It is no wonder the industry finds itself left far behind its counterparts in other advanced countries as new synthetic drugs and antibiotics are rapidly replacing a large number of commonly used drugs.

Now that a Development Council for Drugs has been established by Government, it may be expected that the Indian Pharmaceutical industry's march toward self-sufficiency will be rendered quick and smooth.

*

Exchange Value of Rupee

Despite a considerable increase in industrial production in the postwar period, the volume of exports is below the prewar level. The index of exports was 94 in 1954 as against 100 in 1948. This, according to Dr B. R. Shenoy, Director, University School of Social Science, Ahmedabad, is probably due to the prevailing exchange rate of the rupee.

In his last lecture under the Sir William Meyer Endowment at the University of Madras, Dr. Shenoy expressed the view that the Indian rupee was overvalued. A more appropriate exchange valuation was indicated by the continued smuggling of gold into tthe country inspite of Authority's vigilance. The overvalued rupee was also acting as a drag on exports. By revising the exchange rate to its economic level, the price differential between the internal and external prices of gold would be removed. Then, smuggling would also automatically lose its glamour.

Dr Shenoy pointed out that when once the attraction for smuggled gold was removed, the import trade would begin to exhibit a truer picture of the country's economy. The emphasis would shift to the import of essential commodities and at the same time the handicap to many lines of export would also be removed.

THE BANK OF INDIA LIMITED.

(ESTABLISHED 7th SEPTEMBER, 1906).

ANNUAL REPORT

To be submitted to the Shareholders at the Fiftieth Annual Ordinary General Meeting to be held, at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 8th March, 1956, at 4 o'clock in the afternoon.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1955.

The Directors submit to the Shareholders the BALANCE SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1955. The Auditors' Report is also annexed.

	Rs.	a.	p.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 9,10,851-5-5, have resulted in a profit of	94,01,630	3	5
An interim dividend was paid for the half-year ended 30th June, 1955, at the rate of 6 per cent free of Income-tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed	15,00,000	0	0
Provision made for Income Tax and Super-Tax for the year	25,00,000	0	0
Bonus to Staff	12,75,000	0	0

The Directors now propose:—

To pay a final dividend for the half-year ended 31st December, 1955, at the rate of 10 per cent free of Income-tax, making 16 per cent for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb	25,00,000	0	0
To place to the Bank's Landed Property Account	3,00,000	0	0
To carry forward to the next account	13,26,630	3	5
TOTAL Rs.	94,01,630	3	5

The Bank's business continued to function satisfactorily.
The Official Bank Rate remained stationary at 3½%.

Branches were opened during the year in India at Delhi and Bangalore and abroad at Dar-es-Salaam (Tanganyika).

In accordance with Article 92, read with Regulation 78 of Table "A" of the Indian Companies Act, Mr. Ambalal Sarabhai, Mr. Dinsha K. Daji and Mr. Ramniwas Ramnarain retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, ... Chairman.

AMBALAL SARABHAI,
JOSEPH KAY,
DINSHA K. DAJI,
RAMNIWAS RAMNARAIN,
BHAGVANDAS C. MEHTA,
K. M. D. THACKERSEY,
A. D. SHROFF,
MADANMOHAN MANGALDAS, } Directors.

H. T. COULTAS, Chief Accountant. D. R. THOM, General Manager.

Bombay, 2nd February, 1956.

N.B.—The Dividend, when sanctioned, will be payable on and from Saturday, the 24th March, 1956, to Shareholders whose names are on the Register on 9th March, 1956.

Dividend Warrants will be posted to Shareholders at their Registered Addresses.

Early intimation should be given to the Bank of any change of address.

Balance Sheet as at 31st December, 1955.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited, as at 31st December 1955, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit.
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the year;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and
(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

THE BANK OF INDIA LIMITED, BALANCE SHEET—(Contd.)

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1955, does not include any profit or loss of its subsidiary, the Bank of India (U.K.) Nominees Limited (a Nominee Company operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

Balance Sheet, 31st December, 1955

Capital Authorised and Fully Paid-up:		Cash at Bankers	£100
100 Ordinary Shares of £1 each	£100		
	£100		£100

Signed on behalf of the Board,
J. DONALDSON, } Directors.
S. H. BRADFORD, }

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act 1948 in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1955, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

SOUTH INDIAN MARKETS

(Continued from page 405)

As a Russian steamer for loading the former purchases of the USSR is due by the first week of March, a section of the trade believes that further purchases may be done for shipment by the same steamer, if reasonable prices are offered.

The crop for the current season, which is now being harvested, shows an improvement over last season's. Exports during the first two months of the season—November and December 1955—are also higher, the actual figure being 64,688 cwts as compared with 43,260 cwts during the same period last season. This increase in export was largely on account of good demand from the USA, Russia and China. New York buyers are, however, reserved in their operations and this is largely responsible for the present dull trading in the market.

✱

Indian Ginger now enjoys a very favourable position in the world market in view of the continued crop failure in Jamaica and Africa. In the Alleppey market, the price for the commodity has been ruling very steady at Rs 775 per candy.

The bulk of the West Coast crop is being harvested; and, judging by the turn-out to date, a 25 to 30 per cent increase in the current season's crop over last season's can be expected. Certain trade estimates place India's new crop at about 9,000 tons.

Exports of dry ginger during the first two months of the season—November and December 1955—amounted to 12,752 cwts, which showed an increase of 5,437 cwts over that of the corresponding period last season.

✱

The new Coffee season has made a start with the release of the 1955-56 crop at the Mangalore auction, held last week. The prices of Plantation coffee have registered a decline, with Peaberry fetching bids between Rs 235 and Rs 250 and Plantation between Rs 212 and Rs 225 per cwt, according to growth. It is felt that this level is likely to be maintained at least until the break of the monsoon on the coast.

It is understood that the Coffee Board has now liquidated old season Cherry coffee, which was being offered, of late, at prices even below the base level. The new crop Cherry variety has realised, in auction, Rs 188 to Rs 192 per cwt. Robusta has eased to a little extent in the Mysore auction, results of which are to be announced shortly. Indication is about Rs 160 for Robusta variety. It is also learnt that Plantation has recorded a small improvement at Mysore, consistent with quality.

The Madras Groundnut market ruled steady during the past week. Business was, however, restricted due to apprehension of an increase in excise duty on groundnut oil. Arrivals averaged 35 to 40 tons a day, while crushers were taking up small quantities around Rs 135 per candy for superior oil-quality seeds.

In the Groundnut Oil section, the rate for the ready position fluctuated narrowly around Rs 264 per candy, while February delivery was quoted at Rs 260 to Rs 262 per candy

While fresh export quotas for oil seem to be ruled out in view of the prevailing high prices, the validity of the current export quota permits will expire by the end of February. Representations have, therefore, been made to the Government of India to validate these permits for a few days early in March.

✱

In the Madras Tanned Hide market, arrivals of Cow hides were slightly less than in the previous week. Arrivals of Cow Calf and Buff Calf were moderate and prices for these were easier by As 2 per pound. Buff hides were in moderate supply and prices were lower by 6 pis per pound.

In the export section, trading with the UK was at a low ebb. It was reported that 8-8½ lbs were sold on the basis of 39½d, 36½d and 33½d for runs, fourths and fifths respectively. In the case of 10-12 lbs, the rates were nominal at 36d, 35d, and 34d respectively. In Cow Calf, sellers were finding it difficult to stabilise prices, while sales of Buff hides were reported at the price ideas of the buyers.

In the Tanned Skin section, arrivals of Goat and Sheep skins were moderate; and there was a corresponding clearance from the market.

In the export section, foreign buyers were not showing interest in Madras offers. This was due to the large quantity coming up for London auctions in March. In Sheep skins, only patchy business took place in common, middle class and semi-prime descriptions.

In the Raw Skins section, prices were quoted Rs 20 per ton lower for Goat skins and Rs 10 to Rs 15 lower for Sheep skins.

MARTIN BURN LIMITED

NOTICE

At a Meeting of the Board of Directors of Martin Burn Limited, held on 25th February, 1956, the Directors recommended the payment of a dividend at the rate of Rs. 1-8-0 per share on the Ordinary Shares ranking for dividend for the year ended 30th September, 1955. In addition the Directors have recommended a cash bonus of Four Annas per share on the Ordinary Shares ranking for dividend. These recommendations await sanction by the Shareholders at the Annual General Meeting of the Company to be held on Wednesday, 28th March, 1956.

The Ordinary Share Register of the Company will be closed from the 21st to 28th March, 1956, both days inclusive, and the dividend and cash bonus, if sanctioned, will be paid on or after the 23rd April, 1956.

By Order of the Board,
MARTIN BURN LTD.
A. G. GIDLEY,
Secretary.

27th February, 1956.

THE SCINDIA STEAM NAVIGATION COMPANY LIMITED

✱

The following are extracts from the speech delivered by the Chairman, Mr. Dharamsey M. Khatau, at the 36th Ordinary General Meeting of the Company held on Wednesday the 22nd February 1956, at 4 P. M. at Scindia House, Ballard Estate, Bombay :—

Gentlemen,

I assume that, as usual, you will permit me to take as read the Directors' Report and the Audited Accounts for the year ended the 30th June 1955, which have been in your hands for some time now.

It is regrettable that the results this year have been less satisfactory than in the previous year. There are four main causes for this. The Dockers' strike in the U. K. and the congestion at U.K. and Indian ports and the 'Go Slow' of Port and Stevedoring Labour caused a delay of 380 voyage days. The loading of rice at Rangoon was about 400 tons per day as against the anticipated 800 tons per day on which the freight rates were based. This caused considerable loss. The cost of stevedoring has risen to the extent of about 15% over the previous year. The cost of Marine Dues, Claims etc. have also gone up. The cost of coal increased by about As. 10/- per ton. The necessity of chartering vessels to fulfil commitments for rice liftings from Burma was unprofitable. This would not have been necessary if the construction of ships at the Visakhapatnam Shipyard had proceeded according to programme.

In view of the unsatisfactory results the Managing Agents have agreed to accept Rs. 8 lakhs only and waive the balance of Rs. 2,26,951/- provided that the amount so waived is exempted from Income-tax in their hands. Our thanks are due to the Managing Agents for this gesture.

Our Reserves and Surplus now amount to Rs. 6.51 crores against Rs. 6.27 crores last year. Our Specific Reserves have increased from Rs. 5.29 crores to Rs. 5.94 crores at the end of the year.

As we are in need of finance for further modernisation of our tonnage, we have requested the Government to release Rs. 2.47 crores invested in the shares of Hindustan Shipyard Ltd. and Eastern Shipping Corporation Ltd.

COASTAL FREIGHTS

The tonnage plying on the coast today is not sufficient to carry all available cargoes. From 1950 to 1955 Coastal tonnage has increased only from about 200,000 tons gross to 244,000 tons. Due to prevailing unsatisfactory conditions all round about 20% more tonnage is now required to carry the same volume of traffic. To meet the increasing demands and relieve the pressure on Railways more coastal shipping is needed; but the prevailing prices on ships are very high. A standard coastal ship which used to cost about Rs. 44 lakhs in 1950 would now cost about Rs. 80 lakhs. Unless rates of freight are raised to meet the operating costs, acquisition of fresh tonnage is impossible.

The Coastal Conference therefore decided to increase the freight rates on General Cargo by 10% from 1st June and request Government for same increase in Coal rates from May 1955. Before these increases could be effected, it was suggested by Government that the freight rate structure on the coast should be maintained until the Rail-Sea-Coordination Committee reported its findings. On further representation Government have allowed a meagre increase of 5% in the rates on coal and general cargo from 15th October last.

The Coastal Conference believes that the rates of freight should be fixed at a level to meet fully the costs of operation, normal depreciation, reasonable provisions for rehabilitation and fair return on capital employed. The present Coastal fleet has many old vessels which will require replacement at no distant date. A provision for rehabilitation of fleet out of earnings is therefore necessary. There is no reason why a return of 10% on Gross Block value should not be granted in the case of shipping, while fixing the rates of freight, as is allowed by the Tariff Commission for other industries. On the above basis, the short-fall of earnings over the operating expenses comes to 28% of the earnings. For a new ship the short-fall comes to over 50%. While I am not suggesting that the rates should be enhanced to this extent, I trust Government will recognise the necessity to provide reasonable incentive to shipping companies for expansion of tonnage.

Pending submission of the Report by the Committee, the Conference has urged that as an interim measure coal and general cargo rates be increased by 15% from 1st March 1956. I hope Government will grant early relief in this connection.

The combined liftings of the two Indian Lines—Messrs. India Steamship and ourselves—of the exports from India to the U.K. and Continental countries amount barely to 15% of our total exports to these countries. As soon as the new ships on order are delivered we intend to employ 18 ships in these trades. Even so, in the entire overseas trade of this country, the participation of Indian Lines comes barely to 5%. We have, therefore, still to go a long way towards the target of attaining a 50% share in the carriage of our overseas trade. But we are going to expand and I wish to emphasise that it is the ambition of the Indian Lines to participate equally in the carriage of the foreign trade of this country.

TONNAGE PROGRAMME

The question of building new ships for the coast is very difficult. I have already informed you about the very unsatisfactory state of affairs on the coast at present. Needless to repeat that no shipowner can think of building new ships for the coast unless the existing conditions show material improvement.

In order to have a fleet of 18 fast ships we shall need three new ships; besides, one or two more ships will be required by way of substitutes when other ships are under special survey. It means ordering four or five ships similar to the new "Jal-Azad" and Jal-Jawahar" which are already in commission. As you know, we are committed to borrow from Government about Rs. 8¼ crores in respect of the ships already ordered in Germany. Purchase of additional four or five ships will involve further borrowing from Government, which will be of the order of about Rs. 5 crores. Though the prospects in the India/U.K.-Continent trade are likely to continue to be promising in view of our country's increased requirements under the Second Five-Year Plan, owing to the large sum of money involved, your Directors are giving serious consideration to this question and will reach a decision after examining it from every angle.

PROSPECTS FOR THE CURRENT YEAR

I would now like to acquaint you with the prospects for the current year as they appear to me. On the expenditure side, costs of operation under various heads show no signs of decrease. Actually there is bound to be increased expenditure under certain items; for example, we shall have to spend considerably more on ship repairs in view of a larger number of ships having to be put through special surveys during 1955-56. Some of these ships are older and will, therefore, require heavier repairs. Stevedoring costs are already high and will increase further on account of the introduction of Piece Rate system of payment to labour. As regards fuel-oil, there was an increase of 5sh. in the prices with effect from March, 1955, and a further increase of 7sh. 6d. from 1st January of the current year; from the 15th of the next month the prices will further increase by about 3sh. On the other hand, as I have already stated, two German-built and two Visakh-built ships were delivered to us during 1955. Three of them will have been in commission practically for the whole of the current year and one for nearly six months. The increase of 10% in freight rates from February 1955 together with comparatively brisk movement of cargoes from the U.K. and Continental ports to India will show its full effect in the current year. The further increase of 10% in rates which will be effective from next month will be only partly reflected in the current year. A distinct improvement in our freight earnings in the India/U.K.-Continent service may therefore be expected. On the Coast, so far as working conditions at ports are concerned, one may hope that the corner will be turned as a result of the introduction of the Piece Rate system of payment. The rate of freight on salt from Saurashtra to Calcutta has been fixed at Rs. 31-4 per ton for the year 1956, which is Rs. 3-2 more than the previous rate. The rates on coal and general cargoes were increased by 5 per cent last October. Any further increase that it may be possible to secure in coastal rates will not be fully reflected in the current year. Having regard to the position I have indicated, it appears to me that on the whole the working during the current year should be reasonably satisfactory compared with the year under review.

KUMARDHUBI ENGINEERING WORKS LTD.

Notice is hereby given that the Share Transfer Books and Registers of Members of the above-named Company shall be closed from 9th March 1956 to 10th March 1956, both days inclusive.

By order of the Board,
F. C. BADHWAR,
Director.

Calcutta,
23rd February, 1956.

RICHARDSON CRUDDAS LTD.

NOTICE

NOTICE is hereby given that the Annual General Meeting of Shareholders of Richardson & Cruddas Ltd. will be held at 12, Old Court House Street, Calcutta, the Registered Office of the Company, at 11 A.M. on Wednesday, the 21st March 1956 for the following purposes:—

(1) To receive, consider and adopt the Report of the Directors and the audited accounts of the Company for the year ended on the 30th June, 1955;

(2) To declare dividends;

(3) To elect Directors of the Company;

(4) To appoint Auditors of the Company for the ensuing year.

The Share Transfer Books and the Register of the Members of the Company will remain closed from the 7th of March to 21st of March 1956, both days inclusive.

By order of the Board,
S. B. Industrial Development Co., Ltd.,
Managing Agents.

Calcutta,
The 15th February, 1956.

THE STATE BANK OF INDIA

*

Speech by the Chairman Dr. John Matthai, at the First Annual General Meeting of the Shareholders held in Bombay on 29th February 1956.

I have much pleasure in welcoming you to the first Annual General Meeting of the Shareholders of the State Bank of India.

2. I would like at the outset to dwell briefly on the genesis of the State Bank and the objects Government had in view in forming it so as to be able to assess the results that have been achieved in the first six months of our working. On the 20th December 1954, the Finance Minister announced in the Lok Sabha the decision of the Government of India to assume effective control over the Imperial Bank of India as a first step towards the setting up of a State Bank of India. This decision was taken by Government on the recommendations of the Committee of Direction of the All-India Rural Credit Survey, which had suggested among other measures, the creation of "one strong integrated State-partnered commercial banking institution with an effective machinery of branches spread over the whole country for stimulating banking development by providing vastly extended remittance facilities for co-operative and other banks and following a policy which would be in effective consonance with national policies adopted by Government without departing from the canons of sound business." Following this announcement, the State Bank of India Act was passed by Parliament in May 1955.

3. On the 1st July 1955 the State Bank of India came into being and the undertaking of the Imperial Bank of India, which was formed in 1921 by the amalgamation of the three Presidency Banks, was transferred to the new institution with the exception of the assets and liabilities of foreign branches to which a reference will be made later in my speech. The process of transfer from the Imperial Bank to its successor Bank was completed smoothly and it is a matter of gratification that the good work put in by all concerned and the satisfactory arrangements made have enabled the change-over to take place without any dislocation or difficulties either within the Bank or in the general economic life of the country. It will be agreed that, with the establishment of the State Bank, a new chapter has commenced in the history of banking in India.

CENTRAL AND LOCAL BOARDS

4. The Bank started to function under the direction of a Central Board and three Local Boards at Bombay, Calcutta and Madras, initially appointed by Government, consisting of men of outstanding ability and experience in various fields of economic activity. The Central Board has had a variety of difficult problems to face during the initial period and I would like to take this opportunity of expressing my appreciation of the help and co-operation the Directors have extended to me in handling them.

FOREIGN OFFICES AND FOREIGN EXCHANGE

5. In regard to the transfer of the assets and liabilities of the undertaking of the Imperial Bank to the State Bank as contemplated by the State Bank of India Act, it was felt that, while there would be no difficulty about the transfer in India, it was doubtful whether such "vesting" would be recognised and given effect to in foreign countries. As a precautionary measure, it was therefore decided, on legal advice, to provide for the continued existence of the Imperial Bank as a corporate entity beyond the "apointed day" to enable it to make over its assets and liabilities at its foreign branches to the State Bank. Accordingly, the State Bank of India Act was amended by an Ordinance on the 23rd June 1955 which was later passed into an Act of Parliament on the 21st September 1955. The present position is that the Imperial Bank of India is nominally in existence for the purpose of enabling the transfer of assets and liabilities in London, Burma, Ceylon and Pakistan to be effected. While the bulk of these assets and liabilities have already been transferred to the State Bank, there are still a few legal formalities to be completed for effecting the transfer completely and as soon as these are finalised the Imperial Bank as a corporate entity will cease to exist.

6. While on the subject of our foreign branches, I would mention that these continue to serve a useful and important purpose and we have during the past six months examined the question of opening new branches in foreign countries with the object of fostering Indian trade and expanding our activities, particularly in the field of foreign exchange to which we attach much importance. For diverse reasons, our progress in the matter of further expanding foreign exchange business has been slow, but in view of the great expansion in India's foreign trade, which will result from the Second Five Year Plan, it is our intention to adopt a more vigorous drive towards attracting what we consider to be our legitimate share of this important sphere of banking business.

BRANCHES IN PAKISTAN

7. In so far as our eight branches in Pakistan are concerned, the Pakistan Authorities have informed us that, in accordance with their policy not to allow any foreign bank to open branches in the interior of the country, the State Bank of India will be allowed to operate in port towns only. The position now is that, while our branches at Karachi, Chittagong and Naraingunge may be allowed to continue permanently and those at Lahore and Dacca up to the 30th June 1959, our branches at Hyderabad (Sind), Mirpurkhas and Lyallpur will not be allowed to function beyond the 30th June, 1956. Arrangements will therefore be made to close these three branches as required by the Pakistan Authorities. While on the subject of Pakistan Branches, I would like to say that no loss has been suffered by us as a result of the devaluation of the Pakistan rupee which took place in August last.

BRANCH EXPANSION AND RURAL CREDIT

8. I now pass on to deal with the question of the expansion of banking facilities in rural areas which is one of the main objectives before us towards furthering the banking development of the country. Arising from the recommendations of the Rural Banking Enquiry Committee, 1950, the Imperial Bank of India had, in consultation with the Reserve Bank of India, agreed to open 114 branches (both new and Treasury Pay Offices to be converted) during the period 1st July, 1951, to the 30th June, 1956. Up to the 30th June 1955, 63 offices had been opened by that Bank and since that date a further 20 offices have been established, leaving 31 centres where branches are still to be opened. The State Bank has a statutory obligation to open 400 new branches during the first five years of its existence or such extended period as the Central Government may specify in this behalf. The places where such additional branches are to be established have to be determined by the Central Government in consultation with us and the Reserve Bank. As a first step in this process, 100 places have been selected which are confined mostly to district treasury and the relatively more important sub-treasury centres; it is obviously not possible to include every centre which requires banking facilities in the initial list. These 100 centres, together with the 31 centres left over, will be covered in the first programme and thereafter a further list will be drawn up.

9. It must be stated that the Imperial Bank experienced considerable difficulty in securing suitable premises and, in some cases, where accommodation was available in the local treasury buildings, there was inordinate delay in effecting the necessary alterations and additions to make them suitable for the Bank. The Reserve Bank gave the Imperial Bank the requisite assistance in several cases of this nature but even so the progress was slow for reasons beyond control. In the present phase of the expansion programme and with the assistance of the Reserve Bank, we are intensifying our efforts to open branches as expeditiously as possible. The Reserve Bank of India have been requested to ask the various State Governments to instruct the District Authorities to give all possible assistance to the Bank in securing accommodation for the office and, where necessary, for the members of the staff at the new centres where it is proposed to open branches. I need hardly add that arrangements are being made by us to recruit and train the staff, both supervising and clerical, required for the phased opening of branches.

10. One of the chief reasons which prevented the Imperial Bank from pursuing a more vigorous policy of expansion was that, as a private shareholders' bank, it could not afford the heavy expenditure involved in opening new branches which were likely to prove unremunerative. This position has changed in the new context, as provision has been made in the Act for meeting the losses beyond an agreed figure, on unremunerative branches, from an "Integration and Development Fund" into which are paid the dividends due to the Reserve Bank on its holding of 55 per cent of the total issued capital in the State Bank.

11. An essential part of the development of the rural credit programme is the availability of adequate facilities for storage, warehousing and marketing of agricultural produce, in which the country has been lacking. The Government of India are shortly setting up an All-India Central Warehousing Corporation and State Warehousing Corporations with a view to affording facilities for storage of commodities. An organised system with effective State participation will then come into existence, in which we, along with other interested institutional agencies, will be required to play our legitimate part. I welcome this move in the larger interests of the country and, from our own point of view, I have no doubt that this will increase our ability to make advances against suitable security to the small producer in rural areas.

REMITTANCE FACILITIES

12. Passing now to the question of providing extended remittance facilities for co-operative and other banks, which was one of the objects Government had in view in setting up the State Bank of India, we have, as agents of the Reserve Bank, agreed to liberalise the existing remittance facilities available to scheduled banks (and State co-operative banks who enjoy similar facilities) by permitting free transfer facilities twice (instead of once) a week, with effect from the 1st November 1955. This matter will be reviewed during the year with the object of considering in what directions remittance and other ancillary facilities to scheduled banks could be further liberalised without imposing any undue burden on our working.

INTEREST RATES AND COLLECTION CHARGES

13. The State Bank's schedule of charges for the negotiation and collection of bills and interest rates on advances have been fixed in relation to its operating cost and the comparative rates charged by other banks. These rates are necessarily subject to review from time to time in the light of prevailing business and monetary conditions. The transformation of the Bank into a State Bank does not by itself justify relaxing the basis on which the rates are fixed. In any action which the Bank may be called upon to take in the matter, apart from the normal considerations governing the problem, it is necessary to take account also of the obligation placed on it to develop banking in rural areas and the mounting cost of its establishment charges on account of the successive Bank awards.

14. Another matter which affects banks generally and which requires careful consideration is the gradually increasing burden of interest paid for attracting deposits. I understand that an attempt was made in 1954 to reach an agreement amongst banks in the matter of fixing ceilings on deposit rates. Unfortunately, this did not succeed with the result that each bank now pursues its own policy in this highly competitive field. I cannot but view with concern the present trend amongst banks to offer increasingly higher rates of interest for deposits and consider that this is unhealthy competition which should be discouraged. A voluntary agreement among banks appears to be the solution, but if this is not possible because of the diversity in their size and standing, the alternative is for Government to consider suitable action for regulating deposit rates.

BILL MARKET SCHEME

15. At this point, I feel I must make a reference to the helpful role played by the Reserve Bank of India through their bill market scheme inaugurated in 1952, by which cash was provided to banks against commercial bills, in terms of Section 17(4)(c) of the Reserve Bank of India Act. The scheme has been of considerable assistance to banks including ourselves during the busy season. When the scheme was introduced, the Reserve Bank agreed to charge interest at ½ per cent below the Bank Rate as a concessionary measure to popularise this method of finance and also to bear a part of the cost of the stamp duty incurred by banks in converting demand bills into usance bills. The Reserve Bank recently announced that, as the scheme is now well established and as the resources of banks have now materially changed, advances under the scheme will be made at 3¼ per cent instead of 3 per cent and the concession of bearing a portion of the stamp duty will be withdrawn, with effect from the 1st March 1956. Although this step will result in some increase in the cost of our borrowings under the scheme, I consider that, under existing monetary conditions, it is a move in the right direction.

STATE-ASSOCIATED BANKS

16. The subject of the amalgamation of State-associated banks with the State Bank of India has been receiving our attention. While the broad outlines of the policy to be followed in this regard must await future developments, we are exploring, in consultation with the Reserve Bank, the feasibility of taking over some of the minor State-associated banks. We have made a beginning in this regard and have set arrangements in train for an investigation of a few selected institutions with a view to making a fair and reasonable appraisement of their position and the problems that will have to be faced before integration takes place.

SMALL-SCALE INDUSTRIES

17. The Second Five Year Plan accords high priority to the development of village and small-scale industries. Government are providing greater credit facilities to these industries under the State Aid to Industries Acts by liberalising the conditions for distribution of loans. While Governments assistance would go some way, the bulk of the credit finance would have to be provided by institutional agencies operating in the field, whose support is likely to prove of more permanent value to the industries concerned. While the State Bank does not differentiate between small-scale and large-scale industries for purposes of providing credit, we feel that more positive efforts should be made to ascertain the credit requirements of small-scale industries and to devise methods by which substantial assistance could be made available to them so as to place them on a firm footing.

18. Small industries run by co-operative societies naturally look to the co-operative credit organisation for assistance. Small industries requiring working capital for short periods and able to provide readily realisable security are normally helped by commercial banks. Those which require long-term capital on fixed security have usually to approach the State Financial Corporations. The credit requirements of small industries cannot however be adequately satisfied unless a scheme is evolved for co-ordinating in an effective manner the activities of the above credit agencies. The initiative for planning such a co-ordinated scheme has been taken up by the State Bank. In this connection, we have had exploratory discussions with the represenetives of the Reserve Bank of India and various institutional agencies. A pilot scheme for providing credit to small-scale industries at certain centres in the three Circles of the Bank has recently been drawn up and arrangements are now in progress to work the scheme. In the light of the experience so gained, a general scheme for providing credit in a co-ordinated manner by the State Bank and the institutional agencies concerned will be drawn up and extended to various centres in the country. With a view to facilitating the work of the various institutional agencies, who have no branch organisation, we are arranging for the services of our branch agents to be placed at their disposal in the matter of compiling and furnishing opinions and confidential reports on the worth of prospective borrowers and generally assisting such credit agencies in their operational activities in the centres where they are not represented.

SECTION 31(3) OF THE STATE BANK OF INDIA ACT

19. Before passing on to a consideration of the accounts and other matters of interest, I would like to refer briefly to Section 31(3) of the State Bank of India Act which prohibits Directors of the Bank, even if they are merely ordinary shareholders in companies borrowing from us, from being present at any meeting of the Executive Committee of the Central Board (or the Local Board) when advances for such companies are being considered. This restriction often results in the want of a quorum for the meeting when the majority of the Bank's Directors are "interested" in a particular company (although their interest may be merely that of a shareholder), thus necessitating the postponement of consideration of such proposals. It will be agreed that this is not satisfactory from the point of view of the Bank or its constituents and it is expected that Government will take early steps to remove the present disability which is hampering the expeditious conduct of the Bank's business.

BALANCE-SHEET AND PROFIT AND LOSS ACCOUNT

20. Turning now to the accounts, although the State Bank has been in existence only for the past six months, I propose to compare the figures of our first Balance Sheet as at the 31st December 1955 with the corresponding figures of the Imperial Bank of India as at the 31st December 1954 and similarly the Profit and Loss Account figures for the last half-year with the figures for the corresponding period in the previous year. Thus, it will be seen from our Balance Sheet that our Fixed Deposit, Savings Bank, Current and other Accounts stood at about Rs. 226 crores as compared with Rs. 231 crores at which this item appeared a year previously. Although there is a decrease of Rs. 5 crores over the year, the present position must be considered satisfactory if the downward trend in our deposits which started early in the year soon after the Government's announcement of their decision to assume effective control over the Bank is taken into account. Our deposits in India fell from Rs. 203 crores in January 1955 to Rs. 184 crores in June 1955 and this drop of Rs. 19 crores can only be explained by the initial apprehension in the minds of the public regarding the future policy of the Bank and the continuance of its commercial character in its altered status. I am glad to say, however, that any fears entertained in this regard have proved entirely groundless as is evidenced by the steady increase in our deposits in India during the past six months, which reached the figure of Rs. 202 crores at the end of December 1955, thus almost regaining the level of January 1955.

21. On the other side of the Balance Sheet, our total advances have shown satisfactory improvement and at about Rs. 107 crores are some Rs. 5 crores higher than a year previously. Amongst our assets, Investments at Rs. 116 crores were some Rs. 8 crores up on the year. While a substantial portion of our investments portfolio consists of short-dated Government securities and Treasury Bills, we have, consistently with our enlarged responsibilities, participated in and taken up State Financial Corporation Shares and Land Mortgage Bank Debentures in suitable lots. It is needless for me to state that our Investments appear in our Balance Sheet at a figure lower than their market value. Of the remaining assets, cash in hand and with other baks stood at around Rs. 29 crores which represents a little over 13% of our total deposits as compared with the 15% cash ratio which last year's Balance Sheet disclosed.

22. I come now to our trading results from which it will be found that, after allowing for interest paid, our gross profits for the half-year at over Rs. 351 lakhs are approximately Rs. 40 lakhs better than those of the corresponding period last year, as against which our charges are up by a like amount of Rs. 40 lakhs. The principal increase in charges is in respect of Establishment which cost us some Rs. 35 lakhs more than in the corresponding period of 1954. Of this, Rs. 23 lakhs have gone to the clerical, cash department and subordinate staffs and represent for the most part increases in salaries, allowances, etc., arising out of the adjustments made in implementing the Gajendragadkar Award, which was published in August 1955. In the result, our net profit for the last half-year, at approximately Rs. 68 lakhs is about the same as that for the corresponding period in the previous year.

DIVIDEND

23. The dividend has been declared by the State Bank at the same rate as was done by the Imperial Bank in June 1955 and the previous years, viz., 16% per

annum. This on the purchase price represents a net return of about 4.5%. By far the largest part of the sum distributed as dividends is payable to the Reserve Bank. Although, in terms of the notification issued by the Reserve Bank, it was laid down that the new shares of the State Bank would be issued to those shareholders who applied for such shares, in lieu of the compensation payable to them, at a price of Rs. 350/- for each share of Rs. 100/-, only a small proportion of the old shareholders opted for the new shares, with the result that the Reserve Bank of India are at present holding a major portion of the State Bank shares. It follows, therefore, that the private shareholders who benefit from the dividend payable by the State Bank form only a very small minority and the matter consequently is one which affects the investing public to a small extent only.

24. At this stage, it is appropriate to refer to a suggestion which has been made that a note be incorporated on the Bank's share certificate to the effect that the share was issued at the rate of Rs. 350/-. The matter was given full consideration and it was, however, generally felt that, while there was nothing in law to preclude the inclusion of such a note, it was most unusual for a share certificate to mention anything more than the nominal amount of the share. Apart from the fact that this suggestion may not meet with the approval of all the shareholders, there are practical and technical difficulties involved which prevent its wholesale adoption. As the issue price of Rs. 350/- was announced by the Reserve Bank by a special notification, it was considered unnecessary to make a note on the share certificate as suggested. The shareholder's natural desire to see that the price of Rs. 350/- at which the share had been acquired is taken into account in determining the rate of the dividend has already been duly fulfilled by the State Bank declaring its dividend at the rate of Rs. 8 per share for the half-year which is the equivalent of 16% per annum.

INDUSTRIAL DISPUTES AND AWARDS

25. As you are aware, the banking industry has been passing through a difficult time during the past 8 years with disputes between banks and their employees dragging on from one Award to another without reaching a final solution. Arising out of the modifications made by Government in the Labour Appellate Tribunal's decision, which was implemented by the banks in November 1954, the Bank Award Commission was appointed by Government to conduct a fact-finding enquiry, which submitted its recommendations in July 1955. This Award, known as the Gajendragadkar Award, confirmed the decisions of the Labour Appellate Tribunal, with certain modifications and was accepted **in toto** by Government. Parliament have also given their approval to the Award by passing the Industrial Disputes (Banking Companies) Decision Act, 1955. The banks have accepted the terms of the Award and have interpreted them in a liberal manner, although their impact on certain institutions was considered to be onerous. The employees have taken objection to certain cuts that have been imposed upon them by the application of the Award and have, without resorting to the constitutional remedies provided in the Act, indulged not only in demonstrations but in various forms of direct action, which disrupted normal banking business in a number of centres, particularly in Calcutta. As a result of the intervention of the Chief Minister of West Bengal, to whose sympathetic and untiring efforts I would like to pay a special tribute, the employees in Calcutta agreed to complete the annual closing of accounts and also work overtime to clear arrears. This has been done and conditions have since returned to normal in the affected centres.

26. In regard to acts of indiscipline committed by employees, the State Bank had to take action, in consultation with other banks, by issuing charge sheets. These, however, have not been proceeded with so far in the hope that better relations will hereafter be established between the banks and their employees. It is necessary for me to utter a warning that no institution, whether public or private, can possibly survive if respect for constituted authority is absent or gross indiscipline prevails. While it is impossible to overlook or condone acts of indiscipline committed by employees in violation of the laws, which is tantamount to flouting Parliament's authority, there can be no objection whatever to employees following approved trade union methods to ventilate their legitimate grievances and safeguard their rights and to work for the amelioration of their conditions of service. In fact, a move in these directions would lead to the creation of an effective machinery for solving labour problems by means of mutual consultations and to the establishment of healthier relations which will be for the benefit of the parties concerned and the country as a whole. Now that the unhappy events of the recent past are over and normal work is proceeding, it is a matter for consideration, if satisfactory conditions for smooth working of banks hereafter can be ensured, whether further avenues should not be explored to remove any undue hardships to the employees.

27. Personally, I have great faith in direct and friendly talks across the table with the leaders of the Staff Unions and in exchanging ideas frankly with them with a view to arriving at an amicable settlement wherever possible. I have already made a beginning in this regard and have met office-bearers of the Unions in Calcutta, Bombay and Madras. The talks I have had have been useful and I am confident that this approach will contribute to a clearer understanding of the problems and a closer appreciation of the realities which have to be faced by both parties. I make an earnest appeal to all concerned to co-operate in finding a satisfactory solution to this problem and, for my own part, I would be prepared to do my best so that the unpleasant chapter of strained relations between banks and their employees is finally closed.

TRIBUTE TO THE STAFF

28. Before I conclude, I must pay a warm tribute to the Supervising Staff of the Bank for their loyal and devoted service during an exceptionally difficult period. Apart from the many transitional problems, which arose from the change-over to the Bank's new status, the difficulties due to disputes with our employees placed upon the Supervising Staff a heavy load of responsibility. I am grateful to them not merely for the work done by them but for the spirit in which they have done it. I would like also, in spite of the unfortunate happenings to which I have referred, to add a word of appreciation regarding the work done by the clerical and other staffs. I know the bulk of them are loyal and normally discharge their duties faithfully and competently and I shall be failing in my duty if I do not acknowledge the good work they have done during the period under review.

29. My thanks are specially due to the Managing Director, Mr. S. K. Handoo, whose experience and knowledge of banking problems and whose administrative ability have been of the greatest value to us. I wish to place on record my deep appreciation of the energy and zeal with which he has applied himself to the discharge of his responsibilities as the first Managing Director of the State Bank of India.

Second Plan Hinges on Achievement of Coal Target

*

Need for Both Sectors to work in close Co-operation

*

Mr B. Mitter, the Chairman, Urges Comprehensive Formula for Compensation

Addressing the Annual General Meeting of the Indian Mining Association in Calcutta on the 2nd March, 1956, Mr. B. Mitter, Chairman said:

Gentlemen,

The year that has passed since we last met has been primarily concerned in giving concrete shape to the future and the Second Five-Year Plan has dominated the affairs of the Coal Industry. I need hardly emphasise how vital it is for the industrial development of the country that the aspirations of the Plan should be matched by actual attainments, nor need I stress how closely its success hinges on the ability of the Coal Industry to meet its new responsibilities.

In the past the Industry has on the whole been able to give the country all the coal it required and if on occasions some consumers have had to go short, the cause was usually to be found either in special circumstances such as prevailed during the last War, or in the limitations of transport.

The task before the Industry today is however greater than it has ever been called upon to face in the past. It is required to make available 60 million tons of coal by 1960 as against the 38 million tons produced last year. The acheivement of this target in the short space of five years undoubtedly poses a problem of formidable proportions, but with the concentrated and co-ordinated effort of all who are in a position to help, there is no reason why the goal should not be successfully attained. In coal the pattern of production is one in which collieries worked by private enterprise operate alongside those worked by Government and, in the context of the immense increase of potential required, there is ample scope for both to develop and to make their respective contributions towards a common cause. For this mixed economy to function effectively it is important to create an atmosphere in which both the sectors can work to maximum effect in close co-operation. They should both have equality of opportunity and both be allowed to operate under similar conditions.

ACCENT ON EFFORT

In some quarters there is a tendency to take every opportunity of casting aspersions on the working of collieries under private ownership. No one claims that in an industry which has several hundred individual producing units conditions everywhere are ideal. Similarly I think it would be difficult even for the stoutest champion of State enterprise to establish that the Government collieries are models of perfection. Negative generalizations against the private sector serve little useful purpose, and, at a time when so much depends on the fulfilment of the Coal Plan, the accent must be not on creating divisions but on mobilising all our resources behind one gigantic effort.

To achieve the success we all desire it is important to examine what are the obstacles which stand in the way and I propose therefore, within the time available to me, to lay before you what in my view are some of the main problems facing us at present. In mentioning these difficulties however I wish to emphasise that, contrary to what some people are only too ready to assume, there is no desire on our part to be obstructive in any way. On the contrary I believe that only by a frank statement of difficulties will it be possible to devise remedies to overcome them.

SECURITY OF TENURE

To achieve the new momentum in production required by the Plan, it is obvious that vast new development programmes will have to be launched involving large financial outlays. In the private sector we are prepared to marshall our full potential behind these development projects and to finance them very largely from our own resources. However whilst we are used to accepting normal commercial risks in the course of business, we cannot ignore the fact that, in a mineral industry like coal, it must necessarily take many years before any return on the capital outlay can be expected. We had accordingly hoped that Government would be in a position to give the Industry some reasonable security of tenure in the face of frequent mention of the possibility of nationalisation. Government have unfortunately found themselves unable to give any security of tenure but it has been indicated that, if producers in the private sector made plans for increasing their production and laid out money for the purpose, then in the event of nationalisation full compensation, after taking into account depreciation, would be paid for whatever money was laid out with the approval of Government for this additional production. Whilst we welcome the reasons which prompted this indication, it must be emphasised that the formula is too limited in scope and its application in practice is fraught with too many difficulties to enable it to instil any great sense of confidence amongst those who are not only able but eager to undertake large scale capital outlays on development work.

COMPENSATION FORMULA

If the formula is examined it will be seen to consist of three main parts, which lay down that compensation would be paid on capital outlay for increasing production, that it would be paid on capital expenditure less depreciation, and, finally, that it would be paid only on expenditure incurred with the approval of Government. As regards the first part, in an extractive industry like coal which works a wasting asset, even the maintenance of existing levels of production requires a steady flow of new investments and it is technically impossible to distinguish between capital outlay for maintaining production and capital outlay for increasing production. The two are very closely linked when incurred in one and the same mine, and even the sinking of a new shaft in the same or another property might be regarded as necessary for maintaining production.

An example may help to illustrate the point. Let us assume, for instance, that a property is being worked through two shafts and that a small area round the shaft bottom has been developed In order to develop in accordance with approved mining methods the remaining area of the property towards its boundaries, more haulage engines, motors, switches, cables, steel wire ropes, rails and a host of other things would be required. Such additional installations, far from increasing output immediately, may only enable the mine to maintain its output for five, ten or even fifteen years until the depillaring stage is reached. when output will rise sharply. Will the capital outlay on such additional plant and machinery be regarded as necessary to maintain output or to increase output? The outlay is necessary to maintain present production but it is equally necessary to increase future raisings. Examples such as this can be easily multiplied to bear out the fact that no distinction is possible between the two forms of capital investment. Turning to the second part of the formula, it is suggested that compensation would be paid on capital outlay less depreciation. If a company were to invest a crore of rupees on fresh capital development and Government were to decide to acquire the Industry, say in five years time, then taking into account the rates of depreciation applicable in the Coal Industry, the depreciated value of the outlay would be very substantially less than this crore at the end of five years. At the same time, in the course of these five years, the company can hope to earn very little by way of return on its investment. Consequently, the outlook can hardly be construed as being reassuring to those who contemplate making large financial commitments. As regards the approval of Government to items of expenditure, if the necessity of having the initial investment approved by Government were conceded, should the formula imply that an account had to be kept of every single item of plant and machinery installed at each individual colliery, and, further, that this had to be done for an indefinite period, various practical and procedural problems would inevitably arise making the satisfactory maintenance of the records extremely difficult, if not impossible, both from the point of view of Government as well as that of individual producers.

In the absence of any security of tenure, the terms of compensation are naturally of great significance to those who are making ready to make large investments of money in developing the coal resources of the country. Furthermore, the formula suggested, in its present shape, postulates the laying down by Government of certain intricate procedural arrangements in regard to maintenance of records before any new development work can be undertaken. In view of all these considerations I hope Government will find it possible to evolve a more comprehensive formula which will transcend the limitations of the one mentioned. It has been stated by various Government spokesmen from time to time and even during the debate on the Fourth Amendment to the Constitution that the objective of Government was not to deny compensation but only to make it non-justiciable. If that is the avowed objective of Govern-

ment, then the present suggestion militates against the fulfilment of the objective.

TRANSPORT INADEQUACY

In considering the general state of the Coal Industry I cannot recall any occasion over the years where reference has not been made to the inadequacy of transport facilities available for moving coal. Nevertheless, I feel that I must dwell for a while on this old problem which, under the impact of the Second Plan, has assumed new dimensions of magnitude and urgency.

After the inevitable strains and dislocations caused by the last World War the Railways have made commendable efforts to restore the position, and to improve upon it, but the situation still remains one in which the capacity available is sadly deficient in relation to requirements. In 1946 the railways had stated that they were confident of attaining within two years a daily loading of 3,600 wagons in the coalfields of Bihar and Bengal. In 1955, however after a lapse of nine years, the average number of wagons loaded daily in these two areas was only 3,262. Although this figure was a slight improvement on the 1954 figure of 3,205 wagons, it is manifest that the improvement is not keeping pace with the expanding output. When production plans are being designed to raise the output of coal by 22 million tons in five years, the Industry is apprehensive that transport is not being expanded sufficiently to cope with the vastly increased traffic which will be offering. I referred the other day from another platform to the cut in allocations for the Railway Ministry under the Second Plan. Since then the General Managers of our Railways have together given voice to what has described as "a chorus of complaints" emphasising their difficulties arising from shortages of steel, cement and timber. They are reported to have expressed misgivings about the ability of the Railways to adhere to their schedules of work. Planning in their view had become increasingly difficult and so had the possibility of giving any assurances for the future.

If there is any substance in these reports which have appeared in the Press, they naturally give rise to doubts as to whether adequate importance is being attached to the imperative necessity of achieving the closest coordination between the production and transport of coal. We are familiar with the results of the lack of such coordination in the shape of accumulated stocks at the pitheads and losses caused by spontaneous combustion. The Railway Budget presented last week also indicates that the development plans will be inadequate to cope with the level of coal production envisaged. The success of the Coal Plan cannot be assured unless transport can move the expected volume of traffic and I would urge that even greater efforts must be made for the breaking of this bottleneck.

Apart from directly expanding the capacities of the Railways, one way in which the strain on the railway system can be mitigated would be to make fuller use of coastal shipping for the carriage of coal. From this Association we accordingly welcomed the setting up last year of the Rail-Sea Transport Co-ordination Committee and urged before it our views that coastal freight rates for coal should be readjusted so as to bear a closer relation to rail freight rates. At present the disparity is glaring and this prevents the optimum utilisation of these two forms of transport.

Within a restricted field, the possibility of improving transport was examined in 1955 by a Committee set up to investigate Pilot and Depot Capacities in the West Bengal and Bihar Coalfields. This Committee has made some recommendations but only from the short period aspect of meeting requirements up to the end of 1957. Although it was limited to examining Pilot and Depot Capacities, the Committee felt that existing route and junction limitations would have to be liberalised considerably in order to achieve a lasting solution and, it became obvious during its deliberations, that the transport problem could not be considered satisfactorily in small segments. For the movement of coal a more comprehensive policy is required and not merely the stringing together of a number of ad hoc expedients.

EQUITABLE WAGON SUPPLY

Since it appears almost inevitable, however, that for some time to come at least the insufficiency of wagon supplies will continue, steps should be taken to ensure that such supplies as are available for coal loading are allocated in an equitable manner. It seems to have become the practice for the State collieries to get first priority in such allocations to the detriment of collieries in the private sector. It is some times said that in fact no discrimination is made, the wagons being allotted strictly on the basis of priority of orders. This is, however, merely a form of sophistry for, if every order placed with a State colliery is ipso facto given a high priority, the resultant position is unaltered. If private enterprise is to be given a fair chance of expanding output, distribution of wagons should be made without arbitrarily subordinating the interests of one integral section of the Coal Industry to the dictates of another.

The expansion of production and the development of new collieries will necessitate provision of new sidings and there are indications that the Railways are now not averse to the construction of sidings on Assisted Terms. This is undoubtedly an improvement on their previous policy, followed for some time, of considering only applications on Private Siding Terms. There is a possibility, however, that the rules governing the provisions of Assisted Sidings may be revised with a view to increasing the financial burden on the owners and proportionately easing the burden on the Railways themselves. If the terms are modified in this fashion the effect would be to saddle on the owners most of the onerous provisions of private sidings. Private enterprise has already expressed its eagerness to embark on large financial outlays for the development of collieries and I trust that in respect of sidings no fresh impositions will be made as compared with the Assisted Terms known to the Industry previously.

IMPORT OF EQUIPMENT

Turning from availability of transport, the expansion in production contemplated under the Second Plan will make it necessary for large scale import of such plant and machinery as are not made in this ccountry at present. Since Government collieries themselves would be interested in such imports, there is need to ensure that collieries in the private sector are not discriminated against in respect of import facilities, and further that, on the procedural side, all unnecessary hold-ups are obviated. In regard to essential requirements produced in India, some co-ordination at a high level is called for to see that the Coal Industry gets its fair share. I would like to stress in this connection that the position of cement supplies is far from satisfactory and is already causing considerable concern to colliery owners. The present allocations are quite insufficient to meet existing demands of the Industry and this raises the doubt as to whether sufficient quantities will be available for capital works required in connection with the Plan.

Some of the largest coal producers in the country, for instance, applied between them for a total of 2,364 tons of cement for period IV of 1955, against which actual allocations issued by the Cement Adviser amounted to only 428 tons This insignificant figure included 178 tons of the more expensive sea-borne supplies from South India. Even though the collieries concerned agreed to accept their full balance requirements in cement imported from South India costing over Rs. 50 per ton more than cement produced in Eastern India, the shortfalls were not made good. The example I have cited applies to a very large number of privately run collieries and perhaps I may be permitted to enquire whether the State collieries are in a similar position both as regards the proportionate allocation against demands as well as allocation of cheaper cement from factories located nearer the coalfields.

PRODUCTION COSTS

The mention of the cost of cement brings me to the wider issue of production costs and prices. To shoulder effectively its onerous responsibilities, the Coal Industry must be placed in a position where it can secure an adequate selling price for its output. I think most of you are already aware that today's controlled prices are based on production costs of eight years ago and that over these eight years costs have moved steadily upwards, thus narrowing considerably the margin left to the Industry. This process is still continuing.

Under the Coal Mines (Temporary) Regulations introduced last year, for instance, additional precautions are required to be taken in regard to open cast workings and there are new stipulations governing the use of winding ropes, the construction of precautionary fire dams and the installation of electric lighting underground. The new Mines Rules (1955) require, amongst other things, additional provisions for First Aid personnel and equipment, ambulance rooms, shelters and canteens. They also provide for employment of a much larger number of Welfare Officers who are requied to have certain specified qualifications and to be of a certain status. The draft Electricity Rules, gazetted in 1954, lay down many stipulations regarding earth leakage protection gear, flameproof gear, and switchgear at sub circuits. They restrict the length of trailing cables, thus necessitating more gate-end boxes. Furthermore, they require that all cables in certain areas are to be double-wire armoured.

All reasonable measures necessary to ensure the better working of mines, whether in the State sector or in the private sector, have our full support. It must be realised, however, that to implement all these new rules and regulations costs money. In so far as these provisions are progressive they are welcome, but the dynamics of progress cannot be contained indefinitely within the straight-jacket of an inflexible price structure.

SELLING PRICES

It is appreciated that coal being a basic commodity, the level of its selling prices has a bearing on costs in other industries; but these considerations apply equally important commodities like steel and cement. Whilst this aspect should no doubt be borne in mind, I am sure you will all agree that no single industry should be made to subsidise others if its own economics justify an increase in selling prices. Nor can such an increase be denied on the ground that when production goes up in future, and when transport is available to move this increased production, costs would tend to go down. Consideration of this vital problem should not be allowed to languish in vague generalities of this nature. What is needed now is to make today's controlled selling prices reflect today's costs, and if the Industry's costs go down in future, there is no reason why future prices should be impervious to such changes. I would suggest that Government should no longer delay a comprehensive review of coal prices and that the results of this review should be made known at the earliest opportunity.

Labour costs, as you are aware, constitute the most important single element in the cost of producing coal, and the wage structure of the industry is being reviewed at present by the All-India Industrial Tribunal. The issues before the Tribunal are of great consequence and its findings, which are expected shortly, will no doubt have an important bearing on the future of the Coal Industry.

STOWING ASSISTANCE

You have heard in the past references to the question of stowing and the quantum of assistance received for it. There has been no change in the position in the last year and the subsidy continues to be grossly inadequate. The rules governing the grant of assistance are in a large measure illogical, with the result that they give rise to various anomalies. For instance, owing to the peculiar rules governing depreciation, capital investment on mechanisation is penalised as compared with inefficient installations worked manually. Again under the present rules a colliery situated on a river bank receives the same limit of assistance as a colliery situated many miles away from the source of sand supply. These and many other cases have been the subject of discussion for some considerable time but measures are still awaited to rectify the position. Nor is any solution yet available to the complaint that payment of stowing subsidies continues to be six months or so in arrears. There is need for urgent action in this matter as the present practice is a source of considerable hardship to those collieries which stow and, in so doing, implement one of the best known methods of promoting safety as well as of conserving coal.

Very close to the subject of stowing is that of washing and for some time now the question of arranging supplies of washed coal for the Steel Works has been before the Government and the Industry. I trust that before long we shall have a clearer picture both as to the location of washeries and as to the price to be paid for washed coal.

GREAT OPPORTUNITY

Gentlemen, the years that lie ahead hold a great opportunity for the Coal Industry to make a significant contribution to the industrial growth of the country. The very magnitude of the expansion envisaged poses a challenge however, and there are many problems to be tackled. To overcome them we must all strive to our utmost and must all pull together. If the authority and power of Government is linked in a joint endeavour with the resources and potentialities of private enterprise, I am sure we shall be able to face with confidence the challenge of this new opportunity.

I would like to conclude, gentlemen, by thanking your Vice-Chairman and the outgoing Committee for the help and support they have given me during the last twelve months. My appreciation also goes to our Secretariat, both here and in the coalfields, for the work they have put in, and, finally, I wish to thank your technical adviser, Mr. L. J. Barraclough, and all the others whose untiring efforts have proved so valuable to me during the past year.

FOR THE INVESTOR

(Continued from page 382)

Dividend Maintained by Kohinoor Mills

The first textile mill, to present the reports and accounts for 1955 from Bombay, is the Kohinoor Mills Company, Limited. The working results are satisfactory and the dividend is maintained at Rs 18 per share for the year under review.

Sales for the year are slightly lower at Rs 5.86 crores as against Rs 5.97 crores in the previous year, while the net profit, before Taxation and Depreciation, is Rs 36,04,447 against Rs 36,82,225. Apart from allocating Rs 3.00 lakhs to Development Reserve, the Taxation amount has been raised to Rs 8.50 lakhs from Rs 5.55 lakhs. The Depreciation amount is, however, reduced to Rs 6.33 lakhs from Rs 17.76 lakhs.

According to the directors' report, the Income-Tax authorities have not yet taken up the assessment of the company's profits for 1954. In addition to Rs 6.33 lakhs written off from the profits of the year, the directors have appropriated a further Rs 15.00 lakhs for Depreciation from Machinery Reserve Account.

£R$

Rohtas Industries

Thanks to the record production at the various factories, Rohtas Industries Limited has presented excellent working results for the year ended 31st October, 1955. The following table shows the comparative production figures (in tons):—

	1954-55	1953-54
Paper ..	20,135	16,074
Cement	3,25,032	3,53,238
Asbestos Cement ..	6,156	4,334
Sugar	9,999	6,178
Caustic Soda ..	1,757	1,604
Vanaspati ..	5,857	688

During the year under report, the production of clinker from the second kiln has been satisfactory, while that from the first kiln did not yield the anticipated results, because the machinery supplied for modernisation had to be altered several times. The decline in the total production of cement has been due to these operational difficulties and consequent interruptions. The position is, however, improving.

Sales for the year are higher at Rs 9.76 crores against only Rs 6.72 crores in the previous year, though the net profit, before Taxation and Depreciation, amounts to only Rs 105.25 lakhs against Rs 110.00 lakhs. The Directors have, after setting apart Rs 47.29 lakhs (Rs 43.80 lakhs) for Depreciation, Rs 20.00 lakhs (Rs 25.00) lakhs for Taxation and Rs 15.00 lakhs (same) for General Reserve, maintained the dividend on the Ordinary shares at Rs 1-8 per share.,

Tide Water Oil Maintains Dividend

The working of the Tide Water Oil Company (India) Limited, during the half-year ended 31st October 1955, has resulted in a net profit, before providing for Taxation and Depreciation, of only Rs 80,371 as against Rs 1,42,373 in the previous half-year, though sales are maintained at Rs 21.42 lakhs. The directors have, after providing Rs 5,424 (Rs 4,489) for Depreciation and Rs 36,000 (Rs 18,000) for Taxation, maintained the dividend at As 8 per share.

Since the close of the half-year under review, it has become necessary to increase the selling prices of some oils consequent upon increases in freight rates and in the prices of certain base bulk stocks.

MARTIN BURN LIMITED

NOTICE

At a Meeting of the Board of Directors of Martin Burn Limited, held on 1st March 1956, further consideration was given to the question of the distribution of profits as shown in the accounts for the year ended 30th September 1955, and it was resolved that the Cash Bonus recommended in the resolution passed on 25th ultimo be increased by one anna per share free of Income Tax.

The Directors further resolved that the above-mentioned additional Cash Bonus of One Anna be incorporated in the Report and Accounts for the year ended 30th September 1955.

The Directors, therefore, now recommend a Dividend of Rs. 1-8 per share on the Ordinary Shares of the Company for the year ended 30th September 1955 together with an additional distribution by way of Cash Bonus of Five Annas per share, both without deduction of Income Tax.

This Dividend and Cash Bonus if passed by the Shareholders will be payable on and after the 23rd April 1956 to those members so entitled who are registered in the Company's books on the 28th March 1956. It was agreed that the Ordinary Share Register of the Company be closed from the 21st to the 28th March 1956.

By Order of the Board,
A. G. GIDLEY,
Secretary.

2nd March, 1956.

GATEWAY NOTES

(Continued from page 402)

would do well to reconsider the issue with a view to allowing established trade to participate. Mr Shah struck a note of caution regarding the setting up of the State Trading Corporation and any hasty entry by the State into foreign trade.

The harassment caused to importers by unduly stretching Customs formalities was set out in clear detail by Mr Shah. It is true that the Import Trade Central Organisation is being streamlined and procedures are being simplified. But this is being more than countered by inefficiency or inadequacy of staff or lack of co-ordination in the Customs Department. Difficulties at the Port of Bombay are acute. The holding up of seasonal goods like woollen fabrics is known to have blocked the funds the importers.

The reason for this complicated procedure is not far to seek. Executive instructions issued from time to time and having little bearing on each other have piled up to choke the smooth application of rules and regulations. The outdated Sea Customs Act of 1871 is also a source of worry to the trading community. The way out as Mr Shah sees it, is the appointment of a Customs Enquiry Committee to suggest how the whole system can be overhauled or changed without loss of revenue to the Exchequer and with the minimum of hardship to the trader.

KRISHNABEHARI TEA COMPANY, LTD.

Notice is hereby given that the Adjourned Nineteenth Ordinary General Meeting of the Shareholders of Krishnabehari Tea Company Limited will be held at the Registered Office of the Company No. 161-1, Harrison Road, Calcutta on Monday the 5th March 1956 at 3 P.M. (sharp).

AGENDA:—

1. To receive and approve the Report of the Directors for the year ended 31st December 1954.
2. To receive and approve the Audited Accounts of the Company for the year ended 31st December 1954.
3. To declare a dividend.
4. To elect Directors.
5. To elect Auditors and to fix their remuneration.
6. To transact any other business that may be brought before the meeting.

The Share Transfer Register of the Company will remain closed from 28th February to 5th March 1956, both days inclusive.

By Order of the
Board of Directors,
BIHARILALL LAHOTY,
Managing Director.

Calcutta,
the 11th February, 1956.

BANARHAT TEA CO. LTD.
NOTICE PURSUANT TO SECTION 289(b)4 OF THE INDIAN COMPANIES ACT 1913.

The Company proposes to make such changes in the terms of the Agreement with their Managing Agents Messrs. Andrew Yule & Co. Ltd., as will be required under the provisions of the Companies Act 1956. Although these changes are not designed to increase the remuneration of the Managing Agents, application is being made to Government for their approval of the proposed new Agreement.

Notice is therefore hereby given that the Company intends to apply to the Central Government for consent to a change in the remuneration of the Company's Managing Agents, Andrew Yule & Co., Ltd.

By Order of the Board,
ANDREW YULE & CO. LTD.,
M. E. DIXON.

DORCHESTER PRINTING WORKS

PRINTERS OF DISTINCTION

116, LOWER CIRCULAR ROAD, CALCUTTA

Stock Exchanges

MIXED RECEPTION TO BUDGET PROPOSALS

Watch-dog Writes:

ONCE again, stock markets passed a drab week with a number of factors combining to foster dull conditions. Till Wednesday, prices developed a reactionary tendency due to selling pressure caused by pre-budget uncertainties and the absence of any support.

Apart from a few selected Textile scrips which met with good support on dividend expectations, little of interest wes seen. But, the general impression was that, if conditions on the Stock Exchange were any indication of future events, the Budget should not be worse than what was feared.

It was, however, satisfactory to note that the markets reacted favourably, on the whole, to the Budget proposals when they were announced on Wednesday, though the proposals relating to the tax on bonus issues and the imposition of super-tax on dividends above 6 per cent disturbed the market sentiment to some extent.

On balance, the majority among marketmen appears to have taken a constructive view about the Budget proposals which are found to be not so much bearish as they had been earlier expected.

The Calcutta Stock Exchange developed a reactionary trend till Wednesday following adverse Budget rumours. But the market reacted favourably, on the whole, to the Budget proposals; and the closing levels for the week were better, thanks to some bear-covering at lower levels.

Prices on the Bombay Stock Exchange moved rather erratically as operators appeared still confused over the Budgetary picture.

Fairly steady conditions prevailed on the Madras Stock Exchange.

Trading on the London Stock Exchange was dull and price movements were irregular.

Wall Street closed barely steady with a fair predominance of mainly fractional losses.

*

Calcutta

Calcutta, Friday Evening.

CONDITIONS on the local Stock Exchange, during most part of the week, remained dull with prices drifting to lower levels in the absence of any support. Till Wednesday, operators were not inclined to extend commitments in view of the Budget uncertainties, though they felt that, at the then ruling prices, most of the adverse possibilities had been discounted. Thus, the undertone remained hesitant, pending the Budget session.

The first reaction to the Budget proposals was a sharp marking down of prices following the imposition of tax on bonus issues and super-tax on dividends above 6 per cent. On second thoughts, however, operators lent support to the market on the hope that the dividend limitation might encourage companies to expand capital structure and thus bring them gain. Moreover, the tax proposals were not so much bearish as they had been earlier expected. It will, however, take the market time to come to any definite opinion about the full implications of the new tax proposals made.

Another important announcement of the week was the decision made by the Committee of the Stock Exchange to remove restrictions on trading in Indian Irons. This decision was welcomed by the trade as Budget reactions would mean little if the leading scrip was out of the list. Thus, all the six clearing shares are now freely traded, indicating thereby that payments difficulties are overcome.

The Committee has also taken a number of measures to curb over-speculation in the scrip. It is decided that each member of the Exchange can deal freely in clearing shares only up to a total value of Rs 5 lakhs during a particular settlement. If any member wishes to make deals involving more than Rs 5 lakhs but less than Rs 10 lakhs, he will have to deposit a margin of 5 per cent. If he wishes to deal in more than Rs 10 lakhs, a margin of 7½ per cent will have to be deposited.

Also, the week under review was the most anxious on the Giltedged market since 1951. There was a further setback in prices as enquiry dried up all round, but there was no particular pressure to sell. Even State Loans succumbed to the malaise. Though there was a slight improvement at the close, the undertone continued to be weak. 3 per cent 1986 Conversion, after touching a new low of Rs 77-8 from last week's closing rate of Rs 78-15, finished better at Rs 77-10. Among other Loans, 3 per cent 1963/65 changed hands at Rs 94-8; 3 per cent 1970/75 at Rs 88-13 and 4 per cent West Bengal 1767 at Rs 100-2.

In sympathy with the securities market, Bank shares turned quieter with business done on a reduced scale. United Commercial shed As. 12 at Rs 48, while Punjab National was marked at Rs 43. Hind moved between Rs 37-8 and Rs 38.

Apart from the growing disparity between raw jute and manufactured goods prices, the announcement of the reduction from As 10 to As 4 by Howrah Jute and the passing over of the dividends by Bally and Reliance had an adverse effect on sentiment in the Jute section, where operators were not inclined to enter into any commitments. There was also a general feeling that, as a result of the existing high prices for raw jute, the working results of the mills, during the current half-year, would also be unsatisfactory as in the case of the previous half-year.

Although turnover in the Coal section, was limited, selected scrips continued to meet with good support on dividend conditions.

Textile shares, remained, on the whole, steady. There was a general feeling among market circles that the additional excise duty on cloth might not prove a very large burden on the industry in view of the current tight supply position and the industry might be able to pass on the burden to the consumer.

Tea shares ruled comparatively steady, but the volume of business continued to be restricted. Despite a reduction in the export duty from As 8 to As 6 per pound,

(Continued on page 429).

ORIENT JUTE MILLS CO. LTD.
NOTICE PURSUANT TO SECTION 289(b)4 OF THE INDIAN COMPANIES ACT 1913.

The Company proposes to make such changes in the terms of the Agreement with their Managing Agents Messrs. Andrew Yule & Co. Ltd., as will be required under the provisions of the Companies Act 1956. Although these changes are not designed to increase the remuneration of the Managing Agents, application is being made to Government for their approval of the proposed new Agreement.

Notice is therefore hereby given that the Company intends to apply to the Central Government for consent to a change in the remuneration of the Company's Managing Agents, Andrew Yule & Co. Ltd.

By Order of the Board,
ANDREW YULE & CO. LTD.,
M. E. DIXON,
Secretary,
Managing Agents.

Calcutta,
1st March, 1956.

RICHARDSON & CRUDDAS LIMITED
NOTICE

NOTICE is hereby given that an Extra-ordinary General Meeting of Shareholders of Richardson & Cruddas Ltd., will be held at 12, Old Court House Street, Calcutta, the Registered Office of the Company, at 11-30 A.M. on Wednesday, the 21st March 1956 to consider and, if thought fit, to adopt with or without modification the following resolutions proposed as specified, that is to state.

As an Extra-ordinary Resolution:

1. Be it RESOLVED that the first sentence of Clause 5 of the Memorandum of Association of the Company be amended to read:—

"The Capital of the Company is Rs. Three Crores divided into 75,000 5½ per cent (income-tax free) Cumulative Preference Shares of Rs. 100 each and 22,50,000 Ordinary Shares of Rs. 10 each subject to being increased or reduced or converted into stock in accordance with the Articles of Association of the Company and the legislative provisions for the time being in force in this behalf"

instead of

"The Capital of the Company is Rs. One Crore divided into 40,000 5½ per cent (income-tax free) Comulative Preference Shares of Rs. 100 each and 6,00,000 Ordinary Shares of Rs. 10 each subject to being increased or reduced or converted into stock in accordance with the Articles of Association of the Company and the legislative provisions for the time being in force in this behalf".

As Special Resolutions:

2. Be it RESOLVED that Article 5 of the Articles of Association of the Company be amended to read:

"The Capital of the Company is Rs. 3,00,00,000 divided into 22,50,000 Ordinary Shares of Rs. 10 each and 75,000 5½ per cent (Income-tax free) Cumulative Preference Shares of Rs. 100 each".

instead of

"The capital of the Company is Rs. 1,00,00,000 divided into 6,00,000 Ordinary Shares of Rs. 10 each 40,000 5½ per cent (Income-tax free) Cumulative Preference Shares of Rs. 100 each".

3. Be it RESOLVED that the Article 6(a) of the Articles of Association of the Company be amended by deleting the full stop after the words:—

"nor confer any voting rights" and adding thereafter

"except to vote on a poll only in proportion to the paid-up share value of the preference shares of the paid-up share value of the ordinary shares of the Company and only on resolutions placed before the Company which directly affect the rights attached to the Preference Shares".

4. Be it RESOLVED that the existing Article 100 of the Articles of Association of the Company be reconstructed to read:—

"On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every ordinary share of Rs. 10 held by him and ten votes for every Preference Share of Rs. 100 held by him where vote for preference share is admissible as hereinbefore mentioned provided that no member shall be entitled to vote so long as any dues on his shares remain unpaid and also provided that the holders of preference shares shall have no right to vote either in person or by proxy at any General Meeting by virtue or in respect of their holdings of preference shares unless a resolution is proposed affecting the rights or privilege of the holders of preference shares or for the winding up of the Company"

instead of

"On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him provided that no member will be entitled to vote so long as any dues on his shares remain unpaid and also provided that preference shareholders shall not be entitled to vote".

By order of the Board,
S. B. Industrial Development Co., Ltd.,
Managing Agents.

The 15th February, 1956.

*

CLIVE STREET GOSSIP

(Continued from page 400)

the two was once explained by T.E. Hulme in an extremely telling analogy: The classicist conceives of human nature as a bucket whereas the romantic thinks of it as a well: that is to say, the former is acutely conscious of man's limitations, whereas the latter sees his possibilities as endless. Applying these categories to national character, it is conventionally supposed that certain nations are temperamentally averse to the perfectionist attitude and, therefore, their professions about the possibilities of human nature are correspondingly sober. In such nations, there is less of cant and greater correspondence between professions and actions. Certain other nations are, equally nationally, supposed to be romantic in temperament and inevitably their professions far outstrip their action. In Europe, the Latin countries are supposed to represent the classical temperament while Germanic and Anglo Saxon countries the latter. In Asia, China (whose characteristic philosopher is, not quite accurately, considered to be Confucius) is supposed to represent the classical attitude while India (whose Characteristic philosopher is Sankara) is supposed to typify the romantic attitude.

*

I am keenly aware that this hypothesis begs too many questions at too many points and can in detail be demolished for the simple reason that nations don't have attitudes like human beings. Moreover, the ideas themselves have so many overtones that they cannot be discussed summarily like this without doing grave violence to their essence. But, by and large, it is true that accusation of moral humbug has often been made of England, the 'perfidious Albion" who is supposed to have perpetrated the most outrageous acts of history to the accompaniment of unctious intonation of moral platitudes. Likewise, there are many, especially in Europe, who consider American utterances as most insufferably superior in its moral tones in the context of power politics. Whatever may be one's view on the generalisations I have made earlier, I think it will be generally agreed that a certain moral earnestness in professions is a characteristic shared by England and India. By the same token, a certain chasm between professions and practice is also inescapable in both countries.

*

What, then, is the moral? Curiously, those who would like the gulf narrowed are arguing like perfectionists, for, it is extremely unlikely that this consummation is ever likely to be achieved. On the other hand, the gulf does not necessarily argue conscious hypocrisy. The whole point about the sixteenth and seventeenth century (especially the Shakespearean ones) about the puritan was that his self righteousness was unconscious and that was why he was such an admirable figure of fun. From the moral point of view, there is a great deal to be said in favour of any profession of high mindedness —for, the very existence of the standard makes it impossible to stray too blatantly from the norm. On the other hand, a "realistic" appraisal of human possibilities may lead directly to moral anarchy and cynical realpolitik.

*

Mr Watson puts this aspect of the matter in a nutshell when he traces the "vein of self righteousness in Indian public attitudes" to "the ability of the Indian, even today, to discuss fundamentals without embarrassment." Our split personality, therefore, derives at least partly from our traditional concern with fundamentals and, however faltering we may be in our practice, there is no insincerity in our professions.

*

The contemporary aspect of Mr Nehru's thesis, I shall hold over for a future occasion.

EAVESDROPPER

CALCUTTA STOCK EXCHANGE

(Continued from page 419).

operators were not inclined to enter into large-scale commitments following the tax on bonus issues and the limitation of dividends.

Sugar shares were practically neglected. Only Carew and SKG had some support upto Rs 10-10 and Rs 12-5 respectively.

Price movements in the Engineering section, were rather irregular due to alternate bouts of buying and selling. Till Tuesday, transactions in Indian Irons took place on cash basis at rates varying from Rs 33 to Rs 33-4. With the removal restrictions on forward trading, the scrip started at Rs 32-2 on Wednesday and, after touching a high of Rs 32-9 and a low of Rs 31-10, flinshed the week at Rs 32-7.

Except Metal Corporation which met with renewed demand upto Rs 12-15 from Rs 11-3, trading in the Miscellaneous section was generally dull and prices, after touching low levels immediately after the announcement of the Budget proposals, recovered most of the lost ground toward the close due to some short-covering. The following table will show the trend of prices of the most important scrips during the week:—

	Pre-Budget Session Rs. a.	Post-Budget Session Rs. a.	Week's Closing Rs. a.
Engineerings:			
Indian Irons ..	32 0	31 2	32 7
TEXMACO ..	20 6	20 5	21 1

Rohtas ..	20 6	20 1	19 8

N.T.—No transactions took place.

*

Madras

Madras, February 29.

FAIRLY steady conditions prevailed on the Madras Stock Exchange during the past week, when attempts were made by operators to shake off the pre-Budget misgivings. The imposition of additional taxation in the Madras State did not have any adverse effect on sentiment.

TEXTILES:—The announcement of Bonus shares by Bangalore Woollens imparted a steady tone to this section though a slightly easier tendency in prices was noticed towards the close on apprehensions of an increase in excise duty on cloth. Bangalore Woollens were lifted upto Rs 601-4 cd., cr., while Buckinghams hal sellers at Rs 172. Metturs recorded a gain of 10 points at Rs 395. There was some support for Janardhans and Kaleeswarars at the market rates. Maduras changed hands at Rs 50-12 cd. and Loyals at Rs 40-12.

PLANTINGS:—This section came in for a better turnover than for some weeks past. With the slight improvement in the prices obtained for tea, investors showed good interest in Tea shares at the recent low levels. Coorgs were taken upto Rs 10; Halleyburias upto Rs 25-12; United Nilgiris upto Rs 323-12 and Devasholas at the market rate.

In the Rubber section, Cochin Malabars were better at Rs 8-2 and Malankaras at Rs 27. TRTs had demand at Rs 12-12. Rajagiris were, however, offered at Rs 21-5. Midlands changed hands at Rs 19-8; Thirumbadis at Rs 2-5 c.d. and Gokuls at Rs 2-7

Among Coffee shares, Coffee Lands came up for better demand at Rs 18-14, while Ouchterlonys and Consolidated Coffees hovered narrowly around Rs 5-4 c.d. and Rs 21-13 respectively. Shevroys changed hands at Rs 2-5-0.

MISCELLANEOUS:—Cement and Chemical shares met with some activity during the week. Mettur Chemicals were better at Rs 9-1, while Mysore Chemical Fertilizers had buyers as market rates. Among Cements, Indias ruled almost steady at Rs 32-5, while Travancores changed hands at Rs 11-10 to Rs 11-13 and Andhra "B" shares at Rs 15-8. Among other scrips, FACTS were done at Rs 9; Bangalore Transport at Rs 12-8 and Spencer Ordinaries at Rs 17-8.

*

London

London, February 27.

ACTIVITY on the London Stock Exchange, during the past week, was at a low ebb and prices showed an irregular tendency. There was little desire on the part of operators to extend commitments in view of the uncertain economic outlook and there was a tendency to wait for the February gold and dollar figures.

Among Industrials, Steels, Engineerings and Electrical Equipments tended to ease, while Bowaters were firm on the United States link-up. Oil shares lost some ground with Coppers showing little change. Tin shares were firm, reflecting the higher metal prices.

Giltedged responded well to favourable week-end Press comment, and good gains were recorded. Among Foreign Bonds, Japanese dollar class issues were supported, while Greeks and Peruvians hardened. Following were the closing rates of selected stocks and shares:—2½ per cent Consols £53¾ (£54); 3½ per cent War Loan £74¼ (£74¼); Dunlop Rubber 21/4¼ (22); Imperial Chemicals 44 (43/9); Imperial Tobacco £22½ (£2 25/32); Assam Teas 20/3 (19/6); British Petroleum 110/10½ (107/14½); (Burma Mines 2/10½ (2/10½) and Indian Copper 9/9 (9/3).

*

New York

New York, February 26.

PRICES on Wall Street ruled barely steady with a fair predominance of mainly fractional losses. Some initial firmness on expectations that the President would seek re-election attracted profit-taking, so that losses were mildy in the majority.

Tobacco issues showed losses ranging up to $2, reflecting reports that new tests had again linked heavy cigarette smoking and lung cancer; and these losses were maintained till the close. Standard Oil of California were a special feature in the week's trading, having advanced by $3¼ on a proposed two-for-one stock-split. Union Carbide was Chemicals leader, developing an advance of $2 following the reports that its business plus that of other major producers was continuing at peak levels and that Carbide would show the largest first quarter earnings in its history.

Selected Aircraft were popular with Chance Vought gaining about $2 following the receipt of a Navy order for the continued production of guided missiles. Following were the closing rates: —Anaconda Copper $78 ($75—week's opening); General Motors $45½ ($44¼); Ford Motors $62¼ x.d. ($62¼) and U. S. Stee Common $58 ($56½).

Two people
...but the same tune

In ottawa or in Delhi, in Montreal or in Calcutta, the pipers play the same tune.

This particular tune is of a ballad which says that, some twenty years ago, Canadian enterprise helped to initiate the development of the aluminium industry in India. Today, Canadian technical and financial resources are again helping the industry to install a new smelter, which will be India's biggest, at Hirakud, Orissa.

The ballad ends with the rejoicing that Canadians and Indians are partners in India's progress towards industrialisation.

Statement of Faith

Investment Gossip:

I HAD the pleasure last week of listening to a testament of faith in India; what intensified the pleasure was that the statement was made by a Briton who, by virtue of five years spent in this country, is familiar with and has kept himself informed about economic conditions in India.

Even more important, he represents an industrial house that is a house-hold name the world over; and, in his capacity as Deputy Chairman of Imperial Chemical Industries Limited, Mr S. P. Chambers has expressed sentiments that may confidently be expected to gladden the heart of a scribe such as I.

The progress recorded in the First Plan has pleased our friends; but there is the amicable warning

Investment Exclusive:

Enquiries made in banking circles reveal that there is no foundation to the market rumours, current for the last day or two, that the holdings of a certain bank in shares in the Mundhra group are to be dumped on the Stock Exchange.

—and one that we should note with care—that the First Plan is no more than a small beginning, and that the statistics of increased production are, because they do not take account of the rise in population, likely to be misleading. Prudence requires that we do not succumb to the temptation of easy complacency because of the progress achieved in terms of statistics; else, we might not spare the effort and energy that are needed for the development work that we have yet to take on hand.

Very refreshingly, Mr Chambers has said that he does not consider the Second Plan targets as "over-ambitious." This is in welcome contrast to the outcries we have had about biting off (or trying to) much more than we could chew. ICI's Deputy Chairman has properly recognised that methods must be adopted which would economise capital, and as rightly points out that, in the long run, it would be folly to prefer hand methods of production regardless of efficiency. Incidentally, I may mention that the Draft Outline of the Second Plan has been careful to make the same point: labour intensive schemes would be fostered—but not at the sacrificial cost implied by choice of methods that clearly were inefficient.

I need hardly say that ICI are keenly interested in the developments in India, or that they may be relied upon for their due contribution to industrial progress. Mr Chambers revealed, in this regard, that ICI were engaged on a programme of developments in the field of explosives, dyestuffs, chemicals and plastics. Additional investments in the near future would be of the order of Rs 5 crores; and, as further schemes were examined, perhaps an even larger sum of money might be invested.

I was also very interested to hear from Mr Chambers that, although part of the capital would be brought in from Britain, it is ICI's intention, indeed policy, to associate more and more Indian capital in their new projects. This is the sort of Indo-British co-operation that is doubly blessed: joint working, with a stake in the business resting in part with Indian hands, will certainly be of immense value to India; and, of course, it will benefit ICI as well! Co-operation such as this augurs well for cordial relations between Britain and India at all levels—not least, in business.

One more point in Mr Chambers's statement, I found most gratifying. The nationalisation of insurance aroused fears among our own countrymen that it presaged a dogmatic predisposition on the part of Government toward State control over industry on an ever widening scale. It is true that, in the foreign press, the impression was given that the nationalisation of insurance could betoken a less friendly Indian attitude to foreign capital. Thus, I was particularly happy that Mr Chambers felt that the insurance nationalisation was not the precursor of widespread taking over of trade and industry by the Government of India.

It is the enlightened thinking of men of the calibre of Mr Chambers which will ensure that foreign capital in India is not hastily frightened away, but that, on the contrary, it will seek to help this country as best it can in our most difficult task of implementing the Second Plan—and the others to come.

£R$

State Bank of India

THE first balance sheet of the State Bank of India offers substantial proof that, in its new form, the State Bank continues as the pre-eminent institution to provide commercial banking services. This is particularly revealed, if we bear the fact in mind that, just prior to the appointed day on which the Imperial Bank's affairs were taken over, deposits had declined by a sizeable margin.

A comparison of the State Bank balance-sheet with the accounts of the Imperial Bank as at the end of 1954 is useful in this regard. This indicates that deposits are a little over Rs 5 crores lower at Rs 225.09 crores; and this is largely due to a decline in current and contingency accounts.

On the assets side, Cash balances—excluding money at call—are steeply lower by Rs 7 crores. This amount, together with Rs 5 crores shown as having been borrowed from banks, represents the resources that were availaable to the State Bank for increases in the investments and advances portfolios.

The rise in investments is one of over Rs 8 crores; and, by reducing holdings in foreign government securities (which, incidentally may be accounted for by transfers yet to be completed of assets and liabilities of Imperial Bank branches abroad to State Bank auspices) the State Bank's giltedged portfolio has been increased by nearly Rs 10 crores to Rs 106.40 crores.

The fact that advances have risen by Rs 5 crores is testimony of the State Bank's avowed determination to continue as a commercial bank. Nevertheless, in line with the lower volume of deposits, it would appear that the Bank has increased its accommodation to constituents largely by an expansion in bills purchased and discounted.

The State Bank's income in the half-year compares favourably with the earnings of the Imperial Bank in the second half of 1954. But the improvement to the extent of Rs 43 lakhs has largely been offset by a rise in the expenditure on salaries and allowances—a charge that rose from Rs 1.94 crores to Rs 2.29 crores.

In the result, there is no more than a nominal change in the balance of profit at Rs 68.59 lakhs. The provisions for both bonus to staff and dividends have been maintained at the same levels Consequently, the carry forward, too, shows little change at Rs 34.37 lakhs. This compares with the figure of Rs 33.56 lakhs transferred from the Imperial Bank

£R$

Indian Bank

The latest balance sheet of the Indian Bank Limited records a spectacular rise in deposits from Rs 24.85 crores to Rs 29.44 crores. The rise is shared by all four heads, with current and contingency accounts Rs 1.90 crores higher.

A sharp increase in acceptances and endorsements takes the balance sheet total to Rs 41.90 crores—an improvement over the year of roughly 33 1/3 per cent.

With cash balances slightly reduced besides, the Indian Bank has been able to expand both investments and advances. Investments are Rs 1.39 crores higher and this is almost wholly due to a rise in giltedged. The portfolio continues to show depreciation as between the book and market values; but, as between the face and book values, the depreciation is covered by the provision to the tune of Rs 13¼ lakhs in the Sinking Fund and the non-statutory Reserve.

The Indian Bank has played its due part in meeting the increasing demand for finance; advances are marked higher by Rs 4¼ crores at Rs 17.54 crores, loans accounting for just under Rs 2½ crores of this rise.

As a natural consequence, the bank's income has mounted by Rs 23½ lakhs so Rs 1.46 crores. Prudent management has ensured that this was not wholly dissipated in increased expenditure. Although interest paid and salaries each accounted for a rise in expenditure of Rs 8 lakhs, the balance of profit shows a steep increase to Rs 20.28 lakhs from Rs 13.94 lakhs.

Prudently, again, the Bank has been in no haste to raise the dividend—at 12 per cent, at which it has been maintained, the distribution to shareholders is both fair and satisfactory.

Instead, over Rs 7 lakhs have been transferred to Reserves as against Rs 1 lakh last year. After this transfer, with other provisions showing negligible changes, the carry forward is placed at Rs 1.45 lakhs compared to Rs 1.31 lakhs brought in.

Altogether, the Indian Bank has displayed a conservative prudence in the disposal of profits—an attribute that should surely characterise banking policy.

£R$

Investment Notes:

In the Bombay market, Bombay Dyeings, after moving up to Rs 557½ from Rs 537½, are now quoted around Rs 548. The company has recommended a final dividend of Rs 12-8 plus a Bonus of Rs 5 per share, making a total of Rs 25 per share for 1955 as against Rs 20 paid for 1954. The element of Bonus is a fresh attraction. There is a general belief that the company's working during 1955 will show impressive results.

Two new scrips—Blue Mountain and Waterfall Estates of the Kothari group—are added to the cash list of the Bombay Stock Exchange with effect from the 1st March. Trading is allowed in these shares in lots of hundred.

The Bombay and Ahmedabad cotton textile mills have fared well during 1955; and it appears that most of the companies have recovered the ground lost in 1954. While the outlook for the industry continues to be bright, the general impression is, that there may be a temporary lull in the domestic market in the coming weeks as a result of the large turnover effected in the recent past. The follow-

HIGHLIGHTS

There is a trait about Eavesdropper, that he knows when to cup his ears when it seems to him that a particular conversation might be confidential.

Also, he is careful to choose between the news that he gets off the record and the views that he can freely use: a confidence, he wouldn't betray, although controversy, he does not shirk.

But this highlight is not about Clive Street Gossip. It is about the Eavesdroppers (and, properly, we should spell the word without the capital letter) who hover about the open windows in New Delhi.

The New Delhi eavesdroppers had a field day in the week before Budget (parenthetically, we may remark that this is the manner in which a day can be lengthened into a week).

And, well before the Budget, there were some who were peddling what were supposed to be the most closely guarded of secrets.

Leakage: ranted the Opposition. True. It couldn't be denied.

We remember that, when the decision to take over the Imperial Bank was made with no leakage of the news whatsoever, the same Opposition charged: Unnecessary Secrecy!

While the leakage of Budget proposals is a grave and serious matter, the more important task is, not to find a scapegoat, but discover the source of the leakage.

In this week's World of Finance, two concrete suggestions are given toward this end: they call for a bit of work a la Sherlock Holmes.

Cauvery Spinning and Weaving Mills, Madras, have announced that 245 bearer Debentures of Rs 100 each have been drawn for redemption on April 1, 1955. No interest will accrue from that date.

£ R$

Investment Briefs :

British India Corporation has passed over the dividends, both on the Ordinary and Preference shares, for 1955.

Bararee Coke has reduced the dividend from 7½ to 7 per cent for the half-year ended 30.9.1955.

Martin Burn Limited has raised the dividend to Rs 1-12-0 (including a Cash Bonus of As 5) per share for year ended 30.9.55 from Rs 1-6-0 (including a Cash Bonus of As 2) paid for the previous year.

Polsons Limited has maintained the dividend at Rs 10 per share for 1955.

Industrial Investment Trust has maintained the dividend at Rs 4½ per share for 1955.

Binny and Co. (Madras) Limited has announced a final dividend of 6 per cent, making a total of 10 per cent for 1955 as against 8 per cent for 1954.

£ R$

Dividend Raised by Richardson & Cruddas

Balance-Sheet Reviews :

IT might be recalled that Richardson & Cruddas Limited increased its capital, during the year ended 30th June 1955, by raising the number of Preference shares from 29,450 to 40,000 of Rs 100 each. The shares were issued at par and had been fully subscribed. Ordinary shares numbering 2,32,900 of Rs 10 each were also issued at a premium of Rs 1-8-0 per share. The shares had been fully subscribed and the premium on shares collected has been treated as a Reserve.

The working results of the company for the year under review have been very satisfactory. The net profit, before providing for Taxation and Depreciation, amounts to Rs 33,02,702 as against only Rs 31,91,285 in the previous year, thanks to an increase in sales from Rs 1.86 crores to Rs 2.57 crores.

Apart from setting aside Rs 4.00 lakhs for Dividend Equalisation Reserve and Rs 3.50 lakhs for Rehabilitation Reserve, the directors have raised the Depreciation amount to Rs 2.48 lakhs from Rs 2.26 lakhs. The Taxation amount has, however, been maintained at Rs 12.00 lakhs. The directors have recommended a higher dividend of Rs 1-8-0 per share on Ordinary shares as against only Re 1 paid in the previous year.

According to the Directors' report they have considered the necessity of increasing the scope of the activities of the company for the purpose of taking advantage of the heavy demands on all engineering workshops of repute, mainly due to the development plans initiated by the Government. They have also decided to set up a modern workshop for the manufacture of railway wagons on a new site, not far away from the Bombay City.

In connection with the expansion scheme, the directors have proposed to raise fresh capital. In this connection, an extraordinary general meeting will be held shortly for considering the proposal of increasing the authorised capital of the company from Rs 1 crore to Rs 3 crores.

The balance-sheet, as at 30th June 1955, shows a paid-up capital of Rs 1 crore—6 lakhs Ordinary shares of Rs 10 each and 40,000-5½ per cent Cumulative Preference shares of Rs 100 each. Capital Reserve is shown at Rs 1.51 lakhs; General Reserve at Rs 10 lakhs and Other Funds at Rs 15.50 lakhs. The gross block at Rs 50.38 lakhs shows a net block value of only Rs 36.79 lakhs. Liquid assets at Rs 1.78 crores are substantially higher than sundry liabilities, at Rs 1.19 crores.

£ R$

Dividend Maintained by India Paper Pulp

It will be recalled that the India Paper Pulp Company issued 3,30,000 Ordinary shares of Rs 10 each at a premium of Rs 10 per share in August 1955 in order to raise the capital from Rs 30 lakhs to Rs 63 lakhs. This issue was fully subscribed, and the premium on this account has been transferred to the Share Premium Account which, after writing off brokerage and

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

IN an interview in America just before he left that country for his projected trips to the Capitals of various South-East Asian nations, Mr John Foster Dulles, the US Secretary of State, was asked by a reporter whether, consequent to his discussions with the US Ambassador to India, Mr John Sherman Cooper, Mr Dulles was thinking in terms of a thorough "overhaul" of American foreign policy as it related to India. Mr Dulles's answer was what may appear to be a surprising reply, that the policy now obtaining was, largely, on correct lines. Are we to understand, by this, that there is not likely to be any major change in US attitudes? Are we to consider that US foreign policy, in this light, is static? Are we to conclude that the discussions that Mr Dulles will have with his Ambassador and with the Indian Prime Minister, Mr Nehru, will not change any of the convictions on which Mr Dulles frames his policy?

We may say, at the outset, that the answer to each one of the questions we have just posed must be an unambiguous "No".

At the same time, it is also necessary for us to recognise that the general lines of US policy toward India are unexceptional. The frictions and misunderstandings of the recent past can by no means be attributed to an unfriendly disposition toward India on the part of the US administration. On the contrary, specifically, there is marked sympathy with and admiration for India's heroic endeavours to undertake planned development on an ambitious scale. It is in this context, the context of India's Second Plan, that it has become necessary for Mr Dulles to subject his foreign policy to an agonising reappraisal. At this juncture, it is proper that we realise what, in the conditions of today, is connoted by foreign policy.

Foreign policy may be said to mean the relations on a government level between countries; and that relationship is, today, more and more in terms of the "have" and the "have-not" countries. And, if the ends of the foreign policy of any country may be said to be directed toward the achievement of peace and security, we shall be able to appreciate the shift in emphasis in foreign policy from the political level to the economic sphere. President Eisenhower, in stating that it is the universal desire to want a "world in which we may live in peace and confidence", has given expression to the pre-requisites to that peace. He said: "And in striving toward that goal, we have understood that to help others was often the best way ourselves to advance." In fact, it is the recognition of this need to help others which has been the guiding principle in the formulation of American foreign policy since the end of the second World War.

Very generously indeed, America provided all the help and assistance that was necessary for the rehabilitation of the war ravaged countries of West Europe. It was an economic recovery programme; and the indigenous reservoir of industrial knowledge, supplemented as it was by American dollars and equipments, greatly facilitated this task of regeneration of economies that had been crippled by the armaments of war. And, so long as foreign aid as an important facet of foreign policy was administered in the European countries, the benefits accruing therefrom were vast and immediate. Improvements in industrial production, and a quick recovery in the export trade, restored equilibrium in the balance of payments position of the West European countries within a measurably and remarkably short period of time. Also, so long as foreign policy was motivated by the desire to strengthen a nation by restoring to it a sound economic foundation, American foreign policy was a success. But, in the recent past, for many reasons, there is arising the necessity to refashion foreign policy.

The first of the factors is the newly gained independence of millions of people who had, till recently, been subjected to colonial rule. With independence, there has come the realisation on the part of these peoples that they are the "have-nots"—but this is accompanied by the ambition as well as determination that their present state of relative poverty could be rectified. Thus, the entry on to the world stage of under-developed countries, and their own knowledge that they constitute a strong force, if only by reason of the millions of people that they represented, have been responsible for a new phase in the cold war.

Unfortunately, it would appear that America was not able to recognise that, while it was important to enable the rebuilding of West Europe such that it could resist military aggression, the danger from which the under-developed countries must be guarded is not the sudden onslaughts of armed forces, but the wily infiltration of radical views. And, so long as there is little evidence that anything is being done to rescue the mass of population from their age-old poverty, the conditions continue to favour that very infiltration that the free world, and in particular the free world of "haves", has to guard against. Thus, for South-East Asia, foreign policy in the form of military pacts or in the nature of military aid can avail little, if anything. Foreign policy, therefore, has necessarily to change dynamically into economic aid policy. America is well fitted to shoulder the responsibility inherent in safeguarding the independence of this newly freed part of the world: but the reason for this does not lie merely in the fact of American wealth, or in the ability of the US Government to dispense large sums of dollars as aid.

Quite to the contrary, we wish to urge strongly that foreign aid, howsoever large a proportion it might attain to, cannot be relied upon to guarantee freedom and independence. We have said before on many occasions, and we repeat, that foreign aid can quite often be twice cursed. The donor is not human, even though he may carefully extend the aid without visible or invisible strings, if he did not expect some return for it. As for the recipient, the very fact that he is forced to accept charity engenders resentment in him; the self-respect of both donor and recipient is in danger of being lost.

But this is not to say that there is no form of foreign aid that can be acceptable to the South-East Asian countries. America is not only in the happy position of being able to give on a most generous scale, America is also a country which is in need of, and in fact is eager to provide a market for, many goods and commodities that South-East Asia is rich in. Put simply, we suggest that American foreign policy should be so framed as to foster schemes in such particular fields of industry as will enable the recipient country to export a moiety of the very products thus made possible to America.

We do not consider that it is either feasible or desirable that America should undertake to underwrite the shortfall in India's requirements of foreign exchange over the Second Plan period. Secondly, from India's viewpoint, it is unrealistic and it is unnecessary to look to foreign aid as the only means of bridging the exchange gap. We trust, in this view, that Mr Dulles is not bringing with Himself any plan that he proposes to discuss in New Delhi which promises any substantial offer as loan or gift. In spite of the fact that a loan is ultimately repaid, we do not favour the idea of a one-way traffic in help: the repayment of the loan is not sufficient recompense, and it is not in the best interests of Indo-American relations that we should receive fresh aid of a nature that might give rise to misunderstandings.

But there are, we suggest, numerous ventures that America could help to finance. We do not here have in mind a diffusion of dollars or energy in Community projects and the like. For, in the employment-intensive programmes that we shall need to undertake, the bulk both of effort and money has to be found from within the country itself. Where America can be of most help is in providing the foreign exchange and technical know-how in specific projects under heavy industry. Such provision of help is, of course, foreign aid: but it is aid of an acceptable nature and which, by enabling production of exportable commodities, is self-liquidating.

There is, already, an important element of co-operation between American business and India. The exploration for oil being conducted by Stanvac profits both parties. We suggest that it should be possible to draw up a number of schemes in which American capital could be put to work in India. Specifically, we have in mind the intensive mining of iron ore in this country with a view to the export of ores in large quantities to the US; and America does need iron ore. The help that would be necessary from the American side would comprise finance for a special port to be constructed in this behalf with facilities for mechanical loading; and we may add that, for this port, we commend Geonkhali as geographically most favourably situated. We would refer readers to the article we wrote in an earlier week on this subject.

What is it, then, that we should like Mr Dulles to do? The American Secretary of State quite possibly would be indicating to Mr Nehru that America, with its interest in the strengthening of India by industrial development, would like to increase the volume of aid during the next quinquennium. We feel that the best aid we can receive from America would lie in the Administration expressing its confidence in our country and in its fostering of American capital investment in India by giving some guarantee of repayment in the event of expropriation, at some future date, by India. In the long run, aid of this sort will be of greater help than outright grants or easy payment loans running to the millions of dollars.

The IMA Chairman Speaks Out

NATURAL justice demands that, for the fault of a few, the many cannot be punished. Yet, it would appear from the speech made by Mr B. Mitter at the annual general meeting of the Indian Mining Association, there is a disposition to generalise about the coal industry on the basis of conditions to be found in some of the individual producing units which, it is known, are by no means either representative or typical of the industry as a whole. As Mr Mitter points out, "no one claims that, in an industry which has several hundred individual producing units, conditions everywhere are ideal." Thus, it is unfortunate that aspersions continue to be cast about sub-standard conditions of working by collieries under private ownership; not only are these aspersions untrue; such "negative generalisations against the private sector serve little useful purpose and, at a time when so much depends on the fulfilment of the coal plan, the accent must be, not on creating divisions, but on mobilising of our resources behind one gigantic effort."

What Mr Mitter, in his capacity as Chairman of the IMA, has said, is important for the pointer that it gives to the need for the industry to set about tackling the problem of myriad uneconomic units. It is the fragmentation of collieries in the early years of the war which, largely, is responsible for the unenviable position today of the coal industry in the private sector. For, with fragmentation, in the first place, the coal lost in border seems has, with the years, increased in quantity. In the second place, it has rendered difficult plans of modernisation by the very fact that the smaller individual units could not afford the expenditure called for. In the third place, the uneconomic working as well as the far from ideal conditions in some of the collieries has painted, at least in the eyes of some quarters, the whole industry in dark hues. It would appear, then, that Mr Mitter has drawn attention to the "several hundred individual producing units," implicity hoping that action, both by industry and by Government, would be quickened on the question of amalgamation or some such similar measure in respect of the small collieries.

Although Government were not able to give any security of tenure, or guarantee against nationalisation, the IMA Chairman has stated that, "in the private sector, we are prepared to marshall our full potential behind these development projects and to finance them very largely from our own resources." Unfortunately, the formula for compensation, which Government have indicated they would follow in the event of nationalisation of mines that had proceeded with development, "is too limited in scope" and does not "instil any great sense of confidence amongst those who are only too eager to undertake large scale capital outlays on development work."

Mr Mitter is of the view that the formula does not take account of the fact that coal mining is an industry in which it would be "technically impossible to distinguish between capital outlay for maintaining production and capital outlay for increasing production." Secondly, the formula does not, also, have regard to the fact that there is, usually, a substantial time-lag before returns are available to the investor on developments that had been proceeded with. For both these reasons, Mr Mitter has suggested that Government should evolve a more comprehensive formula. In the view that the success of the Second Plan "hinges on the ability of the coal industry" to meet the new target of 60 million tons by 1960, we may suggest that the development of the coal industry would be greatly facilitated, if Government could see their way clear to giving some re-assurance on the matter of the formula to be adopted if the need for compensation arises.

*

Wagon Shortage for Coal

IN the earlier paragraphs, we have indicated what may be called the problems that will need to be solved if the target of coal production for the Second Plan is to be achieved by means of due encouragement and incentive being provided to the industry. But there is a far more urgent problem that has to be tackled; and, unless the solution is found, there can be no question of production rising to levels now envisaged—whatever the incentives that may later be offered.

This immediate problem is the supply of wagons. In recent months, far from any improvement in the transport situation, it has been reported that the supply of wagons has been deteriorating and that, in fact, the figure does not even touch the so called minimum guaranteed level.

The significance of such inadequate availability of wagons is manifold—and the repercussions could seriously disturb all current thinking on the coal production target. Firstly, so long as wagons are insufficiently in supply, raisings continue to pile up at the pitheads. It follows that the colliery so suffering from surfeit of stocks is unable to achieve optimum production. There is, too, the hazard of fire in the pitheads. The consumer, and he may be engaged in vital protion in another sphere, finds that his work is impeded as the fuel is either not readilly available or it reaches him too late. Finally, there is also the consideration that a colliery, which is hard put to it to maintain production, cannot possibly advance its development projects.

Thus, in the sphere of wagon supply for coal, it is not only necessary that the figure should be maintained at the guaranteed minimum needed to take care of the transport of the current rate of production; it must also be stepped up in accordance with the expanding production of and demand for coal. What is obtaining, unfortunately, is just the contrary trend.

We cannot emphasise too strongly the advisability of Authority in New Delhi ensuring that top priority be accorded to the lifting of coal; it is on coal, more than on any other industry, that the success of the Second Plan rests. Government must make doubly sure that stocks do not mount at pit-heads due to a wagon shortage; the host of adverse effects arising from such mounting stocks can spell disaster to the Second Plan; and, for that reason, we cannot afford to be indifferent to or delay the consideration of the problem of transport in coal.

Law for the Layman

The Hair Dressers' Case

By K. N. VISWANATHAN

IT has been laid down recently in England by the Court of Appeal in INGHAM v EMES (reported in 1955-2 All E. R. at 740) that when a hair dresser applies dyes to the hair of a customer he warrants that the dye is reasonably fit for that purpose; and if it turns out that the application of the dye has injured the customer, the hair dresser will be liable in damages to him for breach of warranty, or implied term. But if the customer knows that he is allergic to the dye proposed to be applied to his hair and does not pass on that information to the hair dresser, he will be disentitled from relying on the warranty or implied term. That is what happened in the aforementioned case of INGHAM v EMES. The facts of this case taken from the judgment of Lord Justice DENNING are as follows:—

Mrs Ingham the 2nd plaintiff in this case, is the wife of the first plaintiff and this action is brought by her against the defendant Emes, the hair dresser, for damages for the injury suffered by her on account of the application of a hair dye to her hair named Inecto Rapid by an assistant of the defendant, named Mrs Hughes. When Mrs Ingham was attending another hair dresser she then had her hair dyed with Inecto and after about 2 days her eyes became puffy. She consulted a Doctor and he suspected that it might be the Inecto which caused the trouble. After the experience, she did not have Inecto for a long time, because she knew it might have a bad effect upon her. In September 1951, she started going to 1st defendant Maison Emes in Godalming where she was attended upon by Mrs Hughes an assistant of the defendant. Thereafter for two and half years, Mrs Ingham regularly had her hair tinted by Mrs Hughes with henna and they were on good terms with one another. There was the possibility that Mrs Ingham might have casually mentioned to Mrs Hughes about her—being allergic to Inecto. In March 1954 Mrs Ingham had an important engagement to fulfil and therefore wanted to look her best. Further she was fed up with henna shampoos as they have to be done frequently. Mrs Hughes suggested to her to try Inecto and also told her that if she tried Inecto, she must have a test first because it was dangerous. In March 1954, Mrs Ingham went to have a test to see if she was likely to be harmed by Inecto.. Mrs Hughes opened a package of Inecto and put the instruction was "The manufacturers draw attention below to a simple and easy test which in the opinion of Skin Specialists will disclose any predisposition to skin trouble from the use of the dye. The test must as a matter of routine be employed on each occasion, regardless of the fact that it has been used with success on the same person on a previous occasion. It may be dangerous to use Inecto Rapid without this test." The test consisted in applying a little Inecto behind the ear, painting a film of colliodion over it and leaving it for 48 hours. If no irritation is experienced and no rashness or inflamation follows then the skin is not allergic and the dye may be used. On 9th March Mrs Huges applied the test in accordance with the instructions. Two days thereafter Mrs Hughes examined the patch and said her skin was perfectly clear. She told Mrs Ingham she could safely have her hair dyed with Inecto. Thereafter Mrs Ingham made an appointment to have her hair dyed with Inecto on March, 16. It was done on that day and after a few days she was suffering from accute dermatitis. Lord DENNING while holding that the dermatitis was caused to Mrs Ingham by the Inecto, however exonerated the hair dresser from liability on the ground that Mrs Ingham did not disclose to the hair dresser the fact of her being allergic to Inecto and therefore she is disentitled from relying the warranty or implied term. Says the Learned Judge "The second plaintiff ought to have brought home to Mrs Huges that she was allergic to Inecto. The difficulty that I have felt is that this looks to me like a plea of contributory negligence,

Editorial Notes

Ike Seeks a Second Term

The Republican party in America, after 20 years of sojourn in the wilderness, was triumphantly swept into power by the phenomenal popularity that greeted Mr Eisenhower when he stood for the presidency in 1952. Indeed, such was Mr Eisenhower's popularity that, last year, in spite of substantial criticism having been levelled at the Republican adminstration, it appeared more or less certain that, should the President decide to seek a second term, the Republican party would be as successful in the presidential election of 1956. But, last year, the President's serious illness caused a blight on Republican prospects, as it appeared that few in the party would be able to command popular respect and, therefore, extract the popular vote of a size sufficient to hold back the Democratic party.

Since his heart attack, Mr Eisenhower has recovered remarkably well, and is now, in fact, well able to shoulder the enormous responsibilities and carry out the awesome tasks that are inherent in the American presidency. Thus, the controversy has been raging for some time whether, in view of his improved health, Mr Eisenhower might desire to seek re-election. The question resolved itself into a number of particular problems which had to be decided. Firstly, would it be fair on the part of the Republican party to expect a recovered heart patient to volunteer for the strenuous task that would inevitably be his? On the other hand, would it be fair to the American people that a man not 100 per cent fit should be the head of the State? The Democrats had not originally intended to use health as an important election issue if only because they felt that, in so doing, they might generate resentment from Americans, who might believe that such tactics would be low. Some time ago, however, when Mr Eisenhower was closely questioned as to whether he would be seeking re-election, the President indicated that he had not yet made up his mind, that the decision he would make would have to take due regard of the fact that he was a recovered heart patient. Thus, it was the President himself who opened the way for health being discussed as an election issue.

Last week, Mr Eisenhower, after we do not know how much of heart searching, made his decision. He said that he was willing, if nominated, to seek re-election as President of the USA. This has been variously hailed, firstly as ensuring continuity of policy and the achievement of peace, toward which Mr Eisenhower has undoubtedly been working these last few years. Gallantly, the Democratic aspirant for nomination, Mr Adlai Stevenson, has also welcomed the President's decision, because it now enables the Democratic party to compete with the very best candidate that the Republicans could offer. Another ingenuous insinuation by a Democratic Senator was that it was proper that Mr Eisenhower should be the Republican candidate—because, as responsible for the Republican Administration of the last four years, he would be in the best position to make a defence of it in the election debates. There have also been scattered suggestions that Mr Eisenhower should have chosen, rather, not to seek re-election because of his health.

Obviously, on this question of health, Mr Eisenhower has received a full clearance from his doctors. An interesting point that he made was that the President of the USA is assured of better health by reason of the fact that there are always the most eminent doctors making the most careful of checks on him from time to time. At election time, then, it should be the simple issue of voting for the candidate of one of the two parties.

The Republican party's chances of emerging successful in the 1956 elections have improved considerably with Mr Eisenhower's decision of last week. It is true, also, that Mr Eisenhower's personal popularity and the well deserved reputation that he has as a man of peace seeking peace are both factors which weight the forthcoming elections in favour of, if not the Republican party, at least Mr Eisenhower himself. It is also true that the popularity of the Administration is by no means at the same high level as that enjoyed by Mr Eisenhower. Secondly, the probable candidate for the Democratic party, Mr Stevenson, is highly esteemed in America though, of course, he does not command the personal warmth of feeling from the masses. With the question of health likely to offset some part of Mr Eisenhower's popularity, the present indications are that the 1956 presidential elections may well turn out to be a close affair.

Economic Prospects for M.P.

Compared to other States, Madhya Pradesh enjoys a political climate which is more congenial to planned development. The dawn of a new industrial era, for which perhaps the State waited longer than other regions, is now in sight. The giant newsprint mill at Nepanagar is already contributing toward raising the general level of the State's economy. A paper mill at Ballarpur has gone into production. A cement factory, with an initial capacity of 216,000 tons per year, is going to be set up near Bilaspur. The construction work of the Rs 100 crore Bhilai Steel Plant progresses according to schedule. The prospects of a fertiliser factory near Itarsi and a heavy electrical plant near Drug are considered to be reasonably bright. Add to this the impressive strides taken by the State in outstripping the First Plan target of 2.81 lakh tons of extra food by the fourth year of the Plan.

It is fitting that the President of the Madhya Pradesh Chamber of Commerce, Seth Narsingdas More, should fully share in the zestful optimism with which the State looks to the future. He was all praise for the Government policy of removal or relaxation of the various economic controls and this he recognised as having given the necessary fillip to higher production.

To have said this was not to endorse Governmental policy at every level. Pointing to specific issues, he asked for the withdrawal of the outmoded system of licensing the cloth and yarn dealers in the State. The proposed electricity duty on power consumption would, he said, push up cost of production and retard expansion plans of several existing industries. Attention was also drawn to the need for rationalising the Octroi charges. It is however, known that Government are currently bestowing careful thought on this last issue.

*

The Paint Industry

It seems difficult to formulate a precise production target for paints and varnishes in the Second Plan. But the stimulus given by current internal development and the potential export markets in neighbouring Asian countries is likely to keep demand at a high pitch.

Most of the existing paint factories, however, are running below installed capacity. Considering that they could easily absorb the expected rise in demand, the first duty of Government should be to ensure conditions which will help them utilise their full capacity. This, in sum, is the keynote of the speech by the outgoing Chairman of the Paint Federation, Mr B. Banerjee at the annual general meeting held last week in Calcutta. Now that excise control over the industry has come to stay, Mr Banerjee pleads for better liaison between the Customs and the Excise and between the Excise and the industry. He was critical of exempting small manufacturers from duty without any compensatory inducement to improve and maintain the quality of their wares.

*

Orissa Budget

Orissa's new budget reveals a deficit of Rs 560 lakhs which should be reckoned as serious for a revenue exchequer of Rs 1937 lakhs. Both revenue and expenditure stand at an appreciably lower level than in the revised estimates of the current year, the revenue being lower by Rs

World of Finance

Thrills and Travails of Budget Leakages

IN every aspect of policy-making and detailed implementation during Sir Chintaman Deshmukh's stewardship of India's finances, there has been such confident competency, and benign Providence has befriended his regime so constantly, that, in all these six years, his record has been marred by no untoward event but, on the other hand, marked and distinguished by every attribute of propriety. From this point of view, the admitted leakage of the secrets of this year's budget will be construed by Indian superstition to be in the nature of a blemish essential to relieve and soften perfection. Human aspiration must be content with qualified perfection; and Sir Chintaman need not be unduly perturbed or disturbed that this leakage occurred or that its occurrence was seized by the Opposition as a suitable occasion to score a debating point against a minister who had so far seemed well nigh invulnerable.

Hardly a month ago, Indian Finance referred to the masterly strategy in regard to the nationalisation of life insurance. Over fifty officials had to be taken into confidence. At least half a dozen in the top ranks were in the know of every facet of the plan and procedure for nationalisation. On the side of the interests concerned, there was an uneasy suspense in which the most outstanding trait was an expectancy of the worst. Yet, when, on that fateful Thursday night, the Finance Minister announced, in a radio talk, Government's final decision to launch nationalisation of life insurance on an extensive front and with an intensive sweep, the announcement had all the effect of a bolt from the blue. It was a masterpiece of well-guarded secret. The 1954-end transformation of the Imperial Bank of India into the State Bank of India was, likewise, an official pronouncement which startled by its suddenness. Those who are making so much ado about the clandestine trafficking in the 1956-57 budget proposals should have the fairness to concede full marks to Sir Chintaman for his consummate handling of supersecrets in instances like those we have mentioned, as well as in the case of budget after budget effecting tax-changes calculated to evoke market repercussions of such variety and magnitude as would appeal particularly to the fraternity who set out to get rich on news illicitly secured.

In advancing this line of reasoning, we are aware of our overlooking the simple truism that any stick is good enough for the Opposition to beat the Treasury dog. Thus, instead of handing a bouquet to the Finance Ministry for its superb tactics in regard to nationalisation of life insurance, the Opposition demanded to know why this was done through an Ordinance, and not through orthodox legislation progressing step by step through Parliamentary schedule and providing, at every stage, endless occasions for MP effusions. The Opposition just refused to believe that the essence of life-nationalisation's success was the strategy that took managements unawares. This is, indeed, a double-edged fork. If, in the one case, Sir Chintaman had planned everything with scrupulous regard to secrecy, the Opposition twit him with unnecessary furtiveness; and if, in the case of the Budget, the eavesdropper has eluded him, he is charged with negligence.

Let us grant that there is a traditional sacredness about Budget secrets. But, let us also admit that, despite the traditional precautions taken in good faith and with stern determination, leakages have occurred in the past and, we may be sure, will occur in the future, so long as the annual event of the national budget remains invested with its vast potentialities for thrills and tremors. In the war and post-war years, New Delhi has been infested with swarms of five percenters, the tribes who are, irreverently but accurately, described as touts; and these go-betweens have pushed into the shade those nosy Parkers who get active particularly in the eight or ten weeks preceding the budget. Sir Basil Blackett used to boast that he could identify a nosy Parker when he saw one, but realised that the one person that this gent would avoid was the Finance Member himself. For ways that were dark and wiles that were sure, none like the sleuths for budget kabbar. Some of the Members in the Assembly promoted (and benefitted from) the activities of the budget-eavesdroppers; but Sir Basil had such a compact and consummate staff that his regime passed without any unseemly incident.

Sir George Schuster, too, was equally well-served; and the premature disclosure of the silver duty imposed in one of his budgets was in no sense due to the successful enterprise of the news-hawks. In strict confidence, and in the utmost good faith, he had consulted a non-official member of the Assembly as to the likely public reaction to such an impost. This member, also in strict confidence and in utter bonafides, consulted some of his business friends. So, the circle of people thus consulted grew wider; and not all of them were animated by too fine a scruple in this respect. Tidy fortunes were reported to have been made on the advance information; and Sir George was greatly hurt and annoyed. But there was no breeze on the floor of the Assembly, nor storm in the columns of the press.

Sir George Schuster was succeeded by Sir James Grigg. Sir George was debonair, Sir James was angular. Sharpness and temper took the place of urbanity and habitual tolerance. So, when, in one of his budgets, Sir James suspected leakage, he became frantic in his condemnation and drastic in the measures taken to hound the conspirators. Nothing came of it. To this day, the plot remains unravelled, and the criminals are at large. The only thing that remains to this day as a reminder of Sir James's frenzy is the distinction of the Budget into Part A and Part B. While Sir Basil Blackett and Sir George Schuster were fully alive to the strategems and ingenuity of those who were, all the time, assailing the recesses and processes which guarded Budget secrets, they were content with the historical practice of regarding the Budget as an integrated performance. The heroic step of relegating the new tax proposals to Part B and of issuing Part B only after the Finance Member finishes outlining them in the Assembly is one hundred per cent Grigg invention.

Then came the war—and the post-war budgets. And, as we said, the touts have eclipsed the hawks. The distinction into Part A and Part B persists; but has it sheltered Sir Chintaman in the predicament in which he found himself early this week? Echo answers: Has it?

Let us turn from the gripping historical narrative to the sordid contemporary facts. Quite a number of enquiries about past leakages of secrets and forgeries of letters have yielded no results. Reason? The investigation sought to proceed from New Delhi to Bombay and Calcutta. The process may now be reversed with a view to find out whether it will be more rewarding. In this regard, we have two concrete suggestions to make. The first is in regard to nationalisation of life insurance. Stock Exchange circles aver that some of the big parties effected large bear sales in Indian Irons and Tata Ordinaries a few hours before the Finance Minister's broadcast. If the investigators could examine the books of the brokers and find out who were the parties on whose behalf large-scale bear sales were put through, some definite and useful information may be forthcoming with regard to the leakage of this secret.

The second suggestion pertains to the hurried transport of cloth from the godowns of some cotton mills in the last two or three days of February. It should not be difficult to get positive and authenticated information of such transfers from mill godowns; and this should be a helpful starting point from which the direction of the enquiry on budget disclosure could be charted.

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on March 6. Total amount offered was Rs 1,36,00,000. Tenders at Rs 99-6 per cent were accepted in full and those at Rs 99-6-9 per cent. were allotted approximately 55 per cent. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-5 per cent per annum.

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs. a. p.
1956:			
February:			
7th	1,68,25	1,00,00	2 8 3
14th	1,53,00	1,00,00	2 8 3
21st	1,00,75	1,00,00	2 8 6
28th	1,02,75	1,00,00	2 8 6

+

The returns of the Reserve Bank for the week ended March 2 bear the impress of influences usual to the beginning of the month as well as of seasonal influences. What may be described as purely intra-Governmental transactions are conspicuous by their absence. In the remaining weeks of March, however, the returns may be expected to disclose drastic changes reflecting such transactions. The sharp increase in active note circulation and also in outflow of rupee coin is recorded in the week under review. In order to meet the intensified

First Effects of the Credit Squeeze

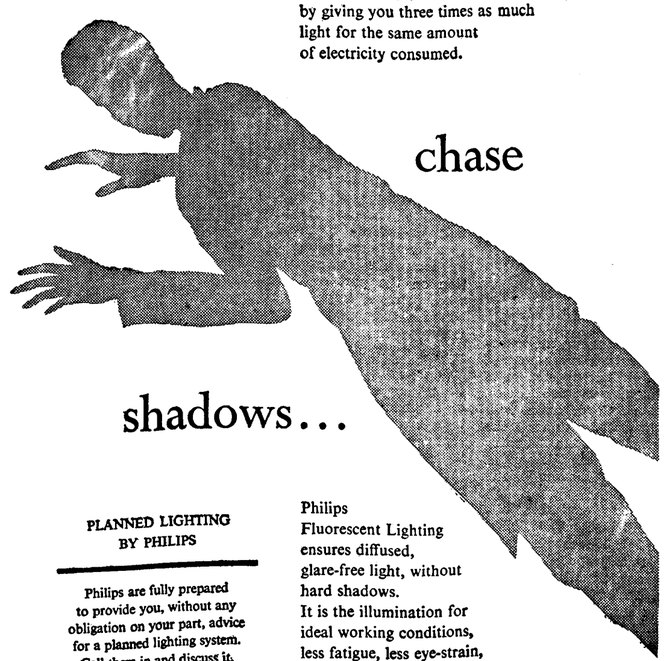
By PAUL EINZIG

THE Government's disinflationary measures are at last beginning to show their effects. During the first two months of the year there has been a distinct slackening of demand for consumer durable goods. Both the motor industry and the radio industry are beginning to feel the combined effect of the credit squeeze and the restrictions on instalment credit. A number of firms reduced their output, and this necessitated the dismissal of some of their workers. The total involved cannot be more than a few thousand all told, but many times more workers are put on short-time or at any rate their overtime working has been stopped.

Unemployment that has developed so far is quite negligible. The state of over-full employment continues to prevail. Even though statistics of unfilled vacancies are not very up to date, there is reason to believe that the number of vacancies continues to exceed considerably that of the unemployed. The extent of the change in the employment position has not been sufficient to alter materially the balance of power between employers and employees, except perhaps in the motor industry and in the radio industry. Employees in the engineering industry have just succeeded in obtaining wages increases of between 8 and 9 per cent, which means the creation of additional purchasing power amounting to at least £75 million a year. It is true, they originally claimed an increase if 15 per cent. Possibly they would have held out for over 10 per cent if it had not been for the setback in business activity in other industries. As far as engineering firms are concerned they continue to work to capacity and their delivery dates are still too long. Having regard to this circumstance the comparatively conciliatory attitude of the engineering unions was a welcome surprise.

During the course of March, the Prime Minister, Sir Anthony Eden, will have a series of consultations with representatives of the Trade Union Congress and of the various employers' organisations. Similar consultations were held last summer, with the object of achieving better industrial relations and stopping the wages spiral. The result was entirely negative because the unions then held all the trumps. Today the position is somewhat different. The Union must realise that Mr Macmillan's recently announced measures were only the first instalment and that he is prepared to go much further to break the wages spiral. Even though Mr Macmillan emphatically rejected suggestions that he should aim at creating unemployment as the only effective means of checking inflation, quite conceivably he will raise the bank rate further if necessary and this is liable to lead to more dismissals of workers. The unions are well aware of this and it is therefore conceivable that they are prepared to moderate their wages demand in return for an undertaking by the Government not to carry the disinflationary measures too far.

The Government does not intend to drive a hard bargain. In the course of his imminent consultations the Prime Minister is not expected to demand a wages freeze. He is expected to insist, however, that wages demands should be moderated considerably and deferred as far as possible during the period of the Government's disinflationary drive. The official argument runs as follows. With the contraction of domestic demand as a result of disinflationary measures it has become more important than ever, in the interest of maintaining full employment, to increased exports. Although the fall in domestic demand will increase the exportable surplus in many goods, exports can only be increased if prices are competitive. Moreover, to the extent to which there is a decline in the output it is essential that this decline should be accompanied by a corresponding decline in consumr purchasing power. If the latter is maintained or even increased, as a result of wages increases then too much money will be chasing once more too few goods.



The Government is satisfied that, once the inflationary situation is corrected, the increasing trend of output will be resumed. It will then become possible once more to grant wages increases without the risk of producing inflationary effects. The Prime Minister will appeal to the unions that they should exercise self-denial until such a change is brought about.

The Government is expected to

don't chase shadows...

An attempt to combine economy with efficiency is often like chasing shadows. Planned Lighting, however, is a sure road to success.
Planned Lighting means greater output, fewer accidents, less absenteeism. It's Fluorescent Lighting—by Philips—which will help you reduce overheads by giving you three times as much light for the same amount of electricity consumed.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it.
Philips Electrical Co. (India) Ltd.

PHILIPS

Philips Fluorescent Lighting ensures diffused, glare-free light, without hard shadows.
It is the illumination for ideal working conditions, less fatigue, less eye-strain, hence higher efficiency and increased production.
Why not try it out yourself? Ask Philips Lighting Service Bureau to examine your existing installations and submit recommendations for any improvements required.

Reinsurance Corporation of India

✱

Draft Scheme Considered

A DRAFT of the proposed Reinsurance Corporation of India has been circulated by one Mr Desai, who describes himself as a member of the Gains and Drains Sub-Committee". 'Gains' and 'drains' actually mean export and import of insurance. The revenue account of 'gains' and 'drains' is reported to have led to the view that insurance for India remains an import despite many reinsurances which Indian companies now receive. A professional reinsurer within the borders of India, mooted as an Indian enterprise, can arrest, it is believed, to a certain extent, if not fully, the outflow of foreign exchange.

Government of India, for sometime, were considering the floatation of such a company as a public enterprise. This was resented by the private sector in general insurance. After many consultations, a scheme of joint collaboration was devised. This also did not find favour with the trade. Ultimately, Government of India agreed to the proposal of Indian general insurers for the floation of a purely private enterprise. The proposed scheme is the logical sequence of the said agreement. Should private enterprise fail to give the correct lead, be unable to collect the necessary capital, or form a company which is inadequate to answer the country's requirements, Government of India will be entitled to step in to correct and balance the deficiencies.

The proposed Corporation will, thus, be constituted under the ordinary laws of the country managed by a Board of Directors. The scheme as outlined is briefly as under.

The authorised capital of the Corporation will be Rs 10,00,00,000 divided into 1,00,000 shares of Rs 1,000 each. It is proposed to issue immediately on formation of the Corporation, 25,000 shares of the face value of Rs 1,000 each totalling Rs 2,50,00,000.

"It is expected" says the memorandum, "that out of the capital proposed to be issued, Rs 2 crores will be subscribed for by Indian Insurers. The balance of Rs 50 lacs will be kept in reserve for allotment to new members. It is proposed to collect a paid-up capital amounting to Rs 1,00,00,000 by convenient instalments."

"The members or each member company is expected and will be required to cede to the Corporation premium equivalent to the following percentages in respect of the member's gross direct premium income written in India, in each calender year (a) 10 per cent thereof for the fire department (b) 10 per cent thereof for the marine department and (c) so far as the miscellaneous department is concerned 10 per cent thereof in respect of risks reinsured on surplus or quota share basis and 25 per cent thereof in respect of excess of loss covers where risks are reinsured on excess of loss basis."

It will thus be seen that, in the proposed scheme, participation in shares of the Corporation entails the obligation to cede business by the participators. A professional reinsurer's acceptance of business is determined by the nature of account, character of business, and management and the nature of terms. Likewise cessions are made depending on the character of service and terms of cession. These universally accepted principles governing reinsurance acceptances and cessions are proposed to be replaced by a system where either of the partners in the deal has to go blind. This is more unhealthy for the reinsurer than the company making the cession, for, the reinsurer accepts liability which may prejudice its results. Thus the compulsory system of cession by companies leaves little discretion on the part of the reinsurer who, being a large reservoir of business from many sources, can hope to profit only by virtue of having a large turnover.

It will further be noticed that obligation to cede is limited only to a "member company". Should, therefore, any of the Indian insurers refuse to participate in shares, there will be no obligation for the said insurer to cede business. Likewise, the large body of foreign insurer transacting a substantial amount of general business in the country will be under no obligation to cede business to the proposed professional reinsurer. The promoters based their hope possibly on the view they seem to hold that foreign insurers trading in India cannot but cede a part of their reinsurances to the proposed indigenous corporation, if approached, out of sheer compulsion of events. This is presupposing too much and is nothing less than a kind of political pressure. The more sensible course would seem to be to allot the remaining Rs 50 lakhs of share capital to foreign insurers. This is suggested because it seems the structure of the proposed corporation is based upon share participation by the members required to make cessions. Correctly, as stated earlier, the two issues should be kept entirely separate. The Corporation's acceptance of business should be influenced by no other consideration than the consideration of its own trade, nor should cessions be made by an insurer except for reasons which to it are most advantageous. The reciprocal obligations proposed for the Corporation are possibly not conducive to Corporation's own interests.

For many months, controversy is going on in the country about the propriety or otherwise of of foreign capital participation in the proposed corporation. Foreign general insurers trade on equal terms with their Indian counterparts in this country. There is no reason why foreign insurers should not participate in the capital structure. There should, at least, be no bar against them. The present scheme, where Indian general insurers have been specifically invited to subscribe, cannot but have a limited outlook when it deliberately excludes foreign general insurers. The reciprocal obligation on which the scheme is based cannot, then, be enforced agains' insurers nor is political pressure, which is a form of coercion, always the answer.

Considerable thought has been execised in devising a system whereby there can be no "possibility of domination of the Corporation by one or few shareholders." A "promoters agreement notwithstanding any iights under the Indian Companies Act and/or the Indian Insurance Act" has been envisaged. "A convention", says the report, "will be established and it will be provided in the Promoters' Agreement that, for the purpose of voting, a company and its subsidiaries' share be regarded as one group and the maximum voting exercisable by either a member or a group shall not exceed 12½ per cent of the total exercisable voting right at any time."

This is all very good and looks attractive on paper. Conventions however, have no legal sanction and there will be no recourse if any member goes against convention and stands on legal rights. It is equally doubtful if posterity can be bound by conventions now entered into in all good faith. The correct course would be to limit the shareholding of a company or a group to 12½ per cent. Foreign companies, if accepted as subscribers, will not have more than 25 per cent holding amongst all of them with a defined limit on pro rata basis for each company. There will, thus, be voting rights limited according to shares. Foreign companies, even if they vote as a combine, will not be able to exercise more than 25 per cent of the total votes.

The proposed corporation, from the standpoint of private enterprise, must be careful to see that it does not blunder into a mass of fruitless entanglements. If, in the course of its inception, it becomes the subject-matter of wrangle and is manoeuvred to subserve group interests to the sacrifice of larger interests of the country, it will be only a matter of days before the Government of India would step in and moot the Corporation as a public venture. Private enterprise is, thus, on trial; and the sooner this is realised, the better it is. The theoretical and practical basis of running reinsurance company as a professional in the trade is quite different and entirely independent of shareholding. It is unsound to have shareholding as a dominant issue in running the professional reinsurer on sound business lines.

✱

Tubes Manufacture

IT has been recognised that, in the fashioning of Indian development on an ambitious scale, the most important pre-requisite for the successful implementation of all plans that we might have is co-operation. Co-operation of various sorts is needed—in the villages, between the private and the public sectors, and on a government to government level. This has been recognised. But action in this respect alone can provide the incentive for and the encouragement of co-operation on an ever-widening scale. Last week, in Jamshedpur, we had an example of what planned co-operation can achieve—and especially if the parties to the co-operation are themselves unquestionably efficient and as high in their solicitude for the public interest.

Stewarts and Lloyds are the largest producers of steel tubes (850,000 tons a year) in Europe; and they are also one of the longest established in the field. In the matter of steel manufacture. Tatas hold a similar position in Asia. And, as Mr A. G. Stewart, Chairman of Stewarts and Lloyds, pointed out, his company and the Tata Iron and Steel Company are probably two of the cheapest producers of steel in the world. The new venture, is, thus, a partnership between true leaders in the steel industry 'resting squarely on foundations of enterprise, tradition and experience", a fact which should lend it immeasurable strength.

Though the two companies entered into an agreement to collaborate as early as 1937, the war intervened to delay the formation of the Tube Company till 1952. The new plant is situated some two miles south-east of the Tata Iron and Steel Company's works at Jamshedpur. Designed by the British company and erected under their direct supervision, the plant is now complete in all details.

The main producing plant consists of a Fretz Moon mill of highly modern design, with a capacity of approximately 90,000 tons per annum and covering the range of tube sizes, 1/2 inch to 3 inches nominal bore, that is mostly in demand in India. The Tata Iron and Steel Company's Strip mill, capacity 200,000 tons, will supply strip to the Tube Works in the form of coils. The tubes so manufactured will be suitable for water and gas supply and for low pressure steam piping and are expected to fulfil the greater part of the

World of Jute

Rise in Jute Goods Stocks

THURSDAY'S news that stocks of jute goods at the end of February have increased by 11,300 tons as compared with those at the end of January, has come somewhat as a surprise to the jute markets. For till the previous day the consensus of opinion seemed to be that, though an increase was inevitable in view of the further increase in looms, the difference would not be so large as to engender feelings of pessimism. Moreover, marketmen had been favourably influenced by the fairly large enquiries received in the past few days for sackings from Australia

When the IJMA figures relating to stocks at the end of February reached the market there was a perceptible decline in enthusiasm and Hessian 40"×10 Oz Ready fell by six annas to Rs 40-10 with B Twills Ready showing a loss of over one rupee at Rs 115-12 from the previous closing of Rs 116-14. There was a corresponding marking down in rates in the forward positions also and Hessian 40"x10 Oz April June came down to Rs 41-2 from Rs 41-8 and B Twills from Rs 117-6 to Rs 116-2. In the Sackings section Hy. Cees Green lost Rs 1-12 to quote at Rs 114-12. Cornsacks, Cubans, and A Twills all lost a rupee each to be placed at Rs 118, Rs 144 & Rs 139 respectively. Liverpool Twills were marked down to Rs 131-8 from Rs 132 and sugar bags from Rs 134 to Rs 132.

The reactionary trend that had been witnessed in the goods section, however, did not extend to the raw jute market. Assam Bottoms which quoted at Rs 31 per maund the previous day continued to quote at the same rate even after the release of the stock figures. Evidently, raw jute holders are not worried about the stock position of jute goods as they seem to have reasons to believe that raw jute supply atleast in Pakistan is not as plentiful as it was earlier expected to be.

It would appear that Indian dealers have derived encouragement to hold on to their stocks of raw jute by the apparent scarcity of the raw material that is currently being experienced in Pakistan. Though it is not clear how stocks have been brought to such a low level in that country, the fact remains that raw jute markets have little stocks on offer.

The reversal of the trend in raw jute prices is certainly not conductive to widening of foreign interest which is already at a low ebb. Apart from the quite recent enquiries from Australia for sackings, the past two months have failed to produce any sizeable business from abroad. The steady rise in stocks with mills since the turn of the year is an indication of the diminishing interest in foreign countries in Indian jute goods. It is rather unfortunate that matters should come to such a pass so soon after the industry has decided to increase its capacity by unsealing looms.

It may be recalled that in October 1955 stocks touched a new low of 62,300 tons. Encouraged by the healthy statistical position, the trade began to think in terms of an increase in production. By December, the IJMA had come to the decision that, considering the improved demand, an increase in production was necessary. Accordingly they directed mills to unseal 2½ per cent of the looms wth effect from 9th January 1956. Within a few days of the coming into force of that decision, the IJMA reviewed the position again and decided to direct the mills to reopen another 5 per cent of the looms with effect from February 20. It is to be noted that those decisions were taken after great deliberation.

The inclease in stocks in the past two months is nothing to be worried about. For, in the first place they do not compare unfavourably with those at the corresponding period of last year, when production capacity of mills was less than it is now. But the new trend is not to be passed by as though it is of little consequence. Even without the present rise in raw jute prices, mills are finding it difficult to make minimum profit from the sale of manufactures. Their difficulty will be further increased by the high price levels now obtaining for raw jute. It is highly improbable if foreign buyers, who are already hesitating to buy at prevailing levels, will show any inclination to buy jute goods from India at further enhanced rates.

✱

The market for Jute Goods, after ruling quiet in the early part of the week, firmed up toward the close due to speculative buying, being influenced by the rumours of only a small increase in stocks with the mills at the end of February and the firmness of the raw jute section. Persistent rumours of a Russian order were also a contributory factor. No fresh business was, however, done with foreign buyers, who seemed to be awaiting further developments before entering into commitments at the current levels of prices. Mills took advantage of the rise in prices and sold fair quantities at higher levels. The following table shows the trend of prices during the week:—

	Week's Opening Rs. a.	Week's Closing Rs. a.
Hessian:		
40"×10 Ozs.:		
Ready ..	40 5	41 0
April-June ..	40 14	31 8
40"× 8 Ozs. ..	34 4	34 12
40"×7½ Ozs. ..	31 2	32 4
Sackings:		
B. Twills—		
Ready ..	114 8	116 14
April-June ..	115 4	117 6
Hy. Cees (Green) ..	112 4	116 8
Cornsacks ..	117 0	119 0
Cubans ..	143 0	145 0
A. Twills ..	137 8	140 '0
L. Twills ..	129 8	132 0
D. W. Flours ..	133 0	135 0
Sugar Twills ..	132 4	134 0

In sympathy with the manufactured goods section, prices in the Raw Jute section firmed up towards the close due to greater interest shown by mills in their purchases. Sellers were not inclined to reduce their rates due to a feeling that, since production was running at a higher level with the unsealing of further looms from February 20, mills had to make larger purchases sooner or later in order to augment their stocks. Moreover, firmer advices from the Pakistani markets continued to encourage local stockists in maintaining the higher rates. The following mill business took place during the week in:—Assam Bottoms at Rs 30¼; Indian Northern Bottoms at Rs 31 Middles at Rs 34; Daisee Mesta Bottoms at Rs 28-4, Middles at Rs 31¼ and Bimli at Rs 28, all per maund for March delivery.

SOUTH EASTERN RAILWAY.

TENDER FOR FABRICATION OF GARMENTS.

Tender No. CS1/56/K6/9/1(56) in invited by the Controller of Stores, South Eastern Railway, Garden Reach, Calcutta —23 for fabrication of garments required for the staff of the Railway during the period from 1-4-56 to 31-3-57 on annual contract basis. Tender forms are obtainable from his office (I.B. Section) on remittance of Rs. 2/- by Money Order in case of Mofussil Firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta by local firms. Earnest Money is Rs. 1,000/- in cash. Valid Income-tax Clearance Certificate must accompany the tender.

Closing date March 28, 1956 at 12 noon.

STATE BANK OF INDIA

Successors to the Imperial Bank

The need of the day

Our country's economy is expanding rapidly and with the Second Five Year Plan in sight it will gather further momentum. The need for a strong and efficient banking system has never been greater than today as the nation's savings require to be pooled and managed in a resourceful, confident and prudent manner.

The State Bank fulfils these expectations. It has started upon a programme of opening 400 additional branches throughout the country within the next five years.

The State Bank of India offers to serve you efficiently in many ways. It takes care of your savings and valuables, lends moneys against goods, produce and other approved securities and assists you by accepting appointment as executor and/or trustee of your will or trust. Its wide and varied services are at your disposal. Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Calcutta, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

World *of* Tea

Fall in Exports

ACCORDING to the latest available figures, imports of tea into the UK was 43 million pounds lower during 1955 as compared to those of 1954, while production was 35 million pounds higher between the two major producers—India and Ceylon. India has suffered markedly in her exports to both the major importing countries, having dropped by 38½ million pounds in the exports to the UK and about 6 million pounds to the USA.

Shipments of tea from Cochin to various destinations have shown a decline from 2.95 million pounds in the week ended 8th February 1955 to 2.37 million pounds in the corresponding week of this year. Similarly, exports of Indonesian tea have shown a decline to 55.80 million pounds during the period from January to November 1955 from 77.04 million pounds in the corresponding period of 1954. The following table shows the shipments of tea from the Cochin Port to various destinations (in lbs):—

Destination.	1st to 8th Feb., 1956	1st to 8th Feb., 1955
To the UK ..	1,868,545	2,715,900
„ USA ..	108,737	96,689
„ Canada ..	109,154	Nil
„ Australia ..	Nil	Nil
„ Other Countries	185,449	112,562
„ Indian Ports	95,377	26,585
Total ..	2,367,262	2,951,736

Tea shipments from East Pakistan have, however, recorded a marked rise in January 1956 and totalled 6.46 million pounds as compared with 5.36 million pounds in the corresponding month of last year. Shipments to Karachi for internal consumption have also risen sharply to 4.16 million pounds in January as against 2.71 million pounds in the corresponding month of 1955.

North Indian tea producers hold the view that the Government of India's decision to allow exports of 480 million pounds of tea out of the 1955 crop and to withdraw the restriction on exports to London auctions are likely to give some immediate relief even though they may not affect the world market to any extent. There is very little difference now between London and Calcutta prices; and even if more tea is offered in London, the Indian producers are not likely to get much benefit. They also hold the view that any attempt at voluntarily restricting the crop will merely encourage other producers to take full advantage of it and that Ceylon will come in on the scheme in any case

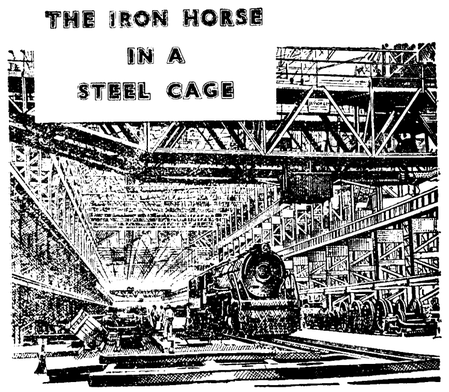
Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 54,000 packages for which there was a better general demand. The very best CTC Brokens and Fannings were keenly competed for and often sold many annas above brokers' valuations, while stylish Whole Leaf grades were also several annas per pound dearer.

Fannings grades were an irregular feature and were mostly one to three annas per pound dearer, while the more ordinary Whole Leaf grades and clean Brokens were fully firm to half an anna per pound dearer.

Low Medium and poor liquoring stalky kinds opened one to one and a half annas per pound lower, but closed fully firm to occasionally dearer, while any teas which showed an improvement in quality were keenly competed for. Following were the rates quoted per pound:—Clean Black Pekoe Rs 1-15-0; Plain Broken Pekoe Rs 1-4-6 to Rs 1-5; Medium Assam Broken Pekoe Rs 1-7 to Rs 1-7-6 and Best CTC Assam Broken Pekoe not quotable.

Offerings in the Internal Sale consisted of 19,700 packages of Dusts for which there was a good general demand. Black Leaf teas, suitable for the Middle East, received fair support at about last rates, while the best CTC Assams with good liquors were the strongest feature and were several annas dearer.

Medium Assams and Dooars with improved cup quality advanced by ½ to 1½ annas per pound, but those with plain liquors and poor leaf appearance were irregular and generally easier. There were a few lines of Darjeelings on offer, which received good support, especially the flavoury kinds. Following rates were quoted:—Medium Dooars Dust Rs 1-7 to Rs 1-8; Medium Assam Grainy Dust Rs 1-8-6 to Rs 1-9-6 and Best Assam CTC Dust Rs 2-12 to Rs 2-14.



Offerings of Leaf grades consisted of 4,700 packages for which there was an improved demand; and most offerings were selling ½ to 1 anna per pound above last rates.

In the Export Quota section, rates moved narrowly between 6 and 7 pies per pound at which levels some business was reported done.

In the Cochin market, offerings consisted of about 1,290,000 pounds. Quality showed some improvement for Mediums and high-growns, particularly from the Nilgiri district; and there was a useful selection on offer.

The sale was characterised by a good general demand. Best liquoring high-growns and good Mediums with bright liquors were keenly competed for at a considerably dearer rates. Lesser high-growns and Mediums were well supported at rates which were about As 2 per pound dearer, while Low Mediums generally came to an easier market and declined from half to one and a half annas per pound.

Whole Leaf grades again met with a rather restricted enquiry and were sometimes easier, but clean black-leafed teas received fair support at about last rates. Following rates were quoted:—Plain BP Rs 1-7; Low Medium BOP Rs 1-13; Medium BOP Rs 2-2 to Rs 2-3; Good BOP Rs 3 to Rs 3-4 and well-made OP Rs 2-6.

Chittaranjan is the largest locomotive manufacturing unit in Asia, designed to build 120 locomotives and 50 spare boilers every year under single shift production. In the construction of these immense workshops no less than 11,000 tons of STEEL were used.

The largest structure in the whole Project is the Main Assembly Shop, which measures 1560 feet long 212 feet wide and rises to a height of 75 feet. From this massive workshop roll India's locomotives—the visible results of the new industrialisation of India.

STEEL FOR PROGRESS

INSERTED BY THE INDIAN IRON & STEEL COMPANY LTD MANAGING AGENTS: MARTIN BURN LTD.

IIX 46

In the auction held at Colombo about 4,578,450 pounds were offered for which there was an active demand at generally dearer rates for improved quality. Among high-grown teas, there was a good demand for both Broken and Leaf grades and prices advanced appreciably. The quality of Nuwara Eliya teas showed little change. Although medium-elevation sorts were in strong demand, prices were sometimes slightly lower.

At the Chittagong Tea Sale No. 19, held toward the end of last week, offerings were 2,884 packages of Dusts and 10,814 packages of Leaf grades. The Leaf teas, on offer, showed the inevitable seasonal decline in cup quality and appearance, and the market generally fell away by As 3 per pound. Buyers took advantage of any decline in quality in the more popular BOP marks and these were frequently sold at As 3 to As 5 per pound below last rates. OP was quoted at Rs 2-2-0; BOP at Rs 1-10-0 to Rs 1-10-6; BPS at 1-8-0 to Rs 1-8-6 and OF at Rs 1-11-6 to Rs 1-12-0.

There was a very useful general demand for Dusts, particularly for non-wither types. Plain Sylhet Dust was quoted at Rs 2-6-0 per pound. Sale No. 20 will be held on the 14th March, 1956.

In London auctions, offerings were 24,993 packages, including 23,919 packages of Northern India teas. There was a very good demand, which strengthened as the sale progressed and prices for all the better quality teas marked a further advance. The best liquoring teas were again keenly sought after and sold well above valuations. Mediums and the clean plain kinds were fully firm to a shade dearer. Brown stalky varieties were very irregular and sometimes easier to buy.

Tea stocks in London, as at 24th February 1956, were 99.00 million pounds as compared to 96.42 million pounds a week ago and 127.45 million pounds a year ago. Landed between 18th and 24th February, 1956 were 13.72 million pounds, while deliveries during the same period were 11.15 million pounds.

World Overseas

US Notes

AMERICAN workers contine to add to their insurance holdings, one of their many forms of economic security. Preliminary estimates by Institute of Life Insurance Private Trade Association show that in 1955 workers and businesses in the United States bought more new group life insurance than in any previous year. Through group purchase plans, which often are provided for in union management contracts, workers obtain the advantages of broader coverage and higher benefits at lower cost. Many companies pay all or part of their employees' insurance programmes.

The value of new group insurance plans set up for American workers last year aggregated $9,300 million, about $..700 million more than in 1954. More than 2.4 million employees in private industry were brought under group insurance.

Adding United States Government employees also under group insurance protection by Act of Congress 1955, purchases came to $11,200 million and number of newly insured to 2.9 million, thus protecting half the labour force. An estimated 31 million workers, more than half the non-agricultural labour force of the United States, now own group life insurance. This is 20 million more than were covered 10 years ago. Insurance now in force with employee groups is estimated at $102.000 million more than 10 years ago and some $16,000 million more than a year ago. In addition to the $11.200 million in new policies, about $5 000 million of the 1955 increase came from additions of workers to previously established groups or from additional protection for those already covered.

There is a strong evidence that increasing private insurance ownership in the United States is continuing in 1956. Life insurance purchases in January were at an all-time high of $3,742 million up 21 per cent from a year ago. Life Insurance Agency Management Association of Hartford, Connecticut has reported that in January the new group life insurance for workers amounted to $822 million, about 120 per cent more than a year ago. Figures represent only new groups set up and do not include additions under group insurance already in force.

Another indication that life is more secure for American wage earners and their families comes in a report from Metropolitan Life Insurance Company, one of the nation's largest with headquarters in New York City. Basing conclusions on experiences of the millions of its industrial policy holders, the company says only one-third as many deaths occurred in this group last year as would have occurred if mortality conditions of some 50 years ago had continued to prevail. Despite outbreaks of respiratory diseases early in 1955 and intense and protracted heat waves during the summer, death rate among Metropolitan policy holders last year continued at all-time low of 6.2 per thousand which was established in 1954.

Tuberculosis and complications of pregnancy and childbirth established new low death rates last year among workers and their families holding policies from Metropolitan Life. Mortality from principal communicable diseases of childhood measles, scarlet fever, wooping cough and diptheria remained at all-time low of 0.3 per 100,000. Dearth rate from acute poliomyelitis was 0.6 per cent per 100.000 compared with 0.7 in 1954. 1.0 in 1953, and 1.5 in 1952. The company notes that there also was a decrease of about 25 per cent last year in number of cases of acute poliomyelitis reported from general United States population and attributed this in part at least to immunization programme begun after development of new Salk Vaccine.

Unprecedented growth and development of American pharmaceutical industry is helping the United States achieve highest general health standards in history, according to head of one of nation's leading drug manufacturing concerns. H. S. Burns, President of the United States Vitamin Corporation, told a meeting of Investment Bankers in Philadelphia this week that industry medical research programmes are being doubled and trebled to provide new and improved medicines for a population that is increasing at a rate of one million families a year.

Mr Burns pointed out that with the United States birth rate now more than 4 million a year and with the number of persons over 65 years of age expected to grow to 15.5 million by 1960 as a result of higher health standards and longer life expectancy, American pharmaceutical industry has been intensifying research in both pediatrics and genetics. The result, he said, may well be the still further expansion in numbers and good health of the overall population. More specifically, he noted it will mean prolonging mental and physical efficiency and productivity of nations working force.

*

Britain

DETERMINED BID BY U.K. TO EASE STRAIN ON ECONOMY

By JOHN KINGSLEY

THE increase in the Bank Rate to 5½ per cent (the highest level for 25 years) and the further measures announced by the British Government are determined attempts to ease the strain which excessive demand for both consumption and investment has placed upon the country's economy. The timing of the new measures was not due to a sudden emergency. Rather, they were taken to ward off the dangers which might arise as a result of unbalanced expansion later on.

The United Kingdom economy has enjoyed a period of continuous growth since the later part of 1952. Only toward the end of 1954 did the first signs of pressure on the country's resources appear, with private consumption—especially of durable consumer goods—rising more than production. At the same time, investment, which had previously been lagging, showed a sudden spurt. This put a strain on the metal-using industries which was intensified by the fact that the production of capital goods cannot easily be increased in a short time.

In spite of the increased home demand, British exports have continued to expand, but imports have risen at a higher rate—a rise which, in turn, has led to a deterioration in the balance of payments and a decline in the gold and dollar reserves. The Government has taken new measures in good time to forestall a balance of payments crisis which might well mean the end of prosperity and raise the spectre of mass unemployment for the first time since the 1930's.

Britain's leading position in world trade and banking makes it natural that its problems should be widely discussed. It is not, however, the only country faced with the problem of an overstrained economy. All the industrial countries of Western Europe are confronted—to a greater or lesser degree—with the danger of inflationary pressure.

This is clearly set out in the eighth report of the Organization for European Economic Co-operation (OEEC), whose timely publication on the day after the economic debate in the House of Commons should dispel any misconception of a British "crisis" and bring home the fact that the threat to economic balance is a problem to the whole of Western Europe. The report lays great stress on the danger to European prosperity because "signs of inflationary pressure have appeared, even if there has been no element of crisis in the situation".

The description of the signs indicating the strain which demand is putting on productive resources fits the present situation in the U.K. Thus the report points out that throughout Europe consumption tends to outrun production in most industries, and that a particularly tight situation has developed in basic industries such as coal and steel. In most OEEC countries the demand for labour has taken up all the slack in unemployment.

In some countries there have been significant increases in the general level of retail prices. In quite a few, excess demand has led to a deterioration in the balance of payments. These strains, the report stresses, have originated not in external causes (as in 1951) but in this same too rapid rise of internal demand, increased investment being combined with rising consumption.

The new measures taken by the British Government aim to moderate this demand. This was also the purpose of the measures successively taken in the course of 1955, which achieved the objective of reducing, if not eliminating, excessive pressure. The latest measures are stronger than the earlier ones but do not cancel them. The whole adds up to a powerful and persistent "squeeze" which can hardly fail to cope with the tempo of the present boom conditions.

The OEEC recommendations for coping with the present strain include prompt action in introducing new restraints if the existing ones prove insufficient (Mr. Harold Macmillan, Chancellor of the Exchequer, has proved that he realizes the importance of this advice); desirability of non-interference with investment; combination of monetary measures with fiscal action; and reduction of public expenditure. Indeed, the new UK measures fully comply with all these suggestions.

The restrictions on investment are designed to cut down new demand for investment and not actual investment expenditure—there is no question of any fall in the present level of industrial investment (which rose by 12 per cent last year) but only of a slowing down in the tempo of new investment. Private consumption will be moderated by the indirect effects of the higher Bank Rate, by the new hire-purchase restrictions, and by the reduction of the bread and milk subsidies.

Current Government expenditure, though showing a slight increase in money terms as a result of higher costs, will make a smaller demand on the country's resources of labour and materials. Finally, local authorities will be making substantial further cuts as a result of "standstill" orders.

The measures taken by Britain are more forceful than those adopted by some other countries with a similar domestic situation. This is natural enough, it is a consequence of the United Kingdom's determination to carry out its oversea commitments which, in the free world, are second only to those of the USA. Britain requires to restrain domestic inflation in order to maintain sterling as a strong world currency to comply with its commitments to oversea investment; and for the repayment of its debts and to fulfil its military obligations overseas.

These last obligations require an external expenditure of £150,000,000, and constitute a burden on the balance of payments which no other European country has to carry. Worth remembering also is the fact that in Britain defence expenditure takes a larger proportion of national resources

than in any other Western European country.

It is because of these obligations that pressures sometimes develop more quickly in Britain than in other European countries. But as the new measures demonstrate, the necessity for correcting such pressures in good time, so that these commitments may be fulfilled, is fully realized.

The Sterling Area's gold and dollar reserves rose by $61,000,000 during February and stood at $2,210 million at the end of the month. Announcing this in London on March 2,,, the Treasury said that defence aid estimated at $6,000,000 was received from the United States during the month.

A sum of $8,000,000 was paid in gold or dollars to the European Payments Union (EPU) in respect of January, and $2,000,000 was paid to creditors of EPU in bilateral settlements.

On the provisional figures for the month, the United Kingdom had a deficit of £8,000,000 with EPU, which will fall to be settled in March—75 per cent in gold or dollars and 25 per cent by an increase of the debt to EPU.

The gold and dollar reserve figure for February, say London observers, will be welcomed not only because it is the best figure in the series since the Middle of 1954, but also because it continues the underlying improvement which financial commentators have detected over the past five months if the persistent adverse balance with Western Europe and special items of debt repayments are allowed for.

But will take many months' instalments of the magnitude of February's $61,000,000 before the reserve figures can be considered as at a satisfactory level. And this is the time of year when the reserves benefit most from seasonal factors.

The United Kingdom's balance with Organization for European Economic Co-operation (OEEC) countries is the least satisfactory aspect of the picture. Britain's own trade balance with Western Europe was adverse in January, and may again be so in February. But the British position in EPU is determined by many factors other than her own trade.

Even so, it is noteworthy that at this week's Ministerial meetings of OEEC countries in Paris the United Kingdom has affirmed its adherence to OEEC's trade-liberalization programme.

Some of the countries with which she has current trade difficulties lag behind Britain in the freeing of trade from import restrictions.

The Glasgow Herald (March 3) comments: "The news of the rise in the gold and dollar reserves—more than double that of January and the best for almost two years—was accompanied yesterday (March 2) by the announcement of the next step in the control of credit: the offer of £300,000,000 of a five per cent short-dated Government stock.

"The first of these events is concrete evidence that the world has been impressed by the firm policy instituted a fortnight ago, while the second is an earnest that the battle against an excess of purchasing power is to be carried forward without flinching.. On most days throughout the past two weeks or so, there has been evidence that people in both Europe and the USA who owed money to this country were paying up, and that there was some tendency to shift balances here to take advantage of the high rate.

"It is no longer possible to say that the Government have failed to act, although they may have to be even more drastic. They are now entitled to the goodwill of all responsible people of whatever political party in their effort to salvage the £ and rebuild prosperity on a sounder basis."

Australia

For the first six months of the year 1955-56 Australia's imports exceeded her exports by approximately £A24 million as against an excess of imports of £A29 million in the corresponding period of 1954-55, the Australian Government Bureau of Census and Statistics announces.

The total imports in December 1955 were valued at £A63.3 million as against £A64.1 million in December 1954—a decrease of 1.2 per cent.

The total exports in December 1955 amounted to £A73.4 million as against £A85.5 million in December 1954—a decrease of 14.2 per cent.

Australia's relatively heavy participation in external trade is primarily associated with the fact that she has on one hand been favourably placed for resources suited to the production of large exportable surpluses of wool and other rural commodities, states the December issue of "Trends", published by the Rural Bank of New South Wales.

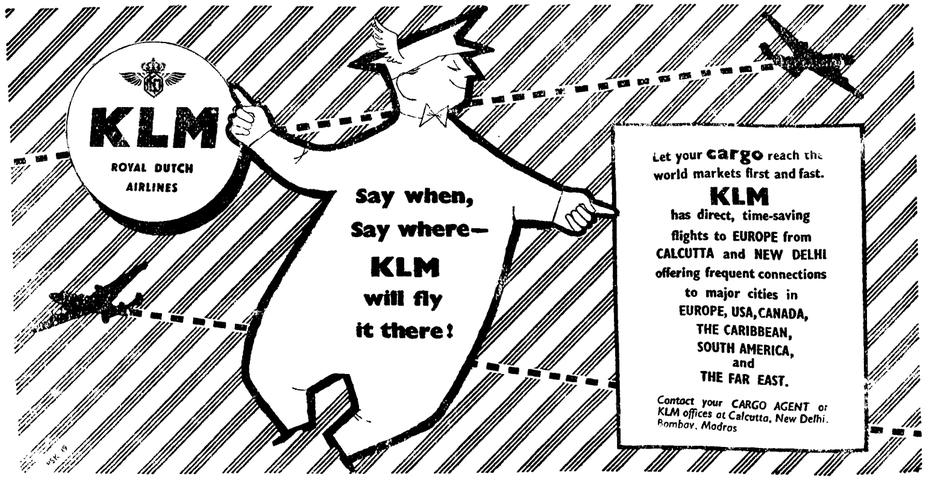
Equally significant, on the other hand, is the fact that in the process of national and industrial development Australia needs to import substantial quantities of various raw materials and manufactured goods.

In addition her external financial problem includes the yearly financing of a substantial "invisible gap" which represents the net cost of freight and insurance on imports, interest and other remittances payable to overseas lenders and investors in Australia's development.

This invisible gap means that Australia's export income must yield enough not only to pay for visible commodity imports, but also to provide external credits from which the net invisible debits may be met.

Unless Australia achieves a favourable trade balance of £A150 million or more yearly—the approximate net cost of invisible transactions—an adverse balance of payments results, and it is thus necessary to draw on the external reserves.

In these circumstances the economic desirability of ensuring that export income is sufficiently large and buoyant to finance both visible and invisible payments abroad gives a special significance to the terms of trade, says "Trends".



The more favourable the terms of trade for Australia the larger the volume of imports that can be exchanged for a given volume of exports. For example, in the period since the Second World War wool exports have on an average exchanged for 1½ times as much imports as before the war.

Although the terms of trade declined in 1954-55 (the export price index was 450 and the import price index 395 as against 496 and 390 respectively for 1953-54), and may fall further in the current year with wool prices at rather lower levels, they will certainly be more favourable than before the war.

There is still no convincing evidence that the long-term outlook points to unfavourable terms of trade for countries such as Australia which predominantly export farm products.

But it is true that what may be termed Australia's "propensity" to import tends in periods of great domestic prosperity and consumer demand such as experienced in recent years to run ahead of the "ability" to import as measured by export earnings.

The maintenance of favourable terms of trade is not in itself a solution as the need for import restrictions in 1952-54 and again in 1955 has clearly shown. Favourable terms of trade are a useful supplement to, not a substitute for, a favourable trade balance.

"Insist for your containers on "BHARAT". They are economical and made by Indian Capital, Labour, and Know-how. Standard 18 Gauge 42/45 "BHARAT BARRELS" price is Rs. 25-8 ex-factory. If you do not get BHARAT BARRELS, Write to Box No. 247, BOMBAY."

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It.

"NORMALLY, it is the business of the intellectuals to give a lead in dealing with such problems, but our intellectuals have failed us. Many of them do not even seem to realise that the nature of the problem, others suffer from a kind of frustration and a crisis of spirit, not knowing where to turn". Thus, Mr Nehru discussing the contemporary aspect of what he calls the "split personality" of India. I am not attempting to provide any kind of alibi for Indian intellectuals when I say that precisely the same charge has been laid at the doors of intellectuals of every country and of intellectuals all over the world in the context of present global discontents. Years ago, Mr Julien Blenda brought the terrible indictment against this class by his famous expression "La Trahison des clercs." A recent series of articles in Encounter attempted to survey the activities of this rather loosely described class, and the overwhelming impression that one had in regarding them was one of the ineffectiveness of the intellectual in directing national or international policies.

✱

But consider the immensity of the tasks they are called upon to accomplish and the formidable obstacles in the way of their effectiveness in the modern context. In the first place, they have to work only indirectly, for, by definition, they are outside the power game and active politics. This makes their impact somewhat weak. There is another aspect of the matter: in colonial countries, as India was until the other day, the intellectual feels obliged to enter politics in the pursuit of ideas he holds dear and in the process is lost to the intellectual class. The loss to India in this fashion has been terrible: we have lost Mr Nehru to Politics in this fashion and unless one consciously withdraws from politics and reenters like Achut Patwardhan a contemplative life, or like Jayaprakash Narain a life of practical idealism, they are permanently lost. The depletion of the ranks of intellectuals caused by this circumstance is, in fact, a matter for serious worry even today.

✱

Secondly, the intellectual is an increasingly ineffective person in an age of mass media of communication and stimulus. Though, theoretically, it should now be possible for him to reach a larger audience than ever before, fewer and fewer people are rendered capable of responding to ideas as more and more people become conditioned to the stimuli of the least exacting kind. Thus, the intellectuals are obliged to talk and write for intellectuals; and if, in the process, they do not quarrel violently (and in course of time lose touch with each other) they tend to form coteries of their own living on each other's washings.

✱

The third problem that the intellectual has to face is that increasing specialisation has tended to destroy his existence as a class. A general interest in ideas as such is fast becoming a rarity except as a kind of dilettantism. The result has been that, compared even to the early part of this century, the illiteracy of the nominally educated in matters other than their particular narrow discipline is appalling. This is a terrible problem because of the far reaching consequences of the act of the specialist like that of the scientist engaged in the manufacture of deadly weapons. And, when the scientist is conscientious enough to consider the political and moral consequences of his acts, he finds himself treated, as Oppenheimer was, as little better than a criminal.

✱

And then there are the peculiar problems of the intellectual of the present century in which, unlike the mandarins of other ages, the intellectual was called upon to show an overt interest in politics. The consequences of this compulsion in so far as it concerned India, I have already touched upon. Elsewhere, too, the consequences of the brief honeymoon has been disastrous for the intellectual himself. Inevitably, Marxism exercised a profound influence and, if one did not progressively surrender, to that exacting dogma, every one of one's cherished rights of free inquiry, one turned into a bitter anti-communist, a self lacerating crusader against all that is implied by the Soviet Union. In either case, one's effectiveness as an intellectual was seriously limited because of the obsessions one laboured under.

✱

The Indian intellectual class had its share of these ills and had some others of its own. The most serious of these has been, as Mr Nehru has pointed out, the snapping of the continuity with the traditions of its own earlier intellectual life. In Europe, despite their considerable other difficulties, the learned classes had a continuous tradition of inquiry and had no special problems of assimilation. In India, assimilation may not itself have provided any serious difficulty—for, India's capacity for synthesis is well known—but the difficulty in the present situation was the complete or the almost complete destruction of the earlier traditions. The powerful stimulus of a renaissance that came from contact with the West was, for the most part, allowed to exert its power without being related to our own past. But, since no one can escape his past, the outward forms of institutions and customs continued to exist side by side with notions and habits acquired from the West. Many were able to accommodate both without any obvious sense of incongruity because they were blandly unaware of it. Others, more sophisticated, though not strictly honest in the traditional Western sense of the term, were able to make the necessary mental reservations and live in apparent disregard of the anomalies. Quite a few frankly chose the Western values and specifically forswore our earlier traditions. Only a very few made the really difficult task of trying to achieve a synthesis of the two.

✱

The ultimate hope for the future of our country, as for the rest of the world, lies in the ability of these people who have achieved the synthesis to put across their message. In the context of the future of our country it is obvious that our history has to make sense as a whole. Any kind of hope that we can skip the last three hundred years (or the last thousand years, as some wish) and bring back the days of our ancient glory in the form in which it originally existed is totally unrealistic. On the other hand, the advice that we should cut ourself completely free from our past and become, in effect, a cultural colony of America, or Great Britain, is a counsel of despair. It is possible, and it is imperative, that we synthesise the best we have learnt from the West, (and none but a fool would deny that what we have learnt is enormous) with the best in our own ancient heritage. Something of the sort was actually done by successive influences like that of Raja Ram Mohan Roy, Swami Vivekananda and Gandhi. At the present moment, we have still with us Nehru, Vinoba and Jayaprakash, who exemplify, each in his own way, certain aspects of this synthesis.

✱

That such a synthesis should not be difficult on a much larger scale is evidenced by the observations of Mr Watson, whose broadcast talk I mentioned last week. He refers to certain phenomena that can be truthfully described as 'something

that can happen only in India.' He mentions, in this connection, Vinoba's experiment of Bhoodan and, quite rightly in my view, relates its success partly to the traditional respect we have for the saint. This respect is no 'picturesque village superstition, but has application even among the sophisticated, secularised and the westernised.' The Guru-chela relationship is rightly traced back by Mr Watson to one of our vital traditions of philisophic inquiry; and even today, members of the urbanised middle class have their gurus to whom they periodically repair to get spiritual instruction. Any one who knows of the reverence accorded to Shankaracharya and other gurus when they visit the cities would agree with the statement. The not inconsiderable audiences at the innumerable philosophic discourses announced in the engagement columns of the daily press are mostly from the urban middle class, not all of whom can be said to be uncritically superstitious. These are useful members of society like engineers, doctors, and civil servants, who carry on their secular tasks to the best of their ability after being trained at institutions run on western lines. Therefore, if only a firm intellectual basis is given to this phenomenon and the validity of the attitude is adduced, as I believe can be done in terms that will satisfy an inquiring mind, there is no reason why it should not form the foundation of conduct for others who now wish to be elsewhere or in some other millenium.

*

As for as the potentiality of the idea for bringing about a happier world situation, it is not so much a forlorn hope as a compelling necessity. Under modern conditions, unless the East and the West come to terms, and a new kind of man who is a synthesis of all that is best in both emerges, the conflicts that will continue to rack our lives would be quite insupportable. It should be the endeavour of every one who bothers at all about the future of mankind, to strive to bring about this qualitative change in the lives of the people of both the East and the West.

EAVESDROPPER.

Self-Sufficiency in TUBES

On March 7, 1956, the works of the Indian Tube Company were formally opened in Jamshedpur by the Hon'ble Dr. Sri Krishna Sinha, Chief Minister, Bihar.

The Tata Iron & Steel Co. Ltd. and Stewarts & Lloyds Limited, the largest producer of steel tubes in Europe, have jointly sponsored this project. A Fretz-Moon Mill with an annual capacity of 12,000 miles of tubes (90,000 tons by weight) at a cost of Rs. 3 crores has been installed. A separate Electric Resistance Weld Mill for the manufacture of some 13,000 tons of high quality precision tubes will be in operation by 1957, and Government's permission is awaited to instal a third mill to make seamless tubes.

When all the three mills are commissioned the country's requirements of practically all varieties of steel tubes should have been met.

Bombay Review

The State Bank of India

GLOOMY prophets who, at the time of the conversion of the Imperial Bank of India into the State Bank of India, strenuously peddled the view that its glory would soon become a matter of memory were triumphantly proved false here last week. Addressing the first annual general meeting of the shareholders of the State Bank of India, Dr John Matthai gave a characteristically lucid account of the performance of the institution that has the enviable good fortune of having him to guide its destinies.

In his address, Dr Matthai traced the genesis of the State Bank of India and surveyed the entire field of activities during the half year. He gave an account of the initial difficulties of taking over, especially of the minor legal ones connected with foreign branches, and of how these were tackled with expedition and smoothness. He then went on to deal with what is perhaps the most important aspect of the working of the bank, its progress in spheres in which it is to play an increasingly important role in the coming years and for doing which, indeed, it was created.

The progress outlined is satisfactory, considering the fact that the bank has been in existence only for six months and has had other problems of transition to tackle before it could settle to its principal task. Finally,—and in this were implied the relative priorities—Dr Matthai came to matters of immediate interest to the shareholders, the performance of the bank as an institution engaged in giving a fair return on the investment. In this connection, he dealt not only with the profits earned and the dividends declared but also with employer-employee relations on which he had some very sound things to say.

The State Bank was created on the recommendations of the Committee of Direction of the All India Rural Credit Survey. This Committee had suggested the creation of "One strong integrated State-partnered commercial banking institution with an effective machinery of branches spread over the whole country for stimulating banking development by providing vastly extended remittance facilities for co-operative and other banks and following a policy which would be in effective consonance with the national policies adopted by Government without departing from the canons of sound business."

As will be seen, the idea was to extend the activities of the former Imperial Bank (which was, inevitably, the Bank chosen for the purpose outlined) to regions which it would never have, on its own initiative, ventured into. This extension became inescapable on the findings of the appalling conditions of rural credit which were of a sort which would defeat every effort at planned national regeneration. But care was taken to see that the State Bank did not become a mere adjunct of the Finance Ministry distributing to rural areas the largesse that the Government find out of their revenues. The Bank was to retain its commercial character and become what innumerable banks in other countries do as a matter of ordinary business.

This new role of the former Imperial Bank is, as is also well known, part of the concerted and co-ordinated effort at planned development. A massive endeavour at changing the face of our country-side is central to our ideas of planning. Apart from the fact that this is inevitable in any effort at harmonious development and at redressing the imbalance in our economy, the Second Plan has assigned a crucial role to rural industry from the point of view of employment. This involves the deployment of vast credit facilities and other ancillary services in the matter of providing raw materials, storage facilities and marketing media. These are to be done principally by co-operative agencies who need the help of an institution that is not, on the one hand, too closely hemmed in by statutory strings or inhibited by larger fiscal considerations. On the other hand, an ordinary commercial bank would never venture into such a highly risky field where the hazards are, on purely commercial reckoning, far too many. In the circumstances, only a State-partnered Bank to whom the return on capital is not an overriding consideration can discharge the functions of an institution that is central to the objectives and strategy of planned development.

The performance of the State Bank in this regard is satisfactory, considering the shortness of the period for which it has been in existence and the other odds it had to face. The Imperial Bank was to open 114 branches between July 1951 and June 1956. Up to June 1955, it had opened 63 branches and a further 20 branches have been opened till the end of December 1955. This leaves a total of 31 branches still to be opened before next June. As the State Bank gets into its stride, the opening of new branches would become more or less automatic and the target should easily be realised. The State Bank is under the statutory obligation of opening 400 new branches in the first five years of its life and, already, 100 places have been chosen. As the momentum released by the Second Plan gets active, this target of 400 new branches should not only be capable of easy realisation but can even be exceeded.

The principal difficulties encountered in the rapid opening of new branches are mentioned by Dr Matthai as the usual ones of accommodation and the lack of adequate co-operation from local authorities. I think that the State Bank is entitled to greater consideration than is implied by this apathy on the part of local authorities. It is high time that Governments, both Central and State, should give expeditiously all the facilities the bank needs.

In the erection of the vast network of warehouses and storage godowns to facilitate marketing of agricultural produce, vigorous steps are already being taken. The Government of India are shortly setting up an All India Central Warehousing Corporation and the State Warehousing Corporations. The necessary legislation has recently been passed. This will bring into being an effective system of State participation in agricultural marketing, and the State Bank, along with other interested institutional agencies, is expected to play an important part in this aspect of rural economy.

As regards the small-scale industries, the State Bank has taken the initiative in planning a scheme for co-ordinating effectively the activities of credit agencies. Exploratory discussions between the Reserve Bank and other institutional agencies have taken place and a pilot scheme has been drawn up. On the experience gained on working this scheme, further developments are promised. Dr Matthai has also promised to place at the disposal of institutional agencies the services of the bank's branch managers and staff in collecting information regarding prospective borrowers and in giving other operational assistance to those agencies.

As will be seen, a great deal of quiet and patient work in setting up the necessary organisational apparatus is going on all the time: and, in the fullness of time, these agencies are sure to play effectively the roles assigned to them.

Discussing the second aspect of the State Bank's unique character, namely, its being an institution worked on commercial principles, Dr Matthai has persuasively argued that the finances of the State Bank are as sound as those of the former Imperial Bank. I am sure the balance sheet aspect of the matter will be discussed in the appropriate columns of this journal. But it may be pointed out here that the gross profit results for the half year compare favourably with the corresponding period for the previous year, though, owing to higher costs this year, the net results have been about the same in both the periods. The fall in deposits is not in the least alarming, as the improvement registered since the fall in June (owing to unfounded fears about the future policy of the Bank) has clearly shown that the State Bank is firmly established in the affections and preferences of depositors.

By deed, and not by word, the State Bank has proved that it will offer all the commercial facilities that, in time past, one was sure of from the Imperial Bank.

On the subject of employer-employee relations, Dr Matthai had inevitably to refer to the strike that took place in December and the serious dislocation in closing of accounts and other inconveniences caused to the public. Quite justifiably, he related this question with that of discipline and respect for constituted authority and the need for accepting awards made as binding in every respect. He expressed his faith in direct and friendly mutual discussion and stated that he had already had such useful discussion with the Union leaders in Bombay, Calcutta and Madras.

In short, Dr Matthai's report is one of gratifying all-round progress in the new and almost uncharted career of the State Bank. The gloomy prophets have, as often before, been left high and dry with their pessimistic illusions.

As I have shown before, the dispelling of the beliefs of doubting Thomases that the State Bank would, in next to no time, become no more than an adjunct of the Ministry of Finance lies in the determined manner in which the State Bank has set about indicating, by deed and not mere word, that it would, as part of its new role, fulfil its position as the top commercial bank as well. We may be sure that, in this task of laying emphasis on commercial banking as an important activity of the State Bank, Mr S. K. Handoo, the Managing Director, has acted with imagination and drive, with initiative and vigour. Dr Matthai has acknowledged the debt due to Mr Handoo in this respect, "whose experience and knowledge of banking problems and whose administrative ability have been of the greatest value to us." If ever a man has received well deserved praise, it is Mr Handoo.

Foreign Trade in 1955

For three successive years now, India's foreign trade has recorded progressive increase. During 1955, exports were valued at Rs 604 crores as against Rs 563 crores during 1954. Though to a smaller extent, imports too showed a rise from Rs 616 crores to Rs 644 crores in the corresponding period. The country's total trade has thus risen from Rs 1,179 crores in 1954 to Rs 1.248 crores in 1955, representing a growth of Rs 69 crores. Though the adverse balance still continues, it is less at Rs 40 crores compared to Rs 53 crores the previous year.

The main contributory factors have evidently been higher domestic production, on the one hand, and increased demand for capital goods, on the other. Significant changes have appared and continue to occur in the pattern of trade but a reasonable degree of diversification in respect of countries as well as commodities is yet to be achieved. The consolation may, however, be derived, if consolation it be, that our foreign trade is more broad-based than that of our Asian neighbours.

The United Kingdom and the United States continued to be India's most important suppliers and buyers, but their shares in India's exports have declined, from 31.3 to 27.4 per cent for the former and from 15.2 to 14.3 per cent for the latter.

The value of exports to the US has risen by about Rs 4 crores, while the value of exports to the UK fell by Rs 10.6 crores during the year. On the import side, the percentage share of both countries stood higher, increasing from 23.7 to 24.7 per cent in the case of the UK and from 11.9 to 13.8 per cent in the case of the US.

The year shows increases in imports from West Germany, Japan, Kenya, France, Iran and Pakistan but those from Italy, Egypt, Saudi Arabia and Singapore fell slightly. Japan, Canada, Australia, Indonesia, China and the Netherlands have stepped up their imports from India. Trade with the USSR, Yugoslavia, Poland, Hungary and Rumania indicated an up-trend.

As was only to be expected, foodgrains, raw cotton, mineral oils, staple fibre, etc. were imported in much smaller quantities. A reverse trend is noticeable with regard to imports of machinery, metals and vehicles. Though it may not be possible exactly to find the correlation between the input of capital and the demand for capital goods from abroad during the Second Plan, it is safe to infer that the current trend in imports of manufactured items will continue. Larger exports of processed or fabricated commodities as different from raw material are also in sight. The policy of regulated imports and exports on a selective basis has obviously some way yet to go.

*

Prospect of Dutch Capital

Indo-Dutch relations being currently uninhibited by disagreements, political or otherwise, it may reasonably be hoped that negotiation between industrialists from the Netherlands and firms in India, for the investment of private capital in this country will fructify. If they do, the current year will see probably additional investment to the tune of Rs 4 crores in Indian enterprises. This expectation we have on the authority of the retiring Consul-General of the Netherlands, Mr F. M. van Hall.

'On the basis of fair business partnership', Dutch industrialists are prepared to invest in such industries as railway equipment, marine equipment, radio and electronics, and scientific instruments. Specialised technical knowledge will also be available with regard to these industries.

While these negotiations are extra-governmental, the Netherlands Government, it is learnt, are anxious to assist India during the Second Plan in shipbuilding and in the reclamation of low-lying waste lands. Dutch engineers have already visited the Calcutta salt basin and the creek areas of Bombay. They have recommended the cheaper method of building dykes around the low levels rather than the traditional method of filling up.

The general policy of the Netherlands Government in regard to international economic co-operation has been that, wherever possible, the medium should be the appropriate UN agency. The proposed 'SUNFED', for instance, has the enthusiastic support of the country.

The Netherlands has already transformed her agricultural economy into an industrialised economy and is now able to export to India capital goods, such as, diesel engines, electric motors, pumps, chemical apparatus, hoisting gear and machine tools.

None of the industries in which the Dutch can and are willing to participate is in any danger of nationalisation. It is the avowed policy of the Indian Government to welcome foreign capital and technical assistance, subject to the condition that such participation is conducive to the development of the indigineous industry. Indian firms can, therefore, strive for the closest co-operation with Dutch industrialists without fear of governmental reticence and with the hope of a promising future.

Economic Condition of Bombay's Middle Class

Some of the practical value of the report on the Survey into the economic conditions of the middle class families in Bombay city conducted by the Bombay Branch of the Indian Statistical Institute is lost by the undue time-lag (over five years) between the actual investigations and the publication of results. If, however, the Institute is able more expeditiously to conduct a similar survey at present it would make possible a dependable comparison between the economic conditions before and after the First Five Year Plan.

The report gives important information about the composition of the middle class household, the type of residence and amenities, the pattern of expenditure and income and savings. In addition to pointing out that the Survey was the only of its kind carried out in the city in nearly three decades, the report would have done well to add a brief outline of the results of the earlier survey so that the change that took place might have easily been evident.

The average middle class household consists of 5.62 persons of whom 1.93 are adult males, 1.71 are adult females and the rest children. In one out of every four households there is a guest and one out of every six households has a domestic servant. It seems that the latter aspect should be considered as indicative of a decreasing trend.

The incidence of unemployment on adult males is not negligible at 6.7 per cent. The average number of persons, children included, dependent on the head of the average middle class farily is 3.57.

Regarding housing conditions, it is found that nearly 67 per cent live in chawl-type tenements and the rest in self-contained flats or houses. The average living area available per resident is only about 43 sq. feet. More than half the tenements do not have separate kitchens. Basic amenities like exclusive bathrooms or provison for washing clothes or cleaning utensils are absent in the majority of households, not to speak of extra amenities like a compound, a garden or a common room.

The head of the average middle class household earned about Rs 303 per month, which is outstripped by his monthly expenditure of Rs 326. Expenses on food accounted for 48.2 per cent.

Non-compulsory savings are practically non-existent in the great majority of cases. The average deficit is least in the case of Government employees and highest in the case of those employed in commercial firms.

Port Trust Finances

Though a revenue at a higher level than the present, is, above all, vital to the schemes for development, the finances of the Bombay Port Trust appear to be sound. The current year is expected to close with a handsome surplus of Rs 117.4 lakhs. The budget estimates for 1956-57 also reveal a surplus, though a much smaller one at Rs 69.2 lakhs. The revenue is maintained at more or less the same level as in the current year; the total revenue on General Account for the budget year is Rs 9.04 crores. The likely decreases in revenue from Wet Docks, lands and buildings, Railway Department and Interest and Miscellaneous are cushioned by increased receipts under 'Bunders'.

Expenditure, however, shows a substantial jump to Rs 8.35 crores during the coming year, representing a rise of Rs 48 lakhs over the current year. This is explained by the additional staff required for working the piece-work system of payment in the Docks, the anticipated increase in labour charges in this system, the increase in the cost of operation, repairs and maintenances, oil pipe lines, and provision for Municipal tax made on the basis of the assessment for the quinquennium 1944-49. In the current year, receipts from demurrage fees, including surcharge, are estimated at Rs 96 lakhs.

On the authority of trade associations, it is not likely that the quantum of overseas trade will be much different from that of the current year. Imports of certain commodities, however, are more or less sure to drop. Important items like foodgrains and sugar, will practically disappear from the imports list. The total imports, after allowing for any such decrease are placed at about 2.3 million tons and exports at 2 million tons.

At the Bunders, traffic in mineral oils is expected to increase, the imports and exports being 4.2 million tons and 1.9 million tons respectively in 1956-57.

The high level of expenditure on capital works prompts the Chairman of the Port Trust, Mr L. T. Golap to plead for an increase in the present surchage which constitutes the main prop of the revenue structure. Excluding the Butcher Island Scheme which is financed entirely by the Government, capital works during the next two years will cost Rs 5.53 crores.

The new budget makes a provision of Rs 1.08 crores for modernisation of Princess and Victoria Docks. The estimates envisage Government loans of Rs 3.25 crores for the Marine Oil Terminal and Rs 1 crore for other Plan projects.

Delhi Review

Olympus

The Middle Path

ADDRESSING the 29th annual session of the Federation of Indian Chambers of Commerce and Industry here on Sunday, the Prime Minister restated once again the fundamentals of the Socialist pattern of Society which the Government are pledged to bring into being gradually. He disposed of rather summarily certain efforts made to distinguish the "socialistic pattern" of the Avadi resolution from the "Socialist Pattern" of the Amritsar resolution and said that, even in the Avadi resolution, there were mentions of socialist pattern. He said that any suggestion that the dropping of two letters meant more overt doctrinaire commitment was unwarranted and rather childish. He reiterated that the Socialistic pattern was no mere slogan but "something more essential and inevitable, because in the long run there was no other choice." The whole of his speech was then devoted to explaining why this is so and to clearing misunderstanding about the precise nature of the kind of socialism the Government have in mind.

Adroitly side-stepping the many specific issues raised by the President, Mr Shantidas Mangaldas, Mr Nehru asked the chambers to look at every specific act as part of a whole philosophy of social progress. If every individual act of the Government is seen in the light of this fundamental approach, the bits fall into position and the puzzle is solved. In this connection, he paid a handsome tribute to the "measure of the business community's attempt to understand that philosophy".

The fundamentals of this "philosophy" have been repeatedly explained by Mr Nehru in all kinds of contexts. Firstly, it is a philosophy that is distrustful of dogmas of any sort. He made the interesting point that many self-styled revolutionaries become helpless capitives of their own revolutionary doctrine and eventually are transformed into the worst kind of reactionaries. In this context, it was inevitable that he should refer to the current reappraisal of Stalin in Soviet Russia. Though he did not indicate it in so many words, it was easy to infer his view that there have been few orthodoxies as rigid and unbending as the Stalinist version of Marxism and few orthodoxies so cruel in its manifestations.

Rigidity in our approach to problems is to be eschewed because it is a dynamic world (a favourite expression with Mr Nehru) and fresh experience makes earlier solutions of problems obsolete. Taking the cue from the President's references to the need for improving production techniques, Mr Nehru suggested that a similar change in the outlook on social problems is necessary. The nature and quality of things continue to change though they continue to bear the same names. Take expressions like capitalism and socialism and communism. These were defined in particular terms in the nineteenth century, and the definitions were more or less correct in the circumstances of that period. Since then enormous changes have taken place, and such notions have been rendered hopelessly anachronistic. Even the prediction made on the basis of the old definitions have, as confessed by communists themselves today, been proved wrong.

In the circumstances, to go on using the same expressions as though they meant the same things now as then is to be guilty of intellectual laziness. In this connection, Mr Nehru referred to the symptomatic habit of cartoonists of picturing the capitalist as a pot-bellied monstrosity. Though, in a representative art dealing in generalities, a certain stratification into types is inevitable, very often this symbolic cliche hides a profound ignorance of contemporary reality. There is, perhaps, no capitalist, in the pristine sense of the term in the modern world, and, if there were, he certainly is a much slicker (and slimmer) person than is implied in the cartoons.

Having made up our minds that, in the world of today, approach to problems is to be empirical rather than dogmatic, flexible rather than rigid, what would be the ingredients of an economic policy that would answer the facts of the situation in India today? No one attempting to answer this question can shirk the fact that there is tremendous disparity in well being in our country, which is "psychologically bad, economically bad and politically bad." The second fact that cannot be shirked is the tremendous awakening among the under-privileged and, be it said to the credit of the privileged, the acute sensitiveness of the social conscience. It is totally unrealistic to expect that this combination of circumstances would not bring about changes which we have to describe, for want of a better word, as "socialist".

Once this end is accepted then the question resolves itself to one of deciding which is the best means of doing it. On this, there is clearly room for difference of opinion, but no one can quarrel with Mr Nehru's suggestion that the best methods would be those that would avoid conflicts. If you accept Mr Nehru's view, as indeed you cannot help doing, that our outlook on all problems, whether they relate to international politics or rural economics, should be an integrated one, and that violence has over-reached itself in the international sphere and is self-destructive, it follows that, in other things also, violence is self-destructive. Of course, even if you did not have impressive demonstration of the importance of violence in world affairs, more limited experience either in the political field (as in the Bombay and Orissa riots) or in the economic field (as in sterile industrial disputes) would confirm this theory.

In this regard, Mr Nehru interestingly considers strikes and lockouts as actually obsolete. I can imagine many a pious trade unionist, who has been nurtured on the nineteenth and early twentieth century trade union literature, throwing up his hands in shocked horror at such heresy. But, in an ultimate sense, Trade Unionism has, as much as capitalism, a vested interest in the perpetuation of class conflicts. People uncommitted either way, like most of us, would prefer a state of affairs when the sources of these conflicts are gradually removed to

Nationalisation of Life Insurance means :—

National Prosperity
WITH
Personal Security

INSURING PUBLIC:—Nationalisation of Life Insurance is not only an attractive method of mobilising public savings more effectively than ever before to finance the National Plan.

When you take a policy you take the first step towards personal security. This is Life Insurance to-day; it ensures greater prosperity collectively for the whole nation.

The Policies you now effect are attractive as these have the full backing of the Government. The premium rates with uniform policy conditions have been standardised throughout India. The Government at present do not contemplete any further reduction in premiums.

POLICYHOLDERS:—The funds to be controlled by the Government make Iusurance safe, sound and secure with full value of your money with other benefits thrown in. The Government have issued instructions to ensure payment of valid claims without delay and sanction and grant admissible loans on policy with all expedition.

LIFE INSURANCE AGENTS:—The Government mean to take Insurance closer to the nation through nationalisation. LIFE INSURANCE AGENTS will therefore be mobilised to carry the message of Insurance to the remetent corner of the country. The AGENTS will thus continue to be soldiers and will have new fields to conquer.

FIELD OFFICERS:—Ramifications of insurance organisation will be both intensive and extensive now and the FIELD OFFICERS with their knowledge and specialised experience of public contact will continue to be the backbone of the organisation. The FIELD OFFICERS should thus throw their chest forward and meet the new circumstances with new courage and confidence.

NATIONALISATION OFFERS YOU

•Standardised premium rates
•Uniform policy conditions
•Dependable service
•Economic management
•Favourable returns

Build your future and help country's progress : **TAKE A POLICY NOW**

North Indian Notes

Uttar Pradesh Budget

The outstanding feature of the new budget for UP is the significantly higher levels at which both revenue and expenditure stand. Incidentally, they form the highest ever estimates for the State. The revenue deficit of Rs 9.55 crores is proposed to be covered by additional taxation measures, the precise nature or content of which has not yet been announced. Considering that the incidence of taxation in UP is lower than in Bombay, Madras, West Bengal or the Punjab, the fresh burden is not likely to prove onerous. While possessing the attributes of a development budget, the 1956-57 budget takes commendable strides toward the socialistic goal through major concessions to the lower economic stratum of the population. Committed to a Plan of the size of Rs 248 crores, the State can claim to have made a good start.

Revenue receipts have been estimated at Rs 85.35 crores as against the expenditure of Rs 94.91 crores. For the Second Plan schemes, a sum of Rs 43.17 crores, including Rs 31.85 crores on the capital side, has been proposed to be spent in the budget year. The reliance on the Centre in this regard is to the extent of Rs 32 crores. It has to be said that the total indebtedness of the State is rather heavy, having risen from Rs 130 crores a year ago to Rs 193 crores at the end of the current year. At the end of the coming year, it will be Rs 271 crores. Loans from the Centre only partly explain this rise in indebtedness.

The current year's revenue deficit shows a welcome shrinkage from Rs 5.55 crores to Rs 2.61 crores, and this is proposed to be met by a transfer from the Revenue Reserve Fund, the uninvested balances of which will be Rs 4.37 crores at the end of the current year.

The Finance Minister, Mr Hafiz Ibrahim has rightly thought it fit to allot the highest amount for education, out of the revenue expenditure, which works out to a remarkable increase of 160 per cent since 1946-47. Extending concessions, he announced a 50 per cent cut in school fees from the first to fifth classes. Children of Government servants with a pay of Rs 100 or less, will be allowed a similar concession in Intermediate classes.

The budget will ensure a higher pension for Government servants earning up to Rs 200, through a merger of dearness allowance with pay. Medical facilities to lower grades of Government staff are also to be stepped up.

Expenditure is scheduled to be increased on education, by Rs 115 lakhs, on medical and public health by Rs 106 lakhs, on planning and development by Rs 130 lakhs, on veterinary aid by Rs 43 lakhs and on co-operation by Rs 37 lakhs and also on welfare programmes. Ninety-nine new NES Blocks and 25 Intensive Development Blocks at a cost of Rs 160.25 lakhs will be opened in the coming year. New irrigation schemes will cost Rs 393.5 lakhs and another Rs 519.9 lakhs goes to schemes already on hand.

Mention may also be made of the proposed expansion of the Roorkee University, schools for electrical engineering, flood protection for another 1,300 villages, and new roads and bridges costing Rs 36.65 lakhs.

Industrial development in the State cannot be said to have been very satisfactory. The Second Plan provides for expenditure of some Rs 17 crores in this regard, of which Rs 1 crore will go to the establishment of industrial estates. Unless new avenues are found and opened up for large-scale industries, the State will have to be content with cottage and medium industries. Some progress has been achieved in cottage industries, which are proceeding along new directions such as hand tools, umbrella parts, suitcase fittings, chaff-cutter knives, mechanical toys, etc. New lines of manufacture like rayon pulp, soda ash, textile machinery parts, railway wagons and coaches seem to have promising prospects, if private enterprise is prepared to come forward. Unless greater emphasis is laid on industrial development in the financial side of the Second Plan, the already existing flagrant regional unevenness of industrialisation may well become sharper.

In the matter of irrigation, it cannot be denied that the progress achieved has already had a wholesome effect on agricultural production and general economic prosperity. Government have set a target of 2 million tons of additional production over the base year 1955-56. Extension of jute, cotton, oilseeds and fruits and vegetable crops is to receive prominent and immediate attention.

The power projects, which have been included in the next Plan, are Yamuna, Rihand, Harduaganj, Sohawal, Matatila, Mau, Gorakhpur, Mainpuri and Kesa extension. Rural electrification will spread to another 200 centres.

If national income is taken as an index to economic prosperity, UP has fared well. National income in 1954-55 for the State was Rs 1 824 crores as against Rs 1,509 crores. The per capita income rose correspondingly to Rs 277 from Rs 249. The sole contributing factor is claimed to be the increased quantum of production. This prosperity has been shared by the working classes and the urban areas, though the cultivators' position was unfavourably affected by price variations in the last two years.

UP is confronted, like others, with the question, where is the extra money for the implementation of the Second Plan to come from? The State has to provide internally a total of Rs 42 crores for revenue expenditure and a net sum of Rs 45 crores for capital expenditure in the next five year period. The success which attended public loans floated by the State shows that additional taxation need not be the only way of meeting this challenge.

*

Budget for Delhi State

With a basically inelastic revenue, Mr Gurmukh Nihal Singh could have hardly proposed a more balanced budget for the Delhi State without the imposition of fresh taxation. But to hail the budget as an answer to the State's growing problems can only be an incorrect first impression. Anticipated expenditure, no doubt, shows a significant rise above the current level, but it cannot be claimed that progress achieved in any of the major directions, education, public health, water supply, sanitation or housing has been satisfactory. The reason may partly be found in the Chief Minister's plea for a single integrated administration for the whole State. The divided authority between the Centre and the State has in no way helped matters. This seems to be an even greater handicap to progress than the static level of income.

The budget estimates for 1956-57 show a revenue of Rs 537.82 lakhs against an expenditure of Rs 661.84 lakhs. The deficit of Rs 124.02 lakhs is to be covered partly by the opening balance of Rs 51.02 lakhs and partly by a balancing grant of Rs 72 lakhs from the Centre, which, incidentally, is a regular feature of the State's budget.

The Chief Minister, hinted that Government might enhance the sales-tax on luxury goods as has been done in some other States; the Taxation Enquiry Commission's suggestion for multipoint sales-tax is apparently shelved for the time being. There is also a proposal to give relief in certain cases by granting exemption from sales- tax.

The increase of Rs 65.11 lakhs over the current year's budget is mainly accounted for by the provision made for the Second Five-Year

(Continued on page 497)

Delhi Review

North Indian Markets

Setback in Sugar Prices

SUGAR prices, which had improved recently on apprehensions of the imposition of excise duty, showed a setback in the absence of support following the announcement of the Budget proposals. Traders, who had been keen on building up stocks, were reported to be in the market to liquidate their stocks. Rates of Indian sugar declined by Rs 1-8 to Rs 2 per bag, while foreign qualities became cheaper by As 4 to As 8 per bag.

A section of the traders believe that the market will stabilise at the current levels. Several dealers had recently made substantial purchases from the mills at higher levels; but they are not expected to press sales at reduced prices, pending a clear picture of the future sales policy of the mills which have preferred to wait for the present.

The mills have recently been allowed a release quota of about 2 lakh bags, while the present market stock is about 50,000 bags as against the normal quantity of 30,000 bags. Both the factors will prevent any substantial improvement in prices.

Meanwhile, total production up to February 7, during the current season, was 797,511 tons as against 741,606 tons in the corresponding period of last season. Stocks with the factories on the same date were 808,866 tons as against 608,899 tons last year.

The Government of India have fixed a minimum price of Rs 1-7 per maund for gate deliveries and Rs 1-5 per maund for deliveries at rail-centres for sugarcane to be purchased by vacuum pan sugar factories during 1956-57 season. These prices are the same as fixed for 1955-56 season.

*

Conditions in the Hapur Gur market continued to remain depressed due to increasing stocks and poor offtake. Loading was restricted and daily arrivals went down to an average of 1,500 maunds. Rates moved between Rs 10-0 and Rs 10-4 per maund. Stocks were estimated around 1.50 lakh maunds.

*

Despite several measures taken by the Government, the upward trend in Foodgrains prices persisted during the past week. The earlier expectations of a bumper "rabi" crop are being revised; and the current shortage is more pronounced than the customary seasonal trend.

In the surplus producing mandies of the Punjab, farm quality Wheat was quoted at Rs 16-8 per maund as against Rs 14-0 in the corresponding period of last year. At Hapur, average quality wheat improved to Rs 15-2 and farm quality to Rs 16-4 per maund, corresponding prices last year being Rs 13-0 and Rs 13-4 per maund respectively.

Hardening tendency in coarse grains prices continued. Gram prices improved by As 8 per maund to Rs 10-10 for local quality and Rs 11-2 for the Punjab quality owing to the firm Punjab and Madras advices. Prices of other grains ruled steady.

The price of Rice also recorded slight improvement in line with the general firm trend of the market.

Rice is being exported continually to Mauritius, Aden, Zedda, etc. In order to send huge quantities of rice abroad, the exporters are purchasing at a very high rate from the rice mills of West Bengal. As a result, the prices of the commodity, instead of going down, has increased to the extent of Rs 2 to Rs 3 per maund on an average within the last few days. In addition to this, rice has become scarce and dear in Pakistan. Huge quantities are now being despatched daily to the border areas like Kanaghat, Bongaon, Chakdaha, etc. With the result, rice merchants at Calcutta have not the sufficient courage to purchase rice at competitive rates. It is, therefore, apprehended that, unless measures are taken to stop exports, the price of the commodity may soar very high as it did just before the introduction of the rationing system in 1943.

In the Delhi grains market, further rise in foodgrains prices was recorded during the past week. Wheat, both dara and farm qualities, touched higher levels of Rs 15-12 and Rs 18-0 per maund respectively. As arrivals of the commodity were poor, flour mills were active buyers.

Demand for Gram was good from mills, with the result the rates were slightly better. Maize and Bajra rose modestly, while other grains were steady. In the Pulses section, prices steadied up on good demand.

Trading in the Bombay grains market was characterised by a substantial improvement in the prices of some Pulses, Rice and Jowar. Among Pulses, Gram attracted considerable attention of the mills, which were consistent buyers. The upward trend was aided by the shortage of spot supplies, arising from smaller arrivals into the City.

Prices of several qualities of Rice, particularly those grown in the Bombay State and Andhra, moved up by Rs 5 to Rs 7 per candy on account of the good local demand and higher advices from growing centres.

Rates of indigenous wheat suffered a decline of about Rs 10 per candy following the improved arrivals of the new crop supplies from growing centres in the Bombay State and Saurashtra. These arrivals were reported to have been sold at Rs 160 to Rs 170 per candy, while stocks acquired from the Government ruled steady at Rs 128 to Rs 135 per candy, according to quality.

Prices of Jowar hardended by nearly Rs 10 per candy, mainly on account of the reduced inflow from Sholapur area. Prices of Bajra kept steady, the Uttar Pradesh quality being sold at Rs 120 to Rs 125 per candy.

Exports of Shellac looked up in February 1956 from the low level touched in the previous month. The total quantity of exports amounted to 27,628 packages during the month under review as compared with 23,943 packages in January this year. Out of the total exports for last month, shellac accounted for 19,251 packages.

The market trend, however, was very uncertain during the month under review. After improving sharply from Rs 132-8 to Rs 142 per maund early in February 1956, Pure TN Shellac prices slumped to Rs 130 before closing the month at Rs 133.

SOUTH INDIAN MARKETS

Rise in Coffee Crop

THE 1955-56 Coffee crop is estimated at 28,795 tons, showing an increase of 1,415 tons over the previous estimate. The total is made up of Plantation variety 12,610 tons, Arabica Cherry 6,800 tons and Robusta 9,385 tons. The quantity decided upon for export, during the current season, is 1,500 tons. The main reason behind the limited export is the rising consumption, although the export question is expected to be reviewed shortly. The Coffee Board feels that it will require large stock in hand to keep prices in check.

According to latest reports, there were a few showers in January in the coffee-growing areas; and some of the growers were apprehensive of the effect of these rains on the coming crop. As far as is known, they have not done any damage in the main districts.

The Coffee Board, at its export sale held at Mangalore, toward the end of last week, sold 300 tons of Plantation coffee. The range of prices were: Plantation 'A' Rs 416-2 to Rs 424-2; Plantation 'B' Rs 390-2 to Rs 402-10 and Plantation Triage Rs 315 to Rs 335-12 (all per cwt). On the whole, prices ruled higher than those secured at the sale held here about a year ago.

India's Cashew processing industry is now on the verge of another crisis as the processors' earlier expectations of record crops, both in India and Africa, have failed to materialise. The revised estimate of Indian and African crops are 50,000 tons and 55,000 tons respectively as against the original estimate of 70,000 tons for India and 85,000 to 90,000 tons for Africa.

Raw nut prices have, therefore, soared to Rs 950 per ton from Rs 800 quoted earlier in the year. About 80 to 85 per cent of the kernels, which can be produced this year, have already been sold forward. As the current raw nut price does not keep parity with the contract price for kernel (49 cents per lb) those, who have not got enough stock in hand, will find it difficult to fulfil their contracts.

*

A nervous undertone continues to persist in the natural Rubber market in London. Prices, during the past few days, have been moving narrowly between 31½d and 32¼d per pound, showing a drop of nearly 5¼ per pound since the beginning of the year.

There has, however, been a greater buying interest. According to some reports, the Soviet Union, Poland and Argentina have been active buyers; but this is merely serving to steady the prices and not to induce any considerable recovery.

The fact, that stocks of new cars held by dealers in Britain as well as in the United States are estimated to be approaching saturation point, gives little confidence for the outlook of rubber over the next few mounths.

United States consumption of rubber, during December, was about 10,000 tons below the previous month, whereas Malayan production, in the same month, was some 10,000 tons higher. Malayan Federation stocks have, in fact, increased by 13,500 tons during December though they are not thought to be unduly high.

*

Despite the accumulation of floating stocks in all the primary markets, Pepper prices were well maintained during the past week when resistance was offered at lower prices. The growers were regulating the inflow of the commodity into the terminal markets according to the day-to-day sales effected. In the Cochin market, the rate was quoted at Rs 831-4 per candy. In the Kozhpode market, Wynaad quality was quoted at Rs 910 to

The Peninsula

Andhra Budget

THOUGH the criticism levelled against Mr B. Gopala Reddi's second Budget by the leader of the Communist party may be construed too harsh, it is, however, to be accepted that his effort is too humdrum for a budget for the first year of the all important Second Five Year Plan.

Mr. Reddi has not been able to infuse the Plan-tone which is the main characteristic of the other budget which had been discussed in these columns last week. A probable reason for his decision to be content with a pattern which makes no serious departure from his first budget is the expectation that very soon Visalandhra will become a reality. His hope has since been confirmed by no less a person than Prime Minister Nehru himself who has announced that the Government of India have finally decided to merge Telengana with Andhra.

As against the revised estimate of Rs 22.40 crores, revenue in 1956-57 is estimated to amount to Rs 23.71 crores. Likewise anticipated expenditure is also not very much changed at Rs 26.95 crores against the revised estimate of Rs 26.37 crores. The estimates thus show a deficit of Rs 3.24 crores. Increases in revenue occur mainly under Union Excise Duties, Land Revenue, General Sales Tax and Tobacco duties, partly offset by a decrease under income-tax. Under expenditure, there are increases mainly under irrigation due to provision for flood repairs, under Medical, under Public Health, due to larger provision for the national water supply scheme in rural areas and under interest on debt due to provision for interest on loans taken in 1955-56. The Finance Minister has disclosed that the Government propose to raise an additional revenue of Rs 2.16 crores by new taxation measures, thereby leaving an uncovered deficit of Rs 1.08 crores.

The expected yields per annum from new taxation measures under the various heads are as follows: levy of full assessment on inam lands Rs 46 lakhs; levy of additional single point tax on mill-made cloth and precious stones Rs 50 lakhs; levy of purchase tax on the manufacture of tobacco and sales tax on cheaper varieties of manufactured tobacco such as beedies, etc., Rs 60 lakhs; surcharge on land revenue Rs 45 lakhs and Revision of the scale of court fees and suits valuation Rs 15 lakhs. The surcharge on land revenue will be in force temporarily for a period of one-year and will be replaced by a scheme of standardisation of land revenue and increase of water rates which together are expected to yield more than Rs 45 lakhs per annum.

The Government have also decided to raise the rate of cess on sugarcnae from Re 1 to Rs 3 per ton The anticipated additional revenue of Rs 12 lakhs from this is to be earmarked for being credited to a Fund which is designed to finance schemes for development of sugarcane cultivation. The Government also anticipate a small additional revenue of Rs 9 lakhs by increasing the rate of tax on motor spirit other than petrol from Rs 0-1-6 to Rs 0-3-0 per gallon.

A sum of Rs 15.48 crores has been provided in the budget for capital expenditure as against Rs 15.54 crores in the revised estimates. It is rather surprising that Mr Gopala Reddi has devised his capital budget for the first year of the Second Plan almost on the same lines as in the previous year. Outlay on electricity schemes involving over Rs 5½ crores and Irrigation schemes consuming over Rs 4 crores are the two major items. The other items of comparable importance from the point of expenditure are the outlay on multi-purpose river schemes (Nagarjuna Sagar) and capital account of civil works taking about Rs 1.81 crores each.

The fact that the emphasis in the Second Five Year Plan, as in the First, is again on irrigation and power projects explains the allocation of nearly two-thirds of the funds under capital outlay to these two heads. The Nagarjuna Konda project has already been inaugurated. The project is estimated to cost Rs 122 crores. On completion it will bring 31.83 lakhs acres under the plough and produce 75,000 Kw electric power. Provision has also been made in the Second Plan for the Tungabhadra High Level canal and the Vamsadhra project and investigatoin of the Pulichintala and Sideshswaram Projects. At the end of the Second Five Year Plan, an additional area of 5.68 lakhs acres of land is expected to be brought under irrigation.

Of the two principal electricity projects in the State, Machkund and Tungabhadra, the former is expected to be completed during the Second Plan period when three additional generating units will be installed. Two additional generating units will also be put up at the Dam Power House of the Tungabhadra Hydro Thermal Project. As a result of the increased supply of electricity, the per capita consumption of electricity in Andhra has been doubled from 5 units in 1950-51 to 10 units now. At the end of the Second Five-Year Plan, the per capita consumption is expected to increase from 10 to 20 units.

By far the most outstanding achievement has been recorded in the sphere of food production which has increased from 40. 9 lakh tons in 1950-51 to 44.80 lakh tons in 1955-56. The State is in the happy position of being able to supply food grains to other states and to export fine varieties of rice abroad.

At the end of the Second Five-Year Plan period, it is expected there will be increase in the production of sugar cane, oilseeds and cotton by 9.85 lakh tons, 1.73 lakh tons and 2.000 bales respecitively. It is also expected that during the period 86.000 acres of land will be reclaimed through soil conservation.

A disappointing feature of the budget is its negligible allocation for industrial development. For, during the Second Plan period the State Government propose to confine their attention to expanding the Andhra paper mills from 10 tons to 35 tons per day and the establishment of 6 sugar factories on a co-operative basis with State participation. Apart from these, licenses have already been issued by the Government of India for four new spinning mills including a co-operative spinning mill of cotton growers at Tadpatri, two sugar factories, three cement factories, a Ferro Manganese Plant and a factory for the manufacture of superphosphate and mixed fertilizers. Expansion of the existing sugar factories has also been sanctioned by the Government of India.

Mr Gopala Reddi has admitted that the Andhra Government must needs devise ways and means, sooner or later, of increasing their revenue to fill the gap in the Budget. It is, however, gratifying to note that the Finance Minister is confident that the recommendations of the Sales Tax Enquiry Committee who will be concluding their labours by April 1956, will bring substantial relief. Even so, there will be need for devising further measures to augment the State's revenues.

Madras Review

South Indian Notes

Neyveli Lignite Project

There is a fair chance now that in the next five years, the Southern region will see the fulfilment of its long cherished ambition of intensifying industrialisation. Mr C. Subramaniam, Finance Minister, Madras state, disclosed recently that there were strong indications that the proposed heavy electrical equipment factory would be located in Madras. The project engineer, Neyveli, is confident that the final check that is being conducted there now will firmly establish the feasibility of the Neyveli Lignite Project. With abundant electricity and fuel assured, new vistas of industrial development in the South will be opened up. The utilisation of the iron ore deposits in Salem will also become a distinct possibility.

The preliminary investigations of the proposed Neyveli project entered a crucial stage last week when Mr M. Bhaktavatsalam, Minister for Agriculture and Industries, Madras State, inaugurated sixteen large-scale pumpsets capable of baling out water at the rate of 16,000 gallons per minute. The full-scale pumping test is to be carried out with 20 pumps of 1000 gallons per minute each, in two rows of ten pumps each, the rows being 250 feet apart and a rectangular grid, covering a length of 1000 feet.

On the results of this final test depends the decision of the Government of India, to accord sanction or not, to the project. Though encouraging results have been obtained by pumping out water from a few holes, experts have calculated that to mine and remove lignite safely from an area corresponding to a mining strip in regular opencast mining, by effecting a local depression of the water pressure, it would be necessary to pump out about 20,000 gallons of water per minute from the water bearing strata below the lignite, over a period of about 100 days. The twenty large-scale pumpsets out of which sixteen have already been started, are expected to enable the experts to have the final check on this important aspect, so that they can give the green signal to the project with confidence.

On the basis of investigations carried out so far, the Rs 70 crores Neyveli project has been proposed for inclusion in the Second Five-Year Plan. The Government of Madras were in charge of the administration and control of the investigations till September 15, 1955 from which date, the Government of India had taken over the direct control and administration of the investigations and the planning and execution of the integrated projects such as the thermal power plant with a capacity of 200,000 KW burning lignite as fuel and a plant for producing about 200,000 tons of fertilizers.

It has been calculated that there are 2,000 million tons of lignite over an area of 100 sq. miles at Neyveli. But this valuable fuel is found with artesian high pressure aquifers below it. Nowhere else in the world does lignite occur over strata containing water under high pressure. This has created unique problems in the exploitation of the lignite at Neyveli.

After a close study of the results of preliminary investigations, it has been concluded, that it is necessary to lower the water level in the immediate vicinity of Neyveli to a depth of at least 50 feet below the base of the lignite, thus reducing the pressure of water, after which only the lignite can be taken out without imperilling the life of the workers and the mining machinery.

*

Hyderabad Budget

The dependence of Hyderabad's economy on agriculture has been brought out clearly in the State's Budget for 1956-57. Adverse weather conditions coupled with excessive rains had resulted in a marked decline in agriculture production. Land revenue had fallen by Rs 20 lakhs as large suspensions had to be granted in several districts where crops had suffered damage. The State's biggest single item of revenue (excise) also continued to follow a downward trend which began in 1952-53.

The anticipated revenue receipts for the year are Rs 26.04 crores and revenue expenditure Rs 30.37 leaving a deficit of Rs 4.3 crores. The budget estimates for 1955-56 anticipated a deficit of Rs 2.21 crores but the deficit increased to Rs 3.21 crores at the end of the year. The anticipated revenue receipts shrunk from Rs 30.62 crores to Rs 24.75 crores, the revenue expenditure from Rs 32.83 crores to Rs 27.96 crores and capital expenses from Rs 12.04 crores to Rs 9.19 crores.

The budget estimates for 1956-57 provide for revenue receipts of Rs 26.01 crores as against the revised estimate of Rs 24.75 crores for 1955-56 which means an increase of Rs 1.29 crores, occurring under land revenue (Rs 15 lakhs), other taxes and duties (Rs 62 lakhs) Civil works (Rs 34 lakhs) and forests (Rs 10 lakhs). They also provide for a total revenue expenditure of Rs 30.34 crores as against the revised estimate of Rs 27.96 crores thus recording an increase of Rs 2.38 crores. Of this Rs 1.57 crores are due to inclusion of grants for the new schemes to be undertaken under the Second Five Year Plan.

In presenting the Budget to the State Legislative Assembly, Mr Vinayakrao Vidyalankar, Finance Minister, pointed out that Hyderabad could not sustain the deficit of Rs 4.28 crores as the scope for raising fresh taxes was limited. He, had therefore, proposed to raise only about Rs 70 lakhs by certain adjustments in the existing tax structure leaving the bulk of the deficit uncovered.

The state's inability to raise internal resources by way of taxation, loans etc, is also borne out by the shortfall of Rs 8.36 crores in the expenditure on the First Five Year Plan. It is, however, to be noted that the difficulty experienced is due in a large measure to the need for diverting a considerable portion of the available funds toward meeting the demand of development departments. The rising trend of expenditure under this item is well brought out by the fact that whereas in 1950-51 total revenue expenditure on development plans amounted to Rs 9.54, it has risen to Rs 16.73 crores in the revised estimates of 1955-56.

United Bank of India Limited

Regd. Office: UNITED BANK BUILDINGS

4, CLIVE GHAT STREET, CALCUTTA

NOTICE

NOTICE is hereby given that the Next Ordinary General Meeting of the Shareholders of UNITED BANK OF INDIA LIMITED will be held at the Registered Office of the Bank at the UNITED BANK BUILDINGS, 4, Clive Ghat Street, Calcutta, on Saturday the 31st March, 1956 at 10 A.M. to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year ended 31st December, 1955;
2. To declare a Dividend;
3. To elect Directors in place of those retiring by rotation;
4. To appoint Auditors and fix their remuneration;
5. To pass the following resolution intended to be moved as a Special resolution:—

"Resolved that the Company consents to each of the following employees who is a relative of the Director of the Company mentioned against his name continuing to hold his employment with the Company.

NAME OF THE EMPLOYEE	NAME OF THE DIRECTOR
Sri Bhupendra Mohan Sengupta ..	Sri N. C. Datta
,, Dwijesh Chandra Sen ..	Do
,, Chittatosh Das ..	Dr. S. B. Dutt
,, Kshiti Bhusan Datta ..	Do
,, Jyoti Bhusan Datta ..	Do
,, Jagat Suhrid Datta ..	Do
,, Biswaranjan Das Gupta ..	Sri K. C. Das
,, Dhruba Narayan Gupta ..	Do
,, Prasanta Ranjan Mallick ..	Do
,, Pabitra Kumar Sen ..	Sri B. K. Datta
,, Ranjit Kumar Datta ..	Sri N. C. Datta and Sri B. K. Datta
,, Satyendra Krishna Datta Roy	Do
,, Diresh Chandra Dutta Gupta	Do
,, Dhirendra Kumar Sen ..	Do

By Order of the Board,
A. K. ROY,
Secretary.

Dated, Calcutta,
The 1st March, 1956.

N.B.—The Share Transfer books of the Bank will remain closed from Saturday the 17th March to Saturday the 7th April, 1956, both days inclusive.
The Dividend, when sanctioned, will be payable on and after the 23rd April, to those Shareholders whose names stand on the Register on the 7th April, 1956.
Dividend Warrants will be posted to Shareholders at their registered addresses or in accordance with their mandates.
Early intimation should be given to the Bank of any change of address

The Indian Bank Limited, Madras

(ESTABLISHED 1907)

DIRECTORS' REPORT
Ninety-Seventh Report

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1955 The Auditor's Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 20,28,454-10-2 and together with the sum of Rs. 1,30,785-0-11 carried from the previous year's account, makes a total of Rs. 21,59,239-11-1

3. Out of this sum, the Directors have made the following interim appropriations:

	Rs.	A.	P.
An 'ad interim' dividend at the rate of 5% and a Bonus of 1% (both free of Income-tax) was paid which absorbed	3,48,000	0	0
The Directors now recommend that the following further appropriations may be made:—			
To pay a final dividend of 5% and a Bonus of 1% (both free of Income-tax) thereby making the dividend and bonus for the year amount to 12%	3,48,000	0	0
To provision for taxes	5,75,000	0	0
To transfer to the Reserve Fund under Sec. 17 of the Banking Companies Act 1949 raising it to Rs. 62½ lakhs	3,50,000	0	0
To transfer to the Reserve Fund other than that under Sec. 17 of the Banking Companies Act 1949 raising it to Rs. 10 lakhs	1,00,000	0	0
To transfer to Sinking Fund raising it to Rs. 7½ lakhs ..	2,63,100	0	0
To transfer to Bank's Buildings account	30,000	0	0
To carry forward	1,45,139	11	1
TOTAL ..	21,59,239	11	1

4. The Bank rate remained unchanged at 3½% during the year under report.

5. Offices of the Bank were opened during the year at Annamalainagar (South Arcot) Calcutta, Khammameth, and Mettupalayam.

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank four Directors, Messrs. O. M. SP. L. M. Meyyappa Chettiar, A. M. A. MR. Murugappa Chettiar, Rao Bahadur Dr. M. R. Gturuswami Mudaliar and C. Krishnamoorthy Mudaliar retire this year by rotation and they, being eligible, offer themselves for re-election.

7. The Directors regret to report the sad demise of Rao Bahadur Sri M. R. M. S. Periannan Chettiar, Director of the Bank, on 17th December, 1955. In his place Sri Rao Bahadur T. S. Kachapikesa Mudaliar was co-opted as a Director on 6th January, 1956.

Balance Sheet as at 31st December, 1955.

SOUTH INDIAN MARKETS

(Continued from page 453)

Rs 915 and the Country variety at Rs 875 per candy.

There are various rumours with regard to fresh business of about 1,000 tons with Russia; but these have remained, so far, unconfirmed. Opinion among a section of the trade is, however, veering round the fact that, unless there is concentrated buying by America, the present prices may not be maintained as growers are likely to get tired and come out to sell before the pressure of Sarawak new crop in the market.

✱

Business in Coconut Oil in the Cochin market has come to a standstill, pending price adjustments following a decision of the Cochin Oil Merchants' Association to continue all contracts in coconut oil at old rates.

The Association has taken the above decision to consider the situation arising out of the proposed imposition of excise duty of Rs 70 per ton on coconut oil and other non-essential vegetable oils. It is resolved that, in future, prices should be quoted excluding the excise duty.

✱

Following the levy of excise duty on the production of vegetable oils, the Madras Groundnut market was rather in a state of confusion. Representations were reported to have been made to the Government that the duty would cripple several crushing units, which would not be in a position to stand the competition from the smaller units.

Arrivals averaged 30 to 35 tons a day, while small crushers were taking up these stocks to meet their immediate requirements. The rate for superior oil-quality seeds was quoted at Rs 140 per candy.

In the Groundnut Oil section, the rate for the ready position was quoted at Rs 285 per candy. Shippers showed only small interest, while Calcutta interests were buying to meet their immediate requirements.

✱

In the Madras Tanned Hides market, arrivals and clearances of Cow hides were on a moderate scale. Prices declined further by 6 pies to one anna per pound in 5-5½ lbs average, three to six pies in 8/8½ lbs and about three pies in 10/12 lbs. There were, however, no accumulation of stocks in the market.

In the export section, UK buyers continued to hold off buying as far as possible and were only enquiring for their immediate needs. According to reports, business was confirmed with the UK in 5/5½ lbs at 49d; 8/8½ lbs at 39½d and 10/12 lbs at 36d basis.

Arrivals of Buff hides were on a moderate scale, while clearances were rather slow. Prices declined by a further three to six ples per pound. Arrivals of Calf were slow on account of poor demand from the UK who was buying only small quantities. Arrivals of Buff Calf were fair and there was a steady clearance at prices a shade easier than last week.

In Tanned Skins section, market quality Goat skins showed a further drop of one to two annas per pound; but market quality sheep skins showed no further change for the present.

In the export section, trading in both Goat and Sheep skins was not brisk as most buyers seemed to the content to mark time and await the results of the impending London auctions, which will begin on March 12.

In Raw Skins section, prices of both Goat and Sheep skins remained unchanged.

MARTIN BURN LIMITED.

CONVERTIBLE NOTES.

NOTICE is hereby given that interest for the half-year ending 31st March, 1956, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1956, or in accordance with their instructions.

A. G. GIDLEY,
Secretary.

12, Mission Row,
Calcutta,
10th March, 1956.

No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Stock Exchanges

EQUITIES IN GOOD SHAPE

Watch-dog Writes:

SECOND thoughts on the Budget proposals have produced slightly different reactions in stock markets. The cumulative impact of the Budget proposals, severe though they are, are considered not as bad as was apprehended. Thus, with the emergence of gradual support, equities in general, have recovered most of the lost ground, thanks to bear-covering and renewed bull support.

Except for the forward scrips losing some ground at the close due to settlement considerations, the Calcutta Stock Exchange displayed steadier conditions during the week.

Price movements on the Bombay Stock Exchange were confined to a narrow range as operators appeared to be cautious in their commitments.

Sentiment was cheerful on the Madras Stock Exchange where brisk trading was noticed in selected Textile and Planting issues.

In contrast to last two weeks, the London Stock Exchange remained depressed, showing evidence of the credit squeeze on industry.

Wall Street closed firm with a fair representation of gains ranging to $2 or more.

*

Calcutta

Calcutta, Thursday Evening.

DULL but steady conditions prevailed on the local Stock Exchange during the past week. Although the announcement of the Budget proposals had a restraining effect on operators, a somewhat optimistic mood was in process of development toward the closing stages of the week and rates were cautiously marked up. Except for the six clearing shares which lost some ground due to settlement adjustments, conditions in other counters remained steadier with a revival of interest in selected scrips. Turnover showed a marked expansion.

Prices in the Giltedged market continued to display an easier tendency. Support was lacking, partly to the acute financial stringency and partly to fears of a rise in line Bank rate. Institutional investors showed little interest owing to prevailing uncertainties. 3 per cent 1986 Conversion Loan was marked down further to Rs 76-10 from Rs 77-9 to finish at Rs 77-4. 3 per cent 1970-75 changed hands at Rs 89 to Rs 89-2; 3 per cent 1963-65 at Rs 94-9-6 to Rs 94-10 and 3½ per cent 1964 at Rs 98-7.

Bank shares ruled quiet, the only exception being Punjab National which continued to receive good support upto Rs 47 from Rs 43-6. United Commercial turned ex-dividend and changed hands at Rs 45 to Rs 46-4, while Hind were maintained at Rs 36-12.

Jute shares continued to be a neglected counter as operators were found to be still reluctant to enter into commitments as they felt that, due to the growing disparity between the prices of raw jute and manufactured goods, mill costs had increased further. Howrah were on offer at Rs 23-14 to Rs 24-1; National at Rs 25-13 to Rs 26-2 and Reliance at Rs 10-10 to Rs 10-12. Among higher priced scrips, Khardah were nearly maintained at Rs 171, while Ganges, after receding from Rs 70 to Rs 67-8, finished better at Rs 69. Kamarhatty met with some enquiry upto Rs 160 from Rs 157.

Coal shares came in for selective enquiry. Burrakur, after being marked down to Rs 13-8 from Rs 14-4 due to settlement adjustments, recovered partially at the close to Rs 13-13. Bengal were enquired upto Rs 547 from Rs 545 following the maintenance of dividend, while New Beerboom moved narrowly between Rs 19-12 and Rs 19-15. East Indian were a steady feature at Rs 32.

Textile shares ruled steadier on the behalf that the incidence of excise duty on cloth at six pies per square yard was reasonable since it would be passed on to the consumer. Kesoram had buyers at Rs 16-9 to Rs 16-12; Cawnpore at Rs 9-2 and Elgins at Rs 27-4 to Rs 27-7. Bowreach met with some enquiry at Rs 300.

Tea shares registered only a limited turnover though prices were well maintained around last levels. There was a feeling that most of the companies might not find the new tax proposals to be of such a magnitude that would necessitate a dividend-cut. Brooke Bond moved between Rs 20-2 and Rs 20-5; Dhelakhat between Rs 17-15 and Rs 18-2; Baghmari between Rs 21-9 and Rs 21-11; Patrakola between Rs 180 and Rs 185 and Jayshree between Rs 12-2 and Rs 12-6.

Sugar shares were practically neglected on quieter advices from the commodity market; and the omission of any excise duty on sugar had no effect on sentiment. Carew, after touching a high of Rs 10-15 from Rs 10-9, receded toward the close to Rs 10-4. Darbhanga changed hands at Rs 21-2 to Rs 21-4, while SKG new shares were done at Rs 11-4.

Price movementsc in the Engineering section, were mostly influenced by the speculative activity in Indian Irons. This scrip, after opening at Rs 33-2 and, after touching a low of Rs 32-3 on settlement considerations, finished the week at Rs 32-5. After market hours on Thursday, there were buyers at Rs 32-1-6 with sellers at Rs 32-2.

Among othr Engineering scrips, TEXMACO, after touching a high of Rs 21-10, receded at the close to Rs 20-14 on profit-taking. Jessop changed hands on the ex-rights basis at Rs 34-6 to Rs 34-12, to finish weak at Rs 31-8 on selling pressure. Braithwaite turned cum-dividend at Rs 27-12. I. S. Wagon moved between Rs 170 and Rs 171 with Richardson quoting around Rs 26-8.

In the Miscellaneous section, Paper shares ruled almost steadier with Titaghur moving narrowly between Rs 44-4 and Rs 44-8; India Pulp between Rs 23-11 and Rs 23-15; Bengal between Rs 126 and Rs 127-12 and Shree Gopal between Rs 18-3 and Rs 18-8. Orient after being taken upto Rs 35-2, receded to Rs 34.

In Minings, Indian Copper were a narrow market around Rs 6-6, while Karanpura Develpment were taken upto Rs 21 on speculative buying. Metal Corporation continued to be in good demand upto Rs 12-14.

In Oils, BBP hovered idly around Rs 4-1 with IBP ruling steady at Rs 40-14.

Among other scrips, Indian Cable, after improving to Rs 32-2 from Rs 30-10, eased off at the close to Rs 31-6. Martin-Burns were keenly sought after upto Rs 27-12 from Rs 27-5 following the increased dividend, while Metal Box changed rands at Rs 25-12 to Rs 26. India Steamship moved between Rs 8-6 and Rs 8-8 and Rohtas Old between Rs 20-8 and Rs 20-12. BIC were pushed down to Rs 10-4 from a high of Rs 11-8 due to selling pressure.

*

Madras

Madras, March 6.

THE local Stock Exchange was not subject to such violent fluctuations as Bombay and Calcutta after the publication of the Budget proposals for 1956-57. The majority among marketmen appeared to have taken a constructive view about the proposals which were found to be not so much bearish as they had been earlier expected. There was brisk trading in selected Tea, Rubber and Coffee shares, while several issues in the Textile Section registered handsome gains on balance.

TEXTILES:—Turnover in this section was better and selected issues were taken up at higher levels on the feeling that the working results for 1955 would be encouraging. Bangalore Woollens were again marked up to Rs 600 on renewed support, while Buckinghams received support at quoted rate. Maduras firmed up to Rs 51-4 and Loyals to Rs 42. Janardhans provided a bright spot, spurting to Rs 101, while Mettur Industries were absorbed at Rs 403 and Rajalakshmis at Rs 175. Travancore Rayons, however, lacked support and met with some sellers at quoted level.

PLANTINGS:—There was brisk trading in this section. Among Tea shares, Coorgs continued to attract buyers at Rs 10-2. Nilgiris in the absence of sellers, spurted to Rs 13-4. Neelamalais were bid up to Rs 7-2, while Periakaramalais were done at Rs 8-2 and Twyfords at Rs 23. Devasholas had, however, some sellers at the market rate.

In the Rubber section, Kalpettas moved up by half a point to Rs 27. Cochin Malabars were prominent, registering a small rise to Rs 9-5 on strong demand. There was support for Be Bes, Midlands; Gokuls and Pullangodes at the market rate.

Among Coffee shares, Consolidated Coffees were keenly sought after upto Rs 125-4 cr. fpxn Rs 23 c.r. following the Government's sanction to issue bonus shares. Coffee Lands scored As 12 at Rs 19-8, while Ouchterlonys moved narrowly between Rs 4-14 and Rs 4-15-6.

MISCELLANEOUS:—Cement and Chemical shares came in for good attention in this section. India Cements had buyers at Rs 32-3; Travancores at Rs 11-14 to Rs 12; Mettur Chemicals at Rs 9-8 and FACTs at Rs 6-8 to Rs 6-10-6. Indian Steel Rolling Mills elicited some support at the market rate, while Bangalore Transports were marked higher at Rs 13-4. Mysore Golds had some sellers at the market rate.

*

London

London, March 5.

IN contrast to last two weeks, sentiment on the London Stock Excange, during the past week, remained rather depressed following the effects of the credit squeeze on industry. Substantial price falls were recorded in all sections.

Among Industrials, Associated Electricals new issues were quoted at 7¼d. premium at the close of the first dealings. Anglo-Argentine Trams and City of Buenos Aires Transport were higher on reports that Argentina was about to become a member of the International Monetary Fund. Oils were weak under the lead of British Petroleum on the serious situation in the Middle East.

Sterling and the Giltedged markets were weak on the marked deterioration in international situation. British Funds showed a steady decline under the pressure of small persistent selling. Follow-£53¾ (£53⅞—previous week); 3½ per cent ing were the closing rates of selected

(Continued on page 496).

MARTIN BURN LIMITED.

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st March, 1956. §Includes stock on hand.

(b) Dividend for four years from 1st April 1951 to 31st March, 1955 at 6¼ per cent per annum.

(c) Rs. 5 lakhs to be capitalised and issued as Bonus shares of Rs. 50 each in the proportion of one share for every five shares held.

(d) After transferring Rs. 1,84,474 from taxation reserve.

(e) Arrears for 1946, 1947 and 1948.

(f) After crediting Rs. 1,13,664 being excess provision for bonus for 1951 and Rs. 6,77,776 being E.P.T. and after transferring Rs. 1,50,000 from Dividend Equalisation Fund.

(g) After transferring Rs. 1,80,000 from Res.ve.

(h) After transferring Rs. 2,10,000 from Dividend Fund, Rs. 1,15,000 from Depreciation Renewal and Extension Fund and Rs. 40,000 from Reserve for taxation.

(i) After transferring Rs. 5,95,000 from Reserve.

(j) In addition to dividend, a Bonus of one ordinary share of Rs. 10 each at par of Jay Shree Tea Gardens for every 20 ordinary shares of Kesoram Cotton Mills will be issued.

(k) After transferring Rs. 70,000 from General Reserve and Rs. 37,500 from Dividend Equalisation Reserve.

(l) Dividends for 6 years from 1949 to 1954 at 5 per cent per annum.

(m) Dividend to be paid out of Dividend Equalisation Fund.

(n) After transferring Rs. 1,00,000 from Dividend Equalisation Fund.

(o) Managing Agents have foregone their minimum commission of Rs. 50,000 and have instead charged 10 per cent on net profit.

✱

New York

New York, March 6.

PRICES on Wall Street, after initial firmness, developed a slightly easier tendency towards the close due to profit-taking though a few scrips showed fractional advances on balance.

Apart from some specialities, early trading was light following the recent decision made by the President. There was, however, a broadening in covering and investment demand, which was aided by some optimistic predictions for 1956 corporate results.

Babcock and Wilcox, one of the concerns interested in atomic energy development, initially advanced by over $1 with its order backing expected to show further increase this year. This rally was extended to over $2 at the close. Oils were popular with Royal Dutch advancing by $2½. Anaconda Copper was quoted at $78½ ($77¼—previous week); General Motors at $44 ($45); Ford Motors at $62 ($45) and U.S. Steel Common at $56½ (57).

✱

EDITOR'S NOTE.

For the convenience of investors we publish below a list of companies whose accounts have been incorporated in the Tabulated Balance Sheet section.

This now makes it possible for investors to keep track of the latest balance sheets and enables them to immediately to make comparison with other companies in the section.

FOR THE INVESTOR

(Continued from page 436)

underwriting expenses, now stands at Rs 31.61 lakhs.

Meanwhile, the accounts for the half-year ended 30th September 1955, have shown encouraging results, thanks to an increase in production as well as sales. Sales have risen to Rs 46.63 lakhs from Rs 39.55 lakhs, while the net profit, after Taxation and Depreciation, is higher at Rs 8.34.251 as against Rs 7.26,366 in the previous half-year.

In respect of allocations to Funds, the Depreciation amount has been maintained at Rs 2.70 lakhs, while Taxation has been raised to Rs 2.50 lakhs from Rs 1.70 lakhs. The dividend is maintained at 7 per cent.

According to the Directors' report, orders have been placed for plant to expand the mill's paper-making capacity, and the orders for the renovation and modernisation of the two existing paper machines will be placed shortly.

£R$

Bengal Nagpur Coal

The Bengal Nagpur Coal Company has reported a loss, before Depreciation, of Rs 10,319 for the half-year ended 30th June 1955 as against a net profit of Rs 17,637 in the previous half-year. Sales have shown a sharp decline to Rs 12,668 from Rs 2.00 lakhs. After transferring a sum of Rs 3,337 from Reserve, a sum of Rs 17,780 has been set apart for Capital Reserve, while Depreciation amount has been reduced to Rs 4.800 from Rs 16,025. The dividend on the Ordinary shares has been passed over again.

Arrangements have been made for the raising and despatching of about 20,000 tons of coal, which remained to be worked at Bhuggutdih Colliery.

£R$

More Jute Results

Four more jute mills, viz., Belvedere, Caledonian, India and Megna, have presented their reports and accounts for last half-year; and the working results have been rather disappointing.

In the case of the Belvedere Jute Mills Company, sales are substantially lower at Rs 55.34 lakhs during the half-year ended 31st December 1955 as against Rs 67.20 lakhs in the previous half-year, while the accounts, before setting aside for Depreciation, show a loss of Rs 2.44 lakhs against a net profit of Rs 2.61 lakhs. The Depreciation amount has been maintained at Rs 43,000. After transferring a sum of Rs 3.20 lakhs from various Reserves, the directors have found it possible to recommend a dividend of only Rs 2-8 on the Ordinary shares, the dividend paid for the previous half-year being Rs 5 per share.

Similarly, the Caledonian Jute Mills Company has reported a loss, before Depreciation, of Rs 33,204 for the half-year ended 30th November 1955 as against a net profit of as much as Rs 3.21 lakhs in the previous half-year. Sales have declined to Rs 50.28 lakhs from Rs 59.98 lakhs. The Depreciation amount has been raised from Rs 95,000 to Rs 1.40 lakhs, though no provision has been made for loss on forward contracts as in the case of the previous half-year. The dividend on the Ordinary shares has been reduced from Rs 4 to Rs 2-8 per share. According to the Directors' report, the Hessian Warp section of the mill was modernised with the installation of 15 silver spinning frames and ancillary machinery. This section of the mill has since been working double shift.

Despite an increase in sales from Rs 87.23 lakhs to Rs 97.59 lakhs, the India Jute Company has incurred a loss, before setting aside for Depreciation, of Rs 28,504 for the half-year ended 30th September 1955 as against a net profit of as much as Rs 4.95 lakhs in the previous half-year. A sum of Rs 1.86 lakhs (Rs 1.31 lakhs) has been provided for Depreciation. After transferring a sum of Rs 2.86 lakhs from Contingency Suspense, the Directors have been able to declare 1¼ per cent, both on the Ordinary and Deferred shares, as against 2½ per cent in the previous half-year.

According to the directors' report, new machinery and plant to the value of Rs 12.85 lakhs was installed. The benefits from the new machinery are now apparent and, with increased efficiency plus the saving in labour, costs are already appreciably lower. Further machinery is on order and, when installed, the company's position will be further strengthened.

The Megna Mills Company has, however, reported a net profit of Rs 1.56 lakhs for the same half-year as against Rs 5.84 lakhs in the previous half-year, while sales are shown at Rs 1.43 crores against Rs 1.32 crores. After setting apart Rs 2.85 lakhs (Rs 2.56 lakhs) for Depreciation, the dividend has been halved to 1¼ per cent; and this was possible only after transferring Rs 1.10 lakhs from Contigency Suspense.

LAW FOR THE LAYMAN

(Continued from page 438)

or a plea that the second plaintiff was the author of her own misfortune; and that has never been pleaded or found. But I think the same result is reached by saying that the implied term as to fitness is dependent on proper disclosure by the customer of any relevant peculiarities known to her, and in particular of the fact that she knew by experience that Inecto might have a bad effect on her. The way this result is reached in law is this; in a contract for work and materials (such as the present)—there is an implied term that the materials are reasonably fit for the purpose for which they are required; See G. H. Mayers & Co., v Brent Cross Service Co., (1) (1934) I.K.B. 46). This term is analogous to the corresponding term in the sale of goods; See Steard v Reavell's Garage (2) (1952)-1 All. E. G. 1191). In order for the implied term to arise, however, the customer must make known to the contractor, expressly or by implication the "Particular Purpose" for which the materials are required, so as to show that he relies on the contractor's skill or juidgment. The particular purpose in this case was to dye the hair, not of a normal person, but of a person known to be allergic to Inecto. The second plaintiff did not make that particular purpose known to Mrs Hughes. She cannot therefore recover on the implied term."

FIRST EFFECTS OF THE CREDIT SQUEEZE

(Continued from page 441)

press employers' organisations to cut prices and to keep down profits and dividends as far as possible. This is essential not only from the point of view of its direct effect on inflation, but mainly because of its effect on the attitude of labour. Wages restraint will become more practicable if it is combined with a restraint of profits and dividends. Some recently announced profits showed striking increases compared with the previous year. Trade union officials would find it difficult to restrain the appetite of their members unless they can point to a certain degree of self-denial by employers.

It would be optimistic to expect that the present series of consultations will produce the desired result. Most probably it will be necessary to administer another dose of the disinflationary medicine before the unions can be induced to moderate their demands to a sufficient extent. Opportunity for this will be provided by Mr Macmillan's first Budget, the details of which will be announced on April the 10th. Unless by some miracle a turn of the trend should occur within the next few weeks, it will have to be a 'tough" Budget. It is no wonder that the Stock Exchange is not in a happy mood. The popular assumption is that things will have to get worse before they can get better.—(Copyright).

✱

EDITORIAL NOTES

(Continued from page 433)

37 lakhs and expenditure by Rs 165 lakhs. As against a substantial opening balance of Rs 314 lakhs, the budget year is expected to close with an overall balance of about Rs 67 lakhs, on the assumption that a loan of Rs 3 crores would be raised in the coming year.

A sum of Rs 1,285 lakhs has been earmarked for new schemes in the revenue account, and this covers the State and Central sectors of the carry-over of the first Five-Year Plan as also schemes under the Plan.

At the existing level of taxation the State's contribution to the Second Plan can only be to the extent of Rs 9.7 crores on revenue account and Rs 0.2 crores on capital account. This does not compare with the actual size of the Plan namely Rs 97.3 crores, which in itself is but a small increase over the financial target of Rs 86.2 crores of the First Plan.

No doubt, the Finance Minister is acutely conscious of the low taxable capacity of the people in the State. However, he does believe that some Rs 7.8 crores can be mustered during the plan-period through additional taxation including, of course such measures as the surcharge on land revenue, betterment levy, extension of coverage of sales tax, taxes on passengers and goods, mining cess etc. It is not clear why a beginning has not been made in this direction especially after the Planning Commission have pressed the State to endeavour to raise further resources to the extent of Rs 2 crores.

WORLD OF FINANCE

(Continued from pag 440)

demand for currency, expansion has been effected against foreign securities transferred from the Banking Department to the issue Department.

Foreign securities in the Issue Department have risen by Rs 14.99 crores to Rs 682.15 crores. Rupee securities are unchanged at Rs 603.23 crores. Rupee coin has declined by Rs 1.05 crores to Rs 103.98 crores Active note circulation has gone up by Rs 15.81 crores to Rs 1,418.66 crores, while notes held in the Banking Department have registered a decline of Rs 1.86 crores to Rs 10.73 crores.

In the Banking Department, Central Government's deposits at Rs 59.56 crores show a decline of Rs 6.95 crores. It is noteworthy that even after the month-early disbursements, the level of Centre's balances is well over Rs 50 crores. State Governments' deposits have risen by Rs 1.91 crores to Rs 18.03 crores in spite of month-early payments. The deposits of the Scheduled Banks have declined by Rs 5.81 crores to Rs 49.35 crores. The fall would have been much sharper, but for increased borrowings from the Reserve Bank. 'Other loans and Advances' show a substantial increase of Rs 7.14 crores to Rs 63.29 crores. This is partly due to seasonal demand and partly to the incidence of the beginning of the month. Foreign securities in the Banking Department are lower by Rs 13.73 crores at Rs 53.93 crores. As the transfer to the Issue Department is Rs 14.99 crores, the difference of Rs 1.26 crores represents net accrual of foreign assets in the week under review. Investments are down by Rs 1.87 crores to Rs 47.42 crores. This is confirmation of the report that the Reserve Bank is not making any purchase in the open market. On the other hand, it may be inferred that the Reserve Bank has sold some securities. It is, however, unlikely that such sales would have been effected in the market which has been displaying falling prices and absence of demand. The sales of securities may, therefore, be attributed to transactions direct between the Reserve Bank and one or other of the States. Another explanation that may be put forward in this connection is a readjustment of the giltedged portfolio of the Reserve Bank to the current lower prices of government securities.

+

The seasonal pressure for credits is, likewise, reflected in the increase in 'Loans and Advances' made by the Scheduled Banks in the week ended February 24. Loans and Advances' have shown a further rise of Rs 6.02 crores to Rs 697.01 crores. Both demand and time liabilities are higher by Rs 0.95 crores and Rs 1.19 crores at Rs 631.06 crores and Rs 418.08 crores respectively. Borrowings from the Reserve Bank have risen by Rs 2.17 crores to Rs 40.82 crores, while those from the State Bank have declined by Rs 0.89 crores to Rs 12.17 crores. Cash and balances with the Reserve Bank have risen by Rs 1.87 crores to Rs 88.08 crores. Investments have moved down from Rs 377.44 crores to Rs 375.26 crores. Money at call and short notice stands at Rs 5.52 crores against Rs 7.14 crores.

+

The statement of the State Bank of India for the same week reveals a drop of Rs 3.59 crores in deposits to Rs 233.34 crores. Borrowings from other banks are lower by Rs 0.03 crores at Rs 0.97 crores, while other liabilities, including inter-office adjustments, have risen by Rs 4.03 crores to Rs 10.50 crores.

On the assets side, cash balances have declined by Rs 5.67 crores to Rs 18.11 crores. Investments are higher by Rs 0.38 crores at Rs 115.25 crores. Advances show a sharp rise of Rs 5.74 crores to Rs 126.16 crores—'Loans, Cash Credits and Overdrafts' accounting for a rise of Rs 3.76 crores and 'Bills Discounted and Purchased' for Rs 1.98 crores.

✱

OLYMPUS

(Continued from page 451)

one in which there is a machinery to abate the excesses of the conflicts.

The final fact about the current situation to which Mr Nehru drew attention is the place of science in our lives. In Mr Nehru's view, the world of tomorrow will be run, not by businessmen and politicians but by scientists and technologists. Whether this would be an unmixed blessing is arguable; for, scientists have their orthodoxies as well as businessmen, politicians and religious denominations. But, in so far as science aids the creation of plenty, which can be shared by all, its value in reducing class tensions is immense.

The result of the readjustment in mental outlook is, according to Mr Nehru, the pursuit of the "middle path". "As in the political field we are friends of the big blocs without being tied to them, so also in the economic field, seeing our conditions and our minds, we want to follow our own path. We do not want to tie ourselves with the economic policy of any country although we want to be on friendly terms with all, benefiting by each other's experiences and learning from others. In adopting this middle course, certainly we shall make mistakes but we shall keep our minds open." Apart from the fact this middle path is economically sound, the high courage and passion for the freedom of the mind and the spirit this attitude implies makes it an inspiring basis of conduct.

WORLD OF BUSINESS

(Continued from page 442)

country's growing demand for such tubes.

High quality precision tubes, for bicycles, boilers, etc., will be produced in the electric resistance weld plant, the construction of which has already commenced. By 1957, this plant will manufacture approximately 13,000 tons of tubes a year.

A third plant is scheduled to go up as soon as Government sanction is received; and this would specialise in the production of seamless tubes for use in high pressure work and defence purposes. When these three plants go into full operation, the entire domestic requirements of steel tubes will have been met, except for a relatively small tonnage of tubes of diameter larger than 6 5/8 inches.

Sir Jehangir Ghandy, Chairman of The Indian Tube Company, draws attention to two commendable facts; first, no less than 74 per cent of the expenditure on the construction of the plant was incurred in India and second, with the exception of only three engineers, the plant is manned entirely by Indians.

Emphasising that an industry has aspects other than production, Sir Jehangir said, "We consider the worker, howsoever humble, an end in himself and not merely a means to an end". The broad policies which the Company had laid down on recruitment, promotion, training, wages, welfare amenities, communications, joint consultation, collective bargaining, etc., bear out fully this cardinal tenet.

These are reasons enough to forecast an illustrious future for the Indian Tube Company. The rapidly growing use of steel tubes on an unprecedented scale in industly, in utility services, and in agriculture should leave this conclusion in no doubt.

NORTH INDIAN NOTES

(Continued from page 452)

Plan, the size of which, as sanctioned by the Planning Commission, is Rs 13.6 crores, exclusive of Rs 4.25 crores for power development. The allocation in the year 1956-67 for the Plan totals Rs 45.25 lakhs on Revenue Account and Rs 304.15 lakhs on Capital Account.

Notable among the development schemes for the budgetary year, are expansion projects relating to agriculture, poultry, fisheries, afforestation, leprosy patients colony, rural water supply and sanitation, loans to local bodies for their development schemes and a wage-earning scheme for prisoners. In case the prohibition programme is extended, as the State Government would like to, the consequent cut in excise revenue and the additional expenditure involved in strengthening the Excise Department are reckoned to be not inconsiderable.

On balance, the impression is left that the all round growth of Delhi's civic and industrial needs calls for a bolder approach and a less diffused administrative machinery to carry it out.

THE NEW COMPANY LAW

By

C. S. RANGASWAMI

and

G. BASU

The New Company Law, which is intended to be a practical handbook for company managements and commercial students, will contain detailed commentary on the new Act. The first volume has an exhaustive introduction, while the second will include a number of relevant appendices.

Pre-publication price is Rs. 25 for a set of 2 volumes.
Post-publication price is Rs. 30 plus postage.

Advance orders at pre-publication price may be booked with "Indian Finance", 116 Lower Circular Road, Calcutta—14. Orders must be accompanied by a cheque to cover the price.

Publishers: Oxford Book & Stationery Co.

Printed at the Dorchester Printing Works, 116, Lower Circular Road and published for Indian Financial Journals Ltd. and Edited by O. Swaminatha Rangaswami at 116, Lower Circular Road, Calcutta. Bombay Publisher: P. R. Venkatesan, Navsari Chambers, Outram Road, Fort, Bombay.

For the Investor

Mr Chaturvedi Stays on

Investment Gossip: *ONE*

This week's significant bullish news is that Mr B. N. Chaturvedi, who had resigned from the Presidentship of the Calcutta Stock Exchange, has been persuaded to withdraw his resignation.

In the protracted and, often, stalled negotiations for effecting a solution of the settlement troubles, there was continuing sniping from a certain section of interested brokers; and Mr Chaturvedi felt like saying: "I have worn this crown of thorns long enough. Let somebody else wear it now."

When the news of his resignation reached the Exchange Hall, there was a spontaneous suspension of business. In their hundreds, the members marched to the President's office and begged him to reconsider his decision, assuring him that he was the one man in whom everyone had implicit faith and promising him that they would give him unswerving loyalty.

Mr Chaturvedi was greatly touched—but pleaded that he was tired and sick with bickerings and stubborn posturings based on preoccupation with one's own interests and only with one's own interest.

A deputation waited on him at his house; and it was made clear that it was the view of one and all that he, and he alone, can shape the destiny of the Stock Exchange competently, firmly and understandingly; and that, invaluable at all times, his leadership was indispensable in the conditions in which adjustments will have to be made to Company Law Reform and Stock Exchange Reform.

Mr Chaturvedi relented; and Lyons Range will continue to receive his sagacious guidance and upright leadership.

£R$

Mr Tata on the Premium

Investment Gossip: *TWO*

At the extra-ordinary general meeting held this week to sanction the new issue of TISCO shares, Mr J. R. D. Tata dealt, competently and convincingly, with the question marks that seemed to dominate the thinking of some of the shareholders.

Why this premium?

Mr Tata made it clear that, for his part, he would have preferred the issue of the rights shares at par. But, now that the Government have decided that the shares must be issued at a premium of Rs 30 per share, why keep harping on it? Why make a mountain of a molehill? Why forget that the original proposal of the Government was a premium of Rs 100? Why also forget that, at an earlier stage, TISCO had made a rights issue at a substantial premium? Why also overlook the simple fact that, if a well-established company like TISCO issued the shares at par, new companies will find it by comparison, none too easy to raise capital?

The next question Mr Tata disposed off was this: Will the dividend prospects justify the premium? Mr Tata hinted that the present yield could be maintained The extra amount required would come out of the extra profit on the extra output.

More. As reserves are built, bonus shares are quite on the cards. Of course, Government's permission is required; but why conjure up difficulties in this regard?

Finally: What about the threat of nationalisation?

Mr Tata said that Government had not given any assurance to any Indian company about their future policy with regard to nationalisation. Only the oil refineries were given such an assurance. "They have told us that it is not their policy or intention at present to nationalise this industry. They have also told us that we cannot commit future Governments. This is perfectly legitimate."

The Prime Minister, the Finance Minister and the Minister for Commerce and Industry had recently stated that their policy was not to acquire existing manufacturing companies, but to build new ones. Mr Tata also referred to the specific reference made by Mr Nehru recently to this company in this regard.

The extra-ordinary general meeting provided the occasion for three important announcements.

First. The World Bank loan will carry interest at 4½ per cent. There may be a small rebate. Compared to the cost of money in India, the rate that the World Bank will charge is very reasonable.

Second. The expansion programme will be the only means for increasing, not only production, but productivity. That is, cost per ton will show considerable decline.

Third. Mr Tata announced the time schedule. Transfer books of the Company will close between April 12 and April 26. The circular will go forth by the middle of May. First payment on the new shares will be payable in the first week of July; the second, approximately in December 1956; and the third, approximately in June 1957.

My information is, let me add, that the proposed tempo for completing the project will suffer no abatement. The determination to fulfil the plan by the target date remains firm and steadfast.

Mr Choksi is leaving by the month-end to complete the deal with the World Bank.

The order for the coke ovens has already been placed with Simon Carves.

The rolling mill is likely to come from West Germany. Eight open hearth furnaces from the USA.

Bengal Paper Controversy

Investment Gossip: *THREE*

I like an honest to goodness offer of purchase of all shares in a company. It is a good thing, and if there is an entrepreneur who believes that he possesses greater efficiency and can command abler "know-how", all power to him: let him offer to buy up the company, I have no quarrel with him.

But, as Watch-dog of the interests of the Investor, I am afraid I look askance at any attempts at the corner of a company by purchase of such proportion of the shares as will amount to a majority interest. In such case, though Company Law provides for the safeguarding of the interests of the minority, I am afraid I cannot help a twinge of fear for the interests of the Investor. Especially is this so when the opportunity is seized of building up what is no more than an apparently good argument for a change in management.

And I am twice shy of documents which purport to give the whole story—but which, in fact, are heavily biased in one direction.

What I am leading up to is the controversy that is agitating the minds of investors in the matter of the Bengal Paper Mill Company Limited. The facts of the case are briefly as follows:

Firstly, the present managing agency agreement of Bengal Paper is due to expire early in 1957.

Secondly, in line with the expansion and modernisation of the paper making industry in the country, Bengal Paper, it is known to investors, has drawn up projects that call for installation of modern paper making equipment.

Thirdly, it has become evident that one of the main difficulties that the paper industry will have to face in the coming years will be supply of the raw material.

Fourthly, in order that the development programme can proceed smoothly, and also so that proper arrangements can be made for the supply of the raw material, it has become necessary to provide for safeguards to ensure that there would be no change in management during the years of development.

Fifthly, for this reason, at the instance of the Directors of the Bengal Paper Mill Company Limited, an extraordinary general meeting has been called to consider a fresh agreement with the Managing Agents to come into force from 1st April, 1956.

This intention to renew the managing agency agreement has provoked one Mr N. G. Maniar to circularise a statement with a view to preventing the present Managing Agents from continuing in office. Various allegations have been made in this statement.

HIGHLIGHTS

There is much to be said for a good phrasemaker. The ability glibly to toss off a catchy set of words is not easily come by.

Mr John Foster Dulles can justly claim that he possesses, if not the gift of the gab, at least the art of coining cliches.

Think of it: massive retaliation, defence from strength, brink of war, agonising reappraisal. All of them, Dullesisms.

Then, again, there is another matter, Statesmanship does not consist in coining apposite sets of words. And, in diplomacy, what is indicated is statesmanship—not what Stephen Potter would call coinsmanship.

In fact, you may say that Dullesisms and Statesmanship are poles apart. This is not merely the conclusion that Indians have come to, the American press is also leaning to this view.

The other day, the New York World Telegram, which is not exactly known for its fondness for Mr Nehru, mused aloud whether "India was being lost to the Reds" because of Mr Dulles's policy.

"We must," said the World Telegram, "abandon the attitude that those who will not sign up in our pacts are against us."

Even more forthright is Newsweek: which, also not quite known for its pro-Nehru leanings, described the Indian Prime Minister as "Asia's Greatest Statesman" and India as "the most powerful bulwark of democracy in Asia."

If the American press is veering round to a more realistic appraisal of Indo-US relations, it looks as if Eavesdropper has tried to find out what it is that makes Mr Dulles tick.

All Contents of this Issue Copyright 1956 by INDIAN FINANCE

I do not think it is necessary to outline what these allegations are. It suffices for me to mention that, in one important context, the figures given in Mr Maniar's statement are based on wrong assumptions.

But the real question at issue is not even whether Mr Maniar's statement is largely correct or not. I wish to impress upon the Investor that he should take due care to ascertain all the facts before he casts his vote on—or assigns his proxy for—the extraordinary general meeting to be held late this month.

Balmer Lawrie & Company is an entity well known to the Investor; to him, the name has meant efficiency and integrity. It will be a sad affair if the Investor is convinced by arguments based on palpably incorrect assumptions; and it would be a pity if, on the brink of great developments, the Bengal Paper Mill Company Limited should be exposed to the unsettlement of a change of a management which is known to possess both efficiency and integrity.

£R$

Investment Notes:

National Carbon Company has already commenced mailing allotment letters, refund cheques and rejection letters. It is expected to take about two weeks to complete the mailing. It is reported that a number of applications have had to be rejected, because the application forms had not been properly completed.

Bank of India has proposed to issue bonus shares to mark the golden jubilee of the bank. The issue will be in the ratio of one for each five shares held. The directors have, therefore, decided to apply to the Controller of Capital Issues for the necessary sanction.

Tata Oils have scored more than five points within the space of a week, presently quoting around Rs 48-8. There are expectations that the profits for the year ended 31-3-1956 will show a sharp spurt over those of the previous year. On this basis, it is expected that the directors may be in a position to raise the dividend from Rs 2 to Rs 3 per share.

In a circular letter, issued by the Alembic Chemical Works, it is pointed out that the existing shareholders have subscribed to almost all the new shares offered last year. The company, therefore, thinks it unnecessary to offer the small balance of 10,000 shares to the public as existing shareholders will take them.

Bangalore Woollen, Cotton & Silk Mills Company has obtained the sanction from the Controller of Capital Issues to capitalise Rs 81 lakhs from General Reserve for the issue of bonus shares in the ratio of 2:1.

Mysore Vegetable Oil Products have proposed to reduce the capital from Rs 15 lakhs to Rs 12 lakhs by reducing the nominal value of the shares from Rs 10 to Rs 8 and refund cash Rs 2 per share. Transfer Books will remain closed from 26th to 31st March, 1956.

Investment Briefs:

Durbhanga Sugar has maintained the dividend at 15 per cent for the year ended 31-8-1955.

In the Finlay textile group, Finlay has raised the dividend from Rs 16 to Rs 20 per share; Swan from Rs 20 to Rs 25 and Gold Mohur Rs 12-8 to Rs 15-0, all for 1955.

Century Spinning has maintained the dividend at Rs 22 per share for 1955.

Victoria Mills have raised the dividend from Rs 14 to Rs 20 share for 1955.

Binny & Co. (Madras) Limited has raised the dividend from 8 to 10 per cent for 1955.

Janardhana Mills, Coimbatore, have doubled the dividend to 20 per cent for 1955.

Forest Industries (Travancore) Limited has passed over the dividend for the year ended 31-3-1955.

Arthala Estates have again passed over the dividend on the Ordinary shares for the year ended 30-6-1955.

Gokul Rubber has raised the dividend from 9 to 10 per cent for 1955.

Messrs. Tata Industries Limited, Managing Agents for the Tata and Steel Company Limited, report that the total approximate production of iron and steel at the Steel Works at Jamshedpur during the month of February 1956 was:—

Pig Iron		97,500
Steel Ingots		89,500
Saleable Steel:		...
Semis ...	19,700	67,700
Finished ...	48,000	

Following are the crop statements issued by Aspinwall & Company Limited for the period ended February, 1956 (figures in pounds):—

	Crop February	Crop Total	Same Period Last Year	Estimate for Season
Peermade Tea ..	58,646	134,497	214,319	1,900,000
Pullangode Rubber ..	35,000	577,000	573,000	600,000
Travancore Rubber ..	Nil	81,084	66,189	1,035,000

Encouraging Textile Results

Balance-Sheet Reviews:

TEXTILE shares have reached successive high levels and the section, in all the three principal stock exchanges, has generally presented a number of sparkling features against a background of general firmness during the past few weeks. There is a general belief that the outlook for the industry will continue to be bright.

Two textiles mills—Buckingham & Carnatic of Madras and Swadeshi Cotton Mills of Cawnpore—have presented their reports and accounts for 1955. The working results of

New Forces in the Stock Exchanges

Indian Finance
Established 1928
March 17, 1956

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right."—The Analects of Confucius.

SECOND thoughts on the Budget, combined with several other factors, have inspired a broad-based and high-powered surge in Stock Exchange prices. The picture presented by share prices is definitely less confusing than it was particularly in February and the early days of March. And it is opportune to undertake a study of all the relevant issues with a view to providing a measure of clarification for investors puzzled and dismayed by recent trends and developments.

As an aid to understanding, it is necessary to have a quick look at the debacle which, till ten days ago, overwhelmed both Dalal Street and Lyons Range. In our view, the immediate cause was intensified bear raid at the instance of operators who had shrewdly surmised the imminence of the announcement with respect to the nationalisation of life insurance.

We are not concerned here with the question whether such operators had access to inside information or were impelled by the "hunch" for which many of them have, undoubtedly, a flair. The point to be emphasised is that, on the eve of Sir Chintaman Deshmukh's broadcast regarding life-nationalisation, frenzied sales specially in Tata Ordinaries and Indian Iron were effected, resulting in a calamitous fall in prices. So precipitate was the decline that settlement difficulties of an acute kind emerged.

The Calcutta Stock Exchange was, to all intents and purposes, closed for fresh transactions. Deliveries of shares were suspended, the periodical settlement in the forward shares was deadlocked. The scene shifted from the exchange hall to the committee room.

The President and the responsible members of the Stock Exchange Committee had an anxious and strenuous time, day after day, week after week. Complicated transactions of stupendous magnitude had to be scrutinised, and the position of scores of brokers taken into account. In the negotiations that were taking place all the time, both the bulls and the bears maintained an unyielding attitude. The process of finding a solution was protracted; and the gladiators on both sides were in no mood to smoothen or expedite the process. It is a personal triumph for Mr B. N. Chaturvedi, the President, that, at long last, the tangle was overcome and normal trading was resumed.

This recital is intended to show clearly that the heavy land-slide in Stock Exchange prices was largely due to the aggressive use to which the impending announcement of life-nationalisation was put by some prominent bears. Whether the nationalisation of life insurance is really of bearish import to Stock Exchange is another matter. Our own view is that it is not. But, with Stock Exchange behaviour completely dominated by giant operators who have learnt to act effectively on "flash" news, what counts is, not the real significance of events, but the interpretation which such operators choose to adopt and broadcast.

When the bull-bear tussle was settled, many of the brokers were left in a weakened state, as they had to shoulder a proportion of the losses. It was, at the same time, clear that, technically, the market was in a heavily oversold position. The budla differences provided a convincing indication in this respect. We may say that this was the broad stock exchange position at the time of the Budget.

First thoughts on the Budget were disposed to draw inferences adverse to shareholders. With the issue of the Emergency Budget Bulletin by Indian Finance, however, there was a thorough re-appraisal in Stock Exchange circles; and, as a result, pessimism is yielding place to growing confidence.

In this returning confidence, two positive influences of greatly encouraging significance have emerged. Firstly, the large volume of purchases, recorded since last week, has emanated, not from professionals, but from a considerable number of investors of small and medium status. Secondly, there is gratifying evidence that a moiety of the funds accumulating in the hands of the custodians of life insurance companies is being diverted to the blue chips in the list of ordinary shares.

The diversified purchases of the small investors and the unified purchases of the life insurance companies are both inspired by the feeling that prices as in the early days of this month were attractive for bonafide investment, and that, viewed strictly in relation to shareholders as distinct from capitalists, the prospects for the Stock Exchanges are definetely reassuring.

In this estimation of Stock Exchange outlook, there is a blend of the assertive horse-sense of the average investor and of the expert knowledge of the custodian specially entrusted with the task of investments in the private sector. While the avalanches (of sales or purchases) released by the professionals from time to time have momentary but exaggerated effect, the muckle made up of many a mickle of the genuine investors has an enduring and sustained quality. With Stock Exchanges coming under the closer watch and the more constant guidance of the Government, measures must be devised for encouraging and stablising the factors that make for this enduring quality.

We have two immediate suggestions in this connection. The first relates to the gambles of the professionals. While the interest of the professional operators is to be welcomed within limits, there must be some manner of curb on excessive gambling. The transactions on the eve of life-nationalisation must be carefully studied by the Company Law Administration; and it may be hoped that valuable conclusions can be drawn with regard to the when, how, and how much of margins to be imposed.

It is also necessary to ascertain how far existing rules of business such as satta stimulate operations of a certain kind. It has been alleged that the satta system, as it is now, favours the bears. There can be no justification for such a state of affairs.

Our second suggestion is that, on the lines of the Bombay Shareholders' Association and with its kind of policy and personnel, active and independent shareholders' associations must be started in Calcutta, Madras, Kanpur, Ahmedabad and other centres where there is any considerable body of bona fide investors.

It will be the function of such a shareholders' association to give lead and furnish guidance to such effect that the present tendency to identify the interests of investors with those of Big Busines will yield place to a continuing assessment of events and trends solely from the stand-point of the investor.

Thus, the new Company Law may be irksome to Big Business; but, surely, it must be hailed by investors who had so far to look on helplessly while some of the managing agents and directors were on a spree of misdemeanours. Some of the directors dislodged from their seats of authority in life insurance companies may feel very unhappy over it; but the investors must take note of the assurance given by the Government that the investment pattern so far as the private sector is concerned will be maintained in the same proportion.

The Stock Exchange outlook is distinct and apart from, and not always nor often coincident with, Big Business outlook. Such an outlook on the part of investors must be fostered and promoted. A competent and well-guided shareholders' association should play an important role in developing a new way of appraisal from the investors' point of view.

Conditions today are appropriate for a start to be made with such an appraisal. These conditions are synonymous with conditions which warrant and justify a confident outlook for the future. They may be summarised as follows:

(1) A temporary factor in this regard is the present oversold condition in the market. As prices show further improvement, bears will be obliged to cover their sales. This is a potential bull factor.

(2) Company Law reform means that the Government have the agency and machinery which will eliminate the unsound and fraudulent companies, and strengthen the sound and honest ones.

(3) Stock Exchange reform means that the alert and watchful eye of the Government will ensure the maximising of safe and healthy conditions of working.

(4) It follows that investors will not be at the mercy of share market gamblers, on the one hand, and of managing agency autocrats, on the other.

(5) The investment climate should, therefore, improve greatly.

(6) Bona fide investors will emerge in greater force and with greater confidence.

	Pre-Budget Rs. a.	Post Budget Rs. a.	14-3-56 Rs. a.
Indian Iron ..	32 0	31 2	33 1
TEXMACO ..	20 6	20 5	21 2
National ..	26 12	26 2	25 10
Burrakur ..	13 10	13 9	14 0
Elgin ..	27 6	27 6	27 7
Brooke Bond ..	20 4	20 4	21 0
Orient Paper ..	33 3	33 2	34 6
Indian Copper ..	6 7	6 0	6 8
Indian Cable ..	30 2	30 0	31 8
Rohtas ..	20 6	20 1	20 4
Tata Ordinary ..	223 0	222 0	234 4
Bombay Dyeing ..	514 6	515 0	577 8
National Rayon ..	217 8	229 0	232 0

(7) The resources of such investors will be vastly augmented by the recurrent disbursements of anything like Rs 1,000 crores a year on account of the second and future plans.

(8) Nationalised life insurance may be expected to make strong headway; and the annual accruals to the life fund will progress steadily. Increasing allocations from this fund will be available to irrigate the market for industrial shares.

(9) By all tokens, on all fronts, and in all ways, every industry is working to full capacity, is assured of better margins, and may be trusted to pay larger dividends.

The big capitalists may wince. But the future belongs to the myriads of small investors. Let the small investors rejoice that their day has arrived. Let them realise that patriotism demands their saving to the utmost limit and investing in the wisest way. Let them organise themselves, so that they can judge events for themselves, speak with one voice and act with one common purpose.

*

The Problem State

TRAVANCORE-COCHIN has the dubious distinction of having had, of all the States in India, the largest number of Ministries in office since Independence. The resignation last week of the T-C Ministry marks the fifth futile attempt to give a continuity of leadership to this problem-vexed southern State.

The significant lesson that can be drawn is that, firstly, the strength of the various parties is precariously balanced and that, secondly, discipline in the rank and file of Congress legislative members is seriously lacking. The first point arises from the fact that a working coalition between any set of parties is found very difficult to sustain for any length of time. Indeed, at the present moment, hopes that the extreme measure of President's Rule can be avoided by the joint formation of a Ministry under Congress and PSP auspices seem doomed to disappointment. It may be that the PSP cannot forget the unpleasant memory of the withdrawal of Congress support that led to the downfall of the last Ministry; it may be, also, that the PSP, doctrinairely opposed as it is to Coalition as a national policy, is helplessly unable to recant the earlier determination.

The indiscipline of Congressmen is, in this context, the really serious matter. It has been a most deplorable characteristic of Congress internal politics that, since the SRC decisions, rebellion against leadership's dictates should have occurred so often and in such awesome proportions. Bombay's fair name as the possessor of a civic conscious public was sadly besmirched by happenings the blame for part of which at least could be laid to the doings of rebelling Congressmen. The crisis in Travancore-Cochin, for which 6 Congressmen could squarely be held to be responsible, is a confirmation that is to be regretted of indiscipline within the Party.

The present revolt of the dissentients is tied in with the SRC proposals—or, rather, with the suggestion of merger mooted after the Congress decisions on the Report had been taken. The charge has been levelled at Mr Govinda Menon, the Chief Minister, that he has been altogether too active in his efforts at the formation of a larger southern State. We do not suggest that the individual, even if he is affiliated to a party, is not free to have a differing view. But the proper procedure should have been to apprise the High Command of their opposition to any such merger in the south. To precipitate a crisis in Government for expressing their sentiment displays a far from adequate appreciation of the rights and duties of an MLA.

Mr Govinda Menon is to be congratulated on his tenacious efforts to bring about some sort of merger for his State. That they have not proved fruitful, and that further attempts in the immediate future are also likely to be in vain, is not his fault. It would appear that there is no real prospect of a stable Ministry for Travancore-Cochin. The next general elections may conceivably bring about such shift in the balance of party power that Travancore-Cochin may be more fortunately placed in the matter of stable Government. But the possibility that the composition of the State legislature may be but negligibly changed cannot be ruled out. In that event, T-C's hopes would rest on the ability of the Congress High Command to wrest greater discipline from its party members.

Law for the Layman

Contracts Can be Concluded Through Telex or Teleprinter

By K. N. VISWANATHAN

THE Court of Appeal in England has recently declared that contracts can be validly concluded through Teleprinter, the case of Entores Ltd., v Miles Far East Corporation (Reported in 1955-2 All. E.R. 493). This decision opens a new chapter in the Law of Contract and its importance to businessmen in this country and in the Commonwealth is obvious.

The Court of Appeal has also laid down in this case that Contracts by Teleprinter stand on a different footing from Contracts by letters, as the communications between the parties in a contract by Teleprinter are virtually instantaneous. After briefly noticing the facts of this case it is proposed in this Article to bring to the notice of the reader the weighty judicial opinion as to what the law considers as necessary for the conclusion of contracts by (1) Word of mouth, (2) by Telephone, (3) by Telex.

The facts of this case taken from the judgment of Lord Justice Birkett one of the learned Judges who decided this case, are; The Plaintiffs, Entores Ltd., a Company registered in England sue the defendants Miles Corporation, a company having its head quarters in New York, but carrying on business through an agent in Holland, for breach of contract. In September 1954 a series of communications passed between the Plaintiffs and Defendants by means of an equipment called Telex Service, consisting of a Teleprinter and Signalling Unit and certain necessary subsidiary apparatus possessed by both parties. The communications are virtually instaneous, for the moment one party types out the message the other party ought to the receiving it in the ordinary course of things. The plaintiffs claim that they entered into a contract with the defendant for the purchase of Copper Cathodes through Telex and that the contract was concluded in England by the receipt of the Teleprinter message of the defendant signifying the acceptance of the offer of the plaintiff. The Court of Appeal found in favour of the Plaintiff. That Contracts can now be validly concluded through Telex or Teleprinter is judicially recognised.

Lord Denning illustrates graphically how a contract by word of mouth is brought about thus:—"Suppose for instance that I shout an offer to a man across a river or a court yard but I do not hear his reply because it is drowned by an aircraft flying over head. There is no Contract at the moment. If he wishes to make a contract, he must wait till the aircraft is gone and then shout back his acceptance so that I can hear what he says. Not till I have his answer am I bound". In other words the offeror must have knowledge of the acceptance signified to him.

Lord Denning describes the conclusion of a contract by Telephone thus:—"Now take a case where two people make a contract by Telephone. Suppose for instance, that I make an offer to a man by telephone, and in the middle of his reply, the line goes dead so that I do not hear the words of his acceptance. There is no contract at that moment. The other man may not know that the telephone conversation was abruptly broken off because people usually say something to signify the end of the conversation. If he wishes to make a contract, he must therefore get through again so as to make sure that I heard. Suppose that the line does not go dead, but it is nevertheless so indistinct that I do not catch what he says and I ask him to repeat it. He then repeats it I hear his acceptance. The contract is made not on the first time when I do not hear but only the second time when I do hear. If he does not repeat it there is no Contract. The Contract is only complete when I have his answer accepting the offer."

As to how and when contracts are concluded by Teleprinter Lord Denning states the legal position thus:—

"Lastly take the Telex. Suppose a clerk in a London office taps out on the teleprinter an offer which is immediately recorded on a teleprinter in a Manchester office, and a clerk at that end taps out an acceptance. If the line goes dead in the middle of the sentence of acceptance, the teleprinter motor will stop. There is then obviously no contract. The clerk at Manchester must get through again and send his complete sentence. But it may happen that the line does not go dead, yet the message does not get through to London. Thus the clerk at Manchester may tap out his message of acceptance and it will not be recorded in London because the ink at the London end fails or something of that kind. In that case the Manchester clerk will not know of the failure but the London clerk will know of it and will immediately send back a message "not receiving". Then, when the fault is rectified, the Manchester clerk will repeat his message. Only then is there a contract. It is not until his message is received that the contract is complete."

Lord Denning continues "In all the instances I have taken so far, the man who sends the message of acceptance knows that it has not been received or he has reason to know it. So he must repeat it. But suppose that he does not know that his message did not get home. He thinks it has. This may happen if the listener on the telephone does not catch the words of acceptance, but nevertheless does not trouble to ask for them to be repeated: or if the ink on the teleprinter fails at the receiving end, but the clerk does not ask for the message to be repeated: so that the man who sends an acceptance reasonably believes that his message has been received. The offeror in such circumstances is clearly bound, because he will be estopped from saying that he did not receive the message of acceptance. It is his own fault that he did not get it. But if there should be a case where the offeror without any fault on his part does not receive the message of acceptance—yet the sender of it reasonably believes it has got home when it has not—then I think there is no contract. My conclusion is that the rule about instantaneous communications between the parties is different from the rule about the post. The contract is only complete when the acceptance is received by the offeror."

Editorial Notes

Administration of Company Law

Ever since the new company law was passed by Parliament, company managements have been increasingly concerned about the penal clauses that could be enforced for their failure to stick to the letter of the Act from the date on which it becomes effective. For the reason that the amended law is voluminous, and also having regard to the fact that a multitude of details has to be attended to, it has been represented that some more time should be given before penal clauses are invoked. There has also been the anxiety that the new law might seriously disturb company working unless some leniency is shown in its administration for an "interim" period.

On both these points, Mr D. L. Mazumdar, the Secretary to the Finance Ministry for Company Administration, has hearteningly set at rest the doubts and anxiety. Mr Mazumdar expressed the Government view that no serious difficulty would arise from the enforcement of the Act from April 1, and therefore there was no need to postpone the date from which the Act would be effective. But he also indicated that the law would be administered with understanding leniency, especially in cases where it was known that difficulties were being encountered in making all the changes called for by the new Act.

The Government insistance is that the spirit of the law should be adhered to, even though it may not be possible at the outset to stick to the letter of the law. "We are concerned," said Mr Mazumdar, "with the substance and not with the technicalities." Presumably, company law administration would not be harsh in dealing with the "technical" offences—so long as managements were in the process of setting these right in their Articles of Association etc.

In respect of balance-sheets, for example, the Act lays down that they shall follow a prescribed pattern as from April 1, 1956. It has now been indicated that Government are aware that companies, whose years might close after March 31, 1956, might find it difficult, because their internal accounts might not have been kept in the prescribed form, to publish their 1955-56 figures as required by the new law. In such cases, where there were genuine difficulties, the Government would be willing to dispense with compliance of some of the provisions for the current financial year.

It is proper that, in the administration of an Act that calls for detailed action by company managements, Government have realised the magnitude of the tasks to be carried out; and that, consequently, firmness in its enforcement will be tempered by leniency in genuine cases of difficulty.

*

Bank of India

Later this year the Bank of India Limited is to celebrate its golden jubilee. Its Chairman, Sir Cowasjee Jehangir, has referred to the forthcoming jubilee in the address that he delivered to the shareholders in Bombay last week. Good news is in store for them; Sir Cowasjee has revealed that the jubilee should, in the view of the Directors, "be marked by the issue to shareholders of one bonus share of Rs 50 fully-paid for each five shares of the Bank." An application is proposed to be sent to the Controller of Capital Issues for the necessary sanction. Should the issue be approved, the paid-up capital of the Bank of India would increase to Rs 3 crores; but the reserve fund would continue to be at a level higher than the paid-up capital at Rs 3.02 crores.

The Bank of India's Chairman has utilised the forum offered to him to express his disquietude about some of the developments in the Indian economy. Firstly, in respect of new Company Law, which he describes as a "gigantic and voluminous piece of legislation," Sir Cowasjee has suggested that the ramifications of the Act will call for much tolerence on the part of those administering it during, at least, the first months of its life. There can be no two views in this matter; but current thinking in New Delhi would suggest that, largely, the tolerence called for by Sir Cowasjee will be in evidence in Company Law administration.

Other factors which caused him some anxiety are the nationalisation of life insurance "by the undemocratic method of an ordinance" and what is termed to be "the unfair method of compensating shareholders." Sir Cowasjee is, also, not quite happy about the budget proposals for 1956-57. He has drawn particular attention to the fact that Section 23A Companies, falling as they do within the mischief of the new dividends tax, come in for "grossly unfair" treatment. Readers will recall that we had touched this aspect of the new budget, and our suggestion was that, in the case of the new dividends tax, there should be some relaxation for Section 23A companies.

Another point made by the Bank of India Chairman concerns the rising cost of establishment and overhead expenses. With the bank rate maintained at 3½ per cent for the last four years, Sir Cowasjee suggests that the rates of interest obtainable on advances could not, for this reason, be raised. Thus, the margin available as between the higher cost of deposits, etc. and the income accruing on advances is being eaten into quite sharply. When the cost of almost every other commodity has gone up in recent years, it is strange that the cost of money alone, as determined by the interest charged on advances, should remain static. We believe that action on two lines is desirable and is indicated. Firstly, agreement should be reached as between banks on the interest paid on deposits thereby ensuring that there is no unhealtay competition for attracting deposits. Secondly, it would be logical for the rate of interest on advances to be raised.

*

Assam's Budget

Assam has been spared new levies in the 1956-57 budget. The over-all shortfall of Rs 3.89 crores is, however, to be left uncovered. On revenue account, receipts are estimated at Rs 21.89 crores and expenditure at Rs 25.54 crores.

The fact that the State's Revenue Receipt has increased by over Rs 7 crores in the last four years does not by itself indicate that internal resources can be augmented in like proportion in the future. One of the pecularities of the State seems to be that the progressive increase in expenditure is accounted for, to a considerable extent, by the maintenance cost of projects already completed. It would indeed be a great achievement if the yearly havoc wrought by floods can be finally warded off.

The impact of the First Plan, with an outlay of Rs 20 crores, is admittedly faint. The rise in national income registered is considerably lower than the all-India figure. The Plan nonetheless could claim to have prepared the ground for a more formidable bid in the next five years. It is arguable if Assam, an economically backward State, does not need a larger allocation than Rs 60 crores in the Second Plan. Of this, the State will have to contribute Rs 11 crores, the target for additional taxation during the period being Rs 4.3 crores.

Improved communication and transport facilities, giving access to markets outside the State, might stimulate investment by private industrialists. Current provision for industrial expansion is not inspiring. Potentially rich in natural resources, the State should aim at correcting the preponderant rural bias in development, priority being given to revenue yielding projects.

World of Finance

Exceptionally Busy 'Busy Season'

UP to the time of writing, no upward movement in the official minimum of the Reserve Bank of India has been announced. During the past few days market circles have vigorously canvassed the possibility of a rise in the Bank Rate. This anxious expectancy is attributable to what may be called wishful thinking in the reverse. Masochistic pleasure is derived from anticipatory forebodings. On many occasions in the past the actual event has proved less terrifying than what had been conjured up by a fevered imagination. So it may prove, in the case of the current apprehension of a higher Bank Rate, though we cannot rule out the possibility of an announcement in this respect toward the evening. Our comment, however, has necessarily to be on the assumption that, though money rates are pressing close to the Bank Rate and could thus justify an increase, the Reserve Bank authorities are broadly satisfied that, for the time being, no special purpose would be served by an upward revision in the Bank Rates.

The Reserve Bank may well argue that the rise in the rates for short credits as well as for term money is no more than the rise that the Reserve Bank announced in the rate for advances against usance bills. Short credits were ruling at 3 per cent per annum in periods of peak demand while, as a last resort, banks could have recourse to the central banking institution and secure replenishment at 3 per cent per annum. Now that banks find themselves obliged to pay 3¼ per cent per annum in the case of borrowings against commercial bills, they are naturally willing to pay up to 3¼ per cent per annum for deposits secured in the open market. The hardening in money rates is, therefore, a direct consequence of the Reserve Bank's decision to raise to 3½ per cent per annum the rate for advances against usance bills. This latter decision was based purely on considerations pertaining to the system of advances against usance bills. There is no reason to believe that the increase of ¼ per cent per annum in this rate is to be construed as a forerunner of a rise in the Bank Rate.

It is true that, by all tokens, the busy season this year has been exceptionally busy. The answer to this problem is not a rise in the Bank Rate, but full readiness to meet all reasonable demands for advances against the usance bills tendered by the Scheduled Banks. The Reserve Bank's attitude to banks in this respect has been most liberal. The question of a rise in the Bank Rate in conditions of a busy season will arise only if there are symptoms of inflation. So long as no inflation of any kind has developed, it must be assumed that a 3½ per cent per annum Bank Rate is appropriate to the conditions in the domestic situation.

If the current busy season has revealed an exceptionally high tempo, it is in line with what was to be expected. Industrial and agricultural production has shown all-round expansion and continues to be persistently upward. It follows that this will necessitate larger financial requirements for trade and industry. The Government continue to spend large sums in implementation of the Plan; and large doses of created money have been released. It follows that the stimulus thus provided will account for increased demand on the part of trade and industry. It is implicit in a regime of planning that demand for credits must expand progressively; but it is not implicit in planning that Bank Rate must be stepped up higher and higher.

A study of the latest money market figures, in comparison with the corresponding figures of a year ago, provides conclusive and gratifying proof of the money market's ability to deal adequately and competently with the growing tempo of activity and the rising level of demand for credits. Active note circulation has increased by Rs 162.90 crores to Rs 1444.09 crores between March 11, 1955 and March 9, 1956. This has been made possible by expansion of currency against Rupee Securities to the extent of Rs 140.59 crores, of which Rs 130 crores approximately represents deficit financing. Currency to the extent of Rs 29.01 crores has also been expanded against Foreign Securities. It may be added that the net increase in the total foreign assets of the Reserve Bank in the past year has been of the order of Rs 7 crores. A measure of the intensified demand for credits is provided by an increase of Rs 110.24 crores in "Loans and Advances" made by Scheduled Banks. These advances now stand at the Mount Everest altitude of Rs 711.88 crores. Banks have been able to satisfy such a hydra-headed demand for credit, firstly, through increased deposits (+ Rs 87.35 crores), and, secondly, through increased borrowings from the Reserve Bank (Other Loans and Advances at Rs 68.25 crores are up by Rs 30.81 crores).

+

Tenders for Rs 1 crore of 91 days Government of India Treasury Bills were opened on March 13. Total amount offered was Rs 1,06,00 000. Tenders at Rs 99-6 per cent were accepted in full and those at Rs 99-5-9 per cent were allotted approximately 89 per cent. Total amount accepted was Rs 1 crore, the average rate of accepted tenders being Rs 2-8-6 per cent per annum.

Week ended	Total Amount offered	Total Amount accepted	Rate Percent per annum
	(In '000 Rs.)		Rs. a. p.
1956:			
February:			
21st	1,00,75	1,00,00	2 8 6
28th	1,02,75	1,00,00	2 8 6
March:			
1st	1,36,00	1,00,00	2 8 5
8th	1,06,00	1,00,00	2 8 6

+

The sharp and substantial increase in active note circulation in the week ended March 9 is presumably due to intensified internal demand; and the expansion of currency effected during the week for a total amount of Rs 25½ crores, partly against Foreign Securities and partly against Rupee Securities, is solely connected with the Reserve Bank's needs for cash in the till. As in the last week, so in this week also, currency expansion is in no way connected with the ways and means adjustments of the Centre. There has, therefore, been no recourse to deficit financing. In the currency expansion effected this week, Rs 15 crores is against Foreign Securities transferred from the Banking Department and Rs 10 crores is against Rupee Securities also transferred from the Banking Department. The usual practice is for the Reserve Bank to utilise Foreign Balances in the Banking Department for creation of currency whenever it has need to replenish cash in its till. On the present occasion, in addition to utilisation of foreign balances, a moiety of the Investments in the Banking Department has also been pressed into service. It may be due to the Reserve Bank taking the view that the Foreign Balances at Rs 40.62 crores in the Banking Department are too low a level.

Notes in circulation have sharply risen by Rs 25.43 crores to Rs 1,444.09 crores. Notes held in the Banking Department are lower by Rs 1.86 crores at Rs 8.87 crores. On the assets side, foreign securities have risen by Rs 15.00 crores to Rs 697.16 crores and rupee securities by Rs 10.00 crores to Rs 613.22 crores. Rupee coin is lower by Rs 1.42 crores at Rs 102.56 crores.

In the Banking Department, Central Government's deposits have declined by Rs 5.25 crores; Provincial Governments' deposits by Rs 7.48 crores and bank deposits by Rs 1.94 crores to Rs 54.31 crores, Rs 10.55 crores and Rs 47.41 crores respectively. Other deposits are shown at Rs 16.88 crores against Rs 16.81 crores. Balances held abroad have declined by Rs 13.36 crores to Rs 40.62 crores. "Other Loans and Advances" show a rise of Rs 4.96 crores to Rs 68.25 crores, which includes Rs 23.46 crores advanced to Scheduled Banks against Usance Bills. The total amount of advances availed of by Scheduled Banks against Usance Bills, since January 1, 1956, is Rs 28.27 crores. Investments have moved down by Rs 9.80 crores to Rs 37.62 crores.

+

The statement of the State Bank of India for the same week reveals a drop of Rs 4.16 crores in deposits at Rs 229.18 crores. Borrowings from other banks have risen by Rs 0.53 crores to Rs 1.50 crores, while other liabilities, including inter-office adjustments, are lower by Rs 2.09 crores at Rs 8.41 crores.

On the assets side, cash balances have declined by Rs 2.26 crores to Rs 15.85 crores and Investments by Rs 7.58 crores to Rs 107.67 crores. 'Loans and Advances' show a rise

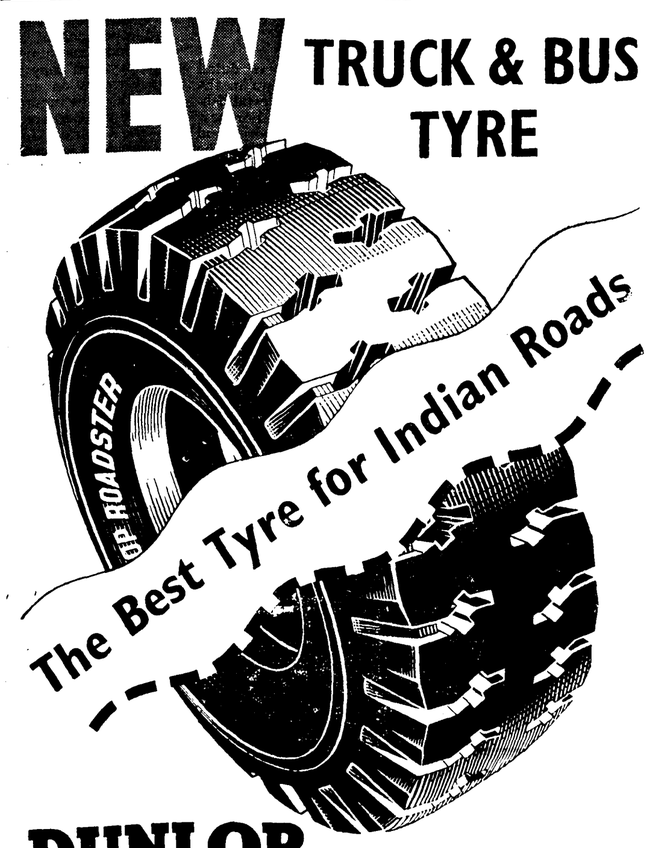
Oil and Sterling

By PAUL EINZIG

THE sudden decision of King Hussein of Jordan to remove Lt. General Glubb from the command of the Arab Legion, was followed by a sudden drop in sterling. Even though it recovered on the following day, its weakness gave a forceful reminder of the extent to which sterling depends on Britain's position in the Middle East. Beyond doubt, the weakening of British influence in Jordan was highly detrimental to Britain's chances of maintaining her influence in the Arab countries in general. The resulting fall in sterling, temporary as it was, indicated the view taken in international markets about the extent to which Britain's oil supplies from the Middle East depends on the maintenance of political influence in that part of the world.

Something like 50 per cent of Britain's total oil requirements is covered from the Middle Eastern oilfields. Should these supplies be diverted from Britain it would mean a considerable widening of the "dollar gap." In any case, sterling's position is none too strong. Even during the favourable season of the first half of the year, the gold inflow is barely a trickle, and, unless the disinflationary measures produce their hoped-for effect, at the present rate the year may close with another net loss of gold. If the need to buy much larger quantities of dollar oil is added to the existing pressure, the result would be disastrous.

In the course of the debate on the situation in the Middle East on March 7, it was argued by Opposition speakers that there is no cause for alarm because the Middle Eastern oil production, refining and transport, which is at present under British control is in any case organised in a way that whoever controls it has to sell the supply to Britain. This argument is, however, unconvincing. It is true, the Middle Eastern producers would find it difficult to discover at short notice alternative markets in the free world. The trouble is that the oil supply is covered by the Soviet Union, so that there is a real danger that should Russian influence gain control in the Middle East a large part of the oil produced there would be diverted to the Soviet bloc of countries. Notwithstanding the much published expansion of the Russian oil output since the war, there is reason to believe that the supply is barely sufficient to cover expanding requirements resulting from ambitious industrial expansion and agricultural mechanisation. Indeed, one of the reasons why Moscow has reached out her entacles towards the Middle East lies precisely in the desire to secure control over the oil supply.



Such a control serve not only the purpose of meeting the requirements of the Communist countries but also of making the free world largely dependent on the supply of Communist controlled oil. Such would be Britain's plight as a result of the loss of control over her share of Middle Eastern oil that she would feel compelled to buy Soviet oil on a large scale. This would necessarily mean that Britain would also feel compelled to lift the ban on the export of many strategic goods to the Communist bloc in order to be able to pay for Communist controlled oil. The Government would have to insist on a drastic revision of the strategic list regardless of its effect on American opinion.

During the House of Commons debate it was suggested that instead of trying to maintain political influence in the Middle East, Britain should aim at securing economic influence by means of economic assistance on a large scale. Although the suggestion came from the new Leader of the Labour Party, Mr Gaitskell, who as an ex-Chancellor of the Exchequer, is an economic expert, it seems to be utterly devoid of any sense of reality. Those Arab countries which produce oil do not require British economic assistance. The less fortunately placed Arab countries would, of course, need a great deal of economic assistance; but, judging from past experience, it would be idle to expect them to shape their political and economic policies in a sense favourable to Britain out of sheer gratitude for economic aid received. In any case the trouble is that in existing conditions Britain is not in a position to grant economic assistance on a large scale any more than she is in a position to substitute dollar oil for the sterling oil at present imported. The requirements of these underdeveloped countries have virtually no limit and to try to satisfy them in the hope of maintaining economic influence over them would be about as futile as to pour water into the sands of the Arabian Desert.

It is increasingly felt in London that a limit must be placed to economic assistance to "neutralist" countries. Britain and even the United States have not enough capital resources to satisfy everybody and it is increasingly felt that the needs of Allied countries should be given priority and, in view of their immense requirements, they would leave very little for neutrals. This course is advocated on the ground that if Britain and the United States were to dissipate their economic strength by spreading it over too wide a field, their political influence would probably suffer. It is felt that, compared with this, Communist economic expansion in the form of capital projects in neutralist countries would be the smaller evil.

During the course of the debate the American attitude in the Middle East came in for some sharp criticism. It was pointed out that Anglo-American disagreement over Middle East oil is paving the way for Russian penetration in that part of the world. It is certainly not to the interests of the United States to pursue a policy which would greatly weaken Britain by undermining the strength of sterling, and which might compel Britain to relax the ban on the export of strategic goods to the Communist countries.

World *of* Business

The Life Insurance Corporation Bill, 1956—I

*

Organisation and Compensation

Broad principles of the frame in which existing and future life insurance business in India will be fitted have been outlined in the Life Insurance Corporation Bill 1956. It will shortly be referred to a Select Committee and it is the intention of the Government of India to bring the final law into force by the beginning of July this year. The urgency cannot be questioned: for, the interim measures merely provide for the taking over, in the public interest, of the management of life insurance business pending nationalisation of such business. Interim measures, therefore, do not project the final shape. It is in public interest that the final shape should be clearly drawn at the earliest opportunity to remove uncertainties, vagueness and misconceptions about the future set up. This is more necessary for the field staff since, in the absence of integration of companies and final postings, both the insured and the insuring public and the agents quite understandably hesitate to make fresh moves.

The parent body, it appears from the Bill, will be the Corporation composed of not more than fifteen members with an Executive Committee consisting of not more than five of its members. General superintendance, direction of Corporation's affairs and business will be carried out by the Executive Committee. There will be a Managing Director who shall be a wholetime officer of the Corporation and will generally act on behalf of the Executive Committee of the Corporation. The Managing Director will, thus, be the chief executive deriving his authority from the Executive Committee and the Corporation.

There is not much of detail about the general set up in the body of the Bill barring establishment of zonal offices at Bombay, Calcutta, Delhi and Madras and such other zonal offices as the Corporation thinks fit with the previous approval of Central Government. This latter qualification is entirely unnecessary. The Corporation, it has been stated, should be run on business principles, and if it has to refer all such matters to Central Government, it will lose much of its initiative and business character in its execution of many responsibilities. The zonal manager will be entitled to establish as many divisional offices and branches in each zone as he may think fit, although the Zonal Manager will exercise only such functions as the Corporation may delegate with respect to the area within the jurisdiction of the zonal office. For each zone, again, a Board may be constituted to advise the Zonal Manager.

These brief details contain within them the nucleus of the future pattern of organisation of life insurance in India. They are supremely important. Doubts have been expressed in many quarters whether Government are undertaking a self defeating task by disturbing the entire pattern of organisation in the country, which has grown to some status by years of patient labour and work. Government, thus, cannot afford to fail: and they cannot fail if they adopt decentralisation of authority as the main starting point. For all practical purposes, the Zonal Manager will be the principal executive in each area. There is no limitation in his creation of divisional and branch offices. He should, therefore, take each subdivision as the unit on which to build up the edifice. There should, thus, be a branch office in each subdivision town and a combine of subdivisional offices will constitute the area of a divisional office. A number of divisional offices will be formed which will be coalesced into one unified whole under the zonal office.

The Zonal Manager, however, does not have full authority. The Corporation may, with the previous consent of the Central Government, make regulations defining the limits of each zone, the jurisdiction of each divisional office and policyholders' councils for advising the divisional office in matters referred to the Council. The rule making authority seems to have been largely reserved for the Central Government in almost all matters in which the Corporation has to give directives, normally given by an executive in any commercial house. For instance, the previous authority of the Central Government is necessary in delegation of powers by the Corporation to zonal Managers, the method of recruitment of agents and staff and terms and conditions of their service, the conditions subject to which any payment may be made by the Corporation and so on and so forth. The innumerable bindings of the Corporation reserved by the Central Government to be exercised in the form of rules and regulations to be prescribed, are large inroads on the authority of the Corporation.

A phrase most frequently used is "with the previous approval of the Central Government". This phrase can, in circumstances, have a devastating effect and can very largely paralyze the seeming authority of all the offices including the Corporation itself. And yet, the Bill in Section 6(3) clearly states that the Corporation "shall act as far as may be on business principles". One would have thought that the idea sought to be explained is that the Corporation shall act as a commercial house. The many limitations do not support this view. Therefore, "business principles" possibly mean something other than what is generally understood in a commercial establishment.

II

The other most important issue is the principles that underlie compensation to shareholders. This point has been elaborated in great detail and it is difficult to entangle the substance from the mass of many qualifications and conditions. Life shareholders, unlike any other business, do not take much of an entrepreneurial risk. It is, indeed, a business which can hardly fail and ought never to fail. The role of shares in life business is limited to mooting the business and in meeting the initial expenses. Soon, fund begins to accumulate, and then the fund or part thereof pays for all the organisational expenses. Policyholders thus pay for managing their own business and, in a short while, share capital becomes entirely redundant, and it fast loses its risk bearing character. Its claim for a share of the profits ceases from the time it loses its risk bearing value. Since the period of risk bearing cannot but be small in a life insurance company, the claim of shareholders for a share of the surplus is progressively reduced as time goes by until, finally, no claim lies.

From this point of view, provisions made in the Bill for compensation to shareholders would appear to be reasonable and liberal, although many contrary views have been expressed. The Bill proposes to relate compensation to acturial investigation surplus. For purposes of calculation, only share of the surplus to shareholders in the last two investigations prior to 1st of January 1955 will be taken into account. The amount of compensation would be 20 times the annual average of the said last two actuarial investigation surpluses or 10 times the annual average plus the paid-up capital whichever is greater. For this purpose, allocation to shareholders exceeding 5 per cent or falling below 3 per cent will be ignored.

In addition, earned profits to the valuation date stand transferred to the profit and loss accounts and, from the date of the Ordinance till ownership vests in the Government—roughly a period of six months—trading profits will accrue to shareholders. The measure of compensation will be the loss of profits in the period.

There are many other provisions regulating the rate of compensation to shareholders particularly in respect of composite offices. But the main principle remains more or less as stated above.

Compensation thus offered to the shareholders is not necessarily binding. Shareholders have the right, provided in the Bill, to refer the matter to the Tribunal to be created under provisions of the Bill for a decision. Therefore, shareholders have been conceded the right to plead their case before a Tribunal which may annul any Government dispensation.

These are important provisions; and, when it is remembered that the ethical basis of compensation to life shareholders is less strong than in other commercial undertakings, the provisions provided in the Bill seem, on the whole, to be based upon equity and justice.

The Bengal National Chamber of Commerce have admitted that 20 times the annual average is, on the whole, reasonable; and this seems to be the view generally held, although, as stated earlier, contrary views have been expressed. The large body of shareholders should appreciate that life insurance is a social endeavour and a community service. In a commercial enterprise, the share capital is devised to prop and support the trade. In life insurance, capital helps only the formation of the organisation and pay for expenses in initial stages. Its role is liquidated soon after. This has to be very clearly appreciated in mooting any scheme of compensation or in any variation proposed to be made to liberalise the provisions in the Bill.

SOUTH EASTERN RAILWAY

TENDER FOR SUPPLY OF PAINT BLACK READY-MIXED FOR WAGONS

Tender No. GM3/56/68CS(56) is invited by the General Manager, Garden Reach, Calcutta-23 for supply of 50,000 Gallons of paint Black ready-mixed quick hard-drying for wagons to C.M.E.'s Specification. Tender form is obtainable from the office of the Controller of Stores, Garden Reach, Calcutta-23, (IB Section' on remittance of Rs. 5/- by Money Order (not refundable) in case of Mofussail firms and on production of Cash Receipt from the Chief Cashier, Garden Reach, Calcutta-23 by local firms. Earnest Money is Rs. 2,500/- in cash. Valid Income Tax Clearance certificate must accompany the tender. Closing date is April 6, 1956 at 12 noon.

S 17

The Canara Banking Corporation Ltd.

In celebrating its golden jubilee, the Canara Banking Corporation Limited has presented to its shareholders what must surely be reckoned as a most satisfactory set of accounts for its jubilee year. The balance sheet discloses that, as against the capital of Rs 20 lakhs, the reserve fund and other reserves are placed at Rs 12 lakhs. Deposits and other accounts are at Rs 4.24 crores, and the total resources are shown at Rs 5.45 crores.

Of the assets, cash balances account for Rs 93.64 lakhs. Investments, shown at cost, have a total value of Rs 1.75 crores—and these are almost wholly in Central and State Government and other Trustee securities. Accommodation to constituents by the Canara Banking Corporation is of the order of Rs 2.23 crores, and Rs 1.59 crores of this amount is in the form of loans, cash credits and overdrafts.

The profit and loss account discloses that the income of the bank in 1955 was Rs 22.83 lakhs. Interest and discount accounted for Rs 18.05 lakhs, and commission, exchange and brokerage fetched another Rs 4.57 lakhs.

The main items of expenditure were the interest paid on deposits, which took up Rs 9.70 lakhs, and salaries and allowances at an aggregate of Rs 6.34 lakhs. After allowing for other expenditure, the balance of profit is shown to be Rs 3.35 lakhs. Inclusive of the brought forward, the disposal balance was Rs 3.37 lakhs. The statutory reserve receives Rs 76,000, and Rs 18,000 odd has been credited to the contingency fund. The provision for taxation is Rs 1 lakh and the dividend on ordinary shares, inclusive of golden jubilee bonus at one per cent, is at the rate of 11 per cent per annum absorbing Rs 1,40,500. The carry forward is Rs 2,432.

The Canara Banking Corporation can look upon the last decade as having produced substantial progress. The paid-up capital has risen from Rs 15.97 lakhs in 1946 to Rs 20 lakhs. Reserves have nearly trebled to Rs 12 lakhs. Deposits are at more than double the 1946 figure, being placed today at Rs 4.22 crores. During the same period, investments have also risen proportionately to Rs 1.97 crores. The net profit, which was Rs 2.07 lakhs in 1946, was placed at a commendaple Rs 3.35 lakhs in 1955.

If we may judge by past experience, and by the accounts of the Canara Banking Corporation Limited in recent years, it is a safe assumption that the bank is now enabled to play its proper role in the financing of trade, commerce and industry in revitalised South India.

*

National Bank of India Ltd

Figures of the National Bank of India Limitd run, of course, into millions. And, as Mr J. K. Michie, the Chairman, has pointed out in his statement, 1955 was a year in which the balance sheet reflects all round expansion.

Current and other accounts have risen by more than £2 million to be placed at £116.8 million. Such has been the demand on the National Bank for finance that the balance sheet discloses an amount of £5 million as being loans payable. In the result, the balance sheet total is over £6½ million higher at £168.7 million.

On the other side of the ledger, cash balances have increased from £18.6 million to £19.3million. While investments in Britain are somewhat higher at £15.6 million, investments in securities quoted on overseas stock exchanges have declined from £21.1 million to £19.8 million. There is a small rise in unquoted investments.

Advances, loans receivable and other sums due to the bank are sharply higher by £5.7 million at £76.7 million.

In consequence of the expansion in business, the net profit has risen from £385,923 to £421,839. The transfer to premises account is unchanged at £35,000; the contingency reserve account receives £15,000 more at £85,000; and dividends absorbed more at £245,947 against £235,254. The balance carried forward is some £16,000 higher at £342,158.

There is one point in Mr Michie's speech that we in India would be well advised to take serious note of. The labour situation in the banking industry in this country has left much to be desired; and Mr Michie has used temperate language to describe the difficulties that were encountered. Obviously, a situation wherein banking could be brought to a near paralysis should not be permitted to recur. How far bank management, on the one hand, and Government, on the other, can so formulate policy as to ensure that the difficulties arising from certain provisions in the Industrial Disputes Decision Act remains to be seen. But it is clear that the Central Government must insist that rules that they draw are applicable to and adhered to by both management and employees. The alternatives, as Mr Michie has, with dark prediction, stated is anarchy and the impossibility of Banks carrying out their obligations under the Negotiable Instruments Act which in turn would mean the paralysis of business, a state of affairs which was within a hairbreadth of happening in Calcutta early in January.

Manufacture of Polythene in India
