The managers are not supposed to write into the final legislation anything that is not found in one or other of the two Bills they are appointed to reconcile, nor are they supposed to leave out anything which is in both. But as the two Bills are often completely different in many vital provisions this still leaves plenty of scope for the conferees. This is especially true in those fields, such as public housing, about which the Senate and House disagree radically year after year, regardless of which party is in control. Everyone knows in advance that this kind of legislation will have to be written in conference, and all previous manœuvres during the session will have been based on this assumption. This year, however, the negotiators are likely to be faced, not only with the usual difference between the conservative House and the more liberal Senate, but also with a determination on the part of both that no compromises will be acceptable. Although the managers behave to some extent as plenipotentiaries, they do not feel it necessary to suppress their personal opinions. Even when, as sometimes happens, the House of Representatives appoints its managers with specific instructions not to yield on certain provisions, they have traditionally refused to consider themselves bound.

This freedom of action is in some respects an advantage. A committee chairman can quietly drop an unwise amendment carried on the floor of his chamber for sectional or demagogic reasons; sometimes members vote for such an amendment for the sake of the record secure in the comfortable knowledge that it will be dropped in this way. A strong committee chairman, as, for example, Senator George during the recent debate on mutual aid, can also use the uncertainty of a conference to strengthen his hand in piloting his measure through the debate on the floor. He can, for example, promise to "take into conference"—that is, put up a serious argument for inclusion in the final Bill—one out of a series of amendments, provided the sponsor will drop the remainder. This is particularly useful in the Senate, where the laxer rules make it easier than in the House to amend legislation on the floor.

*

The system has, however, some notable disadvantages. When the managers of one House are themselves out of sympathy with their own majority on a major issue, as happened this year in the Senate over the original farm Bill, they are liable to acquiesce in the objections of their opposite numbers with suspicious alacrity. Moreover, the institution of the conference favours the passage of measures with provisions sought by lobbyists for private interests. It sometimes helps them directly because such provisions, having been slipped in inconspicuously in one House, get included in the conference bargaining without having to face close scrutiny in the other. But the indirect effect is probably much greater. All really astute lobbyists know that the last two or three weeks of the session is the best time to shoot "jokers" through both Houses without serious challenge. This is because conference committees, which are very time-consuming, have stripped the floors of the more senior and experienced members.

Behind the closed doors the managers of the two Houses

sit on opposite sides of a table; votes are taken at each stage within delegations, to decide whether to offer or accept particular concessions. Expert staff members from both legislative and executive offices are on hand. Bargaining is lengthy and at times acrimonious; the atmosphere is informal and the language down to earth. At every recess individual managers are subjected to pressures from every kind of interest, from the White House downwards, which try to refight on this last secret battleground battles that have been publicly lost or drawn.

In fact there is still a further stage; the final report must be approved by both chambers. But it is very rarely rejected. For one thing it is "privileged" business and can be rushed through with only perfunctory notice; for another it may not be amended, but must be accepted or rejected as a whole. Perhaps even more decisively it is a highly intricate document which, in the frenzy of these last days, is gabbled out to members who have not yet received their printed copies; even this perfunctory reading of it is often suspended half-way through. Thus the most dilatory of legislative processes completes its final stretch at a breathless pace.

Mr Stassen on a Limb

SHORTLY after arriving in Panama City for his meeting with the presidents and presidents-elect from south of the Rio Grande, President Eisenhower was overheard remarking that he felt fine but did not have "much strength." These words were flashed around the world and put the issue of the President's health and of his political future back on the front page. It was kept there, by implication at least, when Mr Harold Stassen, the President's adviser on disarmament and a member of his Cabinet, announced that he would support Governor Herter of Massachusetts against Mr Nixon for the vice-presidential nomination at the party's convention next month. Mr Stassen asserted that an Eisenhower-Herter combination would "run at least 6 per cent stronger than an Eisenhower-Nixon ticket." He also stated flatly that Mr Eisenhower would be pleased to have Mr Herter on his team if the convention wishes it.

This bombshell was followed by a brief moment of shocked silence, but then the wheels of the Republican machine whirred into motion and it now looks as if Mr Stassen has been ground exceeding fine. The President let it be known that Mr Stassen had no right to make his statement as "a member of my official family." A group of Republican Congressmen demanded that Mr Stassen should resign. And to make the fiasco complete, Governor Herter—whom Mr Stassen had seemingly failed to consult—announced that he would nominate Mr Nixon for the Vice-Presidency at the Republican convention and that he knew how much President Eisenhower valued Mr Nixon. Observers felt that, good as the Vice-President's previous chances of renomination had been, Mr Stassen's odd sortie had made them very much better.

Why did Mr Stassen, an experienced and ambitious politician, make this apparent miscalculation? Possibly, he believed that other prominent Republicans, particularly in the eastern and liberal wing of the party, would rally to his banner and express openly a dislike of Mr Nixon which many of them have hinted at in private. Perhaps, Mr Stassen honestly thought that President Eisenhower would "dump" his controversial young Vice-President at the first sign of dissent in Republican ranks. If Mr Stassen's gamble had worked, it would have put him back among the leaders and kingmakers of the party—a position he held briefly after engineering Wendell Willkie's nomination in 1944. At the moment, it looks as if it has pushed him out on a rotten limb which Mr Nixon can saw off at his leisure. But Mr Stassen is not climbing down and certain very sophisticated commentators point out that Mr Eisenhower has still not said, in as many words, that Mr Nixon may be for three is his absolute choice. likely to

Steel Thaw

THE American steel industry is still frozen almost solid, with 90 per cent of the plants shut and 650,000 workers idle, but a thaw has begun at last and it looks as if the strike will be settled before the weekend. On Monday the stoppage would enter its fifth week, the point at which it would begin to have serious effects on the national economy. Until now few steel users have been inconvenienced, since they had built up their stocks of material to record levels in preparation for the strike. The existence of these stocks would have made a sharp cutback in steel output inevitable had there been no strike and this explains why the employers, the workers and, indeed, the country as a whole, have been taking the dispute so calmly, in the mood of a welcome summer holiday.

But if the strike went on much longer, it would begin to "endanger the national health and safety" and the President would be forced to step in, probably by asking for an injunction against it under the Taft-Hartley Act. No one wants this: the Administration is pledged to the principle of free collective bargaining; injunctions are anathema to labour leaders; and the steel companies do not welcome the inquiry into their private affairs which would be conducted by government mediators trying to find a basis for settlement during the eighty days the injunction would be in force. Ten days ago, Mr Eisenhower let it be known that he was becoming seriously concerned about the strike, but this did not prevent negotiations being broken off sharply in Pittsburgh last Saturday, with each side accusing the other of stiff-necked intransigence. However, on Tuesday they were suddenly renewed in the more neutral atmosphere of New York, at the suggestion of the industry's spokesmen. It is understood that the companies are now prepared to compromise further on the main point at issue, the length of the contract, and to agree to one that lasts for only three years, a period which is also acceptable to the union. The union, in its turn, seems to be willing to climb down on the principle of extra pay for weekend work. But in return for their concession, the industry negotiators apparently expect the union leaders to modify their demands for increases in wages and other benefits. Bargaining on these and other points could go on for some time.

Welfare for the Democrats

THE Senate Democrats have passed a Bill, over the Administration's opposition, providing for a new programme of insurance benefits for the disabled and for other liberalisations of the social security system. By so doing they were paying a well-earned farewell tribute to Senator George, who is content to crown his long career with this extension of the welfare state. But the Democrats were also capturing the popular side of a humanitarian election [illegible] mercifully unbedevilled by questions of race, and [illegible]ving the Republicans with a laggard, Scrooge-like U[illegible] Obligation to the plight of the disabled.

[illegible] State and [illegible] only a small proportion of the disabled get Other Secu[illegible] help, and [illegible]is as assistance, not as a right, in 42 states, which receive matching grants from the federal government. Last year the House whipped through a Bill to provide benefits at the age of 50, in the event of permanent physical or mental disablement, for the 70 million Americans insured against death and old age under the federal scheme; to lower to 62 the age at which women could claim retirement benefits; and to bring most of the self-employed into the insurance programme. Only 23 Republicans dissented.

Last week most Republicans stood firm in the Senate, where the Administration had had a chance to voice its objections to insuring against disability at this time: that it is too soon to raise security taxes again; that malingering might be encouraged; and that future Congresses might be tempted into further concessions dangerous to the financial stability of the insurance system. But with the help of a handful of deserters, the new scheme was adopted by 47 votes to 45. The Administration was even less successful, though its case was stronger, where the ladies were concerned. Although the Secretary for Health and Welfare pointed out that to lower the retirement age for women flew in the face of the fact that they were both living and working longer, the Senate chivalrously and overwhelmingly voted to permit working women and wives of retired workers to claim a reduced benefit at 62, and gave widows of insured workers their full pension at that age instead of 65. With the admission to insurance of the self-employed, which is not controversial, these changes will benefit over a million voters. The Administration will now have to decide whether, having stated its financial scruples, it would not be politically wise, in an election year, to swallow them with a good grace.

New Protectionists

Washington, D.C.

ONLY the last minute passage of a measure on customs simplification saved this session of Congress from dismal nullity on the subject of foreign trade. Although it was the third bite in four years at a cherry that is still only half eaten, this lonely accomplishment is not to be despised; for, unlike the two previous simplification laws, it does tackle a substantial problem. It deals with one of the two major disincentives to fresh adventure in the dollar market which are contributed by the customs system itself. Hitherto a rate of duty has been calculated on one of two base figures, whichever was the higher—the "foreign value," which is the price the foreign supplier commands in his own home market, or the "export value," which is the price he is asking in the United States. The calculation of "foreign value" for this purpose involved costly, time-consuming and often resented investigations into the business affairs of companies abroad. From now on "foreign value" will not be considered, except in the minority of cases where dropping it would bring about a cut of at least five per cent in the duty payable; this was the price that had to be paid to get the Bill through the Senate Finance Committee.

The United States Treasury and foreign representatives alike have hailed the new law as a major saving in red tape and a lubricator of international commerce. But for the foreign exporter joy must be a little confined. It is not clear how long it will take Customs officials to decide what imports are covered by the five per cent exception. Also there may be something a little ominous in the repeated assurances by Treasury spokesmen that the time and manpower saved by the simplified procedure for valuation will be devoted to stricter enforcement of the anti-dumping law. And alongside this measure to meet one big complaint against the American tariff system came the postponement for two years of the possibility of remedying the other. The Tariff Commission had been instructed to report this year on ways of reclassifying imports so that new products which have appeared since 1930 do not have to be assessed for duty on an arbitary judgment of their similarity to other products; but the commission asked for a later deadline and was given until March, 1958.

★

It is now two and a half years since Mr Clarence Randall whip-lashed his special commission on foreign trade policy into making an early report because of the urgency of its proposals. It is eighteen months since the Democrats swaggered back into control of Congress with the boast that in foreign trade matters above all they would show that it required opposition leadership to put the President's programme into effect. But when the Democratic leaders came to the first item, the three-year extension of the Reciprocal Trade Agreements Act, they were given a bad fright by the extent of the desertions from their own ranks. The Bill only just scraped through the House of Representatives last year and emerged from the Senate heavily amended.

This experience had a marked effect on the attitude of the Democratic leaders this year, for it represented a major shift in the balance of forces within Congress and forced a revision of all previous calculations. The South, which had hitherto been the stalwart supporter of internationalism and free trade, was reliable no longer. The textile industry, symbol of the South's emergence from economic backwardness, saw itself in danger from Japanese competition. This created a community of interest between the South and New England which had hitherto been nurturing a grievance against the South for stealing its traditional industry. At the same time something like panic had been overtaking the cotton growers at the prospect of losing their foreign market altogether as a result of the support system which kept up American prices and encouraged growers in other countries to expand their acreage. It was calculated that

at the rate American exports were falling it would only take two years for the world to be totally and permanently independent of American cotton.

In this predicament an unnatural alliance was formed last winter between the growers and the manufacturers, for the purpose of forcing the Department of Agriculture to undertake an aggressive campaign for the disposal of its cotton surpluses abroad at competitive prices; meanwhile the domestic textile industry was to be protected by an import quota based on the average imports of the past three years.

The strength of this combination soon made itself felt. The Administration began the congressional session firmly determined to push through the Bill authorising American membership of the Organisation for Trade Co-operation at an early stage. Whatever his shortcomings when it came to pressure for other legislation, the President undoubtedly made a strong personal point of this Bill. Nevertheless, he was told bluntly by the Democratic Chairman of the House Ways and Means Committee, himself an enthusiast for foreign trade, that there would be fewer Democratic votes for OTC than there had been for the Reciprocal Trade Act and that passage of the new Bill depended on Republican support. When an informal count of heads by Mr Martin, the Republican leader, showed a poor response among his followers, Mr Rayburn, the Democratic Speaker, declined to take the responsibility of exposing the Bill to defeat on the floor. The issue therefore never came to the test; instead, the Administration found itself thrown on the defensive.

It decided in these circumstances to concentrate on one thing above all others—to prevent quotas being imposed on imports of textiles since, if that dam once burst, there was no knowing what might not rush through. The Administration therefore tried to relieve the pressure by executive action. An exchange of letters between the State Department and the Japanese government confirmed the continuation of the voluntary self-restraint that had been proclaimed by the Japanese textile exporters. At the same time, as part of the Administration's attempt to get support for its new Farm Bill from the cotton states, it announced that after August 1st it was greatly extending its effort to "regain a fair share" of the world cotton market. Finally, as an alternative to import quotas, export subsidies were offered to the textile industry, on the pretext that it deserved compensation for the fact that henceforth American cotton would be sold cheaper to the foreign than to the home buyer.

However, the new coalition still showed ominous strength in the Senate. Despite the Administration's rather feeble protests—it was apparently caught unawares by the manœuvre—Senator Eastland of Mississippi managed to insert in the Farm Bill a provision giving the government no option but to compete with any substantial offer of cotton made by anyone on the world market, however low the price, until the whole cotton surplus was disposed of. Finally, concerted efforts were made, first on the Farm Bill and then on the Foreign Aid Bill, to introduce new quotas for imports. The most dangerous amendments in both cases were moved by Senator Milton Young of North Dakota, which lies across the border from Manitoba and Saskatchewan. He brought additional support to those Senators worried about Japanese textiles by also proposing quotas on oats and barley, which come in mainly from Canada. On the Foreign Aid Bill he lost by only two votes and the renewed strength of the protectionist cause at this time of unrivalled prosperity is seriously worrying and puzzling the Administration.

Whose Power?

DURING the past ten days the Administration has won two congressional battles over the question of whether electricity should be developed under private or public auspices. But in the process the Republicans may have lost the war for control of the next Senate. For three of the closest fights in November's election are likely to be for senatorial seats in Oregon, Washington and Utah and in all three of them the main argument will probably be over the hydro-electric facilities at Hells Canyon on the Snake River, the most important undeveloped site in the Northwest. The Democrats claim that the full potential of this site can only be obtained from a single high dam, which would have to be financed out of public funds provided by the federal government. Congress, whichever party has been in control, has always refused to back this scheme and the present Administration has approved a proposal for the building of three smaller dams by a private company. These, it is argued, would not only save the taxpayer money but would provide much needed electricity more quickly, even if not more plentifully, than the big federal dam.

The Administration's first victory came when a Bill for a high dam built with government money was defeated by a coalition of Republicans and conservative southern Democrats (whose constituents would not benefit from the provision of more electricity for consumers in the Northwest). But to secure this victory the President had to use his personal influence to an extent that was unprecedented in this session and he was thus unmistakably identified with the private project. This link may well prove very profitable to the Democrats in the key northwestern states next autumn.

Similarly, although less specifically, the Democrats may benefit from the defeat, in the House a few days later, also as a result of pressure from the Administration, of a Bill which would have provided for the federal government to build nuclear reactors to produce electricity for peaceful purposes. This Bill, already passed by the Senate, was opposed by the Administration because it was considered unnecessary and wasteful of the country's scientific resources. But its Democratic sponsors insist that the present system of waiting for private companies to develop atomic energy for commercial use means that the United States is being left behind in the race for economic nuclear power.

On a third front in the war over public or private power, the Democrats have certainly received a valuable reinforcement. In a brief which echoes much of their long-standing criticism of the notorious Dixon-Yates contract, the Department of Justice itself is now arguing that the contract was illegal and contrary to public policy. This contract, for the supply of electricity from a private plant, to the Tennessee Valley Authority directly, and the Atomic Energy Commission indirectly, was cancelled a year ago. The Department's brief is the government's answer to a suit for $3.5 million to cover expenses which has been brought by the Dixon-Yates company.

By Grace of Radar

FROM A SPECIAL CORRESPONDENT

UNTIL recently, most people, with the exception of a small group of competent scientists, were gloomily certain that literally nothing could halt "the ultimate weapon." But in their annual outpouring of information regarding prospective new weapons the armed services have revealed an impressive confidence that the high-speed missiles of the not very distant future can be combated by anti-missile missiles.

This year's testimony of ordnance experts from the Army and Navy before congressional committees is now being made public in a somewhat deleted form. It gives little detail of the prospective missiles themselves or of the means of countering them. Their time, in the words of Rear Admiral John Clark, director of the Navy's guided missiles division, is "a few years off," or "many years yet." But he is certain that it is coming.

To a sceptical Senator who argued that there could be no effective interception of onrushing missiles, Admiral Clark replied quickly:

> Oh, yes. The problem is detection, tracking briefly. After you track briefly this establishes the trajectory. You would then launch a guided missile to intercept it at some point in its trajectory with a nuclear warhead. . . . I don't mean to belittle the terrific scientific problem involved in the detection and tracking. . . . Let's say if the launching site was definitely known and a radar maintained on that particular site, then I think that technology will some day, and maybe not in the too distant future, give us the necessary advancements.

The omissions in the censored text provided a good deal more substance than these published excerpts. An Army witness used language that was somewhat bolder, without being any more specific; his assurance was that by the time the ballistic missile, which the Army ordnance authorities are hoping for, is delivered, the anti-missile missile will also be at hand. He was less definite than Admiral Clark that it will have fabulously little time in which to operate. Obviously, the problem is to have enough warning time, by grace of radar detection and other devices, to allow automatic calculating and guiding systems to perform their electronic miracles. This combination alone can get an anti-missile missile into the air in time to meet its enemy.

Mock War

ON the morning of July 20th, a hypothetical submarine fired a theoretical nuclear missile at Honolulu and during the following hours 75 target areas in the United States, including 63 leading cities, were supposedly hit by bombs and missiles ranging in power from the equivalent of 20,000 to 5,000,000 tons of TNT. When the imaginary smoke cleared, it was discovered that five hydrogen bombs had "blasted" New York into rubble, killing or injuring some six million people. "In theory—though not, of course, in reality," as the Associated Press hastened to point out, the United States was at war. Operation Alert, 1956, the third annual exercise in civil defence, was scheduled to last six days and was designed to test, more intensively and extensively than ever before, the plans and techniques worked out during the past six years at a cost of some $316 million.

As the air raid sirens wailed over Washington, Congress was too busy to move, but about 10,000 government employees dispersed to sixty-five secret re-location centres within 250 miles of the capital. From these issued a stream of directives, regulating prices and food supplies, freezing salaries and vesting in Mr Peterson, the Civil Defence Administrator, "extraordinary executive powers." This was done under the state of "unlimited national emergency" which President Eisenhower had declared as a substitute for the martial law which he imposed on the country during last year's test; the use of such a device, even in theory, had disturbed Congress.

The President has now invited Mr Peterson to attend Cabinet meetings. This is presumably designed to give civil defence greater importance both in government planning and in the public eye, but it may also mean that the federal government would like to play a greater part in the whole undertaking. At present the main responsibility rests on state and local governments, under the Act passed in 1950. But since then the whole basis of civil defence has been changed by the development of infinitely more powerful nuclear weapons. Even the President's Commission on Intergovernmental Relations, not usually in favour of greater centralisation, believed that the Act should be amended to give the federal government more authority.

It will, however, be difficult to induce Congress to take the trouble necessary to make the Act more effective, for the indifference to the subject there reflects the apathy of the general public. Nor has this year's Operation Alert stimulated much interest, although it no doubt provided useful training and experience. But at least the well-timed assertion from the head of the Atomic Energy Commission, that recent tests showed that the peril of radio-active fall-out could be minimised, has made civil defence a realistic possibility.

SHORTER NOTES

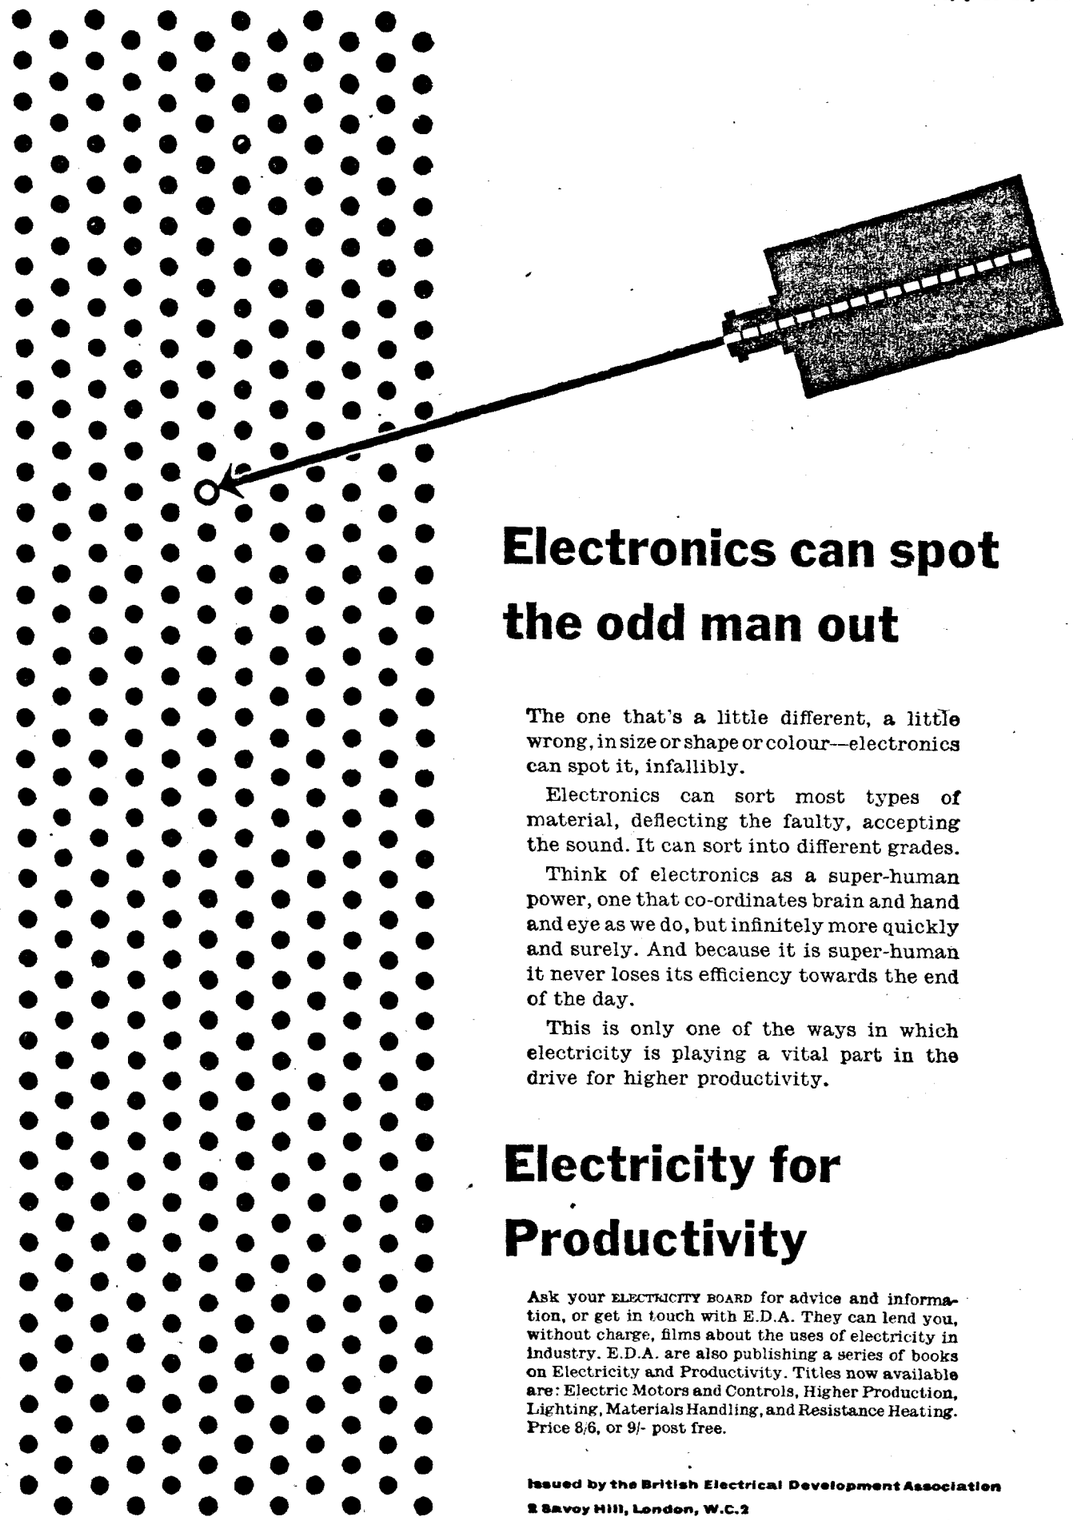
Correction.—In the table on page 229 of *The Economist* of July 21st, the figures for yield an acre were in bushels, not in thousands of bushels and, in the case of tobacco, in thousand pounds, not in thousand 100-pound bags.

★

The average income of the 52 million families in the United States in 1955 was $5,520 before paying taxes; 41 per cent of families had less than $4,000 in that year and 8 per cent had over $10,000.

★

Foreign visitors to the United States spent a record $645 million last year, and an additional $63 million on transport facilities; Americans going abroad spent $1.6 billion. More than half of the spending in the United States was by Canadian visitors, while Europeans brought in only $61 million; however, this was a rise of $13 million over 1954.



Electronics can spot the odd man out

The one that's a little different, a little wrong, in size or shape or colour—electronics can spot it, infallibly.

Electronics can sort most types of material, deflecting the faulty, accepting the sound. It can sort into different grades.

Think of electronics as a super-human power, one that co-ordinates brain and hand and eye as we do, but infinitely more quickly and surely. And because it is super-human it never loses its efficiency towards the end of the day.

This is only one of the ways in which electricity is playing a vital part in the drive for higher productivity.

Electricity for Productivity

Ask your ELECTRICITY BOARD for advice and information, or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Electric Motors and Controls, Higher Production, Lighting, Materials Handling, and Resistance Heating. Price 8/6, or 9/- post free.

The World Overseas

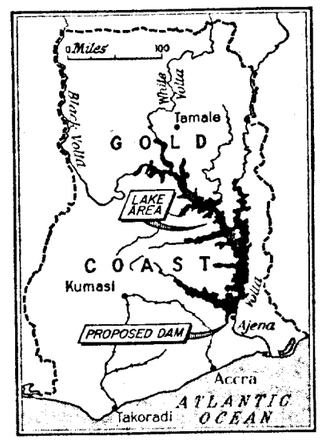
Pause on the Volta River

IT is a happy coincidence that the report of the Preparatory Commission on the Volta River Project appears just a week after the results of the Gold Coast elections. It faces the Gold Coast government with fateful decisions, permanently affecting the country's economic future. But these decisions can shortly be discussed and taken by the government of an independent Commonwealth country—a government with a comfortable majority in the Assembly and one whose members are already conversant with the project and its financial implications. The scheme is thus saved from any risk of becoming a pawn in party manœuvres, as might have happened if Dr Nkrumah's majority had been slender. At the same time, if it is brought to fruition, no future Gold Coast administration can aver that any of the agreements with participating governments or firms were entered into by a government shackled by dependent status. This obviously improves the prospect that the scheme would be harmoniously and efficiently carried through, and that the agreements on which it would be based would be honourably kept.

What are the practical possibilities of it being carried through? The Preparatory Commission has reported, after the most thorough vetting that any such scheme can have ever had, that the project is technically sound, could be operated competitively, and would not have any adverse social effects, notably on health. It does not propose any fundamental changes in the scheme first proposed in the 1952 White Paper (Cmd 8702). This scheme involves the damming of the Volta at Ajena, the creation of a lake 3,500 square miles in extent, the generation of 617,000 kilowatts of power at a price that would make the production of aluminium economic, and the construction of a smelter to use the large bauxite deposits in Ashanti, with the necessary communications and townships. The project would be operated by a Volta River Authority on the lines of the TVA consisting, probably, of four African and three European members (the latter representing the British government and the two interested firms, Aluminium Ltd of Canada and British Aluminium). The main alterations in the original scheme are that ten per cent more power would be available, and that in the construction the labour force could be reduced by mechanisation, thus easing labour problems and the possible impact of wage inflation.

The cost of the scheme, however, has greatly increased, partly because of higher world prices, partly because of more accurate costings. The White Paper costed the first stage of the scheme, with a production of 80,000 tons, at £100 million and the whole scheme, giving a production of 210,000 tons, at £144 million. Of this £25 million was to be provided by the companies, £39-£44 million by the Gold Coast government, and £56.8 million by the British government. The Preparatory Commission now costs the first stage at £162.6 million and the whole plan at £231.3 million; but, in view of experience elsewhere, it thinks that another 45 per cent should be added for contingencies, bringing the initial stage to £215 million and the whole cost to £309 million.

Doubling the capital costs reacts heavily on the cost of the power. With interest at 5 per cent, power in the initial stage would cost 0.548d. a kilowatt-hour falling to 0.289d. at the final stage—making favourable assumptions about water levels. (A new American smelter, in contrast, is paying about 0.34d., and Norwegian firms are paying about 0.17d.) The commission draws the only possible deduction—the scheme should be undertaken with the intention of carrying it right through to the final stage as quickly as possible. Delays would further inflate costs, and there is now really no half-way house.



Clearly these increased costs set a problem. The Gold Coast government's share of the initial stage now rises from £36 million to about £75 million; of the whole scheme to over £100 million. This is hardly covered by its reserves, and would impinge on other development; and income is heavily down from reduced cocoa prices. If the Gold Coast met these increases, about £75 million at the initial stage and £130 million at the final stage still remains to be found. Since 1952, the companies have put money into other projects and feel, according to Aluminium Ltd, that the prospective return on the capital is now "substantially lower." Britain, on the other hand, is less well placed to contemplate heavy new commitments than in 1952. The Preparatory

Commission has therefore turned to the World Bank, which is to send a mission to investigate.

This will give everyone a chance to think carefully. The companies have to consider that, although the scheme is expensive, by 1964, when it would come into operation, the present annual increase in demand for aluminium (5 to 7 per cent) means that they will be in need of a new source. Britain will have to consider the obvious implications of bringing the Gold Coast into full membership of the Commonwealth ; the Volta scheme is the only hope of diversifying its economy, and a withdrawal now might not only set the Gold Coast government shopping elsewhere but disappoint it at the outset of a new era. But the Gold Coast government must think hardest of all, once the independence celebrations are over. This scheme is the country's best hope of rising standards and national progress. Its first reaction to the Preparatory Commission's report is cautious. But if it wants to get the money for the scheme it will have to do two things: first, put in every penny it can of its own and, secondly, show that it is capable of efficient and clean administration. Much will depend on the way it comports itself in the months that must now elapse before negotiations can begin in earnest.

On the Barbary Shore

FROM A CORRESPONDENT

THE Maghreb, or western portion of the Arab world, contains about twenty million Arabs, roughly one-third of the world total. A second twenty or twenty-five million live in the Nile Valley, and the third portion lives in Asia. The Maghreb's coast line includes all the southern shore of the Mediterranean from Egypt westwards and continues down the Atlantic towards Senegal. Morocco (in Arabic, *al Maghreb al Aqsa* or the Far West) is as near America as any part of western Europe is.

A century before William of Normandy conquered England, Tunisian armies conquered Sicily and Malta. In consequence the Maltese talk a dialect of north African Arabic, though they are squeamish on the point and prefer to think of it as Phoenician. Were Malta to be integrated with the United Kingdom then there might be Arabic-speaking members at Westminster as well as Algerians at the Palais Bourbon. In the twelfth and thirteenth centuries, Moroccan dynasties ruled much of Spain, and King John of England is said to have sought their help against the barons. As late as the nineteenth century, various European powers and the United States paid protection money to the Barbary States to allow their shipping to pass unmolested. The French conquest of Algeria took twenty years.

Now that Morocco has been unanimously recommended by the Security Council for admission to the United Nations and Tunisia has applied for membership, it is high time for the British public to give some thought to the western Arabs and for the Foreign Office to form an independent judgment about them, just as the French have had to judge Egypt independently of the rest of North Africa.

The political tendencies of the Maghreb are likely to be determined by its unusual geography and its history. Geographically a Mediterranean area, it forms a unit at once connected with and separated from black Africa by the Sahara ; it is marked off from Egypt and the East by more easily crossed deserts, and from Spain and the rest of Europe by the Straits of Gibraltar and the Mediterranean. Having received their language and religion from the Arabs, its peoples feel themselves Arabs, whatever their precise racial origins may be. They have also received civilising influences from Phoenicia, Rome, Moslem Spain and more recently from France and Christian Spain. As Arabs they are certain to take their place sooner or later with the other Arab states, but in such matters as western defence they have not yet made their choice between the attitudes of Egypt and Iraq—although King Feisal has visited Rabat and Fadhil Jamali, the Iraqi delegate at the United Nations, has addressed the Tunisian Assembly.

They certainly share the eastern Arabs' dislike of the presence of foreign troops when this can be said to be a remnant of a former foreign rule and not the result of a freely negotiated defence agreement. In Tunisia, negotiations for a Franco-Tunisian alliance have been suspended by M. Bourguiba on account of the French declaration that French troops must always remain in Bizerta, and indefinitely in the rest of the country, not only for mutual defence but also for the security of the local French population and the supervision of the Algerian frontiers. The latter was the very issue which led to the original French intervention in 1881. In Morocco the foreign minister has announced a "gentleman's agreement" on the French army, but there are known to have been considerable difficulties. As Morocco is expected to have a budget deficit of about £30 million, she may well, however, be glad to make an agreement with the United States to continue the lease of air bases in return for an annual payment.

The leaders in both countries have been deeply influenced by French civilisation and are anxious for French assistance in many fields. There has been no rush to make the administration all-Tunisian or all-Moroccan. Indeed, in the latter country there are simply not enough Moroccans available. French settlers have been agreeably surprised by the success of the Moroccan government in restoring law and order, and those at Agadir are reported in the French press to have supported the Moroccan protest at the re-establishment of French garrisons. Two hundred Moroccan officer cadets have already gone to St Cyr for training.

Jews and Deserts

The determination of the Moroccans to unify their newly-independent nation is shown by the suspension of mass Jewish emigration ; this is in accord with the government's policy to integrate Jews fully in the life of the country. Prince Moulay Hassan made a special appeal to young Jews to come forward as candidates for army cadetships. It is worth recalling that the Sultan refused during the war, at some risk to himself, to apply the Vichy anti-Jewish laws.

There is danger in Morocco of trouble over the southern frontier. The trade with Senegal through what was known as the Moroccan Sahara is traditionally important. The Sultans exerted a certain influence there for long periods. In 1912 the Moroccan frontier was fixed by Franco-Spanish agreement, and henceforth the non-Spanish portions of the "Moroccan" Sahara were treated as part of the Special Southern Areas attached to Algeria. The Tindouf region is now believed to contain immense deposits of iron. Though no official claim is known to have been made, the frontier question has been raised in Cairo by the Istiqlal leader, Allal al Fasi, and in Rabat by the party newspaper, *al Alam*.

Egypt, by far the most populous of the Arab states as well as the most advanced technically and intellectually, enjoys great prestige in Barbary. Cairo served the nationalists as a political base when their movements were banned at home, and gave them diplomatic support and encouragement over the radio. It is still serving the same purpose for the Algerians ; though any aid given in the form of arms, whatever has been said to the contrary, has been negligible in its effect on the fighting. But any idea that North Africans would desire, or for a moment tolerate, Egyptian control or political or military guidance can be dismissed entirely.

Last but not least of the manifestations of Arab solidarity is the sympathy of Moroccans and Tunisians for their fellow Moslems in Algeria. This puts a severe strain on Franco-Tunisian and Franco-Moroccan relations, and the need to be neutral creates great difficulties for the Moslem governments with their own public opinion. Smuggling of arms and volunteers across the frontiers is a serious problem. British policy within the Commonwealth is greatly admired, but this very admiration turns to disillusionment whenever Britain takes the lead in approving the present French activities in Algeria. It is to be hoped that British interests were better served outside the Arab world than they were in it by the reference on July 14th of the British Ambassador in Paris (when talking about Algeria) to France's civilising mission (gladly acknowledged by North Africans in other spheres) and by his statement that colonialism really has no meaning nowadays except in relation to Soviet affairs. Arabs are quick at grasping allusions, and hard words are sometimes almost as wounding to them as helicopters full of soldiers.

M. Thorez Survives

FROM OUR SPECIAL CORRESPONDENT

LE HAVRE was an appropriate setting for the French Communist congress. Not only has the municipality lately passed into Communist hands, but the town itself has acquired an eastern European look. The new town on the ruins of the devastated port had to be built on a cheap budget, and the result is more impressive in size than in beauty. "Stalin-Allee," said the wits of the avenue leading to the unfinished *mairie*, where the first Communist congress in western Europe since Khrushchev's denunciation of Stalin was being held. At the end of an interminable hall the presidium sat under a map of France covered with a hammer and sickle. On the right, above the fraternal delegates' boxes, the portraits against red cloth of Marx, Lenin, Jules Guesde and Jaurès dominated the hall. As the only concession to the new spirit Maurice Thorez lost his place in this gallery of immortals, but the "son of the people" lost no time in dissipating any illusions which might have resulted, proving himself still capable of staging his own show in the orthodox Stalinist fashion.

Even his health seemed to have improved for the occasion. He took the rostrum on the very first morning and spoke for hours. Jacket off, interrupted by rhythmic applause, with the familiar stentorian voice he hammered at the now familiar subjects: the contrast between socialist growth and capitalist stagnation ; the new perspectives opened by the spread of Soviet forms of socialism outside Russia ; peaceful co-existence ; the need for Algerian independence ; the categorical imperative, unity of action with the Socialists. After a break, he came to the sore subject. The latest statement by the Soviet central committee provided, in his opinion, the "Marxist explanation" of Stalin's crimes demanded by western Communists. Besides, Soviet self-criticism should not be transplanted "mechanically" to France. To judge by M. Thorez, the French leaders have little on their conscience. After a guarded apology to Jugoslavia, he applied the established principle that attack is the best form of defence and lashed out at the dissidents who want to transform the "vanguard of the working class into a debating society."

A Show Stalin Would Love

M. Thorez invoked the Leninist principles of "democratic centralism," but he showed that he can apply them in practice only in their Stalinist version. There followed a performance Stalin would have loved, as one speaker after another climbed the rostrum, expressed his approval for the general secretary's report, and proceeded to paraphrase or elaborate some selected passages from it. M. Servin, who took the place in the secretariat of the excommunicated Lecoeur (a French substitute for Beria as scapegoat for past mistakes), and M. Kanapa, the primitive keeper of intellectual orthodoxy, reiterated stern warnings for recalcitrants who had dared to question the "law of absolute impoverishment" or to demand the proportional representation of various trends within the party. The decisions of the congress, it was declared, must be obeyed and not discussed ; no thought was given to the premise implicit in such a proposition, that the decisions should be reached through discussion in congress. Here, instead, was a gigantic parade, impressive by the careful preparation of every slightest detail. The floor took its cues from the cheer leaders on the platform and distributed ovations discriminately: ordinary applause ; locomotive-like clapping ; a full-throated *International*. Mr Mikhail Suslov, the first Moscow leader ever to attend this French function, was judged worthy of the whole gamut. His message was a cheering one for the orthodox ; he, too, brought a special blessing for M. Thorez. Delegates, who for weeks had watched the French party seemingly at odds with the world communist movement, now found comfort in the thought that "everyone had been out of step except our Maurice."

And so the discussion ended before it had even begun. M. Duclos, looking like Pickwick, brought the proceedings to a more parochial level with a lengthy report on the municipal achievements of the Communists and their plans for local councils. Like model pupils, the delegates took copious notes. In the intervals they flocked downstairs, under a Lurcat tapestry, to the bookstall. (At no other meeting is the written word in such demand.)

On the fourth and last day came the moment of relaxation. Communist versions of the Boy Scouts, representatives of Paris women and youth strolled on amid confetti and paper planes to the accompaniment of revolutionary songs. So that the essential moral of this congress should not be lost in the rejoicing, it was finally driven home in the election of the new guiding bodies. Self-criticism might be good for others, but everything was apparently almost for the best in the best possible French party. All the members of the central committee and politbureau were duly re-elected, a few newcomers being added as alternate members. (M.

Joliot-Curie was the exception, his prestige giving him direct access to a full seat on the central committee.) The only sign of the new times was the official subordination of the secretariat—the key body in the Stalinist party system—to the other leading organs. M. Thorez did not trouble to climb the rostrum to receive a final homage. This was his hour of triumph ; the storm was weathered.

Cultured, individualist France, of all places, has produced the crudest and most anachronistic of all Stalinist party performances. A combination of favourable circumstances helped M. Thorez to a success which may be temporary. The ferment provoked by the Khrushchev revelations had not had time to get the better of the well-oiled party machine. The existence of ferment and unrest could be gathered from the violent attacks on "petty-bourgeois deviationists." But there was also a natural reaction after the first agonies of destalinisation ; the conditioned reflexes of the faithful were at work—the dread of liberty, the fear of crumbling discipline. ("I hoped they would be less tough in handling the opposition," commented a well-wisher at Le Havre. "I feared it," replied the orthodox card-holder.)

The Russians, worried by the stir caused by the Khrushchev speech, by Togliatti's outburst, and by the Poznan riots, have evidently set themselves to slow down the pace to that of the slowest soldier ; this is to the advantage of M. Thorez. And no alternative political magnet competes in France for the allegiance of the Communists. The Socialist party, burdened with office, saddled with the Algerian war, raising taxes and refusing wage increases, cannot be considered as a rival for the affections of the discontented masses. Despite all their difficulties, M. Thorez and his colleagues could proudly point to five and a half million votes in the last elections.

And yet the triumph is likely to be short-lived. It was not difficult to discern uneasy feelings even among the hand-picked, disciplined delegates. The shock has been administered and its effects are at work, although the ranks were briefly closed. *Ex Oriente Lux* still seems a valid maxim for the Communist world and no party machine, however tight, will be able to resist the disturbing impulses from Moscow. Did not the same Mr Suslov, only recently, take a message of comfort to Mr Rakosi—a comfort which did not help for long. The *Grand Guignol* at Le Havre was superbly staged, but it marks the twilight of an era. M. Thorez and his managers may not be able to produce another one like it.

Shanghai on the Surface

FROM A SPECIAL CORRESPONDENT

FROM the winding river approach, the famous Bund skyline looks unchanged and unchanging. The pointed tower of the Cathay, the red brick of the old Palace Hotel, the square-shouldered epauletted Broadway Mansions, the high clock tower, the dome of the Hongkong and Shanghai Bank—all loom up, solid and substantial as ever, if perhaps a little shabby and neglected on closer examination. The dense clutter of sampans and junks has been cleared away from the waterfront—where, on this weekend, there lay a sleek Soviet cruiser and two destroyers on a goodwill visit, while 18 cargo ships, for Scandinavia, London, Hongkong and Panama, lined the docks or were anchored in the stream.

The Union Jack flaps from its mast in the gardens of the British Consulate. From every other pole and from every craft, be it never so humble, trails the starred red flag of Communist China. Loudspeakers blare party propaganda and rousing folk songs along the docks, night and day. The workers, in straw hats and blue overalls, are smart, efficient, cheerful, well fed. The only difficulty, it seems, is that the Shanghai authorities will not send any labour for foreign ships unless the men are skilled and trained.

The foreign passenger in transit is granted his shore pass without demur ; even a newspaperman is not quizzed, but is civilly welcomed and urged to "enjoy" himself ashore. Few, if any, foreigners are seen in the crowded streets. All Western signs have been removed from shops and streets, but pedicab drivers still tend to remember and identify more quickly and easily the discarded imperialist names of Avenue Foch and Avenue Joffre. The rickshaw coolies have all been liberated. There is only a handful of cars—and the driver goes to prison automatically, irrespective of blame, if he hits a pedestrian. There are no thieves: the penalty for a second offence of theft or robbery is death. There are no street-walkers, no gay quarters, no gambling or opium houses, no beggars. There seems to be plenty of food, beer and fiery Chinese "wine." The Chinese cooking is as good as ever. Clothing is mainly the old-style blue cotton gown or uniform, but the women are being mildly encouraged to get back into the slit-skirt *cheongsam*.

Stalin Still Beams

The racecourse has become a people's park, and old *taipan* members would shake their heads over the transformation of the grand-stand into a Communist historical museum. The imperial lions have disappeared from the front of the Hongkong-Shanghai Bank. The Shanghai Club will soon become a seamen's club. Blood Alley is only a hectic memory. The American school belongs to the People's army—a training-school for intelligence cadres, it is believed. The benevolent photogenic Stalin of pre-1956 days still beams from shop windows and propaganda displays. The most imposing building that has been constructed since the liberation is the curious, ornate, wedding-cake confection dedicated to indestructible Sino-Soviet friendship.

The changeover from private profit-making to communist ownership seems to have been achieved on a durable basis. There are no longer brass bands playing in shop-fronts to attract custom, but there are more bright neon signs than in Moscow and there is a gayer mood among the crowds in Nanking Road than in Gorky Street. The population of Shanghai was forcibly reduced from six million to four, but it is suspected that at least half of those evicted have drifted back, unwanted and unwelcomed in the areas to which they were transferred. A large colony of Soviet managers, technical experts and advisers live with their families in some of the fine old homes to the west, but they have apparently been advised to keep to themselves and not intrude unduly on the city scene. Out on the western Hungjao road there is also a mysterious slum settlement of White Russians—about one hundred men, women and children, who recently arrived unannounced overnight and who have presumably been removed from the north-west.

AUTOMATION FOR SMALL QUANTITY PRODUCTION

Ferranti Ltd. have developed a system for the electronic control of machine tools which enables small quantities of parts, even single units, to be manufactured automatically without the use of special jigs or fixtures.

Great economy in time and expenditure is achieved in machining operations where previously manual skill has been applied directly to the work.

THE RECOGNISED AUTHORITY ON HYDRAULIC POWER TRANSMISSION

[*Continued from page 326*]

They exist in wretched hovels: no one knows what their fate will be or why the Chinese declined to move them to the Soviet Union.

Many of the vacated hotels and surrendered mansions have been converted into offices: the new Shanghai evidently needs far more bureaucrats and officials than the old Shanghai did. Blocks of workers' apartments have been, and are being, erected; trees are being planted; streets are being widened; at least one ancient cemetery has been reclaimed as a people's park — the bones and ashes of Chinese and barbarians were reinterred with equal reverence outside the city. There are some new factories and a shipyard at which it is alleged a first communist frigate has been built.

Are the people happy? What do they think of the change? The few remaining Old Hands, who are still clinging on or trying to shake themselves loose, shrug and ask in reply: "How can you tell what the Chinese think?" Shanghai is a dull drab port, compared with the old roaring days. By the highest Christian missionary standards, it is now relatively a most respectable city, with the imprint of Communist puritanism everywhere plain and stark to see. And the Shanghai proletariat, one suspects, never had it so good.

33,000 Petitions for Uno

FROM OUR UNITED NATIONS CORRESPONDENT

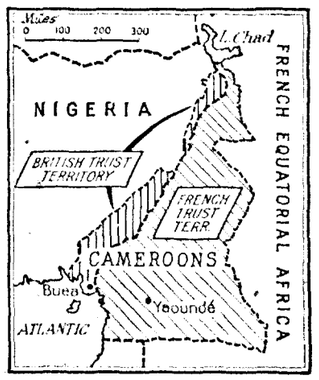
PETITIONING is an ancient democratic right which is still practised at Westminster and in other parliaments. The United Nations receives thousands of petitions each year; but has no machinery for dealing with most of them. An exception is the provision in the Charter that the Trusteeship Council may accept and examine petitions from Trust Territories. A standing committee makes a preliminary examination of all petitions and recommends what action the Council should take. In four out of five cases, the Council merely draws the attention of the petitioner to some observations of the administering authority or suggests some course of action to him. In about 15 per cent of the cases, it expresses the hope that the authority will undertake some specified remedial action. In the remaining cases, the Council states its inability to reach a conclusion, or requests further information, or merely takes note of the petition.

The growing volume of petitions has created problems for it. Some of them are frivolous or relate to matters about which the United Nations can do nothing—for example, matrimonial or financial difficulties of individuals. Many are couched in such general terms that a group of government delegates meeting in New York cannot, with the best will in the world, reach any useful conclusion. What is to be done with a petition that baldly alleges that the chiefs or officials in some Trust Territory are terrorising the people?

The number of petitions has increased steadily. When the Council began its first 1956 session, it had before it 731 petitions, until then a record number. But during the first few days of its deliberations there arrived in New York a number of envelopes, parcels, boxes, and sacks from the French Cameroons containing about 33,000 communications.

Almost all of these seem to have been intended for the 1955 visiting mission to the Cameroons. About 12,000 were in fact given to the mission while it was on tour, but because there were more than it could cope with they were handed over to the UN Secretariat in one bag. The remaining 21,000 were apparently despatched direct to UN headquarters. The Secretariat brought them to the attention of the mission, which understandably referred them back to the Secretariat, which in turn "disposed" of them by informing the Council of what had happened.

The purely mechanical work of classifying, translating, reproducing, and circulating 33,000 separate communications would cost about $1 million, and the number of stencils required would exceed the total number at present used in a whole year by all organs of the United Nations. Assuming that a delegate could read and understand each petition in three minutes, it would take him the best part of a year to complete his reading of them all. The observations of the administering authority would normally be sought on each petition, and then the standing committee would try to frame a recommendation to the Council. The Secretariat would send each petitioner a copy of the Council's decision and a copy of the official record of the public meeting at which the petition was examined.



Several methods of dealing with the Cameroons petitions were suggested—for example, that they be shared among the members of the Council, or that non-governmental organisations should be invited to assist in examining and classifying them. After discussion the Council asked the representatives of Australia and India to study them with the help of the Secretariat and to report on their contents at the summer session of the Council, which is now in progress.

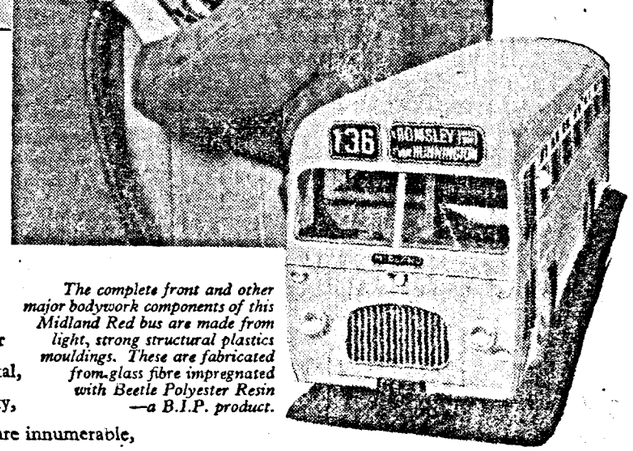
It seems that about two-thirds of the petitions request the immediate unification and independence of the French and British Cameroons. There are many cases of groups of petitions in the same handwriting with different signatures, initials, or thumbprints or with identical texts though in different handwriting. About 3,000 are apparently complaints arising from the riots in the French Cameroons in May, 1955, some of them alleging that many Africans had been killed or imprisoned during and since the riots. There are nearly 500 complaints of loss of property. The writers of about 5,200 petitions say they are satisfied with French rule for such reasons as that the French have made salt readily available and abolished slavery, or because women do not have to pay taxes. The remaining 3,000 are miscellaneous in character; most of them express support for the French administration and then make a specific request, such as for a gun or a loan, or suggest that taxes be reduced or more roads built.

A continuance of petitioning on this scale must lead to a breakdown of the system. This, indeed, may have been the intention of some of the petitioners.

the Wonder of Plastics

This operator is applying an insecticidal lacquer to the interior of a ship. The efficiency of the insecticide over a long period is maintained by the use of Beetle Urea Resin—a B.I.P. product—in the lacquer formula.

This evening gown of nylon net has been treated with a Beetle Fashion Finish—a B.I.P. product—to impart a pleasing crispness durable to repeated dry cleaning.



The complete front and other major bodywork components of this Midland Red bus are made from light, strong structural plastics mouldings. These are fabricated from glass fibre impregnated with Beetle Polyester Resin—a B.I.P. product.

In textiles and transport, in lacquers and laminates, plastics today play their part. Their role may be contributory, it may be fundamental, but the wonder of plastics is in their versatility, their infinite possibilities. Types and grades are innumerable, each with its own properties—and limitations—presenting a wide field of choice to the intending user. The leading plastics materials manufacturers maintain extensive consultative and development services, and none is better qualified to advise and assist than B.I.P.

The full resources of the B.I.P. Research, Technical Development and Design Services are freely at the disposal of manufacturers interested in the possibilities of plastics. Advice will gladly be given on any problem concerning plastics, irrespective of the type of material involved.

THE BUSINESS WORLD

Going Rates for Building Societies

SIX per cent is the minimum charge now recommended by the Building Societies' Association to its members for house mortgages, and 3½ per cent net is the rate for interest on shares. The higher charge to new mortgage borrowers is as unpopular with many of the leaders of the Association as it will be with the borrowers. Many building society men still feel that the 5½ per cent charged and 3 per cent paid line could have been held a little longer if their hand had not been forced.

The public is not to be blamed if it shares in the general bewilderment. The finger that has pressed the trigger for the highest mortgage rate for over 30 years is the same that shot less accurately two years ago at a reduction to 4 per cent when the general charge was 4½ per cent. It belongs to Mr Algernon Denham, the President of the Halifax Building Society. The conversion of the Halifax Society from being a pioneer of low interest rates to the leading advocate of high ones has been rapid and not auspiciously timed. It coincided with the resignation of that society from the Association, on an issue that had nothing to do with interest rates, and with the resignation of the present chairman of the Association, Mr Fred Bentley, from the general managership of the Halifax in circumstances that won him sympathy within the movement. On the actual issue that provoked the resignation of the Halifax society—the alleged acceptance by societies of large sums of short-term company owned money as a basis for long-term mortgage lending—the Association will be replying in figures. For the moment it is fruitful only to forget the occasion and to consider dispassionately the justification for higher rates. The Halifax, meanwhile, has alone raised its deposit rate to 3¼ per cent, which is only ¼ per cent below its share interest rate.

The case for a 6 per cent mortgage charge and 3½ per cent share interest rate has not lost strength since it was argued in *The Economist* on May 5th. The trifling adjustment made by the societies after their May conference involved no more than a consolidation of the charge for new mortgages at a minimum of 5½ per cent; until the latest decision this was the only response the societies collectively had made to the one per cent rise in Bank rate early this year and to the "savings budget." Building society rates were therefore out of line with the price of money. Grossed up at the standard rate of tax, 3 per cent tax paid interest is equivalent to just under 5½ per cent. This could hardly compete with the new savings certificates that will be on sale next Wednesday, which yield £7 5s. 11d. per cent to an investor paying tax at standard rate if held for their full seven years. Nor was it competitive with rates of 6½ per cent and upwards offered by hire purchase houses and with attractive offers for money made by the local authorities.

The remarkable fact was that that money from investors continued to flow so readily into the societies; the half-yearly figures of the Co-operative Permanent society issued last week underline that fact; in the first half of 1956, compared with the first half of 1955, receipts from investors actually increased by £3.4 million to £17.5 million. But the increase in new money was matched by a rise in withdrawals. Withdrawals by investors in the Co-operative Building Society rose by £3.5 million to £10.8 million. The same story is told by the Alliance Building Society's first half-yearly statement: receipts from investors rose by £300,000 to £6.3 million, but withdrawals rose by £1.6 million to £4.9 million. The comparisons are not strict ones, for the withdrawal figures include interest, but the tendency is clear.

Temporarily, the societies were comfortable. The money they borrowed from shareholders at 3 per cent grossed up at the composite rate of tax (4s. 10d. in the £), cost them about 4 per cent and the money they borrowed from depositors at 2½ per cent cost 3½ per cent. On the other hand, Treasury bills have recently yielded

a shade under 5 per cent. The societies could therefore make a profit by investing in Treasury bills.

But this pleasant opportunity for the societies to increase their liquidity ratios and make a profit at the same time was possible only so long as the societies were content to go very slowly in lending on mortgage. A substantial demand for mortgages of good quality that the societies would have been willing to meet if they had had the funds has remained unsatisfied. Only a higher pattern of interest rates, sufficient to promote and hold adequate investment or to curb mortgage borrowing could restore the balance.

BUILDING SOCIETY INTEREST RATES

Society	Share Interest	Deposit Interest	Date of Change	New Borrowers	Old Borrowers
	per cent	per cent		per cent	
Halifax	3½	3½	Aug. 1st	6	5½% (Dec. 1st)
Abbey National	3½	3	Oct. 1st	6	No change this year
Co-op. Perm...	3½	3	Oct. 1st	6–6½*	No decision
Woolwich Equ.	3½	3	Oct. 1st	6	Early increase not contemplated
Leeds Perm...	3½	3	Sept. 30th	6	6% (Dec. 1st)
Provincial	3½	2½	July 1st	5½	Not stated
Alliance	3½	3–3¼†	Oct. 1st	6	6% (Oct. 25th)
Leicester Perm.	3½	3 {	Sept. 1st share Oct. 1st dep. }	6	Not stated
Temperance Permanent	3½	3	Oct. 1st	6	Not stated
Leek & Moorlands	3	3	Aug.	6	Not stated

* 6½ per cent for 26 years and over.
† 3¼ per cent for 6 months notice.
These rates apply only to owner occupier mortgages and personal shareholdings and deposits.

Such a level must take account of two additional factors. First the rate charged to borrowers must rise more steeply than the net rate paid to shareholders, because as shareholders' interest rises the income tax that the societies pay on it rises too. A year ago, when the general rate paid to shareholders was 2½ per cent net, it was balanced by a mortgage charge of 4½ per cent. At the beginning of this year the balance lay between 3 per cent net, paid on shares, and an average mortgage charge of 5¼ per cent. Now the balance will be between 3½ per cent paid and 6 per cent charged, so that in little more than a year the gross margin will have widened from 2 per cent to 2½ per cent. Secondly, the societies must allow themselves elbow room because they do not know what rate of tax they will have to pay for the current financial year. It happens to be the occasion of the four-yearly investigation that determines the "composite rate" and since pay packets were well filled last year the chances are that the average personal effective rate for the average building society investor which the "composite rate" represents will also be higher. At a guess it might rise by 4d. to 6d. in the £. That is one of the reasons why several big societies are in no hurry to decide about the rates to be charged to their old borrowers.

The case for an increase in building society interest —an adequate increase that will pull the societies out of the long rut of too little and too late—seems overwhelming. The interest front was already crumbling when the Halifax fired the shot that broke it. Members of the association wishing to deviate from the recommended rates of interest have to give a month's notice before making public their intentions. Since the dispute between the Halifax society and the association blew up, it has become apparent that several medium, small and even large societies, the Leicester Permanent among them, had tendered that notice. The Halifax influenced the timing of the change. The other big societies, Abbey National, Woolwich and Co-operative Permanent, show their reluctance by not increasing share interest until October 1st while the Halifax goes up on August 1st. But the rise had to come.

Before the building societies can claim to have consolidated their new interest front, they have some hard thinking still to do, and their association has decided against advising them on the point that in some ways matters most—the treatment of existing borrowers. Hopes of cheaper money die hard, and some societies that have postponed an early decision seem still to hope that cheaper money will come to the rescue by the end of the year. That may be optimistic. If the price of money follows its historic pattern of swings extending over several years, the Halifax society (which alone has fixed the rate for existing borrowers at 5¾ per cent) may prove to have quoted on the low side. Certainly the societies cannot afford to leave the issue unsettled for very long. When they are paying the new rates to all shareholders and depositors, but collecting increased interest only on their most recent lendings, they will be cutting hard into the slender margin between income and expenditure. If fears about the new composite rate of tax should prove founded, a general 6 per cent charge for new and old loans next year would hardly cause surprise.

It has also been left to the societies to decide whether when the blow does fall on existing borrowers they will again offer them the choice of lengthening the life of the mortgage or increasing the monthly payment. It is a problem that some societies will solve by the illogical compromise of leaving the option open, but inviting borrowers rather more forcefully than before to increase their payments. There is one class of borrowers to whom that choice cannot be offered—the older of the 35-year mortgage borrowers with the Co-operative Permanent Building Society. To raise the rate of interest to 6¼ per cent (which is the Co-operative's present charge for loans of more than 26 years), without increasing the monthly payment would leave nothing for repayment of capital; the mortgages would become loans in perpetuity. The society will therefore have to decide between treating such borrowers as a specially favoured class, excused from part of any increase, or a specially disfavoured class that cannot be allowed any option to extend. These 35-year loans are not numerous enough to embarrass the society, but those who have never liked 35-year mortgages will smile wryly at the odd logic of these events.

Trade in Better Shape

THE balance of British overseas trade has improved materially this year. The unpalatable medicine of tighter and dearer money, reinforced by direct restrictions on hire purchase and higher rates of purchase tax, has begun to work. If the sceptics who thought that monetary policy would not work are not abashed, they are at least less vocal now. On the crude comparison between the first halves of 1955 and 1956 the change-round has been quite dramatic. British exports have risen by 14 per cent in value to £1,591 million fob, and by 10 per cent in volume; re-exports have risen by 42 per cent to £80.3 million fob; and imports have risen in volume and value by only 4 per cent to £1,976 million cif. The net result in this first half of a critical year is that the gross visible trade deficit has fallen by no less than one third—from £454 million to £305 million. A year earlier the tide had been flowing dangerously the other way; imports in the first six months of 1955 were 14 per cent higher than in the first half of 1954; exports were only 3½ per cent higher and the trade "gap" swung wide open from £275 million to £454 million. Thanks in large part to the narrowing of the trade gap, Britain has earned a surplus on its current balance of payments of not less than £100 million in the first half of this year, compared with a tiny surplus of £15 million in the same period of 1955.

Comparison of the trade figures with the first half of 1955 exaggerates the real improvement, mainly because exports in that period were reduced by the transport strikes, but also partly because this year's exports include about £6½ million worth of silver bullion that is in effect a capital transaction, the return to the United States of a loan. The Board of Trade estimates that the true increase in the value of British exports was about 10 per cent and the increase in volume about 6 per cent. The real increase in imports is estimated at two per cent in both value and volume. The real increase of 6 per cent in the volume of British exports so far this year compares with an annual increase of 5 per cent in 1954 and 1955. This improvement has been achieved in the face of contracting markets in certain countries, notably Australia and New Zealand, but world trade as a whole is still buoyant. The value of world exports of manufactures rose by over $1,000 million to an average of $8,458 million a quarter in 1955. That rate of increase seems broadly to have been maintained in the first quarter of this year, when world exports of manufactures were provisionally estimated at $8,981 million, a rise of nearly $900 million on the first quarter of last year.

The advance in British exports has had the welcome result of arresting the gradual decline in Britain's share of world exports of manufactures. Since the middle of last year its share has held steady at just under 20 per cent, compared with 22 per cent in 1951, which was also its prewar share. There are also some tentative signs that the phenomenally high rate of increase in exports from West Germany is at last beginning to slacken.

The sharp fall in Britain's visible trade deficit this year reflects an improvement with all the main trading areas, particularly with non-sterling countries. Between the first halves of 1955 and 1956 the average monthly deficit with non-sterling countries fell by £15.4 million to £41.2 million a month. The main reason for that improvement was the sharp increase in exports to the dollar area, which rose by £13.3 million to a record £44.7 million a month. Shipments to OEEC countries, which latterly had failed to match the expansion in intra-European trade, rose by £6.7 million to £74.2 million a month, thanks partly to exceptionally large deliveries of ships. Exports to other non-sterling

countries rose by £8.9 million to £35 million. Re-exports of rubber to Russia accounted for about one-third of that increase, but shipments of British-made goods to Russia, Finland, the Middle East, Indonesia and Japan have also been rising.

The main changes in the composition of trade between the first halves of 1955 and 1956 are set out in the tables. It is impossible to know how the transport strikes last year affected the comparisons between individual categories of exports, but as a rough rule of thumb exports as recorded in the first half of 1955 ought to be increased by about 4 per cent to give a fair comparison with 1956. The rise of £198 million in British exports is almost entirely the result of growing shipments of engineering products, with the notable exception of motor cars. Shipments of machinery other than electric take pride of place, with a rise of £37.8 million. Exports of ships and boats were nearly twice as high, at £46.6 million, thanks to the delivery of several large liners, including the *Empress of Britain* to Canada and the *Bergensfjord* to Norway. That high figure is unlikely to be repeated; the latest shipbuilding returns show that tonnage completed was exceptionally high in the second quarter of the year. Shipments of aircraft (excluding engines) rose by £21.1 million to a record £39.9 million; there were particularly large increases to the United States, Australia and Sweden. Shipments of non-ferrous metals rose by £16.9 million to £47 million; higher prices of copper, plus an increase in the volume, accounted for most of the rise. Shipments of iron and steel rose by £10.1 million to £87.1 million, despite the fall in shipments to Australia and New Zealand. Shipments of chemicals now appear to have levelled off, but they were still £11 million higher than in the first half of 1955. Coal shipments did not increase, but shipments of petroleum products more than recovered, rising by £8.5 million to £48.2 million.

The lame dogs are mainly motor cars and textiles. Despite the recovery in recent months, shipments of motor cars and chassis were £5.5 million lower than in the first half of last year; the only encouraging feature was that exports to North America were the highest since 1953. Commercial vehicles and chassis, in contrast, rose sharply by £8.9 million to £49.9 million; the increase was spread over a wide number of markets. Among textiles, exports of cotton and rayon yarn and fabrics continued to decline, but wool tops, yarns and fabrics were £4.1 million high, despite the fall in wool prices.

The upward surge in British exports is gratifying, but it is also history. What matters is whether the advance can be maintained. Exporters faced with the daily battle for markets may think that present times are tough, but competition is going to get tougher still. The time may come when capital goods will be as difficult to sell as consumer goods. In this battle government and industry both have their separate tasks. It is for the government to ensure that British industry and labour are not indulged so that they price themselves out of world markets; it is for industry to make the goods cheaply and sell them.

Those twin tasks of government and industry are neatly summarised in an official report in the Board of Trade Journal of this week, discussing German competition. "In the long run," the report concludes, "a competitive advantage will rest with the country which is most successful in preventing inflation, and which achieves the most rapid increase in efficiency and sales promotion, and advances in technology." After allowing the home market to be cosseted, the British Government is now trying to do its job and industry has apparently responded. The first part of the exercise is producing results; but it is only the first part.

Business Notes

Stroking Bankers' Ears

THE unaggressiveness of the Treasury's recent conversion operation, pitched tamely in line with existing yields, is now explained. There are more ways of getting the ass to move than the dangling of a carrot. Even in monetary policy, it now appears, the Government is turning to the strategem of "stroking the ears" of the bankers. The full purpose did not, admittedly, emerge from the communiqué issued after Tuesday's meeting between the Chancellor and the bankers. To judge only from that, the composition of the meeting seemed more intriguing, and certainly more unusual, than what it discussed. For the Chancellor invited not only the chairmen of all the clearing banks but also representatives of all the other principal banking groups—accepting houses, Scottish and Northern Ireland banks, overseas banks, foreign banks and affiliates, and the American banks in London—and thus staged a gathering without precedent except in wartime emergency.

The primary aim of this impressive assembly was obviously to combat the recent impression that the monetary measures have weakened and are likely to weaken further, and to enable Mr Macmillan to reaffirm to the bankers and to the world that the Government would continue to play its part in the effort at disinflation. The Chancellor, having made it plain only a few weeks before that the present dose of monetary medicine would not be much stiffened except in "extreme emergency," is not adding any new measures. He looks to the existing measures—including some, such as the premium bonds, that have still to materialise—to become more effective as the year goes on. In terms of monetary policy, this evidently means that the interest-rate carrot will grow no larger; as for sticks, will one be found to strike at bank liquidity, say, next year?

At present the authorities have no stick, and do not feel strong enough to cut one. Hence the ear-stroking. "Effective action," said this week's communiqué, "could only be taken if the Government and the banking organisations worked in close co-operation." The Chancellor then "asked that the contraction of credit should be resolutely pursued and that there should be no relaxation in the present critical attitude towards applications for bank finance." The second part of this request, made on the anniversary of Mr Butler's demand for a reduction in bank advances, was an exhortation to the banks to keep tough—but not necessarily to reduce the total of their private-sector lendings.

Funding by Persuasion

BUT if this part of credit policy has in these days to be regarded as the task of the bankers, the other and much more important part, which is the task of contracting the volume of credit as a whole, is one that only the monetary authorities can perform—by carrot or by stick, and by no other means. It cannot be delegated to or even shared with the commercial bankers, even though they, with ears suitably stroked, "undertook to meet the Chancellor's wishes and the national needs."

Nor, indeed, was this the only ear-stroking, or the one most immediately significant for the markets and for the future of monetary policy. In default of a sufficient carrot and use of the stick, the volume of money will rise in these coming months before the tax-gathering season, because of Government borrowings. And in default of strong funding operations, too much of these borrowings must be by Treasury bills, so that the banks' liquidity will rise excessively and thus create the conditions under which credit would become easier and not stiffer. To resolve this dilemma, the authorities have been reminding the banks that they will get more liquid assets than they will need, and have been suggesting that suitable "co-operation" in funding efforts would serve the interests of all. It is "hoped" that, as liquidity ratios rise or are about to rise beyond an equilibrium level appropriate for the season, the banks will buy investments—of which the "departments" have (or can procure by a stroke of the Treasury pen) an unlimited supply.

The first effects of these suggestions seem clearly visible already. They evidently played a part in the conversion operation; and several of the banks whose July statements have appeared have added significantly to their investments since the end of June—although two of these banks had shown a decline in investments during the preceding six weeks. Needless to say, such tactics of persuasion would hardly have been feasible without the assurances about Bank rate. The authorities have now made it harder to use either carrot or stick in future, or to get full results from them if they try.

The Successful Conversion

SUCH considerations partly explain why the response to the Government's offer to convert the maturing £824 million of 2½ per cent National War Bonds 1954-56 was so impressive. No less than £657 million of the maturing stock will be converted into the new 4½ per cent 1962 stock, leaving only £167 million to be paid off in cash. Most of the stock converted must have been acquired during the first 6½ months of this year, and at least until the terms of the conversion were announced the purchases must have been made without upsetting the overriding requirement that the departments had to be net sellers of stock. Despite inactive markets large amounts of stock were scooped in on switches, and the switches usually left the departments with more money and less stock.

* Assented to Conversion offer.

Investors, giving due weight to that achievement, must now try to look forward. The first object they will perceive will be the sum of £167 million to be paid out in cash next month. The market sees the latest turn in financial policy as designed to ensure that as much as possible of that substantial sum goes into the gilt edged market, though the market at the moment gives little help. It rallied for a few hours immediately after the Macmillan conference but it soon slipped back into stagnation and has on balance declined during the week ended on Wednesday, the *Financial Times* Government Securities index falling from 84.78 to 84.43. Large sums of money are obviously still by-passing the market direct to the local authorities; last week a net outflow of temporary money exceeding £6 million and between £4 million and £5 million of mortgage investment is believed to have gone that way. The industrial market also is showing revived signs of life which serve to emphasise the friendless state

of the gilt-edged market and to point the direction in which most of the £60 million of Trinidad Oil money must be expected to go.

If efforts to persuade large investors, particularly the banks, to buy gilt-edged succeed, the stock in trade of the Government broker will be of interest. This presumably includes the 5 per cent Exchequer stock of 1957 of which he is a reluctant seller, because it is the next maturity, the 4 per cent Conversion stock 1957-58, the new 4½ per cent stock of 1962 which he has not yet started selling seriously, and the 3½ per cent stock 1979-81 which is too long for banks. It is apparent that his sales must be concentrated on the 4 per cent Conversion and the new 4½ per cent stocks.

Sterling Unhelped by Assurances

THE day after the Chancellor's talk to the bankers, sterling made its sharpest dip for many weeks. It has fallen below $2.79. But *post hoc* should never be identified with *propter hoc*. It had already for some days been inclined to weaken, and the most that can fairly be suggested is that the immediate result of the Chancellor's talk, at which the foreign bankers were represented, did not help—even though the purpose of the exercise was to give earnest of his firm intentions. The holding of the meeting during the motor strike (though it had in fact been arranged long ago) and the fact that the Chancellor in underlining the need for some intensification of the credit squeeze also referred (not by any means for the first time) to recourse to physical controls as a backs to the wall defence line could be taken as bearish signs. The weakness of sterling was not, however, of speculative origin, as the strength of forward sterling shows. The premium on the forward dollar is now less than the relative levels of short-term interest rates in London and New York would allow. It is the old story of lags and leads: the Chancellor's initiative, and its timing, brought forward a fair commercial demand for dollars. On Wednesday, when the sterling-dollar rate fell below $2.79, there was demand for dollars to cover purchases of oil, grains, sugar, tobacco and non-ferrous metals. Only in part can these be explained by seasonal considerations; their concentration on one particular day must be connected with the publicity given to the previous day's meeting with the bankers.

The only important currency against which sterling has shown up well during the past week is the French franc, which is now coming under serious pressure. The forward franc has fallen to a discount against sterling despite the prevailing levels of interest rates which should pull the rate to a premium. French franc notes in Zurich have fallen to about 20 per cent discount on the official rate, the gold price in Paris has risen to its highest level for three years and the Deutsche mark remains firmly glued to the Bank of France's compulsory support rate.

The Deutsche mark continues to dominate the European exchange markets in spite of the "categorical" statement made by Dr Erhard at the OEEC meeting in Paris that "the Federal German Government intends to maintain unchanged their present exchange arrangements and parity." On the same occasion, Mr Macmillan, who acted as chairman, announced that he deprecated anything that introduced doubt, uncertainty or speculation in European currency affairs, and said that exchange rate policies would not form part of the examination of balance of payments problems which the OEEC will be conducting in the next few months. These assurances have not had much effect.

A New Trustee Stock

INVESTORS had reason to expect that after the conversion operation was concluded a new issue of trustee status—with luck the first of a run of them—would soon follow. They may well feel glad that the Agricultural Mortgage Corporation has been chosen to head the procession. Its stocks are popular with investors and this week's issue, which has the additional attraction of being free of stamp, is of £5 million 5 per cent debenture stock 1979-83 at £97, of which only £10 is payable on application and the balance on September 4th, well after the unconverted £167 million of National War Bonds 1954-56 will have been paid off in cash. Lists opened and closed on Friday after this issue of *The Economist* went to press.

After the latest operation at the short end of the market and the recent speech of the chairman of the Agricultural Mortgage Corporation which stressed the need for medium and long term investment in agriculture, there was no surprise and certainly no distaste for the 23-27 year dates chosen by the Corporation. Yields of £5 3s. 1d. per cent flat and £5 4s. 2d. per cent to final redemption, seem nicely measured to a trustee stock of that length.

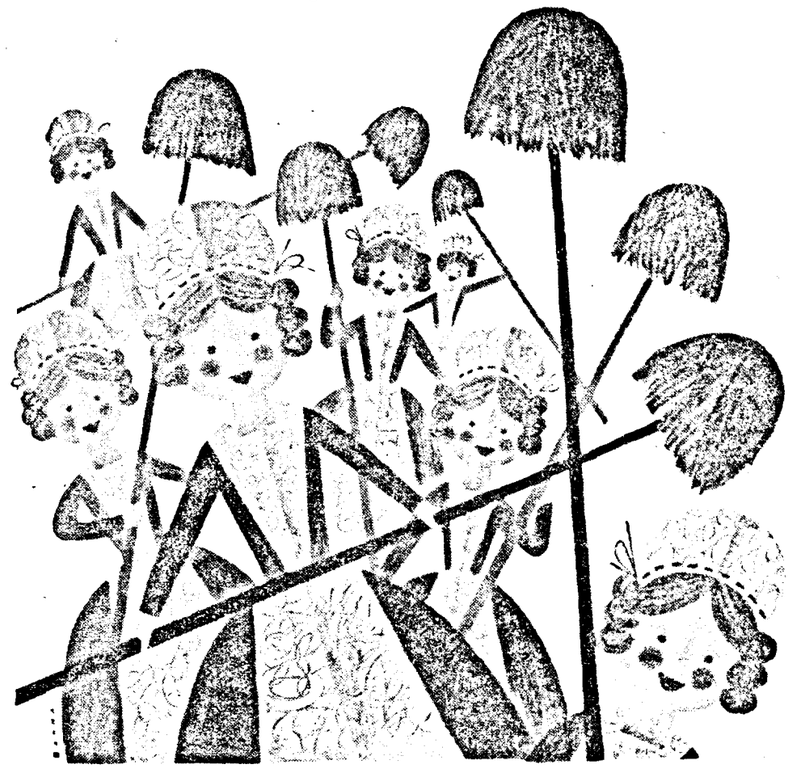
Messrs. Mullens and Co. have underwritten the issue for commissions aggregating 1¼ per cent. The sponsors of the debenture may have felt that to chase an unconvincing gilt edged market downwards would make little difference in the short run to the volume of money that the issue would attract. The only question is whether £5 million are available for a loan equivalent in status to a good county council issue.

Freedom for the Railways?

THE modifications the Transport Tribunal has decided to make to the draft scheme of maximum railway freight charges prepared by the Transport Commission under the 1953 Transport Act are difficult to assess. The tribunal broadly confirmed the charges scheme: its changes involve the question of what may be a reasonable dividing line between two types of railway goods charges. In the first category of traffic the Commission will have normal commercial freedom to fix its own rates, subject to certain levels of published maximum charges; in the second the Commission can quote "reasonable rates," but if a consignee considers them unreasonable then the Act grants him the right of appeal to the Tribunal. The second category of traffic will comprise all goods carried in owners' tank wagons, owners' wagons, or road-rail wagons, and any consignment weighing 100 tons of more. All other traffic will fall within the first category.

The distinction the Tribunal has drawn is presumably

7 maids with 7 mops



design or accident?

The Walrus and the Carpenter were dismayed by a fairly simple problem, and decided that if seven maids with seven mops swept it for half a year, the seashore would not be clear of sand.

The business man need not be dismayed by even more complex problems. For the Remington Rand Univac—first electronic computing system in large-scale production—reduces large volumes of data at tremendous speed, and with superb operating efficiency.

In one instance, Univac took just 21 minutes to perform a computation which would otherwise have required 250 man-hours and seven machine-hours. Results are printed at great speed.

It will pay any progressive executive to look into this Remington business. For this international organisation with its 37,000 workers is geared to the solution of the knottiest problems of typing, filing, charting, photo-copying and accounting.

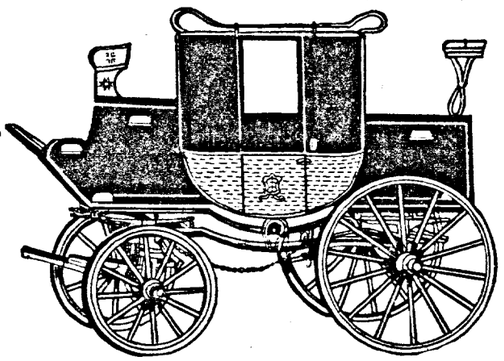
What the Rocket was to the stagecoach



Titanium is to the metals of today

Very occasionally, the slow pace of progress quickens dramatically. Today, titanium — at last harnessed to the needs of engineers — promises to speed the rate of achievement.

No designer in metal can afford to ignore titanium's special properties, particularly its high strength-to-weight ratio and its outstanding resistance to corrosion. Already, aircraft designers are finding in it the answer to some of their most exacting problems. It may provide an answer to yours.

I.C.I. are now producing titanium as a raw metal, and are also making sheet, strip, rod, tube, wire, plate and forging stock from titanium and its alloys. For full technical information about this remarkable new metal, write for the booklet "Wrought Titanium".

IMPERIAL CHEMICAL INDUSTRIES LIMITED LONDON S.W.1

M.400

based upon the invisible line between goods for which road transport offers potent competition as a haulier and goods for which it does not. This alternative method of transport, with its own form of costs, can be expected to impose some ceiling upon railway rates; often, it seems likely, one below the permissible maximum (and for some traffics below the railways' own costs). But consignments of more than 100 tons (what will comprise a consignment for this purpose?) are likely to include the bulk of coal and minerals traffic, which last year made up nearly three-quarters of all railway freight ton-mileage and more than three-fifths of freight revenue. On the whole it is consigned by large organisations or firms that may be thought to have enough "countervailing power" in the size of their annual transport bills to negotiate reasonable rates with the Commission. This concentration of transport users more heavily dependent upon the railways will, however, be of some advantage if it means that appeals to the Tribunal will be kept down, once the first agreements—and appeals—have set the general tone of "reasonable charges." Initially, moreover, these charges will probably be the "exceptional rates" at which most of this traffic is currently carried under the 1920 Act.

Judgment on these practical details will come later. The important point is that, nearly 3½ years after the 1953 Act received the Royal Assent, the Commission has been given a qualified "go-ahead" signal on what was intended to be the major item of railway reform in that statute. And it will still be at least a year before the Commission will be able to put this amended scheme into force.

BMC Strikers Hit Ford

One unfortunate victim of the BMC strike this week (which is discussed in a Note of the Week on page 299) has been the Ford Motor Company. The company has given "protective notice" to 2,500 of its employees making bodies for Consul, Zephyr and Zodiac cars at the Briggs plant at Dagenham, that unless supplies of certain pressings made by Fisher and Ludlow improve they will be dismissed when their annual holidays end on August 13th. Although Ford's normal practice is to avoid complete dependence upon outside suppliers for integral parts of its vehicles, Fisher and Ludlow have since February been making part of the underbodies for the three new Ford models from dies supplied by Ford as an interim measure until space became available at Dagenham. As production of the new models has been building up since then to a daily maximum of 600 units, reached last month, and as every car coming off the line has been sold many months ahead, stocks are virtually nil. But Ford is believed to have got some of its dies away from Birmingham before the pickets arrived in strength, and the company hoped to maintain working until Thursday after which its own holidays began. The immediate outcome at Briggs was that 12,000 employees went out on strike—after the unions at Fisher and Ludlow had refused to release the dies and jigs to let their fellow-trade-unionists work. Later this week, the same strike at Fisher and Ludlow seemed likely to cause further redundancy at Standard.

For BMC, which has been working much short time for the last five months, the strike may help to use up some of its unsold stocks. But Ford can still sell every car it makes; short-time working at the Popular plant in Doncaster earlier in the year did not last long. For the motor industry generally, with the possible sole exception of BMC, June appears to have been one of the best production months for some time. Daily output was 15 per cent higher than in May and only 6½ per cent below June last year, but that month was affected by the railway and dock strikes. Exports, however, were still 15 per cent down on the first half of last year even though shipments were then severely affected by disputes.

Atomic Stewardship

The Atomic Energy Authority has this week published its second annual report, for the year ended March 31, 1956. This is less a financial report than an account of stewardship. The financial operations of the Authority are presented to Parliament in the spring, along with the other Civil Estimates, in a decapitated form that lumps together salaries and new building expenditure on civil and military work, but suppresses the operating account of the Authority, which deals mainly with the bookkeeping transaction of costing the value of atomic weapons delivered to the services. This is in sharp contrast to the way in which the accounts of the American Atomic Energy Commission are published. It is difficult to see what justification there is for consistently withholding the total figure for atomic expenditure in this country.

The Authority has grown substantially since it was removed from the Ministry of Supply. Its labour force, which numbered nearly 20,000 at the time the Authority was formed in August, 1954, has risen to nearly 24,000; but these figures mean little or nothing in an atomic industry where the staff that are not engaged on research are simply guardians, not of machines, but of whole monolithic plants that operate like gigantic robots behind impenetrable concrete walls. It is the rate at which these plants are growing that measures the Authority's progress: the annual report is largely a bleak and factual account of new building, new sites, and new projects under investigation.

Fission and Fusion

For the first time, the Authority refers to research on hydrogen fusion, which has been going on in this country since 1948. There is no doubt in the minds of the scientists at Harwell that controlled thermonuclear fusion—as distinct from the uncontrolled and violent fusion of a hydrogen bomb—is theoretically possible. What they are not sure of is whether, to quote the report "a pure fusion reactor can be built which yields more useful power than it consumes." The principal technical difficulty, which was a good deal more fully described by Russian scientists visiting Harwell than it is in the Authority's report, lies in reach-

ing and holding temperatures of the order of 100 million degrees centigrade long enough for the fusion reaction to become self-sustaining. Extremely high temperatures have been reached under laboratory conditions but not, apparently, high enough to carry the work past this first obstacle.

The rest of the Authority's work is concerned with projects likely to yield rather quicker practical results. The building of Calder-type power stations, where the generation of electricity is secondary to the manufacture of plutonium for weapon production, is well under way. Part of the structure of the Dounreay breeder reactor is finished and, in total, 21 reactors are either in operation, under construction or planned by the Authority. This includes one research reactor that the Authority is buying from the AEI-John Thompson group, the first time that it has agreed to purchase a reactor for the design of which industry, and not Harwell, has been responsible. Harwell's idea of the next stage in atomic power station development seems to be gradually settling in favour of an enriched reactor consisting of a graphite structure much like Calder, but cooled with liquid sodium, as opposed to a reactor suspended in a water-filled cylinder which is rather more popular in the United States. Design studies have been made of a 100,000 kW installation built on the homogeneous principle, where the constituent parts of today's reactors are all reduced to a slurry flowing through a network of pipes.

Side by side with these plans for a fantastic future has gone the more mundane and practical extension of the Authority's existing treatment plants, in particular of the diffusion plant at Capenhurst, which is the country's only source of enriched uranium. Capenhurst has been increased considerably in size, but it is a rapacious consumer of electricity. So the Authority expects to make early use of the new agreement negotiated with the United States to buy surplus uranium 235 from the Atomic Energy Commission —which owns diffusion capacity that dwarfs Capenhurst.

Comets for Capital

It is ironic that it should have been a decision by American aircraft manufacturers that has put the de Havilland Comet back on the map. For the order for 14 Comet IVs placed by Capital Airlines, which is worth £19 million, might never have been signed if first Convair, and then Douglas and Boeing, had not started design work on medium-range jet airliners that might be carbon copies of the Comet. Neither the Comet nor these projected American aircraft are suitable for operation over the North Atlantic, nor even for coast to coast operation inside the United States; they are designed for express flights on shorter routes that up to a few months ago seemed the exclusive prerogative of the turbo-prop airliner. Opinion inside the United States is now convinced that air traffic will go to the operator who gives the fastest service. A jet, so the argument goes, is faster than a turbo-prop; therefore a jet is the appropriate choice, even if it may be less economical to operate than a turbo-prop. This may seem a somewhat inadequate basis on which to plan aircraft buying. But it is, nevertheless, carrying considerable weight among airlines, including those outside the United States. It has made the attempt to sell big turbo-prop airliners of medium range like the Vickers Vanguard and the present Britannia difficult; at the same time it has swept the Comet back into the limelight.

By ordering Comet IVs, Capital Airlines expects to get delivery of new jet airliners to replace its present Constellations at the end of 1958, and to have all 14 delivered by the end of 1959. This is considerably earlier than the dates promised for the Comet's American competitors and could give Capital, a rapidly expanding airline, the same technical lead that it gained by introducing the Viscount into the United States. The export credit facilities available in this country must also have been a factor in the deal. Capital is heavily committed for some years ahead and is negotiating to raise new permanent capital in the United States. Capital's network remains firmly based on Viscounts; a further 15 have just been ordered, bringing the total fleet up to 75. The Comets will be used only on the longer hauls.

Shrewd commercial judgment has been shown by de Havilland in switching their plans for the Comet from the original concept of a potential North Atlantic long-range transport to one tailored for medium distances. The bulk of the Capital order will be made up of Comet IVs modified to give less range, more seats and more speed than the original design. With 75 per cent of the drawings for the aircraft completed, de Havilland have set themselves a gruelling schedule to meet the promised delivery dates for both Capital and the British Overseas Airways Corporation in 1958. Almost all the development flying and airworthiness trials are being carried out on the Comet III, and there will be no Comet IV prototype. For Rolls-Royce, who will provide the Comet's Avon engines, the order is another milestone in the company's steady advance into the American market. For de Havilland it is something more critical. And for those airlines still uncommitted about their new equipment, the Comet comes as an unsuspected fifth ace in the pack.

Business at Lloyd's

FROM marine, aviation, fire and accident insurance, Lloyd's underwriters received in premiums £228.8 million last year after deducting commission. This, in contrast to the experience of the insurance companies, represented only a slight increase in premium income over the 1954 figure. Last year the non-life premium income of the insurance companies was over £600 million, from which about £100 million was paid in commission; hence the premiums paid to the Lloyd's underwriters' account for about 30 per cent of all the non-life premium income of British insurers.

Lloyd's accounts are kept open for three years and at the end of that period estimated outstanding liabilities are added to claims or the re-insurance premiums to cover them are charged to claims. On this basis, the 1953 account, which has now run its course, yielded the biggest profit of any of the last six accounts for which returns have been made to the Board of Trade. Aggregate balances in hand at the end of the account came to £24.9 million, including £11.8 million on the marine and aviation accounts and £12.3 million on "other business"—largely fire and accident insurance.

While the 1953 account was so successful, a shadow lies across the 1954 account which will be closed at the end of this year. In the first year of the account "other business" was hit hard by claims for damage caused by abnormally severe windstorms in North America, on which Lloyd's underwriters have transacted a considerable volume of "excess of loss" reinsurance. At best there will be only a meagre profit on this account and the profit earned on all classes of insurance in the three years of the 1954 account may thus be little more than half of the transfer from the 1953 account.

Bankers' Credit for Argentina

A CITY consortium, headed by Baring Brothers who have been agents to the Argentine government since 1822, is being arranged with the idea of extending trade credits to a maximum of between £20 and £30 million, should Argentina's demand for capital goods of British origin justify it. The idea behind the discussions which Mr J. G. Phillimore, a partner in Baring Brothers, has been having in Argentina is that Argentina's urgent capital needs under the new regime, are certain to be met by competitive international tendering and that the contribution that the City of London can make is to ensure that British industry will be able to compete in the knowledge that credit facilities not less strong than are available to competitors will be provided. Argentina's urgent need is to maintain its railways to a standard that will ensure that the crops move down to the ports, to develop the oil resources and develop electric power. Diesel locomotives have recently been bought from Japan and from the USA.

Details of the credit consortium remain to be filled in, but the present conception is a revolving credit tied in to the length of credit extended by the Export Credits Guarantee Department. For goods whose capital nature admits of no argument a maximum period would be about five years per item—for example per individual railway engine but not five years over the whole of a running contract for engines. A probable charge is one per cent above Bank rate in addition to the ECGD insurance charges.

"Ernie" Calls the Odds

DR CHARLES HILL, in announcing this week details of the Premium Savings Bonds scheme and the organisation the Post Office is building up to administer it, seems to be bargaining for hundreds of millions of these £1 bonds to be taken out.

Bonds will be on sale at Post Offices and banks from November 1st and may be held by any person aged 16 and over, up to a maximum individual holding of £500. The chances of winning a prize are fairly good. For each £250,000 invested for one year there will be 237 prizes ranging from one of £1,000 to 200 of £25. These prizes correspond to odds of roughly 1:1,000. Bonds will not be eligible for prizes until they have been held for six months, and buyers will not be able to choose their numbers. The first draw will take place next June when six months' interest at 4 per cent a year on bonds bought in November will be available for distribution. Thereafter the draws will take place monthly; thus in July 1957 the prize money will comprise six months' interest on bonds bought in December 1956 plus one month's interest on November bonds still uncashed. This six months' waiting period might prove to be an unattractive feature of the scheme; but if it were to be shortened the prize money would be substantially smaller.

To run the scheme the Post Office is setting up a separate department in Lancashire, which will need a staff af about 1,000 and is expected to cost about £500,000 a year, to be borne by Exchequer votes. Individual records of each holding will be kept since the bonds will be registered Government bonds under the National Loans Act, 1939. To select the prize winning numbers the Post Office have designed an electronic random number indicator equipment. "Ernie" is not a computor, but a glorified fluorescent light. It consists basically of a glass tube filled with neon gas. When electricity is passed through the gas particles move at high speed, hitting a metal plate. This imparts an electric impulse along a wire, linked to nine separate points, each representing a digit. When the charge of electricity ceases the last point to receive the impulse indicates the chosen digit. A batch of nine tubes working simultaneously will thus give a number of nine digits. It will be a scientific gamble; but "investors" who have no fear of the complexities of football pool coupons will no doubt take the science in their stride.

IFC Established

THE charter of the International Finance Corporation came into force last week-end when France and Germany completed the formalities needed for membership; this brought the number of member countries to thirty one, compared with the required minimum of thirty, and the total subscriptions to $78.4 million, comfortably above the minimum of $75 million. Britain and the United States became members some months ago.

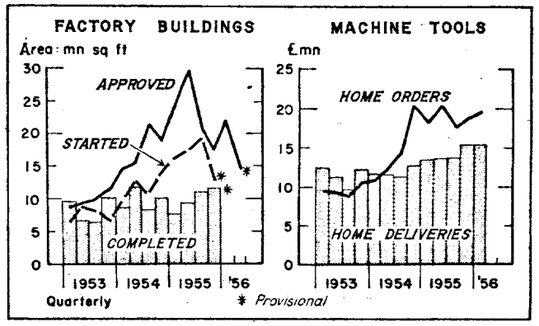
The corporation can now proceed with its task of complementing the work of its parent body, the World Bank, advancing capital in rather smaller amounts for generally shorter periods, and to private firms rather than to Governments. The IFC aims to work in conjunction with private investors, and while it is debarred from taking up equity stock as such, it is prepared to share the risks (and expects to take some of the profits) from the projects it supports. It is expected that many of its investments will carry the right of conversion into share capital on re-sale. As the IFC seeks to turn its money over, it will be attracted most by industrial projects that promise a relatively quick return, rather than by the "first stage" development schemes of transport and public utilities that are favoured by the World Bank.

The corporation shares a common headquarters with the Bank in Washington, and the Bank's professional advisers are available to it. Its directors are drawn from the executive directors of the Bank, whose president, Mr Eugene Black, is *ex officio* chairman of the corporation. But IFC has its own president—Mr Robert Garner, who has resigned his post as vice president of the World Bank. The general manager of IFC is Mr J. G. Beevor, well known in London and formerly managing director of the Commonwealth Development Finance Company.

Investment in Machine Tools

MACHINE tool output is slowly responding to the recent huge surge in new orders, but it is still well behind the rate at which business continues to be booked. During the first four months of this year the industry produced £26.7 million worth of tools, against £23.3 million in the corresponding period of 1955; but its new orders amounted to £33.1 million, against £32.6 million. That is a significantly lower rate of ordering than for some months, but it still exceeded current deliveries by a quarter.

Much of the increase in these value figures for output, moreover, can probably be put down to higher prices. Nevertheless the increase of 17 per cent in the value of home deliveries in the first quarter compares broadly with the 20 per cent increase in investment expenditure on plant and machinery by manufacturing industry for the same period shown by the latest returns from the new investment survey of the Board of Trade. Exports meanwhile have risen almost imperceptibly, while imports, at £12½ million by the end of June, have risen by about 70 per cent and are now exceeding exports for the first time since the Korean war. The load of orders on machine tool makers' books reached £104 million at the end of April. Four-fifths of these were home orders: the total was equivalent to another 15½ months' work or 2½ months more than in April, 1954. Manufacturers have suffered from a persistent

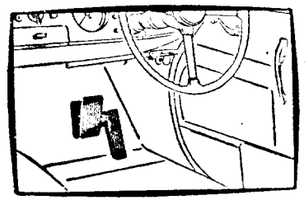


shortage of skilled labour and draughtsmen, which has not so far been significantly eased by recruiting labour declared redundant by other industries.

Information about factory construction is somewhat behind-hand. The Ministry of Works estimates that expenditure on new industrial building in the first quarter totalled £59 million, a third more than the amount spent in the same months last year. But the Board of Trade has so far published only provisional figures of factories started and completed in the last three months of 1955. Presumably, more recent returns will reflect the enormous increase that appears to have occurred since then. But the significant feature of recent machine tool orders and of approvals for new factories is the marked decline in the rate of new commitments.

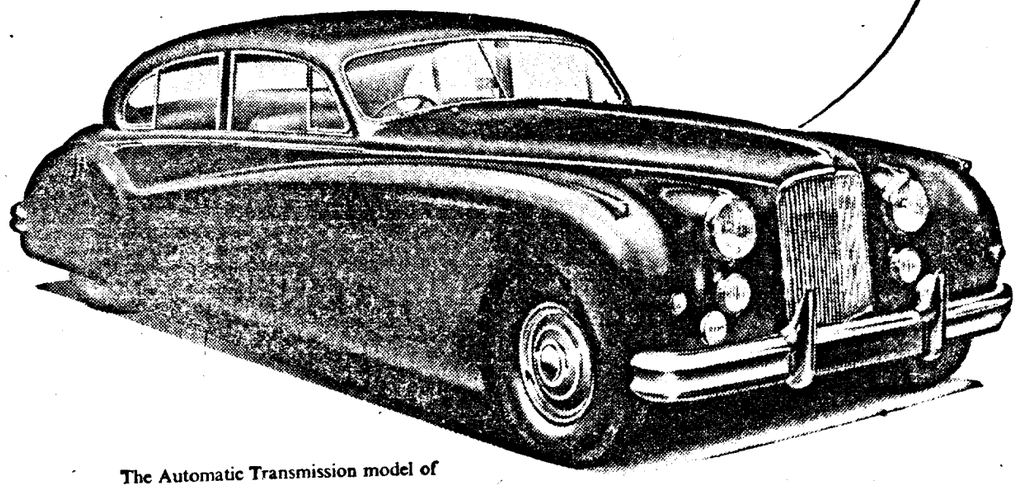
"Carte Blanche" for the Dock Scheme

THE committee of inquiry appointed exactly a year ago under the chairmanship of Mr Justice Devlin to look into the operation of the Dock Labour Scheme, and to advise whether any alterations need be made to it, packs sound horse-sense on the subject of industrial relations into its long and detailed report, published this week. Its task was certainly not an easy one. Dock working presents some most difficult and unusual problems not met in any other industry, and despite the introduction of what is mistakenly called "decasualisation" with the dock labour scheme of 1947 (which succeeded the six-year-old war-time scheme) employment is still given casually to dockers in the registered pool. It is the nature of the industry and its peculiar form of operation that is at the root of its problems, not the scheme itself, which is primarily concerned with the make-up and distribution of the labour force. The black record of serious unrest since 1947 has its origin, the committee feels, and rightly so, in the industry or in particular decisions taken under the scheme. On this subject the committee makes some admirable comments and suggestions, though it has decided that its terms of reference exclude reference to complaints of restrictive practices and inefficiency in port operations. As for the scheme, the committee finds it to



Now Jaguar brings you

a more restful and effortless form of driving than you have ever known...



The Automatic Transmission model of the Mark VII Jaguar Saloon, which has for over two years been acknowledged abroad as providing the smoothest and safest 2-pedal driving in the world, is now available in Britain. It brings an entirely new conception of motoring pleasure that must be experienced to be believed. Without clutch or gearshift, it gives—at the touch of accelerator or brake—complete command of all the silken power and supreme flexibility of the famous XK engine. It provides completely relaxed driving comfort and effortless control in every situation, banishing fatigue from long journeys or the 'stop-and-go' conditions of crowded town traffic.

No other car can offer such grace, space and pace or such restful enjoyment. Your Jaguar dealer will be happy to arrange a demonstration for you.

C.P.V. and the British exporter

WHEN we talk about the C.P.V. *World* Organisation, we mean just that; for the maps at our London headquarters are flagged in unexpected, as well as in obvious, parts of the globe.

In Fiji, for instance, it is perfume that C.P.V. advertisements are selling: in Istanbul—sewing threads and air services; in the great native markets of Africa and Malaya—a host of things, from toothpaste to silver polish. There is hardly an overseas country where we are not working, with our own on-the-spot organisation or an associate, to market and advertise the varied products of our British clients.

To *market* them, we say. For though C.P.V. advertising weapons are tactically powerful, it is marketing strategy which dictates their use. We do not regard export marketing as a hit-or-miss affair —a casual matter of sending translated advertisements through the post, or leaving things to the man-on-the-spot. We believe it is a serious business. And we know a good deal about it; as our clients, and their sales, will testify.

To help the British exporter to market his products in almost any part of the world; indeed, to advise him whether, where and when he should market them at all; that is one of the chief purposes for which C.P.V. exist. *Can we help you?*

Immaculate...

An immaculate pen the Sheaffer; distinguished, well-groomed, meticulously clean. Balanced to your hand, the Sheaffer Snorkel Pen moves across the paper like a bird across the sky, slender, smooth and silent. Just to hold a Sheaffer is to know the feel of a perfect writing instrument. The slender lines, the exclusive tubular nib and the unique filling method* all contribute to the superb quality of this, the finest pen in the world. The gift of a lifetime—for a lifetime.

pneumatic filler
A flick of the finger—and pen flushes and fills in one swift downstroke.

***the world-famous Sheaffer Snorkel Pen filler**
Wiping nib, wiping barrel—a thing of the past! Sheaffer filling tube reaches down beyond nib, drinks the ink, retracts!

14-carat gold feather-touch nib
A marvel of delicate precision and strength.

matching sets
'Ensembles'—pen and pencil; 'threesomes'—pen, pencil and ballpoint. In handsome gift cases.

Skrip
The finest ink for the finest pens.

have been properly conceived and should therefore remain (with some minor alterations proposed by the committee).

But the Devlin inquiry was faced by some proposals from the employers' side that would have changed the whole character of the scheme. Its essence is dual control; the management of the labour force is entrusted to the National Dock Labour Board on which both sides are equally represented. This, the employers' association argued, made for ineffectiveness, divided loyalty for the trade union leaders on the Board, and the imposition of an impersonal barrier between the employers and the men. They suggested that it should be replaced by a corporation, controlled solely by the employers. The committee devote much space to a full and incisive analysis of this argument, which rejects the employers' points one by one. Apart from the immense practical difficulties of making such a change, it would merely replace one impersonal organisation for another and one in which the unions moreover had no say. If the original scheme had replaced some personal relationship between employers and men—which it did not—then there might be some weight in the suggestion. But the main advantage of dual control is that it is based upon a partnership of both sides, in which the committee sees the best hope for further progress. Given co-operation in the spirit as well as in the letter of the Dock Scheme, and if the Board becomes a more positive force in the industry, then some of the seemingly intractable problems of the industry might yield a solution.

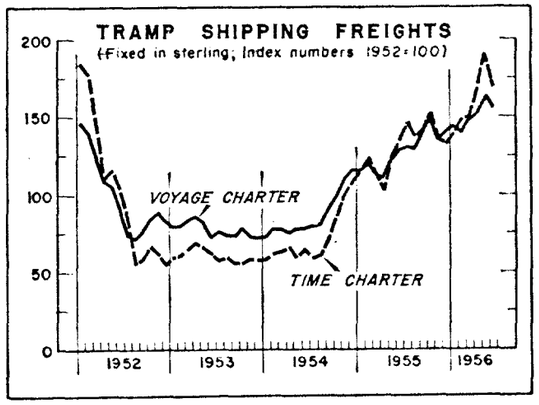
Rio Tinto's Big Uranium Deal

ECONOMY of information, more perhaps than is still worth while, surrounds the contracts that are placed with the uranium producers. What is worth learning from the biggest yet announced, the purchase of uranium oxide to the value of $242,416,800 for which Northspan, a new mine of the Rio Tinto group, has received a letter of intent from the Canadian government? The rate of milling—of ore, not of uranium—is to be 9,000 tons a day. The amount of new financing required (if precedent is followed it will be done by Northspan in Canada, not by Rio Tinto in London) will be $70 million. Neither the grade, nor the rate of production nor the price is to be divulged.

This contract slightly exceeds the previous biggest—$206 million and a rate of milling of 6,000 tons a day, arranged by Algom, also in the Rio Tinto group. Investors will probably permit themselves a few deductions. So far all the Canadian contracts have been arranged to end in 1961 and it is unlikely that the Canadians have exceeded that span. So far all have been calculated to write off the capital expenditure over the period of the contract and leave the producer with his production facilities standing him in free at the end. It is unlikely that any producer—certainly not Rio Tinto—has agreed to easier terms. Finally the Canadian government is still interested in uranium and wants it quickly. Doubts whether it wished to go further are allayed. On the contrary Northspan, an amalgamation that includes three ore bodies, is taking pride in the fact that thanks to Rio Tinto management's experience and to the fact that one shaft is already sunk to 1,300 feet the preparatory period will be short. Production is scheduled to begin 12 to 15 months from now.

Strength in Freight Rates

SUMMER is normally the season of weakness in tramp shipping freight rates, but this year it looks as if the summer is going to be a short one. The slight recession of the past month was short-lived, and rates for many voyages have already recovered much of their losses. Rates for single voyages with coal from the United States to the Continent, which fell to about 66s. a ton at one time during the miners' holidays, were this week in the region of 72s. Some idea of the underlying strength of the market, which is dominated by the demand for Transatlantic coal shipments, may be inferred from the fact that applications have been made by



French and German shippers, as well as American, for the release of as many as 100 vessels from the US laid-up "defence reserve fleet" for employment in the coal trade on a charter basis. So far the Federal Maritime Administration has resisted these attempts to obtain ready tonnage on the cheap.

Even more impressive is the interest that coal charterers are showing in securing ships for long-term employment. Recent orders quoted on the Baltic Exchange included an inquiry for a vessel for five years' consecutive voyages at

NEW RUSSIAN STATISTICS

The Annual Supplement to our three-monthly economic review of the USSR, just published, contains *new Russian statistics now available in English for the first time:* more complete and *detailed production figures* than ever before; the commodity breakdown of *Russia's foreign trade.*

A subscription to four Quarterly Economic Reviews of the USSR and the annual supplement is £10. Single copies of any quarterly review or of the Annual Supplement are £3. Every country in the world is dealt with in our three-monthly reviews and supplements.

THE ECONOMIST INTELLIGENCE UNIT LTD.
22 Ryder Street, London, S.W.1
WHitehall 1511 Ext. 144

the dollar equivalent of 53s.; while another offer for four years' employment was made on a basis of £350,000 cash in advance plus 48s. 6d. per ton, or alternatively 56s. per ton without an advance. This is tantamount to supplying the greater part of the purchase price of a Liberty ship, or half the cost of a new ship, as well as offering employment for four years on a profitable basis. It is not without significance for the future operations of tramp shipping that such inquiries are circulating even at a time when a good deal of tonnage is expected to be released from employment under earlier time charters, and when the liner companies have practically withdrawn from the time charter market.

Shipbuilders' Limits Lifted?

MANY shipbuilders are prepared to argue that output from their yards since the war, in spite of prosperity, has never exceeded about 70 per cent of "full capacity"—defined as what they could produce if they had the men and the steel. Although in certain years—including 1955—they have booked orders for about 2½ million gross tons of new ships, they still seem unable to raise their final output of completed ships beyond 1½ million tons. As a result, successive waves of ordering—mainly of tanker ordering—have built the total orderbook of the industry up to very high levels: more than 7 million tons were on order at the end of 1952 and last year's new wave of tanker orders has left the orderbook, at the end of June, at roughly 5¼ million tons of new ships, worth about £675 million.

In the last six months, as it happens, the industry has been completing ships faster than it has been booking new orders: it has booked orders for 142 ships totalling 752,000 gross tons and completed 154 ships totalling 834,000 gross tons. This rate of ordering, however, is far below the level of late 1955; and on the other hand completions in the second quarter were at an exceptionally high rate, no less than 516,000 gross tons, the highest quarterly figure since 1921. However, the figure merely indicates that work was finished on ships totalling this tonnage; any of the single measurements of shipbuilding output one may choose—tonnage commenced, launched, or completed—is liable to be misleading. In this same quarter that was a record for postwar completions, rather less tonnage than usual was commenced and the total under construction therefore declined. It seems likely that the level of total activity in shipbuilding during the whole of this year will be higher than last—but more doubtful whether it will exceed the output of 1954.

Wheat Agreement Renewed

THE new International Wheat Agreement, the third since 1949, comes into force next Wednesday. Of the fifty countries listed in the draft agreement drawn up in Geneva last April, all the exporters and all but two of the importers have accepted it or expressed their intention to do so. The failure of Eire and New Zealand to accept is apparently due simply to a hitch in procedure. The absence of these countries, and the accession of Iceland, leaves the total quantity which the importers guarantee to buy at the minimum price at 7,167,000 metric tons, while the quantity which the exporters guarantee to sell at the maximum price remains at 8,244,000 tons. Those quantities will be equated when the Wheat Council meets again early in December, and when the membership will be finally known. The guaranteed quantities in the previous agreement amounted to 10,749,000 tons. The maximum and minimum prices are both five cents a bushel lower than in the previous agreement; the new maximum is 200 (US) cents a bushel for No. 1 Northern Manitoba wheat, ex-Fort William, and the new minimum is 150 cents. The market price of No. 1 Northern is now 176½ (US) cents a bushel.

The only significant change among the exporters is that Argentina is a member for the first time; Britain, the largest importer, remains outside. The form of the agreement closely follows that of its predecessor, except that the council can now examine domestic production policies and means of regulating the disposal of surpluses; in doing so it can consult with other international organisations and with non-member governments.

Furniture and Hire Purchase

THE furniture industry has asked the Board of Trade for certain relaxations in the hire purchase restrictions on furniture sales, basing its case on the sad condition to which those restrictions have brought manufacturers and retailers. During 1954, the furniture trade swept along on a crest of "no deposit" hire purchase. When the regulations introduced in 1955 made a deposit a compulsory condition of hire purchase, the bottom dropped out of the furniture boom: on the industry's own estimates, total sales were halved, and hire purchase sales in some months were as much as 65 per cent below their level in the corresponding period of 1954. Sales have improved this year. In March hire purchase transactions were a third above the level to which they fell in March, 1955, but even this recovery still leaves sales substantially below their level in 1954. What makes the recession more noticeable is that it is not evenly spread over the industry; it is concentrated on those sections of the trade, mainly the multiple furniture chains and their suppliers, who specialised in "no deposit" trading.

The changes proposed by the industry would permit customers who already have hire purchase agreements, and have paid their initial deposit, to add new items of furniture to those outstanding agreements as soon as they have paid a certain number of instalments on the original purchase, without paying a fresh deposit. The value of the new orders would not exceed the value of the instalments repaid. This is very like the type of "budget account" that many department stores use; the furniture industry claims that it was common practice in the furniture trade before the restrictions were imposed. The industry argues that it is being squeezed harder than is economically necessary; that furniture output is the lowest for three years; that the industry has lost 10,000 workers; and that there is a "high degree" of short time. Special treatment, it claims, would be "demonstrably not inflationary." Why not? If it succeeded in raising home sales, it demonstrably would be.

Rise in Raw Sugar

SINCE the end of June the price of raw sugar on the so-called "free" world market has risen by five points to 3.41 cents a lb fas Cuba. That is almost the highest price for over two years, and it compares with a minimum of 3.25 cents prescribed in the International Sugar Agreement. So much sugar is sold otherwise than on the "free" market and the quantities that determine the "free" price can be so small that price movements often magnify changes in demand or supply. But of the buoyancy of the market there is no doubt. A somewhat broader demand from West Germany, Japan, Britain and other countries has come when supplies available for prompt shipment are small. Exporting members of the agreement with sugar to spare are naturally restive at the restraints at present imposed upon them, and that is no doubt why a meeting of the Sugar Council has been called for next Monday.

There are three ways in which the council could make a larger quantity of sugar available. The unfilled portion of export quotas could be reallocated to other exporters; the regulation which restricts shipments in the first eight months of the year to 80 per cent of the initial quotas could be waived; finally the exports quotas, which are at present fixed at 90 per cent of the basic quotas, could be raised. With the possible exception of one country, a reallocation of quotas seems unlikely. Russia and other East European exporters can hardly be expected to declare deficits before they can assess the size of their own beet crops, and without that declaration the council may be reluctant to use its discretionary powers. Whether the council will lift the restriction on shipments, raise the quotas, or do both, will presumably depend on how long it considers the shortage may last.

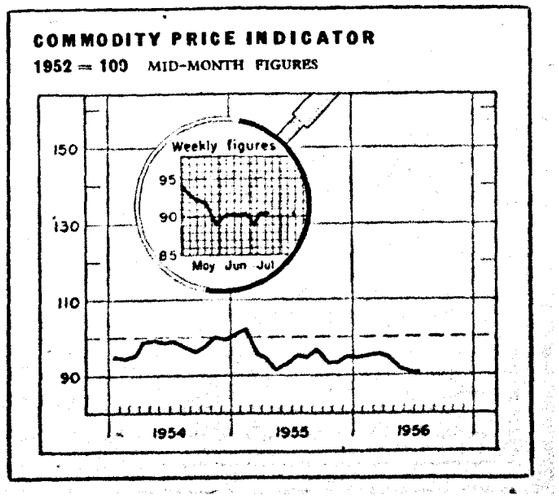
Testing the Turbo-Drill

THE turbo-drill now being tested in the Netherlands by a joint subsidiary of Shell and Standard Oil (New Jersey) uses a principle which has long been known but not applied by the British and American oil companies. Sporadic experiments using turbines to drive drills have been made in the United States ever since the 1920s. Last year a Russian version, for which seemingly extravagant claims were made, was said to be doing two-thirds of all drilling in the Soviet Union. An attempt to obtain the Russian know-how about this drill, in return for petroleum equipment wanted by the Russians, was made by an American company last year, but vetoed by the United States Government on the grounds of national security. But early this year successful experiments were made with a French drill using similar principles. The cost data, especially that released by the Russians and Roumanians, is felt to be still too sketchy to justify large-scale development work in Britain or America; the present test in the Netherlands is being made with the French model to obtain more detailed and reliable information on the comparative speeds and drilling costs of turbo-drills and conventional equipment under identical operating conditions.

In conventional oil drilling, an engine at the surface turns a rotary table that turns the entire string of drill pipe and the cutting bit at the bottom of it. A "propeller shaft" a mile or two miles long can hardly be expected to be the perfect means of transmitting rotary movement. At 6,000 feet only 6 per cent of the energy generated at the surface is actually delivered to the drill bit at the bottom. When a rig is drilling, heavy mud is pumped down the centre of the drill pipe and up again between the pipe and the wall of the well—this continuous circulation is possible because the bit has a larger diameter than the drill pipe. This mud maintains the pressure at the bottom of the hole, cools the bit, brings cuttings to the surface, and plasters the wall of the well to prevent it from caving in.

When a turbo-drill is used, the drilling string is not rotated at all. The bit is rotated directly at the bottom of the bore by a turbine powered by the flow of mud through the drill pipe. By this means, although there is still some loss of power through friction, a large part of the normal loss of energy can be avoided. The rate of penetration of any bit through the rock is governed jointly by the speed at which it rotates and by the force with which it is pushed downwards (determined by how much of the great weight of the drill pipe is allowed to rest on the bit). If more power can be delivered to the bit, a combination of greater speed of rotation and greater weight on the bit can be achieved, especially in hard rock formations. As a result of this, penetration rates ten times as great as those achieved with conventional rigs have been claimed for the turbo-drill.

The turbo-drill costs more and requires a more powerful mud pump at the surface. But if the higher penetration rates claimed for it can be achieved, the reduction in drilling



costs per foot may well offset the higher initial costs of the equipment. Directional drilling, in which the hole is deflected from the vertical, is easier with a turbo-drill, and the drill pipe, being stationary, should suffer less wear and tear.

SHORTER NOTES

Home car sales in May—as measured by the official registration figures for that month—totalled 43,635 against 47,906 in May, 1955. This was a drop of 9 per cent, slightly more than the 7½ per cent shown by the previous four months. Commercial vehicle registrations over the full five months were running 15 per cent above last year. But both tractor and motor cycle registrations are heavily down; tractor registrations by 22 per cent and those of motor cycles by 18 per cent.

★

The board of the Birmingham Small Arms Company has instructed Lazard Brothers and Company and Deloitte Plender Griffiths and Company to make an independent examination of and report on the organisation and structure of the group.

The deferred ordinary dividend of Pye, the radio and television manufacturers, has been left unchanged at 12½ per cent. But this dividend is payable on a capital of £2,772,208 as increased from £2,520,188 by the rights issue in December. The group's trading profit in the year to March 31st rose from £2,199,302 to £2,331,848.

★

Although the gross profits of United Dairies advanced from £3,002,043 to £3,668,544 in the year to March 31st, the ordinary dividend has been left unchanged at 15 per cent. Net profits have risen from £1,269,633 to £1,665,333 but a new provision of £200,000 has been charged for future advertising. The company intends to capitalise £591,360 from general reserve to make a 10 per cent free scrip issue.

★

Imperial Chemical Industries is to build an $11 million plastics factory in Missouri in co-operation with the Hercules Powder Company. Some of the raw material will come from other Hercules plants in the United States. The plastic is methyl methacrylate, which was originally developed by ICI and remains one of the leading types of transparent plastic in use. The factory will have a capacity of 34 million pounds a year.

Company Notes

NCHANGA CONSOLIDATED COPPER. Sir Ernest Oppenheimer, the chairman of Nchanga, describes the company's financial year ended March 31st as exceptional. It was exceptional in the sense that copper rose by over £100 a ton to a peak price of £436 in March, giving an average price for the year of £370. Since then the price has fallen and Sir Ernest says: "we cannot reasonably base our expectations on a return to the peak prices reached in the first months of 1956." These high prices resulted in Nchanga, one of the lowest cost producers in the Rhodesian copper belt, earning a gross profit of over £25½ million and recommending dividends of 30s. a share after spending £3 million on capital expenditure and adding £3½ million to the general reserve.

The copper companies, as Sir Ernest emphasises, need to make such large appropriations to take care of the loans they are making to the Rhodesian Government for the development of the Federation, particularly in regard to the Kariba hydro-electric project. Of the £20 million that the four producers will lend the Government in five annual instalments Nchanga's share is £6½ million, including £2 million this year. And once Kariba is completed, the copper companies between 1961 and 1967 will pay a surcharge on their electricity supplies that in total will come to over £10 million.

But it is not simply money which is at stake. It is the whole future of the copper belt. Sir Ernest points out that strict adherence to the programme of construction at Kariba is of "the utmost importance." If there is any delay in delivering electric supplies to the copper belt from Kariba, "there will be a rapidly increasing shortage of power . . . and production of copper might have to be curtailed." It is, he says, on the strength of receiving power from Kariba early in 1960 that the new mines are being equipped and that the mining programme at Nchanga is being planned. Between now and 1960, the copper producers will depend for some of their power supplies on the Belgian Congo and, fortunately, supplies will be flowing from that source before the end of this year, some months earlier than was planned.

★

GENERAL ELECTRIC. The growth potentialities of the electrical manufacturing companies are known to every investor and the shares of the leading companies in the industry offer slender yields. General Electric is one of these, yet it does not seem to thrive so mightily as the other giants of the industry. For the year to March 31st last, for instance, it has reported a fall in profits before tax from £7,538,966 to £6,562,231, while the net profit attributable to the holding company has fallen from £3,452,546 to £2,759,417. The reasons for the decline in profits are no doubt a decline in the sales of the durable consumer goods made by the electrical manufacturing companies and rising costs which trim profit margins not merely in the light end of the industry but also on capital goods.

The ordinary dividend rate has been left unchanged at 14 per cent, but the final payment of 9½ per cent is declared on a capital of £13,714,680 as increased by the rights issue. An immediate increase in the dividend had not been expected, but the trading results were disappointing and the £1 ordinary shares fell 3s. 3d. to 55s. 6d. to yield £5 1s. per cent.

★

HOOVER. Hoover's profits for the six months to June 30th should not come as too great a shock to shareholders. Last year gross profits fell from £4,582,000 to £3,838,233 owing to a rise in costs and not to a drop in sales, and a further fall in profits was to be expected as the hire purchase restrictions tightened their hold. That restraint has resulted in a decline in domestic sales of 29 per cent, comparing the six months' figures to June 30th with those of the corresponding period of 1955. But over the same two periods, exports have risen by 13 per cent.

Loss of sales is not the whole story. Costs have also continued to rise and the result is a decline in gross profits from £2,230,000 to £1,028,000. Looking forward, the Hoover directors say that "the prospects for the second half of the year do not indicate any appreciable improvement, but much will depend on the

Government's policy. So long as credit restrictions and high rates of purchase tax are maintained, trading conditions will continue to be difficult."

But there are a few crumbs of comfort. The decline in home sales in the six months to June 30th of 29 per cent is less than the decline of 34 per cent reported in the first eleven weeks of the year and the rise in exports of 13 per cent is higher than the increase of 10 per cent in that

	Six months to June 30,	
	1955	1956
Consolidated earnings:—	£	£
Gross profit	2,230,000	1,028,000
Taxation	1,105,000	607,000
Net profit	1,080,000	392,000

eleven weeks. Further, the directors go out of their way to say that in spite of the lower profit "they do not consider it necessary to reduce the interim dividend." which is left at 10 per cent. There is no comment on the prospects for the final payment, which for 1955 was 40 per cent. That at the moment is for the optimists and pessimists to work out between them, and the result of the tussle so far has been that after an immediate fall of 9d. the "A" rallied to the original price of 22s.

★

REARDON SMITH LINE. This company ranks high among tramp shipping companies. It is a family business with a fine modern fleet in which the public, through the gradual attrition of death duties is gaining an increasing share. The jump in working profits to £2,036,389 in the year to March 31st, compared with £887,209, is not out of line with the movements of the freight index from 96.3 to 134.6; and the optimists will note that for the first three months of the year now current the index has averaged 156.4. Though the freight market was much in the company's favour last year the results were excellent considering that costs were rising and that one of the company's newest ships was sunk. And looking forward, the chairman, Mr Douglas Smith, feels justified "in striking a note of confidence for a very good trading year for the fleet."

The company has a heavy building programme. The last of the four motor vessels ordered in its first programme will be delivered next month and now it is planned to build four more vessels of a bigger tonnage; the first two will be ready for trading in 1960 and the others in the following year. Capital commitments therefore stand at the large sum of £4,700,000, which can be compared with the book value at cost of the fleet of £5,783,852. But at the end of March the group's liquid resources came to over £5 million and since then it has sold one of its older ships at "a very satisfactory price." The dividend is raised from 15 per cent to 20 per cent and the 10s. shares stand at 40s. 9d. If that were the whole story the shares would yield a mere 4½ per cent which would be meagre for the shipping market. But Reardon Smith has for many years paid a tax free distribution (usually of 10 per cent) from realised capital accretions. The 10 per cent distribution from that source has been maintained and the market now counting it a regular affair calculates the yield at 9.2 per cent.

★

BLACKBURN AND GENERAL AIRCRAFT. Higher profits and a bigger dividend were expected from Blackburn and General Aircraft for a year ago the chairman forecast not only satisfactory results, based on the production of the "Beverley" transport aircraft and on development contracts, but also a high level of activity for a number of years, requiring further capital expenditure. In the week preceding the preliminary statement the 10s. ordinary shares rose in anticipation from 15s. 6d. to 17s. 3d., and though the expectation of higher earnings was realised they subsequently fell back to 16s. 6d.

The ordinary dividend has been effectively raised from 9 to 12½ per cent. This dividend, after tax, absorbs only £98,844 from the net profit for the year ended March 31st of £382,062, which shows an increase of £128,905. Profits before tax rose by £237,649 to £758,506. At 16s. 6d. the 10s. units on the new dividend yield about 7½ per cent.

LONDON STOCK EXCHANGE

Next Account begins: August 8th

Next Contango Day: August 8th

Next Settlement Day August 14th

THE Chancellor's call for a contraction of credit only temporarily curtailed activity in ordinary stocks and many gains persisted; the *Financial Times* index of industrial shares showed a rise of 3.1 over the week to 185.1 on Wednesday, and the weakness of sterling offset the advantage to gilt-edged of the policy so that the index of Government securities declined steadily from 84.78 to 84.43. Several issues of German and Japanese bonds improved to their highest points this year.

Insurance stocks were firm, Legal & General advancing further to 28½, but bank shares weakened. The sharp rise in United Dominions Trust which followed the increase in dividend was reversed on Wednesday following the statement on credit policy, but on balance the stock gained 1s. 3d. to 73s. 3d. Associated Portland Cement rose 5s. 6d. to 102s. 6d. xd following the full report. General Electric dropped 3s. 3d. to 55s. 6d. on disappointment with the results; C. A. Parsons, however, gained 1s. 6d. to 89s. Prices of motor shares were maintained; BMC were steady at 6s. 10½d., Rolls-Royce rose to 107s. 3d. and Ford improved slightly. Raleigh jumped 5s. 9d. to 38s. 9d. and BSA recovered to 26s. 3d. Hawker Siddeley gained 4s. 9d. to 43s. 3d. and De Havilland improved 1s. 9d. to 25s. British Aluminium rose a further 5s. 6d. to 77s. 9d. and British Tabulating were also bought, the "new" reaching 20s. 3d. premium on Wednesday and the "old" rising to 47s. 6d. Stores were firm; Marks & Spencer advanced 2s. 9d. to 62s. 6d. and Debenhams 2s. 3d. to 36s. Rumours of a bid for New Day pushed up the price to 10s. 7½d. before a reaction to 10s. 3d. Courtaulds recovered to 37s. 3d. after an earlier loss and Lancashire Cotton rose 1s. to 25s. 7½d. Borax improved again to 13½.

Oil stocks fluctuated, but were lower on balance; British Petroleum lost 5s. 7½d. to 175s. 7½d. Kaffirs were firm and base metals improved. Rubbers were steady and Ceylon teas firm.

THE MONEY MARKET

THE discount market reduced its bid by 2d. per cent at the Treasury bill tender on Friday last, restoring the discount rate to a fraction above 5 per cent. This move, which followed reductions in the rate at the two preceding tenders, was prompted by the return of stringency in the short-loan market and the renewed weakening of sterling. Outside tenderers appear to have reduced their bids by rather less than the market, so that although total applications fell by £15·5 million, the market's allotment fell from 61 to 50 per cent. The average rate of discount on all bills allotted rose by 6d. per cent to £5 0s. 3.82d. per cent.

The stringency in Lombard Street has continued through the latest week. On Monday the market was left on its own and two or three houses had to take loans (for a very small amount) at Bank rate. On the following day the Bank gave a fair amount of aid, but on Wednesday market supplies of funds were just adequate. Throughout the week, October maturities have changed hands at 4⅛ per cent and August maturities at 4⅛ per cent.

The Bank return shows an outflow of notes for holiday spending of £22.4 million in the week to Wednesday last. This brings the efflux in the latest four weeks to £69.6 million, compared with £78.2 million in the corresponding period a year ago.

SIR FREDERICK LEITH-ROSS ON CURRENT TRENDS AND PROSPECTS

The 143rd Ordinary Meeting (being the Annual General Meeting for the year 1956) was held on July 25th in London, Sir Frederick Leith-Ross GCMG, KCB (the Chairman), presiding.

The following is his circulated statement:

It is with deep regret that I have to record the death of Sir Dougal Malcolm who had served the Bank with distinction for many years. Sir Dougal's connection with Southern Africa, and in particular with the territories of Southern and Northern Rhodesia, went back to the time of Cecil Rhodes and few could rival his knowledge of their history and problems. As President of the Chartered Company, which was the chief of his African interests, he kept himself continually informed of conditions there and this knowledge he kept up to date by frequent personal visits. We miss him greatly, not only for his wisdom but for his outstanding character and courtesy.

I am pleased to report that in Sir Dougal's place there was elected to the Board Mr A. Comar Wilson. As a Director of the Anglo American Corporation and of the Chartered Company, and of many other Companies operating in Southern Africa, with his wide outlook and energetic personality, Mr Comar Wilson will, I am sure, be a valuable addition to the Board and you will be asked to confirm his appointment at the Annual Meeting.

While referring to matters concerning the Board I would draw your attention to the Circular issued with these accounts advising that it is proposed to enable the Board to increase the number of its members to sixteen. The Circular fully explains our proposal and I will not therefore enlarge on it here.

VISITS TO OVERSEAS TERRITORIES

During the year under review nearly all the territories in South, Central and East Africa where we are established have been visited by Directors. I myself made a prolonged tour last winter of the East African coast towns, Zanzibar, Tanganyika, Nyasaland and the Rhodesias, before spending three weeks in the Union and visiting some of the main centres there. Mr Hogg paid a short visit to the Federation and the Union last autumn and Sir Edmund Hall-Patch undertook an extensive tour of the Union in the spring. Mr Villiers visited Uganda and Kenya and Mr Holland-Martin went to the Federation as well as to Kenya and Uganda. Mr Acton undertook a tour covering Portuguese East Africa and parts of the Federation. We have also had the good fortune to have had visits to London of Mr Ralph Gibson and Sir Ulick Alexander, the Chairmen of our Local Boards in the Union and the Federation of Rhodesia and Nyasaland respectively.

For many years the administration of our Rhodesian offices has been channeled to London through our General Management in the Union of South Africa. A variety of reasons—the formation of the Federation of the Rhodesias and Nyasaland, the foundation of a Central Bank, and the growth of our Rhodesian business—had led us to think that the time had come to change these arrangements. We have therefore set up an administrative office in Salisbury, which is now dealing direct with London, though still maintaining, of course, a close liaison with the Union. Henceforward the Local Board will also have wider responsibility for the supervision of our business in the Federation. It is with regret, therefore, that I have to report that we have lost the services of Mr K. C. Acutt, Deputy Chairman of the Rhodesian Local Board, who had been invited to join the Board of the newly formed Central Bank in the Federation. In Mr Acutt the Central Bank have acquired a valuable Director: we are only sorry that under the law it is not possible for Mr Acutt to serve both institutions. In place of Mr Acutt, the Local Board have elected Mr A. E. P. Robinson, who has many interests in Southern Rhodesia, as a Director, and Sir Robert Hudson was appointed Deputy Chairman.

AN EVENTFUL YEAR

Once again I am able to report to you that the business of the Bank has continued to expand. This will be seen from the year's accounts, which show a Balance Sheet total of £18 million more than last year.

The year 1955 was, generally speaking, a year of great prosperity and active development in all our Territories. But it was marked by an increasing tightness of money and demands for extended credit, with a corresponding increase in the calls on our Bank for assistance. In an endeavour to meet the legitimate day to day claims in respect of the productive needs of industry and commerce without disturbing the even flow of the business of our customers, and at the same time to do our best to comply with official policy, we have had to adopt a process of careful selection to ensure that the assistance we could give was evenly spread between the great body of our customers.

THE BALANCE SHEET

During 1955, the issue of 2 million fully paid £1 shares at 35s. per share was successfully accomplished, increasing the paid-up capital of the Bank by £2 million to a total of £9 million, and providing a further £1,500,000, by way of share premium, as an addition to the Reserve Fund. The additional cash thus brought into our business has been of great assistance in meeting the pressure for accommodation with which we have been faced. As you will see, Advances to Customers have increased by some £25 million. These advances have been well spread territorially, £8 million being attributable to countries with a Union currency, £9 million in the Federation of Rhodesia and Nyasaland, and the balance elsewhere. (It should be mentioned that, of the increase in advances in the Union, a large part was due to the effect of a Government drive to collect tax arrears, and the figure was reduced by nearly £5 million in April.) The measure of assistance provided for the movements of goods is reflected in the increase of Bills of Exchange purchased, £4 million, and Bills Discounted, £3 million. The other changes in the Balance Sheet are all consequential upon these movements and reflect the manner in which the funds were provided to finance them. The total of funds deposited with us by our customers increased by almost £13 million, and the other principal changes are reductions in the Cash items. Investments and Remittances in Transit by approximately £7 million, £6 million and £3.5 million, respectively.

PROFIT AND LOSS ACCOUNT

From the Accounts it will be seen that, after the usual and necessary provisions, the Profit for the year is £823,359, an increase of about £35,000 on that of the previous year. The balance brought forward from the last year's accounts was £581,703, so we have £1,405,062 to deal with. As the result of the issue of shares last year, to which I have already referred, the paid-up Capital was increased to £9 million, and the Reserve

Fund to £8,500,000. Before this operation the Reserve Fund stood at the same figure as the paid-up Capital, and the Board consider that it would be desirable gradually to increase the amount of the Reserve Fund until a similar position is again reached. Accordingly, we decided this year to appropriate £250,000 to the Reserve Fund. The amount written off Bank Premises is repeated at £50,000 and, after providing for these two sums, there remains £1,105,062 for disposal.

An interim dividend of 1s. per share was paid in January last, and it is now recommended that a final dividend of 1s. 6d. per share be paid, making a total distribution of 2s. 6d. per share, that is to say at the same rate as for last year, but on the increased capital of 9 million shares. The gross total of the year's distribution will therefore be £1,125,000 which, after deduction of Income Tax, will amount to £646,875.

After the appropriations and distribution, there will remain £458,187 to be carried forward to the next accounts.

STANDARD BANK FINANCE AND DEVELOPMENT CORPORATION

With the Bank's Accounts will also be found the Balance Sheet and Profit and Loss Account of this wholly owned subsidiary. After making a transfer to Reserve for Contingencies, the profit amounted to £21,178, which compares with £21,087 last year. Together with £64,292 balance of Profit brought forward from last year, there is £85,470 available for allocation. The Board of Directors have decided to repeat the modest distribution of 2s. 6d. per share paid last year which, after deduction of Income Tax at 8s. 6d. in the £, will take £14,375 and leave £71,095 to be carried forward to the next accounts.

Before passing on to brief notes on conditions in the various territories in Africa, where we are established, there are some observations of a more intimate character concerning the Bank which I should like to make.

BANKING COMPETITION

In all the countries in Africa where we operate, we have seen in the last few years signs of increasing competition. In the Union considerations quite unrelated to the service provided by the Bank have often been brought to bear in order to secure the transfer from us of accounts which we have held for many years. Intense competition for deposits by Building Societies and other non-banking institutions has resulted in an increase in deposit rates in which the Banks have had to follow to some extent in protection of their positions. This increase in rates is unwelcome to the Authorities and it is with regret that we have found ourselves obliged to agree to them. In the Federation of Rhodesia and Nyasaland, where we were the first Bank to be established 64 years ago, there has been an increase in the number of institutions which undertake banking transactions in a few centres without maintaining a network of Branches throughout the Territories. In East Africa we have also seen new entrants to the banking field. Despite this increasing competition we have been able to maintain our position and, with the rapid development which is taking place throughout the Continent of Africa, I feel confident that the business of our Bank will continue to expand.

BRANCHES AND STAFF ORGANISATIONS

Meanwhile we have continued our endeavours to cater fully for the needs of our customers and of the countries in which we operate. As you know, we maintain offices in the United Kingdom, Germany and the United States of America. Last year we opened a new Branch in London at Suffolk House, Park Lane, which should be a convenience to visitors in that area and help to relieve the congestion in our West End Branch. We have also acquired new and more central premises for our agency in Hamburg.

Our Managers are continually on the alert for opportunities to extend our organisation and, since my last Statement, the number of our offices has increased from 666 to 731. In watching the development in their districts, Managers are assisted by visits from members of our Local Boards, who make a point of visiting Branches whenever possible.

The extension of our Branch system, whilst providing more opportunities for promotions, naturally places strains upon our staff. The prosperity enjoyed by the countries of Africa has its effect on the labour market and, in conditions of overfull employment, the wastage of young staff is at a high level and much more time must be spent on training new recruits than would be otherwise required. In these circumstances we are employing an increased number of women on higher grade duties and I am glad to say that they have shouldered their increased responsibilities very successfully.

To assist in training junior officers we are expanding and intensifying our Training Schools. It will be understood that on account of the distances involved in Africa we are obliged to maintain such schools in the principal centres and it follows that we need a larger staff of instructors than would be required by individual banks in this Country. Opportunity is also taken to give training in this Country to promising young men from South Africa, and an exchange system is operated.

To enable our Branch Managers to bring their ideas to Headquarters and provide them with an opportunity of meeting their contemporaries and the General Management, and of discussing their problems in an atmosphere of mutual help, periodical conferences are arranged where a selection of the senior officers meet one another in Pretoria.

From what I have said you will appreciate that active measures are being taken to maintain a sufficient staff of the necessary standard of training.

I will now refer to some of the major developments in Central and Southern Africa: more detailed information will be found in our monthly bulletins which we will be glad to send to any shareholders who desire them.

UNION OF SOUTH AFRICA

In South Africa, 1955 was a good year for farmers and a record year in mining, manufacturing, building, the distributive trade and transportation, but it may mark the limit of the forward surge in the economy during the past three years. It is true that the strength of the economy is shown by the fact that there was a net fall of only £20 million in the foreign exchange reserves, although imports increased by £50 million and the net inflow of capital fell by £66 million. Early in 1955, there were signs of an inflationary trend developing, with a rise in costs and in prices as well as in the volume of money in circulation, and in August the Governor of the Reserve Bank requested the Commercial Banks to restrict credit for fixed capital purposes and for hire purchase transactions. This request was reinforced by the increase in the Reserve Bank discount rate from 4 per cent to 4½ per cent on September 29, 1955—a change which was designed also to discourage any substantial outflow of funds to, or the retention of funds in, London. The discount rate was not further raised in February last, when the Bank of England rate went up to 5½ per cent, but measures were taken to restrict certain capital movements from the Union, and recently a Reserve Bank amendment Bill was submitted to Parliament under which certain additional minimum reserves may be called for from the Commercial Banks when it is considered necessary in the national interest to curtail Bank credit.

The rise in the retail index of prices in South Africa during 1955 amounted to less than 2 per cent as compared with an increase of 4.5 per cent in the United Kingdom. The extent of the inflationary trend in the Union was therefore modest as compared with that in this Country. But the rapid development of mining and industry in the Union during the last few years has necessitated the import of capital from abroad on a very large scale and, with the sharp reduction of this capital inflow and some withdrawal of capital from the Union, there was increased pressure on local savings and on Bank advances. This pressure was accentuated by the bountiful harvests of recent years, which necessitated the financing, pending export, of the maize surplus, valued at some £20 million, partly by the Commercial Banks and partly by the Reserve Bank. The shortage of skilled labour led to increases of salaries and wages which also tended to force up the price level. The Reserve Bank, whose firm resolve it is to maintain the soundness of the South African currency, took prompt action to restrain the expansion of credit and, with the similar disinflationary action which has been taken abroad, a very definite stringency has developed in the Union, which is reflected in a falling-off of business generally and particularly a sharp reduction in building activity. After the intense development of the past ten years a period for consolidation may well be beneficial to the Country and there is no reason to anticipate that the monetary restraints will be carried further than to secure this. Thus, while 1956 may not be as commercially active and prosperous as the past few years, the difference is not likely to be great and the general level of trade may well be maintained.

On the long-term prospects, there are a number of factors that promise both protection against any serious recession and powerful aid to a fresh forward movement in the future. The output of gold rose during the past year from £164.6 million to £182.8 million, owing mainly to the development of the new mines in the Orange Free State and the exports of "prescribed materials" rose in value from £14.8 million in 1954 to £30 million during 1955. The virtually certain growth of these two exports, as well as the progressive development of other mineral and agricultural products, and the rise in public savings, are a good augury for the future. The financial and economic policies followed by the Government and by the Reserve Bank have, as in the past, been generally conservative and have merited the support of the public.

The main question is whether the political and social stresses in the Union, which have recently received widespread publicity, will interfere with the economic progress of the Country. South Africa will still for many years require a regular inflow of foreign capital for the further development of its great natural resources and the possibility of obtaining this inflow of capital will depend, to a large extent, on maintaining the confidence of investors in the stability of the Country for many years ahead. The solution of the problems which face South Africa will not be found by the application of doctrinaire

principles, of whatever character, without regard to the practical requirements of the Country, and it may be hoped that in South Africa counsels of moderation may prevail and that abroad the complexity of its problems may become better understood. Meanwhile, the political polemics which attract so much notice abroad seem to have little or no effect on the course of business in South Africa. To most people, whether European or African, the price of wool or cereals is of more importance than any political question. None-the-less, for the industrialist, the development of the political situation, with its effects on labour-management relations, is of great importance.

THE FEDERATION OF RHODESIA AND NYASALAND

The past year was again one of great prosperity for the Federation, the total value of trade amounting to £310 million, with a favourable balance of nearly £40 million. This was mainly due to the high prices realised by the exports of copper from Northern Rhodesia, but there was also an improvement in both agricultural and mineral production in Southern Rhodesia. In Nyasaland results were more patchy, tea and cotton doing well but the tobacco crop being short. The Building industry is intensely busy in the Copperbelt towns and in Salisbury, where indeed there has been a major building boom. Development in all branches of industry continues actively.

The main problem of the Federation is the need of capital to maintain and carry forward this development. The focal point of the Federation's current programme is the Kariba Hydro Electric Scheme, the first stage of which is estimated to cost some £80 million. To finance this great enterprise, which is of vital importance to the Copperbelt, loans have been or are being negotiated with the International Bank, the Colonial Development Corporation, the Commonwealth Development Finance Corporation, the Copper Mining Groups, the Chartered Company, and the Banks. We have participated to the extent of £2 million as a long-term investment, and we are also helping to finance the contractors for various parts of the scheme during the period of construction.

The Kariba Scheme, however, is only the most important of many development projects for which the Government is responsible. The improvement of the existing railways and roads, is almost as urgent a need as the provision of power: the Government has announced its intention of spending £25 million on railway expansion during the next three years but total requirements for railway and road services are likely to be much higher. Housing, education, sanitary, and other public services for the growing population of the towns will entail further heavy demands on Government capital resources. There appears to be a significant expansion of local savings available for investment and the Budget can provide a substantial amount for development purposes, but even so, there may well remain a gap which can be filled only by attracting foreign investors.

Private enterprise is, of course, responsible for much of the development that is taking place. In Northern Rhodesia, the Copper Companies are showing public spirit and foresight in making funds available for a number of projects not directly connected with their own industry but which ultimately will redound to the benefit of the Country. The Southern Rhodesian Government is sponsoring an industrial plan, involving an expenditure of £50 million by private enterprise, including among other projects the transfer to private enterprise of the Rhodesian Iron and Steel Company with a view to the extension of the plant and the expansion of its production. There are few countries in the world which can offer such rich prospects for development as the Federation but, in present conditions of monetary stringency, the finance may not be readily available. We have already had to adopt a selective policy in our advance business so that we can continue to support old business connections and meet new calls on us from the most legitimate types of business.

A landmark in the financial organisation of the Federation was the inauguration last March of the new Central Bank, the Bank of Rhodesia and Nyasaland. On April 1st last it took over the functions of the Central Africa Currency Board, for which we had acted as agents since its establishment in 1939, and it is expected to start full operations in approximately a year's time, when it will assume responsibility for the management of the public debt and of the Government accounts. This will naturally involve the loss to our Bank of certain Government balances which we at present hold though we should also be relieved of some of the calls made upon us by the Government. Moreover, under its statute, the new Bank has been vested with wide powers to control the operations of the Commercial Banks, including power to require varying percentages up to 25 per cent of their deposits to be kept with it as reserve balances. While the requirements of the new Bank must have repercussions on the operations of the Commercial Banks, we are confident that, under the guidance of its distinguished Governor, Mr A. P. Grafftey-Smith, its powers will be used with caution and full consideration given to the need for Commercial Bank credit in a rapidly developing Country, where capital is short, and is likely for many years to remain short, of requirements.

It can be fairly said that the initial period of political and economic stocktaking which followed the inauguration of the Federation is over and that a general feeling of confidence in its future prevails. Indeed, throughout the three territories that comprise the Federation, there is now a growing demand for the revision of its present cumbrous and costly constitution and for the creation of a unitary Dominion, with a single legislature and a homogeneous public service. It may be hoped that an acceptable settlement of this question may eventually be reached.

Last year I mentioned that our Board proposed to extend to the Federation the operation of our Development Corporation. We found that for this purpose it would be necessary to register the Corporation separately in each of the three territories and to comply with the Company law requirements under two different legal systems. While this can be arranged, your Board feel that, having regard to the pressure on our resources for normal banking business, it is advisable to defer action until we can see more clearly what our position will be when the Central Bank begins to function and, in the meantime, we hope that the legal requirements may be simplified.

EAST AFRICA

In Kenya, the Mau Mau rising has now been reduced to a few scattered gangs in the forests, though the problem of dealing with the internees, numbering about 40,000, remains. In Uganda, there is a disquieting element of latent political friction, but, generally speaking, law and order now prevail throughout the three territories and the development of public works continues apace. The first development programme of the East African Railways and Harbours Administration, amounting to close on £60 million, is nearing completion and the Transport Advisory Council is recommending a loan programme of £34 million for expenditure in 1958 to 1961. The development of Mombasa compares with that of any city in Southern Africa and Dar es Salaam is not far behind. The city of Nairobi approved last December a capital works programme for the next five years, involving £10½ million. The rate of private industrial development is less striking but is being maintained, and there is exceptional activity in the building industry in all the important centres.

The past season has been a very good one for coffee and a satisfactory one for cotton, sisal and other produce. But the bazaar trade has been unusually quiet and money is tight throughout the territories. There has been overstocking but the main cause, particularly in Uganda, seems to be that the African is not spending so freely as in the past. Whether this is due to lower returns to the growers or a better appreciation of the value of saving, or to other causes, is obscure. The co-operative movement shows marked growth but needs careful supervision: too many cases occur of mismanagement and defalcation. One of the most successful organisations of this kind is the Kilimanjaro Native Co-operative Union at Moshi, through which a crop of 6,000 tons of first quality Arabica coffee is grown and marketed annually. Generally speaking, the native population needs a great deal more business experience if it is to make full use of the Country's natural resources.

Another factor that cannot be ignored is the increasing demand, on the part of native organisations, for political rights. In each of the East African territories experiments are at present being tried with a view to giving all races a limited share in the responsibilities of Government. The results of these experiments will be watched, with close interest, by the financial markets. Large amounts of capital investment will, for many years, be required for the economic development of these great territories and, with the credit squeeze operating in the United Kingdom and a general tendency to tighten up credit elsewhere, the prospects of obtaining the capital necessary will be greatly influenced by the extent to which the political organisation promises stability for a long period ahead. In these circumstances it is not in the interests of the inhabitants of East Africa to press for democratic systems of self-Government on the European model before there is more evidence that they are sufficiently experienced in political judgment to undertake such responsibilities. The wide extension of the suffrage is too often regarded in the United Kingdom as the panacea for all political problems: in East Africa such a step at present would, frankly, prejudice the prospects of economic development.

TRIBUTE TO STAFF

In concluding this statement I would again pay special tribute to the loyalty and wholehearted support given by the Staff. The constant changes in the junior ranks to which I have already made reference, and the increasing tempo of business activity, place a heavy burden on the senior men and women, and their untiring efforts to train the younger members and render that degree of service which the public have come to expect from our Bank are deserving of special commendation.

The report and accounts were adopted and the other formal business having been duly transacted, a Special Resolution in connection with the Directorate was passed and other following business approved.

FINANCE CORPORATION FOR INDUSTRY

UNPALATABLE FACTS OF COUNTRY'S GENERAL ECONOMIC AND FINANCIAL POSITION

POSITION IN EXPORT FIELD BEING PROGRESSIVELY UNDERMINED

NEED FOR COURAGEOUS LEADERSHIP BACKED BY UNITED NATIONAL EFFORT

PROVISION OF FINANCE FOR INDUSTRIAL EXPANSION A MATTER OF URGENCY

LORD BRUCE ADVOCATES LIMITED DEPARTURE FROM ORTHODOX U K BANKING PRINCIPLES

The eleventh annual general meeting of Finance Corporation for Industry Limited was held on July 26th in the Conference Hall of the Chartered Insurance Institute, 20, Aldermanbury, London, E.C. The Right Honourable The Viscount Bruce of Melbourne, PC, CH, MC, FRS, the Chairman, presiding.

The following is the Chairman's statement which had been circulated with the Report and Accounts for the year ended March 31, 1956:

Although it has been my custom in the past to address my remarks on the affairs of your Corporation to members at the General Meeting, I have thought it desirable this year to depart from this practice and to send you my comments and observations on the results of the year with the accounts, so that they may be read together.

From the Profit and Loss Account you will have observed that interest and dividends from investments, less interest on advances from bankers, together with the surplus on realisation of investments, engagement fees and other income amount to £983,320 against £980,436 twelve months ago.

On the debit side, administration and other expenses—£21,271—and Directors' Fees—£8,000—are virtually unchanged. Taxation absorbs £444,799 against £453,483 for the previous year.

The net profit for the year after tax therefore is £509,250—a slight improvement of £11,551 as against 1954-55.

In their report accompanying the accounts your Directors recommend payment of a dividend of 6 per cent on the paid up share capital and have transferred the balance of the profits for the year, together with £8,000 of the balance brought forward from previous years, to investment reserve. This leaves a sum of £171,367 to be carried forward.

OBSERVATIONS ON NET PROFIT FIGURE

I now propose to make a few observations with regard to the net profit of £509,250 this year against a net profit last year of £497,699.

Both these results are admirable and should cause a certain degree of satisfaction to the Shareholders. I feel, however, I should give you some explanation of how they have been arrived at, so that you will not be misled into believing that your Corporation is now established on a basis where profits of this magnitude can be confidently anticipated in the future.

If I take the figures for the present year it will, I think, make the position clear.

Interest and dividends from investments less interest on advances from bankers total £486,084. During the 15 months prior to the end of the financial year under review, the bank rate rose from 3½ per cent to 5½ per cent. As a result we have had to pay a higher rate of interest on our borrowings from the Panel of Bankers. This increase, however, has not materially affected your Corporation as it is our practice to attach to our loans rates of interest which fluctuate with Bank Rate.

Such a provision introduces a desirable flexibility in that during a period of rising rates while protecting our position it brings home to our borrowers the hard facts of the financial and economic position. On the other hand, when rates are falling it gives them the benefit of cheaper money.

While variations in interest rates do not for the reason I have given seriously affect the Corporation's profits, the volume of investment does.

DIMINUTION IN VOLUME OF INVESTMENTS

From the Balance Sheet you will have observed that our investments this year stand at £41,239,000 as against £53,905,228 twelve months ago.

This reduction took place in the main towards the end of our financial year and consequently does not materially affect the profits. The effect during the next year will be more noticeable, although it will be offset to some extent by the increase in our future commitments—which you will have seen from the Balance Sheet stand at £39,632,000 at March 31, 1956, against £32,752,000 twelve months earlier.

While the margin between the interest we receive and the interest we pay is a substantial sum for the year it represents a very small percentage of the total of our advances. This is due to the fact that it is the policy of your Directors to keep this margin as low as possible during the early days of new ventures and the initial period of expansion and development of established ones.

As you know, under our Charter we can only make advances to new projects which will be of benefit to the national economy and even then only when the required finance cannot be obtained from any other source. This means that in the initial stages of any venture which we are financing it is impossible to determine whether it will succeed or not.

In the event of the venture not achieving what was hoped and expected, all we can look for is the small margin on the interest rate we charge and hope—but with no certainty—that we will get our money back.

In the event, however, of the venture succeeding, we feel we are entitled to some reasonable return for our courage in providing the necessary finance. Broadly we do this by attaching conversion rights in the Equity of the concern to our loans or by taking options to subscribe for shares.

A NOTE OF WARNING

It is as a result of this policy that in the past two years we have been able to show profits of £489,615 and £497,236 respectively under the heading of "Surplus on realisation of investments, engagement fees and other income" although in the latter year there is included an amount of £360,000 "Retention money" arising from the sale of our investment in Petrochemicals a year previously—to which I referred in my statement at the time. I am pleased to be able to report that no defects which the purchasers considered chargeable to this account were found in the plant at Partington and accordingly the amount has now been paid over to us in full.

It is to be expected that profits under this heading will fluctuate considerably from year to year and it is by the merest coincidence that the figures in the Profit and Loss Account for the past two years have been similar.

I have gone into this matter at some length, because I feel I should utter a word of warning as to the possibility of your Board being equally successful in the future as in the past in this particular field.

We have also to bear in mind, because of the nature of the business your Company was created to carry out, the possibility of substantial losses, as in the case of the sale of our interest in Petrochemicals. This loss, I would remind you, we were fortunately able to cover and at the moment your Directors are satisfied that no special provision is required in respect to any of the existing investments and they are therefore shown in the Balance Sheet at cost.

THE CREDIT SQUEEZE

Turning now to the Balance Sheet, the effect of the diminution in our volume of investments—to which I have referred earlier—has been to reduce our borrowings from the Banks. This, by accident and not by design, has been in line with the Chancellor of the Exchequer's credit squeeze. Why I say "not by design" is because in my view

it was not and should not be intended to curtail our activities which are directed towards increasing production and making more goods available for export. Even at a time of a "credit squeeze." if such activities are not continued it is difficult to see how the country will ever emerge from its present troubles.

On this question I have been in continuous consultation with the Clearing Bankers and the Bank of England. I am happy to report that as a result of these discussions an arrangement has emerged which meets the situation as far as your Corporation is concerned.

Additional Speech By Chairman at the Meeting

Addressing the meeting the Chairman said: This year I have circulated my comments and observations on the results with the Accounts and shareholders will have had an opportunity of considering them. If there are any questions, I will be pleased to answer them after the resolution for the adoption of the Report and Accounts has been submitted.

It has been my practice in the past at our Annual Meeting to make some observations on the general economic and financial position of the country. This practice I propose to continue on the present occasion.

In doing so I must make it clear that I and I alone am responsible for what I am about to say.

COUNTRY'S ECONOMIC AND FINANCIAL POSITION

At each of our Annual General Meetings over the past few years I have expressed concern at the economic and financial position of the country. During the past year that concern has deepened. The facts of our economic and financial position are simple, but unfortunately few people seem to grasp them.

In order to provide employment for our people and to maintain our standard of living, we must have resources sufficient to pay for what we have to buy. These resources we obtain from the proceeds of our exports, visible and invisible and the return upon our foreign investments.

In addition we must also build up our gold and dollar reserves to a point adequate to meet our obligations to our creditors and the Sterling Area and to tide us over a period of recession in world trade.

UNPALATABLE FACTS

I now propose to examine how far since the war we have lived up to these inescapable obligations and what are the prospects of our doing so in the future.

First—as to how far between 1945 and 1955 we have earned sufficient to pay for what we have purchased.

Over that period we have paid to other Nations about 9,600 million dollars more than we have received. Fortunately over the same period we have obtained by way of loans and aid from the United States and other sources 9,500 million dollars—almost the same figure. Without this help we should have been bankrupt.

Thus over the past ten years we have not met the first obligation of national economic and financial health.

Second—as to our obligation to build up adequate gold and dollar reserves—

The fact that these reserves were about 91 million dollars less in June of this year than at the end of 1945—despite the very large dollar and other loans and grants we have received over the past ten years—is evidence of how far we have failed to do so.

These unpalatable facts must I suggest give us all furiously to think. They show that notwithstanding that the going has been good (as I shall show in a minute) we have failed since the war even to begin to pay our way by our own efforts.

CAUSE FOR ANXIETY

When we consider these facts in relation to the future and take into account the conditions that have prevailed over the past ten years, it is impossible to avoid a feeling of deep anxiety and even of serious alarm.

Exports have been and will continue to be the vital need of the economy of these Islands. Since the war we have progressively expanded them to the point where they are some 75 per cent greater in volume than in 1939. Notwithstanding this and bearing in mind that we have during the period depreciated the value of the £ sterling we have—as I have already shown—needed loans and aid to the extent of 9,500 million dollars to keep our economy on what might be described as an "even keel."

In the future we cannot expect nor would we desire to obtain the same measure of financial aid that we have received over the past ten years. This means that we have not only to maintain our exports but we must substantially increase them.

PAST FAVOURABLE CIRCUMSTANCES

In considering the prospects of achieving this, it is desirable that we should examine the circumstances that have prevailed during the period in which we have achieved our expansion in volume of some 75 per cent, the present position and the conditions that are likely to prevail in the years to come.

First, dealing with the past:

In the immediate postwar period we had a sellers' market, while the world restocked, re-equipped and restored war devastation. Just when this sellers' market looked like ending, we received a new stimulus from the expansion of armaments and stock piling consequent on the Korean war.

Now that stimulus has gone and we are facing a buyers' market in which the competition increases every day.

We must therefore recognise that the expansion in exports that we have achieved was accomplished under favourable circumstances.

PRESENT AND FUTURE PROBABLE TRENDS

We must also consider the present position and future probable trends in considering the possibility of achieving the further expansion that is essential. Such an examination does not give very encouraging results.

Our greatest competitors in the export market today are the United States, Western Germany and Japan. Probably Western Germany is the best country to take as an example of what we are up against:

Before the war Britain and Germany each had roughly a 20 per cent share in the world's exports of manufactured goods.

In 1951 the UK share of world trade was 22 per cent and Germany had built up its share to 10 per cent.

In the years 1952 and 1953 our exports declined and there is little doubt that that decline was due in considerable measure to the increasing competition of Western Germany.

In 1955—which was a good export year—our position showed no signs of improvement. The UK share of world trade had declined to 20 per cent and Germany's share had expanded to 15 per cent.

In Germany retail prices rose much less during 1955 than they did in Britain and Germany's industrial production went up 17 per cent as against 6 per cent in the UK.

Whilst I have taken Germany as an example, we are of course also faced with the competition of the United States and Japan in world markets.

The position in 1955 in these countries was much the same as in Germany. In both production rose to a greater extent than in Britain. Retail prices remained static in USA and fell by one per cent in Japan—against a rise of 4 per cent in this country. In so far as figures for 1956 are available, they indicate a continuance of this trend.

The broad picture is shown by the fact that in 1955 our exports went up by some 7 per cent, those of the United States by about 9 per cent, those of Germany by about 17 per cent and those of Japan by about 27 per cent.

In face of these facts is it possible to escape the conclusion that our position in the export market of the world is being progressively undermined?

"WHAT ARE WE DOING ABOUT IT?"

May it not be that we are seeing the first fruits of this in the recession that has taken place initially in the Textile Trade of Lancashire and more recently in the Motorcar Industry. May not this recession be followed in other industries unless we take steps to meet the position? What are we doing about it?

The first and fundamental task must be to contain our domestic inflation. Until a stop can be put to the continual rise of costs and prices, we will lose ground to other nations whose inflation is less violent.

To do this the Government, on whom the primary responsibility rests, appears to have put its trust to a great extent in monetary measures, such as increased interest rates, the credit squeeze and other financial pressures—apparently believing that the position can be restored in this way.

Such action is valuable and essential but I do not believe that a diminution in spending by the public and the making of more goods available for export will by itself provide the solution of the problems that confront us.

NEED FOR CHANGE OF HEART

If we are to overcome our difficulties and place this Nation again upon a sound economic foundation, we have to bring about a change of heart and a realisation of the need in our own and the Nation's interest to give of our best and to impose upon ourselves a self discipline.

This applies equally to those who control, direct and manage our industries and to the workers. In respect to management, the going has been too good. Full order books and high and easily earned profits tend to create an atmosphere of complacency and slackness. A touch of adversity will quickly bring home the need for better and more dynamic direction and control of their activities. In respect to the workers, it appears to me that we are faced with a psychological problem.

This has been much better expressed than I can hope to put it by Sir James Turner,

the President of the National Farmers' Union, when he said:

> "In my view the problem of inflation will never be solved and this national economic disease will never be cured unless and until someone tells the patient its real seriousness and what is certain to happen to him if a major operation is not performed, and performed skilfully and quickly.
>
> "It is my deep and sincere conviction that the truth, however unpalatable, needs to be laid bare to the people of the country. The wartime catch-phrase 'Britain can take it' remains true today—but only if her people are told what they must take, and why."

That is only another way of saying that we have to take drastic action to meet the circumstances we are up against; that the people have to understand the reasons for the taking of such action, and that the support of the people has to be obtained if that action is to be successful.

TELL THE PEOPLE THE TRUTH

There are many politicians, trade union leaders and employers who realise that drastic action is necessary, but maintain that it is not possible to make the people generally understand the need and obtain their support.

This view is understandable, but in my opinion it constitutes an abdication of leadership. I am convinced that the people would respond to bold and courageous action.

We have today full employment, higher wages, better living conditions and more extensive social services than we have ever known.

In these circumstances it is natural that ordinary men and women view with suspicion exhortations—

- to work harder;
- to refrain from wage demands which the worker regards as his just due in face of the rising cost of living;
- to accept automation, which he feels will deprive him or his fellow worker of his job; and
- to accept without demur transference of employment from the place where he has probably at long last established a home.

All these things, however, I am convinced he would accept, once he realised how serious is the crisis we are up against and that unless he did we and he would almost inevitably be faced with unemployment, lower wages, a reduced standard of living and restricted social services.

How are these things to be brought home to our people?

In considering ways and means by which this can be done it is essential to recognise that politics do not enter into the matter.

It is simply a matter of making every section of the nation realise that the economic and social progress we have striven for and accomplished over the years is in dire peril and that we can only avert disaster by courageous leadership, backed by a united national effort equal to that of the war.

To achieve this, politicians of all parties, trade union leaders and employers must unite in telling the people the truth.

To this end every available means—such as the press, radio and television—must be employed.

If this were done I am convinced the position would be dramatically transformed and I for one would be confident of the future—for I believe the British people still have those qualities of character, courage and determination which have in the past led the world in peace and war.

In this new atmosphere a great responsibility will rest on the shoulders of our political, industrial and financial leaders.

THE FINANCIAL FIELD

I do not propose to dwell on the many political and industrial problems which will have to be faced. There are, however, a few observations I desire to make in respect to the financial field.

In this changing world it is essential that we should keep our minds flexible and that we should be prepared to adopt new and possibly somewhat unorthodox methods of dealing with the problems that it brings in its train.

This need was admirably dealt with by Sir George Erskine in his Presidential Address to the Institute of Bankers last year.

In that address he pointed to the necessity for capital investment on an ever ascending scale in what has been described as "the second industrial revolution." He then brilliantly surveyed the past history of industrial investment, the present position and put forward many practical suggestions as to the course we should follow in the future.

These suggestions will inevitably lead to a considerable measure of controversy.

If we are to compose these differences and arrive at wise decisions, it appears to me essential that the whole of the financial problems that confront us should be examined and reported upon by a group of the best brains available, representative of the different shades of thought on these complex questions.

The only way in which I can see that this could be done would be by the appointment of a Committee similar to the one which produced what is known as the Macmillan Report. I make the suggestion that this should be done. A Committee inevitably takes time to arrive at its conclusions and make its report.

AVAILABILITY OF CAPITAL FOR INDUSTRIAL EXPANSION

There is, however, one matter that brooks no delay. It is the need to provide for financing expansions and developments in Industry which are vital to the national economy.

An outstanding example is in respect to Steel. This industry is now organised in a manner which, while preserving the best in private enterprise, safeguards the interests of the public and ensures its development and expansion being in line with the national economic policy.

The industry as it is now constituted has formulated plans which involve capital expenditures running into tens of millions of pounds over the next few years.

The greater part of the required finance will be forthcoming from the individual resources of the many Companies concerned. It is impossible to determine with certitude at the inception of the programme the balance that will be required from outside sources. Equally it is impossible to say with precision in advance when and for what period it will be needed.

Some may be required as temporary finance, to be repaid out of subsequent earnings. Some may be required as permanent capital, the advance being repaid as and when it is possible to place obligations or shares with the market.

Consequently before the programme can be set in motion arrangements must be made to ensure that the whole of the capital involved will be available as and when required.

FIXED TERM LOANS

The scale under modern conditions on which finance is required to cover future planning has now reached the point where only the Banks command the necessary resources.

This fact is being increasingly recognised. In America the Banks now grant what are called "term credits" and facilities of a similar character are provided by many Banks on the Continent.

These arrangements undoubtedly conflict with the principles on which the UK Banks have been so firmly and successfully established and I would not put forward any suggestion for a modification of those principles if I thought it would in any way impair the strength, stability and flexibility of our banking system.

Nevertheless, by virtue of the very strength which they have achieved and in view of the need to cover the finance required for expansions and developments in industry vital to our national economy, I believe they would be well advised to consider the desirability of a limited departure from their existing practice.

This is neither the time nor the place at which to make detailed proposals regarding this suggestion but in broad terms it is my considered opinion that the Banks might well examine the possibility of granting fixed term loans for this purpose, with a maximum of five to ten years, to an aggregate amount limited to some proportion of their total advances.

Such loans should be strictly confined to objectives designed to benefit the national economy and conditioned that the required finance could not be obtained through any of the existing channels.

Should the Banks see fit to adopt the suggestion I have made, an immediate question arises as to how they would put it into operation.

I think the practical method would be for the Banks as a whole to operate through a chosen instrument.

It is a little embarrassing for me to speak on this point as I might well be accused of pressing the claims of your Corporation to be the chosen instrument. I feel, however, that the matter is so important that I do not propose to allow this consideration to weigh with me.

The question is one for the Banks to decide but I am confident that should they desire the co-operation of your Corporation it would be your wish that it should be afforded to the fullest possible extent.

Finally, gentlemen, I desire once again to express my deep sense of gratitude to my fellow Directors for the unfailing help and support they have given to me. I would also like to express our thanks to our General Manager, Mr G. S. Nelson, for the invaluable work he has done for the Corporation, and to pay a sincere tribute to our Secretary and our very small but increasingly competent staff.

The report and accounts were adopted and a dividend of 6 per cent was declared.

The retiring directors, Sir Charles D. Ellis, FRS, and Sir Findlater Stewart, GCB, GCIE, CSI, were re-elected; the remuneration of the auditors, Messrs Deloitte, Plender, Griffiths and Company, was duly fixed, and the proceedings terminated with a cordial vote of thanks to the Chairman for his conduct of the meeting.

F.M.C.—a new approach to Meat Marketing

PLANNED IMPROVEMENTS GIVING SATISFACTION

A NEW fleet of hygienic transport vehicles, better slaughter-houses and meat sales depots, and more efficient use of by-products are among the improvements made by the Fatstock Marketing Corporation during the past year — its second year of operation.

FMC, as a Company limited by guarantee, was established by the Farmers' Unions of England and Wales, Scotland, and Ulster to operate on a commercial basis from the end of meat rationing in July 1954. Operating as a producers' marketing organisation it offers farmers an alternative to the auction yards in the marketing of their stock for meat.

Mr. Owen R. Guard, Chairman of the Corporation, at a meeting of members held at Victoria Halls, Bloomsbury Square, London, W.C.1, on Tuesday 24th July, in the submission of his report on activities for the year ended March 30th, 1956, expressed confidence that FMC, as buyers of fatstock, processors and distributors of meat, is giving satisfaction to both farmers and butchers.

FINANCIAL POSITION

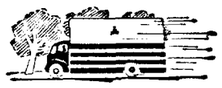
Trading profit for the year of £561,012 shows a substantial increase over the preceding period and, after provision for depreciation and taxation, has enabled a general reserve to be started. Although this has been a worthy achievement for an infant organisation, the Corporation is not complacent. Its profit last year on the turnover of £107 millions represented only 1¼d. in every £1. FMC has now to consolidate its gains and also steadily increase its throughput and operational efficiency to ensure long-term success for the organisation. In common with other commercial concerns this will have to be achieved against rising costs and falling market realisations. " Nevertheless, in the knowledge that FMC has a lot of loyal members, we are confident," said Mr. Guard, " that the Corporation will continue to progress."

CURRENT DEVELOPMENTS

Plans are now complete for slaughter-houses capable of operating at full efficiency, for a series of effectively sited meat sales depots, and for an immediate doubling of a fleet of meat transport vehicles with the highest standards of hygiene. These plans envisage the expenditure over the next few years of £3½ millions. To begin this development, permanent capital becomes necessary and H.M. Treasury has sanctioned a note issue to FMC's members of £500,000.

CAPITAL ISSUE

This first issue will be made in unsecured notes redeemable in 1976 or before and will bear interest at a fixed rate of 5½ per cent. An additional interest of up to 4½ per cent may be payable depending on the distribution of any bonus by the Corporation to its members. The amount of a bonus distributable to noteholders will not exceed 17½ per cent of the total bonus sum, the remaining 82½ being distributed to producers in proportion to the value of their transactions with the Corporation during the period. Notes will be issued in multiples of £10, and allotted up to a maximum of £500 to any one member. Application forms will be distributed during October to the Corporation's members.

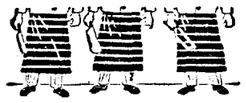


BY-PRODUCTS

The Corporation's fixed assets have doubled during the year and now stand at £1 million. A further fifteen businesses have been purchased, mostly in the field of by-products. The activities of the holding company, FMC Products Ltd., are being expanded to provide a comprehensive and more profitable service, for FMC believes the farmer is entitled to the maximum benefit obtainable from the whole of his product.

IMPORTS

The Corporation is conscious of the dangerous situation that can arise for British fatstock producers if the unrestricted import of meat from the Argentine returns nearer to its pre-war proportions. FMC, which finds the handling of some imported meat essential to the sales end of its marketing operations, has taken the initiative in arranging talks this summer with the two New Zealand meat producing co-operatives with which it has been associated during the past two seasons. The final outcome should enable FMC to handle an increased share of the New Zealand meat trade to the resultant benefit of both the Commonwealth and U.K. producers.



THE FUTURE

FMC is fully aware of the importance of its stock procurement policies. While procurement and movement of stock and meat must be based on a national plan, actual operations will continue to be influenced by local conditions and requirements.

Initially the Corporation was optimistic enough to believe that its basic requirements of stock would come from its members without the need for an elaborate and costly procurement organisation. It is apparent now that as much effort as has been needed for selling the meat is also necessary to secure suitable offerings of stock.

Nevertheless, for those farmers who have confidence over a steady period that FMC is the right outlet for their stock — not just a convenience for a part of it or on occasions — FMC is confident that it will provide a greater and better service.

FMC is a farmers' organisation, with its capital, profits, and reserves belonging to its producers. By its operation every fatstock producer is benefiting indirectly, if not directly. Now, the progressive producer will be able to confirm his support of producer controlled marketing by investment in the organisation established for him.

From August 7th FMC continues its further endeavours from Agriculture House — the new London headquarters building of the N.F.U. of England and Wales — and therefore with a new address of:

THE FATSTOCK MARKETING CORPORATION LIMITED

25 KNIGHTSBRIDGE · LONDON · S.W.1.

NCHANGA CONSOLIDATED COPPER MINES LIMITED

(Incorporated in Northern Rhodesia)

SIR ERNEST OPPENHEIMER EMPHASISES IMPORTANCE OF THE KARIBA PROJECT

URGENT NEED FOR BETTER AFRICAN EDUCATION

The nineteenth annual general meeting of Nchanga Consolidated Copper Mines, Limited, will be held on August 15th in Salisbury, Southern Rhodesia.

The following is the statement by the Chairman, Sir Ernest Oppenheimer, which has been circulated with the annual report and accounts for the year ended March 31, 1956:

The price of copper on the London Metal Exchange rose by over £100 per ton during the company's last financial year, to the peak figure of £436 in March, 1956, with an average of £370 for the year. Since then the fall in price has been even more marked and prices under £300 per ton were recorded.

AN EXCEPTIONAL YEAR

I believe that there is reason to hope that such wide fluctuations in price will not recur and that the market will settle down at a level which will satisfy consumers and also provide a fair margin of profit to producers. We cannot reasonably base our expectations on a return to the peak prices reached in the first months of 1956. In the circumstances, the year under review must be regarded as exceptional but, from our company's point of view, the high profits were most propitious in that we were able to recommend dividends totalling 30s. net after providing £3 million for capital expenditure and transferring £3,500,000 to general reserve. We regard this reserve appropriation as desirable, in view of the commitments we have undertaken to assist the Government with loans for the general development of the Federation, including in particular the Kariba project.

The importance to the Federation as a whole, and the copper mining companies in particular, of the Kariba hydro-electric project cannot be over-emphasised, and I am therefore happy that the Federal Government has, with our help, been able to raise the large amount required to build the dam and equip the first phase of the power station there. Had there been any obstacle to proceeding with this undertaking, alternative means of providing this essential power at considerable cost would have been the sole responsibility of the copper mining companies. Strict adherence to the programme of construction for Kariba clearly remains of the utmost importance.

Should there be any delay in the delivery of power from this source beyond the beginning of 1960, there will be a rapidly increasing shortage of power on the Copperbelt and production of copper might have to be curtailed. It is on the strength of receiving power from Kariba early in 1960 that the new mines on the Copperbelt are being equipped and the mining programme at your mine is being planned.

PROGRESS EXCEEDS EXPECTATIONS

Meanwhile, progress made in connection with the importation of power from the Belgian Congo has exceeded our expectations and it is now confidently anticipated that supplies will be forthcoming from this source before the end of 1956, which is some months earlier than was originally planned. This achievement reflects great credit on both Union Miniere du Haut Katanga and Rhodesia Congo Border Power Corporation.

Training of African employees to fill the 24 categories of jobs handed over by European employees in terms of the Advancement agreement signed in September, 1955, has proceeded satisfactorily, and we contemplate that this first phase of advancement will be completed before the end of the present financial year when about 185 Africans will have taken up advanced positions on our property.

I am convinced that we have made the correct decision in proceeding with the gradual advancement of our African employees, and we think the agreement reached is being implemented at a pace which meets the reasonable aspirations of the Africans and is at the same time compatible with the efficient conduct of operations. I sincerely trust that our European employees, who have so far readily conceded the wisdom of this advancement policy, will continue to co-operate in carrying it out, and will not be over-hasty in judging the results. Similarly, I trust that those Africans who are placed in advanced jobs will readily accept their new responsibilities and demonstrate the same integrity and loyalty as we expect from our European employees.

NEED FOR AFRICAN EDUCATION

Advancement inevitably creates demands for increasing amenities so that community life can keep pace with economic progress. We have accordingly been examining the requirements of the African community on the Copperbelt, and have reached the conclusion that urgent attention should be given to improving African education, which, we think, is inadequate in present circumstances. While, naturally, the major responsibility must rest on the Government, which we are confident is doing its best to keep pace with the rapidly expanding need, we are also of the opinion that the copper mining companies should accept a share of the responsibility for dealing with a situation which has largely been occasioned by the expansion of their operations. We are, accordingly, examining the whole question to see in what way and to what extent we can help.

I should like to pay tribute to the general manager and his staff on the mine, who have rendered valuable service in a particularly important year when the preparations for opencast mining called for additional efforts from employees. Close attention has been given to developments at the mine by the company's consulting engineers, Anglo American Corporation of South Africa, Limited, who since January 1, 1956, have been providing their services to the company from their office in Salisbury. This arrangement is already proving beneficial not only in that the consulting engineers are now so much closer to the Copperbelt but also because of the advantages of their office being in the capital of the Federation.

It was with regret that the board accepted the resignation of Mr H. E. Nelems, our general manager since September 1, 1954. He carries with him to Canada our thanks for his outstanding services to us and our best wishes in his new position. I am happy to welcome as his successor Mr Lawrence Allen, whose record of service on the Copperbelt, latterly as manager of Rhokana Corporation, fits him admirably for his new task.

The report and accounts have been posted to all stockholders. Other persons who are interested may obtain copies from the Head Office of the Company, Kitwe, Northern Rhodesia, or from the Transfer Offices at 44 Main Street, Johannesburg, or 40 Holborn Viaduct, London, E.C.1.

VENT-AXIA LIMITED

CONTINUED SALES EXPANSION

The twentieth annual general meeting of Vent-Axia Limited was held on July 25th in London, Mr J. C. Akester (Chairman and Managing Director) presiding.

The following is an extract from his circulated statement:

It is pleasing to report continued progress during the past year resulting in a Group Trading Profit of £212,963, which is £54,617 higher than last year. The Net Group Profit after providing taxation of £111,902 was £101,061, an increase of £27,641. Net assets of the Group are £65,504 higher at £352,633 and Current Assets exceed Current Liabilities by £348,412. The Directors recommend payment of a Final Dividend on the Ordinary Stock of 65 per cent, less tax, making 95 per cent, less tax, for the year, compared with 85 per cent last year.

Sales of Vent-Axia units have again increased throughout the year and the upward trend has continued during the first quarter of the present financial year. Exports, which already represent a very reasonable proportion of the total turnover, have also improved and should continue to do so, as the potential market abroad is even greater than at home. Twenty years ago we created something new, something different in the field of ventilation and our faith in the future is stronger than ever.

In recent months we have been faced with further substantial rises in the cost of materials, wages and overheads; nevertheless, we have again decided against increasing the prices of our equipment, relying instead on our ability to absorb them by increased sales. We believe the demand for Vent-Axia at home and abroad will continue to grow and we shall do all we can to encourage and meet it by gradually enlarging and improving our organisation and the products we sell.

Our subsidiary Company, Axia Fans Limited, based largely on the requirements of all classes of the Shipping Industry, has made a substantial contribution to the improved results. The Company has progressed favourably both in the volume and responsibility of the work undertaken and the goodwill of our customers. The turnover and profit increased during the past year and the value and number of contracts in hand are higher than ever before and such as to give every confidence in the future.

The report and accounts were adopted.

BRITISH SUGAR CORPORATION

GRATIFYING RESULTS

SIR ALAN SAUNDERS'S ADDRESS

The twentieth annual ordinary general meeting of British Sugar Corporation, Limited, was held on July 24th in London, Sir Alan Saunders, OBE (chairman), presiding.

The following are extracts from the circulated address of the chairman for the year ended March 31, 1956:

In striking contrast to last year the weather was kind and the beet crop was harvested and delivered to the factories under almost ideal conditions. This year 43 per cent of the total crop was harvested by machine and in some areas as much as 65 per cent was so harvested, thus demonstrating the great value of the mechanical harvesting demonstrations which we have for many years undertaken in conjunction with the Sugar Beet Research and Education Committee of the Ministry of Agriculture.

Such results are most gratifying and we are now concentrating our attention on making similar improvements in the Spring work. Our seed suppliers are producing rubbed and graded seed expressly for this purpose and we have every confidence that in due course a substantial amount of the Spring work will be mechanised.

CROP ABOVE AVERAGE

The total amount of the crop, the quality and condition of which was above average, was 4,555,938 tons and the average yield per acre was 11.27 tons, both of which were the third best in our history. Indeed, one factory which normally has a high average yield, had, this year a record figure for this country of 15.17 tons per acre.

We produced in terms of white sugar 620,317 tons and the production of our by-products was 282,517 tons of pulp and 214,006 tons of molasses. There was an increasing demand for dried pulp and owing to the favourable season the crowns and leaves which remained on the fields after the beets were harvested were of greater advantage than usual to the growers. As one normally expects in a dry season, the sugar content of the beets was slightly higher than usual.

PREVIOUS RECORDS EXCEEDED

In such favourable circumstances our factories were ensured of a plentiful supply of beets of excellent quality and in exceptionally clean condition, and this, coupled with increased operating efficiency, enabled us to slice the beets at a daily average of 45,651 tons. This exceeds all previous records by 10 per cent and is almost half as much again as our daily slice in 1944-45. Notwithstanding this speeding up, the accepted loss of sugar during the manufacturing process was the lowest in the history of the Corporation.

We are thus reaping the benefit of our Reconstruction Programme and our factory staffs were able to take the fullest advantage of the good conditions and improve their efficiency.

We have extended the efficiency barometer, to show this year's results and it is pleasing to see that apart from the improvement in slice which I have already mentioned, the labour required to work a ton of beet has been further reduced by 10 per cent and the economy in coal usage represents a saving of a further 15,000 tons of coal.

The modernisation of our plant continues and during the year we have erected for the first time, concrete silos for the storage of our sugar and more are being erected this year. These silos ensure a high grade product for both bulk and packet delivery of sugar and at the same time provide economies in bags and labour. Delivery of sugar in bulk form to manufacturers and in prepacked form to the general public, has increased considerably during the year and to provide a first class service to the customer, we have introduced a number of modern vehicles for the transport of sugar by road, which, no doubt, many of you will have seen in our areas. We have a technical advisory service which is available to users of our sugar and many leading manufacturers have taken advantage of it in solving process problems.

RECONSTRUCTION SCHEME

The results of the year are clearly shown in the Accounts, but I think there are two items which should be explained to you.

I told you last year that our major Reconstruction Scheme was completed a year ahead of time. We must, however, keep our factories up to concert pitch and therefore we have, during the year, spent a further £930,000 on necessary renewals and modernisation, all of which has been provided from our own resources.

It is public knowledge that new legislation affecting the Corporation is in progress and will involve certain changes in the Memorandum and Articles of the Corporation. In any such revision it is our intention to redraft the Articles to bring them up-to-date to comply with various statutes and Stock Exchange regulations. An Extraordinary Meeting will be called in due course to adopt them.

THE SUGAR BILL

When the Sugar Bill had its second reading last November, during the debate the Minister of Agriculture, Fisheries and Food made the following statement:

"We do not propose to interfere in any way with the existing structure of the Sugar Corporation. After eighteen years, it has shown itself to be an extremely efficient organisation. . . . We are also making provision to enable Ministers to continue certain incentive payments—they may not necessarily be the same as at present, but the principle will be the same—the purpose of which is to promote and encourage economy and efficiency in the undertaking. It is made clear in the Bill that payments of this kind will be related to the achievement of steadily rising standards of efficiency and economy."

Thus the fundamental framework of the existing arrangements will remain.

In concluding my review I should like to express our thanks to the staffs and employees of all our factories and departments, to our growers, to the National Farmers' Unions, and to the Government Departments, all of whom have helped us so much to achieve these satisfactory results.

The report and accounts were adopted.

TRUST HOUSES

TOTAL TURNOVER SUBSTANTIALLY INCREASED

The Fifty-third Annual General Meeting of Trust Houses Limited was held on July 20th at Brown's Hotel, Dover Street, London, W.

Captain A. R. S. Nutting, OBE, MC, the chairman, presided, and in the course of his speech said: This is the fifty-third annual general meeting of your company, and I think I can today claim that from small beginnings it has developed into a large and widespread undertaking.

Our trading profit has fallen slightly on 1955 figures, but after taxation there is an increased profit of £9,400.

We propose to pay the same dividend as last year, and after making the same appropriation to our reserve for improvement and development of properties as last year and making good the deficiency disclosed by the quinquennial valuation of the head office staff superannuation fund we shall carry forward £121,506, against £103,326 brought in.

Our fixed assets all show an increase during the year, which is largely accounted for by the acquisition of new houses and by extensions and development of old properties.

The capital profit on the houses which we have sold, £97,675, has been transferred to capital reserve.

The purchase of new properties has naturally reduced our cash balance, but I think I can report that the money has been well invested.

The houses purchased since the end of the war are now showing a satisfactory overall return on the capital invested and we have every reason to expect that similar results will soon be forthcoming from more recent acquisitions.

EVER-INCREASING EXPENSES

I am glad to be able to tell you that our total turnover for the year under review shows a substantial increase over 1955, but unfortunately greater turnover in our business does not always mean greater profits, due to the ever-increasing expenses. We try to keep our prices low, and give real value for money, and I claim, and I think you will agree, that we succeed, but our costs, as I say, are constantly rising and it might interest you to know that our expenditure out of revenue for the improvement and maintenance of your properties has averaged over the last three years well over £600,000 a year. This business of yours is now a large and complicated one, and with the ever-changing position, requires constant vigilance and great attention to detail and I can assure you that your managing director, Captain McCallum, ably assisted by his loyal and efficient staff, has an arduous and difficult task to perform.

No doubt you would like me to say something about the prospects for the current year. I am not one to prophesy. Times are very difficult, but I can tell you that the turnover to date has been well maintained.

I should like to pay tribute to all those in head office and in our houses throughout the country, for without their loyal co-operation your company could not continue to prosper. I feel quite sure you will join with me in thanking them one and all for their efforts.

The report and accounts were unanimously adopted and the final dividend of 5 per cent on the Ordinary and Deferred shares, making 9 per cent for the year, was approved.

ALLIED IRONFOUNDERS LIMITED

A YEAR OF PROGRESS

The twenty-seventh annual general meeting of Allied Ironfounders Limited was held on July 26th in London, Mr James Shaw (the Chairman) presiding.

The following is an extract from his circulated statement:

Our trading profits for the year, before charging depreciation and certain other expenses, amount to £2,464,959. After providing for depreciation, debenture interest, Directors' fees and commission, and bringing in investment income our profits are £2,160,731, of which Taxation absorbs £1,157,383.

Our net profit for the year is £926,512, against £1,092,563 in 1955, but the retention in subsidiary companies, of only £15,246 against £154,531 last year, leaves available in the Parent Company £911,266. We have appropriated £471,920 to the General Reserve, making the figure on the Consolidated Balance Sheet £2 million. We are recommending the payment of the same final ordinary dividend as last year, making with the interim and with the Preference dividends a total distribution of £425,534. The balance retained both in the Parent Company and in Subsidiaries is £717,624.

The capital employed in the Group now exceeds £10 million, and the returns to the Ordinary Shareholder on his share of the capital employed is 7.9 per cent.

MANUFACTURING OPERATIONS

The financial results reflect a year of progress in manufacturing operations but less favourable trading conditions. Increases in labour and material costs, with the policy of price restraint in the background, have limited the profitability of our operations. Good labour relations and adequate material supplies were maintained throughout the period.

Our main output consists of castings for the building industry and items of domestic equipment; we also do a substantial amount of business supplying hotels with catering equipment.

The chief products are: Rainwater and Soil Goods, Baths, Cooking and Heating Equipment, Gas Appliances, Electric Cookers and Fires, Oil-Fired Appliances, Heavy Duty Cooking Equipment and Leisure Kitchen Equipment.

OVERSEAS TRADE

We have made considerable efforts this year to increase our export trade, but in many countries we are severely handicapped by import restrictions due to exchange difficulties. We succeeded in building up a worth-while trade in cast iron pipes with the West Coast of the USA, but unfortunately an adverse decision by the Anti-Dumping Commission has severely restricted this trade.

ALLIED IRONFOUNDERS PROPRIETARY LIMITED, AUSTRALIA

The new Melbourne foundry is now virtually completed. For some months we have been assembling cookers sent out in parts from this country, and the cooker assembly shop as a result is now working efficiently; we melted metal for the first time on May 17th. In all we have invested about £1¼ million sterling in this project. To operate in Australia on the scale this implies is a considerable undertaking, and we must expect some time to elapse before we get an adequate return on this investment though we are in no doubt about the long term merits of the enterprise.

DURBAN FALKIRK IRON COMPANY (PTY.) LIMITED, SOUTH AFRICA

This Company has again had a very successful year, but since the end of the year trading has become somewhat more difficult as the result of financial restrictions in the Union. Both the Durban and Newcastle Works have been extended, and we can expect good results from this Company as soon as trade improves.

OUTLOOK

All Shareholders know that our business is to supply the building trade, and that our fortunes depend largely upon the demand for new homes and the replacement of domestic equipment in others. We have had several years of increasing prosperity, but we are bound at any time to be seriously affected should there be a major reduction in the programme for house-building. We do not anticipate the maintenance of this programme at the level of 300/350,000 houses a year, but we have in this country some millions of inferior dwellings which will have to be replaced over the next ten or twenty years, and if this national problem is dealt with by both Government and industry in a statesmanlike way the replacement of these houses will more than make up for any reduction in the programme for additional housing.

Your Company will continue the propaganda it began with the film "The Stockton Test," to spread knowledge of the Government grants available for the rehabilitation of old property and to show the value to the nation of their wider use.

The report and accounts were adopted.

VACTRIC Ltd.

AND ITS SUBSIDIARIES

The above figures are extracted from the Accounts for the Financial Year ended 31st March, 1956, presented to the 22nd Annual General Meeting of the Company held on 20th July, 1956.

HENDERSON'S TRANSVAAL ESTATES

The forty-fourth annual general meeting of Henderson's Transvaal Estates, Limited, was held on July 24th in London.

Sir Joseph Ball, KBE (the Chairman) presided and, in the course of his speech, said:

Dealing first with the Company's own Accounts, you will have noted that the profit, before taxation, amounted to £88,225, as compared with £77,508. From this sum has to be deducted £41,708 in respect of taxation, leaving a net profit of £46,517.

To the net profit of £46,517 must be added a balance of £74,070 brought forward, making an available total of £120,587. Your directors now recommend a first and final dividend of 15 per cent, less tax, and there will remain a balance of £71,988 to be carried forward.

The profit before taxation, at £219,870, was approximately £40,400 higher than in the previous year, and after providing for depreciation and taxation the net profit amounted to £103,447—the comparable figure for last year being £78,462.

The results of our Subsidiary Company, Tweefontein United Collieries, Limited, for the year ended December 31, 1955, showed a profit on coal, after provision for working expenses, replacements and renewals and selling commission, of £146,949, as compared with £141,915 for the previous year.

We continue to hold our substantial investment in White's South African Portland Cement Company Limited, which Company further expanded both its output and its profits for the twelve months ended November 30, 1955. The report was adopted.

HOUSE OF FRASER LIMITED

A VERY SUCCESSFUL YEAR

CONTINUED EXPANSION OF BUSINESS

MR HUGH FRASER ON PROPOSED SCRIP ISSUE

The fifteenth annual general meeting of House of Fraser Limited will be held on July 30th in the Merchants' Hall, 30 George Square, Glasgow, C.2.

The following is an extract from the statement by the Chairman and Managing Director, Mr Hugh Fraser, DL, JP, which has been circulated with the report and accounts:

The business of the Company has continued to expand since the last Meeting of Stockholders and a satisfactory measure of progress is disclosed in the Statement of Accounts for the year.

From the Consolidated Accounts you will observe that the Group has had a very successful year. All necessary expenditure in carrying out our established programme of Store maintenance has been charged in the Accounts and the Trading Profit has improved quite considerably over the comparable figure in the Profit and Loss Account for the previous year.

The Interest debited in the Profit and Loss Account includes a full year's charge for interest on the loan of £1¼ million negotiated at the end of 1954. The Net Profit before Taxation was £1,772,729 (£1,482,609) while the provisions required for Taxation amounted to £989,813 (£837,906) leaving a Net Profit of £782,916 (£644,703). The balances available for distribution after providing for Dividends due to Outside Preference Shareholders in Subsidiary Companies amount to £1,247,811. The Dividends due on the Preference Stock and an Interim Dividend at the rate of 20 per cent on the Ordinary Stock of the Parent Company were paid during the year under review.

The Directors now recommend a Transfer to General Reserve of £50,000 and payment of a Final Ordinary Dividend for the year at the rate of 45 per cent actual. After the appropriations recommended, the amount carried forward in the Accounts of the Parent Company is £371,964 (£304,240) and the total balances of Undistributed Profits carried forward to the next Consolidated Account stand at £749,772 (£510,132).

BALANCE SHEET FEATURES

In the Consolidated Balance Sheet the Book Value of Heritable Properties has increased by over £500,000. This is chiefly due to the inclusion of the properties owned by Forresters (Outfitters) Limited and Isaac Benzie Limited and to additional expenditure incurred by Binns Limited on construction works at Middlesbrough. There have been unavoidable delays in building progress there, but it is now expected that the new Store will be ready for occupation in the early months of 1957.

The surplus of Current Assets over Current Liabilities, £3,684,825, is less than the comparable figure for last year by £291,596, but in the opinion of the Directors the net liquid resources are adequate for all Company purposes at present contemplated. The principal items affecting the liquid resources of the Group were the net expenditure on new subsidiary companies, the cost of building construction in Binns Limited already referred to, and repayments to Heritable Creditors and Outside Preference Shareholders on the winding up of Pettigrew & Stephens Limited.

A steady rise in operating expenses during the year has been successfully met by an expansion of turnover and the increase in the total of Issued Share Capital and Group Reserves from £5,060,182 to £5,449,706 is very satisfactory, as the increase has been achieved entirely out of taxed profits.

Credit for the continued success of the Company's trading must again be given to the Staffs of every store in the Group, and I welcome this opportunity to acknowledge their enthusiasm which has yielded record figures of turnover year by year.

PROPOSED SCRIP ISSUE

The Report of the Directors contains their recommendations relating to certain major alterations in the Share Capital of the Company which are set out fully in the Notice to Ordinary Stockholders convening an Extraordinary General Meeting to consider the proposals. The consent of the Treasury has been obtained to enable the proposed issue of "A" Shares to be made and if Ordinary Stockholders authorise the issue of 4,698,146 "A" Shares of 5s. each credited as fully paid, the additional £1,174,536 10s. in "A" Ordinary Stock will raise the amount of the Capital of the Company in issue to £2,699,073.

An increase in the Authorised Capital of the Company is necessary for this purpose and the Directors consider that an increase to the sum of £5 million will be in the interests of the Company in order to have an adequate amount of unissued shares available for future expansion, but apart from the proposed bonus issue in "A" shares, the Board has no immediate plans for the issue of any shares in excess of present requirements either for cash or otherwise. Subject to approval by Ordinary Stockholders, Renounceable Allotment letters covering the new "A" Ordinary Stock will be posted to Stockholders on October 16, 1956.

THE CURRENT YEAR

The trading experience of the Group in the current year to date has been very favourable both as regards volume of business and net earnings. Notwithstanding the economic devices employed on a national scale to bring about disinflation the retail trade is still faced with mounting costs particularly in regard to wage standards.

The problem of rising costs is, however, a constant incentive towards more efficient working and I feel that we may look forward to another successful year if economic conditions in the country remain reasonably steady.

It is proposed to post Warrants for the final Ordinary dividend immediately after the conclusion of the meeting.

THE METAL BOX COMPANY LIMITED

SIR ROBERT BARLOW'S REVIEW

The thirty-fifth Annual General Meeting of The Metal Box Company Limited was held on Friday, July 20th, at The May Fair Hotel, Berkeley Street, London, W.1.

Sir Robert Barlow, the Chairman, presided.

In his review the Chairman commented in detail on the progress in each of the Company's five product groups: Open Top; General Line; Paper Products and Flexible Packaging; Caps, Closures and Injection Moulding; and Machinery Building. In every case he reported continued expansion, both in demand and in production facilities.

RESEARCH AND DEVELOPMENT

The Chairman reported that the Company's research and development facilities were being steadily expanded in order to make available the optimum use of the latest packaging materials and techniques for the benefit of its customers.

New research laboratories had been built at Speke to cover the development of laminates, at Portsmouth for polythene extrusion and coatings and at Alperton for injection moulding. Plans were also in hand for the construction of a central research laboratory at Swindon where it was hoped to provide extended customer service facilities and to undertake longer term basic research.

Additional engineering research and development facilities were also being provided for the design of equipment which would improve productivity and increase the efficiency of all the Company's manufacturing operations.

TEN YEARS' PROGRESS

Sir Robert drew attention to the figures and graphs included with the report which, he said, "seek to explain in simple form the Company's remarkable growth since the war.

"It will be seen that £21,288,000 has been spent on buildings and equipment. This has resulted in an increase in sales of £45,000,000, and the business we did in 1955/56 was nearly four times that of 1946/47.

"In its turn, this has led to an increase in working capital of over £12,000,000.

"The total capital employed has increased five times in ten years.

"The amounts paid by way of salaries, wages and benefits refer only to the Home Company and are therefore not comparable with the other figures.

"At March, 1947, we employed in the United Kingdom 16,753 people of whom 1,692 were part-time workers. At March, 1956, the number had increased to 24,818, of whom 4,062 were part time. This is an increase of less than 50 per cent, whereas the money paid out to them increased 200 per cent.

"It is fair to say that everyone is better off for the investments we have made—our shareholders who have provided the capital, the customers we serve, and the people we employ—and not least the State which takes the bulk of the profit—no less than £15,721,000.

"It is a great tribute to the central organisation under Mr Ducat's leadership that it has been able to handle an expansion on such a scale as these figures show."

The Report and Accounts were adopted, the dividend approved and the retiring Directors re-elected.

PARKLAND MANUFACTURING COMPANY

RECORD PRODUCTION AND SALES

The fifty-third annual general meeting of the Parkland Manufacturing Company, Limited, was held on July 19th at Bradford, Mr George F. Hanson (Chairman), presiding.

The following extracts are from his circulated statement:

Our production has again benefited from the new and up-to-date machinery we have installed and it has now reached a very high level of efficiency. The whole of our plant has been fully employed during the period.

Again, production and sales have surpassed last year's record output. Competition has continued to be very keen and, throughout the trade, buyers seemed very reluctant to place orders in the Summer of last year. As a result the orders on our books reached a low level and your Directors decided to build up stocks of coloured yarns. This enabled us to give very good service when trade revived in the Autumn, thus enhancing our goodwill.

Unfortunately, however, this coincided with a sharp decline in the value of Merino wool with its resulting effect on our profits.

We have intensified our efforts to sell in export markets, with a gratifying measure of success, again in the face of severe competition.

The net profit for the Group amounts to £695,440, compared with £766,340 for the previous year, and, but for the increase in our production and turnover, the effect of the fall in wool prices would have reduced our profits more seriously.

The balance remaining after Taxation, and after crediting £54,246 excess provision for Taxation in previous accounts, is £355,860 compared with £390,395 in the previous year.

CONSOLIDATED BALANCE SHEET

Current Assets amount to £3,271,593 compared with £3,196,008 in last year's Balance Sheet. The Current Liabilities are £1,387,326, against £1,469,636, and the Liquid Surplus has increased to £1,884,267 against £1,726,372 a year ago, due to the profits which we have again ploughed back.

The balance available for distribution by the Parent Company is £386,763, against £373,464 a year ago, and your Directors recommend that there should be a Final Dividend at the rate of 25 per cent actual less tax on the Ordinary Shares and on the "A" Ordinary Shares. The total net amount absorbed by dividends on the Ordinary and "A" Ordinary Shares is £111,003, against £101,723 last year. The increase is largely because, this year, the "A" Ordinary Shares receive both the Interim and Final Dividends totalling 32½ per cent whereas for the previous year they received only the Final Dividend of 25 per cent.

In our industry owing to the continual fluctuations in the value of our raw materials it is wise to approach any forecast with caution. Our new range of patterns has been well received and we have a very satisfactory order book. We are continuing our recent policy of preparing yarn stocks to give good deliveries of cloth to our customers.

It is our hope and aim that when we present our figures next year the results will not be unsatisfactory.

The report was adopted.

GEO. BASSETT & CO.

The annual general meeting of Geo. Bassett & Company Limited was held on July 24th at Sheffield, Mr D. Gordon Johnson (Chairman and Managing Director) presiding.

The following is an extract from his circulated statement:

Our sales in 1955/56 again broke all records. Costs rose, however, more sharply than sales, with the result that the profits, before tax, were a little lower, falling from £795,135 to £711,229. Your Directors propose, however, to maintain the 20 per cent final dividend, making a total of 25 per cent for the year.

When we consider that the total home sales of chocolate and confectionery fell by nearly 3 per cent during 1955, I think we may regard our own increase as a reflection of the growing popularity of your Company's products.

This increase in our sales, however, was unfortunately insufficient to absorb increases in wages and raw material prices and we operated throughout the year under review on a progressively lower margin of profit. Notwithstanding increased costs, the consumer prices of all our lines remained unchanged throughout the year.

Our exports showed a slight fall from the record level of the previous year, but were still well above the level of two years ago.

After the very rapid expansion of recent years there must inevitably be a period of consolidation while plans are made for further growth. I look to the future, however, with a reasoned optimism.

The report was adopted.

ALITALIA

ITALIAN INTERNATIONAL AIRLINES

(Rome, Italy.)

The Annual General Meeting of ALITALIA was held in Rome recently, and the following are details of the report presented by the Board of Directors:

The Company's activity during the past year was directed towards consolidating and preparing commercial and technical developments previously planned. In this way, ALITALIA tries to compete with other major foreign airlines and to surpass them in the rate of expansion of their networks.

The Company's capital was increased from Lit. 2,000m. to Lit. 4,500m., and an order for two DC-6B aircraft was placed for delivery in January, 1956, and March, 1956, respectively. Both of these aircraft are by now in operation on the Company's routes. Another order has since been placed for four DC-7C aircraft—a larger version of the DC-6B and of wider commercial appeal, which are to be delivered late in 1957 and early in 1958. Two new Convair 440 Metropolitans are also on order. As a result, ALITALIA'S operational fleet, which at December 31, 1955, numbered four DC-6B's and four Convair 340's has, by now, been increased by two DC-6B's; with the future deliveries of the Convair 440's and the DC-7C's now on order, the Company's fleet will have risen to 16 aircraft by April, 1958, and will thus have doubled its present capacity.

Two new services were introduced during 1955, both operated with Convairs—Catania-Rome in both directions, with an extension to London on three days of the week (connecting with ALITALIA'S service to Paris and Frankfurt in Milan) and a weekly extension to Tripoli; Milan and Frankfurt in both directions three times a week. During the summer months, as an experiment, a night service between London, Milan and Rome on three days a week was also operated. No major alterations were made to other existing ALITALIA services.

Early in the Spring of 1956, ALITALIA will open a new service connecting Rome with East and South Africa (Rome-Nairobi-Johannesburg) through Athens-Khartoum, and another from Rome to Damascus and Baghdad.

Traffic figures for 1955 showed a distinct improvement compared with 1954.

	1955	1954	
Kms. flown	6,864,944	6,080,914	+ 12·9 per cent.
Passenger/Kms.	172,713,473	146,912,548	+ 17·5 „ „
Ton/Kms. (Cargo)	2,018,932	1,765,702	+ 14·3 „ „
Ton/Kms. (Baggage)	283,046	200,629	+ 41·1 „ „
Ton/Kms. (Mail)	1,197,579	1,037,402	+ 15·4 „ „
Passenger Seats Utilisation	55·4 per cent.	54·1 per cent.	+ 2·4 „ „
Total Pay-load Utilisation	56·0 „ „	54·9 „ „	+ 2·0 „ „

The profit for the financial year ending December 31, 1955, amounted to Lit. 127,464,383, which, added to the surplus of Lit. 6,477,614 brought forward from the previous year, produced a total of Lit. 133,941,997, which has been set aside as a reserve.

The report and the financial and economical budget for the year ending December 31, 1955, were adopted.

Management

Count Nicolo' Carandini, President; Lord Douglas of Kirtleside, GCB, MC, DFC, Vice-President; Ing Bruno Velani, General Manager; Dr Donato Saracino, Administrative Manager; Ing Giuseppe Rimer, Manager for Materials; Dr Renato Cappelletti, Commercial Manager; Com.te Mario Ceroni, Operational Manager.

THOMAS DE LA RUE AND COMPANY LIMITED

CONTINUED IMPROVEMENT

The fifty-ninth annual general meeting of Thomas De La Rue and Company Limited was held on July 25th in London.

Mr B. C. Westall, CBE, MA (the chairman), presided and, in the course of his speech, said: The Company's trading continues to improve and this is reflected in the Balance Sheet.

Later in the meeting I shall ask the Stockholders to agree to increase the Authorised Capital of the Company by £1 million. It is possible that our research organisation may at any time confront us with new developments which will need money to bring into the production line.

Turning to the figures of Trading the whole of this year's profits are attributable to the Security and Plastics Divisions.

Taking the business as a whole a half of our sales are exported directly. Apart from this, many manufactures are exported by our Customers in which our products form a part. This great strength of our export market is due to the fact that in the course of each year nearly every country in the habitable parts of the globe is visited.

DIVISIONAL ACTIVITIES

In the Security Division the forecast I made last year that the turnover would be maintained has proved well justified. The outlook for the current year I regard as no less promising than that for the year under review.

In the Plastics Division there has been a substantial increase in sales of both Formica and Delaron laminated plastics. Last year I reported that the Company had reduced the price of Formica by 10 per cent. The hopes I then expressed that the profits would be maintained by an expansion of turnover have not only been fulfilled but, by reducing waste and making strict economies, the factory has made a considerable contribution towards this increase in profits.

Another encouraging sign in this Division is the increasing success of the plastics manufacturing units on the Continent, namely, in France, Germany, Spain, and Italy, from which we may expect a reasonable contribution to the Company's profits during the current year. Since the close of the year arrangements have been made to erect a factory for the manufacture of our plastic products in Australia.

During the year steady progress was made in the expansion of our Delaron material, particularly in its application to telephones, radio, television, and the electronics fields, and in addition to this, we have successfully introduced a copperclad grade of Delaron Laminate.

In the Potterton Division (Cookers and Water Heaters) new models are now being developed and we hope that these new products may help to put the Potterton Division on a satisfactory basis.

In the Stationers Division new models of Onoto pens were introduced and other important steps have been taken to improve the efficiency of this division.

During the year a considerable sum has been spent on Research and Development covering all Divisions, which we believe will make a substantial contribution to the Company's prosperity in the years to come.

The report was adopted and the increase of capital was approved.

FODENS LIMITED

The fifty-fourth annual general meeting of Fodens Limited was held on July 25th at Elworth Works, Sandbach. Mr James Wild, the Chairman, said in his report:

This year marks the one-hundredth anniversary of our organisation. At the outset, the firm produced agricultural machinery and steam engines, and the first traction engine was manufactured in 1884. The first steam wagon was produced in 1901, and this type of vehicle was sold in large numbers until 1932, when the first Diesel-engined vehicle was produced. Today our products are distributed throughout the world.

We have a full order book, and provided that business continues to be satisfactory then I am sure we shall receive our full share of business available to our industry.

Fodens (South Africa) (Proprietary) Limited has had a very successful year, and sales have continued to expand.

The following is an analysis of how each one pound of our sales income has been applied:

	£ s. d.
Wages and Salaries	5 6
Materials and Services	11 10¼
Servicing of Buildings, Plant and Equipment	9
Taxation	1 0¼
Retained in the Business	6
Dividend (net)	4¼
Total	£1 0 0

I would express the Directors' appreciation of the loyal and steady co-operation received from all employees throughout the year. The report was adopted.

G.R.A. TRUST

CONTINUED POPULARITY OF THE SPORT

The twenty-eighth annual general meeting of The Greyhound Racing Association Trust Limited was held on July 25th in London.

Mr Francis S. Gentle, CBE, Chairman, referred to the enduring attraction of Greyhound Racing as presented by the GRA and to their Patrons' loyalty to the sport of their own choosing in the face of discriminatory Taxation and increased competition from Television.

The Ordinary Dividend was being maintained at 20 per cent but was being paid on the increased capital following the recent bonus issue.

The Government had recently undertaken to introduce new legislation on Betting, Lotteries and Gaming but until the Board saw what the Government was to propose in its new Bill they could not assess the possible effects thereof.

Anyone who said that there were extravagant profits being made out of Greyhound Racing today, except by the Chancellor of the Exchequer, was talking without a proper appreciation of the facts.

The Chairman did not belittle the possible difficulties in the matter of new legislation but there was a strong case for an alleviation, rather than a worsening, of the position of Greyhound Racing, and every endeavour would be made to protect the Company's interests.

The Accounts were adopted, the proposed dividend was confirmed and the retiring Directors were re-elected.

SMITH'S POTATO CRISPS

The twenty-seventh ordinary general meeting of Smith's Potato Crisps, Limited, was held on July 25th in London.

Mr Fermian Le Neve-Foster, the chairman, after expressing regret at the retirement from the position of Director and Managing Director of the Founder of the business, Mr Frank Smith, in the course of his speech, said: The Net Profit of the Group, before taxation, amounts to £557,997 compared with £407,972 for the previous year. The Net Profit of the Group after taxation is £276,593 against £214,138, a net increase of £62,455.

The most satisfactory feature of the year's results is that sales of the Parent Company during the year represent an increase of about 25 per cent on the figure I disclosed last year, production being increased from about 22,650,000 to 28,250,000 tins.

The directors have decided to recommend a final dividend of 25 per cent plus a cash bonus of 5 per cent, making, with the interim dividend already paid, a total distribution of 37½ per cent on the enlarged capital resulting from the Share Bonus last year as against 32½ per cent on the smaller capital last year. This is an effective increase of an additional 8 per cent. The directors consider that the time has come when, in view of the progressive results and our financial position, an advance in the cash dividend is well justified. The net requirements for the dividend on our single class of Issued Shares is £107,976, which is covered more than two and a half times by the Net Group Profits of £276,593.

SALES

Last year I referred to the slim profit margin on which we were operating which was less than ¼d. per packet and to the anxieties we were experiencing with increasing costs. Unfortunately costs have continued to increase in all directions.

The Public are aware of the high prices for Potatoes in the recent shortage, but more important to us the average price rises substantially year by year. The high quality oil we use, which is our next most important item of material costs, has recently risen 30 per cent in cost on the average of last year and is now priced at six times the prewar level. At the same time there has been an advance of wages and in the cost of transport and every other item of our costs. In these circumstances we made a thorough costings review of the situation and came to the conclusion that, even with a further increase of production, it was impossible to retain the Retail price of 3d. per packet any longer. The price per packet was accordingly raised from May 1st to 4d. per packet, but at the same time the content of the packet was increased by 15 per cent by way of compensation; in other words a price policy of "more for more." The increase in the price has been well received by both the Trade and also by the Public and we can see no falling off in Sales.

The demand for our product continues unabated even with the larger production we can now supply to the market. The slogan "There are no Crisps like Smith's" still holds good, and I make no apologies for repeating it.

During the current year production and sales are still mounting in comparison with last year and we are achieving figures which reflect the progressive policy of expansion which we have pursued for the last few years.

The report and accounts were adopted.

THE APV COMPANY

SERIOUS EFFECT OF STRIKE

The forty-sixth annual general meeting of The APV Company Limited was held on July 25th at Crawley, Dr R. J. S. Seligman, PhNatD, FCGI, FInstMet, FIM (the Chairman), presiding.

In the course of his circulated statement, the Chairman said that the Consolidated Accounts for the year 1955 showed that there was a further increase in the profit on trading, which amounted to £577,932 compared with £519,107. Taxation provision amounted to £148,277, and the increase in Staff Profit Sharing Bonus to the figure of £40,574 was attributable to a larger number of employees.

The Parent Company's turnover in 1955 was £3,968,000 compared with £3,715,000. The turnover of the Group reached a figure somewhat in excess of £6,700,000.

Sales in the Parent Company in 1955 were appreciably lower than in 1954. This was, in the main, due to the fact that in the earlier year two exceptionally large orders were received, one from the Russian Government for Dairy Equipment, and one from our own Government for other equipment, which were not repeated in 1955. The plant supplied to Russia was very favourably received and there was good prospect of further orders from that source. Those two exceptional contracts in 1954 more than accounted for the diminution of sales in 1955 and apart from them, sales again showed an appreciable increase. Sales for the first six months of the current year were at an annual rate of 23 per cent more than those received in 1955. He pointed out, however, that the Company was now faced with intensified competition in all its markets both home and abroad.

The Subsidiary and Associated Companies had, broadly speaking, had a successful year.

REVIEW OF ACTIVITIES

In the course of his Review of the Group's activities, Dr Seligman, commenting on the Dairy Industry Department, said that the progress foretold in his statement last year was fully achieved in 1955 and sales, especially export sales, materially exceeded those of 1954 apart from the Russian Contract. He had mentioned last year that arrangements had been made with several firms to manufacture at Crawley specialities which were complementary to their own, and he was able to report satisfactory development of the sales of several of those. However, with its very large proportion of export business, that department was particularly sensitive to the keener price competition, and to the effects of currency or other political or economic obstacles, and those were bound to affect the future sales of that department.

So far as the Brewing Industry was concerned, the Chairman said it was gratifying to report that the total value of orders received for brewing plant in 1955 was 50 per cent greater than in 1954.

As to the Chemical Industry, Dr Seligman said that 1955 gave the Chemical Engineering Department an order book which was somewhat smaller than that achieved in 1954. After dealing with the major reorganisation of the Chemical Engineering Department and the formation of a new department, the Industrial Sales Department, he continued:

The reorganisation makes it very difficult to form a reliable picture of what the current year offers to the two foregoing sections of your Company. It can be said, however, that the bulked orders to date are at a higher rate than those of 1955, though much below what it is hoped they will ultimately reach.

As anticipated in my statement last year, your Food Plant Department secured orders in 1955 well in excess of any previous year.

FUTURE PROSPECTS

I must refer to the unfortunate stoppage which has taken place during the current year and its very serious effect on the prosperity of the Company and all who are connected with it. The loss of orders and the actual expenditure involved must affect the results of the current year. Clearly, redoubled efforts are necessary by all concerned to make good the lost ground and to advance well beyond the limits reached in 1955.

The report was adopted and the dividend of 10 per cent for the year was approved.

DE WENDEL & CIE SA

(PARIS)

The Annual General Meeting of de Wendel & Cie SA was held in Paris on June 25, 1956, with Count Emmanuel de Mitry in the chair.

The following extracts from the report issued to shareholders throw light on the progress of the Company during the 1955 financial year.

The production of iron ore by de Wendel & Cie SA rose to 4,948,281 metric tons, an increase of 18.7 per cent on 1954. Cast-iron production attained 1,764,597 metric tons, an increase of 16.3 per cent on 1954, whilst steel production rose to 1,524,359 metric tons, an increase of 10.27 per cent on the preceding financial year. The turnover rose to Frs. 75,439,820,826 against Frs. 56,583,940,730 in 1954 (all tax included).

The Company's modernisation programme was continued during the 1955 financial year. The main expenditure in the factories was directed towards the reconstruction of a blast-furnace completion of which is scheduled for the last quarter of 1956, towards the construction of a sixth Martin furnace and towards new plant for the manufacture of metal railway-sleepers. The new continuous wire-drawing mill was gradually introduced into service during the second part of the year. In addition considerable investment has been equally necessary in the railway system because of the increase in traffic.

The production of various divisions of the "Société Lorraine de Laminage Continu" (SOLLAC), in which de Wendel & Cie SA holds important interests, has once again made notable progress in 1955.

The balance sheet at December 31, 1955, showed total assets, including liquid and realisable assets at Frs. 27,123,160,922, as against short-term liabilities of Frs. 14,829,909,921.

Fixed assets have risen to Frs. 26,700,453,593.

Profits for the year, after allowing Frs. 6,362,539,107 for amortisation, totalled Frs. 559,016,034.

The dividend for the year 1955 has been fixed at Frs. 500 gross per share of Frs. 5,000.

COMPAGNIE FRANÇAISE DES PÉTROLES

(French Petroleum Company, Paris)

RISE IN INVESTMENTS

FURTHER PROGRESS

The Annual General Meeting of the Compagnie Française des Pétroles was held in Paris on June 29th, with M. Victor de Metz in the chair, and the following is a summary of the report presented by the board:

REVIEW

The situation of the oil industry remained satisfactory during 1955. Expansion proceeded, a growth of 11.3 per cent contrasting with only 4.5 per cent during 1954.

World oil output reached 763 million tons, with Middle Eastern oil fields taking the lead. The French oil industry shared in this general advance and French refineries processed 25.1 million tons of crude oil, compared with 23.8 million tons in the preceding year.

OUTPUT

The Company's progress paralleled that of the industry. Among its Middle Eastern interests, output of the Iraq Petroleum Company rose to 24,202,000 tons, and the Mosul Petroleum Company, the Basrah Petroleum Company, and the Qatar Petroleum Company produced 1,313,000 tons, 7,231,000 tons and 5,362,000 tons respectively. Persian output reached 15,772,000 metric tons. Abu Dhabi Marine Areas Limited continued its explorations on the seabed of the Persian Gulf.

The total tonnage of crude oil received by the Company during the year amounted to 10,241,449 metric tons, made up of 6,348,390 tons from the Eastern Mediterranean and 3,893,059 tons from the Persian Gulf area, as against a total of 9,312,828 tons in the preceding year. The Company also shared in the output of the Tripoli and Abadan refineries to the extent of 412,180 tons.

INVESTMENTS

Investments rose considerably during the year, comprising a £760,000 share in the Iraq Petroleum Company's capital increase, and a rise from £1,110,600 to £3,270,600 in the Company's share in the new organisation in Persia.

REFINING

The Compagnie Française de Raffinage, an important subsidiary, processed 6,468,270 tons in 1955, 3,095,724 tons were handled by the Raffinerie de Normandie, and 3,372,546 tons by the Raffinerie de Provence.

A pressure distillation unit with a daily capacity of 10,700 cubic metres was put into service by the latter in August last year.

TRANSPORT

With the entry into service of two 30,000-ton tankers (the *Biblos* in the spring of 1955, and the *Nimite* at the beginning of 1956) the fleet operated by Compagnie Navale des Pétroles (another undertaking controlled by the Company) comprised 14 vessels with a total deadweight tonnage of 260,000 tons.

Two further 30,000-ton tankers are expected to join the company's fleet in 1956 and 1957 respectively, and a 16,000-ton vessel for the transport of refinery products has been ordered and is due for delivery in 1957.

PROFITS, DIVIDEND

Net profits for the year totalled Frs. 6,398,280,380. It was accordingly proposed to declare a gross dividend of Frs. 600 per share of Frs. 5,000 nominal equivalent to 12 per cent as before.

The report, the accounts, and the proposals put forward by the Board were adopted.

DERBYSHIRE STONE

WIDENING SPREAD OF ACTIVITIES

The twentieth annual general meeting of Derbyshire Stone Limited was held on July 25th in London, Mr John Hadfield, MSc, ARIC (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

The gross profit for the 15 months ended March 31, 1956, amounting to £414,683, was satisfactory. The Group Net Profit before taxation was £262,327, compared with £207,120 for the period January 1st to December 31, 1954. The Group Net Profit after taxation was £132,654.

The total of Capital Expenditure and Investments for the period under review amounts to £340,099 and your Directors have so far approved expenditure of £155,000 on capital items and on investments in the current year.

GOVERNMENT'S ROAD PROGRAMME

Derbyshire Stone Limited is one of the largest producers of roadmaking materials in Great Britain and consequently the Government's policy in connection with roads is of particular interest to the shareholders. The transport system of this country, and I include railways with roads, has an enormous effect on our national economy. Ultimately an adequate road programme must be forthcoming, but I shall not believe that the Government will do anything really substantial until I see contracts actually placed.

Your Company has spent a lot of money on preparing for a Government programme of greatly increased road construction and reconstruction and, when such a programme does materialise, our plant capacity is such that it will be possible for the Company to make a substantial contribution.

The confidence which I have expressed in previous years as to your Company's future continues undiminished. Initially our business was predominantly that of making and selling road materials, an activity in which we are of course still substantially engaged. Important as they are, however, road materials now account for less than half of our turnover. This spread of activity is a healthy development and should insure us to some degree against the effects of violent fluctuations in the prosperity of any particular group of customers, and we are all the time on the look out for further markets. I have no reason to feel that in the year which will end next March we shall fall behind our past achievements.

In the long term I believe that your Company will increasingly reap the reward of our policy of constantly modernising our plant and machinery, and of expansion into fresh fields of activity.

The report was adopted and the Ordinary dividend recommendation of 20 per cent actual for the 15 months' trading period approved.

ST MARTIN'S LE GRAND PROPERTY COMPANY

The thirtieth annual general meeting of St Martin's Le Grand Property Company Limited was held on July 23rd in London, Sir Philip du Cros, Bart., presiding. The following is an extract from the circulated statement:

I am glad to be able to report further improvement in the profits of the Group. Gross income during the past year increased by £77,459 to £474,314; net profit before taxation by £23,875 to £174,934 and net profit of the Group, after charging all taxation, by £12,126 to £85,777.

The Directors recommend a final dividend of 7 per cent, making 11 per cent on the share capital as against 10 per cent for the previous year.

Adelaide House (Parent Company) continues to prove one of our most valuable investments.

Modernisation and reconstruction of Princes Square, Glasgow (Cheapside Company), continued throughout the year and is now complete.

Empire House (Cheapside Company): Work on the new seventh floor is now well advanced and it is hoped that it will be ready for occupation very early in 1957.

Hasilwood House (Hasilwood Properties Limited) is extremely well-let and producing an income in excess of estimates made at the time of purchase.

In spite of difficulties, I have confidence in the future of your Company and look forward to reporting a satisfactory profit at the end of the current year.

The report was adopted.

SWEARS & WELLS LTD.

INCREASED PROFIT

The twenty-ninth annual general meeting of Swears & Wells, Limited, was held on July 20th in London, Mr Cyril J. Ross, OBE, chairman and joint managing director, presiding.

The following is an extract from his circulated statement:

The report and accounts for the company's financial year ended January 31, 1956, show a very satisfactory result, being an increase over last year's record profit. The Consolidated Profit was £807,481 and compares with last year's figure of £724,360. The directors are able to recommend a final Ordinary dividend at the rate of 12½ per cent on the £1 million Ordinary Capital as at January 31, 1956, which makes a total of 20 per cent for the year, being the same rate as for the previous year.

I am pleased to say that in April last the Chancellor made Purchase Tax concessions in respect of certain classes of furs. These are of especial benefit to your company.

In the retail section trading in furs ten new branches in the United Kingdom have been added during the year, all of which I am happy to state are making good progress. A further four branches have been opened in Canada. The fashion side of the business continues to show steady progress and has increased its turnover and profit.

Given no undue reversal in the company's economic affairs, we have every reason to feel that the company will continue to make progress and produce satisfactory profits during the current trading year.

The report and accounts were adopted.

MACONOCHIE FOODS

The ninth annual general meeting of Maconochie Foods Limited was held on July 25th in London, Mr R. S. Mays-Smith (the Chairman) presiding.

The following is an extract from his circulated statement:

The trading profits of the Company and its United Kingdom Subsidiary Companies, plus dividends from Trade Investments amounted to £147,507 compared with £120,782 in the previous year. The net profit amounts to £69,303.

The result of the year's trading can be considered satisfactory and I am pleased to report that since the end of the Company's financial year the improvement has been fully maintained and the turnover shows an increase over that for the same period last year. In these circumstances your Board have decided to pay 18 months' arrears of Preference Dividend, requiring £11,644 net. After deducting this dividend the credit balance to be carried forward on Profit and Loss Account is £50,009. If the progress in trading is maintained it is hoped that it will be possible to pay off all arrears in the comparatively near future.

I am pleased to tell you that the sales of "Pan Yan" for the year ended February 29, 1956, constitute an all-time record in the history of this Company.

The turnover in the United Kingdom Company continues to expand satisfactorily and provisional accounts for the first quarter show an increase in profit over the similar period last year, but it must not be forgotten that profit margins must of necessity tend to decrease with rising costs of raw materials, wages and overhead expenditure.

The report was adopted.

APPOINTMENTS

ACTUARIAL STUDENT FOR SOUTH AFRICA

Established Society, conducting Life and General business in the Union and the Rhodesias, is expanding and requires a young student, who has passed or about to pass Part II of the examinations, as Assistant to the Actuary. A generous commencing salary will be paid and there are excellent opportunities for promotion. All costs incidental to the examinations and passage to the Union are paid by the Society. Pension scheme, medical aid scheme. Long leave granted every five years for holiday outside Southern Africa.—Write Box M/198, Strand House, London, W.C.2.

STATISTICIAN REQUIRED by leading London Advertising Agency, to be responsible primarily for the analysis of television consumer data, and also for statistical analysis in connection with consumer research project.—Apply to Research Manager, Young and Rubicam, Ltd., 285 Regent Street, W.1.

MARKET RESEARCH

Educated man wanted, 30 or under, with some experience of Market Research, to be trained as personal assistant to the head of the Market Research Division of W. S. Crawford Ltd.—Write to The Market Research Manager, 233 High Holborn, London, W.C.1.

IMPERIAL CHEMICAL INDUSTRIES LIMITED has a vacancy in its Treasurer's Department in London for an assistant who will be engaged on foreign exchange work. Knowledge of such work and commercial banking procedure would be an advantage. Applicants should be between 23 and 28 years of age. Commencing salary according to age and experience.—Applications should be addressed to Head Office and Regions Staff Department (ISG), Imperial Chemical Industries Limited, Imperial Chemical House, Millbank, S.W.1.

INTERESTING CAREER offered in Investment Research section of leading London Merchant Bank to young economics or statistics graduate.—Write Box JL.66, c/o 95 Bishopsgate, E.C.2.

NATIONAL COAL BOARD

The South-Western Division of the National Coal Board require Organisation and Methods Officers in the Divisional Staff Department at Cardiff.

The duties involve the study of organisation and work methods at Divisional, Area and Colliery Offices, followed by the submission of reports containing conclusions and recommendations. The posts call for experience in the installation of administrative systems and an acquaintance with modern office procedures, equipment and methods.

Previous experience of organisation and methods work and/or a University degree or professional qualification is desirable. Knowledge of the organisation of the mining industry would be an advantage, but is not essential.

The successful applicants would be directly responsible to the Divisional Organisation and Methods Officer, and would be paid, according to qualifications and experience, within the salary scale of £1,085 x £35-£1,475.

Applications, containing full particulars of age, qualifications, experience and positions held, should be sent to the Staff Department, National Coal Board, Cambrian Buildings, Cardiff, by September 1, 1956.

APPOINTMENTS

AUSTRALIA—CANBERRA UNIVERSITY COLLEGE

Applications are invited for appointment to the vacant post of Lecturer or Senior Lecturer in Economics.

Salary range: Senior Lecturer, £A1,800-£A2,150 per annum; Lecturer, £A1,200-£A1,750 per annum. Commencing point within the range will be determined in accordance with the qualifications and experience of the applicant. Annual increments are £A70.

Further particulars, conditions of appointment and the summary form which must accompany applications, may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on August 31, 1956.

AUSTRALIA—UNIVERSITY OF SYDNEY

Applications are invited for the position of Lecturer in Government and Public Administration. Other things being equal, some preference will be given to applicants qualified to undertake teaching and research in administrative aspects of Government; but the appointment will not necessarily be made from applicants in this field.

Salary will be in the range £A1,200 x £A80-£A1,750 per annum, plus cost-of-living adjustment (£A34 men, £A28 women). Appointee will be subject to deductions under the State Superannuation Act. The commencing salary will be fixed according to the qualifications and experience of the successful applicant.

Finance available for home purchase to married male members of staff.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in London and Australia, is August 27, 1956.

IBM UNITED KINGDOM LIMITED

Due to continued rapid expansion, the Company requires men of common sense and initiative with a successful background, methods and/or accounting for intensely interesting work to apply after training conventional and electronic equipment to the commercial and factory accounting problems of industry.

Logic, patience and the ability to organise are important assets and those selected will find this an intensely satisfying and remunerative career and one which will make a considerable contribution to the national economy.

Men aged 23-33 should apply to the Personnel Manager, 100 Wigmore Street, London, W.1, for places in the next training course (approximately twelve months) which will start on September 3rd, quoting Reference EAM/6.

Some graduates without experience will also be considered.

EXECUTIVE PRESIDENT—CANADIAN SUBSIDIARY

A leading British Company of Light Industrial Engineers, with several manufacturing establishments in the U.K., foreign Subsidiaries, and a world-wide organisation, intends to appoint immediately a Senior Executive Engineer, who can be groomed to take over in two years the duties and responsibilities of President of its Canadian selling Subsidiary.

The opportunities attached to this post are considerable, and the person appointed will require outstanding potentiality, in addition to the following basic qualifications:—

(1) Age group, 37-42, inclusive.

(2) An engineering background, preferably university graduate or member of recognised professional body.

(3) Direct experience of the problems associated with selling precision products over a wide engineering field.

(4) Sound executive experience, with recognisable capacity for effective administrative control at the highest levels.

(5) The drive and leadership necessary to direct and expand the activities of an already well-established organisation.

Companies, if any, to which applications are not to be forwarded, should be marked on the back of the envelope.

Applications should be addressed, in an envelope endorsed Canadian Appointment, to Box A 7390, W. H Smith & Son Ltd., Blackfriars Street, Manchester, 3.

EXPORT MANAGER

An important, well-established Engineering Company, with several manufacturing units in this country and a world-wide selling organisation, wishes to appoint a man who, after a fairly short time, will be capable of assuming the duties of Export Manager.

This is a post offering exceptional opportunities, and applications are invited from men of an age likely to be in the age group, 35-41, who satisfy the following requirements: Experience in the engineering industry (preferably possessing a recognised engineering qualification), and particularly in the selling of engineering products; some years' executive experience, giving evidence of capacity for high-level administration and control; outstanding qualities of leadership and drive to expand overseas sales.

Commencing salary in the region of £2,000 per annum.

Applications should be addressed, by letter, to Box ZU.355, Deacon's Advertising, 36 Leadenhall Street, London, E.C.3.

YOUNG AND RUBICAM LTD., ADVERTISING, require an experienced Market Research executive, to be responsible for planning and analysis of all forms of consumer research on a group of accounts.—Apply not later than August 9th to Research Manager, Young and Rubicam Ltd., 285 Regent Street, W.1.

MARKET RESEARCH Department of large London Advertising Agency has a vacancy for a Research Assistant with at least one year's experience.—Apply, with full particulars and salary required, to Box 473.

ACTUARY.—Applications invited from young qualified Actuaries or students nearly qualified for vacancy in Capetown office of Shepley, Fitchett & Eriksen, Consulting Actuaries, of Johannesburg and Capetown. Generous immediate salary, depending on qualification and experience, with prospects of partnership.—Apply, giving full details, to Box 370.

FEDERATION OF RHODESIA AND NYASALAND

VACANCIES: STATISTICIANS
CENTRAL AFRICAN STATISTICAL OFFICE
MINISTRY OF FINANCE

Applicants, under 35, must possess, or obtain this summer, a First or Second Class Honours degree (or equivalent qualification) in Statistics, Mathematics, Economics or other appropriate subject. All applicants must have taken a University course in Statistics or have passed the examinations of an approved statistical society.

Starting salary:
(Men) £600-£1,100, depending on qualifications and experience, on scale rising to £1,600.
(Women) £600-£840, depending on qualifications and experience, on scale rising to £1,200 p.a.

Senior Posts, with salaries of up to £2,850, filled by internal promotion.

N.B.: As allowances can be made, in certain cases, for National Service in the assessment of commencing salaries, an Honours graduate without experience could start at £1,000 p.a.

Application forms and further details from the Federal Public Services Attaché, Rhodesia House, 429 Strand, London, W.C.2. Closing date August 15th.

SENIOR SCIENTIFIC OFFICERS; SCIENTIFIC OFFICERS.—The Civil Service Commissioners invite applications for pensionable appointments. Interview Boards will sit at frequent intervals. The Scientific posts cover a wide range of scientific research and development in most of the major fields of fundamental and applied science. In biological subjects the number of vacancies is small; individual vacancies exist in the Natural History Museum for candidates who have special knowledge of, or who are interested in, palaeobotany, malacology, helminthology, acarology, foraminifera, mammalian taxonomy.

Candidates must have obtained a university degree with first- or second-class honours in an appropriate scientific subject (including engineering), or in Mathematics, or an equivalent qualification; or possess high professional attainments. Candidates for Senior Scientific Officer posts must in addition have had at least three years' post-graduate or other approved experience.

Candidates taking their degrees in 1956 may apply before the result of their degree examination is known.

Age Limits: Senior Scientific Officers, between 26 and 31, but specially suitable candidates under 26 may be admitted; for Scientific Officers between 21 and 28 during 1956 (up to 31 for permanent members of the Experimental Officer class). *Salary (London)*: Senior Scientific Officers: (men), £1,135-£1,345; (women), £1,026-£1,240. Scientific Officers: (men), £605-£1,055; (women), £605-£962. Women's scales being improved under equal pay scheme. Somewhat lower rates in the provinces.

Further particulars, for which early application is advised, from Civil Service Commission, Scientific Branch, 30 Old Burlington Street, London, W.1, quoting No. S 53/56 for Senior Scientific Officers, and S.52/56 for Scientific Officers.

WORKS DIRECTOR

ENFIELD CABLES LTD. ARE SEEKING A WORKS DIRECTOR, WITH SEAT ON BOARD, TO TAKE CHARGE OF THE COMPANY'S FACTORIES WHICH ARE ENGAGED IN THE MANUFACTURE OF ELECTRIC WIRES AND CABLES. THIS IS A TOP-LEVEL POSITION AND WILL CARRY A COMMENSURATE SALARY. WRITE, GIVING FULL DETAILS, TO J. E. SUNDERLAND, DIRECTOR AND GENERAL MANAGER, ENFIELD CABLES LTD., BRIMSDOWN, ENFIELD, MIDDLESEX.

A STATISTICIAN is required immediately by a progressive manufacturing company. The selected candidate will be directly concerned with both industrial and commercial statistics and should therefore have appropriate experience and/or a recognised qualification. He or she will be paid a high commencing salary. The work is varied and interesting, and prospects are excellent for a first-class applicant.—For further details, write now to Box 472.

METEOROLOGICAL OFFICER, SCIENTIFIC OFFICERS.—The Civil Service Commissioners invite applications for permanent posts. Early application is advised. The duties include research in atmospheric physics, covering the study of cloud structure, synoptic and dynamical meteorology, large- and small-scale diffusion and turbulence, climatology, and development of instruments. There is a limited number of posts for forecasting work at the more important centres. Successful candidates will be given a course in meteorology before being assigned to a research or forecasting establishment for further training and experience. In some instances candidates with national service obligations can be commissioned in the R.A.F. for forecasting duties at R.A.F. stations.—Further information may be obtained from the Director, Meteorological Office (M.O.10), Air Ministry, Kingsway, London, W.C.2.

Candidates must be between 21 and 28 during 1956 (up to 31 for permanent members of the Experimental Officer class). They must have (or obtain in Summer, 1956) a First- or Second-Class Honours degree, preferably in physics or mathematics. Salaries (London rates), £615-£1,055. Women's scales lower, but being improved under equal-pay scheme. Somewhat lower rates in provinces. Opportunities for promotion to Senior Scientific Officer (£1,135-£1,345), and higher posts.

Particulars from Civil Service Commission, Scientific Branch, 30 Old Burlington Street, London, W.1, quoting No. S52/56. (Met.)

TRADE organisation in Manchester requires a Qualified Accountant to specialise in accounting and costing methods for the cotton industry as well as assisting in the organisation of training courses for senior management. After a period of training with a firm of Management Consultants in modern management techniques, the applicant will be required to assist in the organisation of training courses.—Give full details to Box 475.

UNIVERSITY OF LONDON

The Senate invites applications for the post of Resident Staff Tutor to work under the Tutorial Classes Committee. The duties include teaching classes in one or more of the subjects usually studied in W.E.A. and University Tutorial Classes, with preference for Philosophy, History or Economics, together with responsibility for organising the work in part of the London Extra-Mural area, probably in Surrey. Good academic qualifications are required and experience in adult education is desirable. Salary £700-£50-£1,400 per annum with a bar at £1,000, also Family Allowances, and membership of F.S.S.U., the initial salary being determined in accordance with the qualifications and experience of the successful candidate.—Particulars and application forms from Director of the Department of Extra-Mural Studies, Senate House, W.C.1. Completed application forms to be submitted before August 27th.

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships, tenable for one year in the first instance, and renewable for a further period, not exceeding two years. The studentships are normally of the value of £350 or £400 per annum. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University.—Applications should be sent, not later than September 1, 1956, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF SHEFFIELD

Applications are invited for a post of Assistant Lecturer in Political Theory and Institutions, to begin duties on January 1, 1957. Salary scale, £580 x £30-£650, with F.S.S.U. provision and family allowance. Applications (four copies) should be sent to the Registrar (from whom further particulars may be obtained) by September 12, 1956.

IMPERIAL CHEMICAL INDUSTRIES LIMITED

METALS DIVISION

Applications are invited for the position of STATISTICIAN in the TECHNICAL DEPARTMENT Located at Witton, Birmingham.

This is an interesting position, involving the application of statistical methods to industrial problems.

Applicants, either male or female, should possess an honours degree in Mathematics, although where a candidate has had previous experience of this work, a degree in Physics is also suitable.

A generous starting salary is offered, and there is adequate scope for progressive remuneration. The Company also operates a Pension Fund and Profit-Sharing Scheme.

Applications should be addressed to the Staff Manager, Imperial Chemical Industries Limited, Metals Division, Kynoch Works, Witton, Birmingham, 6, quoting TD/2/E.

ADMIRALTY requires three unestablished Assistant Statisticians, two for service in London and one in Bath. Applicants must normally be British subjects with either 1st or 2nd Class Hons. Degree in maths., or economics with statistics as a special subject. Salary within ranges—London—£581-£1,050 (Men), £581-£969 (Women); Bath—£529-£961 (Men), £529-£885 (Women). Women's ranges being improved under equal pay scheme. Annual leave 25 days plus public holidays. Salary ranges and conditions of service under review. Five-day week now operating.—Forms from M.L.N.S., Technical and Scientific Register (K), 26 King Street, London, S.W.1, quoting A 117/6A. Closing date August 11, 1956.

A MANAGING DIRECTOR

Chief Executive of public company employing 2,000. Keenly competitive manufacturing industry. Due to extend present service agreement takes opportunity to consider change. Considerable experience, University honours, professional qualifications, age 44. Replies will be treated as confidential.—Box 474.

WOMAN, 12 yrs. Supervisor Calculating Dept., seeks similar pos. in London or Staines area.—Box 479.

EXPORT.—Economics Graduate (22), Assistant Export Sales Manager, substantial chemical manufacturer, seeks move to manager level. Fluent French and Spanish. Widely travelled.—Box 476.

SALES EXECUTIVE (28), with initiative, ability, successful record and pleasant personality, interested in responsible sales post combining Sales Promotion and Publicity. Highest industrial references.—Box 477.

YOUNG MAN (26), returned to U.K. after three years as commercial executive in West Africa. Intimate knowledge of British and French territories with comprehensive marketing, agency and export experience, seeks U.K. position where initiative appreciated and experience useful. French and secretarial qualifications.—Box 478.

THE UNIVERSITY OF HULL

RESEARCH SCHOLARSHIP

The University proposes to award a Post-Graduate Scholarship for full-time research in Arts, Economics or Law, tenable for one or two years. Value £40 p.a. but eligible for supplementation by the Ministry of Education.—Further particulars may be obtained from the Registrar, to whom applications should be sent not later than August 7, 1956.

W. D. CRAIG,
Registrar.

THE Economists' Bookshop has the world's widest range of books on Economics, Politics, History, Anthropology and the Social Sciences. World-wide mailing service. Second-hand books bought.—11-12 Clements Inn Passage, Aldwych, London, W.C.2.

EXPERT POSTAL TUITION

for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G.9/2).

HANDLING ECONOMY:

FOR MORE THAN THIRTY YEARS Mitchells have supplied mechanical handling plant to the world's industries; the Company has been the pioneer and inventor of plants which have provided greater efficiency and savings in handling and site costs.

AMONG THESE DEVELOPMENTS are the quick action of grabs closing in half the time taken by other mechanisms, with equal power; the non-skid control of transporters which eliminates all possibility of the transporter skidding on its tracks; and unique methods for guiding conveyor belts and ensuring that they are kept straight on their idlers under all conditions of service and loading. Tipplers, wagon tippler hoists, ropeways, cableways, cranes and complete automatic wagon marshalling systems are the other aspects of Mitchell enterprise.

Mechanical Handling Plant at TILBURY POWER STATION

MITCHELL ENGINEERING LTD *supplied the comprehensive coal unloading, storing, reclaiming and conveying plant. The travelling transporter for storing out and reclaiming has a span of over 270 feet and is the largest travelling bridge in Great Britain.*

THE BEST VALUE IN SAVINGS CERTIFICATES FOR 40 YEARS!

nearly 4¼% interest

income tax free

from the

NEW

NATIONAL SAVINGS CERTIFICATES

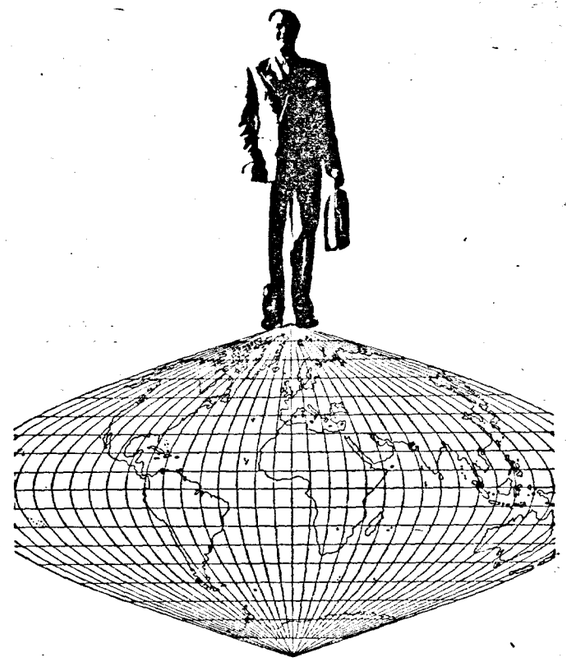
10th Issue

The *new* National Savings Certificates grow in value at record speed — each 15/- Certificate grows to £1 in only seven years. That's equivalent to nearly 4¼% tax free and to over 7½% gross where income tax is paid at the standard rate, and even more for the surtax payer. They're the finest investment ever — for everybody. Maximum holding is 600 15/- units.

£450 becomes £600 in only 7 years!

You can obtain full information about the *new 10th Issue National Savings Certificates* from your stockbroker, banker or other professional adviser, and from your local Savings Committee, Savings Centre, Post Office or Trustee Savings Bank.

Issued by The National Savings Committee, London, S.W.1.



they saw this man — *multiplied exports by four* •

If you'd mentioned export credit insurance to this firm before 1951 they'd have answered 'What's it got to do with us? We know all our customers and we can trust them to pay up'. Then the E.C.G.D. man called and they agreed, a bit grudgingly, to see him. He asked them what they'd do if their customers' governments blocked payment, and he told them that anyway credit insurance had a *positive* side to it. It would give them the security they needed to go after *new* customers. They took some convincing—but in the end they took out a policy too. Now they're glad of it. Within four years they've raised exports of their product—scientific apparatus—from £9,000 to £37,000 worth—a fourfold increase! Perhaps you're an exporter, and perhaps you're saying now 'That's all very well, but what's export credit insurance got to do with *me*?' The E.C.G.D. man will be calling on you. See him. He'll tell you.

• This is a true story, but because business between E.C.G.D. and exporters is strictly confidential any details which could identify the exporter have been left out.

E·C·G·D

E.C.G.D. is a Government Department set up to help exporters. Its services are fully explained in the booklet—'Payment Secured'. Write for a free copy.

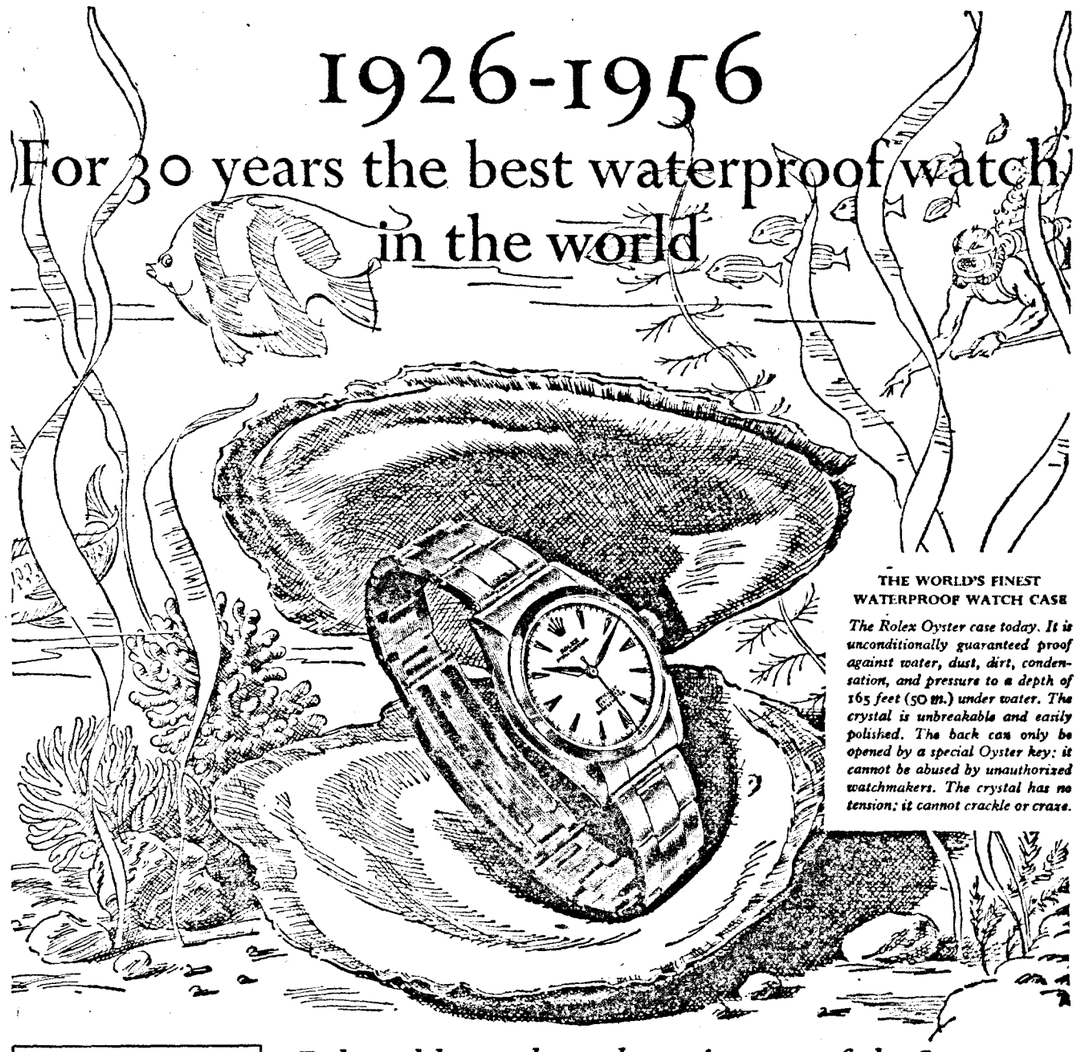
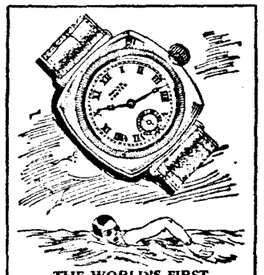
For 30 years the best waterproof watch in the world



THE WORLD'S FINEST WATERPROOF WATCH CASE

The Rolex Oyster case today. It is unconditionally guaranteed proof against water, dust, dirt, condensation, and pressure to a depth of 165 feet (50 m.) under water. The crystal is unbreakable and easily polished. The back can only be opened by a special Oyster key; it cannot be abused by unauthorized watchmakers. The crystal has no tension; it cannot crackle or craze.



THE WORLD'S FIRST WATERPROOF WATCH CASE

This is the Rolex Oyster watch as worn by Mercedes Gleitze when she swam the English Channel. Rolex announced this feat to the world on Nov. 26th, 1927. The watch looks clumsy now, but then it was almost a miracle.

Rolex celebrate the 30th anniversary of the Oyster case

In 1926 Rolex invented the Oyster case, the world's first truly waterproof watch case. To the trade at the time it seemed a joke, a "gimmick" that had nothing to do with timekeeping. But Mr. Wilsdorf, the chairman of Rolex, and his colleagues at Rolex, knew that it was a revolution.

For the point of the waterproof watch is protection, not just against water, but against dust, sand, grit, and all other elements that can damage the movement and clog the vital oil.

The Oyster has come a long way since Mercedes Gleitze made world headlines in 1927 by swimming the English Channel with an Oyster on her wrist.

Perhaps even Mr. Wilsdorf did not dream in 1927 Rolex would develop Oysters that can go down wherever man can go. Yet they have. Witness the fact that the Navies of three great nations use Rolex for special underwater activities.

Rolex have such unshakable confidence in the present Oyster case that they guarantee it unconditionally—against everything but brute force.

Very briefly, any Rolex Oyster is guaranteed proof against water, gas, dust, dirt, powder, condensation, and pressure to a depth of 165 feet (50 m.) under water (except for the new, ultra-flat dress Oyster models, which are guaranteed to 66 ft. (20 m.)).

It provides complete protection for the fine and incredibly accurate movement it contains.

ROLEX

A landmark in the history of Time measurement

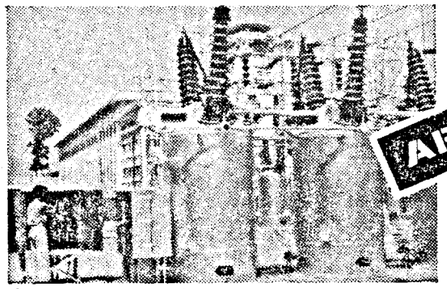
Power for industry (*above*) By supplying plant for many of the new power stations, ENGLISH ELECTRIC is playing its part in the Central Electricity Authority's vast expansion programme. The picture shows three of the four 60,000-kW ENGLISH ELECTRIC steam turbo-alternator sets installed in the Drakelow 'A' Power Station, near Burton-on-Trent.

Power in the mines Modernization of the mines means more electrical installations to help all branches of the industry. At the National Coal Board's Snowdown Colliery in Kent this 2,480-h.p. ENGLISH ELECTRIC winder motor is direct coupled to the 23-ft. diameter Koepe wheel on the left.



Overseas markets account for about half the work of the ENGLISH ELECTRIC Group. This picture shows one of five ENGLISH ELECTRIC 132-kV oil circuit-breakers in the switching station at Khatima Power Station, Uttar Pradesh, India. The whole of the hydro-electric plant and equipment for this power station was supplied by ENGLISH ELECTRIC.

To young men and their parents *To any boy or young man considering a career in science or engineering, ENGLISH ELECTRIC offers almost unlimited opportunities—first-class training, and a choice of rewarding jobs at home or abroad. For details, please write to Mr. G. S. Bosworth, Central Personnel Department D.5.*

A TWOFOLD JOB...

How The English Electric Company is working for Britain at home and abroad

Britain is busy now, more prosperous than for decades past. Full employment, active industries, advances in science and technology, plenty of opportunities both for firms and for individuals . . . this is progress to be proud of. The challenge—the need—is to maintain it.

All depends on production—and exports.

From 1949 to 1955, our total industrial output rose by 27%, and the value of our vital exports by 58%. But still higher production, still more export activity, are needed to ensure *still better living for Britain.* In both these ways, ENGLISH ELECTRIC is playing its full part.

At home, this company helps to supply the generators, transformers, switchgear and other plant needed for Britain's expanding power generation programme; it also makes the electrical equipment by which our industries *use* this energy for production—production not only for home but for export markets.

In addition it is itself a vigorous and successful exporter; *about half the Group's business is overseas,* earning foreign currency for Britain.

With the world-wide experience of its engineers and technicians, backed by great manufacturing resources and advanced research, ENGLISH ELECTRIC is hard at work, making an important *twofold* contribution to Britain's economic progress.

Water-power for Spain Looking down the spillway on the dam at the Salime Power Station, Spain. The power house itself lies beneath this spillway, and contains four 32,000-kW water-turbine generating sets which, together with transformers and the switchgear seen on the left, were supplied under a comprehensive contract by ENGLISH ELECTRIC.

Europe's Achilles Heel

THE Suez Canal has become the Achilles heel of Britain and of Europe. Their dependence on this one thread of water has been growing, with their growing dependence on Persian Gulf oil, at a rate which could well have caused alarm even if the world had been spared the alarming personality of Colonel Nasser. Checked in his scheme for the Aswan High Dam, the Colonel has retaliated against the Suez Canal Company, and in a manner calculated to offer the most ostentatious possible affront to the western world. But the real shock to the West has been not Colonel Nasser's bad manners, but the appalling discovery of its own vulnerability.

Perhaps the discovery might have been made without the shock, by cold argument without waiting for the Colonel's prompting. Just so might King Lear have reasoned things out for himself, without waiting for his ungrateful daughters to demonstrate his predicament to him, wringing from him confused threats that held more emotion than strength: "I will do such things—What they are yet I know not—but they shall be The terrors of the earth." The British reaction to Colonel Nasser in the past week has called Lear to mind; Government and public, caught off balance, have been threatening force without having apparently either defined the problem to be faced, or formulated the purpose of action. Enough force is to hand, it may be hoped, to deal with Colonel Nasser if the decision were taken to use it. But on what occasion would it be used, and with what intention? How far would it have to go to impose the will of the nations upon Egypt's dictator? Above all, what solution would it be expected to bring? Armed occupation was tried before; it solved no political problems, and was rightly given up.

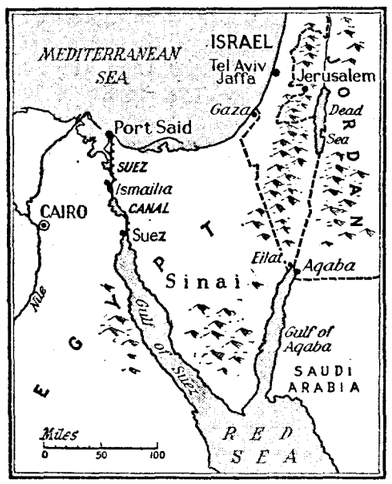
British force has only just been withdrawn from Egypt; the last troops left the Canal Zone on June 13, not to return except in an eventuality which the Anglo-Egyptian Agreement of October, 1954, defined fairly clearly—an armed attack by a power outside the Middle East on an Arab League country or on Turkey. This agreement was important in another way, because by it Egypt herself for the first time subscribed to the international guarantee of the freedom of navigation of the Canal. In declaring the Canal Company expropriated Egypt has behaved culpably indeed, but, up to the time this issue of *The Economist* went to press, Colonel Nasser has neither closed the Canal nor discriminated against any of the ships going through it—beyond the obstruction, unlawful but already of some years' standing (and acceptance), of ships bound to or from Israel. The two contingencies, expropriation of the Canal and obstruction of shipping, need to be kept distinct, because they are of a different order of gravity and require, or would require, counter-measures of different kinds.

The powers which signed the convention of 1888 made this distinction plain when, in the knowledge that the company's concession would expire in eighty years, they laid down the principle of free passage:

> The engagements resulting from the present Treaty shall not be limited by the duration of the Articles of Concession of the Universal Suez Canal Company.

Thus they recognised that the ownership of the Canal had nothing to do with the right of navigation, a position which, for what it is now worth, the Egyptian Government says it accepts.

This leaves the real fear unassuaged: President Nasser has not the legal right to close the canal to anybody, but he clearly has the physical power to close it or to levy blackmail upon its users. This is true, and it is an alarming state of affairs, but it does not date from last week. He has not won this power by seizing the ownership; he possessed it already as head of the government through whose territory the canal passes. One is tempted to say that he gained it when the British troops left Egypt, but not even this is quite true, since Egypt used the power against Israel for some years, with Britain in full occupation of the Canal Zone, and in disregard of a resolution of the Security Council as well as of the 1888 Convention.



Britain, by withdrawing from Egypt, withdrew the restraint which prevented Nasser from using his physical power against all and sundry if he chose; it obtained in return an Egyptian promise—fragile perhaps, but not broken yet—to respect the right of free passage. As is now clear, at the same time it exposed the Canal Company to seizure twelve years before the concession is due to run out—less, perhaps, by withdrawing the restraint than by removing the target which had for so many years drawn the fire of nationalism. With the British Army gone, the Canal Company, as the biggest remaining foreign institution in the country, was left exposed to this fire. It would have been very fortunate indeed to escape attack for all the remaining years of the concession; Colonel Nasser's rebuff over the Aswan High Dam precipitated his attack on the company. By doing so it has precipitated, too, a series of issues that were brewing.

At Suez, nationalism confronts the principle of international law and order: not for the Arabs the voluntary limitations of sovereignty that exert a rational appeal in Europe; the newly independent states, among which the Arab states are prominent, raise national claims in their purest and most unrestricted forms. Equally, a seizure of this kind, made without warning or discussion from one day to the next, is the severest possible blow to the principle that the developed countries should help the under-developed countries of the world in their economic growth. So they should; but if the conduct of Dr Mossadegh and President Nasser has to be accepted as typical, and the existence of a big foreign enterprise treated as an affront to national pride, then it becomes an unreasonable risk to put investments into such countries except on the tightest of political or military strings.

Yet it remains true that the ownership of the Suez Canal was, under the terms of the concession, to pass to the Egyptian Government in 1968. Britain withdrew its forces from Egypt in the full knowledge that that was so, and no reason existed for supposing that any Egyptian Government would agree to extend the concession. By that time, European dependence on the canal would almost certainly have been much greater than it is now. This makes the more puzzling Sir Anthony Eden's apparent enunciation of a doctrine in the Commons on Monday:

> No arrangements for the future of this great international waterway would be acceptable to Her Majesty's Government which would leave it in the unfettered control of a single power, which could, as recent events have shown, exploit it purely for purposes of national policy.

This is new, and the Prime Minister made clear on Thursday that he regards it not merely as an *obiter dictum* but as a doctrine, applicable, presumably, after as well as before 1968: "It is upon this that we insist . . . nothing less than this can be acceptable to us." It takes the Suez Canal dispute far beyond any question of ownership, nationalisation, or compensation, by a chain of reasoning which amounts to this: (1) "Free navigation" as guaranteed by the Convention of 1888 extends to efficient and economical operation of the canal. (2) Colonel Nasser's other commitments will prevent him from using the canal dues to enable it to do its job efficiently and economically. (3) His conduct shows him and his regime to be unreliable. (4) Therefore the canal must be placed (in an unspecified way) under international control.

Arguments of international law, day-to-day politics, and economic convenience could hardly be more entangled. Can the Prime Minister expect the powers, on the basis of a chain of reasoning arguable at so many points, to act in concert to impose the new doctrine on Egypt by force? This would be a very different matter from taking the necessary counter-measures if Colonel Nasser were to close the canal. What the Prime Minister might more logically and coherently have said would have been, first, that renewed guarantees might be fairly asked for now, after what has happened, of the international freedom of the waterway and its proper working and development; and, secondly, something more on these lines:

> It is too risky to depend for the trade between Europe and Asia on one route in one pair of hands.

Instead of crying for what has been given up long ago, the countries of the Atlantic and Indian Oceans—for the latter, too, need their trade route from Europe—should be looking for a way of bringing their dependence on the Canal within the limits of what is tolerable.

It has to be borne in mind that, well before 1968 (if the date retains any relevance), the Suez Canal will have become inadequate for the volume of traffic, even assuming that the existing improvement plans go through. A second canal, if it could be safeguarded, would not be absurd. To draw off some of the oil traffic, more pipelines are not merely not absurd, they are unavoidable, although pipelines, like canals, offer temptation to the nationalists. (Oilfields, too, offer such temptation. The political troubles of oil supply from the Middle East are only beginning; this is not to say that they will prove insuperable, but that the world must be prepared for them when they come.) A second canal at Aqaba may not, indeed, be the answer; but ideas of this kind have to be considered, not merely dismissed as visionary. The Suez Canal was visionary once, and London wanted no share in building it. Another related scheme might be explored, at least. The strip of desert land from Aqaba to Gaza offers other possibilities, short of a canal itself, along the *de facto* frontier between Israel and Egypt. What inducement might persuade the Egyptians to agree to a United Nations authority taking over and administering a strip of land there? Such a strip could carry pipelines and other land traffic. In an extremity, or in the distant future, it might carry a canal, too. In the meantime it would relieve the intolerable dependence of which the Prime Minister reasonably complains.

Only some such scheme, seeking to use the absence of a territorial settlement on the borders of Palestine as an asset for once, could fulfil the most desirable and at the moment most remote of all conditions, that a route which the world's traffic needs should pass through international territory. And the material interest at stake is big beyond computation. The immediate western interest is not to teach Colonel Nasser a lesson (he must learn his own lessons) but to keep the ships passing through the canal. That must be the objective now of the concerted policies of all the western powers—including the United States. But, in the longer view, to think of alternatives on ambitious lines is better than beating the breast or the drum.

What Suez Means

Different aspects of the Suez Canal dispute are discussed in this issue of *The Economist* under a number of headings, in addition to this leading article, *Via Suez* (page 419) considers the Suez Canal traffic in oil and dry cargoes and the financial and economic aspects of the seizure; and a note (page 391) deals with the two-way character of Anglo-Egyptian trade.

Our Paris correspondent outlines the French attitude to the seizure and the Suez Canal Company's position (page 412).

Men, Arms and Aims

THE debate on defence this week was arranged, at the request of the Labour party and to serve party politics, when the cloud on the middle eastern horizon was no larger than a man's hand. A certain diffidence in the tone of Labour's spokesmen on Wednesday suggested that they realised the incongruity of demanding the abolition of national service at the moment. But this show of moderation failed—even apart from Mr Wigg's robust repudiation of his party line—to cloak the irresponsibility of the proceedings. What should have been a critical appraisal of the military means available for backing up the political strategy discussed in the previous week's debate on foreign affairs amounted to little more than electioneering. The effects, both at home and abroad, are likely to be uniformly bad.

For this the Government must take its share of the blame. By putting out all sorts of hints that it might do away with conscription by 1958 at a time when its opponents were pledged only to a reduction in the period of service—foolish as that was—it practically forced Labour to make its overbid. The result is that, at the moment when the Government is finding from the recruitment figures that the abolition of national service would threaten the army with near-extinction, and the real problem is to turn the nation towards some form of selective service in the years ahead, Labour has now committed itself both to abolish conscription and to oppose utterly selectiveness in any form. Both parties have contributed to laying down the doctrine that the obligation to serve is something extraordinary and unnatural as well as painful; that the "return" to a prewar type of voluntary professional army, navy and air force is the only proper objective of policy.

It may be an objective of policy, but the doctrine is false and misleading. The primary objective is to achieve defence and security in a situation that is not only unlike the prewar situation politically, but has been revolutionised technically. The real issue is the form which the obligation to serve should take in this transformed and still-changing political and technical

situation. The rigid distinction between general conscription, on the one hand, and regular service, on the other, is disastrous to constructive thinking.

The absurdity of making the figures fit the argument for or against conscription, instead of starting with the requirements of the defence situation and then making deductions from the figures about the role of obligatory service, came out in the debate. Mr George Brown took Mr Head's figures, which showed that without conscription the army would fall to 120,000-130,000 in 1961, added the officers to bring it up to "about 150,000," asserted that this estimate was made on the most pessimistic assumptions, assumed that one could be optimistic about the effects on recruiting of further pay increases and some money spent on better amenities, and declared that the result was virtually the 200,000 regulars which Mr Head "needed." Mr Macleod punctured all this by starting at the other end. The 600,000 men "needed" after running down the forces to the required level on the present system was equal to 450,000 regulars; on a basis of ten years' average service this meant 45,000 volunteers a year; which in turn proved to be one in five of all fit young men reaching the age of 18 annually —and was it likely that any pay code would bring in that number? The answer is No. But what fixes the number Mr Macleod (or his colleagues or the service chiefs) first thought of?

Out of the context of commitments, and of technical and economic possibilities, such statistics are, in fact, quite unreal. If the army's commitments in Germany and overseas were small enough by 1961, 120,000 men might be enough. On the other hand, if Mr Macleod's 450,000 regulars were to be equipped fully with the latest atomic and other unconventional arms to fight every kind of war, global, limited-atomic, limited-conventional or cold, the cost might prove prohibitive. Until it is known what the forces have to do, with what weapons, and in conjunction with what allied efforts, it is quite impossible to guess what size they ought to be at any given time. This is the question that Parliament never discusses.

★

No outsider can discuss it in any precise terms. But it is possible to separate three factors in the equation, none of which can be considered in isolation from the others. The first of these is, in duellists' terms, choice of weapons. To put this factor at its highest—as some Labour MPs do—if every dispute carried to the arbitrament of force is to be settled by the hydrogen bomb, very small forces might suffice. The problems of cost, conscription, even of sharing the effort between allies, might then be fairly simple to solve. It is just because this solution does not apply, say, to Suez that the costly and complicated division of effort into unconventional and conventional weapons must be made. But even then it is necessary to answer the question: how unconventional can a conventional war be? The "trip-wire" of ground forces in Europe is supposed to be connected with, and to touch off, the great deterrent—the H-bomb. But the forces composing it are increasingly equipped with tactical atomic weapons, as if some graduated reaction short of hydrogen bomb warfare were contemplated. Are plans to meet limited outbreaks elsewhere also to be based on tactical atomic weapons? Or must conventionally-armed reserves be kept in case limited atomic war does not meet the *casus belli*?

The second factor is the degree of help given, or withheld by allies. This can operate in various ways. There can be specialisation between the allies in the production of particular weapons or in the undertaking of particular jobs. The obvious example affecting the problem of British manpower, however, is the divisions held in Germany. If to make the trip-wire effective it is agreed that the American divisions must be held there, and if the only terms on which they can be held is the presence of the other allies, including the building up of the German divisions, and if France has to concentrate her army in Algeria, then inevitably there seems very little scope for reducing the British divisions in Germany—and they require 80,000 men. To reduce them might mean disconnecting the trip-wire from the ultimate deterrent. Discussions with Nato must hinge on this, not on Britain's wish to end national service.

The third factor, of course, is cost. One Labour argument in the debate was that as the new weapons coming into production would inevitably become more and more costly, the only place where economies could be made was in manpower, and therefore plans must be made to reduce it forthwith. Most military experts agree that a smaller force with more modern weapons usually costs far more than a larger force with simpler weapons (this was true even before the advent of atomic weapons). This point does not dispose of the need to economise in manpower; but it raises in much more acute form the question of what commitments can be met, and with what weapons, from a given economic effort. Abolishing conscription will not offset the real possibility that defence costs may rise to £2,000 million in five years, even after the heavy prunings made in the Ministry of Supply programme last February and by the Macmillan cuts last month. The only things likely to offset this increase are a change in commitments in the common task of preserving the balance of power in the world, a decision to meet commitments differently and a reallocation of jobs—say, the making of hydrogen bombs or the long-range missiles-to-be—between the allies. The basic determinant all the time is the political and strategic objective.

However that objective is met, it must be by an adjustment of these three factors. Service ministers and service chiefs are, in fact, reconsidering them. It is rather late in the day, and, of course, their conclusions on many points of detail must remain secret. But it should be possible for the government to present—as it did not this week—a broad picture of the way in which these factors interlock to produce Britain's basic defence commitments. Only then will it be clear how far, in what way and for how long will it be necessary to draw upon the citizen's obligation to serve. Only then will it be possible to hold a real defence debate.

Toying with Local Government

MR SANDYS has taken what appears at first glance to be a very little bite at the big apple of local government reform. He approached his task by persuading the local authority associations to formulate common principles, and it is at least a tribute to his diplomacy that they reached some kind of agreement. Unfortunately the Minister's long-awaited White Paper* contains hardly anything beyond this lowest common denominator of mutual compromise. There are glimmerings in places which suggest that the Minister would, if he dared, be bolder, and he apparently intends to reflect further before embodying his proposals in a Bill. But his second thoughts will need to be vastly more coherent if this ragged patchwork of rather stale proposals is to be transformed into a viable scheme of local government.

The first impression of the new proposals is that they put the clock back to 1945. A Local Government Boundary Commission is again to be created—or rather two Commissions, for Wales is to get a separate one. The Commissions, as before, will be given formally a broad measure of discretion to make recommendations. Mr Sandys explained that the new scheme is "a wide and supple framework within which it will be possible to do either much or little"; but, again as before, the Commission will receive general guidance from the Minister and, to judge by this White Paper, the guidance may prove too limiting and restrictive. The proposals make one important change of procedure. This time it will be the Minister, not the Commission, who will make the final decision as to what changes should be presented for Parliamentary confirmation.

★

Will these arrangements work any better than those set afoot a decade ago? To answer this question it is necessary to look at the three fields of local government where changes may be expected. Rightly, the Commission is to tackle first the status and areas of counties and county boroughs, since the conflict between these two types of authority is the sore spot of the present system. Rightly, too, it is to review a whole area or region at a time, so that its recommendations can be seen in proper relation to each other. It will be free to propose the elevation to county borough status of any town of more than 100,000 population (or 125,000 population if the town is part of a conurbation); but it will be told to walk warily in proposing the demotion of any county borough or the union or dismemberment of any county.

How then is the Commission to achieve a satisfactory reform? Taken in the aggregate there are already too many counties and county boroughs for efficient administration and harmonious co-existence. To create more county boroughs, without pruning the ranks of both types of authority, is the way to make the situation worse. The likely result of the Commission's work will be the creation of half a dozen new county boroughs and the union of two or three small counties, followed by a moratorium. Such a result would not be worth the pother.

★

When this first review is completed, the county councils—not the Commission, unless any county is exceptionally slack—will be told to review the areas of the minor authorities. These reviews are intended to be vigorous and will embrace for the first time non-county boroughs, although any borough threatened with loss of status will be able to appeal to the Minister. At the same time there is to be an increased delegation of powers from the counties to the various district councils, the details of which have not yet been agreed. This approach is reasonable in principle. But Mr Sandys should urge the creation of minor authorities large enough to enjoy reasonable powers in their own right, rather than plumping for an immediate extension of delegation schemes, which are unsatisfactory.

The third field for local government reform lies in the great urban concentrations which contain 40 per cent of the total population. The greatest advance in the White Paper is its clear recognition of the problems created in these areas by a welter of diverse local authorities. In these areas only, the Commission would review both major and minor local authorities in conjunction. Mr Sandys singled out two general solutions which might be applied to any of the conurbations. One would be to combine existing authorities into a contiguous group of largish county boroughs, loosely linked by some kind of co-ordinating machinery; the other would be to create a two-tier urban county most of whose functions would be performed by the lower tier.

These suggestions are the only ones in the White Paper that go appreciably beyond the common ground of agreement reached by the local authority associations. They show a hopeful degree of genuine initiative. Yet neither of Mr Sandys's suggested solutions could really be made to work without the introduction of a new type of local government machinery. This is particularly true of his second (and better) solution, which could be achieved under the present system only by demoting half the county boroughs in England. It was just this impasse that forced the last Boundary Commission to recommend the creation of a new kind of "most-purpose" authority. What if the new Commission comes to the same conclusion?

Moreover, the largest urban area of all, London, is once again excluded from effective investigation. The White Paper lays down that the counties of London and Middlesex (like the border between Wales and

* Local Government. Areas and Status of Local Authorities in England and Wales. Cmd 9831. 1s.

England) must be treated as scrupulously as the frontiers of a sovereign power. The remainder of the London area will be investigated and "should be approached on similar lines" to the other conurbations. The only meaning to be extracted from this curious statement is that the metropolitan parts of Essex and Kent might be converted into separate counties or groups of county boroughs. Such a piecemeal approach to the pressing problems of London government is not only unworkable but ludicrous.

All in all this is a most unsatisfactory White Paper. It is quite right that the Government should lay down the general principles of reform and entrust their application in particular areas to an independent Commission. But Mr Sandys has not produced any adequate principles; and the restrictive instructions which he apparently intends giving to his Commission will mainly have the effect of stopping any search for principles by that body also. Warned by the fate of its predecessor, the new Commission is most likely to stick closely to protocol and content itself with minor proposals.

This way of going about it will not solve any of the basic problems of local government. It will not settle the conflicts of counties and county boroughs or satisfy the aspirations of medium-sized towns or provide a satisfactory framework of government for the conurbations. None of these things can in fact be done unless Parliament and Government cease to regard the status of existing major authorities as close to sacrosanct. These are the lessons clearly demonstrated by the history of the last Boundary Commission. Have they been forgotten so soon?

Mr Macmillan's Bradshaw

THERE is little doubt which sentence from this year's budget speech will be longest remembered. The remark, "We are always, as it were, looking up a train in last year's Bradshaw," has already evoked more approving comment than perhaps the rest of Mr Macmillan's speech put together from economists and statisticians—who have a vested interest to declare—and also, more significantly, from some business spokesmen. The Chancellor's statement this week that he is proposing definite steps to improve his Bradshaw will, therefore, receive a general welcome—even by those who will have to help supply the raw data.

Current economic statistics serve the Chancellor for two major purposes: they should give him as up-to-date as possible an appreciation of the balance of the economy at any one time, and their analysis should enable him to make reasonably intelligent forecasts of the way elements in the economic situation are developing, both short and medium term, say, over the next three to six months and broadly for the next year to eighteen months. To do this, Mr Macmillan wants both to get better statistics—better meter readings of how the economy is going—and to get the readings he gets now faster. "We must continually improve our statistics, in form and timing." Much of the recent effort to improve official statistics has been concentrated on getting extra information about manufacturing industry. Now the need is for more information elsewhere. The Chancellor is proposing to institute, compulsorily, an annual sample inquiry into capital expenditure and stocks in the distributive and service trades and more firms will be urged to yield such information voluntarily each quarter. Statistics of new orders are to be extended and will include, it is hoped, new building contracts, while some engineering industries will find themselves approached for more frequent production figures. To fill in the personal side of the demand picture, a continuing inquiry will be made, on a small scale, into household incomes and spending. The external accounting is to be improved, especially in relation to capital transactions. On the income side, quarterly estimates of profits will be sought, in confidence, from a sample of companies and the Inland Revenue is to supply a quarterly national wage and salary bill.

To these proposals, the Chancellor added a plea to private business to speed up its provision of statistics; the success of much of the exercise depends on whether it is heeded. It is no bureaucratic slowness of processing in Great George Street that imposes the delay in recording economic activity—it is the reluctance of private business to fill in forms and its habit of leaving them to the last minute. The demands both for quicker and for better statistics invite comparison with an economy that statisticians often quote to British audiences as an example, the United States. The table opposite attempts to give some indication of the range of significant indicators that are available for gauging the climate of the American economy as compared with those upon which the Treasury works: and the time-lag before these become available to the public.

It will be seen that most of the indicators are available more quickly in the United States. This comparison does, however, require some qualification. The American statistician, intent on getting out more statistics more quickly, is resigned to a considerable amount of revision. This goes beyond the likelihood that figures produced early are provisional. An industrial production index that is available within two weeks of the period to which it applies will not only be more liable to revision than one produced in twice that length of time; it may need to be an entirely different and more restricted index. The monthly production index for the United States has not only a smaller coverage than the British one, but it has to rely quite heavily and precariously on changes in man-hours as indicators of output trends. The Americans produce an index of wholesale commodity prices weekly; but this is based on so few items that it can only be used warily. There is no escape from the broad choice: speed against reliability.

Nevertheless there is no escape, either, from the fact that, on balance, British economic statistics lag well behind the American ones, both in scope and timeliness. Mr Macmillan's proposals should go some way towards righting the balance in the three major fields where the comparison is favourable to the American side: stocks, payrolls and new orders. These are among the main data still required to fill out any quarterly estimates of changes in real supply and demand. A deficiency which remains, rather surprisingly, is in the current expenditure of public authorities, whose accounts are by no means geared to national income estimation. Mr Macmillan has nothing to say about this, but he gives the assurance that Whitehall is moving forward towards quarterly estimates of national expenditure.

ECONOMIC INDICATORS, HERE AND IN USA

Statistics of:	Frequency of Publication		Interval before Publication*	
	UK	US	UK	US
Employment	Monthly	Monthly	5 weeks	3 weeks
Unemployment	Monthly	Weekly	3 weeks	2 weeks†
Labour vacancies	Monthly	...	4–5 weeks	...
Earnings	Half-yearly	Monthly	5 months	3 weeks
Hours	Half-yearly	Monthly	5 months	3 weeks
Industrial production	Monthly	Monthly	8 (5) weeks	2 weeks (revised after 6 weeks)
External trade:—				
Value	Monthly	Monthly	3 weeks (12 days)	6–9 (4) weeks
Volume	Quarterly	Monthly	6 weeks	12 weeks
National income	Yearly	Quarterly	8 (3½) months	6 weeks
Corporate profits (total)	Yearly	Quarterly	8 (3½) months	3–4 months
Personal income	Yearly	Monthly	8 (3½) months	5 weeks
Personal consumption	Quarterly	Quarterly	2–3 months	6 weeks
Balance of payments	Half-yearly	Quarterly	3½ months	2–3 months
Gold and dollar reserves	Monthly	...	2–3 days	...
Gold holdings (Treasury)	...	Daily	...	3 days
Stocks:—				
Manufacturing	Quarterly	Monthly	3½ months	5 weeks
Wholesale	...	Monthly	...	5 weeks
New orders:—				
Manufacturing	...	Monthly	...	5 weeks
Capital expenditure‡	Quarterly	Quarterly	4 months	10 weeks
Bank deposits	Monthly	Weekly	2–3 weeks	1 week
Bank advances (detailed)	Quarterly	Weekly§	3 weeks	1 week§
Retail price indexes	Monthly	Monthly	4–5 weeks	5–6 weeks
Wholesale price indexes	Monthly	Monthly and Weekly	2–3 weeks	4 weeks, 3 days
Consumer credit	Monthly‖	Monthly	6–7 weeks‖	4–5 weeks
Retail sales	Monthly	Monthly	5 weeks	6 weeks (10 days)

* Figures in brackets refer to interval before publication of preliminary estimates based on incomplete analysis. In the case, for instance, of the British trade figures the 12 days refers to the publication of preliminary totals: the 3 weeks to the full Trade and Navigation Accounts. Many other figures are, however, subject to revision. † Insured population only (about half US working population). ‡ Investment plans. § Covers only 200 banks in leading cities. ‖ Hire purchase only.

But there are still some further steps needed for a good assessment of general trends in the economy. A sample inquiry into what operatives earn is made only twice a year and not published until five months after that date. Could not monthly payroll figures—which the Americans consider a very sensitive indicator of the economic climate—be collected? Industry certainly calculates them more often than monthly—and tells the Inland Revenue. No direct inquiries are ever made into salaries, except what emerges from the census of production, and as no distinction is made in tax assessments between wages and salaries, salary estimates are mainly a residual item in the accounting. The computation of rent, too, has a large element of estimation in it. And some improvements might be sought in the traditional forms of statistics from the City—for example, the classification of bank deposits by sectors in the same way as advances. A more comprehensive set of financial statistics would be the first essential in any attempt to emulate the new system of accounting, known as "flow of funds," that the Federal Reserve Board has recently introduced.

Nevertheless, before long, British statistics should begin to compare with American. When they do, will the British businessman become as "figure-minded" both as user and supplier as the American is reputed to be? It is often said that Americans are readier to supply figures than British, though their positive enthusiasm can easily be exaggerated. It is sometimes suggested that the American tradition against using trade associations for price fixing or even standard costing systems makes them more prepared to supply the Government with data from which it can return them comprehensive and comparable statistics for the whole of their industries. Another difference is that the larger number of major companies in American industries may make them less afraid than British firms are that industrial aggregates will enable their competitors to guess their shares of the market.

On one score there is no doubt: American government statisticians are more forthcoming than their British counterparts both in explaining to industry why information is being asked for and in making clear how the collated results can be of use to it. Mr Macmillan's statement has little to say on this score, but to get his figures he will have to back it up with an educational effort. Experience in recent years suggests that the economic technicians behind American economic policy have a much more sensitive and sure judgment of the economic indicators that their statisticians supply than the British display; they have never had any reason to forget the "finger-tip technique" of influencing the economic climate of a free economy. A Chancellor's Bradshaw must always be out of date to some extent, although business travellers may hope soon to be able to look up their trains with reasonable sureness of their departure times. But no Bradshaw is better than the ability to understand it: and the quality of this technical appreciation seems since the war to have been another weakness in British economic policy.

Notes of the Week

Agenda for Stability

A GOOD many glasses of sherry have been consumed at No. 10 Downing Street by representatives of the trade unions and of industry—both private and nationalised—in recent months in pursuance of the Prime Minister's belief that quiet off-the-record discussion among the really influential people could win friends for the government's disinflationary policy. No agreed communique has emerged from these talks, since it would have said nothing, but the government this week made its own statement, which referred —without particularising—to "practical contributions" towards stabilising prices made in the talks. The gist of the message, addressed no doubt to those who have not been to No. 10 as well as those who have, is that still more practical contributions must be made, in the form of wage restraint and price restraint, "even where this process would affect profits and dividends." Clearly the statement was drafted in the all-too-certain knowledge that the trade union response, however polite at No. 10, was likely to be extremely dusty outside it.

The statement draws attention therefore to the fact that retail prices have kept steady in recent months as well as giving warning of the dangers of foreign competition. It takes credit for the government for having made economies in its own housekeeping, and points to the modest first fruits of the credit squeeze in higher exports and rising reserves. But the government is evidently nervous that the monetary mechanism must henceforth be reinforced by self-denying ordinances by both sides of industry. As a note on page 426 shows, industry has already made a contribution in price policy; and the reference to "profits" was an unhappy concession to prejudice. The real question is how far the sheer shortage of money can now stop the rise in wages. The events of the summer may do something to answer this question—through the *non possumus* of employers faced with wage demands, and the fate of any strikes undertaken to enforce them. But evidently the hospitable doors of No. 10 will continue to be open for talks, briefings and frank exchanges of points of view as the squeeze continues to do its work.

—Or Agenda for Inflation?

THE preliminary agenda for the Trades Union Congress in September provides a blunt commentary on the government's statement. It reflects the attitude of no compromise and no co-operation which the unions have adopted; it echoes older slogans of direct, as distinct from parliamentary, action. It is based on the argument that the government got the country into an inflationary mess with a vote-catching budget and too much kindness to its own supporters; that it need not now hope to get out of the mess by the sacrifices of the working classes; and that the only remedy is for it to resign.

Four of the six largest unions—the Transport and General Workers, the mine workers, shopworkers, and railwaymen—specifically condemn wage restraint. The TGWU resolution, for example, asserts the right of Labour

> to use its bargaining strength to protect the workers from the dislocations of an unplanned economy. It rejects proposals to recover control by wage restraint, and by using the nationalised industries as a drag anchor for the drifting national economy.

The other big union, the National Union of General and Municipal Workers, is still, under the latest trade union knight, Sir Thomas Williamson, a force for moderation, in so far as it is silent about wage restraint; but it is equally damning about the government's economic policy.

On automation, the resolutions have not the "fight-to-the-last-ditch" tone of some union conferences earlier this year, but there is a general insistence on prior consultation and on compensation for redundancy. The Association of Supervisory Staffs Executives and Technicians wants a National Planning Board for Automation, to do everything from ascertaining when and where it should be introduced to providing compensation for redundancy.

None of these resolutions adds up to a policy for meeting situations which, whether the unions oppose them or not, will result from government policy and from technical change. Most of Congress's time, however, is taken up with discussion of the General Council's report. Unfortunately the likelihood that this will be less negative than the union resolutions in its approach to economic problems is at present remote.

Compromise in Warsaw

THE Polish central committee has finished its lengthy heartsearchings on what the prime minister, Mr Cyrankiewicz, revealingly called "the bitter truth about the intricacies of the victorious road to socialism." Both the committee's resolutions and the new party appointments (which do not include Mr Gomulka) suggest that the Polish Communists have decided to stick to the middle of the road. Poznan gave them a nasty shock, but it has not frightened them into turning the clock back; on the other hand they will take care that the trend away from Stalinism does not go too far or too fast.

The Polish leaders confessed that all is not well with the

state of the party. It is too liable to "political vacillations" and "ideological disarmament"; it has completely lost touch with the masses; it has got bogged down in a mass of administrative and bureaucratic detail instead of concentrating on "political leadership and control"; and many party activists will have to be thoroughly re-educated in their job. It was also frankly admitted that the ordinary Pole—whether worker, peasant or intellectual—has had a very raw deal, that the official statistics about the rise in his living standards have been plain wrong, and that it is essential to give him a more worthwhile stake in the regime. Whether he in fact gets it will largely depend on the new five-year plan.

The details—which may be all-important—of this plan still seem to be under debate, but the broad outlines have been settled; capital investment will go down; investment in agriculture and housing will go up; there will be a moderate switch from heavy to light industry; and average real wages will go up by 30 per cent by 1960. In the meantime Mr Cyrankiewicz has announced a two-year emergency programme designed to remove the "most painful grievances" of the Polish people and diminish the "most glaring disproportions" in the Polish economy. This will include measures to increase the wages of the lowest-paid groups, to ensure that real earnings do not drop when norms are raised (a common grievance in eastern Europe) and to prevent price increases. By these and similar steps the Polish Communists hope to strengthen their regime and prevent further and more dangerous Poznans. But there is not the slightest suggestion that Communist control might be modified; on the contrary the fight against "liberal bourgeois tendencies" is to go on with redoubled vigour.

Delicate Course in Budapest

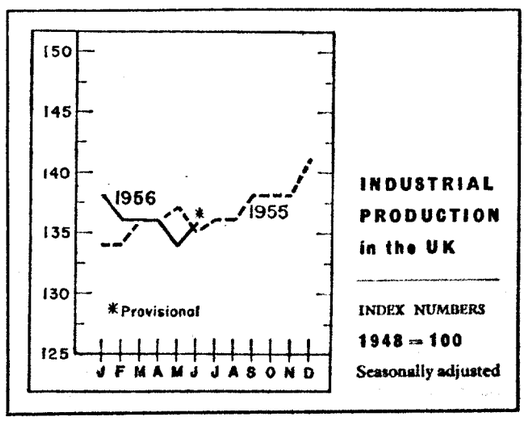
IN Budapest, as in Warsaw, the Communist party is busy trimmings its sails. For the Hungarians the task is even more tricky than for their Polish comrades. Ever since the "new course" was introduced in eastern Europe after the death of Stalin, the Hungarians have veered somewhat wildly from one tack to another; the effects of this erratic course are now being felt. Both right- and left-wing deviations are said today to represent "a very serious danger." To make the situation even more of a nightmare for the good party man, the two deviations have become so interwoven that—in the indignant words of the central committee's resolution—"often it is not easy to discern whether a threat is right-wing or left-wing."

In practical terms this means that the policy-makers in Budapest are particularly hard put to it to maintain themselves on a reasonably safe middle course; they have to worry both about the old diehards who sympathised with Mr Rakosi, and about the followers of the former premier, Mr Nagy, whose views are considered dangerously liberal. These conflicting pressures are reflected in present policies. The cabinet reshuffle announced this week does not include any important appointments of men with more liberal tendencies, although it contains some painless concessions to new ideas—in the resignation of Mr Gerö, the new party boss, from his key cabinet post of first deputy premier, and in the appointment, to a comparatively unimportant post, of a rehabilitated Social Democrat. The "wavering and distrust towards the party" shown by some of the intellectuals and the press (some of them have even "demanded full freedom of the press—freedom to spread bourgeois views") are severely castigated. But there has been a sprinkling of announcements concerning such matters as the reform of judicial procedures, freedom of movement inside the country and a better deal for the Hungarian parliament. Presumably these are designed to make the regime more acceptable.

In the economic field, the original directives for the new five-year plan are apparently being considerably revised; capital investment is to be cut, and average real wages are to go up by 25 per cent. But the Hungarian Communists continue to harp on the importance of priority for heavy industry and on their firm determination to push on with collectivisation without delay. It remains to be seen whether Mr Rakosi's successors, who probably sympathise a good deal more with him than with Mr Nagy, have yet done enough to remove the danger of Hungarian Poznans.

Between Picnics on Corfu

MARSHAL TITO and Mme Broz have been visiting the King and Queen of Greece on Corfu. The Greek prime minister, Mr Karamanlis, was there too, and although the visit was supposed to be private and informal, some time was taken off from boating, picnics and underwater fishing to attend to more serious business. No communiqué was issued afterwards, but it is unlikely that any sinister plot was hatched for Greece's flitting into the "neutral" camp. The chief topic was undoubtedly the fate of the Balkan pact. As a military alliance this is now moribund. The Jugoslavs have for some time been anxious to soft-pedal its military aspect on the grounds that the danger of Russian attack is past and also, no doubt, because membership of a military alliance is somewhat embarrassing to such staunch and open opponents of "blocks." Now the other partners, Greece and Turkey, less convinced that Russia has ceased to be dangerous, have exchanged so many bitter words over Cyprus that their co-operation over defence, or, indeed, anything else, has become impossible.



Marshal Tito, however, seems determined that the Balkan alliance should not lie down and die altogether. In Moscow he flourished it in front of the Russians and apparently got them to acknowledge that it provided a sound foundation for peaceful co-operation in the Balkans. This may be taken at its face value, or as a euphemism for the spread of Jugoslav influence in the region, with consequences which may, or may not, be agreeable to the West. In either case, the Jugoslavs' interest in reviving the tripartite alliance is neither surprising nor quixotic. But the pact, like Humpty Dumpty, has had a great fall, and to put it together again—which will involve getting the Greeks and the Turks to agree on the future of Cyprus—may prove an impossible task. But if Marshal Tito can do better than all the king's horses and all the king's men, then good luck to him.

Fading In an Era?

THE first session of the new Parliament ends for all practical purposes this week; though Colonel Nasser may yet ensure that the end will be on a grim note in emergency meetings. Even without this, it has been an eventful session—a Parliamentary climacteric marking the change from the Churchill-Attlee to the Eden-Gaitskell era. New leaders eager to make an impact and not trammelled by past battles have from both sides pumped new vitality into the conduct of affairs.

Sir Anthony Eden's reputation has fluctuated as wildly as the weather, though more in his party than in the country. From the post-election peak of his popularity he plummeted during the autumn and winter until in January Downing Street had formally to deny that he was about to resign. The first three months of this year were hard going, but he turned the corner—or at least one corner—during the Bulganin-Khrushchev visit. His touch is now far more professional, and his leadership will be secure if he continues to win the hearts of his belligerent backbench critics by his handling of Colonel Nasser.

The economic trip-wire which sent Sir Anthony sprawling last year has been a lifeline to Mr Gaitskell, who had his own troubles, but has hauled himself steadily up, both in party and public estimation. When economic discussion began to pall, he neatly sidestepped into the role of a most effective Labour spokesman on foreign affairs—but he clearly has plenty of other ammunition as well. Both at Westminster and Transport House the Labour party is more efficient under his leadership. He is inevitably taking longer to work himself in than Sir Anthony. It may be too soon to guess whether British politics will for long be moulded by the personalities and wrestlings of these two men; but not the least of the interest of the next session of this Parliament will derive from the light it sheds on this question.

Holidays on Strike

THE Minister of Labour succeeded in getting the two sides concerned in the strike at the British Motor Corporation to take part in joint talks, but common ground between them has yet to be found. The unions are demanding joint consultation before redundancy is declared in future and compensation for the men dismissed from BMC. On the first demand the BMC offers talks at the local level, and on compensation it refuses talks except at national level, with the Engineering Employers' Federation. It is here that the deadlock is at present complete. The Federation is anxious that BMC should not set a precedent by offering compensation payments which would be beyond the means of less prosperous firms, while the unions on their side want to keep their freedom to drive hard bargains in accordance with each firm's capacity to pay. In the words of Mr Nicholas, of the Transport and General Workers' Union, they do not want the sort of compensation that could be paid by the "backyard foundry."

It is something, however, that the talks are not broken off but are adjourned until next Thursday while both sides consult among themselves. It was not really to be expected that there would be a rush to reach agreement while the strike is in a state of suspended animation. If no agreement is reached next week the struggle will begin again in earnest on Monday week. Then the unions will have to keep the returned holiday-makers out of the factories and the company will have to decide how long it can carry on at the reduced level of output. Last week this was about 40 per cent of normal, although Morris, for example, still had between half and three-quarters of its workers and Austin produced little more than a quarter of its usual output with three-quarters of its workers. Meanwhile support for the strike grows dangerously among other workers such as the railwaymen.

Solidarity with the Strikers

Our Special Correspondent writes:

AT 5.30, when ship repair workers were due to meet in Custom House Fields, the main signs of life were two gypsy caravans complete with occupants and a few men lying on the grass. But then more men began to gather, a loudspeaker van bounced into the middle of the field, and some policemen strolled up.

A young man announced the object of the meeting—to give moral support to the brothers on strike at the British Motor Corporation, and to vote them one hour's pay per week each. He quickly stood down in favour of Mr Claude Berridge, the London organiser of the Amalgamated Engineering Union. Mr Berridge angrily castigated those who would destroy the unity of the working classes; but his remarks about the wickedness of Moral Rearmament and the Economic League were cut short: "We've heard all this stuff, mate. What are we here for now?" So he took a few swings at the Tory Press and at the huge profits of the bosses; the company's reserves represented "a cushion for the shareholders," so why should they not be a cushion for the workers? He declared that this was the biggest struggle since 1926. This thought was quietly received, and Mr Berridge sat down amid rather lukewarm applause.

The next speaker was Mr Dick Etheridge, the chief convener from Austin, whose forecast of the solidarity to be expected at Longbridge caused his union executive to get

an unpleasant shock when the strike was actually declared. Mr Etheridge, like Mr Berridge, is a Communist, but he is less thin and earnest, and his Midland accent and joviality were an agreeable change. He made jokes about Sir Leonard Lord, chairman of the BMC and the villain of the piece. "And he's no better than me. His father was a working man." This, oddly enough, was to Sir Leonard's discredit. Mr Etheridge said that he had brought along his missus as a symbol of working-class unity, and this unity was his main theme. His anger was directed first at the Tory Press, which made heroes out of blacklegs; then at non-unionists, and at wives who wanted their men to go back to work; and finally he reached the surprising conclusion that "despite this opposition from within our own ranks, the working classes have never shown such solidarity."

The proposition was then put to the vote. It was opposed by only about six out of the five hundred odd men at the meeting, with a few abstaining. There were one or two cries of "How can they be on strike if they are on holiday?" But most of the men seemed pleased enough to have voted the money, although equally pleased that the meeting was over. They hurried across the field, talking about Laker. The action that had been taken was neither popular nor unpopular. It just seemed necessary.

Two-Edged Trade Weapon?

THE decision to impose a control on the use of Egypt's sterling balances in London is no more than a warning. Its effective meaning will depend on how it is applied, and this in turn depends, not only on political factors, but on two economic questions. Can a squeeze on sterling hurt Egypt painfully? If effective, will it, like so many economic sanctions, prove a two-edged weapon which will hurt Britain as much as Egypt?

A blocking of Egypt's sterling assets in London could certainly be uncomfortable for Egypt. The slump in demand for long-staple Egyptian cotton has made it difficult to find enough foreign exchange for imports from the West. Even with the release of £20 million of blocked sterling assets this year and last, Egyptian imports are still far below the level of the boom years 1951 and 1952. Import restrictions, already severe, have been further tightened in recent months. Egypt, of course, uses transferable sterling to buy not only in Britain but in other parts of the sterling area and Europe. A blocking of sterling assets would handicap its entire trade. But it is by no means certain to bring Egypt to its knees. Gold and dollar reserves could cover current payments for a while, and bilateral payments arrangements could provide a sufficient, if uncomfortable, framework for trade with many other countries. The effectiveness of a stop on London sterling would depend a great deal on the extent to which other western countries took parallel action.

★

But a stop on sterling would of course hurt Britain too. Though the fall in Lancashire's cotton buying has slashed Britain's imports from Egypt (from £13 million in the first half of 1955 to £6.3 million in the first half of this year), Egypt's imports from this country have been growing and in 1954 and 1955 Britain recovered the position of Egypt's main supplier. Efforts by the British exporters, helped by their long-standing connections, have been largely responsible for this, but Egypt also seems to have made fair efforts to fulfil the promise to encourage imports from Britain in return for the release of sterling balances. A stop on British exports to spite Egypt would at one blow cut away all the gains which British exporters have made.

Mindful of past experiences, they tend to think first of the Germans as the competitors who might supplant them in the market. But Egypt's mark earnings are small. Only with one area—the communist bloc—has Egypt the large trading surplus which could permit a major growth of imports. Through heavy cotton purchases by communist countries Egypt raised its exports to them to £E.27 million in the first five months of this year, a third of the total. Egypt seems to have built up a trade surplus of £E.17 million despite arms imports; this will no doubt be used in any case to finance larger imports of capital goods from the communist countries. Deprived of sterling, Egypt might turn still more to the east for such supplies.

Sixty Schizoid Governments

"HEART on the left, wallet on the right" is a time-honoured description of the average Frenchman's political posture. It is, however, a global rather than a Gallic attitude when governments are concerned. Last week the members of the United Nations were treated to a couple of overdue lectures on the subject at Geneva. Lord John Hope, the British delegate, warned the Economic and Social Council that, if the continual increase in the budgets of the UN and of its specialised agencies could not be checked, his government would have to consider whether it could go on bearing its present share of the cost. He praised the various practical successes achieved, but complained that, while lip-service was regularly paid to the need to cut out dead wood and concentrate on priority tasks, in fact little was done about it.

Next day the Secretary-General himself was even more outspoken. He pointed out that the Secretariat had reduced its own ranks by 15 per cent in two years, but that it was the member governments that gave the orders. For three years running he had submitted plans for readjusting programmes, but there was little he could do as long as there continued to be the largest common denominator among governments for starting new projects, and the lowest common denominator for financing them. There was no point in setting up another committee to overhaul economic and social programmes if it maintained the habit of agreeing on maximum programmes with minimum allocations. Mr Hammarskjöld referred to the "schizophrenia" often displayed when a government's representative in one UN organ votes for new enterprises while its representative in another organ demands economy.

Something like sixty of the seventy-six member governments suffer from this schizoid tendency, and the UN suffers from the consequences. When funds are drained away into futile activities insisted upon by governments that contribute little or nothing toward them, the organisa-

tion not only has that much less to spend on practical work; another consequence is that its appeals for extra funds fall on unsympathetic ears. It was salutary for the Economic and Social Council to be told by the Indonesian delegate that all the efforts it fondly regards itself as directing had so far had "no appreciable effect on the lives of the less privileged populations of the globe." The Council's first practical step to remedy this situation might well be to cut short its own interminable and inconclusive debates, so that the money thus saved could be used by more productive UN organs.

Japan Looks at Peace Terms

JAPANESE politicians have been making a noble effort to sink their differences and show a complete, if fragile, unity in the peace talks with Russia. This by itself is a very considerable feat and a hopeful sign of political responsibility in Japan. Only a fortnight ago a number of business leaders, together with Mr Yoshida's following from the former Progressive party, were calling upon the Liberal Democrat prime minister, Mr Hatoyama, to resign, without, however, giving any indication whom they would like in his place. But it has now been made clear that Mr Hatoyama will stay in office at least until the Moscow talks have finished, although he will have to continue to put up with Mr Shigemitsu as his foreign minister.

The Socialist opposition have reaffirmed their policy of restoring diplomatic relations with Russia if necessary before settling the territorial dispute, and they have said that Mr Shigemitsu's appointment as chief delegate will "cast a dark shadow over the forthcoming talks." But even they have refrained from embarrassing the foreign minister by trying to extract a definite statement of policy from him. Only Mr Yoshida and his following, the diehard section of Mr Hatoyama's party, have continued to press their policy of no compromise up to the moment of departure.

It seems clear from Mr Shigemitsu's carefully non-committal replies to the questions of Mr Yoshida's faction that he is prepared to yield a good deal if necessary. One source suggests that he may try to refer the question of the North Kuriles and South Sakhalin to a conference of the former allied nations, while making an effort to "secure a reservation on Kunashiri and Etoforu." This may mean that he will try to keep open the possible return of these islands to Japan if and when the Americans leave Okinawa and the Bonin group. Mr Khrushchev has stated that the Soviet position on the territorial issue has not changed since the London talks. This policy, if it is not merely a piece of preliminary bluff, seems to be short-sighted. Even if, as the Russians are said to believe, Japan is drifting away from America and towards socialism, a return of the southern Kuriles would give an immense boost at a comparatively small cost to Russia's reputation as a good neighbour in the Far East. Big Brother could then watch benevolently while the Liberal Democrats squabble among themselves about foreign policy, and while the Socialists climb into power from a platform of neutrality, prosperity and trade with Asia. But it seems unlikely that the Soviet government will be clever enough to give back even Etoforu and Kunashiri.

Mr Poole's Bevanites

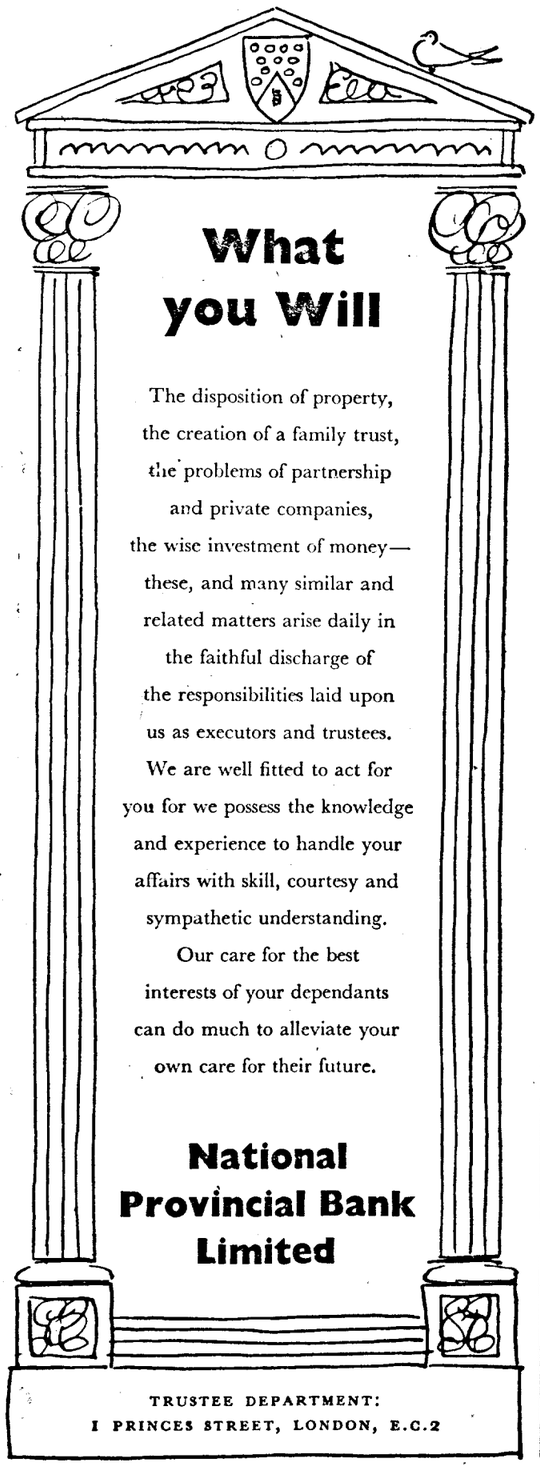
IT would be an exaggeration to say that the middle classes have got out of hand; but Mr Oliver Poole, the Chairman of the Conservative Party organisation, evidently felt last week that the time had come to give them a timely warning. They have been insubordinate at recent by-elections; they are joining—apparently in significant numbers—a deviationist organisation called the Middle Class Alliance; worst of all, certain extremists among them have formed an embarrassing if not dangerous extra-party action group calling itself the "People's League for the Defence of Freedom," which has gone most expensively into print with demands for curbing trade union privileges. What with not voting and frightening votes into the arms of Labour, all this, in Mr Poole's view, has got to stop. It threatens to divide the Tory Front (which draws, according to Gallup poll figures, 25 per cent of its electoral support from the working class income bracket). And the Tory party, Mr Poole insisted as sternly as he dared, is all that stands between the middle classes and Labour's sea-green plan for equality.

Mr Poole sympathised with the burdens of middle-class people in terms which vaguely suggested he was not one of them. But he reminded them that Tory chancellors did try to help them—first by cutting income tax and now by slowing down the erosion of their incomes through inflation. He sought to rally them to the more constructive Conservative aim of further pushing up living standards. But, in admitting that the middle classes had had "less than their fair share of prosperity in the past," he did not promise to make sure that they would get under Tory rule at least their fair share of any future additions to the size of the national cake let alone any rectification of past injustices. That, however, is the positive assurance that the middle classes want—otherwise equality will overtake them anyhow. It is one which it would be indiscreet for Mr Poole to give; he must hope that stirring appeals not to rock the boat in rough water will bring them back into line, and that mild anathemas will cause his Bevanites to stop baiting the unions. They ought to see anyway, without Mr Poole telling them, that it is silly to tell your big brother to punch the head of an even bigger boy.

Holland's Holiday from Government

DUTCH cabinet crises last as long as French governments, say the Dutch. Holland's current cabinet crisis is some seven weeks old. General elections ended the life of the last Dutch government, and there is still no sign of a new one.

The hiatus has almost become traditional. No single party in Holland is large enough to govern by itself. At



DAISEE JUTE

puts her best foot forward

PUT YOUR foot down where you will, you are putting it on jute. For jute lines the lining of your shoes. It backs your carpets. It forms the underside of your linoleum. Surprising, the places jute gets to.

It calls itself twine, hessian, scrim, brattice cloth. It is best known, perhaps, as sacks. It is also string and rope. Are your shoulders padded? Your lapels stiffened? Jute most likely does the job.

Astonishing, jute's versatility. How few there are who give this stuff the recognition it deserves. All over the world, every hour of the day, down-trodden, indomitable, jute is hard at work. Hats off to jute!

JUTE INDUSTRIES LTD.

— makers of jute bags and sacks; twines, cords and ropes; yarns for woven carpets; cloth for tufted carpets and needlefelts, for backing linoleum, for tarpaulins; roofing felt, damp-courses and plasterers' scrim; webbing; and cotton belting.

There may be an application of jute to your business. Why not write to us:—

'I vote,' said Frog, 'for the British farmer!
Where would we be without him—production doubled since 1939, more than half of all
our food now home grown, 60% of...'

BUT TOWN MOUSE INTERRUPTED WITH

I vote for me!

...'and I know exactly where you'd be without the British farmer. Very nice bit of bog you had... before it was drained and planted with wheat. Down with boots!'

FROG 'How wet *you* are! Every extra acre planted means dollars saved. *And* the British farmer grows three times as much wheat per acre as the American farmer.'

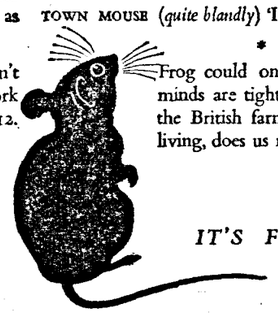
TOWN MOUSE 'What,' said he, 'is that to frogs. And don't tell me again that British farmers often work a 90-hour week for no more than £10 - £12. I do not care. I say, up with paws.'

FROG (*croakless with rage*) 'All right! Up with paws and up with prices too! Let your meat be inferior: your eggs as seasonal as turkey: your milk reserved for the rich! Let us not encourage the British farmer to give us our wonderful food.'

TOWN MOUSE (*quite blandly*) 'I thought you liked flies!'

* * *

Frog could only goggle. For those whose minds are tightly closed will *never* care that the British farmer, in return for only a fair living, does us really proud.



IT'S FISONS FOR THE FARMER

the same time, cross-currents of confessional and historical party loyalties complicate the simpler policy differences which must be resolved when cabinets are formed. Cabinet-building, too, has been given added importance by the presence in recent governments of all the main parties; parliament has tended to become a quiet debating society whilst the real political conflicts are fought out inside the cabinet. The prudent Dutch like to achieve a coalition which will fairly reflect the balance of power and ideas between the member parties for a substantial time. But the price is long and delicate bargaining when governments are formed.

Cabinet-building has been made more difficult this time by the increasing tension between the Labour and Catholic parties which has been evident during the past two years. Before the elections in June the Catholics campaigned hard to gather back into the fold those Catholic voters who had turned Labour. But they failed, and Dr Drees, the veteran Labour Premier, was asked once more to piece a cabinet together.

★

Two main policy differences were for a time the centre of negotiation—rent and defence, where the Catholics backed the defence minister in a demand for heavier spending. Both issues were eventually resolved by compromise. But just when hopes were high, Professor Romme, the Catholic leader, stated new demands, one of which was for a new ministry, to take over certain functions from the Ministry for Economic Affairs, and presumably to be placed in Catholic hands. The Catholic leader had forced on Dr. Drees the choice, either of giving in to demands which he felt were unjustified by Catholic strength, or of giving up his attempt to form a cabinet. He chose the latter.

Professor Romme then took up the task, but Labour quickly rejected his programme. Perhaps a leader of one of the smaller parties will now seek to mediate between them, but once again success seems unlikely unless the Catholics are prepared to give more ground than hitherto. A smaller coalition, say between the smaller parties and either the Catholics or Labour, may be considered, but both have disadvantages. But the Dutch cheerfully believe that some Government will be formed by mid-September, when Parliament reopens.

Peers and Prisons

PRISON reformers will derive some encouragement, however small, from Tuesday's debate in the House of Lords. It is true that many of the criticisms put forward—the overcrowding, the sanitation (or rather absence of it), the lack of work, the shortage of staff—have been made for so long and so often that to find them still justifiable must tend to produce a feeling of despair. The encouraging aspect of this week's debate is that the Government seemed to be much less complacent about them.

Lord Mancroft, Parliamentary Under-Secretary, certainly began by producing the stock official answer to criticisms, giving the number of prisons and detention centres started since the war, the number of new workshops, kitchens, hospitals and chapels, and so on. But he soon abandoned this sort of defence of prison administration, and showed himself fully aware that though lack of money must prevent many needed improvements in physical conditions, a great deal can be done to improve the outlook of the prisons without any extra expenditure at all. For instance, he mentioned the imminent extension of the Bristol experiment, which allows preventive detention men in the third stage of their sentence to work in the city for normal wages and to live in a hostel more or less as free men. He also spoke of the possibility of finding work for local prisoners by the establishment of out-factories for local factories. Again, he realised that prison officers should be given a much more constructive job if the relationship between them and the prisoners in local prisons are to be improved.

Almost every kind of prison reform, whether it is a matter of finding money for new lavatories or finding a job for a man who has been discharged, comes up, as Lord Mancroft said, against the obstacle of public indifference. Until recently, one might have added Government indifference as well; and it is something gained that a member of the Government is at last taking a personal and constructive interest in the subject.

Irish Hairshirt

Our Dublin correspondent writes:

THE deterioration in the balance of payments continues to be the main topic of Irish politics. The Minister of Finance continues sedulously to treat the symptoms rather than the disease itself—with the natural result that the symptoms tend to recur. In March he imposed duties on consumption goods designed to cut back imports by £7 million, but exports have continued to fall so steeply that the balance of payments deficit promises to be as bad as last year. Mr Sweetman is now after another reduction in imports of £5 million, and has accordingly raised the special duties from 37½ per cent to 60 per cent (the preferential rate being changed from 25 per cent to 50 per cent), while applying the levies at the March rate to many goods which escaped at that time.

In Mr Sweetman's defence it must be admitted that he inherits the consequences of the mistaken policies followed by all the governments that have held office in the last ten years. The fall in exports reflects the fall in cattle prices; but that development would not have been so serious if rising domestic costs and indecisive agricultural policies had not combined to price almost every other agricultural product out of the export market. Development of Irish agricultural production for export is the only solution of the balance of payments problem; but it will not be of much assistance over the short run. Capital investment policies of the last few years now far out-run current earning and saving. At last some revision to bring it in line with available resources is possible; and it must be said that a greater proportion of capital expenditure is now going into projects that give some prospect of yielding monetary return. Even so, the volume of saving will fall far short of expenditure, and this must be blamed in some measure on the steady refusal to allow interest rates to follow the upward trend in the United Kingdom. A policy that on one side calls for more saving and on the other subsidises borrowers is a curious example of doctrinaire rigidity.

Missionaries Under Fire Again

How seriously will Indian public opinion take the startling judgment on the work of missionaries that has been published by an official committee of inquiry? The committee's report, based on two years of investigation, states that

> Evangelisation in India appears to be a part of the uniform world policy to revive Christendom for re-establishing western supremacy. . . . The objective is apparently to create Christian minority pockets with a view to disrupting the solidarity of the non-Christian societies. . . .

When this committee was appointed in 1954 by the government of the Central Indian state of Madhya Pradesh, the air was heavy with allegations about subversive activity by foreign missionaries and with complaints by the missionaries themselves about hostile actions on the part of local authorities. Since then, the Indian government has imposed some strict regulations on foreign missionaries, notably a prohibition on working in frontier districts—although there are many established Christian congregations there; while the churches for their part have increasingly recognised the need to become less dependent on external support, and the principal denominations have strengthened their local roots. The general atmosphere is much better now than in 1954. It will be sad if the belated result of the Madhya Pradesh inquiry is to jeopardise this improvement.

The danger lies not so much in the committee's recommendations for further restrictions on missionary work—though these would, if adopted, cause much senseless suffering, including the closing down of badly needed orphanages; the most harmful effect of its sweeping generalisations is that they provide ammunition for intolerant elements in India which detest the doctrine of the secular state propounded by Mr Nehru and by other liberal minds. "Conversion muddles the convert's sense of solidarity with his society," says the committee. "There is a danger of his loyalty to his country being undermined." This is not only an odd argument to advance in a secular state, but an ironic one. The ultra-orthodox Hindus who campaign against a secular India are the very people who have failed to give any such sense of solidarity to the untouchables, aboriginals and hill peoples to whom Christianity has offered a way out of their stagnation.

Colour in the Factory

The fears that were expressed when the first big stream of coloured workers reached Britain seem latterly to have been allayed; at any rate, fewer complaints are heard about rich Jamaicans buying up houses or, at the other extreme, of poor Jamaicans undercutting British trade unionists. Certainly, a small inquiry* in Birmingham suggests that, on the whole, the first 15,000 coloured workers there are being absorbed without much difficulty.

The investigators found little prejudice against coloured workers on the part of employers; such as there was tended to be based on ignorance or on a wholesale condemnation because of one failure or on fears that it would upset their existing white labour or prejudice its recruitment. But most of the employers interviewed who had recruited coloured workers were satisfied with them, both with their performance of a job and with their relations with their fellow white workers—though they tend to be cautious about up-grading them to skilled or supervisory jobs. The attitude of the trade unionists was more ambivalent. Most of them affirmed the principle of no discrimination; on the other hand, it was quite possible for the same branch of a union declaring its adherence to this principle to pass a resolution calling for a stop to the entry of foreign labour. It is perhaps significant that trade union prejudices are directed not against the colour of immigrant workers but against them as outsiders liable to make demands on Birmingham's housing.

But, though the report is, on the whole, reassuring, it ended twelve months ago. Since then, immigration of coloured workers has gone ahead, and the total number in this country must be far more than the 100,000 or so estimated for the end of 1955. It may well be three times that number. Secondly, it is still far from certain what will actually happen to coloured workers if there have to be more dismissals. However much employers and trade unionists uphold the principle of "last in, first out," regardless of colour, employers will find it difficult in practice to keep on coloured workers while they are laying off white ones.

* Employment of Coloured Workers. By Leslie Stephens. *Institute of Personnel Management.* 3s. 6d.

French Joint Stock Mania

In the present state of France there is much to make us rejoice, but much also to awaken our conjectures and even excite our fears. It is gratifying to see the commercial and industrial spirit gradually displacing in the affections of the nation the former inordinate desire of war and conquest; to see, also, the feelings of cordiality which continue to subsist between England and France,—feelings which are at once evidenced on our part, and augmented on hers, by the noble exertions so generally made throughout the United Kingdom to relieve the sufferers by the inundations of the Rhone and Loire and their tributaries. But these inundations afford further food for reflection. They suggest an inquiry as to the means of the nation to encounter so costly a visitation,—following, moreover, in the footsteps of an expensive war; and this leads to a consideration of the anomalous form in which the industrial spirit has manifested itself of late in France, and the effects which it is calculated to produce on the resources of the country. . . . There, especially within the last year or two, an utter mania prevails on the subject of companies, and the public seem to be impressed with an idea that nothing can be or ought to be successful unless conducted by such. Companies are starting up like mushrooms, in every conceivable department of industry, from the highest to the lowest. Not long since we saw one advertised for washing clothes,—a business, we are of opinion, it would be more advisable to relinquish to the unaided private enterprise of washerwomen. The best and the worst feelings of the people, their virtues, passions, and prejudices, are all enlisted in the support of the Joint Stock mania. . . . The consequence of all this has been that a deal of capital in France has been diverted from its accustomed channels of expenditure.

Letters to the Editor

Living Like a Lord

SIR—In your issue of July 28th you say that the new nobility will fall no nearer to the gutter than the welfare state allows. If the new peerage is to be one which depends upon state pensions and doles, then the whole idea of nobility has gone. One of the reasons why I oppose the further creation of hereditary peerages is that under modern conditions it is hard enough for anyone, even a rich business man, to leave sufficient to his heir to enable the latter to live in any way resembling the proper style of a peer.

In fact many of the new peerages are bestowed upon those who have distinguished themselves not in business but in politics and trade union affairs. Suppose that the first of a new line holds a post in a nationalised industry at about £8,000 per year. This is good and he can uphold his status as long as he is in the post which carries this salary. But when he retires he draws at best a pension, since few people can save much nowadays. His son and heir cannot look forward to the inheritance of his father's post, and may be unable to earn more than a well salaried minor post affords. He cannot hope to live in as good a style as his father and will inevitably be lower in the social scale though provided with a technical nobility. The absurdities of Mr Gaitskell's theory as to equality will receive a forceful exposition because the new nobleman will be lower in financial position than many commoners.

It is one thing to acquiesce in the deterioration in the position of the older families, but deliberately to create new families of nobility which are from the outset deprived of means sufficient to uphold their ennobled status, is to flout the idea of creation by the Crown and to provide the world with yet another example of Britain's decline. What makes matters even worse is that the victims themselves seem so pathetically anxious to perpetuate their peerages. One reads in the press of peers who express a desire for an heir to their titles, though they must know that such an heir will have little to inherit but a title. Life peerages on the other hand would suffice for the reward of the deserving, and if a life peerage was considered not enough in the way of merit, then a hereditary peerage could be created with means to endow it.—Yours faithfully,

L. G. PINE, *Managing Editor. Burke's Peerage Ltd.*

The Price of Enosis

SIR—In a Note published in your issue of June 29th, the writer, forecasting the economic consequences of the union of Cyprus with Greece, infers that "Despite past neglect"—on the part of the British Colonial Government of Cyprus—"Enosis could scarcely be expected to bring economic benefits to Cyprus."

We have always made it clear that our case is essentially one of morality and justice, and Sir George Hill rightly points out in his book, "A History of Cyprus," Vol. IV, page 490, that "The desire for union (of Cyprus) with Greece is not for any material benefits it would bring." This thesis does not in any way imply economic ruin for Cyprus. On the contrary there are basic reasons to believe that the workers and peasants who constitute 85 per cent of the population of Cyprus will be in a better financial position in the event of union with Greece. National insurance, for instance, has not been introduced to Cyprus while in Greece it is very well organised. In addition, owing to the care of the Greek State, agriculture in Greece has made great strides and it is on more modern lines than it is in Cyprus. As a result of the modern methods applied in Greece, production is continually increasing, having exceeded the prewar standards despite the destruction caused during the war years, while official statistics show that production in Cyprus is either stationary or on the decrease.

There has been not only stagnation but a decrease of production in Cyprus during the last 50 years despite the fact that the population has been doubled in the meantime. You also remark that "The Cypriot peasant would also lose his small but significant tariff preference in the British market." Yet during the last five years British exports to Cyprus amounted to £52,805,000 while the imports from Cyprus were only £21,825,000. The deficit, therefore, is £31 million. Consequently Britain, not Cyprus, is benefiting from the trade balance between the two countries. In contrast, the trade balance between Cyprus and Germany is in favour of Cyprus. During the last five years Cyprus exported £24,668,000 worth of goods to Germany while it only imported £4,921,000.

The writer concludes by saying "The British base, already the driving force of the island's economic life, would become more vital to it than ever. Fortunately the Greek Government seems aware of this." But should strategic bases become the driving force of a country's economic life? There is a gap in the trade balance of the island between 1945 and 1954 to the tune of £62,223,000. The cause of this gap is entirely the failure of the Government to develop agriculture and industry, thus increasing exports and reducing imports. This gap is bridged by emigrants' remittances, tourism and expenditure on military installations of temporary nature. The compulsory dependence of the economy of the island on the existence of military bases is a disturbing feature involving great danger to the economy of Cyprus.—Yours faithfully,

PHIDIAS G. DUKARIS
UK Secretary to the
London, W.1 Ethnarchy of Cyprus

"Faster, Faster . . ." in Bahrain

SIR—I read with considerable interest the article that appeared in your issue of July 14th entitled "'Faster, Faster' . . . in Bahrain." I would, however, like to draw your attention to some inaccurate statements that appeared in it.

In the fourth paragraph you say that "last year and early this year the authorities met several of its [the Committee of National Union] demands." In fact, while a certain number of changes were carried out before, in October of last year, at a meeting held between the Ruler, with his adviser and a senior member of the ruling family, and two representatives of the committee, agreement was reached on all points then in dispute and concerned with the criminal code, the judiciary, the councils of education and health and the police force. This agreement was signed by representatives of both parties. The Government had already some six months before organised the committee that was at the time drafting the labour law. The committee did not put forward any demand for a legislative council and intimated that the subject had been shelved.

As is mentioned in the article, elections were subsequently held for half of the members of the councils of education and health. I would like to point out, however, that when the names of the nominated members were first announced, they included only two members of the ruling family on the Council of Education, and these were later withdrawn from the council.

In order to settle further differences that appeared to have sprung up, the Ruler met the representatives of the committee during the month of June, and he agreed to make some changes to meet their requests. These included the removal of certain members of the councils of education and health, and the decision that the presidents of each should be elected from amongst their number. The Ruler also agreed to remove the censorship of the press, as requested by the committee. However, the committee still refused to encourage the elected members of the two councils to hold their meetings, because of their objection to the Council of Administration, and it was for this reason and not because of any action of the adviser of the Bahrain Government that the councils of education and health have not yet met.

The Council of Administration was itself not instituted because of any demand from the public, but was appointed by the Ruler to make recommendations to him and to assist him in affairs of state. It was for this reason that the council consists only of Government officials and certain members of the ruling family with considerable administrative experience.

The Committee broke off its conversations with the Ruler towards the middle of June, but the Bahrain Government then publicly expressed its desire that the conversations should be renewed and the negotiations carried to a successful conclusion.—Yours faithfully,

JAMES H. D. BELGRAVE,
Public Relations Officer,
London, W.1 Bahrain Government

Party Paradox in Canada

SIR—Your Canadian correspondent, in your issue of July 7th, says that "the Conservative opposition" in the Canadian House of Commons, "with 50 odd members, supported by a score of Socialists (CCF), continues to demand that the Liberals, with their 170 members and their 21 years of office, should resign immediately."

The fact is that the Conservatives and CCF have never once "demanded" that the Liberal Government "should resign immediately." That would be obviously impracticable and indeed preposterous. What they have demanded, and continue to demand, is that the Government should dissolve Parliament, a very different course of action, and perfectly practicable.—Yours faithfully,

Ottawa, Canada EUGENE FORSEY

Grey Skies for Aircraft

SIR—In your article of June 30th you state first that civil airlines would get Government support only if they get backing from one of the corporations, and finally you ask "Are conditions in the aircraft industry now such that the last flicker of competition can be extinguished?"

I suggest that one of the quickest ways to extinguish competition is for two state corporations to be allowed to continue as virtual monopolies. If we encourage private enterprise airlines to develop, we are going to get these companies, which in many cases are backed by a great deal of shipping money, to order aircraft independently of any Ministry, thereby injecting competition not only amongst airline operators, but also amongst the aircraft manufacturers.—Yours faithfully, HAVARD GUNN

Burnham, Bucks

Lessons of Poznan

SIR—You publish in your issue of July 14th a letter from Mr Godfrey Lias, who writes, *inter alia*: "The riots in Czechoslovakia were not confined to one city, as in Poland and East Germany. . . ."

Mr Lias's memory is at fault. I happened to be in Germany during June 1953, when the East German rising occurred, and must, in the interests of historical accuracy, insist that it was by no means confined to one city. The West German radio ensured that news of the East Berlin rising was immediately known throughout the Soviet-occupied zone. Workers in Magdeburg, Chemnitz, Leipzig, Halle and Dresden, as well as other industrial centres, at once followed the East Berliners' example, setting fire to *Volkspolizei* barracks, occupying town halls, and demanding removal of the Communist regime and free all-German elections.

Many East German workers, besides Berliners, lost their lives in the rising, or by subsequent judicial murder. Considering that they had been subject to twenty years of Nazi and Communist dictatorship, their unbroken spirit was all the more remarkable.—Yours faithfully,

YOUR SCANDINAVIAN CORRESPONDENT

Kashmir and Goa

SIR—In reply to Miss M. da Silva's letter of June 16th, I am of Hungarian origin. However, this gives me the advantage of recalling from my early history lessons that Hungary had for almost 200 years been part of the Turkish Empire and, afterwards, for more than 200 years, a province of Austria. Now either Miss da Silva is right and the Magyars had for two centuries been transformed into Turks and, subsequently, turned for another two centuries into Austrians—or I am right and one *can* "subjugate a whole population against its will," Hungarians or Goans.

Catholics, altogether one per cent of the population in the Indian Union, do have their difficulties and—India being a free country—their grievances are occasionally voiced by the Prelates of the Church in public. However, all this did not stop Cardinal Gracias, a Goan himself, from claiming Goa as an integral part of India at a public meeting two years ago. Should the hardships facing Catholics in India be so grave indeed, what would explain the presence of the thousands of Catholic Goans there?

In theory, the caste system is outlawed in the Union as it is in Goa; in practice, it still survives in Goa, as it does in the Union. However, this in no way interferes with "the full rights of free worship" enjoyed by Catholics in the Union—a state of affairs I was glad to witness during my journey all over India in 1954.

Mr Nehru—whom Miss da Silva accuses of pretending "to be the single moral authority in the world"—does certainly tolerate more criticism from his own countrymen than Dr Salazar does. I for one cannot blame him for wanting to extend the democratic institutions, enjoyed by people in the rest of India, to the inhabitants of Goa.—Yours faithfully, GEORGE A. FLORIS

Country Banking in the Industrial Revolution
L. S. PRESSNELL
'In presenting this well-documented account of the role of the country banks between 1760 and 1844 Dr Pressnell has successfully completed a task that would have daunted many lesser spirits. . . . The outcome of his labours is a first-class piece of scholarship and research; it has much enriched knowledge of the evolution of the financial mechanism and has opened up many promising avenues for further research.'

Economic Problems of the Church
From Archbishop Whitgift to the Long Parliament
CHRISTOPHER HILL
Much attention has been devoted to the economic problems of landowners in the two generations before 1640. Meanwhile ecclesiastical conflicts have continued to be discussed in terms of 'Puritan' opposition to episcopacy. But the Church was also an economic organization, with its own problems. Mr Hill looks at some of the causes of friction between laymen and clerics, and between the clergy themselves, to throw fresh light on the causes of 'the Puritan Revolution'.

From Quadrant to Octagon

HISTORY OF THE SECOND WORLD WAR: *Grand Strategy Volume V.*
By John Ehrman.
Her Majesty's Stationery Office. 651 pages. 42s.

THIS volume of the Official History of the Second World War is the first to appear of the six on "Grand Strategy," that is to say, on the central direction of the war. It extends over the period of the two Quebec Conferences—Quadrant in August, 1943, and Octagon in September, 1944. By the earlier of these dates Italy was virtually out of the war, and everywhere the tide had turned sufficiently for the Allies to be assured of the ultimate defeat of the other two Axis powers. What, then, were the undertakings which would most quickly bring about the inevitable end?

The Quadrant Conference reaffirmed the priority of operations against Germany and prescribed as the central feature of these a landing in force in Normandy, in accordance with plans already prepared. Supplementary to this were operations on the mainland of Italy, the capture of Sardinia and Corsica, and a landing in the south of France. Activities in the Balkans were to be limited to victualling guerillas, commando raids and strategic bombing. The plans for Normandy (Overlord) suffered no fundamental alteration thereafter and provoked comparatively little discussion at the top. The date was put back a few weeks and the initial assault was strengthened, and that was about all. The sideshows, however, occupied far more of the attention of staffs and ministers. This was due largely to Mr Churchill's intense desire to preserve flexibility, to take advantage of opportunities whenever and wherever they arose, and to pay some regard to political factors in the Balkans. So strongly did he press his ideas on occasion that the Americans complained that the British were trying to "ditch Overlord." In the main the American view prevailed and the Italian campaign suffered from a form of pernicious anæmia, while no significant operations were undertaken in the Balkans or the eastern Mediterranean. Jobbing back is a futile occupation, but few would deny that the western world would today be in better case had Mr Churchill had greater success with the President and his advisers.

Quadrant left the sole responsibility for operations in the Pacific to the American chiefs of staff In South East Asia the plans were vague, and the arrangements for command were unbelievably complicated. There were three kings in this Brentford—Admiral Mountbatten, Vinegar Joe Stilwell and Chiang Kai-shek—and Mr Ehrman seems to imply that they scarcely ever agreed upon anything. This is perhaps not surprising. The prime concern of the Americans was to keep China in the war in order to provide a base for bombing Japan and to prevent the Japanese from carrying on the fight on the mainland after their home islands had been captured; the British, on the other hand, were anxious to re-establish themselves in Burma and Malaya—an objective which was not well viewed by the anti-colonialists in Washington. It is a sad commentary on these conflicting ideas that China was saved from Japan only for the benefit of world communism, and that India, Burma and large parts of Malaya are deluding themselves that they can sit indefinitely on the fence between Russia and the West.

These inconsistencies of aim in South East Asia and in the lesser theatres of Europe provoked great argument at the highest levels, and Mr Ehrman faithfully records it all. He also gives a full account of the disputes between Mr Churchill and his own chiefs of staff about the role of Britain after Germany had been defeated. More space is therefore devoted to these controversies on the lesser issues than to the major projects on which there was throughout substantial agreement. The author regards this as unavoidable. It is certainly unfortunate, for it gives an impression of constant bickering not only between Mr Churchill and his chiefs of staff, but also between the British and the Americans, which is far from a true one. The relations between the Minister of Defence and the British chiefs of staff were intimate and mostly cordial; and the Western Allies, whatever their area of disagreement, achieved a miracle of collaboration in what Mr Ehrman rightly calls the greatest conjoint operation in the history of war.

If Mr Ehrman has been unduly forthcoming in these respects, there is one in which he has been over-reticent—the Montgomery-Eisenhower argument as between the "single thrust" and the "broad front." This comes very near to "Grand Strategy," and it is arguable that the wholehearted adoption of Montgomery's plan would have ended the German war in 1944. The Germans themselves think so at any rate. But the very small instalment of it that was grudgingly tried at Arnhem failed, and thereafter the war was bound to last well into 1945.

It would be ungracious to end this review here. Mr Ehrman gives fascinating accounts of the Cairo and Teheran Conferences, of the attempts to entice Turkey into the war, of the terrible betrayal by the Russians of General Bor's Warsaw rising, and so on. For these and much else we can be grateful.

Spotlight on a Prince

A PRINCE OF MANTUA.
By Maria Bellonci. Translated by Stuart Hood.
Weidenfeld and Nicolson. 312 pages. 25s.

BETWEEN the bald uplands of objective historical research and the lush valleys of the historical novel there is a strip of terrain encroached upon by both. Along the lower edge of this strip move Mme. Oldenbourg and Miss Prescott; along the upper strides Dr Bryant. While writing her last book to be published in this country—"The Life and Times of Lucrezia Borgia"—Maria Bellonci kept exactly to the middle; carefully amassed facts were cautiously brought to life by imagination and—for Signora Bellonci writes very much as a woman—some intuition. Her present book was conceived a little further down the slope.

Its sub-title is "The Life and Times of Vincenzo Gonzaga" (Vincenzo I, duke of Mantua 1587-1612). The "Times" are very strictly subordinated to the "Life," and are only drawn upon to shed light on the hero. Thus the cultural life of Mantua—important from the points of view of theatrical and musical history and the growth of the ducal art collection—is dealt with only impressionistically; almost nothing is said about the economic life of the city, or about the effect of the constitutional and military changes introduced by Vincenzo's father, Guglielmo. There is more about foreign policy; but, here again, while the spotlight follows the hero, we are left to guess at the significance of the shadows on the rest of the stage.

It is from the "Life," then, that the book must be judged. The subject is admirably chosen. Vincenzo was a complex and flamboyant character, Mantua at the height of its fortunes and splendour. The sources for Mantuan history in the sixteenth century are immensely rich, with archives admirably ordered, containing the gossip and business of an exceptionally able class of bureaucrats and diplomatists. We can assume that many of the author's picturesque and intimate touches are based on the observations of contemporaries. Not all: "Guglielmo could feel from the physical immobility of his pose [the Duke was praying] how his thin blood traced the accursed curve of his back"—this must be intuition; "the guests at Colorno were immersed in the ripe odours of autumn, the sun's last appeal to the earth's innermost humours. They passed from rich days of abundance to long, cool, exciting nights played out on a gamut of evocative notes"—this is certainly imagination. But while much of the system, the definiteness, the ease of reference of a straightforward biography are missing, the author does succeed where this often fails; she recreates the impact events had on contemporaries, suggests the true relation between private feeling and public action, gives to scandal the weight it carried at the time. And all this with a seriousness of purpose that entitles her to a respect that no amount of literary brilliance could secure for the author of a mere *chronique scandaleuse.*

The reader who comes to this book without a previous knowledge of "Lucrezia Borgia"—preferably in the original from which the English version was much abridged—might well be put off by the cloying, knowing tone of parts of the narrative. The publishers do not help. They do not say when the original was published or whether (as with "Lucrezia Borgia") they have omitted notes. There is no bibliography. The reader of a work in a genre as personal as this should surely be given every possible indication that the author is trained in the severe business of historical research.

Test Pilot's View

THE QUICK AND THE DEAD.
By W. A. Waterton.
Frederick Muller. 237 pages. 15s.

SQUADRON LEADER WATERTON was chief test pilot for the Gloster Aircraft Company for seven years until his summary dismissal by the company in March, 1954. His time with Gloster spanned the period during which the British aircraft industry tumbled ignominiously from the high peak of success reached in the late 1940s into a series of mistakes, delays and disappointments that have left not only the Royal Air Force, but also the British Overseas Airways Corporation, with yawning gaps in their equipment and lost the industry much of the export markets that once seemed stretched out at its feet.

The function of a test pilot is to fly new aircraft in a variety of conditions to see how they behave in use. There is no other way of telling whether a design will do what was expected of it on the drawing board. Aerodynamics is not a precise science, and the early post-war policy of skimping on basic research made it even less exact in this country than it need have been. Consequently, the work of test flying can be appallingly dangerous, with long periods of monotony offset by short intervals of real terror. A skilled test pilot can sometimes get the better of a vicious aeroplane under conditions likely to kill a service pilot of average experience. It is then hoped that, on the basis of the test pilot's report, the aircraft can be modified to correct its vices.

The basis of the public squabble now going on between Squadron Leader Waterton and his former employers is simply this: the author believes that he did not get sufficient hearing when he reported on the misbehaviour of the aircraft under his supervision. Where matters hardly simmered with the Meteor—which was a splendid aircraft in its day—they reached boiling point over the delta winged Javelin, an aircraft that has had more than its share of development troubles, in which two test pilots have lost their lives and which threw off its controls when the author was flying it—to land him in a blazing inferno of exploding fuel tanks with a jammed cockpit canopy. For this work he has been paid, for the greater part of his time, £1,500 a year.

Relations between test pilot and design staff inevitably follow a series of sharp ups and downs along with the fortunes of the aircraft unless there is exceptional tact and understanding on both sides—which does occur in one or two companies. Squadron Leader Waterton does not pretend that his rough tongue went unnoticed. But he has been known as a mature and careful pilot; and even if one presumes that he overplayed his role of devil's advocate, it is disturbing that a senior test pilot should part company from his employers in so bitter and disillusioned a frame of mind. One man's grudge does not condemn an industry, or even a company, but behind this personal record lies the wider issue of why, repeatedly, glaring major defects in the behaviour of new aircraft in recent years were brought to light only after those aircraft were handed over for trials conducted by the Ministry of Supply on behalf of the services. This is one test pilot's view, bluntly and crudely put, of why such things happen. It is not everyone's explanation; but equally, it is one that a number of people, less articulate than the author, have thought might have a good deal of substance.

Reflection on Politics

POLITICAL THEORY.
By G. C. Field.
Methuen. 314 pages. 18s.

THE academic study of politics is in a queer condition. There is plenty of empirical investigation of institutions, some of it penetrating but much of it very dull. But there is a lack of discussion of political values. Perhaps this is because of the scorn heaped by linguistic philosophers upon the notion of agreed political values. Perhaps it is because of the stern insistence of the sociologists that if there are any communal values they must be social and cannot be confined to politics. The student of politics may as a result turn into someone who amasses detail without being able to discuss whether the detail has anything to do with goods and bads. If this happens, a higher fence than usual will be put between such students and their fellow-citizens, since the discussion of political values is not likely to cease in the community at large.

The late Professor Field's book runs counter to these tendencies, and does so in a way that is scholarly, modest and persuasive. It represents the reflections on politics of a professional philosopher, developed during forty years of lecturing. The whole tone is quiet and reasonable; there is continual emphasis that absolute values are not at stake, but that questions of degree may, and often should, become questions of principle; and there is a cool insistence that politics is a field in which experience is to be preferred to dogma.

No effort is made to contain the facts of politics within a single theory of behaviour or a single moral theory. The author encourages his readers to rake over the contents of their minds to find experiences which can bear the weight of tentative generalisations about what might be good and bad conduct in politics. The book has no obvious plan, but when he has finished it the student will find that he has been introduced to the main historical currents of political thought, has seen how words like "state," "sovereignty" and "consent" are used, has tackled some of the problems and criticisms of democracy, and gained a sound appreciation of the position of nations one against another. Certain values have been laid before him—tolerance, free discussion, popular participation—but they have not been shoved down his throat.

Mr Field evidently considered that fanaticism was undesirable, and so was iconoclasm. His approach is likely to appeal to young people who dislike fanaticism but are uncomfortably aware that the destruction of all political values leaves no protection against political hucksters, tricksters and bullies.

Versatile Poet

HEINRICH HEINE.
By William Rose.
Oxford University Press. 170 pages. 18s.

HEINRICH HEINE has worn well, for he is perhaps the first major poet whose career is characteristic of that of the modern man of letters. Journalist, critic, political theorist and professional exile, Heine was both an image of his time and one of its shrewdest recorders. As fine a pamphleteer as Hazlitt and as subtle a judge of nineteenth-century politics as Stendhal—whom he resembles in his elegant radicalism—Heine seemed to attract to his person the principal actors and currents of feeling in the fascinating period between the end of the Napoleonic adventure and the beginning of modern socialism. And being a Jew, he was a man especially qualified to consider France and Germany as objective realities, as countries in which he lived but to which he did not owe an ultimate fealty.

Mr Rose is amply justified, therefore, in studying Heine's political and social attitude and his complex feelings towards Judaism. Perhaps, the only difficulty is that both subjects are so large that a full treatment of them, and of the relation between them, would require a biography. As far as Mr Rose's study goes, it is sound and illuminating. It will serve as a valuable corrective to some of the exaggerated accounts of Heine's relations with Marx and early communism, and it sets out the main facts pertaining to Heine's ambiguous relations with the

regime of Guizot. But it is a pity that Mr Rose does not examine more closely the politics in some of Heine's poetry—which is, after all, the essence of his genius. The essay on Heine and the Jewish problem is more satisfying and in it Mr Rose has marshalled the essential evidence. It is an intriguing question whether Heine's ambiguous feelings towards Judaism account for his failure to write the "Rabbi von Bacharach." The first two chapters of this intended novel are a splendid prelude to what should have been a very fine novel indeed.

Perhaps a word of praise for the Clarendon Press would be in order. The extensive German quotations have been carefully printed. In all too many books by even the most reputable English and American publishers, a quotation in a foreign tongue is an invitation to the most outrageous errors.

One Wage and Another

THE EVOLUTION OF WAGE STRUCTURE.
By Lloyd G. Reynolds and Cynthia H. Taft. Section by Robert M. Macdonald.
Yale University Press. London: *Cumberlege.* 410 pages. 40s.

JUST why one man should be paid more than another is not only among the most fascinating of problems for social science: it is also among the most embarrassingly realistic. Yet it has been a frequent vice of economists to interpret wage-differences less from the results of detailed study than by reference to pre-established concepts. Since labour is considerably more than a commodity, wages present a field in which non-economic factors are of major importance. The attempt to fit all the phenomena of wage-differentiation into a preconceived framework has often done less to explain them than to explain them away in a manner comforting to professional omniscience.

This book on wage-differentials has the great merit that it is based on a wide survey of wage-trends and contains a genuine and interesting attempt at theoretical modification. Its hard core is two series of studies—one analysing wage-movements in four major United States industries, the other comparing the general trend of wage-relativities in North America with that in three European countries—Sweden, France and Great Britain. The first group presents a most intriguing question: the four industries concerned are railways, steel, cotton textiles and one more recently organised manufacturing trade. But the trends Professor Reynolds and Mrs Taft describe correspond so closely to those of wage-differentials in their British counterparts that one is tempted to ask whether the common structure and circumstance of particular industries may not be more important than their differing national environments.

The group of general international comparisons is valuable as a broad survey. But, in detail, if the British section is a guide, it illustrates one of the special problems of wage-study. The mere complexity of the subject involves the risk of error if the inquirer ventures far outside his province of native intimacy. Leaders of industrial relations in the coal, jute, cotton and footwear trades would be surprised to hear that one finds no instances of British wage-structures being remodelled by joint agreement. The annual cycle of wage-adjustments has become so marked a feature of the British economy that it is difficult to see how "wage-rounds" can be thought to be less frequent than in the United States, where long-term contracts seem increasingly common; and to attribute the final collapse of "wage-restraint" to a rise in the cost of living after the middle of 1950 is especially misleading, since no such rise occurred until after "wage-restraint" broke down.

These may be sorry factual quibbles to raise against a noble effort. The novelty of the writers' theoretical interpretation lies in two things. One is their attempt to short-circuit the problem of apparently conflicting social and economic pressures on wage-differences by distinguishing instead between "individual" and "organisational" behaviour. The distinction may well be useful for supplementary analysis: the economic behaviour of monopolies is notoriously different from that of competing individuals. But just how it resolves the fundamental problem never becomes clear. In practice, the writers themselves rely heavily on *post hoc* economic explanations of the old type. Their more refreshing suggestion is that the effects of trade union action on wage-differentials are to be appraised, not by comparison with some imaginary economic world of "perfect competition," but against what the really far from perfect economy would be like in the absence of labour organisation. Trade unionists, not least, may be astonished at the judgment that, in a world where the competitive struggle has weakened, their movement has in some measure replaced it as the "hidden hand's" tool for manipulating the economy to an ideal adjustment.

Shorter Notices

SUICIDE IN LONDON: *an Ecological Study.*
By Peter Sainsbury. Maudsley Monographs No. 1.
Published for the Institute of Psychiatry by *Chapman and Hall.* 116 pages. 15s.

In this monograph Dr Sainsbury reports the results of two most painstaking researches into the social causes of suicide in London. The first is a comparison between the boroughs in their suicide rates and in various indices of their social characteristics. The other is a detailed study from the coroner's records of 400 suicides in North London during the years 1936-38. This period was chosen because it approximated most closely to that of the "New Survey of London Life and Labour," on which the author leans heavily in the first part. Although two decades and a war have intervened, suicide rates and local social differences seem to have changed little.

Dr Sainsbury has been able to show that high rates of suicide are related to what he calls the social isolation, mobility and disorganisation of a neighbourhood, and not to poverty, overcrowding, unemployment, and juvenile delinquency. This distinction has never become apparent in several well-known studies of American cities like Chicago, whose centres yield high rates for all these factors as well as for suicide and mental disorder.

Although Dr Sainsbury is mainly concerned with social determinants, he has not neglected other causes of suicide. For example, there was a recognisable mental disorder in 40 per cent of the cases.

The book contains a mass of detail which will intrigue even the most knowledgeable Londoner: Holborn, for example, has almost three times the suicide rate of Greenwich. But those who want only an outline of the picture will find one in a summary which Dr Sainsbury has provided for the current number of the *Howard Journal* (published by the Howard League for Penal Reform). Here also is an article by Professor Stengel on the subtle differences between suicide and attempted suicide.

★

BRITAIN IN MALTA: *Volumes I and II.*
By Harrison Smith.
Progress Press, Malta. 274 and 222 pages. 26s. 6d.

This most detailed study of Anglo-Maltese relations at the peak of the "Imperial period" in British history will not cast much light on the problems of Anglo-Maltese "integration" that lie ahead; but it serves to emphasise how very deeply rooted are Maltese traditions and memories in Mediterranean culture. Dr Harrison Smith does, moreover, emphasise the importance of Italo-Maltese ties, and their impact on Anglo-Italian relations at a time when it looked as if Britain might stand alone against Europe while taking a hiding from the South African republics. The main value of the book is in its detailed study of the early working of a colonial representative government, the strength of feeling for the Italian language, and the peculiarities both of Joseph Chamberlain's methods as a Colonial Secretary and of Maltese (or Latin) democratic methods, all of which, by 1903, set Malta back to direct rule.

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

End of Term

Washington, D.C.

IT is not easy to judge fairly the achievement of an American Congress. The session which ended last week had five major pieces of legislation to its credit: an imaginative highway programme; a "soil bank" scheme that really looked as if it might go some way towards solving the farm problem; the Upper Colorado storage project, a vast development plan affecting five western states; federal insurance against disastrous floods such as occurred last year; and an important extension of old age pensions and disability insurance.

The Republican Administration can take credit for the first four items although the Democrats rewrote the financing arrangements for the highway programme and claimed with some justice that the Republicans had stolen the "soil bank" from them. The pension legislation provided one of the few occasions on which the Administration felt it necessary to resist Democratic generosity to the voters. The Administration was almost completely upheld on fiscal matters and, with reservations, on foreign policy and defence.

Compared with an average session of Parliament, with its much neater and smoother processes, this would seem to be a fair accomplishment. Yet this Congress, as has so many of its predecessors, leaves behind it a sense of failure. One reason for this is the cacophony and diffuseness which characterises the congressional process. Such an ambitious shopping list of legislation is handed down by the President in each annual message on the State of the Union, so many committees hold so many hearings on so many Bills that the final product must seem disproportionately modest. An immense amount of time is wasted at the beginning of each session, with the House of Representatives meeting only two or three times a week and the Senate wrangling futilely over constitutional amendments; this year it was an unwieldy scheme for revising the method of electing Presidents. Still more time is wasted by the insistence of Congress on passing authorisations for such controversial measures as foreign aid and public housing for one year only, so that they have to be debated afresh in every session.

Many of the items on the agenda come back year after year. No matter which party is in office, the executive always wants action on these old faithfuls and the legislature can never get around to them. Sometimes the measure is held by a committee for session after session, like a flower waiting to be pollinated, for the moment when a busy politician will alight with bargains and combinations that will supply it with enough fruitful votes on the floor. In some cases, notoriously that of reform of the immigration system, the obstruction of a single obstinate man, strategically placed, may be enough to prevent progress. In others, as for example home rule for the District of Columbia, the proposal is in the clutches of a committee which has ulterior motives for being less sympathetic than the body of Congress.

★

But this is the tale of every Congress. There are three substantial reasons why this particular session should have earned an equivocal reputation. First and foremost Congress failed the country on the vital issue of education. This year there was a general demand, fortified by the White House conference on education and the Administration's belated recognition of the crisis, for grants from the federal government to help bridge the deficit in the construction of schools. It all came to nothing, partly because a Negro Democrat insisted on injecting the racial issue into the debate, but principally because of faulty co-ordination on tactics between the White House and the Republican party in the House of Representatives.

Secondly, Congress failed to do anything to protect the rights of the Negro in the South. Both parties frankly played politics over this. The Administration, which is hoping that the elevation of Senator Eastland, an extreme segregationist, to the chairmanship of the Senate Judiciary Committee will shake the Negroes' loyalty to the Democratic party, produced a civil rights programme in April. The Democrats argued, with justice, that if the Administration had really wanted to get the measure through it could perfectly well have produced it in January, particularly as it was almost identical with Bills already filed by northern Democrats. In fact the Democratic leaders wanted above all else to avoid a bitter fight on civil rights which would have split their party down the middle. Similarly, right-wing Republicans were reluctant to antagonise their fellow-conservatives, the Democrats from the South, whose votes they would need to fend off other liberal proposals. In the end both Republicans and Democrats in the House of Representatives gave themselves two opportunities to vote in ways pleasing to Negro constituents, while the Bill itself came up so late that the southern Democrats could afford to treat it with good humour. When it staggered into the Senate at the last minute it was instantly buried by Senator Lyndon Johnson, the leader of the Democratic majority.

The third congressional failure—and the most ominous for America's overseas associates—was the burial in com-

mittee of the Bill authorising United States' membership in the Organisation for Trade Co-operation. This unhappily confirmed the impression made by last year's tariff debates that the most important shift in the balance of political forces shown by this Congress has been the southern Democrats' desertion of their traditional internationalism.

On the more cheerful side there was little sign of that rancorous obstruction of ordinary business which some people had predicted as the result of opposite parties being in control of the Administration and of Congress in a presidential election year. On the contrary, relations between the two were much better than they often are when the same party is in charge of both. This is because the Democratic leaders, Senator Lyndon Johnson, Senator George and the Speaker, Mr Rayburn, were determined to maintain the utmost good feeling between the opposite wings of their own party and the differences between these two wings are far greater than those between either wing and the corresponding section of the Republican party. The Democratic leaders subordinated partisanship to party unity to such an extent, and the President's programme was itself so skilfully contrived to avoid head-on clashes of principle, that many Democrats went away grumbling that the session had provided little for them to talk about in their election campaigns.

The Republicans, with their long habit of opposition, showed far better discipline in fighting the things the Administration disliked than in backing Mr Eisenhower's programme. And when it came to foreign aid there was at first a mass Republican desertion of the President. This was substantially the Administration's fault because of its unconvincing presentation of American foreign policy, which seemed to members of both parties to have become caught in a groove. Later, in the Senate, the Administration partially recovered the day, but at the cost of a sharp warning from the Democrats that they would not carry the President's burden much longer without more consistent effort from his own party.

Finally, on the two matters on which election-year demagoguery might have been most expected—tax reduction and the farm recession—the session ended well. A last effort to restore the discredited system of high rigid price supports for agricultural products collapsed after the President had vetoed the first farm Bill and challenged Congress to enact his popular "soil bank" proposal. And, with the Budget showing a surplus, both parties heeded the call of "fiscal responsibility" and left the spare cash in the till to pay off the national debt.

Steel Peace

THE steel strike which no one minded has ended equally unconventionally in a settlement which pleases everyone. The relaxed approach which has characterised the whole affair has been underlined by the time taken to translate this settlement into individual contracts with the various companies. This delay means that the steel mills will not even begin to get back to normal until next week. The industry has won a guarantee of three years—it wanted five—without a stoppage and can plan for expansion on a basis of uninterrupted work and stable labour costs, with rises linked directly to increases in productivity. The union has also won on matters of principle: for the first time in this industry extra pay is to be given for Sunday work and the companies have recognised their obligation to supplement state unemployment allowances when men are laid off. But what seems to count most with Mr McDonald, the triumphant leader of the steel workers, and presumably counts most with them too, is the very substantial increase in wages and other benefits, which even he admits will give the men an additional 45 cents an hour by the time the contract expires. This is nearly as much as he was said to be asking for when bargaining opened two months ago, and almost certainly more than he expected to get.

The employers' sudden readiness to give him nearly all he wanted, after weeks of intransigence, apparently had three causes. The strike was reducing shipments of iron ore on the Great Lakes, which freeze in winter, and a serious shortage of raw material threatened the steel industry's plans for working to capacity later in the year to make up for the loss in output during the stoppage.

The main provisions of the steel settlement are:—

1. **Length of Contract:** Three years without the usual provision for annual bargaining over wages. A cost of living clause, however, for the first time in this industry, provides for changes every six months if necessary, to match rises in the consumer price index, up to a total increase of 4 cents an hour in wages.

2. **Wages:** Pay increases ranging from 7½ to 16 cents an hour, depending on skill, during the first year of the contract. With other adjustments this means an average rise of 10½ cents an hour. Subsequent increases will average 9.1 cents an hour in each of the two succeeding years.

3. **Other Benefits:** Premium pay for Sunday work, rising from time and a tenth in the first year to time and a quarter in the third; other existing types of premium pay will go up. Supplementary unemployment pay to bring insurance benefits up to 65 per cent of normal earnings for 52 weeks. Increased pension, insurance and holiday benefits.

Secondly, the Administration, afraid that it might be forced to intervene, was secretly urging that a settlement be reached before the national economy suffered and before the election campaign got under way. And thirdly, a record rise in the cost of living during June, announced last week, suggested that price inflation had already begun and that the steel companies need not be afraid that they would be blamed for starting a new upward spiral.

The pressure on the price level comes largely from the mounting cost of food, which should soon be checked by seasonal factors. Nevertheless, under these conditions the rise in the price of steel as a result of the new contract—an average of about $10 a ton is forecast—may affect the cost of living more noticeably than has been usual with increases in steel prices during recent years. On the other hand, while the steel contract sets a pattern for other industries, most of this year's important wage negotiations are over. Therefore the settlement will not mean as great an immediate expansion in consumer demand, as a result of higher earnings, as it might have done had it come earlier.

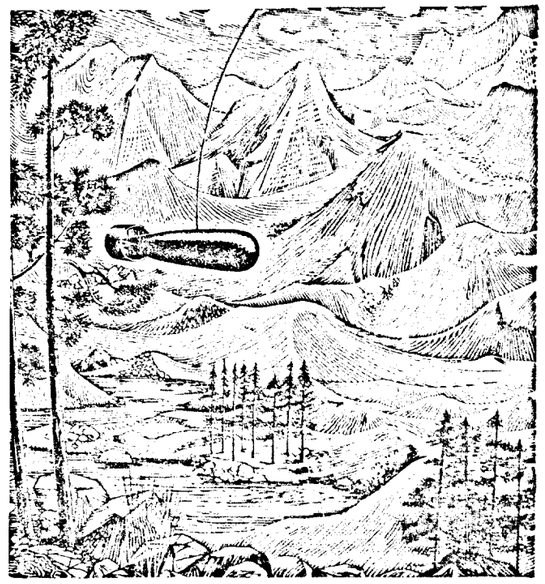
DEVELOPING OUR RESOURCES



INCO'S Airborne Operation

In its continuing search for new deposits of nickel, a vital material of industry, Inco—The International Nickel Company of Canada—has taken to the air. Unlike the old-time prospector with pick and shovel, his modern counterpart scans wide tracts of country with a "flying X-ray". This equipment, suspended 500 feet below the aircraft, indicates areas that hold promise of metal-bearing rock. When these areas have been located, Inco's geologists and drilling crews move in to make a close examination of the ground, and equipment, food, tents are brought up—often by air. It still takes months or years of exploratory work to determine if there is enough ore of commercial value to warrant further development. If all goes well, another valuable source of nickel ore may be proved.

Inco's airborne prospectors have already covered more than 40,000 square miles in air surveys of Canada, and in recent years the Company has spent more than five million dollars a year on exploration in Canada and other countries.

This is just a part of the operations carried out by the Inco-Mond organisation to provide industry with the large supplies of nickel which the future will demand.

Open Conventions

UNTIL last week it looked as if the Republican national convention would be a cast-iron ritual in which a well-drilled corps of delegates would nominate President Eisenhower and Vice-President Nixon with untroubled enthusiasm. It also looked as if the Democratic convention would be a free-for-all rough and tumble with several leading contenders battling for the presidential nomination. But Mr Stassen and Senator Kefauver have changed the picture. Undeterred by flying brickbats, the anger of his party's organisation and the silence of his supposed friends, Mr Stassen, who has taken leave of absence from his job as the President's adviser on disarmament in order to pursue the cause as a private individual, is pursuing his single-handed campaign to nominate Governor Herter of Massachusetts for the Vice-Presidency instead of Mr Nixon. He seems splendidly unruffled by the fact that Mr Herter will himself be nominating Mr Nixon for this very office, though he has made it clear that he will desist if Mr Eisenhower says plainly that he wants Mr Nixon as his running-mate.

But this is exactly what the President seems unwilling to do. At his first press conference since his latest illness he once again went through the routine of praising Mr Nixon's "splendid record" and of stating how satisfied he would be to have him on the team. But he also said kind words about Mr Stassen's work on disarmament and refused to state any definitive preference between Mr Nixon and other potential candidates. Behind the President's ambiguity there may be a genuine respect for the democratic functions of the nominating convention or a very shrewd wish to avoid giving rank and file Republicans throughout the country the impression that the convention is a mere façade for decisions settled and sealed by party headquarters in Washington. Mr Hall, chairman of the party, has had to admit that the convention is "open," while reiterating his enthusiasm for Mr Nixon. This admission allows Mr Stassen to continue his solo effort, but if he fails both Mr Nixon and the party may benefit from the illusion of controversy which has been given.

In the Democratic camp, on the other hand, the dust is settling. By gracefully withdrawing from the race and urging his supporters to join Mr Stevenson, Senator Kefauver has just about assured Mr Stevenson's quick nomination. It is now estimated that Mr Stevenson has more than 500 of the 686½ votes needed for victory at the convention. Governor Harriman continues to speed around the emptying track, but it seems almost certain that the only thing still "open" about the Democratic convention is the choice for Vice-President.

Housing Saved Again

THE annual instalment of the housing story has ended, as always, with the Bill being pulled back from the brink of the congressional adjournment just as the controversial public housing provisions were about to plunge into oblivion, carrying with them the aids for private builders which no one wants to lose. This year the agony was more drawn out than usual: the conservative House Rules Committee refused to allow the unwelcome subject to be debated at all while Republican leaders and Administration spokesmen condemned both the Bill passed by the Senate and the modified version recommended by the House Banking Committee, but were determined to have some housing legislation even so. In the end determination won and everyone else compromised at the last moment on a Bill which gave the Administration what it had asked for and no more.

For the next two years 35,000 public housing units a year may be built with financial help from the federal government. This is a minimum number, which just keeps the public housing programme alive; the Senate tried, as often before, to insist on 135,000 of these low-rent houses being built annually for three years. In addition Senators wanted special public housing arrangements for poor old people, but all they achieved was a mortgage insurance scheme to encourage private builders to undertake such houses. Most of the remaining provisions of this complicated Bill deal with the continuation, expansion and liberalisation of the various existing schemes under which the government insures mortgages and loans for building new houses and improving old ones.

This stimulus for private enterprise comes at a moment when the housing boom, on which the economy has relied for so long, is being deflated. The main trouble seems to be not lack of demand for houses as such, but lack of demand at present prices. Builders insist that these are the lowest they can now offer, since costs of land, materials and labour have all gone up. Another difficulty is the scarcity of mortgage money. In June the number of new houses started, at an annual rate of 1,070,000 units, was the lowest on a seasonal basis for two and a half years, and actual spending on house building was 12 per cent below June, 1955. The indications are that this trend will continue.

Millikin Steps Down

Washington, D.C.

AS the session of Congress ended, the Republican Senator Eugene Millikin, of Colorado, announced that he would retire. He has been pathetically crippled with arthritis and digestive ailments for some time, but his decision not to stand again may have come too late to save his much needed seat for his party. His retreat, at the relatively early age of sixty-five, closes an era in Coloradan politics, weakens the conservative leadership of the Republicans in Congress, and removes from the Senate its most accomplished debater and its most formidable opponent of greater freedom for foreign trade. As a result of the last fortnight's state conventions in Colorado, a conservative Senator will be replaced in November by a liberal, either a Republican of the Eisenhower, or a Democrat of the Truman, vintage.

Throughout his senatorial career Mr Millikin has devoted his singular wit and intellectual brilliance largely to negative causes. More than any other man he brought to grief the wartime visions of a free and flexible American foreign economic policy; his most characteristic legislative achievement was the clause, regularly inserted in the Acts permitting Reciprocal Trade Agreements, which insisted that Congress neither approved nor disapproved of American membership of the General Agreement on Tariffs and Trade. Still the Senate will be a duller place without him; his scintillating passages at arms with Senator Douglas, of Illinois, the unorthodox Democratic economist, were a rare relief from the dreary wastes of most senatorial verbiage.

Mr Millikin was the senior Republican member of the Senate Finance Committee, which handles all taxation and tariff matters, and twice its chairman. His place as the Republicans' chief fiscal spokesman will be occupied, though hardly filled, by Senator Edward Martin, an obscure McCarthyite from Pennsylvania, whose length of service makes him next in seniority. Senator Millikin's other position, that of chairman of the Republican Conference, the collective body of Republican Senators, goes by election and not seniority. It made him one of the party's ruling triumvirate in the Senate. The other members—the chairman of the Republican Policy Committee, Senator Styles Bridges, and the Minority Leader, Senator Knowland—are, like himself, men who would have preferred Senator Taft to General Eisenhower as President. It will be interesting to see whether anyone closer to the Eisenhower viewpoint is chosen to take Mr Millikin's place.

No Senator should be thought of independently from the state which sends him to Washington as a kind of ambassador. Colorado is a semi-arid, under-populated state, with magnificent mountains, two fair-sized towns which contain about half its small but growing population, large sheep and cattle ranches, dustblown wheatfields, high-cost mines and poor communications. Senators and Representatives from Colorado, of whatever party, normally favour quotas or protective tariffs on imports of wool, beef (where protection is disguised as quarantine requirements) and minerals, and spend much of their time and energy in Washington lining up support for expensive federal projects to improve the natural resources of their home state.

Because of its mountains and its poor communications Colorado is a difficult state to hold together. The normal rivalry between town and country is exacerbated because the two cities, Denver and Pueblo, are east of the continental divide while the politically potent rural counties are to the west. Economically, these counties look west and south to Utah and New Mexico; they feel little in common with the thirsty Coloradan cities and fiercely resent their efforts to reach across the mountains for water. Because of archaic apportionments these rural counties control the state legislature, regardless of the fact that sixty-three per cent of the population is listed as urban. But, although the Republican mayor of Denver is now attempting to assert the city's rights, many of its leading business men are collaborating with the rural politicians to prevent equal representation. They fear that, if the city has its full voting power, the conservative tone of the present state government will be disrupted by trade unions' influence.

★

For the last fifteen years political power has been shared in a curious personal coalition of two conservatives, Senator Millikin, the Republican, and Governor Edwin Johnson, the Democrat, who was in the Senate for eighteen years between his first and his present terms as Governor. Since Governor Johnson had a severe heart attack last year, the duumvirs, now both old and ailing, will be retiring together when their terms expire in January. These two grand old conservatives have not been without their critics. The symbol of Eisenhower Republicanism in Colorado has been the dashing, romantic figure of a millionaire cowboy, Mr Dan Thornton, who was a Texan and a Democrat until he took up ranching in Colorado and in ten years made himself the Republican Governor, an office which he held from 1951 to 1955. As a personal friend and early backer of General Eisenhower, Mr Thornton, in 1952, inflicted a humiliating defeat on Senator Millikin, who was trying to pilot Colorado Republicans into the Taft camp. In revenge, the Senator has used his hold on federal patronage to prop up the conservative wing of the party and has tried to hang on to power long enough to thwart Mr Thornton and ensure a smooth transition to his own candidate for the senatorial succession, a rather prosaic Congressman.

But by April it was apparent that Senator Millikin was losing his grip. Although Colorado Republicans were at first delighted by his announcement in March that he would be available for another term, joy rapidly turned to dismay as visitors to Washington brought back accounts of his true condition. Arguments about President Eisenhower's future have made an extremely health conscious public less ready to tolerate other invalids in office. Alarm reached panic proportions in June when a poll by the *Denver Post* showed Mr Millikin running well behind either of his most likely Democratic opponents. Only when this fact had been brought home to him and when a strong opponent had already challenged him for the nomination, did Senator Millikin decide to give up. But he had lost control over the state's Republican convention, which last weekend rushed to embrace the new champion, Mr Thornton, and endorsed him unanimously.

The Democrats, however, will have a primary election on September 11th to find their candidate for the Senate; two candidates, Mr John Carroll and Mr Charles Brannan, qualified at their convention. Mr Carroll, who has already been twice defeated for the Senate, has for many years led the rebellion against Governor Johnson's conservative leadership. His political following is mainly drawn from the liberals and trade unionists of Denver, whom he used to represent in Congress as a straight supporter of the New and Fair Deals. Many Democrats, feeling that he was a divisive force and had already had two chances, hoped to rally the party around Mr Brannan, who was Mr Truman's last Secretary of Agriculture. But Mr Carroll refused to be counted out and turned up at the convention with unexpected strength.

Whoever is chosen, the Colorado contest is likely to be among the liveliest in the campaign, especially as Coloradans tend to vote for personalities rather than party. According to the *Denver Post's* poll, Mr Thornton, though more popular than Senator Millikin, starts as the underdog. But he has on his side his tremendous reputation as a colourful fighter, his close association with President Eisenhower, and the possibility that the Democrats will repeat in their primary election their performance of two years ago, when they tore each other apart in bitter fratricidal strife.

Back to Old Virginia?

BOTH because it is so near to Washington and because many of its citizens, whether white or Negro, are among the most articulate and progressive in the South, Virginia is in the front line of the struggle over racial segregation in publicly financed schools. Such segregation was

declared unconstitutional by the Supreme Court in May, 1954, but the fight over individual counties and school districts goes on in state legislatures and local courts. On July 12th a federal judge ordered the publicly financed schools in Charlottesville, Virginia, to begin putting Negro and white children in the same schools this autumn. This was the first time that a southern court had set a specific date for a process which the Supreme Court had demanded "with all deliberate speed." Charlottesville is a city which prides itself on its enlightenment, but Negroes account for nearly 20 per cent of the population, and the verdict set off a storm of opposition. Mr McCue, who represents the city in the state legislature, at once announced a plan for defeating the courts. He would make local school officials employees of the state and thus immune to prosecution, on the theory that state governments cannot be party to a suit unless they agree to it in advance.

Whatever the legal merits of this odd strategy, it appears to represent the extremist view expressed by Governor Stanley. Reflecting an alleged crystallisation of sentiment against any compromise with integration, he has declared flatly that "there shall be no mixing of the races in the public schools anywhere in Virginia." Thus he has withdrawn his earlier support for the so-called Gray Commission plan; while this was primarily intended to evade the Supreme Court's decision, it would have permitted a certain measure of racial integration. Governor Stanley has set August 27th for a special session of Virginia's General Assembly and is asking for power to withhold state funds from any community allowing mixed schools. The Governor's new attitude has provoked strong protests from more progressive Virginians. They point out that in a district such as Arlington, a suburb of Washington, integration would hardly cause a ripple, and that it is wrong to treat the problem there in the same way as in such a storm-centre of tension as Prince Edward county where half the population is Negro. Many observers seriously doubt whether the Governor has any constitutional right to withhold funds from publicly financed schools, and a major battle is in prospect at the General Assembly.

Mark of Cain

WITH the departure of Mr Harry Cain from the Subversive Activities Control Board, one of the most forceful personalities in the monotonous and complex debate about the security regulations for government servants leaves the official scene. After starting out as a comrade-in-arms of Senator McCarthy, Mr Cain became converted to the burning conviction that the Administration's security programme was often flagrantly unjust and urgently needed revision. He hammered loudly on the White House door for more than a year, and was finally allowed to confront the President with a list of injustices and hardships suffered by individuals through the tedious cruelties of investigations and dismissals under often unfounded suspicions. A few hours after seeing Mr Cain the President was carried to hospital for his operation. When resigning at the end of his term, Mr Cain wrote to the White House and pleaded once again for fairness and reform. The President coldly accepted his resignation.

But Mr Cain has made his mark, and a growing number of responsible Americans are expressing views similar to his. A Senate subcommittee, headed by Senator Johnston of South Carolina, has just condemned the way in which the Civil Service Commission compiles its statistics about "security risks," and lumps together such categories as "loyalty," "security" and "suitability" on a variety of other grounds. This criticism of the Administration's policies, moreover, came on the heels of an authoritative and extensive study of the whole system undertaken by a special committee of the Association of the Bar of the City of New York. The study embodied numerous and specific suggestions for reform. It would limit the clearance procedure to government employees having access to really secret data or engaged in the formation of policy; the Attorney General's notorious list of subversive organisations should be greatly improved or abolished altogether; government employees facing security charges should have counsel and be allowed to summon witnesses for their defence; and, whenever possible, accusers should be made to confront the accused.

It is doubtful whether these sound ideas will find much practical echo in Congress. By 373 votes to 9, the House of Representatives last week cited the well-known dramatist, Mr Arthur Miller, and seven other individuals for contempt on the ground that they had failed to answer one or more questions about their political associates, their past or their beliefs when being investigated by the Un-American Activities Committee. This citation now goes to the Department of Justice for possible prosecution.

Taking the Consumer's Pulse

II. Signposts for Sales

FROM A SPECIAL CORRESPONDENT

THE origins of the Survey Research Centre at the University of Michigan, which is responsible for the index of consumer confidence described in an earlier article, go back to the war, to a group which did research for various branches of the government. One of its last and most important surveys led directly to its present series. The Federal Reserve Board, worried about the huge accumulation of savings during the war and about the inflationary effect this might have on the postwar economy, asked for a study of attitudes towards savings bonds and of consumers' plans for buying durable goods. After the war the group was dissolved and the three key men—Doctors Rensis Likert, Angus Campbell, and George Katona—succeeded in making an arrangement with the University of Michigan, where they set up a semi-autonomous Institute for Social Research, headed by Dr Likert.

The Survey Research Centre, under Dr Campbell, is a part of this institute and carries on various programmes besides the studies of consumer intentions and finances, for which it is, of course, most famous. The Centre has done work for the Boy and Girl Scouts, charitable foundations and private firms. It has made studies of attitudes toward family size to see if changing social habits may not offer a better clue to population trends than the projections by the experts who have so grossly underestimated the growth of population in the United States. It has gone into travel habits and plans, buying of life insurance and why voters voted the way they did in the last presidential election, a study which will be repeated this autumn.

The section of the regular economic studies of consumers which is most generally accepted is that dealing with the finances of consumers, changes in their incomes, and so on. Last year, this work was given high marks by a special group appointed by Congress's Joint Committee on the Economic Report, and headed by an economist, from Harvard, Dr Arthur Smithies. This group reported that the study of consumer finances, while "capable of further improvement," is a "unique and widely used" and, indeed, indispensable economic tool. The Smithies report was, however, a little less enthusiastic about the other aspects of the survey. "The statistics," it said, "on expectations, intentions, and attitudes, have proved to be of some value, but the record is mixed." The report pointed out that the surveys had achieved some remarkable successes. In 1949, the Michigan Centre scored notably when, in spite of the recession of that year, the surveys predicted a high level of consumer demand—which turned out to be right. In 1951, on the other hand, when everyone looked for a continuation of the Korean War boom, the survey detected that consumers were worried over rising prices, and quite correctly foreshadowed the downturn in buying which developed in that year. And in 1954, when experts began to take a gloomy view of things again as the economic indicators flagged, once more the surveys showed that consumer confidence was high and that buying would continue at a satisfactory level. It did.

The Centre's record, however, is a little less impressive when it comes to predicting what will happen to specific items. For instance, it showed an upturn in car sales for 1952, when actually they dropped from about 5 million to just over 4 million. This was explained by the steel strike of 1952, which cut down production. Again, last year, judging from the survey, car sales should have run at about the same 5,500,000 level as the year before. Instead they shot up to record heights. This time the explanation appears to be that no one—most assuredly not the consumer himself—could have predicted how buyers would react when the motor manufacturers turned on the greatest selling campaign in history.

★

Such misses open the surveys to criticism levelled by the Smithies Report and echoed by other economists:

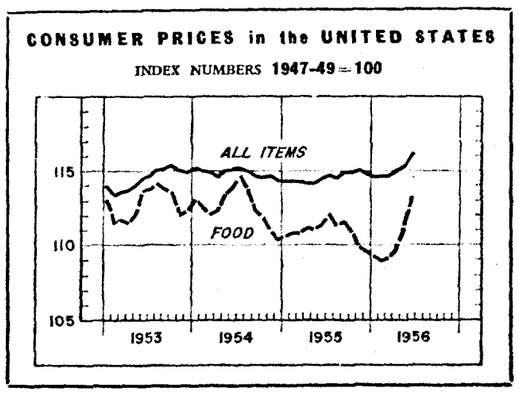
> Consumer sovereignty is at least partially limited by producer activity. The emergence of new products, advertising methods, and pricing policies necessarily changes consumers' tastes so that a complete explanation of consumers' behaviour must take full account of the interaction of producers' and consumers' decisions.

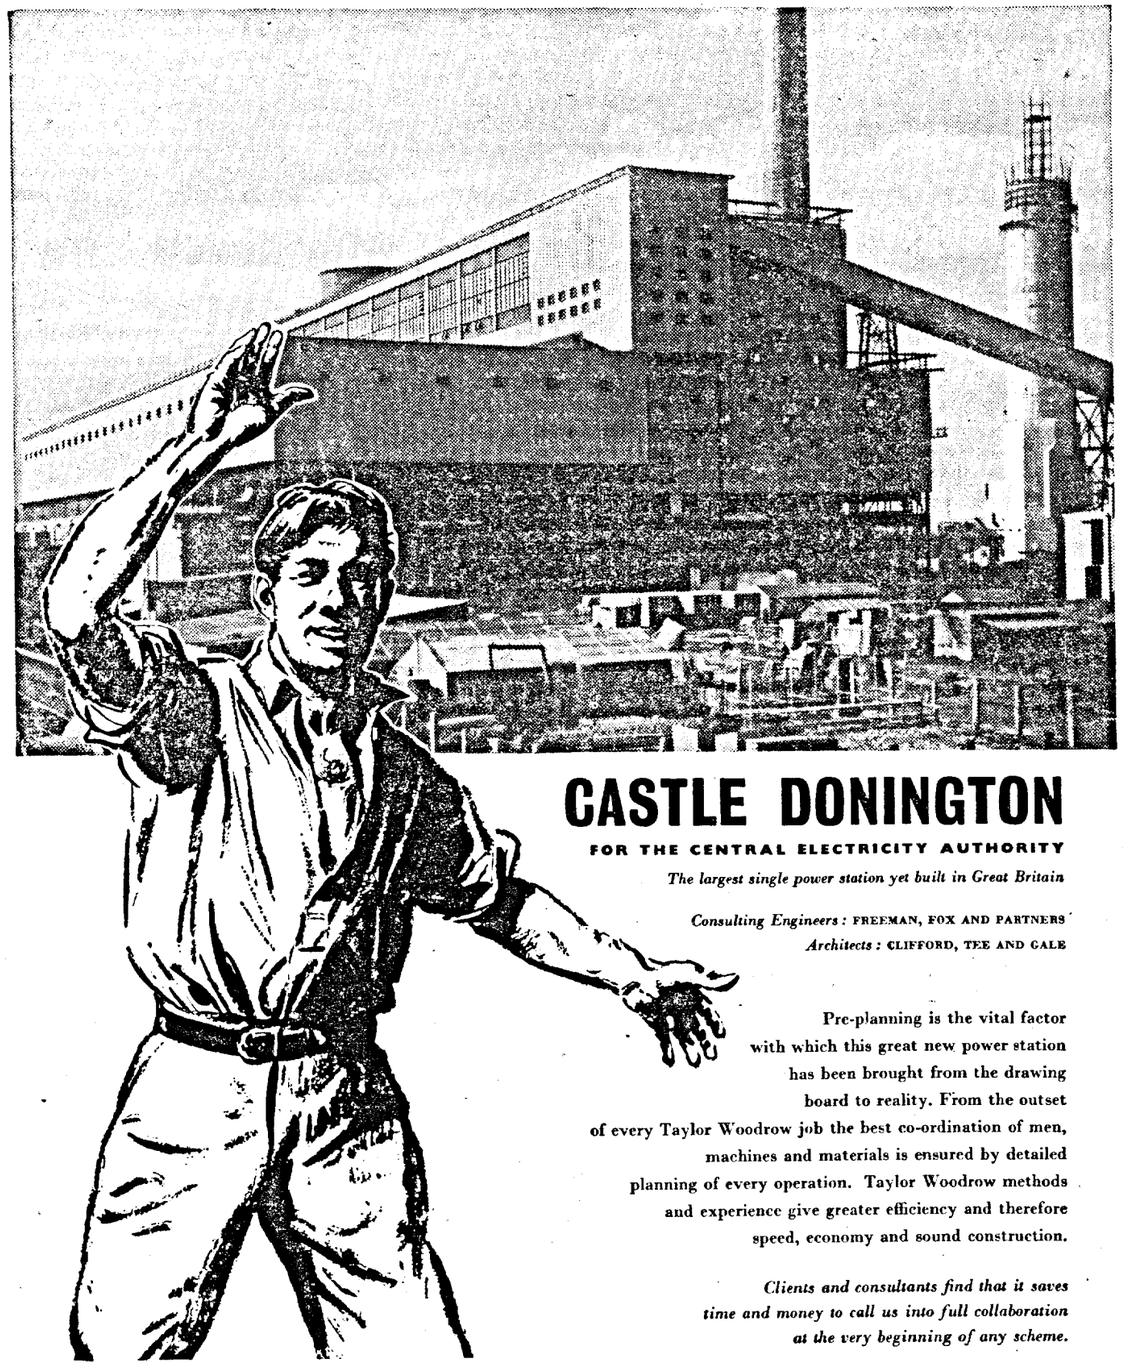
Similarly it is limited by strikes, depression, war, or other unforeseen events entirely out of the consumer's control. The Centre, in replying to criticism, is careful to stress that its surveys cannot be used to measure absolute levels of consumer spending; they indicate the direction of coming changes rather than the magnitude. Indeed, members of the Centre have gone further than this in admitting weaknesses in the survey. One of them recently confessed, for instance, that it was sometimes doubtful whether the surveys led or lagged behind changes in consumer buying; he thereby admitted a familiar charge that economists bring against the survey—that taken quarter by quarter it often does nothing more than confirm what has already happened in the market place.

On the whole, however, economists do not bear down too heavily on the Centre's work, since they are aware that it is making an important contribution in an area badly needing much more light. But to do some of the things that the Smithies Report suggested—such as increasing the size of the sample, taking more frequent surveys, and making more extensive reinterviews to see whether people actually bought the things they said they were going to—takes money. And there is no indication that the Federal Reserve is going to increase its present expenditure of $150,000 a year on the survey.

Though admittedly experimental, the surveys have served to pin down various interesting aspects of consumer behaviour. It is clear, for example, that people will react differently to a fast and a slow rise in prices. A sharp rise will send them into the shops to beat further increases; a slow one will cause them to drop out of the market and to wait for prices to go down. It is also interesting that people with higher incomes are more sensitive to good or bad news about the economy than are people in the presumably poorer groups, because the better off have greater access to economic information. Still another interesting discovery is that the people who hold the greater part of the instalment debt outstanding are also those who have the most ambitious plans for buying household durable goods. The explanation is not that these consumers are heading for bankruptcy, but that they are usually younger people who are in the process of forming families and who are highly optimisitc about their ability to earn over the long run.

Dr George Katona, who serves as director of the Centre's economic behaviour programme, is an avowed critic of the Keynesian view that spending patterns are rigidly tied to income. According to him, the rates of spending to saving depends in part on such psychological factors as the view consumers take of the future of the economy, how they regard their own economic outlook, and where they think prices are going. Even changes in income may not produce the expected effect on spending and saving because of the presence of other factors, such as the amount that had already been spent on durable goods. Nevertheless, Dr Katona and others at the Centre believe that consumers do act according to rational patterns, even though they are not quite the patterns which people have expected hitherto. It is these patterns which the group is trying to pin down.





CASTLE DONINGTON

FOR THE CENTRAL ELECTRICITY AUTHORITY

The largest single power station yet built in Great Britain

Consulting Engineers: FREEMAN, FOX AND PARTNERS
Architects: CLIFFORD, TEE AND CALE

Pre-planning is the vital factor with which this great new power station has been brought from the drawing board to reality. From the outset of every Taylor Woodrow job the best co-ordination of men, machines and materials is ensured by detailed planning of every operation. Taylor Woodrow methods and experience give greater efficiency and therefore speed, economy and sound construction.

Clients and consultants find that it saves time and money to call us into full collaboration at the very beginning of any scheme.

The World Overseas

Aden Between Two Ages

FROM OUR SPECIAL CORRESPONDENT

"TO the newcomer to Aden," says an official pamphlet on the colony, "this famous fortress and port presents at first rather a forbidding aspect." Many newcomers, alas, will consider this an understatement, for after 117 years of prosperous British rule Aden remains incomparably the least attractive big city of the Arab world. Its streets are cracked and rubbish-blown. Its buildings are drab, its shops slatternly. Despite the savage force of its setting, there is no sense of power or majesty to the huge rambling installations which testify to the presence of the British *raj*. A hang-dog, shabbily mercantile feeling permeates the geometrical streets of the place, and only the great ships off-shore, endlessly steaming in and out of the harbour, give it any sense of grace or beauty.

This is partly because, though it stands at the horn of the Arabian peninsula, Aden has none of the antique pungency of an Arab city. Its Arabism is masked by a façade of British India. The Indian Government, having raised it from the status of an obscure fishing village, administered it until 1937, and a fair proportion of its population is still Indian. Labourers are coolies in Aden, Englishmen are sahibs, the *suk* is the bazaar. Through the years much of the spirit of the Indian Empire lingered on in Aden, getting more tattered and thumb-marked through the decades, but satisfied and paternalistic still; with the Governor secure behind his visitors' book and the old fans twirling slowly in the easy-going offices of the Secretariat. The port thrived, and the merchants with it; the RAF flew bravely overhead; and society creaked on like an elderly steam train on some unhurried country line.

Now the violent winds of political change have suddenly blasted this fusty old organism, and no wonder; the remarkable thing is that it has survived so long, here on the edge of the Arab maelstrom. It is difficult to equate Aden's godowns and old-fashioned gardens ("For Ayahs and Parents Only") with the huge highways and power-stations of modern Cairo, or the glittering phalanxes of hotels and apartments which are rising along the sea-shore at Beirut. Inevitably, all the phenomena of frustration now make their appearance in Aden—nationalism, genuine and mercenary; trade unionism, cynical and constructive; seditious activities fostered from abroad; wild demands and accusations; political chicanery and jostling for position; and a general sense of impending change, of eras ending and vistas opening. At some moments it seems refreshing; at others (after, for example, a meeting with some peculiarly kickable political opportunist) infinitely depressing.

Indeed, some conflict of sentiments is almost inevitable for an honest English observer visiting Aden today. He will, to begin with, feel sympathy for some aspects of the routine nationalist credo. He feels instinctively that there is something unnatural and unhealthy about the present status of Aden; he wonders, looking at the barefoot illiterates around him, whether Britain has done as much as it might have done for the inhabitants; he finds the presence of a British colony at the tip of Arabia an undoubted anachronism; he has a hazy suspicion that there is something noble to the idea of real Arab unity, unconvincing though the concept may sound; he is not inspired by the spectacle of an impoverished Empire clinging to its outposts with the ageing jets and obsolete cruisers that leave it impotent in a wider sphere of diplomacy.

On the other hand, he suspects that, on the whole, British control of Aden is a good thing for the world. It bolsters the British economy, which is a force for good. It strengthens the British position elsewhere in Arabia, without whose oil (so we are assured) British economic independence would collapse. It keeps this great bunkering and entrepôt centre out of the hands of Powers which seem to be, on the face of it, inimicable to the serenity of the world. If all these assumptions are correct, it appears to be a national duty to keep control of Aden so long as is practicable and so long as it can be kept without unwarrantable repression.

But the urge for political independence is irresistible, and British policy in Aden must, by the nature of things, be a rearguard action. Lord Lloyd, when he came to the colony in May, calmed the anxieties of the European merchants by declaring that there could be no self-government for Aden "within the foreseeable future." Nevertheless, the administration, spurred perhaps by criticism at home as much as by events in the colony, has granted some small and wise concessions to the inevitable. It has done so more or less through the agency of a sort of semi-nationalist group calling itself the Aden Association; a party which, though the government seems to have been slow to realise it, is a gift from Heaven to the retreating imperialist.

Its leaders call themselves "The Queen's Arabs," and in general have a soothing air of loyalty and moderation. To such friendly and relatively responsible folk, political concessions can be made with dignity, and the British are well advised to foster them. To the visitor from Cairo or Amman, though, their programme is almost comically unconvincing. Loyalty to the Crown, maintaining the British connection, restrained progress towards responsibility—

compared with the bold, brash, invigorating scurrilities of Cairo, this kind of talk is hollow stuff indeed. So long as Colonel Nasser throws his weight about so glamorously, nationalising canals, raising the shadow of Arab seizure over the oil resources of the Middle East, no counsels of moderation can be very effective in Arabia.

So it takes no great political acumen to see that the Aden Association, which prides itself upon its multi-national flavour, will make little appeal to the eager pan-Arabists now setting the political pace of Aden. When the coolies strike, they are striking (*au fond*, and they may not know it) on behalf of Gamal Abdel Nasser and all the explosive, intoxicating forces he represents. Between these forces and the cautious benevolence of the Secretariat there is no point of compromise ; and there is probably no point in negotiation. The Aden Association, which is strongly represented in the Legislative Council, has gained some of its points by polite and patient determination ; but the extreme nationalists boycott the Council.

Arab unity (as expressed, in particular, by Cairo radio) is of course their strongest card ; and though their motives range from the idealist to the shoddily criminal, many of them probably envisage Aden as the southern outlet of a united Arabia. It is unlikely, however, that the more intellectual of them foresee the creation of Arab unity by any fusion of existing ruling forces. There is no doubt that the influence of Yemen and Saudi Arabia, exerted partly through the Aden Protectorate, has helped to upset the *status quo* in the colony (which has a large Yemeni population, and strong commercial ties with that mediæval autocracy). But the keenest minds behind recent events are probably not in the least enamoured of Saudi or Yemeni ways of life. They are republicans and progressives, who want to see the feudal potentates of the Middle East overthrown to a man and replaced by a series of administrations akin to, and in alliance with, the Egyptian government.

Nasser's Picture in Bazaars

Thus there is, in the eyes of the advanced Adeni nationalists, no substitute for Colonel Nasser, no figure to be discreetly cherished by the British as a sop to extremist sentiment. Already Nasser's picture hangs in the Aden bazaars, more compelling by far than that of Queen Elizabeth headscarved at a point-to-point ; and, even in British eyes, more formidable than the good and conscientious public servants, counting the days to home leave, who reluctantly represent British power in south Arabia. Compared with Bandung and Brioni, anything that Whitehall can offer must seem arid and alien. Only the British find rearguard actions inspiring.

Nevertheless, the port remains rich and increasingly busy ; and the British are engaged upon an admirable programme of improvement. Houses are being built in great numbers. There are new roads and roundabouts. A new secretariat is planned. The port is being enlarged. A new hospital is being started, to replace the ineffably gloomy yellowish structure which stands, peeling and forlorn, in the heat-blasted depths of Crater. The British Government has still failed to bring one single thing of physical beauty to Aden ; but there is a kind of spiritual uplift to such belated acts of enlightened self-interest.

And, inevitably, the first concessions are being made to local political opinion. The sense of Arabism is strong and pervasive, like gypsy blood in England, and it is fundamentally Arab opinion that governs the public opinion of Aden. Wary preparations are therefore being made for eventual local participation in government. Arabic has been made an official language. Unofficial members of the Legislative Council are to be given certain supervisory privileges in the administration. More Arabic speakers are being impressed at last into the government. The great merchant houses, suddenly jolted from the 19th to the 20th centuries, are adapting themselves to modern concepts of labour relations.

So the visitor at least discerns a sense of activity in Aden, quite apart from the well-stocked (and tax-free) shops, the constant passage of the ships and the seething of the magnificent new oil refinery. Arabs will interpret it as a portent of new glories ; Britons as a hostage to unfriendly progress. Aden is suspended between dynamics, as a young man often hovers, for a minute or two, between the mother who is sewing a button on his shirt (always reluctant to see him go) and the girl friend who waits, in a flouncy blouse and ankle-straps, outside the corner cinema.

•

The Company, France and Suez

FROM OUR PARIS CORRESPONDENT

THE Suez Canal Company is not playing a purely passive role. It has already used its main weapon by instructing shipowners not to pay tolls into Egyptian accounts. From Friday onwards the Egyptian government proposes that ships obeying this will be refused entry into the Canal. Despite this threat, it is hoped to make the company's decision effective by instructing owners to pay into neutral or international banks. Egypt could then hardly refuse entry into the Canal without offending flagrantly at a time when it must tread carefully ; and the tolls would still not benefit Colonel Nasser. But this remains a secondary weapon in a rapidly moving situation.

So does the company's authority over its non-Egyptian personnel. A struggle is going on with the new Egyptian company which has "recalled all its staff abroad," including "its" senior officers in Paris—that is to say, the staff of the Suez Canal Company—on pain of dismissal. The company must soon decide whether it will order its non-Egyptian employees in the Canal area to leave or, by default, let them be drafted into the new Egyptian company. They include most of the pilots without whom the Canal traffic would be rapidly paralysed. But these employees are already working virtually as hostages under martial law. The withdrawal could hardly be enforced unless an excuse for an armed intervention were being sought.

Politics is not the whole of the company's problem ; there is also that of compensation. Colonel Nasser claims that he will find $100 million a year for the Aswan Dam from the Canal profits, but his figure is that of revenue. The profits are a third of that. If, as he promises, the tolls are not raised, it would take him about eight years to pay compensation and carry out normal investments on the Canal before starting on his "personal pyramid." The doubts thus cast by his declared ambition on the terms of compensation are increased by the Egyptian proposal to announce them only when Egypt holds the foreign as well as the Egyptian assets of the company. Confidence is not increased by the precedent of the *Sucreries d'Egypte*, nationalised last year in comparative calm ; the French and Egyptian governments are still at odds over compensation for the third of the shares of this company held by Frenchmen. Suez Canal Company shares fell from 92,500 francs last week here to 67,000 this Wednesday. But the company has not lost heart. By a reasonable attitude it presumably still hopes to gain satisfactory compensation from an international settlement and even—who knows ?—payment for its installations in the Canal area.

Disturbed French Feeling

If the London talks end with no result the frustration will probably revive French nationalism, always susceptible to any encouragement. The government's hopes for an autumn settlement in Algeria might be postponed and there are already signs of renewed anti-American feeling. Rumblings of the latter could be heard in the presentation by M. Lecourt, the MRP leader, of the parliamentary motion endorsing M. Mollet's wish for a "strong and energetic riposte." Our "allies must realise that Atlantic solidarity must not be an empty phrase and that the fate of the Atlantic alliance is now perhaps hanging in the balance. . . ."

Long acquaintance with Colonel Nasser as an impresario of the Algerian rebellion had ripened French opinion for a violent reaction to the Suez coup. The Canal Company and the economics of oil were overshadowed by fear of a collapse of western influence throughout the Middle East and of French policy in North Africa. Though M. Pineau refused to make threats which could not be supported by effective action, the unanimity of the Assembly (Communists apart) in applauding his hope for a "firm decision" and "complete solidarity" between allies set the tone of French expectations.

Not that the French have really thrown caution to the winds. They know that alone they can do little about Suez. Their land forces are tied up in Algeria, although their naval forces are less committed. They have £400 million of investments in Egypt. Half their oil comes through the canal. This made them all the more eager for the allied unity promised by the identical early reaction of London and Paris. Hopes of "firmness" have been diluted, first by the length of the London talks and, above all, by the open differences with America. The realisation on Tuesday that military action was unlikely had a sobering effect because it crystallised doubts about the effectiveness of allied action, even diplomatic or economic, should Colonel Nasser reject international control of the canal.

In North Africa the French have already felt Nasser's influence ; they now fear its growth. M. Lacoste said last week that negotiations might be possible in Algeria—in fact new political decisions were hoped for in September. If Nasser now "gets away with it" the French anticipate that increased rebel confidence and secular intransigence will set back these hopes. They also fear that in Tunisia and Morocco M. Bourguiba and the Sultan, for all their dislike of Egyptian influence, may be carried away by extremist pressure and may perhaps "nationalise" French companies like the Tunisian phosphate mines. Whether this happens or not there is a danger that the French desire for firm action, frustrated over Suez, might force a hardening of attitude in Algeria and block an early settlement.

Slaves for Sale in Mecca

FROM OUR UNITED NATIONS CORRESPONDENT

THE adventures of Awad el-Joud are by now quite well known in United Nations circles, and they will again be called to mind when the UN conference on slavery meets in Geneva on August 13th. Awad was born in French West Africa and at the age of ten or eleven became a personal servant of an African chief. In 1949 this chief began a pilgrimage to Mecca, taking with him his wife, children and servants ; the slow journey lasted about a year. For some months they stayed in Mecca, where they engaged in social activities and religious rites. When the time came for them to return, the chief found himself short of funds, and he therefore "sold" Awad to an Arab prince.

After two years of slavery Awad was again put up for sale. He was taken to a slave market in Jiddah, where he was examined by prospective purchasers. Awad managed to escape, and took refuge in the French embassy. In the end he slipped aboard a boat full of returning pilgrims, and after an adventurous journey arrived in West Africa in April, 1954, where he made a detailed report to the French police commissioner. Awad el-Joud says that there were about forty slaves in the prince's household. He was well treated, but received no payment for his work. According to a report "leaked" from the French embassy at Jiddah, slave girls in 1953 cost between £200 and £400, while older women and men fetched somewhat lower prices. More recent reports indicate that too many rupees are chasing too few slaves, with the usual inflationary consequences.

Arousing Public Opinion

One means by which the international community can seek to eliminate an obnoxious practice such as slavery is to publicise the facts in the hope that an aroused public opinion will press for remedial action. A 100-page summary of information on slavery was prepared for the UN Economic and Social Council in 1955 by Hr Hans Engen of Norway, and this year the Council received supplementary information from the Anti-Slavery Society. It is evident from this that slavery is still extensively practised in its "classical" form in Saudi Arabia, Yemen, the Trucial States, and sheikhdoms of the Aden Protectorate ; in other parts of the world it takes such forms as the purchase or inheritance of women, debt bondage, unpaid but compulsory labour, and the exploitation of children under the guise of adoption. The secretary of the Anti-Slavery Society recently estimated that almost half a million people may be in bondage in the Arabian peninsula. Saudi Arabia seems to be the worst offender as regards "classical" slavery. Slavery is legalised there by a decree of 1936, and it was alleged before the Economic and Social Council that the slave trade is conducted with the knowledge and complicity of the authorities. Mecca is one of the few places in the world where there is a public slave market. Saudi Arabia has not replied to the UN questionnaire about slavery and servitude, and only Russia came to its support during the UN debates last April.

During these debates there were several references to a report prepared by a member of the Assembly of the French Union, the Rev. Emanuel la Gravière. In 1954 he told the

French Union Assembly that people were being recruited in West Africa and sold into slavery in Arabia. The Union Assembly asked him to investigate the matter further, and his report, which was published last November, substantiated and elaborated the original charges. He interviewed Awad el-Joud and included a full account of this interview in his report. Independent and detailed evidence supplied to the United Nations by the Anti-Slavery Society shows that many of the Africans sold into slavery in Mecca make the journey in organised groups under the impression that they are on a pilgrimage. Arab girls are collected by means of village raids, usually with the connivance of village chiefs. The Buraimi oasis, in dispute between a British-protected sheikhdom and Saudi Arabia, is said to have been a main centre of slave-trading. No convincing refutation of the formidable indictment against it has come from the Saudi Arabian government. In other parts of the Arabian peninsula, however, the authorities seem to be making determined efforts to stamp out both slavery and the slave trade.

Apart from publicising the facts about slavery, the United Nations has been discussing a new international convention on slavery. The conference which meets in Geneva on August 13th will have before it a draft convention which was prepared earlier this year by a special United Nations committee; it is based on an earlier text submitted by Britain, but in its present form is a visible compromise between the western and the "anti-colonial" groups. The western countries preferred to have an imperfect instrument adopted as soon as possible, while most of the "anti-colonial" countries wanted to send the draft convention to the UN Assembly, where it might well have suffered the depressing fate of the Human Rights covenants. An Egyptian proposal to refer the draft to the General Assembly was pressed to the vote and rejected. The convention will supplement a League of Nations convention of 1926 and, if adopted in substantially its present form, will give signatory nations the same right of visit, search, and seizure as apply to vessels suspected of being engaged in piracy.

Against European Inefficiency

FROM OUR PARIS CORRESPONDENT

PRODUCTIVITY, say the experts, is an attitude. How is the progress of an attitude measured? It may be this kind of difficulty in assessing the achievement of the European Productivity Agency, a little known child of the OEEC, that has led to difficulties in agreeing on how the financing of the agency should be apportioned, although its lease of life has been renewed until 1960. Yet the evidence suggests that the agency, in its three years of life, has played a part, on the whole very intelligently, in the spread of European awareness of productivity.

A feature of post Marshall-aid Europe has been the establishment in most countries, with OEEC encouragement, of state-aided productivity centres. The European agency's function is to co-ordinate and supplement their work in projects in which five or more countries are interested. The scope for international action probably emerges best in agriculture, where present methods leave most to be desired. A teletype network has been organised for the exchange of daily market news on fruit and vegetables with fluctuating prices. Because a convention between several countries would previously have been necessary, this obvious need had not been met. The agency is now campaigning for standard European gradings to improve the marketing of agricultural produce and permit, for instance, the rational re-routing of shipments from glutted markets to better ones. It is also developing experiments such as the temporary transporting of seeds from northern pastures to improving grounds in the Mediterranean area where they gain strength and multiply far faster. This kind of operation is carried out easily enough in the United States or Russia but in Europe it requires international co-ordination.

The agency has concentrated, however, on the training of cadres for industry. It is encouraging the teaching of business administration to managers, present and future, and has planned seminars for trade unionists which have won the unions' interest—it was, for instance, the agency which organised the well-publicised TUC conference on automation last May. The agency is pushing member countries to introduce courses in business management (the French opened nine institutes in 1955). But as Mr Fletcher, its deputy director, has observed: "Even in the United Kingdom appointments to chairs of business management have been delayed for want of suitable applicants." Almost everything remains to be done. The agency is at present sponsoring the training of 56 future European teachers of administration in American universities (at the same time the Americans propose to send students to Britain, where management training methods are now considered in some ways superior). In related fields, it provides small travelling teams of American or European experts to demonstrate new management techniques; or it finances a useful publication like the *Technical Digest*, which tells the small producer briefly and precisely what new gadgets and ideas have been written up in any of a thousand technical journals.

Misplaced Economy

The last year has produced a new preoccupation with the under-developed areas of Europe. It has been found that countries like Greece, Turkey, Portugal or southern Italy benefit least from the agency's productivity programmes; they have neither the attitudes, the experts, nor the capital to apply. So the agency is beginning a technical assistance programme. Advisers will be sent to Greece to help set up a modern planning bureau. In Sardinia the peasants in a pilot area will be advised on the use of machinery on their recently redistributed lands, improvement of hillside pastures, four-year rotation of crops, and marketing through co-operatives. The agency will provide the specialists—they are the rarest commodity—the local authorities will do the rest.

The agency's operations from 1953 to mid-1957 will have been carried out almost entirely on a mere $10 million contributed directly or indirectly by the United States. In Europe the whole approach to the productivity programme has been infinitely more modest than the size of the problem—which is that Europe is falling further behind the United States and now also Russia, by failing to increase productivity at similarly high rates. Europe will not be saved by its productivity programmes—but still less by attempts to economise on them.

Canada's Long Parliament

FROM OUR OTTAWA CORRESPONDENT

THIS extraordinary session of the Canadian Parliament is now expected to last until about the middle of August, which will make it almost if not quite the longest session in Canada's history. The reasons are partly climatic and partly political. Usually the MPs who set the pace like to wind up the session by about the beginning of July, since after that the hot weather is likely to strike them. This year, by an unexpected dispensation of providence which seems to be favouring the Opposition, Ottawa has not yet had any hot weather.

This has undoubtedly made it easier for the Conservative opposition to maintain the attitude of obstinate uncooperativeness which follows logically from its earlier heated declarations that this Parliament had become unworkable as a result of the incidents during the pipeline debate. The Speaker's resignation, offered just over a month ago, might have made it possible to re-establish some of the amenities of normal parliamentary practice. But the first thing Mr St Laurent did on his return from the Commonwealth meeting in London was to persuade the Speaker to withdraw his resignation and to announce to the House that since the vast Liberal majority still had complete confidence in Mr Beaudoin, it would be unthinkable to let him resign. This declaration brought down on the Prime Minister the reasoned criticism of several Liberal newspapers which had supported him throughout the pipeline debate. But the politicians seem to agree that it was an astute political move. Rumour had reached Ottawa that under-cover gossip seeping through Quebec was presenting Mr Beaudoin as a victim of racial prejudice. Such a preposterous charge never reached the public prints, and may never have been of serious proportions, but it was enough to persuade the Liberals that they would be wise—however wrong—to stand by the Speaker.

Two unhappy consequences have flowed from all this. One is that the level of language and orderliness in debate, which was never high, has fallen lower than ever. The Speaker and his alternate presiding officers are naturally prone to let almost anything pass rather than risk stirring up a row, and some of the abuse exchanged across the House reflects no credit on the members. The other consequence is that the normal parliamentary accommodations in the arrangement of business have largely lapsed. The normal process for ending a session requires an informal compact between the parties: the Government lets some of its business stand over, and the Opposition facilitates passage of the rest. Without such arrangements the session itself, like so many of its members when they are on their feet, knows no way to stop.

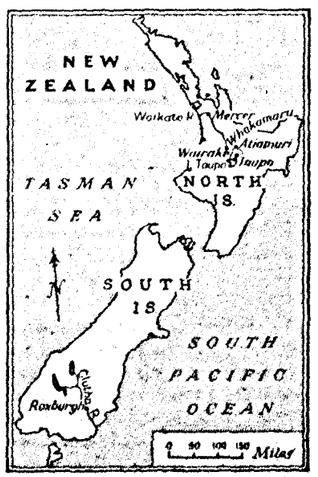
One of the principal items of government business has, however, now been passed with eloquent, but not unduly protracted, opposition from the Conservative and Social Credit parties. This was the legislation to implement the federal government's offer of new tax arrangements to the provinces for the five years 1957-1961. Now that it is on the books it is up to the ten provincial governments to decide what the future tax pattern shall be. Under the new plan the federal government will make an "equalisation payment" to the provinces unconditionally. This will be sufficient to raise the *per capita* yield of certain standard taxes to the same level as the average of Ontario and British Columbia, where income taxes bring the largest return. The chief significance of the plan is that Quebec will get a federal payment, on just the same basis as the other provinces, without having to give up its right to levy its own income taxes. Quebec, or any other province, also gets a little more room to levy its own taxes without penalising its residents. Ottawa will "abate" its personal income tax by 10 per cent of the federal rate and its corporation tax by nine percentage points for residents of any province which raises its own taxes. Alternatively, if a province is satisfied with these rates, it can still save itself the bother of levying its own income taxes and rent them to Ottawa.

The parliamentary opposition at Ottawa attacked these arrangements because they did not give the provincial governments enough money—a line of attack which coincided with that of the Conservative premier of Ontario, Mr Leslie Frost, who claimed that Ontario needed at least 15 per cent of the personal income tax plus a 15 per cent tax on corporations. Thus ended another artificial alliance brought about by the pipeline debate. In Ontario's interest, Mr Frost had felt bound to go along with the federal government's scheme for getting natural gas piped across the northern part of his province, and this was very embarrassing to his fellow Conservatives in the federal Parliament who were so bitterly attacking the federal plan. The tax question has straightened out that complication and realigned the Conservatives on the same side.

New Zealand Power Problems

FROM OUR WELLINGTON CORRESPONDENT

WHEN the first two generators of New Zealand's largest hydro-electric power station, at Roxburgh on the Clutha River, begin to turn early this month, the power supply of the South Island, at present drastically rationed, should become adequate for many years to come. But the North Island, with twice as large a population, will face rationing and shortages at least until 1961, when the last of several large power stations now being built or planned should be operating. Even then generating capacity may not be adequate.



The South Island's brighter prospects have revived the idea of "piping" power from the South to the North Island by a submarine cable. The south has never regarded the idea with enthusiasm, but the power question has now become so politi-

cally explosive that objections have been subdued. But even if the investigations are expedited—and there are serious technical obstacles to overcome—"piping" is unlikely to help the North Island during the next five years, when the shortage will be most acute.

In the North Island generating capacity is at least 10 per cent below demand. The combined capacity of both islands is at present about 940,000 kw, and it is hoped that new stations will double this within six or seven years; but even if they do, demand will more than keep pace. It has been conservatively estimated that by 1975 output must reach at least 2½ million kw to keep up with consumption. Even on present cost levels, this could entail an expenditure of £500 million within the next twenty years, which would bring investment in power plants to about £680 million.

One of the problems of the North Island is that all its major generating stations, both existing or planned, are based on the Waikato river, which has its source in Lake Taupo. The level of this lake and the river's consequent rate of flow therefore govern the whole supply position. The only two sizeable plants which will not depend on the Waikato will be the thermal steam generating station now being built at Wairakei near Taupo, and the steam station planned at Mercer on the Waikato coalfields. The completion of the Wairakei station has been delayed by the British Government's indecision over the manufacture of heavy water there, and it is not now expected to operate its first generator until the middle of 1958. The first two of the six generators to be installed at Mercer should be operating about the same time. Other hydro stations under construction in the North Island will come into operation at intervals between the end of this year and October, 1961.

Siam's Seekers After Power

FROM A CORRESPONDENT IN BANGKOK

SIAM'S general election, due in February, is already casting its shadow before. To a westerner it looks a very diluted affair. Half the members of the Assembly are nominated, and they, together with the support of the Army's leaders, make it almost certain that the present regime, under Marshal Pibul, will stay in power. But, if the big question is virtually settled, some smaller ones are not. The outcome of the polls will decide the government's attitude towards its plans to foster "fuller democracy" in Siam—including the abolition of nominated membership by 1962; it will show how the struggle for power between the various leading figures inside the regime is going; and it will give a hint about the way opposition opinion is moving. It is this aspect of the election that has made the chanceries of Bangkok turn an unwontedly close eye on the session of the Assembly that opened last month.

Marshal Pibul's concept of "fuller democracy" would probably cause raised eyebrows at the Reform Club. But even if the new slogan was—as cynics have suggested—proclaimed to gain popular support for the premier and thus strengthen his balancing position between the army and the police, there is no doubt that it has considerably ruffled the placid backwater of Siamese political life.

When the existence of political parties was legalised a year ago, all the pro-government Assemblymen were automatically co-opted into the Manangkasila party. Marshal Pibul became leader of the party, and General Phao, the chief of police, secretary-general. It was assumed that this dignified but relatively uninfluential post had been given to Phao as a consolation prize for the bland way in which he had previously accepted a curtailment of his authority.

However, although General Phao is handicapped because his police will never have such heavy guns as the Army, he is not only in a class of his own as an administrator, but he is far more interested in politics as such than Marshal Sarit—the army's obvious choice as heir-presumptive to Marshal Pibul. Phao has been indefatigable in organising the party in the provinces, and seems to be aware that, while the liberal intellectuals of Bangkok can never be reconciled to a militarist regime, improvements in communications, irrigation and administration may win votes elsewhere.

His come-back has not passed unchallenged. Captain Piem, one of the prime minister's secretaries, has revived the Thammatipat ("Right is Might") party, which supports Marshal Pibul personally while criticising much of the government's policy. This group has been particularly active in the north-east and the south, where the respective Lao and Malay majorities feel that the central plain receives preferential treatment from the government. Another relatively young group of supporters of the 1947 coup has formed the National Democratic party. This is reported to enjoy the covert support of Marshal Sarit. Its political programme is even more nebulous than most in Siam, but it appears to be nervous lest "fuller" democracy should lead to the eclipse of the self-styled "coup" group.

Opposition Factions

On the opposition side there are several factions, but only a handful are important. Nai Khuang Aphaiwongse has revived his Prachatipat (Democrat) party, but is seriously handicapped by the fact that most of his former supporters are suspicious of Marshal Pibul's "fuller democracy" programme and have so far refused to re-enter politics. Nai Khuang is a right-wing liberal, and his party is too restrained in its social and economic policy to arouse great popular enthusiasm despite his own undoubted popularity. Even less likely to succeed is the similarly named Democratic party ("Democracy" is an OK word in party titles)—a rather nebulous body of opposition MPs originally elected as independents. The Labour party is too poor and disorganised to stand a serious chance at the polls, but its potential voting strength may be gauged from the fact that the government has unexpectedly decided to introduce a Labour Bill which undercuts the Labour party by conceding (at least on paper) many of its demands.

There is, of course, no Communist party, but a faint whiff of Marxism lingers round the Sethakorn or Economists' party. Until recently Nai Thep Chotinuchit, the head of the party, and three other leading members were in gaol for alleged violation of the Anti-Communist Act in connection with their recent visit to China. They have since been released on bail to attend the Assembly, and it seems possible that the charges will be quietly dropped. Of all the opposition groups, however, only Nai Khuang's Democrats have the sketchiest organisation outside Bangkok, and they are all desperately short of resources.

Petroleum chemicals are **building a new world**

More and more, we live in an age served by petroleum chemicals, a vast and thriving industry supplying practically all other industries with essential base materials, partnering modern agriculture in greater productiveness, speeding the development of plastics and the other still-young techniques of our changing world. In the petroleum chemical industry, with all its exciting possibilities, Shell Chemical Company has always been a pioneer and leader. To-day, Shell's expanding chemical output includes well-known chemicals long established in use, modern replacements possessing technical advantages, and radically new materials which are widening the horizons for inventive minds and adding much, in many ways, to human efficiency and comfort. You see this adventurous new world of chemicals around you, unfolding its variety on every side.

You can be sure of Shell

THE BUSINESS WORLD

Via Suez

I.—Trade through the Canal

BETWEEN 45 and 50 ships were travelling through the Suez Canal every day, carrying perhaps a sixth of all the cargo being moved by sea throughout the world, when Colonel Nasser seized the Suez Canal Company's assets in Egypt last week. Total movement of cargo via Suez was at a rate of roughly 120 million metric tons a year, about four times as much as in 1938 and well over twice as much as in 1948. It was steadily rising—much faster than the total tonnage of seaborne trade across the world.

Ships ordinarily move in two convoys each way each day, southward from Port Said and northward from Port Tewfik at Suez itself. Lengthy sections of the canal allow one-way traffic only, although one bypass, the Farouk Canal, has been opened since the war to separate north and southbound traffic, and two others were planned by the company in its current development programme, which would eventually have allowed four convoys each way each day. The convoys take about 12 hours from one end of the 101-mile canal to the other.

More than four times as much cargo moves northward, from East to West of Suez, as is shipped southward down the canal—though the numbers and tonnage of ships going in each direction are roughly equal, because tankers, which account for more than 65 per cent of ships using the Canal, return southwards in ballast to the Persian Gulf.

Suez traffic is made up essentially of the traditional East-West exchange—manufactured goods from Europe and the West for a vast tonnage of raw materials, including petroleum, ores and metals, cereals, oil seeds and oils, fibres, and rubber, from East of Suez. The predominance of petroleum and the return payment for it meant that in 1955 more than 65 per cent of the traffic both ways moved to or from the Persian Gulf, the Red Sea and Aden. About 11 per cent of the total was the import and export trade of India, Pakistan, Ceylon, and

† Including 30 days on each trip for loading and discharging.
‡ London to Persian Gulf: assuming tanker speed 14½ knots and 4 days for loading and discharging.

Burma ; 14 per cent to or from Malaya, the Netherlands East Indies and the Far East ; 7 per cent to and from East Africa. Europe was the Western origin or destination of 85 per cent of Suez Canal traffic, and only about 12 per cent went to or from America.

Britain is certainly the biggest single user of the canal, in both directions. About 21 million metric tons out of the 67 million tons of oil moved northward through the canal in 1955 came to this country. Britain's imports of rubber from Malaya, wheat, meat and wool from Australia, chrome from East Africa, cotton, tea, oils and manganese from India, jute from Pakistan, tea and oils from Ceylon—all come via Suez. In return, it sends these countries steel, machinery, vehicles, and consumer goods, plus certain chemicals and cement ; just under 25 per cent of our import and export trade is with countries normally reached via Suez.

Britain, accordingly, is more vulnerable than any other country to interruption of the free passage of shipping through the Canal. This vulnerability derives both from the high proportion of our trade going via Suez and the inconvenience of taking that trade by any other route. The Netherlands, similarly, is affected as a maritime nation trading on a large scale with the Far East ; France because it is a very heavy importer of oil from the Persian Gulf, though its Far Eastern interests have declined ; Italy as a heavy importer of oil, and also as a Mediterranean nation trading on a large scale with East Africa, to reach which via the Cape, for example, would mean sailing about five times the distance.

Diversion of trade to alternative routes—if the passage of ships through the Canal were stopped or if Western nations were attempting to reduce their dependence upon this vital sea link in unfriendly hands—would involve considerably longer distances and sailing times, as the table on page 419 illustrates, and thus a reduction in effective shipping capacity. Against this the only offsets would be Canal dues, which are significant but quite insufficient on most routes to make it worth while to go another way, and shipping insurance rates, which tend to rise rather sharply at periods when the Canal is in jeopardy. But the major element of British and European dependence upon the Suez Canal lies in the Canal's biggest and most rapidly-growing business—oil from the Middle East.

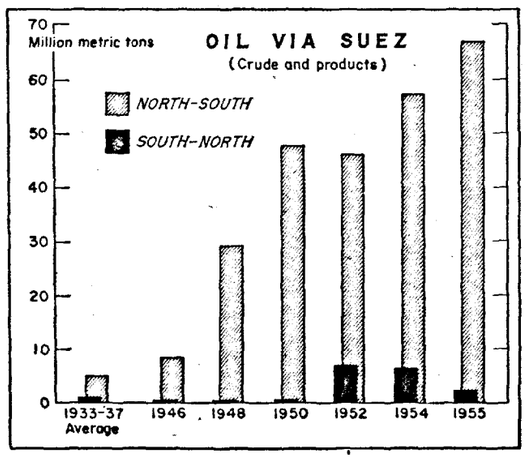
II.—Moving Middle East Oil

SINCE the war the Middle East has re-drawn the map of oil movement throughout the world, creating a vast refinery industry in Western Europe almost incidentally in the process. It has two-thirds of the world's proved oil reserves; in 1955 it produced a fifth of the world's output, and its share continues to rise ; it accounts for half the world's oil exports. And more than half the oil moved westward from the Middle East goes through the Suez Canal.

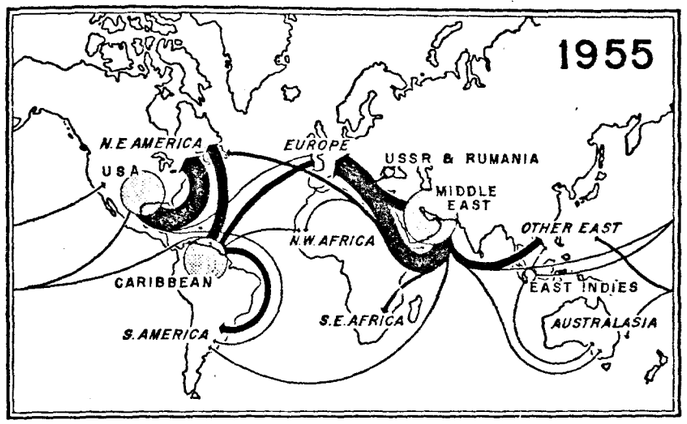
In 1955, 67 million tons of Middle East oil were carried north through the Canal to Europe and points west, out of the 145 million tons of total exports ; 40 million tons more were carried through the pipelines from Iraq and Arabia to the Mediterranean. Of the remainder, about 22 million tons went to Asia east of Suez, 10 million tons to East and South Africa, 5 million tons to Australasia, and about a million tons round the Cape of Good Hope to South America—the one Western destination to which, even with medium-sized tankers, it is cheaper to sail round the Cape than go through the Canal.

About 14 million tons of the Middle East oil passing through the Mediterranean went onward to the eastern seaboard of North America ; about 4 million tons to North and West Africa. The remaining 90 odd million tons, with about 5 million tons from the Soviet sphere and some 30 million tons, mainly in refined products, were imported into Western Europe, which in turn exported about 6 million tons of products. Consumption in Western Europe, therefore, approached 120 million tons of crude oil or equivalent refined products ; 75 per cent came directly from the Middle East, and nearly half through the Suez Canal.

For oil as well as other things Britain is even more dependent on the Canal than Western Europe as a whole ; last year about 20½ million tons, or 75 per cent of our crude requirements, came via Suez, mainly from Kuwait, and these supplies represented more than 85 per cent of total oil consumption inside Britain. About a quarter of the tankers that use the Canal are British, and 30 per cent of the oil brought through Suez comes here.



At present, oil satisfies less than 15 per cent of total energy requirements in Britain, against about 17 per cent for Europe as a whole. This share of energy requirements, however, is still based mainly on the use of oil fuels for purposes that nothing but petroleum can serve. The whole tendency of recent years, however,



which both in Britain and in Europe is expected to accelerate rapidly, is towards the use of oil products for general fuel requirements, filling for the time being the growing gap between rising fuel demand and the much more slowly rising output of coal and hydro-electricity.

One comparatively moderate estimate* of the pattern of oil movements that might be required in 1965, if this shift to oil as a general fuel continues, is shown in the map at the bottom of this page. That forecast of possible oil movement in ten years' time assumed the use of a canal expanded to take more traffic than it can today (though only three years away from the contractual date of reversion to Egypt). But it suggested that even the expansion planned in the Canal would not accommodate all the oil traffic needing to be moved north from the Persian Gulf. Significant expansion of the capacity of the existing pipelines, new pipelines from the Gulf to the Mediterranean, or sailing big tankers round the Cape of Good Hope might become necessary in the sixties.

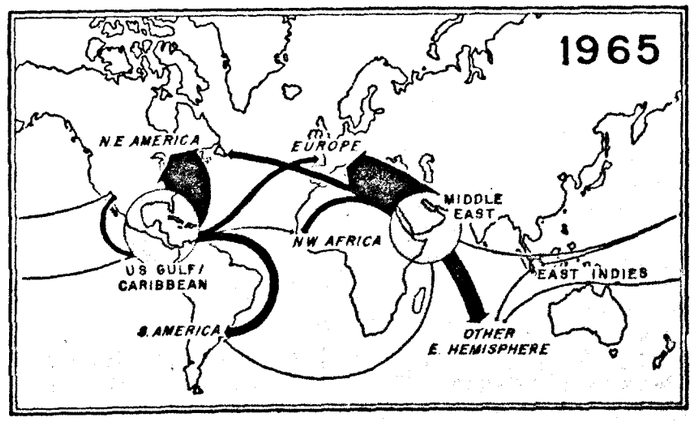
The development of alternative routes that would eventually become essential to move the Middle East oil that the West will need, even given free passage through an enlarged canal, is one thing. Any sudden re-routing of oil in an emergency, as for example if the canal were closed, is another. It would depend, obviously, upon other contingent circumstances ; primarily whether oil could still be moved freely along the pipelines to the Mediterranean and by tankers bound on other routes outward from the Persian Gulf.

At a pinch, given the kind of international oil co-operation that was readily forthcoming after Abadan was closed, the American continent might temporarily abandon its present oil imports from the East. If oil were still flowing through the pipelines, diversion of the supplies now coming through Suez round the Cape, at a crude guess, would need about half as much tonnage again as the 10 million tons odd of tankers now employed in carrying Middle East oil to Europe. That would mean diverting to this emergency run an extra 10 per cent or so of the world's tanker fleet. If the pipelines to the Mediterranean were cut, too, the further pressure on tanker tonnage would have to be relieved by very considerable extra supplies from "shut-in" capacity in the Western Hemisphere to help meet the needs of Western Europe. Some marginal supplies would probably be practicable, if extremely costly. Since the shorter hauls would make comparatively economical use of the tanker fleet, the movement of enough oil to meet essential needs might be practicable.

If necessary, such a painful exercise probably could be carried out: that is perhaps the limit of what it is sensible to say now. But presuming no such emergency arises, the longer-term implications for world oil movement and for oil production in the Middle East of Egyptian seizure of the Suez Canal are still likely to be far-reaching.

★ ✓

No extra investment in coal or nuclear energy can blunt the fact that for the next 20 years at least rapid economic expansion in Europe depends upon rapidly increasing supplies of oil. How far marginal oil supplies could be found elsewhere is a question in which all Middle Eastern nations that produce—or transport—oil have a vital interest. At the least, the development of alternative routes through which oil can flow, and the reduction of dependence upon a canal that may in future be in greater jeopardy, will obviously be hastened. This, too, will be costly—for Nasser, as well as for the West.



* Presented by Mr W. Jamieson, of the British Petroleum Company, to the Institute of Petroleum in June.

III.—Income from an Isthmus

IT costs any ship 7s. for each ton of its "Suez net tonnage" (which is slightly greater than its British "net registered tonnage") to sail through the Suez Canal laden with cargo, and 3s. 2d. a ton to go through in ballast. The same dues apply to tankers, dry-cargo ships and passenger liners. These rates are cheap by any postwar standard: the 7s. compares with 5s. 9d. a ton in the very different money values of 1939, and is less than the rate in 1941.

In 1955, ships in transit paid the *Compagnie Universelle du Canal Maritime de Suez* Fr. 32,583,842,000 in dues—roughly £32 million. From all sources, its total revenue was nearly £34 million. From this gross income the Company's operating and administrative costs have to be met. Operating costs in Egypt, in 1955, came to over £9 million, of which about £6 million was spent on working and maintaining the Canal; the company's accounts also show just under £2 million for expenses incurred but not charged in earlier years. Another £1 million was absorbed in administrative costs outside Egypt: the company's headquarters are in Paris and it has offices in London and New York. "Social charges" took nearly £5 million; these include interest and amortisation on loans, pensions and an allocation of about £1 million to the Egyptian Government. These current costs, in total, absorbed about half the company's revenue.

Upkeep and improvement of this single, massive and wholly fixed asset—keeping the Canal navigable and capable of handling the growing demands upon it—is obviously a costly responsibility. In 1955 the Canal Company allotted about £3½ million to its "Improvement and Renewal Fund" and another £2 million into contingency and special reserves.

Allocations to these reserves for improvement thus left £10½ million to be paid out in dividends to the various classes of capital. About £1½ million, representing a 15 per cent cut from earnings, went to the Suez Canal Egyptian Government Interest Trust. (The Egyptian Government was originally entitled to this 15 per cent allocation, but in 1880 sold this right, now held by the trust. The founders shares received about £1 million, representing their 10 per cent allocation from earnings; directors and employees about £400,000 on their 4 per cent bonus; owners of the capital shares and *actions de jouissance* received the remaining 71 per cent, amounting to just over £7½ million. The capital ranking for these allocations forms a complicated structure. There are 100,000 founders shares of no par value; 378,768 capital shares; and 421,232 *actions de jouissance*. A year ago the British Government held 179,586 capital shares and 173,918 *actions de jouissance*.

Beyond the bare statement that compensation would be paid on the basis of share valuations on the Paris Bourse on July 26th—when the total valuation was perhaps £70 million—Colonel Nasser has given no indication of what he would propose to pay shareholders of the company for nationalising the Canal 12 years before it was due to fall into Egyptian ownership. Over and above the operating costs in Egypt and the provisions for upkeep and improvement of the Canal (if Egypt proposed to maintain and develop it to meet the growing volume of business) about £10-12 million a year might remain. Such a sum, admittedly, might be of the order of the foreign contributions recently suggested for the early years of the Aswan Dam project. But that crude equation ignores any provision for compensation out of the Canal profits. Moreover, before Colonel Nasser could spend the foreign exchange earned in Canal dues he would have to lay his hands on those dues—at present being paid by cheques on foreign banks to the Suez Canal Company.

IV.—Where the Money Is

THE Suez Canal Company's one great fixed asset earns its lucrative rent simply because it is fixed—in Egypt. But the company holds most of its liquid or near-liquid assets, built up from profits in the past, outside Egypt. In all the company owned at the end of 1955 about £19 million of short-term investments and £16 million of longer term securities in various currencies. The company had recently agreed to keep larger funds in Egypt. But the spoil, if rough hands could be laid upon it, represented a rich temptation and the first act of the British authorities has been to put it beyond reach of the Egyptians. This first financial counter measure is the issue of a Treasury Order denying Egypt access to the assets of the Suez Canal Company in this country. This "statutory instrument" reinforced the warning to banks given by the Suez Canal Company, immediately on learning of the seizure of the Canal, that no instructions regarding disposal of the assets of the company should be accepted from the Egyptian government.

The second directive, which removed Egypt from the group of transferable account countries, was intended to rescind the freedom with which sterling has in the past been able to move between Egyptian and other transferable account countries, and so to prevent the hasty removal from London of disposable sterling. It was also intended to subject to Exchange Control investigation every payment into and out of an Egyptian account.

The second order was followed up by more detailed instructions to authorised banks in London regarding the transactions they are permitted to make on Egyptian accounts. These details, published on Wednesday of this week, state that Egyptian sterling accounts may be credited with any amounts received from residents of the sterling area and from non-residents

—other than payments from other Egyptian accounts. Cheques, bills and payments under confirmed credits drawn or arranged before July 27th may be paid to residents of the sterling area. All other payments require specific authorisation by the Bank of England.

This move was not intended to block Egyptian sterling but to subject it to rigorous supervision and control. Blocking was unnecessary because it had in large part been achieved under last year's agreement for the gradual freeing of the £130 million which was then standing to the credit of Egypt's No. 2 account at the Bank of England. The first agreed release of £20 million under this agreement was taken by Egypt on the first working day of this year, so that £110 million remains in the No. 2 account, which cannot be drawn upon again until January 1st next.

Whether Egypt will be seriously and damagingly affected by its expulsion from the sterling transferable system depends firstly on the rigour with which payments into and out of Egyptian accounts are restricted by the Bank of England and, secondly, on the degree to which the United Kingdom initiative in this matter is backed by other countries. So far the United States and France have put comparable restrictions into effect but other countries have not.

The first riposte from the Egyptians was to announce that dues by British ships using the canal must be paid in cash at Port Said or Suez. The unreality of this demand was soon realised and the order was replaced almost immediately by a statement that cheques on London, Paris or Cairo would be accepted as in the past, provided that they were made payable to the new Suez Canal authority. At the time that *The Economist* went to press, the complications arising from these orders had not yet crystallised—partly because dues on British ships using the canal are usually paid well in advance by the shipping and tanker companies. But the question of what payments are to be acceptable is bound to come to a head within the course of a few days.

Business Notes

Canal in Throgmorton Street

SUDDEN events produce dramatic reactions in the stock market. Then, as with all human institutions, there is a pause for more leisurely reflection and the market recovers some of its poise. This sequence was followed after Colonel Nasser's seizure of the Suez Canal, though the rally which followed the initial fall in prices owes something to the firm stand taken by the Government. Inevitably oil shares, which since the Trinidad Oil take-over had been moving ahead under a good head of steam partly American in origin, led the tumble in prices. In two days' trading Shell fell from 163s. 1½d. to 151s. 3d. and British Petroleum from 174s. 4½d. to 156s. 10½d. But few of the leading industrials which earlier had attracted some support escaped the precautionary marking down, and by the close on Monday the *Financial Times* ordinary share index had skidded down from 185.6 to 181.4. The speed of the decline was exaggerated by the seasonal narrowness of the market, just as a ship passing through the narrow confines of the Suez Canal seems to be moving much faster than it is in reality.

The initial reaction in prices was too sharp, and a rally, led by oil shares, was not slow to develop. By the close on Wednesday the industrial index had recovered to 183.9; outside the range of this index, Canadian securities, including the shares of such a company as Hawker Siddeley with investments in Canada, were particularly strong. More significantly, gilt-edged securities after taking the initial shock of the Suez Canal crisis continued to weaken. The prime influence in this market was the weakness of sterling, and in the week's trading to the close on Wednesday the

*ex-dividend. †adjusted for free scrip issues.

Financial Times Government securities index fell from 84.49 to 83.64. The weak market left much of the new Agricultural Mortgage Corporation 5 per cent stock (1979-83), offered at 97, in the hands of the underwriters;

they had to take up 78 per cent of a £5 million loan whose terms even in a better market were shaved too close for comfort. The stock opened at 2 discount and is now quoted at 1¾ discount.

Sterling Takes the Strain

STERLING this week had to take the strain of events in Suez and the Burmese frontier, plus a considerable concentration of commercial demand for dollars. The commercial and speculative influences, as usual, merged. It is probable that the slight loss of confidence in sterling caused a good deal of anticipatory buying of dollars and selling of sterling and that some of the commercial demand for dollars, which loomed so important in the early part of this week, was in respect of business which in more normal circumstances would have been covered later this year. The rate for sterling dipped to $2.78¼; on Wednesday afternoon there was a strong rally which carried the rate up to $2.78⅞, but on Thursday the rate fell back to $2.78 11/32. The rate for transferable sterling has recovered with the official rate to $2.78⅜. On the other hand, switch or security sterling has been exceptionally weak and was being offered on Wednesday at $2.66, representing a discount of some 5¼ per cent on the official rate. The rate fell further on Thursday to $2.62½. There seems to be no speculation against sterling in the dollar market. The three months discount on forward sterling is 1⅜ cents, which is rather less than the differential in short-term interest rates in London and New York would justify.

On the Continent, sterling was losing ground in the first part of the week but recovered sharply on Wednesday. The dominant factor in this part of the foreign exchange market is still the German surplus, which is being accentuated by the temporary reduction in imports into Germany, pending the promised reduction in import duties, and a further speculative movement into Deutsche marks. Against most European currencies, sterling is at a forward discount equivalent to about 2 per cent per annum. The outstanding exception is the French franc, against which the forward rate is at a premium equivalent to about 4 per cent per annum.

The weakening in sterling has automatically resulted in increases in the price of gold in London: but this week the price has been further boosted by a considerable increase in demand, reflecting uncertainties over Suez, from the Continent, the Middle East and the Far East. On Tuesday this raised the gold price to 252s. 1d. an ounce—the highest since the London market was reopened in March, 1954—denoting a dollar price of $35.10. Mocatta and Goldsmid report that July was the most active month for gold dealings since the bullion market reopened.

Gold Reserves Now

THE poor performance of sterling last month is not fully reflected in the movement of the gold and dollar reserves, announced on Thursday. After the crediting of $16 million of defence aid in July—a book-keeping entry the timing of which is quite fortuitous—the published reserves rose by $20 million in the month, to $2,405 million. On other dollar accounts there was thus a surplus of $4 million—the smallest this year.

Moreover, the dollar accounts would have been in substantial deficit last month if the payments to the European Payments Union were made on a current basis. Britain last month paid $19 million to the Union in settlement of its deficit in June, and $9 million to EPU creditors under the new funding agreement; but the EPU transactions for last month resulted in a deficit of no less than £24 million, which will involve a gold payment this month of $50 million (apart from the $3 million that is the new regular instalment on the funding debts). The payment of $11 million by London underwriters on the insurance of the *Andrea Doria* was made on July 30th, but does not appear to have been accounted for in the July figures.

As in earlier phases of strain, the speculative movements against sterling have been most marked in the EPU balance. Last month the seasonal demands of tourist expenditure coincided with a continued pull of funds into D-marks and the ebbing of confidence after the Suez news. The dollar balance outside EPU has held up reasonably well in this season of heavy imports from North America (which, however, continues for some months yet). But it is the dollar account as a whole that matters.

Excitement in Commodities

THE commodity markets are having an exciting time. The news of the "nationalisation" of the Suez Canal was quickly followed by the announcement of the settlement of the steel strike in the United States. Rubber prices rose sharply on the first item and metal prices rose on both. Tin and copper were also influenced by labour troubles in the mines and copper was helped as well by the increase of £25 to £300 a ton in the Rhodesian Selection Trust price. But not all Eastern commodities have been affected. While the premium for prompt supplies of Pakistan raw jute rose by about £2 a ton, tea prices did not respond to the news from Egypt and the cotton market, once so sensitive to world events, ignored it.

Any interruption of shipments from the East would affect half a dozen key commodities. Taking Britain alone, all of this country's imports of raw jute and jute goods, most of its rubber, wool and tea, over half of its lead, and much of its vegetable oils and sugar are normally shipped through the Suez Canal. Tin ore, on the other hand, comes mainly from Bolivia and Nigeria; Malayan tin goes mainly to other countries, particularly the United States. If shipments had to be routed round the Cape the tonnage locked up in the pipeline would be increased at a time when stocks of many commodities are rather low. Shipments of rubber from Singapore to Britain, for instance, would take an extra seven to eleven days (details for other ports are given on page 419), but the initial delays would be greater as ships were turned back from Suez. Copper would not be directly affected. Rhodesian copper is shipped out of Beira, and the bulk of it goes round the Cape. But copper and other commodities would be indirectly affected by the shortage of shipping space and the rise in freight rates.

Consumers are worried at the prospect, but they have not rushed to buy. Present prices still look dear to them, and works' holidays have begun. In a few weeks' time, however, consumers' needs will increase, and there will be the additional fillip of the upswing in the American steel industry. If shipments then had to be re-routed prices would soar.

Sir Bernard Docker's Waterloo

DIRTY *mink* was washed in public to the heart's delight and the mind's distaste at Wednesday's meeting of the Birmingham Small Arms Company and was washed fairly clean. By a majority of four to one on the poll and of about three to one on a show of hands stockholders refused to condemn their present board headed by Mr J. Y. Sangster for removing Sir Bernard Docker from the managing directorship and, therefore, under the company's articles, from the chairmanship and from the board. By approximately the same majority they gave an unrestricted vote of confidence to their present board. It was the company meeting of the decade. The Great Room at Grosvenor House seating 1,500 was filled to overflowing; as the chairman observed, only seven stockholders had attended the last meeting on December 5th. The meeting was also at times vociferous; shouts of "get out" and "you are no good" almost prevented the investment manager of the Prudential Assurance from getting a hearing for one of the most useful speeches of the day. But the debate and the voting were on the whole well behaved and excellently managed.

THE BSA VOTING

Sir Bernard's Resolutions	Votes For	Votes Against
(1) Deploring the removal of Sir Bernard Docker	717,683	2,881,607
(2) To remove Mr J. Y. Sangster	722,601	2,875,729
(3) To remove Mr J. E. Rowe	*not moved*	
(4) To remove Mr J. Leek	*not moved*	
(5) To remove Mr N. H. Docker	*not moved*	
(6) Recommending the reappointment of Sir Bernard and Mr J. S. Moyses	716,789	2,871,348
Mr Sangster's Resolution		
(7) Approving the action of the Present Board	2,824,548	727,046

Voting rights are one vote for each £1 of the £5,630,344 ordinary stock in issue.

Sir Bernard Docker, who spoke with moderation, accepted defeat with dignity—he had only asked the shareholders' verdict, he said, and having got it he did not want to press his other resolutions. But there was some hard hitting, some direct conflict of statement and the variety of issues that flitted through the discussion was great enough to be confusing. It is, therefore, worth remembering that shareholders have decided one point only—that they would rather have their company run by Mr Sangster and his present team than by Sir Bernard. In that broad sense the democratic principle underlying company law has produced a clear result. Such questions as the kind of expense account needed for the managing director of a company selling Daimler cars, machine tools, motor cycles, and the other products that BSA makes, or the kind of relations that ought to exist between the chairman of such a company and other members of his board, must be quite beyond the purview of shareholders in general meeting.

The Points at Issue

THEY nevertheless had to base their decisions on the facts provided over the last few weeks in the battle of circulars and proxies, after Sir Bernard's dismissal, and the few additional facts given at the meeting. On May 17th the majority of the board advised Sir Bernard that they no longer had confidence in him as managing director and on May 31st, by six votes to three, they dismissed him. Numerous accusations were made against him which were vigorously answered in the circulars that preceded this meeting requisitioned by him and 2,600 other stockholders. These were the most important of the charges:

(1) The attempt to appoint Mr R. E. Smith, a brother-in-law of Lady Docker and principal executive director of the Daimler company, to the parent company's board and Sir Bernard's alleged loss of temper when his proposal was defeated.

(2) His alleged failure to disclose to the board the request by the Prudential Assurance, which is the largest shareholder, for an independent investigation.

(3) His habit of circulating interim trading results to certain directors only and of not tabling them for discussion at board meetings.

(4) The alleged attempt to procure payment for certain dresses and furs worn by Lady Docker at the opening of the Daimler company's Paris showroom.

(5) The cost—£50,000 over five years—of the special cars, including the gold car, built on the instructions of Sir Bernard and used for publicity purposes.

(6) The kind of personal publicity that Sir Bernard and Lady Docker were attracting.

On many of these issues, particularly on the handling of Sir Bernard's expense account and on whether or not the special cars involved a loss to the company, there remains a conflict of evidence that the statements of Sir Bernard and of Mr Sangster did nothing to resolve. Sir Bernard's strongest point was that on December 5th last year his colleagues unanimously re-elected him chairman and that all but two of the allegations against him—the dispute about Mr R. E. Smith and the affair of the Prudential—concerned matters that had occurred before that reappointment. Mr Sangster's two strongest points were, first, that in the year

ended May 31st, the twelve months ending with Sir Bernard's dismissal, not a single Daimler car had been sold in the United States which seems to tell against the kind of publicity that Sir Bernard and Lady Docker attracted. Secondly, he disclosed that in the board room he went into open opposition to Sir Bernard on January 19th over a proposal, hitherto undisclosed, to give £5,000 to Sir Bernard's "cut the costs" campaign, and that it was only after this occasion that he approached the Prudential (without his chairman's knowledge) to see if support could be obtained for a requisitioned meeting of shareholders. He then found that another director, Mr Rowe, had already been to the Prudential.

The Prudential's Role

BOTH sides join hands on one point; the kind of publicity that has attended the struggle for power is not the sort that BSA wants. There is one party whose sensible suggestion, if adopted, would have obviated it—the much abused Prudential Assurance. Mr Leslie Brown the Prudential's investment manager disclosed at Wednesday's meeting that he sought an interview with Sir Bernard Docker in January not, as Sir Bernard had implied, to seek information not available to other shareholders nor, as had been suggested, because Mr Sangster had been to him behind Sir Bernard's back, but to request an independent investigation. That request has now been granted. Lazard Brothers and Deloitte, Plender Griffiths are appointed to investigate, but by the present board. Mr Brown, despite Sir Bernard's lack of recollection, is in no doubt that he asked Sir Bernard to pass his request to the Board.

In practice the Prudential like other big institutions is at pains to avoid interfering in the management of the companies in which it invests. Mr Brown reaffirmed that policy. What then was he to do when he heard reports, as he did early in January (before Mr Brown first met Mr Sangster on January 23rd), that trade was developing badly for BSA, in which the Prudential holds £280,000 stock? Mr Brown's conclusion was that as there were no other big shareholders with whom he could consult his clear duty was to request an independent examination. Only crude prejudice can fail to see that the interests of the big institution are identical with those of the small shareholder. In the words of the shareholder who came down from Yorkshire all shareholders should be "not interested in gold cars but in brass." The first proper steps towards protecting a good investment were taken by the Prudential in January and by the shareholders this week.

Buttress for the Plateau

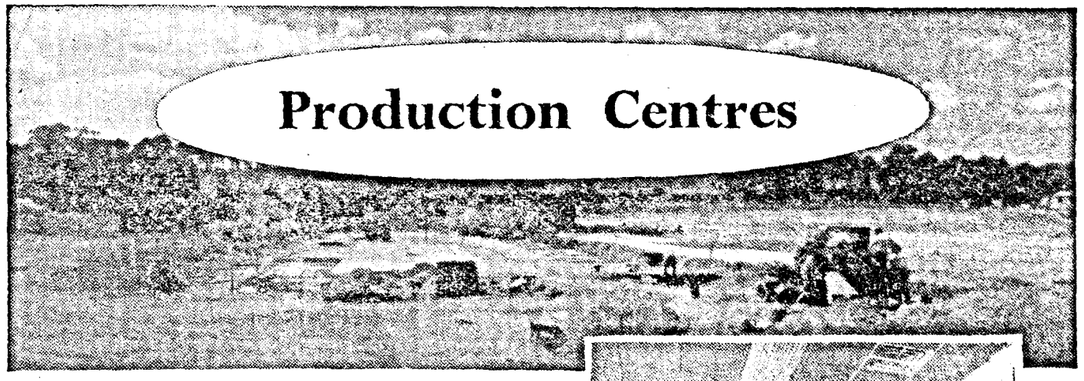
SINCE the Federation of British Industries and the three other national organisations representing the bulk of private industry made their appeal to members three weeks ago to exercise "price restraint," several dozen private firms have made suitable noises in reply and joined those already committed to some form of stabilisation. The most notable recruit, in terms of prestige value, came this week from ICI. In practical import this heavy reinforcement will probably not change much. The ICI group has been particularly successful at absorbing increases in internal costs since the war. Its prices have on the average risen by only two-thirds since 1946 against an increase of 150 per cent in the cost of materials and a doubling of its employees' earnings. The severe cost inflation last year made it more difficult for the company to keep its prices as steady, despite more heavy investment and further gains in productivity, but it is unlikely that ICI would consider its policy any the less worthwhile before next June—the end of the period of restraint in the company's announcement.

But the swelling number of firms pitching camp on the plateau also means that disinflation is probably beginning to have its effect. The plateau is, for the moment at least, being brought into the range of possibility. ICI will not raise the prices of most of its enormous range of products "unless any unexpected or exceptional factors intervene." (As an earnest of intentions perhaps the price of its polythene was cut by 3d. to 2s. 11d. a lb later this week.) This familiar formula was augmented by a further exception for products containing imported raw materials, such as non-ferrous metals, which can vary widely and quickly in price. Here the company "can do no more than continue (its) policy of price restraint." But by next summer industry may have stoked up considerable increases in costs. Wage rates so far this year have been rising even faster than in 1955 and the trend does not seem likely to stop abruptly. Fuel costs should remain, on the whole, steady: the Coal Board, with an adequate price increase recently tucked under its belt, hopes to maintain coal prices until the end of 1957. But freight costs are far less certain. Even if the railways are "encouraged" to shiver insolvent on their plateau after next month, when Mr Watkinson's review is due to be completed, some sharp adjustments of prices to costs will be necessary in many industries when the present stabilisation campaign ends.

Productivity Down

THERE may be some irony that a seasonal recovery in one of the industries most affected by the Government's policy of credit restraint, the motor industry, should have contributed to the first increase in total industrial production that the Government's statisticians have been able to discern for several months. Motor production in June was considerably better than in May, which was affected by the Standard strike; and motor production is one of the early indicators of output upon which the statisticians have based their forecast that the index of industrial production in June will turn out to have been 139 to 140 (1948=100), a record for the month. On a seasonally corrected basis, the index forecast for June is still slightly higher than a year before, and industrial output in the first half of the year therefore comes out about fractionally higher than in the first half of 1955. Manufacturing output in the first six months, however, is lower than twelve months before.

Output was indeed cut during the first half of this year by perhaps 3 per cent, from the peak shown by the new season-



Site clearance at Eastleigh, July 1955

Production of Chemicals, June 1956

From Excavation to Occupation in 12 months

EFFICIENT TEAMWORK backed by modern methods and equipment is the keynote of greater output in building, as in all industry.
This laboratory for William Warner & Company Limited at Eastleigh was built by Cubitts. They are pleased to acknowledge here the successful efforts of their own team and those of their sub-contractors, who jointly enabled production to commence only 12 months after site clearance started.

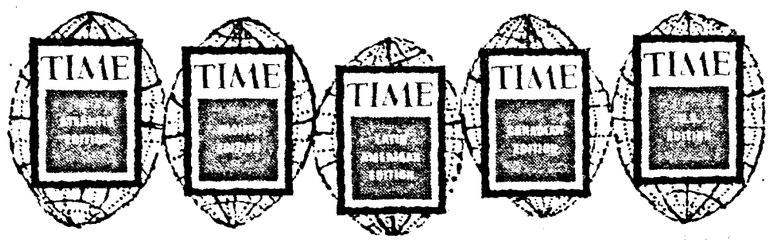
You'll meet the most interested people . . . in TIME

TIME readers are thinking people, thoroughly interested in the world they live in. They are decision-makers in industry, the professions and government, with a compelling curiosity about the news. Being *interested* is their business.

And TIME readers *mean* business. They have a unique influence on the purchasing and trading policies of companies and nations; just as they have the affluence that makes them best customers, themselves, for every consumer product and service.

What an interested and interesting market for you! The most informative and enjoyable news source available to people like these are the five separate (English language) editions of TIME.

Each week, hundreds of thousands of copies are bought in the world's major market areas. All carry the same current news; only the advertising differs. In TIME you can advertise to those areas that interest you most . . . through one, two, three, four or all five of the world-ranging editions of TIME.



The Important Magazine Everywhere

TIME—The Weekly Newsmagazine · New Bond Street, London W.1.

ally corrected index of industrial production in December. Employment, if one allows for seasonal factors, has also been declining since the end of last year, but by a far smaller proportion—about three-tenths of one per cent. In plain language, employers have not sacked men as fast as they have had to cut production schedules. Productivity, therefore has tended to decline. This is to be expected, at any rate in the early stages of disinflation in industry—not merely because employment is reduced less than output, but also because the industries into which men and capital resources are transferred are those in which productivity has been advancing more slowly. A shift in the balance of the economy takes some time—and some trouble—to achieve.

Banks Buy Gilt-Edged

IN the first two and a half weeks of July the clearing banks' holdings of investments rose by £30.2 million. The re-entry of the banks into the gilt-edged market as buyers follows a period of sixteen months, during which they have been large and almost continuous sellers: between mid-February of last year and the end of June this year the value of the banks' portfolios dropped by £335½ million. After last month's purchases the total portfolio was £1,993 million.

Two-thirds of the purchases were attributable to one bank, Barclays, and nearly the whole of the remainder to Lloyds and Martins between them. It is notable that both Barclays and Martins are enjoying exceptionally high liquidity (even after the purchases their ratios of cash, call money and bills to gross deposits were 35.4 per cent and 38.2 per cent respectively, compared with the average ratio of 34.4 per cent). This has enabled them to conform readily with the recent suggestions that the authorities would welcome the co-operation of the banks in checking excessive liquidity through security purchases. Further results may be expected in coming months as liquidity is strengthened by the seasonal increase in the Treasury bill supply.

That influence will this year be reinforced by the switch in the financing of the capital requirements of the nationalised utilities to the Exchequer. The existing arrangements of the utilities with the banks expired at the end of July—and their advances are believed to have been bumping up to the maximum of the agreed limits. But even after the implementation of the new arrangements (which, now that the Finance Act is on the statute book, could be effected at any time) the banks will be extending facilities on a considerable, though declining, scale for some months to come. Meanwhile, advances to private borrowers appear to be fairly stable. The decrease of £45.2 million in total advances in the July period is not a real one, for the end-June total is always artificially swollen by clearings between branches; the true measure of the trend is reflected in the increase of £20 million in the eight and a half weeks since mid-May. This may have been wholly accounted for by the demands of the utilities—but it contrasts with increases of under £5 million in the preceding eight weeks. The banks' scrutiny of applications continues as critical as before; but no new "target" of reduction has been set following the new appeal by the Chancellor last week, nor have the banks sent out any new instructions to their branches in consequence of it.

Attracting the Small Saver

THE man with a few pounds to save, as well as the man who wants a flutter on "Ernie," is now being ardently wooed. In the next few weeks the building societies will be putting up their rates, offering him a gross yield (if he pays tax at 8s. 6d.) of £6 1s. 9d. on their shares. On Wednesday the National Savings movement dangled before his eyes perhaps the most attractive bait of all. This is the long-awaited 10th series of National Savings Certificates which offer the investor paying the standard rate of

	Gross yield per cent (Tax at 8s. 6d. in £)
	£ s. d.
National Savings:	
Savings Certificates 9th series (10 years)	5 5 11*
Savings Certificates 10th series (7 years)	7 5 11*
4½% Defence Bonds	5 5 1
Savings Bank (up to £15 of interest)	4 7 0
Local Authority Mortgage Loans:	
Manchester (2, 5, 6, or 7 years; minimum of £50)	5 5 0
Bradford (2, 3, 4 or 5 years; minimum of £50)	5 2 6
Bristol (3, 4, 5 years; minimum of £500)	5 10 0
Wolverhampton (10 years)	5 5 0
Building Societies:	
3½% net on shares	6 1 9
3½% net on deposits	5 13 1
3% net on deposits	5 4 4

*Compound interest.

8s. 6d. in the £ a gross yield of £7 5s. 11d. per cent compound (or £4 3s. 11d. net) if held for the full seven years. Being tax free, these certificates will attract surtax payers even more, and many of them will no doubt take out the maximum holding of 600 units at 15s. each. One post office in the City was sold out on Wednesday. They offer the investor a full £2 of gross interest more than the 9th series certificates, but the investor can now hold 1,400 units of this issue.

There is thus an advantage in switching from the old

series to the new certificates (unless, indeed, the investor has enough money to hold the full quota in each series). In the last few weeks repayments of National Savings certificates have been heavy. The credit squeeze, short-time working in some industries and seasonal withdrawals for holiday money largely account for these repayments. But buying of the old series of certificates in the last few weeks has been sustained well enough to suggest that a few investors—presumably those paying surtax—have been glad to avail themselves of the new opportunity that Mr Macmillan gave in his Budget of buying an extra 200 units in the 9th series.

Outlets for small savings are not strictly competitive with each other. The buyer of the new certificates has to wait seven years to secure the full advantage ; for shorter periods the new rates offered by the building societies will exert a considerable pull. So, too, may some of the mortgage loans of local authorities, though these have the disadvantage of a fixed life (or a long notice of withdrawal) ; they attract money from companies or the special investment departments of Trustee banks rather than from individuals. Once he has £50 in the ordinary branch of the Trustee bank, the investor can put up to a maximum of £2,000 in the investment department, where he can earn only up to 4 per cent but where he can withdraw his savings at a month's notice. The small saver has a wide choice and though through habit or inertia he may not want to chop or change, the return offered by the new certificates—the highest since 1922—will be a difficult lure for him to resist.

Rumblings About Steel Prices

ONLY the most discreet reflections of the rather fervid debate about price policy that has been and still is going on in the British steel industry for some time are to be traced in the quarterly review that the British Iron and Steel Federation published this week. The federation prefers to set out the current facts of life of the industry—demand still greater than it can supply in spite of steady expansion ; the difficulty of getting enough scrap to maintain the traditional reliance on this steel-making material ; the need therefore for a higher proportion of pig iron, which will require more low-grade home iron ore at rising prices but also much more foreign ore at prices that the federation still wistfully believes might moderate, relatively, in a few years' time. And almost incidentally it mentions, tucked away in a note well outside its main argument, that British home trade prices for steel are still somewhat cheaper than those in most other major steel-producing countries, where prices, too, appear likely to be going up. Very mildly, it comments

> Since much is made of the impact of German competition in engineering and other metal goods, it is perhaps particularly instructive to compare the prices paid by the British and German industries for their steel.

For open hearth steel, the German engineer in fact has to pay between 14s. 6d. a ton extra (for reinforcing bars) and £8 a ton extra (for sheet).

The review mentions that the last increase in British steel prices, in May. did not take full account of the rises that had already occurred in the industry's labour and transport costs ; nor could it cover the subsequent increase in coal prices. There it halts the argument. This, no doubt, is partly to leave the facts to speak for themselves ; they do. It may also reflect considerable internal disagreement within an industry that has long argued the case for stable and controlled prices—which now has to deal with a Government that wants prices frozen and a state-appointed board that has taken the actual figuring of prices out of the industry's own hands.

Rubber Shod Economics

IN investigating the rubber footwear industry the Monopolies Commission encountered an unusual and rather strange defence of a system of uniform prices arrived at by prior consultation. It was based on the economic principle that in a perfectly competitive market, in which competitors and customers are fully informed, there can be only one price for a product of uniform quality. Therefore, argued the rubber shoe makers, a uniform price is "strong circumstantial evidence of the existence of effective competition." This seldom occurs in any modern market because competitors are ignorant of each other's intentions and have to "grope blindly." The way out is for manufacturers to meet and consult with each other, as the eight members of the Rubber Footwear Manufacturers' Association—with two-thirds of the domestic market in rubber boots and nearly half of the market in canvas footwear—have been meeting and consulting before each summer and winter selling season. At these meetings the natural "price leader" in each standard line would emerge. Dunlop, which produces 44 per cent of all rubber boots and 31 per cent of canvas shoes, happened to be this natural leader for almost all types of shoes. All other manufacturers would then follow the leader's prices, though there was no formal compulsion for them to do so. Thus, argued the makers, the imperfections of modern marketing were corrected and the conditions of an impossibly perfect market place conjured up in the Association's board room.

Unfortunately for the consistency of this remarkable defence the Association's members had an understanding not to alter their prices during each selling season. They also agreed not to arrange special prices with large customers without notifying the rest, and they operated a classified list of traders entitled to ordinary and special wholesale terms. But the main argument was itself patently false, and easily punctured by the Commission. Uniform prices can be the symptom equally of perfect agreement as of perfect competition. Uniform prices were found to exist for footwear products that were not uniform in themselves. Following the price leader, whose costs happened to be not among the lowest, merely meant "a tacit agreement by 'competing' manufacturers to observe, irrespective of their own costs, the prices set by Dunlop or by North British." As a result the Association's members were hampering their own ability to meet effectively the formidable competition in canvas footwear from importers and manufacturers in the leather footwear industry and the growing competition in rubber boots from importers. The two non-members, of whom Bata has been one since 1952, had been much more successful. So the Commission recommends that the members of the Association should cease consulting each other on prices, in their own interest as well as that of the public, and that they should drop the attendant agreements on price variations and dealers' terms. But the prominent position occupied in this industry by Dunlop, the Commission concludes, does not operate against the public interest, except through the company's membership of the Association.

Now in its second year

The Paper Bulletin

This is a bulletin service for paper users and makers. It deals with the supply, demand and price trends for paper, paper products and raw materials. The sixth quarterly issue is now available.

The Old Lady's Veil

THE Bank of England continues to hold the distinction of being the one nationalised institution to conform with the obligation of issuing an annual report on its activities without reporting on its activities. In the latest instalment, the only light shed on the Bank's policy in the first year of the credit squeeze is that in the spring of last

Germany's Export Challenge

BY 1953 West Germany's export trade had already made a remarkable recovery. Yet the volume of German exports has since risen in 1954 and 1956 by no less than 40 per cent and Germany's share of world trade in manufactures has made a further stride from 13.3 to 15.6 per cent (the prewar share of all Germany was 23 per cent). That compares with a rise of 11½ per cent in the volume of British exports in the same two years, and with a fall in Britain's share from 21.3 to just under 20 per cent. German exports had reached three-fifths of Britain's exports by 1953 ; in 1955 the proportion had risen to three-quarters. How has Germany done it ? Some of the answers appear in an official study of German competition published in the *Board of Trade Journal* last week.

UK total	2,519	2,922	+ 16
German total	1,673	2,457	+ 47

The old story that German industry still enjoys special privileges gets no support. Materials and fuel, in fact, cost a little less in Britain than in Germany. Rates of company taxation are very similar, and local taxes in Germany are higher than local rates in Britain. Tax reliefs for German exporters expired at the end of last year. The British exporter has larger sources of credit, pays less for it, and can insure those credits as cheaply as his German competitor.

German industry has had the great advantage of a vast influx of new workers. Between 1950 and 1955 the number of wage and salary earners rose by nearly four million. That influx has brought a profound stimulus to the rate of increase in German output and a considerable, though by no means an absolute, restraint on wages.

Taking the ratio of production to employment as a crude index of productivity, the report finds that output per man in manufacturing rose by 17 per cent in Germany between 1953 and 1955, and in Britain by 10 per cent. Average weekly earnings in Germany rose by 12 per cent (much less than output per man), and in Britain by 17 per cent (much more than output per man). So labour costs dropped by 4 per cent in Germany and rose by 6 per cent in Britain. Although it is difficult to compare the absolute level of productivity in the two countries, movements in costs have clearly been in Germany's favour. "Fringe" payments to labour are thought to be higher in Germany than in Britain, but not so much higher as to bring total payments to labour up to the British level. Nor is there any evidence that productivity in Germany is so much lower than in Britain as to cancel the apparent advantage in labour payments.

OVERHEARD AT THE FESTIVAL HALL

your sales are limited by the number you ignore

"Most products sell in the mass market to-day. It makes media selection much easier. You just go in the papers with multi-million circulations, and there you are!"

"What do you do about the people who don't read papers with multi-million circulations?"

"There aren't enough of them to worry about."

"Aren't there? There are plenty at this concert and I don't know how many more listening at home. And what about the serious playgoers, the balletomanes, the people who throng the art galleries to see modern art? They want a popular type of newspaper which caters for their interests. So what newspaper do they buy?"

"The News Chronicle, I should say."

"The News Chronicle. The paper which is read by that part of the mass market which appreciates the better things in life. They may not be in the majority but your sales are limited by the number you ignore. The News Chronicle carries more financial advertising than any other popular daily. Can **you** afford to ignore the most valuable and discriminating section of the mass market?"

year "the condition of the gilt-edged market . . . made possible vigorous departmental net sales"—which indeed was obvious at the time. It is recalled further that during the year to end-February, the Bank made advances to the discount market at Bank rate on 100 days. The new information in the report is confined to the usual isolated scraps. Merchanting transactions conducted in sterling between non-sterling area countries rose further in 1955, to £176 million—compared with £163 million in 1954, £142 million in 1953 and £124 million in 1951. The total value of commodities sold to countries outside the sterling area under the special commodity market schemes rose still more steeply, from £299 million in 1954 to £393 million last year. The Bank points to the substantial increase in business in the London foreign exchange market, and states that the turnover of US dollars was up by about 40 per cent.

A New Fiver

EARLY next year the Bank of England will issue a new five-pound note—in colour and only very slightly larger than the one-pound note. The innovation will be widely welcomed. It has long been clear that the postwar rise in prices and wages called for a note in common usage of higher denomination than one pound. The existing fiver (which will remain in circulation for some years) suffers both from its unwieldy size and from a prejudice that appears to remain in the public mind against its acceptability. Even so, the use of five-pound notes has been increasing steadily. Their circulation has doubled in the past six years, but at end-February it was no higher than £242 million, against £1,357 million in ones.

In the past year or so the use of fivers has quickened markedly, as the Coal Board and high-wage motor and other companies have begun putting them into wage packets. This has saved a considerable amount of time both for pay staffs and for the banks—though it has caused some annoyance to shopkeepers, who have found that they need to keep considerably more one-pound notes. But even this inconvenience should be diminished if the new fiver achieves a really significant increase in popularity—which it should do, on grounds of attraction, convenience and confidence. The general public may then become rather less attached to the conviction that the first thing to do with a fiver is to change it.

Bid for Robinson and Cleaver

CITY CENTRE PROPERTIES have now made a formal offer to the shareholders of Robinson and Cleaver of £5 for each of the 250,000 ordinary shares, subject to the acceptance by owners of not less than 75 per cent of the issued capital (or less if the bidders are willing to accept). Informal skirmishing now becomes formal battle.

The directors of Robinson and Cleaver have again advised shareholders not to accept the offer and they have replied to it with a promise of a preliminary report, on August 15th, of results for the year to July 31st, instead of waiting until the usual time of early October. The directors will then declare the final dividend (they repeat that it will be substantially higher than last year's payment) and will publish full details of the company's assets and how they propose to employ them in the business. As City Centre Properties' offer is open until August 31st, Robinson and Cleaver shareholders will obviously wait until this preliminary report is published before deciding about City Centre Properties' offer.

In the meantime they can consider some of the implications of City Centre Properties' own preliminary report. Its most arresting disclosure is that "the total capital expenditure involved in developments in various parts of the country in which the group is interested exceeds £10 million." These projects are expected to be completed within three to five years and to add considerably to the group's revenue. The sum is large in relation to the group's own liquid resources and the absorption of Robinson and Cleaver (which ought to be well supplied with cash from the sale of its Crown lease on the Regent Street property) would no doubt ease City Centre Properties' own financing problems. In spite of an increase in "loans and mortgages" from £2,624,193 to £3,746,115 in the year to March 25th last, City Centre still seems to be short of cash. Its total current assets at that date amounted to £357,126, against current liabilities of £1,657,596; a year earlier current assets totalled £317,874 and current liabilities £2,763,971, including a bank overdraft of over £1,900,000. These figures must prompt a question about the financial arrangements that the group would have to make to satisfy its offer, which if fully accepted would require £1,250,000 in cash. The directors of City Centre Properties are considering a free scrip issue but at the moment they are content to leave the ordinary dividend unchanged at 17½ per cent.

Closing a Small Loophole

A NEW order makes it necessary to secure Treasury consent before a company issues shares or debentures in consideration of the transfer to that company of property, except where the property consists either of the assets of an undertaking being sold to the company (as happens on the conversion of a partnership into a company) or of the securities of another company (as happens when two companies are merged into one). This closes a loophole through which a company could get new money without seeking the prior consent of the Treasury. The method was for a parent company to sell its property to a subsidiary in return for shares and debentures; the parent company could subsequently raise new funds by selling the shares or debentures, retaining control of the assets through its ownership of the equity. The new order should also check efforts by property companies to evade the surveillance of the Treasury by building a property, forming a new subsidiary, creating a new debenture, selling that debenture and then starting the cycle again. But it will not hamper the normal take-over bid, where shares are offered in exchange for existing shares.

While the Chancellor has tightened the reins on new issues with his right hand, he has loosened them with his left hand. In a letter to Lord Kennet, the chairman of the Capital Issues Committee, Mr Macmillan seeks to encourage more capital investment in Northern Ireland. He says that

the Treasury is ready in principle to consent to the raising of new money exclusively for investment in Northern Ireland provided that such proposals fulfil the normal screening conditions of the Capital Issues Committee.

Oxygen by TV

To celebrate the opening of the first tonnage oxygen plant in Britain this week (a tonnage oxygen plant makes this gas in quantities that can more easily be counted in tons than in cubic feet) the British Oxygen Company held a rather unusual form of meeting. Its offices in London were connected by a closed TV circuit and a two-way radio link with the plant at Port Talbot. The Home Secretary, in his capacity as Minister for Welsh Affairs, pressed a button in London and the air compressor started to suck in air in South Wales, watched and heard by an audience in London. Conditions were not particularly kind for this 200 mile link—the longest closed circuit for industrial purposes yet achieved in this country; it was carried by Post Office lines used by the BBC for the bulk of the distance and by a microwave link for the last few miles—but reception was on the whole good. It had been better for previous rehearsals. A raging gale in South Wales on the opening day disturbed the sound link—but not the TV circuit—and at one point caused a question from London about ancillaries to be translated to a puzzled steel manager in South Wales as a question about "distilleries."

The plant, which has a capacity of 100 tons of oxygen a day, will feed the Abbey and Margam works of the Steel Company of Wales, and a second plant of 200 tons daily will follow very shortly. Others are being built for steel and chemical plants in other parts of the country. Besides marking the inauguration of the first tonnage oxygen plant, however, Wednesday's meeting had some significance for industrial television. Since a closed circuit was used five years ago to link an overspill meeting at a hall in Edinburgh with the neighbouring main conference room, television has been adapted to a number of industrial, educational, and defence uses. As an industrial tool it has been used profitably where vision is required but it would be dangerous, inconvenient, or impossible to place the human eye. Apart from conferences and office communication—Glyn Mills have used a ten-mile micro-wave link since 1952 to check signatures on cheques with its records office—television has been used for control and inspection purposes in a wide variety of industries, including nuclear and steam power stations, steel plants, aircraft testing—and the bridge of a whaling ship. As experience has been gained the cost and simplicity of equipment has been improved, but television is not necessarily a cheap toy for industrialists.

Spurt in Nickel

NICKEL shares rose sharply this week after the United States government announced that it will pay premium prices to encourage production of nickel. In London the stock of the International Nickel Company of Canada, which accounts for about four-fifths of world production, rose from $187¼ to $208, and in Toronto shares of Falconbridge Nickel Mines and Sherritt Gordon Mines rose by about 12 per cent. The United States is almost entirely dependent on foreign sources of nickel, and its premium price contracts will be available to domestic and foreign producers. Unless the government demands delivery into its own hands, producers will have the option of delivering to the government or to American industry.

The government's decision is an extension of existing policy. For several years the United States has paid premium prices to enable the low-grade deposits in Canada and elsewhere to be opened up. Prices have ranged up to $1 a lb, which compares with International Nickel's present price of 64½ (US) cents a lb, and with its price to consumers in this country of £519 a ton. Despite the diversion of considerable quantities of nickel from the American strategic stock there appears to be no slackening in the demand for nickel in the United States or Europe. Prices paid for the small quantities that come on to the open market are still as high as £2,000 a ton.

Company Notes

GREAT UNIVERSAL STORES. "Gussies" ordinary dividend announcement usually sends up the price of its shares. This year the dividend has been raised from 60 to 62½ per cent (paid on a capital as increased by a 10 per cent free scrip issue), but in the course of two days the "A" ordinary shares fell by 2s. 7½d. to 38s. 10½d. The market was unsettled by the Suez Canal seizure, but Mr Isaac Wolfson and GUS are many miles from the Canal and the fall reflects a genuine disappointment with the trading results.

Profits again show an advance, rising by £1,349,706 to £20,273,185. But £364,233 of this increase simply reflects profits earned by subsidiaries newly acquired during the year to March 31st; in 1954-55, £546,127 of the increase of £3,369,155 represented profits earned by newly acquired subsidiaries. Set against advances in earnings reported in earlier years, the annual figures suggest that the rate of increase in GUS's profits is slowing down appreciably. The trend of the half-yearly figures brings out the same point. Comparing equivalent periods, profits in the six months to September 30, 1954, rose by 27½ per cent, in the six months to March 31, 1955, by 17 per cent, in the six months to September 30, 1955, by 8½ per cent, and in the six months to March 31, 1956, by 6 per cent. It seems that GUS's profits have been affected by the rise in costs and are not escaping the squeeze, even though, as Mr Wolfson has claimed, only one fifth of the group's business at home is on hire purchase and sales of clothing and drapery are bigger than sales of furniture. By their length hire-purchase contracts tend to cushion profits on any setback in current sales. But though the march of the multiples, taking in the weekly shillings of the millions, has been checked, it has by no means been halted.

	Years to Mar. 31, 1955	1956
Consolidated earnings :—	£	£
Trading profit	18,923,479	20,273,185*
Depreciation	973,352	1,298,191

5s. "A" ordinary shares at 38s. 3d. yield £8 3s. per cent.		

* Including £364,233 being profits of new subsidiaries acquired during the year.

JOHN BROWN. From its interests in shipbuilding, boilermaking, machine tools and railway carriages and wagons, John Brown cannot fail to do well when the demand for capital goods runs high. Rising costs, not falling sales, are the danger. In the year to March 31st the group did well. Its profits before tax rose, more vigorously than had been expected, from £2,229,218 to £3,067,953. The increase may have been partly influenced by the completion of large contracts, but if that is so, the fact remains that profits have been rising steadily since 1952-53.

Profits after tax attributable to the parent company have risen from £858,130 to £1,233,048. But this has not been a signal for an increase in the ordinary dividend, which is left unchanged at 1s. 2d., tax free, per £1 stock unit, absorbing £376,933. The dividend cannot be described as anything but conservative; the directors may have been influenced by apprehensions about higher future costs. On the maintained dividend the £1 units at the current price of 38s. offer a gross yield of 5.3 per cent.

★

GENERAL ELECTRIC. The full accounts of General Electric help to put the decline in trading profits in the year to March 31st, discussed in these columns last week, in perspective. They show that the actual decline in trading profits before all charges was slight—only £136,550 to £9,752,774. The much bigger decline in gross profits before tax, from £7,538,966 to £6,562,231, was due to heavier charges for depreciation, unascertained liabilities and loan interest. Nevertheless, the perspective revealed by the accounts is not too inspiring when it is compared with the experience of the other giants of the electrical industry.

In the directors' report the chairman, Sir Harry Railing, says that "sales for the year continued their steady and satisfactory increase and constitute another record"; "total exports reached a record figure"; and "the order book for capital goods remains satisfactory but the falling off in certain consumer goods continues." If that were all, there would be little reason for complaint. But profits have fallen and Sir Harry attributes this to three factors. First, costs of production and distribution have been rising and have not been fully recovered in prices. Secondly, "difficult trading conditions in certain consumer goods following the measures which the Government have taken to curb expenditure" have had their effect on the results. And, thirdly, overseas subsidiaries have had a difficult year "owing to keen competition, import restrictions and local manufacture" and there have been losses on exchange in Argentina and Pakistan. This is not a unique experience; other chairmen in other companies and other industries have laid stress on the same difficulties in trading this year.

The failure of profits to respond to the increase in sales has set GEC a new financial problem. Its stocks and work in progress have risen from £35,544,510 to £43,457,144, thanks to "a greater volume of capital goods in course of production" and to "an increase in finished stock which is partly due to the fall in orders for consumer goods." As a direct result, the group's cash balances have fallen from £7,150,352 to £1,373,435. The group's outstanding capital commitments are estimated at £2,212,975. This report will not encourage stockholders to raise their sights beyond the 14 per cent dividend paid for 1955-56.

Next Account begins August 8th
Next Contango Day August 8th
Next Settlement Day August 14th

LEADING oil shares slumped heavily on the seizure of the Suez Canal; British Petroleum fell 8s. 9d. last Friday and the same amount on Monday, while in the same period Burmah lost 15s. and Shell 11s. 10½d. The Government's action caused a partial recovery, leaving British Petroleum 11s. 10½d. lower on balance over the week at 163s. 9d. National Bank of Egypt dropped 2½ to 13¼ and British Bank of the Middle East 2s. to 34s. Anglo-Egyptian Oilfields fell 12s. 6d. to 36s. 3d. The crisis checked the buoyancy of industrial stocks, the *Financial Times* index of ordinary shares moving back 4.2 to 181.4 on Monday, but there was a steady recovery later although business was restricted. The prices of Government securities continued to slide throughout the week, the *Financial Times* index reaching 83.64, the lowest point recorded, on Wednesday. Short-dated stocks receded; 4 per cent Conversion 1957/58 lost ⅛ to 98⅛ and 2 per cent Conversion 1958/59 ⅛ to 94⅛.

Bank shares weakened; Lloyds "A" lost 1s. 6d. and Barclays 10½d. Prudential Assurance "A" fell 3 to 42. Gus "A" declined 3s. 3d. following the results and Canadian and English Stores' preferred ordinary lost 7½d. to 15s. 1½d., and its ordinary shares fell by 9d. to 7s. 9d. Debenhams was strong, advancing by 1s. 3d. to 37s. 3d. Standard Motor hardened to 8s. 1½d. following the moves for an inquiry. Rolls-Royce improved 1s. 3d. to 108s. 6d. but Ford were 6d. lower. ICI dropped 1s. 9d. to 45s. 4½d., and Borax was ⅛ lower on balance despite a rise of 3s. 9d. on Wednesday to 13⅛. *Shipping* weakened, Cunard losing 1s. 6d. to 21s. 9d. and P & O deferred 1s. 9d. to 30s. 6d. United Molasses declined to 47s. 6d. before recovering to 49s. 6d.

Kaffirs remained quiet with Winkelhaak falling back to 16s., but coppers advanced. Rhodesia-Katanga and Rhodesian Anglo-American were prominent with gains of 2s. 10½d. and 5s. 7½d. respectively.

(1) From August, 1953, the index has been revised to show a more representative wheat price. (2) Figures up to July, 1953, relate to delivered prices and subsequently to ex-warehouse prices of H.C. electrolytic copper; from May, 1955, onwards the proportion of copper sold at fixed prices has been taken into account. (3) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by *Professor R. G. D. Allen for the* London and Cambridge Economic Service. (4) New series based on January 17, 1956=100. (5) Surveys made twice a year; annual figures relate to October survey. (6) *Revised series based on Liverpool spot market prices, as from July 1, 1954.* (7) *Revised figure for food on June 26th was 91·5.*

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. Italy includes Trieste. (3) New drachmas introduced May 1, 1954 (1 new drachma=1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area. (6) Average fourth quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended July 28th, 1956, there was an "above-line" surplus (after allowing for Sinking Funds) of £11,645,000 compared with a deficit of £4,301,000 in the previous week and a deficit of £9,084,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £9,693,000, bringing the total deficit to £263,579,000 (£358,518,000 in 1955-56).

THE MONEY MARKET

THE discount houses again changed their bid at the Treasury bill tender last Friday—for the sixth week in succession. The bid last week was raised by 3d. (in the previous week it had been reduced by 2d.) to £98 15s. 2d. per cent, thus carrying the rate just below 5 per cent, around which it has vacillated in the past few months. Total applications last week fell heavily by £37.4 million to £381.0 million, whereas the offer was down by only £10 million, to £270 million. The upshot was that the market succeeded in raising its allotment from 50 to 73 per cent.

Credit was almost continuously short in Lombard Street in the week to Wednesday. The Bank helped the market by making special purchases on each day except Saturday and Tuesday, and on Wednesday the aid reached moderate proportions. Rates for day-to-day money have ranged up to 4¾ per cent, and on occasion 5 per cent has been paid.

The price of gold in London rose on Tuesday to 252s. 1d. an ounce, the highest since the reopening of the gold market in March, 1954. The rise has reflected not only the weakening of sterling, but also a substantial increase in demand. This has raised the dollar price to around $35.10 an ounce.

The Bank return shows a further outflow of notes for holiday spending of £16.2 million. This brings the total active circulation to £1,979.2 million.

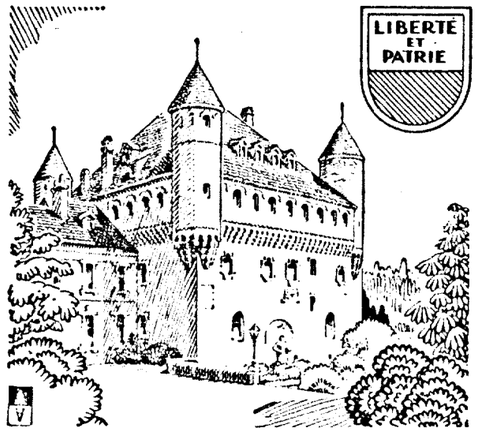
Perhaps you didn't know that
LAUSANNE



seat of the Federal Court of Justice, boasts of a 22 storied skyscraper plus roof-restaurant, which is in strange contrast to the lovely Burgundian Gothic Cathedral, and the mediaeval Piedmontese style Castle of St. Maire?

But everybody knows

that Lausanne, famous for its University and educational establishments, patronised by Kings and commoners from the corners of the earth, is also an important holiday resort and centre of commerce.
The Lausanne Branch of the Union Bank of Switzerland is always prepared to give prompt and efficient service.

COMPANY MEETINGS

THE BRITISH PLASTER BOARD (HOLDINGS) LIMITED

INCREASED TURNOVER

SUCCESSFUL OUTCOME OF DEVELOPMENT POLICY

EFFORTS TO FOSTER PRICE STABILISATION

SIR GRAHAM HAYMAN ON GROUP'S WIDESPREAD INTERESTS

The thirty-ninth annual general meeting of The British Plaster Board (Holdings) Limited was held on July 26th at Bath House, 82 Piccadilly, London, W.1, Sir Graham Hayman (the chairman) presiding.

The following is the Chairman's statement which had been circulated with the report and accounts for the year ended March 31, 1956: Members of the Company will have learned with deep regret of the death of Lord Belper on March 20th last. Lord Belper became Chairman of the Group in 1935 on the occasion of the amalgamation of The Gypsum Mines Limited with The British Plaster Board Limited, which followed a few months after British Plaster Board's first important merger, which was with The Gotham Company Limited. Lord Belper had, therefore, presided over this enterprise throughout almost the whole of its rapid growth as a Group, and his influence in the conduct of our affairs will be greatly missed. He was regarded with the greatest respect and affection by his colleagues on the Board, and by the large number of employees to whom he was known personally in the home and overseas companies of the organisation.

In April last, your Directors did me the honour of appointing me Chairman of the Board. I have been associated with the industry for some twenty-five years and have followed closely the progress of your Group. I will do my best to ensure that its progress is maintained in the future.

BALANCE SHEET

As mentioned in the Director's Report, the Company has acquired the whole issued capital of Plaster Products (Greenhithe) Limited. This acquisition accounts for the increase of £199,960 in the issued Ordinary Stock of the Company which was allotted in part payment, the balance of the purchase price being paid in cash. The issue of this Stock results in the Share Premium Account being increased by £165,513.

The total of Fixed Assets as at March 31, 1956, increased in comparison with the previous year by £1,499,338 before depreciation. Of this, £1,030,146 is in respect of gypsum and gypsum products, and includes the assets acquired through the purchase of Plaster Products (Greenhithe) Limited; £241,809 was spent in enlarging and improving the paper, liner board and box factories of C. Davidson & Sons Limited; £81,001 was spent in various other sections of the Group in this country, including felt and engineering, and £146,382 was spent overseas, mainly by our Canadian company. During the year, the balance of the bank loan, £658,718, which had been arranged to finance part of the purchase consideration of the Canadian company, was repaid.

You will recall that in 1947 we inaugurated a staff pension scheme. For some time past, however, it has been apparent that the amount placed to Pension Reserves is inadequate due to the severe inflation which has taken place in the intervening years. It was, therefore, thought advisable to obtain an actuarial valuation, as the result of which increased amounts have been charged in this year's accounts. At the same time, your Board decided to convert the scheme into a Trustee Scheme and to transfer to the Trustees, on account of the first year's contribution, an appropriate part of the Company's holding of British Government Securities.

Whilst on the subject of pensions, I should add that since the start of our new financial year, your Board has decided to adopt an improved scheme for the payment of pensions to our workmen.

TRADING ACTIVITIES

In spite of frequent reminders from my predecessor of our extensive and growing interests outside the British building industry, I have the impression that few may appreciate how widely the Group's interests have been diversified and spread outside that sphere. This should, I think, be stressed, and may best be illustrated by the fact that nearly 40 per cent of the total profits for the year were derived from sources other than the British building industry.

This does not mean, however, that there has been any lack of progress in the home or overseas production of building materials, the sales of which show an increase over the previous year, and there are points of particular interest to note from the report of our activities in this field. For instance, out of more than £7 million of capital expenditure which we have incurred since the war, a substantial proportion has gone into gypsum and gypsum building products, and we have introduced an impressive number of new ideas designed—with the ready collaboration of our personnel and the Trade Unions—to reduce costs, to increase output and to improve quality.

We consider that the achievements of our organisation have been notable, as typified by the following comparisons of indices immediately prior to the recent increase in coal prices:

	% Increase in Selling Prices based on 1939	
Gypsum	101	
Coal		265
Plaster	103	
Plasterboard	69	
House building materials generally		192

In spite of the fact that the trend of our profits in the gypsum section has been slightly downwards over the last three years—the increased costs imposed on us by others being more than our improved efficiencies and productive capacities could absorb—we decided in December last in collaboration with the Cement Producers and others, to hold firm the prices of our gypsum products until at any rate June 30th of this year. We pointed out, however, that private enterprise could only hope to continue to hold prices if the Government, the Nationalised Industries and the Trade Unions would play their part in stabilising costs. Unfortunately, during this trial period, we have had to bear further additions to costs beyond our control which have now forced us to increase our prices to a moderate extent.

The amounts by which our own prices are being increased do not cover us by any means for the whole of our additional costs, and it is worth recording that the price of plasterboard to the user is, even now, only equal to the price set immediately before we were freed from price control in March, 1952.

This reflects the success of the development policy of your Company in the mechanisation of its mining operations and the steady introduction of improved methods of manufacture, which have made possible a substantial increase in our overall productivity. The vital importance of stable prices is fully recognised, but that target can only be achieved provided that other raw materials and services—which play such an important part in the national economy—are made available to industry at prices which are not only stable but reflect efficient and economical operation.

The plaster mill and board plant machinery of Plaster Products (Greenhithe) Limited, whose purchase I have already reported, are being transferred from Greenhithe to East Leake in Nottinghamshire, where greater advantages will accrue from the availability of gypsum rock from our mine there, and from a more balanced geographical spread for our plasterboard production as a whole.

In the case of the roofing manufacturing and contracting companies, trading conditions were brisk with an appreciable gain in turnover, but the abnormally competitive situation of the previous year persisted to a large degree throughout the period under review, with the result that the industry's price levels are still too low.

Our engineering companies—whose activities include stampings, drop forgings and valves—have done very well in difficult circumstances and their profits are higher than in the previous period.

C. Davidson & Sons Limited, who specialise in the manufacture of paper, paper board and ancillary products, show only a slight improvement in profits over the

previous period. Production has been somewhat affected by the final stages of the development plan put in hand some years ago but full advantage of these developments will be obtained after the completion of the programme in the course of the current year.

OVERSEAS INTERESTS

It is some two and a half years since Western Gypsum Products Limited, Canada, became part of our Group and we are now nearing the completion of an initial plan to improve still further the quality of their products and enlarge their manufacturing capacity. We are now studying the merits of several possible schemes for the further development of our interests in Canada, since we are more than ever satisfied of the desirability of expansion there.

In Rhodesia, where, you will recall, we have established a small paper board making unit, we are experiencing some technical difficulties which we hope will be solved shortly. As was anticipated, the development of an ample market in that area is necessarily slow.

Our associate companies in Eire, France and South Africa have each been making good progress, although earnings of the South African company have been adversely affected, so far as concerns their building materials section, by the withdrawal of sea competitive rates by the Railway Authority, coupled with the continued limitations imposed on the use of road transport. However, increasing success in the quarrying of base minerals is proving a balancing factor in their earning power.

The construction of the new plaster mill and board plant by our associate company in Sweden is proceeding satisfactorily, and it is hoped that they will be in production next year.

RESEARCH DEPARTMENT

The work of the Research Department, which is the essential background of much of our development programme and new applications of gypsum materials, has increased considerably, and more adequate premises are being provided near Nottingham.

TRADING RESULTS AND DIVIDENDS

In spite of the reduction in earnings from trading in gypsum and gypsum products in this country, we have been able to show improved total results due to additional profits earned overseas and in other branches of the Group at home. The Consolidated Profit and Loss Account accordingly shows an increase over last year of £150,832, the total income amounting to £2,205,049.

As in the previous year, the full benefit of taxation investment allowances was placed to reserve. We have brought back from Taxation Reserves into the Profit and Loss Account £146,774, which is mainly made up of Excess Profits Levy reserves now no longer required, following settlement of the Group's liability to this tax. £162,645 has been placed to reserves in subsidiary companies, and the Directors have appropriated £375,000 to the Parent Company's General Reserve.

The Directors recommend the payment of a final dividend on the Ordinary Stock of 7½ per cent, which, together with the interim dividend of 5 per cent, makes a total for the year of 12½ per cent, being the same rate as that paid last year.

THE FUTURE

One hears a good deal these days about the reduction in activity in the British building industry likely to be experienced in the near future.

It has, of course, been obvious for a long while that, sooner or later, there will have to be reductions in the rate at which houses have been built over recent years, and the anticipation of this trend was one of the reasons why your Directors have been eager to spread into other industries and other countries. It is a pity that a reduction in building in this country should occur because the economic situation has necessitated a "credit squeeze" rather than through the satisfaction of the housing demand, but, so far as this Group is concerned, with our widely based operations, both at home and abroad, I think we may face the future with confidence.

PERSONNEL

I should like to pay tribute to the loyalty and co-operation we have had from all our employees throughout the organisation. I have already referred to the willing collaboration we have had in our continued drive for improved methods and increased productivity, which has contributed so much to the satisfactory results now before you. All concerned are deserving of the highest praise.

The report and accounts were adopted and the final dividend of 7½ per cent, less tax, making a total of 12½ per cent, less tax, for the year, was approved.

The retiring directors were re-elected and the remuneration of the auditors having been fixed, the proceedings terminated.

RAPHAEL TUCK & SONS

The fifty-fourth annual general meeting of Raphael Tuck & Sons, Limited, was held on July 27th in London, Mr Desmond Tuck, chairman and managing director, presiding.

The following are extracts from his circulated statement: The long delay in presenting the report and statement of accounts of our company for the year 1954-55 is due entirely to the length of time it has taken to reach settlement of our claim for stocks destroyed in the fire of October, 1954. Further claims for loss of our building, and for plant destroyed, have also been settled, but there remains outstanding the claim under our Insurance Policy for Consequential Loss resulting from the fire.

The year under review started off well, and up to the time of the fire the turnover of the company was increasing at a rate which, had it continued—and there is no reason to believe it would not be continued—would undoubtedly have yielded a profit.

From this somewhat sombre review I will now turn to a brighter picture. As the sustained efforts of management and staff began to eliminate the adverse effects of the fire, a new and vigorous drive began, not only to retrieve lost trade, but to expand our markets.

It would naturally have been a more enviable task to have been able to present a report of a successful year's trading, but the contrary is not altogether surprising, since it has not been possible to include any compensating figure for our enforced and serious curtailment of business during no less than half of our trading year.

The report and accounts were adopted.

W. J. BUSH & CO.

SATISFACTORY INCREASE IN TURNOVER

The fifty-ninth annual general meeting of W. J. Bush & Company Limited was held on July 27th in London, Mr Eric L. Bush, chairman of the company, presiding.

The following is an extract from his statement circulated with the report and accounts for the year ended December 31, 1955:

During the year under review there has been a satisfactory increase in the turnover of the Group, but profit margins have suffered as a result of the more intensive competition. This, in addition to the continued increase in operating expenses arising from inflationary conditions, has resulted in a fall in profit from £271,618 in 1954 to £245,339 in 1955.

CURRENT TREND

So far as the current year is concerned, turnover of the Group for the first five months has been maintained. During this short period, however, the effect on trade of the "credit squeeze" in the United Kingdom and of restrictive measures imposed in other parts of the world has not yet been fully felt. It is therefore difficult to forecast to what extent business will be influenced by these factors during the remainder of the year, but present trends are certainly by no means as favourable as have been experienced during recent years. Whatever can be achieved by increased efficiency to combat these tendencies will remain under constant study for appropriate action.

In my statement last year I indicated that the Company's Capital requirements were under consideration. In the Autumn, whilst the matter was still under review, an offer to purchase an overseas asset was received. This offer, in addition to other considerations, would provide funds which would otherwise have to be raised from other sources. Acceptance of this offer is largely dependent upon the extent to which the proceeds may be liable to taxation before receipt by the Company. A request for a ruling on this matter has been made to the appropriate taxation authorities overseas. It will be appreciated that in these circumstances I cannot give more information at this stage, but members will be informed of the result of the negotiations in due course.

DEVELOPMENT PROGRAMME

Our development programme has involved the expenditure during the year of £144,449 on Fixed Assets at home and abroad. Full occupation of our new property at Isando, near Johannesburg, was achieved early in 1956.

By the addition made last year the reserve against Stock in Trade was deemed to be appropriate in the light of prevailing inflationary tendencies and with total stocks on approximately the same level no further allocation has been made in the Accounts under review. It has been considered prudent, however, to place the sum of £50,000 to Reserve against Contingencies.

The continuing endeavours of our staff in all establishments at home and overseas can be assured.

The report and accounts were unanimously adopted and the payment of a final dividend of 12½ per cent on the Ordinary Share Capital, making 15 per cent for the year, less tax, was approved.

GEORGE NEWNES LIMITED

SATISFACTORY RESULTS IN DIFFICULT YEAR

PROBLEM OF RISING COSTS

MR H. C. TINGAY'S STATEMENT

The fifty-ninth annual general meeting of the Company was held on Tuesday last at the head office, Mr H. C. Tingay, Chairman, presiding. The following are extracts from his statement circulated with the report and accounts:

The earnings for the year ended March 31st last have been adversely affected by two factors; firstly as a result of the dispute in the printing industry in the early part of this year, and secondly by rising costs. Group profits at £1,222,783 show a decrease of approximately £300,000 on last year's figure of £1,527,668. After deducting taxation the net profit is £786,728 as against £909,054 last year. This year's figure includes an amount of £66,092 overprovided for taxation in previous years.

The printing dispute involved the Company and its Subsidiaries in heavy losses. A total of 102 issues spread over 23 publications could not be produced at all. In addition substantial extra expenditure had, and still has, to be incurred in an effort to regain the lost ground.

Costs in general, and production costs in particular, have continued their upward course. In January last, at short notice, our paper costs were increased on average by £5 per ton—a very considerable addition in view of our large annual paper consumption. Similarly, in January, printing costs were substantially increased. Our total printing bill exceeds three-and-a-half million pounds per annum, so it will readily be realised what even a modest percentage increase can mean.

PARENT COMPANY'S RESULTS

The results of the parent company, George Newnes, Limited, after deducting taxation and all other charges, show a net profit of £537,725 as compared with £549,044 for the previous year. The Directors recommend that a final dividend of 15 per cent be paid on the ordinary shares making, with the 3 per cent interim dividend, a total of 18 per cent for the year. This is the same as for the previous year. After transferring £250,000 to General Reserve and £40,000 to Staff Sick and Pension Fund, there remains a balance of £85,648 to go forward to next year's account.

GROUP'S FINANCIAL STRENGTH

The financial strength of the Group is fully maintained, as disclosed by the Consolidated Balance Sheet. Cash resources of the several Companies amount to £1,377,546 in addition to Tax Reserve Certificates of £643,575. General Reserve and Reserves for Contingencies figure at £1,923,961. Development Reserve now reaches the substantial total of £919,143. Undistributed profits, spread over the various Companies, amounting to £385,282, are carried forward to next year's accounts.

PROPOSED SCRIP ISSUE

Over a number of years new enterprises, fresh acquisitions and long-term developments have been made possible out of resources set aside from profits earned in previous years, and the Directors consider that the time has arrived when further measures should be taken to bring capital and assets more into line. They therefore propose, subject to the consent of the Capital Issues Committee, that the parent company, George Newnes, Limited, should distribute to its ordinary shareholders one new ordinary share for each two ordinary shares now held.

THE PUBLICATIONS

The Group now owns and publishes sixty-one periodicals covering a wide field of publishing activity. Twenty-two come within the general and specialist field; the other thirty-nine being trade and technical journals. A few of the more important might be referred to individually.

Last autumn the Company launched a newcomer—THE PRACTICAL HOUSEHOLDER—a monthly in the do-it-yourself field, as the title implies. It was a spectacular success from the first issue, and today the circulation exceeds 700,000 copies per issue.

WOMAN'S OWN, our highly successful colour-gravure weekly, goes from strength to strength. The circulation continues to advance and is now nearing two-and-a-half million a week.

Our group of practical monthlies—PRACTICAL MOTORIST and MOTOR CYCLIST, PRACTICAL MECHANICS, PRACTICAL WIRELESS and PRACTICAL TELEVISION, companions of THE PRACTICAL HOUSEHOLDER already referred to, are doing well.

AMATEUR GARDENING, the leading gardening weekly, goes forward again both in circulation and advertising support. But for the printing dispute, which suspended several issues, the figures for the year would have constituted new records in both directions. The circulation position has been restored, the sales now being in excess of 240,000 weekly.

THE SMALLHOLDER, one of the properties of our subsidiary, C. Arthur Pearson Limited, was similarly affected by the printing dispute, several issues being completely cancelled at a vital time of the year. The circulation position happily has since been restored to normal at nearly the 200,000 mark.

COUNTRY LIFE LIMITED

The Country Life business has again had an excellent year, the profits being the highest recorded at any time in its long history. The bulk of the increased profits has been provided by HOMES AND GARDENS. Over the years much thought and expense have been devoted to the development of this high-class monthly magazine, and the long-term policy has now begun to produce substantial results.

TEMPLE PRESS LIMITED

Temple Press, as printers of several of their own principal journals, was most seriously affected by the printing dispute. For six weeks the only journals the Company published were four monthlies normally printed outside the London area. Consequently, the profit, which immediately prior to the dispute compared favourably with previous years, was reduced by the end of the year to less than half the anticipated figure. Since the last statement, the Company has added two journals to its list of specialised publications. THE PETROLEUM TIMES, an old-established fortnightly, which is the leading oil journal of the United Kingdom, was acquired in January, and three months later a new monthly, NUCLEAR ENGINEERING, was successfully launched, designed to cover all phases of world industrial production and utilisation of nuclear energy and its by-products.

THE NATIONAL TRADE PRESS LIMITED

The publications of the National Trade Press have done well. BRITISH COMMUNICATIONS AND ELECTRONICS, launched last year, continues to make further substantial progress. During the year the Company organised and conducted seven trade fairs covering the dress fabric, men's outfitting, household textiles, footwear, watch and jewellery trades. In March, 1957, they will stage the largest textile exhibition ever held in Great Britain at Earls Court.

PROBLEM OF RISING COSTS

The continuous increase in costs gives rise to a searching analysis of the future prospects of the periodical market. In the end, the public decides what it will pay for its reading matter, and if selling prices are pushed too far, all concerned in the well-being of the industry—publisher, printer, paper-maker and the distributive trade—must accept a lower level of activity. This position has been, or is being, reached in several directions, and long-established periodicals with circulations which a few years ago would have made very satisfactory profits, are now struggling to make ends meet and are being faced with being priced out of the market if costs go still further against them.

In the field of new enterprise, always highly speculative at any time, even the most courageous of publishers must now have his courage put to a stern test. To launch a new popular paper in the mass circulation category, risks have to be taken which are not fairly related to possible rewards. The break-even point in circulation, particularly in the case of colour-gravure printing, has now reached a level which at one time would have been described as astronomical, and as a result the large promotional expenditure involved in reaching the required target would in many cases not be justified.

GROUP'S WIDELY SPREAD INTERESTS

So far as our own Group is concerned, it is in the fortunate position of having powerful and firmly established publishing properties spread over widely diversified interests. Also its book publishing interests are substantial and progressive. With finances strong and development resources adequate, the Company is well equipped to pursue a progressive policy as and when suitable opportunities occur.

GROSVENOR HOUSE (PARK LANE)

REPUTATION GREATER THAN EVER

The twenty-eighth annual general meeting of Grosvenor House (Park Lane) Limited was held on July 26th in London, Sir Charles Taylor, MA, DL, MP (the Chairman), presiding.

The following are extracts from his circulated statement:

The profits for the year are up again, although, owing to the continuing rise in operating costs, the net amount is rather disappointing. The Directors have decided to recommend the same Ordinary Dividend of 10 per cent as last year, plus a bonus of 5 per cent. Business in all departments is again better than ever before, but during the last financial year, the ever increasing upward spiral of wages and costs had certainly not been halted, and will in fact continue during this present year.

A lot of money has been spent on maintenance and on special works in public rooms. We have received many compliments on our New Cocktail Bar, the decoration and air-conditioning of the Ballroom, and the new look of the Lounge, which has been completely redecorated and transformed so that it is now in keeping with the décor and dignity of the whole hotel.

I am very pleased to tell you that a private banqueting suite has been created, furnished elaborately in late French Empire style and for small dinner parties. I believe that there is no better in any hotel in the world.

The whole of the cost of these works has been written off out of profits. As a result, it is not possible to make a transfer to the General Reserve this year, but your Directors consider it better to write off the cost of the Special Works now rather than spread it over a period of years and at the same time making transfers to the General Reserve.

It has again been possible—and we believe that it is both necessary and really worthwhile—to make another addition to the "Provision for Maintenance."

As I said a year ago, your Directors have made arrangements to buy outright the Licensing Monopoly Value for Grosvenor House. This means that, in future, the Company will not have to pay a Monopoly Value every year, the amount of which was unknown until it had been assessed at the end of every three years.

BOLD AND IMAGINATIVE DEVELOPMENT PLAN

We are now in the process of building 90 more bedrooms and two more suites on the site of 35 Park Street. The plans include the building and equipping of a Goods Off-Loading Bay, which will relieve Park Street of more than 130 goods vehicles a day. It will also increase the space available for cars in our private courtyard, and the drive in and out will be far more convenient. The whole plan is bold and imaginative and from the clients' point of view will make the service better still, minimise noise, and provide one of the finest entrances by road to any hotel in London.

The reputation of Grosvenor House is now greater than ever.

The report and accounts were adopted.

FERRANTI, LIMITED

CONTINUED INCREASE IN ACTIVITIES

The fifty-first annual general meeting of Ferranti, Limited, was held on July 26th, in London, Sir Vincent De Ferranti, MC, MIEE, chairman and managing director, presiding.

The following are extracts from his statement circulated with the report and accounts for the year to March 31, 1956:

The continued increase in the Group's activities and the further extension of its manufacturing capacity are reflected in the accounts submitted.

The consolidated profit for the year amounts to £1,311,223 compared with £1,193,364 for the year to March 31, 1955. After provision for tax on all profits earned to date the net profit is £626,366, against £576,605. A dividend on the Ordinary Stock of 6 per cent is recommended.

IMPORTANCE OF RESEARCH

Although the outputs of most departments show increases over the corresponding figures for the previous financial year, an extensive programme of Research and Development is vital to ensure that such increases will be maintained. During the past year, a significant proportion of the Company's resources has therefore been absorbed in such a programme.

Its present position as a leading manufacturer of Electronic Digital Computers is one of the benefits of pursuing this policy during the past, and further research and development in this important field, so essential to the coming new techniques in Automation and Data-Processing, is being most energetically pursued. The "Pegasus" and "Mercury" Computers have both been well received, and additional production facilities have been planned to come into operation during the next financial year. Collaboration with Powers-Samas Accounting Machines, Limited, both in the development and marketing of commercial Data-Processing Equipment, is proceeding satisfactorily.

Semi-Conductor Diodes, and the corresponding Triodes, or Transistors, with the virtual certainty that these will supersede many types of conventional valves, represent developments which no progressive company concerned with the manufacture of electronic devices can afford to neglect. Research and development work is being carried out on a considerable scale in this field.

COMPUTER-CONTROLLED MACHINE TOOLS

Another new development, the Computer-Controlled Machine Tool, has been demonstrated both to British and to United States' industrialists, and has been acknowledged as an internationally outstanding system. In addition to this equipment, the rising volume of research and development work in progress in Scotland includes the development of important Aircraft Fire-Control Systems for high-speed aircraft, which is proceeding in a most satisfactory manner, and will, when in service, add significantly to the defence of the country.

Research and development work on Guided Missiles has reached the stage at which quantities are being produced for trials purposes. The undertaking of further work on Air Defence Missiles Systems for the Royal Air Force and the Royal Navy has necessitated a considerable increase in our establishment at Wythenshawe.

POWER TRANSFORMERS

Turning towards some other aspects of the Company's activities, the sales input of Power Transformers has reached a record figure, and included during the year both the largest single transformer contract ever placed by an overseas customer in this country, and the largest single transformer contract ever placed in this country from the southern hemisphere.

Although there has been a marked increase in business with other markets, the transformer industry continues to absorb the major part of the output of Synthetic-Resin-Bonded Paper Tubes and Cylinders, production of which has exceeded all previous records. The turnover shows an increase of 10 per cent compared with last year's figure, and the rate of profit has been maintained, despite the rises in costs of labour and raw materials.

Both output and sales input of Electricity Meters show a marked increase compared with the figures for the previous financial year.

Last year's upward trend in the sales input of the Foundry continued during the first part of the current financial year, but received a check latterly as a result of the recession in the motor car industry. Output has nevertheless continued to rise, and there has been a further outstanding increase in the demand for Spheroidal Graphite Cast-Iron in many fields. Cast by the new Shell-Moulding process, this material is, for example, replacing drop-forged steel components in small hand tools, with the great advantage that subsequent machining can be virtually eliminated.

RADIO AND TELEVISION

Although the total figures for sales of Radio and Television Receivers, and of Radiant Electric Fires, over the year show an increase, these have received a check towards its latter end from the measures taken by the Chancellor to restrict domestic spending. The increased manufacturing facilities for Cathode-Ray Tubes mentioned in last year's Report are now in operation, and the output has risen by 50 per cent.

The output of Instruments has again slightly increased during the year, and a Clip-on Wattmeter has been added to the already well-known and successful range of clip-on electrical instruments.

As anticipated, the production of the Scottish factories has increased during the year. About 40 per cent of the output has been exported, much of it going to hard currency areas. Amongst the equipment being manufactured is a new Radar Approach System for Aircraft carriers.

PROGRESS IN CANADA

In Canada the output has remained approximately the same as in the previous year. The sales input and unexecuted orders show a gratifying increase. Ferranti Electric Limited has made a major addition to the factory at Toronto, which permits the maximum weight of transformer manufactured to be increased to 240 tons. The Meter Division has brought its new Thermal Demand Meter into production as a first step in expanding its range of meters.

The report and accounts were adopted.

EDGAR ALLEN & COMPANY, LIMITED

STRONG FINANCIAL POSITION

The Fifty-Seventh Annual General Meeting of Edgar Allen & Company, Limited, was held on August 2nd at Sheffield, Mr W. H. Higginbotham, FSAA, FSS (Chairman), presiding.

The Chairman dealt briefly with his Statement, previously circulated to Members, on the Accounts for the year ended March 31st last. In so doing he said that the accounts for the preceding ten years had reflected a high and sustained level of trading activity, with consequent substantial improvement in the Company's financial position. This sequence had, unfortunately, now been broken: although the activities of the Parent Company and its seven Subsidiaries had been well maintained during the year, the resultant available profit (after taxation at a considerably higher rate) had fallen sharply from the level of previous years. Despite this, however, the financial position of the group was still commendably strong.

GROUP TRADING PROFITS

The Consolidated Profit and Loss Account for the year showed a group trading profit of £703,596 derived from total sales in value slightly higher than in the previous year, the respective contributions of Parent and Subsidiaries were 71 per cent and 29 per cent. The turnover of the Parent Company, though reduced by 4 per cent from 1954/5, was still only 1 per cent less than the average of the three preceding years; that of Subsidiaries was 13 per cent above the 1954/5 level.

The Chairman then continued:

In considering the analysis of earnings it may be observed that the ratio of Group Profits, before Tax, to net Capital employed (as shown in the Balance Sheet) has fallen during the year by some 4.5 per cent: after tax, the corresponding reduction is 3.3 per cent. Subsidiaries' profits have likewise declined by 2.7 per cent and 3.5 per cent respectively.

In considering the Trading results of the Parent Company it must be borne in mind that its products are extremely varied, and supplied to a wide range of industries, at home and abroad, for production of both capital and consumer goods; this is an element of strength, which, however, had disadvantages. Within these groups there is again considerable diversity in type, quality, and quantity of output; of profit margins obtainable; and in extent of demand from year to year. This is especially the case in respect to Steels.

INCREASES IN COSTS OF MATERIALS

Among the increases in costs of materials may be mentioned those of consumable process materials, such as sand, consumable stores of various kinds, grinding wheels, oxygen, etc., to an overall extent of some 5 per cent. Coal and coke have been increased in cost by some 11/13 per cent; further increases have occurred since March 1956. Substantial advances in costs of electricity and gas have also occurred, while transport costs have likewise risen. Increases in costs of manufacturing materials, other than alloys, include an advance of about 6 per cent on prices of Steel Plate and sections (affecting the Engineering Department) late in 1955: the increase in scrap prices in December 1954 (which only partially affected the 1954/5 total costs) has been fully effective in 1955/6; a further substantial advance has been made in scrap prices in the current year. As regards alloys: the price of Tungsten has remained fairly stable, but the world shortage of nickel has led to very substantial price increases in the marginal supplies available. On a total consumption of alloys, equivalent to some 10 per cent of total turnover, the estimated overall increase in cost is roughly 20 per cent.

In 1954/5 there were two major wage advances, the first operative from April 1954, and the second from March 1955, the effects of which were to some extent absorbed last year. Within five months of the previous wage settlement in March 1955 a further claim was lodged (based largely on concessions granted by the Nationalised industries) the effect of which is an estimated increase in our total labour costs of some 6 per cent. The effect of the various wage advances varies as between Departments and products: the overall result is an increase in production costs to the extent of 1 per cent plus.

SELLING PRICES AND PROFIT MARGINS

The selling prices of practically all the Company's products (excluding those of the Engineering and Trackwork Division) and the permissible margin of profit are controlled, directly or indirectly, under Statutory Regulations and through the agency of the Iron and Steel Board; all prices were also affected, in export markets, by the increasing intensity of foreign competition. There has thus been in a number of instances (of which steel castings are an example) a varying degree of delay in raising selling prices to offset these various cost increases: also, there has been a serious endeavour to avoid raising prices wherever possible. At present, price levels are fairly satisfactory. Another important factor is that of variation in demand for, and in production and sale of, various products. In steel castings the tendency has again been towards production of lighter and smaller castings, with a proportionately higher process cost. In steels the tendency has been towards stainless and heat-resisting steels, and also towards sales at an earlier stage of process. Inadequacy (now fortunately being corrected) of external process facilities has also been experienced, which has tended to delay deliveries of orders actually on hand.

ORDERS ON HAND

Orders on hand are much greater both in volume and value than at this time last year, even if the large cement plant contract is excluded from the total, increases are shown in all the major departments. Present indications are that delays in deliveries are being overcome, at prices which should show a fair profit margin; and engineering sales are likely to improve in the current year. It is reasonable to expect that (unless any serious increase in wages should occur) the trading results for the current year 1956/7 will be substantially better than those of 1955/6.

The Company has again been active in the research field; in which connection may be mentioned enquiry into the precipitation hardening qualities of stainless steels; and study of the effect of increasing the manganese content of austenitic manganese steel.

The report and accounts were adopted.

METAL CLOSURES LIMITED

REPUTATION FURTHER ENHANCED

The twentieth annual general meeting of Metal Closures Limited, was held on July 25th at West Bromwich.

Mr W. V. Esperson (the chairman) presided and, in the course of his speech, said: The accounts are a reflection of the intense activity of the company during the year under review. Our Consolidated Profit, before taxation, is £401,184, an increase of £94,198, or approximately 30.68 per cent. After taxation, the net result is £184,484, an increase of £53,772, or about 41 per cent.

This increased profit is mainly due to, firstly, capital expenditure on plant; secondly, a substantial increase in output and, thirdly, improved manufacturing methods.

As stated in the Directors' Report, application was made to the Treasury for consent to our issuing 1,250,000 ordinary shares of 4s. each at par; a very large part of the capital we would obtain by the issue is required for further manufacturing facilities, particularly for plant and sealing machines which we must provide in order effectually to handle our continually increasing business. We have received the sanction of the Treasury to the proposed issue.

During the year we exported to 41 different countries, and the value was about 12 per cent greater than the previous year's total. Practically without exception, the good workmanship and quality of these exports maintained and even enhanced the reputation of the Company. We confidently anticipate that our exports during the current year will surpass in value those for the year under consideration.

The example of America in the use of glass containers is being steadily followed here, and we believe that this usage will ultimately consume a large number of our Closures.

PROBLEM OF RISING COSTS

At the last Annual Meeting I stated that over the past seven years our prices in respect of about 75 per cent of our products had been increased by only approximately 15 per cent despite the fact that the price of aluminium sheet during that period had been increased by 75 per cent and wages by about 100 per cent. Over the past 8½ years the price of aluminium sheet has been increased by 80 per cent and the increase in wages by about 110 per cent. It is now apparent that our metal and wages increases, so far materialised this year, will amount to approximately 5 per cent of our anticipated turnover. Despite all increases we have not increased our own selling prices in respect of at least 90 per cent of our productions, but have absorbed them by reason of increased efficiency and greater turnover. Very regretfully I have to say that there does not appear to be any further measures left to us to keep prices at their existing level.

In regard to the future, our order book is in a satisfactory condition and the trend of business continues to be favourable, and subject to no unforeseen circumstances arising, I believe that the financial results of the current year will be virtually as satisfactory as those we have now under review.

The report was adopted and resolutions increasing the authorised share capital of the Company and amending the Articles of Association were approved.

CHUBB & SON'S LOCK & SAFE COMPANY LIMITED

RECORD SALES AND LARGER PROFIT

The seventy-third annual general meeting of Chubb & Son's Lock & Safe Company, Limited, was held on August 1st in London, Mr H. Emory Chubb, CBE, MIMechE, chairman and managing director, presiding.

The following are extracts from his statement circulated with the report and accounts for the year to March 31, 1956:

I am pleased to report the achievement of record sales by the Group. Last year I referred to the important part being played by our overseas subsidiaries, and this year we see the benefit of the capital expenditure invested therein. As a result our gross trading profit has increased from £250,258 last year to £370,661.

During the year we incurred capital expenditure amounting to £127,000 and from the note of capital commitments for home and overseas attached to the balance sheet you will realise that our expenditure during the coming year is likely to be greater still.

In my review last year I referred to the intention of the Board to issue further Unsecured Notes. Arrangements are now being made to issue a further £150,000 of Unsecured Notes and to add the existing Notes to the new issue, making a total of £200,000.

Towards the end of the financial year we made an approach to Hobbs Hart & Company Limited to take over their business by an exchange of shares, and your consent to this was received at the Extraordinary General Meeting on May 2nd. I am glad to say that our offer was well received and we now have 95 per cent acceptance of our proposals from the Hobbs Hart Shareholders. This firm recently celebrated the Centenary of its foundation and we have known them well for many years. They have supplied security work of high quality to many leading banks and have a reputation which commands much respect.

GENERAL TRADING CONDITIONS

As yet we have not felt the full impact of credit restriction and I feel it unwise for us not to be prepared to face the consequences of a reduction in our turnover. At the same time we should not forget that there are still new markets to be explored and we shall do our utmost to maintain the increased total of sales which has been evident during recent years.

In order to broaden the basis of our activities we are embarking on the manufacture of products other than our security work in certain of our overseas factories. These new lines are produced with our normal machinery and are likely to prove a worthy standby if at any time the sales of our security lines decrease. I might mention that in certain overseas markets our profit derived from these sources has been considerable.

It has often been suggested to me that as we have been in existence for so many years everyone who requires a safe has already been supplied. This, of course, is not the case, for so long as the world progresses, population and business risks to property are constantly increasing and the demand for protection is unending. There are still numerous big institutions which are extremely vulnerable to fire risk and no amount of insurance compensation would make up for the dislocation and loss incurred by the destruction of vital information. Each year we have the privilege of supplying protective equipment to companies with world-wide reputations, but much more remains to be done in this respect.

PARENT COMPANY

Here marked progress has been made by the Export Department, which, for example, has supplied 77 per cent of the total output of this country of light safes and fire-resistant equipment to dollar countries, and 58.5 per cent of all heavy security equipment exported. In addition, our export, and indeed our home, order book is well supplied with work which will keep us busy for the current year, which is a most creditable achievement. The output of locks is well in excess of any previous year and several important contracts have been obtained both at home and abroad. The lock business presents many problems of its own, but we have adhered to quality and not given way to the cry for the production of cheap and inferior locks. At the factory our rearrangement of senior personnel has given good results and the management is responsible for a considerable increase in output without heavy expenditure on new buildings. As I said in my review last year, our sales organisation is largely dependent on the efficiency of our works, and I have reason to believe that this is still on the upward grade.

OVERSEAS

It is also satisfactory to realise that our sales of security work for Banks as well as for the general public has shown a marked increase in Australia. Visits here from that country are being made by members of the staff, and Mr L. W. Dunham, our Deputy Managing Director, called on our various Australian branches this year.

Our sales of security work in South Africa are increasing. I visited South and East Africa and was fortunate in making a number of satisfactory contacts.

Contrary to the experience of many British firms who have established works in Canada, I am glad to report that at the end of its second year Chubb Canada has made a satisfactory profit. The factory is being extended to cope with the increasing demands for security appliances made to the special requirements of that country. I hope and believe that at the end of the current year I may report considerable further expansion.

In conclusion, I know you would wish me to express our gratitude to all of those who have contributed to the satisfactory results before you, and on your behalf I should like to convey your appreciation to all concerned.

The report and accounts were adopted.

THE SUNGEI KRIAN RUBBER ESTATE LIMITED

INCREASED PROFIT

SIR JOHN BARLOW'S STATEMENT

The Forty-seventh Annual General Meeting of The Sungei Krian Rubber Estate Limited was held on July 31st in London.

The following is an extract from the circulated statement of the Chairman, Sir John D. Barlow, Bart, MP:

The profit for 1955 was £74,085 compared with £55,602 last year. Taxation requires £37,500. £20,000 has been transferred to replanting reserve and £6,000 to reserve for depreciation of investments. The dividend for 1955 of 3s. per £1 stock unit less income tax will be paid as an interim dividend on July 26, 1956, and requires £13,127. The amount to be carried forward to next year's accounts is £23,885.

From the capital surplus account in the balance-sheet it will be seen that a final distribution of £35,190 was received from the liquidator of Chamek Rubber Estate Limited during the year. On October 25, 1955, a capital surplus dividend of 4s. per £1 stock unit requiring £30,440 was paid: this dividend was not subject to income tax. The total dividends to members in respect of the 1955 accounts will be 7s. per £1 stock unit, of which 4s. was free of income tax.

The crop for 1955 of 1,589,000 lb was slightly lower than the previous year because of the areas which were cut down and replanted. The gross selling price of the crop was nearly 28d. per lb and the cost of production nearly 20d. per lb, excluding amortisation of the estates; thus the profit was approximately 8d. per lb. In 1954 our costs were 13d. per lb and the crop was sold for 18½d. per lb, giving a profit of 5½d. per lb. The reason for the proportionately smaller profit as the price of rubber rises is that the new rates of export duty, which were introduced on June 1, 1955, increase more steeply when the price of rubber exceeds 22d. per lb.

COMMODITY PRICES COMPARED

The following table shows the percentage increase in price of prominent industrial commodities in the United States comparing January-September, 1939, with January-April, 1954, 1955, and 1956. The figures are taken from the Survey of the Guarantee Trust Company of New York.

	1954 Jan.-April	1955 Jan.-April	1956 Jan.-April
	%	%	%
Copper	180	212	313
Cotton	268	263	274
Pig iron	172	173	188
Tin	92	90	115
Rubber	29	107	131

Rubber is still one of the commodities which has increased least in price since before the war. If the May, 1956, price is compared with the 1939 price the percentage increase is 90 per cent. So it will be seen that rubber has not shared in the general rise in prices to the same extent as have other industrial commodities.

One of the main factors influencing the price of natural rubber is the price of the synthetic product, which now accounts for over one-third of the world's supplies of rubber. The price charged for synthetic rubber in the USA is 21-23 US cents per lb (18d.-19.8d. per lb). United States synthetic rubber costs 27d. per lb imported into England. As a certain amount of synthetic rubber is essential in industry, a consortium of companies are erecting a synthetic rubber plant in England capable of producing 50,000 tons per annum. This will provide the United Kingdom with enough synthetic rubber each year and save us the expense of importing a dollar product from the USA.

It has been estimated that 25 per cent of world requirements for rubber have to be natural rubber, 25 per cent synthetic rubber and the remaining 50 per cent can be either natural or synthetic depending on price. At present prices natural rubber is cheaper than synthetic rubber imported into Great Britain and is only a little more expensive than its synthetic counterpart in the USA. With the cost of power rising in the USA, manufactured products will probably cost more and synthetic rubber may go up in price.

WORKERS' WAGES

The natural rubber producers now know the probable price their product will fetch in world markets, provided business activity is maintained at its present level. The largest single item in the cost of production of plantation rubber is wages, which account for over 50 per cent of the cost. Last month the workers on estates were granted a substantial increase in wages after negotiation with the workers' union, who had started go-slow tactics to press their demands. Although high wages and a high standard of living are desirable, it is essential for natural rubber producers not to let their costs increase too much by raising labourers' wages steeply, otherwise we shall not be able to compete with synthetic rubber and there will be unemployment in Malaya.

The report and accounts were adopted.

SIMMS MOTOR UNITS

At the Annual General Meeting of Simms Motor Units Limited held on July 27, 1956, Mr G. E. Liardet (Chairman) in the course of his speech said:

Our overall financial position has been strengthened during 1955 and while net profit after Tax is 5 per cent less than 1954, this is consistent with the maintenance of price levels against the rising cost of wages and materials. Our turnover showed a substantial increase for both Home and Overseas Markets.

We have acquired a number of smaller Companies, thus spreading the range of our products over a much wider field.

The Group surplus before Taxation amounts to £1,038,725. After Taxation, £523,525, and pre-acquisition profits and losses transferred to Capital Reserve, £2,949, the sum available to the Shareholders of Simms amounts to £512.251 compared with £544,249 in 1954. The addition of the amount brought forward from 1954 makes a total of £780,110. Your Directors have set aside £214,250 to General Reserves and £100,000 to Plant Replacement Reserve and recommend a Dividend of 1s. 9d. on each Ordinary Share for the year 1955, leaving £359,664 to be carried forward into 1956.

In considering the immediate future it would be wrong to underestimate our difficulties. Costs are rising, and due to the Credit Squeeze we cannot look to increased turnover to enhance the smaller profit margin which appears inevitable this year.

Taking a longer view, great benefit will undoubtedly arise from large-scale technical development, and in expansion into other industries through our Subsidiary Companies.

HACKBRIDGE AND HEWITTIC ELECTRIC

FIFTY YEARS OF PROGRESS

The fiftieth annual general meeting of Hackbridge and Hewittic Electric Company Limited was held on July 27th in London, Mr Anthony M. Browne (Chairman and Managing Director) presiding.

The following is an extract from the statement which had been circulated with the report and accounts:

The trading profit of the Group amounts to £534,079 against £524,931 for the previous year.

There is available a net profit of the Group, before Taxation, of £461,957 against £462,218 for the previous year.

After making provision for taxation of £259,428 (as against £248,934 the previous year), adding an amount of £15,000 from provision for taxation no longer required, and other adjustments, there is £275,718 available for distribution, as compared with £267,337.

The Directors recommend the transfer of £100,000 to General Reserve and the payment of a final dividend of 17 per cent making a total of 23 per cent on the present ordinary capital of £750,000.

As at March 31st last Current Assets exceeded Current Liabilities by £1,634,952.

As the Authorised Capital has now been fully issued the Directors consider that it would be wise to seek authority from Stockholders to effect an increase above actual requirements by the creation of 1 million Ordinary Shares of 5s. each making the total Authorised Capital £1,350,000. In so doing, the Directors wish to state that they have no present intention of making any new issue.

Your Company is now in its fiftieth year of operation. Founded in August 1906 under the name of Westinghouse Cooper Hewitt Company (later changed to Hewittic), it then became associated with the Hackbridge Electric Construction Company (Transformer makers), with whom it later became one group in association with the New Switchgear Construction Company.

During this time the development of the specialist manufacture of transformers, rectifiers and switchgear originally started by each division has been the main concern of the Company, which has continued to maintain a leading position in the Industry in respect of these products.

EXPORT OUTPUT MAINTAINED

During the past year a good export output has been maintained, in spite of the continuously increasing competitive position from Continental manufacturers and also from indigenous manufacturing companies. The Directors and Senior members of our staff have maintained contacts with our clients overseas by personal visits. All our members and overseas Engineers who visit us when in England report on the good service and high reputation of the plant supplied.

At home the expansion programmes of the Central Electricity Authority and Area Boards and of the British Railways and London Transport should, it is hoped, continue to provide an increasing scope for our products. These Undertakings have taken the greater part of our home output in the past, and the performance of the plant and the service given by the Company have earned their confidence, and everything is being done to have available in the Factory all the process equipment for manufacturing and testing the largest units in accordance with the latest practice.

We are happy to be able to add that our order book ensures that we shall be fully employed in all divisions during the coming year.

The report and accounts were adopted.

At a subsequent extraordinary general meeting the proposed increase of capital was approved.

THE TRUSTEES CORPORATION LIMITED

SIR EDWIN HERBERT'S REVIEW

The Sixty-eighth Annual General Meeting was held on August 1st at Winchester House, E.C.2. Sir Edwin Herbert, KBE, the Chairman, in the course of his speech, said:

Once again I am able to present to you accounts which I hope you will consider satisfactory.

The gross revenue from Interest and Dividends at £563,220 shows an increase of £81,032 over the previous year.

Winchester House continues to be fully let. The expenses of running the building continue, however, to rise, and the continual increases in the prices of fuels, and the recent rating re-valuation, have contributed to the drop in revenue from this source by as much as £12,332, when compared with the previous year.

The net revenue for the year after providing for taxation of £240,078 amounts to £294.016. We now recommend a final dividend of 15 per cent on the Ordinary Stock (making 22 per cent for the year).

The market value of our investments at £9,400,874 shows a surplus of £4,992,244 over the book value last year. This, I think you will agree, reflects a position of great strength which should enable us to weather any storms which may arise through unsettled conditions at home and abroad.

Our Revenue Reserves and unappropriated profits now stand at the substantial figure of over £750,000. It must also be borne in mind that our recent issue of Ordinary Shares will produce, after expenses, a sum of approximately £370,000 to the credit of our Share Premium account. In all a sum in excess of one million pounds.

At this stage you will no doubt wish to know what are our prospects for the coming year. The effects of the credit squeeze being exercised by Her Majesty's Government are slowly beginning to emerge. The severe competition from Germany and Japan is making it more difficult for our manufacturers to pass increased costs on to the buyers, and, in consequence, one sees that profit margins are decreasing, and this in turn is leading to lower profits. The present high cost of labour is tending to force our industries to look into the possibilities of automation, and whilst this and lack of overseas orders will, in the short term, bear hardly on part of our labour force, as exemplified in the recent reductions of staff in some industries, it must, in the long term, enable us to compete more favourably with our competitors abroad.

The best managed companies have always adopted a conservative attitude towards distributions of earnings, and this, coupled with our well spread portfolios, should enable me to present to you next year, figures which will bear comparison with those now before you.

The report and accounts were adopted.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES

PROBLEM OF EVER-RISING COSTS

The forty-sixth annual general meeting of The London County Freehold and Leasehold Properties Limited was held on July 30th in London. Mr Thomas J. Cullen (Chairman and Managing Director) presided and, in the course of his speech, said: Our gross rental income for the year was £2,451,950; to this should be added £30,436 interest receivable on our loan in Rhodesia, making a total of £2,482,386, being £142,826 more than last year. After tax (other than profits tax attributable to dividends) and interest the net revenue was £365,664.

The increase in gross income was £143,163 and the increased outgoings, including tax (other than profits tax attributable to dividends) amounted to £75,439. A substantial portion of the additional gross income is due to the payments by tenants towards the increased cost of services and repairs under the Housing Repairs and Rents Act, 1954; but, on the other hand, the major portion of the increased outgoings is due to the rise in the cost of services, maintenance and management since the passing of the Act. Under the Act the amount recoverable is limited to the increased cost from 1939 up to the date of the passing of the Act in August, 1954, and our Accounts serve to emphasise how inadequate these allowances now are.

It is hoped that this result, in a year of ever-increasing costs, will be considered satisfactory by stockholders.

The Government have definitely promised a general review of the Rent Acts and I am sure it will be realised that to continue to hold down rents where they are inclusive of services is quite unreasonable in these days of rising costs.

Some people at the moment appear to think the general remedy for all our ills is for the Local Authority to take over all houses and flats which are rent-controlled.

I am convinced that public authorities could not manage blocks of flats with services economically and efficiently, and that it would be very much against the interests of the tenants that they should attempt to do so.

A word might here be said about the new rating valuations. Generally speaking, the changes made in our properties are not very significant. But they have revealed more sharply the rent anomalies of controlled dwellings.

The two increases in profits tax—a tax that seems to me quite illogical—will substantially increase next year's outgoings. Our increased income from lettings during the past year will, however, provide a sum sufficient to more than cover that increase. The demand for all our properties—both residential and commercial—is insistent and we continue to do our utmost to give our tenants good service and good value. We are entitled to look forward to continued improvement in our net income.

Our plans in Rhodesia are progressing favourably. We expect very shortly to enter into contracts that will enable us to confirm the establishment of a permanent Branch Office in Salisbury and a Subsidiary Company there.

The report was adopted and at a subsequent Extraordinary General Meeting the conversion of 122,122 New Ordinary Shares into Stock was sanctioned.

ALLIED SUMATRA PLANTATIONS LIMITED

The Thirtieth Annual General Meeting of Allied Sumatra Plantations Limited was held on July 31st in London.

Mr A. L. Mathewson, OBE, chairman, who presided, in the course of his speech, said: After charging depreciation and a provision for renewal of planted areas, the combined profits of the subsidiary companies amounted to Rupiah 21,852,459. However, provision for Indonesian company tax and Government levy brings the net local currency profit for the year down to Rupiah 8,575,281, of which under current Indonesian exchange regulations slightly less than Rp. 4 million will, subject to permit, be remittable.

The directors recommend the payment of a dividend of 7½ per cent less income tax, which will absorb £60,375.

Indonesia's first elected Government have now formulated and are submitting to Parliament a Foreign Investment Bill, the preamble to which states:

"Capital is required to accelerate economic development in Indonesia and to increase national production in order to arrive at an improved standard of living of the population: the capital which is available at present in Indonesia is not as yet sufficient for that aim and consequently it is considered expedient to attract foreign capital for investment in Indonesia; in order to promote interest abroad in capital investment in Indonesia it appears expedient that next to regulations guaranteeing the interests of national development, regulations be established determining the necessary facilities and guarantees for foreign investment in clear stipulations in order to remove all hesitation in this sphere."

As we all know, the demand for capital for development purposes throughout the world far outruns available resources; and a process of selection becomes inevitable. Since nothing succeeds like success, it is highly important to Indonesia, in common with all other countries seeking foreign investment, that the current experience of the general body of its existing enterprises should provide definite incentives.

As at present adumbrated the Foreign Investment Bill provides no sufficiently clear-cut indications of the policy of Indonesia's new Government in relation to foreign enterprise in general and the vital plantation section in particular. It is plainly desirable that their intentions should be made unequivocally clear at the earliest possible date so that the future policies in relation to Indonesia of this and other plantation companies can be properly decided.

The relative desiderata are well known to Indonesian Ministers. To cite only one or two of these. Even in a matter so fundamental as land tenure, estate owners remain almost entirely in the dark as regards the future terms and conditions on which estate lands may be held. In the new bill 30 years is suggested as the normal duration of a lease or in some cases up to 40 years—a period demonstrably inadequate for long-term enterprise such as rubber, oil palm, or tea growing, in which the most pressing problem is how to speed modernisation of obsolescent plantations by large-scale replanting. Then again it remains puzzling to the investor why a country which needs and desires to expand exports and foreign exchange earnings should single out its own export industries for discouragement through differential rates of exchange.

The report and accounts were adopted.

TENNANT BROTHERS, LIMITED

HEALTHY SALES POSITION

The seventy-fourth annual general meeting of Tennant Brothers, Limited, was held on August 1st at Sheffield, Mr H. K. Wilson (chairman) presiding.

The following are extracts from his circulated statement for the year ended March 31, 1956:

During the year under review important developments have taken place. The proposal to associate with Whitbread and Company, Limited, met with the overwhelming approval of the Members. Towards the end of the financial year we began negotiations for the acquisition of the business of Clarkson's Old Brewery Barnsley, Limited. These are approaching a successful conclusion.

The five-year plan is in full swing. At the present time we have actually in building five new public houses. Plans are also being prepared for nine others. Last year I reported that Wiley and Company, Limited, had achieved a record turnover. This has been improved upon by over a quarter of a million pounds sterling. In the Brewery and Bottling Departments both turnover and barrelage have this year shown a very considerable increase—in fact, by 10.9 per cent on 1954-55.

The Consolidated profit of £285,270 shows an increase of £58,631 compared with the previous year. The Net Profit shows an advance, being £9,008 higher at £121,206. It is gratifying to be able to recommend a total distribution for the year of 17½ per cent against 13¼ per cent last year.

The report and accounts were adopted.

WILLIAM HANCOCK & COMPANY

The sixty-ninth annual general meeting of William Hancock & Company Limited was held on July 26th, in Cardiff, Colonel J. Gerald Gaskell, CB, TD, DL (Chairman and Managing Director), presiding. The following is an extract from his circulated statement:

The profit for the year, before taxation, shows an increase from last year's figure of £236,462 to £276,589. Our sales of draught and bottled beers have each shown an increase amounting in all to about 3 per cent for the year, which is slightly more than the previous year's reduction. In addition, it is satisfactory to record that the sales in all our other departments have improved, namely, the Catering Department, Wine and Spirit Department and the Soft Drinks Department.

The consolidated net profit, after charging taxation, shows an improvement from £96,902 to £109,116, which I think you can consider to be satisfactory.

The Balance Sheet shows a healthy position, and the General Reserve has now reached the satisfactory figure of £800,000.

As to the future of all businesses, including our own, it is not possible to form any opinion. We feel that we have built up a substantial goodwill among our customers in spite of increased competition.

I mentioned last year that this industry badly needed relief in taxation in the form of a reduction in Beer Duty, but I am afraid my appeal fell on stony ground. I still feel that special consideration is due to the brewing trade for the immense burden of taxation that it has shouldered so long.

The report was adopted.

CHARRINGTON, GARDNER, LOCKET & COMPANY

OVERALL TRADE EXPANSION

The fifty-third annual general meeting of Charrington, Gardner, Locket & Company, Limited, was held on July 27th in London, Sir John Charrington (the Chairman) presiding.

The following is an extract from his circulated statement:

It is pleasing to be able to report a further improvement this year in the trading results.

Trade has expanded in all markets—especially fuel oil—and profits have improved by £96,436 before taxation. However, approximately one-third of this increase was brought about by the effect of the sharp rise in coal and coke prices in July, 1955, on our stocks at that date.

The tax charge is £184,603, which is £44,581 higher than a year ago, and the profit for the year after taxation at £140,752 shows an increase of £51,855 over last year.

CONFIDENT OF CONTINUED PROGRESS

Our sales of Fuel Oil have exceeded our forecasts, but allowance had been made for the possibility in building up our delivery plant, and as a result our service throughout was kept at the highest level of efficiency. I look forward with confidence to continued progress.

Despite the rapid expansion of our sales of fuel oil, we have, during the year, also sold more coal and coke than ever before.

Although the percentage of house coal in our domestic trade grows less and that of coke greater, it is encouraging to be able to state that we find no falling off in the demand for solid fuel.

It would seem that the Clean Air Bill will soon become an Act of Parliament, and as we have made a feature of encouraging the sale of smokeless fuel at all depots for some few years now, I believe that we shall be well placed for the future in all areas, whether smokeless or not.

The important share of the industrial coal trade which your Company handles has been further developed during the year, and I think this growth is due in no small measure to the efforts made to help our customers to limit consumption of coal by increased efficiency.

Our general lighterage trade has been well maintained. We have again had a busy and profitable year at our barge building yard at Dartford.

We are proceeding steadily with the provision of further plant and equipment for our fuel oil business and with the mechanisation of coal handling at depots. We are at the same time finding that continued increases in the price of coal and coke necessitate considerable additional working capital.

These needs can be met only partially from internal sources and there can be no doubt that, if the healthy expansion of the Company is not to be frustrated, further capital must be sought before long.

The report was adopted and the total dividend of 15 per cent was approved.

APPOINTMENTS

FEDERATION OF RHODESIA AND NYASALAND

VACANCIES: (1) *INDUSTRIAL INVESTIGATOR*, (2) COST INVESTIGATOR, INDUSTRIAL DEVELOPMENT AND RESEARCH BRANCH: MINISTRY OF COMMERCE AND INDUSTRY

Successful applicants for the above posts will be appointed initially on contract for three years, with possibility of renewal.

1. *INDUSTRIAL INVESTIGATOR*

The salary of the post will be determined in accordance with the qualifications and experience of the person appointed. The successful candidate will be a key member of the Government organisation, charged with the examination of applications for tariff protection for industries, or for industrial rebates of customs duty. Such examination will include the determination, with the assistance of the Cost Investigator, of the costs of production of items on which tariff assistance is sought; the weighing up of evidence presented for and against such assistance; the submission of comprehensive reports on the industry concerned, and assessment of the repercussions of the proposed tariff adjustments on the economy of the Federation. An objective and judicial approach will be expected.

Experience in a responsible capacity in business or manufacturing industries is essential. Academic or professional qualifications particularly related to the problems of industry and commerce would be advantageous, as would previous connection with and participation in tariff work. The work to be done will require an understanding of industrial processes and the capacity to penetrate thoroughly the costs and workings of industries. If the applicant is not already familiar with the machinery of import duty tariffs and with the implications, in all respects, of adjustment to tariff rates, he will be required to familiarise himself rapidly with these matters.

2. *COST INVESTIGATOR*

The successful candidate will work as a member of the organisation for the examination of applications for tariff protection or rebates of duty for industries. His special duties will be to make costing examinations into industries in order to determine costs of production and to establish the economics of particular industries; he will also be expected to carry out investigations into such other economic or industrial subjects as may be required.

The salary will be determined by the qualifications and experience of the person appointed.

The qualifications required are a professional qualification in cost accounting (e.g., A.C.W.A.), together with such personal experience in industry, in a professional or executive capacity, as to be able to make effective investigations into a variety of industries. Experience in tariff work would be advantageous.

3. *CONTRACT TERMS*

For both posts will be a matter for negotiation with the successful candidates; provision will be made for vacation and sick leave.

Applications, in duplicate, giving full details of age, qualifications, experience, marital status, present emoluments, and the names and addresses of two referees, should be sent to: Public Service Attaché, Rhodesia House, 429 Strand, London, W.C.2, by August 21, 1956.

STATISTICIAN required by leading London Advertising Agency to be responsible primarily for the analysis of television research data, and also for statistical analysis in connection with consumer research projects.—Apply to Research Manager, Young and Rubicam, Limited, 285 Regent Street, W.1.

APPLICATIONS are invited for the appointment of Director of The Acton Society Trust. The Salary offered will depend on qualifications and experience, with a starting rate of not less than £1,250.—Applications and requests for further information should be addressed to the Secretary, at 39 Welbeck Street, London, W.1. Closing date for applications, September 15, 1956.

COMMERCIAL ENGINEERS (ELECTRICAL)

A vacancy exists with the United Kingdom Atomic Energy Authority, Industrial Group, in the Commercial Department of the Technical Policy Branch, Industrial Group Headquarters, Risley, Warrington, Lancs.

DUTIES:

The duties associated with this post are novel in character, and present an interesting opportunity for undertaking responsibility for the assessment of the economical and commercial aspects of nuclear power generation.

The successful candidate will primarily be closely associated with the development of nuclear power stations by the electricity supply authorities within the U.K. It will be necessary for him to acquire a good understanding of the various technical processes operated by the Industrial Group. Opportunity will be given for a period of initial training in the specialised field of atomic energy.

QUALIFICATIONS AND EXPERIENCE:

Candidates should have a Degree in Electrical Engineering, or be Corporate Members of the Institution of Electrical Engineers. A good commercial background is essential, and candidates should preferably have had experience in assessing costs of electrical generation and distribution by conventional methods.

A good personality and the ability to work in conjunction with other members of a large industrial organisation are equally important.

Experience in the field of Metallurgy will be an additional qualification, but is not essential.

SALARY:

Will be assessed within the scale, £1,705-£1,980. A contributory Pension Scheme is in operation.

An Authority house for renting by married staff may be available in due course, or, alternatively, substantial assistance may be given towards legal expenses incurred in private purchase.

Suitably qualified persons are invited to send a postcard, quoting Reference 1547 for application form, to the Recruitment Officer, U.K.A.E.A. (I.G.) Headquarters, Risley, Warrington, Lancs.

Closing date: August 17, 1956.

EXPORT SALES.—A company in London, which is rapidly developing sales of its products in all parts of the world, has vacancies for three more (£27-35) in its export division. This division's work includes the development and consolidation of overseas distribution and the negotiation of sales with foreign authorities and international organisations. Applicants must have had wide experience of these and other aspects of overseas sales. Within a year of joining the department they will be expected to fill senior positions. Starting salary £800-£1,000.—Send a postcard for further details to Box 897, c/o Dizons, 1-9 Hills Place, London, W.1.

SCIENTIFIC COMPUTING IN IBM.—Young men and women trained as mathematicians, or as engineers or scientists with a good mathematical background are needed to help in the formation of a scientific and technical computing group. Members of this group will operate a scientific computing centre in the London area, based on a high-speed digital computer. They will also work with outside organisations throughout the country advising on the use of IBM equipment for scientific work and assisting in the setting up and operation of computing installations within these organisations. Members of this group will be provided with an initial period of training in the London data processing centre. Opportunities will be provided later for specialisation within this centre, on particular types of equipment or computing application. Other opportunities will arise for regional work in connection with assistance to outside organisations.—Please write in first instance to Personnel Manager, IBM United Kingdom Limited, 100 Wigmore Street, London, W.1, quoting Reference S.C.1.

FEDERATION OF RHODESIA AND NYASALAND

VACANCIES: STATISTICIANS
CENTRAL AFRICAN STATISTICAL OFFICE
MINISTRY OF FINANCE

Applicants, under 35, must possess, or obtain this summer, a First or Second Class Honours degree (or equivalent qualification) in Statistics, Mathematics, Economics or other appropriate subject. All applicants must have taken a University course in Statistics or have passed the examinations of an approved statistical society.

Starting salary:

(Men) £880-£1,100, depending on qualifications and experience, on scale rising to £1,600.

(Women) £680-£840, depending on qualifications and experience, on scale rising to £1,280 p.a.

Senior Posts, with salaries of up to £2,850, filled by internal promotion.

N.B.: As allowances can be made, in certain cases, for National Service in the assessment of commencing salaries, an Honours graduate without experience could start at £1,000 p.a.

Application forms and further details from the Federal Public Services Attaché, Rhodesia House, 429 Strand, London, W.C.2. Closing date August 18th.

GRADUATE in Economics with "first" or good "second" Honours Degree, specialist in either Economic Theory or Statistics, required for research work in Department of Economics, International Wool Secretariat. Commencing salary £500-£600 (according to qualifications) with superannuation benefits.—Apply, in writing, giving full details of qualifications and experience, to the Secretary, International Wool Secretariat, Dorland House, 18-20, Regent Street, London, S.W.1, marking cover "E.C. Confidential."

GRADUATE (economics and business administration), of Frankfurt University and London School of Economics, seeks career with British or American firm or financial institution operating in Germany. He possesses initiative and tact, and is willing to incur responsibility. Age 24. German nationality.—Box 480.

WOMAN, 32 yrs. Supervisor Calculating Dept., seeks similar post in London or Staines area.—Box 479.

SQUEEZE NOT FREEZE! *The Banker*, in its new, 3D style look, points to the danger in the policy, too widely accepted, of switching the instrument of official restraint from monetary action to hortatory talk. The factual background is provided in an analysis entitled *Credit Contraction Halted*.

THE BANKER in its new format has been the subject of widespread, and favourable, comment. The August issue presents in addition *The Battle of Mortgage Rates*, by John Marvin; *Principles and Mechanics of Monetary Control*, by Professor E. W. Paish and R. Alford; *Commonwealth Development Now, Five Years of Local Aid*; and, as every month, the lively commentary by Sir Oscar Hobson, *"As I See It."* Price 2s. 6d. monthly from bookstalls or a specimen copy from 9 E. Poultry, London, E.C.2.

THE *Economists'* Bookshop has the world's widest range of books on Economics, Politics, History, Anthropology and the Social Sciences. World-wide mailing service. Second-hand books bought.—11-12 Clements Inn Passage, Aldwych, London, W.C.2.

SHIP-IN-BOTTLE-MAKERS! Free service! Young man accepts full bottles of *Duff Gordon's* El Cid Amontillado Sherry, returns them ready for insertion of ship. Prompt, conscientious work guaranteed.

EXPERT POSTAL TUITION for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (69/2)

Imagine a farming world without oil!

As population increases, so must the food supply. Obviously. Yet, without proper implements — tractors, combines — agricultural progress as we know it could not have been achieved. For it is such equipment that permits more intensive, more productive and more profitable farming. And it is oil that runs this equipment, helps maintain and protect it. Caltex, in supplying finer fuels and lubricants to the peoples of 67 free nations, is indeed gratified to be part of this immeasurably important cycle.

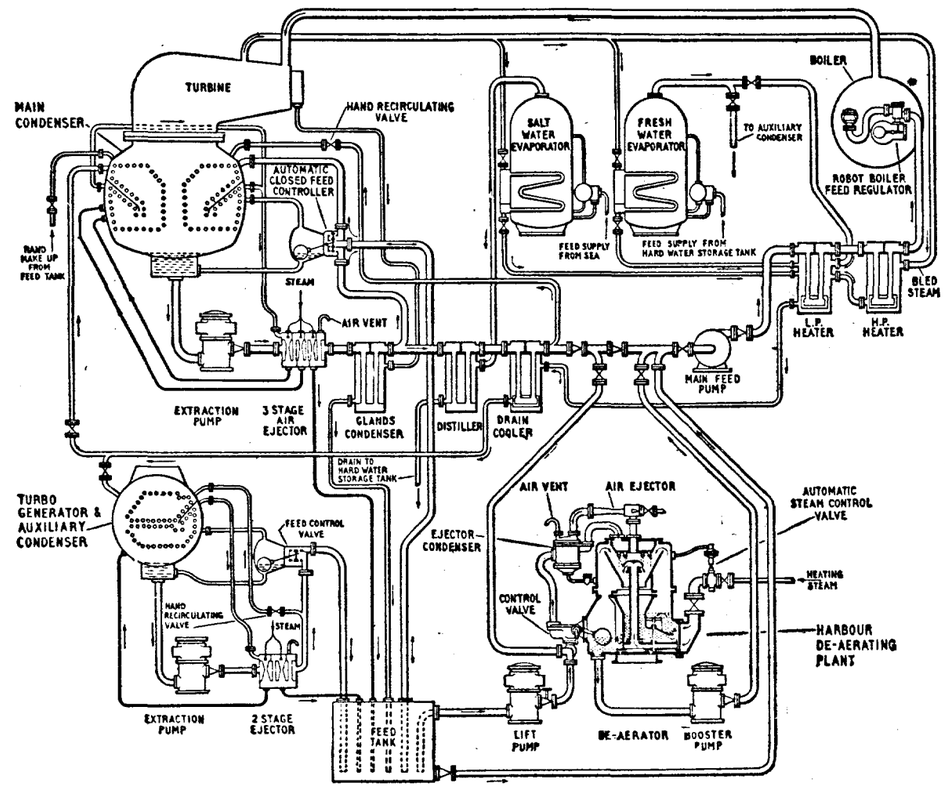
WEIR

PATENT CLOSED FEED SYSTEM



The Weir Closed Feed System is a practical and efficient method of providing pure de-aerated feed water for boilers, for both land and marine services.

Corrosive gases are removed by the Weir Regenerative De-Aerating Condenser, and as the condensate is under pressure in the system this prevents any re-entry of air or other gases to cause corrosion in the boilers, steam pipes and other surfaces.

For marine services, the Weir Closed Feed System protects the boiler against corrosion under all sea-going conditions and ensures that in port the boiler feed water is also fully de-aerated. The system is perfectly automatic at all powers, the various units responding automatically to changes of power without manual attention.

COMPLETE RADIO/TELEPHONE AND RADIO/TELEGRAPH SYSTEMS AND EQUIPMENT

World wide radio-communication began with Marconi's Transatlantic messages in 1901. Since then Marconi research and development have led to every major advance in technique. Marconi equipment today, operating at all frequencies, covers a very wide field of both long and short range radio-telegraph and radio-telephone requirements. Marconi VHF multi-channel equipment can provide for as many as 48 telephone channels and is largely superseding land-line or cable routes on grounds of efficiency, economy and, where terrain is difficult, ease of installation and maintenance.

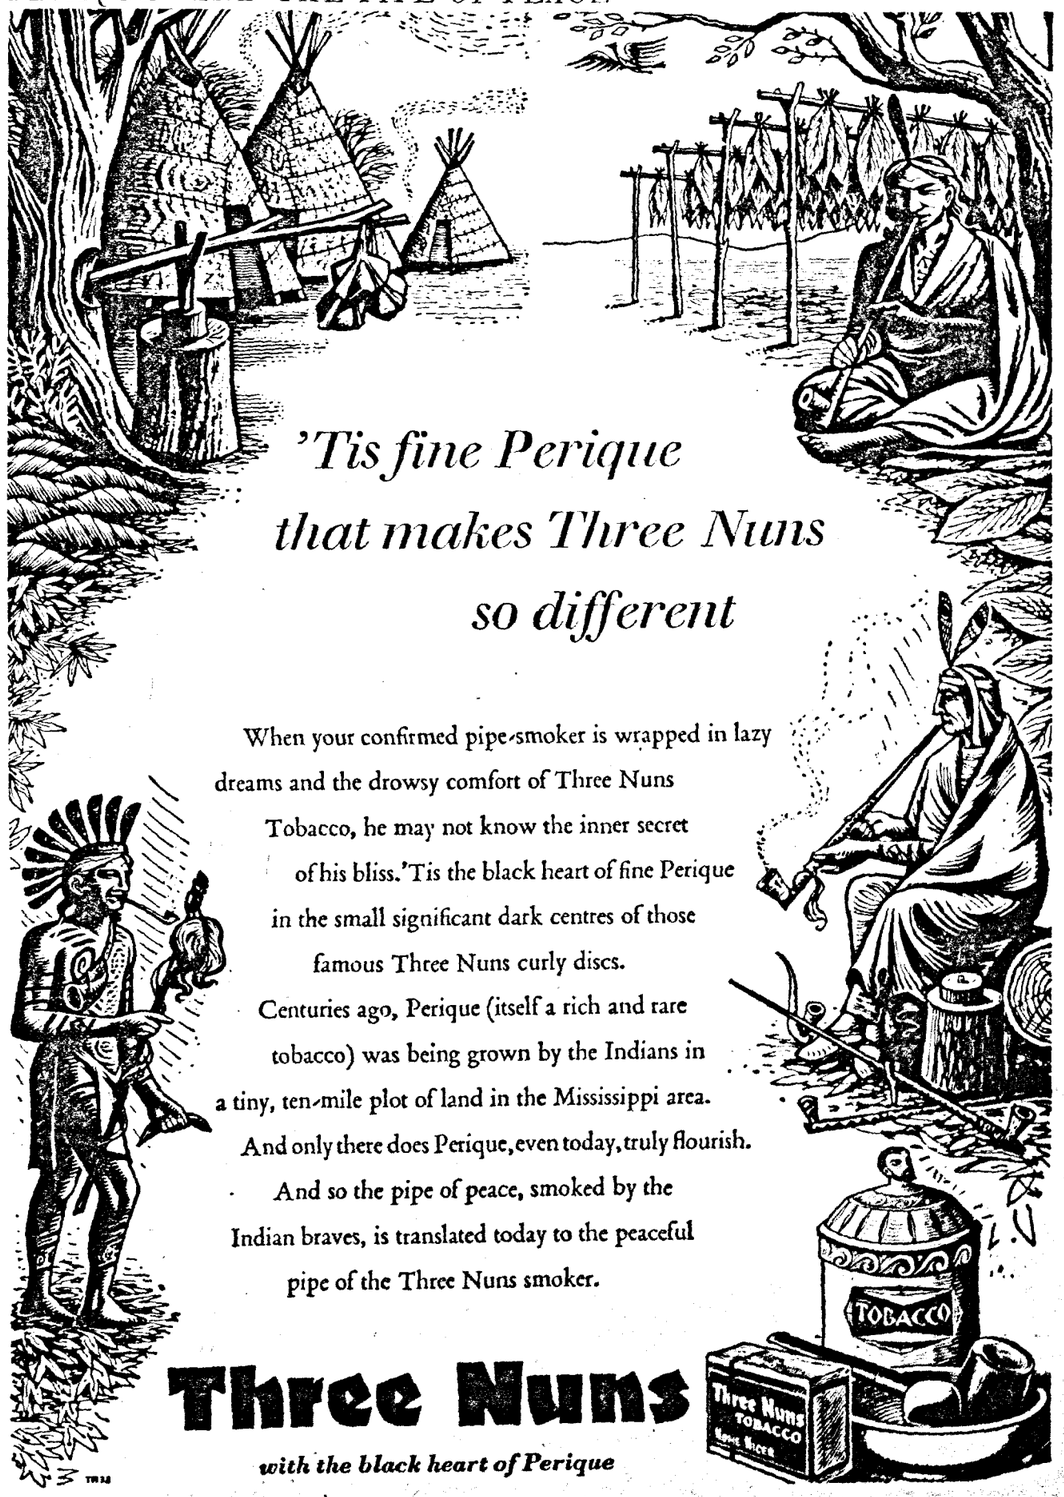
PERIQUE—AND THE PIPE OF PEACE



'Tis fine Perique that makes Three Nuns so different

When your confirmed pipe-smoker is wrapped in lazy dreams and the drowsy comfort of Three Nuns Tobacco, he may not know the inner secret of his bliss. 'Tis the black heart of fine Perique in the small significant dark centres of those famous Three Nuns curly discs.

Centuries ago, Perique (itself a rich and rare tobacco) was being grown by the Indians in a tiny, ten-mile plot of land in the Mississippi area. And only there does Perique, even today, truly flourish.

And so the pipe of peace, smoked by the Indian braves, is translated today to the peaceful pipe of the Three Nuns smoker.

Three Nuns

with the black heart of Perique

BRITAIN'S FIRST TONNAGE OXYGEN PLANT COMPLETED

To provide The Steel Company of Wales with a continuous supply of oxygen in tonnage quantities, British Oxygen have erected a special plant at their own works in Margam. The plant, coupled by direct pipeline to the steelworks and having a capacity of 100 tons of oxygen per day, is the forerunner of many similar installations to provide a nation-wide service for the steel industry.

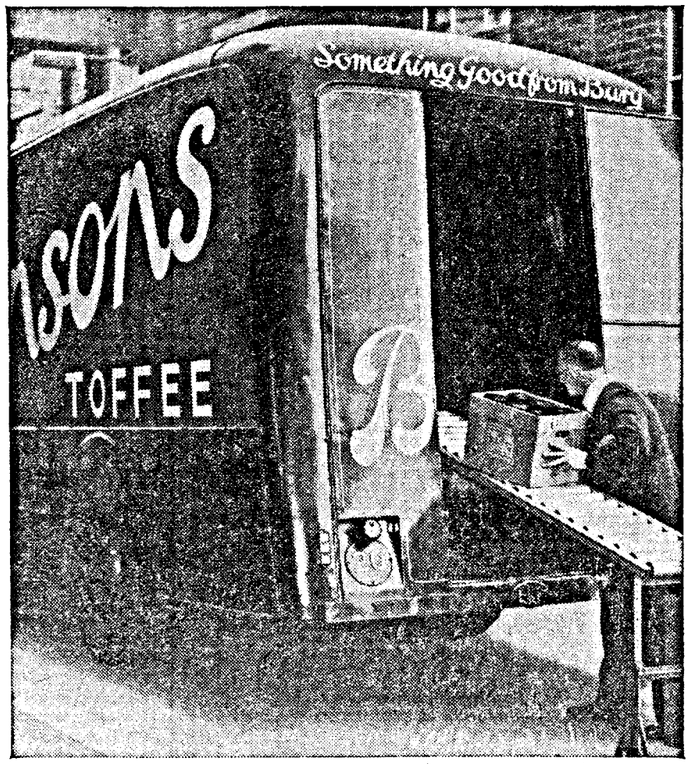
THE WATCH YOU NEVER HAVE TO WIND

One man helped this confectionery firm to overcome invoicing delays

Bensons' deliveries sometimes had to wait for invoices—but the Burroughs man, Mr. R. Sudall, was able to suggest a quicker system using Burroughs Sensimatic accounting machines.



Bensons Confectionery Ltd., of Bury, have a large home and export trade in toffees and boiled sweets. Last year deliveries were hindered because loaded vans were kept back while invoices were being prepared. More staff were put on the work, but there were still delays during peak periods.

Bensons contacted Burroughs, who sent one of their team of accounting experts—Mr. R. Sudall. Together with Bensons' accountants he made a thorough analysis and suggested a system using two Burroughs Sensimatic accounting machines.

Now, these machines prepare invoices in *one operation* direct from travellers' orders—and accumulate the grand total of all invoices. Each machine prepares 30 to 40 invoices an hour, and loads now go out as fast as they can be packed. Bensons are already coping with a 50% increase in activity, and anticipate further orders through their prompt deliveries.

WHATEVER YOUR BUSINESS

If you have an accounting problem, the Burroughs man can help you. He is an expert on modern accounting systems, and well able to work with your accountants or auditors. Backed by Burroughs' world-wide experience, he will make a full analysis and suggest the most economical, *workable* solution. If he thinks no change advisable, he will say so; if he does recommend a change, he will make a detailed plan and help you get it working smoothly. Call in the Burroughs man—you're committed to nothing. His advice is free.

Burroughs make the world's widest range of business machines. You'll find your local Burroughs office in the telephone book.

Long Haul at Suez

WHILE next week's conference of the powers on Suez is being prepared, a large and costly British armada is being directed towards the eastern Mediterranean, with little indication either of what it will cost, or of how long it is likely to stay. British feeling flared up quickly over Suez, in a mood of impatience ill tuned to face a long and tedious contest of wills. The Government patently sees the Suez question in terms of swift action—a short, sharp conference under rigorous chairmanship (with a technique inspired, perhaps, by the Japanese peace conference at San Francisco in 1951); then Egyptian compliance, with or without a physical struggle.

Will this bright concept prevail against the dusty facts of international life? The government in its military preparations may or may not be pursuing a specific plan; if it were, it would be unlikely to disclose it. When the Prime Minister announced "certain precautionary measures of a military nature" to the House of Commons he described their purpose in the most general terms, "to strengthen our position in the eastern Mediterranean and our ability to deal with any situation that may arise." The description contained a warning, perhaps unintentional. A power position, to be strong, must be durable. The western nations have to contemplate at Suez, in the eastern Mediterranean, and in the countries of the Middle East from which oil comes or through which it passes, not one "situation" arising, but a long series of situations—whether the immediate issue with Colonel Nasser is settled by negotiation, or by force. It is a dangerous illusion to suppose that the armada can settle matters at a stroke and come home, leaving the Middle East clear for the tranquil and ordered flow of commerce.

If the despatch of armed force to the Mediterranean means anything, and is not merely the human protest of Ministers against the endless wearisome embroilment in the meshes of foreign politics, it must be intended as an insurance policy against the failure of international moral pressure: against the possibility that Nasser may break his word and close the Canal, or against the possibility that, the conference having reached a decision, he may refuse to accept it. The premium on such an insurance policy is high. More important, to be of much value it must be taken out not for a few weeks but for many years, or when the risk materialises, in an expected or an unexpected form, it may be found that the policy has run out. Is Britain in fact prepared, having clamped a control by force on an actively unwilling Egypt, to sit on the lid for ever, while keeping further massive military strength handy to deal with the inevitable wide repercussions in the Arab world?

The problem which Colonel Nasser has flung in our faces at Suez is a problem of politics and in the end it will have to find a political solution, whether or not the military adventure is tried first. It will be best to use the conference next week to produce the political solution now—a set of proposals, that is, which the Egyptian government

can conceivably accept, rather than one that would have to be imposed upon it. The minimum British requirements of which the Prime Minister told the Commons before it went into recess, the still more ambitious requirements which M. Pineau outlined when he returned from London to Paris, and the terms stated in the invitation to next week's international conference, all go beyond what President Nasser, or any Egyptian government with a serious claim to be representative, is at all likely to swallow.

The most cautious of all these formulations, that contained in the invitations to the powers, speaks of "operating arrangements under an international system designed to assure the continuity of operation of the Canal as guaranteed by the Convention of October 29, 1888"; in short, the running of the Canal is to be taken out of Egyptian and put in international hands. Probably a majority of the powers at the conference—themselves by no means an unchallengeable selection of countries to speak for the world in this matter—can be found to approve the proposal, though naturally that does not mean that they would be prepared to fight for it; any fighting would be left to a very select company, perhaps Britain and France alone.

From many countries whose friendship they would need they could not in that case count upon even a benevolent neutrality. For the United States the decision would be difficult. Mr Dulles went a long way, evidently further than he liked, to meet British and French feelings when he subscribed to the three-power statement last week. As is known, he is thoroughly disillusioned with Colonel Nasser, whose flirtations with Moscow and rancour against the West led Mr Dulles to cancel the offer of aid for the High Dam and thereby to spark off the Canal crisis. But if the Americans disapprove of Colonel Nasser, they disapprove hardly less of the Anglo-French brandishing of force. President Eisenhower put his whole emphasis on Wednesday on negotiation, "good sense" and "sober second thinking" and against the use of force: "We have tried to substitute the conference table for the battlefield." There is no support here for an imposed solution, still less for a military adventure.

West Germany views the conference with misgivings and the British attitude with astonishment. A representative German press comment remarks that the British Government has lost its nerve. It adds, somewhat tartly, that the neutrality of the Canal has been violated before—lately by Egypt against Israeli traffic, with full British compliance; earlier, by Britain against Germany in two wars. Bonn has agreed to come to the conference out of a disinclination to give offence in Paris and London, together with a reluctance to be absent when decisions are taken; but Bonn does not want to offend the Arabs, either.

Mr Nehru, whose moral authority in Asia tends to grow on an occasion of this kind, has agreed to come only with the strongest public reservations. India's interest in the Canal, like that of South Asia generally, is strong, but it will not for a moment deter Mr Nehru from admitting Egypt's right to nationalise anything in Egypt that it pleases. The outstanding differences "are not strong enough to justify an international crisis"; the British and French military moves have made matters worse and "aroused resentment not only in the Arab countries but in Asia as a whole."

Finally in the Arab countries themselves, no trace is to be found of anything but bitter hostility to any western intervention. Even Iraq has spoken up in Egypt's favour; in a clash, the whole Arab world would be on Colonel Nasser's side. For that reason alone, an imposed solution will last only as long as the armed force which is sent to impose it.

★

If, instead, the search is made for a plan that would not inevitably have to be fought for, then it will almost certainly end with international control of a much gentler kind, leaving ownership (subject to compensation), territorial rights, and operating control in Egyptian hands. It would amount to supervision by an international body to see that ships had free passage without discrimination or extortionate dues, and that the Canal was efficiently maintained. It would have no executive powers to enforce its wishes, but it would have to have the right to observe, to be informed, and to recommend. These rights would have to extend, no doubt, to the right to recommend projects of development to keep pace with the expanding traffic, but the fact may as well be faced that suggestions for expansion would have to be accompanied in practice by suggestions about the financing of expansion. (If the powers want an ever-expanding Canal, as they reasonably may, they may have to be ready to put up some of the money; why should the Canal be run for the benefit of its users alone?)

An international supervising team at Suez would have to be responsible to a body of powers, who would appoint and protect its members, and to whom it would fall to act on the recommendations when action was needed. Since there is no rational way of setting a limit on the number of countries interested in the use of the Suez Canal, the logical body would be the widest possible, the United Nations. This, it will be objected, is slow and ineffectual; but it need not be ineffectual when there are powers ready to act on its behalf. A United Nations team at the Canal would in a crisis present the clear legal and moral case which western governments nowadays need before they resort to force. It would have the other advantage of being the only kind of supervising body which the Egyptian government could accept without humiliation if it wished.

Even so, it can be doubted whether Colonel Nasser will agree; but the proposition is one that can reasonably be put to a sovereign government. To the British Government, too, such a limited solution may be hard to swallow after the brave words that have been used; but it is better to begin with the politics now.

Sterling Stocktaking

THIS is the season of the year for sterling area crises. The peak weeks of holiday are also the peak weeks of pressure upon the pound. And foreigners —who remember only too well how many economic squalls have blown up in Britain in August, to reach gale force in September or October—are naturally watching the foreign exchange market with hungry speculation. On Wednesday the middle spot rate of sterling against the dollar was $2.78\frac{7}{16}$; on the same date a year ago, when the Chancellor was just beginning to realise that he might have to introduce an autumn budget, it was $\frac{3}{8}$ths of a cent higher. The gold reserves at the end of July were $2,405 million; at the end of July last year they were $2,544 million. Britain is again approaching the hurricane belt, and the Chancellor is carrying a slightly smaller umbrella than before. Is the hurricane going to blow?

The answer, one can be reasonably sure, is that this year it is not. That forecast ought to carry rather more assurance than the absence of warning that there would be a freak ice storm on August Bank Holiday at Tunbridge Wells. It is important to emphasise the absence of genuine hurricane signs, because in three weeks' time one of the accustomed barometers of stormy weather may appear to point the other way: the gold reserves in August are very likely to fall.

This likelihood can be measured with some precision. In August Britain is having to transfer $50 million of gold to the European Payments Union, to pay for the sterling area's deficit with Europe in July. Receipts of American aid, which were unduly swollen last month, are likely to fall back to their recent average of $3 or $4 million a month; at that level they would just about cover the additional and regular $3 million a month that Britain now pays on its funding debt to Europe. It follows that the gold reserves are likely to drop unless the sterling area's dollar surplus on transactions outside EPU this month exceeds $50 million. In July this surplus was $32 million, which was rather surprisingly good; under the normal seasonal pattern—since sterling area sales to North America are now at the year's nadir—it has to be expected that the surplus outside Europe will be smaller this month. Indeed, in view of the political speculation against sterling touched off by the Suez crisis and the persistent strength of the Deutschemark, it would not be surprising if it were wholly washed away. In the absence of special payments or receipts the gold reserves this month might then fall by $50 million or so. A setback of this order this month, aggravated or mitigated by any special payments or receipts, would not be out of line with the current state of the sterling area economy.

The question that the speculator in sterling should be asking himself is, therefore, not what any reduction in the reserves in August may portend, but whether the short-term underlying state of the sterling economy is unhealthy or sound. One ingredient of it is already known. The Chancellor has stated that Britain seems to have made a surplus of over £100 million in the first half of this year; when Chancellors speak like that, it is quite probable that the surplus was up to £150 million or more. As an offset to this British recovery, the overseas sterling area was almost certainly in deficit. Because there are no published monthly figures of the sterling balances (another missing table in the Chancellor's Bradshaw) it is impossible to make any estimate of this deficit; but since the gold reserves ran up by some £95 million in the six months, the deficit is unlikely to have been as great as Britain's surplus in the first half of 1956.

★

What of the second half of the year? There has been no indication in recent trade returns, or in the welcome bite of disinflation at home, that Britain's visible accounts need necessarily deteriorate. If the military preparations for Suez are as expensive as they threaten to be, the invisible accounts are bound to suffer some strain. By contrast, however, the overseas sterling area ought to have a better half year, once the autumn season for sales of its primary commodities opens, for there has been a notable strengthening of commodity prices and not entirely because of Suez. These sales, and commodity prices, were depressed in the spring by fears of an American recession. Now nobody expects a serious recession there; the United States has had a steel strike instead.

There are, therefore, some grounds for short-term equanimity. But the mere fact that this has to be pointed out is indeed a cause for long-term concern. This year Britain can manage to snatch a balance of payments surplus; its perennial condition of internal inflation is less obvious than at almost any period since the war; and the world economic situation offers prospects for sterling area exports that are promising. And yet, just before the customary season of strain, and before an actual fall has appeared in the monthly gold accounts, analysts here are having to assure Zurich bankers that it really is not at all likely that sterling will again be devalued next month. That this should be necessary is at once a measure of the inadequacy of the present gold reserves, and of the lack of foreign confidence that Britain has yet learned to use them seriously; it is also a measure of the urgency of the next battle against inflation at home, which will be joined in full earnest when the autumn's wage claims start to roll. In that battle—and this is the real lesson of the nervousness of foreign exchange markets in the past few months—Britain will be most closely watched; the slightest impression of weakness will immediately react on the pound.

Korea Today—1

White Man of Asia

FROM A CORRESPONDENT IN SEOUL

THE South Korean government stepped on to the international stage in a world crisis. After centuries of isolation, Korea lacked experience of external relations; and Dr Rhee has found it difficult even to gain the attention of a preoccupied world. He has knocked at every door, including those of the United Nations, the International Bank, and the Red Cross; he has hastened to send ambassadors to every accessible capital, and is now opening legations in Rome and Ankara. But the results are meagre so far. The Republic of Korea enjoys platonic relations with Europe, strictly practical ones with the United States, superficial or non-existent ones with most of Asia, and frankly bad ones with all its neighbours.

Its spokesmen argue that toughness, even boorishness, in foreign relations is the only way to escape being overlooked and to maintain the kind of atmosphere suited to a possible resumption of local (and, if fortune favours, global) hostilities. More than anything else it is afraid of international indifference, which, it believes, would quickly lead to the suspension of foreign aid, the *de facto* recognition of both the Korean states, and the gradual absorption of the whole peninsula into the communist sphere. So Dr Rhee abuses Tokyo (from a safe distance) and threatens to use his jets to sink Japanese fishing craft that stray as near as sixty miles off the Korean coast; he meets conciliatory North Korean gestures with pledges that reunion will be achieved by armed force; and he preaches a holy war against international communism. European efforts to reduce world tension are dubbed treason, and the Commonwealth prime ministers are accused of "connivance with the enemy" because their July communiqué expressed hope that the United Nations would become more universally representative—which is taken to imply the seating of the Peking government.

This unruly behaviour has led the American defence experts to abandon their ideas of an Asian anti-communist alliance based on friendly co-operation between an industrial Japan and a well-armed South Korea. Instead, they are asking Congress to approve a thirteenfold increase in military aid for Japan. Seoul's bellicose attitude makes things easier for advocates of Japanese rearmament. It also provides Japanese businessmen with the best of arguments for seeking commercial openings in China and North Korea. And it affects the Japanese negotiations for a peace treaty with Russia. The lack of official relations between Seoul and Tokyo gives the Japanese a chance to recall the "blessings" of their period of rule in Korea, then the world's fourth producer of rice, today a deficit area.

Dr Rhee won his laurels as a national hero by his long struggle against Japanese rule, and while he lives no real *rapprochement* between Japan and Korea can be hoped for. Such a move would, indeed, involve a certain risk of a new Japanese dominance, for Japanese influences remain strong in Korea. Many Korean traders put false Japanese trademarks on local products to ensure better sales. The flourishing black market in Seoul for the Japanese monthly *The Housewife's Friend* expresses a keen interest in all aspects of Japanese life.

The president's belligerence towards North Korea no longer arouses the same popular enthusiasm as in 1953. On the contrary, its main effect today is to aid communist propaganda, which dubs him an American puppet and the incarnation of the new western imperialist menace. In the unlikely event of a new outbreak of hostilities, the communists would have little trouble in "identifying the aggressor." Fortunately the choice between peace and war is in the hands of neither Seoul nor Pyongyang, but rather in those of Moscow and Washington, both of which seem bent on winning the world's good will. But meanwhile North Korea can go on making ever sweeter approaches to Seoul without running any risk of their being accepted, and this sweetening of tone may eventually secure it widespread international sympathy. In fact Kim Il Sung's latest proposals for unification, as expounded to a "neutral" journalist, already bear a close resemblance to the view on the Korean question expressed by several anti-communist delegates at the 1955 United Nations Assembly.

Relations between Seoul and Washington swing from mutual admiration to mutual exasperation according to the progress of American or Korean election campaigns, of east-west conferences, of Congress debates on foreign aid and of South Korean budget deficits. The intransigence of Dr Rhee's government often prevents any improvement. Seoul is choosy about American ambassadors; it evicts members of the Neutral Nations Supervisory Commission; it extracts sizeable sums from the United States Treasury; it vituperates against America's allies as much as against its enemies, and seeks in every way to impose its will on Washington, sometimes with success. The Americans have themselves provided the material for the blackmail that South Korea levies upon them. The South Korean army, which can at any moment unleash a new conflict, draws on American and UN supplies. Moreover, millions of Asians see in South Korea the fate that awaits them if they opt for the anti-communist camp.

Meanwhile South Korea heads the list of recipients of US aid, getting as much as the next three beneficiaries together. It seeks tirelessly to get America to invest in its territory a good deal more than the free world could ever allow to fall into communist hands. It means to chain America to Korea. Washington, for its part, is always trying to cut down the amount of aid allotted to capital equipment, and has succeeded in progressively increasing the deliveries of consumer goods "to check inflation."

Twenty-five years ago Dr Rhee was accused by his comrades in exile of dreaming of a Korea with the status of Hawaii or Alaska—a United States territory, whose inhabitants would be entitled to passports, greenbacks, snack bars and modern amenities, if not to votes. One cannot say if he still dreams of this. But one notes that the teaching of foreign languages is limited to English. The Korean, pink-complexioned in winter, brick-red in summer, has been called "the white man of Asia," and his long history reflects a fierce desire to cut himself off from the rest of his continent.

To tell the truth, nobody is bold enough to look far into the future. And that includes "Uncurk"—the UN Commission for the Unification and Rehabilitation of Korea. Humiliated by having failed in its chief task —unification—over so many years, the commission now confines itself to observing political and economic developments in the south; it is denied access to the north. It submits an annual report to the UN Assembly, a report on which the communist delegations draw copiously in order to denounce the "Rhee dictatorship," the "warmongering policies of America," and, more broadly, the "failure of the United Nations" in South Korea.

The Ring and the Book

"RINGS" in the auction room are no novelty. They certainly existed at book auctions in the eighteenth century; there is detailed documentary evidence that a ring was at work in a sale at Strawberry Hill in 1842. They are said to be more widespread, and their manœuvres often more blatant, in the antique and fine art trades than in the antique book trade; and they certainly flourish more luxuriantly on the continent than in Britain. But it is the antiquarian booksellers in Britain who are at present most publicly in the pillory for this practice; they were exposed in a courageous series of articles last year in a book-trade periodical called *Desiderata*, which has since (either *post hoc* or *propter hoc*) had to cease publication. The charge is a serious one, for in Britain—under the terms of the Bidding Agreements Act of 1927, commonly known as Lord Darling's Act — auction rings are specifically illegal. But, although illegal, they continue unmolested.

Clearly this ought not to be allowed to go on; but it needs to be soberly probed. What are these rings? And how prevalent are they? To the first question, Mr John Carter's "ABC for Book-Collectors" provides a conveniently terse definition:

> A ring is any group of two or more persons (normally, but not necessarily, dealers) who agree together before a sale to refrain from bidding against each other, in order subsequently to share between themselves the saving, in cost price under the hammer, effected by this elimination of competition. The lots purchased by one or another of the ring's representatives are then re-auctioned in private, the difference between the two totals being divided among the members of the ring. This private auction is called the *settlement* or *knock-out*, and each man's share of the total price difference is called the *dividend*. The anticipation of this communal credit-balance, which may often be substantial, also strengthens the hand of the ring's representatives in discouraging outside competitors in the early stages of a sale. For whereas a single bookseller would find it expensive to bid a succession of lots up to the ceiling—thus suggesting that the outsider had better stick to bookshops or retire to stamp-collecting—the cost of such action is shared by all members of the ring, who will jointly benefit from the resulting peace and quiet.

In answer to the second question—about the prevalence of the rings—some recent newspaper articles have given the impression that the shabby manœuvres they are so rightly exposing are executed with equal unanimity, aplomb and success at Sotheby's or Hodgson's or Christie's as at small sales in the country. This is unfair. Undoubtedly there are still sometimes minor combinations of dealers at London book sales, for minor, "bread-and-butter" lots. These are as objectionable and illegal in the metropolis as at a country manor house. But these ringlets in London are of minimal importance because they do not include, as the country sale rings with sadly few exceptions normally have included, a decisive majority (if not all) of the dealers present. The situation is very different at the country house sales, where books and manuscripts are sold with the other domestic chattels, lotted and bundled usually with little regard for value or importance, normally sold not subject to return for imperfections, and catalogued by local firms, most of whom make no pretension to any specialised knowledge of this highly specialised field. In these conditions, the professional has an overwhelming advantage over the amateur; and he takes illegal advantage of it.

What, then, is to be done? It is no answer to say that sellers should send their books from the country to London; that is tantamount to saying that clients must take the rap because some dealers in the country successfully break the law. The ideal course, undoubtedly, would be for the Antiquarian Booksellers' Association to put teeth into its rules; to make a public and statutory declaration, signed by the entire committee, that no member is going to, or is going to be allowed to, take part in any ring large or small, in town or country or abroad; and then, equally publicly, to expel any recalcitrants. One prominent member of the trade is trying to prod his colleagues in this direction.

Sir Basil Blackwell, of Oxford, has initiated an independent crusade, publicly inviting all booksellers who, like himself, will have none of the ring to join him in publicly saying so. Sir Basil is a past president of the association ; but his is hardly an antiquarian business in the regular ABA sense, and the fact that he has stepped in where its committee feared to tread (coupled with the character of the support that some not very well informed articles in parts of the press have proffered to him) has alienated most of its members, including, unfortunately, many potential allies. Moreover, his form of declaration, which included a retrospective clause that few dealers could have honestly signed, made alliance with the most influential sections of the association almost impossible, even if he had consulted the committee before promulgating it.

The trade is therefore faced with an unpleasant dilemma. Sir Basil's " Book of Saints " (his own hardly happy phrase) comprises at present less than seventy names out of perhaps 1,700 dealers in the country, of whom about 300 are members of the Association. His list, to date, probably includes few important firms. Yet when it is published the implication will be plain—and presumably intentionally plain—that any firm not on it " settles," or at least condones, the practice. Will the ABA come to terms with Sir Basil ? Will it outface him ? Or will there be a crop of resignations by those members who are privately of his way of thinking ? The absurd thing about rings as operated nowadays in the book trade is that for any book of consequence the final buyer (i.e., the successful bidder in the private settlement or " knock-out ") may well pay as much in the end as if he had bought it in open competition at the public auction ; for he will often have used up his " dividend " in overbidding at the settlement. The dealers who most consistently profit from rings are those who turn up regularly at country sales, stand in with their colleagues, buy little if anything at the settlement, and go home with ten or fifteen pounds in their pocket as the price of abstaining.

If the trade will not discipline itself, then the only other remedy is the obvious one. There is a law against rings: let it be enforced. The authorities' excuse for not enforcing it is the difficulty of procuring evidence for the Public Prosecutor ; professional colleagues will not willingly give each other away. But there is little doubt that if they were determined the authorities could do more—aided by auctioneers, and particularly the non-metropolitan auctioneers. If every country auctioneer formally notified the police, before a sale, that he had reason to believe (as he has) that a breach of the law was likely to be committed, a sharp eye could without much difficulty be kept on the movements of easily recognisable dealers after the sale. In London, the auctioneers need have little doubt about the comparatively few persons on whom the police should be recommended to concentrate their attention. Moreover, the tax-collector could surely move parallel to the law-enforcers. At present, auctioneers can, and some do, exert unofficial pressure on known members of the ring by denying them any credit beyond their barest entitlement. But since the proceeds of the settlement are distributed in cash, and since any entry of them in a firm's accounts would be *prima facie* evidence of illegality, it may be taken for granted that they are not declared for income tax. Any auctioneer who wants to extinguish the ring (and every auctioneer presumably does, since it takes money out of his own pocket as well as the consigner's pocket) could give the Inland Revenue some sufficiently pointed hints.

There is one other stick that can be waved against wrongdoers. The Statute of Limitations gives only limited protection for past rings. It is an open secret that a fully documented account of the ring's operations at the Lowther Castle and Wentworth Woodhouse sales was prepared for publication by *The Times Literary Supplement* in 1948. Publication of this material was withdrawn in exchange for the signing of a pledge by every member of the ABA that he would never take part in a ring, and the addition to the rules of the Association of a clause which declared that legally proved contravention of Lord Darling's Act would be grounds for expulsion from the Association. The spirit of those pledges has not been carried out by some members of the Association. Presumably, however, the detailed *exposé* of these sales is still in its pigeon-hole ; and the booksellers who took part in those two rings—including many of the most famous firms in the trade—might reflect that the article would make just as devastating reading today as when it was compiled.

The Higgling of the Market

The higgling of the market, the battling of man with man to settle how much of one commodity or what proportion of a particular service shall be given for another commodity or another service, is generally spoken of with contempt, and as unworthy of the notice of the influential portion of society. Like many other things which appear low and mean at first, but which afterwards come to occupy a high place in our esteem and our affection, this higgling, when examined, is found to play a very important part in all our affairs. By it the price of corn is determined, and the price of corn settles the rent of land, and thus the income of the great landowner depends on the results of this higgling. The price at which corn is sold every year has a great influence over the labour of the agriculturist in the next and subsequent years, inducing him to grow more or less wheat, or barley, or oats, as he finds a better or worse market for these articles. As sugar, or coffee, or tallow, by the conflicts and debates of buyers and sellers, comes to be marked dear or cheap, orders are sent abroad or withheld for these articles ; and thus the course of trade, as well as the rent of the landlord and the cultivation of peculiar crops, is regulated by the higgling of the market. . . . It is an element, therefore, in the natural constitution of society, to which all human laws, under their best aspect and in their perfect form, are only very subordinate accessories. In this constitution . . . it is one of the indispensable means of regulating labour and distributing its produce in the best manner.

The Economist

August 9, 1856

Notes of the Week

The Commons and the Canal

It was unfortunate that members of Parliament found it impossible to delay their holidays even by the day necessary to debate Suez after, rather than before, the three-power statement. Although everyone had a rough idea of what was being planned, it is difficult to believe that, faced with it in cold terms, members would have worked themselves up to such a pitch of competitive belligerence. The diplomatic effects of this parliamentary sabre-rattling are discussed earlier. The main political effect seems to be that Sir Anthony Eden has somehow been ushered out on a dangerous limb by Captain Waterhouse and his friends, while Mr Gaitskell utterly failed to discourage the taking of such risks.

Mr Gaitskell's instinct to give the government every chance by presenting a picture of national unity in a moment of peril is laudable. But the uncompromising and indeed untypical tone of the Prime Minister's speech, and Mr Selwyn Lloyd's even stronger language to Tory MPs two days earlier, would have justified much stronger emphasis on his reservations. It would have been proper for the Opposition to have made its contribution by reflecting the moderate criticism of the Government's attitude which is taking shape in the country. Mr Gaitskell did demur at the by-passing of the United Nations and object that the Government is threatening force over too wide an area. But he did not make these points strongly enough. A false impression has gone out of unity in extreme courses, only Labour's lunatic fringe dissenting ; but in fact, following Mr Jay and Mr Healey, the majority of Labour MPs feel that force is only justified if Egypt closes the canal physically.

Sir Anthony Eden seems for once to have been unduly influenced by an uprush of Tory backbench hysteria. It remains to be seen whether the Tories have now cooled down sufficiently to let him climb back to a position which gives him more freedom of manœuvre—though his broadcast on Wednesday night gave no indication of any disposition to climb down. It is hard to think of Captain Waterhouse as typical of the average Tory, except when the average, in an overheated moment, caricatures itself.

The Farmworkers' Rise

Will the 6s. increase which last week was provisionally awarded to the farmworkers set the pattern for this year's wage increases ? They usually establish themselves at round about the same figure—last year it was about 9s. to 14s. The new award of the Agricultural Wages Board (which if it is confirmed will come into force on September 24th) certainly should not set the pattern because the claim was based on the plea that the farmworkers are ill-used compared with workers in other industries. They last got a rise as recently as in January, but they were indignant that it was only 8s. They could claim with good reason that this award placed them at an even greater disadvantage compared with other workers than they had suffered before, and that their relative position was getting steadily worse. The farmworker not only has a comparatively low basic wage (and for 47 hours instead of 44), but he has no opportunities for improving on it by piece-work or incentive payments ; and the man who is skilled in handling the increasingly complicated machinery is unable to earn an appropriate differential. The farmworker's average earnings, according to the most nearly comparable figures for last year, were £8 5s. compared with an average of £11 11s. for men in manufacturing industry. This comparison no doubt has something to do with the fact that in the last year the full time agricultural labour force (now 479,000) has lost 21,000 workers.

The National Union of Agricultural Workers, with the support of the Transport and General Workers' Union, which also has some farmworkers, therefore decided to put in a claim for a further 10s. immediately after the January award. It is this which has resulted in last week's award of 6s.—in spite of a much-resented letter from the Ministry of Agriculture to the farmers' union, warning them that any wage increase would not automatically be covered in the price review, and certainly not completely in any case. The board would have been wiser to have given a larger increase the first time, for it has already been demonstrated, for example in the case of railway workers, that increases which are given to improve the relative position of any one group of workers merely tend to be used by other workers as the basis for new and probably larger claims.

Registrar for Restrictions

As soon as the Restrictive Trade Practices Bill received the Royal Assent last week the President of the Board of Trade signed an order specifying the first classes of business agreement that will have to be registered with the new Registrar of Restrictive Trading agreements ; and this week Mr R. L. Sich, a Treasury Solicitor, was appointed to this key post in the new apparatus of monopoly control. The classes of agreement set out in the order that Mr Thorneycroft signed last week—which will come into force at the end of November, provided that Parliament approves it—are those that include restrictions as to price or other terms or which involve collective discrimina-

tion. Mr Thorneycroft quoted common pricing, level or agreed tendering, and the offer of preferential trading terms in exchange for loyalty to particular suppliers, as examples of the kind of agreement he hoped to pull in with this first cast of his net.

Mr Sich's new job will be to set up and keep this register of restrictive agreements, and later to bring agreements on the register before the Restrictive Practices Court for a decision whether they operate against the public interest. The new court, appointments to which have not yet been announced, will assume that agreements in the classes specified are against the public interest, unless parties to an agreement can justify it on one or more of six grounds laid down in the Act and additionally satisfy the court that any justification on such grounds is not nevertheless outweighed by the likely detriment to the public. Mr Sich this week emphasised that his job would be to see that all relevant evidence showing the effects of an agreement on the public interest, not merely the adverse evidence, should be laid before the court—though he conceded that in practice the "other side" might be expected to assemble all the evidence favourable to an agreement. His task, he added, was "not to go baldheaded for trust-busting." But what he makes of it will partly determine how successful the Act, this latest essay in British empiricism about business monopoly, turns out to be.

No Boat to China

IN refusing permission to visit China to fifteen American journalists who had been offered visas by the Peking government, the State Department has behaved clumsily and with short sight. Its explanation for the refusal was that this kind of contact is impossible as long as the two governments have no diplomatic relations and Americans are held in Chinese prisons as political hostages. There would be substance in this argument if Peking had hand-picked a group of fellow-travellers on whom it could rely to ask no awkward questions and to take home uncritical reports. But this is a group of responsible journalists, whose reports would doubtless be as searching and frank as those of their colleagues who have done such a good job in Russia and Eastern Europe since those areas became more accessible.

It is not merely that this official rigidity offers the communist propaganda machine an easy target; there are times when that risk has to be faced if principles are to be maintained. But in this case it is not at all clear what principle is endangered. Newspapermen are less likely to be bamboozled than almost any other category of visitor; their training makes them temperamentally resistant to propaganda, and these visitors to China would undoubtedly give their hosts an anxious time fending off questions about political police, slave labour—and American prisoners. If they got evasive answers, they would hardly be likely to pull any punches in their despatches. Would not approval of their journey be a sensible means of stepping up the pressure on Peking to set its hostages free, and of giving its little Stalins the healthy shock of confronting men who take no glib slogans for an answer where the essentials of freedom are concerned? The chorus of protest in the American press seems amply justified.

Iceland and Nato

FOLLOWING the procedure laid down in 1951, the new Icelandic government has requested the council of the North Atlantic Treaty Organisation to reconsider the necessity for keeping forces in Iceland. This is the first formal step in denouncing the defence agreement with America. The council has replied that there has not been enough change in the situation since 1951 to warrant leaving Iceland undefended against a surprise attack and thereby exposing the transatlantic routes to danger. The radar station at Keflavik and the constant watch kept on the northern seas by Nato planes based on Iceland are the positive, but minor, part of Iceland's importance to the Atlantic powers. Its key position makes it vital that it should not fall into Russian hands in the event of sudden war. Only a permanent garrison can afford any protection against this danger. Since Iceland has no army, this garrison must be foreign.

What the Nato reply does not make clear is why the defence of Iceland has become more vital than it was in 1949 when Iceland joined Nato on condition that bases should be given to allies only in time of war, which it should be Iceland's prerogative to define. Not till the Korean crisis were American forces admitted. The Icelandic government is now seeking to get them out on the ground that the Korean war has long since ended, and the international situation is no longer explosive. Why should it now be fatal to western security to leave Iceland undefended when from 1949 to 1951 it was apparently quite all right?

The question is being asked; its asking does not mean that the people of Iceland are turning away from the West. Some 42 per cent of the electorate voted in the recent elections for the Independent Party, which advocates further discussions before turning out the Americans. But a shift of the pattern of voting, combined with an electoral alliance between the Progressives and the Social Democrats, put the advocates of complete demilitarisation into power. There is no overwhelming popular mandate. This fact may not be immediately important. The new government has been legally returned, and is fully entitled to pursue its own policy. It does mean that a small swing of opinion, or a quarrel between the parties which make up the government, could alter the situation in a very short time. But by then it may be too late to undo what is now being done. Once they have gone, the Americans will be chary of again exposing themselves to dismissal.

Soviet Zone—Socialist Showpiece?

AS more information is released about the visit of Herr Grotewohl and Herr Ulbricht to Moscow last month, it becomes clear that the Soviet government has decided to give the Soviet zone of Germany substantial economic help. As is known, occupation costs will be halved next year to 800 million marks. The Russian trade credit to the zone, as it now appears, amounts to 1,000 million marks. In addition, convertible currency to the value of 500 million roubles is at the zone's disposal in return for larger German deliveries of fine mechanical and optical goods. Russia is to double its deliveries of coke, coal, ore and wheat during the five-year plan, and extra supplies of materials are being delivered to factories in heavy engineering where, earlier this year, output slowed down through shortage. Russian aid is mutual aid, as one spokesman explained, but more fuel and basic materials will be of real value.

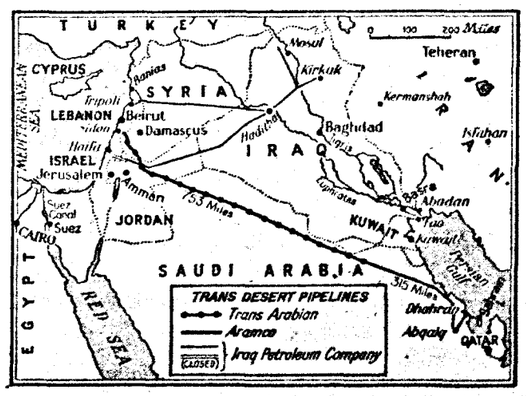
Encouraged by these concessions Herr Ulbricht has promised the removal of food rationing within two years and a reduction of official working hours from 48 to 45 per week, and has proudly emphasised that 100,000 houses will be built during the five-year plan (this is about a fifth of the number west Germany builds each year). But the citizens may well be sceptical. Since the bad winter of 1953, it is true, there has been a certain improvement in conditions. Under the "new course" begun that summer, the release of government food stocks and a Russian credit of 400 million marks brought better food supplies. A trickle of durable consumer goods began to appear in the shops and last autumn shops were actually over-stocked with some types of textiles. But many household essentials are still difficult or impossible to buy in the zone and sugar, fats and meat remain severely rationed. A bad harvest still leads to acute winter shortages of basic foods like potatoes, and to failure to honour the fat and sugar rations. The main achievement of the "new course," indeed, was not better living conditions but a better balance in heavy industry which has enabled the zone to conclude its first plan without another economic crisis.

This time, Herr Ulbricht has carefully qualified his promises. The ending of food rationing will depend on better farm yields, he has said, and will require an increase in the prices of rationed foods, long held artificially low. The east German citizen will not be much encouraged by Herr Ulbricht's announcement that in the first half of 1956 plan production was some 814 million marks behind schedule. Arrears in industry, now as in the past, seem likely to have a higher claim than consumers on the zone's additional exchange resources. The saving in occupation costs seems certain to be used mainly to increase the zone's own arms production. Russia, it is clear, is anxious to add to the zone's economic stature, to strengthen its prestige and its competitive position in the endless campaign for German reunification on Russian terms; "the time is not far off when democratic Berlin will demonstrate the advantages of the socialist system for Germans in the whole country," says *Pravda*. This implies much better living conditions; but the other claims on the zone's resources are great, and the pace at which living conditions can be improved remains uncertain.

TAPline

EGYPT'S nationalisation of the Suez Canal, by adding to the appeal of alternative routes to the Mediterranean, has improved the bargaining position of the Arab countries through which the oil pipelines from the Persian Gulf to the Mediterranean must pass. Heated talk of "nationalising" these pipelines is often heard in Damascus and Beirut, being strongest in the countries that produce no oil of their own. The Syrian and Lebanese presidents are reported to have discussed such a proposal in Beirut on Tuesday. Earlier reports from Cairo that Syria, the Lebanon and Jordan are shortly to hold discussions with Saudi Arabia on their "common oil interests," in the light of the Suez dispute, came as no surprise. One of these common interests, and to Saudi Arabia and Jordan one of the most important, is the Trans-Arabian Pipe Line, usually known as TAPline, which carries crude oil from Abqaiq, the heart of the gathering system for the Saudi Arabian oilfields near the Persian Gulf, to a special oil terminal a few miles south of the old port of Sidon on the Mediterranean—a total distance of 1,068 miles.

TAPline is owned by the four American oil companies that own the Arabian American Oil Company (Aramco), and in the same proportion: 30 per cent Standard Oil Company of California; 30 per cent The Texas Company; 30 per cent Standard Oil Company (New Jersey); and 10 per cent Socony Mobil Oil Company. Aramco itself owns the first 315 miles of the pipeline, as far as Qaisumah in north-eastern Saudi Arabia; TAPline is responsible for the remaining 754 miles to the Mediterranean, which comprise 550 miles from Qaisumah to the Saudi Arabian border, just over 100 miles in Jordan, 80 miles in Syria, and the final 25 miles to the sea in the Lebanon. TAPline, which has an outside diameter of 30/31 inches, had an initial capacity when it was opened in December 1950 of 300,000 barrels a day in winter and about 10 per cent more in summer. It is still operating at a rate of just over 300,000 barrels a day or 15 million tons a year—carrying about a third of Saudi Arabia's crude output—but its capacity is now being expanded, by the construction of four new pumping stations, to carry over 20 million tons a year by January, 1958. Ultimately, by adding yet more pumping stations and looping the line, its capacity could be expanded further to 25 million tons a year.



TAPline's main advantage over the tankers that transport much of the rest of Saudi Arabian crude oil is that it eliminates the very long journey by tanker round the Arabian peninsula and avoids Suez Canal dues. Its earnings can therefore be considered as equal to the cost of shipping an equivalent amount of oil by the long tanker haul round Arabia and through Suez, less the cost of operating the pipeline and amortising a risky capital investment of over $230 million. TAPline recently offered the four Arab countries through which it passes—Saudi Arabia, Jordan, Syria and the Lebanon—a half share of these notional profits, but left them to work out how to divide their 50 per cent share amongst themselves. Any chance of a swift agreement on the application of this principle has now been diminished, firstly by the new light in which the four Arab countries now see themselves as a result of the Suez Canal dispute, and secondly by the action of the Lebanese government, which in prosecution of its own demands has imposed taxation, retroactive to 1952, on TAPline and other foreign companies that had enjoyed negotiated exemptions.

No Money for "Balance"

SEVEN months ago, the Independent Television Authority formally asked the Post Office for a grant of £750,000 to subsidise the production of certain programmes beyond the resources of the four ITA programme contractors. During the prolonged negotiations that followed, the ITA offered to settle for ever-diminishing sums, but last week it was curtly informed that under present economic conditions no grant could be made and no hope was held out of when, if ever, the government would reconsider the request. The ITA reception of the news was a yelp of hurt surprise ; the board had automatically assumed that it had a statutory right to such a grant. The Television Act allows the Postmaster General to give ITA up to £750,000 (collected from BBC licences) in any one year if he and the Treasury think fit but does not say for what specific purpose the money must be used. The ITA rested its case for a grant to meet the cost of balancing the programmes on the tenor of the debates during the passage of the Act.

It was not easy to persuade the Post Office that ITA programmes were seriously out of balance, because no serious public agitation about their content had been heard for some time. There are also those who would argue that any balance necessary is provided by the BBC. But the ITA bitterly resents the suggestion that it should be the Light Programme to the BBC's Home Service and wanted the grant to meet two basic deficiencies, which will be more apparent now that the autumn schedules have been pruned of certain technically costly programmes. The ITA's main concern is to see proper cover given to current affairs, and one programme a week to subjects that lump together as "the arts." The cheaper type of current affairs programmes are now being done quite well on the commercial network, but good documentaries covering home and foreign developments are notably lacking, which is hardly surprising as their costs run to between £3,000 and £5,000 for a half-hour programme. The ITA believes that there is a case for wholly or partially subsidising the cost of these technically expensive programmes, and it was certainly encouraged to expect that money to do this would be forthcoming. The Post Office is no doubt equally right to refuse to allocate funds to subsidise public entertainment at the present time, but it is a pity that in doing so it has managed to convey the impression that it was shutting the door for all time on the ITA.

Independence for Rhodesia?

LORD MALVERN'S loud complaints that the British Government would not yield the Federation "technical independence" when he asked for it in London is probably motivated in part by political considerations. The new Dominion party is liable to make an issue of that very thing ; "Britain trusts West Africans with independence before it trusts its own kith and kin out here" is an easy cry in settler districts. Lord Malvern evidently felt that he had to ask for it ; and the story having leaked—why ?—he had to make a virtue of his demand. He may count the cost in the obvious reaction among the Africans of Northern Rhodesia and Nyasaland. They make no nice distinctions between "technical independence for the Federation in its own sphere without affecting the territories" and a straight demand for unfettered white rule. Why should they ? In Rhodesia the constant attacks on the Colonial Office, and the way the Federation has been taking over all the powers it can, add up to a simple message to Africans. Lord Malvern wants to win, or wants Sir Roy Welensky and the Federal party to win, the next Federal elections ; but it is tragic that he should find—and he is an experienced politician—that the only way to do it is by alienating African feelings.

Politics apart, there was not much logic in Lord Malvern's argument. The three governments in Central Africa made a bargain when federation was agreed—a bargain not only with Britain, but as between themselves and with the Africans as British-protected persons. This was that the constitution should not be altered, except under certain conditions, until 1962. The ripeness, or otherwise, of the Gold Coast for independence is completely irrelevant. On the contrary, the plain fact is that race relations have developed less favourably in Central Africa than many hoped in 1952. Now Lord Malvern is faced with the problem that proposals for a wider franchise—which are not yet clearly known—may also be prejudiced by African suspicion. The upshot seems to be that the Federation will make less progress politically than it might if Lord Malvern had not raised the question of independence in London. As a contribution to the Prime Ministers' conference, it was well below Lord Malvern's standard.

The Rising Loaf

IT was quite right to abolish the remaining part of the subsidy on bread: it was an anomaly, the last of the food subsidies outside the orbit of child welfare. Its only justification was the nutritional one that the national loaf is better food than "enriched" white bread ; and that argument was not upheld by the officially appointed experts whose report (hotly contested it is true, by other experts) was published in May. So the national loaf at 8½d. will become in September the loaf at 11d. at least. This is unlikely to raise the cost of living by more than one point, but the psychological effects are disproportionately great. Dearer bread is an emotive phrase which will be a useful battle cry in the autumn as the trade unions enter the fiercest phase of their struggle over this year's wage claims.

As far as the bakers are concerned, the removal of the subsidy will be welcomed by all sections of the trade, but particularly by the small man. The controlled price has left him with a narrower profit margin than that of the plant bakery, and he has seen many of his friends go out of business. His price for the hand-made loaf can now be higher than that of factory-made bread and its quality, he claims, may therefore be improved. The bakers do not fear resistance to the new prices. Consumption seems to have fallen gradually in any case as rising prosperity brings less dependence on bread as a filler, but the removal of the subsidy may bring nothing worse than a temporary increase in the consumption of crusts.

Karachi and Kabul

OPTIMISTS in Karachi have suggested that one of the purposes of this week's visit to Kabul by the President of Pakistan is to enrol Afghanistan in the Baghdad Pact. President Iskander Mirza himself is too much of a realist to be likely to harbour such illusions. Ever since Pakistan came into being there has been bad blood between it and the Afghan government, which has persistently sought by propaganda and subversion to get the Pathan tribesmen of the former North-West Frontier Province to break away from Pakistan.

Kabul's ostensible argument has been that the Pathans should be entitled to self-determination and a separate national state. This is doubly disingenuous logic. On the one hand, the Pathans have shown no interest in the idea of isolating themselves in a small state of very doubtful viability, and losing the many opportunities available to them in Pakistan, where a Pathan, Dr Khan Sahib, is now Chief Minister of the newly united western province. On the other, the creation of a true ethnographic Pathan state would mean the dismemberment of Afghanistan itself, where Pathans are the largest single element in a mixed population. But these considerations did not deter the Afghan regime from stepping up its "Pakhtunistan" campaign last year to such a pitch that, after the Pakistan embassy in Kabul had been wrecked by a mob, diplomatic and trade relations between the two countries were suspended.

Amends have since been made, and President Mirza's journey to Kabul at the invitation of King Zahir Shah marks a return to normal, if not cordial, relations. It had been preceded by a round of visits in which Turkey has played a conspicuous part; while President Mirza has been entertained in Ankara, the Prime Minister of Turkey, Mr Menderes, has visited both Kabul and Karachi, and it has been announced that the king of Afghanistan will shortly be paying a state visit to Turkey. The Turks, allied to Pakistan and linked with Afghanistan, where Turkish elements are strong, have an obvious interest in helping to end the quarrel, and are well placed to do so. The Afghans, for their part, may now be the more ready to see reason because their open breach with Pakistan last year has shown them what it means to become economically dependent on Russia. Munificent Soviet bounties, including an offer of credits totalling $100 million, have not prevented them becoming painfully aware of the foolishness of quarrelling with the neighbour through whose territory lies their natural trade routes to the outside world.

Bombay Bigger—and Better?

ALL who wish India well will hope for early and final acceptance of the new plan, announced on Monday, for the redrawing of state boundaries on the "Bombay side." For nearly a year the country has been tormented by a controversy that has led to several bloody conflicts. The new boundaries recommended last October by a three-man commission found favour in most parts of India, especially in the south, where they met the popular desire for linguistic units. But they provoked fierce indignation among the Mahrattas, the predominant group in the Deccan uplands south and east of Bombay city. Instead of a separate Marathi-speaking state, they were offered a continued partnership with the Gujeratis, who are predominant in Saurashtra and Kutch and north of Bombay city. The Mahratta parts of Hyderabad were to be added to the enlarged Bombay state, but the Nagpur and Berar areas, also strongly Mahratta, were to become a separate state named Vidarbha. The Mahrattas complained that they were to be neither united nor left alone.

Their violent protests led the government to change its mind. In January Mr Nehru announced that Gujerat and Maharashtra would after all be separated and that Vidarbha

would be merged into the latter. But he also announced that Bombay city, with its mixed population, would fall to neither state. The Mahrattas in Bombay city at once launched an even more alarming wave of riots, in which many lives were lost. Bitterness against the Prime Minister and the ruling Congress party reached serious proportions, and even the Finance Minister, Mr Deshmukh, who is much more of an all-India administrator than a Mahratta politician, tendered his resignation. This was finally accepted only at the end of July, when Mr Deshmukh publicly denounced Mr Nehru's policy on Bombay in startlingly outspoken terms. A week later the Prime Minister went to Poona in person, apparently to take Maharashtra's temperature ; and now the government has reverted to the original idea of a large Bombay state of 48 million people embracing both Gujeratis and Mahrattas, but this time including Vidarbha, so that the Mahrattas will have a clear majority. Now the Gujeratis in turn have resorted to violent protest. But the past year's distracting struggle may nevertheless be near its end. If so, India will benefit doubly: the other boundary changes should go through more smoothly, and it will be possible to concentrate more attention and effort on the new five year plan.

Seretse Stays

LAST week in the House of Commons the Government reiterated its decision to maintain the ban on the return of Seretse Khama to Bechuanaland, whether as chief or as private citizen; the Labour party on the other hand used this opportunity to reconcile its previous decision to exile Seretse for five years with its present inclination to restore him as chief, or at least give the tribe another chance to choose him as chief. The Government bases its decision, as before, on its belief that the tribe has not yet settled down sufficiently to permit the reopening of the old cleavage between Tshekedi and Seretse, and its belief that the present situation is satisfactory; the Labour party not only believes it has evidence that tribal opinion has hardened behind Seretse, but that to keep him from his people does them serious harm—particularly at this moment when the question of mineral concessions in tribal areas has arisen. The Government clearly concedes that there is a difficulty here by agreeing that if the tribe wishes someone with the name of Khama to see, and sign, any document embodying the conditions of a concession, facilities will be provided for this to be done—presumably by Tshekedi on the spot or Seretse in London. But what happens if both or either think the terms of the concession should be varied in the tribe's interest?

The onus of proving that Seretse's return even as a private citizen would convulse the tribe lies with the Government; and the fact that it asserts this does not prove it. If it had wished the tribe to start thinking along new lines, it would, in any case, surely have proceeded to develop local elective councils, and made a start with a protectorate legislature. It has not done this and therefore the presumption must be that, under the hypnotic glare of South Africa, a policy of masterly inactivity is still the policy of the Commonwealth Relations Office. Is this really necessary now that Mr Strydom has again been refused the protectorates? Is it even logical? People talk of the dead hand of the Colonial Office; but the hand of the CRO seems even more frozen.

Art Schools Up in Arms

THE smiles with which local education authorities greeted Sir David Eccles when he became Minister of Education have rather faded from their faces since it became clear that education too must take its share of economy cuts. Even some of those who appreciate his difficulties and regard the cuts as inevitable have been offended by the way they were announced. Sir David has been hard pressed—by the big programme for technical education, by an insistent Chancellor of the Exchequer, and by the approach of a new school year. Under these pressures he has sent out circulars without fully going through the time-honoured processes of consultation with all the parties concerned. His insistence on higher fees for evening classes was at least not a new request. The latest row, about art students, has more to it.

There are in England and Wales about 170 art schools, run by local authorities with a 60 per cent grant from the Ministry of Education. The number of students in them is now less than 11,000, compared with nearly 15,000 in 1949, when numbers were swollen by ex-service people on grants. There seemed a case therefore for some contraction, and the Minister last year prompted an inquiry by the school inspectors. Their reports showed that the ratio of staff to pupils was often absurdly high, and that much of the teaching was poor; and it seems many of those who pursue these attractive courses have no further use for their art after they finish the course. The girls with the sandals and horses' tail hair styles get married, or take up other bourgeois occupations.

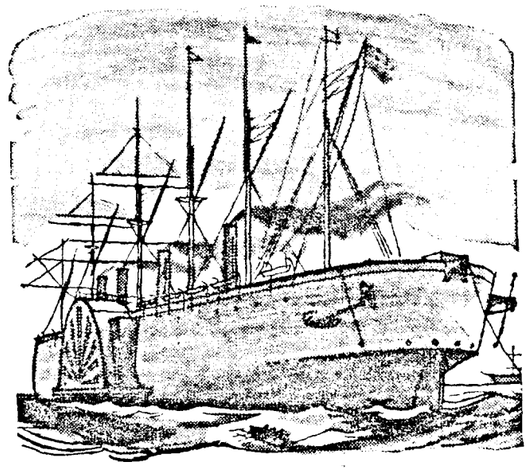
The Minister therefore decided that a good many full-time courses at the smaller art schools ought to be discontinued, and his letters informing local authorities of his proposals have been arriving in series, region by region. Some of them, unfortunately, arrived as late as July—too late, probably, to cancel arrangements for September. A protesting deputation from the Association of Art Institutions has now been assured that such cases, and others which they feel strongly about, will be reviewed: there are some courses, for example, whose closure would condemn students to long journeys to the nearest alternative centre. But let there be no nonsense about some dim little institution being a precious flowering of local talent whose closure will be England's loss. The decision to prune these schools has been badly handled, but it was certainly needed.

Still Vexed Seychelles

MR LENNOX-BOYD has had a rough session and must be glad it is over. Labour has pursued him relentlessly on great issues and small. Why, he was asked, must he precipitate a crisis in Nigeria by insisting on an inquiry into the possibility of financial irregularity in the Eastern Region; why did he not, on the other hand, precipitate an upheaval in the Seychelles by instituting an inquiry into the conduct, judicial and convivial, of the Chief Justice there? Since the Speaker ruled that the judiciary could not be attacked on a Supply day, Labour had to deal with the Seychelles as a problem of the executive; this nevertheless enabled it to bring up verbatim not only the petition against the Chief Justice, with all the high moral relish of a Sunday newspaper story, but also the auditor's report on the public accounts of this colony of 40,000 souls producing coconuts in far from welfare state conditions and well off the beaten track. It presumably says much for Parliament's meticulous care that the Seychelles were debated when the House was giving most of its time to the Suez crisis.

It is asking a good deal to expect life in the Seychelles to be conducted on the lines of an English garden suburb, though no doubt something will now quietly be done to try to verify the remaining 350 unverifiable items in the accounts. The Chief Justice may feel that the ruling that he could neither be attacked nor defended worked somewhat to his disadvantage; but he has the satisfaction of knowing that it was not out of order to say nice things about him, which was duly done from the government side. Meanwhile the real questions raised by several recent Labour offensives on the colonial front remain unanswered. Can anything be done to raise the standards of public

Twelve years before Cable Contact



The first South American cable was laid between Pernambuco and Lisbon in 1874—twelve years after the Bank of London & South America had opened its doors in Brazil. Since then, commerce with Latin America has increased enormously, and with it have grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America. It has Branches in most of the important trading centres of that vast continent. Up-to-date reports on local markets, trading regulations and general economic conditions are received regularly from Branches overseas and are summarised in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

FLASH!

'No more needles in haystacks'

How much time, money and nervous strain would be saved if, every time you wanted a piece of information you knew exactly where to put your finger on it! Which is just what happens when all your records are coded and classified by the Kardex Visual Control system.

All related records are grouped under one title, visibly indexed. Permanent information is segregated from forms carrying ever-changing day-to-day entries. Brilliantly coloured signals spotlight every item requiring immediate attention. There is not the slightest risk of soiling, misfiling or loss.

Kardex is merely one of the many modern methods devised by Remington to stream-line the day-by-day efficiency of business operations. The Man from Remington Rand will gladly call upon you to discuss their application to your own problems—without obligation.

BOWATER-EBURITE
JOIN FORCES

USERS OF CORRUGATED CASES

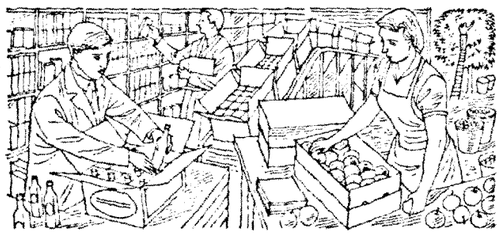
WILL BENEFIT FROM

BIGGER OUTPUT—

EVEN BETTER SERVICE

The merging of the corrugated case making interests of The Bowater Paper Corporation and The Eburite Group of Companies brings with it a number of advantages for users of packaging. Together, the two organisations can offer a much more flexible service than either, operating singly. Rationalisation of distribution and continuous large-scale production will lead to economies in manufacture and marketing. And since the pooled experience of both companies will be available to customers of each, a wider, shared knowledge will be brought to bear on individual packaging problems.

Both organisations have taken a leading part in the development of packaging for industry and commerce. Their corrugated cases carry an ever-increasing variety of products—from beer to biscuits, TV tubes to turkeys. Other products of the new company range from chocolate boxes to laminated baking cases.



The manufacturing plants of the company are located in key positions for national distribution:

Corrugated fibreboard containers

BOWATER-EBURITE LIMITED
PARK ROYAL ROAD, NORTH ACTON, LONDON N.W.10

ANDREW RITCHIE & SON LIMITED
CLOBERFIELD FACTORY, MILNGAVIE, SCOTLAND

BOWATERS FIBRE CONTAINERS LIMITED
PURLEY WAY, CROYDON, SURREY,
and ELLESMERE PORT, CHESHIRE (NOW UNDER CONSTRUCTION)

Fancy, rigid and confectionery boxes

ANDREW RITCHIE & SON LIMITED
JAMES STREET, BRIDGETON, GLASGOW S.E

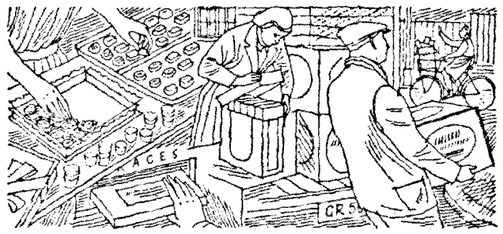
ALFRED KENT & SON LIMITED
BEDFORD ROAD, CLAPHAM, LONDON, S.W.4

Aluminium foil ware and capsules; paper crimp cups

AUTOLEX LIMITED, WHITE LODGE, FRENCH STREET,
SUNBURY-ON-THAMES, MIDDLESEX.

Folding boxes; baking and confectionery cases

CHAS. G. DONALD & COMPANY LIMITED
28 LANDRESSY STREET, GLASGOW S.E



The linking of the resources of Bowaters and Eburite means that the existing machine power will be put more efficiently to use. Additional productive capacity will accrue to Bowater-Eburite Limited when the new corrugated case plant at Ellesmere Port, Cheshire, comes into production in 1957.

The sales forces for corrugated containers will operate in the near future from headquarters in England, at Bowater House, Stratton Street, London, W.1 and in Scotland, at the Cloberfield Factory of Andrew Ritchie & Son Limited, Milngavie, through Bowater-Eburite Sales Limited, a new company formed for this purpose.

Behind these factories will be the full raw material, research and development resources of the Bowater Organisation, augmented by the new mills and factories in hand and projected both in this country and in Tennessee and South Carolina.

BOWATER-EBURITE
LIMITED

morality in backward territories moving fast to independence, and what will happen if they are not? And what is to be the future of those colonies which are too small—even if upright—to become independent? Of the latter it can at least be said that a few seem destined to become RAF bases, *faute de mieux*. It looks as if the Seychelles will be one of these—and perhaps with closer communication with the serious issues of the world at large, life among the coconut palms will lose some of its present powerful provincial flavour.

Slim Hope for Aliens

It cannot be said that aliens in this country will derive much comfort from a parliamentary reply given by the Home Secretary last week. Because the United Kingdom has now become a party to the "European Convention on Establishment," an authority has been set up to which aliens may appeal if a deportation order is made against them otherwise than on the recommendation of a court of law. The authority, which is to be the Chief Metropolitan Magistrate and his colleagues at Bow Street, after hearing the appeal will make a recommendation to the Home Secretary as to whether the deportation order should be carried out or not.

On the face of it this procedure should make deportation orders less arbitrary. But the qualifications to it which the Home Secretary went on to state seem designed to make it as ineffective as the Convention, which is also riddled with ifs and buts. In the first place, he is not bound to take the magistrate's advice, though he would normally do so. Secondly, and more serious, he has excluded from the scope of the appeal procedure most of the aliens against whom deportation orders are likely to be made. It will not apply to those against whom orders are made on security grounds or on the ground that they landed in this country without permission. Even more high-handed is the exclusion of aliens who have permission to enter but who, in their first two years here, fail to observe the conditions attached to their stay—for instance, change their job (paid or voluntary) without permission. The new procedure will, in fact, do nothing towards making it less difficult for aliens to enter Britain; nor will it help many of those who, having succeeded in entering, find themselves in difficulties with the numerous regulations governing their stay.

Indonesia's Little Suez

If emotions could be measured statistically, Indonesia's repudiation of its debts to Holland should have caused more rejoicing in Djakarta than sorrow in The Hague. For while Indonesia proudly proclaimed the renunciation of some 4,081 million guilders (about £385 million) of debts to Holland, the Dutch themselves, after careful search, could not discover that the Indonesians owed them more than some £61 million. At the conference in 1949 when a settlement of the long struggle between the two countries was at last reached, Holland had waived all claims on some 2,000 million guilders of debts which it had accumulated in paying for the war. The Indonesian government was left in effect only with prewar debts, now worth some £61 million.

But the bitter conflict over New Guinea has made Indonesia anxious to erase the past in its own way. In February it repudiated the economic and political ties with Holland which the conference had left. Debt repudiation was a logical next step, and in Djakarta last week, where a raucous press had been urging the government to emulate Nasser, the plunge was taken. Studiously returning to the legal position of 1949 and ignoring Holland's seven-year-old "gift," the Indonesian government declared that it still owed Holland over 3,000 million guilders of "war" debts as well as the prewar ones and then knocked the Aunt Sally safely down.

The Dutch have taken their real as well as their imaginary losses quietly. Until last February, repudiation of debts would have come as a nasty shock, for Indonesia had been a good debtor since 1949. But when Indonesia then renounced its economic and political ties with Holland, it also stopped servicing its debts. Repudiation has been painful for the Dutch, but it has not been a great surprise. They have not considered reprisals, for Indonesia's assets in Holland are minute; and the losses suffered last week are small compared to those which nationalisation of Dutch interests in Indonesia could inflict.

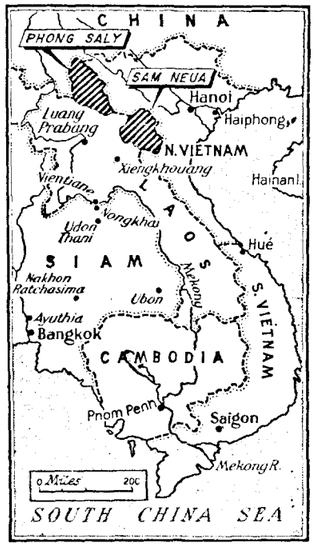
The threat of nationalisation, indeed, remains a much more fundamental worry to the Dutch than the loss of their debts. Fortunately, on the Indonesian side, despite the violent emotions which still burn and the steady and irritating pressure on foreign firms, the government remains anxious to attract foreign capital; and Dutch businesses still predominate in important branches of the economy. Last week the government carefully kept debts to third countries away from its bonfire, and it hopes to encourage new foreign capital through a new investment law. And two weeks ago it succeeded, apparently, in convincing the International Monetary Fund that it was worthy of a $50 million loan to bolster dwindling reserves. But its action last week is scarcely an invitation to the private foreign investor.

Integration in Laos

An agreement has been reached in Laos whereby the two provinces (Phong Saly and Sam Neua) held by the Communist-controlled Pathet Lao faction will be brought again under the administration of the Laotian government. The *quid pro quo* for the Pathet Lao has been the Laotian government's endorsement of the Five Principles of Co-existence, which, however admirable in their abstract virtue, have come to indicate in the Far East a degree of acceptance of the moral leadership of Communist China. The Pathet Lao will also get a minority representation in the parliament which has already been elected for the other provinces of Laos, and will doubtless retain both the will and the capacity to make further trouble in future.

Still, the agreement appears to be on balance a victory for the government, and may be regarded as a result of the

successful consolidation of the Laotian state since the Geneva settlement of two years ago. The Pathet Lao have been unable to extend their power beyond the two provinces then assigned to them. Subjected to an economic blockade by the government forces to the west and south of them, they have had communications across the mountains with North Vietnam, but the latter, preoccupied with its own rehabilitation, has not been able to do much for the Pathet Lao provinces. The Pathet Lao owed its original successes less to native Laotian support than to the infiltration of well-armed Viet Minh detachments across the passes; but the permanent stationing of Vietnamese troops in Laos could only make for enmity between Hanoi and Vientiane, and Viet Minh policy now appears to be to cultivate good relations with both Cambodia and Laos, and to keep them politically detached from South Vietnam and Siam. As long as Cambodia and Laos remain genuinely neutral and do not drift into the communist orbit, their function as a buffer zone is one of considerable value in the affairs of South East Asia.



Manchukuo Revisited

THOSE who supposed that the world had finished with war crimes trials arising out of the second world war have turned out to be unduly hopeful. The Chinese People's Republic has just held a highly publicised trial of 28 Japanese for participating in the administration of "Manchukuo" before 1945 and in the repression of Chinese resistance to it. These Japanese officials were originally taken prisoner by the Russians when they overran Manchuria in 1945, but they were handed over to the Chinese communists after the establishment of the People's Republic. They could have been tried at any time in the last six years, but the Peking government has chosen to bring them before a court now, after they have already been prisoners in Soviet or Chinese hands for eleven years since their capture. The timing is plainly political in motive; strong pressure is being put on Japan to recognise the Peking government, and some previously condemned war criminals have been released and repatriated to Japan uttering appropriate slogans from well-washed brains. The line is to remind the Japanese of the enormity of their past sins against China and to emphasise the generous forgiveness which the communist regime is ready to extend towards a properly purified neutralist Japan.

The administrators of "Manchukuo," especially the gendarmerie, were a ruthless set of men, and many of them would probably have qualified as war criminals in any Allied court held since the war. This case, however, has been marked by all the classic features of communist show trials which have recently been much less conspicuous in Russia and Eastern Europe. The principal accused, according to the official account, was too ill to attend the court, but the judge visited him "at the place where he was undergoing treatment" and obtained his confession to all the charges against him. The other accused confessed in open court, denouncing themselves in extreme terms; one of them asked the court to give him severe punishment "as a warning to those imperialists who are scheming to start new aggressive wars." After the court had passed sentences of from 12 to 20 years on the accused, they expressed their gratitude for the leniency with which they had been treated.

Who Should Run a Hospital?

THE Acton Society Trust's first pamphlet on hospitals and the state decribed the reorganisation that took place under the National Health Service Act. The second* discusses how this reorganisation actually affected the hospitals' internal administration and the status—and feelings—of the administrators.

The pamphlet's conclusions are mainly based on case studies of three different types of hospitals: a former local authority general hospital, a former voluntary hospital now forming part of the same hospital group as the first, and a mental hospital which had also been run by a local authority. As was to be expected the impact of the change was felt most severely in the ex-voluntary hospital. Formerly quite autonomous, this hospital had been run by a board of management, elected from the governors, and its three committees. Nationalisation took away all authority from these bodies. The former chief administrators (the house governor and the matron) found the administrative machinery of the group placed between them and the new management: the house governor (renamed hospital secretary) found himself subordinate, even at committee meetings of his own hospital, to the group secretary; the matron, who had formerly attended all the board of management meetings, found herself excluded from the meetings of the new management committee. But the voluntary hospital, though its officers had most cause for resentment, was not alone in its complaints. The old local authority hospital, which, because it is the largest unit of the new group, has the group headquarters within its grounds, preferred the remote control formerly exercised by the town hall to the close and, it was felt, unnecessarily detailed control that had been substituted. Only the mental hospital, which is managed as a single unit and does not, therefore, suffer from friction between two layers of staff, felt that it had gained, administratively, from the new organisation.

The Trust points out that much of the exasperation and frustration the studies disclosed may have disappeared since they were completed. But, in discussing the need to strike a balance between the provision of an integrated hospital service and allowing individual hospitals some independence, it comes down in favour of more independence, including financial independence, than the Ministry of Health wants them to have. The important thing, the trust rightly feels, is not to adhere too rigidly to a specified number of tiers of authority, which proliferates bureaucrats and committees, but to see that decisions are taken as near as possible to the point where they are to be effective—that is, in the place where patients are treated.

* "The Impact of the Change." *The Acton Society Trust.* 4s.

They Do Come to Britain

THIS is the time of year when Britain's largest invisible export becomes clearly visible in the streets of London, Edinburgh or Stratford-on-Avon. It is strange that a country which had three feet of hailstones on Bank Holiday can boast of being Europe's greatest tourist attraction, if that attraction is reckoned in income from tourism, including fare payments; if it is reckoned in "guest nights," i.e. nights spent by overseas visitors in British hotels, Britain comes second after Italy. Many of these visitors, it is true, have come on business. Many from the United States and Commonwealth countries are visiting their friends and relations. But an ever-increasing number are drawn here by posters of historic buildings, and by all those attractive people in fancy dress—beefeaters, kilted highlanders, guardsmen or Chelsea pensioners. Even the little-travelled French are now crossing the Channel and the German visitors, already spread all over the Continent, are about twice as numerous as last year. Then there were over a million overseas tourists, and this year's total is expected to be higher.

Tourism, in the favourite phrase of the British Travel and Holidays Association, is Britain's largest dollar earner, well ahead of the runners-up: whisky, vehicles and aircraft. The association (which was set up by the Labour Government after the war to persuade people to "Come to Britain") believes that the expansion could go much further if only there were more hotels with the private bathrooms and the standard of service which visitors regard as minimal; and its latest annual report reiterates the association's now perennial plea that something should be done. For some reason only American companies seem to find it worth while to open suitable new hotels in London. First came the hotel in Bond Street, and now another American company is hoping to build one in Portman Square. Evidently profit is possible, even without the exemptions from purchase tax and the loan concessions which the travel association has long recommended.

"Dynamic Justice" for Rents

AN intelligent and perceptive pamphlet on rent control has emerged from the Bow Group of the Conservative party.* Its two authors have an easy task in exposing the anomalies of rent restriction. They also conclude that Mr Macmillan's 1954 Act (his "Operation Rescue") must now be written off as a failure; its mild incentives to landlords have proved to be so hedged around with precautions as to inhibit action—particularly in the case of those older houses which most urgently need repairing. The Government therefore must start afresh; and in the authors' view it could reasonably decontrol straight away a million odd of the more highly rated dwellings, while consigning the million worst ones to the exclusive care of municipal enterprise.

The authors consider that the remaining 4½ million properties should be decontrolled in the end; they deny the persistence of a housing shortage justifying continued control in most areas. Nevertheless they believe that after 40 years rent restriction has become so well-established a social institution, affecting millions of household budgets, that its sudden abandonment would be an act of political suicide. An interim, yet comprehensive, scheme must therefore be found and the authors settle—somewhat reluctantly—for the idea of a new system of rent tribunals, which (unlike the present tribunals) would be linked to the county courts and would review both furnished and unfurnished lettings. These tribunals would inject "an element of dynamic justice" by relating the size of their rent awards to the landlords' willingness to undertake repairs and to other relevant circumstances.

This is a bold proposal to appear in a Conservative pamphlet, but it is not really a very happy one. The tribunals would have to handle an enormous volume of cases if they were to make much impact. The authors' hope that this judicial approach might soften the blow of rent increases is, moreover, surely illusory. The tribunals would operate through special rent controllers who would be instructed to ignore questions of personal hardship which would be dealt with through the medium of social service payments. This is the right principle; yet one can predict the outcry from the Left against the "heartless Tory rent fuehrers." In any case, has the experience with rent tribunals been sufficiently encouraging to warrant its considerable extension, particularly as part of a scheme which purports to be only temporary?

Mixed-up Somalis

SOME Somali tribesmen, living in the Haud and the Reserved Area between Ethiopia and British Somaliland, have complained to the Emperor of Ethiopia of the acts of British liaison officers, and of broadcasts from Hargeisa designed to "destroy our freedom and restore the subjugation we hated." This came after British protests against the high-handed Ethiopian actions in the Reserved Area which were described in *The Economist* of July 21st. The trouble is that the nomadic habits of the tribes concerned make it difficult to define nationality and jurisdiction adequately.

One subject of British complaint, the slaughter and mutilation of a large number of men, women and children of the Essa tribe, has been justified by the Ethiopian government as legitimate action against banditry. (The tribe in question is certainly warlike and probably lawless, though it may have been provoked by the depredations of troops stationed in its area.) Because some British protected Somalis were

among those killed, the British Government has to concern itself with the rights and wrongs of this affair although it took place well inside the Ethiopian border.

Temporarily sedentary tribes are another problem. The agreement of 1954 allowed Somalis to enter the reserve territory in search of grazing without becoming subject to the Ethiopian government. But if they stay there long enough to raise a crop of grain, as they used to do, the Ethiopian government claims that they have become permanent settlers and therefore Ethiopian subjects, while the British assert that nationality is defined by parentage and not by domicile. This is one reason why both sides have been accusing the other of trying to coerce tribes into changing their allegiance. Only greatly improved administration and a real attempt on the part of the local authorities to co-operate with each other can save the border tribes from being used as the rope in a moral tug of war between British Somaliland and Ethiopia.

Russian Help for Jugoslavia

THE Jugoslav economic delegation which has been negotiating in Moscow for the past two months has not been wasting its time. Jugoslavia is to get a long-term loan of 700 million roubles ($175 million) at 2 per cent, in order to increase its annual production of aluminium to 100,000 tons by 1961 at the latest. Half the loan will be provided by Russia and half, surprisingly, by eastern Germany; a second loan for further expansion is to be negotiated in due course. Jugoslavia is also to get unspecified quantities of Russian wheat which may weaken, but will hardly break, its present dependence on American supplies; the counterpart funds from the sale of the wheat are to cover the local costs of the aluminium and related hydro-electric projects.

The Jugoslavs set great store by their large bauxite deposits. With adequate electric power, they believe that annual aluminium production, which in the past two years has risen from 3,500 tons to around 20,000, could be increased to at least 200,000 tons. Since Jugoslavia's needs are reckoned at only 30,000 tons annually, there should be plenty to export; aluminium and electric power will between them, it is hoped, go a long way towards solving the country's balance of payments problems. It is too soon to say whether the decision to accept such a large loan for such a key project from the eastern block is a straw in the wind. Western help was on offer, too. But the Jugoslavs always insist that their search for foreign loans is not influenced by ideology; and they turned down Russian help when they considered Russian terms unsatisfactory.

The inclusion of east Germany as a lender is an interesting political aspect of the scheme. Marshal Tito when he visited Moscow in June subscribed to a statement that the existence of two German states had to be recognised. Jugoslav officials have since insisted that the Moscow statement does not mean that Jugoslavia intends to recognise the east German state diplomatically. Now the equivocation is deepened by the announcement that Belgrade is to receive economic aid from a country which it does not recognise. Still more curious, east Berlin is in a poor position to go in for foreign investments, and is just in course of getting a loan from Moscow itself. Can the Jugoslav project have been taken into account by Moscow in fixing the amount of the loan to east Berlin? This would be an ingenious way of edging Marshal Tito an inch nearer to recognition of the German Democratic Republic.

Malayan Labour Troubles

THE labour unrest which last year afflicted Singapore seems in recent months to have spread to Malaya. A go-slow in the rubber industry earlier in the summer considerably affected output and forced the employers to grant big wage concessions, and there have been other disputes on the railways and among unskilled labour employed by the Government. The latest industry to catch the epidemic is tin mining. For some weeks sporadic go-slows, strikes and bans on Sunday working have been spluttering round the industry, and the miners' union has several times threatened a strike. Each time the deadline has approached it has been called off, for its strike funds are small, and employers are beginning to smile at these continual cries of "wolf." But the strike threat still hangs uncertainly over the industry, and ill-feeling remains.

A straightforward and not always unreasonable demand for better pay and conditions is one cause of the unrest in the federation. The rubber conflict, for example, sprang from a clear and familiar source of trouble. The employers, anxious to reduce their costs when their selling prices are low, had succeeded in introducing a system of sliding wages tied to prices. When prices fell this year labour naturally resisted the drop in income, and succeeded in largely replacing the sliding scale with a basic wage plus cost-of-living allowance. But the motives for the tin strike seem more obscure. Pay demands certainly play a part, but the unions' demands are continually changing and seem as much a symptom as a cause of the bad relations between the miners' union and the employers.

Perhaps the scent of independence has encouraged a feeling among labour that demands on European firms can be pushed up. Competition between unions—above all between the big unions which were originally sponsored by the British Labour government and the smaller Communist unions mainly backed by the Chinese—has no doubt helped to keep demands on the boil. Labour unrest in the federation perhaps looms unjustly large in foreign eyes: it has so far done little economic harm. The organisation and hold of the non-Communist unions is strong, and so far they have been judicious in their choice of weapons, avoiding large-scale strikes.

Now in its second year

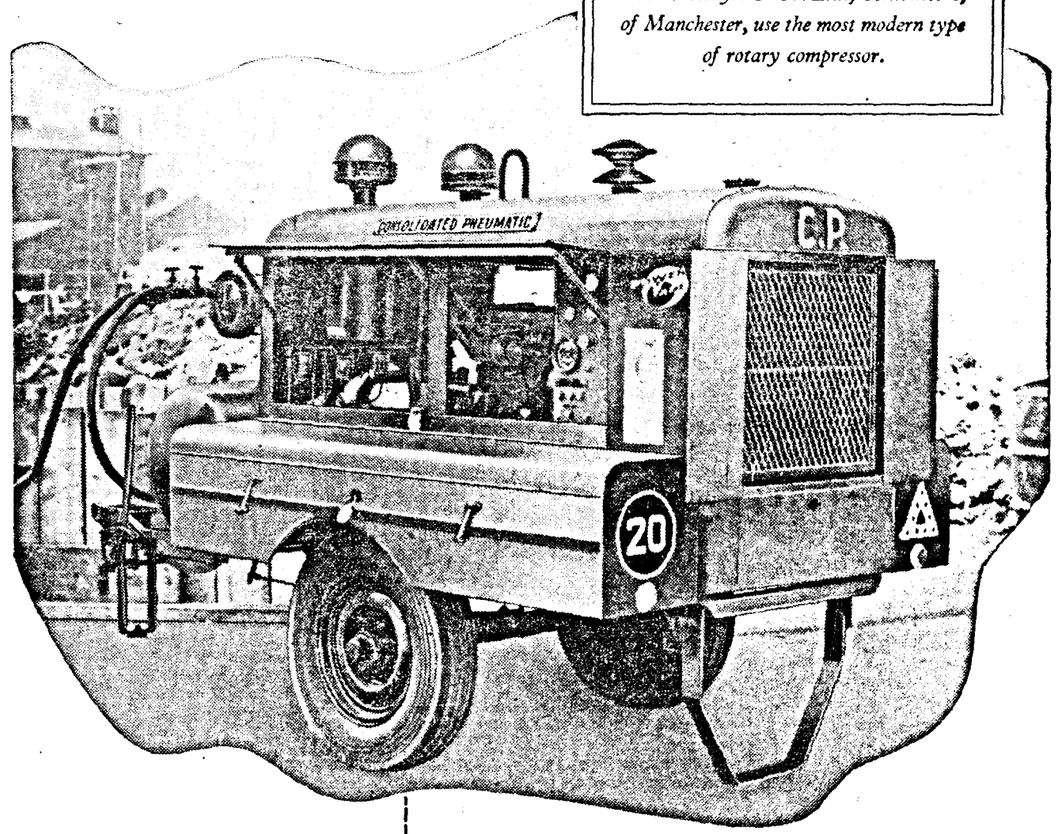
The Paper Bulletin

This is a bulletin service for paper users and makers. It deals with the supply, demand and price trends for paper, paper products and raw materials. The sixth quarterly issue is now available.

Full details from:

THE ECONOMIST INTELLIGENCE UNIT LTD.
22 Ryder Street, London, S.W.1. Whitehall 1511, Extension 144.

For the operation of Breakers and Picks, Robert Carlyle & Co. Ltd., Contractors, of Manchester, use the most modern type of rotary compressor.



The Compressor that costs virtually nothing to maintain

No more compressor troubles for Plant Engineers—gone are the problems associated with clutches, crankshafts, valves and pistons, which are all potential causes of costly breakdowns and hold-ups.

The modern compressor is the "Power Vane" Rotary, a machine running in oil and oil-cooled, designed for continuous duty with complete protection given by fully automatic safety devices.

A full range of models available with capacities of 120, 175, 210, 365 and 600 cu. ft.

Ask for catalogue 58c.

POWER VANE ROTARY COMPRESSORS

the things they say!

We called Bob and Mary on the 'phone last night.

Where are they living, these days?

Bob's with an oil company in Edmonton, Alberta . . .

It was rather disappointing, though, really. The atmospherics were bad.

That's often the case when you have to talk by radio-telephone, but it'll be different if you call them when the new Transatlantic telephone *cable* is in commission.

What's so novel about that? They've had cables for years.

Ah yes, but the old ones only carried morse. This will be the first Transatlantic *speech* cable — and it'll carry thirty-five conversations at the same time.

That sounds like a pretty mix-up! How do they manage it?

Well, they use a coaxial cable, and one of the tricks about that is the insulation. It's a plastic called polythene, and apart from being a first-class insulator, polythene is almost indestructible — it'll stand up to its job for years.

Who discovered it?

Imperial Chemical Industries. Lucky thing they did, too, because polythene is the stuff that helped to make our radar more effective than the enemy's during the war. You've probably seen it in the shops, come to that — it's the same versatile plastic as they use for making squeeze bottles, washing-up bowls and sink tidies.

Imperial Chemical Industries Limited

Letters to the Editor

Cyprus: The Long Wait

SIR—You take the fashionable view that an improvement in Cyprus can only be had through negotiation; that the Government must make some political, as opposed to administrative, move and that such a move, by implication, must be concessionary. It is indeed the case that in almost all disputes, domestic or foreign, negotiation is coming to be regarded as an end in itself; it is something, apparently, to get round a table if only to have a slanging match. Nevertheless it is still true that some situations, particularly those involving crime, do not permit of negotiation. It may well be that such a situation exists in Cyprus at the present time.

You say "the battle against terrorism in Cyprus cannot be won by purely *military means.*" It is just as reasonable, and perhaps more realistic, to hold that it can only be won by purely military means, in a static political atmosphere and with a resolute administrative backing. You say that "moderate opinion among the Greek Cypriots can be expected to emerge only by normal constitutional processes." On the contrary, constitutional processes will be a mockery unless the moderates have already emerged and this they will only do, as you point out, when they are no longer afraid. But they are afraid of the terrorists and extremists and since these are the only people at present available for negotiation, such negotiation can only frighten the moderates still more. They can hardly be expected to repudiate Eoka if we announce that, within a precise period, Eoka will be free to assume the government of the island. Moreover, there is no comfort for them in talking of ten or fifteen years; the terrorists' battle-cry would merely change to "self-determination in five years"—or two years or next week.

The aims in Cyprus are to restore law and order and to introduce responsible self-government; one might add the desirability of curbing the sinister political influence of the church. May it not be that these things can be got the sooner by a flat-footed and unqualified affirmation of our sovereignty and a declaration that no political development of any kind can be contemplated until terrorism has been crushed? If, as seems now possible, the Government is prepared to take this line, they may be surprised and gratified by the support they get both here and in Cyprus.

In the detachment of political discussion we sneer too often at the advocates of "firmness"; it is as well to remember that to less happy citizens, cowering under lawless violence, the "tyrant" appears remarkably like a Deliverer.

If we abandon Cyprus, we shall have been *driven out, not by terrorists, but* by left-wing politicians, American anti-colonialists and liberal journalists.—Yours faithfully, R. C. M. COLLARD
Oxhey, Herts

Men with Golden Arms

SIR—As manufacturers and distributors throughout the world of amphetamine products, we read with interest your Boston correspondent's article which appeared in your issue of July 14th. As your periodical has always enjoyed a reputation for accuracy, we were surprised to see by the article that your correspondent was not too familiar with drugs, particularly with addiction.

Your correspondent describes the problems faced by narcotic agents in the Boston area. In the middle of the fifth paragraph there is a switch from narcotics to amphetamines, an entirely different class of drugs, and because the writer uses the word "addict" in connection with amphetamines, he leaves the reader with the impression that amphetamines are narcotics. The amphetamines are not addiction-producing drugs in the sense that the word "addiction" is used by major world authorities. In view of the tremendous use of amphetamine by physicians in their medical practice in conjunction with therapeutic measures for the treatment of obesity, depressive states, narcolepsy, enuresis, behaviour disorders in children, barbiturate poisoning, psychopathic states, to mention just a few of its uses, it is distressing to read articles which mislead readers into believing that the amphetamines are narcotics or produce addiction similar to that of the narcotics. Degrading such a useful drug in this manner by a kind of guilt by association is not only harmful to the pharmaceutical and medical professions, but to society as a whole.—Yours faithfully, MILES VALENTINE
Smith Kline & French International Co.

Kashmir and Goa

SIR—I wish to correct the statement made by Miss M. Da Silva in *The Economist* of July 21st that "The Goan Catholics do not want a merger with India chiefly because of the caste system in the Indian Union and because they (Indians or Goans?) do not enjoy full rights of free worship." There is a vicious caste system practised by Goan Catholics in their social life. As their ancestors were Hindus drawn from diverse castes, the same caste system has been continued among Goan Catholics and there are "Bhamans," "Sudir" and "Charod" castes among them even to this day. "Bhamans" (which term means "Brahmins," the highest among the castes) will not have inter-marriages with lower castes. Only last May a highly educated Goan Catholic young man belonging to the "Bhaman" caste married a girl from the lower caste and his relatives practically boycotted the wedding.

As to the allegation that "they (Indians?) do not enjoy full rights of worship," it is completely false. I am a Catholic living in Bombay for the last 24 years and I have never experienced any curtailment of the right of worship. There are more Catholic churches and chapels in Bombay city than Hindu temples and there are a great many mosques for Muslims also. And this "freedom of worship" exists in every corner of India, as any foreign tourist will testify. There have been isolated attacks on churches or Christians by a fanatical sect—the RSS, or Hindu Mahasabhaites; but these have occurred in far away villages and whenever they took place the local officials have brought the miscreants to book and after proper trial those found guilty have been sentenced to hard labour. Secondly, when a Hindu MP brought before the Indian Parliament a private member's Bill to restrict conversions—the provisions of the Bill were directed mostly against Christian missionaries—Mr Nehru strongly opposed the measure and the Bill was hastily withdrawn. The Government and the overwhelming majority of Hindus have nothing against Christians and every care is taken to ensure freedom of worship to minorities. It is only a fanatical section that carries on propaganda against foreign missionaries. Mr Nehru has condemned both communists and communalists strongly, both in Parliament and outside. The Goan Catholics, therefore, need have no fears whatsoever on these counts. And what if we, Indian Catholics, have to face harassment, nay, even persecution, at the hands of the majority community in the future, say, after Mr Nehru? We shall not waver in our loyalty to the country, but face the situation with courage and faith, for "The spirit He has bestowed on us is not one that shrinks from danger."—Yours faithfully,
Bombay P. ALVARES

Tick Two Hundred Years Ago

SIR—Among some family papers I have just found a beautifully written bill of exchange dated 1764, drawn by a Scotch shopkeeper on one of his customers and formally accepted. It is a three-day bill for "values of goods received," and the amount is "eight shillings sterling." Apparently Scotch retailers would not give three days' tick for eight shillings without an acceptance in legal form. The shopkeeper was Walter Wilson of Hawick, who must have been either the uncle or the grandfather of James Wilson, your earliest predecessor.—Yours faithfully, D. E. W. GIBB
Lloyd's, E.C.

Books & Publications

Ambassador in Paris

THE PAPERS OF THOMAS JEFFERSON: Volumes XI and XII.
Edited by Julian P. Boyd.
Princeton University Press. London: *Cumberlege.* 734 and 739 pages respectively. 80s. each.

IN his preface to the volume of his biography of Thomas Jefferson that includes the years of Jefferson's stay in Paris, Dr Dumas Malone writes:

> the vaunted centre of Europe offered this man of vast energy and curious mind personal opportunities such as he never had before and was never to have again. Despite his nostalgia and his sense of the futility of Parisian life, it seems that in France Jefferson was better able to do the sort of things he wanted to do, and be the sort of man he wanted to be, than he ever was afterwards while in public office. Never again did he live so well or indulge his tastes so freely.

The two latest volumes in the magnificent series of Jefferson papers, now being edited by Julian P. Boyd, gives the reader a chance to test Dr Malone's conclusions. They cover the whole of 1787 and the first three months of 1788. By the beginning of 1787, Jefferson had already lived in Paris for over two years and his work as ambassador was in full swing—a work various enough to be a full-time occupation even for a man who could admonish his small daughter that there was no human evil greater than idleness. He had to look after his country's reputation and credit and he extended this care to include sharp controversy with anyone who denigrated the North American continent. He had also to safeguard the commercial interests of his fellow citizens and worry about the captives of the Algerian pirates.

Although correspondence on these and similar themes takes up the bulk of the present volumes, it is not this aspect of Jefferson that will most attract the general reader. There are two other principal strains to disentangle in the correspondence. In the first place, Jefferson was completing his knowledge of the Old World—Volume XI includes his travel notes on his journey through southern France and into northern Italy—and he was fitting this knowledge into his general political philosophy. The Assembly of Notables early in 1787 proved to be the first step in the French revolutionary drama and his friendship with Lafayette made him more than just an external observer. At home, too, great things were happening. It is interesting to see the contrast between Jefferson's view of the Shays Revolution and the bitter comments upon it which Abigail Adams sent him from London. The insurrection—if the term is not too strong—was followed by the Philadelphia Convention for drawing up a new constitution; and Jefferson's friends kept him fully informed of the picture, though without breach of confidence as to the debates themselves.

In spite of these diplomatic and political pre-occupations, there can in fact be little doubt that Dr Malone is correct. We see Jefferson still ranging over the field of human knowledge and picking out, wherever possible, those aspects of scientific advance that seemed likely to yield the most immediate dividends in the shape of human welfare. New books, new inventions, new improvements in agriculture, are all commented upon and on all his comments are sought by a wide variety of correspondents on both sides of the Atlantic. It was indeed the golden age of the Enlightenment when to men like Jefferson nothing but a reluctance to trust the people seemed to stand between them and unceasing material and social advance. Only governments were evil.

It is an appealing picture, but to some it may seem rather chilling. One may feel it difficult to acquire real affection for someone whose interests were so wholly intellectual, even though on occasion he admits to being moved by natural beauty or by the architectural remains of antiquity, which he notes that the vandals of his day were still busy removing. Apart from his two surviving children, he seems at this time to have had few close personal ties. But one should not regard him as too much of a prig, and a charming letter to a compatriot, in which he contrasts the bustling life of a Parisian woman of society with the homely domestic employments of an American housewife, might stand for the sincere reactions of many Americans at many times. There is an element of humour in Jefferson, though not a very obvious one.

Tribute to an Historian

ESSAYS PRESENTED TO SIR LEWIS NAMIER.
Edited by Richard Pares and A. J. P. Taylor.
Macmillan. 550 pages. 36s.

SIR LEWIS NAMIER has transformed the study of English eighteenth-century history, reinterpreted the liberal and national movements of the nineteenth century and brought meticulous scholarship to the study of the diplomatic origins of the last war. The son of a Galician landowner, moving with ease among the aristocracy of the reign of George III, has come to exercise what is probably the most powerful single influence upon contemporary historians. The adjective "pre-Namier" and the verb "to namierise" have become part of the historian's vocabulary. The galaxy of distinguished historians among the contributors to this volume is a tribute to the status of Sir Lewis; the wide range they cover is testimony to the breadth of his inspiration. Seven essays are concerned with English politics with particular stress upon Parliament; two illustrate business methods and life in the eighteenth century; one illustrates taste through a study of the antiquarian interests of Horace Walpole. The remaining six range over the field of modern diplomacy and European history east of the Rhine, with special emphasis upon Russia and Germany.

The editors consider that the study of English history "will continue to bear the stamp of Sir Lewis Namier's inspiration." It is a pity that they have devoted only two pages to the revolutionary nature of his approach and method, especially since he himself has never explained these in more than the brief essay. Most of the essays in this book have their intrinsic interest, but an explanation of their affiliation to Sir Lewis's work would have given them greater unity and interest. The first two essays provide a brilliant opening. Mr Trevor-Roper is an iconoclast in the tradition of Sir Lewis, pitilessly revealing the political incompetence of Oliver Cromwell and provocatively relating political groups to social pressures. Sir Lewis has been criticised for "showing insufficient appreciation of political principles and of abstract ideals to which their votaries try to make reality conform." Here Mr Trevor-Roper enjoys exposing the zealots of the Fifth Monarchy men as "a knot of Tammany demagogues, who concealed their sharp practices behind lachrymose Celtic oratory." Miss Sutherland, threading her way through the intricacies of City politics in the eighteenth century, traces the political effects of the social resentments of the smaller merchants. Professor Hughes, in an exceptionally interesting essay, shows how the Liberal government in 1882 came to adopt the closure, thus ending the days of the "independent" members whose earlier importance has been so cogently analysed by Sir Lewis.

There are two substantial essays on Russia. Mr Bolsover gives a useful survey of Russian foreign policy in the nineteenth century. Mr E. H. Carr stimulatingly relates the Russian revolution to the complex interplay of Russian national tradition and western innovations. Like Sir Lewis he emphasises "the irrational tendencies permeating modern mass society," a note also struck in Mr Seton-Watson's informative but less well organised survey of social forces in eastern Europe. The last essay sustains the clarity and incisiveness of the first. Mr Wheeler-Bennett, with as much irony but more humanity than

Mr Trevor-Roper, examines the dramatic interplay of personality and policy in the careers of Ludendorff and Groener. Not all the essays reach this high quality: some make small points ponderously; but the good vintages compensate for the *vin ordinaire*, and the champagne of Mr Trevor-Roper, Mr Carr and Mr Wheeler-Bennett provides the sparkle.

Creator of Suez

FERDINAND DE LESSEPS.
By Charles Beatty.
Eyre and Spottiswoode. 334 pages. 30s.

INTER-OCEAN canals, it seems, cost their promoter and shareholders many anxious, even ruinous, moments before they start paying the returns that are later taken for granted. In 1870—a year after its opening—Suez Canal shares of 500 francs par value stood at 208; in 1889, the Panama Canal Company went into liquidation, driving its chairman—Ferdinand de Lesseps—into senility and a court case that sent his eldest son to prison. A life that includes such episodes is worth writing in popular form. Mr Beatty's practised hand has done the job readably enough, but he would have drawn a more interesting portrait had he been less apt to write of "the enemy" when treating of his hero's critics.

As a young vice-consul in Egypt in the 1830s, de Lesseps was told by Mehemet Ali that "if you have something important to accomplish, remember that if there are two of you there is one too many." But he needed no prompting with this piece of oriental advice. By temperament, he relished authority, disdained opposition, easily dismissed a worry, was indefatigable mentally as well as physically. These are all qualities which, in politics, produce dictators, and, in other walks of life, fanatics, bores and, with a little bit of luck, heroes of success stories. A merger of all the strains yielded de Lesseps's extraordinary capacity for sticking to his notions and for bearding the great with the "bragging air" that at least one English critic found trying. He was a good and a moving public speaker, and must also have been an exceptional organiser (one of his lists of tools for a job is given in detail); otherwise he would never have caused so many competent engineers to work on the lines that he—who lacked their technical qualifications—had dictated.

The main accomplishment of his life is well known. He produced a working canal through the isthmus of Suez in only ten years and in the teeth of a "Suez-cide" school led by Palmerston and the Sublime Porte, Robert Stephenson and, at all moments when the going was bad, the Viceroy of Egypt.

A much more interesting book would have emerged were these marginal characters drawn in fuller dimensions. The contemporary rulers of Egypt, for instance—Mehemet Ali, Said and Ismail—were different as chalk from cheese; yet only the second, who is much the least interesting of the three, is occasionally made to come alive. The translations from French sources are marred by gallicisms, and sentences such as "Britannia had no need or desire to *force* Marianne to give up her pet" are not to everyone's taste. But the book is good holiday reading for anyone who wants a beakerful of nineteenth-century confidence in the future of mankind.

Bolshevik Self-Analysis

THE RUSSIAN MARXISTS AND THE ORIGINS OF BOLSHEVISM.
By Leopold H. Haimson.
Harvard University Press. London: *Cumberlege.* 254 pages. 45s

THE Russian Research Centre of Harvard University has been responsible for nearly a score of erudite studies on various features of Russian institutions and behaviour. The present volume, dealing with an aspect of intellectual history that has been made familiar by Mr Bertram Wolfe's "Three Who Made a Revolution" and other recent works, has a number of distinct but closely related objectives. It aims to interpret the appearance of that extraordinary phenomenon, the nineteenth-century Russian intelligentsia; to describe the impact upon it of Marxist thought; to analyse the political movements based upon it—Bolshevism and Menshevism; and lastly to give an account in some detail of the early intellectual development of four leading figures, including Lenin. Fortunately, the author has not attempted to deal with these topics singly, in self-contained compartments. Instead, he skilfully weaves together the separate strands of a strange story. It is not easy, amid the mass of obscure names of people, journals, parties, and of highly esoteric polemics, to disentangle the pattern. The reader, unless he is the most specialised of specialists, will falter and be tempted to lay aside this account of the doings of little-known plotters and their never-ending self-analysis. Historically, however, the intellectual origins of Bolshevism are a matter of considerable moment; and although this book, by its nature, cannot present a simple story, the patient reader will be rewarded with a fascinating account of how small events helped to shape the destiny of the world. Perhaps the most interesting part of this story is the process by which Lenin's three chief co-actors, Plekhanov, Akselrod and Martov (all intellectually superior to him) became his determined but, in the event, quite unsuccessful opponents. Perhaps it was the core of true liberalism, in the Western sense, in their intellectual make-up (and its complete absence in that of Lenin) that accounts for their failure.

Mr Haimson brings out clearly by how narrow a margin the Mensheviks, the main political expression of the opposition to Lenin's doctrines, failed. It was, in truth, a race against time that Lenin was running. And if the new, more Western, society that was beginning to emerge had had time to establish itself before the Bolshevik conquest of power, the history of the world would have been profoundly changed.

Ample Thinker

SIR KENELM DIGBY.
By R. T. Petersson.
Cape. 366 pages. 25s.

SIR KENELM DIGBY, praised by John Aubrey as "the most accomplished cavalier of his time" and by Ben Jonson for his "heroique ample thoughts," was indeed talented, versatile, exuberant and dangerously facile. The son of a Gunpowder Plot conspirator, he remained a devoted Catholic, apart from a brief flirtation with Anglicanism. But he was also a convert to the New Science, writing treatises on the importance of reason and experiment as the keys to the natural world. He was in turn botanist and chemist; as a disciple of Harvey he did experimental work in embryology; and at the great medical centre of Montpellier he lectured on his Powder of Sympathy, which became a fashionable remedy. The world was Sir Kenelm's oyster: he travelled widely, was an accomplished linguist, a distinguished bibliophile and a benefactor of the Bodleian. He was the romantic lover, the husband of Venetia Stanley, that "celebrated beautie and courtezane," the patron of Van Dyck, chancellor to Henrietta Maria, the pleader of the royalist cause with the Pope and of the toleration of Catholicism with Cromwell, whose friend he for a short time became.

Mr Petersson is largely concerned with tracing the effects of this dual allegiance to Rome and to science upon Sir Kenelm and with showing why, despite his intellectual vitality, he was never more than the gifted amateur. The very dissipation of his energies in a period of growing specialisation meant that when the Royal Society was formed he could make little contribution to it. And his Catholicism made him more at home in the France of Richelieu than in the England of Clarendon and Boyle. Above all, his impatient enthusiasms prevented him from giving form and finish to his writings. He wrote too much and too fast, and his convoluted thought and ornate style require all Mr Petersson's skill to unravel the content.

Mr Petersson is most successful when relating Sir Kenelm's many interests to the intellectual history of the period. But his attempts to enliven what was originally a Princeton doctoral thesis are often unhappy. John Aubrey described Venetia Stanley as having "a most lovely and sweet turn'd face": to Mr Petersson she is "stunningly beautiful." To fill in the background Mr Petersson tells us what Sir Kenelm "must have enjoyed," or describes a fête which he "might have attended." Mr Petersson's account of politics is often careless and his judgments sometimes startling. Sir Thomas Roe was never Secretary of State; and to credit Buckingham with "undeniable efficiency in the Admiralty

and the Treasury" is ludicrous. Pruning, an art never cultivated by Sir Kenelm, has also been neglected by his biographer

Germany's Legal Status

GERMANY AND THE NORTH ATLANTIC COMMUNITY: *A Legal Survey.*
By M. E. Bathurst and J. L. Simpson.
Published under the auspices of the London Institute of World Affairs by *Stevens.* 228 pages. 35s.

THIS joint work by the legal adviser to the British Embassy at Bonn and an official of the Foreign Office, who have had close personal acquaintance with the legal problems created by the status of Germany in the postwar world, provides a valuable historical account of an unprecedented phase in international relations. The task of international lawyers is very difficult. On the one hand they have to find a legal formulation for political facts; on the other they hope by this formulation to provide a framework within which the dynamic forces of international relations can be contained and anticipated.

The rapid recovery of Western Germany both economically and politically has set international lawyers an almost impossible problem; it is not therefore a criticism of the authors of this book to say that the admirably clear account, occupying rather more than half of the work, which they give of the belligerent occupation, military government and Allied High Commission in Germany is now inevitably mainly of historical interest. Moreover, even as history, the authors' account is unsatisfying, as their primary concern with the legal formulation of political problems leads them occasionally to adopt an equivocal attitude. For example, in speaking of the period of belligerent occupation, they consider that "understandable though the impatience of the United Nations to achieve their war aims may have been, it is not easy from a purely legal standpoint, to find justification for the Supreme Commander's actions in dissolving political organisations and suspending educational institutions and the normal courts of justice"; yet they add in unresolved conflict with this somewhat diffident criticism:

> The National-Socialist system as a whole being one which ignored basic rights and liberties, the Supreme Commander was entitled to proceed against all emanations of it, and that it is possible to suggest after the event that his action might have been less drastic, is not necessarily a valid criticism of it.

Perhaps the most interesting part of the book is the second half, the content of which is indicated by the title given to the whole work. The authors summarise the provisions of the constitution of the Federal German Republic relating to foreign affairs and their relationship to the Bonn Conventions of 1952 signed between the Federal Republic and France, the United Kingdom and the United States; they then trace the steps by which, after the failure to set up a European Defence Community on the pattern of the European Coal and Steel Community, the Brussels Treaty Organisation was expanded into a wider Western European Union, of which the Federal Republic became a member, and they explain the interlocking relationship between Western European Union and the North Atlantic Treaty Organisation to which Germany was also admitted. Having reviewed this network of international obligations, they come to the conclusion that the Federal Republic is in law a part of the continuing German state subject to a "residual occupation" for purposes connected with the Occupying Powers' responsibility for the reunification of Germany and the final peace settlement.

The book is mainly of value as a clear and useful work of reference, marshalling many not easily accessible facts; the political background and problems are, perhaps inevitably, indicated with tantalising discretion.

Charlemagne Recreated

CHARLEMAGNE: FROM THE HAMMER TO THE CROSS.
By Richard Winston.
Eyre and Spottiswoode. 346 pages. 25s.

THIS book raises in an interesting way the problem of "popular" history and the liberties which may reasonably be allowed to an author who writes for a public with no specialised knowledge of the subject and no means of checking the author's statements. On the one hand, it has many first-class qualities. It is written in a vivid and lively way by a writer who has made himself familiar with the original authorities for the period and uses them with ease and fluency. He comes hot-foot from the documents to tell the reader what he has learnt from them before the initial impulse has been lost in the tiresome meandering of secondary discussion. Moreover, he has taken a wide view of what constitutes an original authority: the poetry, art and theology of the age are drawn on as freely as the chronicles and biographies. The author is everywhere at home. The single map and handful of illustrations are well chosen and beautifully executed: it is a pity that they are so few, but so far as they go they illustrate the subject in an extremely lively and convincing way.

Altogether there is much to praise. Why is it, then, that after a time the attention begins to flag and a certain dissatisfaction makes itself felt? It may be because Mr Winston does not treat the reader as if he were quite grown up. He cuts his way through the difficulties of interpretation and the gaps in his evidence with a sort of cheerful dogmatism that becomes in time rather slighting to the reader's intelligence. Even the least learned will begin to feel that the way cannot be quite so straightforward as Mr Winston makes it seem, and will want to be let into the secrets of the historian's problems. The conclusions are rather too clear and the process of arriving at them too hidden to satisfy an inquiring mind. Here is an example of the author's manner:

> The reflectiveness, the vigour and even the prolixity of the Caroline Books mark them as the work of Charles. The mild-mannered and courteous Alcuin could could never have brought himself to use such forceful language, Theodulf of Orléans, had he been the author, would have framed his insults more subtly . . . Certainly Charles employed a research staff as any modern statesman would. But it is equally certain that he was not so dependent on staff work as are some modern heads of state. The actual work of composition was almost certainly his.

Certainly, one may say, it is difficult to deal with the complicated problems raised by the so-called Caroline Books in a page or two, but even the uninitiated reader who has patience to read a quite long book on Charlemagne might gladly give up some of these certainties and semi-certainties for a brief view of some of the problems. He would come away perhaps with a less clear picture of Charlemagne, but with a greater historical insight than he will get from this nevertheless praiseworthy attempt to give flesh and blood to one of the greatest figures of European history.

Unending Warfare

THE SOVIET SECRET SERVICES.
By Otto Heilbrunn.
Allen and Unwin. 216 pages. 18s.

THE activities of the Soviet secret services, which Dr Heilbrunn takes in their widest sense to include military and industrial espionage, wartime partisan operations and the subversive tactics of foreign Communist parties, are surprisingly well illustrated in published memoirs and documents. Some hundred of these, published since 1940, are mentioned in his bibliography and footnotes, and even then there are some notable omissions. From this material and a few sources that are less accessible, the author has sketched a comprehensive and convincingly menacing canvas of a secret army, which goes on waging war without a battlefield. He proves the cynicism of Soviet motives with the appropriate texts from communist politicians, and throws in a chapter on the legal status of partisans and another on the German failure to take effective counteraction by using Soviet prisoners during the war.

The subject is too vast for Dr Heilbrunn to take a satisfactory critical view of his sources and theses in so small a compass. Although he concentrates his arguments on such graphic subjects as the Red Orchestra and other spy nets that operated in Germany, France and Switzerland during the war, the part of the French Communist Party in the fall of France, and resistance politics in Jugoslavia, he fails to escape a charge of diffuseness and superficiality. His description of the organisation of the secret services is substantially accurate but contains some avoidable mistakes.

Nevertheless the story fulfils its purpose and recalls effectively the ever-present dangers and complexity of Soviet secret operations, which are too easily forgotten as more obvious causes of tension disappear. Most readers will agree that we must study Soviet methods of clandestine war and counter them; many will think twice before committing themselves to the main conclusion which the book was written to serve—that we must learn from Soviet and German experience and prepare now for secret war, even by such dubious means as broadcasting counter-propaganda by press and radio at home.

Diagnosis of Economics

THE FAILURES OF ECONOMICS.
By Sidney Schoeffler.
Harvard University Press. London: *Cumberlege.* 268 pages. 38s.

ECONOMISTS are not, on the whole, a complacent race. From time to time, after a long step forward in the understanding of economic relationships, bursts of over-confidence do indeed occur. Quesnay was a Newton in the eyes of his followers; the lesser classicists were quite sure that they knew it all; *Das Kapital* still has the force of Holy Writ to the faithful; and it was very heaven to be young in the Keynesian dawn.

Nevertheless, few economists would shrug off with complete self-satisfaction the judgments with which this book opens. Over the last two hundred years "the power of accomplishment of economics—measured in the pay-off terms of prediction and control—has changed but little"; on questions of policy "equally expert men may, and usually do, reach diametrically opposite conclusions"; on questions of prediction "even when professional opinion is virtually unanimous, we still cannot depend on it." It is indeed possible to reply that in the absence of economic teaching even sillier and more inconsistent policies would be favoured and followed; even more misleading forecasts would be made; an even greater pyramiding of fallacies of composition would bedevil public affairs. But when one considers the time, energy, brain power and money poured into the development of economics, the defence is rather lame.

What is wrong? And can anything be done about it? Comprehensively, mercilessly, though with unfailing politeness, Mr Schoeffler first examines those comparatively hopeful explanations which stress the refractory nature of the economist's subject-matter (complexity, inaptitude for experiment, difficulty of detachment) and then turns to his main task. "Economists have been and are doing something akin to . . . studying the nucleus of the atom with a stethoscope." There follows a catalogue of methodological misdeeds. The most important of these are the use of past sequences as valid evidence for the future (one for the econometricians) and the treatment as closed systems evolving from their own inner necessity, or as semi-closed systems open to influence only by a few identifiable forces from outside, of systems which are in fact wide open (one for the model-building neo-classics). A sequence of case-studies respectfully but firmly drives home the moral; even the best and most scrupulous of economists are crippled by methodological defect.

Mr Schoeffler does not, however, draw the familiar conclusion that economics is a semi-fraudulent waste of time. It is simply wrong to try to turn it into "an empirical, nomothetic science"; it is a broad, various group of disciplines: general decision theory, studying the rationality of action; history, in the broadest idiographic sense; and policy-making or "healing" art. By co-operation between these, but above all by concentration on methodology in the light of modern logical analysis, there can be evolved "a conception of prediction for the social sciences" and the means of giving that conception a body; and it is to the outlining of this task that Mr Schoeffler's last chapters are devoted.

This is where the reader, even if adequately equipped with the techniques of pure logic, will start quietly tearing his hair. For the "tentative general definition of rational action" here laid down would in practice condemn *homo sapiens* to perish like Buridan's ass in any imaginable field of haycocks, distinguishable or not. A new species would be needed, as intellectually superior to *homo sapiens* as Einstein to a blind kitten, to carry through the programmes blithely set out here—programmes including, as a mere preliminary, the solution of a fair selection of the ultimate philosophical problems that have baffled mankind for the last two and a half millennia. Short of that consummation, however, something may be gained from this impressive injunction to economists to look to their tools and preserve a proper humility.

Shorter Notices

CITIES AND MEN: *An autobiography, Volume III:* 1924-1954.
By Harry Luke.
Bles. 254 pages. 25s.

This volume, the third of Sir Harry Luke's autobiography, shows how much, how very much, can be made of the years after forty. Although the book loses to some extent because it deliberately side-steps any repetition of what Sir Harry, an immensely prolific writer, has put into other books about special phases of his life, there is a steady attraction about it. Indeed, the sense of movement is so strong that some might find the book a trifle scrappy. But to anyone willing to let his mind play as freely as the author's own, the next few pages always contain a point of view or an anecdote worth waiting for.

Sir Harry Luke has spent most of his life in the Colonial Service. But, as he says, he prefers the old world to the new, and it was a cruel blow to him that in 1938 he failed by a chance fortnight to be allowed to achieve his life's ambition and follow up his service in Palestine and Malta as Governor of Cyprus. Instead, he was sent across the world to be Governor of Fiji and High Commissioner for the Western Pacific. As things turned out, the war transformed his post; he found himself rallying the French possessions to de Gaulle amid a web of American air strategy. Later Sir Harry retired into characteristically dynamic activity for the British Council in the Caribbean, and subsequently pursued his own indefatigable travels even faster than before—to Brazil, Peru, Scandinavia, and back again and again to his happiest hunting grounds in the Mediterranean and Middle East. This is a book for the traveller and armchair observer alike.

*

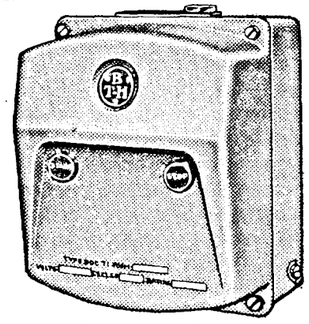
SHORT-TERM ECONOMIC FORECASTING: *Studies in Income and Wealth, Volume* 17.
By the Conference on Research in Income and Wealth.
Princeton University Press. London: *Cumberlege.* 506 pages. 60s. $7.50.

Governments in advanced western countries, bent upon the maintenance of full employment and stability, necessarily devote considerable time and effort to the one or two year prediction of such expenditure magnitudes as consumption and investment. Some would argue that a forecaster need only be well-informed and have a strong intuition; others would stress his need to understand and use scientific rules of procedure. Many more would agree that a fusion of these would be preferable, and the authors of these papers are members of this last group.

In the United States and Canada a number of institutions, both public and private, have for some years conducted surveys of intended expenditure, on consumption and investment goods, by both individuals and firms. In this country, the Board of Trade has published its first surveys of companies' investment plans. Contributors to this volume have a common objective—to test the reliability of these forecasts, both in amount and rates of change, by setting them against the figures actually recorded in the time period to which they refer.

The volume is not easy reading, though this is inherent in the subject-matter. There is also some degree of overlapping. Nor is it possible to delineate any uniform set of findings save that the predictions as a whole do not appear to justify great confidence. It is of more immediate interest to ascertain why they are so unreliable. For example, are they subject to some systematic bias, or are the deviations of predictions from the actual random in character? In conditions of steadily improving trade Mr Sauerlender and Mr Modigliani find that the magnitude of change tends to be systematically underestimated, while when trade is falling, the opposite is true. Mr Bronfenbrenner and Mr Friend find evidence that business systematically understates its expenditure plans. Given that there is evidence of such uniformities it should be possible to apply corrections—in some cases by rewording questionnaires and in others by adjusting recorded replies at the editing stage. But too much too soon should not be expected of such exploratory studies. To those concerned with prediction this book should prove instructive and one suspects it may possibly be instrumental in advancing testing of forecasting procedures in this country.

A. C. Direct-on-line CONTACTOR STARTER Type DOC71



for single-phase or polyphase non-reversing squirrel-cage induction motors.

This new starter is enclosed in a die-cast aluminium case of elegant appearance. Sturdy in construction and dependable in operation, it incorporates under-voltage release and overload protection, with integral start-stop buttons. It complies in all respects with BS.587 for "Frequent Duty", i.e. forty starts per hour.

Up to 5 h.p. 200-550 volts 25-60 cycles

New branch in Beirut

Air lanes from five continents converge upon Beirut — capital city of the Lebanon and great trading centre of the Middle East.

In Beirut, therefore, the new branch of the First National City Bank will serve the business interests of an increasingly important area. It will also make a significant contribution to the world-wide service of the First National City Bank.

The organization is based on a network of 66 branches, offices and affiliates in 24 countries all over the globe. In addition, the world's markets are covered by over three thousand five hundred banking correspondents in every major centre of commerce.

This invaluable service is at your disposal here in London. The officials of the two branches, in the City and West End, are well experienced in the conduct of international business. Take your problem to them — they are anxious to help.

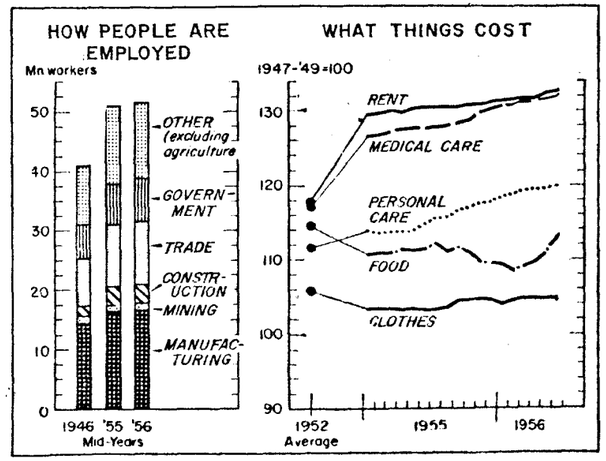
American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Is Business Too Good?

Washington, D.C.

THE end of the steel strike comes at a time when there is a marked change in the economic mood in the United States compared with even two months ago. There is now little or no talk of a recession this year, although the pessimists are predicting that the fourth quarter may be mildly sluggish rather than exuberant, or that the economy faces a "real challenge" in 1957. The fact remains that the pessimists appear to have been wrong about 1956. It now seems unlikely that there will be any more recession in the third quarter than has already happened—the mild reduction in total industrial production, about 3 per cent, which resulted directly from the steel strike. To give the pessimists their due, some such reduction would certainly have occurred in steel in the absence of a strike, though less sharply and spread over a longer time. The difference between what has happened and what might have happened is, in a sense, psychological. The strike meant that the country never lost its feeling that "business is good"; without it the repeated weekly reports of steel output at 80 or 75 per cent of capacity might have "smelt" of a general let down.



In any case, business is indeed good, and there is every indication that this pleasant state of affairs will continue for the rest of the year. The Secretary of Commerce, with little contradiction, says that the economy is "full of bounce," and demand is lively in all the major sectors. Spending on business plant and equipment is still at record levels, and the steel strike, by delaying some projects, may have prolonged the bullish effect of this key sector. Government spending at all levels shows a slowly rising trend, with the big federal programme for road building only beginning to make itself felt. Exports are zooming to unheard of heights, with a new record for this year a near certainty. And most important of all, consumer incomes continue to mount each month to new peaks, in spite of a shorter factory work week for much of this year and of layoffs in some factories, particularly in the motor industry. In June, total income reached an annual rate of $324.2 billion, which compares with a rate of about $317 billion at the end of 1955 and an average for that year of only $306 billion.

One basic reason for this, as a number of economists have been arguing for some time, is that things like automobiles —and indeed manufactures generally—simply do not count for as much in the total economic picture as most people think they do. To offset the unemployment of about 200,000 people in the motor industry this year, there have been increases in jobs compared with a year ago of 600,000 in construction, 400,000 in trade and 300,000 in services, just to name three examples. Indeed, since the end of the last war, total employment has risen by nearly 11 million, while employment in manufacturing went up by only 2,300,000. On the whole, consumer buying has kept pace with the rise in incomes, with retail sales running consistently slightly above the same period in 1955. But while new buying on the instalment plan remains about the same as it was a year ago, repayments are far heavier, so that the net increase in spending is less than the rise in incomes.

All of this has had familiar effects on the sensitive financial sector of the economy and has led to a widespread awakening of concern about inflation. On Wall Street, the stock market has pushed through its all-time highs on most of the averages. And in the money markets, the central bank, which never was pessimistic anyway, appears to be reinforcing its policy of restraint. The course of Federal Reserve policy is a good indicator of the changing sentiment. After severe restraint during the late spring, when the Federal

Reserve kept down the net borrowings of the banks to meet their reserve requirements to a severely low level, it began in June to buy Government securities to make credit easier. But now the tone of the money markets is again clearly one of restraint, with interest rates strong. Some industrial and state government financings have been postponed, and prices of federal government securities are near their lows for the year. What is more, the "Fed" is prepared to get even tougher if good business drifts into speculative excess.

The trouble with this generally rosy picture is that the statistical omens now suggest that even the Republicans may have failed to achieve the great economic goal of the mid-twentieth century: full employment without inflation. The consumer price index, after nearly four years of astonishing stability, rose in June by seven-tenths of one per cent, the sharpest monthly increase since the early days of the Korean War, and is now at an all-time high. Wholesale prices, which earlier increased abruptly, have levelled off for the moment at a point about three per cent higher than a year ago, but the certain rise due to follow the steel settlement has yet to be felt. While steel prices themselves have little direct effect on the cost of living for the ordinary citizen, other signs are pointing in the direction of higher prices—in the teeth of the efforts of the monetary authorities to maintain the blissful plateau of the last four years.

★

The story of prices in the United States during this period is not well understood. It is generally thought that stability has been achieved because food prices went down while industrial prices went up. But Dr Arthur Burns, the President's chief economic adviser, has pointed out that, in 1955, food prices were indeed lower by 3 per cent than in 1952, but

> the average of apparel prices was 2 per cent lower, the average of household appliance prices was 11 per cent lower, the price average of furniture and bedding was 3 per cent lower, and the price average of automobiles and related supplies was 6 per cent lower.

It is not goods that have risen in price, but services—rents, medical fees, laundry, haircuts, domestic help, repairs of most kinds. These, as Dr Burns points out, "have been catching up, so to speak, to the broad price movement that occurred earlier." It has been the recent rise in food prices, together with the long upward trend in services, that has pushed the general price level up at last.

Dr Burns is confident that a combination of improvements in productivity, competition, general "restraint" in business and monetary and fiscal conservatism from the government can keep prices stable. But there is little that those things can do to keep farm prices depressed—especially since, for political and other reasons, the government does not want to keep them depressed. Moreover, there is a widespread feeling that the extremely generous steel settlement moved wages and other benefits quite substantially ahead of productivity. While Dr Burns feels that "the pressure of wages on prices will . . . continue to be counteracted by a progressive tendency to increase output per unit of labour," others are not so sure. Even Dr Burns concedes that experience since 1952 "is much too brief to be conclusive," and he must be contemplating with some dismay the sudden surge of doubt whether prices can in fact be held under control in a modern economy.

Prelude in Chicago

TWO thousand seven hundred and forty-four Democratic delegates, accompanied by 1,896 alternates, some 4,300 newspaper men, radio and television reporters, an estimated 20,000 visitors, hundreds of salesmen, song writers and hucksters of every kind, are descending on Chicago for the Democratic national convention. It opens on Monday when Mr Sinatra's dulcet voice will carry the Star Spangled Banner over the air-conditioned immensity of the International Amphitheatre. Chicago, with its 135,000 hotel rooms, is taking this invasion in its stride and is looking forward to earning some $5 million before the last cocktail has been drunk, the last sight-seeing tour taken by the delegates' families and the final plunge made into a plastic swimming pool which is being set up near the amphitheatre. According to the present schedule, the convention will decide the party's platform on Wednesday, the nomination of the candidate for the White House will take place in the course of Thursday night, and the proceedings will end on Friday evening with an oration by Mr Truman. After that, the empty liquor bottles will be carried away, the smoke will fade from the tired hotel rooms in which the politicians have made their moves and the Beauty and Barber Supply Institute will arrive for its convention.

With Mr Adlai Stevenson's nomination seeming more and more assured, attention is focusing on two other questions: the party's position on the vexed problem of civil rights and the choice of a vice presidential candidate. This week, the platform committee will be wrestling with its conscience and the needs of party unity in an attempt to hammer out a formula vague enough to assuage southern fears of more equality for Negroes yet firm enough to attract the Negro vote and to satisfy northern and liberal Democrats. It is thought that moderation will prevail over the wishes of both extremes. While paying lip-service to the Supreme Court's condemnation of racial segregation in publicly financed schools, which Mr Stevenson endorsed once again on the eve of the convention, the Democratic platform will probably emphasise the need for the advancement of Negroes in less controversial areas. It is true that Governor Harriman and his supporters hope to upset the applecart and are demanding a strong stand on civil rights even at the risk of a walk-out by southern Democrats. But the party machinery is working against such a strategy and it now looks as if the front and hind legs of the Democrats' donkey will be in step, at least until November.

Also Running

PRESIDENT EISENHOWER'S illness, the career of President Truman and the controversy raging over Mr Nixon, have made the choice of a vice presidential candidate a more significant process than ever before in the history of American party conventions. The old saying that a Vice President is one heart beat away from the White House has become a reality in the minds of millions of voters. Great interest is attached, therefore, to the choice of a number two man on the team that will most probably be headed by Mr Stevenson. A number of candidates have already shown their colours and leading Democrats are emphasising that their race is "wide open." In actual fact, the successful candidate for the presidential nomination usually picks his man from a short list; but his final choice often depends on last-minute manœuvres on the floor of the convention.

By withdrawing from the contest for the Presidency and throwing his support to Mr Stevenson, Senator Kefauver has made himself an obvious candidate for second place. It now appears that he would be very willing to obtain it, but he may be disqualified both because he is intensely disliked by fellow-southerners who consider him a renegade and because his earlier utterances against Mr Stevenson would furnish Republicans with fine ammunition. Another prominent candidate is Senator Humphrey of Minnesota, a strong liberal who has gained the respect of his southern colleagues in the Senate. He is handicapped, however, by the fact that his state is close to Mr Stevenson's Illinois and that strategists tend to prefer a team with a more diversified regional appeal. In this respect, Senator Kennedy of Massachusetts looks like a strong contender. He has the advantages of youth, a brilliant war record and a very wealthy father able to contribute to the party's empty coffers. But he is a Roman Catholic of Irish background and political pundits are trying to decide whether this would be a drawback or an advantage in a national campaign. Senator Lyndon Johnson of Texas, who will come to Chicago with the support of nearly 100 southern delegates who would like to see him as President, is also being tipped for the Vice Presidency. But many observers doubt whether Senator Johnson, who has had a heart attack, would care to give up his leadership of the Democrats in the Senate. Behind these prominent candidates comes a host of dark horses, any one of whom may emerge out of the political tussle. They include Mayor Wagner of New York, Senator Gore of Tennessee, Senator Symington of Missouri, and Governor Meyner of New Jersey.

Foreign Aid—1957 Style

Washington, D.C.

TO interpret the sharpness of this year's debates on foreign aid as a return to isolationism would be a mistake. The final appropriation of $3.76 billion is one billion dollars more than was appropriated last year, though it is rather over a billion dollars less than the Administration requested for 1957. The request was increased this year because the "pipeline" of supplies on order for military assistance had been much depleted. Congress, however, felt that there was still enough money on hand for this purpose; many members argued that it was wasteful to go on piling up a backlog of orders for conventional weapons if western strategy was to be based in future on the use of nuclear and guided missiles. Significantly, this year's cuts fell almost completely on the strictly military budget. Congress's reduction in the total which the President had requested was the same proportionately in 1957 as it had been in 1956—23 per cent. But last year the military section lost 29 per cent and the non-military 20 per cent; this year the cut in military aid was 33 per cent and the rest lost only 6 per cent. Even so, this year's final appropriation for military assistance was just over twice the size of last year's.

The Administration made several abortive efforts to break out of the rigid fiscal moulds which have restricted foreign aid's efficiency and charm. It takes a year from the time when a tentative scheme is recommended by the mission in the field to the time when money is finally voted. Then it takes another four or five months for the Administration to analyse the effect of the various congressional cuts, changes and stipulations, so as to know whether money does in fact exist to cover any particular scheme. Then, with the fiscal year already half over, the United States is at last in a position to negotiate formally with the foreign country, in conditions that may well have changed radically

Total	4,672·5	3,766·6

since the original idea was mooted. To make matters worse the money must revert to the Treasury if it is not spent by the end of June, when the fiscal year closes, and since Congress has laid down that no more than 20 per cent may be committed in the last two months, the negotiations are often subject to unhealthy pressure. By March and April contracts are being placed with indecent haste.

Congress was asked to relax its jealous grip in three ways. Appropriations for military aid were to be put on a basis under which the money, once it was voted, could be used as needed, regardless of the fiscal calendar. The bulk of economic aid was to be available for fifteen to twenty-four months, instead of a nominal twelve. The President was to have first claim on each year's aid funds, up to a maximum of $100 million, so that he could undertake to support major development projects for as long as ten years ahead. But on all three points the Administration ran into constitutional scruples and drew a blank. However, the battle for flexibility was not entirely lost. The President now has greater authority than ever before to switch funds around. Furthermore, in addition to the $100 million for contingencies which he has always been voted, he is now

empowered to scrape up another $150 million from wherever he pleases in the programme for sudden emergencies.

It was in the administration of economic aid, pure and simple, that Congress made its own major changes. This is the item called "development assistance"; it is distinguished from "technical co-operation"—the "Point Four" idea of giving training to local instructors and specialists—and "defence support"—economic aid to allies with larger military establishments than they can afford. This last distinction is not very apparent on the ground. A railway line rebuilt in Turkey, for instance, would be "defence support," whereas one rebuilt in India would be "development assistance." But it makes it possible, when convenient, to minimise the economic component of foreign aid; it can thus be claimed that 83 per cent of this year's programme is strictly concerned with defence. "Technical co-operation," which has always been the easiest of the aid ideas to sell politically, and "defence support," both came out of the congressional swing doors in much the same shape as when they went in, but "development assistance" was considerably altered. First, the distinction between different regional funds was done away with; four separate items in the President's request, including his fund for Asian economic development and the special fund for the Middle East, which were in Title IV of his original request, were consolidated into a sum which he could use anywhere in the world. Secondly, the total of these items was cut by $93 million from $343 million to $250 million. This reflected, not a retreat from the principle of economic aid, but congressional opposition to the Aswan Dam, later echoed by the Administration, and disappointment at the slow start of various regional projects which had been authorised a year before.

★

Although it freed this $250 million development fund from regional limitations Congress imposed a few fresh conditions. Not more than a quarter of it can go to any one country, a provision which hits only India, whose share is reduced from a projected $70 million to a ceiling of $62.5 million. But, most important of all, 80 per cent of the aid must be in the form of loans rather than grants, unless the money is to be used to purchase American agricultural surpluses or to promote regional schemes of benefit to more than one country. This decision, in which the Administration has reluctantly acquiesced, reflects the strong conviction that American generosity will cause less irritation when it is not on a charitable basis. As the result of these changes only funds in "defence support" are to go to geographic regions now specified. Otherwise this is decided administratively, but the congressional committees are shown "illustrative country programmes," and it is normal, as a matter of courtesy, to notify the committees before making any major departure from these programmes. Before "development assistance" was consolidated, the congressional friends of the Latin American countries arranged to shift Latin America's economic aid programme over to the less vulnerable category of "defence support," where it remains separately identified.

Finally, according to a rider put into the Bill by the Senate over the President's objection, all aid to Marshal Tito must be cut off ninety days after the Bill's enactment unless the President has made a positive finding that "Jugoslavia is not participating in any policy or programme for the Communist conquest of the world." Furthermore, no more military aid may in any case be sent to Jugoslavia, except for items in the pipeline or to maintain existing equipment. Since most of the three hundred aircraft, including modern jets, which it had been planned to give to Marshal Tito, are already in the pipeline, this was a somewhat empty gesture. It did, however, have the political advantage of throwing on to the shoulders of President Eisenhower sole responsibility for arming a Communist country newly returned to communion with Moscow.

New Blood for a Car Company

THE rejuvenation of the Studebaker-Packard Corporation, the fourth largest of the five remaining American motor manufacturers, has been undertaken by the Curtiss-Wright Corporation, a powerful, diversified company best known for its aircraft engines. The agreement, under which Curtiss-Wright will act in an advisory capacity to the management for three years, does not involve a merger between the two companies, but Curtiss-Wright obtains an option to take up 5 million unissued $5 Studebaker-Packard shares; this should enable Curtiss-Wright to gain working control eventually if it wishes. To bolster Studebaker-Packard's shaky finances, Curtiss-Wright will pay $35 million to lease some of the automobile company's plants, which it will use to fulfil government defence contracts, mainly, it is expected, for jet engines. At the same time a triangular agreement between the two companies and Daimler-Benz AG of West Germany provides for Studebaker-Packard to use important German developments in diesel and petrol engine design, in return for which Daimler-Benz obtains the right to produce certain Curtiss-Wright products in Germany.

Studebaker-Packard's financial troubles have been no secret. The corporation, which has never made a profit since it was formed by merger in October, 1954, lost nearly $30 million last year, and another $14 million in the first quarter of 1956. Curtiss-Wright's backing will not only provide Studebaker-Packard with some much needed cash, but will also make the ailing motor company a better risk in the eyes of the banks. Whether this support will enable Studebaker-Packard to make money on motor cars is another matter. It is to concentrate its car production in one plant, which means abandoning or moving the highly automatic production line for Packard cars, and is to produce in future a more limited range of models for a "selective" market. But the fall in the demand for cars which brought Studebaker-Packard's troubles to a head has affected even the larger manufacturers. General Motors' net income for the first six months of 1956, although still more than half a billion dollars, were nearly 24 per cent less than in the first half of last year; Ford's net earnings fell by 44 per cent to $132 million; and Chrysler's net earnings of only $19 million were 73 per cent below those in the first half of 1955. The industry is now on the verge of retooling for the production of its 1957 model cars, and this year the changeover period is expected to be prolonged to give the dealers time to move the heavy stocks of 1956 models which still remain on their hands.

There's no such thing as DISTANCE when you fly B.O.A.C.

Choose a Continent . . . a country . . . a place you want to be . . . then book your ticket by one of B.O.A.C.'s 4-engined, fully pressurized airliners. For business or for pleasure, it's fast, it's direct, it's the superbly comfortable way of travelling anywhere in the world—in a matter of hours you can be in any of *51 countries on all 6 Continents.* You relax in a spacious, air-conditioned cabin . . . are served with magnificent food and wines . . . are waited on with courteous, *personal* attention.

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH QANTAS, S.A.A. AND TEAL

Labour Meets the Colour Line

FROM A CORRESPONDENT IN MISSISSIPPI

THE great drive to unionise southern labour has chosen, as its first major target, the textile industry which has the bulk of its 700,000 unorganised workers in the South. The decision by the executive council of the American Federation of Labour and Congress of Industrial Organisations to go ahead was a brave but perhaps an ill-advised one. The old CIO Textile Workers' Union of America, with 300,000 members, and the AFL United Textile Workers, with a third of that number, have not yet amalgamated, and the southern drive is therefore being launched under a divided command. Moreover, because of the inflexible stand in favour of racial integration taken by the national trade union federation, the climate of opinion in the South is more hostile to labour organisers who come in from outside than at any time since the depression years. It has always been difficult to organise unions in the South: the Amalgamated Clothing Workers of America, active in this region for decades, have only 30,000 southerners among their 400,000 members. And now union leaders admit that the fight over racial segregation has set back their efforts to organise more workers by from five to ten years.

Already a Southern States Conference of Union People, meeting in Chattanooga, Tennessee, has openly challenged the "forced integration" policies of the AFL-CIO. It has called on southern labour to "preserve our constitutional rights and our status as union people." In Birmingham, Alabama, a number of men belonging to the AFL-CIO union are forming an organisation of Southern Fabricating and Steel Workers, and in the same city the Southern Aircraft Workers have been launched. But initial reactions were not very enthusiastic when an attempt was made recently to form a Southern Federation of Labour, to hold the colour line, at a meeting in Birmingham; it was attended by representatives of ten southern states, but a large proportion of those invited failed to appear. It is too early as yet to evaluate the significance of these local revolts.

Spokesmen for organised labour denounce the White Citizens Councils for deliberately harnessing racial prejudices to a traditional hostility to the labour movement as such. The president of the Textile Workers' Union of America has issued a warning that these Councils—set up to preserve the southern "way of life"—are out to block political and economic changes that will result from the growth of unions. It is true that the most outspoken defenders of white supremacy are also among the most notorious labour-baiters. A former Governor of Arkansas said of the Councils: "Today their attack is against the Negro. Tomorrow their attack is against the labour unionist."

The essentially rural "southern way of life" has never taken easily to trade unionism and the forces which mould public opinion in the small towns and which are now fighting the racial battle have had long experience in "saving" the local workers from "communistic labour agitators" from the North. A case in point is the recent ordinance of the town of Dublin, Georgia, which requires a union organiser to have been a resident of the community for five years, to pay a licence fee of $2,500, and to swear that no union money will be spent to encourage violation of the laws on segregation. And in Chapman, Alabama, where the woodworkers have been on strike for almost a year, detectives paid by the lumber company have been brought in as deputy sheriffs and town marshals "to preserve order." The mayor in this medieval barony—where the town literally belongs to the company—doubles as personnel director for the lumber concern. Its lawyer is in the forefront of the Citizens Council movement. When a northern-owned company advises its southern employees to join the trade union, as a result of the objection of workers in its unionised factories in the North when their products are combined with those from its non-unionised plants in the South, local businessmen are dumbfounded and local newspapers cry out in anguish against the Negroes and the Communists.

Except in lumbering, mining, and steel manufacturing, Negroes have not been employed in large numbers in southern industry. This has been a major factor in the exodus to the North of coloured agricultural workers displaced from the farms. But in progressive establishments, more and more Negroes are being used, many of them working alongside white employees. Accomplished judiciously and with great patience, this degree of integration has caused little friction. Company managers in such plants, however, are deeply concerned today because of mounting tension.

★

With jurisdictional problems still to be settled between the formerly separate AFL and CIO, and with most of southern labour adamant on the race issue, the question arises as to why the national leaders of the AFL-CIO persist in their drive for organisation at the present time. Many southerners profess to see this as an attempt to arrest the southward movement of northern industry. Recently the *New York Times* listed six corporations which had changed their plans to establish plants in the South because of the fear of racial tension. Certainly the trade unions' perennial drive for an ever higher national minimum wage is partially stimulated by the desire to eliminate one of the South's strongest inducements to northern business—cheap labour. This touchy problem was recently brought out into the open when the United Hatters, Cap and Millinery Workers called upon Congress to prevent "subsidised sweatshops" by prohibiting southern communities from offering tax exemptions and other benefits to northern industries to seduce them into the land of low wages and "company unions." But outsiders often fail to realise that when men from submarginal farms on which no one could make a living are brought into southern factories, even at wages below the national level, they have taken a step up the economic ladder.

In spite of its present embarrassments, however, organised labour can look forward to happier days in the South as industrialisation gathers speed. Each year politicians solicit labour support more greedily; the unions recently helped to keep Texas faithful to the Democrats, and have considerable political strength in Tennessee, Florida and Alabama. The "right-to-work" statute which outlawed the union shop, and which was passed so jauntily two years ago by the Louisiana legislature, has been repealed as a result of labour's political activity in that state. Amalgamation of AFL and CIO unions has already been achieved in Arkansas, Louisiana and Tennessee. City newspapers which a decade or two ago carried only anti-labour stories now have a tendency towards a fuller and more objective report on the trade union front. Once the racial fight has run its course, southern labour seems bound to turn to the only agency that can give it self-protection.

Commissioners Fall Out

IN its twentieth semi-annual report, the Atomic Energy Commission has announced that during the past six months the United States has become the foremost producer of uranium ore in the non-Communist world. In 1948 production amounted to 70,000 tons; at present it is nearing an annual rate of three million tons. The report also asserted that "notable progress" had been made in designing, constructing and operating nuclear reactors for the production of industrial electricity and that radioactive *strontium—a particle contained in the fall-out from a* thermonuclear detonation and capable of inducing bone *cancer—"is not a significant factor . . . at the present level* of weapons' testing."

But in an unprecedented move, Mr Thomas Murray, one of the five commissioners, registered his dissent from both these claims. Mr Murray has long maintained that the AEC is relying far too heavily on private industry and that America will fall behind in the international race for peaceful applications of atomic energy unless the government takes a lead and builds the first atomic plants itself. Secondly, Mr Murray contends that the AEC's official attitude towards the hazards of radioactive fall-out and the necessity for continued nuclear tests is erroneous. Referring to recent studies by the National Academy of Sciences and the Medical Research Council in the United Kingdom, Mr Murray stated that too little was known to warrant the reassurance contained in the AEC's report.

Mr Murray has long been at odds with Admiral Strauss, the chairman of the AEC, but his dissent underlines far more than a clash of personalities. It represents a split over basic policies between the Administration and Admiral Strauss on the one hand and leading Democrats in Congress on the other. This split continues to bedevil the development of atomic energy in the United States. Last week, for example, and again with Mr Murray's opposition, the AEC granted a "conditional" permit to a private firm, the Power Reactor Development Corporation, to build a plant to house a reactor of the "fast neutron breeder" type. Its estimated cost is to exceed $40 million, and it is to be situated in Michigan, about 30 miles from Detroit. Promptly, Senator Anderson and Representative Holifield, of the Joint Congressional Committee on Atomic Energy, wired President Eisenhower demanding that the permit be revoked. They claimed that the reactor would be a grave peril to the safety of the dense population in the region. This argument may be made sincerely, but there is every indication that this latest fracas is yet another chapter in the long battle over private versus public financing for atomic industry.

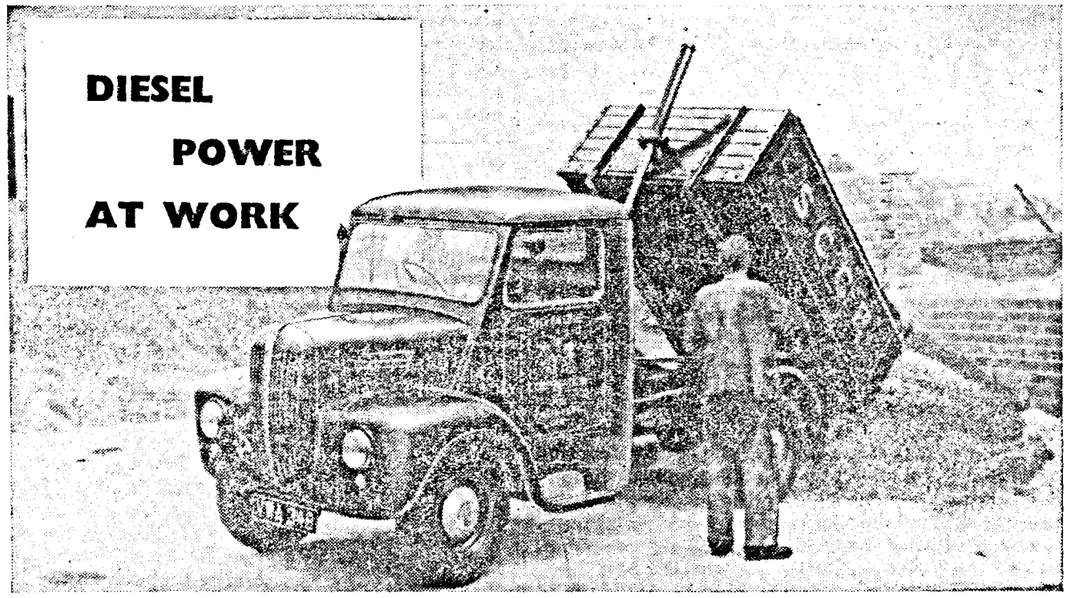
Time Out for Defence

THE doctrine of "defence essentiality" enables ailing American manufacturers to claim higher tariff protection on the ground that they have an essential contribution to make to the national defence. It was fashioned largely in the watch industry, which is therefore the ground where the protracted battle between domestic manufacturers and importers over this doctrine is fought most viciously by the lobbyists and followed most keenly by other interests. The watch industry gained its prized defence status in 1954, when the duty on imported watches was increased by 50 per cent, but provision was made for the whole question to be reopened after two years if the President thought it desirable. The Tariff Commission has now advised the President that it does not feel that a formal reappraisal of the 1954 decision is justified, mainly because the competition from imports is still active, even though its character has changed. One of the most conspicuous developments has been the increase in "upjewelling" or remanufacture of watches after they have been imported—a loophole which the American Treasury has been trying unsuccessfully to persuade Congress to close. Another is the striking increase in the imports of cheap non-jewelled watches which rose, in spite of the tariff increase, by more than 50 per cent in 1955, and are still mounting rapidly.

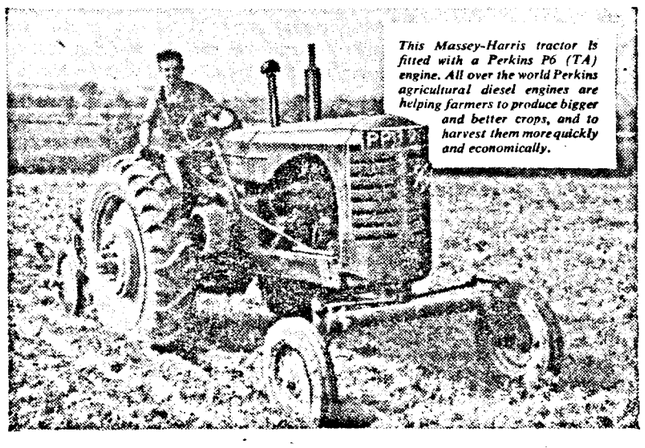
Before the President accepts or rejects the Tariff Commission's advice he will have to wade through a morass of conflicting recommendations from the "experts" both in his Administration and in Congress. The most important of these is the re-examination of conditions in the watch industry which is being made by the Office of Defence Mobilisation. This agency's copy book was badly blotted last year when a formerly secret report, contradicting the ODM's own contention that the watch industry was essential to defence, was released by the Department of Defence, and never adequately refuted by the ODM. These divisions within the Administration are reflected in Congress, where an economic subcommittee has roundly asserted that trade restrictions to protect the domestic watch industry in the name of defence are "unwarranted"—and received a violent mixture of brickbats and bouquets for doing so. The subcommittee concluded that the watch industry was not unique in training men in the special skills required for precision engineering work in munitions factories, and that in any case the freezing of industrial capacity and skilled manpower was no way to ensure national security in an age of rapid technological change. The efficiency of the industry might well be better safeguarded, the subcommittee felt, by the stimulant of competition from abroad. Restrictions on imports would merely place a burden on consumers and on other industries, harm America's trade relationships and detract from national security. This is fresh air, and welcome. But it has to penetrate the shutters of an industry which, not content with defending the high tariffs it has already secured, is now campaigning for import quotas as well.

SHORTER NOTE

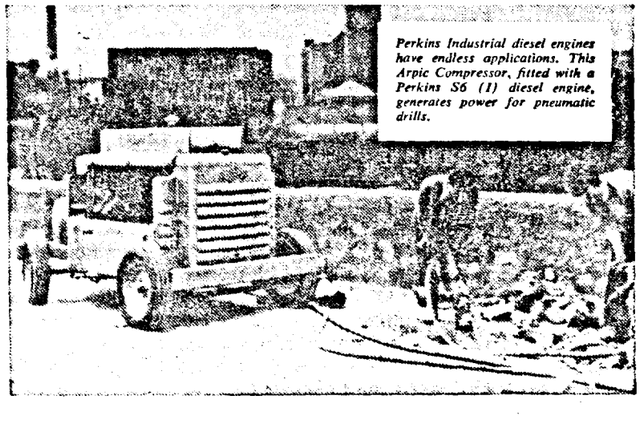
The House of Representatives defeated a Bill sponsored by Senator Gore and calling for the construction of government-financed and government-owned atomic plants for peaceful purposes. In revenge, Democratic leaders buried two companion Bills, which the private companies wanted; one would have provided for federal indemnification in the case of accidents in private atomic plants and the other would have exempted manufacturers and operators of nuclear reactors from certain provisions of the Public Utility Holding Company Act.



Vehicles of all sorts, commercial and private, are powered by Perkins Diesel engines. Available as first equipment or as complete conversion unit for a wide range of vehicles. This 25 cwt. Trojan Tipper is powered by a Perkins P3 (V) engine.



This Massey-Harris tractor is fitted with a Perkins P6 (TA) engine. All over the world Perkins agricultural diesel engines are helping farmers to produce bigger and better crops, and to harvest them more quickly and economically.



Perkins Industrial diesel engines have endless applications. This Arpic Compressor, fitted with a Perkins S6 (1) diesel engine, generates power for pneumatic drills.

ON LAND AND SEA, in industry and on the farm Perkins Diesel engines are at work on a bewildering variety of jobs. For diesel power saves money. Local Authorities find diesel engines reduce fuel consumption by approximately 50%, a considerable saving over an annual period. Farmers save money using Perkins Diesel engines in tractors and combines. At sea, Royal Navy submarines, fishing boats and private yachts use Perkins Diesel engines for economy and safety. The Thames River Police have standardized on Perkins engines. On the road, you'll see the Perkins sign on many well-known commercial vehicles. Whatever the job, diesel engines give you greater reliability, longer life, easier starting and reduced running and maintenance costs. Perkins Diesel engines offer you far more — for far less. May we send you details?

Nasser at the Peak

FROM OUR CAIRO CORRESPONDENT

IF President Nasser jumped into the Suez Canal trouble with both feet he has since been careful not to put a foot wrong. Demonstrative courtesy is shown to convoys passing freely through the canal; exit visas are granted to departing British families more in sorrow than in anger; they draw their allowance of sterling without difficulty; even the newspapers, their first fine passion spent, argue with abnormal reasonableness the justice of Egypt's cause. Were it not for a few pictures of reservists training for the defence of the Canal and squads of foreign correspondents waiting with nonplussed patience for the story to come, one would say that the crisis was a hallucination.

Egypt is content to be caught in this calm of waiting and let each day set its small seal upon the nationalisation of the Canal Company. Each convoy reinforces the Egyptian pledge of free transit. Aircraft carriers in the Eastern Mediterranean acquire an air of intimidation. And in the Arab world the nationalists mobilise popular sentiment in Egypt's cause. Every Arab government, even that of Iraq, has been constrained to declare its support for Egypt, whatever its secret anxieties may be.

It is evident that if the London conference fails to reach agreement with Egypt, the western powers will need to impose their will on the Arab world as a whole and not simply on Colonel Nasser. Nationalism, the dominant force in the region, will not stay dormant anywhere from the Persian Gulf to the Nile. Oil workers' unions, by threatening strikes and sabotage, have given some indication of what this can mean. If this calm gives way to trouble, therefore, it will be trouble on a grand scale.

The significance of the potential struggle lies in the open breach between the West and Arab nationalism. The link with Arab governments has for long been tenuous and unreliable as those governments lost their power of autocratic rule over national sentiment. They have already capitulated to popular opinion over the Suez Canal question and, apart from the efforts of King Saud and the Iraqi government to secure their oilfields, will do nothing to still the clamour. Indeed, they cannot; for it is President Nasser who, having captured the imagination of their peoples, now leads them.

Secure not only in the opinion of his own people but in that of the surrounding Arabs, President Nasser looks out for the support abroad which will strengthen him at the United Nations or the London conference. His pacific behaviour since the Alexandria speech has been directed to that end, for the sympathies of Asia, animated by the Bandoeng conference, can be most easily consolidated by pacifism. Russia and its communist allies, having gained the break between Nasser, as the leader of Arab nationalism, and the West, would probably prefer to avoid more serious trouble, confident that Egypt has set a pattern of behaviour which will pay dividends in the years to come.

What President Nasser most clearly requires at the moment is to be left in possession of his prestige and of the Suez Canal. For that reason, if no other, he can be relied upon to maintain the Canal in accordance with the standards of the company for as long as possible. He has solemnly promised freedom of transit, and his spokesmen have promised that the plans for developing the Canal will be executed. Even the High Dam has almost been forgotten in the general anxiety to convince the world that the financial requirements of the Canal itself will be met. To what extent these intentions would survive a direct struggle with the West over the Canal no one can say; but there is little reason to doubt their present sincerity. Egypt's long-term difficulties have been increased by the damage to western confidence caused by the nationalisation of the Canal, and the obvious need is to restore some trust if possible. An Egyptian victory at the expense of an economy indefinitely impaired by western ill-will, with capital shy of investment and perhaps continuing sterling difficulties, would put Egypt's economic prospects further in doubt.

What is not recognised here is that the policy of counteraction, of retaliation to any unpopular western act, has destroyed all faith in present promises. President Nasser does not trust the West. He has now made certain that the West will not trust him. Words on either side have little meaning; the actions that could carry conviction require time to do so. He could, of course, concede international management of the Canal without sacrificing the nationalisation, and so go far towards those guarantees the West is seeking. Short of this there seems no possibility of restoring confidence.

From collapse of confidence in Nasser to outright opposition to him is, however, a big step. His prestige stands high in the Arab world; to oppose him and fail would enhance it immeasurably. Aircraft carriers and all the other trappings of a tough policy have little meaning out here beside the potential breadth of Arab resistance. Nor are they likely to scare Nasser; he is far from being a "frightened pharaoh." The inescapable conclusion is that the western governments must be confident that they can go in and win—or they should quickly get out and settle.

Building a Caribbean Federation

FROM A CORRESPONDENT LATELY IN JAMAICA

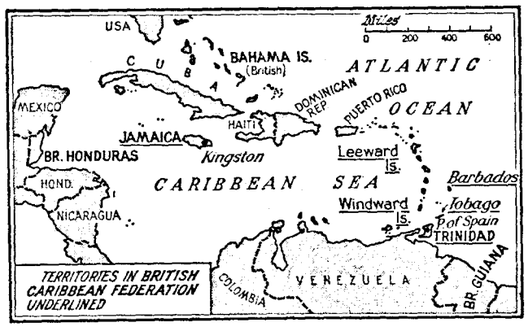
THE work of building a selt-governing Federation in the British Caribbean is going forward in an unhurried, unspectacular way. The decision to federate the island territories, finally made by the London conference last February, is fully accepted. Federation Day was celebrated in the Caribbean on Thursday of last week, the day on which the Royal Assent was given to the British Caribbean Federation Act. The Federation will not, in fact, formally come into being until the Governor-General assumes office and the interim form of government becomes effective ; the Federal Legislature is to be elected and to begin work early in 1958. All this is so completely taken for granted that it arouses very little public discussion. No one even tries to create a myth of a " struggle for independence," and the general public is leaving to politicians and officials the task of making the Federation work.

There is plenty of work to be done before 1958. The broad constitutional decisions have been taken, but the plans so far made for administrative machinery are very sketchy, and little detailed planning can be done until the pressing question of the Federal capital is settled. In February the plenipotentiaries failed to reach agreement on this, and referred it to an independent commission. This commission, with Sir Francis Mudie as its chairman, is now trying to select, by the end of September, three possible sites from which the plenipotentiaries will make their final choice. Its members have been asked to take into consideration a formidable list of qualifications which, if adhered to, practically precludes placing the Federal capital in some small and backward island which happens to be " central." In any case, a geographically central position may mean very little in a region where most travel is by air. But politically, the attractions of a small-island choice are two: it would help to bolster the economy of a depressed, perhaps a grant-aided territory ; and it would not arouse the insular jealousies of the larger units. These jealousies can be very bitter, and no doubt played a large part in the tentative selection of Grenada, one of the Windward Islands, in 1953.

Where Should the Capital Be?

If, however, the Mudie commission recommends sites in Jamaica, Barbados and Trinidad, the plenipotentiaries will be faced with the same embarrassments as before, but with no excuse for side-stepping a decision ; and, in fact, the commission's terms of reference almost limit the range of choice to these three territories. Barbados has strong claims on many counts, not least among them being the quality of its educational facilities and the availability of suitable local recruits for the civil service. Moreover, the sober moderation of Barbadian public life would provide a suitable atmosphere. On the other hand, Barbados is a little off the main air routes, and the presence of the Federal capital might not, at least at first, be enough in itself to induce commercial airlines to add greatly to their regular services. Jamaica and Trinidad are somewhat better served in this respect. Both Kingston and Port-of-Spain, moreover, are the capitals of comparatively large and thriving communities. Both territories, but especially Jamaica, can offer adequate space without undue sacrifice of productive land. But a choice between the two would be difficult. Jamaica is the larger, Trinidad the richer. Jamaica has the advantage of the presence of the University College of the West Indies, which is at present the only fully functioning Federal institution, and on which the Federation must largely rely for a supply of educated men and women to man the higher grades of the Federal services. Jamaica has also acquired, under its present constitution and present government, a valuable reputation for honesty and competence in public life. Trinidad lacks stable political parties, and has a reputation for petty corruption in public affairs which has recently been somewhat smugly exploited by the Jamaican press. Next month, however, it is to have a general election, which might be made the occasion of a local house-cleaning.

The real difficulty in the choice of a capital lies in the fact that the British West Indies form not one group but two. The British territories of the eastern Caribbean, despite frequent bickering, have a sense of neighbourhood and community. Travel between them is fairly easy. Port-of-Spain has already a good claim to be regarded as their capital, at least in a commercial sense. Jamaica, on the other



hand, with a population equal to that of the whole eastern group, lies apart and, except for its little dependencies, alone. There are strong influences pulling the two groups together—socially, for example, the influence of the University College, politically the powerful personality and growing reputation of Mr Manley ; but the feeling of separateness remains, especially in the economic life of the area. In the choice of a capital this might not matter so much if only the islands were concerned. But if British Guiana should enter the Federation, the eastern group would be greatly strengthened, and so would Trinidad's claim to house the capital ; for, whatever may be said about " continental destiny," Port-of-Spain is, in fact, British Guiana's main gate to the outside world. The accession of British Honduras would not strengthen Jamaica's claim to nearly the same extent and seems at present a less likely possibility.

Most West Indian leaders agree that British Guiana can take no effective action about Federation until representative government is restored. Tentative moves are already being made in that direction. If a representative government with some sense of responsibility can be established, its attitude towards Federation will no doubt be affected by whatever recommendations are made by the important Trade and Tariffs commission. Already British Guiana has been subjected to economic pressure by members of the proposed Federation acting in concert. The eastern Caribbean

governments have been able to insist on substantial reductions in the price of Guianese rice. Mr Gomes, of Trinidad, alluded to the " schizophrenia " of Guianese political leaders, and said bluntly that when British Guiana entered the Federation it might expect more sympathetic treatment. More hard bargaining, and possibly hard words, may be expected when Jamaica's rice agreement with British Guiana expires at the end of 1957. It has long been a commonplace that the Federation needs the empty spaces of the Guianese hinterland ; less attention has so far been paid to the Guianese need for a market in the islands. The anti-Federation pronouncements of Mr Raatgever and his friends have lately taken on a shrill emphasis which may well betoken alarm.

With or without the mainland territories, the political future of the Federation depends greatly upon the willingness of leading politicians to leave the Unit legislatures and seek election to the Federal legislature, since the London conference last February decided that they could not serve in both. Some, at least, appear willing to make this move, and already an attempt is being made to form a Federal political party. Mr Manley of Jamaica, Mr Adams of Barbados, and like-minded leaders from several of the smaller islands who met in Barbados last May as members of a Standing Committee on Federation, then discussed the formation of " a federation of Socialist parties made up of an alliance on a Federal level of those existing political parties in the various units which share common outlooks and aims and adhere in a broad way to the same Socialist political beliefs." An inaugural conference is to be held this month. No Trinidadian politician has yet associated himself with this proposal, nor have opposition groups in the various territories yet made any attempt to get together in a similar way—they have, of course, had less opportunity. But if the Federal election nearly two years hence can be fought on party lines rather than on grounds of purely local interests, and if the outcome is a politically united Council of State commanding a disciplined majority in the legislature, then the Federal government—despite the many constitutional limitations upon its power—should get off to a good start.

Schuman Pool's Fourth Birthday

DURING the past year the activities of the Coal and Steel Community have tended to be eclipsed by the discussions among the Six on Euratom and the Common Market. But even had these new proposals not caught the imagination of those interested in the " supra-national " approach to European integration it would have been difficult to sustain general interest in the day-to-day operations of the Community once the common markets for coal and steel had been opened and the main lines of policy laid down on controversial questions such as cartels, investment, and pricing practices. As M. Mayer, the president of the High Authority, explained to the Common Assembly of the Community at its session in May, many of the powers of the High Authority can only be exercised in periods of acute shortage or serious glut. In times such as the present, of high production and strong demand, the High Authority must rely mainly on its powers of persuasion.

The High Authority began to function just four years ago, on August 10, 1952. To a considerable extent the timing of its early actions was determined by the timetable for bringing the treaty fully into effect which was contained in a separate convention. Two points were defined, the preparatory period which was to extend from the date on which the High Authority opened its doors until the opening of the common market for coal six months later, and a transitional period which was then to begin and to last for five years. During the preparatory period the institutions of the Community were to be set up, the necessary waivers from the Gatt and the OEEC code of trade liberalisation negotiated and consultations held with producers, consumers, workers and governments. During the longer transitional period the major provisions of the treaty would be in operation but various derogations from them would be permitted—in particular to give the Belgian and Italian coal industries and the Italian steel industry time to put themselves in position to stand the full blast of six-country competition. In addition to specific provisions for relief to particular countries, the convention also stipulated that the High Authority should give financial "readaptation " assistance to enterprises shut down and to workers thrown out of work as a direct result of the opening of the common market. Once the transitional period is over this authority lapses.

With only a year and half of the transitional period still to run, two questions will play an increasingly important part in the discussions of the High Authority as it enters its fifth year. The first is whether, in fact, the transitional arrangements can end on schedule ; the second is whether the treaty should be amended when that becomes possible at the end of the transitional period.

Belgian Coal Problems

The High Authority intends that the exceptional measures should end by the time stipulated in the convention, that is by February 10, 1958 ; but this is more likely to happen in the case of Italian coal and steel than in that of Belgian coal. During the transitional period the High Authority is empowered to collect a " compensation " levy from the sale of coal from the most efficient mines (that is, from the German and Dutch mines) and to use it to subsidise Belgian and Italian coal. Compensation payments to the Sulcis mines in Italy were limited to two years and have now been ended. But the Belgian coal industry has from the beginning been recognised to be the more difficult case. Over the last four years the High Authority and the Belgian government have together worked out an ambitious reorganisation plan which calls for the closing of the most inefficient pits and the modernising of those that show reasonable promise of being able to compete without special protection or subsidies at the end of the transitional period. But in the present market situation, when even the poorest quality coal finds a ready market, it will not be surprising if the Belgians find it difficult to close pits and the planned reorganisation of the Borinage (where most of the marginal pits are located) is unlikely to be completed in another eighteen months.

The Italian steel situation is rather different. Here the principal concession contained in the convention was [illegible] permission given to the Italians to retain customs du[illegible]

coke and steel during the transitional period. The level of the duties was to be lowered each year and this has, in fact, been done: duties on coke have been reduced from 15 to 8.25 per cent, those on pig iron suspended, and those on steel, alloy steel and special steels reduced by varying amounts, although less impressively. One sign of the progress already made by the Italian steel industry is that it has been sufficiently successful on the French market to cause French producers to protest to the High Authority that it is unfair that they should continue to be bound by certain restraints on pricing practices which are not yet applicable to the Italians.

The authority to give readaptation grants is not confined to Belgium and Italy but applies to any enterprise or worker in the Community. These provisions have in the past accounted for a good part of the trades union support for the High Authority. For the Authority's power to assist workers by contributing to the payment of unemployment benefits, resettlement allowances and the cost of technical re-training has helped to counteract the otherwise rather negative cast of the treaty so far as labour is concerned. Generally speaking, the treaty reserves questions of social policy for action by national governments and gives the High Authority little direct responsibility except the task of ensuring that individual states do not gain an unfair competitive advantage by wage cutting or similar means. The High Authority also shares in the vague mandate given all institutions of the Community to promote (by unspecified means) the "improvement of the living and working conditions of the labour force . . . so as to harmonise these conditions in an upward direction."

Experiments Unlikely

During the past year the High Authority has been under pressure from the trades unions and the socialists in the Common Assembly to do more than it now has power to do to improve working conditions. And there have been suggestions that when the treaty is open for amendment the High Authority should be given more specific powers to "harmonise upwards" the social policies of the six countries. But the six governments recently indicated how the wind is blowing when they flatly turned down a suggestion of the High Authority that governments should consider introducing a standard "miners' charter" incorporating the best features of the French and German systems. On present evidence, it is highly unlikely that the governments will be disposed to yield any of their prerogatives in this field to the High Authority—either by stretching or amending the treaty.

At one time many of the advocates of the "supranational" approach to integration favoured the expansion of the Schuman plan treaty to cover steel products and other related industries, but there is little support for the idea today. In the last four years the Coal and Steel Community has proved that the common market is not only feasible but, on balance, advantageous for all concerned. But it has also shown that "integration by sector" raises its own problems of distortion and discrimination. The Six have therefore chosen to try to create a common market for all products rather than continuing to experiment with the sector approach. It seems safe to predict that any amendments offered at the end of the transitional period will be compiled to make the existing machinery work more smoothly rather than to alter its character.

Charm Across the Baltic

FROM OUR CORRESPONDENT IN SCANDINAVIA

THIS month Marshal Voroshilov is to visit Finland and next year Marshal Bulganin and Mr Khrushchev are to visit Denmark, Norway and Sweden. Russia plainly gives high priority to the encouragement of neutralism in the North, and it is subjecting the Scandinavians to a mounting "charm offensive," of which the Soviet leaders' visit next year will provide a climax.

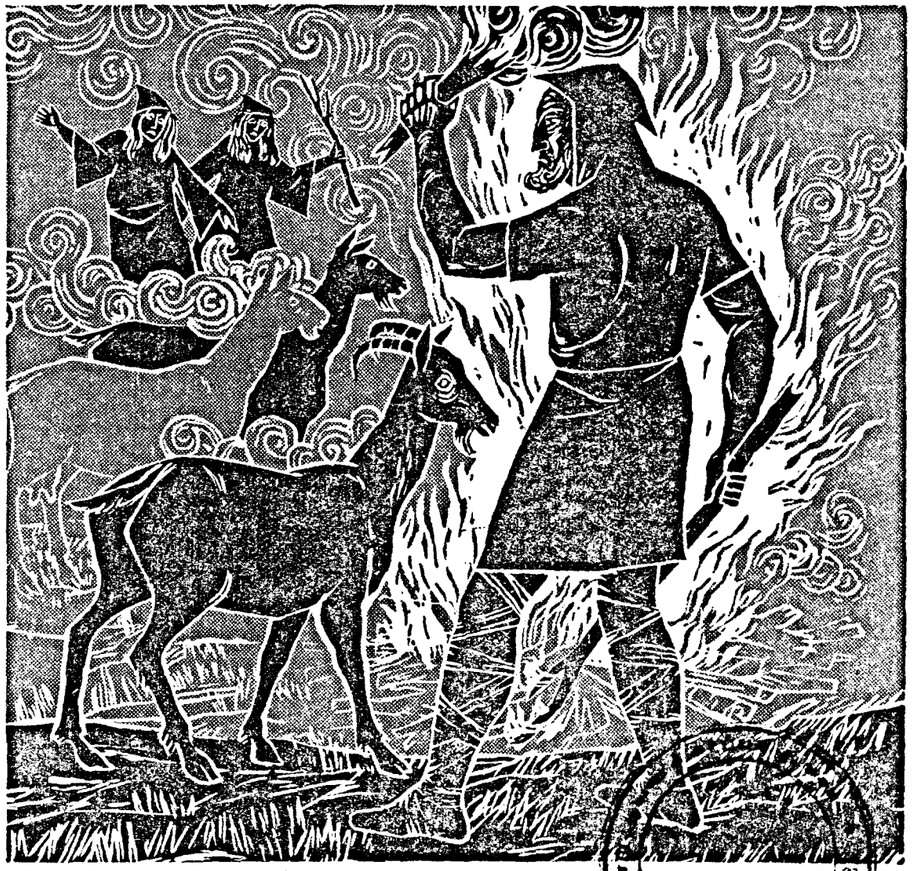
Russia is traditionally sensitive in the Baltic area. The neutrality of Sweden and Finland is secured; for Sweden shows no signs of departing from its tested "alliance-free" policy based on muscular defences, while Finland is pledged, under the 1948 Soviet-Finish treaty, to shun great power entanglements. Moscow's eagerness to entice Denmark, Norway and Iceland out of the Atlantic fold is therefore perfectly logical. Soviet sabre-rattling has given place to blandishments, and to marginal concessions from which the maximum propaganda effect is extracted. Chief among these was Russia's evacuation of its base at Porkkala, near Helsinki, which atomic and technological advances had rendered expendable.

Russia's withdrawal of its veto on Finland joining the Nordic Council and the United Nations represented no real concession, but the righting of an old wrong. A more conciliatory spirit, however, led to resumption of Soviet-Danish trade negotiations, which broke down in 1954 over Denmark's sturdy refusal to deliver embargoed tankers. (However, the two-year trade agreement recently signed, with an annual value of £7 million in each direction, still represents only 2 per cent of Denmark's foreign trade.) The Russians are at last investigating the postwar disappearance of the Swedish diplomat, Raoul Wallenberg, whose kidnapping in Rumania incensed Swedish opinion; and Swedish fishing vessels in distress are now allowed to shelter in the "forbidden" Polish port of Stettin.

Nautical Flirtations

When Russian trawlers were impounded this year for fishing in Norway's territorial waters, Russia apologised and paid up without demur. Later, the agreement giving Sweden a strategic supply line through Trondheim on the Norwegian coast failed to provoke one of *Pravda's* customary outbursts. Through Intourist, hundreds of Scandinavians will visit Russia, and possibly the Baltic States, this summer, while Russian tourists are also due in Stockholm. Almost daily, delegations of parliamentarians, footballers or scientists leave for admirably stage-managed visits to Russia.

Units of the Russian Baltic fleet are used systematically and successfully as ambassadors of goodwill. In 1954 the fast cruiser Ordzonikidze and two Skory-class destroyers visited Helsinki. Last year the Red Fleet showed the flag in Stockholm, while Swedish naval vessels visited Leningrad. This August the Russian sailors will see Oslo and Copenhagen; Norwegian units are due simultaneously in Leningrad. The smart turnout of the Russian warships and the good conduct of their ships' companies make a favourable impression on the Scandinavian general public, though political commentators continue to question the wisdom of these nautical flirtations.



The flames of protection

NOT MUCH OVER a hundred years ago, need-fires were still burned in remote parts of Scotland. These fires were kindled on hill-tops as protection against witches, who, it was thought, stole milk from the herd and sent hail and thunder to destroy the crops.

Superstitions fade and die, yet the need for protecting goods is as strong as ever. But modern businessmen work on facts, not on fancy. The protection—the packaging—they seek, must be completely reliable. Thousands of manufacturers find this sure protection in the products of Thames Board Mills. Their nowadays famous products, widely differing in the materials from which they are made and the uses to which they are put, have one thing in common. They all speed from factory to warehouse and shop, protected by "Fiberite" cases, or cartons made from "Thames Board".

Today, with modern plant, technical skill, and a wealth of experience, Thames Board Mills make a major contribution to the packaging needs of industry.

Warrington, Lancs

willingly concede that Australia is facing a discomfiting inflation and one likely to grow worse before it is checked. They do not agree that the cure is to allow wages to lag behind prices. In their eyes, the quarterly wage increases appear not as the cause, but as the result, of inflation and of an unwillingness by management to absorb costs.

In opening the door to a discussion on wage-fixing, the Commonwealth government has found itself involved also in discussing price fixing. Ideologically it has little fondness for price controls and constitutionally it has less power to control prices than it has to influence wages. Price fixing is controlled by the state governments and has become largely ineffective since at least one state government has been openly hostile to it; any real uniformity has been difficult to obtain. If the conference is to succeed, it must therefore lead to agreement not only between the Commonwealth and the states but also between the state governments. There is another awkward question for the conference. If uniform methods of wage-fixing are to be adopted, should they not begin to operate at a uniform level of state and federal wage awards in each state? And if so, should the state awards come down or the federal awards go up?

Although the Commonwealth government lacks any power to instruct state governments on wage-fixing it does possess powers in other fields which could influence their decisions. All the more fruitful forms of taxation in Australia (except local authority rates) are either a Commonwealth parliament right or priority. In sole possession of the income tax field (though Victoria has decided to challenge this power) the Commonwealth is at present making tax reimbursements to the state governments above the amount to which they are entitled. But when discussing wage-fixing recently, the acting Prime Minister, Sir Arthur Fadden said that his government should not be expected to foot the state governments' bills irrespective of the nature of the policies pursued by them.

Some state governments, which are already feeling the pinch of higher costs and higher wages for employees on their own government payrolls have been forced to enter minor fields of taxation. The New South Wales government announced this month the imposition of a state land tax but, such is the effect of the quarterly wage adjustment that a week later, when the June adjustment was announced, it was estimated that the latter's annual cost for that government's employees would involve most of the land tax.

Détente in Delhi

FROM OUR CORRESPONDENT IN INDIA

DELHI is normal. For the first time since 1939, tension has gone. India's capital has become positively *gemütlich*, yet neither complacent nor oppressive. Relaxation is as contagious as panic—senior diplomats find time to admire South Indian bronzes, and officials to play tennis or discuss the hidden significance of the avatars of Vishnu. Businessmen forget to weep about controls or nationalisation and instead exchange gossip about the arranging of marriages; [illegible] ndents [illegible] willing[illegible]

when asked what there was to worry about, had to think twice to remember the gap in the resources for the second five year plan. India has at last settled into normalcy.

The key to this change in a capital city where senior officials formerly worked round the clock, while politicians earnestly catalogued their worries and foreign correspondents rushed around madly, is that since the first five year plan has succeeded, India's emergency is over.

Nothing is as comforting to live with as success. Now all Indian efforts and dreams are focused upon the second plan. This presents great advantages all round. It gives people something to work for and to agree about. It has provided the administration and the politicians with a common goal, reducing the old tensions and class rivalries and making room for genuine appreciation. Since it is the plan which matters most, the standing of ministers no longer depends on how long they stayed in jail or how fine a yarn they can spin, but on how much planning they understand and how capable they are of delivering the goods. An outstanding example is Mr T. T. Krishnamachari, the Minister for Commerce and Industries, who, through sheer ability, has cornered under his wing steel and state trading. Two years ago, when "T. T. K.", as he likes to be called, announced that India would have to make six million tons of steel a year, he started a long controversy about megalomania; yet now the mills for six million tons are being built and the controversy has shifted to transport. Will India have enough carrying capacity for its economic expansion?

Little to Bicker About

Since most of the vital decisions for the second plan have already been taken, there is singularly little to bicker about, especially since the government is confident that the public has become, through skilful treatment of the hot and cold shower kind, sufficiently keen on the plan to accept almost any sacrifices to make it a success. Thus, if prices go on rising—the wholesale price index has gone up by 15 per cent in the last year—inflation will gladly be met with extra doses of drastic taxation. The problem is more one of transport and personnel than of finance, and as regards administrative personnel at least the problem is on the way to solution. The administration has caught up with the wartime gap in recruitment and with the 1947 depletion of its cadres. The postwar recruits are becoming sufficiently senior to relieve the pressure of work on their elders, and government service has again become attractive enough for the pick of India's youth to look to it for a career.

But, as well as these purely domestic factors there are external reasons for the détente in Delhi. "Destalinisation" has made a mockery of the Indian communists. They are publicly asked to dance the gopak, and their leader, Mr A. K. Ghosh, made rather an ass of himself when he confessed, in a printed circular to members, that the party had been arguing ever since 1924 over which half of India's bourgeoisie had sold out to imperialism, simply because Stalin had said that one half had. Yet Mr Ghosh admitted that although all Indian communists knew Stalin was wrong none dared to contradict him. Before "destalinisation" they were already hobbling; now they are positively crippled. [illegible] argue, and not without justification, that Nehruism, a planned socialist democracy [illegible] consent [illegible] only for more [illegible]

'Ever in the fire and never consumed'...

THIS IS ONE of those legendary associations that bear no real relation to the truth. Salamanders are amphibians, the black and yellow species 'Fire Salamander' being common still throughout North Africa and Central Europe. Far indeed from being fireproof, he is found only in the dampest places.

There is nothing mythical however about the fire-resistant properties of ASBESTOLUX, one of the most up-to-date manufactured products of The Cape Asbestos Company. Non-combustible and therefore widely used in modern building practice, this asbestos insulation board is mainly composed of Amosite asbestos fibre, from the Company's own South African mines. It is this Amosite, with its high specific volume, i.e. millions of long, thin hair-like fibres per pound, that gives to ASBESTOLUX many of its outstanding qualities—high insulating efficiency, good strength/weight ratio, and extreme durability due to its indifference to temperature, moisture, chemicals, insects and fungi.

Central Banks for New Dominions

THE possession of a fully fledged central bank has become one of the hallmarks of national sovereignty and independence. The closer a country is to its emergence from political colonialism or from the economic poverty line, the more eagerly is that prized symbol demanded. After the First World War a rash of new central banks spread over the face of the under-developed parts of the world. They were in the main sponsored by two prophets, one American, one British. Dr Kemmerer of the United States laboured in south and central America to set up miniature federal reserve systems. And Sir Otto Niemeyer's creations, mainly in the sterling world, are by now firmly established and thriving.

Today the problem is being posed again in the nascent dominions of the Commonwealth. They are not content with the currency boards with which they made do in their colonial days. In the Federation of Rhodesia and Nyasaland the transition from the Central African Currency Board to the new Central Bank of the Central African Federation has been completed. A report on the establishment of a central bank in Malaya (it may ultimately be two central banks, one for the Federated Malay States and another for Singapore) has recently been completed by Mr G. M. Watson of the Bank of England and Sir Sydney Caine, the director-elect of the London School of Economics. In the Gold Coast the imminent move into independence will be followed by the emergence of the National Bank of the Gold Coast as a fully fledged central bank which will take over the function of the West African Currency Board in that area. Nigeria will in due course follow suit—perhaps with no less than three central banks if the regions demand complete economic as well as political independence. Plans have already been prepared for a central bank that will serve the Caribbean Federation and in the more distant future yet another (or will there have to be three?) will take over the functions of the East African Currency Board, when Kenya, Uganda and Tanganyika acquire dominion status.

This transition from currency boards to central banks is understandable. The essence of the colonial currency system is that the local circulation is interchangeable with sterling not only at a fixed rate but automatically. The authority has discretion neither to decide the rate of exchange nor to expand or contract the volume of currency. It is purely passive in its functions. Whether it is a body of currency commissioners created by local statute, a currency board set up in the local territory, or one operating from London, it simply issues coins or notes locally against a deposit of sterling in London. It holds the sterling so received in cash or in gilt-edged investments and this sterling is paid out again on demand whenever local currency is paid in. The system is a faithful financial reflection of the political dependence that goes with it.

In the matter of interest rates and credit control the pace is set by London. The supply of currency in a colonial territory fluctuates almost automatically with the vagaries of the colony's balance of payments and the volume of its London funds. This may be right and acceptable when the territory concerned has little or no indigenous credit system and its economy is dependent on comparatively few exportable primary products. In those circumstances the balance of payments should indeed govern the supply of money. But when a domestic capital market emerges in such an economy and when its output becomes more diversified, the need for an independent mechanism of credit control arises. There should then be a central institution that will help to smooth out fluctuations in the supply of money by absorbing foreign exchange arising from a favourable balance of payments and sterilising the resultant increase in the cash reserve of the commercial banks, or reversing the operation in times of depression.

The first move towards creating this autonomous central banking system out of the currency boards was made when permission was given in November, 1954, to the currency boards to take up local securities with part of their assets and no longer to hold them exclusively in United Kingdom securities. This was intended to meet the understandable criticism that poor colonial territories were in effect financing the British Government in London instead of keeping their resources for the finance of their own and more urgent needs. There is no means of knowing how far there has yet been a shift from sterling to local currency assets. The movement has probably not gone far.

Since this shift of assets is likely to be much more pronounced when the currency boards develop into central banks, the change involves much more than pure finance. An illustration of what is involved may be given—in hypothetical terms—in the context of the Kariba scheme. The new central bank of the Central African Federation may take up short-dated bonds of the Federal Hydro-Electric Board. Electrical equipment for the scheme purchased in Britain may be paid for out of the proceeds of sales of sterling securities held by the Central Bank. In this way there will have been a shift of assets from sterling to local currency but behind that transaction there will lie a shift of real resources. Capital goods will have been imported from the United Kingdom to Rhodesia and this operation will have been financed by converting sterling assets of the central bank into local securities.

★

The imminent emergence of central banks in the new and yet unborn dominions will pose a number of difficult problems. The first will be to ensure that these banks are effective instruments of control in the territories in which they operate. A central bank established in a country devoid of a well-developed local money must operate on lines that depart considerably from those which the Bank of England has gradually evolved or on which the Federal Reserve system was enacted. The difficulty of ensuring effective control of domestic credit is increased by the fact that the bulk of banking business in these areas is usually transacted by large institutions with headquarters in London. These banks will go out of their way to keep "out of the clutches" of the native central bank by keeping their liquid assets relatively large and invested in sterling. The recently published report on the establishment of a central bank in Malaya states that attempts to secure control by requiring the commercial banks to maintain deposits at the central bank proportionate to their liabilities "have not proved very satisfactory." It suggests that in the particular circumstances of Malaya the central bank should be given power to prescribe the percentage not of cash but of liquid assets which the commercial banks should be required to keep against their liabilities. It also suggests that the central bank should have power to vary these percentages and that the assets in question should include not only those in Malaya but those held in sterling:—

> The advantages of the system would be that, by giving the commercial banks a measure of elasticity, it would recognise the practical shortcomings of the system of achieving control through deposits at the central bank . . . it would facilitate the holding of a cushion of sterling exchange and, above all it would recognise the practical limitations of the existing money market in Malaya and the need to allow the commercial banks to continue to use the facilities of the London market in order to maintain properly organised liquid reserves behind their cash in hand.

That should be sound advice not only for Malayan but for other prospective central banks.

•

Another important aspect of the problem of creating effective central banks in the new territories will be that of finding the key men required for good and impartial administration. There must be a governor or deputy-governor well versed in the arts of central banking, an executive head of "chief cashier" rank, and someone of the highest reputation, in charge of the issue department. The need for the highest levels of probity in these appointments to the new central banks is underlined by the recent unsavoury political storms and scandals in the prospective dominions of West Africa. The men of the necessary technical and moral qualities are hard to find, for existing demands have already drained the supplies of top executive material in some of the older central banks.

A third aspect of this transition is cost. Currency boards perform their functions cheaply. The Commissioners are for the most part paid nominal or negligible fees. The secretaries are provided and paid by the British Government. Because of this economy in running costs currency boards have in the past been a substantial source of income for the territories concerned. The income on their investments, after building up the necesary reserves, has helped to finance the current needs of the colonial territories. The picture might change considerably after their metamorphosis, for central banks are prone to be expensive toys. Salaries of governors, directors and staff have to be paid and appropriate premises provided. Far from being net earners, the new central banks may, in terms of strict profit and loss, become net burdens to the territories they serve. None of the difficulties, however, will stop a movement which has behind it all the emotional force of nationalism as well as a considerable measure of economic reason. The new central banks will be established. Most of them will almost certainly make mistakes. It will behove the Bank of England to guide them as tactfully as possible into the ways of sound central banking and in the process to draw still further on the already inadequate supply of good potential central bankers in this country.

Minding Other People's Business

"THEY are almost business doctors, are they not?" was a question asked in the nineteen thirties by a departmental committee taking evidence about a profession aspiring to higher status; it comes as a surprise to know that the professional men in question were accountants, not industrial consultants. Today the nickname could hardly mean anything else. "Calling in consultants" is a well-known routine in a considerable sector of large-scale and medium-sized industry. Plenty of people still have no use for them; but then there are people who say "I've no use for doctors. I know how to keep myself fit—regular hours and a glass of decent claret at dinner" (or whatever the regimen may be). Moreover there is as yet no National Health—or National Efficiency—scheme that would put consultancy services easily within the reach of the small firm.

Industrial consultancy in Britain is about fifty years old, but only since the war has the demand for it grown to such an extent that managements can speak of "our consultants" without a slightly apologetic air, and consultancy firms themselves can offer young men long careers with pensions and reasonable security. One may be cynical about this. On the one hand unemployment before the war enabled firms to impose their will and their methods, however outdated, on workpeople without the comeback of a soaring labour turnover rate; on the other, since the war high taxation has greatly eased the apparent burden of consultancy fees.

But that is not the whole story. Even firms quick to agree with the definition of a consultant as "an ordinary guy a long way from home" do admit the value of bringing in the trained eye and detached mind of an experienced outsider to bear on problems with which everyone on the spot has become far too involved to see objectively. Many big firms—some of them with the largest of internal "work study departments"—attest their belief in outside advice by employing consultants almost constantly, sending them from one problem to another. This they consider no reflection on their own executives. Often the consultants' recommendation is precisely what their own executives want done; but it takes an outsider to resolve the conflicts and put it forward (and even take the opprobrium). Still more often, the broad lines of the solution are known — but the executive time needed to work it out in detail just cannot be found: the consultants come in as reinforcements at a critical sector in management.

Who are the consultants today? Before the war, firms or partnerships were mainly small, and the one-man show was common. Both the firm and the single consultant often specialised in a particular technique and had to seek the clients who needed it. Thus Charles Bedeaux built his organisation round incentive systems based on time and motion study techniques derived from F. W. Taylor; Harold Whitehead, on the other hand, developed new methods of sales analysis; Stephenson, Jordan and Harrison developed cost control and management accountancy; and Urwick, Orr grew up upon new production engineering methods. Today, many single practitioners still specialise; but the larger firms are usually equipped to advise on the whole range of business problems, ranging from a new factory lay-out to the design and launching of a new product. On the British Institute of Management register—which is an entirely voluntary one and confers no special cachet—there are four large firms and a dozen medium and a dozen small ones. These four large firms are believed to have handled some three-quarters of the consultancy jobs done since the war. Since their inception they have had over 3,000 clients.

★

The problem today, for these best-known firms, is more often to get staff to do the jobs than to find clients. Apart from the directors, and some white-headed single practitioners whose stock of wisdom has accumulated since the days when to apply simple Taylorism to a British factory was a revelation, most "business doctors" are young men in their thirties, earning perhaps £3,000 a year on the average. The large firms find that about 60 per cent of their staff are engineers, about 30 per cent accountants, and the remainder from other professions. Nearly all are picked out of industry in the first place and nearly all return to it. The professional career of industrial consultants, like that of nurses and merchant seamen, is usually short. But this is inevitable; it is the best guarantee that consultancy is not quackery. For it means that the "business doctor" was trained initially on the job; and it means that he becomes so good that industry wants to buy him again for permanent use.

This, of course, is the basic problem of many firms of consultants, and the reason why they cannot expand. They reckon that they do not get back their investment in a man for two years; for he must be trained, both in special schools and alongside another consultant on a case. Engineers must be taught costing; accountants, work study. How long they can hold him after that varies. They soon lose a good man who simply joined to widen his contacts in industry with a view to making bigger money. But there is, it appears, an able managerial type of man who likes change, who enjoys being the teacher in teacher-pupil relationships under varying conditions, and who prefers to take responsibility for a single "operation" rather than for a continuous business function in one chair. These men are the backbone of the profession; but even they get tired of life in provincial hotels, acquire wives, and begin to think in terms of regular hours. Big consultancy firms with regional offices may hold men when they reach this stage; it is important to try, since by then their experience will

be exceptional. But at best it is a hard life; and there are few genuine consultants *faute de mieux* in these days. There are, of course, pirates who find that a maximum of plausibility with a minimum of competence pays well with perplexed directors in old-fashioned firms who have just heard that "calling in consultants" is now respectable and even economical.

Whether it is economical depends on the results achieved; it is not cheap when consultants' salaries must equal at least the pay of the middle-level executives whom they advise. Fees are on a time basis; they must cover not only the time of the consultant who "takes up residence" with the firm, but also the cost of specialist services supplied by the firm—for it is the firm's whole experience that is hired (or should be), not the use of a single man. A year's analysis of a problem and the putting in of a new system may cost £10,000; the consultants say that this can be recovered in a single year's working. Often it can be; but this is a large sum for a small firm, and even attempts to arrange part-time advice have not really enabled the consultants to get into the large market that they believe exists among the mass of firms employing 200 workpeople or less.

Consultants assiduously seek to dispel any impression that they have anything in common with the Man Who Stayed to Dinner. Among the best of them there is a defined procedure both for beginning and ending a case. There is usually a preliminary analysis, followed by a contract terminable on one month's notice for a specified period; the conclusion of the job, and the bringing in of the consultant's proposals, are usually specially negotiated when the work has proceeded to the appropriate point. A client who does not stick closely on his side to the terms of reference is liable to be dissatisfied; but it does happen that problems change while the consultant is on the job—and he may be on it for four years.

The consultants have certainly made a useful contribution to the effort to raise standards of British management and productivity since the war. Even if they cannot "widen their market downwards" to the small firm, it may still grow. It may well be that as businesses grow larger and more complex, the dangers of inertia that beset big organisations will need to be offset by more and more of these gingering-up operations from outside.

But there is little sign that the doctors of industry in Britain will increase to the extent that they have done in the United States. The shortage of good men, for one thing, sets a stiff limit. Whereas under inflationary conditions industrial and commercial firms can continue to raise the demand-price of talent, the consultants find it hard to do so. As in other professions fees do not rise as fast as overheads. And in the past it is expansionist attitudes that have engendered the demand for consultancy services; the British industrialist, looking round for economies, is quick to see in bought-out services of all kinds a "frill" to be cut out. He is often ill-advised; but in times like today, for example, though consultants may feel that there is more than ever that needs doing, sales-resistance is beginning to rise again.

Business Notes

Suez Blues

THE Stock Exchange Account that ended on Tuesday was a miserable affair for those investors who had joined the oil share scramble earlier in its three weeks' course. There have been some ugly falls and the losers were gamely cutting their losses up to almost the close of business on Tuesday. The institutions stood back with cash in their pockets and waited for the air to clear. When the new Account started on Wednesday there were signs that the selling had eased. The indices hardly do justice to the steadier tone of markets that seemed to be developing on Wednesday but was hardly maintained on Thursday. The *Financial Times* ordinary share index at 179.5 on Wednesday showed an unbroken fall through the first week of August from 183.9, though the Government security index on balance did not lose ground, for it stood at 83.91 on Wednesday compared with 83.64 a week earlier. The modest recovery at the start of the new account in recent speculative favourites was only sufficient to indicate that the selling had stopped. British Petroleum rose 1s. 3d. on Wednesday to £7 10s., only to fall back to £7 9s. 6d. on Thursday. They remain more than 24s. lower than when the Suez crisis broke.

The behaviour of markets has not fully conformed with the pattern that is expected when there is international trouble. The fall in oil shares was bound to be an element in it, and the preference of investors for transatlantic stocks was equally natural. Some weakness in gilt edged stocks caused no surprise but the market is still narrow and movements have been small. Several commodities have been strong; tin and copper (affected also by labour troubles),

lead, zinc, and rubber have all risen. Commodity shares (other than oil shares) might have been expected to rise too but have shown little response. A rise in shipping freights seemed a natural response to the Government's action in requisitioning a substantial number of ready ships in British ports, but so far this has paralysed rather than stimulated the freight market. The small advance in shipping shares a week ago has not continued.

The table shows a few of the divergent movements since

	July 26	Aug. 8	Rise (+) or Fall (−)
3½% War Loan	70⅝	70 3/16	− 7/16
Shell	163/1½	150/−	− 13/1½
United Molasses	50 6	47/3	− 3/3
P & O	32/3	28/6	− 3/9
United Sua Betong	47/6	46 6	− 1/−
Rhokana	£40	£42½	+ £2½
Rubber, spot, per lb	27d	31 1/16d	+ 4 1/16d
Tin, cash, per ton	£758½	£774½	+ £16
Copper, cash, per ton ...	£287½	£317	+ £29½
Gold, per fine ounce	251/1½	251/9½	+ 7d
Transferable sterling	$2·77	$2·75⅝	− 1⅛c.

July 26th—before the Suez crisis broke. It suggests the general conclusion that the crisis first produced a closing of open speculative and semi-speculative commitments—the closing of bull accounts in oil shares and of bear accounts in some of the commodities. It has not so far developed towards the second stage that would follow if the crisis were prolonged—the buying of goods, services and shares that are likely to be scarce. Charterers have not rushed in to hire ships; industry has not yet started to build up stocks of commodities that may take longer to arrive; and investors are in no hurry to search for shares that might benefit.

Breather for Sterling

STERLING has been in somewhat better shape this week, though the recovery from the post-Suez setback has so far been limited. On Thursday the spot dollar rate fell back ⅛ to $2.78 1/16 and was therefore only 1/16 above last week's nadir of $2.78¼, while the transferable rate this week has actually fallen further, to $2.75 9/10. The most encouraging movements have been in the rates against Continental currencies, which have all improved this week. Most notably, the rate against the D-mark has at last moved perceptibly above the support point at which it has had to be held by the Exchange Account for many weeks. Pressure from Europe has been mainly responsible for sterling's current phase of stress, and this week's modest reversal of the trend is much to be welcomed.

But the biggest excitement in the foreign exchange market in the past week has been in the market for security sterling. On Thursday of last week the rate on this category of "blocked" sterling dropped by nearly five cents to $2.60½—the lowest since the autumn of 1952, and representing a discount of nearly 7 per cent on the parity rate. The drastic weakening of security sterling (the market for which is relatively narrow) went hand in hand with an equally spectacular rise in the premium on dollar securities. After the Bank holiday security sterling moved up to around $2.66¼—still low by the standards of the last year or two.

Dollar Premium Counter Move

THE Government broker entered the market on Wednesday and sold short-dated United States Treasury stocks. The effect of this unprecedented move was to bring the boomlet in dollar—and particularly Canadian dollar—stocks to a sharp, if temporary, halt. The premium that British residents have to pay for the privilege of buying dollar stocks dropped from 6¼ per cent over current United States and Canadian prices on Tuesday to 4 per cent on Wednesday. The consequences of this new technique require explanation. When the Government broker sells short-dated stocks he is in effect pumping dollars into the limited pool from which British investors can buy dollar securities. He thus reduces the premium on them by increasing the supply. His Treasury shorts can be switched by the market into any dollar security for which there is a demand. Indeed the practice of the arbitrage market is to hold its working capital (since its members are not authorised dealers in foreign exchange) in these same short-dated Treasuries.

This action, taken on behalf of the Exchange Equalisation Account, was therefore parallel with operations in the foreign exchange market that nowadays protect both official sterling and the off-grades of sterling; it was presumably based on the view that the demand for dollar stocks had reached an intensity detrimental to the prestige of sterling. This action is in sharp contrast to the Government broker's previous transactions in the dollar security market. Previous sales have not been of "ready money" stocks; they have consisted of mixed bags of common stocks, preferred stocks and bonds that the Treasury thought would be better in the private hands of British investors than in an official portfolio. They have also been designed, not always successfully, to collect as much of the dollar premium for the Exchange Account as possible.

Investors Prefer Canada

IT does not follow that the methods adopted this week will invariably be used in the future, but it does seem possible that they will be needed from time to time. The table gives some impression of the heavy demand for Canadian securities (coupled with buying British shares with substantial Canadian interests) for more than a month. It is by no means wholly the result of the Suez affair. The supply of dollars available for purchases of dollar securities is limited to the proceeds of the sales of other dollar securities by British residents plus occasional bequests and occasional capital transfers, such as the Mexican Eagle payments. Since the supply has been limited the premium has recently been rising with demand. Buying has in

part been marked by speculative interest in Canadian oil shares and in part by a more solid investment interest in established Canadian and United States enterprises. It can be argued that the Canadian security markets are now dangerously high and that British official intervention, just after the news of tighter credit restrictions in Canada, was

	Price, June 29, 1956	Price, July 26, 1956	Price, Aug. 3, 1956	Price, Aug. 8, 1956	Yield, Aug. 8, 1956

effectively timed. Also the tax benefits given to domestic investors in Canada make the yields much more attractive to them than to non-residents. That does not mean that investors taking a long view of Canadian prospects will necessarily be dissuaded.

Calm on the Baltic

So far the shipping freight markets have been very subdued under the shadow of the Suez Canal dispute and the requisitioning of merchant ships by the Ministry of Transport. Fewer dry cargo fixtures have been made than usual and new business for vessels using the Canal is virtually non-existent. Charterers appear unwilling to take British ships as long as the threat of requisitions persists and owners—particularly those with vessels sailing under other flags—are holding off the market in the anticipation that rates must go up. But, apart from a few isolated instances of higher payments for both voyage and time charter, freights have stayed steady. There has been a similar pause in business on the tanker market. Both single voyage and period charter business is down; for Gulf shipments operators and owners are both keeping off the market, waiting for the time being to see what happens. A number of companies that operate liners through the Canal have however given shippers notice that they will not guarantee to call at ports in the Mediterranean—in the possibility that they may need to send vessels round the Cape.

Unless transit through the Canal is physically impeded there seems to be little reason why freight rates for tankers and dry cargo vessels should be seriously affected. The number of ships requisitioned by the Government so far is comparatively few; by Thursday the number known to have been taken over had reached 25, all small dry cargo vessels of 7,000-10,000 tons. The liner *New Australia* of 20,000 tons is in a special category since it is owned by the Ministry of Transport and has been taking emigrants to Australia. The chartering arrangements for these vessels are at the moment uncertain, as it has been left to each individual owner to negotiate terms with the Ministry. But if the requisitions last for some time or many more ships are taken over, then the industry might make a collective move for an agreement on terms and rates—and the loss of tonnage on the market might also begin to be noticeable. For the present, however, the important need is for the Government to say when it has completed its requisitions, and so remove this extra uncertainty to business on the Baltic.

Super Tankers Round the Cape?

Neither of the two large tankers launched this week—at Kure in Japan and at Barrow-in-Furness—could sail through the present Suez Canal fully loaded. The bigger, the *Universe Leader* of 84,730 tons deadweight, built in Japan by National Bulk Carriers for the American company Universe Tankships, is indeed intended to carry oil from Persia to North America round the Cape of Good Hope. The operating economies associated with its huge size—it is the world's largest tanker and the fifth longest ship in existence—will enable it to carry oil by this longer route more economically than the normal-sized tanker can carry it from Persia via the Suez Canal.

The 47,150-ton *Evgenia Niarchos*, the last of ten vessels that Vickers-Armstrong has built for Mr Niarchos, the Greek ship-owner, has a draught of 37 feet 9 inches, which compares with the present 35 feet minimum depth of the Suez Canal. In practice, it would probably pay to operate this tanker through the Suez Canal less than fully loaded, as some of the other big tankers in the 45,000-ton class are being operated. Carrying less than a full load through the canal, and topping up their cargo from ports in the Levant, these vessels carry oil to the West cheaper than a fully loaded tanker in the 10,000-20,000-ton range. Moreover, it usually pays their owners to sail them back in ballast through the canal to the Persian Gulf, in order to get more round trips a year—and this might be possible even for the new tankers in the 80,000-ton range, if the Suez Canal Company's latest programme of deepening—to a minimum depth of 38 feet in 2-3 years' time—were to be carried out.

There are at present seven tankers afloat in the 45,000-50,000-ton range, one of 52,000 tons with a sister ship due off the slipway at Dunkirk very shortly, and the *Universe Leader*. More than 15 others are on order in the 45,000-50,000-ton class, and at least 12 more of 50,000 tons or over. Tanker operators generally talk of 50,000 to 60,000 tons as the size of vessel at which it becomes profitable to carry oil round the Cape to North America at present prices, with the economies of operation and the saving of canal dues more than offsetting the increase of about 40 per cent in route mileage. From the Persian Gulf to North-West Europe, however, is a different proposition; the route round the Cape is 75 per cent longer. The contribution that the existing super-tankers and those soon due to be launched could make to any major carriage of oil round the Cape to Europe would obviously be significant; but nobody should imagine that by current standards it could be cheap.

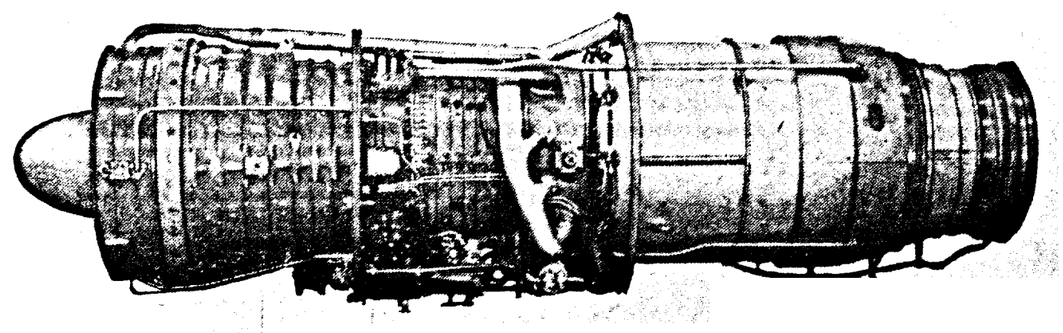
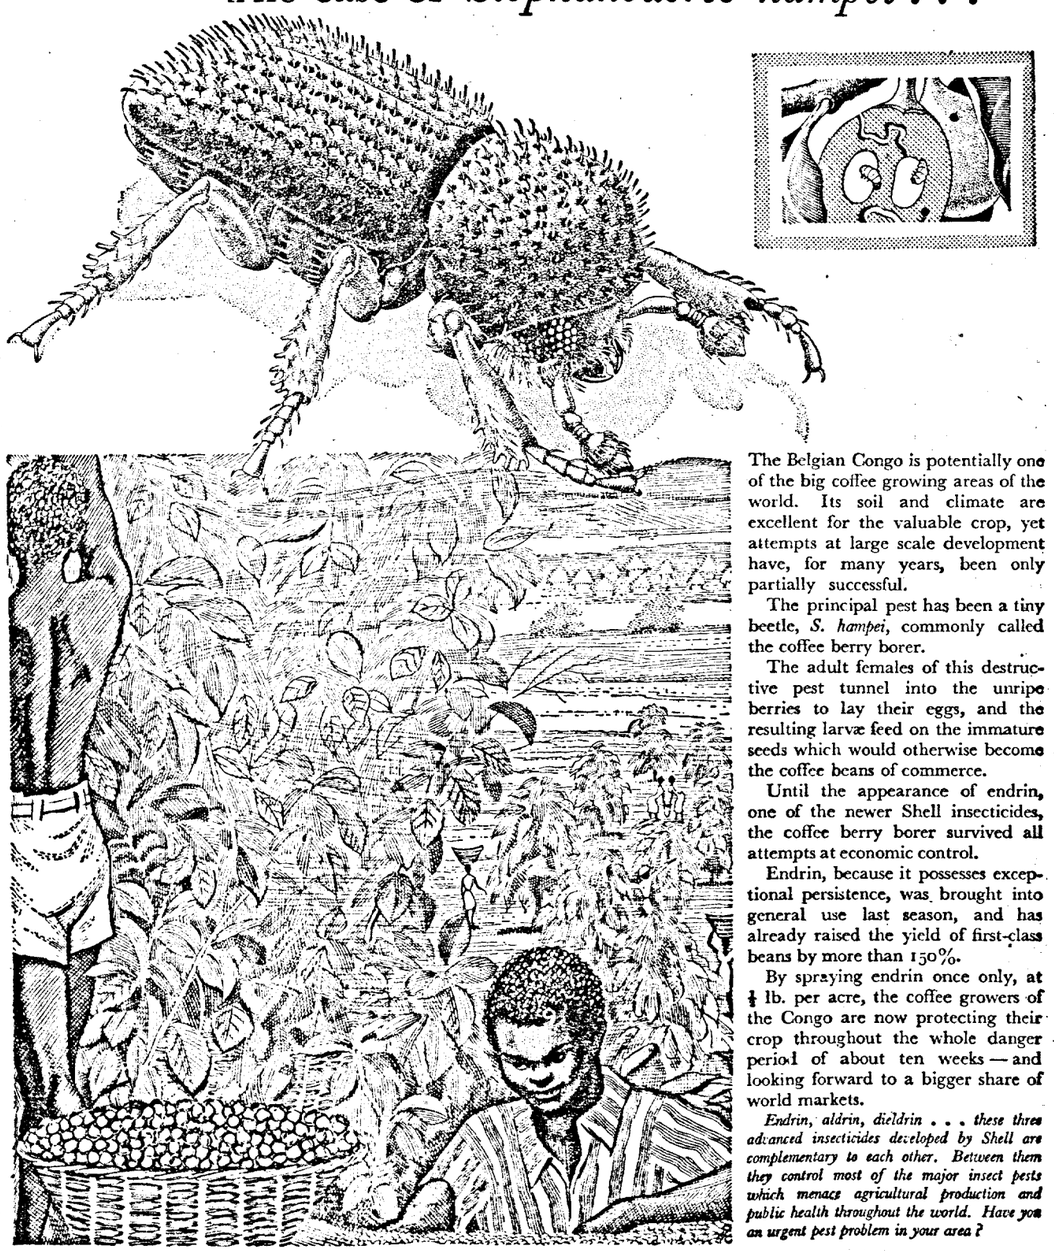
BRISTOL AERO-ENGINES LIMITED



The case of *Stephanoderes hampei* . . .



The Belgian Congo is potentially one of the big coffee growing areas of the world. Its soil and climate are excellent for the valuable crop, yet attempts at large scale development have, for many years, been only partially successful.

The principal pest has been a tiny beetle, *S. hampei*, commonly called the coffee berry borer.

The adult females of this destructive pest tunnel into the unripe berries to lay their eggs, and the resulting larvæ feed on the immature seeds which would otherwise become the coffee beans of commerce.

Until the appearance of endrin, one of the newer Shell insecticides, the coffee berry borer survived all attempts at economic control.

Endrin, because it possesses exceptional persistence, was brought into general use last season, and has already raised the yield of first-class beans by more than 150%.

By spraying endrin once only, at ¼ lb. per acre, the coffee growers of the Congo are now protecting their crop throughout the whole danger period of about ten weeks — and looking forward to a bigger share of world markets.

Endrin, aldrin, dieldrin . . . these three advanced insecticides developed by Shell are complementary to each other. Between them they control most of the major insect pests which menace agricultural production and public health throughout the world. Have you an urgent pest problem in your area?

endrin

endrin, aldrin and dieldrin are SHELL insecticides for world-wide use

BOAC's American Jets

THE contents of the memorandum sent by the British Overseas Airways Corporation to the Minister of Transport after the return of members of the corporation's board from the United States have not been made public but it is now widely assumed that they include a request for permission to order 17 Boeing 707 jet airliners at a probable cost of £30 to £40 million. It has been evident for some time that BOAC needed to order one or other of the two big American jets; other airlines have by now ordered more than 200 of them, many for use on the North Atlantic for which they have been specially tailored. It is on this route that BOAC's lack of modern equipment—indeed its physical shortage of aircraft of any type—has told most seriously. While traffic across the Atlantic has been increasing at a spectacular rate, BOAC's share of it has been sliding steadily downwards. It is now carrying barely 29 per cent of the passengers travelling on its own home market between this country and the United States.

A fleet of jet airliners capable of crossing the North Atlantic non-stop will not automatically cure the decline in the corporation's never rosy health, but it is certain beyond doubt that the deprivation of such a fleet, or permission to buy only a truncated version of what now seems necessary, will reduce BOAC to the status of hanger-on on this most gilded and competitive of all air routes, picking up the crumbs of traffic that its rivals cannot or do not want to carry. In the last three years, during which BOAC introduced the first Comets, and coast-to-coast flights began inside the United States, the trend of traffic has begun to show an unmistakable preference for the faster service.

For the time being, the only way to get higher speeds is to cut out intermediate stops. Non-stop North Atlantic services were started by Pan-American this summer and will be followed by BOAC when the first of the corporation's 10 Douglas Seven Seas arrives in two months' time. But the jet airliners that will come into service in 1959-60 will outstrip not only today's piston engined aircraft, but the turbo-prop Britannia which should, if the expectations of the Bristol Aeroplane Company are fulfilled, be flying on the North Atlantic in 1958. The Britannia is BOAC's insurance against failure by the American jets to fulfil expectations, but with speed at a premium, the Britannia alone cannot keep BOAC competitively strong.

The Choice of Aircraft

THE corporation has been faced with a choice between two almost identical jet airliners, one built by Douglas and the other by Boeing. The first company has an enviable record of civil aircraft development stretching back into the thirties; the second has made little impact on the civil market, beyond the sale of a limited number of Stratocruisers, but since the end of the war it has worked on a succession of steadily larger jet bombers. Not all of these have been free from trouble, but each one has added an accumulation of experience in big jet aircraft that is probably without equal. The first operator to order these jet aircraft, Pan-American, split its order neatly between the two types; since then roughly equal numbers of the two have been ordered. In choosing the Boeing 707, BOAC would simply be showing a preference for the company with the longer technical experience as against the company with the longer commercial experience. If the government does approve the plan to order these aircraft, Boeing could start delivery in 1959 and complete the full order for 17 during the following year.

Two points of doubt have arisen about these American jet aircraft. The first concerns their engines; the second concerns the number of airports that could handle them. If BOAC ordered the Boeing aircraft, they would be fitted with Rolls Royce Conway engines. Both American companies are to some extent working on trust that the Pratt and Whitney engines specified for their aircraft will have the performance figures promised and both have made extensive studies of alternative British engines. The Conway is no more advanced in its test programme than the Pratt and Whitney, but there are some technical grounds for believing that its installation may give either aircraft an advantage over versions fitted with American engines. This certainly influenced Trans-Canada to order Conways for its Douglas DC8s; an order for Boeing from BOAC would give Rolls Royce Conway-powered versions of both airliners in production simultaneously in both factories.

The ability of airports to handle these big airliners has worked up into a major debating point, but airport authorities are meanwhile quietly adapting their runways to meet the new requirements. There is no particular reluctance among airports to make provision for such technical changes as the jets will bring in terms of additional cubic yards of concrete, and the requirements themselves are less formidable when it is remembered that the occasions are few and far between when a civil aircraft—as distinct from a bomber—ever takes off loaded down with passengers, fuel and freight to its maximum permitted weight. It would be a pity if side issues such as these were allowed to cloud what is—or should be—a straight technical choice by BOAC of the aircraft most suitable for its services—on the success of which, incidentally, depends much of the prestige of British civil aviation.

Is Consumption Rising Again?

SHOPPERS spent about six per cent more in the first six months of this year than in the corresponding period last year, but the volume of their purchases was roughly the same. This ought to be a gratifying sign that inflationary pressures were being mopped up and that resources were being freed by restraints on personal spending. But the real level of retail spending appears to have been on the increase: in June the volume of retail sales was higher than in 1955—for the first time this year. The value of these sales in January and February was about three per cent higher than last year, between March and May about six per cent higher, and in June as much as nine per cent higher. After allowing for changes in prices—which in 1955 were fairly stable up to May and this year climbed steadily up to April and then slipped back somewhat—retail consumption looks to have been about one per cent

down in real terms over the first five months and about four per cent heavier in June.

One month is not long enough to support any generalisation, but increased spending in June was spread quite widely. Food shops reported a six per cent increase in sales over June last year—the same order of increase as in previous months—but since prices were a little lower the volume of sales increased. Clothing and footwear sales were also up, both in value and in volume—for the second month running. Household goods stores reported a remarkable gain of ten per cent, against one of two per cent for the half-year as a whole. But here comparison must reckon with last year's hire purchase restrictions which were imposed in February and began to take a severe toll in the summer months. This would also help to explain the 36 per cent increase in furniture sales by the multiples, which follows one of 29 per cent in May. When "no-deposit" hire purchase agreements were stopped last year the multiples' business was virtually halved. Nevertheless by pushing 9-month credit sale agreements they have since clawed some of this back.

Egyptian Payments Stopped

THE control of payments out of Egyptian sterling accounts is being operated more rigorously than was first supposed. Last week all payments into or out of Egyptian sterling accounts became subject to approval by the Exchange Control, but it was not then known how readily approval would be given. A Board of Trade circular to trade associations and firms now makes it clear that no payments are in fact being allowed out of Egyptian sterling accounts to UK residents or non-residents for goods awaiting shipment to Egypt, or in the course of manufacture, unless covered by confirmed credits established on or before July 27th. Approval is also being withheld from all other payments arranged after July 27th, with the previous exceptions that Egyptian nationals can draw on their accounts for living expenses, and that cases not covered by last week's instructions can be referred to the Exchange Control. Payments into Egyptian accounts are still being permitted.

Exports from Britain to Egypt may not necessarily come to a complete standstill, though that is plainly one of the objectives. It is possible that some British firms may be in a position to demand payment in a currency that is transferable, and conceivable, though unlikely, that some firms may be prepared to accept cheques drawn on an Egyptian account that cannot for the present be cashed. But coming on top of the difficulties of arranging shipment of goods to Egypt, and the withdrawal of cover by the Export Credits Guarantee Department, it will probably be enough to discourage all but the most venturesome exporters.

NEW RUSSIAN STATISTICS

The Annual Supplement to our three-monthly economic review of the USSR, just published, contains *new Russian statistics now available in English for the first time:* more complete and *detailed production figures* than ever before; the commodity breakdown of *Russia's foreign trade.*

Film Protection to Continue

FOR many years film production in Britain has been protected by legislation that requires most cinemas to show a prescribed proportion of British films in their programmes. For the last eight years it has had further assistance from the Government. Since 1948 a finance corporation has provided the bulk of its working capital with loans of public money, much of which has had to be written off, and since 1950, as a return for slight reductions in Entertainments Duty, cinema exhibitors have been paying a levy from box-office receipts to the producers of films made here, over and above the revenue these producers normally draw from film rentals. The quota legislation lapses in October 1958; the National Film Finance Corporation's power to lend money for film production expires in March, 1957; and the box-office levy system, which is in form still a voluntary scheme, comes to an end in October, 1957. These last two dates, at any rate, have been worrying British film producers: any film that was intended to draw a reasonable benefit from the levy before October next year ought to go into production in November, and ought therefore to be planned this summer. Last week Mr Peter Thorneycroft allayed these major anxieties of the producers: he said that the quota system would be extended beyond 1958, the NFFC's lending powers renewed before March, and a statutory scheme, comparable in purpose with the box-office levy, instituted when the voluntary scheme comes to an end.

Cinema exhibitors, in the past, have sometimes attempted to use the voluntary levy scheme as a bargaining weapon in attempting to wring reductions in Entertainments Duty out of the Government; from time to time some independent exhibitors have simply refused to pay the levy. Government departments, however, have in recent years affected to believe that there is no connection whatever between this duty, which takes about 35 per cent of the industry's gross revenues, and the financial situation of British film producers. In 1953 the Board of Trade threatened to make the levy statutory unless the exhibitors agreed to renew it on a voluntary basis, which they finally did; this year it is not giving them even the chance to argue. The exhibitors, admittedly, may well retain some hopes from Mr Macmillan's statement this summer that he is reviewing Entertainments Duty and may remodel it; but few of them expect a really significant reduction in their tax burden.

Cut in Australian Preferences?

THE official statement on the trade talks between Britain and Australia is an interim report that leaves many questions unanswered. Four weeks is a short time in which to examine the whole field of mutual trade and reach a comprehensive agreement, and it is not surprising that discussions have to be resumed in September. The two countries are still each other's best customer, but they recognise that the pattern of trade between them has changed in recent years, and both are facing "new and difficult problems." Discussions have concentrated on measures designed to help the balance of payments of Australia, and thus enable its quantitative import restrictions to be reduced. While the principle of mutual preference in tariffs will be preserved, the level of preference is being considered. The question of how best to increase Australia's traditional exports to Britain, particularly wheat, is receiving special attention.

Does the reference to the level of preference foreshadow some reduction in the preferences granted by Australia on British goods? Australia contends—and Whitehall does not deny—that the level of mutual preference is tipped in Britain's favour. Australia feels that if some preferences were reduced foreign countries could sell more goods to Australia and buy more Australian goods in return. It is also believed to be anxious to reduce costs in Australian industry by removing tariffs on certain capital goods and industrial materials. That would automatically sweep away some preferences, but Australia argues that the preferences on these goods are not fully effective: at times when Britain cannot supply enough of them to meet Australia's demand, the rest of them have to pay the full rate of duty, and that merely adds to Australian costs, without helping British exports. Hence the outcome of the negotiations may be a narrowing of preferences on some goods and the elimination of preference (and duty) on others. The British Government would no doubt oppose drastic changes that would materially diminish exports to Australia, and such changes would not be in Australia's real interests either. The extent to which Australia will seek alterations in preferences may depend on how far Britain can assist its sales of wheat.

Five Kinds of State Lorries

THE new form of organisation for British Road Services, announced this week within a few days of the Royal Assent to the Transport (Disposal of Road Haulage Property) Act, is based upon a clear, functional separation of

It's an Ill Trade Wind . . .

THE sterling area has two sharply divided parts. Britain is an exporter of manufactures and buyer of materials, the overseas sterling countries are exporters of mainly primary products and buyers of manufactures. A favourable wind for one does not usually help the other. That is shown by the Board of Trade's analysis of the volume and prices of trade with non-sterling countries in 1955. Last year, overseas sterling countries paid one per cent more for their imports from non-sterling countries than in 1954, and received one per cent less for their exports, since lower prices for their coffee, cocoa, tea, wool and cotton outweighed increased prices for their rubber and copper. So the terms of their trade—their average import prices matched against their export prices—worsened by two points from 96 to 98 (1953 = 100). Britain was a little more successful than this, for it had to pay three per cent more for its imports (particularly ores, timber and pulp and non-ferrous metals) but received two per cent more for its exports—mainly engineering products, metals and coal. So Britain's terms of trade worsened by only one point from 99 to 100.

Movements of prices in the last five years have been much more unfavourable to overseas sterling countries. For the past three years the prices of their exports have been no higher than in 1950—before the Korean boom and subsequent collapse. Though the prices of their imports have fallen too, they were nine per cent higher in 1955 than in 1950. Britain's terms of trade, in contrast, were much more favourable than in 1950. Prices of imports have risen by 16 per cent in the last five years, while prices of exports have risen even more, by 23 per cent.

Indices of the volume of trade explain most of the sharp deterioration in the balance of payments of the sterling area against the rest of the world last year. Exports to non-sterling countries rose by 11 per cent, but imports into the sterling area rose by 18 per cent, and Britain was mostly to blame for that adverse shift. Imports into this country rose sharply by 20 per cent, because we bought much more semi-finished and finished goods and fuel, and exports rose by only nine per cent. Overseas sterling countries increased their imports by 16 per cent but they were able to sell 14½ per cent more goods to non-sterling countries.

*Import price index as a percentage of the export price index; a rise indicates an adverse movement

the traffic handled by the 15,000 or so vehicles that at present constitute its fleet. From next month, when the new arrangements become effective, the state road haulage fleet will operate in five separate companies, each owned by the Transport Commission and controlled by the same Board of Management, although executive management will be conducted, as before, through a number of geographical divisions and districts. The largest of the five companies will operate the 7,750 or so lorries that will be engaged on general haulage. The others will be concerned with special traffics, contract hire, parcels, and meat haulage. The last two—the parcels company with some 4,400 vehicles and the meat haulage company with about 500—are still liable to be sold back to private owners, but the Act allows them to be retained for the time being by the Commission.

Thus the main lines have at last been settled for this venture in competition between state and private hauliers with, one hopes, complete freedom from further political disturbance for some considerable time to come and the possibility of technical co-operation emerging for wage negotiations, traffic clearings, and perhaps the sharing of certain depot facilities. Already there is a tendency for more private hauliers to argue a case for closer co-operation with BRS on common problems. But relations in the road haulage industry are being put to a severe practical test at the present time. Credit restraint has made its impact felt not merely upon some hauliers who bought new or denationalised lorries on credit, but also, and more noticeably, upon the total volume of traffic available. Industrial production is no longer rising and the recession in cars and other durable consumer goods has meant less business for hauliers serving these industries and their suppliers, which are relatively big customers. Yet total carrying capacity is still growing. As a result competition has become much fiercer. Private operators have found it difficult to secure the five per cent increase in freight charges recently recommended by the Road Haulage Association although the increase has been conceded by many large users of outside transport—mainly for work fixed by contract. And rate cutting has broken out in many parts of the country, particularly for casual traffics on the longer hauls.

Sugar in Plenty

BUYERS of raw sugar on the "free" world market can hardly complain of a lack of supplies from now on. In the space of one week the effective exportable supply from members of the International Sugar Agreement has been increased by some 800,000 tons, though a part of that supply had been sold in anticipation but not shipped. On July 31st export quotas under the agreement were raised by 444,000 metric tons to 4,440,000 tons and the restriction on shipments before the end of August was removed. Now the International Sugar Council has announced that Russia, Czechoslovakia, Poland, Holland and Haiti have duly notified it that they will be unable to use quotas or parts of quotas amounting in all to 451,000 tons. This quantity has therefore been allocated to eight other exporters in proportion to their basic quotas; Cuba, the largest exporter, receives 290,000 tons, and Formosa and the Dominican Republic each receive 64,000 tons. Hungary and Mexico, both of which shared in the redistribution, have since told the council that they do not expect to use their quotas to the extent of 20,000 tons and 50,000 tons respectively, and further tonnages may be released by other countries. These will also have to be redistributed.

Redistribution does not alter the total of the export quotas; it simply enables the quotas to be used. The new total of 4,440,000 tons compares with the council's latest estimate of 5,050,000 tons as the requirements of the free market in 1956. Allowing for the sugar likely to be available from non-member exporters the new quota seems a bit generous, and the world price has declined slightly to 3.39 cents a lb (fas Cuba).

Pensions at Last

THE Finance Act became law last week and insurance experts now feel safer in working out their proposals for the pensions for the self-employed and others that it facilitates. A useful description for the non-technical of what is and is not possible under the new law comes in a bulletin prepared for private circulation by the Northern Assurance Company. This brings out clearly the extent of the concession to the over-forties who are allowed by the Act in its final form to make pension contributions (and to claim tax relief for them) to a greater extent than the standard of £750 a year or 10 per cent of net relevant earnings (whichever is less) that is applied to younger contributors. The limits for the older contributors are:—

Year of birth	Maximum contribution lesser of	
	(£)	Per cent of earnings
1914–1915	825	11
1912–1913	900	12
1910–1911	975	13
1908–1909	1,050	14
1907 or earlier	1,125	15

These higher maximum contributions are not open to people who retain pension rights or receive a pension from previous employment.

SHORTER NOTES

With most of the returns in from the 600 manufacturing companies that contribute to the Board of Trade's survey of investment spending, the estimate of capital expenditure by manufacturing industry this year has been revised upwards to £910 million, an increase of 54 per cent on 1954 and of 21 per cent on 1955 (18 per cent extra for machinery and vehicles and 33 per cent more in building work). Only one industry has revised its forecast downwards—the motor vehicle industry, which now expects to spend 22 per cent more this year instead of 30 per cent more.

★

Leek and Moorlands Building Society announces that from August 1st its interest to shareholders is 3½ per cent, not 3 per cent as given in *The Economist* of July 28th. The society, subject to unforeseen circumstances, does not intend to alter its charges to existing mortgage borrowers this year.

★

The directors of Manfield and Sons, the footwear company owning about 200 shops, have recommended shareholders to accept the bid made by Sears Holdings. The offer is one 5s. "A" ordinary share in Sears (now quoted at 14s. 3d.) plus 11s. in cash for every 5s. ordinary share in Manfield (now quoted at 23s., against 19s. 4½d. on the eve of the offer). Manfield shareholders will retain the interim dividend of 7½ per cent.

Mercury Securities, formerly Central Wagon, earned a gross profit of £1,034,722 in the year to March 31st, against £868,065, and the ordinary dividend has been raised from 10 to 15 per cent. The acquisition of a group of insurance brokers came too late to have any effect on profits, but it is reflected in the rise in debtors from £1,661,694 to £6,443,322 and in creditors from £784,174 to £8,373,091.

★

Gross receipts into the Exchequer from the sale of national savings certificates in the week to Saturday last amounted to £4.7 million. The new certificates were issued from the middle of the week.

★

A further fall in hire purchase transactions in the motor trade is disclosed in the July figures issued by HP Information. Private cars sold on hire purchase during the month totalled 40,138 compared with 43,065 in June and 46,988 in July last year. Total contracts registered with HP Information were 65,720 in July compared with 70,846 in June and a peak figure of 87,842 in July last year.

Company Notes

TRIPLEX SAFETY GLASS. Stockholders in Triplex, the safety glass makers, take pot luck with the motor industry and when that luck is out they must expect to dine sparely. They know, too, that they are interested in a concern whose growth must be financed partly by retained earnings. Whether they were prepared for the conjunction of higher group earnings and a sharply reduced dividend that the preliminary figures shows is open to doubt. The operating surplus of the group for the year ended June 30th was £704,403, compared with £611,679, and the net surplus after tax £324,844, compared with £312,764. The dividend is 2s. per 10s. unit (20 per cent), compared with 2s. 6d. (25 per cent). That dividend would have shown a yield of £5 8s. per cent had the ordinary units remained at 37s. and a fall to 35s. 3d. was only to be expected and the yield is now £5 16s. per cent.

	Years to June 30th	
	1955	1956
	£	£
Group surplus before tax ..	*611,679*	*704,403*
Taxation	298,915	379,559
Group net surplus	*312,764*	*324,844*
Retained by subsidiaries ..	12,329	127,329
Parent company's net surplus	*298,091*	*180,470*
Preference dividend	9,256	2,121
Ordinary dividends	111,392	116,487
Ordinary dividends (per cent)	25	20
Retained profits	177,443	61,682
General reserve	100,000	25,020

The board gives three explanations for its decision to reduce the dividend in the face of higher earnings:

(1) It considers that a reduced dividend, despite higher profits, will assist the country in its struggle against inflation.

(2) Expansion schemes launched last year will involve considerable expenditure.

(3) Profits of the parent company were less this year than last, the recession in the motor industry having affected the last five months of the financial year. This loss of profit was made up partly by the acquisition of the balance of the share capital of Triplex (Northern) and by an improvement in some other subsidiaries, particularly of the engineering group.

Patriotic stockholders may wonder ruefully whether it is now their duty to buy only investments guaranteed to pay as little as possible. But the crux of the matter seems to be in the third explanation. The increase in earnings arose largely from newly acquired assets and was related to an increased ranking capital. Ordinary share capital went up from £774,902 to £1,012,933 because of the conversion of preference shares into ordinary stock and also of the issue of 395,542 stock units to Pilkington Brothers in part payment for the control of Triplex (Northern). But as the board points out, profits were adequate to pay at least a maintained dividend on the enlarged capital had they so decided.

★

WILLIAM CORY. As one of the big coal and oil merchants and distributors in this country, William Cory has to decide how much of its resources should be invested in coal distribution (which is still profitable) and how much in oil distribution (where the market is profitable and is growing quickly). It is not an easy decision. In the year to March 31st the group handled a record tonnage of oil but there was also an increase in its tonnage of coal and other produce, and the group's coal export department and its seaborne and railborne coal departments all enjoyed a better year. As a result the consolidated trading profit rose from £2,010,506 to £2,357,230. But the ordinary dividend was left unchanged at 17½ per cent, partly, it seems, because the company has quite formidable capital investments to make.

	Years to Mar. 31,	
	1955	1956
Consolidated earnings:—	£	£
Trading profit	2,010,506	2,357,230
Investment income ..	372,071	424,283
Depreciation	358,337	543,500
Taxation	1,063,567	1,144,632
Net profit	*794,659*	*894,193*
Ordinary dividends ..	580,019	585,644
Retained profits	83,598	273,508
Cons. balance sheet:—		
Net fixed assets	2,335,677	2,946,298
Net current assets ...	14,508,486	13,691,989
Debtors	12,265,359	13,025,969
Quoted investments ..	8,146,605	7,267,464
Cash and T.R.C.'s	5,336,357	4,414,570
Reserves	10,513,745	10,598,519
Ordinary capital	5,800,188	5,800,188

£1 ordinary stock at 65s. yields £6 3s. per cent.

In planning these investments the company has had in effect to decide between coal and oil. It has chosen oil. In view of the increasing changeover from coal to oil for industrial purposes, the chairman, Mr F. A. Leathers, is convinced that the company's present collier fleet, allowing for normal obsolescence, "will be able to take care of future seaborne coal requirements." And the group has placed orders for three new oil tankers, each of

18,000 tons dw to be delivered between 1958 and 1960. These orders must represent the bulk of the capital programme. But there are other commitments as well—to build two new ore-carrying vessels and to keep the group's fleet of lighters and its oil tank vehicles in good trim. In all, capital commitments are estimated at about £7½ million. The group has enough liquid resources in hand to finance such a programme. In October, William Cory celebrates its sixtieth year as a public company. Its record shows that it has kept abreast of the times and stockholders are entitled to believe on the evidence of the latest report that further progress will be made in the future.

★

CARPET PROFITS. Having enjoyed a sellers' market for much of the postwar period, carpet manufacturers are now passing through a bad spell. Production is down and exports have fallen even more heavily. At home, hire purchase restrictions and the increase in purchase tax have cut demand at a time when competition from imported carpets, notably from Belgium, has grown stronger. It is not surprising that three preliminary reports from companies with big interests in the manufacture of carpets make a sorry showing. It may happen with good fortune that the tufted carpet will give some manufacturers a useful market in a moderately priced floor covering, but that lies in the future.

The preliminary report from *Gray's Carpets and Textiles*, which is not exclusively concerned with carpet making, reveals a slight recovery in profits in the year to December 31st, which may reflect economies on textiles other than carpets. Profits, before tax, have risen from £51,834 to £101,263. But there is no dividend for ordinary shareholders, whose 5s. units are now quoted at 3s. 4½d. The directors explain that no ordinary dividend has been earned and that there is not enough cash in hand to permit them to pay an ordinary dividend of 10 per cent out of reserves as was done in the three previous years. Another company, *Associated Weavers* (which makes upholstery fabrics as well as carpets), has reported a drop in profits before tax from £564,542 to £321,620 in the year to March 31st. Ordinary shareholders in this company will receive a dividend, but it has been reduced from 30 to 20 per cent; the 1s. stock units now stand at 2s. 1½d. The directors of *A. F. Stoddard*, a Scottish manufacturer of carpets, whose 5s. ordinary shares are quoted in Glasgow, have adopted a different policy. In the past the dividends they have recommended have been conservative and now for the year to May 31st the dividend has been effectively raised from 10½ to 12½ per cent. Yet trading profits have fallen by 27 per cent, from £489,091 to £355,836. The dividend, however, absorbs only £35,938 from a net profit of £149,976.

★

METAL INDUSTRIES. This company is best known by its activities as shipbreakers and metal merchants. But it has a number of electrical and engineering subsidiaries, and it seems that it is the operation of these subsidiaries that has brought the group so much trouble. As was forecast in an interim statement in January, the company is not recommending an ordinary dividend for the year to March 31st; in the two previous years 9 per cent was paid. In this interim statement the directors said that the amount of the net profit attainable in the year was "problematical." That was a clear warning, but the fact that the group made a loss before tax of £544,923 (against a profit of £631,445) in the year to March 31st must still come as a shock to stockholders.

In February, the directors announced that they were seeking the advice of Cooper Brothers, the chartered accountants, on the administration of the group. Some of the recommendations made by Cooper Brothers after investigating the subsidiaries have now been put into effect and when the accountants' final report has been received a fuller statement on the company's affairs will be included in the chairman's speech. This statement by Sir Charles Westlake will probably be published with the full accounts in September. The £1 units are now 18s.

LONDON STOCK EXCHANGE

Next Account begins: August 22nd
Next Contango Day: August 22nd
Next Settlement Day: August 14th

GOVERNMENT securities tended to improve slightly this week, with undated stocks showing the largest gains. 3½ per cent War Loan rose ⅛ to 70⅜, but short-dated stocks declined after the increase in the Treasury bill rate; 3 per cent Exchequer 1960 falling ⅜ to 94⅞ xd. The new Agricultural Mortgage loan rose 7s. 6d. to a discount of 27s. 6d. There was a further slump in leading oil shares; despite a rally on Wednesday, British Petroleum was 13s. 10½d. lower on balance over the week at 150s. and Burmah lost 6s. 4½d. to 92s. 6d. Shell lost 5s. to 150s. Industrial stocks drifted lower, especially on the last day of the old account, and business was still restricted. A swift rise in Canadian shares up to the end of last week was reversed later, Aluminium Ltd. falling back $10 to $270 xd (London) on Wednesday and International Nickel losing part of the recent rise to $205¼ (London).

Bank and insurance shares remained weak; Barclays receded 9d. to 41s. 3d., Alexanders Discount lost 1s. to 27s. 6d. and Legal & General ¼ to 27½. Stores were weaker on balance, although recovering on Wednesday; GUS "A" fell 2s. 3d. to 36s. and Woolworth 1s. 4½d. to 55s. 6d. Robinson & Cleaver rose 3s. 6d. to 98s. 6d. Motor shares were depressed; BMC lost 4½d. to 6s. 7½d. and Ford 1s. 6d. to 33s. 6d. Vickers declined 10½d. to 42s. 10½d. and steel shares weakened, Dorman Long falling 1s. 3d. to 26s. 9d. Among textiles the trend was downward. British Celanese lost 6d. to 15s., Courtaulds 1s. to 36s. 3d. Unilever dropped 2s. 6d. to 76s. 6d. and United Molasses 2s. 3d. to 47s. 3d. Borax jumped 1⅛ to 15 xd and Hudson's Bay 15s. 6d. to 215s. 6d.

Kaffirs remained depressed; Randfontein slipped 2s. 6d. to 37s. 6d., Vaal Reefs 3s. to 28s. 9d. and OFSIT 4s. 3d. to 55s. 6d. Coppers were firm up to the weekend but eased later. Bancroft improved sharply on Wednesday to remain unchanged on balance at 51s., Rhokana rose 1½ to 42½. Rubbers were weaker, but Ceylon teas were firm.

[1] Great Britain. [2] Provisional estimate. [3] 1954 figures onwards exclude all screening losses normally amounting to around 5,000 tons a week. [4] Excluding government stocks from August, 1953. [5] Average for first quarter. [6] Average for second quarter. [7] New series for retail sales calculated back to January, 1955; revised figures for stocks to be published later. [8] Rayon production only. [9] Including filter cake from May, 1956.

[1] Electricity production for New Zealand represents about 87 per cent of total generation. [2] Copper and tin refer to metal production. [3] General trade (including re-exports) except for Canada, which is special trade only. Imports are cif except for Australia, Canada and S. Africa which are fob; exports are fob. Trade for India and Pakistan includes that going by land, except for Pakistan in 1948 when figures are for trade by sea and air only; annual figures for India are for 12 months beginning April 1st of year stated and for Australia and Pakistan 12 months ended June 30th. [4] Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. [5] Including foreign investments. [6] Including semi-processed gold. Beginning January, 1955, including South-West Africa. [7] In July, 1948, part of holdings was transferred to the State Bank of Pakistan. [8] April, 1948—March, 1949. [9] Including some long-term securities.

Financial Statistics

EXCHEQUER RETURNS

For the week ended August 4, 1956, there was an "above-line" surplus (after allowing for Sinking Funds) of £32,224,000 compared with a surplus of £11,645,000 in the previous week and a surplus of £55,157,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £6,270,000, bringing the total deficit to £237,625,000 (£326,025,000 in 1955-56).

THE MONEY MARKET

The credit stringency in Lombard Street tightened further this week. On Tuesday one or two houses were obliged to take loans at Bank rate, and on Wednesday most houses found themselves "in" the Bank. The sustained purchases by the Bank in the previous fortnight had depleted the market's supplies of maturities; and the Bank's action of forcing the market to take seven-day loans was attributed to its desire to offset the disbursements a week later of the £170 million of maturing unconverted War Bonds. The amount of the week's penal borrowings is reflected in Wednesday's Bank return, which shows a rise in discounts and advances of £18.3 million, to £36.2 million.

The see-saw in the Treasury bill rate continued at last Friday's tender, when the discount houses lowered their bid by 3d. per cent, to £98 14s. 11d., exactly reversing their move at the previous tender and restoring the rate to a fraction above 5 per cent. Total applications were up by £18.1 million to £399.1 million, while the offer was up by only £10 million, and the market's allotment fell back from 73 to 57 per cent. After the tender, October maturities changed hands in the market at up to 4 13/32 per cent.

The Bank return shows a small reflux of notes of £1.5 million from the holiday peak of £1,979.2 million recorded on August 1st.

COMPANY MEETINGS

W. H. SMITH & SON (HOLDINGS) LIMITED

THE HONOURABLE DAVID J. SMITH REVIEWS THE YEAR'S TRADING

The Seventh Annual General Meeting of W. H. Smith & Son (Holdings) Limited was held on August 3rd at the registered office of the company, Strand House, Portugal Street, London, W.C.2.

The Honourable David John Smith, JP, the chairman, presided.

The following is his statement which was circulated with the report and accounts:

The financial year under review has been the most unsettled and difficult experienced for many years. The difficulties encountered, and the resulting reduction in our profit figure, have been largely caused by three labour disputes which took place during the year.

The first was the daily newspaper strike. This removed from our wholesale houses, bookstalls and shops the sale of all London daily papers for the period March 26—April 20, 1955. We could effect no savings to meet this loss, as the rest of the business continued to function and the distribution of weeklies, periodicals, books, stationery, etc., continued.

Soon after this strike ended the railway strike started. This not only closed all our bookstalls to the normal travelling public from May 29—June 14, 1955, but cost a very considerable sum in distributing papers, etc., to all parts of the country by road. Our emergency road transport service, which went into operation at once, worked extremely well and, with the co-operation of the publishers, our deliveries were effected without break.

When this strike ended we enjoyed normal trading conditions for a few months and, with the rise in the price of some of the London daily papers, we began to recover part of our losses in sales.

Then came the printing dispute in the London area which stopped the publication of many weekly periodicals and monthly magazines from February 16, 1956, until after the end of the financial year. This was the third severe blow, and again we were unable to make any significant economies to meet this temporary setback in sales.

In all, these three disputes meant a heavy loss in sales with no corresponding saving in expenses. During the strike periods we did not dismiss or lay off one single employee. Some 20 men at our Alacra factory were affected by the printing dispute ; all but one of these men, I am glad to say, are now at work again.

I think it speaks well for the resilience and enterprise of this business that we were able to weather these three severe blows.

RISING EXPENSES

In common with most businesses we have had to face a steep rise in expenses during this year. Under normal circumstances the extra gross profit on increased sales would have gone a long way towards offsetting this rise, but the particular difficulties which I have already mentioned and which were outside our control have prevented this. We shall again have increases in expenditure to meet in the coming year, as the following facts show.

During the last financial year wages increased by £564,365. Since 1948 wages have been steadily rising, and without any significant growth in the labour force our wage bill has increased from £3,181,978 in 1948-49 to £5,433,476 in 1955-56, an increase of 70.76 per cent. Annual increases have been as follows:

1949/50	£303,370	(9.53 per cent increase)
1950/51	£276,694	(7.94 per cent increase)
1951/52	£359,122	(9.55 per cent increase)
1952/53	£212,796	(5.16 per cent increase)
1953/54	£292,512	(6.75 per cent increase)
1954/55	£242,639	(5.25 per cent increase)
1955/56	£564,365	(11.59 per cent increase)

The balance of the large increases granted in the last year have still to be met in the current financial year

Rates charged by British Railways for carriage of our goods have increased during the past year, and during 1956-57 our expenditure under this heading is likely to rise by £42,000.

The new rating valuation falls very heavily on a company such as ours with shops in the best sites. It will involve an increased cost of about £140,000 per annum.

During the year we have recast the pension arrangements for our staff. Our superannuation scheme, started as long ago as 1894, has now been brought up to date and will, we believe, provide good and generous benefits for our staff. The main change has been that pensions will now be related to retiring salary rather than to a money purchase scheme, and a valuable extra benefit is the widows' pension. This new scheme will cost an additional £40,000 per annum.

It can be seen from an examination of these items alone that even greater efforts will have to be made by both management and staff so to expand the business and to examine the methods we are using that these constantly rising expenses are either absorbed by increased business or reduced by more economical methods.

CAPITAL EXPENDITURE

We are losing no opportunity to expand the business where we see good prospects. To finance such expansion substantial capital expenditure is essential for modernising and improving existing shops and bookstalls and wholesale houses, for opening new ones and for acquiring new businesses. In recent years capital expenditure has averaged just over £400,000 per annum and it is worth while reminding ourselves that this money can most economically be found out of the profits of W. H. Smith & Son, Limited. It is essential that our shareholders, the members of the staff and the management should be aware of this fact.

DEVELOPMENTS

The rebuilding of our Birmingham and Hull wholesale houses, mentioned in my statement last year, is now well under way and both will be finished during the present financial year. When completed I do not think there will be any better planned or better equipped wholesale distributing warehouses in the country. Two new wholesale depots have been opened at Weston-super-Mare and Goole.

We have opened a fine retail shop in Hull, which has made a most encouraging start. Other new retail shops have been opened in Ringwood, Hemel Hempstead, Bishop Auckland, Cowes, and Ripon.

Our policy of modernising and improving our shops and bookstalls is continually going forward, and many branches have been either entirely or partly refitted during the year. The effects on the sales have been excellent.

We have found that the installation of bookstalls in hospitals is particularly popular with both patients and staff, and we now have seven bookstalls in hospitals. Two new ones were opened during the year.

During the year literary brains trusts were organised by our publicity department at several public schools and at the *Sunday Times* Book Exhibition at the Royal Festival Hall and were broadcast by the BBC. Many well-known personalities in the world of literature took part in them and they proved extremely popular. We believe they did much to raise the company's prestige in the book world.

We also made an experiment in advertising on television from the new Midland station. Though no spectacular results were obtained we have reason to know that the programme was well liked and attracted a large viewing public.

STAFF TRAINING

The staff training college to which I referred last year has been opened, and courses for our retail staff have been running since November, 1955. Those members of the staff who have attended have derived considerable benefit from the courses and from the discussions and interchange of ideas which they have been able to have with their colleagues from different parts of the country. I am satisfied that this college will play an important and useful part in your company.

ACCOUNTS

The profit shown in the consolidated profit and loss account, after charging additional amounts under the heading of "supplementary payments to staff superannuation and pension funds," as referred to in the notes on the accounts is £1,475,911.

It will be noted that it has been possible to credit £30,000 representing provision for taxation for previous periods no longer required (as against £65,000 for the previous year): after taking into account this credit the charge for taxation is £836,821 (against £972,753).

After charging taxation the consolidated net profit for the year is £639,090 (against £801,612 for the previous year). Out of this amount £268,000 has been transferred to general reserve and £7,403 has been added to the balance of profit carried forward.

The total net dividends on the Preference and Ordinary shares of W. H. Smith and Son (Holdings) Ltd. amounted to £363,687, the small variation in the total compared with

the previous year arising from the difference in the standard rate of income tax for part of the year 1954-55.

The movements in the balance-sheet reserves are shown in the notes on the accounts.

Properties, plant, motor vehicles, fittings and fixtures, etc., have increased during the year by £514,445, after deducting depreciation and sales. The gross total expenditure under these headings amounted to £782,446.

The current assets less the current liabilities decreased during the year by £393,240.

SUBSIDIARY COMPANIES

W. H. Smith & Son (Alacra) Limited.—This company, which manufactures continuous stationery to run over specialised attachments to typewriters and accounting machines, had a successful year. Unfortunately in the last few weeks it was seriously affected by the printing dispute, but even so it earned a good profit. We are confident that we have an excellent product and that this wholly-owned subsidiary will make progress and increased profits.

Versatile Fittings (WHS) Limited.—This company, which started operations just before the end of the year under review, has been formed to market a particularly flexible and easily erected type of shop fittings. W. H. Smith & Son, Limited, will make extensive use of these fittings when redesigning old shops or opening new ones. The response from members of the shop-fitting trade in Great Britain has been encouraging, and plans are being made to develop export business to the Continent and other parts of the world.

W. H. Smith & Son (Canada) Limited.—Mr George Renison, a Canadian who was previously a part-time director of our Canadian subsidiary, has now been appointed full-time managing director. We feel sure that the new arrangement will have considerable advantages. The progress we have made in establishing ourselves in Canada has been slow and we still have some way to go before this subsidiary makes a profit. However, we believe that Canada has a great future, and a well-run business there must share in that future.

DIRECTORS

I am very glad to say that Mr Hugh Saunders, deputy managing director of the Rio Tinto Company Limited, has joined the board of directors.

STAFF

This year has been a hard one for the staff in view of the three disputes to which I have already referred. I cannot speak too highly of the efforts made by all members of the staff to tackle a difficult situation.

DIVIDEND POLICY AND PROSPECTS

During the five years 1950-51 to 1954-55 the group's reserves have increased by over £1,600,000, which is slightly more than the total net dividends paid in respect of the same period. The developments planned for the current financial year and the results so far achieved indicate that it should be a reasonably successful one. In view therefore of the extent to which we have built up the reserves in the past and our belief that the setback in profits in 1955-56 was only temporary we have decided to recommend the payment of the same dividend as last year.

The report and accounts were adopted.

HICK, HARGREAVES & COMPANY LIMITED

ANOTHER SATISFACTORY YEAR

PROGRESS AND STRENGTH MAINTAINED

MR W. D'ARCY MADDEN'S SPEECH

The sixty-fifth annual ordinary general meeting of Hick, Hargreaves and Company, Limited, was held on August 8th, at Bolton.

Mr W. D'Arcy Madden, CBE, JP, the Chairman and Managing Director, presided and in the course of his speech said: The Company has again experienced a most satisfactory year and its progress and financial strength have been well maintained.

The net profit before tax is £578,958, which is an increase of 10 per cent over the previous year. This is after providing full depreciation amounting to £50,083 on the revalued fixed assets to which I referred in my speech last year. Taxation amounts to £284,129 or 50 per cent of the profits earned, and the balance available with £35,141 brought in from the previous year is £329,970.

DIVIDENDS AND BONUS

Of the final net profit, £190,405 or 65 per cent is retained in the business and a final dividend of 10 per cent together with a bonus of 3½ per cent, on the capital as increased by the scrip bonus issue on May 2nd last, is recommended. This gives a total distribution for the year of 25 per cent of the net profit for the year available for appropriation. This year the sum of £26,000 has been set aside from the profits for a bonus for the Company's employees.

Turning to the Balance Sheet, you will notice that the issued share capital today is increased to £756,000 through the bonus issue I have already mentioned, having the effect of reducing the Capital Reserve to £182,121. Also that the authorised share capital has been increased to £1¼ million. The Plant Replacement Reserve has been consolidated with the General Reserve, which now stands at £1 million. On the other side, there is a substantial increase in the value of Work-in-Progress, while cash and investments total £883,077. The excess of current assets over current liabilities is £1,605,818.

WORKS IN FULL PRODUCTION

The works have continued in full production during the year. The contracts on our books still exceed £4 million sterling and include Condensing and Feed Heating contracts for the Central Electricity Authority for commissioning up to the end of 1960, which include five plants of 120 MW capacity. We have also received further orders for auxiliary equipment for the Atomic Power Stations now under construction. The expanded nuclear power programme to 1965 now announced will offer further opportunities in this important field.

The new testing and research building to which I referred last year will shortly be in operation. As stated in the Accounts, our commitments for Capital Expenditure are approximately £123,000, and further proposals for increasing the efficiency and productivity of the Works are under consideration.

THE OUTLOOK

My remarks last year in regard to competition, high cost, and lower profit margins, apply still more forcibly today. Moreover, the increasing size of power units will inevitably result in fewer, if larger, orders for the manufacturers of these equipments. With this outlook, notwithstanding our satisfactory order book and strong position, it is necessary to conserve our financial resources to meet any developments which may lie ahead. This is the policy your Directors have adopted and which I feel sure will receive your full support.

The relations between the management and the employees of the company continue to be happy and satisfactory, and the Directors wish to express appreciation of their work and loyal co-operation during the year.

The report and accounts were adopted.

HOVIS LIMITED

EFFORTS TO STABILIZE PRICES

The fifty-eighth annual general meeting of Hovis Limited was held on July 31st in London, Mr J. F. Morton (Chairman) presiding. After paying tribute to the wholehearted devotion and great ability of Mr Cecil Gordon Wood, whose retirement from the office of Managing Director was announced at the meeting, the chairman said:

The Organization's turnover in all milling products has risen to over £10 million, and that of trading activities unconnected with milling to over £2 million. The increase in turnover, however, has not been sufficient to offset the diminution in the profit margins; this accounts for the reduction in trading profits. In conformity with the Prime Minister's request, we have done our utmost to stabilize prices, so essential to the economic well-being of the country today.

Nevertheless, price stabilization can only be achieved if the costs of all means of production, including services of every kind, remain reasonably constant. Some fluctuations are bound to occur in a healthy, free economy and, of course, there is little we can do to counter a rise in price of essential imports of raw materials. But a great deal can be done in this country. Co-ordination of the will to combat inflation is surely possible if the leapfrog incidence of inflationary trends is halted, and in this respect the public services must all set an example if governmental exhortations are to receive wholehearted response. Our own efforts, so far, have brought about a measure of sacrifice which can only be endured if other members of the economic community fairly play their part. The margin of profit in the milling industry is already low, particularly when one takes into account the high costs of replacing capital equipment, the essential charge for the depreciation of which must form part of the total cost of the product.

As Hovis is unsubsidised, the termination of the bread subsidy will finally remove the artificial price distinctions that now exist. It is satisfactory to know that even under present adverse conditions the sales of our main product, Hovis, still greatly exceed the pre-war demand. Moreover, since the end of the financial year Hovis flour sales have shown a most encouraging tendency to increase.

The report was adopted and a total distribution of 12½ per cent on the Ordinary Stock was approved.

BANQUE INTERNATIONALE À LUXEMBOURG S.A.

LUXEMBOURG

CENTENARY YEAR

REVIEW OF PROGRESS

The annual general meeting of the Banque Internationale à Luxembourg S.A. was held in Luxembourg on May 24th, and the following are details of the report presented by the Board of Directors, which surveys the Bank's work from the time of its establishment:

The Banque Internationale à Luxembourg was founded on April 14, 1856 by Grand Ducal decree as Luxembourg's first bank of issue, and opened its doors on August 1, 1856.

BANK OF ISSUE

In the course of an eventful century, which witnessed two world wars and saw the country occupied twice within 25 years, the Bank continued to discharge its main function for the benefit of the country's economy.

Circulation rose from Thaler 1,226,800 during its first year of operations to Frs. 6¼ million on December 31, 1914, and Frs. 20 million in 1955.

CAPITAL

The Bank's statutes fixed its initial capital in 1856 at Frs. 40 million, although the first subscription totalled but Frs. 3 million. By 1919 this figure had risen to Frs. 25 million. After severe postwar difficulties, this capital was reconstituted at an Extraordinary General Meeting on March 15, 1920. Once the setbacks resulting from the second occupation had been overcome, the Bank's capital was further raised to Frs. 30 million at an Extraordinary General Meeting on May 29, 1947.

RESERVES

Reserve appropriations were effected consistently from the time the Bank was first established, and by December, 1915, they had reached a total of Frs. 8,650,000. In 1944, after the country had been liberated, the opening balance sheet in francs showed reserves as Frs. 28 million. By the close of the year under review a total of Frs. 86 million had been set aside in the Bank's reserve funds.

CREDITORS

The Bank's history has been an example of the elementary truth that a bank lives by the confidence of the public.

The number of current accounts, deposit accounts, and savings accounts rose steadily, and balances had reached the total of Gold Frs. 10 million by the end of the first 25 years. During the next 20 years these balances increased regularly at the rate of Gold Frs. 1 million a year, and totalled Gold Frs. 30 million in 1901. Progress was even more rapid thereafter, and by 1920 a total of Frs. 122 million had been reached. At the end of its first century of business, the Banque Internationale à Luxembourg S.A. could point to the proud figure of Frs. 2,500 million, comprising balances in current, deposit and savings accounts.

BRANCHES

The Bank covers the whole territory of the Grand Duchy, with two branches in Luxembourg town and 18 branches throughout the country. This represents a density of one bank counter for 2,800 people, compared with 7,550 in Belgium and 12,000 in France.

PROFITS

The Bank's reserves up to 1918 were entirely exhausted as a result of the Currency Law of December 11, 1918. Since then, in spite of the setback following the Second World War, reserves have risen encouragingly, and stand at Frs. 86 million today.

Dividends fluctuated around 8 per cent during the 58 years from 1856 to 1914. From 1920 to 1943, the rate remained steady at 5 per cent, and payments at the same rate were resumed in 1948. Since then there has been an upward tendency in dividend payments, and the rate rose to 6 per cent in 1952 and 1953, and to 7 per cent in 1954. The dividend proposed for 1955 again amounts to 5 per cent with an additional Centenary dividend of 10 per cent.

The report, the accounts, and the proposals put forward by the Board were adopted.

BOARD OF DIRECTORS

Max Lambert, Luxembourg, Chairman; Félix Chomé, Luxembourg, Deputy Chairman; Max Arendt, Luxembourg; André Bahuet, Paris; Charles Bech, Diekirch; Louis Lehembre, Brussels; Fernand Loesch, Luxembourg; Victor Prost, Grevenmacher; Willy Putz, Luxembourg; Leon Richard, Luxembourg; Albert Wehrer, Luxembourg; Joseph Wolter, Luxembourg.

LORRAINE-ESCAUT
(Paris)

INCREASED TURNOVER

The annual general meeting of Lorraine-Escaut was held in Paris on June 19th, Monsieur Jean Raty presiding, and the following is a summary of the report presented by the Board of Directors :

EXPANSION

The report outlines the activity of the iron and steel industry and of the tube industry during the year under review. These two industries benefited from the general expansion of the economy and increased their production by 18.4 per cent and 23.2 per cent respectively over the figures for the previous year.

The iron and steel industry came up against certain difficulties, however, which may prevent as rapid and regular a progress as the present demand on the steel markets requires.

The report goes on to stress the problems caused by the cost of raw materials such as fuel and scrap, whose supply gave rise to a certain amount of concern. Little progress was made in the field of transport charges within the area covered by the European Coal and Steel Community, a fact which lends added emphasis to the interest shown by the iron and steel industry in Eastern France in the project of building a Moselle canal.

PRICES

Particular emphasis was placed on the serious question of prices which leave the iron and steel industry with margins insufficient to make the necessary investments and to insure a proper return on capital invested.

In the circumstances, in view of the price increases effected by most of its foreign competitors, the industry had no alternative to the recent increase in its scale of prices.

In the tube industry development was very satisfactory on the whole, both on the home market and in export trade, and prospects seem favourable.

INVESTMENT

An extensive construction programme was carried out during the year, including among its main projects two new blast furnaces at Longwy and Thionville and the new housing for heavy plates at the Mont-Saint-Martin rolling mill, which was taken into service over a period of several months and which will be extended even further in order to raise its production capacity.

Work on other new installations is planned to begin before the end of the current year or at the beginning of 1957, including the production line for the manufacture of large welded tubes at Sedan as one of the most important projects.

FINANCE

The report concludes by referring to the important financial operations conducted by the Company during the year, either on its own account or as part of a group, and by giving an account of the progress and the results of the companies in which Lorraine-Escaut has an interest and which, on the whole, had a favourable year.

TURNOVER AND PROFITS

The Company's turnover during the year rose to Frs.74,419m., as against Frs.59,632m. in 1954 and output developed as follows :

	1955 Tons	1954 Tons
Steel	1,627,000	1,375,000
Tubes	269,000	222,000
Ore	4,241,000	3,600,000

Profits totalled Frs.978,614,958 and it was proposed to declare a dividend of 7 per cent gross as compared with a dividend of 6 per cent gross for the preceding year.

The report, the accounts, and the proposals put forward by the Board were adopted.

APPOINTMENTS

THE UNIVERSITY OF MANCHESTER
RESEARCH STUDENTSHIPS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships, tenable for one year in the first instance, and renewable for a further period, not exceeding two years. The studentships are normally of the value of £350 or £400 per annum. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University.—Applications should be sent, not later than September 1, 1956, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY COLLEGE OF SWANSEA

Applications are invited for the post of Computer in the Department of Economics. The salary will be on the scale £400 x £25 to £500 per annum.—Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications must be received by *Saturday, August 25, 1956*

LONDON COUNTY COUNCIL

Technical College for the Furnishing Trades. Teacher of Social and Industrial History required Monday evenings for the Foremanship course. Rate of payment (at present under review), 46s. 6d. per class.—Application forms from Secretary at College, Fitzfield Street, N.1, to be returned by August 30, 1956. (1500)

THE NATIONAL INSTITUTE OF ECONOMIC AND SOCIAL RESEARCH

The Executive Committee invites applications for the post of Secretary, lately made vacant by the death of Mrs F. S. Stone. The appointment will be for a year in the first instance, with prospects of continuance. The salary will be in the range of £1,100 to £1,450, with F.S.S.U. provision and family allowances.—Applications, with the names of two referees, should be sent to the Acting Secretary (from whom further particulars may be obtained) at 2 Dean Trench Street, London, S.W.1, not later than September 30th.

THE NIGERIAN PRODUCE MARKETING COMPANY LIMITED, 5 BUCKINGHAM GATE, LONDON, S.W.1, has a vacancy for a trainee. Applicants should be Nigerians, possessing a good University degree, a study of Economics and Commercial subjects being an advantage. Commencing salary £650 per annum.

The successful candidate will receive a thorough training in the work of the Company and of the Marketing Board organisation as a whole with a view to eventual promotion to the Company's senior staff.

Apply in own handwriting, giving full details of age, experience, etc., as follows :

In the case of applicants now in the United Kingdom to :
The Managing Director,
Nigerian Produce Marketing Company Limited,
5 Buckingham Gate,
London, S.W.1.

Applicants at present at any of the Universities in the United Kingdom are requested to apply through the Secretary of their University Appointments Board who will forward their application to the Nigerian Produce Marketing Company Limited.

In the case of applicants in Nigeria to :
The Director,
Department of Marketing and Exports,
Consonza House,
Lagos,
Nigeria.

The closing date for applications is August 31, 1956.

MARKETING OFFICER required by N.C.B.'s Marketing Department at London Headquarters, as Head of Section concerned with policy questions on prices and utilisation of fuel, and with the marketing aspects of reconstruction and development in the industry. Applicants should have first-class administrative ability, sound commercial experience, a knowledge of the general problems and structure of the coal industry and some scientific or technical background. Appointment (superannuable) with inclusive range £1,660-£2,375 male according to qualifications and experience.

Write, with full particulars of age, education, qualifications and experience, to National Coal Board, Staff Dept., Hobart House, London, S.W.1, marking envelope SS/367, before September 3, 1956.

GRADUATE IN ECONOMICS required for Statistics Department of well-known Coventry engineering firm. Some experience of Market Analysis an advantage. Interesting permanent position. Modern factory with excellent working conditions. Pension scheme.
Applications, with full particulars, to Box 484.

ASSISTANT STATISTICIANS required by N.C.B.'s Statistics Branch at London Headquarters. Degree in mathematical statistics (or equivalent) and experience in the application of statistical techniques (including punched-card) to practical problems are required. Appointments (superannuable), according to qualifications and experience, within inclusive scales, either £834 to £1,031 male, £754 to £940 female, or £770 to £898 male, £694 to £810 female.

Write, with full particulars of age, education, qualifications and experience, to National Coal Board, Staff Dept., Hobart House, London, S.W.1, marking envelope SS/359, before August 18, 1956.

TURNER BROTHERS ASBESTOS COMPANY LTD., ROCHDALE, invites applications for a post of an unusual nature which offers a great deal of scope for initiative. The work will comprise the collation of statistical information covering most of the Company's activities and the presentation of such information in the form of charts. Applicants should have a knowledge of accountancy and statistics, and a qualification in one of these subjects would be an advantage.

Applications should state age, education, experience, Services career, present salary and salary required, and should be addressed to the Manager, Office Administration Department.

DEPARTMENT OF FINANCE, DUBLIN, invites applications for a post at Economic Assistant.

Age on September 1, 1956, not less than 25 and not more than 35.

Candidates must have at least a Second-Class Honours degree in Economics or a related subject and at least three years' satisfactory experience in teaching Economics or in economic research or in an economic advisory capacity.

Salary (according to age and experience) will be in the ranges (a) £1,400 to £1,700 for a man, and (b) £1,125 to £1,425 for a woman.

Particulars and application form from Staff Section, Department of Finance, Dublin. Latest date for receipt of completed application forms—September 6, 1956.

GOVERNMENT OF PAKISTAN

Applications are invited for the post of Director, Commercial Audit, Pakistan Audit Department, from qualified Accountants having previous experience of Government audit and accounts work. The appointment will be on a contract basis for five years. Salary for the first year will be at the rate of 2,250 rupees per month with increments of 100 rupees per month for the second, third and fourth years of the contract. First class B sea passage for self and family for outward journey and return on completion of contract. Free medical treatment and attendance, according to Rules. Leave on average pay at 1/11th of duty plus leave on medical certificate. One leave passage admissible each way after completion of three years' service. Permission to subscribe to Contributory Provident Fund, Sterling Branch. Liable to serve in either of the two Wings of Pakistan.

Any further information required may be obtained from the Chief Auditor, High Commission for Pakistan, 34 Lowndes Square, London, S.W.1, to whom applications with the names of two referees should be forwarded by August 25, 1956.

EXECUTIVE PRESIDENT—CANADIAN SUBSIDIARY

A leading British Company of Light Industrial Engineers, with several manufacturing establishments in the U.K., foreign Subsidiaries, and a world-wide organisation, intends to appoint immediately a senior Executive Engineer, who can be groomed to take over in two years the duties and responsibilities of President of its Canadian selling Subsidiary.

The opportunities attached to this post are considerable, and the person appointed will require outstanding potentiality, in addition to the following basic qualifications :

(1) Age group, 37-42, inclusive.
(2) An engineering background, preferably university graduate or member of recognised professional body.
(3) Direct experience of the problems associated with selling precision products over a wide engineering field.
(4) Sound executive experience, with recognisable capacity for effective administrative control at the highest levels.
(5) The drive and leadership necessary to direct and expand the activities of an already well-established organisation.

Companies, if any, to which applications are not to be forwarded, should be marked on the back of the envelope.

Applications should be addressed, in an envelope endorsed Canadian Appointment, to Box A 7390, W. H. Smith & Son Ltd., Strand House, London, W.C.2.

MARKET RESEARCH

JOHNSON & JOHNSON (Gt. Britain) LTD. have an opening for a woman as a SENIOR RESEARCH OFFICER at the Head Office of the company at Slough. The appointment will involve entire responsibility for a long term research project requiring the setting up and training of a small field force.

The successful candidate is likely to be about 30-35 years of age and have a sound university background with some knowledge of statistical method or mathematics. She will certainly be well experienced in the design and control through all stages of field surveys and/or consumer panels and have had personal experience in the field.

The commencing salary will be dependent on qualifications and experience but will not be less than £1,000 p.a. Applications, in confidence, setting out full details and salaries earned, to Johnson & Johnson (Gt. Britain) Ltd., c/o 93 Park Lane, London, W.1, marking the envelope "Research Appointment."

COLONIAL ASSISTANT.—Applications are invited for the post of Assistant in the Commonwealth Section of the Labour Party. Some knowledge of colonial affairs and research experience desirable. Salary £600-£650. Application forms, which are obtainable from Mr Morgan Phillips, Secretary of the Labour Party, Transport House, Smith Square, London, S.W.1, should be returned, together with specimens of written work, not later than August 31, 1956.

TAXATION : International firm of Chartered Accountants has vacancies for men wishing to specialise in taxation. Previous experience an advantage but not essential. Good prospects and interesting work with rapid promotion for the right men. Salaries in accordance with qualifications and experience. Pension scheme.—Write Box W.437, c/o Streets, 110 Old Broad Street, E.C.2.

SOLARTRON

PUBLICITY MANAGER

We are seeking an outstanding man capable of advising the Board on all publicity and advertising matters who also has the ability to build up and lead effectively a team of technical writers and publicity assistants. This is a challenging and stimulating opportunity with the rapidly expanding Solartron Group of Companies who manufacture a wide range of electronic test equipment and industrial control equipment for an international market.

Wide experience in the fields of technical writing, publicity/advertising and modern methods of exhibition and display planning will be necessary and an extensive understanding of electronics or a similar technical field is almost essential.

This is a position offering great scope and as excellent future and will carry a substantial four figure salary.

The Group operates a generous non-contributory Pension scheme.

Apply in writing, giving full details of past experience, to the Personnel Director, The Solartron Electronic Group Ltd., Queens Road, Thames Ditton, Surrey.

A FIRST-CLASS Sales Executive with proved selling ability is required by a rapidly growing Company near Liverpool manufacturing speciality chemical products for the plastics industry. The Company is part of a larger group and is extending its distribution throughout Europe.—Interested applicants should state their age, qualifications and proof of selling ability in reply to Box 481.

COMMERCIAL ENGINEERS (ELECTRICAL)

A vacancy exists with the United Kingdom Atomic Energy Authority, Industrial Group, in the Commercial Department of the Technical Policy Branch, Industrial Group Headquarters, Risley, Warrington, Lanca.

DUTIES.—The duties associated with this post are novel in character, and present an interesting opportunity for undertaking responsibility for the assessment of the economical and commercial aspects of nuclear power generation.

The successful candidate will primarily be closely associated with the development of nuclear power stations by the electricity supply authorities within the U.K. It will be necessary for him to acquire a good understanding of the various technical processes operated by the Industrial Group. Opportunity will be given for a period of initial training in the specialised field of atomic energy.

QUALIFICATIONS AND EXPERIENCE.—Candidates should have a Degree in Electrical Engineering, or be Corporate Members of the Institution of Electrical Engineers. A good commercial background is essential, and candidates should preferably have experience in assessing costs of electrical generation and distribution by conventional methods.

A good personality and the ability to work in conjunction with other members of a large industrial organisation are equally important.

Experience in the field of Metallurgy will be an additional qualification, but is not essential.

SALARY.—Will be assessed within the scale, £1,705-£1,980. A contributory Pension Scheme is in operation.

An Authority house for renting by married staff may be available in due course, or, alternatively, substantial assistance may be given towards legal expenses incurred in private purchase.

Suitably qualified persons are invited to send a postcard, quoting Reference 1547, for application form, to the Recruitment Officer, U.K.A.E.A. (I.G.) Headquarters, Risley, Warrington, Lanca.

Closing date : August 17, 1956.

THE ORGANISATION FOR EUROPEAN ECONOMIC CO-OPERATION, Paris, has a vacancy for an economist in the National Accounts Division (age under 35). Total tax-free emoluments between Fr. 1,480,000 and Fr. 1,700,000 per annum. Essential qualifications : nationality of one of the O.E.E.C. Member countries, good honours degree in Economics, ability to draft well in English, working knowledge of French. Experience in economic statistical analysis an advantage.—Write for further information and application form to Personnel Division, O.E.E.C., 2 rue André Pascal, Paris, 16e.

TELEVISION AUDIENCE MEASUREMENT LIMITED want another Account Executive. He must have all the qualities of a first-class "contact" man with several years' (preferably Agency) experience in media and/or research. TV experience would be helpful. This is a job only for a man who can hold his own at the highest level.—Write (in confidence) or telephone for an appointment to Martin Maddan, TAM, Chantry House, Eccleston Street, S.W.1. (VICtoria 0331.)

AMERICAN PUBLIC RELATIONS EXECUTIVE (U.S. Foreign Service background), whose most recent professional services were as counsellor to a West European government and to a Continental enterprise with worldwide exports, is residing in London for family reasons. His experience is offered to an English firm interested in developing its U.S. or Western Hemisphere markets. He maintains excellent Manhattan publicity contacts, and is prepared to collaborate both at a policy level with management and operationally with sales and advertising departments and overseas representatives.—Box 482.

SUCCESSFUL TUITION FOR THE B.Sc.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees : instalments. Over 1,000 Wolsey Hall students have secured this valuable degree since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

THE CHARTERED INSTITUTE OF SECRETARIES

Employers requiring the services of CHARTERED SECRETARIES to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute (Dept. E), 14 New Bridge Street, London, E.C.4.

LONDON COMPANY MARKETING HIGH-CLASS LADIES' HATS OVER GREAT BRITAIN SEEK AGENCY OF A QUALITY BRANDED ARTICLE OTHER THAN HATS, FOR THEIR TWO TRAVELLERS TO SELL.—WRITE BOX 463.

SQUEEZE NOT FREEZE! *The Banker*, in its new, bright look, points to the dangers in the policy, too widely accepted, of switching the instrument of official restraint from monetary action to budgetary calls. The factual background is provided in an analysis entitled *Credit Contraction Halted*.

THE BANKER in its new formats has been the subject of widespread, and favourable, comment. The August issue presents in addition *The Battle of Mortgage Rates*, by John Marvin ; *Principles and Mechanics of Monetary Control*, by Professor F. W. Paish and A. Alford ; *Commonwealth Development Now : Five Years of Legal Aid* and, as every month, the lively commentary by Sir Oscar Hobson, *As I See It*." Price 2s. 6d. monthly from bookstalls or a specimen copy from 9.B. Poultry, London, E.C.2.

EXPERT POSTAL TUITION
for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G912),

The eleventh letter of the alphabet

A HURRIED count on the fingers will bring you to 'K', and 'K' is a very significant symbol. If you are engaged in the management or technical supervision of plants, factories, workshops, or any of the multifarious facets of industry where either heat or cold insulation is used, 'K' is important to you, because 'K' is the symbol of efficiency of thermal insulation materials.

The lower the 'K' factor of a material, the better its insulation properties will be. 'K' can influence the prosperity of the company, the comfort of its employees, the value of its services, the quality of its products: therefore, we repeat, 'K' is important to you.

If low 'K' factor materials are used, the heat loss will be controlled, resulting in less expense on maintenance and running costs. Since it is also likely that expert advice will be needed to decide what goes where, Newalls will gladly discuss your problems with you right from the beginning. For Newalls' long experience in the field of thermal insulation, coupled with their range of insulation materials, give them predominant advantages when dealing with insulation problems.

Whether you are interested in chemicals, power stations, refineries, offices, residential blocks, hospitals, cold storage, *et cetera*—then be sure that Newalls can find the answers to your questions, to your best advantage.

"I feel much safer since we got Nu-Swift Fire Protection . . ."

"Every week we have a number of small fires in our works; they're an unavoidable risk we have to allow for. But of course that doesn't mean that we take them casually. Quite apart from a lot of valuable machinery, we've got *lives* to consider. So our real job is to find the means to stop these fires *quickly* before they do much damage. That's why we've standardized on Nu-Swift extinguishers. They act immediately; they're easy to operate, easy to maintain—always completely reliable. Their system of high-speed recharging is a tremendous advantage; with a supply of spare pressure-charges, one extinguisher does the work of four or more. Yes, our safety standards have really gone up since we got Nu-Swift. As my Works Manager put it: 'at last we've got fire-fighting equipment that's as well designed as the rest of our plant.'
I feel much safer since we got Nu-Swift Fire Protection."

. . . and so will you

because Nu-Swift extinguishers combine these four essential advantages:

* **INSTANT ACTION** immediately the knob is struck—thanks to the principle of pressure-charge operation.

* **GREATER RELIABILITY** through extra care in design and manufacture. The sealed pressure-charges do not leak, evaporate, or cause corrosion.

* **HIGH-SPEED RECHARGING**—thanks to easy-to-drop-in pressure charge, pioneered by Nu-Swift. All 2-gallon models can be recharged in 30 seconds.

* **STANDARD SYSTEM** throughout the range. All models are used in the commonsense upright position. Different colours show at a glance the risk for which each extinguisher is designed.

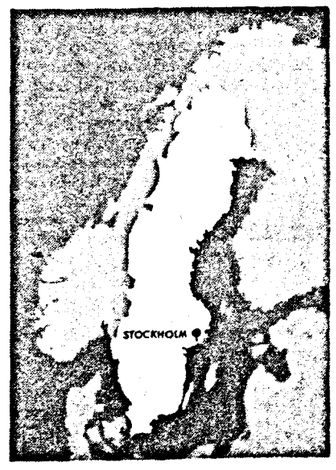
Scandinavia—

a market flowing with milk and honey



The importance of the Scandinavian market grows bigger every year.
Per capita income in this part of the world ranks among the very highest. With a population of 14.8 millions, Scandinavia earns a total annual income of about 92,000 millions Sw. crs. Sweden alone has a population of 7.2 millions and a national income of 40,000 millions Sw. crs.
Sweden is also the home of the St. Erik Trade Fair, the most influential fair in Northern Europe, as well as the only Scandinavian member of UFI. Businessmen and visitors from near and far come to Stockholm by the hundreds of thousands during the 16 days when the Fair is open. Here many firms take on new orders that keep their machines working at peak capacity for years ahead.
The St. Erik Fair offers you the quickest, most direct access to a rich and profitable market at minimum cost—a market flowing with milk and honey—both for exporters and foreign buyers. And for tourists, too—you need only ask those who've been there before.

For the best combination of business and pleasure visit summer-fair STOCKHOLM

Customers in Conference

THE Suez Canal conference has by force of circumstance become a users' conference. Its participants, though weighed down with differences, meet on one parcel of common ground. The twenty-two of them accounted between them last year for 77 per cent of the ships passing Suez, counted by flag ; if Liberian and Panamanian registered ships, run in fact on western account, are added, their total was 96 per cent ; each individually is concerned in the efficiency and availability of the canal.

As this issue of *The Economist* goes to press, all but two of the countries invited have taken their seats ; the absentees are Greece and Egypt. By one standard, the fact that Egypt has stayed away may be an impediment, but by another, it can be rated a boon. For it turns the meeting into a conclave of customers. It offers a chance, though a narrow one, of cutting out political posturing ; it enables speakers to discuss without inhibition the sinister warning of what might happen to any of them—the warning that is implicit in the experience of Israel. It affords an opportunity to determine the lowest common multiple of customers' requirements before seeking the highest common factor of readiness to ensure compliance. This opportunity could so easily be bungled or missed that it is as well for western eyes to be raised from their recent concentration on detail to a wider implication of this meeting—its significance for future relations between themselves and Afro-Asia.

Attending it are three groups of users, each approaching the problem from a different point of the compass and a different social standpoint. The first group consists of western countries whose concerns and desires are well known, but of whom it must be said that the member most eager for action, Britain, needs to avoid acting in isolation. Not only is the United States our indispensable ally, but up to now its views have been more collected and calmer in this matter than our own. The second group is represented by the Soviet Union, disinclined at the moment to see any convulsive change in the *status quo* in the world, but well content, as its note of last week on Egypt's "just action" against "the late company" indicates, to watch a new embroilment between the west and Afro-Asia. Russia also uses the canal sufficiently to be keen for a voice in the discussions ; the communist block's proportion of the total shipping is still only 1½ per cent, but it is rising fast as eastern Europe raises its trade with Asia and the Soviet Far East to levels far above the amounts that can be carried across Siberia. The third group consists of Bandoeng countries whose dependence on the canal may be great, but not so great as to outweigh their support for Egyptian national claims.

The most foolish thing that the western members of the conference could do would be to take a stand that would drive the second and third groups into alliance. In eastern eyes, the assembly and use of force by one country, or even by two, without international authority and before the Egyptians have in fact failed to keep the canal open,

falls into that category. A local victory won at Suez which lost this wider battle would not, in the long run, be worth the winning. The only adroit course now is a proposition capable of gaining the support of at least one of the other two groups. Is this feasible? It has become a little more so within the last two weeks. Some western quarters have begun to talk less about prestige and more about how to make the canal work. In Egypt, at the same time, the sober advice of practical technicians, as well as of Asian users of the canal, seems to have cooled President Nasser's temper after its initial explosion. His decision to send Major Ali Sabri to London is one mark of calmer appraisal. One of the most practical minds behind the Egyptian revolution will now be watching from the wings in London on Nasser's behalf.

Judging by statements made so far, it is likely that the optimum western plan, the vesting of full operating control in an international authority, would be acceptable to the Soviet Union or India, or both, only on condition that the Panama Canal, and perhaps other waterways, be treated likewise. The condition is one that Mr Dulles, needled from home by Mr Truman's reminder of Democratic advocacy of that very step ten years ago, could not possibly accept, Republican Convention or no Republican Convention. If the target is, as it should be, a maximum of agreement, it may be better to go for one of two second bests.

Either of these must entail acceptance of the Egyptian nationalisation, a *sine qua non* for both the Russians and the Asians. One possibility would be to accept it, as in Iran, subject to management by an international body for a fixed period—that body to be responsible for training Egyptians for all posts over, say, the twelve years until 1968. Some form of training arrangements will be essential. The department in the Ministry of Commerce that was set up long since to be ready for canal management in 1968 was hopelessly understaffed. Few Egyptians have acquired the ten years' experience on the high seas which the Suez Canal Company thinks necessary for its pilots; only this year the company has been pressing shipping companies to employ Egyptians for that purpose. In view of Egypt's need for high canal revenues, if only as security for the loans which it will need if President Nasser is to keep his word to his people, international management for a limited time might commend itself to the one or two practical advisers who were responsible for his relative moderation at his press conference on Sunday.

The second alternative recommends itself to customers who hesitate to entrust so much of their well-being not just to President Nasser but to any single pair of hands, and not only now but in the future. This is for a permanent users' council to keep an eye on the organisation set up to manage and administer the Canal. Much debate is likely on the form such an organisation shall take. According to the Pakistanis, Egypt wishes it to be run with Egypt "in authority"; in how much authority over the technical side of management and development? Mr Dulles, contrary to some expectations, said on arrival in London that in his view only an international organisation would afford adequate guarantees against discrimination.

Were such an organisation to be run purely in the interests of efficiency (as is, for instance, in Iraq, the Basra Port Authority that runs the Shatt-el-Arab dredging and traffic), the users' council, watching over the maintenance of acceptable standards on such matters as freedom from discrimination, economic dues, efficient running and development, would hold a sinecure. But were the organisation at any time to hoist Egyptian nationalist colours, the users' council might be busy. Either way, it is as well to face from the start the fact that its charter must be capable of being effective. If the user governments claim a right of supervision, then they will have to be ready to apply sanctions if a partisan Canal Organisation obstructs or ignores them. Without such readiness, each individual user would be exposed to the hazards of discrimination and of being left, as Israel has been left, without redress. Unless the users hang together now, experience points to conditions in which any one of them—Asian as well as western—could hang separately.

A salient point that must emerge from the current discussions is the undesirability of so much reliance on a single vital line of communication. A first thought in the minds of the nations present, and of some absentees, must be the desirability of creating alternative routes. Many are thinking in terms of the supertankers that will return to Vasco da Gama's way of evading Levantine pressure. Others are contemplating a greater variety of pipeline routes, including that from north to south in Iraq, reaching the sea both on the Persian Gulf and via Turkey. But, in view of current experiences, is it possible to tempt oil company money into these huge static investments in countries where moods may change overnight? Are there not now national governments rich enough to build such pipelines for themselves and to earn a reasonable return on their investment by charging a reasonable rent for their services? Investment in such projects is one of the least controversial ways of reducing the monopoly at Suez, increasing competition between routes, and improving the chances that each route will serve producers, consumers, and transit countries to the maximum.

The outlook is stormy. It is clouded by Egyptian over-confidence, by American preoccupation with election issues, by the British government's tendency to be bellicose, by the world's inclination to accept a code of behaviour for ex-dependencies that it would condemn in ex-empires, and by Soviet, Asian and Egyptian pleasure at a showdown with western capitalism. Its bright side is that not only Europe may lose by an uncompromising approach; the other loser would be Asia, with its crying need to sell oil and to attract investment.

Unions Take Notice

LAST week's settlement of the strike at the British Motor Corporation may mark a new departure in British industrial relations. It was agreed that "in the special circumstances of the BMC redundancy" there should be "some payment in lieu of longer notice to some of the men of long service with the company." This amounts to an admission by the Engineering Employers' Federation that to inform the unions only 36 hours beforehand, and to lay off 6,000 men with one week's pay was not good enough. That view was probably taken by most people in this country. But it is something new, and it introduces a principle not previously enunciated by either employers or unions. Both sides seem to have been bounced into accepting it by the course of events, rather than guided towards it by considered policy.

This is more surprising on the union side than on the employers'. The unions' function is to protect the interests of their members, and since it became clear earlier this year that patches of at least temporary unemployment were bound to appear in the summer, they might have been expected to devote a little less thought to a strategy for getting the most out of full employment and a little more thought to a policy of making the best of a reduced demand for labour in certain parts of industry. But nobody, from the general council of the Trades Union Congress downwards, seems to have given any thought to such a policy. The union reaction to redundancy has simply been to rage at the Government for having brought it about. Of the two big unions involved in the BMC strike, the Amalgamated Engineering Union stood for no redundancy at any price, having passed at its last annual conference a resolution pledging support for resistance to redundancy "at the point of production." The Transport and General Workers' Union, in the earlier dispute at Standard, had been fighting, not for compensation, but for a three-day week, and it was not at first to be appeased by the company's offer of £15 for all those dismissed. It was only when these events were overtaken by the dismissals at BMC that both unions saw that a three-day week was a hopeless battle ground, and began to concentrate their demands on compensation.

Having got a cash payment, however, the unions will certainly regard it as a precedent. The employers' federation, on the other hand, is most anxious that it should be understood that the payments which BMC will now make—a second week's pay for those with over three years' service and a third week's pay for those with over ten years—are not compensation for redundancy. It insists that these special payments are in special circumstances, and not to be taken as a precedent. If greater security for the men is wanted, some of them would argue, that is a task for unemployment insurance.

There seems little prospect, however, that this could provide the answer, unless the scale of benefit were radically changed. A suggestion, aired in these columns recently, was that unemployment benefit might be higher in the first few weeks of unemployment. Admittedly this would involve radical changes in the conception of unemployment insurance—the idea of different benefits has been limited to discouraging longer-term unemployment, and has never been applied to encouraging quick mobility. There is a profound difference between the scale of benefit needed to prevent want, and a scale of special payments for the first few weeks of unemployment that would be of real help to people changing jobs.

How far, then, should employers be expected to help in the moving of workers from their plants to other factories? First they can help by joint consultation and forward planning; by deciding in time not to replace workers who leave, redundancy may sometimes be avoided altogether. It must be admitted that this does not always work out so well. Workers do not like employers who talk of redundancy; it makes them uneasy; they are tempted to spread the work; and some key workers are tempted to leave for jobs elsewhere. The others have plenty of time to whip up feeling in favour of a strike, as they did at Standard recently. The spectacle of what happened there, where the unions were given fifteen months' warning of new mechanisation, no doubt had much to do with BMC's decision to hustle the six thousand off the premises in thirty-six hours. Nevertheless, joint consultation, sensibly used by both sides, ought to lessen the hardships of those whose jobs cease.

Compensation is a much harder nut. One idea that has been canvassed is that a compensation fund should be built up by contributions from employers, employed and the Government; indeed, one of the resolutions for the Trades Union Congress embodies this proposal, except that it does not mention any contribution from workers. The idea is borrowed from what is miscalled in the United States the "guaranteed annual wage"—by which the unemployment benefit of dismissed workers in the automobile and steel industries will be supplemented by their former employers to give them about two-thirds of their former earnings. But in Britain, employers are not ready to shoulder the liability, nor are workers keen to forgo any part of present wage increases for the sake of future severance pay.

In this country, the demand for compensation will presumably take the form of a demand for longer notice, which, in practice, means payment in lieu of notice. On this point it is much easier to say what the unions ought not to do, than to say what they should do. First,

in some industries redundancy pay would be difficult to contrive without running into the danger of abuse—building and contracting is one of them. In the seasonal trades (which once again include the motor industry) there is a good argument for spreading earnings over the year, which is the broad effect of the guaranteed annual wage, rather than for compensation based on the assumption that the job is lost for good—which it rarely is in these industries. In depressed industries there would be no point in seeking compensation.

Nor would it be wise, secondly, to seek for each industry a national agreement covering redundancy. Probably the unions would not want it; they would prefer to bargain with individual companies, according to their capacity to pay. Employers' organisations, on the other hand, might not care to see some of their number get first pick of the labour market by offering better terms than the rest; but this means that the prosperous and efficient firm can expand more easily than the unprosperous, and it should not be resisted.

Thirdly, it would be too much to expect that agreements under which no contribution was expected from the worker should cover all kinds of redundancy, regardless of the cause. One large firm has a rule that it pays if redundancy arises from decision about production taken by the management—the introduction of a new plant that displaces labour, for example, or the closing down of a factory—but not if it arises from trade fluctuations outside its control. The distinction cannot always be easy, but the policy seems to work. It would also be absurd to expect agreements to cover any workers with only short service. Standard, it is true, paid £15 to one and all, but it seems hard on the loyal veteran that he should get no more than the raw recruit. The qualifying period for an extra week's pay, however, need not necessarily be as long as the three years of the BMC agreement. A week's pay for one year's service seems a reasonable aim.

Finally, while the unions may ask for agreements on redundancy and other "fringe benefits" at the same time that they are making new large wage claims they should not be so unrealistic as to suppose that they will get both—or even either. The Confederation of Shipbuilding and Engineering Unions has decided on this course with loud war cries this week, in spite of the employers' firm statement in advance that they cannot grant a wage increase this year.

The same opposition will be encountered elsewhere, and this autumn will see it put to the test. But a policy that makes labour dearer will also tend to make it redundant, and the unions really have to decide whether they should switch the emphasis of their demands from the bigger wage packets, which hitherto have been their sole concern, to greater security against sudden economic change. They have made the automatic assumption that they have only to concern themselves with the exploitation of full employment, and they are to be blamed for refusing to consider what they should do in conditions of high prosperity when particular industries are lagging behind. Britain is not running into a slump; incomes are still high; and jobs are still easy to get; and it is slightly strange that the displacement of so relatively few people from such relatively high-paid jobs in the motor industry should have found them so little prepared for change. If the unions are prepared to concentrate on agreements to ease the hardships of redundancy and to assist their members to find new jobs they will have considerable public support.

Germany's Economic Dilemma

THE end of the German economic miracle has been regularly forecast. Germany, say the seers, has at last exhausted the reserves of labour and industrial capacity which have made its formidable industrial expansion possible, and is now immersed in the problems of full employment and inflation that Britain knows so well. They do not find it easy to explain why it is that west Germany's reserves of gold and foreign exchange continue to grow, and why people outside Germany complain of the cruel strain that its payments surplus imposes on the reserves of their own countries. To the British, such a juxtaposition of fear of inflation with a chronic surplus in dealings with other countries seems odd, but in west Germany both problems are real. Germany has not run suddenly into a wall of full employment, for its labour force, still supplemented by the stream of refugees, has grown with remarkable speed and ease. Yet, during the past year, unskilled as well as skilled men have become difficult to get in many areas, and in the main industrial regions for some time there have been more vacant jobs than unemployed. Last year, the growing bargaining power of the unions pushed up wages faster than productivity; in 1956, with the introduction of the 45-hour week in many factories, the gap may be wider still. The cost of living, steady for so long, rose by 3.7 per cent in the nine months to last March, and prices of farm products by still more. Savings deposits in recent months have been growing less quickly than before.

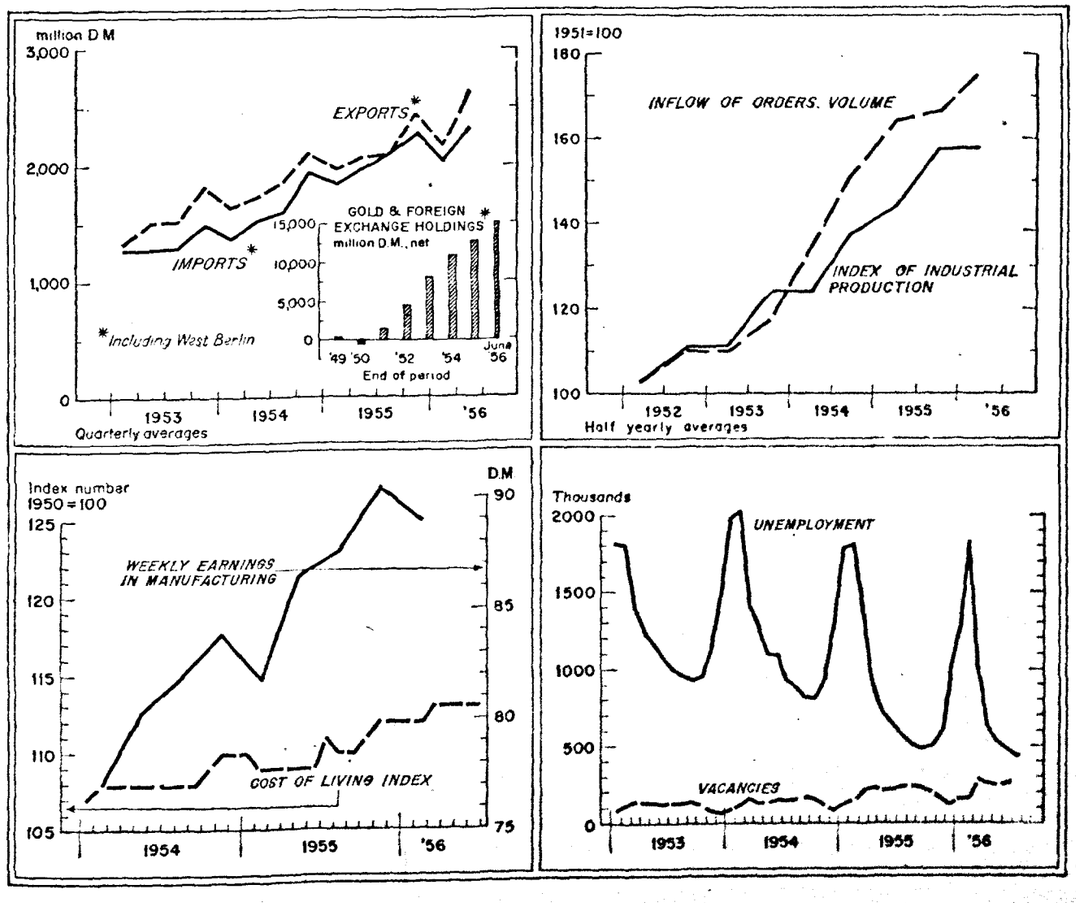
Yet at the same time the enormous west German balance of payments surplus disturbs Europe more each month. Three years ago full employment and the sweeping relaxation of import controls seemed likely to close the German gap. Since then imports have almost doubled, but exports have grown even more. Gold and exchange reserves increased faster in the first half of this year than in the whole of 1955. Because of the

spread of multilateral payments arrangements, Germany's surplus is no longer such an obstacle to its own exports as before, but the strain on the reserves of other countries grows ever more acute. As a result German economic policy faces a peculiar dilemma. Inflation at home demands a policy of restraint; but a cure for the payments surplus would imply the maximum expansion of home demand.

One answer springs at once to mind. Why should not Germany use its surplus to buy more imports which would hold down prices and soak up inflationary purchasing power at home? Encouragement to imports has in fact long been a central theme of Professor Erhard's policies. Import liberalisation has been most effective and has made the German market one of the main motors of prosperity in Europe. The recent tariff cuts will do still more. But it is difficult to believe that larger imports can close the German gap, so long as the German farmer has to remain shielded.

To the British onlooker inured to creeping inflation (and to some Germans, too) another answer may seem obvious. Why not a dose of inflation for Germany, too, to check exports, raise imports and at last cure Europe's Midas of his disease, to the benefit of his competitors? Most Germans cannot be expected to take this view. The experience of two inflations has given them a heartfelt desire for a stable currency. So in the past year German economic policy, and especially that of the central bank, has treated the danger of inflation, rather than the payments surplus, as its main problem, and has taken the path of domestic restraint. The central bank has squeezed credit by raising minimum reserve ratios and interest rates, and by open market operations. The Minister of Finance, for less sophisticated motives but with similar results, has squeezed the financial resources of the community by collecting a colossal budget surplus. The squeeze has worked. The capital market, which has been small and frail ever since currency reform wiped out liquid capital, has been almost extinguished. Local authorities and private builders, unable to raise funds, are starting fewer houses, and construction will fall next season. In industry investment, financed more than ever out of ploughed back profits, helped by generous tax depreciа-

The West German Economy



tion allowances, is still growing faster than the growth of the economy as a whole, but at a slower rate than last year; shortage of outside finance seems to be checking the less profitable projects, restraining the growth of stocks, and slowing down new orders. Even the shortage of skilled workers seems not quite as acute as it was. The cost of living has been stable for four months. On the whole the squeeze has achieved its aim of calming the excesses of boom and attuning the economy to a more moderate rate of growth.

★

But in doing so it has aggravated the payments surplus. The magnet of high interest rates has attracted short-term capital from abroad, increasing Germany's reserves and impeding the restriction of credit. One logical and simple answer has been increasingly mooted in recent months—an upward revaluation of the mark. At one blow revaluation would raise prices of exports and cut those of imports. German imports would grow and exports shrink. And the drop in import prices would push down internal prices too. But at present the German government and central bank have turned down revaluation; the central bank still holds that Germany's surplus will not last. Temporary factors —the influx of short-term capital and the heavy foreign purchases of marks set off by the rumour of revaluation —have clearly helped to puff out the surplus in recent months. And before long rearmament will place a new and lasting burden on the balance of payments. Imports of arms alone in each of the next four years might absorb more foreign exchange than last year's surplus of £158 million; apart from the four billion marks of committed US aid, Germany's arms imports in the period of rearmament could well reach eight to ten billion marks, or over £700 million.

At the same time defence spending in Germany, which may be heavier than the defence ministry has so far implied—perhaps as much as, say, 45 billion marks —must have some expansive effects on the economy. If the new forces are really built on time, defence spending could in theory amount to as much as 20,000 million marks in the peak year, which is more than last year's growth in the national product. German industry, it is true, may be able to take rearmament in its stride, for the continuing growth of investment is expanding capacity, and much of the Bundeswehr's heavy equipment seems likely to be bought abroad. It is mainly lighter equipment—boots and battle-dresses, barrack-room furniture and food, army trucks, small arms, communications equipment—that will be bought at home; and in every case but the last, the German industries involved are not at present under strain. At one time, bottlenecks in the building industry seemed likely to obstruct rearmament and prove a dangerous source of inflation, but these have receded with the likelihood that fewer houses will be built next year. Still, though material capacity may suffice, the recruitment of half a million men is bound to intensify shortages of labour and pressure for higher wages; and recruitment will coincide with a sharp fall in the number of young people leaving the schools.

But economic crystal-gazers cannot ignore political events. What if Herr Blank and his planners are left high and dry by the receding tide of the military cold war? If the new German army, when it comes, is built on a smaller scale and perhaps more slowly than present plans envisage, then economic policy may have to be revised, and new consideration given to the problem of Germany's unwanted pile of gold. Even today there are German critics who demand a more active policy to reduce the "Second Tower of Julius." Prof. Erhard himself is against revaluation for the moment, but he does feel that an adjustment of European exchange rates would be wise; he has not given precise details, but it is no secret that some Germans feel that the French franc and perhaps the pound sterling could do with some devaluation, quite apart from lesser currencies. Some of them tend perhaps to overlook that devaluation is a great deal more hazardous than revaluation. When Professor Erhard lately raised the subject of European exchange parities with the British Treasury, he was rebuffed in a manner which makes it the more likely that a German move, when it comes, will be made without consultation.

★

If alterations in exchange rates are for the moment excluded, what other tools remain? Capital exports are a temporary way out of Germany's dilemma. Switzerland, another chronic European creditor, has solved her problem in this way for the moment. But at present Germany's astronomic interest rates make private capital exports appear Utopian. No one with money to lend will send it abroad when he can get a safe 10 per cent at home. For a while, at least, advance repayment of Germany's foreign debt might help reduce the surplus. And Germany could, like the United States, give her surplus away in the form, say, of gifts under the Colombo Plan or to other underdeveloped countries or areas—though this would be a strange solution for a country with such pressing social and investment needs, in housing for example. But in the long run larger capital exports depend on a revival of the sickly capital market. And this in turn will require a fundamental reversal of internal policy, an easing of the money supply and a reduction of interest rates. To avoid inflation, such a policy would have to be accompanied by the slashing of the generous tax allowances to industrial investment, which industry has so far managed to ward off.

Meanwhile, Germany's growing wealth of reserves becomes more and more embarrassing. Rearmament or a slackening of world boom could change the picture. But if they do not, basic changes in policy—a reversal of the policy of internal restraint—or the more radical, but perhaps less dangerous move, a change in the value of the mark in relation to other currencies — could become imperative.

Notes of the Week

Labour and Its Crisis

THE Labour leadership has extricated itself with some delicacy from the charge of being allied with the Government's more belligerent supporters. Mr Gaitskell—like most people who usually find themselves in tune with his views—must now wish that he had laid more emphasis on the dangers of bellicosity in his speech on August 2nd, even though it included prudent qualifications in its support of the Government; but he could hardly change the inflexions after a whiff of pressure from the left. And the left were in prepared positions. Mr Zilliacus has made himself the spokesman of those who say that the whole Suez question should be referred to the inactive consideration of the veto-ridden Security Council; there has been the usual agitation from the fairly large block of Labour MPs who believe that the sole test of any foreign policy decision should be whether it commands Mr Nehru's support; Mr Warbey and some others appear to be virtually on Nasser's side, and this group would be larger but for the fact that at least half the Labour MPs who would normally be instinctive members for Cairo are already instinctive members for Israel instead.

The Labour leadership, although shifting sideways a little, has avoided the dangerous precedent of being forced into these embraces. Its tactics have been simple. The shadow cabinet met on Monday and unanimously—the Bevanites and former Bevanites agreeing—"endorsed the speech of the leader of the party in the debate on August 2nd," but with "particular" emphasis on the points on which insufficient emphasis was in fact then laid. It also asked for the recall of Parliament immediately after the Suez conference so that the proper emphasis could be laid this time. Apart from a premature new recommendation that the conclusions of the Suez "conference should be submitted to a special meeting of the General Assembly of the United Nations," the Labour leaders are now back in a more flexible posture in face of the crisis. There will still be some mutterings in the party against Mr Gaitskell for his speech of August 2nd, but only among people who always mutter against him anyway; most Labour members will now follow the official line which proclaims—with a slight stretch of the imagination—that what he is saying now is what he has been saying all the time.

The Tories and Theirs

WHILE Labour members have been composing their differences at long range from each other, non-party opinion is contemplating the awkward fact that, just before Parliament broke up, differences among Tory members did not seem to exist. Readers of foreign newspapers are being told that the average Tory backbencher is so resolute against Nasser that Sir Anthony Eden would find it politically difficult to accept even a reasonable solution, unless it were backed either by a public ration of humble pie for Egypt or by a show of force. This is an exaggeration. It is true that the only really spontaneous reaction to the canal *coup* came from the thirty or so Tory militants, howling for Nasser's blood. But the initial reaction of the average Tory backbencher (in so far as such a creature exists) was merely the rather muddled one that the Egyptian dictator seemed to have gone too far this time; the Tories hoped therefore that the Government would take "firm action," although they themselves did not quite see what this could be. It was only after Mr Selwyn Lloyd at a meeting of Tory MPs —much more than Sir Anthony in open debate in the House—appeared to indicate that the Government were prepared to go very far indeed that there was the united rallying to the cause.

Since Parliament rose, the militants have not been able to keep bellicosity on the boil by judicious agitation in the smoking rooms; they have used the correspondence columns of *The Times* instead. It is true that no Tory MP has yet used those columns to preach moderation, but for a fairly obvious reason. No Tory wants to sound pacific now if the Government should happen to be going to be bellicose; but the ordinary backbencher cannot hurt either his conscience or his personal prospects in the party by urging the Government towards stronger action. If the outcome of the London conference should be the sort of settlement that was suggested in *The Economist* last week, Sir Anthony Eden could almost certainly get the vast majority of his party to accept it; he would need to be deft in presenting the case because the tempers of some of his supporters are strained—but that is all. The most damaging charge that could be laid against the Prime Minister in the party is probably the vague one of "dilly-dallying." When and if Parliament is recalled, he will want to be able to give the impression that he is moving swiftly towards a solution; the real political compulsion upon him is to avoid any suggestion that he may be compelled to negotiate for a long time.

Moroccan Eyes on Nasser

ALL over the Arab world, nationalists are watching Egypt much as a class, hand to mouth, watches a tussle between one of its members and a Froebel trainee. Governments, too, are watching, but with more mixed feelings. Their hopes that Nasser will triumph are mitigated by anxieties about the effect on their extremists at home, and on their chances of securing the new foreign investment

that is essential to their plans. Among the most reflective Arabs on this score are some of the leaders in the *Maghreb*—western north Africa.

In Morocco, for instance, the Sultan and his Prime Minister, Si Bekkai, having extended their nominal sway by embodying the "liberation army" into the national forces, are—to France's dismay and chagrin—keeping the nationalist pecker up by ending the contracts of some hundreds of Frenchmen in the police force and by contriving the exodus of a few other French residents on minor charges. But they are at the same time continuing to negotiate with France about reciprocal treatment of nationals and for French help in economic and technical matters.

Even *Al Alam*, the much more extreme Istiqlal (Independence) party paper, which last week made a long survey of the country's economic plight and recommended abrogation of the Act of Algeciras (the international agreement of 1906 whereby Morocco is bound to observe an "open door" tariff system), proclaimed in the same breath the need for attracting new foreign investment. The same cross-currents of emotion and material self-interest influenced its paragraph on the American bases; this proclaimed that the terms on which the bases were leased must be revised by direct negotiation between a sovereign Morocco and Washington, but in a way that would produce for at least another ten years a rent that would be worth Morocco's while.

Mixed Feelings in Tunisia

IN the more mature world of Tunis, the conflict between hearts that beat for Nasser and heads that think him to be setting an imprudent example is even more marked than in Morocco.

A success for him over Suez would give a new impetus to the protagonists of Egypt—the Salah-ben-Youssefists—and, conversely, would make the organisation of "development" much more difficult for the Bourguiba cabinet, many of whose members eye President Nasser askance. M. Bourguiba himself has evaded accepting two invitations to Cairo this summer, pleading—justly enough—extreme pressure of business at home over his country's new political status and economic plight.

Meantime, he is engaged on a programme of social modernisation and secularisation that many a more easterly Arab would like to copy, if he dared, but that will for some time to come be impossible of execution in countries dominated by rural conservatism. Within a matter of months, M. Bourguiba has nationalised former religious property (*habous*), reformed Tunis's archaic Zitouna university, installed secular courts on a unified pattern and declared polygamy to be at an end. Movement at such a pace, and in the teeth of custom, has been possible only because Tunisia has a huge head on a small body, and is dominated to an extent as yet impossible in larger states by the urban opinion of its capital.

Although the pull of the west is no more than intermittent, and will remain so until France is able to cease campaigning in Algeria, it seems that women voters at the next election will strengthen the Bourguibist crusade for a state on a pattern more European than Asiatic—a pattern that will make the Arab League look old-fashioned. M. Bourguiba in his Friday talks to his people has made no reference, as yet, to the Suez affair. He attaches more importance to pursuing Tunisia's own line than to toeing Cairo's, and would be embarrassed by Youssefist satisfaction were Nasser too successful.

Greece Stays Away

GREECE'S final decision not to come to the London conference, after the British Government had rejected its request that the conference should be postponed and the site changed, is regrettable but hardly surprising. Anglo-Greek relations are at rock bottom. Cyprus dominates the political scene in Athens; Colonel Nasser is cheered when he appears on cinema screens; Suez and Cyprus have become inextricably entwined in the Greek mind. To appear at a conference table in London, at the British Government's invitation, might have seemed to blur the outlines of the Greek stand on Cyprus; to stay away is to paint them in more boldly.

Moreover, Greek interests in the Suez dispute are too close to those of Britain for Greek comfort. To oppose western proposals designed to guarantee uninterrupted passage through the canal would be to go against Greece's interests. But to oppose Colonel Nasser might mean the loss of the badly-needed votes of the Arab-Asian block when Greece brings up Cyprus again at the United Nations. The decision to stay away has been criticised by most of the opposition parties, but mainly, it seems, on the ground that the Greek government has missed a golden opportunity of annoying the British.

This episode should not be taken as a sign that Greece is likely—at any rate under the present government—to swing irretrievably away from the West. But it is a forceful reminder that preoccupation with Suez is no excuse for letting the Cyprus sore fester on.

An Autumn Budget?

DOES the Suez crisis mean that Mr Macmillan ought to repeat Mr Butler's 1955 expedient and introduce a supplementary budget this autumn? That question is already being bandied around the club-rooms and in some press discussion, but it is surely a premature one. Whenever a really major change in the strains upon the national economy occurs unexpectedly after the completion of the normal budget there may be need for supplementary fiscal measures, but the occasions upon which this has been judged necessary have been very few, and last year's decision was hardly typical of them. With that exception, "emergency" budgets have been reserved for genuine emergencies or for dramatic changes such as those precipitated by the end of the war in 1945, and Mr Butler's unhappy experience last autumn is bound to discourage any repetition of the experiment of taking budgetary action to cope with lesser changes. If the Suez crisis were to pile up into an emergency requiring or threatening large military expenditures, then indeed a supplementary budget would become a probability, and in

any such budget the stiffening would certainly take the form of additional taxation rather than of new attempts to cut civil expenditures. It is noteworthy, however, that no emergency budget followed the outbreak of war in Korea—despite the massive defence programme that was rapidly projected then.

So long as the bigger dangers inherent in the Suez affair remain no more than conjectural contingencies, the Government will obviously take no final decision on this matter. But already it is clear that the intentions of last April have been frustrated in some degree. Mr Macmillan then "frankly" said that if he had not felt able to count upon his hoped-for new cuts of £100 million in total government expenditure in this fiscal year, he would have felt it his duty to propose very heavy increases in taxation. Where, then, does the Chancellor's duty lie now? He has announced cuts totalling £76 million, but only by reckoning in some of the changes included in the original budget, and part of these savings has already been frustrated or offset by the costs of the military measures taken in these past three weeks. The amounts involved in these uncovenanted outlays cannot have been large by comparison, for example, with the supplementary votes for social services that were repeatedly shrugged off by Labour chancellors during the earlier postwar years. But Mr Macmillan's brave words last April implied that he would disdain any such shrugging. Obviously disinflation has been weakened in some measure; if the Chancellor considers that it is being weakened significantly and yet is not prepared to leap into new budgetary action (as he would be ill-advised to do), he had better press more firmly upon the brakes of monetary policy.

Agricultural Half-Measures

THE Minister of Agriculture has decided against reorganising the work of the county agricultural executive committees along the lines recommended in the recent report of the Wilson Committee. He has been influenced by the lack of enthusiasm for reorganisation among committee members and farmers generally. The Wilson report (like the Ryan report before it) wanted the county committees to concentrate on a limited useful task instead of exercising their present broad but shadowy responsibilities. But the farmers on the committees prefer to have the right to put a finger in every pie, however rarely they exercise it, and they are reluctant to identify themselves with the present direction of Government agricultural policy. Consequently they cling tenaciously to the *status quo*.

Mr Heathcoat Amory has therefore decided for the time being to disturb the county committees as little as possible. In the interests of economy, the routine administration of regulations and subsidies is being transferred to new divisional offices (as the Wilson report recommended); but the advice of the county committees will be sought in all difficult or dubious cases. The committees will also continue to dispense advice and to wield a cudgel over the heads of inefficient farmers, although they are now most unlikely to let it fall.

These decisions are clearly not final. Further administrative changes are pending—including, it is to be hoped, a pruning of such inflated branches as the Agricultural Land Service and a clearer allocation of responsibilities between officials and committees. Other changes will be needed when the Government makes up its mind over the future of coercive sanctions and security of tenure. But it is a pity that the Minister is approaching his task in this piecemeal manner. At a time when vigorous local leadership is still much needed, it is a grave mistake to leave the county committees in a state of suspended animation, possessing powers which they hesitate to use and lacking any clear sense of direction.

A Price Ring Breaks

THE new Monopolies Act has already chalked up its first victim among trade associations that have been enforcing their members' resale prices. Collective resale price maintenance, unlike other restrictive practices, was banned outright by the Act, but industry was given three months' grace before the ban came into effect. Nevertheless the Tobacco Trade Association, which was formed to maintain cigarette and tobacco prices, has decided to wind itself up on September 1st. Other trade associations that have been operating similar practices—the most notable is perhaps the British Motor Trade Association—have until November 1st to conform with the new law.

That the tobacco trade is the first formally to drop collective enforcement comes as no real surprise. Its association has been under a certain strain since last autumn when one of the struggling smaller cigarette makers—the Amalgamated Tobacco Corporation—re-introduced gift coupons. Coupon trading was stamped out by the Association in 1934 with the help of the larger tobacco firms; and it tried, therefore, by means of collective discrimination, to stifle this attempt to beat the gun. But now that collective discrimination must stop, the Amalgamated Tobacco Corporation is free to offer watches, nylon stockings, or anything else in exchange for smokers' coupons.

For the moment, however, the others are not availing themselves of this freedom. No doubt the Imperial Tobacco Company, which makes more than three-quarters of the cigarettes sold in Britain, would be happy to see the industry's smaller fry stay in business; but if competition became too serious it could use some powerful guns—including a stockpile of cigarette cards. Its immediate concern, however, is how to prevent price cutting by the individual enforcement that is still legal. Since there are nearly half a million tobacco dealers, including pubs and cafés, it will probably be fruitless to take price-cutting retailers to court; and a retailer whom it had refused to supply might still get supplies from a wholesaler. Cut-price cigarettes, therefore, may shortly make their appearance.

Mantles of 1888

"A SUCCESSOR STATE," an international lawyer has said, "does not desire to wear the old clothes of its predecessor." The mantle of signatory to the Suez Canal Convention of 1888 is not among those unwanted cast-off

garments. The Suez Canal conference is in the main a conference of users, and perhaps if the invitations had been sent out on that basis alone, the clamour about rights of succession in central Europe might not have arisen. But the invited governments were divided into "parties to the Convention of 1888" and "other nations largely concerned." From the parties to the Convention, two were omitted: Austria-Hungary, and Germany.

One explanation given (not officially) is that these two empires of 1888 do not now exist in the form in which they existed then—Austria-Hungary because of dissolution, and Germany because of division. In the nature of things this will not satisfy their succession states. Nothing has been heard yet of any Austrian protest, but the Hungarian foreign ministry put out a statement saying that it "disapproves and protests most resolutely"; Hungary's status as a party to the Suez Canal Convention of 1888 was expressly upheld, it pointed out, in the Trianon peace treaty. "The other legal successors of the Austro-Hungarian Empire—Austria, Czechoslovakia, and Jugoslavia," it added, "have been ignored in a like manner." The lack of a coastline has not deterred Czechoslovakia from holding that it ought to have been invited, both as a successor of Austria-Hungary and as a user.

With more justice President Tito has declared that Jugoslavia, having inherited most of the coastline, should have been invited as "the rightful heir of the maritime rights of the Austro-Hungarian monarchy" as well as a large user of the Canal. The Soviet government has espoused all these complaints. In maintaining, too, that the Arab states ought to have been invited, it pointed not only to their economic interest—which is in fact great, and should have received more attention—but also to the fact that some of them are successors of the Ottoman Turk.

Heirs of Bismarck

MOST of the public complaints of discrimination in the invitations to the London conference have come from governments which are ideologically against being nasty to Nasser. Thus, the German Democratic Republic (east Berlin) not only declared its opinion that it should have been invited (which the Soviet government supports), but nominated delegates and instructed its foreign ministry to procure British visas. The German Federal Republic, on the other hand, has been tactful about any reservations which it may have attached to its own acceptance of the invitation.

Bonn was invited not as a "party to the Convention of 1888" but as a "nation largely concerned." Some governments could consistently maintain that Germany is divided into two states, and that neither, therefore, is in a full sense the successor of the German Empire; but the three governments who sent out the invitations to the present conference are not well placed to take that attitude. For it is they who have declared (at London in October, 1954, and on other occasions) that

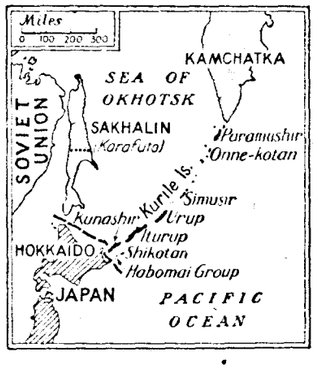
> they consider the government of the Federal Republic as the only German government freely and legitimately constituted, and therefore entitled to speak for Germany as the representative of the German people in international affairs.

Naturally this point has not been overlooked in Bonn, and much thought was given to the advantages and drawbacks of accepting an invitation which did not accord to west Germany the position of sole successor to the German Empire. Probably Bonn was wise not to make a public fuss; it might have caused the Soviet Union to insist on the equal status of the east Berlin government; as things are, Bonn is invited and east Berlin is not.

Official and unofficial comment in west Germany before the conference has not given the impression that the west German delegation will wholly support the British and French attitude to Colonel Nasser. Herr Blücher, the deputy chancellor, told German correspondents last week that what Egypt had done so far did not justify even economic sanctions. Bonn has taken care to preserve at least the appearance of being uncommitted. It has commercial and general grounds for not wishing to offend the Arab and Asian states; but it has a more specific reason, too. Offended by Bonn, Egypt might retaliate by recognising the German Democratic Republic. To avoid any spread in the recognition of east Berlin is a principal aim of west German policy.

Mr Hatoyama Plays for Time

THE talks in Moscow between Mr Shigemitsu, the Japanese foreign minister, and Mr Shepilov about the Russo-Japanese peace treaty have made it clear that the Japanese will have to renounce their claim to sovereignty over the islands of Etorofu, Kunashiri and South Sakhalin. Indeed, this has been obvious since the London talks ended in deadlock last March; only the Japanese Liberal Democrats have kept up the polite fiction that further concessions could be expected from the Russians. After a fortnight of appealing to Mr Shepilov's better feelings Mr Shigemitsu, who himself has always been considered a die-hard on this issue, admitted defeat to reporters, though he refrained from making a formal statement until he could get official support from his government in Tokyo.



Mr Hatoyama and his cabinet have refused him their support. They have refused to renounce the islands and have ordered him to resume the talks, with no concessions, after the Suez conference, which Mr Shepilov and Mr Shigemitsu have both come to London to attend. Mr Shigemitsu considers these tactics ill-advised, and has said so. Nothing, in his view, would be gained by procrastination, and the Japanese government's refusal to reach broad agreement before the interval imposed by the London conference might lead to a complete rupture.

The Soviet government has made it quite clear that its terms will become more and not less stringent as time goes on. True, Mr Shepilov showed anxiety not to offend Japanese public opinion more than was necessary, and he tried coaxing the delegation with a £25 million trade agreement; but the stick has been in use too. The fishing agreement negotiated in May ran out last week, and all Japanese boats have had to leave Russian controlled waters until a new settlement is reached. Agreement is therefore a matter of urgency. The delay, and Mr Shigemitsu's startlingly outspoken resentment of it, can probably be explained by Mr Hatoyama's attempts to indulge in some cabinet reshuffling while Mr Shigemitsu was safely out of the way. If this is true it is regrettable, since it means that Japan's interest in concluding peace is being sacrificed for a domestic party manœuvre.

Mr Mintoff Blows his Top

PICKING quarrels with the British Government has become a well established part of Mr Mintoff's policy. In June, his protests about the amount of financial aid Malta is to have were backed up by a threat that he would advise a dissolution if more money were not forthcoming. This breach was quickly closed for the time being; but in a new and louder protest Mr Mintoff has reopened the whole question and appealed directly to the British Prime Minister. In so doing he has given the Colonial Office a chance to specify the actual sums of money that Britain has paid to Malta since April. So far from no sums having been forthcoming from the £5 million which the British Government agreed to make available this year, as Mr Mintoff alleged, over £1 million has been paid. More than another million pounds has also been paid as grant-in-aid.

The curtain-raiser for the new burst of indignation was a local squabble between the Maltese government and the Governor of Malta over the landing of flying boats that were evacuating wives and children from the Suez Canal. Warning notices were put out by the civil aviation authorities, over the British-owned Rediffusion Company, that fishing boats and other craft should give clearance in certain bays in which the flying boats were to land. Mr Mintoff protested that the Maltese government should first have been consulted, and tried to get the company to put out a cancelling statement, which, on the Governor's order, it refused to do. Thereupon the Maltese government had the Rediffusion Company temporarily put out of action.

This local dispute has also apparently been settled, and the evacuation has proceeded with the full co-operation of Maltese ministers. But it shows how easily the two sides of the dyarchy—the Maltese and the imperial—can get across each other and underlines the importance of the proposals made by the round table conference for improving consultation between them. Mr Mintoff has a justifiable grievance if he were not consulted about the evacuation plans. But his reaction was out of all proportion, especially as Malta's income stands to gain far more from flying boats landing in its bays than from its fishermen fishing in them. Nor is his latest statement, however much it may impress the Maltese electorate by its tirade against the Colonial Office, likely to help the integration on which he has staked so much.

A Confident Conference

Our Special Correspondent writes:

HASTINGS was almost as sunny as it is on the posters for the first day of the conference of the Confederation of Shipbuilding and Engineering Unions. The delegates looked happy as they streamed past the orchestra, past the side shows and candy floss to the pier ballroom. This was not all due to the pleasures of the seaside and of meeting old friends. The confederation was meeting on the morrow of victory over the British Motor Corporation. The strike had been won, in spite of bad timing and indiscipline, by the ramifications of union power in other industries—which is just what this confederation of 40 unions represents. No wonder the delegates were happy.

With his bright eyes and red cheeks the president, Mr Harry Brotherton, always looks happy at any time, even when his industry is embroiled in the most baffling disputes. But his attack on wage restraint was strong and bitter—and warmly received. The loudest applause was reserved for the usual references to Sir Bernard Docker and to

> the incubus of profiteers, middlemen, share pushers, Stock Exchange gamblers and all the other hi-jackers whose permitted practices make a mockery of all our hopes for a decent way of life

But even this did not evoke the most uproarious applause of the day. This was when Mr Berridge, the London district secretary, was asked whether he would like to withdraw a telegram of condolences which he had sent to the Kremlin on the death of Stalin. Mr Berridge rose, red-faced and angry, but the president hastily told him that it was "only Jim's fun."

There was no laughter at the expense of another Communist delegate, Mr Frank Foulkes of the Electrical Trades Union, even though his views were extreme. Mr Foulkes regarded the employers' rejection of their wage claim even before it had been made as a call to arms. "If the employers do not want to negotiate, why should we negotiate?" This was received impassively, and with one accord these representatives of three million workers decided to present their claim for a substantial increase.

The British Larder

LAST year food prices rose more sharply than other consumer prices; yet the effect on the national diet was barely noticeable. Figures released last week show that, in terms of calories, the British people in 1955 were eating only very slightly less per head than the year before, and the average for the whole population of 3,120 a day is still a little higher than the amount supposed to be enough for a man doing moderately active work.

It is, in fact, remarkable how little the diet changes from year to year, even when some foods become more expensive than others. Indeed, there seems to be little, if any, connection between price and the housewife's choice. Among the slight changes recorded between 1954 and 1955, meat became dearer but consumption rose, whereas the price of bread was controlled and consumption fell.

Nor, in view of the rise in the standard of living since 1938, is there as much change as one would expect in today's diet compared with the prewar one. We drink considerably

FOOD CONSUMPTION
(Oz. per head per week unless otherwise stated)

	Average 1934–38	1954	1955
Meat (edible weight)	33·8	32·1	34·0
Fish	7·9	6·3	6·5
Potatoes	56·0	68·3	68·4
Fruit (fresh equivalent)	38·2	38·5	36·9
Vegetables (fresh equivalent)	37·0	38·6	37·3
Flour	59·8	57·6	56·1
Milk (incl. processed: pints)	3·9	5·3	5·3
Cheese	2·7	2·9	2·8
Eggs (number)	4·2	4·4	4·4
Butter	7·6	4·3	4·5
Margarine	2·7	5·6	5·5
Sugar and syrups	33·4	34·3	35·1
Tea	2·9	3·0	2·9
Coffee	0·2	0·4	0·4

more milk than before the war (presumably thanks to the welfare schemes) and eat more potatoes, quite a lot less fish and a little less flour and bread ; butter, moreover, has lost a lot of ground to margarine. Otherwise the British family feeds very much as it did twenty years ago.

Question Time in Budapest

In Budapest the successors of Mr Rakosi have been experimenting—perhaps dangerously—with some of the appurtenances of parliamentary democracy. They have openly admitted that the work of the Hungarian parliament has been a "formality" and that most legislation has been issued in the form of "decree-laws" by the presidential council. They have scolded the deputies for their laziness, their absenteeism and—surely with tongues in cheeks—their tendency to make speeches that merely defend the record of some ministry, giving "the impression that they were not the elected representatives of the people."

The Hungarian parliament is enjoined to turn over a new leaf. It is to meet more frequently and its committees, increased in number from four to ten, are to remain in permanent session. The deputies are to keep in closer touch with their constituents. To give fresh scope for their zeal, parliamentary question-time has been introduced. On the first of these occasions a variety of questions were asked and answered—about "coercion" practised against those in favour of religious education, about the alarming housing shortage in Budapest, about the quality of wine, about the long delays in getting replies out of ministries. A woman deputy who complained that young workers were illegally being put on night shifts received a written reply (because the Minister concerned was away on leave) which she refused to accept ; the Assembly backed her up and demanded that the Minister should present a satisfactory answer at the next session.

Western observers who sat through the question-time got the impression that the whole business had been carefully stage-managed ; for instance, two obviously working class deputies got up and delivered themselves of learned discourses which it is hard to believe were their own unaided work. There has been none of the angry spontaneity that marked the outbursts in the Polish Sejm in April. The chairman of the legal committee that drew up the Assembly's new standing orders said: "We have taken care that our proposals should not lead us back to bourgeois parliamentary practice." And Mr Apro, a vice-premier, rebuked "certain circles" which had been cherishing "delusions" that Hungary was about to go back to a multi-party democracy. But appetites grow with eating. So long as the deputies remain hand-picked stooges, the regime is probably safe from too much intrusion. But there is talk of a new electoral law to replace the list system. Care will be needed here to ensure that men who will really ask questions do not get into parliament.

Mr Gulek's Illegal Handshake

Mr Kasim Gulek, the irrepressible secretary-general of the People's Republican Party, has succeeded in making the Turkish government look foolish—at the risk of landing himself in gaol. A short time ago he made a tour along the Black Sea coast, watched wherever he went by police and soldiers detailed to make sure that he did not infringe the recently enacted law which forbids all political meetings and demonstrations except in the period immediately before an election. When he got to Rize, he went for a stroll through the bazaar and shook hands with the stall-keepers. He was thereupon arrested on a charge of fomenting a political demonstration. After being released on bail he was later brought to trial and given a suspended sentence (because it was a first offence) of a fine and six months in prison.

Mr Gulek is not the sort of opposition politician who will accept a government gag meekly. No doubt he was making a demonstration, of a kind. He is a well-known figure, and, in the present state of Turkey, to make what is, in the government's eyes, a political demonstration, he need do little more than appear in the street and flash his smile at the passers-by. But for this the Turkish government has only itself to blame. By blocking all the normal channels of political expression, in the press and on the platform, and at the same time persisting in an economic policy that gives plenty of cause for discontent, it has put a premium on political ingenuity and courage. By displaying both, Mr Gulek has shown up the absurdity of Mr Menderes's repressive measures.

Not Out

Political and Economic Planning approaches its latest broadsheet, somewhat sacrilegiously called "The Cricket Industry," with the obvious feeling that first-class cricket ought to be in desperate financial straits. Gates at county games last year averaged just over 4,000 on Saturdays, over 3,400 on Mondays, over 2,200 on Wednesdays and Thursdays, but dropped to derisory levels on Tuesdays and Fridays (the last days of three-day matches). They are still going down. Even with the aid of members' subscriptions (which are still more important than gate receipts for some counties), and such other oddments as county shares of Test match profits and the proceeds of private football pools (which make up nearly a third of some counties' gross receipts), most members of the championship either just failed or else just managed to balance their books last year. But it is significant that they did so at widely differing levels of expenditure. Lancashire spent £91,000 in 1955 and earned almost precisely as much ; Surrey spent £68,000 and had £2,000 to spare ; Essex spent only £24,000 and earned £2,000 less than that.

PEP then turns to consider the condition of the players, with the usual feeling that so depressed an industry cannot possibly be attracting the men it wants. But it finds that:

> A professional, with his 1st XI cap, playing regularly for one of the more affluent counties, may earn from his cricket between £700 and £900 a year, plus what he can earn outside cricket between September and April. Players in the less generous or less successful counties may average £600 or £750 from county to county.

There are also the "pickings," ranging from benefit years (Cyril Washbrook got £14,000 in 1948) to sponsorship and advertisement fees from which "the star players can earn far more . . . than from pay as a player."

Nevertheless, PEP notes sombrely that "no other country indulges in a game that goes on for three days at a time, week in week out," and it revives the old proposal that county cricket should be played at weekends only ; in addition to the financial advantage of playing before consistently fuller stands, this would mean that "a wider range of people would be available for first-class cricket" and all players could have a job outside the game. Quite apart from "the disruption to the careers of the existing 800 or so county professionals," however, PEP recognises that "there is likely to be serious opposition to competitive cricket on Sunday, even if games are arranged at times that would not clash with religious services." There is, indeed ; but PEP's own figures hardly justify its pessimistic conclusions. Although its statisticians seem to have been intent on preparing a deliberately crumbling wicket, they have not succeeded in bowling the present system out.

A Trust in Dispute

Last week's announcement by the trustees of the Charles Colston Trust that the trust had been wound up, and its funds redeployed, is to be followed by legal action ; a writ has been issued, against the trustees and against Lady Colston. After reserves had been made for outstanding liabilities, including £25,000 for the Hoover Company's sports pavilion at its Merthyr factory, the trust fund of £300,000 has been handed to Lady Colston, wife of Sir Charles. She has announced that she is setting up a new "Colston Educational Trust" for the benefit of New Hall (Cambridge), Bristol University, Colston's School (Bristol) and Stowe School (Buckingham).

Comment is inadmissible, but it is permissible to recall the known facts. In 1948 Sir Charles Colston, then chairman and managing director of Hoover Limited—the English subsidiary of the American firm—set up a trust with a substantial block of Hoover shares for the benefit of the employees, ex-employees and their dependants of the company he then managed. It was contemplated that the trust would be broken up not later than 1968. The trustees, Sir Harold Webbe, MP, Mr Eric Davies, and Mrs Robert Macdonald, found their wings sadly clipped because the Inland Revenue claimed that Sir Charles was liable to surtax on the income of the trust, even though he himself was completely excluded from benefit, because Lady Colston had been an employee of the Hoover Company and was therefore, as an ex-employee, a potential beneficiary. Sir Charles reclaimed that surtax from the trust, thereby absorbing most of its income.

The trustees have chosen a novel way out of that surtax liability in the future. Since the Inland Revenue has held that Lady Colston was a potential beneficiary of the trust, they have chosen to make her indeed a beneficiary to the extent of the whole of the uncommitted moneys of the trust. In the words of Sir Charles, "she was absolutely free to

Russian Slipperiness

When Russia had once frankly accepted the suggested bases for negotiation, and had carried these into effect by the Treaty of Paris with no more haggling or reluctance than was natural and seemly, we were inclined to hope and believe that she was really in earnest in disclaiming all design or desire to escape by diplomatic subtleties from the genuine spirit of her engagements, and that she was prepared to abandon in simplicity and good faith those aggressive and encroaching plans of policy which the recent struggle had shown her that she would not be suffered to pursue. She declared as much to our Government ; assuring them that they would find that she was resolved to accept in perfect sincerity and as a *fait accompli* the decision of the war, and that what she promised, that she would honourably perform. It now appears that in giving her thus readily credit for a determination to turn over a new leaf and deserve a new character, we were acting rather in conformity with our own principles than with what experience had taught us of hers. . . Her conduct in thus endeavouring to elude and violate the plain provisions, explicit or implied, of the Peace of Paris, appears to us singularly short-sighted and unwise. We were prepared to forget all, and to trust unreservedly. She has shaken our confidence and done much to revive our sentiments of animosity. We were about to go to sleep in our usual confiding simplicity, believing every one to be as honest as ourselves. She has warned us that she needs still to be watched with a vigilant and suspicious eye. She forbids us to put off our armour. Happily, neither fleets nor armies are yet disbanded ; and we, as well as our ally, are in a position to declare that we will not be trifled with. What steps our Government have taken in consequence of these proceedings—which they admit to be infractions of the spirit, if not of the actual words, of the Treaty—we cannot say ; but we think that a distinct intimation should go forth from both France and England that unless the sums necessary to rebuild the fortifications of Kars, Ismail, and Reni are forthwith paid or contracted to be paid by the Russian Government, we shall consider that the Treaty has been broken, and that we are free to take measures accordingly.

The Economist

August 16, 1856

employ it in any way she wished, retaining it for her own personal use if she so wished." She has decided to devote the money to a new educational trust—a full educational trust which would clearly not be liable for taxation. The new trust has objects in which Sir Charles and she have "both been interested for many years." On the face of them these objectives have little direct connection with the employees of Hoover. Two further facts call for mention. Sir Charles's connection with the Hoover company was severed after the formation of the original trust; secondly, certain employees of Hoover are claiming that "the transaction is irregular." That will be for the courts to decide.

German Protestants Meet

THE German Evangelical Church Congress has become a symbolic expression of the community of German people despite the political division of their country. There is little the Congress can do about reunification, and deep political differences sometimes divide the delegates, but they seem to gain from their meeting and the common affirmation of their faith a strengthened sense of community as Christian Germans. This year 22,000 people came to Frankfurt from the Soviet zone, among them Herr Nuschke, leader of the puppet Christian Democrat Union there, and Herr Dieckmann, President of the People's Chamber.

Western critics have often attacked the leaders of the German Protestant church for supping with the devil in such ways as this, for not opposing a materialist totalitarian regime politically, but accepting in some measure the worldly supremacy of the state and separating personal religion from political struggle. And the last church Congress at Leipzig was certainly used by the Pankow regime to propagate its ideas on the way to reunification. But the church's leaders hold that their one vital purpose in the east must be to preserve the church, even at some political cost. When the church itself is threatened, as in the campaign against the clergy of the last few months, they can be firm.

At Frankfurt this time the opposition between Christians in the zone and the regime broke out openly. Speaker after speaker from the zone attacked the regime's policies. Herr Nuschke was asked to make sure when he returned home that an interview given by his colleague Herr Dieckmann, sympathising with the idea of free elections, would receive wide publicity inside the zone. He was asked why as a Christian he and his party tolerated the pagan initiation ceremony which the regime has introduced as a substitute for confirmation. He left the meeting in disgust and was not expected to attend the final session. But on the day itself, he appeared. The East German regime could not afford to miss this opportunity to demonstrate its support for the idea of German unity.

Italians in Belgian Mines

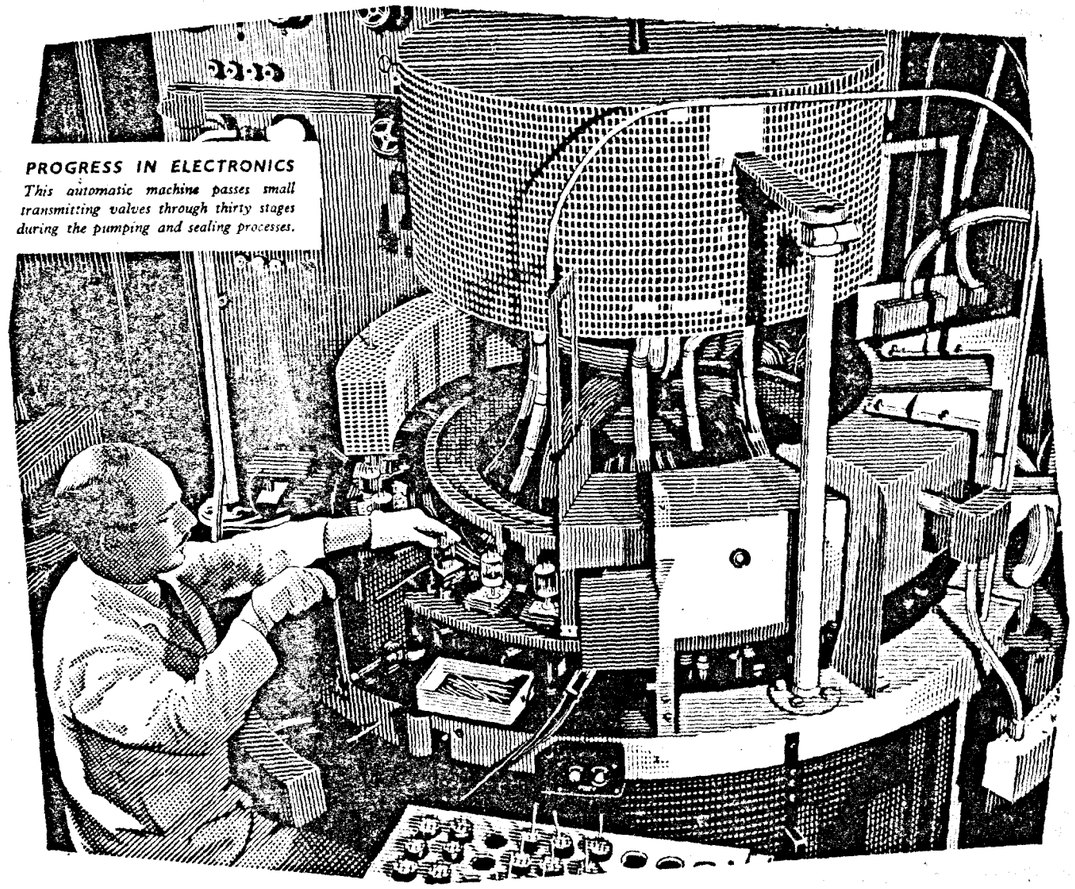
THE disaster at Marcinelle has struck a cruel blow at a development which is of some significance to the integration of Europe, the migration of Italian workers to the Belgian mines. Italy's overpopulation problem is perhaps the biggest single remaining source of poverty and social misery in western Europe. Migration to the fully employed countries of north Europe seems to provide a natural European solution.

The Belgian mines have been short of labour ever since the war, and both countries have benefited from the migration of Italian workers, who now form more than half the Belgian mining force of some 90,000 men. In the light of British experience, perhaps the most remarkable feature of the migration has been the complete acceptance of the Italians by the Belgian mining community. Foreign labour, mainly German prisoners, first went into the Belgian mines in large numbers at the end of the war, when the labour force was dispersed and production an overriding need; it has been accepted ever since. The Belgians themselves, indeed, realists that they are, seem to regard going down the mines as little better than prison. The Italians, together with the several thousand other foreign workers, have become indispensable to Belgian mining.

★

Italian opinion, however, has long been uneasy about the high accident rate. Because of this the Italian government stopped emigration three years ago, and though it was soon resumed, the ban was reimposed this February, after another nasty accident. After negotiations under the auspices of the Coal and Steel Community the Belgians recently agreed to allow Italian inspectors to visit the mines, but the Italians still refused to permit the flow of labour to start again, maintaining that the system of wages incentives sacrificed safety to higher output. The terrible events of the last week have naturally shocked Italian opinion more deeply than ever, striking with special force on the imagination of a nation whose own mining community is minute, and have led to demands in the Italian press that the emigrants should come home.

The court of inquiry has yet to decide whether safety precautions were in fact inadequate at the Bois du Cazier pit. On economic as well as safety grounds these old workings had been scheduled to be closed by the Coal and Steel Community, and were kept open on sufferance while a new shaft was sunk, with indirect financial help from the Community and from the Belgian government. The Authority's pressure for the closing of condemned "marginal" pits may now become stronger. The Italian government, too, though it is unlikely to withdraw labour, will certainly not agree to further emigration except under conditions. Belgian coal output may well suffer.



This machine is part of the product

In the final stages of manufacture, Mullard valves and television tubes part company with the machines on which they are processed. But until they do, the machines are virtually part of the product.

Machines on which electronic valves and tubes are manufactured can be used for no other purpose. Their design is so closely related to the design of the product that the introduction of a development in one is rarely possible without a modification or adjustment in the construction of the other. In many cases, the valves or tubes are activated while still on the machines which process them.

That is why the greater part of Mullard machinery and equipment is designed, developed and built in Mullard's own engineering department. Constant research into manufacturing techniques and progressive development of plant and machinery are among the reasons why Mullard products enjoy a world-wide reputation for performance and reliability.

AT THE OPEN FISH AUCTION

"Cod Buyers!
Cod Buyers! COD!"

With that cry another free auction begins. The time: 8 in the morning. The place: any of the big Distant Water Fleet ports—Hull, Grimsby, Fleetwood. The hustle and bustle: the daily selling of the catch just unloaded from the trawlers.

It is a busy, fast-moving auction held on the dockside against a noisy background of cranes, trawler sirens, and the constant hurry of bobbers, lumpers and the many others who earn their living from the port. Should you be there, you would probably find it confusing and seemingly inexplicable.

Speed is the keyword: nearly 1,000 tons of fish are sold in the hour. No time is lost to make certain that the fish is dispatched fresh and succulent to the great network of retail shops across the country. More important still, the fish auction is a free and open auction. There is nothing to stop you, or anyone else for that matter, from making your bid to the auctioneer in the white coat as he stands astride the metal kit containers (in which the fish is weighed and landed). There are no price rings to hold the customer to ransom. Just highly competitive trawler companies selling to 1,000 equally competitive merchants.

Before breakfast more than 2,500 tons of fish is sold every working day at the three main ports — Hull, Grimsby and Fleetwood. And this is a market which can gear itself quickly to expansion; there's no delay on delivery. In the first half of this year, for instance, the Distant Water Fleet based at these ports brought in 521,950,940 lb. of fish—54,575,080 lb. more than last year. Your orders have raised fish consumption considerably, true testimony to the fact that, despite higher operating costs, fish remains the cheapest first-class food money can buy.

Letters to the Editor

Long Haul at Suez

SIR—The practical effects of the use of armed force against Egypt in the present situation would probably be as follows. First, the immensely expensive supplies and installations already in the Canal base would immediately be lost—and although our rights under the treaty might be restored, the material loss could never be made good. Second, all traffic to this country passing through the Suez Canal would immediately be cut off; as you pointed out last week, it is by no means sure that the tanker capacity exists to make good our oil supplies by the Cape route. Third, the pipeline through Syria would be seized, and so almost certainly would that through the Lebanon. Fourth, the governments of Iraq and Jordan would probably either be replaced by others more in sympathy with the Arab nationalist sentiment, or compelled to throw in their lot with Egypt and the other Arab states; this would mean the ejection of the British troops in Jordan, the end of the British connection with the Arab Legion and the removal of Iraq from the Bagdad pact. Fifth, there might be similar developments in Bahrain, Kuwait and even in Qatar, where nationalist feeling has already begun to make itself felt. Sixth, our assets in all these places might be nationalised and a boycott similar to that imposed on Israel might be declared. Neither of these moves would necessarily involve a declaration of war and might be difficult to counter without the further use of armed force. Seventh, we should have lost Arab sympathy for all time and should find it extremely difficult to regain our position there; in fact, an action supposedly taken to safeguard our oil supplies might well risk their loss to us altogether.

These are the immediate results of such action. But there would also be indirect repercussions. The use of armed force by Britain and France in the absence of any active interference with the flow of traffic through the Canal would be widely denounced by all Asia, by all other anti-colonial powers, and represented as a return to the very worst features of imperialism and an attempt by two stronger nations to impose their will by force on a weaker one. It would be condemned by all the Communist powers, who would exploit the issue for their own ends; and it might well not receive much sympathy, still less support, even in the West. Egypt would certainly bring the matter to the Security Council, and on the present composition of that body it is quite possible that our action would be condemned; we would certainly not be supported. It is not inconceivable even that some kind of collective action might be invoked against us. Any reputation which we may have gained for moderation and statesmanship over the last few years would be destroyed. This is quite apart from the question of international morality, which I am afraid would fall on deaf ears at the moment.

Most of the considerations I have mentioned are quite evident to anybody who has even begun to think about the question, and it is therefore unlikely that the Government can be seriously contemplating the use of armed force in present circumstances. But in this case their present ostentatious military preparations are surely a very grave error. What will the Government do if President Nasser, having refused to attend the proposed conference, declines to accept its conclusions? The measures are presumably intended as a show of strength; but can anything appear weaker than an elaborately mounted threat which at the crucial moment is not put into effect, than the brandished sword which at the instant of challenge is softly replaced in the scabbard again? The net effect will only be to alienate large sections of world opinion, without succeeding in intimidating President Nasser, who, even if he does not see the hollowness of the threats, in his present mood is more likely to be stung to defiance than cowed into submission.—Yours faithfully,

E. L.

★

SIR—I congratulate Mr Collard on his letter criticising your views. The intellectual's fundamental error is the belief that "gunboat diplomacy" is out of date. Nothing could be farther from the truth. There has been more gunboat diplomacy in the last forty years than in the previous 400. Stalin, Hitler, Mussolini and others have all done things that make Palmerston's most ruthless deeds look like Sunday school treats.—Yours faithfully,

H. B. BARWISE

Oxford

Minding Other People's Business

SIR—Your admirable article stirs me to make these points:

1. The value of the experienced consultant rises with the complexity of management. Few executives, even at high level, can show and maintain a lack of ambition "inside the shop," fearless independence of judgment, and both the right and need to have access to the Board. Experienced consultants will insist on all three. It clearly pays to hire them.

2. They also specialise in "time out" from current administrative vexations, in which time they adduce all their experience from other firms. It pays to hire this, too.

3. Experience and expertness grow bigger and faster in the best consultants, obviously. As in the medical world, there are quacks. But good managements spot good consultants; and bad managements can find them by seeking satisfied clients' testimony. Sceptics about management consultancy should remember that no consultants could last long, wax big, and multiply clients had they no value to offer; and that if their services were unprofitable, the clients would not remain faithful to them or vouch for them.

4. You wrote, and we all tend to think, as if industry alone needed modern techniques of management. Yet industry produces only 50 per cent. of our national income. Commerce, finance, transport, distribution, Government offices both central and local, public undertakings, agriculture—these need them even more. Their lag in productive efficiency claws back our higher industrial productivity figure to the low national one. So the field for consultants' skills is very wide here: wider than in America where, however, the services of consultants are still expanding with their turnover.

5. With the complexity of the best management, there is arising a new need: that of teamwork between competing consultants themselves (e.g. for research on methods, or on tricky assignments), or (as in America) between a firm of consultants (presiding) and economists, engineers, marketing or advertising or public relations or other technical experts, both for a specific job and for a client's permanent requirements. This, too, is capable of doing us a lot of good, yet it is virtually unknown here.

"But O, alas, so long, so far" must we wait till the proven techniques of good management leaven the lump of our massively rudimentary "admin." or "O. & M." in Britain! Contrary to your last paragraph's caution, the tempering of the past decade's inflation may now show up, both in public and private enterprises, where those who have demonstrated their skill can best mind other people's businesses. If so, it will not be the least of benefits conferred on the country by a mild disinflation.—Yours faithfully,

London, W.1 GRAHAM HUTTON

★

SIR—May I thank you for the excellent article on management consultants which appears in your issue of today's date?

There are one or two points of fact (quoted below) in which it is not wholly accurate, at least as far as the practice of this firm is concerned:

1. "A year's analysis of a problem and the putting in of a new system may cost

£10,000." At our present standard rate of fees in Great Britain the cost of a consultant and his supervision for a year's working is £7,500. Specialist advice is not charged in addition unless the specialist has to spend time at the client's plant. There are no "extras."

2. "This is a large sum for a small firm, and even attempts to arrange part-time advice have not really enabled the consultants to get into the large market that they believe exists among the mass of firms employing 200 workpeople or less." We have done many assignments for clients with 200 workpeople or less, but only when it suited us to do so. Most firms of this size cannot afford to pay for continuous operating nor do they need it except for a brief initial period: total fees have been from £1,500-£2,500. But, (*a*) it costs just as much to "sell" management consultancy into a small firm as into a big one; and (b) discontinuous operating greatly increases the difficulties of the consulting firm in planning the continuous utilisation of its own personnel and hence in working profitably.

As long as "the problem for the best-known (consulting) firms is more often to get staff to do the jobs than to find clients" they are unlikely to incur outlay and risk looking for clients among small firms.

3. "There is usually a preliminary analysis, followed by a contract terminable on one month's notice for a specified period." Only in exceptional cases do we ask a client to make a contract or to give us any notice. We prefer the professional relationship formerly established between doctor and patient, i.e. terminable at will on the part of the patient.

The Ring and the Book

SIR—The most unfortunate side of Sir Basil Blackwell's crusade is the timing. The Net Book Agreement as it applies to the *new* book trade is a very desirable "restrictive practice" and is at this moment in jeopardy. I therefore consider that to wash a section of the book trade's dirty linen in public is, to say the least, ill-timed. Sir Basil is a party to the Net Book Agreement both as a publisher and a bookseller. In my experience the general public lump the book trade together, whether it be antiquarian, secondhand, new, or even periodicals, and Sir Basil's action at this time will not help the champions of the Net Book Agreement when they start their defence.—Yours faithfully,

JOHN PAXTON

Shepton Mallet, Somerset

Slaves for Sale in Mecca

SIR—In your issue of August 4th, your correspondent states that "slavery in its 'classical' form is still practised (*inter alia*) in the Trucial States."

It is extremely doubtful whether this is so. In this British-protected state it is discouraged by law; slaves are entitled to apply for manumission and most have done so. However, in the interior, notably the Buraimi Oasis and the surrounding areas, where I spent some months last year, grinding poverty is the lot of the ordinary folk who live in this primitive and backward region. These conditions have in the recent past been exploited by Saudi agents plentifully supplied with gold; younger children in large families are purchased to be sent as slaves to Saudi Arabia, thus helping to relieve the economic strain on hard-pressed households.

So, although slavery in its "classical" form is not practised in the Trucial States, it is an area from which slaves are recruited. A solution might be found by the application of economic measures, designed to raise living standards to a level at which the people are enabled to resist the temptation to sell their offspring into slavery in order to relieve their necessity.

It is to be hoped that the United Nations will give due consideration to the economic aspects of this problem, and recommend to interested governments such measures as may be appropriate to alleviate conditions, not only in the Trucial States but in other areas of the world where depressed living standards are an incentive to the recruitment of slaves.

No such measures would be complete without corresponding pressure on the "employing" countries, mainly Saudi Arabia, to bring about changes in their economic structure, which at present makes the possession of slaves by a small but immensely wealthy segment of the community a social necessity.—Yours faithfully, W. O. LITTLE

Manama, Bahrain

How Much Steel for Europe?

SIR—I read with great interest your article of July 7th.

In working out, together with the public authorities, a new plan to develop its iron and steel capacity, our industry is merely taking part in the general trend of expansion of steel industries throughout the world. The expected general increase in steel consumption is particularly certain for the French home market as a result of the French government's policy of expanding industrial production and increasing national income during the next five years. In 1955 steel consumption per capita in France was 247 kilograms, as against 439 kilograms in Germany, 383 in Great Britain and 623 in the United States. In view of this, French steel producers feel it appropriate to set up a modernisation and equipment programme destined to bring their annual raw steel production capacity from its present level of 13.5 million ingot tons to 17 million ingot tons in 1960-61.

Such a programme is certainly no "more ambitious," to quote the terms of your article, than those of our more direct competitors, especially the Germans, who plan to increase production capacity from 21.3 million ingot tons to 29 or 30 million ingot tons. The French steel programme is based on consumption estimates, and not on mere desire to maintain a balance between French and German production within the European Coal and Steel Community, as some parts of your article would seem to imply. The French steel expansion programme will require important capital expenditure. Initial estimates call for a total expenditure of 350 to 375 billion francs, to be spread out over 4 to 5 years. But this financial effort is in no way disproportionate to the aims that will be attained; nor in relation to the effort envisaged by German companies.

The ratio of investment per ton of steel cannot be considered as an adequate basis for a comparison of the modernisation and equipment effort between different steel industries. During the past ten years, the French steel industry has invested 445 billion francs (between 1945 and 1955)—a considerable amount in view of our capacity. Though this outlay is important, when worked out on an investment per ton basis, it should be remembered that the programme achieved during this period was mainly concerned with the modernisation and development of the rolling mills, which explains the high cost of those investments. To this is to be added the amount which our industry had to lay out for the reconstruction of equipment destroyed or damaged during the war. The investment programme for the future will be concerned mainly with the development of cast iron and ingot steel production capacity. Thus the investment per ton ratio will be considerably lower than under the previous programme.—Yours faithfully,

J. FERRY,
Délégué Général

Chambre Syndicale de la
Sidérurgie Française

Mr Poole's Bevanites

SIR—Whether the Middle Class Alliance and the People's League for Defence of Freedom will prove any more lasting than their ephemeral prototypes remains to be seen. But their formation is a clear indication that our present electoral system fails to secure amongst the Conservatives elected adequate representation of middle-class views. Such a leavening would obviously be to the advantage of the party, as well as more satisfactory to those middle-class elements at present so disgruntled as, however reluctantly, to feel they have no option but to set up these "pressure groups," with their serious risk of undesirable wrangling in public. A more effective remedy would be the reform of our electoral system to provide that electors shall not only have a choice between parties but also freedom of choice between candidates of the party they support.—Yours faithfully,

JOHN FITZGERALD,
Director and Secretary

Proportional Representation Society,
London, S.W.1

Books & Publications

Joint Enterprise

HISTORY OF THE SECOND WORLD WAR: *Studies of Overseas Supply.* By H. Duncan Hall and C. C. Wrigley. *HM Stationery Office* and *Longmans.* 548 pages. 37s. 6d.

TO anyone interested in the art or science of administration these studies are of absorbing interest. Some of them really read like history and to have made them do so is a most remarkable achievement. When one considers what the raw material must have been—the endless cables and minutes, notes and memoranda, filed in a way which can only have been a research student's despair—it is remarkable that it has been found possible so surely to impress the magisterial hand. Yet the text reads like an objective study of documentary evidence; there are few signs of the influence of *obiter dicta* by those who witnessed or formed the events, little as some of these may be surprised by the present judgments.

If the authors are right, the story on the whole is a cheering one. Some mistakes were made, a few of them probably unavoidable; but there were hardly any periods of administrative chaos. Administration responded to changing needs, and usually responded quite quickly and on both sides of the Atlantic. The British and the Americans had fundamentally different approaches and also fundamentally different political systems, yet they solved their joint problems well, and eventually found magnificent machinery in their Combined Boards. Yet even the Combined Boards were not left to die of old age; they were liquidated if anything too soon rather than too late.

To the authors it seems that the Combined Raw Materials Board was in general the most successful. It dealt with a sudden rush of problems in the early months of 1942 quickly and efficiently; its recommendations were almost never challenged and were actually implemented with remarkable precision; so long as the war lasted it carried confidence in the other countries as well as Great Britain and the United States; its techniques were ground-based and reliable and yet flexible. According to these studies, the experiences of the other Combined Boards and Joint Committees, with their varying degrees of effectiveness, showed how successful it was.

Why was it the most successful, and why was it able to be successful at all? The authors think it was the most successful, first because in raw materials the Commonwealth had, for once, as much to give as it could hope to receive; and, secondly, because the essential machinery, either from foresight or from the blind pressure of administrative logic, existed and was working in Washington before the board was established and dignified. The men "down the line" had been working away and working together on the commodities for some time. The higher command of the board applied itself to exploiting what they could do, and to giving them support and authority. There were some joint mistakes of economic judgment; but so far as the art of international co-operation was concerned hardly a foot seems to have been put wrong.

The impressive thing is that it was possible at all. To those who know only the fundamental differences of approach, both to policy-making and to administrative architectonics on the two sides of the Atlantic, it might seem a miracle. Yet the causes which made for success proved to be quite decisive. The administrators down the line, working on their commodity problems one by one, found a common, pragmatic and common-sense, attitude to the use of statistics; they regarded implementation as well as recommendation as part of their problem, and attacked this also jointly (it was a great problem on the American side, hardly a problem at all on the British); and they were agreed, both British and Americans, in taking to themselves—without fear—freedom of manœuvre and responsibility according to the urgency and importance of particular problems. They worked under free institutions; and also they worked in the same office.

A general point of great interest, which the authors of these studies bring out clearly, is that the Americans, because they came into the war more than two years later than Britain, did for the convenience of the British a number of things which they would not otherwise have done. Some of these things in the dispassionate light of history seem understandable but not too sensible. Most of them the Americans would never do again.

The book, as will have been seen, gives most of its attention to supplies and to the United States; but it also contains chapters on "The Eastern Hemisphere" and on "Scientific Collaboration."

England and Young America

THE FIRST RAPPROCHEMENT. By Bradford Perkins *Pennsylvania University Press.* London: *Cumberlege.* 269 pages. 40s.

IT is a matter for regret that the high cost of modern academic publishing will put this volume out of reach of the average library—still more of the average private purchaser. For without doubt this is an important contribution to the history of Anglo-American relations. Mr Perkins has taken the decade 1795 to 1805 and put it through a fine sieve of scholarship going back at every point to the contemporary records, the ambassadors' despatches, the Foreign Office and State Department archives, the Prime Ministerial and Presidential papers, the newspapers and pamphlets—in fact, almost everything which would throw light on the course of Anglo-American diplomacy during the period. He has done a splendidly thorough job—such a job, in fact, as one would expect from the son of the distinguished historian of that subsequent phase in Anglo-American relations, the Monroe Doctrine.

The War of 1812 has seemed so much at odds with the basically sensible way in which Britain and its emancipated colonies have generally conducted their relations that historians have usually depicted it as a hangover from the War of Independence. In consequence, the years between have taken on the appearance of an uneasy armistice. Mr Perkins disposes finally of any such way of thinking. He demonstrates conclusively that the years from Jay's Treaty to Trafalgar saw a *rapprochement*, based on mutual respect and joint interest, which was none the less real for being short-lived. Indeed, so realistic was the basis for this understanding that in the light of it it is the War of 1812 which once again appears abnormal—a strange failure of "the forces working for comity between the United States and Great Britain," as Mr Perkins calls them.

At the same time Mr Perkins demonstrates that this sunny decade had to be worked for. First of all, Pitt and Adams, later Jefferson, Madison and Addington had to apply patience and realism to the task of maintaining good relations. In Liston and Rufus King each side was served by excellent ambassadors. (Mr Perkins has put Robert Liston on the map as one of the pioneers of Anglo-American understanding.) When these retired, the prickly Anthony Merry in America and the formal James Monroe in London failed to maintain the standards of their predecessors, substituting the transmittal of grievances for the fostering of mutual understanding. All this and much more—war debts, impressment, neutrality disputes, boundary debates, Haiti and Louisiana—Mr Perkins relates, with accuracy, clarity and sympathy. This is a scholar's book, but, like all good scholarship, it has a significance beyond the academic.

Formless Schools

THE BOY AND HIS NEEDS.
By Erich Meissner.
Macdonald. 176 pages. 18s.

IT is depressing to review this book adversely, for Dr Meissner is a distinguished teacher and one of much more than average sensitivity to the needs of boyhood. Moreover, embedded in a wilderness of quotations there are jewels of profound and original thinking. Yet the harsh fact remains that "The Boy and His Needs" is virtually unreadable; partly because the author's literary style is overloaded with staccato assertions, excessive references to the works of others and rhetorical questions, and partly because the book seems to have no form or pattern.

It is impossible, at the end of the book, to say what Dr Meissner believes about almost any of the various aspects of education he has written about, while his expeditions into theology and moral philosophy are, to put it gently, obscured by a thick haze of verbal confusion. What, for example, is the reader to make of this not untypical passage which illustrates both the limitations of the author's prose style and his lack of clarity:

> Religious prudence cannot be taken for granted. It has to be cultivated. Knowledge of Israel proves indispensable because, through it, criteria are gained. Without criteria there can be no prudence. One day the Great Debate will open. Those steeped in "Gottesdummheit" (their name is Legion) will be at a loss. Salus ex Judaeis est. And why? Heraclitus said: "Man, insofar as he is truly human, lives close to God."

It will also surprise English teachers to know that "The large state schools in Britain are almost continental. Any Prussian school inspector could but approve of them." One wonders how many maintained schools Dr Meissner has visited, how often he has met the boys who, today, grow up in them—is it unfair to suggest that Gordonstoun is not the best laboratory in which to study the theory and practice of education?

Plain Words on Money

INTRODUCTION TO MONEY.
By Honor Croome.
Home Study Books. Methuen. 217 pages. 10s. 6d.

MRS CROOME'S "introductions" to economics, of which this is the latest, combine some of the best qualities of both teaching and journalism. She has the teacher's instinct for what must come first in the understanding of a subject; and she combines it with the journalist's ability to spell out the essentials as slowly as need be, yet keeping the argument moving by lively illustration and colloquial phrase. There is nothing slipshod about this book. Not only does Mrs Croome warn her reader on occasion of the "horrid complications" that he is permitted, for the moment, to escape. There are also passages in this book which, though they may seem simple enough to him, have in fact been drafted very carefully indeed, against more sophisticated criticism. Thirdly, there is the book's realism. Pretty solid technically, it misses little of the broad contemporary scene.

The book's construction is conventional. There are four parts: the first is on the character of money and near-money; the second is on the institutions of banking and the money market (but takes the money market and merchant banking before the commercial and central banks); the third part describes how the monetary system works or can be made to work; and the fourth is on the foreign exchanges. The troubles come, inevitably, in Part III. Mrs Croome does well for the first half of it: her three chapters on changes in the value of money—their measurement, causes and effects—are superior to the ordinary textbooks. But when she passes to Keynes and to the aims and means of monetary policy, she gives as the key element in Keynesian analysis, not the interrelationships of "real" and "monetary" factors dealt in earlier, but the dubious stagnation thesis—the "built-in bias," as she puts it, of the private enterprise economy towards depression. Mrs Croome's development of this thesis to cover contemporary problems—monetary policy is needed to overcome the bias to depression, but monetary policy is itself inflation-prone—is a *tour de force*. But it does less than justice to Keynes and, though giving Mrs Croome scope for a wide, and wise, discussion of "employment policy," leaves too little room for the specific problems of "monetary policy" on which one would expect enlightenment in a book with this title.

Part IV, on the foreign exchanges and international policy, is neatly done, except that there is no particular reference to the sterling area. Or is this prophetic?

Sharing Turkish Spoils

ENGLAND AND THE MIDDLE EAST.
The Vital Years: 1914-1921.
By Elie Kedourie.
Bowes and Bowes. 236 pages. 30s.

THE "vital years" are those in which the Allies first promised themselves shares of the unconquered Ottoman Empire and then, when they had won it, fell to quarrelling between themselves and with their Arab helpers over the spoils. The sources the author uses are Arab as well as European, and he produces some interesting evidence that the Arabs—if the Sharifian family and a few of its emissaries can be called "the Arabs"—knew in 1915-1916 of Anglo-French intentions to annex parts of Syria and Mesopotamia, and grew vociferous about broken promises only later, when times and their fortunes had changed.

But though interesting and very well written, the book is irritating on more than one count. First, its author is determined to press home a theory, no matter what the evidence that, in his scholarly honesty, he cites to suggest that it does not hold water. This theory is that some races are born administrators—the meticulous British and, in their more easy-going but steady way, the Turks. Others, notably the Arabs, are not. Therefore when the Allies destroyed the Ottoman system of administration they were in duty bound to all would-be livers of quiet lives in the Middle East to replace it with another as adequate. This they attempted to do in the Sykes-Picot agreement of 1916, which would have given Britain and France control of the whole area. Their project failed, chiefly through collapse of the will to work it, and it is in analysing this collapse that Mr Kedourie, carried away by his longing for the might-have-been, lays questionable emphasis on the reasons why the agreement petered out.

Rightly enough, he attributes its defeat to the shift of western opinion from imperialism to the climate of the Fourteen Points; to British fears of a French foothold in the Levant; and to British individuals with "personal involvement in the cause of Arab nationalism." Causes he mentions but fails properly to stress are the total unwillingness of an England busy demobilising, and building homes fit for heroes, to take on the number of commitments he would have liked to see it shoulder, and the irresistibility of the strongest postwar force in Arab politics—the societies and movements modelled on the Young Turks for whom desert kings were no match.

No doubt Mr Kedourie's dream world would have suited the minorities to one of which he belongs, but it was practical politics only if attained at the point of a gun. It was brought about, for a while, by General Gouraud; did Mr Kedourie welcome France's arrival at Damascus in 1920? He does not say.

His second major defect is his virtual omission of the Balfour Declaration and the foundation of the Jewish National Home. This, more than any other event of the period, has coloured British relations with the Middle East. "Disturbances" over Jewish immigration began as early as 1921, and, without a chapter on Palestine, the book's title and subtitle are misnomers.

North-East Passage

THE NORTHERN SEA ROUTE AND THE ECONOMY OF THE SOVIET NORTH.
By Constantine Krypton.
Methuen. 228 pages. 21s.

THE Northern Sea Route is the North East Passage of the Elizabethans. It is the shipping lane which runs round the north of Eurasia, using the Arctic Ocean to link the Atlantic with the Pacific, or, as Russians see it, European Russia with Far Eastern Russia. For this last reason, and for the access it gives to arctic Siberia, the Soviet government has made great and spectacular efforts to make use of it. It has spent large sums on organising this effort (for which a special government department was set up): on icebreakers, on aerial support, and on scientific work which includes the most detailed programme of sea ice research that any country has ever set up. What prompts this great outlay—economics or strategy? That is the question to which the West seeks an answer, and this book finds one for it.

Dr Krypton has good qualifications for doing so. Before leaving Russia during the war, he worked for a number of years in the Soviet government department concerned, where he had access to files and archives that no western investigator has ever seen; further, he has a scholarly attitude of mind, as was evident from his earlier book on the pre-revolutionary history of the Northern Sea Route. He examines in detail the economic potential of the areas of Siberia served by the sea route, and contrasts it with the freight actually carried. This leads him to the conclusion that it is not the sea route but the great northward-flowing rivers on which the economy of the north depends; that the sea route, therefore, is being developed primarily for strategic reasons.

There is certainly something in the argument, but it is somewhat overstated. It is likely that strategic and economic motives are both present; and also, one guesses, a third factor, which can exist only in a totalitarian country—the urge to do something unusual or spectacular for its own sake, without paying too close attention to the economic results.

Selections in a Mirror

THE HERITAGE OF ENGLAND IN COLOUR.
Photographs by A. F. Kersting. Text by John Bledlow.
Batsford. 110 pages. 16s.

ANOTHER book of pictures of the English scene? Yes; and there was a place for this one. Not just because the forty coloured photographs are beautiful, but also because they are only forty. It must have torn Mr Kersting's heart to pare down his list of buildings and other symbols of the English heritage so ruthlessly, but it was worth the effort; exhaustive collections are too often exhausting as well. In this case, the reader who complains of getting only five castles, seven cathedrals, and four views of Oxford and Cambridge will be paying the book an oblique compliment. The marvel is that in so small a compass such a representative group of national symbols has been brought together without any loss of spaciousness or of the publishers' high standard of presentation.

Buildings are not Mr Kersting's only themes. He finds room for village greens, with cricket (Godstone) and horse-pond (Finchingfield); for *HMS Victory* and Hadrian's Wall; for blossom and autumn leaves, lawns and daffodils; and for river scenes that range from the too little prized view from Waterloo Bridge to old mills, water meadows, and the boating reaches of Henley and Windsor. But, of course, it is the palaces and colleges, ruined abbeys and peerless cathedrals, inns, castles and great country houses that mirror the past to greatest effect. The changeable play of season and sunlight on English stone and brick is here captured more faithfully than in the companion volume, "London in Colour." Mr Bledlow's notes on the pictures and his 22-page historical introduction ramble through the centuries so beguilingly that the reader, happily bemused among royal licences to crenellate and farmers' ordinaries, emerges with a surprising amount of new information and not the slightest feeling of having worked for it. It is hard to think of anybody for whom this book would not be a welcome gift.

Order Out of Chaos

A SHORT HISTORY OF THE WEST INDIES.
By J. H. Parry and P. M. Sherlock.
Macmillan. 316 pages. 18s.

WHILE the area with which this book deals is a natural geographical unit, it is politically and historically disunited. Not only are its peoples largely transplanted; this is equally true of their physical surroundings in the forms of domestic animals and remunerative plants. And they have been transplanted not from one but from many places of origin. Hence it is no mean achievement on the part of the authors, respectively Professor of History and Vice-Principal of the University College of the British West Indies, to have canalised the diverse racial and cultural streams that have contributed to the complex past of the West Indies into a coherent and logical narrative of 300 pages.

The many strands of past history are woven into a comprehensible pattern; in more recent times, controversial topics such as the impact of the United States on the West Indies are handled dispassionately and objectively. There is a good, clear account of recent development in Puerto Rico with "the evidence which it affords of the administrative competence of the Island Government and the extraordinary corporate enthusiasm . . . which has replaced the apathy of the 'thirties." The Puerto Rican *Estado libre asociado* is, as the authors point out, a constitutional status unique in the world.

More, on the other hand, might have been said on the remarkably sustained totalitarian dictatorship of General Trujillo of San Domingo, whether on the presidential throne or behind it. And more, too, perhaps, in the chapter on "The Caribbean Colonies, 1918-54," on the immense help brought by the British taxpayer under the development and welfare legislation to a region which admittedly had suffered from previous neglect.

"The British West Indies in the middle nineteenth century formed a rich and varied museum of antiquated constitutional and administrative devices." With this sentence the authors begin their chapter on "Patterns of Colonial Government." It is a tribute to their complete mastery of their subject, their sense of proportion and their balanced outlook that they have produced from the chaos of their material so clear and readable a volume, even if the last chapter is a little reminiscent of the best sort of blue book. On the other hand, it is a pity that so many of the illustrations of what is after all a history, technically good as they all are, should be devoted to occupational subjects. More photographs of historic buildings might well have been substituted for those of the all too familiar sugar-cane, coconuts and bananas.

Kuwait in Retrospect

KUWAIT AND HER NEIGHBOURS.
By H. R. P. Dickson. *Allen and Unwin.* 627 pages. 75s.

SEVENTY-FIVE shillings will bring the collector of Arabiana a handsome book, beautifully printed, some glossy photographs of the chief personalities in Kuwait today, a few snapshots that well illustrate the text, and many miscellaneous jottings from the life and times of the greatest living authority on the Gulf Arab. But this is a lot to pay for a book that is a scrapbook, even by the standards of Arabists. It contains bits of history, folklore, bon mots, proverbs, anecdotes, recipes and fragments, some not elsewhere available, that are useful to the historian of Kuwait or the student of tribal genealogy, but it says virtually nothing (except in one photograph of the well-to-do sitting on the tasteful chintzes of an oil-company interior) about the difficult and absorbing topic of Arab adjustment to the new world created by oil, money and communications.

It turns its back on all such bustle, in order to flip over the pages of a diary of life lived at a serener pace. Only an occasional burst of haste or excitement—a punitive raid or a chase after a runaway camel—tempers days made or marred by the capture of a pregnant lizard and its leisurely preparation for the pot. The record of many such days in the years 1939-45 shows how greatly distance is capable of reducing worry. Tucked into a loop in the end-paper is a handsome reproduction of a War Office map. But its date is 1935, so that it marks neither the oil-port of Ahmadi nor the state's new arteries. This was, not is, Kuwait.

World Economic Survey 1955
201 pp. 14s. (14s. 10d.)
A comprehensive and analytical study of the world economy. International trade and payments, primary and industrial production in both private enterprise and centrally planned economies are fully surveyed against the background of developments since World War II, and the more recent economic trends during 1955. The prospects for 1956 are also discussed.
A unique feature of this Survey is the assessment of economic progress in the post-war decade.

Economic Survey of Asia and the Far East 1955
236 pp. 18s. 9d. (19s. 10d.)

Economic Survey of Europe in 1955
248 pp. 18s. (19s. 6d.)

Economic Developments in Africa 1954-55
100 pp. 7s. (7s. 4d.)
A review of the growth of economic activity in Africa during the past two years which surveys the difference in the economic structure of the principal regions and the differing rates of development in each. Chapters are included on agricultural production, mining and mineral production, fuel and power and secondary industries, foreign trade, and investment.

Economic Developments in the Middle East 1954-1955
151 pp. 11s. (11s. 7d.)
One complete chapter of this Survey is devoted to the growth of the petroleum industry in the area. Production and transport, foreign trade and payments, price, monetary and fiscal changes, and development programmes are also fully covered.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Battle in Chicago

Chicago, Tuesday

AT the Democratic convention, Mr Adlai Stevenson is waging a hard fight for the presidential nomination which was thrust upon him four years ago. Balloting had not begun when *The Economist* went to press. The first two days of the week had been taken up with various rituals in the convention amphitheatre, and negotiations between politicians in the air-conditioned rooms and corridors of Chicago's main hotels. Except for this single week once every four years an American political party is little more than a loose confederation of state parties. It must be conjured into a sense of cohesion before each presidential election. This is the supreme purpose of the convention, and it justifies the high-spirited demonstrations, the windy oratory, the gusts of passion and the bursts of sentiment.

To a remarkable extent, this year's struggle for power within the Democratic party has been expressed in semantic terms. Mr Stevenson, who seeks to continue, in a different context, Mr Eisenhower's role of reconciling groups and races, has adopted "moderation" as his slogan. By fastening on this word as the object of his scorn, Governor Harriman of New York has elevated it into a political issue. On the other hand, the South came to this convention determined to avoid a split over the anguishing problem of greater civil rights for Negroes, and was willing to stand by the party's platform if only the words "Supreme Court decision" were excluded.

Last week began well for Mr Stevenson. Senator Kefauver had switched to him and was asking his delegates to do likewise; tabulations in the press were suggesting that Mr Stevenson was already within sight of the 686½ votes needed for the nomination, and he had the further psychological advantage of being on the native ground of his home city. It was Mr Stevenson's objective to start with so much initial strength that when the balloting actually began, the various delegates pledged to cast at least a courtesy vote for such "favourite sons" as Senators Johnson of Texas and Symington of Missouri, and Governors Lausche of Ohio and Williams of Michigan, would quickly rally to Mr Stevenson's banner and make his victory final. Mr Stevenson would thus be above the need for bargaining: he would be able to choose his vice-presidential running mate on his merits and could enter the electoral campaign without any inconvenient political commitments.

The success of this strategy depended on obtaining substantial support from the South, as well as from a high proportion of Mr Kefauver's delegates and those who are formally uncommitted. The southerners regard Mr Stevenson as the least objectionable of the major candidates, because they are satisfied that he understands their problems. But they reserved their final decision until they were certain what the party platform would be. This gave a crucial significance to the attempts of the platform committee to find a suitable formula on civil rights.

★

The first major surprise came in the middle of last week. Mr Stevenson, confident of southern support and evidently worried by the effect on uncommitted northerners of Governor Harriman's imputation that he had become the captive of the South, let it be known that he favoured explicit reference in the Democratic platform to the Supreme Court's famous decision against racial segregation in publicly financed schools. Although the wisdom of this move was passionately debated by Mr Stevenson's staff both before and after it had been taken, the immediate reactions seemed to justify the risk. The southerners continued to show a conciliatory attitude in the platform committee and the chances of Governor Harriman, whom the South detests, because of his radical views on civil rights, appeared to have been further undermined even before his arrival at the convention.

Governor Harriman's arrival itself did nothing to reverse that impression. Despite his narrow electoral victory in New York in 1954, he showed at his first press conference in Chicago that he is still lacking in the magnetic qualities of a popular leader. In fumbling fashion he called for clarity in the expression of American foreign policy, and repeated in a lacklustre voice his mechanical phrases about his horror of "moderation" and his "deep sincerity" on civil rights.

It was at this moment that Mr Truman chose to enter the fight in an attempt to bring off an unprecedented coup by a former President with no political machinery and patronage at his disposal—to reverse the trend of a national convention. The old chieftain has renounced the trappings of power, but he still desires the obeisance. He is enormously popular in the party, because his astonishing victory in 1948 against all odds offers ground for hope in 1956. Mr Truman gave himself a tremendous build-up by promising to announce on Saturday the candidate of his choice. This kept the spotlight on him constantly, and he visibly loved every minute of it.

If Mr Truman had declared for Mr Stevenson he would have guaranteed party unity, and helped to ensu-

nomination on the first ballot. His strong and reiterated endorsement of Governor Harriman meant that there would be a battle, but he was setting himself an enormous task in trying to put across Mr Harriman's candidacy at the eleventh hour. It soon became apparent that the old professional, Mr Truman, had seriously underestimated the new professionalism of that former amateur, Mr Stevenson. It was already too late for Mr Truman to build up a winning combination. It is true that some highly-strung politicians and commentators behaved as if the Stevenson coalition was disintegrating, and while the delegates streamed into their hotels, the spotlight switched rapidly from Mr Truman to Senator Lyndon Johnson, the "favourite son" of Texas, who promptly announced that he was a serious candidate. Many southerners would now back Mr Johnson, who must know that he is unlikely to be nominated because, like President Eisenhower, he has recently had a heart attack. But a respectable total on the first ballot would give him the opportunity of bargaining with Mr Stevenson over the selection of the vice-presidential candidate and the disposal of party patronage. If northern votes deserted to Mr Harriman, Mr Stevenson would have to meet the southerner's price. If he declined to do so, Senator Johnson might really run seriously or might well choose a propitious moment to throw his strength to a compromise candidate such as Senator Symington of Missouri.

★

The candidacy of Senator Symington, about which political pundits have been talking for at least three years, is a curious phenomenon. It is based on the so-called "law of availability." Mr Symington comes from a border state, is very handsome, is of the right age, and his views on the most controversial issues of the day are unknown. He is a northerner who is entirely acceptable to the South, and fits the mythical image of the dark horse emerging suddenly from a locked convention. The main difficulty about Senator Symington is that he is almost unknown to the general public except for his maladroit performance on the television screen during the McCarthy hearings and for his one-man war against the Department of Defence on behalf of bigger and better armaments. Moreover, Mr Symington has given no sign whatever in his public performances that he is of presidential calibre.

In this confusion, Mr Stevenson has a number of factors running powerfully in his favour. For months he has been doing his homework, unencumbered by public office, in building up support across the country. Since his defeat in Minnesota by Senator Kefauver, he has become a far more effective candidate, and now gives the appearance of being a real fighter. But most important of all, while Mr Harriman is attacking Mr Stevenson's "middle of the road" approach, great figures in the liberal pantheon, such as Mrs Eleanor Roosevelt, Mr Walter Reuther, and Senator Lehman of New York, are tirelessly assuring their admirers that Mr Stevenson is sound on all the essential issues.

Mr Truman's dramatic intervention may make Mr Stevenson's candidature, if he gets it, more worthwhile. He will have triumphed as a politician over Mr Truman and the old-style political operators with whom the ex-President still surrounds himself. And in the eyes of the country he will have finally cut his main link with a Democratic regime that still arouses memories of distaste among many independent and Democratic voters who supported Mr Eisenhower in 1952.

Before the Ballot

Chicago, Thursday

AS the delegates filed into the convention hall to nominate a candidate for the Presidency, it looked as if only a miracle could prevent Mr Stevenson from gaining a swift and decisive victory. For when the dust thrown up by Mr Truman's bomb had settled, it was apparent that very few delegates had gone over to Governor Harriman and it seemed clear that Senator Johnson had not been in time to rally the solid South. California, Michigan, New Jersey and Arkansas affirmed their support for Mr Stevenson. Governor Harriman could do little but deny that he had conceded the nomination to his opponent. To Mr Stevenson's aides, things "looked marvellous."

Mr Stevenson cleared what may have been his final hurdle when the convention approved a tortuous compromise on civil rights. As hammered out by the platform committee, the formula recognises the Democratic party's conviction that the Supreme Court's ruling on segregation is the "law of the land" but repudiates any use of force in carrying it out. The revolt against this casuistical solution was organised on the floor of the convention by men committed to Mr Stevenson, and this did further damage to the notion that Mr Harriman and his supporters were the only true liberals in the field. It involved the risk of a final split between Mr Stevenson's northern and southern supporters for the benefit of some dark horse candidate waiting in the wings. But when it came to the point, the majority of the delegates—as well as Mr Truman—were unwilling to sacrifice party unity. An attempt to strengthen the platform's stand on civil rights was rejected without even a roll call.

The party platform, as presented to the convention, features such traditional Democratic causes as the fight against monopolies, a higher minimum wage, rigid and high price supports for farmers and tax relief. But it contains one element that is a startling departure from the history and traditions of the Democratic party: it demands greater protection against foreign imports on the ground that the trade policies of the present Administration are sacrificing American industry to sub-standard labour abroad.

West of Suez

MR CHARLES WILSON, the irrepressible Secretary of Defence, appears to be the only member of the Administration who feels that the Suez crisis is a "minor upset" and "a relatively small thing." President Eisenhower and the rest of his team have been doing their best to bring home to the American public the gravity of the issue and to divert attention, for a moment at least, from the carnival in Chicago. Before Mr Dulles left for the London conference both he and the President sought to arrive at some statement of the American position. Mr Eisenhower expressed the strong hope "that this very serious difficulty will be settled by peaceful means" and said that he could not conceive of military force "being a good solution." But he was careful not to say that the United States would oppose the use of force "under any circumstances." Mr Dulles took a somewhat stronger stand and emphasised the immense importance of the Suez Canal to the economic prosperity of Europe and to the security of the western powers. He admitted, however, that the United States had "given no commitments of any kind" on what it would do if the London conference fails to arrive at a decision or if Egypt rejects a formula for international supervision.

Before embarking on the London venture, the Administration took steps to avert possible attacks from the Democrats and certain Latin American nations. The President invited congressional leaders of both parties, including such senior Democrats as Senator Johnson, Senator George and Representative Rayburn, to a special meeting at the White House. There he outlined the military and political aspects of the crisis and disclosed that he was not planning at present to call Congress back into special session. Mr Dulles also conferred with ambassadors from twenty Latin American republics. Although President Eisenhower has said flatly that "the conditions are not the same" for Suez and for Panama, the issue of unilateral American control over the Panama Canal may well arise. Mr Truman may have made this more likely by declaring blithely in Chicago that he had long favoured the internationalisation of a number of strategic waterways including both the Suez and Panama Canals.

Oil Prepares for Crisis

A NEW "Middle East Emergency Committee" to pool the resources of the American oil industry to meet the needs of Europe and the United States if the Suez Canal were closed to oil tankers, was formed this week in Washington under the wing of the Office of Defence Mobilisation. By guaranteeing the thirteen oil companies that make up the committee immunity from prosecution under the anti-trust laws, the government has cleared the ground for an international supply operation which, if it became necessary, might well surpass in scale that carried out after the closure of Abadan. Plans to meet the emergency will include the pooling, without regard to ownership, of the companies' tankers and storage facilities; inter-company sales and exchanges of crude oil and refined products to make the most efficient use of scarce tanker tonnage for American and European needs; and greater crude output in the United States and Venezuela.

These plans show how far the American oil industry is prepared to go in helping Europe to secure its essential oil supplies, and some means may also be found to reduce the dollar payments that these arrangements inevitably entail. The 8½ million tons of Middle East crude that were shipped through the Suez Canal to the United States last year could, in an emergency, be replaced by American domestic supplies. But the stake of the American oil companies in the Suez Canal is much larger than this. Although less than six per cent of the crude oil produced in the Middle East in 1955 was shipped to the United States, more than fifty-seven per cent of Middle East output was owned by American companies, who sold it mainly for consumption in Europe and shipped it through the Suez Canal or by pipeline to the Mediterranean. The proportion of proved reserves in the Middle East which are owned by American companies is even higher, and as these reserves are expected to play a progressively more important part in supplying both Eastern and Western Hemisphere demand, the American oil companies in the Middle East have as much to lose as have their European competitors. But one group in the American oil industry, while contributing to the solution of Europe's supply problems, would stand to benefit from a crisis: the domestic producers of crude oil who topped a long campaign against oil imports by submitting only this week a formal protest to the government.

A Peculiar Honour

Washington, D.C.

THE Vice Presidency, which provided this week's Democratic Convention with one of its main points of interest and which may provide next week's Republican convention with its only spark of excitement, is a peculiar honour. It is often despised and yet much sought after. For the Vice President remains the only other man besides the President to be elected to office by the entire United States. He is the presiding officer of the Senate and the presidential crown prince. For a battle scarred political veteran near the end of his career this may be a crowning glory; for a young, ambitious man the glittering title of the office may be a stepping stone to higher things.

During the electoral campaign itself, the vice presidential candidate is likely to carry a full part of the burden and to obtain a full share of the credit. But immediately after the triumph of the inauguration comes the anticlimax: the vain search for powers inherent in his office. An interloper in the exclusive club formed by the Senate and an incongruous member of an executive team built around the President, the Vice President is the hanging participle of American government. Unless he already has influence in the Senate in his own right, through long previous service there, or, in a few cases, through service in the House of Representatives, his office cannot supply it. His share of the executive authority, which he may inherit at a moment's notice, has, until very recently, been utterly dependent on the wishes of the President.

When the President is alive and fit, the Vice President is usually left plenty of leisure in which to reflect on the irony of being the second man in the nation but wielding practically no positive power. When the President dies he becomes President, although it is impossible to tell from the syntax of the Constitution whether the "office" or the "duties" of the chief executive were supposed to pass to him. Tyler, who in 1841 was the first Vice President faced with the issue, took the office; his action has since been confirmed by custom and, inferentially, by the wording of a constitutional amendment. In the case of presidential "inability" the Vice President is also supposed to take over, but the Constitution does not say, and no one has even decided, what determines inability, who establishes it, and whether the Vice President becomes acting or full President. From Tyler to Mr Truman seven Vice Presidents have

"IMAGINE ME WITH REAL PEARLS!"

Not too long ago a string of pearls like this would have cost a small fortune. Today however... thanks to the cultured pearl process...their price is much more practical. Developed into a fine art by the Japanese, pearls are now produced in assembly-line fashion by placing small shell particles into live oysters. Returned to the ocean, each oyster will form a pearl around its "nucleus" within 3 to 4 years. Such pearls, when of top quality, are detectable from natural pearls only through the aid of special laboratory equipment.

Serving the 15 million dollar Japanese Pearl Industry...financing the importers and exporters of cultured pearls...has long been a specialty of Bank of America's International Department. By providing on-the-spot service through our branches at home and abroad, Bank of America's International Department gets the job done quickly, with a minimum of red tape. We think we could similarly serve your business or industry. Why not ask us about it?

inherited the Presidency. The four who filled out uncompleted terms in the nineteenth century were not later elected in their own right; the three who did so in the twentieth century were.

A vice presidential candidate is usually chosen to "balance the party ticket," either geographically or idealogically. Sometimes he is a member of the same political faction as the presidential candidate but appeals to a different racial, religious, economic or regional group; sometimes he is a member of an opposite faction whose votes are needed to build up a majority in the convention or of one which has been defeated in the convention and needs to be conciliated for the election. For such reasons Vice Presidents are often taken from populous states—there has been an exceptionally large number from New York, and Mr Nixon is from California.

In the great majority of cases a vice presidential candidate is not given a second nomination. During his four years of frustration a Vice President has usually made too many enemies. Since the Republican party was founded a century ago only one Republican President has ever lived through two complete terms; no Republican Vice President has ever been chosen for a second term. This year the second taboo may be broken, unless Mr Stassen has his way and upsets Mr Nixon's applecart, but the Democrats have not given a moment's thought to renominating Senator Sparkman of Alabama who ran with Mr Stevenson in 1952.

★

It would be wrong to conclude, however, that the successful presidential candidate can always dictate the choice of his running mate. None of the mediocre presidents between Lincoln and Theodore Roosevelt was able to do so, and Roosevelt did not attempt it when he had the opportunity in 1904. Roosevelt himself had been forced as a vice presidential candidate on President McKinley by an opportunistic combination of party bosses.

It would also be wrong to imply that all Vice Presidents have been equally without merit. Some of them were grotesque, such as the vulgar, barely literate Kentuckian, Richard Mentor Johnson. Vice President Johnson, who had been foisted on to the Democratic convention by Andrew Jackson, openly kept three Negro mistresses and ran an inn during his incumbency. Some, like Vice President Adlai Stevenson, grandfather of the present Mr Stevenson, were chosen because their views on the most disputed issue of the day were diametrically opposite to those of the President.

But many Vice Presidents have had something to contribute. Until recently it had to be in the legislative sphere, since a rigid application of the principle of the separation of powers kept the heir-apparent out of the executive government. No Vice President sat in the Cabinet between 1791 and 1918. When he did there was anxiety whether his presence was constitutional, and in 1925, when General Dawes was invited to attend he brusquely and publicly refused. But Vice Presidents who, like Curtis, the only man of Red Indian blood to serve in national office, and the late Mr Barkley, had been Senate majority leaders, or like Mr Garner had been Speaker of the House, used their experience and prestige to help push through the Administration's legislative programme. Unfortunately most of the experienced Vice Presidents broke with their chiefs before the end of their terms, or became infected by the presidential bug through proximity to the throne. They then turned into leaders of the opposition, like Princes of Wales in the eighteenth-century England on which American institutions are modelled.

More recently, with the end of the inhibitions about his taking part in the work of the executive, the Vice President has often undertaken presidential duties by delegation. The most striking examples of this have been Vice President Wallace's headship of the War Labour Board, and Mr Nixon's chairmanship of the Cabinet and the National Security Council during President Eisenhower's absence. It remains to be seen, however, whether the enlargement of the Vice President's function which has taken place under the Republican Administration can survive the special personal relationship between President Eisenhower and Mr Nixon. But, throughout the Vice Presidency's mottled history, the idea that it could be made the stepping stone to the highest office has never wholly evaporated. No Vice President has succeeded, except by death, since Van Buren in 1833. But Mr Nixon's ambitions and the eager competition among the Democratic party's promising young men at Chicago shows that the office is again regarded as an apprenticeship rather than a dead end.

Steel and Inflation

LAST week, the United States Steel Corporation raised its prices by an average of $8.50 a ton, presenting American industry with part of the bill for the recent strike which lasted thirty-four days and cost users over ten million tons of steel. This 6½ per cent increase is less than most buyers expected and the corporation claims that it will not fully cover the additional wage costs. In return for such industrial statesmanship, the steel industry feels that the government should allow more rapid depreciation, for tax purposes, on the new steel plants that are to be built over the next three years.

The increase in the price of steel has set off renewed but discordant discussion on the probable effects of the steel settlement on the American economy. Steel settlements set the standard for pay and benefits in steel fabricating, in the iron ore mines and in the aluminium industry where a brief strike has just ended. The new steel contract may also encourage Mr John L. Lewis to raise new wage claims for his coal miners. These are important segments of the economy, but many of the most important wage bargains, such as the agreement in the automobile industry, have already been struck and although the steel workers' gains are substantial they should not be sufficient to set off another spiral of increases.

Higher steel prices are likely to be passed on in full by the booming capital goods industries, but their impact on the prices of consumer goods will be less immediate. The cost of manufacturing a motor car, for example, will increase by less than $20. A more important question is whether the new level of steel prices will withstand the continuing increase of demand. Users had built up stocks in anticipation of a strike, but there is now a shortage of structural steels and of pipe supplies for the oil industry. And if prices continue to rise in other parts of the economy, it seems unlikely that steel can be relied upon to hold the line.

Half Throttle for Air Freight

FROM A SPECIAL CORRESPONDENT

BETTER financial weather is being forecast for the ten-year-old air freight industry, which has hitherto flown in turbulent economic air and suffered from poor business visibility. But the Civil Aeronautics Board has recently renewed for five years the certificates of the two largest domestic carriers of air freight and has granted them a limited right to carry mail, thus giving them some degree of certainty about future prospects.

Of the ten domestic "all cargo" carriers which sprang up with high hopes in 1947, only two have survived. And of these, only Slick Airways derives any substantial portion of its revenue from freight operations. All the others have either taken a tailspin into bankruptcy or simply grounded their equipment as their operations grew more intermittent and less profitable. One new company, still flying, entered the business in 1951, and operates between New York, Florida and Puerto Rico. The Seaboard and Western company is the only all cargo airline flying between the United States and Europe. A number of factors account for the high rate of failure in the industry. They include powerful competition from the passenger airlines; the absence of government subsidy in any of the forms enjoyed by the passenger carriers; the irregular flow of freight coupled with the high costs of equipment and maintenance which requires aircraft to be used to the full if operating charges are to be kept to reasonable levels.

Air freight, as such, did not come into existence until 1944. Before that, only "air express," at high rates, was flown under an arrangement between the Railway Express Agency and the passenger air lines. In 1945, approximately 1,600,000 domestic "freight-ton" miles were flown, with the all-cargo lines carrying 24 per cent of the total. In 1954, they carried slightly more than 30 per cent of the freight with the passenger airlines flying the rest. By 1956, the total freight-ton miles flown on both passenger and all-cargo lines had increased to only 275 million, far short of the billion tons which the CAB estimated, in 1949, as the potential for domestic air freight.

Competition has been extremely bitter. The passenger airlines have consistently claimed that a combination of passenger and freight carrying offers more economical and efficient service than the exclusive transport of cargo. The freight lines retort that the soundness of their operations is proved by the fact that more and more of the freight flown by the passenger lines is hauled in all-cargo aircraft. These are owned by the passenger airlines but are identical with those used by carriers who concentrate on air freight.

Since all civil aviation operations are regulated by the government, the CAB and the courts have been the arena in which the two groups have contended. The passenger lines have steadily objected to the granting of certificates to the freight carriers, the extension of their routes and the establishment of uniform rate schedules. Three of the major airlines were defendants in an anti-trust suit brought against them by Slick Airways on the charge of unfair competition and restraint of trade. The suit has been settled out of court.

As a result of their difficulties, the cargo carriers have been forced to shift their emphasis from the haulage of freight to contract flying—charter flights and the transport of military personnel and material. Without these military operations, the domestic air freight industry might well have died. The major source of revenue from genuine freight has come from carrying heavy industrial loads or perishables for which all-cargo aircraft are best suited.

Even though it is still very much of a touch and go proposition, there seems to be little doubt that the air freight industry will find a way to survive. A new tariff, a rate of fifteen cents a pound, has been established with a minimum of only $1 per package. Conceivably, the whole attitude of shippers and forwarders will be changed by this attempt to open up a market for cheap air freight. If so, the industry may well shift to full throttle.

The South Fights Back

WHILE the Democratic national convention has been hammering out a formula which, it hopes, will be satisfactory both to southern Democrats and to northern Negroes on whose support the party relies, the battle over racial segregation in the South itself has grown sharper. For more than forty years the National Association for the Advancement of Coloured People has been leading Negroes in their long and wearying fight for equality. The Supreme Court's famous decision barring racial segregation in publicly financed schools crowned years of effort by the Association's lawyers. But in a number of southern states steps are being taken to evade or oppose the Supreme Court's decision, and as many southerners hold the NAACP responsible for their present difficulties, some of their more rabid leaders have promised to "liquidate" it.

The Association has been banned in Louisiana and Alabama, and in the latter state it faces a fine of $100,000 for contempt of court, imposed when the NAACP refused to produce its records, particularly a list of its 14,500 members in Alabama. Lawyers for the Association argued that its members would be exposed to economic pressures and possibly to violence if their names were revealed. This has, in fact, happened in a number of the more backward southern communities, and the fear of reprisals has kept many Negroes from seeking a test of their rights and civil liberties in the local courts. Measures against the NAACP are also being taken or are contemplated in other states. The Florida legislature has passed a Bill to investigate the Association in order to determine whether it is "subversive," and the Attorney-General of Georgia is pressing for legislation to outlaw it for seeking to destroy "our traditional pattern of racial segregation."

The National Association for the Advancement of Coloured People is not finding it easy to translate its legal victories into the realities of daily life. Moreover, at its recent convention the NAACP showed that it was aware that certain white liberal groups are drawing away from it and accusing it of acting too quickly for the Negroes' ultimate benefit. The Association resents this charge and has pointed out that it is filing cases only in those states which have done nothing whatever towards complying with the Supreme Court's verdict.

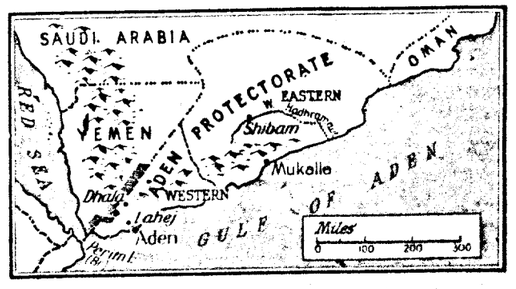
The World Overseas

Midget Thrones and Dreams of Oil

FROM OUR SPECIAL CORRESPONDENT LATELY IN MUKALLA

WHEN the Imam of Oman applied for entry to the Arab League, so the story goes, the League adjourned its session to find out where Oman was. Many Englishmen are no doubt equally uncertain of the whereabouts of such Arab states as Fadhli, Lower Yafai, Mahra, Bir Ali or Mausatta, for all of which they share some communal responsibility, and towards whose upkeep they pay, through the dark medium of the tax collector, some small contribution.

No fewer than 23 such petty states comprise the Aden Protectorate (divided into two parts, western and eastern), and with each of their Sheikhs, Sultans, Emirs, Regents and Sherifs the British Government enjoys protective treaty arrangements. More than that, it subsidises their development and security. provides advisers for their advancement, and has got itself embroiled in a depressingly complicated tangle of intrigue and rivalry concerning their future: whether they should federate under British auspices, whether they should retain their present erratic relationships with each other and with Britain, or whether they should be absorbed into the territories of their pushing but archaic northern neighbours, Yemen and Saudi Arabia. The Protectorate states produce almost nothing, and often seem quite incorrigibly addicted to the pleasures of violence and deceit. The conscientious Englishman, having discovered Upper Aulaki on his map, may well go on to wonder why on earth a harassed British Government wants to have anything to do with it.



Many of the Britons who work in the Protectorate have a disarmingly simple and old-fashioned answer. They say that Britain is in southern Arabia to help its inhabitants, to raise their standards, to induce in them some sense of serenity and to protect their interests against aggression. It may sound goody-goody, but for many of the men in the field it is happily true, and a little more of the spirit among Britons elsewhere in the Middle East might have saved a lot of trouble. Beyond altruism, though, stands hard policy, and at the policy-making level Britain's role in the Protectorate (simplified and rationalised, of course) is at once political and economic.

The political aspect of it can perhaps best be grasped in the Western Protectorate, the northern frontier of which marches exclusively with the Yemen. This contains most of the more jungly states, and its condition of internal disunion may be gauged by the fact that goods travelling from Aden Colony to Dhala, a distance of 76 miles, have to pass through five separate states and are subject to five different customs dues. Parts of this country, much of which is harsh and mountainous, have still never been penetrated by Europeans; but each of the states is served by a British adviser (who sometimes handles three or four of them) and British-financed security forces are scattered through the territory, maintained chiefly by air from Aden.

This place, the affairs of which frequently lapse into anarchy and tribal bloodshed, is a long, long way from stability or political cohesion. The British idea of a federation of its states, now thrown into the laps of the rulers, has not yet gone very far; not only are the rulers jealous of their own dignitaries and incomes, but people fear that a joint administrative structure might develop into some kind of British colonial rule. The Western Protectorate is feudal country, in which hereditary chieftains and their followers guard their prerogatives with a fierce medieval cunning.

British interest in this disagreeable backwater has never been very constructive. The total British expenditure on education there in 1953-54 was not much more than the Governor's salary; when £4 million was requested for the development of the whole Protectorate in the years 1955-60, the Colonial Development and Welfare Fund granted a total of £770,000. Nevertheless, it is largely the social progress that has been achieved that has re-aroused the acquisitive instincts of the Yemenis. The Yemen does not recognise Britain's right to be in the Protectorate, and claims, on the usual historical grounds, to own the whole of it; but recent attempts to encourage subversion across the border have probably been inspired chiefly by the fear of neighbourly progress, allied of course with sentiments of muzzy anti-imperialism.

In fact, the British Government is obviously far less inter-

ested in the territory *per se* than in its position as a buffer between Aden Colony and the rest of the Arab world, which nowadays can only be regarded as unfriendly to British interests. The Western Protectorate is Aden's hinterland, and if it was not under British protection (so the theorists say) Aden itself would be difficult to hold. This is not a strategic matter, but a political one (though British interest in the states of the hinterland first developed because of the need to secure Aden militarily). Nobody can really imagine the Yemenis rushing on Aden. But they have shown in the frontier areas how easy it is, with a gift rifle or the promise of benefits, to gain the support of the poor Arab ; and control of the Protectorate would give them access to many very poor and vaguely disgruntled Arabs within the colony itself.

The little rulers of the Protectorate, though with one or two notable exceptions unreliable and avaricious, are unlikely to relish the idea of Yemeni hegemony, if only because it might mean the loss of their midget thrones. The ordinary man might not welcome, when it came to the point, a return to the most barbaric principles of antique Islamic law, such as the removal of limbs in punishment. But there are three great inducements to subversion: first, the resurgence of pan-Arabism, which is noticeable in such relatively advanced centres as Lahej ; secondly, the sense of Islamic unity, most powerful among such shuttered communities as these ; thirdly, a widespread conviction, fostered by Yemenis, Saudis and Cairo radio, that the British will soon be leaving anyway and that it would be wise to climb aboard the bandwagon now, while the going is good.

Thus the British purpose in the Western Protectorate is necessarily a negative one : it is not really to increase production (though the Abyan cotton scheme is a splendid exception to a general rule), nor to fuse the states into unity, nor to establish more direct rule ; but simply to prevent other people gaining control there. The British presence fills a vacuum, and provides the port of Aden with a relatively innocuous backyard ; and it also protects the flank of the Eastern Protectorate, which is a different matter altogether.

The British Stake

Thanks to the inspiration of some brilliant and devoted British officials (not least the present Resident Adviser, Colonel Hugh Boustead) the Eastern Protectorate has achieved a measure of stability beyond conception twenty or thirty years ago. It consists of five states only, living reasonably peacefully with one another. The easternmost territory, Mahra, is practically unknown and has no administration ; but the principal state, Quaiti, has a successful and quite advanced local administration, maintained with the minimum of British participation. Nationalism and pan-Arabism have inevitably arisen there, but at least they have a basis of relative maturity and experience.

But here the British stake is different. Whereas the Western Protectorate appears to offer little hope of mineral resources (not that it has ever been completely surveyed), the Eastern Protectorate seems to hold the magical promise of oil. A British company is prospecting hopefully in the north, near the Saudi frontier, and the hope of success colours the whole British attitude to the territory. A British bank, for example, has begun operations in Mukalla, the delectable old port (a sort of Arabian Venice) which is the principal gateway to the Protectorate ; business is now slack, and the manager has time to chat ; but it is always worth waiting for oil. Rulers, merchants and British alike find their thoughts overlaid, so to speak, by visions of wealth to come : and the greedy Saudis across the frontier have an added inducement to expansionism.

Precisely whose wealth it will be seems to be a moot point. The concession was granted by the British, according (so they say) to their treaty rights ; but the royalties, it appears, will accrue to the individual rulers in whose territory the oil is found. The British hope that such royalties can be shared, through some federal system, among all the states of the Protectorate ; the rulers, naturally enough, tend to view such proposals with suspicion ; and the visitor is tempted to wonder why, if Her Majesty's Government is qualified to grant concessions, it is not also entitled to dispose of the consequent royalties.

Some people, in any case, question the wisdom of the British policy of co-operation with state rulers. These turbaned potentates are on their way out, so the argument goes, harried by the hounds of progress ; and without them it would be much easier to achieve some kind of unity. To this the advisers answer that without the Sultans and the Sherifs there would be nobody at all to negotiate with. In such advanced centres as Shibam (the white skyscraper city which stands thrillingly, like a land-bound Manhattan, in the remote Wadi Hadhramaut) there are certainly educated, travelled and cultured men—the Hadhramaut even has its own written literature ; but none of them can be considered as representative of the people, or competent to speak on their behalf. The existing system is in many ways difficult, and almost certainly doomed ; but there is at present no alternative.

So in one way and another, and for different reasons, the British policy is to maintain the *status quo* in the Aden Protectorate, in essential ways anyway ; commited, partly by a resilient sense of altruism, to programmes of development and improvement, and heavily engaged, with land and air forces, in protecting the northern frontiers against encroachment and subversion. There are differences of opinion about federation, about oil royalties, about the position of the frontier, about the ethics of the British attitude ; but the intention is clearly to hang on.

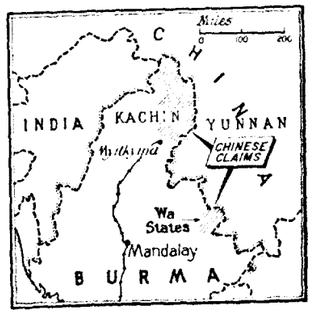
Are we right to assume these responsibilities, hampered by limited resources, and in the face of the universal Arab movement towards unity and independence ? In the city of Aden it is difficult to escape some qualms of doubt ; but in such a place as Mukalla, the lot of whose people has unquestionably been improved by the British presence, whose splendid Arab character has not been tainted and whose British advisers do their work with genuine respect for local pride and aspirations, one feels that (oil or no oil) there is something to be said for the Pax Britannica.

China, Burma and the Wa

BY A CORRESPONDENT

THE Burmese government is reported to have sought the good offices of India about the recent Chinese military penetration into the Wa country on the Yunnan border, a diplomatic protest to Peking having been of no avail. Whatever the significance of this particular incident, it has called attention to the fact that two stretches of the frontier between China and Burma have never been finally demarcated. As long as this situation remains, it provides possibilities of dispute and of Chinese pressure on Burma. The Burmese government has taken over from Britain the claim to the frontier line which appears in atlases published in this country. But Chinese maps show a different frontier, and although the Communist government has sought to allay Burmese fears about traditional Chinese claims, by maintaining that the maps in question were published under the Kuomintang, it has not shown itself disposed to settle the matter by a definite agreement.

Two tribal areas between China and Burma have always in the past been independent of both Chinese and Burmese control ; they have been at once too barren to be worth subduing and too difficult of access to be effectively administered without great exertions. One of these is the country of the Kachins in the extreme north, bordering also on Assam, and the other is the territory of the Wa tribes between the Salween and Mekong rivers to the north-east of the Shan States. It is the Wa country which is involved in recent events, though there have been reports of Chinese intrigues among the Kachins as well and the potential area of dispute there is much larger. The Wa occupy a land about the size of Yorkshire consisting of a jumble of limestone mountains, of no great height but extremely difficult to traverse. Numbering about 100,000, the people live in fortified hilltop villages rather like the " camps " of Iron Age Britain, each tribal unit being independent ; there is no central political control for the whole people. The Wa formerly occupied a much larger area ; they speak a language related to those of the Mons of southern Burma and the Khmers of Cambodia, but quite different from the Sinitic speech of the Shans who surround them. Unlike the Shans, Burmese and Siamese, they are not Buddhists, but retain a primitive animist religion of which headhunting—for the magical fertilising of the crops as well as for the exercise of warlike prowess—has been traditionally a part. The Wa were driven into their inhospitable mountain fastnesses by the Shans coming down from the north ; the Shans despise them as savages, but have in the past been content to leave them to themselves in a country which is as hard to conquer as it is unattractive for settlement. The Wa mountains, however, have been a refuge for people other than the Wa themselves ; when the rebellion of the Chinese Moslems of Yunnan known as Panthays was suppressed in 1875 with fire and slaughter by the forces of the Chinese imperial government, a group of them escaped to a stronghold in the Wa country, and indeed still survives, having augmented its original numbers by making converts among the Wa.



When Burma was brought under British rule, and contact was made with the outposts of the Chinese empire to the north-east, there was a desire in Rangoon and London for a frontier with China more precise than had been thought necessary in the old days of the Burmese kings. This did not necessarily imply a resolve to administer the Wa ; nobody had ever administered them, and from what was known of their ways it was likely to be more trouble than it was worth. But it seemed important to decide to whom the Wa nominally belonged in terms—unintelligible to the Wa themselves—of state sovereignty. A joint British-Chinese commission, therefore, was appointed to define the frontier in 1899, but failed to reach agreement ; the Wa were not interested in the frontier, but took the opportunity to cut off the heads of two British officials and four Chinese soldiers, for which some Wa villages were burnt by a combined British and Chinese force. After this the Wa were left alone until 1935, when a boundary commission was set up by the League of Nations with a Swiss chairman. By this time reports of mineral deposits in the Wa country—a silver mine had formerly been worked there by the Panthays—had suggested that the territory might after all have an economic value.

An exchange of notes between Britain and China in 1941 left the Wa country within Burma, but soon afterwards the Japanese invasion diverted attention from this remote area ; when, after the war, power was transferred to an independent Burma, the Wa were still virtually independent in their hill forts and the new regime had plenty of other troubles to distract it from the question of the frontier. The Kuomintang government in China had likewise too many troubles of its own to bother about the Wa, and the Communists after taking over China soon got themselves into the war in Korea and were careful to avoid complications with Burma or India, even when Kuomintang exiles were raiding Yunnan from the Shan States. But the Wa have not, it seems, been altogether forgotten ; governments in the modern world do not accept that anybody should remain unadministered. The only question is whether it is to be done by Burma or by China. The Burmese appear to have missed their opportunity to bring the Wa under control, and now the report is that the Chinese have moved in and established a garrison on what (by the Sino-British agreement of 1941) is the Burmese side of the border. Perhaps it does not matter very much and the Burmese should be grateful to China for taking on the task of bringing civilisation to the Wa. But when a frontier is challenged, the being of a state becomes uncertain ; once a dyke is breached, where is the water to stop ? The first Chinese encroachment on Burma is unlikely to be the last.

Arms and Japan

FROM OUR CORRESPONDENT IN TOKYO

NOBODY can be conscripted into the Japanese armed forces, and any volunteer soldier, sailor or airman can become a civilian again, almost at a moment's notice and without suffering any penalty for turning in his uniform. One result is that the so-called Self-Defence Forces, if not popular, are at least tolerated ; and unwary tots have even been known to wave to passing Japanese soldiers, though such instinctive patriotism is heavily frowned on by parents, who seem to feel ashamed of it as atavistic, as well as probably being unconstitutional. The Socialists, however, are a trifle less militant in their anti-militarism than they used to be. Mr Asanuma, the party's genial Secretary-

General, now says that, when they come to power, the Socialists will not immediately disband the army, but will reduce it by stages. It is true that the reason Mr Asanuma gives for this modification of previous attitudes is purely economic. Japan, he points out, has quite enough unemployed as it is, without throwing the army on the streets. It is also a fact that most of the men who voluntarily enlist are farmers' younger sons who see no other way of making a living. However, it can be safely asserted that for one reason or another the Japanese have come to accept the existence of a postwar defence system, and are prepared to spend some 12 per cent of the budget on it.

But any suggestion that either this sum or the forces themselves should be increased, invariably encounters stiff resistance. The army, navy and air force now total around 180,000 men. The soldiers are equipped with some thousands of outdated rifles, the sailors man three old destroyers and a dozen and a half superannuated frigates, and the airmen fly 250 aircraft, mostly trainers (no jet pilots have as yet completed their course). According to its agreement with the United States, the Japanese government is supposed to add 10,000 soldiers, 3,500 sailors and 9,000 airmen in the next twelve months, as a step towards the 1961 goal of a 180,000-strong army, an air force with 700 fighter planes, and a 125,000-ton navy. But all this is going to cost money, and the Japanese are very loath to spend it. It is, in fact, difficult to escape the conclusion that postwar Japan is prepared to tolerate armed forces only on condition that they are entirely for show and in no real danger of having to fight (and so, perhaps, lose). Many Japanese believe that, in the atomic age, large forces would simply provoke some large neighbouring countries' hostility, without being able to meet it.

"Fighting is for Yanks"

The corollary of this conclusion is that fighting is strictly for Yanks. In the upper reaches of the armed forces' own bureaucracy, nervous objections are sometimes voiced to the Americans' use of the term "Communists" to denote the potential enemy. The Japanese do not deny that Communists *are* the potential enemy, but seem to feel that that is the Americans' affair, not theirs. As one Japanese official explained when gracefully declining the offer of the use of an American base by the Self-Defence air force: "If the enemy bombs it while it is under your flag, that is your business, but if they bombed it while it was under our flag, why, we would be at war!"

A more recent phenomenon is the growing feeling that the Americans should take their business elsewhere, away from Japan. As SCAP—Supreme Command Allied Powers—recedes into history, so do the "Scapanese" who were well content to leave all decisions, as well as any possible fighting, to the Americans. Post-SCAP Japanese grumble that American armed forces on Japanese soil simply "attract the lightning" of Communist aggression. They want the Americans to go away, and they themselves want to become the Swedes of the Orient.

Some Japanese realise that this would entail taking over the full load of the defence burden, as a necessary part of the price of genuine neutrality. But this realisation is by no means widespread. The recent American announcement of a reshuffle of Pacific Commands, clearly foreshadowing the pull-out of some American forces from Japan, provoked some interesting but conflicting reactions. Perhaps the chief reaction was, "Since the United States is relaxing, Japan can relax also." The Hatoyama government typically sidestepped the awkward problem of a step-up in the share of the budget allotted to the defence forces by announcing (though with some dissident voices) that there would in fact be no large-scale movement of American forces out of Japan, so that the situation had not really changed at all. Others gloomily predicted that greater American concentration on Okinawa would simply make an Okinawa settlement that much more difficult: the reasoning seemed to be that the Americans should not merely leave Japan, they ought to get out of Okinawa as well. And yet another school of thought forecast a severe drop in American procurements of Japanese supplies and demanded that Japan should take what the Minister of International Trade, Mr Ishibashi, called "immediate countermeasures." What Mr Ishibashi meant, as he kindly explained in a signed article in the *Oriental Economist* (which he owns), was that Japan should take positive steps to increase its "economic exchanges" with China, and perhaps with Russia also.

It is not surprising, considering the delicate state of the country's balance of payments that economic factors should play a large part in Japan's thinking on these issues. The dollar deficit would be intolerable but for the American military procurements. The United States has, in addition, spent almost as much on equipping the Japanese Self-Defence Forces as have the Japanese themselves. If the procurements are going to drop because of an American pull-out, and if simultaneously the Japanese are going to be asked to spend considerably increased sums on expanding and maintaining their defence system, the chances are that the emotional drives towards a Nehru-type neutrality will receive greater impetus, while Japanese businessmen will begin in real earnest to look towards Chinese and Russian raw materials and markets.

The Communist countries are of course well aware of this, and would be, even if they did not have a smart ex-MVD lieutenant-colonel sitting in Tokyo disguised as a "fisheries expert," to advise them. A trade bait has already appeared in the Russo-Japanese peace talks in Moscow; and, while it is no doubt purely a coincidence, it must be a matter of satisfaction to the Communists that the Japanese Socialists' "solution" of Japan's territorial claims is to get the Americans out of Okinawa and the Bonin Islands, as a first step to

NEW RUSSIAN STATISTICS

The Annual Supplement to our three-monthly economic review of the USSR, just published, contains *new Russian statistics now available in English for the first time:* more complete and *detailed production figures* than ever before; the commodity breakdown of *Russia's foreign trade.*

A subscription to four Quarterly Economic Reviews of the USSR and the annual supplement is £10. Single copies of any quarterly review or of the Annual Supplement are £3. Every country in the world is dealt with in our three-monthly reviews and supplements.

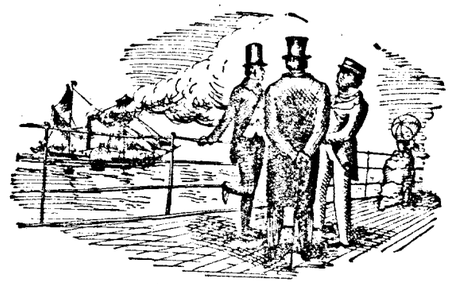
Immense!



Immense!

"Wonderful thing steam Sir"
"Ah, it is indeed Sir"
"Great power Sir—Immense! Immense!"
"Great deal done by steam Sir"
"Ah!—Still in its infancy they say Sir".

THIS snippet of conversation from Charles Dickens' "Sketches by Boz", reflects the wonder and importance of steam as a power in the land (and at sea!) over a hundred years ago. Today, if steam is not in its infancy, it is certainly in the full vigour of its manhood. It is used to generate over 98% of Britain's electrical power and is the most important servant of industry—versatile in its application, providing power and heating for a host of products and processes that are the very basis of our economic progress. Now, as we move into the atomic age, steam is still the essential medium; for the conversion of atomic to electrical power. The name most clearly linked with these developments is that of BABCOCK & WILCOX LTD.

Babcock & Wilcox Ltd., have long been pre-eminent in the manufacture of steam-raising plant; and during the past eight years have collaborated with the Atomic Energy Authority in the study and design of atomic power plant. Already they have manufactured the impressive steam-generating towers for Calder Hall 'A' atomic power station and are engaged on further contracts, to the value of nearly £6,000,000, involving a total of 32 towers. Each of these towers, 80 feet high by 17 feet diameter, houses complex banks of steel tubing with a length of over 10 miles, and covered with nearly 11,000,000 welded, aerofoil studs—a total of 340,000,000 for the 32 towers.

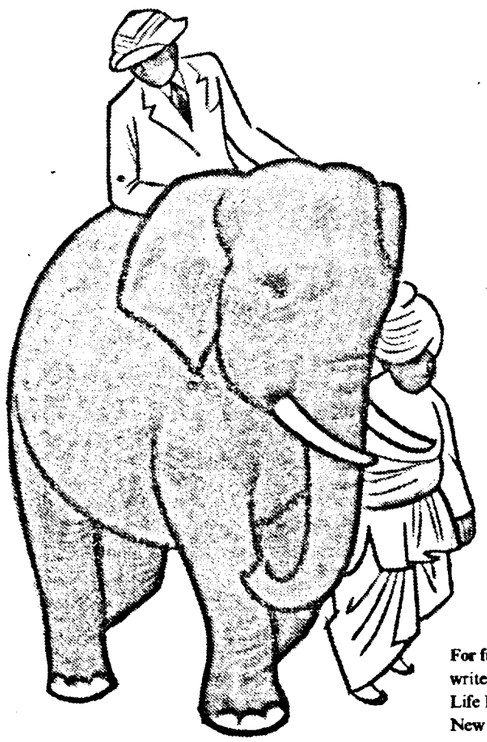
Route to a larger share of the export market



ONE OF the most direct routes to increased export sales is via advertising. And the most effective advertising route is marked by the following significant signposts:

1. Potential Customers. Not everybody everywhere is a potential customer. As an advertiser, it is important that your message reaches the people who are in a position to act upon it. And these key people are among the readers of LIFE's International Editions. They are leaders in business, government and the professions. They are the people who can buy—and influence buying.

2. Advertising Coverage. On five continents you can be sure to reach your markets with these publications. LIFE INTERNATIONAL is read around the world and LIFE EN ESPAÑOL offers concentrated circulation in Latin America. Each extends its impact far beyond its primary circulation. For subscribers and newsstand buyers pass their copies on to family friends and associates. Studies show that as a result, total circulation can on the average be multiplied by eight.

Reaching the right customers with an effective advertising message marks the road to export sales when you advertise in LIFE INTERNATIONAL and LIFE EN ESPAÑOL. And it is for these reasons that leading companies in Britain and on the Continent have more than doubled their investment in LIFE's International Editions in the last four years.

3. Best Possible Message. What you say about your product, the physical appearance of the advertisement itself, are factors of utmost importance. When you advertise in LIFE INTERNATIONAL and LIFE EN ESPAÑOL, you yourself have control over your selling message. You can make certain that it says what you want it to say—that it looks the way you want it to look.

LIFE INTERNATIONAL — advertising rates based on average net paid circulation of 250,000 copies printed in English and distributed in 120 countries outside North America.

LIFE EN ESPAÑOL—advertising rates based on average net paid circulation of 275,000 copies printed in Spanish covering all of Latin America.

These are the INTERNATIONAL EDITIONS of LIFE magazine, with a combined current circulation of over 560,000 copies every fortnight.

LIFE INTERNATIONAL EDITIONS

persuading the Russians to hand over Kunashiri and Etorofu islands. One influential Japanese journalist, quite in the Nehru tradition, has, while accusing the Americans of having a "superiority complex," proposed that Japan should accept the burden, not of its own defence, but of "mediating" between Communist China and Formosa, as a first step towards real, peaceful coexistence in the Pacific.

Holland Fights the Sea

FROM OUR CORRESPONDENT IN HOLLAND

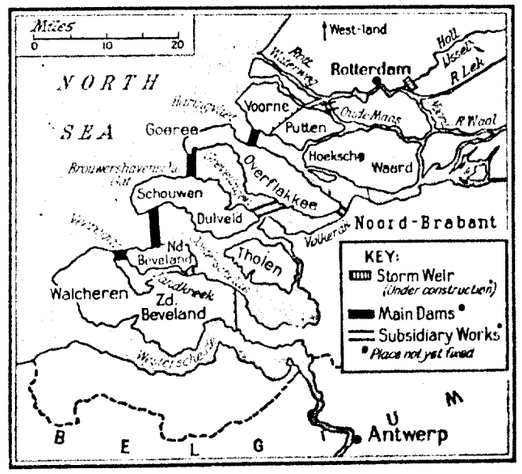
THE ambitious new Dutch scheme of sea defences, the Zeeland "Delta plan," has just been started with the sinking of the first mattress in the Haringvliet, one of the three big inlets which is to be cut off from the sea. The scheme will take about 25 years to complete and will cost around 2,000 million guilders. It will not lead to the reclamation of much new land—about 25,000 to 37,000 acres at the most—but it will give Holland much stronger defences against the sea than it has yet enjoyed and it will also provide much better facilities for preventing fertile fresh-water fields from becoming poisoned with salt water.

The Delta plan is a result of the hard lesson learned by the Dutch in a single night in February, 1953, when it became painfully clear that the safety of one-half of the country and the lives and livelihood of 60 per cent of the population rested on sea defences which were quite inadequate. On that night exceptional conditions of wind and tide caused the sea to break through the coastal defences and take a heavy toll of lives and property. An area of 375,000 acres, with a population of 600,000, was inundated. About 1,800 people lost their lives and at least 72,000 had to be evacuated. And yet the calamity might easily have been much more serious. A breach which was starting to appear in the dykes along the "Hollandse Ijsel" was only stemmed at the very last moment and with the utmost difficulty. If it had not been held, the centre of Holland, with a population of more than four million, would have been inundated.

The commission appointed to draft a plan for more adequate sea-defences decided against a scheme for strengthening and raising the level of the existing dykes as being both costly and unsatisfactory. It agreed that a better plan would be to build 20-30 kilometres of new dykes, leaving the old dykes to form a second line of defence. The three new main dykes will be built in Veeregat and Oosterschelde, Brouwerhavensche Gat and in Haringvliet. It will also be necessary to raise the dykes along the Westerschelde and the Rotterdamse Waterweg, and to dam the Hollandse Ijsel. Secondary dykes will have to be built at Zandkreek and Grevelingen to facilitate the construction of the main dykes, as well as at Volkerak and Oude Maas to control the water levels. Minor undertakings will be necessary to assist drainage, navigation and fish-culture. Ultimately, Holland's complete security against the sea will rest upon an unbroken coastline, the islands in the north being connected by dykes of some kind, but this scheme is still in the earliest stage of planning.

The Delta plan does not provide dykes along the Westerschelde and the Rotterdamse Waterweg, because the heavy sea-traffic of the ports of Antwerp and Rotterdam would find it too inconvenient to have to negotiate a system of locks through the dykes and the experts decided that there would not be strong enough advantages to justify the erection of these obstacles to easy navigation. Elsewhere, however, the plans will provide adequate protection against storm floods even though the water level rises far higher than it did in 1953, when it reached the highest recorded level. The large low-lying basin behind the main dykes acts as a safety valve when the water level of the Waterweg rises. The weir in the Oude Maas will be opened and the water level in the Waterweg thereby reduced. The Hollandse Ijsel dam will protect the area with the weakest defences and the lowest land in Central Holland. The sluices and lift-locks are already under construction, and by the winter of 1957-58 they will be in operation.

The plan also provides a way of dealing with the spate of water which in wet weather surges down the rivers Lek, Waal and Maas, and at the maximum rate of flow becomes



much greater than the Rotterdamse Waterweg can carry away. When the currents in the river Noord and the Waterweg become dangerously swift, the pressure will be relieved by opening the sluice gate at Haringvliet. But when the discharge from the rivers is at its lowest the water will have to be carefully husbanded, for it is greatly needed, not only for irrigation but also to wash out salt water that finds its way into the polders, where it poisons the crops and affects the livestock. At the moment half the water flows to the sea by way of the Haringvliet and is lost. When a separate project to canalize the Rhine and the Lek is completed, the consequent reduction in the discharge from the Lek might well cause the sea to penetrate deeper inland. But under the Delta plan all the sluice gates in the main dams, including the one in the Oude Maas, will be shut when the river levels are low, so that the flow will be directed entirely to the Waterweg. The swifter current will push the salt water further seawards, and Rotterdam and the horticultural area of the Westland district will thus get a better supply of fresh water.

Paradoxically, Holland, which always seems to have a water surplus, has also a problem of fresh water shortage.

Under the Delta scheme it will be possible to open the sluice in the projected dam in the Volkerak whenever there is a surplus of water and then close it as soon as the water level in the north drops below that in the south, and in this way to store water in the Zeeuwse Meer, as the estuaries of Zeeland are called. The water can then be distributed at will among the farming districts in Zeeland and Noord Brabant. If fresh water could be introduced into the sandy and impoverished soil of some parts of this area in the summer months, the productivity of the land would be increased by up to thirty per cent.

In order to convert the Zeeuwse Meer into a fresh water lake when the main dykes have been completed, drainage installations will have to be built in each of the dams, and also probably in the eastern part of the Oosterschelde, so that the salt water can be drained away gradually while fresh water is introduced through the Volkerak. Whenever there is severe frost the sluice gates in the Haringvliet will be opened so that the tidal movement and comparative warmth of the sea will break up the ice of the inland lake.

The dam in the Zandkreek and the one in the Veeregat form part of what is called the "three islands plan," which will link up Walcheren, Noord Beveland and Zuid Beveland. Bringing the islands into closer touch with the mainland will be an important result of the Delta scheme. Industry will then be able to settle in areas which have hitherto been unsuitable because of their inaccessibility. The labour from these areas will also be able to reach the surrounding industrial districts more easily, through the construction of high roads to Rotterdam over the new dams.

Strong Tidal Flow

Although the bill providing for the financing of the plan has not yet passed the Dutch parliament, the first big project, the dam in the Haringvliet, has been begun. The building of dams in Dutch tidal waters presents the engineer with difficult problems, both because at the bottom of these tidal inlets there is nothing but fine sand, and because the ebb and flow of the tide is very strong, and as work on the dam progresses, the tidal current flows through the narrowing gap with increasing force. Yet, if too great a margin of safety is allowed for, the construction will be too expensive.

Under the Delta plan the area of tidal water to be cut off is considerable. The tide range is about twelve feet and in the Oosterschelde alone 240,000 million gallons of water now move in and out at every tide. It is planned to build the dams in three main phases. First, a wide belt of mattresses made of willow branches or similar material, and weighed down with heavy stone ballast, will be placed on the sea bed to prevent the sand being scoured out by the tidal currents. These mattresses will have to be laid at slack water at depths of up to 85 feet. Secondly, a wide "threshold," or underwater dyke, flat-topped and made of mattresses, shale and basalt will be built on this protected base up to the maximum height at which it can still safely withstand the tidal forces; in general, its height will be 30 to 40 feet below sea level. Finally, a long mole of concrete caissons will be placed upon the threshold. The caissons, which will be floated to the site and lowered on to the threshold at slack water are in effect enormous sluices, which, as long as their gates are open, only slightly restrict the flow of water. Once the line of huge open caissons is complete, all its gates can be closed simultaneously. The dyke can then be completed and strengthened in still water.

New Zealand's Cautious Budget

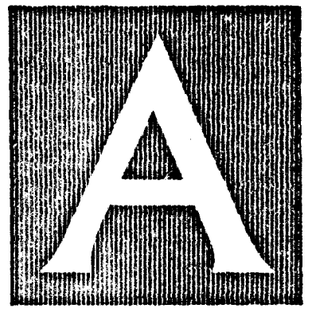
FROM OUR WELLINGTON CORRESPONDENT

NEW ZEALAND made a modest start last week in trying to use the budget to counter inflation. For the first time in seven years there were no tax concessions. Instead, Mr Watts, the Minister of Finance, budgeted for a modest surplus of £3,700,000, increased income tax by £3,500,000 (by halving the 20 per cent rebate granted last year), and removed the special plant depreciation allowance —the only tax concession recently given to companies.

The general public and the business community, which had expected something more severe, accepted Mr Watts' proposals with resignation and with some symptoms of relief. Before the budget, it had been predicted that the government would try to check imports by imposing higher sales taxes on a number of luxury goods, including motor-cars. There had consequently been a moderate run on stocks of liquor and tobacco; but this precaution proved unnecessary. The main criticism of the budget is that it shows yet another steep increase in government expenditure. Last year, while exhorting the public to save, the government increased its own expenditure by £8 million. During the present year, its expenditure will increase by £12,300,000. There is a good deal of restlessness in New Zealand about the high level of private and company taxation; and both this and the effects of the present credit squeeze would be accepted with more equanimity if they were accompanied by some evidence that the government was doing more to obey its own precepts. The halving of the income tax rebate will bring the annual proceeds from income tax to over £98 million.

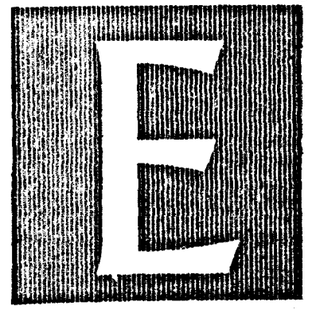
There is also some criticism of the abolition of the special plant depreciation allowance on the grounds that New Zealand's company taxation already leaves the companies only 7 per cent of their profits for distribution and that the real problem is to cut back unnecessary luxury imports instead of handicapping imports of necessary new plant. Mr Watts conceded that despite the credit restrictions New Zealand is unlikely to overcome its balance of payments deficit this year; the deficit would be substantially reduced, for the monthly rate of private imports was now £1,300,000 less than last year, when New Zealand had a payments deficit of over £26 million; but until the deficit was fully bridged all remaining controls on building, capital issues and imports (which at present cover about 20 per cent of imports) would be continued. The government is also to float an internal loan of £5 million.

The budget provided £76,500,000 for social security and welfare, or about 28 per cent of tax revenue. The chief increases in expenditure are in defence (roughly £2 million), works and education. The government is still hesitating about introducing "pay as you earn" taxation, and the most that Mr Watts would do was to announce the appointment of a special committee to investigate the matter still further. His budget's only marked characteristic is that it slightly increases taxation instead of slightly decreasing it. But it is extremely unlikely that its modest tax increases will have any real effect upon New Zealand's chief problem, which is its balance of payments deficit. The budget's chief merit is that at any rate it will do nothing to make the inflation worse, even if it does too little to remedy it.



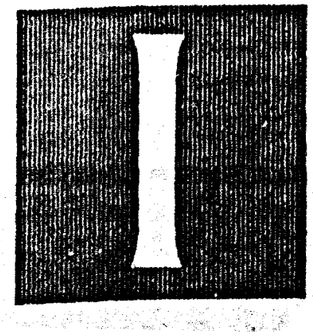
AUG 6th **BANK HOLIDAY BLUES**
This is a dismal bank holiday; hail and rain wet our clothes and damp our spirits. Some comfort, however, is provided by A.E.I. companies, for, thanks to electricity, much of which is generated by Metropolitan-Vickers and B.T.H. equipment, we can take refuge by our Hotpoint fire or at the Cinema where a western, shown by B.T.H. projectors, conjures up some memory of the sun.

every day



AUG 7th **MORE POWER FROM THE ATOM**
Sixteen atomic power stations with a total electrical output three times that of the twelve stations projected in last year's "Programme of Nuclear Power" are now proposed by the government. Amongst the four groups who are preparing tenders for the first of these stations is the A.E.I.—John Thompson Nuclear Energy Co. Ltd., builders of Britain's first privately owned reactor.

every way



AUG 8th **COMMUNICATIONS**
The Prime Minister is heard and seen in many homes in this country as he makes his speech to the nation this evening.
Ediswan valves and cathode ray tubes play a major part in such communication by radio and television. Ediswan is derived from two famous names, Edison and Swan, whose company—now a member of A.E.I.—made the first electric lamps in this country.

Chequerboard of the East

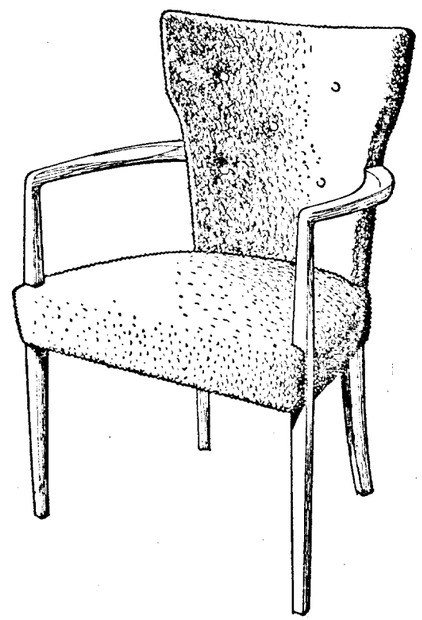
So many races . . . so many needs . . . so many markets extending over a vast area of the earth's surface. And there The Chartered Bank operates with knowledge and experience sustained by more than a century of close and intimate contact. Branches of The Chartered Bank of India, Australia and China are established in most centres of commercial importance throughout Southern and South-East Asia and the Far East. At all these branches a complete banking service is available and, in particular, facilities are provided for the financing of international trade in co-operation with the Bank's offices in London, Manchester and Liverpool, its agencies in New York and Hamburg and a world-wide range of banking correspondents. In London and Singapore the Bank is prepared to act as executor or trustee.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter, 1853)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

Not the retiring kind



Here is a chair that will positively inspire you. Look at its brisk, almost eager lines. See how it holds itself poised, ready to launch the busy executive into a welter of work. Indeed, once ensconced in this chair you'll find yourself working at pre-luncheon speed throughout the day. Yes, this is definitely a businessman's chair.

See it at Heal's along with the many other examples of modern furniture for boardrooms and offices. If you cannot manage a visit to our showrooms, may our furnishing adviser call on you? Or can we send you our leaflet "*Chairs for Executives*"?

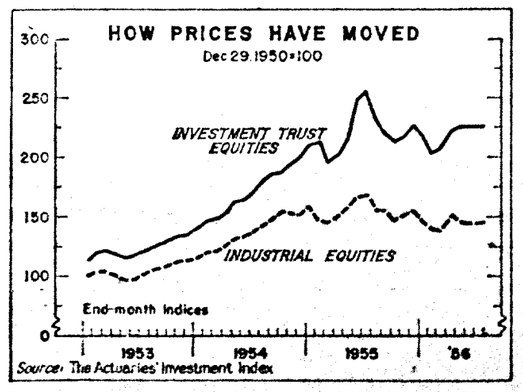
THE BUSINESS WORLD

Investment Trusts Compared

INVESTMENT trusts are a happy hunting ground for statisticians, who bring an elaborate apparatus of analysis, including earnings yields, priority percentages and break-up values, to their comparisons of different investment trust stocks. Such labour is not in vain. It gives the investor a good deal of help in picking his way through well over a hundred investment trust ordinary stocks; it also suggests rational answers to the question whether it is better to secure a stake in an expertly managed and balanced portfolio, or for the investor to use his money and any experience he may have to build up his own portfolio. But there are limits to the usefulness of this kind of figuring; for although the arithmetic of comparisons between trust stocks can be made precise, the market in investment trust stocks is narrow and unlikely to broaden—the nice calculations go with wide prices.

Occasionally it is well to take a less sophisticated look at the behaviour of the trusts. The results of such a general view are set down in the accompanying chart and tables. The chart measures the movement of the prices of investment trust ordinary stocks over the last three and a half years; the tables present the results of two "average" trusts, the first based on a sample of 15 London trusts and the second on nine Scottish trusts. The figures of these "average" trusts have value only as indicators of trends.



The investment trusts are not enjoying the vogue they had in the twenties. Last year several of them placed new capital (usually in the form of debenture stock) and some made small rights issues of ordinary shares. But the amount of new capital raised by investment trusts as a whole during a period of booming ordinary share prices has been small; indeed, one might say that by these issues the trusts were doing little more than passing on to their own stockholders some of the benefits and burdens accruing through the trusts' own participation in rights issues by industrial and commercial companies. While the welfare state has sent some other institutional investors bounding ahead the trusts have done little more than mark time.

Few new public investment trusts have been formed since the war—Cable and Wireless (Holding), now the biggest of them all, is a special case arising out of nationalisation. The demand for investment trust securities and even for the open-ended trust units has been limited. This can be explained partly by the blows suffered by private saving and investment and partly by what has seemed to be an illogical prejudice by governments against the trust form of investment. Memories of the slump in the thirties, which showed that even the most expert management cannot fly above a storm, have not entirely disappeared. And in the post-war bull market, where capital gains and better incomes have accrued virtually automatically for the private investor, there has been so much the less justification for paying a premium to secure expert management.

As the chart shows, the prices of ordinary stocks of investment trusts closely follow those of industrial equities, which bulk largely in the trusts' portfolios. But between the receipt of dividends on a

trust's portfolio of securities and the payment of its own dividend there is always a time lag. That lag is not reflected in market prices of the trusts' stocks. Historically the prices of investment trust equities have nearly always been below their break-up values, for break-up values are always most notional when they are most attractive. Investment trust equities also suffer restraint because the trusts do not normally distribute their income to the hilt. But in a bull market investment trust ordinary shares rise faster than their underlying securities because of the additional element of gearing in the composition of the trusts' capital. Over the last three years trust equities have gained ground on industrial ordinary shares, because of the gearing effect and also because the trusts, like other institutional investors, have been putting more of their money into ordinary stocks. The tables do not show exactly how far that movement has gone, for the portfolio distribution is calculated on market values so that a rise in ordinary shares automatically produces a fall in the proportion invested in fixed interest stocks. But they do suggest that the Scottish trusts have carried the switching out of fixed interest stocks into equities and out of British stocks into North American securities rather farther than the London trusts.

This policy has paid well in a period when profits and dividends were rising. The appreciation in portfolio values over the three years to end-1955 shows that the trusts' manager have done better with their investments than a portfolio simply made up of the industrial equities in the Actuaries' Investment Index would have done. In these three years the Actuaries Index (ungeared, of course), rose by about 36½ per cent, but the market value of the portfolio of the "average" Scottish trust rose by 58½ per cent, and that of the "average" London trust by 48¾ per cent. A trust must be expected to beat the averages if it is to stay in business. But the success of the trusts in keeping ahead of the British stock market indices is not quite a fair comparison, simply because they have been so active in buying of North American stocks which have moved ahead rather faster than British equities. There is, however, a converse to this: yields on North American stocks are generally lower than those on British securities. Increased participation in dollar stocks is thus one reason why the ratio of the trusts' gross income to the market value of portfolios has been falling. Another more important reason is that in a bull market share prices, on which the value of the portfolio is calculated, move ahead well in advance of the actual dividend payments from which the trusts' gross incomes are made up.

If this is an inflationary world, the trusts are right in concentrating more on equity investment, and it follows that there must be an element of growth in the trusts' own ordinary shares. But because of this switch into equities, the trusts are more vulnerable than they were. The chances of higher rewards from investing in a trust are better, but the risks are bigger, too. And, traditionally, the trusts appeal to the investor who desires a steady income—though this tradition got a nasty shock in the early thirties. A bear market would be a big test for the trusts; they would then have to fight for their reputation by maintaining dividends by means of transfers from reserves. Not many of them did so when faced with heavy book losses in the early thirties—and at that time they had proportionately bigger holdings in fixed interest stocks than now.

Investment trust ordinary stocks do not provide an easy road to fortune without risk. A few attempts to make the trusts more popular have been tried—as, for example, by Cable and Wireless (Holding) and Globe Telegraph in paying quarterly dividends and in promising an unchanged dividend rate, preserving an element of equity by free scrip and rights issues. In isolated instances success may attend these efforts. But with the impediments to private saving in this country it is difficult to believe that the trust movement will regain its former popularity. It now has to compete with various forms of indirect investment, such as insurance policies with profits and contributions to pensions funds. No doubt, the debentures and preference shares of the investment trusts will retain their appeal as safe investments, but the trusts' ordinary shares are as likely nowadays to go into the portfolios of other institutional investors as into the trust funds run by the family solicitor. And in the end it is the quality of management that counts ten times more than the precise calculations of the investment trust statistician.

Pop and Hi-Fi

THE gramophone record industry has a technical jargon of its own that is almost as baffling to the uninitiated as the commercial ramifications of its leading companies. Both have changed quite significantly during the past few years. The appearance of long-playing records has been followed by the cult of high-fidelity reproduction; on the commercial side, long-standing transatlantic partnerships have been dissolved to re-form in new and more complex patterns. The old familiar trademarks remain, but not always in the same hands. His Master's Voice and Columbia, Decca and Regal, Zonophone, Victor, Parlophone, Brunswick and relative newcomers like London, Vogue-Coral and Nixa, sell in their millions on both sides of the Atlantic but it is a wise buyer that knows his record's parent.

The most striking feature about the record industry is its survival in the face of rapid changes and advances in popular entertainment. With the leathery resilience of a coelocanth it develops and indeed prospers while the fortunes of rival entertainment industries such as films, radio and television fluctuate disturbingly with changes in public taste and in the economic climate. In 1952, the output of records in this country was roughly estimated at 35 to 40 million, many times the prewar rate. But by 1954 it reached nearly 51 million and last year output all but touched 60 million. Home sales for the first five months of this year are 29 per cent higher than in the same period of 1955 and exports are 11 per cent up over the same period.

The value of these sales is substantial. Home sales last year came to £15.5 million including purchase tax, or £9 million after deducting purchase tax (which has been at the rate of 60 per cent since the autumn budget). Exports were valued at nearly £3 million, which is 50 per cent higher than they were 4 years ago. Nearly half this business is accounted for by companies connected with Electric and Musical Industries, which now claims to be the largest record-making company in the world; indeed, EMI and Decca, the second biggest which probably sells about 44 to 45 per cent of the total, account between them for up to 90 per cent of the total British output although the proportions fluctuate. The balance, which probably amounts to some 10 million records a year, is divided between 20 or so record companies that are not affiliated to either of these giants. Some of these companies, like Nixa, which was acquired by Pye Ltd. in 1954, is growing rapidly; others are small business concentrating on highly specialised recording.

Records, both popular and classical, have a world market in a very literal sense. The same recording tends to sell with the same facility here, in the United States or in the Commonwealth. The exchange of catalogue rights between producers in different countries has, therefore, become a major part of the record business. Many of the records sold by EMI and Decca in this country are recorded in the United States and pressed here from matrices sent over from America and British recordings, similarly, are pressed in the United States. These foreign catalogue rights have played an important part in the fierce commercial rivalry that has developed between Decca and EMI since the war.

The end of the war found EMI distributing in this country and the Commonwealth the record catalogues of the then two biggest American producers, Columbia (British Columbia being owned by EMI) and RCA-Victor, as well as Metro-Goldwyn-Mayer recordings from film sound tracks. Decca was selling the recordings of American Decca (now a separate company) in Britain under the trade mark of Brunswick, while British Decca's own records were sold in the United States through its own distributing company as London Records. Decca was also distributing in this country recordings made by what was then a young and rapidly growing American company, Capitol.

In 1948 came the long-playing records; Columbia

pioneered the 33 rpm speed and RCA-Victor the 45 rpm. Two years later, Decca took the plunge in Britain and began producing 33 rpm records. For more than two years after that it was the sole British producer with not a single challenger in the market. Neither American company could sell their long-playing records in Britain or the Commonwealth because EMI, which held the rights to their catalogues, inexplicably delayed the change-over to long-play for four years until the end of 1952. Not until then did EMI decide to make both types, the standard sized 33 rpm and the smaller, 7 inch 45 rpm records.

In the meantime, the American Columbia company ended its association with EMI, impatience with EMI's long-play policy being a contributory factor, and from the beginning of 1954, arranged to have its catalogue distributed for it by the Dutch company, Philips; American Columbia recordings are now being sold in Britain under the Philips trademark. After this EMI, following Decca, began to make its own arrangements for distributing its recordings in the United States, under the Angel label, instead of relying on the American record companies.

The next move took place at the beginning of 1955, when EMI bought 96 per cent of the common stock of Capitol Records. This was a shrewd move. Capitol had by that time grown to the second largest record company in the United States, with a particularly strong popular catalogue which was being distributed in this country by Decca. The purchase of the company gave EMI control over this valuable catalogue by the same stroke that took it away from Decca. Almost a year later the wheel turned in favour of Decca. EMI's old agreement with RCA-Victor, which had survived so many changes, was ended and RCA-Victor teamed up with Decca. In four years, there has been an almost complete change in the old alliances. What were once quite small companies, Decca in Britain and Capitol in the United States, have come up to challenge the established leaders of the industry.

★

At one time most companies would have said that long-playing records would eventually drive out the old fast 78 rpm, which has a markedly lower standard of reproduction. Today, they are not so sure. The 78 rpm record has been reprieved by the astonishing market for "pop" songs—records of popular tunes that sell by their tens of thousands for a few weeks before being lost in oblivion. The break-even point for a record is probably 20,000; a good "pop" record will net 50,000 or so and a handful reach the million mark. No one is quite sure who buys these records; indeed one of the mysteries of the industry is what happens to its huge output. The principal "pop" customers seem to be adolescents in their teens. Not more than 40 per cent of the money spent in this country last year on records went to long-playing types—

and in numbers of discs, that implies a far smaller proportion. The cheapness of the 78 rpm record is in its favour for works with the ephemeral appeal of most "pop" records. But one of the less desirable consequences is the likelihood of keeping three speeds of record in production indefinitely, unless the 45 rpm type is eventually dropped.

The other phenomenon is the growth in numbers of people at the other end of the scale who are prepared to invest quite heavily in fine quality sound. The "hi-fi" cult has reached the proportions of a substantial industry—though one in which the big recording companies have only an indirect role. Although claims for high fidelity are freely used to sell records, in hard fact there is usually little difference between the quality of one make of record and another. The technical standard of recording has improved beyond recognition since the war and the average quality of the reproducing equipment has not kept pace with it. Hi-fi equipment brings out the technical quality that is latent in any modern long-playing record but cannot be properly exploited by the normal gramophone or radiogram. The cheapest equipment that devotees of the cult would admit as "hi-fi" can hardly be had for less than, say, £75, while the highest grade can easily cost between £200 and £300: in price, therefore, "hi-fi" is roughly comparable to a television set.

Investment in such apparatus, certainly, has two elements likely to tickle British taste today: it provides a handle for a particular kind of snobbery, plus a degree of "do it yourself." The record makers are inclined to be cynical: they feel that the law of diminishing returns sets in rapidly as the enthusiast spends his money in added refinements, and that fairly soon he is getting not better sound, but only more of it. But hand in hand with the technical cult of hi-fi, almost as an engineering hobby, goes the growth and survival of numbers of small recording companies that specialise in works for musical enthusiasts who have equipment capable of getting the best from the recordings.

The equipment for hi-fi is supplied mainly by specialised component makers and assembled as and how the enthusiast chooses by himself or his local engineer. A small exhibition, held last spring, in which 37 manufacturers took part, surprised the industry by drawing long queues. The next stage could be the extensive use of recordings made on tape instead of discs. From the point of view of the record companies, the retailing of works on tape is expensive with few compensating advantages. It puts the amateur, however, in the strong position of being able to make his own tape recordings, which he could not do when records were confined to discs. This calls for more expensive and sensitive equipment than the standard tape recorder though tape equipment may sometimes be added fairly cheaply to the expensive bank of reproducing equipment that a hi-fi enthusiast has bought already: in any case, cost has not so far deterred the devotees.

Business Notes

£167 Million to Invest

WHERE did the £167 million that the Government paid out in redeeming the unconverted fraction of the 1954-56 National War Bonds go? It happened that on Wednesday, when the payment was made, the market as a whole, gilt-edged, industrials and oils, was rising. The rumours about Suez had taken a turn in the direction of moderation, if not of mediation; the edge had come off commodity prices and tin, copper and rubber were slipping back. So investors were venturing cautiously into gilt-edged and industrials and less cautiously into oil shares.

Some signs of buying in the gilt-edged market were not surprising. The volume was modest and the market narrow. Such buying as there was was well spread down the list of gilt-edged stocks with some concentration on the short dates such as the Exchequer 5 per cent of 1957, and the mediums like the Funding 3 per cent 1966/68. Dealings also started in the new 4½ per cent conversion stock of 1962 previously quoted as National War Bonds 1954-56 (assented). They were small and there seemed no selling pressure, but the price established of £97 18s. 9d. seems to imply that the stock stands at about 11s. 3d. below its calculated issue price. It must be assumed that the government departments holding probably most of the new stock will not be so unrealistic as to fail to supply the market somewhat below the calculated issue price. A good reception was also accorded to the small new loan of Stockton-on-Tees—£750,000 of 5¼ per cent stock dated 1966. With its 10-year date the stock is highly attractive to such institutions as the Trustee savings banks. The issue, all of which had been placed at £98, opened at about 10s. premium and rose during the day to £1 premium.

Those signs in the gilt edged market, and perhaps some of the buying of industrials that carried the *Financial Times* ordinary share index up 2.1 to 181.9 on Wednesday, may represent the reinvestment of a fraction of the £167 million repayment. But it can have been only a tiny fraction, representing the actions of individual operators. A large slice of the repayment must remain in the banking system.

Banks, Boards and Treasury

THE new method of financing the nationalised industries has come into operation this week, hard on the heels of the passing of the Finance Act which gave the Treasury the necessary authority. In future, the borrowing requirements of all the nationalised boards for other than short-term purposes will be met by direct advances from the Exchequer; in addition those boards that have hitherto obtained long-term finance in the first instance from the clearing and Scottish banks (pending the flotation of funding issues of government-guaranteed stocks) will borrow from the Exchequer in order to discharge their bank indebtedness. The first repayments to the banks have now been made, and the remainder are expected to be made in mid-monthly instalments extending to March next. These repayments will not entirely extinguish the bank advances, but are intended to reduce them over the eight months to approximately the amounts that are likely to be required for the short-term purposes for which finance will continue to be provided by the banks. The total of these residual amounts is believed to be in the region of £50-60 million, compared with aggregate overdraft limits of about £140 million sanctioned for the period to end-July last. At the peak reached before the big funding issues made last year by the gas and electricity industries, the comparable aggregate was around £209 million.

In the absence of the new arrangement, or of more frequent funding issues, the demands upon the banks might have risen beyond even that high figure, since this year the Transport Commission is expected to be a heavy borrower. This, together with the need to discharge the accumulated bank loans, explains why the Chancellor's estimate of Exchequer advances in the current fiscal year was put as high as £350 million. All advances, whether for new finance or for repayments, will be shown in the Exchequer return, in a new "below-line" item. They will be granted for periods related to the lives of the assets concerned—mainly, it is expected, for periods of 25 to 40 years, except for the nationalised airlines, whose assets have generally a shorter life—and will be repayable over the full period either by equal annual instalments of principal or by equated annuities.

The Treasury's new obligation will increase correspondingly its own direct borrowings (as distinct from issues of government-guaranteed stocks) but it is hoped that reliance on floating debt will actually be lessened. This is because the Treasury expects it to be less difficult to sell its own stocks than to sell guaranteed nationalisation stocks that it has taken up, in effect, as underwriter, especially as the timing of the stock issues or sales will now be determined solely by reference to official tactics in monetary policy and the management of the gilt-edged market. In the immediate future, however, the floating debt will tend to expand more than seasonally—unless the recent appeal for "co-operation" from the banks enables the government broker to speed up his sales of stock as bank liquidity ratios rise. The need for such sales has been made all the greater by the Treasury's repayment this week of the unconverted residue of the National War Bonds.

Shipping and Suez

PENDING the outcome of the international conference on the Suez Canal, activity on the Baltic Exchange is still practically at a standstill, so far as trades are concerned that involve voyages through the Canal. Owners, as well as charterers, are not anxious to commit themselves until decisions are taken over which they have no control. The British Government has continued to requisition ships, mainly ocean-going ships of about 10,000 tons deadweight each, though it has released one or two on finding them unsuitable for the cargoes it wanted to send. The 47 ships that it has taken so far have thus removed at one swoop perhaps an eighth of the British tramp tonnage of this size available, as well as reducing British liner tonnage available for normal commercial trading. The action has been one of the influences tending to strengthen rates in a few of the trades that do not go via Suez. If more ships have to be requisitioned, or if ships taken are kept for any considerable time, tramp ships under foreign flags would benefit most. Not only will the shortage of tonnage force rates up, but foreign owners may well be able to demand a premium for freedom from the danger of requisition: Panama and Liberia, in particular, have no obligations in the matter. None of the British owners concerned appears yet to have settled the question of freight rates for these ships with the Government: this week the Chamber of Shipping announced that a committee of deep sea tramp owners had been appointed to negotiate with the Ministry of Transport about terms and scales of rates.

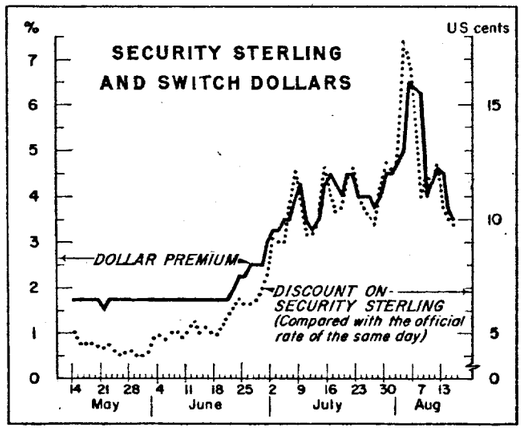
Only a few British ships have as yet been re-routed to travel via the Cape; on the direct Australian trades the diversion does not involve more than about five—10 per cent more mileage. But most companies have been despatching their ships with sufficient bunkers and stores to cover any diversion that may become necessary, and some sailings have been postponed for a few days. So far no question of higher war risk insurance for shipping via Suez has arisen: in certain times of emergency, for example in the late thirties, the higher rates for cover in the Mediterranean have tipped the commercial balance for ships travelling, say, to and from Australia. A number of ships have been insuring against the extra costs of possible interruption of Suez Canal traffic: Lloyds has been quoting a rate of one per cent for this extra risk, though New York brokers later quoted three-quarters of one per cent for cover that excluded delays through shortage of pilots in the Canal. These have presumably been mainly responsible for the cuts in the number of Canal convoys from four to three this week; so far, the number of ships passing the Canal has not been reduced much below the normal rate. Quite apart from any delays that might be associated with its own decision to move troops from east to west across the Canal, the Egyptian government is already encountering the practical difficulties of operating it with too few pilots—key men who cannot be supplemented or replaced quickly, and whose allegiance is to the company.

Support for Security Sterling

RECENT selling of US Treasury Bonds in the London market by the Exchange Equalisation Account, which has pulled down the premium on dollar securities from nearly 7 per cent last week to 3½ per cent this week, is tantamount to official intervention in the market for security sterling. It therefore pinpoints the relationship between the discount on security sterling, quoted in New York and other foreign countries but not in London, and the premium on dollar stocks in the London market. The two are not the same, but the chart shows that they are closely correlated. Indeed the apparent time lag of a day between them is illusory. The dollar premium used is the official one calculated on the prices of dollar stocks at 3.30 p.m., over the exchange rate at that hour (not the premium over a fixed rate of $2.80 that dealers often quote). The discount of security sterling, below official sterling, is taken at the close of the New York market several hours later.

★

By this new form of intervention the authorities seem to be inspired by the argument that the main categories of sterling held by non-residents, namely, American account, transferable and security sterling, cannot be dissociated. When one of them falls too far it draws the others down, as happened towards the end of 1954 when the discount on



transferable sterling led to so much commodity "shunting" that the official rate was affected and the Exchange Account had to enter the market for transferable sterling to stop it. There is, however, a considerable difference between the present intervention—at one remove—in security sterling and the now established practice of dealing in transferable sterling. Transferable sterling is constantly being created by payments into transferable accounts, whereas both security sterling and the market in dollar securities in London should be virtually self-contained pools. Sterling area residents are able to buy dollar securities only because other residents of the area are prepared to sell them. The Exchange Account, too, is British resident and though its sales of securities that formerly provided the collateral for the loan from the Reconstruction Finance Corporation increase the supply in the market and lop the premium, they do not add to the total sterling area investment in dollar stocks. The pool of dollar investments is, however, increased from two other sources, capital transfers, including bequests from dollar area residents to sterling area residents, and market operations originating from certain free markets within the sterling area such as Kuwait.

How Kuwait Operates

THE discount on security sterling measures the price at which non-resident holders of blocked sterling are ready to exchange it for dollars to other non-residents who want to buy sterling securities. It has little obvious connection with the premium over current American and Canadian Stock Exchange prices which residents of the sterling area pay to buy dollar securities with the limited supply of dollars resulting from the sales of dollar securities by other sterling area residents. But markets such as Kuwait where the writ of exchange control does not fully run provide a close and continuous link between the two. A financial institution operating a Kuwait account—it may even be a Swiss or Dutch house operating through a Kuwaiti name—enjoys the privilege of being in a free market and yet within the sterling area. It may start with a holding of dollars to be converted into sterling by the cheapest route. Its choice lies between buying dollar securities in New York, selling in London and collecting the London premium; or buying sterling securities, selling them in London and collecting the discount at which security sterling is quoted in New York. The sterling that the operator ultimately receives by either route is resident sterling (since Kuwait is in the sterling area) and can be used to pay for current transactions such as imports into Kuwait. Operations of this kind keep security sterling and the London dollar premium in step.

Steel into Stock

BRITISH consumers of steel received nearly 10 per cent more of it during the first six months of 1956 than in the first half of 1955, but the bulk of this extra steel seems to have gone into stock, not into their own current output. Total stocks of steel in Britain, indeed, seem likely to have risen more than steel output did during these six months, so that some of the expensive foreign steel that consumers imported must have gone into stock. To the British industrial consumer, it seems, steel is still better than money.

Full details of stocks at the end of June are not yet available. But producers' stocks rose by 140,000 ingot tons, and stocks in the hands of merchants and consumers rose much more. In the first quarter alone these rose by about 275,000 tons of finished steel, or the equivalent of about 375,000 ingot tons of crude steel; and during the second quarter, the Iron and Steel Board reported last week, they continued to rise, though not as fast as in the first quarter. In total, therefore, steel stocks in Britain seem to have risen by close on three-quarters of a million tons, while the industry managed to produce just over half a million ingot tons more during the half-year. That increase in output was less than the industry had hoped, because it was affected by the maintenance workers' ban on overtime.

Steel stocks in the metal-using industries during the first half of this year, therefore, may have reached nearly 20 per cent more than in the first half of 1955. Output in the engineering, shipbuilding and vehicle industries showed no corresponding increase; during the four months to April, indeed, it was lower in 1956 than in 1955. The building and constructional engineering industries, plus shipbuilding, have been the main steel-consuming industries in which output has been rising: coal and the railways, too, have used more steel. But the range of customers needing more than they can get—and of products in very strong demand—is contracting.

Speculative Gushers

RUBBER and gold shares have on different occasions become whirling centres of speculation in Throgmorton Street. It can now perhaps be argued that oil shares have become the casino for the diligent readers of the Sunday press and the brave dabblers. The enterprising American, the astute speculator and the cautious trust have all found occasion, though on different days, to bring their business to the oil market. Throughout the Suez crisis the oil market has reflected the changing mood of these widely different types of investors (because speculative business, which is not large in the market as a whole, has been concentrated there). Jobbers in oil shares did not like the tendency. Recently—and, perhaps, too late—they widened their prices, partly because they did not like what had happened to their books since the Suez crisis began, and partly because they fear that much of this week's buying will be contangoed instead of being paid for.

So far this week buyers have predominated in the oil market. The buying was sufficient to produce the

	July 26	Aug. 10	Aug. 15
Apex (Trinidad)	38/–	37/–	44/–
British-Borneo	53/6	52/3	55/6
British Petroleum	174/4½	144/4½	96/3
Burmah	111/10½	87/6	96/3
Shell (Registered)	163/1½	143/1½	148/1½

sharp rises shown in the accompanying table. On Wednesday, when industrial equities and gilt-edged were also rallying, business in oil shares became hectic as rumours about Suez changed. The kind of business that is being done is illustrated by the rise of 7s. to 44s. in Apex (Trinidad) in the three days to the close on Wednesday. Apex is neither a leader of the market nor is it the first share to think of in connection with Suez (though it is not quite so far removed from Trinidad Oil), but it happens to have been tipped in the Sunday press. Of more moment to the oil market, a number of the leading shares, particularly Shell, were bought on American account before the seizure of the Canal, but, save to a small extent on the first day of the crisis, there has been no sign that these buyers have tried to unload. The British pensions funds are not adverse to holding a proportion of oil shares, but they were quite ready to stand aside this week, letting the speculators have the first run.

Savings Certificates Sell

THE new 10th series of national savings certificates, yielding £4 3s 11d per cent net over seven years and the equivalent of £7 5s 11d to investors paying tax at 8s 6d in the pound, is perhaps the most attractive bargain now on offer to the small saver, and to the not so small saver there can be no argument about it, since savings certificates are free from income tax and surtax. It is not surprising that the new certificates are selling well. Sales in the first three days of issue appear to have reached £3½-4 million, and in the week to Saturday last they quickened to £12 million. This compares with sales of only £7 million in the first week of the ninth issue in 1951, but with £14 million from the first week's sales of the eighth issue in 1947, when national savings were still enjoying the aftermath of their wartime boost.

Sales of the new certificates—doubtless at this early stage still boosted by purchases by surtax payers of their full complement of 600 units—will need to expand considerably before they bring in net new money. For many weeks encashments of the earlier series have been unusually high, apparently in anticipation of switching into the higher yielding issue.

Those high encashments have been much the largest cause of the deterioration of the national savings experience in this fiscal year ; between April 1st and August 4th sales of certificates, defence bonds, and additional deposits in the post office and trustee savings banks fell short of encashments and withdrawals by nearly £26 million, compared with less than £10 million in the corresponding weeks of the previous financial year. Yet net receipts of the savings banks, stimulated by the budget concession relieving the first £15 of interest from tax, have been running appreciably above their levels a year ago, while net receipts from defence bonds (excluding redemptions on maturity) have been about the same—the good sales of the 4½ per cent bonds introduced on May 1st having just about offset the heavy encashments in April. Now investors in national savings have no more reason to hold back in certain anticipation of better things—except to have a fling in premium bonds.

To Ship or Not to Ship?

THE British Government's decision to stop payments from Egyptian sterling accounts, however expedient politically, leaves most exporters out on a limb. If the exporter's goods were not shipped by July 27th, or if his contracts were not covered by confirmed credits opened by that date, he must decide which of two courses offers the least risk. If he ships the goods, payment will be delayed, and even when the British ban is withdrawn the Egyptian authorities themselves might prohibit payment. Some exporters may be strong enough to demand payment in a currency that is transferable, but that would hardly be possible for the majority. The exporter who does not ship goods ordered by Egyptian purchasers may risk an action for failure to fulfil his contract, and will certainly have the problem of finding another buyer for the goods.

If the proportion of total British exports that is covered by the Export Credits Guarantee Department is any guide, only a minority of exporters to Egypt are covered by its policies. Early this month the Department withdrew cover on fresh business, but there were doubts whether its existing policies protected exporters against non-payment resulting from the action of the British government. Those doubts have now been cleared up, and policy holders have been assured that loss on these grounds is regarded as a risk covered under their policies.

Many exporters would no doubt feel happier if exports had simply been prohibited, for most contracts of sale provide for that contingency. To the government, however, a temporary ban on payments from Egyptian accounts presented the advantage that it impedes the flow of all goods financed from these accounts, whether consigned from Britain or other countries. Moreover, there is the hair-splitting point that the government can claim to have stopped short of outright economic sanctions in advance of the Suez conference ; payments are merely "frozen" for the time being.

KLM Comes to Market

SOME time before the end of this year, the Dutch government intends to sell part of its holding in the Dutch airline, KLM, on the Amsterdam stock exchange. A capital reconstruction scheme has been carried through to make this possible, and a quotation for KLM stock will be sought in Amsterdam for the first time. If this is secured KLM stock would become available to American and British investors through the normal "switching" channels. It may be that KLM and the Dutch government are more interested in securing American and British participation than the guilders of Dutch private investors. This event is likely to attract considerable interest because the European airlines are not generally sanguine about their ability to offer private investors a profit margin high enough to attract new capital in the volume in which the industry needs it.

KLM has never been formally nationalised. It was set up with private money in 1920, but over the years most of its additional funds have been provided by the Dutch

Now! MICROFILMING AT FAR LESS COST!

Burroughs Micro-Twin combines microfilm recorder and reader *in one unit*

MICROFILMING provides a modern, compact record-keeping system giving continuous savings in time, work, money—*and in valuable office space.*

Hitherto, it has meant having two machines: a recorder, for filming documents, and a reader, for referring to them.

Now, the Burroughs Micro-Twin* cuts the cost of equipment. It combines recorder and reader in *one* compact precision unit, so that you have the complete cycle of microfilming at your finger-tips. Yet it costs *less than you would expect to pay for the recorder alone.* This low cost is made possible by the ingenious design of the Micro-Twin.

Recording is rapid and easy. Both sides of a document can be photographed at once, or one side only. Film is economized.

To refer to documents, turn the control knob to "read." The same lens is used for both recording and reading. Documents are shown on the viewing screen full-size or larger, sharp and legible even in broad daylight.

The exclusive indexing meter, the latest development in rapid document location, eliminates unguided searching for filmed records. As many as 999 locations may be indexed for each 100-foot roll of film. Any document image may be located in a matter of seconds.

Facsimile prints can be made on the spot, without a dark room.

The new Burroughs Micro-Twin thus brings you the advantages of microfilming at far lower cost than before.

Visit your nearest Burroughs office for a demonstration. Head Office: Burroughs Adding Machine Limited, 356-366 Oxford Street, London, W.1.

**British-made for Burroughs by G. B. Equipments Ltd., to Bell & Howell design.*

FOR LOW-COST MICROFILMING

government, which today holds an overwhelming majority of the shares. The change in the company's articles of association, which at the same time simplifies the structure of the company and makes it possible to place more shares on the market, was made last weekend. There is a strong feeling that if some foreign capital is invested in KLM, the airline will find it easier than it has in the past to negotiate traffic rights, especially in the United States. KLM has no big domestic market of the kind that forms a cushion for the majority of national airlines; it has to win traffic that originates outside Dutch territory and has no particular reason to travel by a Dutch airline other than the service offered. That KLM has been remarkably successful in attracting such traffic is a tribute to its efficiency and reputation, but when it comes to negotiate for traffic rights it has little or nothing to put on the table.

Last year KLM made a profit of £1.75 million after meeting all charges, out of which it paid a dividend of 6 per cent, one per cent higher than the year before. Between now and 1960, it has to meet a bill of about £50 million for new aircraft, most of them American-built. It seems highly probable that the Dutch government, or at least Dutch interests, will retain a majority shareholding in the company. But both of the British air corporations, who have heard a good deal of discussion in recent months about the desirability of bringing in some private capital, will watch this experiment with close interest.

Brush Resistance

ABOUT 200 million brushes of different sorts and sizes are made each year by the 500 or so firms that make up the brush industry in Britain. Most of these concerns are very small; none employs more than 750 workers and more than half employ fewer than eleven. Traditional craft and hand methods are still dominant and several firms still carry on the system of providing families of craftsmen with materials to work up in their own homes. So it is not surprising that brush-making is not Britain's most efficient industry. Like most craft industries, too, it is conservative and highly individualistic. The British Productivity Council also found that most of its firms were uncommunicative. But with the help of some of the larger concerns in the industry, the Council has produced an interesting review of productivity in brush making as a follow up to the report of the productivity team that visited the United States six years ago. Co-operative action is not completely absent: there is a small research association and its staff are paying an increasing number of visits to factories. Attempts have also been made by some firms to raise efficiency, by improving the layout of their factories, by introducing work study and costing techniques, or by paring down the enormous range of different sized brushes they make. But as a body, brush makers still have a long way to go.

Nevertheless, the Council thinks a number of possible future developments may help to quicken the pace. Some firms are finding themselves short of labour, particularly hand workers. Synthetic materials are being increasingly used to make the "filling," which is the brushing material, and the handles. They are already firmly established in the manufacture of toilet brushes—with a consequent concentration of firms—but they are not widely used yet in the production of household brushes and not at all for artists' and paint brushes, for which soft hair is still considered indispensable. The main barrier to the further progress of plastics materials in the domestic brush is their price, but bristles which are the natural filling material fluctuate widely in price and the Council expects that supplies from China (the main source) are likely to fall. Should the wider use of plastics lead to a greater concentration of manufacture, the industry might then more easily be able to afford schemes to promote sales; the main marketing problem for brush makers is apparently that this country, compared with others, is simply not "brush-conscious" and just does not replace worn-out brushes.

Trade Deficit Cut

THE improvement in the balance of British overseas trade was maintained last month. Though exports and re-exports were lower than in June, imports fell even more and the trade deficit was the second smallest this year. The provisional returns show that exports in July, which had one working day fewer than June, fell by £9.8 million to £266.3 million fob; this was slightly higher than the monthly average of £265 million in the first half of the year, and it was £24.2 million (10 per cent) higher than the monthly average for 1955. Imports, which had risen in June, fell sharply by £19.6 million to £320.3 million cif; the total was £9.1 million (three per cent) less than the monthly average in the first half of the year and £3.8 million (one per cent) less than the 1955 average. With re-exports £2.4 million lower at £9.8 million, the gross visible trade deficit dropped by £7.4 million to £44.3 million; this was

* Provisional

£6.6 million smaller than the monthly average in the first half, and nearly £28 million smaller than the 1955 average. The second half of the year has started well. But too much should not be built on a month's figures; the most that can be said is that monetary policy now seems to be keeping the trade "gap" within bounds.

Exports to North America fell by £2 million to £35.6 million last month, thanks to a drop of £2.1 million in shipments to Canada. Shipments to the United States were £200,000 higher at £20.5 million, including a further instalment of £2½ million of silver bullion now being repaid. Excluding this item from this year's figures, the monthly rate of exports to North America in July was as high as in the first half of the year and nearly 23 per cent higher than in 1955.

Canada Turns the Screw

THE Canadian monetary authorities last week gave an open indication of their concern about the growth of the inflationary pressures in their economy; they raised the Bank rate by ¼ per cent to 3¼ per cent, which is a new peak for Canada. British investors, however (unlike some London security dealers), were daunted only slightly in their enthusiasm for Canadian stocks. Demand for them has continued strong.

The background to the increase in the Canadian Bank rate is intriguing. Like Britain and the United States, Canada has been seeking for at least a year to check its industrial boom; the authorities have sharpened their weapons of credit restriction, and with the latest increase have raised the discount rate five times since early August last year (when it stood at 1½ per cent). Like Britain, too, Canada has been out of balance in its current overseas payments balance—in the first half of this year the deficit on visible trade alone rose to the peak level of $550 million. Yet the exchange reserves have continued to rise, and in the markets the Canadian dollar has gone from strength to strength; this week the premium over the US dollar has topped 2 cents.

The explanation lies in the huge inflow of foreign capital, preponderantly of course from the United States. This naturally serves to weaken the efforts of the Canadian authorities to keep down the supply of money, though in recent weeks there have been some signs that the policy was being more successful. The further tightening last week appears to have been prompted partly by fears about the inflationary effect of the increase in steel wages and prices, which followed closely on the settlement of the strike in the United States. After the Bank rate increase, the Treasury bill rate edged up to a fraction under 3 per cent; and the Treasury bill rate in New York reversed its decline in preceding weeks and rose from 2.399 to 2.603 per cent.

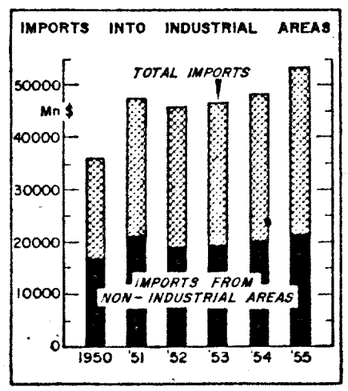
In Search of the Plateau

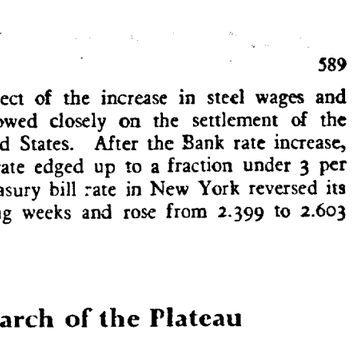
WITH the notable exception of fuel, the basic materials of manufacturing industry cost on the average no more in June than in December. But prices of manufacturers' products continued to rise, though not quite as rapidly as in 1955. The Board of Trade's price index of basic materials in June was 155.2 (June 30, 1949 = 100), compared with 155.3 in December and 150.7 in June, 1955. The decline in prices of copper (down 22 per cent), rubber (down 37 per cent), tin (down 10 per cent), and zinc (down 4½ per cent), just offset increases in other items, particularly cotton (up 18½ per cent), wool (up 9 per cent), imported iron ore (up 9½ per cent), heavy steel scrap (up 30½ per cent), and aluminium (up 10½ per cent). Materials used in mechanical engineering cost hardly any more in June than in December; the rise in iron and steel prices was almost offset by the sharp fall in copper and brass. The fall in these two materials had a bigger effect on the index of materials used in electrical engineering, which fell by 6 per cent to 184.2 between December and June. Prices of fuel, on the other hand, rose by 5.7 per cent to 165.6;

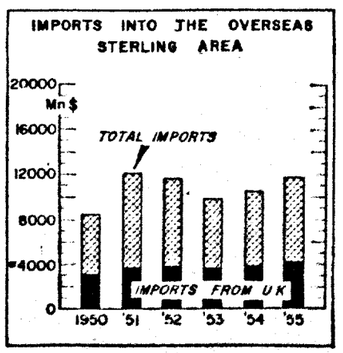
The Fastest-Growing Markets

THE underdeveloped countries may one day offer glittering prizes to exporters, but in the meantime the largest and fastest-growing markets are in the industrial centres of North America, Western Europe and Japan. The rapid increase in these countries' imports in recent years has benefited exporters of manufactures more than exporters of primary products. Between 1950 and 1955 their imports from other industrial countries rose by 65 per cent to $32,210 million, while their imports from primary producers rose by only 30 per cent to $21,450 million. The decline in the primary producers' share cannot be explained by price-movements; according to *International Trade 1955* (prepared by the Secretariat of the General Agreement on Tariffs and Trade), from which these figures are taken, prices of both manufactures and primary products were 16 to 17 per cent higher in 1955 than in 1950.

Britain is particularly vulnerable to any weakening in the export earnings of primary producers, for over half its exports go to those countries. Hence it must not neglect opportunities to expand its exports elsewhere. One such opportunity lies in the proposal for a common market among six European countries. Customs barriers within those countries would eventually be removed, and there would be a common tariff on imports from other countries. The charts show the relative importance as markets of the six European countries and of the overseas sterling area. They suggest that if Britain stood outside the common market, it would be handicapping itself in a market that is growing faster than that of the overseas sterling area.



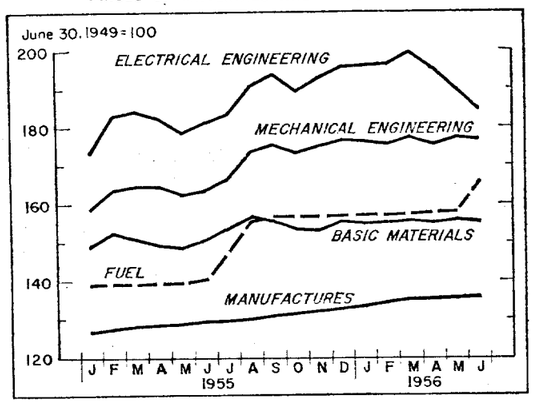




most of that rise occurred in June, when prices of coal, coke and electricity went up.

As the chart shows, the price index of manufactured products, excluding fuel and food, rose steadily to 135.6 in June, when it was 2.3 per cent higher than in December.

PRICES OF MATERIALS AND MANUFACTURES



That reflected a general increase in prices ; iron and steel, for example, went up by 5½ per cent, chemicals and allied products by 2.3 per cent, textiles other than clothing by 2.8 per cent, and paper products by 2.5 per cent. Manufactures have risen steadily for eighteen months ; will there be any slackening in the second half of this year? Now that the nationalised industries and many private firms have joined hands in the attempt to hold prices down, the search for a " plateau " is on.

Building Society Incentives

FIGURES of the Halifax Building Society for the half-year ended July 31st go some distance towards explaining the society's present readiness to offer competitive rates to investors. Total assets have now reached the formidable total of £271½ million. Mortgage assets have also grown, and though mortgage advances in the latest half-year have been restricted, it is safe to assume that only the wisdom of not overlending has held the total back. Receipts from investors, though lower, have also come in reasonably well. The rub has been in the withdrawals by investors which have persistently risen, cutting deep into the liquidity ratio —which the Halifax likes to see high. The ratio has now fallen below 14 per cent. Doubtless the rate of 3½ per cent net now payable to shareholders and particularly the exceptional rate of 3¾ per cent offered to depositors should attract new money and retain much of the old money.

Many societies are now alive to the need to offer inducements to regular savers that will match the attractions of the new savings certificates. Regular saving schemes on specially favourable terms are common. The Halifax society pays a bonus (usually ¼ per cent) on monthly subscription shares, bringing the probable rate this year to 3¾ per cent net. The Co-operative Permanent Society now announces a savings plan that seems to offer the highest benefits that any leading society has yet put forward. Under the Co-operative scheme regular saving of £1, £2, £3 or £4 a month brings no interest return for the first two years, but thereafter attracts an ascending scale of interest additions calculated to yield £4.8.0 per cent net compound interest (equal to £7.13.0 per cent gross) over the whole ten-year period of the plan.

THE HALIFAX FIGURES

Industrial Television

SALES conferences and other business meetings held some distance apart have been linked by television before. But the 600-mile closed TV circuit used by Pye for an hour on Thursday to bring together its sales representatives and dealers in six cities between London and Glasgow is the longest circuit yet used privately in Britain—though much bigger distances have been covered in the United States. This latest demonstration of the possibilities of industrial television was Pye's way of announcing its new models for next week's Radio Show, but there are now about 200 permanent television installations in industry, and the number has been growing rapidly in the last year or two with the development of relatively cheap and suitable equipment.

Pye and Marconi—which supplied the cameras and much of the equipment for the 200-mile London-South Wales closed circuit used by British Oxygen two weeks ago—have carried out most of this development. The cameras used on both these occasions were 'standard " image orthicon " cameras as used for BBC and ITA programmes, but these are too complex, cumbersome and expensive to be

THE NEWEST AIRLINER IN EUROPEAN SERVICE

Swissair are now flying regular METROPOLITAN **Tourist** services between **MANCHESTER and ZURICH** and soon between **LONDON and GENEVA** **LONDON and BASLE.**

The METROPOLITAN — the **newest, quietest, most comfortable** airliner in European service — introduces a completely new standard of **Tourist** flying with :

- **Only two seats a side** for greater comfort.
- **Quiet flying** — new soundproofing system.
- **Nose Radar** which enables the pilot to miss bad weather.
- **Refrigerator** in the galley and wonderful Swissair service.
- **Telescopic passenger steps**—no waiting when you land.

Yes, this is the way to travel! You really must fly—METROPOLITAN!

suitable in the factory. An "image dissector" tube, invented in 1934, can be used, but its sensitivity is rather low. Since 1950, however, when the Radio Corporation of America developed the "Vidicon" or photo-conductive tube, which functions rather like photographic film, industrial television has had a rugged, highly sensitive and, above all, cheap camera available. It is very much simpler to construct and operate—the simplest type of scanning circuitry is used—and the pick-up tube need not be large. Altogether, the camera unit can weigh as little as 4-5 lb. A control unit, attached to the camera by up to 500 ft. of cable, is also small and light, weighing less than 20 lb. This basic equipment costs now from £500-£600 upwards and about a shilling or two an hour to run, but monitor screens, other accessories and special applications will cost more. Industrial television has definite advantages for a number of different control and inspection jobs, but, like most new toys, there is a danger of adapting it for purposes that can more cheaply be done by existing tools—by simple optics, for example.

Japan's Sterling

DISCUSSIONS to extend the Anglo-Japanese payments and commercial agreement are due to begin in London on September 10th. They will be dominated by the fact that Japan's sterling reserves have recently declined at an impressive rate. At this time last year Japanese officials were expressing alarm at the rate at which their sterling assets had risen. They touched close on £140 million, which is far in excess of the level at which the Japanese intended to maintain their sterling balances. The total then began to run down and reached about £100 million last April. Within the last few weeks the decline has gathered speed and the latest reports from Tokyo suggest that the balances are now only about £57 million. The main reasons are some setback in Japanese exports and the wider use by Japan of sterling for multilateral payments, including payments to EPU countries, and recently to Argentina and Brazil. There has even been some discussion of building up sterling balances by a repetition of the dollar swap arrangements (in effect borrowing sterling in the London market against the security of Japan's dollar reserves) which were so widely used in 1953 and 1954, at a time when Japan was exceptionally short of sterling. The fact that sterling is now so widely used by Japan carries with it the promise that the current shortage will not be remedied by specific restrictions against imports from sterling countries.

SHORTER NOTES

The second interim dividend on the 10s. ordinary shares of British-American Tobacco has been raised from 6d. to 7d. a share, tax free. This announcement sent the price of the shares up by 3s. to 51s., on guesses that the total tax free dividend might be of the order of 20 per cent, compared with 17½ per cent for 1954-55.

★

Since existing records of distances between railway stations and depots are anomalous and incomplete, the Transport Commission is going through the whole process of calculation afresh for the purposes of the new freight charges scheme. But as traffic could arise between any pair of the Commission's 7,000 loading points Leo Computors have been brought in to help. The basis of the calculations will be the shortest physical distance, but some places will be grouped together to lighten the work. Even so the highly detailed computer programming involved will make it a twelve-month job (instead of five years with fifty clerks).

★

The directors of Powell Duffryn have not taken the opportunity afforded by the receipt of £337,922 in accumulated interest arising from coal compensation in the year to March 31st to increase the ordinary dividend, which is left unchanged at 16 per cent. The group's gross income, including this special receipt, was £2,316,118, compared with £2,009,747, and its net income £1,070,232, compared with £841,811.

★

Following a rise of one cent per lb in the Canadian price of aluminium ingots, the price in Britain has been raised by the equivalent amount of £8 to £197 a ton (exclusive of the temporary surcharge of 30s. a ton). This brings the total increase in prices since the end of last year to £26 a ton. No announcement about prices of aluminium products was made before *The Economist* went to press.

Company Notes

FURNESS WITHY. For the second year running the directors of Furness Withy have raised the ordinary dividend by 2 per cent. The 16 per cent dividend for the year to April 30th takes £552,000 from a net profit attributable to the parent company of £1,036,586. From this profit another £400,000 (against £250,000) has been tucked away in the fleet replacement account, emphasising once again that Furness Withy, like the other shipping companies, has a big shipbuilding programme and despite the enjoyment of investment allowances, while mere mortals have to be content with initial allowances, has to find the finance for it. The decision to raise the ordinary dividend must be taken to indicate confidence that earnings will remain favourable.

Freight rates have risen but Furness Withy's profits reflect them with a considerable time lag. The bald preliminary statement shows that consolidated profits before tax have risen by only £91,326 to £2,646,365—and the 1954-55 figure of £2,555,039 was abnormally low because of special depreciation charged on new tonnage. Profits have lagged partly because of rising costs. Despite these well-publicised handicaps shipping has enjoyed favourable trade winds for several years. Furness Withy's increased dividend and its increased consolidated net profit of £1,706,013 (against £1,583,587), after charging £940,352 (against £971,452) for tax, are the earnests of prosperity. If the directors are willing to loosen the purse strings is there any reason to complain of a yield of 5¾ per cent on the £1 stock units at 56s. 3d.?

★

ROBINSON AND CLEAVER. Before City Centre Properties made its bids of £5 per share for the £1 ordinary share of Robinson and Cleaver, the directors had set in train their plans to put the money released by the sale of the Crown lease on its Regent Street property to work. It was therefore on the cards (though the cards were not then exposed to the shareholders' view) that Robinson and Cleaver would pursue a more liberal dividend policy. But would this policy have been carried to the point of distributing earnings almost up to the hilt had there been no bid? That bid has also produced a full statement from the directors, in which they argue implicitly that the shares are worth more than the £5 which is offered. Following this statement the shares fell 5s. to 95s.

The directors have said that the company's assets are now worth at least £7 5s. a share; the book value of total assets on July 31st was £2,665,592 (against £1,665,886), of which £664,198 (against £197,547) was held in liquid form; and the property reserve has risen from £39,317 to £975,768, reflecting the sale of the Crown lease. The gross trading profit has risen from £185,463 to £215,983 and net profits from £60,478 to £60,768; these profits do not include any earnings from the new subsidiary, John Moses. The new dividend of 40 per cent, compared with 25 per cent, absorbs £56,063 net, and the directors' promise of a substantially higher dividend has been fulfilled.

Given "reasonable trading conditions" the directors expect at least to maintain the 40 per cent dividend. They plan to spend about £500,000 in expanding the business; this is in addition to the £135,000 already spent on buying the John Moses company. They intend to establish 12 new shops, specialising in household linens, in the provinces, to improve the premises in Regent Street, and those belonging to John Moses. "From now onwards, until they are in full operation in about two years' time, these investments will, in the directors' view, progressively increase the group's trading profit to a substantial extent even after taking into account increased rentals, rates and general expenses."

Shareholders are thus faced with the choice between £5 in cash, surrendering the final dividend of 7s. gross if they accept the City Centre bid open until the end of this month, or accepting the belief of their present board that the asset values are worth more, that the profits will grow and that the 40 per cent dividend, none too well covered at present, will be at least maintained. With the shares yielding 8.4 per cent it seems possible that they will hope for a better bid—though there is no sign of one—yet.

★

INTERNATIONAL TEA. Faced with higher costs the chains of provision and grocery stores rest their hopes of an increase in profits on the achievement of bigger sales. To obtain it they have to improve and modernise their shops, and on occasion to introduce self-service. International Tea Companies stores has pursued that policy and on it a year ago the chairman predicted better results in the year to April 30th. Better results have been achieved. Consolidated trading profits have risen from £1,701,410 to £1,950,717.

Higher charges for taxation (up from £730,777 to £921,354) and depreciation (up from £283,212 to £313,947) absorb much of the increase and the consolidated net profit has risen by only £35,972 to £633,242. But that increase is enough to provide and justify an additional 1¼ per cent on the ordinary dividend. Effectively, the dividend has been raised from 13¾ to 15 per cent and after tax it absorbs £267,375—£25,188 more than in 1954-55. Thus the amount of profits retained in the business remains practically unchanged at just over £300,000. The company's 5s. ordinary units are currently quoted at 12s. 9d. to yield 5¼ per cent.

LONDON STOCK EXCHANGE

Next Account begins: August 22nd

Next Contango Day: August 22nd

Next Settlement Day: August 28th

GOVERNMENT securities fell sharply at the end of last week, but after weakening slightly again on Monday, the July trade figures and the War Bond repayment prompted a rally, which more than recovered the previous losses. 3 per cent Treasury fell ¾ to 60½ last Friday, but subsequently recovered to 61¼. 5¼ per cent Plymouth 1964/65 rose to a premium of 1¼ and dealings in the new Stockton loan started at about 10s. premium, the premium subsequently rising to £1. Industrial stocks improved towards the opening of the Suez conference, but business was limited. An improvement on Wall Street also assisted a rally in oil shares on Wednesday; British Petroleum regained 7s. to 152s. 6d.

Dollar stocks receded, International Nickel falling back to $203¼ (London) following the quarterly results. Hudson's Bay finished 1s. 9d. higher over the week at 217s. Borax rose to 15¾ xd at one stage, but later receded to 15 xd. Motor shares improved; BMC were 4½d. higher at 7s. 0¾d. and Rolls-Royce rose 2s. 6d. to 108s. 6d. BSA gained 1s. 6d. to 28s. and Hawker Siddeley 2s. to 47s. Bristol Aeroplane rose 1s. 6d. to 19s. 6d. Stores improved, Debenhams rising 2s. 6d. to 38s. and GUS "A" 1s. 9d. to 37s. 9d. The increase in the interim dividend caused a sharp rise of 3s. to 51s. in BAT on Wednesday. Imperial Tobacco gained 1s. 9d. to 47s. 9d. xd at the same time. Steel shares were firmer, Stewarts & Lloyds rising 2s. 6d. to 66s. Shipping shares improved, P & O advancing to 30s. 3d.

The smaller oil companies remained strong throughout the week, Apex (Trinidad) jumped 7s. to 44s., but Shell lost 1s. 10½d. to 148s. 1½d. Among the copper producers RST rose 2s. 6d. to 50s. 3d. Bancroft receded to 50s. 9d. after touching 52s. 3d. Kaffirs improved from Monday; Harmony gained 1s. 4½d. to 26s. and Western Holdings 4s. 4½d. to 75s. 7½d.

(1) Annual figures are for June of each year. (2) Engineering, shipbuilding, electrical goods, vehicles, metal goods, precision instruments and jewellery. (3) Textiles, leather goods, clothing, food, drink and tobacco, manufactures of wood and cork, paper and printing. (4) Number registered as unemployed expressed as a percentage of the estimated number of employees. (5) United Kingdom. (6) From June, 1956 onwards comparison with earlier figures is affected by the revocation of the Notification of Vacancies Order, 1952.

(1) Relates to wholesale prices in Athens and Piraeus only for Greece. Figures for Ireland are based on January, 1952=100. (2) July-December. (3) Relates to prices in capital cities only for Austria, France, Greece and Turkey. Belgium excludes rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953=100. (4) Excluding rent. (5) Including direct taxes. (6) Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. (7) Deposit money and notes and coin held by business, individuals and foreigners. Except for Greece holdings of the issuing authority and other banks are excluded. (8) Holdings of the government and central bank at end of period; figures for Greece are gold reserves only; foreign exchange figures for Norway exclude government holdings; Norway and Sweden include foreign investments. (9) Beginning May, 1954, a new drachma equal to 1,000 old drachmas introduced. (10) Including some long-term securities.

Financial Statistics

EXCHEQUER RETURNS

For the week ended August 11th, 1956, there was a "above-line" surplus (after allowing for Sinking Funds) of £32,260,000 compared with a surplus of £32,224,000 in the previous week and a deficit of £7,107,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £9,540,000, bringing the total deficit to £214,905,000 (£338,880,000 in 1955-56).

THE MONEY MARKET

THE maturity on Wednesday of the £167 million of unconverted National War Bonds produced an exceptionally large turnover in the money market. The discount houses had to make substantial repayments of seven-day loans from the Bank; they took up a large portion of the week's new Treasury bills; their maturities had been depleted by the anticipatory purchases of the authorities in past weeks; and it was the make-up day of the clearing banks. Yet the Bank had still to make very large sales of bills "in reverse," both directly to the market and to the banks. Even so, some surplus of funds remained. The banks were keen buyers of November maturities at 4⅛ per cent and of Octobers at 4 23/32 per cent.

The discount houses maintained their Treasury bill rate unchanged at last Friday's tender at £98 14s. 11d. per cent, and secured 62 per cent of their applications, compared with 57 per cent in the previous week. Total applications rose by £10.8 million (to £409.9 million), which was fractionally more than the rise in the allotment (to £280 million); the average rate of discount rose by 2d. to £5 os. 5.84d. per cent.

The price of gold fell by 3¼d. an ounce to 251s. 6¼d. an ounce in the week to Wednesday last, despite the fall in sterling (by ⅛ to $2.78¼).

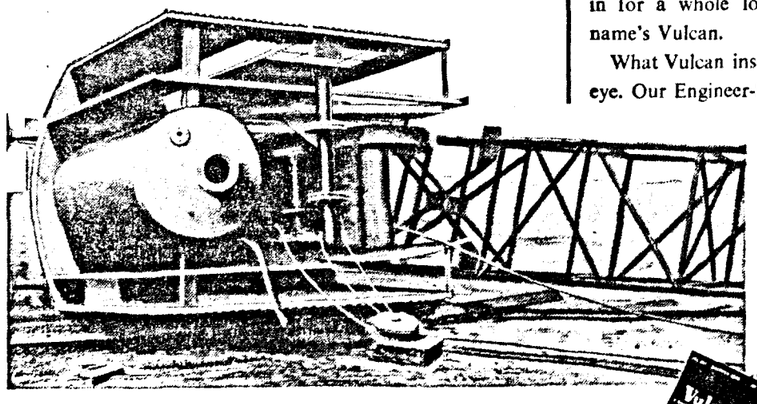
One heavy blow, and it was all over...

The load was seven tons, instead of the safe five. A wind squall of 51 m.p.h. created a pressure of 10½ lbs. sq. ft., which was 5 lbs. over the working margin. So, it's not surprising that, what with the weight and the wind, the crane just couldn't stand any more.



What Vulcan say about it

Users of cranes and hoists need to be extra-careful. As well as the obvious precaution of insurance, safety regulations must not be overlooked, otherwise you're in for a whole load of trouble — as sure as our name's Vulcan.

What Vulcan insure, Vulcan inspect with an eagle-eye. Our Engineer-Surveyors know what to look for, where to find it, and accidents never get a chance. Cranes, hoists, boilers and steam engines, electrical apparatus, pressure and vacuum vessels — these all need Vulcan's specialised insurance, and the specialised inspection that goes with it.

VULCAN INSPECTS — AND PROTECTS

FREE. For news of industrial accidents and ways to avoid them, ask us now for 'Vulcan', a quarterly journal for Power users. Please write to Dept. 17.

COMPANY MEETINGS

UNITED DOMINIONS TRUST

RECORD RESULTS AGAIN ACHIEVED

HIRE-PURCHASE THE SCAPEGOAT IN COMBATING INFLATION

MR J. GIBSON JARVIE ON NEED FOR REDUCTION IN TAXATION

The thirty-fourth annual general meeting of United Dominions Trust Limited was held on August 14th in London.

Mr J. Gibson Jarvie (the Chairman) presided, and in the course of his speech said:

The financial year, which closed on June 30th, was the most difficult year in our history.

Yet, in spite of all the difficulties and the maddening uncertainties, we have again produced record results. The assets of the Group have risen from £58,241,773 to £63,543,729 and the gross Group profits have increased from £1,780,288 to £1,816,435.

Taxation at £941,228 approximates last year's figure. General Reserves are increased by £393,200 and the balance in Profit and Loss Account carried forward has risen from £423,778 to £458,015. Capital and Revenue Reserves now amount to over £8 million.

The Board have recommended an increase of 1½ per cent in the dividend for the year on the Ordinary Stock raising it to 17½ per cent.

GROWING STRENGTH OF OVERSEAS COMPANIES

I told you last year that within measurable time the Dominion subsidiaries, taken together, might easily beat the record of the parent company and their results this year encourage me to repeat that prediction. They have made a handsome contribution to the Group figures which is doubly important while we are facing such vicious Government interference here. Our early essay into the Dominions (the South Africa and Rhodesia companies were established before the War) has been richly rewarding and if we were permitted sufficient capital backing for it, there is no doubt that we could greatly magnify our success and the value of our contribution to the industrial growth of the Commonwealth, by much wider investment overseas.

INFLATIONARY TRADING CONDITIONS

The country is in a precarious state: so we have been told several times recently. Within the last few weeks the Prime Minister has said that we are suffering from "progressive poverty." If that means anything at all, it means—unless we call a stop to the process and recover the ground which we have lost and are losing every day—that we are headed for nothing less than economic chaos and national disaster. I said this last year and the year before that but the Government have apparently only just realised it.

The rising inflation of recent years has worried the Government so they have looked, not for a cure, but for a scapegoat. They found it in Hire-Purchase, a form of trading to which some people are allergic—a reasonably safe subject, therefore, for attack. Unfortunately, although the Government are still faithful to their old scapegoat, they are not yet prepared to apply the only effective remedies and inflation has increased to such an extent that they are now obviously frightened. They are increasing the pressure under their credit squeeze still further to reduce domestic spending and hire-purchase is still their special target.

The refusal by the Government to accept hire-purchase and credit sales as a necessary modern part of our economy and their persistent condemnation of the system and the high priority given to restricting it, is clearly intended to distract attention from the real causes of the present economic disorder. The Government must know the real causes of the inflation but beyond an oblique reference to wages outstripping production, they stubbornly refuse to act.

I repeat what I said last year: the real causes of inflation are profligate Government spending and the inability of production to keep up with the rising spiral of wages. The result is, of course, penal taxation which is placing an insupportable burden on industry and commerce and destroying all incentive and ambition in individuals. What the country needs is a tonic. And the best stimulant the Government could provide would be an immediate and substantial lightening of the dragging weight of taxation.

UDT—THE COMMONWEALTH AND THE FUTURE

In spite of every conceivable discouragement—I might go so far as to say some of it deliberately directed against your company—I have never lost my belief in our ultimate regeneration, nor have I lost faith in the Commonwealth. That is where the future of the UDT Group lies.

The Dominions have made it quite clear that they welcome our investment and the company has, with capital in Dominion subsidiaries supplemented by loan funds, already contributed in no small way to industrial, commercial and agricultural improvement and expansion throughout much of the Commonwealth. The Commonwealth is so big, so important in the world and so potentially strong in the world that, knit together by sentiment and common interests, its future would appear to be safe.

It is, I should think, beyond dispute that the growth of Dominion industry and commerce can do Britain nothing but good. In Great Britain itself, we must be done with chafing restraint and find independence and courage enough to fight back to the greatness we seem to have lost. And our fight must first of all be against our own governments—against those politicians who put expediency before principle and regard their own continuance in office as more urgent and important than national solvency and prosperity. We shall also have to see to it that the TUC and individual Unions can no longer serve their own selfish ends without reference to the nation as a whole. Labour must be made to realise the elementary truth that if by their conduct they damage the national economy, they are hurting themselves. If they cannot, or will not, see that simple fact, then whatever steps may be necessary to protect our economy from their intransigence must be taken.

It would be foolish to say that this company has been unaffected by the restrictive measures applied generally to the nation and particularly to us. We have had a difficult year and there seems little doubt that the Government will continue to do little to curb their own spending and much to restrict the budgets of everyone else. So that we can expect no lessening in difficulty in our current financial year. But so long as the official inhibitions of this country do not spread to the Commonwealth, our Dominion companies look for another successful year, and it is hardly necessary for me to tell you that at home we shall redouble efforts and invention to extend our business in the many fields in which we firmly believe we can contribute much to the nation's prosperity.

The report and accounts were adopted.

CARTER & COMPANY, LIMITED

IMPROVED EFFICIENCY

MR C. CYRIL CARTER'S STATEMENT

The forty-eighth annual general meeting of Carter & Company, Limited, was held on August 16th in London, Mr C. Cyril Carter, chairman, presiding.

The following are extracts from his circulated statement for the year to March 31, 1956:

Trading profits of the Group for this year show a slight increase despite the developing difficulty of trading conditions. Although we have not yet felt the full effect of major improvements such as the installation of the more efficient method of biscuit firing, of which I spoke last year as having been planned, both production and productivity at our main tile factory at Poole have been substantially increased without any appreciable capital expenditure. The first of these new tunnel ovens is now complete—it was lit up on July 2nd and will be in full operation by mid-August.

In the building that houses it provision is made for a second unit, and full benefit from the installation will not be felt until this second unit is built. It would not, however, be prudent to proceed with the building of another oven until the maximum economic performance of the first unit has been proved in practice. The oven and the building account largely for the sum of £77,000 spent during the year from the money raised for capital improvements by an issue of Ordinary shares in 1954, making a total of £93,000 spent from this account up to March 31, 1956. Our capital commitments at that date amounted to £32,000.

STOKE-ON-TRENT FACTORY

At our Stoke-on-Trent factory, J. H. Barratt & Company (1927) Limited, the manufacturing side is much more healthy than it was, but there has been a quite definite recession in the type of business in which that company is engaged—the making of tiles for the fireplace trade, which absorbs more than half of the total coloured tiles produced in this country—and the factory has not been working at really full pressure since November, 1955. Consumer hesitation, caused by the imposition of purchase tax on utility goods, rating revaluation and general uncertainty, has undoubtedly adversely affected sales.

The only major manufacturing need at this Stoke factory is now that of improved biscuit firing equipment. Arrangements have accordingly been made to finance, on favourable terms, the building of a tunnel oven, under the fuel saving scheme of the Ministry of Fuel and Power. Increases in wages, cost of raw materials, fuel and power have affected these tile manufacturing units.

POOLE POTTERY

The third manufacturing company, Carter, Stabler & Adams Limited, which makes Poole Pottery, has recognised the need to increase its exports to the greatest possible extent, in spite of the fact that selling in these markets is less profitable than in the home market. As a result of the recognition of this obligation and in the face of substantial increases here also in wages, cost of raw material, fuel and power, this company has been unable to maintain quite the same level of profitability as in the last two years.

The introduction of an exceptional number of new designs during the year has also contributed to reducing profitability but must be regarded as an investment for the future. Halfway through the financial year purchase tax at the rate of 30 per cent was imposed on tableware, previously untaxed. This, combined with the effects of the credit squeeze in the home market and increased import restrictions overseas, is making marketing very much more difficult, though the full effects of these changes were not felt in the year under review.

CONTRACTING COMPANIES

The contracting companies—as was to be expected in the year after the end of building licensing—have been at the limit of their capacity. With the slow cycle of completions which is inevitable in the building industry, much of the work finally invoiced during this period was, in fact, carried out in the previous year, before the latest increases in the cost of material and labour. In the case of the largest of these units these have more than offset the benefits of the highest sales that our Contracting Division has ever known. The volume of orders for all these companies has been maintained well and the demand for those skilled forms of architectural decoration which we have sustained at some cost in harder times is gratifying.

World economic conditions make the value of any forecast doubtful, but the fact that our sales have been maintained, and indeed slightly increased, is of importance. In the three months since the end of the financial year which we have been discussing, sales have still been maintained.

The report and accounts were adopted.

CROWN ZELLERBACH CORPORATION

(Incorporated in the State of Nevada, United States of America)

MANUFACTURERS OF PULP, PAPER AND ALLIED PRODUCTS, LUMBER, PLYWOOD AND OTHER FOREST PRODUCTS.

CONDENSED SUMMARY OF CONSOLIDATED RESULTS FOR SIX MONTHS ENDED JUNE 30, 1956.

	1956	1955
Net sales	$223,504,000	$196,856,000
Net income (excluding net gain on disposition of Fibreboard investment)	$24,973,000	$20,642,000
Dividends declared	$13,056,000	$12,226,000
Additions and improvements to properties ...	$31,244,000	$17,607,000
Shares of common stock outstanding June 30 ...	13,790,140	13,752,168*
Per share of common stock outstanding:		
Net income (excluding net gain on disposition of Fibreboard investment)	$1.76	$1.45*
Dividends to common stockholders ...	$ .90	$ .80*
Production:		
Paper and paperboard—in tons	828,208	785,669
Lumber—in thousands of board feet ...	83,377	84,274
Plywood—in thousands of square feet ...	45,613	34,702

* *Giving effect to common stock split-up in September*, 1955.

Copies of the report for the six months ended June 30, 1956, may be obtained from the London Transfer Agents, The British Empire Trust Company, Limited, 3, Lombard Street, E.C.3, on application.

Residents in the British Isles, whose shares are not registered in their own names, and other interested parties, who wish their names placed on the Mailing List for future communications, should notify the London Transfer Agents accordingly.

THE GLOBE TELEGRAPH & TRUST COMPANY

ANOTHER SUCCESSFUL YEAR

The eighty-third annual general meeting of The Globe Telegraph and Trust Company Limited was held on August 14th in London.

Sir Edward Wilshaw, KCMG (the Chairman), presided and, in the course of his speech, said: The accounts show that we have had another successful year and that the gross income has risen by £205,992 to £1,007,142.

The earnings for the year, before providing for taxation, are £831,675, which is £206,249 higher than last year. Income Tax absorbs £352,945 and leaves net earnings of £478,730 this year, against £353,499 for 1955. Out of the net earnings the Directors have already paid an interim dividend of 2½ pence per 5s. unit of stock and have transferred £100,000 to the General Reserve; they now recommend a final dividend of 3½ pence per 5s. unit of stock. These appropriations absorb £387,500 and leave £91,230 to be added to the unappropriated profits.

The Capital and Share Premium Accounts are unchanged at £5 million and £63,313 respectively; but the Capital Reserve has increased by £272,490 to £940,813, the General Reserve by £100,000 to £550,000 and the Unappropriated Profits by £91,230 to £326,457.

Invested funds now exceed £10 million and amount to £10,216,410, an increase of £277,340. Of these funds £7,847,750 is in Quoted Investments which had a market value of £15,306,507, nearly double the book value.

The Unquoted Investments, the value of which is substantially in excess of the sum shown in the Balance Sheet (£2,368,660) include our holding of one-half of the Ordinary Stock of Cables Investment Trust Limited, the book value of which is £1,335,000, but which is estimated to be worth more than £4 million.

PROPOSED RIGHTS ISSUE

We propose to make a rights issue which will not only give you the opportunity of increasing the overall yield on your present holding of Ordinary Stock in the Company, but at the same time increase our issued capital so as to enable us to widen our portfolio, thus gaining that additional security which the investment of such capital will provide. We propose to issue a further 4 million new 5s. shares and to offer to you at par, that is to say 5s. (the market value is in excess of 10s.) in the proportion of one new share for every complete five 5s. ordinary stock units already owned.

We shall have to increase our authorised capital from its present £5 million to £10 million so as to cover not only the present proposed issue but also any further new issues of shares which we may have the opportunity to make in the years to come.

In passing I would mention that the introduction of the 5s. units of stock has resulted in a considerable increase in the number of stock owners on our books. To encourage the small investor still further, I have been giving much thought to the introduction of quarterly interim dividends. In my opinion, our financial position is sufficiently secure to enable us to maintain our present rate of dividend unless unforeseen circumstances should supervene.

The report was adopted and the increase of capital was approved.

THE ASSOCIATED PORTLAND CEMENT MANUFACTURERS

EFFORTS TO COMBAT INFLATIONARY SPIRAL

SIR GEORGE EARLE ON PRICE STABILITY

The Annual General Meeting of The Associated Portland Cement Manufacturers Limited was held on August 14th in London.

The following are extracts from the circulated statement of the Chairman, Sir George Earle, CBE:

During the past ten years our Group has expended on capital account no less than £31,843,299 and this has been financed without our issuing fresh capital. Net Current Assets increased during the same period by £9,797,482.

The Associated Portland Cement Manufacturers Limited holds over 80 per cent of the equity of The British Portland Cement Manufacturers Limited and 100 per cent of the Alpha Cement Limited equity.

The trading surplus of these Companies increased by £302,000 to £11,355,000. We set aside for depreciation £2,303,000 and £725,000 for replacement of plant and machinery and are left with £8,327,000. Provision for Taxation amounted to £3,952,000. Various other provisions, payments and transfers to Reserves, including £1,250,000 to Reserve for the new Workmen's Pension Fund, which will give increased benefits to our men, absorbed £3,048,000, leaving for the Stockholders £136,000 more than last year. It is proposed that this increase be passed to them by way of a higher dividend.

REVALUATION OF FIXED ASSETS

The result of the revaluation of the Group's fixed assets was a surplus of £19,071,352. The elimination of the proportion of this amount attributable to Minority Shareholders leaves a balance of £17,859,771. Your Directors are satisfied that the valuation which produces these surpluses is conservative.

The fixed assets now stand at a more realistic figure and your Directors consider that the time has now come when the share capital should be more in line with the capital employed in the business. They therefore propose that the authorised share capital be increased to £25 million by the creation of 13,500,000 ordinary shares of £1 each, and that £12 million standing to the credit of certain reserve accounts be applied in payment in full for 12 million Ordinary shares. These will be issued to stockholders on the basis of three shares for each £2 of stock now held.

The fact that the capital of the Company has been increased provides no reason or promise that larger sums will be distributed as dividends. The issue of these new shares does not by itself increase the intrinsic value of any stockholder's holding.

I want especially to draw attention to the figures in the Accounts which show the dividend expressed as a percentage of the invested capital. For 1955 the figure is shown before and after revaluation—the former is comparative with past years and you will notice that the gross figure of 8.8 per cent is well below the prewar figure of 10.2 per cent; after tax the net figure is 5 per cent as compared with 7.5 per cent before the last war. Comparison with other businesses in this country and overseas indicates that, on this basis, we are working on narrower profit margins than is normal. This is perhaps to be expected as cement in England is sold at a lower price than anywhere else in the world.

The percentage of this Company's total profit, before provision for Taxation, which is provided by the home trade sales of cement is 29 per cent; the remainder of the profit arises from export trade sales of cement, sales of other commodities, dividends from investments in Companies both at home and overseas and interest.

PRICE STABILISATION

In pursuance of this industry's and our Companies' policy of low prices the industry in December announced that home trade prices would not be advanced until at least June 30th this year. The object of this decision was that if a large proportion of British Industry would do the same thing, the inflationary spiral would receive a check and we might begin to get some stability, and instead of wages being advanced they would become worth more in purchasing power.

It must be obvious to anyone that if prices here rise quicker than in the countries with which we compete in the export markets, we shall eventually lose our trade, and this must happen if we do not work harder and produce more to pay for the increased wages which have been received. Apart from doing all we can to keep prices down, which means we must all work hard and must run our businesses as efficiently as possible, it is difficult to know what more the ordinary business people can do.

It is disappointing that at this time Trade Unions should be pressing for a shorter working week and longer holidays which, if adopted, must increase costs and thus worsen our export position.

Last year our deliveries of cement were more than 300,000 tons better than our previous record year, 1954. Our exports, as well as our home trade, increased. But for the Dock strike they would have been better. It is more than regrettable that strife between Unions should affect our country's economy and the life of the people on this island.

After reviewing the Company's activities at home and overseas, the Chairman continued: It seems evident that we shall have to run our works at full output during this year in order to supply the demand and, unless conditions change, this should apply to the works of the overseas Companies as well.

FRIGHTENING FIGURE OF COAL COST

It was a bad blow to our ambition not to raise prices when the Coal Board jumped their price by about 6s. a ton from June 1st. Our Industry really is keen to absorb all the increased costs it can, but this coal advance will cost it about £1,500,000 a year on the home trade alone. This is too much to swallow, and with regret our home trade prices went up 3s. a ton on July 1st. This does not apply to export prices. As the Coal Board have agreed not to advance their pit prices for twelve months we have been able to state that our prices will not be advanced for the same period "unless something quite unexpected and exceptional happens." Our coal before the war, on the Thames, cost 19s. 3d. a ton and now it will be 91s. 7d., the pit prices being approximately 12s. 9d. as against 63s. 4d., nearly five times the prewar price—this is a frightening figure, for it affects the cost of all production.

The report and accounts were adopted and the capitalisation and scrip issue proposals were approved.

APPOINTMENTS

CENTRAL ELECTRICITY AUTHORITY

LABOUR RELATIONS AND WELFARE

The Authority propose to appoint a Chief Executive Officer to take charge of the Labour Relations and Welfare Departments at their Headquarters in London, and invite applications for the post.

The range of functions for which the officer will be responsible will include the Negotiating Machinery covering wages and conditions of employment throughout the industry, and the fields of Education, Training, Safety, Health, Welfare and the Joint Consultative Machinery.

The appointment, which is superannuable, will carry a salary within the scale £4,000 to £4,500 p.a.

Applications, stating age, present appointment and salary, and supported by full details of qualifications and experience, together with the names and addresses of two persons to whom reference may be made, should be forwarded to D. Moffat, Director of Establishments, Winsley Street, London, W.1, to be received not later than September 1, 1956.

ASSISTANT RESEARCH EXECUTIVE required for work in a Market Research Department of an Advertising Agency. The person appointed will be responsible for the impact research of important national advertising accounts. Applicants should be graduates with a sound theoretical knowledge and some practical application of statistics, but a degree in statistics is not essential. A pension scheme is in operation.—Write, stating age, experience, and salary required, to the Personnel Manager, F. C. Pritchard, Wood & Partners, 25 Savile Row, W.1.

ASSISTANTS required for research in the Faculty of Commerce and Social Science. Degree an advantage. Salaries up to £455 a year according to age and qualifications.—Particulars of education, experience, and to Clerk to the Faculty of Commerce and Social Science, The University, Birmingham 15.

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN POLITICAL ECONOMY

Applications are invited for an Assistantship in Political Economy. Salary scale £550 to £650. Initial salary according to qualifications and experience. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than August 31, 1956, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

DEPARTMENT OF INDUSTRIAL RELATIONS

The College invites APPLICATIONS for ONE post of RESEARCH ASSOCIATE and TWO of RESEARCH ASSISTANT, as a team to investigate the effect of recent technical and economic changes on standards of life and social relations in a South Wales community. Salary (a) Research Associate, not less than £850 p.a. with F.S.S.U. and family allowances: (b) Research Assistants, £550 p.a. Six copies of applications (including the names of three referees) should be sent to the undersigned, from whom further particulars of the project can be obtained. Final date for the receipt of applications September 20, 1956.

University College, Cathays Park, Cardiff. August, 1956.

E. R. EVANS, Registrar.

WANTED

Economist/Statistician (male) recently graduated, interesting position combining commercial and statistical practice.—Write, with full particulars, qualifications, etc., to New Zealand Wool Commission (London Agency), 16 Coleman Street, London, E.C.2.

STAFFORDSHIRE COUNTY COUNCIL

COUNTY PLANNING AND DEVELOPMENT

Applications are invited for the appointment of a Senior Assistant in the Research Section of the Department on APT Grades IV-V (£710-£970) per annum. The commencing salary and grading will be in accordance with qualifications and experience.

The person appointed will be concerned primarily with the economic aspects of the Development Plan and the implementation of overspill proposals. Applicants should have an honours degree in economics, geography or related subjects and should preferably have had research experience in the public service, with a research institution or with industry.

Applicants should give details of age, education and training, qualifications, present and previous appointments and experience, and the names of two persons to whom reference can be made. Applications, in which relationship to any member or senior officer of the County Council must be disclosed, should be sent to D. W. Riley, County Planning and Development Officer, 41a Eastgate Street, Stafford, not later than August 28, 1956.

T. H. EVANS,
Clerk of the County Council.

ECONOMICS GRADUATE (with Statistics) required by trade organisation in Manchester. Successful applicant will assist in development work in a department responsible for various measures of productivity improvement. An interest in management training and the place of modern management techniques in improving industrial efficiency necessary.—Box 488.

COST ACCOUNTANT/OFFICE MANAGER wanted for Printing and Wholesale Stationery business in Scottish County town. Knowledge of trade desirable. Pension scheme. Salary commensurate with experience but not less than £750. Apply in confidence, stating age and previous experience.—Box 487.

APPOINTMENTS

VICTORIA UNIVERSITY COLLEGE

WELLINGTON, NEW ZEALAND

The Council of Victoria University College proposes shortly to appoint a LECTURER IN THE SCHOOL OF POLITICAL SCIENCE AND PUBLIC ADMINISTRATION, and invites applications from suitably qualified persons for this post.

The salary will be £985 per annum, rising by annual increments of £50 to £1,235. The initial salary will be determined according to the qualifications and experience of the appointee. An allowance is made towards travelling expenses.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications in New Zealand and London is *September 30, 1956.*

The salary will be on the scale £400 x £25 to £500 per annum.—Further particulars may be obtained from the Registrar, University College, Singleton Park, Swansea, by whom applications must be received by *Saturday, August 25, 1956.*

HER MAJESTY'S OVERSEA CIVIL SERVICE

Statistician (BCD 63/7 03) in the Department of Agriculture, Kenya, to advise on the design of field and other experiments conducted by the Department including sampling, investigations and surveys, and to assist in the statistical analysis of results.

The appointment will be on two years probation for permanent and pensionable employment. Salary in scale £616 to £1,620 (including pensionable inducement pay) plus a temporary variable non-pensionable allowance at present 10 per cent of salary (maximum £162 per annum). Government quarters provided when available at a moderate rental. Free passages for officer, wife and family up to cost of three adult passages. Income tax at local rates which are much lower than in United Kingdom. Generous home leave.

Qualifications required are a good degree in Mathematics or Statistics with some post-graduate training in statistics, and preferably a diploma in statistics; some experience of, or training in, statistical methods as applied to agricultural field experiments is essential. The required post-graduate training would if necessary be provided for by means of a Colonial Agricultural Probationership. Applications will therefore be accepted from persons who have only recently graduated.

Intending applicants, who should be between 21 and 40 years old, should write to the Director of Recruitment (Her Majesty's Overseas Civil Service), Colonial Office, Sanctuary Buildings, Great Smith Street, London, S.W.1, stating briefly personal particulars and qualifications and quoting above reference.

(AMENDED ADVERTISEMENT)

THE LOCAL AUTHORITIES' CONDITIONS OF SERVICE ADVISORY BOARD

invite applications for the appointment of

SECRETARY

to succeed the present Secretary who is to retire in 1957. The salary for the appointment, which is pensionable, is £4,500 a year. The appointment will be held at the pleasure of the Board and will be terminable on three months notice on either side. Conditions of service will be those normally applying to chief officers of local authorities. The successful applicant will be required to take up his duties on a date to be arranged in 1957. The Secretary of the Board is responsible for:—

(1) advising the Board and the Employers' Sides of the wage negotiating bodies concerned with fixing wages and working conditions of employees in local government in England and Wales, and in Scotland also to some extent, numbering about 900,000 in many classes of employment;
(2) acting as Employers' Secretary to these wage negotiating bodies, and negotiating with the professional associations and trade unions representing such employees;
(3) the application of agreements on wages and working conditions arising from these negotiations;
(4) representing the Board and the Employers' Sides at meetings and conferences in connection with their activities;
(5) advising local authorities in matters concerning industrial relations.

A local government background would be helpful but it is not essential. The main requisite of the post is a thoroughly practical experience in wage negotiations over a very wide field (ability to assume responsibility for negotiations on a large scale and at all levels, and an extensive experience of industrial relations. Form of application, which is returnable by October 6, 1956, may be had on application to the Secretary,
37 Upper Grosvenor Street, London, W.1.

IMPERIAL CHEMICAL INDUSTRIES LIMITED

METALS DIVISION

TECHNO-COMMERCIAL DEPARTMENT

Applications are invited for two senior positions in a newly formed department established to evaluate commercial and economic information affecting the long-term interests of the Metals Division. The successful candidates would be members of a small team undertaking market surveys and special investigations and presenting the information to form a basis for future policy.

Applicants, preferably between 28 and 40 years of age, should possess an honours degree and have industrial and commercial experience. An engineering or metallurgical background, although desirable, is not an important as the ability to draw the correct commercial inferences from technical information and present the results clearly, and in a form acceptable to senior management.

A generous commencing salary is offered and the Company operates both Pension and Profit Sharing Schemes. On joining the staff, the successful candidates will receive a reasonable refund of removal (including travel) expenses and, to assist them in house purchase, facilities are available in approved cases for loans.

Application forms may be obtained from the Staff Manager, I.C.I. Ltd., Metals Division, Kynoch Works, Witton, Birmingham 6, quoting TC/1/C.

SPICERS LIMITED require an experienced Office Organisation and Methods Officer, aged preferably between 30 and 40 years. The commencing salary offered would be not less than £1,250 p.a. Written application should be made to the Personnel Adviser at 19 New Bridge Street, E.C.4.

TAXATION: International firm of Chartered Accountants has vacancies for men wishing to specialise in taxation. Previous experience an advantage but not essential. Good prospects and interesting work with rapid promotion for the right men. Salaries in accordance with qualifications and experience. Pension scheme.—Write Box W 437, c/o Streets, 110 Old Broad Street, E.C.2.

MANAGEMENT EXECUTIVE (40), F.C.W.A., A.C.A., A.C.I.S.—5 years' specialist experience on Management Accounting in light electrical and mechanical Engineering industry—seeks permanent progressive position offering wide scope. Present salary £2,250 p.a.—Box 489.

NOTICE

The National Iranian Oil Company offers for sale, during the year 1957, a total quantity of 3,660,000 long tons of Iranian Light Crude Oil in following quarterly quantities F.O.B. Bandar Mashur:

	U.S. Barrels	Long Tons
First Quarter	6,683,000	890,000
Second Quarter	6,840,000	910,000
Third Quarter	6,919,000	920,000
Fourth Quarter	7,076,000	940,000
Total	27,518,000	3,660,000

Main characteristics of the Crude Oil offered are:—
Average Specific Gravity at 60° F: 0.8530 (34.10° A.P.I.)
Sulphur % Wt. 1.3 = 1.4%
Vapour Pressure 6.5 = 8.0 lbs. at 100° F.
Salt Content 5.2 lbs approx per 1,000 bbl.

Those interested are requested to indicate:
1. Price offered per barrel of 42 U.S. Gallons f.o.b. Bandar Mashur.
2. Quantity of crude oil required.
3. Period during which the required quantity will be lifted.
4. Currency in which payment will be effected. (Preference being given to payments in currencies of international convertibility.)
5. Whether the purchaser is prepared to put up a performance bond.
6. Whether the purchaser would arrange for vessels carrying crude oil to be bunkered by the National Iranian Oil Company.

7. Basis to which preference can be made.

This offer is open until September 30, 1956, and the National Iranian Oil Company will notify its acceptance or rejection of the proposals received before November 30, 1956.

The National Iranian Oil Company is also prepared to consider offer for long-term contracts for the purchase of Iranian Light Crude Oil.

Proposals may be directed to the National Iranian Oil Company, Tehran, or to the Iranian Embassies, Legations, or Consulates abroad.

NATIONAL IRANIAN OIL COMPANY

NATIONAL BANK OF INDIA LIMITED

Notice is hereby given that the Transfer Books of the Bank will be closed from August 22nd to September 4th, both days inclusive.

By Order of the Board,
N. W. CHISHOLM, General Manager.

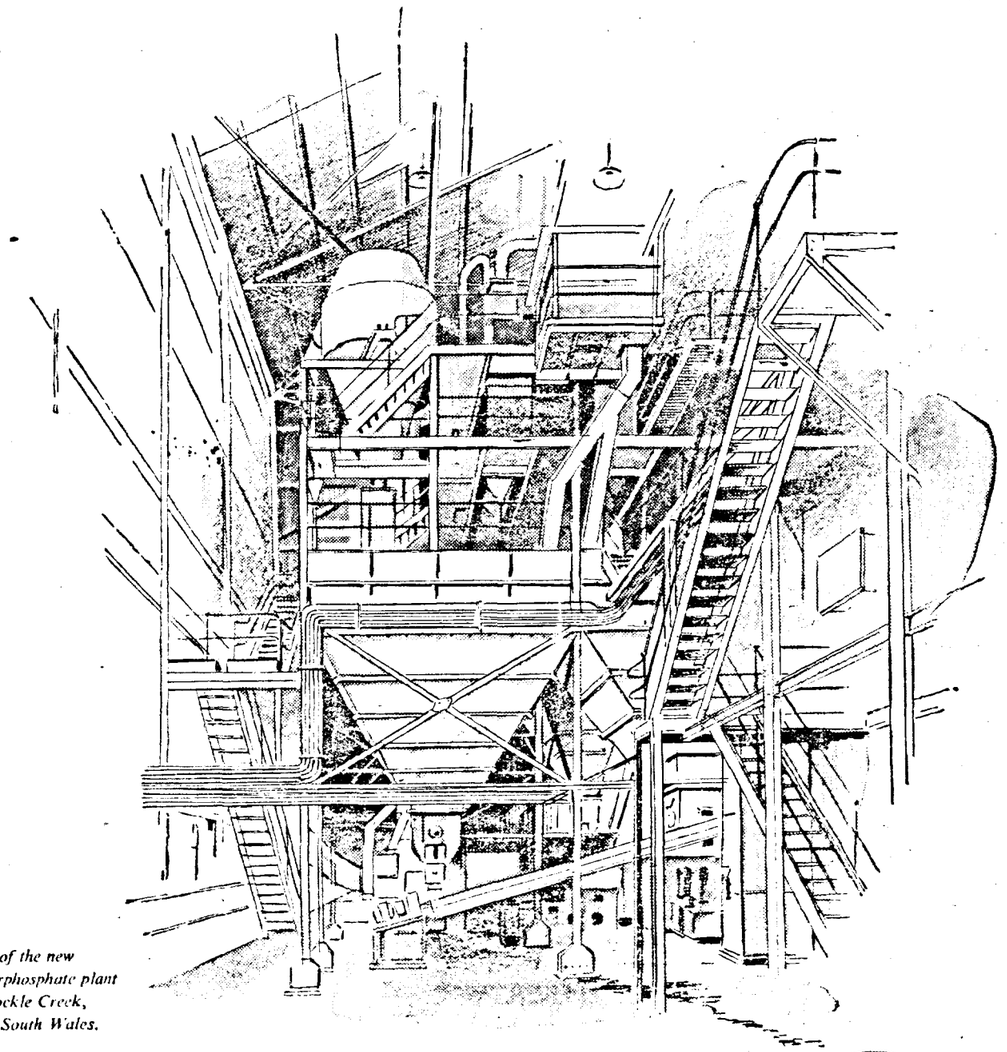
INVESTING FOR THE FUTURE IN... SUPERPHOSPHATE



Part of the new Superphosphate plant at Cockle Creek, New South Wales.

THE FARMERS of New South Wales have more than doubled the area under grass and clover in the last ten years. Over the same period there has been, particularly in the Northern Tablelands of the State, a phenomenal rise in the use of superphosphate for improved pasturage. To meet the increase in demand, C.Z.C. has erected a new superphosphate plant with a capacity of over 150,000 tons a year, a substantial contribution to the campaign for the more intensive use of Australian farmlands.

HIGHLIGHT ON HOLLOWARE

The housewife expects domestic holloware and other kitchen utensils to be bright and attractive. The manufacturer knows, however, that the necessary polishing costs money. A method of reducing these costs is by chemical or electrolytic polishing in solutions based on phosphoric acid. Aluminium, copper alloys and stainless steel can all be polished by these processes.

Packing chicks in corrugated boxes at a Netherlands hatchery.

Baby chicks shipped safely in CORRUGATED boxes

Pick up a baby chick some time and see just how delicate it is—soft, young, still in the early stage of life. Yet millions of chicks are shipped safely every year in corrugated boxes.

Why corrugated? Other materials have been tried. But only corrugated combines so many advantages.

Light weight makes lifting easy, keeps shipping charges down. Rigid, resilient construction stands up well under stacking, soaks up impact blows without buckling. Low thermal conductivity protects the chicks on extremely hot or cold days.

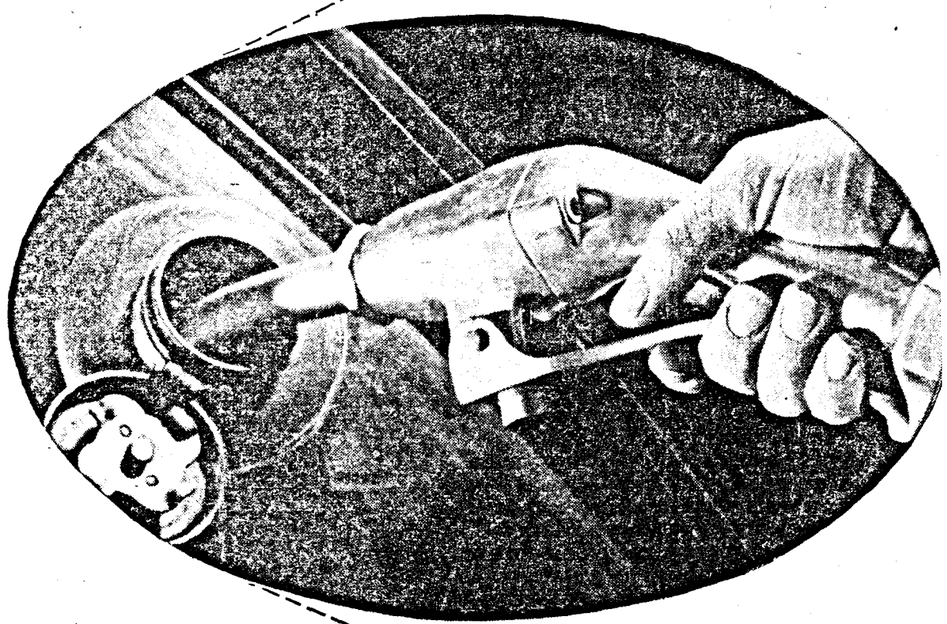
Corrugated's advantages make it useful in all kinds of packaging applications—and are finding growing demand today for an infinite variety of products. Can you use corrugated? Have a talk with your nearby boxmaker.

Langston doesn't sell corrugated, only the machines that make it. Since 1902, these machines have led the field in efficiency and dependability. *Samuel M. Langston Co., Camden 4, N.J., U.S.A.*

LANGSTON Corrugated Container Machinery

MANUFACTURED IN ENGLAND BY MASSON SCOTT & CO., LTD.

This Company is in the OILBUSINESS



We are one of many companies competing in the oil business. We have a big job to do. Between us we have to provide not only every drop of petrol and oil used in every form of transport, but also much of the basic energy fuel for factories and power stations, and the raw materials for synthetic rubber, textiles, and many household goods.

To do this we, as one of the oil companies in Britain, have had to spend £86 million in the last seven years to build a new refinery and modern tankers, whilst developing a marketing organisation adequate for a task that grows with every year.

The only way in which plant and equipment on such a scale can be put to proper economic use is for it to work to full capacity. This, in turn, demands a method of distribution of certain major products which will ensure a reasonably constant level of sales for them.

Our Co-operation Plan for service stations does this for petrol. As a result of this voluntary co-operation between retailers and our Company, many thousands of petroleum traders have been enabled to place their businesses on a more efficient footing. A plan that benefits consumer, retailer, and manufacturer alike seems to us to be a good plan.

Today the whole nature of our Company's outlook is expansion to meet a vital national need for more energy. That is why restrictive practices play no part in our ways of doing business.

Prospecting the ocean to make shoes wear longer

Through creative chemistry, Monsanto turns yesterday's dreams into present-day realities

"CAST OFF LIKE AN OLD SHOE" is a phrase that will soon lose its point. For tomorrow's shoes are going to last for a long, long time. And that'll be largely thanks to Monsanto's new "Tred"*.

To make this soling material ingredient, Monsanto takes derivatives of oil; processes them in newly designed plant; and produces "Tred" for the shoe-sole manufacturer.

This new material is the vital ingredient in modern resin-fortified soles, that combine lightness and flexibility with extreme toughness and abrasion resistance. These shoe soles are inexpensive and will *wear up to four times as long* as any you've had before! Also, "Tred", like other man-made materials, conforms to controlled standards which ensure consistency—the quality of resin-fortified soles need never vary.

"Tred" is a product of Monsanto *policy* t a policy of recognising a good idea for what it is, and backing it with the plant and research necessary to turn a good idea into a good product. It's just another way Monsanto brings a better future closer.

* A new Monsanto Styrene butadiene copolymer

If you (as a manufacturer) are interested in chemicals, it will pay you to get in touch with Monsanto.

"Tred" is a Registered Trade Mark.

Users in Unison

THE London conference on the Suez Canal ended at 5 o'clock on Thursday afternoon not, as some optimists had hoped, in a unanimous compromise, but in two unreconciled propositions. One is supported by 17 of its members, including all the world's main maritime nations; the other is advocated by a minority of four—India, the Soviet Union, Indonesia and Ceylon. During the meeting's worst passage, Mr Krishna Menon and Mr Shepilov, by devices which must have upset many a well-mannered Indian and Sinhalese, tried to ensure that if there were no unanimity, there should be no result. But this flight in the face of fact served chiefly to emphasise the wisdom of the 17 in wishing to keep the Canal affairs above the rough and tumble of politics. The conference has produced a result; 17 nationalities owning, or employing on charter, 95 per cent of the shipping using the Canal, agree on a plan which they wish to negotiate with Egypt.

At the closing session, the majority announced its intention to appoint a committee consisting of its Australian, Ethiopian, Iranian, Swedish and United States members, with Mr Menzies in the chair, to acquaint Egypt with the proposals to which the seventeen subscribe. (The position of Spain, which at one point made their number eighteen subject to a reservation, was still not clear as *The Economist* went to press.) Against the views of the majority, the minority wanted the conference to issue a communiqué, but an Indonesian draft, as it seems, did not please the Russians. Finally, the chairman, Mr Selwyn Lloyd, was asked to despatch the verbatim report of the conference proceedings to President Nasser. Presumably the scene will now quickly shift to Cairo where, judging by reports of a tense situation between the Egyptian government and some of the Canal Company's foreign staff, time is on the side of the Devil, not the Angels.

What promise of efficacy do the plans hold and what are their chances in negotiation? In the eyes of the majority, the heart of the matter is that the Canal's users must have a share in shaping or stopping events before things go wrong, instead of merely a right to protest at impediments, or mend faults, after they have occurred. Their anxieties apply as much to unintentional as to deliberate failings. Hence their key phrase about "control of operation, maintenance and development" by some international body insulated from "the influence of politics of any nation." Another important point these users make is that there shall be no profit apart from a fair and agreed return paid to Egypt for use of the Canal.

The weakness of their proposition is its lack of attraction for a dictator on the make. Yet is their dependence on the Canal so great that he can afford to refuse all parley with this overwhelming majority of its customers? Will he see any importance in a Spanish proviso, at one point accepted by the other seventeen as the price of Spanish adherence, that if the majority proposal is rejected, Spain on its own may put another proposition: "efficient" and "proportionate" representation of the users on an Egyptian board of control?

For Mr Menon, who put forward the minority plan, the main consideration is to win Egyptian co-operation, and the majority plan has no chance of doing so. Is he right? Can so many customers be disregarded? His own plan, which he marketed well when he spoke to the press, but badly in the conference, recognises the need for user supervision, but aims at thrashing out its organisation later. He told the London press that its key clause is, in his view, that which prescribes "consideration . . . of the association of international user interests with 'the Egyptian Corporation for the Suez Canal'." The phrase is, he said, purposely vague so as to afford both Egypt and the principal users a "red carpet" down which to approach a meeting point.

But the Menon plan falls short of an acceptable second best because of the slightness of its provision for what is to happen if Egypt, by accident or design, fails to fulfil customers' requirements. What does India propose to do if the Egyptians spasmodically, or habitually, apply now to one and now to another user the kind of treatment they have given Israel? Take the matter, says Mr Menon, to the Hague Court or the United Nations, after which all users must exercise their influence to get Egypt to accept the decision. This process failed in the case of Israel but not, as Mr Menon was quick to point out, for lack of the means to enforce it; there were in 1951 100,000 British troops on the Canal. What was lacking then was the will, and what is necessary to render his plan effective is both a will and a means to apply sanctions if gentler processes fail. Doubt of the world's ability to organise these causes the big customers to prefer multinational management.

A point that has become blurred during the argument is that two considerations govern the thinking of most of the majority governments. The first is that the Canal shall work. The second, important not just to western investors, but also to all Asians and Africans in need of foreign investment for development, is that the peremptory impounding of foreign assets must not turn out to be a paying practice, even for a handful of local politicians; in the long run it is the underfed millions of Asia who will suffer. One side of the medal, admittedly, is that the western investor does not want to lose his money; the other is that his adversaries who tell gullible mobs that he is still the old colonial type and merits rebuffing are misleading their flock for the political purposes of Cairo and Moscow. For he has become aware since Abadan, as he was not aware earlier, of the need for making his investment a welcome one locally, as well as to absentee shareholders.

Yet other considerations weigh with the user governments as they reflect what to do if President Nasser rebuffs their advances. If he does, it is important to keep a card in hand. What shall it be? The combination of seventeen such major users is not lightly to be jettisoned. It has been forged on condition that negotiation be tried; it would collapse if one or two of the number were to want to resort to force the moment parley were to fail. Certainly Mr Dulles attaches importance to this point: Egyptian unwillingness to talk would, he told the conference, present a new situation likely to call for "further concerted decisions."

He spoke too early to embroider the point, but imaginative minds can conceive some ways in which customers can make themselves felt. One possibility would be a concerted arrangement to withhold dues from an intransigent Egypt, even if the outcome were partial closure. The most powerful customers' sanction —that of boycott—would be difficult to organise among nations whose citizens are still—happily—free to sail what seas they please.

A contingency against which users would in any case do well to make provision is messy handling of Canal traffic, which may easily be caused by inconsideration for old pilots and inability to find good new ones. Asian as well as European buyers of goods normally canal-borne would feel the pinch of the more expensive route, and all might be wise to plan a system of financial help for shippers and traders obliged to go round, like the wise men, by another way. In either eventuality, the oil situation in western Europe would be serious, but not so serious as to throw western Europe into industrial chaos if the trans-desert pipelines were still working, and if help was at hand from the emergency oil committee now at work in the United States.

The second ugly thought that arises in the event of failure to negotiate is the implication in Asia if President Nasser (who could, had he wished, so cunningly and so diplomatically have put the clock forward from 1968 to, say, 1958 or even 1957) be allowed to get away with a piece of sharp practice just because it is directed chiefly at two ex-colonial powers. A triumph for him would produce, elsewhere in the Middle East, a disastrous chain reaction which would end by sweeping out all serious chance of early improvement in the living standards of the masses.

There is in Britain one school of thought which reckons that, failing negotiation, the only way to prevent this triumph and its consequences is to pull President Nasser up short by means of a quick military operation designed to upset him and strengthen his Asian enemies. But would this act yield such a result? There is another and more sober school which holds that such an operation would invite risks greater than those it would cure—that it will be interpreted as proof that old colonials never change, and so is fraught with hazards: sabotage of oil pipelines, the adherence of more Asians to the Soviet camp, and the collapse of user unity.

The most disastrous of all the consequences would be that military action, unless taken at the request of a conclave of dissatisfied customers, would upset the Anglo-American unity in which few Asians believe, but which is so real at moments of crisis. The renewed demonstration of that unity during the week that is ending is the brightest spot in a dark picture.

Lighter Sky Over Cyprus

THE cease-fire proclaimed by Eoka is the most encouraging thing that has happened in Cyprus since terrorism broke out some sixteen months ago. Eoka's proclamation, it is true, only suspends the shooting; it does not call it off altogether. Nevertheless it gives the British Government a real opportunity to break the present deadlock in which murder and repression have taken over from patient, constructive negotiation. If the opportunity can be grasped with skill, energy and imagination—as the measures taken by the Government this week suggest that it may be—the cease-fire may indeed prove, in Sir John Harding's words, a turning-point in the island's history.

The reasons that led Colonel Grivas to issue his "declaration" can only be guessed at. Conceivably he may have argued that violence had paid considerable dividends in budging the British from their refusal to acknowledge the Cypriot right to self-determination, and that for the time being other methods might be more appropriate. It is more likely, however, that the determined efforts of the British security forces and—flowing no doubt from them—the apparently greater willingness of the Greek Cypriots to come forward with information have thrown Eoka's forces and organisation into disarray. The cease-fire may well be designed to make the best of a bad situation; to gain a respite for men hard pressed by British troops, and at the same time to put to the test the British Government's sincerity in saying that terrorism was the great obstacle to a settlement.

Whatever the reasons for the cease-fire, the important thing is to make the most of the lull. The ultimate goal of British endeavours is to secure a peaceful political settlement acceptable to all the parties concerned, Greeks, Turks, British and the Cypriots themselves. The immediate goal is to make life on the island as normal as possible, given the facts that Eoka has not yet laid down its arms and that a close guard must be kept against renewed outbreaks of terrorism. If Colonel Grivas and his men are indeed in trouble they no doubt hope to live to fight another day if necessary; the cease-fire provides a breathing space in which to refresh and reorganise themselves. But the further the political temperature can be lowered, and the more completely the island's life can be induced to flow again along peaceful and normal channels, the more difficult will it be for Eoka to take up arms again. The terrorists cannot operate successfully without some help and co-operation from the local population—even if that support is the result of coercion. Cypriots who have lived through, and passed beyond, the dark days of the emergency may be reluctant, even under pressure, to go back to them.

Reports from the island speak of the delight with which ordinary Cypriots received the news of Eoka's cease-fire; this indicates that they have had their fill of vexatious restrictions and nagging fears of a shot in the back. For the time being at least, Eoka has removed the second. It is now up to the British authorities to do all they can, consistent with the needs of security, to remove the first; if they do not, all the ordinary Cypriot's ancient suspicions of British intentions and good faith will be fortified and Eoka's stock will rise correspondingly. The authorities have indeed shown themselves to be aware that the terrorists must not be allowed a monopoly of gestures; already some restrictions have been lifted. Above all, the Government has announced sensible surrender terms with a time limit of three weeks. These offer the irreconcilables the chance to go to Greece, provided that they seek Greek nationality and that Greece will have them; having done this, they are excluded from returning to Cyprus. No comfort is offered to people implicated in serious crimes unless they choose to go to Greece. Some of Eoka's small fry, not directly involved in crimes "involving violence against the person," may be induced by these terms to surrender and take the chance that they will not be too long detained. The terms may succeed in thinning out the terrorist movement, especially as the prospect is held out of an amnesty later.

Progress towards a political settlement need not, however, wait on the complete tranquillisation of the island. On the contrary, it is essential to take advantage of the improved atmosphere; to act—or to defer action—on the assumption that the British are mastering the situation and that time is on their side, might prove disastrous. The Eoka cease-fire has created what might be termed an auspicious vacuum; but it would be rash to assume that it will remain auspicious for long. It must be filled as quickly as possible with the plan for self-government on which Lord Radcliffe is working; it is good news that he is accelerating his work, and the Government is right to announce it.

There are two obstacles that may hamper and even prevent the acceptance and introduction of Lord Radcliffe's constitution. One is the reluctance—to put it no more strongly—of the Turks, both in Cyprus and in Ankara, to agree to any constitution that is acceptable to the Greek Cypriots. This is a real stumbling block and to ignore it will not cause it to melt away. The Government must bend its efforts to meeting legitimate Turkish misgivings and to overcoming what is unreasonable in the Turkish attitude. The second obstacle is the Cypriots' insistence that only Archbishop Makarios can negotiate on their behalf, and the British reluctance to treat with the Archbishop unless he

denounces violence. The British Government's stand on this has always been unrealistic; to persist in it after violence has, in fact, ceased would be unwise as well. If the Cypriots persist in their attitude—and there is no reason to suppose that they will not—then sooner or later the Archbishop will have to be brought back; and if the present opportunity to pacify the island and introduce self-government is not to be missed, it had better be sooner rather than later. Self-government will probably not prove to be the end of the road in Cyprus; but it is the first condition of progress towards a durable settlement.

Silent Grey Mare

THE attitudes of individual unions to the Government's financial measures and to the appeal for wage restraint have lately been made all too plain. There was still a faint hope, however, that when they put on their other hats and appeared in their alternative role as statesmen, the union leaders who compose the General Council of the Trades Union Congress would show signs of having been moved by the smiles and sherry and the appeals for co-operation which they received at 10, Downing Street, on several recent occasions. That hope will not be strengthened by the council's report to the Congress, which was published this week.

This is a straightforward account of the exchanges that took place, of the memoranda that were presented and the opposing views that were advanced. It all ended in nothing more concrete than an agreement to differ—or rather, in a polite promise to "give careful consideration to the Government's views." Indeed, the differences between Government and union points of view seem if anything to have been greater at the end of the exchanges than they were at the beginning. The memorandum which the General Council sent to all affiliated unions after the autumn budget last year had some wise phrases which it is worthwhile to recall. It is true that it attacked the fiscal policy on lines that are now familiar: namely, that the Government had got into a mess by making tax concessions to the undeserving in the budget of April, 1955, and was trying to get out of it by putting purchase tax on essentials, and by curbing investment not merely on unnecessary projects, but with a positive discrimination against the nationalised industries and social expenditure. Nevertheless, the memorandum reminded trade unionists of their responsibilities in helping to overcome the country's economic problems—with a footnote in the usual bold type that "this must be matched by an equal sense of responsibility on the part of all other sections of the community." Inflation will continue, it said,

> unless rises in incomes are kept broadly in line with increases in output—or until it is terminated by unemployment. . . . Costs and prices cannot go on rising indefinitely without seriously affecting our ability to export. . . . The rest of the world does not owe British workpeople a living.

Why have these words of wisdom gone with the wind? First, the General Council became more hostile as further monetary measures were introduced, and as its repeated advice to the Government to impose direct controls on the ideological expendables like "luxury" building and "inessential" imports was again rejected. Secondly, it has seen the effects of the policy on the motor industry, and is anxious to know how far the credit squeeze is to go and what its effect on employment is expected to be. Thirdly, trade unionists generally have persuaded themselves that all the sacrifices are being asked of the workers and that everyone else is still on the spree (a certain Daimler has been worth far more than its weight in gold to those who would justify wage claims). Hence the demand for control of profits and dividends. Fourthly, since November, there have been a number of union conferences, at which individual members of the General Council have had more regard for their own popularity than to brandish the powerless advice of their other selves at members eager to make their usual wage claims.

These considerations may explain but do not justify the fact that the economic section of the General Council's report breaks off with that vague promise to consider the Government's views, and thereafter disintegrates into a clutter of paragraphs about travelling expenses to and from work, postwar credits, and the British Industries Fair. It is true that all the report sets out to do is to inform the membership of what the General Council has been doing on their behalf. But if it had ideas and guidance to offer on the British economy, could it not have included them in a special report? It has done so on the subject of automation, and produced an admirable piece of work; this ridicules the "science-fiction" view of automation, as well as the fear that vast numbers are about to be swept out of their jobs by a tidal wave of electronics; and it declares that "the importance of mobility and flexibility cannot be over-drawn." That is a firm and sensible lead. It is really too mock modest of the most powerful estate in the land to have so little to say about wages.

Last March the General Council embarked on the task of producing such a report. But it now makes the excuse that the review

> was not one which could be completed hurriedly. . . . Starting from Britain's needs and problems at the end of the war, the General Council have been considering in detail subsequent developments in employment, production, incomes, costs and prices, consumption, investment and the balance of payments.

Trade unionists, as a glance at any of their publications will show, sometimes have a marvellous inability to see the wood for the trees. Why in heaven's name should the General Council start its review with Britain's needs and problems at the end of the war? The vital questions start with Britain's needs and problems now. What impact on employment and production will follow if the trade unions persist in their refusal to offer any co-operation in restraint when, on the face of their own words nine months ago, they must know it to be reasonable? This is not a matter for historical research, but of leadership in an economic crisis that is upon us now. In two or three weeks the Confederation of Shipbuilding and Engineering Unions will present a claim which the employers rejected in advance before it was even formulated. The employers, conscious that their hold on export markets is slipping, and knowing that the whole purpose of Government policy is to make it impossible for them to grant wage claims, will stand firm. What then?

The unions have to decide what they want. It is futile to answer, as they have done so far, that they want the Labour party's remedies; even if they worked, they will not be attainable for at least three years. Meanwhile, they ought to make up their minds about some more immediate questions:

1. Are they prepared to foster the greatest possible increase in productivity (with all the dislocation of jobs and working habits that it will entail) and then bargain as hard as they like for their share in the gains?

2. If not, do they think that Britain's export markets will put up with another large addition to wage costs?

3. Do they approve of wage claims which do not merely cover the rise in the cost of living (2 per cent since last January), but, like those now being advanced, are of the order of "15 per cent," or "substantial"?

4. Is their desire to see Conservative policy fail so great that they would willingly pay the price of a period of industrial strife, a slump in exports, a threat to employment, the danger of devaluation and a rigidly controlled economy, in order to prevent it from succeeding?

The opportunity for the TUC to give a lead that will take wages out of the arena of bad-tempered political discussion has not quite passed. At Brighton in the first week of September a large number of separate resolutions will be rolled up into a composite resolution condemning the policy of wage restraint. The General Council, if it has not lost all courage and decision, will oppose this with a resolution of its own. Nothing, after all, has happened to invalidate the advice that it gave the unions last November. It is still true that the world does not owe the British workman a living.

Korea Today—II

Korean Dreams and Realities

FROM A CORRESPONDENT IN SEOUL

SINCE the armistice of three years ago South Korea has learnt that neither democracy nor prosperity can be achieved merely by copying western models. The first constitution of the Republic of Korea (ROK), adopted in 1948, was of Anglo-American inspiration and combined parliamentary characteristics with elements borrowed from the presidential system of the United States. Ever since 1948 there has been an undeclared war between the legislature and the executive, but Dr Rhee (BA, George Washington University, MA, Harvard, and PhD, Princeton) has easily ensured that the American system should prevail, while denying the legislature any powers comparable with those of Congress.

The National Assembly, being liable at any time to find itself dissolved and facing fresh elections, is naturally wary of using its right of veto. Last year it even lost the right to interrogate the prime minister about the government's actions, for the office of prime minister was itself abolished. And today a majority of Assembly members belong to the all-powerful "Liberal" party, which is under the personal control of Dr Rhee. The party's power extends to every field of national activity. Its members hold key posts in organisations that range from the police and the Bank of Korea to the youth movements and big business enterprises. Mr Shinicky, the opposition candidate who died ten days before the presidential elections in May, put things pretty accurately when he declared publicly, two days before his death: "If this goes on, we'll have a dictatorship!" The average Korean, for his part, defines the policy of the Liberal party thus: "In order to avoid arbitrary actions that would disgrace true democracy, everything that is not yet forbidden must be made compulsory."

Yet it is possible to exaggerate the intolerance and oppressiveness of the Rhee government. The substantial charge against it is not that the officials oppress the population as a matter of policy, but rather that they are driven to sponge on it by their low pay. The poverty resulting from the war, on the other hand, acts as a bond between the 22 million South Koreans and their leaders; so does the willingness of both leaders and led to subscribe to the "Rhee legend." To high and low alike, in spite of such criticisms as that recently made by the Vice President in his inauguration speech, the aged president is "Grandfather," but if all respect his delusions, few share them. President Rhee's place in the history books is no doubt secure, and he himself is choosing the italics and bold type to do it justice. But for the present he has little freedom of choice.

He is obliged to impose austerity, to sacrifice the unproductive social wreckage of the war, such as the widows and disabled ex-servicemen, and to invest for the benefit of posterity.

The opposition parties, the Democrats and the left-wing Progressives, represent a cautious popular reaction against the President's programme of austerity. But they agree with him about the immediate future of democracy in South Korea. They, too, regard democracy as premature for a people with a long history of subjection either to an oligarchy or to a foreign oppressor, a people soaked in the Confucian tradition of respect for the established order, for power and for old age. The election programmes of the opposition parties differed from that of the present government only on details of administrative efficiency, or on foreign policy —particularly relations with Tokyo. Everybody, on the other hand, agrees that the trappings of democracy are worth while, since their value can be measured in the millions of US dollars earmarked for aid to a "bastion" of the free world against the communist tide.

There are drawbacks as well as advantages in being an anti-communist "bastion." For South Korea this status involves maintaining a military apparatus out of proportion to the country's slender resources. The 750,000 soldiers (one million, if the auxiliary services are included) represent a big loss of manpower—or, admittedly, of unemployed—and involve the government in enormous expenditure which it can meet only by recourse to the printing press. The resulting inflation paralyses the economy and hits the ordinary Korean family very hard. The purchasing power of the average consumer, now only a fiftieth of what it was eight years ago, is still continuing its vertical plunge. In 1948 the dollar was worth 50 won; today it is officially worth 500 hwan (the new currency unit adopted some four years ago by a decree which fixed a conversion rate of 100 old won to one new hwan). A dollar bill on the free market now buys more than 1,000 hwan. At present 95 per cent of South Koreans admit to being in debt; and they can console themselves only with the thought that their creditors are in debt, too.

The inflation is also the result, though to a lesser degree, of subsidies given by the government to nationalised undertakings, such as public services, transport, and collieries, whose services or products are sold at artificially low prices intended to hold down the cost of living. The aftermath of war and a hastily conceived farm policy have produced a shortage of rice in a country that was formerly the fourth biggest producer in the world, and the price of this staple item on the Korean menu soars upwards from time to time, causing a general rise in the cost of living. To check this inflation, the American aid experts decided to increase imports of foreign consumer goods; but this emergency measure threw the mediocre quality of local products into sharp relief, and diverted into quick-return commercial speculation much of the liquid capital desperately needed for productive enterprises. Since loans from the banks are reserved for the privileged few, the Korean importer tends to borrow privately at monthly rates of 25 to 30 per cent, thus putting the imported products out of the average consumer's reach by the time they reach the local market.

Private industrial investment is likewise discouraged by the attitude of the government, which changes its economic regulations from one day to the next and threatens to expropriate any enterprise that shows signs of becoming a national necessity. Thus only the more primitive handicrafts, carried on in miserable premises —this evades the taxes which visible signs of prosperity would attract—are able to survive, and the national fair held last autumn displayed an abundance of such products as nails, bolts, padlocks, bicycle pumps, hosepipes, wheelbarrows, and ox-cart axles.

This bric-à-brac merely reflects the average Korean's lack of interest in industrial enterprise. One must look elsewhere for the genuine results achieved by the foreign aid that has flooded in since the armistice (nearly $2,000 million and 8 million tons of varied cargoes). American officials believe that more economic progress has been achieved in South Korea than Sino-Soviet aid has brought about north of the 38th parallel. Certainly, coal production has risen substantially and it is estimated that by 1957 electric power output will meet the demand for the first time since 1945. Dr Rhee's government, however, remains unsatisfied.

When Mr Dulles visited Seoul in March the Koreans asked him for an additional allocation of $2,300 million, with the aim of making the country self-sufficient in five years. This, in effect, was a request for an exact repetition of the sum promised immediately after the armistice. On the other hand, much of the economic progress made under President Rhee's direction belongs to the future. It includes cement, glass, and chemical fertiliser factories which, in a few years' time, will make possible appreciable reductions in imports. Within three years, moreover, the textile industry will be able to satisfy a yearly demand of 13½ square yards of material per head. Many other industrial projects are also coming along, but the Korean, lacking both raw materials and markets, on bad terms with his nearest neighbours and several centuries behind Japan and the West in all technical fields, is well aware that his future will probably be limited by his three natural assets: rice, fish and minerals, in particular tungsten.

He leaves it to the foreigner to invest $200 million a year in mythical industry—that is, $180 million from the Americans and the balance from the United Nations. Apart from some brand-new trams, all the Korean sees are the black market, the inflation and the poverty which accompany the grandiose dreams of his President, whom he respects more by habit than by conviction. He will be in a mood to show his anger as soon as Dr Rhee's successor ascends the throne of the Korean Republic.

Notes of the Week

News from Ismailia

THE Egyptian body that impounded the Suez Canal has issued its first return, covering the 24 days after nationalisation. Up to August 19th, its record is fair enough. Although it had to cut the southbound convoys from two to one per day, by running a big convoy it has maintained the same average—43 ships a day—as that for the same period of last year. A breakdown of the statistics as between ships of the 22 users in conference in London shows that of the 1,029 ships that passed through, 75 per cent belong to the group in favour of an international authority, and only 2.5 per cent to Russia and India. (The Soviet figure of 21 ships compares with 171 for the whole of 1955 and 88 for 1954, and suggests that Soviet traffic is rising steadily.)

Can the level of traffic be maintained? What the statistics do not show is that the social scene on the Canal Bank is becoming tense. Up to date, the new Egyptian management has smiled on all customers; captains in transit report that ships refusing to pay their dues to the new body are waved through with the assurance that payment does not press, and that Egypt will collect the debt in due course. But the European employees of the company have a different tale to tell.

One assistant administrative manager, a Frenchman, has been dismissed for overstaying his leave. All sedentary workers have been served with a document, for signature when they receive their monthly pay, declaring that they are under contract to no company other than the Egyptian one, and agreeing to the institution of proceedings if they break their leave. This document has not been served on pilots—giving the impression that Cairo would like to force foreign desk workers out of their chairs on the assumption that theirs is working any Egyptian can do, but to hold on to most pilots while replacements are recruited, so as to maintain service with a smile.

It is untrue that the company has been deliberately trying to induce its employees to leave, as Mr Shepilov alleged in London. Quite the contrary; on the advice of the British and French governments, it has advised them to remain at their posts pending the outcome of the Conference.

Dropping the Pilots

PILOTAGE through the Canal may yet become crucial, especially if the settlement of the Canal dispute is much longer delayed. Cairo announced on Wednesday that any foreign employee who wishes to quit can do so, subject only to observing legal practices about notice and "provided navigation is not affected." It also announced that it is recruiting 300 new pilots, that it has communicated with all its embassies abroad for the purpose, and that it has already engaged 30 of them—27 Egyptians and three Greeks.

The company's British and French pilots are in an unpleasant position. There were 114 of them on duty in July—61 British and 53 French. Other foreigners included 14 Dutchmen, 11 Norwegians and 12 Greeks. It is the summer holiday season—always a period of short staffing; a small number have not returned from leave, and the corps on duty is seriously overworked. Cairo claims that some are feigning sickness, and is insisting that any health certificate attesting illness be signed by an Egyptian doctor.

In the course of making the Egyptian statement, Sayed Younis, of the Ministry of Finance, himself showed signs of strain, for he departed, for the first time, from observation of the principle of free navigation laid down in the 1888 Convention. If British and French pilots chose to leave, he said, the Egyptian management would not be responsible for delays to British and French ships, since it would get pilots of other nationalities to give priority to the ships of other flags, and to handle the British and French customers only after all others had been served. In the first 24 days since nationalisation, the Canal handled 256 British and 78 French ships—together, one-third of the total.

Short Time and Benefit

LAST April, hopes that labour would become more mobile were discouraged by a decision of the national insurance commissioner that a man on short time could draw unemployment benefit for the two days on which he did not work. In two more test cases decided this week, a tribunal of three commissioners has come to a quite different conclusion and thereby made the case law as anomalous as it is potentially damaging to the country's economy.

In both the new cases, the commissioners have ruled that the employees were not unemployed on the relevant days and therefore not entitled to benefit for them. Their decisions turned on the question whether the employees were still subject to an agreement of 1946, which in return for a guaranteed weekly payment bound them to be at their employers' disposal for work during the whole of the week. The commissioners ruled that the 1946 agreement did still apply to them and, in this respect, was not affected by a new agreement, which came into force on April 9th this year.

The new decisions do not therefore in fact contradict the earlier decision. In that case it was held that an

employee of Standard Motors was eligible for benefit for Friday and Saturday of a guaranteed four-day week, because, according to the particular guarantee of his firm, he was obliged to be at his employers' disposal for only four days of the week. This, in fact, is the criterion by which the commissioners give their rulings: "the ultimate question is not—what does the employer guarantee? [wages or working hours] but—what does the employee undertake in consideration of the employer's guarantee?" The effect, therefore, of the latest decisions is bound to be a revision, by employers and unions, of the terms of the guaranteed weeks, to make it plain that the employees' services are at their firms' disposal for an expressly limited period. It is to be hoped that, before such a revision becomes general, the national insurance advisory committee will propose regulations to preclude altogether the payment of benefit for underemployment. An issue of such importance should not be evaded for long.

Fuss About Academic Accounts

THE Public Accounts Committee does some very useful work, and aided as it is by the expert staff of Comptroller and Auditor General, it is as a rule in less danger of making amateur *gaffes* than is the Select Committee on Estimates. But it is getting in a groove. The chief complaint of this year's committee (whose sixth report was published last week), as of several of its predecessors, is that there is no parliamentary control over the expenditure of the University Grants Committee, and the demand is once again made that the committee's papers and records referring to capital expenditure (the "non-recurrent" grants) should be open to inspection by the Comptroller and Auditor General. As it is, the committee protests, it is unable

> to give Parliament an unqualified assurance that the grants made by Parliament have been spent on the purpose for which they were voted and with due regard to the elimination of waste and extravagance.

This criticism misses the point. The University Grants Committee was deliberately made independent of parliamentary control in the interests of academic freedom, and no one expects the Public Accounts Committee to be able to give Parliament assurances on how it spends its money. This is not to say that there is no "waste and extravagance" in university building: undoubtedly there is. But a better way to get rid of it is to improve methods of planning and design and to set rational standards of accommodation. A post-mortem examination by the Comptroller and Auditor General is not the way.

For one thing, there is little that can usefully be said once a building is going up. For another, the non-recurrent grant (estimated at £7.2 million in 1956-57), which is all that the committee proposes, so far, to bring under scrutiny, is only about a quarter of the recurrent grant (for current administration), and if it is logical to control the one it is logical to control the other. And whether it is logical or not, it certainly would not be effective in securing economies in university building. What, in practice, does parliamentary control mean in the case of school building? A careful check by members of Parliament on over-spending? Not at all; it invariably means bitter attacks on any economies that have been made.

Fuss About BBC Income

ANOTHER cause for the Public Accounts Committee's concern is the BBC—because, like the University Grants Committee, it is an autonomous body, which is, in the committee's view, quite improperly free to do what it likes with its money. By an agreement of 1954, the BBC gets from the Post Office the net licence revenue, after £2¾ million (in the current year) has been deducted as the cost of collecting the licence money. Lately the corporation has been doing quite well out of this arrangement because more licences (in all about £19 million worth) have been taken out than was expected; and as investment expenditure was cut from £6 million to £1 million this year, as part of the Chancellor's plan, the BBC has some money in hand, which it has put into British Government securities and loans to local authorities.

This the committee finds very distressing. It argues that it is misleading to talk about the "licence income." The charge for licences, it maintains, is a tax, and what the BBC gets back is not an income that it has earned, but an annual grant from Parliament. It is therefore wrong, in its view, that the BBC should be able to collect the extra revenue from the unexpectedly large number of licences; wrong that it should hold on to money that it does not spend; and wrong that its income should be arranged some years in advance, and not annually.

It would be a great mistake to follow the committee's advice. It is far more sensible and realistic to regard the licence revenue as a charge for a service—as it is certainly regarded by the public. It would be a very poor incentive to economy to suggest that because the BBC had not spent all its money, it should be deprived of what remained. Finally, it would be retrograde to introduce annual arrangements about income for a body like the BBC which has to plan developments ahead. In sum, it is absurd to suppose that independent bodies which the civil service does not, and could not, run, can nevertheless be subjected to the same kind of control as a Government department.

Bids for Power in Morocco

AUGUST 20, 1955, was the date of the uprisings and massacres in Algeria and Morocco that led, ultimately, to the restoration of the Sultan of Morocco to his throne. Its first anniversary, last Monday, was a quieter day but one no less significant for Morocco's future. It was the date chosen for the climax of an Istiqlal (independence) party congress that decided to withdraw its support from the coalition government of Si Bekkai—the government that has been working to complete the negotiation of independence, and so-called "interdependence," with France.

This move is important on two counts. First it was made under the leadership of much the most important Moroccan commoner, Si Allal el Fassi, who came to the meeting fresh from exile and from Cairo. Under his impulsion, ministers actually serving in the coalition agreed that this had moved much too slowly towards its goal of cutting the painter with France. Si Bekkai, if and when he resigns, may become

but the first of moderate Arab nationalists to fall to sickles swung, Nasserwise, at co-operation with the West.

The second reason why the decision points to the future pattern of events is that it seems likely to shake the Sultan's position. Constitutionally, on paper, his power is still absolute. Until a parliament is created, only he can appoint or dismiss ministries. Yet here is an important political party out for power.

As things stand, both Sultan and Istiqlal or, more accurately, both Mohammed V and Si Allal el Fassi, claim to speak for "the people," and so long as they move in harmony both can substantiate the claim. But part of the reason why the Istiqlal is resigning is social; it wants either to shuffle off responsibility for the economic conditions that accompany the current political uncertainty—the unemployment and the rising cost of living that weigh upon the urban proletariat—or else to be given full powers to handle them according to its lights. In this last wish it is supported by the trade union organisation, the Union Marocaine du Travail.

The Istiqlal now says that its members may join only an all-Istiqlal government or a coalition one committed to its programme. Supposing that it creates a situation in which the Sultan is compelled to appoint such a cabinet, does it not become his master and may it not move faster away from France and prospects of foreign investment, and towards the trade union and the left, than any occupant of a throne would wish?

Through Suez to Algeria?

FRANCE, looking at Suez through an Algerian prism, is more interested than any other country in the psychological aspect of the trial of strength with President Nasser. The nationalisation of the Suez company has strengthened the hand of all those groups—of which M. Lacoste, minister resident in Algeria is the mouthpiece in the government—which saw in Cairo the source of France's African troubles. M. Pineau, the foreign minister, had not long ago been under fire from those groups for stopping to see Colonel Nasser on the way back from his Indian trip. He came to London with instructions to reject any solution likely to boost the colonel's prestige or to raise further his standing in the Arab world.

Currents in the Arab world cannot be contained in tight compartments within the frontiers of the existing Arab states. France is learning this bitter lesson in its vain attempts to grant a radically different status to Algeria on one hand, and to Tunisia and Morocco on the other. It is also true that Cairo took delight in sheltering not only moderate nationalists from North Africa, but also extremists to whom anyone prepared to contemplate coming to terms with France was a quisling. The followers of M. Lacoste now want to strike Arab nationalism at its Egyptian head. They may be tempted to forget that the present revolt is not an imported product, but has its sources in the North African situation. Action at Suez will not by itself bring peace to Algeria.

A warning to that effect has come, surprisingly enough, from a French paper in Algeria, where the liberal voices had seemed completely drowned in the sea of colonialist

vociferation. The *Oran Républicain* has plucked up its courage to accuse M. Lacoste of setting on the road to Cairo all those Moslems "who still had faith in an honourable compromise." Is there still time to arrest this drift? M. Lacoste has just reiterated that 400,000 French troops will remain in Algeria until peace is restored; but is enough being done to bring war to an end? It would be tragic if the smoke from Suez were to serve as a screen behind which all the promised reforms can be dropped conveniently. Should the antics of Colonel Nasser be used as a pretext for inertia in North Africa until the autumn, the West will find itself once again with an awkward brief to defend in the United Nations against a coalition of the Soviet block and the Bandoeng countries.

German Communists and the Law

SINCE communism is not an internal but an external danger to the German Federal Republic, it is hard to see that the judgment of the Federal Constitutional Court declaring the German Communist party illegal can serve any useful purpose. For this the court itself is not to blame. The mistake was made not at Karlsruhe, but at Bonn in 1951, when the decision was taken to accompany the proceedings against the Socialist Reichs party, a crypto-Nazi group, with a parallel suit against the Communists—presumably to show that the Bonn government was not prompted by any left-wing bias in its actions.

The Socialist Reichs party is long since prohibited and dissolved, though some of the people concerned in it are still active, and the obscure backwoods forces which it represented continue to find expression in not very impressive forms. As was clear from the start, the suit against the Communist party had much bigger and more complex implications, which were for the government, not the constitutional court, to take into account. The court could only judge the matter on the text of the Basic Law, though it did exhaust all the possibilities of delay before arriving at the inevitable judgment.

The party which has now been suppressed received 5.7 per cent of the votes cast in the first general elections in 1949, and only 2.2 per cent in 1953. Thus it had, as an electoral factor, become negligible; it had no seats in the Bundestag and little prospect of regaining a place there. Its strength lay, and still lies, in quite another quarter, the support of east Berlin and of the Soviet occupying power, which give it an assured base from which to continue its uphill work in the west.

As the unknown factor in German politics, it will be at least as formidable as when it was in the open; all the more because the shadow of future all-German elections contains, necessarily, the shadow of a Communist return to open politics. This the Constitutional Court admitted in a curious passage in its judgment, which conceded the continued existence of a law of the occupying powers capable, when a four-power decision on all-German elections should be reached, of overriding the law of the Federal Republic. Such a decision, whenever it might be reached, would inevitably require the admission of the western parties to electoral activity in the east, and of the communists in the west.

Money for Malta

MR MINTOFF has now got £500,000 on account and a letter from Sir Anthony Eden, which he has described as courteous but unsatisfactory. The Colonial Office has had a statement of Malta's accounts which apparently might be described in the same terms. In the past, within limits, the British Treasury has met the gap between Maltese expenditure and revenue on production of quarterly statements. Everybody concerned in fact knows that Maltese finances are archaic, and the working out of new arrangements is one of the necessary preliminaries to integration on which Mr Mintoff declares that the British Government is dragging its feet. He, however, is concerned less with machinery than with getting in a strong bid for a bigger deficit to cover a rate of expenditure which the Maltese government apparently considers should be geared to the need to provide work for any unemployed Maltese workpeople.

Mr Mintoff is effectively covering the real issues with a smoke screen. First he refused the original offer of £5 million as inadequate; then he produced a schedule of expenditure which would have required annual subventions rising from £7 million to £10 million and more in later years; then he refused the proposed commission to investigate the figures; finally he demanded the £5 million "as promised," indicating, however, that it was simply on account, and was without prejudice to his bigger demand. His suggestion that Malta has nothing in the bank partly reflects antiquated short term financing arrangements and the local belief that debt, long or even short term, is akin to bankruptcy. This and many other tangled skeins have to be unravelled before integration can be presented as a coherent set of proposals to the House of Commons, which, as Mr Mintoff well knows, has been promised next session. If it is not, he will be the prime cause of delay.

Finance has always been the nub of integration, and these manœuvres show it; they should also be shown up—for Britain's offer remains generous and imaginative. Meanwhile the rediffusion lines are still down and the bickering between the agents of the imperial power and the Maltese government continues at a time when the base is of the utmost importance; but it looks as if to Mr Mintoff this is just the moment for hard bargaining, because it enhances the value of the goods he has to sell. There are, fortunately, signs that Mr Mintoff feels he is going too far.

Settlers in Britain

DURING the depression of the thirties more people returned to Britain from the dominions than emigrated. Since the war the outward tide seemed to have been resumed, but the second report of the Oversea Migration Board now suggests that as against a net outward movement of some 390,000 between 1946 and 1953 by all means of transport, in the past two years there has been a gain by immigration of nearly 100,000. This does not mean that Britain has ceased to supply migrants to the dominions; on the contrary, though total numbers of emigrants have fallen somewhat in recent years, the total is still well over 100,000 annually. But the number of inward passengers has greatly increased. The figures are still much in dispute, and the probability is that taking into account Irish settlers and the displaced persons settled after the war, Britain has on balance lost no population by migration at all; which is just as well in view of the shortage of manpower. The reason is that while a proportion always wants to emigrate (just as a proportion always wants to become regular soldiers whatever the conditions), a high level of capital investment and high wages in Britain have drawn migrants, both from the Commonwealth and elsewhere, and have thus made it possible for the country to resume its contribution to the peopling of the "white" dominions.

The Board shows that though this contribution is considerable, it is a dwindling proportion of the total intake of all the dominions except perhaps New Zealand and Central Africa, where immigration is limited in numbers though considerable in terms of local resources. Both Canada and Australia must rely to an increasing extent on non-British immigrants—if the dominions were to get all the British migrants they want, the Board concludes, they would take 150,000 to 200,000 a year. It is now beyond Britain's power to keep this up; the fact must be faced that the Canadian population of British origin will be down to one-third of the total in a few years. But it is important that the decline should be braked, and the Board was no doubt right to recommend that Britain should continue to support the assisted passage schemes on their present scale. Equally it is necessary to face the corollary that to some extent this means exchanging young British people not only for immigrants from the continent, but also for large numbers of coloured settlers. Even so, the problem of keeping Britain British is infinitesimal compared with that of keeping the dominions so.

Zik Moves Fast

THE Commission of Enquiry into banking affairs in Eastern Nigeria is now starting on its unenviable task. Its terms of reference are highly detailed, so that Dr Azikiwe has been given clear warning of the scope of the inquiry. Moreover the Commission must produce very full evidence under each head or allow the indictment to fall to the ground. Such evidence may be hard to obtain, although the nature of Dr Azikiwe's relations with the African Continental Bank may be clear enough. The terms of reference themselves amount to a direct attack on the Premier, which he has not been slow to use to his political advantage, and the Colonial Office has given him five clear weeks in which to answer every allegation in advance to the full satisfaction of his own supporters in the region.

This Dr Azikiwe has done so brilliantly that it is now almost an academic matter what sort of report the Commission produces. He has paraded the story that the Bank of British West Africa put up the Colonial Office to the whole thing because it feared the competition of the well-run African Continental Bank and has backed this tale by getting possession of certain private letters written by senior bank officials which, if authentic, can only be described as highly embarrassing, since they discuss various ways of getting government deposits for the bank as well as schemes for keeping competition from their main rival, Barclays (DCO), within bounds. Dr Azikiwe has thus successfully smeared one of the British banks as an institution indulging in all the malpractices of which he is accused by Mr Lennox Boyd.

Nor is this all. Dr Azikiwe has also made a raid on the letter files of the judge concerned with the Gold Coast Cocoa Purchasing enquiry from which he has got evidence, he alleges, that the judiciary itself is prejudiced politically against himself and the National Council of Nigeria and the Cameroons; and there are two chief justices on the Commission. Zik, before the Commission starts, therefore rests his case on the twin argument that one of the British banks is unscrupulous itself in the way it gets business and outsmarts its competitors, and secondly that the judiciary, which is so heavily represented on the Commission, is politically biased. To meet this campaign the Commission will have to turn up something quite out of the ordinary in scandal to make any action against the Premier worth while. But if the inquiry flops, Mr Lennox Boyd will find himself in a highly uncomfortable position when faced with a triumphant and probably vengeful Zik at the constitutional conference in the autumn.

Lying Doggo in Malaya

ENCOURAGING remarks on the decline in communist strength in Malaya which appeared in the territory's annual report for 1955 should not lead to complacency. It is in the clearest interests of the communists now to avoid action, to seek to maintain experienced forces in being, and to avoid losses of trained men, until they see how independence, promised "if possible" for twelve months hence, works out. The Baling conference has proved, in retrospect, to have been a moral victory for the Chief Minister, Tengku Abdul Rahman; the communists have not been able as yet to gainsay his position as Malaya's leader during the period when preparations for independence are hopefully going forward.

But the Tengku on his side has not made good his promise, if the communists did not surrender on fair terms, to throw the full weight of the country behind the war—which continues. The value of such a concerted drive has been shown in South Selangor, where co-operation from the population in denying the communists food, aid or comfort of any kind, on any threat, has wiped terrorism out. But in the north, in central Johore (where the communist traditions go back to the twenties) and in some other places nothing of the sort has proved possible; and even 3,000 terrorists in being remain a permanent threat to the country—and to the Tengku's own authority. As it is, he is now chairman of the defence committee, with the director of operations as a member; and as minister for internal security, he is active in pushing forward the creation of a self-contained Federation force. He is also behind the policy for preventing Singapore Chinese from infiltrating Malayan Chinese schools with communist doctrines. Further he cannot go; and so long as communal relations remain unsettled, an all-out drive against the communists is impossible. Six months after the London conference, within a year of independence, and on the verge of coming to London to ask for upwards of £200 million for development, the Tengku has still not come within reach of solving the problem that is at the heart of Malaya's future stability and progress.

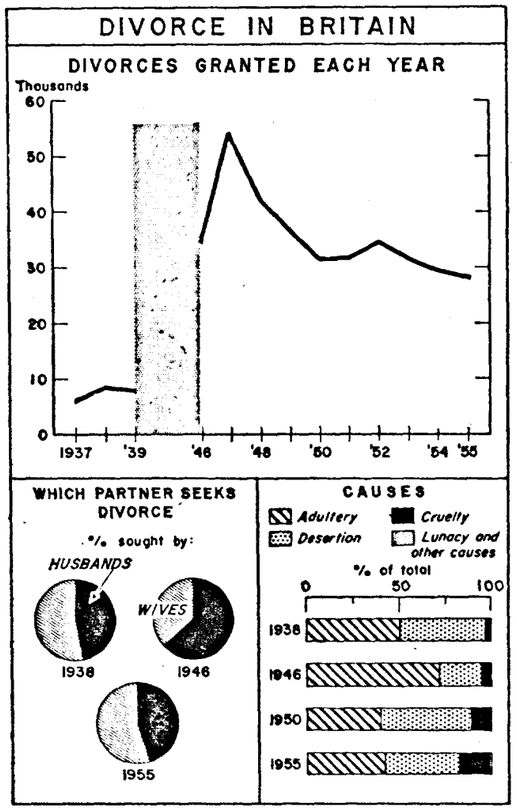
High Words on Slavery

HIGH words are being exchanged in Geneva, where a United Nations conference is trying to agree on a new anti-slavery convention designed to extend the scope of the existing convention of 1926. The membership of the conference has swollen from sixteen to over forty, which perhaps helps to account for the injection of political passions into what should be a purely humanitarian affair. The new convention seeks to widen the definition of slavery to include, in addition to straightforward "classical" slavery, such veiled forms as debt bondage and the "adoption" of children who in fact become tied to a rich family's home. But the effort to stamp out the practice in all its various forms has come up against the blank wall of sovereignty, it has been hindered by anti-colonial obsessions, and it has been diverted by political arguments over the desirability of laying the convention open to signature by non-members of the United Nations; some delegates regard this with suspicion as a backstairs way of getting some form of international recognition for countries like North Korea and North Vietnam.

But the clause which has aroused the greatest controversy so far—and in fact to the least purpose—is Article 3; this would make the carrying of slaves by sea liable to the same severe penalties as piracy and would allow warships and aircraft to search and seize vessels, suspected of carrying slaves, which may be found in a large area of the Indian Ocean, including the Red Sea and the Persian Gulf. This article has been strongly attacked by Egypt (clearly acting as Saudi Arabia's champion) and the Soviet bloc. A special group was eventually set up to work out a compromise; its conclusions are unknown at the time of going to press, but whatever they are, they are likely to miss the mark. Saudi Arabia would be the country most affected by the article; it is known to be actively implicated in the slave trade (as described in *The Economist* of August 4th). But the ships that carry groups of Africans who are eventually destined to be sold into slavery in Mecca, are ostensibly pilgrim ships. Their passengers, believing themselves to be on pilgrimage, would give small thanks to would-be deliverers who, so far as they knew, were merely trying to prevent them from fulfilling a life-long ambition. The article, in fact, is far too blunt an instrument for carrying out such a delicate operation as the prevention of this method of recruiting slaves. Moreover, the Saudis have a simple way out. The article would only apply to ships belonging to parties to the convention. The Saudis have not signed the 1926 convention; nor, it seems more than likely, will they sign the new one.

Flights of Invention

THE Moscow journal *Questions of History* has set a good example with a scathing denunciation of the familiar claim that a Russian named Mozhaisky built and flew the world's first aeroplane in 1882. This claim has been advanced only since 1945, but it is solemnly enshrined in the Soviet Encyclopædia and in a book on Mozhaisky of which a revised edition appeared only last year. *Komsomolskaya Pravda*, the party paper for young people, went one better in March and dated the invention 1876, which conveniently enabled it to celebrate the eightieth anniversary of the "first flight." It is now said that there is no reliable evidence that Mozhaisky invented the aeroplane; that he was definitely abroad at the time when his biographers claim he began building his machine; and that on the day in July, 1882, which they give as the date of his flight, meteorological records show that a storm was raging which no experimental machine could have weathered. The unfortunate biographers are accused of "borrowing" letters written to Victor Hugo by a French air pioneer and ascribing them to Mozhaisky, and of denouncing as enemy intelligence agents anybody who challenged their version of history.



Latest figures are taken from "Civil Judicial Statistics" for England and Wales (Cmd. 9775) and for Scotland (Cmd. 9808). Because the statistics for the two areas are compiled on a different basis, certain liberties have been taken in forming the totals for Great Britain.

Without this last point, the explanation of the new somersault might be simply that the two biographers have fallen foul of somebody powerful enough to get their reputations ruined. But the implicit admission that until lately nobody dared to question even the most fanciful claims for Russian inventiveness is suggestive of something bigger. After the "rehabilitation" of so many unjustly executed men, is there to be a rehabilitation of modesty and a withdrawal of the claims, so tirelessly publicised in recent years, that Russians invented or discovered, *inter alia*, jet aircraft, detergents, penicillin, radar, 3-D films, telegraphy, vitamins, artificial insemination and trams?

If so, the change will be trebly welcome. Credit will be given where credit is due; intelligent Soviet citizens will be spared further dislocation of their consciences; and the world will learn with relief that the Russians have at last got enough self-confidence to dispense with foolish boasts The trend is in the right direction.

Soviet Progress Report

THE Middle East is not the only source of encouraging reports for the Soviet government. News seems good, too, from the home economic front. Bumper crops are reported from the virgin lands of Kazakhstan and Siberia, while industry is also progressing according to schedule. This is, at least, the impression given by the report, recently published, on economic progress in the first half of the current year. The document, incidentally, breaks new ground: it does not limit its claims to enigmatic percentages, but describes the progress made in hard figures. In the first six months of 1956 the Soviet Union, it is claimed, has produced 24 million tons of steel, 209 million tons of coal and nearly 40 million tons of crude oil—a substantial stride towards the goals set under the new five-year plan.

Despite these promising signs, a campaign is being waged for the development of coal and steel production, particularly in the western regions of the country. True, the costs of production are higher there (the costs of production of a ton of coal in the Ukrainian Donbas, at 93 roubles, are roughly twice as high as in Karaganda, lying farther east); but the west still contains the main industrial regions of the country, which need the basic materials of industry on the spot. By 1960 Donbas alone should still provide well over a third of a coal output estimated at 593 million tons. The planners consider that the results hitherto do not correspond to the investment that has been made in technological improvement, and the present drive, led by Mr Khrushchev himself, aims at remedying this situation.

Good progress is also claimed in the semi-luxury branches of light industry producing watches, washing machines or refrigerators. This has enabled the government to cut the prices of some of these still very scarce articles. Spring price reductions used to be the routine method of increasing real wages. Sharp cuts after Stalin's death, however, were followed by strong inflationary pressure, and the traditional spring offering was discontinued last year. Now it has been revived discreetly, without the usual trumpets and without announcing the total "saving" that it means for the consumer. The cuts are concentrated on the fairly expensive luxury goods; foodstuffs seem too scarce for Mr Khrushchev to juggle with their prices. He must hope that a good crop will allow him to be more generous next year.

All This and a Rise Too

THE Conference of the Confederation of Shipbuilding and Engineering Unions continued as it had begun, in a confident mood. The demand for a substantial wage increase was followed by demands for all sorts of other benefits: a forty-hour week, an increase in apprentices' wages, the financing of "sandwich" courses by employers, an increase in the minimum payment by results, a pensions scheme transferable with the worker throughout the industry, bigger expenditure on schools, and, ironically enough, an appeal to the Government to "use every possible expedient to maintain prices at reasonable levels." The conference reaffirmed its desire for the nationalisation of the engineering industry, as laid down in 1953 in the Confederation's "Plan for Engineering"—a document which the late Arthur Deakin called "a mumbo-jumbo of meaningless phrases," and which still seems to be a cause of differences between the confederation and the General Council of the TUC, which is considering the future of public ownership.

Apart from a pious faith in more trade with China and the USSR, the only other topic discussed was automation. Here, by a single voice, the unanimity was disturbed. Mr Harry Nicholas of the Transport and General Workers' Union, who has not lately been notable for getting out of line, asked a series of inconvenient questions. The resolution proposed that automation should be subject to "proper social control" and to a plan of nationalisation: Mr Nicholas got away from these fine generalisations to some practical problems. For example, he said that the introduction of new devices would lead to a breakdown in the traditional demarcation of union responsibilities (would an electronic fitter belong to the ETU or the AEU?); and a new approach would be necessary to the questions of piece-work and shift-working. Another healthy sign was the production by the Executive Council of a report on the motor industry. They had asked the Board of Trade in April to conduct such an inquiry, and having been refused, embarked on one themselves. The document is neither doctrinaire nor polemical, but emphasises the gains made at the expense of British cars by foreign, and particularly German, competitors, and concerns itself mainly with the faults of British designs, sales and services, and with the possibility of offsetting the drop in car sales by bigger exports of tractors and commercial vehicles. This constructive criticism, and the practical remarks of Mr Nicholas, were a welcome change from the stream of demands.

New Town for Birmingham

AFTER a good deal of vacillation, Birmingham City Council is now struggling hard to cope with the problems of a large surplus population. The city itself is almost fully built-up and redevelopment schemes in the congested inner areas will inevitably displace large numbers of people. Over the next 15 years there will probably be 200,000 citizens seeking homes somewhere beyond the present city boundaries. If (as the neighbouring counties and the Government insist) another vast expansion of Birmingham is to be avoided, most of these 200,000 will have to find homes and work in other places some distance off.

To facilitate this process, Birmingham now hopes to conclude agreements with 23 towns which actively want more people. The most promising of these schemes are in Staffordshire, which has a highly co-operative county council and several small towns with good industrial prospects. But the list also includes more distant places, such as the old mining town of Dawley in Shropshire and the small spa of Llandrindod Wells in mid-Wales. There is little doubt about the mutual value of these expansion schemes, which would be built under the Town Development Act, but to make them practicable much more will have to be done to stimulate the movement of industries and firms out of Birmingham. Moreover these schemes will only cater at first for 56,000 people.

Birmingham has therefore decided that the only really effective and speedy method of coping with the bulk of its "overspill" is the construction of a new town. But whereas the city wants the new town (like previous new towns) to be built by a special Government corporation, Mr Sandys wants the city to undertake the job itself. Even

Danger to the Union

The aspect of affairs in the United States is very curious and deeply interesting—hopeful in some respects, gloomy and menacing in others. Something very like rebellion and civil war prevails in two districts remote from each other and tracing the disturbances which agitate them to entirely different causes. The great periodical party struggle—the election of the President—is approaching, and approaching under circumstances which will give unusual virulence to its details and unusual significance to its result. Many occurrences seem to indicate that the most vital and knotty question which America has to solve—and which for two generations has, in consequence of the difficulties which surround it, been cushioned by mutual consent—is now ripe for a settlement and can no longer be postponed. Altogether there is cause for grave uneasiness on the part of all the citizens of the Union, and for the most intense interest on the part of all spectators of the crisis. . . . There seemed every prospect that the great question of the extension of slavery was about to be brought to a bloody arbitrament, and to be fought out on the soil of Kansas between North and South. So perilous a conjuncture called for prompt action; and the House of Representatives at Washington appear to have proceeded promptly and with vigour and good sense. They decreed that the previous elections in Kansas should be quashed or cancelled, and that new elections should take place. . . . The Legislature thus chosen were to decide for themselves the momentous question whether Kansas should demand admission into the Union as a Free or as a Slave State. The President and the Senate had manifested at first great opposition to this just and simple measure; but it was generally believed that their resistance would be withdrawn . . . and that the affair would be finally decided by the admission of Kansas as a Free State. We anticipate nothing else from the good sense of the Americans, and their earnest and universal desire, even in their most exasperated moments, to maintain the Union intact and unendangered. If the matter be so settled, the decision of the momentous question of Free or Slave Preponderance, which *must* be met sooner or later, may be postponed for a short time further.

The Economist

August 23, 1856

if the Minister could get his way, the result would hardly be satisfactory. Birmingham's duty to its ratepayers would inevitably lead it to build something which (like the "satellites" built by the London County Council) would bear more resemblance to a distant housing colony than to a genuine new town. To repeat the "satellite" experiment in the Birmingham area would be a great mistake; a genuine new town is needed and needed quickly. The city ought, however, to participate to some extent in its financing and administration.

The Rainy Season

SOUTH COAST townspeople are surprisingly cheerful about this summer's bad weather. It seems that in the resorts, at least for the big hotels, trade one year is much the same as another. The best of it is that as the holiday traffic grows—25 million people went away last year, spending an estimated £400 million within the country—it becomes necessary to book long before one can see whether it will be a good summer or not. Conferences, moreover, are a growing source of income; Hastings, for example, has over thirty this year. But small hotels and boarding houses complain of a shortage of money—mainly, no doubt, because of hire purchase commitments at home.

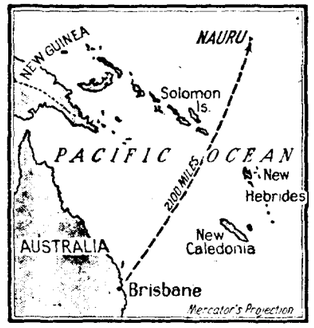
Some hotel managers even seem pleased about the weather—"It keeps the guests in the bar." And those who provide dancing and good food can still do well in the rain. The staff problem is, as ever, severe, but at least visitors are now used to, and less indignant about, the mealtimes dictated by the Catering Wages Act, whose regulation of working hours can make a late dinner more expensive to serve than to buy. Many hall porters and waiters are students, and the young man who carries your bag is likely to say Sir in the manner of the very best public schools.

The saddest sights are people who in fine weather are the life and soul of a resort: the ice-cream men, soft drink sellers, chair attendants, pier owners, and beach photographers. These, above all, are the people who seem, in more senses than one, to be feeling the draught.

An Island's Future

THE United Nations Trusteeship Council has been discussing the future of Nauru, an island in the Pacific, once German, but since 1919 administered by an Australian administrator on behalf of the British, Australian and New Zealand governments. Nauru, a UN trust territory, is only 8 square miles in size and has fewer than 4,000 inhabitants. It has very little land suitable for agriculture, and its economy is almost entirely dependent on the large phosphate deposits in its central plateau. Nauruan phosphate is of the highest grade known in the Pacific, and supplies a major part of the fertiliser requirements of Australia and New Zealand. But the deposits are not inexhaustible, and eventually the island will become virtually incapable of supporting life. Added to this problem is the extreme isolation of the place, which has no harbour and no regular air service.

A mission from the United Nations visited Nauru in the spring, and was told that at the present rate of exploitation the phosphate deposits would come to an end in about fifty years. The islanders are much concerned about their future, and the local government council informed the UN mission that there is a growing tendency among the people to favour eventual resettlement in Australia. The Nauruans would like to be resettled in a group rather than as individuals. The UN mission expressed no opinion on the feasibility of resettlement in Australia, but it did feel that a decision on the future of the islanders could not be postponed much longer without damaging their morale. "A time limit and an advanced plan will focus the attention of the people on this vital problem. Moreover, financial requirements make it strongly advisable to agree on a plan as early as possible." A recent decision of the British Phosphate Commissioners to increase the production of Nauruan phosphate makes the need for a resettlement plan more urgent.



Confidence in Brazil

THE decision of the United States Export-Import Bank to grant loans to finance development in Brazil is a qualified mark of confidence. The bank has announced an initial loan of $151 million to finance mainly railway equipment, and may well grant more later. No doubt the political desire to support the Kubitschek government in part inspired the loan, but the improvement in Brazil's foreign exchange earnings in the past year, and its success in meeting at least its short-term obligations, may also have played a part. Some private German investors, too, are recovering their confidence in Brazil after the doubts and setbacks of last year. A number of projects, some new, some the sequel of years of negotiation and planning, seem to be going forward.

These moves are not an unqualified demonstration of confidence. Though the EXIM bank granted a loan, the USA has refused Brazil's request to fund back dollar debts (put at some $800 million). Private foreign capital has recently been settling in Brazil, particularly in chemicals, not perhaps because of the hope of quick returns, but because of a reluctance to be left out of a market with such potentialities.

British capital does not yet share this interest. It is true that, with inflation still virulent and exchange earnings dependent on the fickle coffee market, prospects for industrial investment in Brazil remain hazardous. But export credits, which some European countries such as France, as well as the United States, are offering on an increasing scale, may have to play a larger part in Britain's trade relations with Brazil if British exporters are to get a fair share of development orders.

DAISEE JUTE

suits everyone

LOW cunning helps haute couture to sculpt in tweed and flannel. Jute helps too. Jute that shapes and holds and stiffens; that makes the lining that moulds the latest line; that keeps a suit in the form it started with and makes it wear for years.

That's jute all over. Anonymous, it hides beneath your lino and your carpet. Pseudonymous, it comes as rope, or twine, or hessian, or scrim. It may even be lining your shoes—and stiffening the peak of your cap.

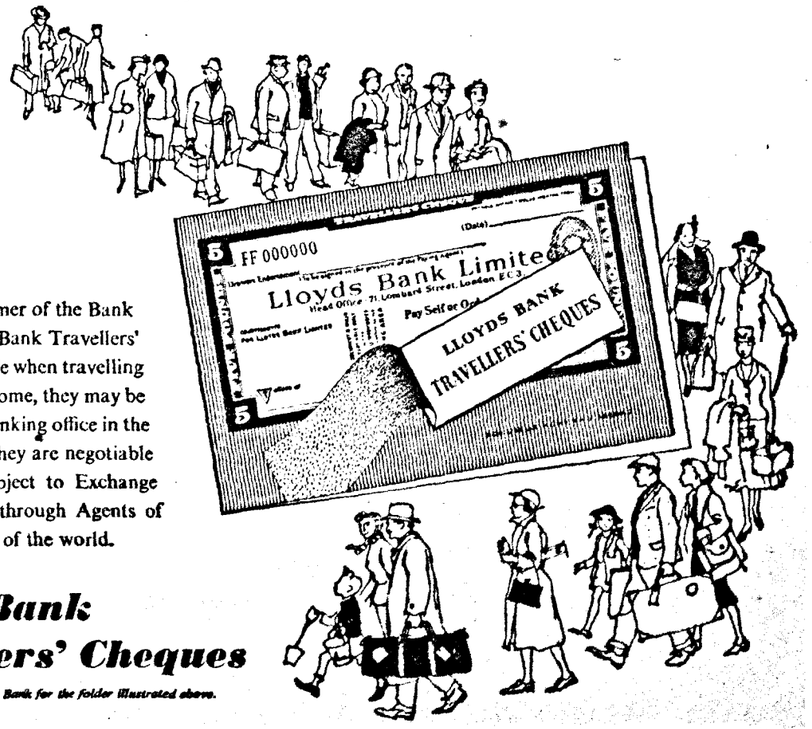
Astonishing, is jute. No fanfares blare for it. No poet yet has sung its praises. Yet humbly it does its work, sustaining the tenuous, prolonging the fleeting, strengthening the frail. Workaday, wonderful jute!

JUTE INDUSTRIES LTD.

There may be an application of jute to your business. Why not write to us:—

—makers of jute bags and sacks; twines, cords and ropes; yarns for woven carpets; cloth for tufted carpets and needle-felts, for backing linoleum, for tarpaulins; roofing felt, damp-courses and plasterers' scrim; webbing; and cotton belting.

JUTE INDUSTRIES LIMITED, MEADOW PLACE BUILDINGS, DUNDEE



At everyone's service

Anyone, whether a customer of the Bank or not, can buy Lloyds Bank Travellers' Cheques — indispensable when travelling at home or abroad. At home, they may be cashed at almost any banking office in the British Isles; abroad, they are negotiable in local currency (subject to Exchange Control restrictions) through Agents of the Bank in all parts of the world.

Lloyds Bank Travellers' Cheques

Ask at any branch of the Bank for the folder illustrated above.

MORE POWER AT LOWER COST

What the roc did for Sinbad, Napier will do for the air passengers of the near future. Napier engines will give helicopters their vertical lift and then, once airborne, their forward power. ***Eland*** *turbo-props will be fitted in the Fairey Rotodyne, and the* ***Oryx*** *turbo-gas-generator in a new Percival helicopter.*

Both these engines are variations on the general Napier theme: more power at lower cost.

Letters to the Editor

The Price of Enosis

SIR—In his letter published in your issue of August 4th, Mr Dukaris seeks to show, contrary to the conclusions drawn in your Note of June 29th, that the annexation of Cyprus by Greece would do no material damage to the Cypriot economy, and that the workers and peasants of Cyprus might even be in a better economic position.

Having in mind that the national income per head and the rates of real wages and salaries in Cyprus are demonstrably much higher than those in Greece, and having in mind the enormous rate of destitution in Greece, as officially announced, no reasonable person could suppose otherwise than that union of the two countries would gradually drag Cyprus's standards downwards.

Mr Dukaris, however, attempts to support his thesis by four arguments: (1) that national insurance facilities in Greece are more advanced than in Cyprus; (2) that agriculture in Greece has made more advance than in Cyprus; (3) that the Commonwealth preferential tariff acts adversely to the interest of Cyprus; (4) that the "adverse" balance of trade involves danger to the Cypriot economy.

These arguments are both factually incorrect and economically unsound.

1. According to the records available the "national" insurance of Greece covers less than 20 per cent of the population. Two-fifths of its expenditure goes on providing a measure of medical assistance, such as in Cyprus is provided by an island-wide public health service available at nominal charges. A further 45 per cent goes on providing small pensions for retired workers. Pensions of this kind are a serious need in Greece since, owing to the repeated devaluations of the drachma, the Greek peasant and wage-earner has never formed a habit of saving. In Cyprus, on the contrary, there is full confidence in the banks and the currency, and almost every family has an appreciable sum in savings banks accounts.

2. Mr Dukaris says "agricultural production in Cyprus is either stationary or on the decrease." This is nonsense. It is true that production of certain traditional crops, such as wheat, barley and carobs, has on average not changed much during this century. But that is because, for obvious economic reasons, farmers have diverted their interest to the more profitable export crops made available by the development of irrigation. Potatoes and citrus, which twelve years ago did not exist in Cyprus, are now of equal importance with the traditional crops.

3. Those who favour the annexation of Cyprus by Greece commonly argue that the reciprocal preferential tariffs between Cyprus and the United Kingdom must be operating to the disadvantage of Cyprus, because Cyprus buys more in value from the United Kingdom than vice versa. The absurdity of this line of argument is illustrated by the experience of a neighbouring and in some way similar country—Israel—which runs a huge trade deficit with the United Kingdom in spite of having no tariff preferences. The truth is that the United Kingdom is the only large and stable market for the main agricultural export products of Cyprus—citrus, carobs, potatoes—and without the tariff preference these products would fare very poorly in competition with the other Mediterranean supplying countries.

4. As to the argument that the economy of Cyprus must be in bad shape because she imports goods to a much greater value than she exports, it is scarcely necessary to waste space in *The Economist*, of all papers, to refute it. It is understandable that Greeks and Cypriots educated in Greece should view an "adverse" trade balance with dismay, since Greece maintains an independent currency which, from continued balance of payments deficits, has attained the reputation of being one of the most insecure currencies in the world. Cyprus, however, has a currency which is simply sterling under another name. Balance of payments problems do not exist for Cyprus as such, any more than they exist for, say, North Wales as such. If Cyprus is able to import more goods than it exports, that means simply that sterling area banks and investors have confidence in the island's economy and are ready to supply capital, both short-term and long-term, to it. As soon as confidence is lost and this capital ceases to flow in, imports will decline and the shocking "adverse" balance will disappear. So will the present standard of living in the island.

My impression is that most Greek Cypriot business men are aware of the economic dangers of enosis. Enosists counter this in two ways. Openly they say "Better a ragged mother than a rich foster-mother." Privately, some of them say: "If we join Greece the United States will have to step up its aid to Greece and we will get our share." This is crazy economics—and one more reason why the considerable minorities in the island are opposed to enosis.—Yours faithfully,

BERNARD BRAINE

House of Commons, S.W.1.

Labour and Its Crisis

SIR—In your issue of August 18th you write: "Mr Zilliacus has made himself the spokesman of those who say that the whole Suez question should be referred to the inactive consideration of the veto-ridden Security Council."

May I point out that (1) the Security Council is neither more nor less inactive than the Governments that compose it. Our own Government is one of the most important of its permanent members and British policy is a decisive factor in the activity or inactivity of the Security Council.

(2) The legal rule that the great powers who are permanent members of the Security Council must be unanimous before it can decide on "enforcement action" (i.e. "action in respect to threats to the peace, breaches of the peace and acts of aggression") merely registers the political fact that the Western powers cannot embark on even a small war against the will of the Soviet Union, or *vice versa*, without incurring the risk of a world war. That fact is self-evident in the Middle East.

(3) Egypt will not accept the Anglo-Franco-American plan of "international controls" of the Suez Canal in the sense of international management, even as a basis of negotiation, and the overwhelming majority of the Suez Conference, including the United States, are strongly against any attempt by the British and/or French Government to try to compel Egypt to accept by resort to force.

(4) The alternative to imperialism and force, which no longer work, is organised internationalism, based on equality of status, common interests and give and take. The appropriate machinery and obligations for working out and negotiating such a settlement is the Security Council of the United Nations.

The only thing needed to make a settlement on those lines work is a policy that is loyal to the Charter. So far the Government seem to prefer trying to make the ghosts of Disraeli and Palmerston walk again, in a world that no longer believes in ghosts.—Yours faithfully,

K. ZILLIACUS

House of Commons

Rubber Shod Economics

SIR—The rubber footwear industry cannot be allowed all the credit for its remarkable argument that a uniform price, however arrived at, practically proves the existence of a perfect market. It has at least one precedent. The US Steel Corporation in defending the basing-point system of pricing, before the United States Temporary National Economic Committee in 1940, put up a similar argument. Because there was one price quoted to a buyer, irrespective of where the steel was coming from, perfect competition existed. The consequence of a perfect market was present, and theory and practice were at one.—Yours faithfully,

S. RUBINSTEIN

THE STERLING AREA IN THE POST-WAR WORLD.
By Philip W. Bell
Oxford University Press. 478 pages. 63s.

STERLING, and the system of international payments that has grown up round it, hold a strange fascination for the American mind—academic and political. The explanation may in part be psychological or even psychiatric. To many Americans the sterling area appears to be one of the last vestiges of imperial dominion and of the colonialism from which they broke free in 1776. During the Anglo-American financial negotiations of the autumn and winter of 1945, there were long periods when the American representatives seemed much more concerned with removing the alleged blemishes and vices of discrimination from the sterling area system than with the task of providing the British economy with the blood transfusion it so urgently needed at the time.

The same note of virtuous exhortation echoes in the two latest additions to the already large American contribution to the literature of the sterling area. Mr Judd Polk's book, written under the ægis of the Council on Foreign Relations, is in large part devoted to a history of sterling and of its crises. He sees in the succession of postwar balance of payments difficulties evidence that the financial policy in sterling countries, and particularly in Great Britain, is being guided mainly " by the desire to maintain steady and near full employment " and suggests that this fact militates against any return of sterling to that state of true convertibility on which it gained its international pre-eminence. Mr Polk views with the gravest suspicion official British pronouncements that it is Britain's aim to bring about greater freedom of payments and trade. Rather does he fear that the regional character of the sterling system will become more and more marked.

Mr Philip Bell's more comprehensive study attempts a systematic survey of the sterling area's financial mechanism. He, too, sees little hope of regeneration by multilateralism in the sterling area. At the same time, he doubts whether the sterling area system can endure as a regional organisation, because Britain does not command the capital resources required to maintain the cohesion of the system. Mr Bell, quite rightly, sees as a disruptive factor the advancement of the colonies towards self-governing status and their desire to maintain their own external reserves and to spend at least part of their London balances.

These two authors, if one may judge by the bibliographies attached to their books, have read everything that has been published on the subject of the sterling area. Yet one must doubt whether they have understood the true essence of a system that existed long before it took visible shape after 1931 and statutory shape after 1939. There is in these two books all too little recognition of the basic fact that the sterling system depends not on compulsion but on the coincidence of interests of those concerned ; that such a procedure as the pooling of foreign currency earnings by sterling countries is something that is virtually automatic owing to the fact that the bulk of these countries' trade is transacted in sterling and financed, shipped, insured in the same currency. Nowhere in these two books is sufficient weight given to the negative factors that keep the sterling system going, namely, the absence, as things are now, of any effective alternative to replace it. The sterling system may, in large part, run on its own momentum, on the basis of institutions and qualities built in the years of convertibility. But it also continues to run because the arts of international banking, merchanting, insurance have not been learned by other contenders as readily as might have been expected.

These American authors, however, put their finger on the weakest spot of the system—the inability of an over-fully-employed, over-social-security-conscious, Britain to provide year after year the balance of payments surpluses with which Britain must maintain its position as a great financial power. Mr Harold Macmillan, in his first speech as Chancellor of the Exchequer, suggested that the " excess of home demand," which all the diagnosticians hold to be the culprit in Britain's economic difficulties, could be described in a " simple but inelegant word, namely greed." Greed and the financial leadership of the sterling area are incompatible bedfellows. But if the sterling system were for this, or any other reason, to disintegrate, there is no readily available alternative that would perform the work it has so admirably and unostentatiously done over the past century. The two American authors should have given greater recogntion to this—the system's functional aspect.

By Anthony Sampson.
Collins. 256 pages. 16s.

FATHER HUDDLESTON'S personal account of life as lived by the African under *apartheid,* " Naught For Your Comfort," was only the latest of a series of books whose impact on public opinion outside South Africa had begun seriously to worry the Union government ; but the exceptional publicity it attracted, and the personality and standing of its author, an Anglican missionary from a highly disciplined monastic order, evidently caused the South African authorities to feel that it should be formally answered. This book, by one of South Africa's most able public relations officers, now posted to the High Commissioner's office in London, is the result of that feeling ; and it is, in a sense, an answer to all books attacking the " inhumanity " of South Africa's racial policy. Fair-minded people who have read the challenge should read the reply.

Mr Steward is concerned to make two main points against Father Huddleston. The first, which is well taken, is that no tears need be shed for Sophiatown as a slum, that the new African locations are far superior considered as housing estates, and that virtually all Africans who have been moved have been glad. He makes mincemeat of Father Huddleston's mystical attachment to Sophiatown, giving a brisk impression of a modern town-planner of the fresh-air-and-hygiene school. He makes all South Africa's communal segregation plans sound like a single vast slum-clearance scheme (as to some Afrikaners it is—physically and racially).

On the wider issue, Mr Steward treads the party line on *apartheid* as the only way of giving Africans a true *lebensraum*—" another political dimension "—in which they can rule themselves and rise to the top economically, professionally and artistically, protected from superior white competition. But the power of Father Huddleston's book resided in his intimate knowledge of what *apartheid* in practice here and now means to relations between black and white. To his assertions of sheer unchristian indifference and of police and official brutality, Mr Steward returns a bland negative. But now comes not a priest but a journalist to repeat, with new—and fascinating—instances, precisely the story that Father Huddleston told. Mr Sampson was in large measure the creator of a remarkable African pictorial weekly, written and photographed by, for and about Africans, called *Drum ;* and what little Father Huddleston did not see Mr Sampson, one feels, did. His book is not only the story of a remarkable African journalistic enterprise—of the sort that presumably fits beautifully into the theoretical fabric of *apartheid,* factual criticisms of the white world and all ; it is also a valuable picture of the detribalised, semi-Europeanised African mind in an industrial white environment. Mr Sampson's story is of the hopeless estrangement between the races born of the humiliations imposed by the one on the other. He tells of the slow but careful appraisal by the black of the resources and morale of the *herrenvolk,* which, for its part, is lost in admiration of its own prowess in bringing the wonders of technical civilisation to the dark continent and its aborigines.

> I found that Africans regarded Europeans as strange animals rather than human beings, or standard-bearers of civilisation. The insults that white men throw on black men are returned in good measure. Some whites think black men look like animals: and vice versa ; the long hair and thin lips of a white man are at least as ape-like as the flat faces and dark skin of the black man. . . . " To the bantu," says the distinguished African scholar, Selby Ngcobo, " the Europeans, probably because of their materialistic outlook, lack the essential quality of human beings, which is best conveyed by the Zulu word ' ubuntu.' "

" Drum " should make grim reading in South Africa ; and for apologists like Mr Steward it poses awkward questions about the inhumanities practised in prisons and on farms, which " Mr Drum " exposed by eye-witness report and camera: police connivance at purely inter-African crime and intimidation, and police violence in support of segregation laws ; the utter denial of opportunities for gifted Africans ; the suppression of even the mildest political activity among non-whites ; the use of the anti-communism act. Mr Sampson had followed Father Huddleston back to England before the new law, enabling a junior magistrate to exile an African from his home and people without appeal to the courts, was brought in. But even without this piece of totalitarianism, " Drum " adds considerably to Father Huddleston's indictment of South Africa as a police state. It looks as if Mr Steward will have to get busy with a new book—" You are wrong, Mr Sampson."

Crown Princess

THE EMPRESS FREDERICK.
By Richard Barkeley.
Macmillan. 334 pages. 30s.

QUEEN VICTORIA'S eldest child, Victoria, became the wife of perhaps the most tantalising might-have-been of German history. For it was only towards the end of the 'seventies and during the 'eighties that the liberalism that had stood up so bravely to the Prussian monarchy in earlier decades was finally drowned in the stormy seas of German chauvinism. Had Crown Prince Frederick succeeded to the throne of Prussia and Germany in the 'seventies, as he might well have done, the demoralising rule of Bismarck might have ended at the same time. Frederick was the spiritual child of his mother's Saxe-Weimar, and, since Germans are singularly susceptible to the tone of their leaders, it is not altogether sentimental to claim that a period might have been born which would have been more solidly liberal than the sickly Republic of 1918.

This Frederick is a subject that deserves the historian's attention. Victoria, favourite child of his mentor, Prince Albert, became his devoted wife, and her destiny seemed inseparable from his. She gave him sympathy and comprehension, but she was tactless and impulsive, so that his enemies—with Bismarck at their head—could always exploit what they chose to proclaim as the sinister influence of the interfering Englishwoman with all her family behind her. When at last, in 1888, the two became Emperor and Empress, Frederick was already dying of cancer of the throat. Thus the unhappy Empress Frederick was left alone, until thirteen years later she too died of the same disease. Hers was the more tragic fate, for she survived to see much of the cruel folly of her eldest son that was one day to precipitate war between her country and his.

Dr Barkeley has written a rather pedestrian account of this daughter, wife, and mother, of princes ; but it is probably a just one, correcting false emphases created by prejudice in the past.

New Forces in the Middle East

COMMUNISM AND NATIONALISM IN THE MIDDLE EAST.
By Walter Z. Laqueur.
Routledge and Kegan Paul. 373 pages. 32s.

THIS is an unusual book. Its field is very different from the Middle East of those travellers, Arabophiles, who find in the simplicity of the desert something which their own civilisation fails to provide for them. To such men, and women, the cities and city-types of the Middle East are merely bad copies of the West.

Mr Laqueur concerns himself entirely with these types. His thesis is that as a class they are dangerously vulnerable to the appeal of communism. Their training has predisposed them against traditional Islamism, which seems to have no place for the technology that has made the West so powerful and which they have set themselves to acquire. The structure of society around them admits them only grudgingly to positions where their skills can be used and well rewarded in economic terms, and it still denies them real power. Yet western technology has not provided them with a creed to replace the religious certainty they have abandoned with Islam. Communism by contrast does both. It offers at once a creed of certainty and a society in which intellect confers power and status. Communism in the Middle East is a party of intellectuals only. In societies where all political parties are small in numbers and only those classes that can loosely be called intellectual take part in politics, a dangerous situation can thus arise.

The exceptions are Turkey and Israel. In Turkey, Russian hostility makes communism synonymous with treachery ; in Mr Laqueur's view, Russian anti-Zionism has the same effect today in Israel. It is at this stage in his thesis that the reader becomes conscious of the author's Israeli nationality . nd suspicious of special pleading.

His treatment of source material is also unfortunate. Of necessity much of his information has come from communist publications, both legal and illegal. He has obviously had access, somehow, somewhere, to very large collections of such material. Yet how and where is not apparent. Many of the chapter notes contain considerable information about individual communists, which suggests access to personal dossiers going in some cases back to periods well before 1939, or, if not to dossiers, at least to persons able to give detailed information. This is, as the author points out in his introduction, a pioneer study. Yet he has neglected the most important duty of the pioneer, to blaze his trail so that others can follow.

The result of this neglect is to throw what is most probably unwarranted doubt upon a most interesting and important book. Its theme is of the first urgency. The most amateur student of current Western policy in the Middle East must be uneasy at the degree to which it seems to have become committed to the maintenance of an unworkable *status quo.* Mr Laqueur's study can only increase those anxieties. In taxing the West with failing to provide an ideal which the forces of discontent in the Middle East can follow, he poses the old familiar question: how can a civilisation, whose development is based on the denial that certainty can ever be attained, satisfy those who are not adult or experienced enough to take this as an answer ?

Undismal Science

ECONOMIC COMMENTARIES.
By Dennis P bertson.
ESSAYS IN MONETARY THEORY: *fourth impression.*
By Dennis Robertson.
Staples. 174 and 252 pages. 16s. and 18s. respectively.

SIR DENNIS ROBERTSON must be getting rather tired of those unfailing tributes to his wit, literary grace, light-heartedness and general charm, elicited by every book he writes ; but his " Economic Commentaries," a collection of ten essays and lectures produced between 1952 and 1955, ensure that they shall be paid yet again. On such topics as Sir Dennis treats under the titles " The Future of Sterling " or " Creeping Inflation " there are indeed other people who can write in a clear, seemly and pleasurable manner—though none so well as he ; but when it comes to rigorous economic theory, as distinct from political economy, he stands entirely alone. Consider, in this volume, " Some Recent Writings on the Theory of

Pricing," and "Utility and All What?" To the large (and growing) class of readers who once knew some economics and would really like to know what is going on among the boys in the back-room—those whom with genial modesty Sir Dennis hails as "fellow idiots"—these two essays in particular can be recommended as one recommends, from personal experience, either a really good restaurant or a really painless dentist. But just how good, just how miraculously painless, can only be appreciated by those who have themselves despairingly tried to reconcile, say, Professors Hicks, Samuelson and Little on economic welfare or to sort out the various concepts of market imperfection.

Sir Dennis warns the general reader—"anyone who is not fairly familiar with the jargons and techniques used by professional economists"—against attempting Part I of his book, including the two essays just named. One might, indeed, make the warning a little more general than that. There is a certain psychological danger in the very smooth, very appetising, very entertaining presentation of intrinsically very difficult stuff; the reader, who in the hands of a less endearing guide would squarely recognise his own incompetence, may find himself believing that he has understood when he has only been intellectually tickled. But how rare is the economist of which such a comment can be made.

The "Essays in Monetary Theory," first published in 1940, are now reprinted for the fourth time. They wear extremely well. Topical as many of them were, and remote as now seem many of the circumstances which prompted them, it is surprising that Sir Dennis has not found, in his usual mine of epigraphs, some suitably cock-eyed version of the detestable words "I told you so."

Poet and Martyr

THE LIFE OF ROBERT SOUTHWELL.
By Christopher Devlin.
Longmans. 377 pages. 21s.

QUICKLY following the recently translated autobiographies of John Gerard and William Weston comes this life of another Elizabethan Jesuit, Robert Southwell. Southwell came to England in 1586 and, nine years later, heroically met the torture and martyrdom which, ever since his entry into the Order, he had eagerly desired. He was a tragic figure: sensitive, sincere, a poet and a publicist, whose "humble Supplication" written in 1592 is a clever and a moving statement of the Catholic case. Father Devlin has been able to use some recently discovered letters relating to this mission, and his book is the product of wide reading and much ingenuity. But it is a work of apologetics rather than of history. There are some placatory phrases. Father Devlin considers it necessary to inform his readers that "the Elizabethan government was not the equivalent of the Nazi or 'Iron Curtain' regimes of this century." But he proceeds to convey very different suggestions by saying that Elizabeth was regarded as "the equivalent of a gangster's moll," attributing to Burghley "the mentality of a blackmailing footman," writing of the "Cecilian dictatorship" and of the government's use of concentration camps and of the "Big Lie."

Father Devlin's study of Southwell's character is both lyrical and speculative. He refers to his subject as "the despair of a modern hagiographer," and his usual formula for Southwell is that of "cold intelligence with fearless ardour." Yet, despite Southwell's own pride in his birth, his dependence on aristocratic patrons and his reference to "my bevy of aristocratic youths," Father Devlin has "little doubt that he was happier in the slush of a cobbled gaol-yard than in the heated splendour of a banqueting-hall." Embarrassingly high claims are made for the importance of Southwell's achievement and influence as a poet. Southwell dedicated poems to "my worthy good cousin, Master W. S.," and had in fact a cousin, William Shelley. But by a "staircase of probabilities" leading to a "tentative conclusion," separately reinforced by a "general impression," Father Devlin suggests the identification with William Shakespeare, thus roused "to a loftier conception of the divine spark within him." A footnote reminds us that Shakespeare is said to have died a papist—and in a district served by Jesuits. Father Devlin devotes an appendix to the theory of equivocation, which does not allow flat untruths but permits ambiguities likely to mislead. This theory, designed for situations "when truth seems to be on one side and justice or charity on the other," is not, Father Devlin allows, "altogether satisfactory." Readers concerned with truth will not find this book deficient in charity towards its subject.

Great Anarch

PIERRE-JOSEPH PROUDHON.
By George Woodcock.
Routledge and Kegan Paul. 300 pages. *Illus.* 28s.

PROUDHON'S "What is property?" published in 1840, gave a simple answer: theft. A peasant by origin, and a craftsman by trade, what he attacked was rich men's use of their wealth to exploit the skill of others. "I ask," he wrote, "an end to privilege, the abolition of slavery, equality of rights, and the reign of law." He pursued this demand for social justice for the rest of his life. Naturally combative, but not desiring power for himself, he never belonged to a party, nor sought to lead one; yet he was a much respected force on the French left for the next generation. A logical democrat, he came to believe so firmly in the common sense of common people that he thought they could manage very well for themselves, if only all established authorities were abolished. It was his misfortune to be depicted as a bogy-man by Louis Philippe and Louis Napoleon from the right, and as a false prophet by Marx from the left; it is only in retrospect that we can see how greatly the world would have benefited if poor men's claims had been taken up by Proudhonians instead of Marxists. The reputation of this lovable, profound revolutionary has never been as great as his merits deserve: partly because of Marx's jealous and venomous attacks on him, and partly because he can so easily be made a figure of fun.

Mr Woodcock has written a useful life of him, based partly on his unpublished diary. The book is weaker in analysis than in biographical detail, but draws attention to "the bold and arresting nature of his thought, the penetrating and often prophetic insight he displayed into the world of his time, and the strong and subtle prose in which he expressed his ideas"; and it will make his readers want to know more about Proudhon's own works.

Shorter Notices

RED, BLACK, BLOND AND OLIVE.
By Edmund Wilson.
W. H. Allen. 508 pages. 25s.

Mr Wilson is a full-powered American intellectual, complete with liberalism, enthusiasm and odd prejudices. The singularly unmemorable title of his book refers to the skin colour of various communities he has visited; New Mexican Indians in 1947, Haitians in 1949, Soviet Russians in 1935, and Israelis in 1954. He brings to his subjects brilliant journalistic observation and the intellectual keenness of a leading literary critic, commenting on Voodoo and the Moscow underground, Old Testament philology and bedbugs. His visit to Russia, before the Stalin purges, progresses from pink-spectacled enthusiasm to extreme irritation, while the Israeli section is of particular interest as a sympathetic view by a non-religious observer of a hieratic society. Readers of his successful book on the Dead Sea Scrolls will find further enlightenment in the comments on the Jewish faith, and this interest in man's need for faith is carried through the study of Indian tribal dances and of Voodoo, and, tacitly, in Mr Wilson's own breaking faith in the Marxist dialectic. Here is a book of discoveries, and as such it is fascinating reading, both for its own sake and for the knowledge it provides of an ever-lively mind.

TREASURE IN THE THAMES.
By Ivor Noël Hume.
Muller. 255 pages. 21s.

Mr Hume is known as a broadcaster with a turn for popularising antiquities, and this readable book affords a theme adapted to popular treatment. It is a record of the antiquities dredged up from the Thames.

Important finds in the river's metropolitan area are becoming less frequent, and of late the Thames Conservancy Board has been more successful than the Port of London Authority. Among the most notable recoveries have been a colossal bronze head of Hadrian from the vicinity of London Bridge, an Iron Age bronze shield from Battersea, and a horned bronze helmet, ascribed to the first century BC, which was found near Waterloo Bridge. All three are in the British Museum.

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

All According to Plan

San Francisco

CORRESPONDENTS arriving wearily from the marble floors and glaring lights of Chicago's Conrad Hilton Hotel felt smothered by the magenta carpets and gloomy caverns of San Francisco's Fairmont Hotel. The two typify the differing atmospheres of the Democratic and Republican conventions as definitely as do the climates of the two cities. Chicago was steamy and fevered, San Francisco is cool and collected. Equally typical are the attitudes of party officials and delegates as they face the press. Democrats always seem delighted to tell all to newspaper people; to many Republicans reporters are to be suffered rather than encouraged except in their proper place at a press conference. In San Francisco there was really no need to ask questions; everything had been planned and rehearsed for months, and the whole purpose of the operation—the prayers, the flags, the songs, the speeches, building up to the apotheosis of Mr Eisenhower's acceptance of the nomination on Thursday—was merely to provide four days of television entertainment and to start the Republican campaign with enough momentum to keep it rolling until it culminates in President Eisenhower's and Vice President Nixon's predestined victory.

But in the last few days Republican officials have been wondering whether all this efficient and expensive planning will really achieve its purpose. However much they may criticise the Democrats for airing their party quarrels on the television screen, the Republicans cannot deny that the rival show provided the spontaneous and dynamic suspense which attracts an audience. This was particularly true of the vice presidential nomination, as exciting a contest as any convention has produced within living memory. The public was brought directly into the biggest smoke-filled room ever known, the convention hall itself, with party caucuses and political negotiations being conducted directly before the roving microphones and television cameras. This was the real stuff of politics—a free convention nominating Senator Kefauver in an open and thrilling fight.

The Republicans who flocked to San Francisco were too self-assured to feel the need for such rough and tumble. But their decorous calm springs also from the feeling that it would be pointless to attempt to change the arrangements made months ago by party officials in Washington. So the delegates have come to this beautiful city to spend their money and enjoy themselves, to gather their strength for the coming campaign and to cheer their beloved President. But there are empty rooms in hotels and, what is more serious, there were probably empty television screens in many American homes. Mr Eisenhower's sudden decision to come to San Francisco a day early probably reflects a last-minute attempt to inject life and enthusiasm into the proceedings, and his wish to show that, whatever the Democrats may say, he is well enough and interested enough to fight an energetic campaign.

★

Mr Stevenson, after himself being nominated as presidential candidate, threw the vice presidential nomination to the free choice of the Democratic delegates. Thus he exploded with a bang the carefully inflated myth that the Republican convention, too, was an open one. There is no doubt that Mr Eisenhower has been the enthusiastic choice of the Republican rank and file all along. But there are many who doubt whether a majority of the delegates would freely have chosen Mr Nixon had he not been imposed on them by the party machine. There are even more who privately doubt whether he was the best choice. In particular it is thought that, with his controversial name on the ballot paper, the party may lose enough votes to forfeit its chance of winning a majority in Congress. This was Mr Stassen's contention. Unfortunately, his brave but belated attempt to put up Mr Christian Herter, the Governor of Massachusetts, as a genuine alternative, seems to have been frustrated before it began—if only because Mr Herter refused to play his part. Nothing came, moreover, of the rumours which were rife in San Francisco this week that several potential candidates were to be encouraged to stand against Mr Nixon so that delegates might feel that they had had a genuine say in the matter. In the last moment, Mr Stassen went to see President Eisenhower to surrender abjectly and to ask for the privilege of seconding the nomination of Mr Nixon, that "great Californian." Mr Eisenhower graciously received the penitent and asked the convention to give him "the courtesy of a real hearing." It is difficult to see what Mr Stassen hoped to gain from this ignominious epilogue to his lone foray. He will have added to the vengeful displeasure of Mr Nixon and the party professionals the contempt of many who would have respected him if he had stuck to his spiked guns.

So Mr Nixon was nominated for the Vice Presidency by acclamation, and the dictatorial tone which has been imposed on the Republican convention by the party's publicity experts and professional organisers will stand in clear contrast to the Democratic readiness to bow to the will of the people. This rigidity, this unwillingness to change plans to meet changing circumstances, was one of the things which kept the Republican party out of power for twenty

years. The events of this week have shown that the Republicans are still unable to do without President Eisenhower and how right he is in thinking that it will take him another four years to rebuild his party. But they have made his bland support for Mr Nixon even less justifiable.

Last week in Chicago, the Democrats were demonstrating once again the quality which kept them in the White House for twenty years—their ability to move with the times. In rejecting Mr Truman and Mr Harriman, they rejected the outdated philosophy of the New Deal, which was the product of an economic depression and has little relevance to present prosperity. The compromise in the Democratic platform on civil rights for Negroes represented an appraisal of reality and a readiness for conciliation in what is an increasingly explosive dilemma. The point of outstanding interest is that on both questions the two wings of the party were prepared to make concessions, for the moment at least, to avoid a split. Under the pressure of their defeat in 1952, the Democrats have drawn together as the Republicans did four years ago, and it is difficult to deny that for the Democrats the process is more genuine than it was for the Republicans. The Democrats may have washed some of their dirty linen in public, but at least the audience saw that it was washed clean. The Republicans give the impression that a good deal of their dirt is merely being brushed under the carpet of Mr Eisenhower's popularity.

As a result of all this, Mr Stevenson's fight for the Presidency no longer seems an absolutely hopeless one. This impression grows as the San Francisco circus goes through its well-organised hoops. But what brought the Democrats together in harmony is precisely that mood of prosperity and moderation which is epitomised by Mr Eisenhower and which gave the Republicans their victory four years ago. The Democrats, by their choice of Mr Stevenson, have clearly joined their rivals in the middle of the political road. The struggle between the two parties during the next ten weeks will not be over what road the country should follow, but over who is to guide the traffic. Unless there are unexpected developments, this will be a campaign of personalities and not of policies. Mr Stevenson showed at Chicago that he had become in the last four years a professional politician and a hard fighter. But when it comes to personality and an established record the advantage still lies heavily with President Eisenhower.

New York After Chicago

THE outcome of the Democratic national convention has had an immediate impact on the political situation in the State of New York. After being defeated in his hard struggle for the presidential nomination, Governor Harriman returned to his home grounds and made it clear that he would seek a second term at the gubernatorial elections in 1958. In his wake came Mr De Sapio, the "boss" of the state's Democratic organisation and the manager of Mr Harriman's ambitions. Mr De Sapio went to Chicago as a potential kingmaker; he has returned as a local politician with troubles at his doorstep. For Senator Lehman announced this week that he would not seek re-election in November. Mr Lehman, who served four terms as Governor of New York, and who has been in the Senate since 1949, is seventy-eight years old. But despite this fact, he would have been the strongest and most popular candidate available to the party.

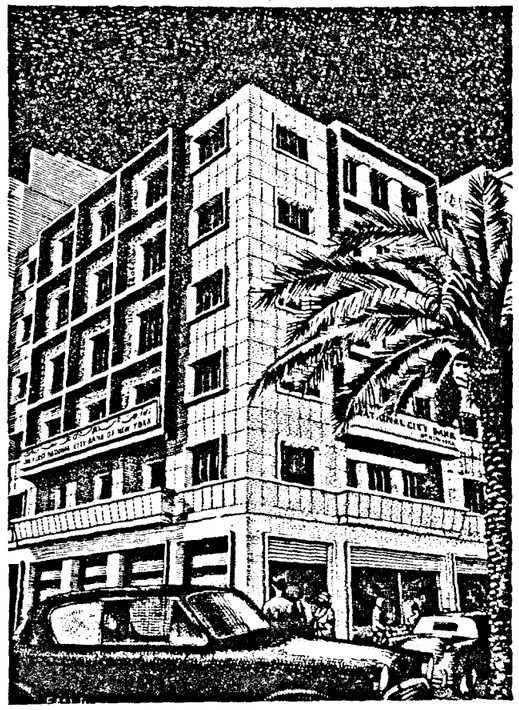
It had been expected that in the event of Senator Lehman's retirement, the nomination would go to Mayor Wagner of New York City. On returning from Chicago, however, Mr Wagner indicated that he was "not interested" in standing for the Senate. This statement—which may not be Mr Wagner's final word—surprised many observers who have long felt that it was Mr Wagner's ambition to fill the Senate seat formerly held by his famous father. The Mayor's reluctance may reflect the belief of certain Democrats that the Stevenson-Kefauver "ticket"—especially without Mr Lehman on it—will not do well in New York. It is this belief, moreover, which caused the New York delegation at Chicago to do everything in its power to obtain the vice presidential nomination for an easterner such as Mr Wagner or Senator Kennedy. Having been rebuffed both in their presidential hopes and in their suggestions for the second man on the team, New York's professional Democrats may not be feeling much enthusiasm for the coming campaign.

Senator Lehman's decision should bring a number of strong Republican candidates into the open. There had been rumours that the party would conscript former Governor Dewey, whose influence in the state remains considerable. But Mr Dewey has said that he would not run, and it is thought that Mr Javits, the State Attorney-General, has the best chance of being nominated. He is a bright young politician who defeated Mr Franklin Delano Roosevelt, Jr., in 1954, and who is Jewish. In New York that is a powerful combination.

Bundles for Germany?

THE fight over the restoration to their original owners of some $612 million worth of German and Japanese assets confiscated during the war has been waged in Congress and the American courts over the past ten years. A strong group of Congressmen, from the right wing of both parties and from states in which voters of German descent are numerous, have been doing everything in their power to set aside the Reparation Agreement of 1946 under which America and its allies specifically agreed to forgo reparations against Germany in exchange for the retention of seized German assets. Despite the opposition of the Administration, which favours the restitution of amounts only up to $10,000 to individuals as a matter of grace, a wholesale restitution Bill has been approved by the Judiciary Committee of the Senate and chances for a similar measure in the House of Representatives—where action has been postponed until the next session of Congress—are improving. Moreover, if some Congressmen have their way the $250 million worth of assets already disposed of by the Alien Property Office will have to be reimbursed to German and Japanese corporations by the American tax payer.

The largest property involved is the General Aniline and Film Corporation which is thought to be worth about $140 million and which has been run by the American



New branch in Beirut

Air lanes from five continents converge upon Beirut — capital city of the Lebanon and great trading centre of the Middle East.

In Beirut, therefore, the new branch of the First National City Bank will serve the business interests of an increasingly important area. It will also make a significant contribution to the world-wide service of the First National City Bank.

The organization is based on a network of 66 branches, offices and affiliates in 24 countries all over the globe. In addition, the world's markets are covered by over three thousand five hundred banking correspondents in every major centre of commerce.

This invaluable service is at your disposal here in London. The officials of the two branches, in the City and West End, are well experienced in the conduct of international business. Take your problem to them — they are anxious to help.

The FIRST NATIONAL CITY BANK of New York

ESTABLISHED 1812

Incorporated with limited liability under the National Bank Act of the U.S.A.

Head Office: 55 WALL STREET, NEW YORK

London Offices:

City: 117 OLD BROAD ST., E.C.2 *West End:* 11 WATERLOO PLACE, S.W.1

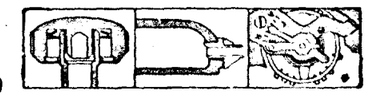
This particular Cyma

is NEW! It is the *navy star* watertight . . . yet slim and so elegant

It is one of the 60 CYMA 17-jewel lever models for ladies and gentlemen, from £15 in chrome/steel and from £25 to £85 in solid gold.

CYMA *navy star* — a masterpiece of Swiss craftsmanship. Its ultra-slim stainless steel case is so designed that faultless watertight sealing is achieved without the bulk usually associated with watertight watches. 17-jewel precision lever movement. Anti-magnetic, Anti-shock* Price £24.10.0

Other watertight models from £11.1.6



A unique spring system, designed to counteract wear, permanently seals the winder.

The main sealing material, a *new* metal alloy, retains its elasticity.

*Cymaflex — the world-famous anti-shock device fully protects the balance staff.

CYMA

*ONLY Cyma watches have the Cymaflex anti-shock device—but every CYMA has it.

SCHLUMBERGER
THE OIL MAN'S
PROTECTION

government since the beginning of the second world war. During this period, the net worth of assets applicable to the ordinary shares has increased by more than $60 million and sales this year are expected to reach $120 million. The firm was seized from IG Chemie of Basel, now known as Interhandel, and over the past eight years the latter has been trying to prove that it is a Swiss company. The Department of Justice, on the other hand, has contended that Interhandel is merely a façade for German interests, especially for IG Farben which sold its shares in General Aniline to the Basel subsidiary while reserving the right of repurchasing them at any time. Earlier this month, a federal court upheld this contention and the Department of Justice believes that it can now dispose of its holdings. But the Swiss government has requested joint arbitration, and lawyers for the German interests hope that they can prolong their legal manœuvres until Congress comes to the rescue.

The whole idea of restoration has neither historical nor legal warrant, and speculations on the German stock market have made it perfectly clear that whatever assets are sent back to Germany will go into the hands of large corporations and not of individuals suffering under alleged hardships. The only plausible arguments advanced so far by Senator Dirksen and his supporters are that restitution would strengthen Dr Adenauer's domestic position and would set a precedent which could be appealed to if America's $29 billion worth of assets abroad were to be jeopardised in a future war.

Second Round for the Vaccine

THE removal of government controls over the distribution of the Salk anti-poliomyelitis vaccine, which coincides with a particularly sharp outbreak of the disease in Chicago, gives an impression of premature complacency. The number of polio cases in the United States dropped from 38,000 in 1954 to 29,000 last year, and the paralytic cases from 14,000 to under 11,000. This year the polio rate is lower than it has been at any time since 1947, and only 4,000 cases were reported up to the end of July, compared with 5,500 during the same period last year. But half of this year's victims have been afflicted with the most dangerous paralytic form of polio, and it is disquieting that there have been as many paralytic cases as there were last year.

In 1955 there was not sufficient evidence to assess the general effect of the Salk vaccine on the disease. The production of the vaccine was first interrupted when certain faulty batches were found to have been distributed, and later slowed down by the stringent safety precautions that had to be imposed on the manufacturers. As a result, only 8 million children were vaccinated, and only some of these were given the triple inoculations now recommended as providing the maximum immunity. This year about 75 million doses of the vaccine have been distributed so far, and the manufacturers have now overcome the initial problems of large-scale production. Some 40 million children have now received one or more "shots" of the vaccine, but there are 65 million in the groups most susceptible to the disease—youngsters under twenty and pregnant women. In the worst outbreak of polio this year, in Chicago, nine out of ten of those who caught the disease had not been inoculated against it.

The responsibility for filling this gap now rests on the "normal distribution channels" from the vaccine manufacturers through wholesalers to the public health agencies, private doctors and chemists. Congress has provided $54 million for a free inoculation programme, which is due to run until June, 1957, when it is hoped that three injections will have been given to all those who want them. Only then will the efficacy of the vaccine have been put to the crucial test—although the persistence of the disease may be prolonged by the surprisingly large minority who refuse to have their children vaccinated.

Money in Politics

FROM A SPECIAL CORRESPONDENT

THE way in which American political campaigns are financed has long disturbed observers in the United States. Public attention was directed to the subject last winter when Senator Francis Case, of South Dakota, revealed during the debate on the natural gas Bill that he had been offered a campaign contribution by an attorney for an oil company. The climate of suspicion that was aroused by this disclosure led President Eisenhower to veto the measure after it had been passed by Congress.

The roots of the whole problem, which is currently under study by a special Senate committee, lie in a conflict between the inherent financial realities of the American electoral system and certain moral expectations held by most Americans. In the United Kingdom it is understood that parties will get their funds from persons and organisations that agree with their programmes. In the United States, on the other hand, any sizable political donation is generally assumed to link the donor and the process of government in an unhealthy way. Innumerable statutes have been adopted by Federal and State governments in an attempt to bring political donations under acceptable control. Many statutes impose specific limits on the amounts that may be spent, but most of them are either full of legal loopholes or are not enforced.

In 1952 some $140 million were expended on behalf of candidates for nomination and election in local and national campaigns. In addition, at least another $7 million were probably contributed to political causes in the form of goods and services. These figures appear in a study of money in politics now being completed at the University of North Carolina.* It does not appear that the real costs of elections have been rising. Such comparisons as can be made indicate that between 1940 and 1952 the total costs of electioneering rose by 60 per cent while the consumer price index went up 90 per cent and the national income increased by 240 per cent.

Campaign funds must, of necessity, come from those who can afford to give. This means an extensive investment in American politics by business organisations through the contributions of their executives and directors. A study of a large number of contributions of $500 or more given in

* "Money and Politics," by Professor Alexander Heard: A Public Affairs Pamphlet to be published in September.

1952 shows that roughly one third of the directors of the major American corporations took out their cheque books. This is true, moreover, of all categories of big business: the oil companies, the merchandising firms, the banks, the manufacturing establishments, and the largest defence contractors. There is evidence that campaign gifts are also made regularly by individuals in firms of lesser size. Since matters affecting the business community are always up for decision before the legislative and executive branches of the government, there is a temptation to sniff bribery in these gifts. In fact, many contributors seek nothing in return for their support. But there is one thing they will obtain: access to the politicians' ears. There they can argue for their interests in a piece of legislation or an appointment to some official position. Access and influence are not equivalent, but one leads to the other and they become difficult to distinguish.

*

Because so much money for political campaigns comes from business sources, Republicans collect a larger share than Democrats. The disparity is not, however, as great as is usually claimed. An analysis of expenditures by the chief national campaign agencies active in 1952, including committees formed by organised labour, showed that Republicans spent $5.50 for every $4.50 spent by Democrats. Naturally, this ratio varies sharply in different places, and wherever one party overwhelmingly predominates, it receives more funds than the other. In the more closely competitive states, however, the Republicans have the best of it, and in some places by a substantial margin. One factor contributing to the affluence of the Republicans is the highly systematic fund-raising programme developed by the party organisation during the last twenty years. The party has effectively used professional techniques developed by those who raise money for charities. But the impact of this Republican advantage on the outcome of elections is not always predictable. The candidate with the smaller war chest can win, as President Roosevelt demonstrated on four occasions. Money talks loudly, however, when it comes to selecting a prospective candidate and a man with personal means or the capacity to attract financial interest may have an important advantage.

The Case episode, together with the estimate that campaigns in 1956 will cost some $175 million, have inspired attempts at a fresh approach to deal with political contributions. This must concede a point denied by much of the existing legislation. Campaign funds are a necessary part of elective politics, especially in the age of television and costly media of publicity. A new attitude became evident last year when Minnesota adopted legislation allowing limited income tax deductions for expenses incurred by candidates and certain party officials, and for campaign contributions of up to $100 by individuals. These measures shift some of the costs of democracy to the government and at the same time endow the process of getting elected with a dignity and public sanction hitherto lacking. Similar in spirit is a novel suggestion in the North Carolina report to create neutral or bipartisan campaign pools. All donations would go into one fund to be divided equally or on some proportional basis among the contestants. In order to work, such a scheme would need the favourable tax status presently enjoyed by educational institutions as well as limitations on the use of political funds derived from other sources. It would also require the kind of education of the public on which the success of many charitable appeals has been based. But what is needed most are new and frank attitudes on the need for money to make democratic politics work.

The Future of Synthetic Fuels

THE uncertainties affecting the future of oil from the Middle East have given an unexpected topicality to the Bureau of Mines's final report on the synthetic fuels programme. In 1944, when the government began research on synthetic liquid fuels, the United States produced more petroleum than it needed, and its net exports amounted to 7 per cent of production. But during the next decade output failed to keep pace with the growth of demand and American imports now exceed 10 per cent of production. As the cost of finding and producing crude oil in the United States is rising, and would rise more sharply if domestic reserves had to make good an interruption in imports, the commercial incentive to develop cheaper methods of producing petrol from coal or oil shale is becoming stronger.

Between 1944 and 1955 Congress authorised nearly $88 million for research into synthetic fuels; the Bureau of Mines built three laboratories and three larger scale demonstration plants. But the Republican Administration felt that the government's role should be confined to the operation of laboratories and small pilot plants. The two plants in Missouri, which demonstrated the two best known methods of producing oil from coal—by direct hydrogenation and by the Fischer-Tropsch process—were sold to private industry at a small fraction of their cost. And the plant at Rifle, Colorado, where methods of mining, retorting and refining oil from shale were developed, was put on a stand-by basis. The government still owns shale reserves in Colorado which are estimated to contain over 500 billion barrels of oil, but the development of the process has been continued by the Union Oil Company of California, which has large shale deposits of its own. The Administration has been widely criticised for "giving away" the results of publicly financed research for exploitation by private industry. But the beneficiaries have, in fact, shown little enthusiasm. The oil industry has never been eager to develop a process based on a competing fuel, and the coal producers have frequently been pilloried for spending so little on research. If oil costs rise, however, or supplies are threatened, this attitude will change and synthetic fuels may, at last, come of age.

Safety on the Highways

FROM A CORRESPONDENT IN BOSTON

WORK is about to begin on the $33 billion highway programme which President Eisenhower approved at the end of June. But the prospect of thousands of new miles of roads travelled by an ever increasing host of automobiles has brought home to many Americans the realisation that something must be done about the tragically high rate of accidents. Experts predict that 41,000 people will be killed this year in traffic accidents, nearly 3,000 more than in 1955 and considerably more than the total casualties suffered by American troops in Korea. During their conference in June, the State Governors set up a committee on highway safety made up of the Governors of Nebraska, Tennessee, New Jersey, New Mexico, Wyoming, Oregon, Idaho and Illinois. It was placed under the chairmanship of Governor Abraham Ribicoff of Connecticut who has been leading a campaign against traffic hazards in his own state.

Half a year ago, Governor Ribicoff, a Democrat in a state with pronounced Republican leanings, shocked the public by announcing that all motorists convicted of speeding would automatically lose their licences for thirty days after the first offence and for sixty days after the second. Drivers with automobiles registered outside Connecticut would be under the same prohibition as far as their driving in that state was concerned. Moreover, Mr Ribicoff put judges on notice that they would not be re-appointed when their terms expired if they allowed motorists with political or local connections to evade conviction and punishment.

The Governor's campaign "to slow down drivers to keep them alive" swung into high gear. Large signs, proclaiming "Don't speed. Conviction Means Loss of Licence," were erected on the 34 principal roads leading into Connecticut. State officials sought to be flexible and realistic in imposing speed limits and on the heavily travelled "parkway" connecting New York and Boston they fixed a uniform limit of 55 miles per hour. The results have been startling. Fatalities on the road fell by 15 per cent over a six months' period while deaths for the same period in the rest of the United States increased by about 9 per cent. During the first six months of the year, 5,398 motorists lost their licences because of speeding compared with only 231 in the first half of 1955.

*

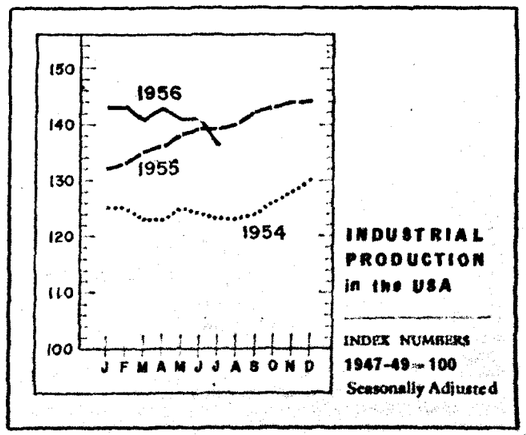
Republicans in Connecticut believed that Governor Ribicoff's draconian measures would make him unpopular with the motorists and voters of the state. But, in fact, the safety campaign has enjoyed a wide measure of support. Some judges have allegedly been too zealous and have tended to convict without further ado anyone brought before them on a speeding charge. Mr Ribicoff has emphasised that this was not his intention and that he would be fully satisfied only when "traffic slows down to the point where no arrests have to be made."

Reciprocal arrangements with neighbouring states are expected to strengthen the Governor's hand. New Jersey had agreed previously to take action against those of its drivers convicted of speeding in Connecticut. Rhode Island is proposing to consider each case on its merits and Massachusetts is studying the problem. During the Governors' conference, moreover, Governor Harriman abandoned an earlier attitude of scepticism and promised to support Mr Ribicoff's programme. If this trend continues and public opinion is thoroughly aroused, Connecticut may have set a pattern for the nation. The committee of Governors is studying the possibility of adopting uniform traffic laws in the forty-eight states, of co-ordinating law-enforcement and of establishing reciprocity in the upholding of conviction and the suspension of licences. Governor Ribicoff's success may convince his colleagues that safety on the highways is both good sense and sound politics.

Confusion at the Docks

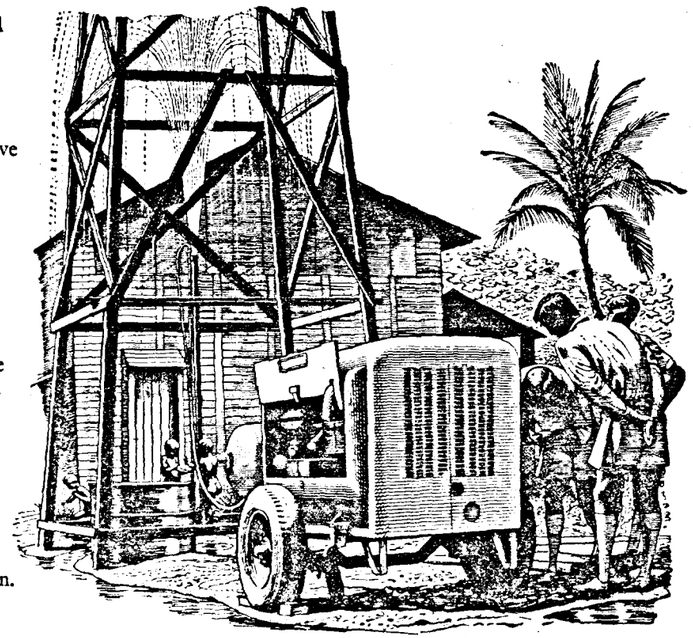
THE confusing struggle between the rival trade unions for the control of the dockers in New York and other east and Gulf coast ports has reached a crucial stage. The International Longshoremen's Association is at present entrenched on the New York waterfront. It was thrown out of the American Federation of Labour in 1953 on the grounds that it had failed to cleanse itself of gangster control. The insurgent union is the International Brotherhood of Longshoremen, which is supported by the AFL-CIO, and narrowly lost to the ILA in two previous elections to represent the New York dockers. The ILA is supported by the powerful International Brotherhood of Teamsters, which controls the road transport workers servicing many of New York's piers but the IBL can rely on the support not only of the AFL-CIO, but also of the Seafarers' International Union, which has just donated $250,000 to the cause, and of one of the local branches of the Teamsters' union.

The two groups tried to settle their jurisdictional dispute by negotiation. The IBL threatened that if the ILA would not accept its terms it would petition the National Labour Relations Board for another representational election on the waterfront. On the other hand, if the longshoremen could come to some *modus vivendi* with their rivals, the AFL union would do its best to secure their return to the AFL-CIO fold. The ILA is, in any case, particularly embarrassed by the jurisdictional dispute because it has just opened negotiations with the New York employers for a new wage contract to replace the existing one which expires in six weeks' time. These negotiations have broken down because the employers quite understandably refused to conclude a "national" agreement covering other east and Gulf coast ports where the New York employers have no responsibility. Both sides also appeal to the solidarity of the east coast dockers to oppose any infiltration by the west coast union led by Mr Bridges. But neither threats nor inducements prevailed. The negotiations broke down; the IBL petitioned the government for new waterfront elections, and is now sticking to its guns. In retaliation, the longshoremen have threatened to refuse to work any ships under contract with the IBL's supporters, and the New York waterfront seems destined for another period of strife. The losers, as always, will be shipping lines and the individual dockers.

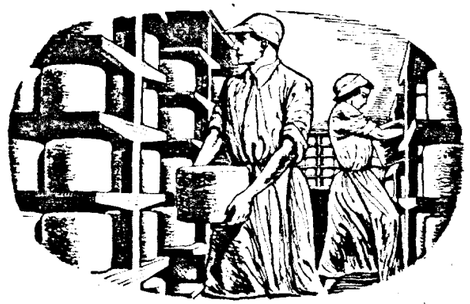


Burma fights disease with clean water

Wiping out typhoid, dysentery and cholera epidemics caused through water taken from disease-ridden rivers is a major aim of Burma's three-year public health plan. To give remote jungle villages a plentiful supply of fresh, uncontaminated drinking water, Burma is drilling as many as 6,000 deep wells. Nearly six hundred of these wells have now been drilled. And it is compressed air that is bringing the water gushing upwards. A number of Atlas Copco portable air compressors are touring Burmese villages pumping newly-bored wells until completely clear water is raised to the surface; water that is aiding the health of a nation.



Solving a pressing problem



Compressed air is versatile. Atlas Copco provide the means for all its many applications—from fighting disease in Burma to operating pneumatic cheese presses in dairies. These are driven by Atlas Copco air compressors which have helped to create a method of pressing cheese that is smoother, faster and more precise than with the old hand-operated machines. The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1.

Atlas Copco puts compressed air to work for the world

The World Overseas

The Orphan of Asia

FROM OUR TOKYO CORRESPONDENT

AN American who first visited Tokyo in 1945, after the débâcle, recalls that he rode over from Yokohama in a jeep, and that after hours of wandering among smashed and flattened buildings, he found only one store, and all it had to sell were some very old copies of *Time* magazine He bought one and jeeped back to Yokohama, filled with melancholy reflections. Eleven years of prodigious effort have healed all Tokyo's physical war scars. Almost every street blooms with giant bouquets tied to tall bamboo poles, to mark the completion and formal opening of a new building. And still new buildings are fast taking shape, amid a hellish clang of hammers and pile-drivers that drowns the constant hooting of the city's thousands of suicidally driven taxis.

Yet the Japanese complain bitterly that their country is still "the orphan of Asia," fighting what many gloomily suspect to be a losing battle with harsh economic facts. There is confusion as well as pessimism in high circles. While the Ministry of Finance valiantly pretends that dollar earnings from American military orders are not going to fall, or not heavily, the Ministry of International Trade forecasts just the opposite; and even the Finance Ministry admits that the special procurement orders are only a "temporary and unreliable source" of the foreign currency Japan desperately needs. Threatened by inflation and unbalanced trade, the Japanese see the South-East Asian countries demanding Japanese reparations but opposing the entry of Japanese goods and Japanese capital; and they note an equal reluctance to buy Japanese goods, on the part of those very Western countries which most heartily urge Japan to solve its problem by becoming "the Manhattan of the Orient." In these circumstances, it is perhaps not surprising that the Japanese tend to look back with increasing nostalgia to the good old days of the lucrative China trade, and to wonder if China, despite Communism, is not still a good bet for them, both as market for their goods and supplier of raw materials. A would-be Manhattan, Oriental or Occidental, still needs a mainland.

These thoughts have just been crystallised in an important signed article in the *Oriental Economist*, by Japan's energetic Minister of International Trade, Mr Tanzan Ishibashi. After stoutly contending that Japan's prewar investments in China, though regrettably tinged by imperialism, were nevertheless "by no means unprofitable to China and her masses," Mr Ishibashi takes the bull by the horns and declares:

> The Japanese Government is about to take the initiative . . . for the early conclusion of a trade agreement with Peking. [If the West does not like this, the West itself is to blame.] Japan has been endeavouring to tighten economic relations with South-East Asian regions other than Communist China, with Central and South America and with the Middle and Near East, so that they may develop into dependable suppliers of raw materials to Japan and promising markets for Japanese exports. The result so far, however, has not been satisfactory enough to induce the Japanese to give up Communist China. Worse still, despite Japan's accession to Gatt, more Western European countries are apparently trying to discriminate against Japanese goods. . . . Boycotts against Japanese articles have also become somewhat rampant even in the United States . . . [These developments] have driven the Japanese Government into a very embarrassing position.

In this article, Mr Ishibashi merely dots the i's and crosses the t's of an argument that more and more Japanese businessmen are coming to accept. They see other nations relaxing restrictions on trade with China, and have no intention of being left out of the race for the market which Japan itself once almost succeeded in dominating. At present, the United States buys £160 million worth of Japanese goods compared with China's figure of a little over £10 million. The large Japanese firms certainly do not wish to imperil their trade with the United States for the sake of a bird in the Chinese bush, however potentially plump. But, even if the West's strategic restrictions cannot be removed—and Mr Ishibashi affirms that the Japanese government is "working hard" for their removal or alleviation—they can probably be got round somehow; a firm already doing business with the United States might also trade with China through a nominally independent subsidiary without too much risk from the Battle Act.

Even with the existing restrictions on trade with Communist China, Japan's adverse balance with that country has this year, for the first time, been slowly changing into a favourable one (and thus comparing sadly with the balances with other areas, which seem to be worsening). With the restrictions removed or got round, the Japanese believe they could sell to China large quantities of ships, railway equipment, electrical equipment, and structural steel. From China, Japan would hope to receive iron and coal, at much lower prices than it now has to pay for American coal and iron, because of the freight charges. To make Chinese mouths water, Japan already plans to exhibit "restricted" items at the Japanese trade fairs to

be held in Peking and Shanghai next October and December.

Like other would-be traders with China, the Japanese are by no means unconscious either of the political implications, or of the strong possibility that, after all the kind words and exchanges of goodwill assurances and trade and "cultural" missions, the actual extent of trade that the Chinese will be prepared to undertake may prove disappointingly meagre. After all, three China-Japan trade agreements have already been signed, without Japanese government participation; each visualised a £30 million trade maximum (one way) which has so far come nowhere near fulfilment. The strategic restrictions may not be altogether to blame for this shortfall. That, no doubt, is why Mr Ishibashi, in his article, first stressed that "under no circumstances" would larger trade with China signify any Japanese alignment, "politically, ideologically, or otherwise, towards the Communist *bloc*," and then delicately hinted: "Economic relations are always transitional. If economic ties strong enough to support the existence of Japan could be formulated with countries other than Communist China, Japan might not necessarily stick to the Communist China area."

In short, it is primarily their feeling of being the "orphans of Asia" that is at present impelling the Japanese towards China. This despairing feeling is heightened, not diminished, by Japan's dismal knowledge that China, and Russia, are more likely to turn out to be nutcrackers rather than friends. Japan is not, at this stage, simply trying to blackmail the West into offering it better economic terms. It is trying to say that the temptation of even an illusory escape from its present economic squeeze may prove irresistible if no one else is prepared to give it room to breathe.

Uganda After Cohen

FROM A CORRESPONDENT IN UGANDA

SIR FREDERICK CRAWFORD, who has just been appointed Governor of Uganda in place of Sir Andrew Cohen, will have to show considerable resource, patience, and, above all, goodwill if he is to make a success of his new appointment. All that Uganda knows of him is that he comes by way of Kenya—and Deputy Governor of Kenya at that. This has inevitably created an atmosphere of mistrust that springs from the fear that he has the "Kenya approach." There is, of course, a very small minority in Uganda which believes that what is needed is "firm government" and that a man with Sir Frederick's experience is therefore a very good choice for Governor.

In this, curiously, they may find themselves allied to the ruling faction of the Uganda National Congress. These Uganda politicians had come to realise that Sir Andrew Cohen—who could be talked to and reasoned with—was a bad thing for Congress. Sir Andrew had succeeded in assuring everybody of his sincerity in pursuing self-government—on behalf of Her Majesty's Government—in as rapid a manner as possible without loss of dignity. It was difficult for Congress to pick a quarrel with Sir Andrew. To do so meant being landed with the onus of making practical proposals in greater detail than it wished to consider. A new Governor is just what it wants. Be he the most sweetly reasonable being, if he be unknown, Congress can make an enemy of him. If he comes from Kenya, Congress will make a diabolical enemy of him. At last there is a chance to go one better than the Governor. Shortly it will be possible to ask for self-government *yesterday*. If this should happen, and the present peace is broken by large and noisy meetings, then it will be most tragic.

There was a good case for Sir Andrew being asked to stay on. The Baganda have now come to think of him as the man who restored the Kabaka rather than the man who exiled him. The Representative Members of the Legislative Council were planning to show their support for an extension of Sir Andrew's tour of duty by sending a delegation to London. Letters in the press have been overwhelmingly in favour of an extension. In fact the feeling in favour of his staying has surely been quite exceptional and, because of it, there was every chance that he would have been able to carry the country forward to self-government rather than be forced to let it rush him precipitately towards an unsatisfactory, undignified and incomplete achievement of that goal.

We have yet to see what Sir Frederick will make of the situation. What is certain is that he is in no position to indulge in "firm government." Such an approach would be disastrous, and it would certainly not slow down the pace of events. Sir Frederick has a reputation of competence in economic matters. This will be a great asset, for the maintenance of prosperity would do much for the maintenance of sanity.

Investing in the Desert

FROM OUR PARIS CORRESPONDENT

TWO days before the French Assembly adjourned, when Suez and inflation held the stage, the government quietly introduced a bill dealing with another great issue—the Sahara's integration with the modern world. The bill, which M. Mollet wants debated in October, sets up a special Economic Organisation for the Sahara which would develop the desert's industrial potential; it would be under a director-general immediately responsible to the Prime Minister.

The bill comes at a difficult time. The Suez crisis casts doubts on the future of investment in Islamic areas; as long as the Algerian rebellion smoulders on, no Saharan dispensation can seem definite, for nearly half the desert belongs to Algeria and the government's bill confirms the title deed. But in Africa there is no oil industry to seize; on the contrary there is probably one to be created—but not without foreign help. This difference from the Middle Eastern situation is reflected in the care the Moroccan and Tunisian premiers have taken not to quarrel with France over Suez and in the fact that the leading French African politician, M. Houphouet-Boigny, of the Ivory Coast, is the minister in the Mollet government who drafted the bill. The government itself would like to see the Sahara as the "functional" federator of the whole area, fed with mostly European capital under French administration. It may seem late in the day for such an ambition. But given

French energy and realism by nationalists, French and African, it might effectively create the kind of co-operation the West must devise with former colonies.

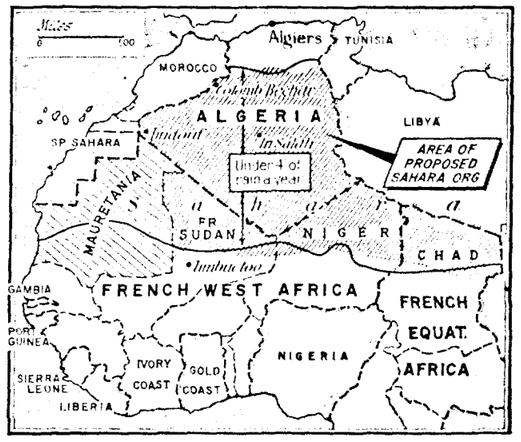
Four years of intensive geological research have shown that the Sahara may rival Canada as a source of raw materials. They have revealed iron ore in the western Sahara, at Tindouf especially, on the scale of Lorraine and of almost Swedish quality. Copper has been found in Mauretania, and elsewhere more modest deposits of zinc, lead, tungsten and manganese. Coal has been mined at Colomb-Bechar since before the war. The star turn promises to be oil. "There is the smell of oil in the Sahara," the experts say, though even two interesting strikes near the Libyan border which gave a promising gush have not rushed them into taking their hunches for fact. Rich natural gas deposits have been found in Algeria proper, and near In-Salah, in the central Sahara. There are vast areas still to be explored.

It has always been clear that the Sahara, like northern Canada, must produce on the grand scale, using intensive methods, sparing of men but lavish with machines. There is no question of populating the Sahara with industrial cities. Research itself has been carried on largely by aerial photography. Raw materials in the Sahara lie hundreds of miles from the coastal peoples and ports and can move there only with their agreement; there is no railway beyond Colomb-Bechar. Power is as short as transport, though oil can be used today—if the pipe-lines are built—and atomic energy and perhaps solar energy tomorrow. M. Louis Armand, the brilliant and ubiquitous chairman of the African Industrial Bureau (one of many posts) recently told an illustrated weekly that, at Tindouf, for instance, it would be necessary to mine "five or ten million tons of ore a year, or nothing at all." The capital required for the Sahara will run to tens and perhaps hundreds of millions of pounds—more than strained French budgets can spare. The government hopes to attract foreign funds; there has been talk of Eurafrica, with Germany as an active partner. But large investors require large incentives and long-term guarantees, both economic in the form of aids to production and marketing, and political. Conversely, the French naturally wish to control operations which, in the terms of sale of raw materials to North Africa, for instance, will be highly political. A strong directing body is needed to co-ordinate development plans, float loans, grant concessions and negotiate economic conventions on a coherent pattern.

Side-Stepping the Traps

Coherence is precisely what the Sahara lacks. It was penetrated from the coast on all sides (so that Algeria stretches south almost to Timbuctoo) and is now the poor relation of five territories (Algeria, Mauretania, Sudan, Niger, and Chad). These territories belong to three economic units—Algeria, and French West and Equatorial Africa—with differing francs, customs duties, fiscal systems and mining legislation. The government's bill ends this confusion, roughly within the "Sahara belt," the line of less than four inches of rainfall a year: the economy of the desert is entrusted to a director-general with a directing committee nominated half by the government and half from a control committee, itself composed half of parliamentarians and half of representatives of the five territories.

In this way, the government hopes to side-step the first political traps of a complex situation. In France, many nationalists wanted the Sahara to be a separate political unit, to stress that it owed everything to French efforts. This was abandoned in order to avoid the impression that France was cutting its losses in Algeria and in order to maintain the links between the desert and the coastal populations it must supply. The economic approach, it is hoped, will avert other difficulties as well. Colomb-Bechar, which is the first, if modest, "combinat" of the Sahara, is in an area where the Algero-Moroccan frontier has never been clearly defined. Political separation would have raised the frontier question and added fuel to the flare of Si Allal el Fassi's claims for a Greater Morocco down to the Senegal river which he has reiterated only this week at the meeting of the Istiqlal national council in Rabat. The economic emphasis, on the contrary, reminds the Moroccans that they need capital, just as M. Lacoste's ceremonial laying of the foundation stone of the new Colomb-Bechar power-station was symbolic of French will to provide it. The Sultan



and his government, like M. Bourguiba, seem aware that industrial expansion is more important to their countries than more territory.

Can a Sahara economic organisation promise dividends? French success probably depends on three connected factors. The first is that France keeps control of the desert, which is facilitated by its sparse population and the fact that it belongs essentially to no one and to all Negroes and Arabs alike. The second is success in obtaining investment funds. This depends in part on an Algerian settlement which renews confidence in the security of the area; in part on the availability of capital, especially in Europe. Oil should not be a problem; and the steel industries of the Coal and Steel Community might be interested in Tindouf's ore. The third is the ability of the French to hand on the benefits of Saharan investment to the coastal populations. The experts believe, for instance, that oil and natural gas sold in North Africa at the local economic price and not at European parities as now, would greatly help the area to develop the industries which alone can solve its demographic problems. The French also seem keen to obtain Moroccan and Tunisian participation in the Saharan organisation. It is to be hoped they will persist in these liberal tendencies, for they start with the great advantage of being patently more interested in spending money in

West and North Africa than are other countries. Results in the Sahara cannot come overnight; when the organisation is set up, as hoped, in the winter, it will really be embarking on planning and further research. But the right start has been made by showing a sense of urgency and of the scale of the problems involved.

Shorter Hours for Swedes

FROM OUR SCANDINAVIAN CORRESPONDENT

SWEDEN is to introduce a 45-hour working week by January 1, 1960. This is the unanimous recommendation of the Commission on Shorter Hours which was appointed by the Swedish government two years ago, and published its 40,000-word report last month. The composition of the Commission, which included representatives of workers' and employers' organisations, and of the main political parties, lifts the report outside the field of political controversy, and virtually ensures adoption of its recommendations. The government will probably introduce the necessary legislation next year. Opinion tests have revealed that the proposed reform is popular; it is indeed understandable that there should be a shift of emphasis in trade union aims from higher pay to increased leisure. The reform is bound to have repercussions elsewhere in Scandinavia; indeed, in both Norway and Sweden, government-appointed commissions are now studying the same question.

At present, the statutory maximum number of hours worked in Swedish industry, commerce, transport and agriculture is 48. Most white-collar workers, however, work only 40 or 42 hours. Among other categories, less than 10 per cent have a working week of less than 48 hours. In industries which have experienced trading difficulties, notably textiles and leather, shorter hours have sometimes been dictated by economic necessity. Overtime will, in the future, be limited to the present legal maximum of 200 hours per year, except in special circumstances.

In order to avoid sharp falls in production, and dislocation of the economy, reduction of the working week to 45 hours will take place in three progressive stages. From January 1, 1958, maximum hours will be 47; in the next year 46; and from 1960 onwards 45. Within this statutory framework, workers' and employers' organisations will work out the most practical means of carrying out the reduction in individual industries. Most workers apparently favour working a five-day week of nine hours. But for the merchant marine and agriculture this has obvious difficulties. The report envisages that agricultural workers will work a 47-hour week at harvest time, and correspondingly shorter hours during the rest of the year. Workers in some industries may elect to work longer hours in winter, in order to enjoy increased leisure during the brief summer months.

After 1960, Swedish workers may look forward to between 120 and 130 free days each year, counting Saturdays, Sundays and public holidays. They already enjoy a statutory 3-weeks' holiday with pay. The effective working year will thus be reduced to under 8 months. The ultimate objective of the Swedish labour movement remains the adoption of a 40-hour week. The introduction of the present reform without reducing pay packets will, it is estimated, cost Sweden the equivalent of a 6 per cent general wage increase. This seems acceptable, provided that unions exercise restraint in presenting future wage claims, and that the anticipated annual productivity increase of 3 per cent in maintained.

Nevertheless, the scheme's sponsors realise that it carries the risk of further inflation, leading to renewed balance of payments difficulties. There are, however, encouraging signs of a return to more normal conditions in the Swedish labour market, after years of "over-employment," which has led to an upward "wages drift" outside negotiated agreements. Indeed, in the past decade industrial wages of male workers have increased by 139 per cent. Their standard of living, now the highest in Europe, has thus improved by 60 per cent. White-collar workers' salaries have lagged somewhat, but they enjoy greater leisure.

With a general election due in September, the timing of the Commission's report is significant. The restrictive policies of the Social Democrat-dominated government may have lost it some adherents; and although the main parties support the 45-hour week, the government doubtless hopes to hog the credit. The caution of the Swedish Press shows that no one is anxious to cast the first stone. The next Swedish government may have to consider adopting less rigid economic and fiscal policies, since the scheme can only succeed in a prosperous, expanding economy.

South African Printers Under Fire

BY A CORRESPONDENT

THE South African Board of Trade and Industries has recently carried out an investigation of 512 firms in the printing and packaging industry. Its conclusions should give food for thought to the printing industry in Britain, where the Court of Inquiry into the strike of compositors and readers last spring recommended that the unions should co-operate in setting up two-tier central machinery to negotiate wages with the employers' organisations.

In South Africa all unions in the printing and packaging industry are members of the South African Typographical Union, which negotiates with the local Federation of Master Printers and the Newspaper Proprietors' Association. High natural protection, a tariff of 30 per cent on printed matter and the statutory closed shop (which is standard in South Africa) have enabled the union to exact from the industry, and the industry from a defenceless consumer, conditions of employment which the board considers to be unjustified in relation either to comparable occupations in South Africa, or to printing productivity in other countries, particularly Holland and the United States. As a result, the board has recommended not only a reduction of the tariff, but also the establishment of separate industrial councils for the packaging and stationery manufacturing sections of the industry.

The board castigates the restrictive outlook of the local typographical union, whose quite remarkable "working rules" have been published in full. It condemns the restrictions on the intake of apprentices which became so severe that a breakdown was averted only by importing qualified printers from Britain and Europe. It refers to "a maze of formal and informal restrictive practices which appear to have been specifically designed to nullify any attempt on the part of management to relate the reward of the individual employee to his productivity," and it criticises the payment of high premium wages "to the efficient and inefficient alike." From this the board concluded that the whole basis of cost and competition is largely artificial.

Management in the industry has not escaped criticism either. The evidence given to the board disclosed the same wide variation in managerial competence which similar detailed surveys have revealed in Britain. The board found that little attention was paid to modern systems of production control and that "few firms had any precise knowledge of the variation in profitability of different processes or departments, of the incidence of short runs on costs, or of the true cost of idle capacity." It also disapproves, for a variety of reasons, of the costing system of the British Federation of Master Printers which the local federation recommends its members to adopt.

The majority report recommends that the tariff be reduced from 30 to 25 per cent. It concludes with some force that while the tariff can be used to protect real wages in one industry, this can be generally achieved only by a reduction of the real wages in others, and that even this possibility is reduced in proportion to the number of industries already enjoying protection. A country cannot lift itself up by its tariff boot straps. All this should be recommended reading for protectionists in all developing countries. Those who sit at the seat of tariff judgment are often inclined to sympathise too readily with the local producer whose case is usually well organised, at the expense of the local consumer.

In a minority report one member goes further; he urges a really drastic reduction of the duty, and blames the statutory closed shop for much of what has happened. Here is a strong argument against "restrictive conditions of employment and operation which . . . insulate both employers and employees, at the community's expense, from the operation of those economic and technical forces which make for change, progress and the reduction of costs." It is unfortunate, but not surprising, that the publication of this report in South Africa should have been greeted by a virtual conspiracy of silence on the part of the entire South African press.

NOTES FROM AUSTRALIA

(From our correspondent in Canberra)

The Prime Minister's Shoes

NO one knows how long Mr Menzies intends to keep Australia playing a guessing game about when he will resign as prime minister. But those of his senior ministers with any chance of the succession are holding themselves ready. There is, of course, no reason why anyone should think Mr Menzies may soon resign except his own habit of hinting that he would like to do so and the fact that he is already so far beyond the previous records of other prime ministers that the nation is inclined to feel that a change must come soon. But Mr Menzies's leadership remains unchallenged in his party and in the coalition; the Liberals have no clear ideas about a successor; and the most recent public opinion poll showed, surprisingly, that the supplementary budget medicines administered last March have not affected the patient's fondness for the practitioner. At least the poll suggested no stronger desire to call in Dr Evatt.

With the ballot for the deputy leadership of the Liberal party due in a month or two (Sir Eric Harrison resigns to go to London as High Commissioner when Mr Menzies returns) the prime minister will be able to watch the first skirmish for his crown within the Liberal party. Three of his senior ministers have indicated that they probably will take the field. They are Mr Holt, minister for labour and immigration, Mr Casey, minister for external affairs, and Sir Philip McBride, minister for defence. If either Mr Holt or Mr Casey should become deputy leader (and this is quite likely) the Liberal party will have shown who is the strongest Liberal candidate to be Mr Menzies' successor. A win for Sir Philip would not be of equal significance, since his name appears to have been put forward simply on the grounds that he would provide a congenial deputy leader capable of managing the House of Representatives. Mr McEwen, minister for trade, and deputy leader of the Country party, is also a potential successor to Mr Menzies if the Liberals should not like any of their own candidates well enough.

* * *

Labour Party in the Doldrums

FOR the Opposition the winter parliamentary recess has been a period of gloom with constant internal strife, appearing sporadically on the surface, and a comparative silence on national issues which has surprised an electorate accustomed to the often unpredictable forays of Dr Evatt. Some of Dr Evatt's enemies had hoped that the expulsion from the New South Wales Parliamentary Labour party of his brother, Mr Clive Evatt, QC, early in July, would have provoked the party's federal leader into an eruption and made his position untenable. None came. Dr Evatt did not contest, at least publicly, the sacred Labour rule that no member may vote against a party decision in a legislature, even on so local an issue as an increase in train fares. Mr Evatt, the party's *enfant terrible*, went.

There have, however, been some signs that Labour has begun to think seriously about a consistent and long-term internal policy. Since Mr Chifley's death in 1951 Labour policy in Australia has consisted mostly of opposition to any

of its opponents' measures that proved unpopular and of catchcries and slogans based on depression thinking, that veered from left to right and back again, depending on whose support the party leadership most needed at the time. The Hobart Federal Labour conference eighteen months ago did provide some sort of a foreign policy with a slant towards neutralism.

The New South Wales Labour party Executive—the recent expeller of Mr Evatt—has now suggested a conference of British Commonwealth Labour leaders in Australia at which, presumably, it would hope to pick up some ideas. Such a conference would have its uses since any policy suggestions put forward by Australian Labourites tend to be treated more on the basis of what faction put them forward, than for what they are intrinsically worth. When given the opportunity to think in an atmosphere clear of party fug Australian Labour has shown itself—as recently as the Chifley era—capable of some fine achievements.

★ ★ ★

Balance of Payments on the Mend

IN spite of increasing anxiety over internal inflation, the government is able to look on the balance of payments problem which was its biggest worry a few months ago with a less dismal eye. The last three months of the 1955-56 trade year (ending on June 30th) produced a heartening favourable trade balance ; the first of the new season's wool has maintained the firmer note evident in June prices ; the shearers' strike has been settled in most states, and some wool which would normally have been exported in the 1955-56 trade year will be shipped in the next few months, which are generally the Australian off-season for exports ; the season has begun well on the land ; and the restrictions on imports have produced results. All this does not mean that the Australian balance of payments problem is evaporating. With an economy so dependent for its health on good seasons and satisfactory export prices, Australia has hardly ever been free of this problem in one form or another. In 1950 the government was encouraging imports, and, as Mr Holt recently pointed out, only a few years ago Australia's overseas balances were embarrassingly high.

A good primary production season and a satisfactory wool price are the Commonwealth's best hopes for an early easing of import licensing. Sir Arthur Fadden has promised a "review" of the balance of payments position in August-September. Though that may be a little early for government action, the present trends, if they continue, could give Coventry a happier Christmas.

★ ★ ★

Argument Over Migrants

SHOULD Australia maintain its migration intake at the 1955-56 rate of 125,000 (about half of them assisted migrants) or is the cost in terms of inflation, the balance of payments, housing, and ultimately living standards and economic health, too high ? Within the Liberal party organisation, in the newspapers supporting the government, and in the two coalition parliamentary parties this question has been argued to a point where both sides have become exasperated with each other. Whatever the Federal Cabinet decides to do, it will displease some sections of its supporters.

Those who want a reduction (20 or 25 per cent is suggested) see the present intake as the gravest of the risks Australia is taking in the rapid expansion of its economy. Since every adult male migrant, and a number of adult females too, require a job and materials for a job, and since four-fifths of Australian imports are for industry, migration is undoubetdly increasing import demand. The "give us a breather" school argues that if a cut has to be made in imports, the presence of a large migrant population's demand for consumption goods might cause the cut to fall on raw material imports and thus hit production and employment. Moreover, since the capital needs of, and for, migrants increase the strain on the economy, it is claimed that the present high intake will lead to more controls and heavier taxation and thus tend to make Australia more socialist.

The opponents of a reduction say that even if much of all this were true Australia must rapidly increase its population to safeguard its external security. Sharp changes in policy would certainly rebound against Australia's credit in migrant countries and make migrants difficult to obtain. Industry does not gear its expansion to short-term policies, and a temporary reduction might have little effect on its demand for capital. It is also argued that since a larger proportion of migrants than of indigenous Australians are of working age, their production is an anti-inflationary factor that outweighs the effect of their consumption.

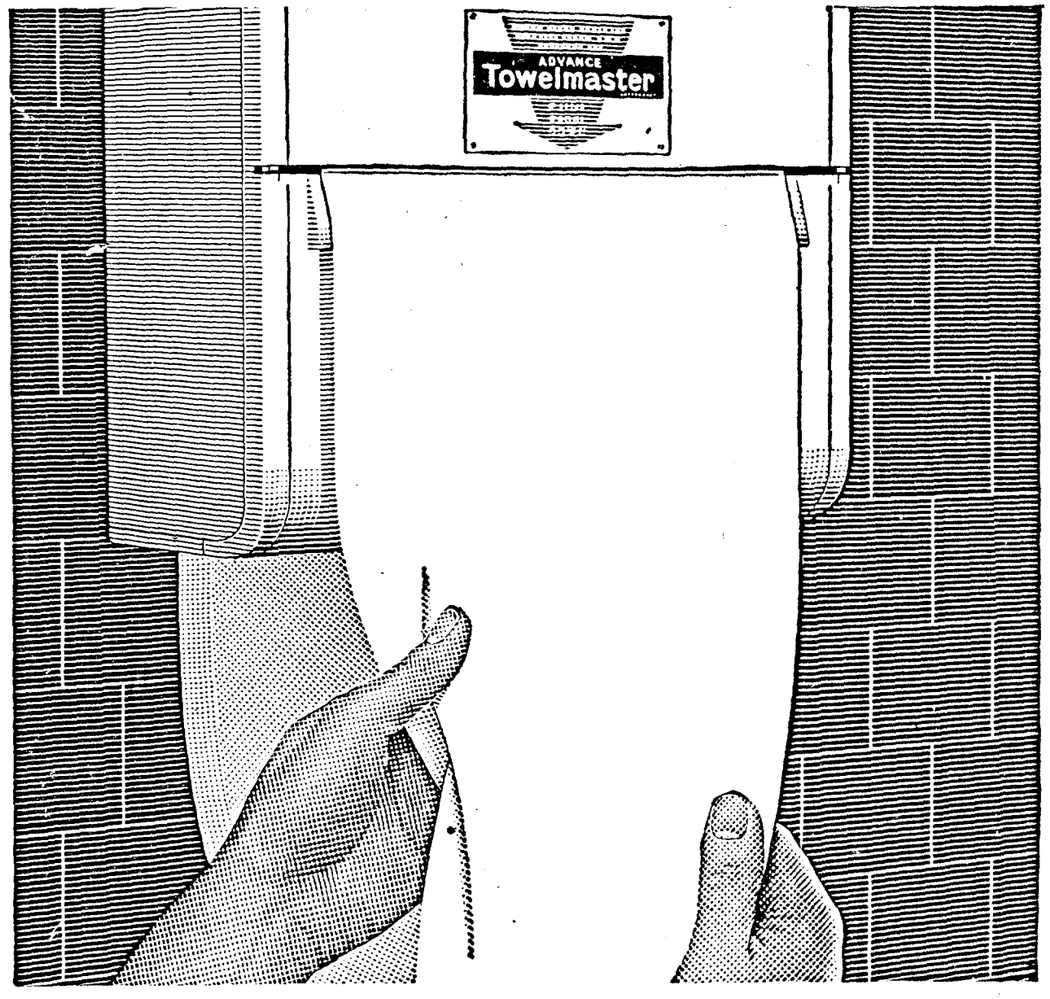
TV Comes to Australia

AUSTRALIA will see its first television in September, but Australians are not yet buying television sets at a rate which suggests that they have been dying for lack of it. Possibly the prices (most of the advertised models cost £A200 to £A280) are too much to pay before television has definitely arrived. The public has a feeling that the prices must come down, like the prices of radios in the 'thirties, "later on." The first really big television show will be the Olympics at the end of the year, and, as most Australians cannot resist watching any kind of sport, television should be well established by Christmas.

About 40 per cent of Australians will be within television range this year ; two commercials will operate in both Sydney and Melbourne and one national station in each, though no date has yet been announced for the beginning of regular national transmissions. Newspapers, radio and film companies control the commercial stations to the considerable disgust of the Labour party, which at first urged national television only. When the Commonwealth Parliament approved commercial television the party sought and was refused a licence. Finally, Labour advocated the promotion of television companies by the stock exchanges. The government refused.

Social workers and others who were cautious about the possible effects of television in homes have been satisfied by a strict set of standards laid down by the government. Australia's dual system of commercial and national broadcasting has proved a happy one and, politics apart, there seems no reason why Australian television should not give pleasure to those who want it or should corrupt the young any worse than elsewhere.



Only the Advance Towelmaster Service

ensures* a clean, dry towel for everyone every time

What a difference the Towelmaster Service makes. Instead of sad, sopping roller towels or overflowing paper bins you have this gleaming white cabinet, offering a length of clean, soft, dry towel to every user—at all times. Why, from the point of view of prestige alone, the Towelmaster is a fine investment. And the cost? Only 5/- for a roll 45 yards long—enough to dry 180 pairs of hands.

There is no capital outlay. You can budget precisely for the year ahead. A minimum of two cabinets is installed and maintained free of charge. All you pay is 5/- for each roll of towelling used. Minimum usage is one roll per cabinet per week.

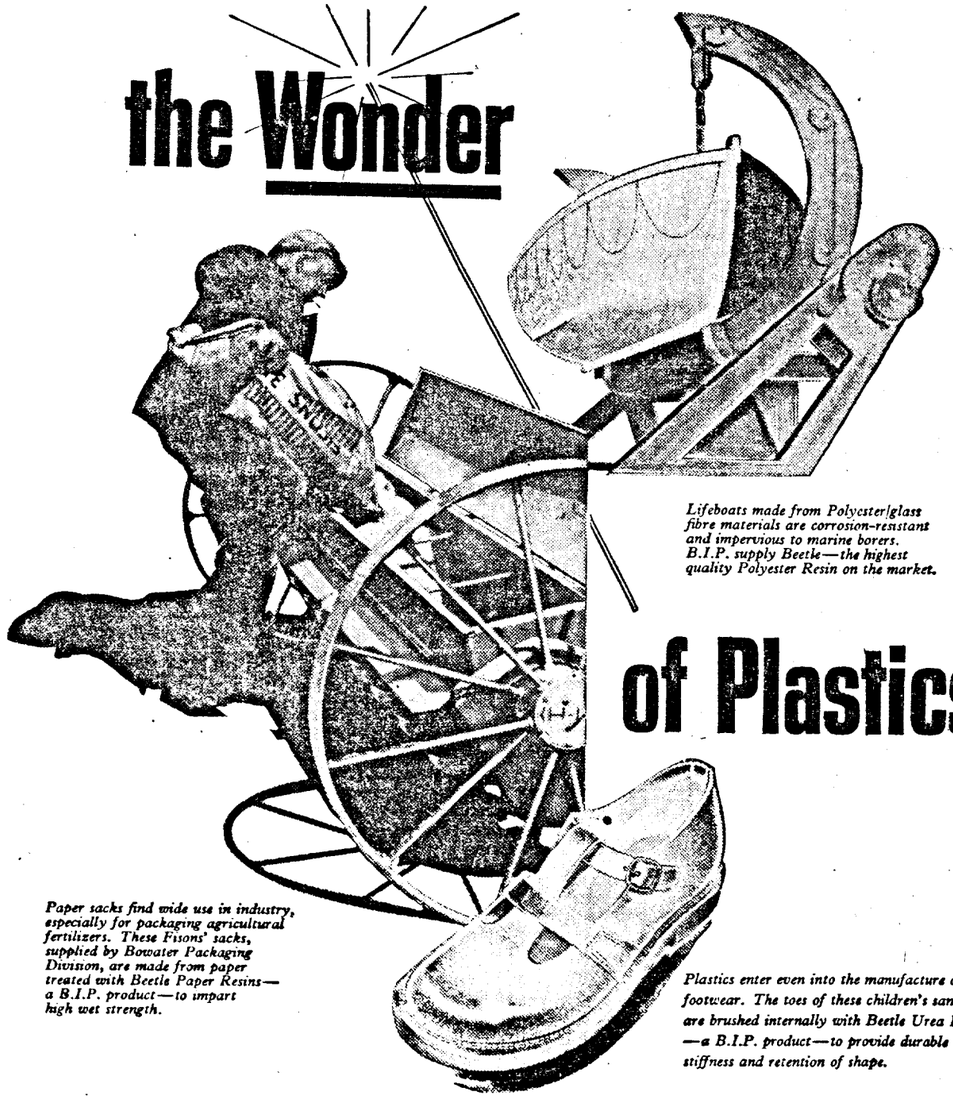
And the Towelmaster is as efficient as it looks. Pull gently and down comes a length of snowy-white towel, sufficient for a really good dry. The used lengths automatically roll themselves back into the cabinet out of sight (into a separate compartment, of course).

Towelmaster

The people to contact are: Advance Linen Services Ltd. (Dept. A7), Stratton House, Piccadilly, London W.1. Telephone: Mayfair 8886

* *We collect and deliver every week; you always have a spare roll in reserve for each cabinet.*

the Wonder of Plastics



Lifeboats made from Polyester/glass fibre materials are corrosion-resistant and impervious to marine borers. B.I.P. supply Beetle—the highest quality Polyester Resin on the market.

Paper sacks find wide use in industry, especially for packaging agricultural fertilizers. These Fisons' sacks, supplied by Bowater Packaging Division, are made from paper treated with Beetle Paper Resins—a B.I.P. product—to impart high wet strength.

Plastics enter even into the manufacture of footwear. The toes of these children's sandals are brushed internally with Beetle Urea Resin—a B.I.P. product—to provide durable stiffness and retention of shape.

In sacks and shipping, in fashions and footwear, plastics today play their part. Their role may be contributory, it may be fundamental, but the wonder of plastics is in their versatility, their infinite possibilities. Types and grades are innumerable, each with its own properties—and limitations—presenting a wide field of choice to the intending user. The leading plastics materials manufacturers maintain extensive consultative and development services, and none is better qualified to advise and assist than B.I.P.

B.I.P. *Services*

The full resources of the B.I.P. Research, Technical Development and Design services are at the disposal of manufacturers interested in the possibilities of plastics. Advice will gladly be given on any problem concerning plastics applications, irrespective of the type of material involved.

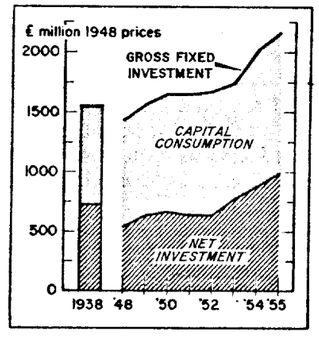
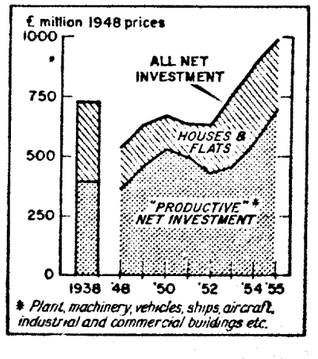
THE BUSINESS WORLD

Britain's Capital Gains

IT has long been the stock wisecrack about the annual Blue Book on National Income and Expenditure that the one figure not to be found inside its covers was any estimate of the national income; but not any more. The paradox hinged on this: that in aggregating the value of the goods and services Britain produced and earned from abroad in any one year, the gross national product, the Central Statistical Office was not prepared to estimate how much of these resources the country ought to be setting aside in that year to make good the wear, tear and obsolescence of its stock of fixed capital—buildings, plant and machinery, vehicles and ships. The ultimate aggregate, until 1955, thus amounted to national income, plus depreciation—but nobody knew how much depreciation. Early last year one of the CSO's staff, Mr Philip Redfern, presented to the Royal Statistical Society a first estimate* of how much depreciation Britain really ought to be allowing. And in this year's Blue Book† the CSO has committed itself to his way of doing this and, with slight revisions, to his answers—which thus introduce a new section on "Capital Consumption" and, suitably on very nearly the last page of the book, a fairly unambiguous figure for Britain's national income.

What really matters in these new tables, however, is that for the first time there exists an official estimate, however wreathed in provisos, of what Britain ought to be setting aside every year merely to maintain the value of its fixed productive assets—and hence, how much of the gross investment put into new buildings and equipment each year can be counted as net investment, a net addition to the value of these fixed assets. Of necessity such a calculation requires the use of some arbitrary formula: there is no direct way of measuring the amount of capital resources "used up" in current production. The formula that the CSO has adopted follows the conventions of ordinary accountancy.





Accounting conventions assume that the usefulness of any fixed asset is spread in some arbitrary way over a predetermined life, and that depreciation should be provided from its current earnings during that life to replace it at the end of the period. In this estimate of depreciation of the nation's fixed capital, the CSO has used the "straight line" method, in which the asset is assumed to depreciate by a constant amount each year (e.g., one-tenth of its value if the life is ten years). But it has not been content with the practice of most accountants and the Inland Revenue of simply depreciating the original cost of the asset, regardless of what it would cost now because of inflation since it was bought. For national income accounting it is essential to put a figure on capital used up in producing a year's output based on what the capital would cost at the prices current in that year. This is the replacement cost principle, and it is put into practice in these new estimates of net investment by calculating

* "Net Investment in Fixed Assets in the United Kingdom, 1938-53." Journal of the Royal Statistical Society. Series A (General), Volume 118, Part 2, 1955.

† "National Income and Expenditure, 1956." HMSO, 6s.

from the written-down value of assets after making adjustments for price changes.

This has been a formidable exercise. The assets for which it has been done exclude consumer durables, such as private motor cars, but include houses and buildings owned by private persons along with the fixed assets of business and "social fixed capital" such as schools and hospitals; they exclude also investments in Britain financed from abroad and British investments overseas. The lives assumed have been 10 years for road vehicles, 25 years for tankers and 30 years for other ships; 50 years for industrial buildings, 75 years for offices and shops, and 100 years for houses; and for the vast variety of plant and machinery, the working lives implicit in the standard depreciation allowances for income tax. No allowance has been made for "capital consumption" of land (site values) or roads (current expenditure on "new construction and major improvements" of roads is regarded as net investment). Nor has any allowance been made for depletion of mineral resources such as coal.

Obviously a good deal hinges on the accuracy of the price indices and of the estimates of capital investment in past years—both of which have had to be taken back as far beyond 1938, the earliest year for which the Blue Book provides estimates, as the depreciation life of the particular assets in question require. The price indices, applied to such estimates of gross investment in these assets, give estimates of gross investment at constant 1948 prices over the years, which can then be written down on the straight line basis to yield a figure of "total capital consumption" at constant 1948 prices. The price indices have then been used to convert these figures of capital consumption back to current prices—yielding from the existing estimates of gross national product and gross fixed capital formation the final figures of net national income and net fixed investment.

Some of the answers to these laborious calculations are set out in the accompanying tables and charts.

"REAL" INVESTMENT

(Net Domestic Fixed Capital Formation at 1948 Prices; £ million)

Type of Asset	1938	1948	Average 1948–1955	1955
Vehicles, ships and aircraft ..	46	132	81	80
Plant and machinery.....	134	184	254	338
Dwellings	332	167	216	291
Other buildings and works..	212	48	165	283
Total*.....	724	531	716	992

* Includes legal fees, stamp duties, etc., less destruction of building.

They are, as Mr Redfern's original estimates were, rather more reassuring than certain lugubrious guesses hazarded a few years ago that since the war Britain might have been consuming its own substance. On the other hand, they offer no welcome revelations that we have been doing a great deal better in building up capital than was thought. By this measure, there has been no "net disinvestment" in any year since the war; Britain has always invested in new fixed capital more than the values of the existing capital might be deemed to have shrunk during that year. On the other hand, it was not until 1953 that the amount of net investment, in real terms, exceeded the addition to capital stock made in 1938—when national fixed capital was probably significantly smaller. Since 1953 net investment, in real terms as well as in terms of inflated pounds, has risen sharply.

Some comfort, however, can be drawn from the evidence that more of Britain's net investment is now going into productive capital. In 1938 nearly half of Britain's net investment, after providing for depreciation, went into flats and houses; in spite of housing programmes since the war, in no post-war year has such a proportion for housing been reached, though in 1953 and 1954, the years of the Conservative housing boom, it exceeded a third of Britain's additions to net capital. In 1948 net investment in plant and machinery was already 37 per cent above the 1938 level; by 1955 it had reached two-and-a-half times as much, allowing for price changes. As a proportion of national income, net fixed investment appears to have been 6 per cent in 1938 and the same from 1948 to 1952; but it reached about 8½ per cent of national income last year.

National Income and Net Fixed Capital Formation

	1938	1948	1949	1950	1951	1952	1953	1954	1955

The Central Statistical Office is still extremely reluctant to follow Mr Redfern in publishing some of the by-product calculations that arise implicitly from the formula both have adopted; in particular, into putting a figure on the value of Britain's total stock of fixed capital, and seeing how this has changed over the years. Their reluctance arises partly from emphasis on the limitations of this formula, which is, certainly, only one of the possible ways of arriving at such a valuation.

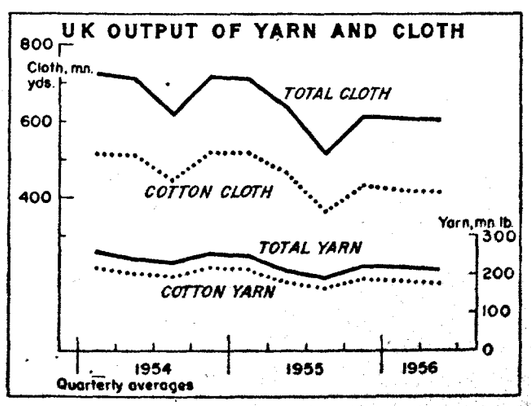
The method adopted in the Blue Book indeed, rests upon only one of the possible concepts statisticians could produce for net investment; and it may involve particular hazards in thinking about the physical quantity of capital assets in the country, Britain's "capacity" as it were. A new machine replacing one that is identical but worn out will appear as net investment because it has a longer productive life before it than the old; so that in periods of physical replacement of machines on a large scale, as in certain years just after the war, the rise in productive capacity may have been smaller than figures of "net investment" would suggest. In practice, however, the new machine seldom is identical with the old; its productive capacity is usually higher, which cannot be fully allowed for in these calculations. Moreover, in periods of very high demand, when plant tends to be used for production as long as it will run, figures of net investment calculated on strict depreciation lives may under-estimate the amount of productive capacity that is actually retained in use.

These figures, inevitably, will be used in nice international comparisons of the amount of current production that each country in Europe or the world is prepared to set aside for expansion. That is perfectly legitimate, provided it is borne in mind that other countries' definitions of net investment—and indeed in some cases of what constitutes investment at all—vary somewhat from Britain's (some of the formulae are logically more attractive, few equally firmly worked out). These new figures, it is clear, are regarded by the Central Statistical Office as a beginning—in particular there are hopes that more detailed figures by industries may eventually be on the (punched) cards. This is part of the process of improving the data, not prejudging the conclusions. Any Bradshaw, as has been remarked before in these columns, is only as good as the man who is using it.

Hard Times in Cotton

INVESTORS in cotton textiles have had their full share of bad news this year. Lancashire is again in the throes of a recession that few companies have escaped. But even the least sanguine investor may have been shocked by the slump in the profits of Tootal Limited. This is a vertical concern which markets its own branded goods and does a big export trade, and has often been held up by Lancashire's critics as a shining example to the rest. In the past the company has carved out for itself a profitable market in medium-priced textiles of good design and quality. Hence it must have escaped the full brunt of competition from cheap Asian textiles in the home and overseas markets. And though it was bound to suffer from the tendency of buyers to hold off in anticipation of lower prices of raw cotton, its trade in rayon goods should have benefited from the steady price of that raw material.

Tootal's results, nevertheless, tell a gloomy tale. Group net profits in the year ending on June 30th fell by £155,000 to £183,000, after providing only £217,000 for tax, compared with £520,000 last year. Thanks to a credit of £815,000 from overprovision for tax in previous years, the available net income, at £998,000, is £457,000 higher than before. Contingency reserve receives £500,000, against nil last year, and the general reserve £700,000, against £291,000. The dividend on the Ordinary and Employees' shares is reduced from 10 per cent to 7½ per cent less tax, absorbing £145,500 (£194,000) and the carry forward falls to £1,444,000 (£1,564,000). The decision to cut the dividend means that for the first time since the early 'thirties the workers do not receive a bonus. This bonus, payable when the dividend exceeds 7½ per cent, absorbed £75,684 (gross) last year. The cut in the dividend suggests that the company does not expect a quick revival in its fortunes.



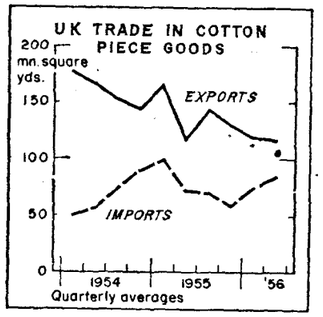
What went wrong? Investors must await the chairman's statement for a full explanation, but one conclusion is clear. A setback of those dimensions

could only have come from a loss of trade, as well as smaller margins, abroad. The company is heavily dependent on overseas trade; last year two-thirds of its total sales went abroad (compared with only about one-quarter for the industry as a whole), and in piece goods the proportion was over three-quarters. Sales must have suffered from the contraction of the Australian market, a major customer, and from the fierce competition from other European producers in South Africa and elsewhere.

Do Tootal's results, the first important cotton profits with an end-June accounting date, foreshadow more shocks for investors? The short-term answer is generally yes. Some companies have weathered the storm well—and a few, including Simpson and Godlee, the merchant converters, have actually increased their profits—but the outlook is not bright. A number of companies should benefit from the triangular trade deals that have been arranged with Pakistan, Indonesia and Burma, but there is no general revival in export business. Trade in the home market remains fairly steady, but margins are narrowed, and companies in the cheap end of the trade especially are feeling the impact of imports of cheap grey cloth from India and Hong Kong—lately supplemented by increasing imports of made-up goods, particularly shirts and towels. And the lack of confidence in raw cotton prices continues.

The United States is exporting its surplus cotton at prices that are far below the domestic price. The Administration plainly hopes to maintain its export prices at a minimum of about 25½ per cent a lb for 1⅛ inch staple, but Congress has directed it to accept lower prices if need be. Mexican cotton, for instance, is now being offered at a discount on the American price, and no one can be sure that other producers will not follow suit when their crops come on to the market. Buyers of raw cotton and cotton textiles are thus tempted to continue buying from hand to mouth, just in case the United States felt obliged to follow the market down.

Business in Lancashire has been slack since the spring. Production of cotton yarn and waste in the second quarter was over four per cent lower than in the previous quarter of this year, and slightly lower than in the second quarter of last year. Production of spun rayon and mixture yarn, however, was higher than in the previous quarter, and also higher than in the second quarter of last year. Production of cotton cloth in the second quarter fell slightly below the first quarter's level, and it was over 10 per cent below the second quarter of last year. Production of rayon and mixture fabrics, again, was higher than in the previous quarter and the second quarter of last year. That contrast between cotton and rayon owes something to the attraction of a steady price for rayon staple.



The labour force has naturally fallen with output. By the end of June spinning and weaving employees numbered only 247,900, nearly 40,000 fewer than at the beginning of last year; both sections of the industry lost rather more than 19,000 workers, bringing the labour force in spinning down to 126,420 and in weaving to 121,480. In cotton, the scale of "redundancy," as it is now fashionable to call it, has been far greater than in the motor industry, yet it has occurred without strife or strikes. Many of the married women thrown out of work have stayed at home; older male workers have often been unable to find work, but younger men and women have found jobs in engineering and in other industries that have so greatly lessened the dependence of the north-west on textiles. Though there are many cases of real hardship in certain cotton towns, the number of registered vacancies in the industry still exceeds the number of unemployed.

As old mills are being closed down, or bought up, production is being concentrated among fewer firms, and machinery is being used more intensively. Competition is forcing employers and unions to revise their ideas about shift work. The weaving unions, who accepted double shifts on automatic looms years ago, recently agreed to the introduction of three shifts, so that some weaving firms are already working their machinery round the clock. The spinning employers have for many months been in negotiation with the unions on working conditions, the extension of two shift work being one of the objectives.

Some firms are extending the range of their products. Others are turning to new products, some of them even outside the textile field; recently a firm of weavers in Lancashire took over a clothing concern, and one of the big spinners took over a towel manufacturer. There is no tidy pattern of change, though in general the bigger firms tend to absorb the smaller, and the structure of the industry is tending to become more vertical. Big spinning combines have bought spinning mills, but they have also bought weaving and merchanting firms. Some of the large merchanting and weaving concerns have taken over both merchants and weavers, and English Sewing Cotton has taken over both spinning and weaving concerns. Where the integrations are "vertical," they have more often been forward, towards the customer, than backwards towards the raw material as they might have been if supply had been the problem. Old hands will not forget that in a previous slump Tootal took the lead in going direct to retailers and that much of the company's strength in recent years dates from that bold move.

In one—rather ironic—sense, the industry is now technically strong. While order books are low, so are stocks; and yarn prices are now in line with prices of cheap American cotton. A revival of business should quickly lead to increased output. Such a revival could perhaps come in the next month or two, when buyers for the home trade place orders for the spring. But will recovery, if it comes, peter out, as it did this year, or will it be maintained? The investor would be wise to look farther ahead. Investment in cotton textiles has always required discrimination, and that is even more necessary today. Though the industry as a whole is contracting, there will always be room for the progressive firm, and Lancashire has not a few. The yields offered on their shares are high, as they must be, for the risks in this trade are high.

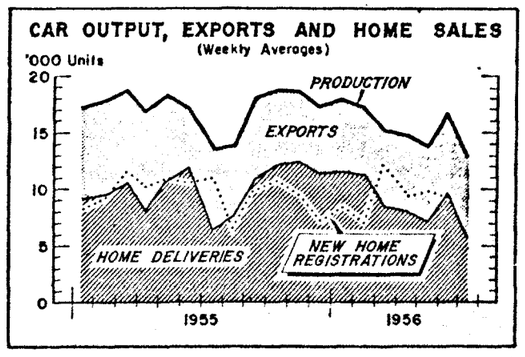
Business Notes

Seasonal Dip for Motors?

STRIKES over redundancy may now be past for the British motor industry; redundancy is not. Last week Vauxhall announced that it will be laying off about 1,100 of its 16,000 workers during the current fortnight, and working four- and five-day weeks alternately; Daimler announced dismissals and abandoned the last remaining Lanchester model; and among the industry's suppliers, Wolverhampton Die Casting dismissed men and Garrington's, the country's biggest drop-forging concern, went on a four-day week. In British Motor Corporation factories many departments are working four days a week, some three, though production of its sports cars is still going full time. Standard are still working a four-day week. Ford are working full time and have laid off no men, though total output is no higher than a year ago: Rootes say that they are working full time and increasing output of certain models such as the new Hillman Minx. But most managements in the industry are already resigned to a further significant fall in car output before the end of the year.

During the first seven months of 1956 car output in Britain was about 10 per cent lower than in the same months of 1955; registrations of new cars on the home market were down nearly as much, and exports down rather more, by about 12½ per cent. But compared with the peak of the motor boom at the end of last year, when the industry was turning out nearly 19,000 cars a week, the current rate of production is down by more than 20 per cent. Exports have picked up since their nadir early this year—in July, as in June, they were higher this year than last. But the industry has little hope that they can rise enough in the next few months to offset the seasonal slackening of home sales. This year, therefore, the high rate of output in the late autumn that has characterised motor output in most years since the war may well turn into a seasonal dip.



Capacity to Spare

THE summer peak of car buying is over; with some manufacturers such as Vauxhall already announcing that their basic models will undergo little more than titivating—plus a small price increase—motor dealers are none too hopeful of the usual revival of buying just after the Motor Show. Even in the postwar years of chronic car shortage, customers were reluctant to take delivery in the middle of the winter. And this year dealers are likely to be extra reluctant to carry large stocks. It would take a really powerful gust of optimism this autumn—which neither the Chancellor nor the industry's designers on present form seem likely to stimulate—for sales on the home market not to slip further.

Nor is there much prospect that exports can balance out the seasonally low home sales this winter. In certain years since the war there has been a tendency for exports to the Southern hemisphere to rise in the second half of the year, offsetting a decline in exports to overseas markets in the Northern hemisphere: the latest Australian restrictions are likely to rule that out. But exports as a whole, since 1952, have been markedly smaller in the second half of the year than in the first six months; it has been the fairly high rate of October registrations in Britain and the building of trade stocks to meet the yearly peak of demand just before Easter that has supported high output during the winter months.

Over the year, then, car output may well be 15 per cent down compared with last year. It has also to be compared with a capacity that must be significantly higher, for the major manufacturers, than it was last year; at the end of last year output was close on double the 1951 rate, and the industry's expansion plans postulated a further rise by about 50 per cent by 1960. The industry is probably running at a rate of output quite 25 per cent below what its facilities would now enable it to produce. Hence four- and three-day weeks. These are costly; they have been costly, on and off, for several months for some producers. In an industry that could guess confidently what seasonal pattern it was likely to settle down to in this new buyers' market for everybody, excess capacity, balancing of working hours at certain times of the year, and temporary lay-offs with payments to keep workers sweet might all have their part in production management. This industry, today, has no firm basis yet for any such confident guesses. It has been under-employing a significant proportion of its labour force for some months. Both its managements and its trade unions—which have recently shown themselves clear-headed enough in analysing its problems, though resolutely wrongheaded in suggesting what needs to be done about them—must be aware that more men will have to be sacked before the end of the year.

New Life in Markets

IF one of the objects of British financial policy now is to persuade the banks to buy gilt-edged stocks, it becomes essential that the outlook in the gilt-edged market should at least not be repellent. This week with a broadening volume of business and rising prices that condition seemed at last to be being fulfilled. In the first three days of the week the rise was substantial. The *Financial Times* Government securities index rose from 84.76 on Friday to 85.37 on Wednesday, 3½ per cent War Loan rising ⅞ to 72⅛. The buying was spread well down the list with some concentration on the medium dates. It was thought that some banks had nibbled, though their volume of buying was certainly not heavy. Some institutional money was coming into the market and private investors were at work. Some at least of the £167 million paid out the previous week in redemption of the unconverted portion of the 1954-56 National War Bonds came in for reinvestment. The Government broker was able to sell comfortably without depressing the market and his sales seem to have been chiefly from the medium-dated section of the list.

Persistent but skilful selling from the official holdings does not necessarily depress prices, though obviously it limits any rise. Two other restraints remain—Suez, and the new issue market. The waiting list of would-be borrowers is long and is believed to include New Zealand. The small placing this week of £1 million of 5¼ per cent Stoke-on-Trent stock at 98½ for dealings next Tuesday is a small reminder of many issues to come. It is an 8-year stock redeemable in 1964 to show a gross redemption yield at the placing price of £5 9s. 7d. per cent. Comparison with the previous placing—£750,000 of 5¼ per cent Stockton-on-Tees stock at £98—is instructive. The Stockton stock placed 10s. per cent cheaper but with two years' longer life was placed at a gross redemption yield of £5 10s. 4d. It now stands at £2 premium and though the mortgage market with which this type of issue competes shows slightly firmer rates for 8-year money than for 10-year money, the Stoke loan looks cheap. Obviously some allowance has had to be made for the risks of Suez.

The industrial market has also been moving up, and business was broadening. The number of markings in the first three days of this week was 25,281, compared with 22,489 in the same days of last week. The industrial index in the same period rose 1.2 to 184.5. In oil shares the course has been more erratic but when, as on Tuesday, the New York market sold stock back to London, London was able to absorb it. On balance the two "Canal" shares BP and Burmah declined slightly over the first half of the week, but Shell showed a net rise. The picture as a whole has been of brighter markets than for several weeks, with the investor prepared to take a growing interest, and not always ruled by the movements on Wall Street. But while the winds blew alternately hot and cold about Suez, markets must remain restrained. It was natural that Thursday should have brought a moderate reaction in both gilt-edged and oil shares.

Banks and Gilt-edged

THE first of the statements from the big banks for their mid-August make-up lend just a little support to the hopes current in the City recently of new purchases of gilt-edged by the banks but there has been no general move towards reinvestment. Lloyds Bank, which increased its portfolio by £5.4 million in the first half of July (following a reduction of £17¼ million in June), has since added a further £5.1 million. Williams Deacons shows an increase of £1.4 million and Glyn Mills one of £½ million, but Barclays and Martins, both of which added substantially to their holdings in July (the former by £20 million) show no perceptible further change. The 1954-56 National War Bonds matured on the make-up date, but it is believed that these banks had not carried any substantial holdings of these bonds to maturity. Most of these banks show some decline in their liquidity ratios—Lloyds is down from 33.9 to 32.8 per cent—but the new Exchequer lendings to the nationalised industries had not taken place at the date of the banks' make-up. In sharp contrast to these banks the Midland which was known to be much the largest holder of the maturing war bonds was in no hurry to re-invest in the gilt-edged market. Investments fell by £60 million to £402 million, a decline that must tie up approximately with the bank's holding of the maturing stock. Its Treasury bill holding increased by £84 million to £283 million.

Seasonal Fall in Imports

A SEASONAL fall in the volume and prices of foodstuffs was mainly responsible for the drop in Britain's import bill last month. Compared with the average for the first half of this year, imports fell by £9.3 million to £320.1 million cif, reflecting a drop of £10 million to £112½ million in imports of foodstuffs and of £6 million to £73 million in manufactures, partly offset by a rise of £7 million to £98 million in basic materials. Three-quarters of the decline in imports of manufactures was attributable to iron and steel and non-ferrous metals. Lower prices of copper brought imports of non-ferrous metals down to £16.9 million, one-eighth below the average for the first half of the year. Iron and steel imports, which fell sharply in May and June from the high level of earlier months, dropped a little further in July to £8.5 million, one-fifth below the first half year's average. Imports of steel-making materials, on the other hand, continued to rise. Metal ores and scrap, at £18.4 million, were one-third higher than in the first half of the year; imports of iron ore and manganese ore themselves were 38 per cent higher.

Exports in July (excluding re-exports) amounted to £266.2 million fob. There was little significant change in the main categories. Ships and boats fell to £7.3 million from the exceptionally high totals of May and June. Shipments of cars and chassis recovered further to £11.1 million, 13½ per cent more than in the first half of the year, but shipments of commercial vehicles and chassis fell to £7.6 million, eight per cent below the high average of January to June. Shipments of cotton yarns and fabrics continued to decline; the July total of £7.2 million was four per cent below the January-June average.

Lower prices for foodstuffs and copper brought a further improvement in the terms of trade. The composite index of import prices fell by two points to 103 (1954=100), while the index of export prices remained at 106, higher prices for metals, textiles and "other manufactures" being offset by a fall of one point in engineering products. The ratio of import to export prices moved from 99 to 97, the most advantageous figure for the past year.

First Loans to State Boards

THE first advances made from the Exchequer to the nationalised industries under the new arrangements authorised in the Finance Act were, as expected, disclosed in the Exchequer return for August 18th. Equally as expected, the new advances much exceeded the amount of the first instalments of repayments of accumulated bank indebtedness that were made to the banks last week. These instalments were in the region of £5 million, whereas the Exchequer advances totalled £27.2 million—shown in the returns as comprising £14 million to the Central Electricity Authority, £5 million to the Gas Council, £5 million to the British Transport Commission and £3.2 million to "other nationalised industries, etc." This last category at present includes only the two Scottish electricity boards (£2.2 million for the Northern and £1 million for the Southern), since no advances have yet been made to the two airline corporations. The nationalised coal industry is of course excluded from the new procedure, since its borrowing requirements have always been satisfied from the Exchequer.

It is understood that all seven bodies have elected to repay the advances by equal instalments of principal (rather than equated annuities) over the period of the contracts, most of which have been arranged for 25 years; the airlines are expected to borrow for seven years. The interest rate for new advances (fixed for the life of the contracts) is at present 5½ per cent for 6 to 15 years inclusive and 5¼ per cent for over 15 years.

BEA Consolidates its Profits

EIGHTEEN months ago, British European Airways gained a toe-hold on solvency after an uninterrupted history of operating loss. In the past financial year, 1955-56, that hold has been consolidated into a comfortable margin of profit. The corporation made a net profit of more than £600,000, compared with £63,000 in the previous year; its revenue went up by 26 per cent to £21.6 million and its expenditure by a little under 23 per cent to £21 million. These figures have a special significance at present. Many of BEA's past financial troubles arose because it could not avoid flying aircraft that were unattractive to traffic and expensive to operate. Much of its better fortune is due to re-equipment with new, highly competitive aircraft. Indeed, BEA's results would be even better but for the substantial number of aircraft on its less popular routes that are no longer economic by modern standards and at today's fare levels. Even such a relatively new aircraft as the piston-engined Ambassador is being relegated to routes where BEA does not have to face its stiffest continental competition. Its sister corporation, BOAC, is expected to make a loss during this current year because it is handicapped by equipment problems. BEA's figures show how vital it is that BOAC should be allowed to re-equip with the right aircraft for its routes—and in sufficient numbers.

The need for aircraft that are economic to operate is emphasised by one curious aspect of BEA's results. The corporation regularly filled nearly 70 per cent of its seats

during the year—a proportion so high that it indicates that at times bookings had to be turned away. Yet the average load that the aircraft carried was only 63 per cent of full capacity—in fact—2 per cent less than they were carrying the year before. This odd discrepancy was due to lack of freight to fill the big holds of the Viscounts. BEA made a concerted drive for freight during the year and increased the tonnage by 25 per cent to 18,600 tons, but it could have carried much more. Fortunately the corporation had a margin over the average load of 61.4 per cent that its fleet of 101 aircraft needed to break even. Had operating costs not declined by nearly 3 per cent it might have been difficult to offset this fall in the average load carried.

With 77 new turbo-prop aircraft on order from Vickers-Armstrongs, some due for delivery during the next two months, BEA is already beginning to consider whether these will not have to be supplemented towards 1960 by a fleet of jet aircraft for the longer routes on its network. The shorter routes will be operated to an increasing extent by newer types of Viscounts ; some of these will follow the Air France Viscounts on the Paris route in December. The problem of equipment for the persistently uneconomic Highland services remains.

Seasonal Pressure on Sterling

AUTUMNAL pressure has begun to make itself felt on sterling. It has been weak against most currencies, particularly against the US dollar. In the early dealings this week the rate on New York recovered from $2.78⅝ to $2.78½, but this was due in the main to bear covering, following favourable reports from the London Suez Conference. Once that covering had been completed, the rate again came under the influence of substantial commercial demand for dollars and weakened to around $2.78¼. In contrast to the day-to-day fluctuations in the official rate, the rates for transferable and security sterling have been unusually stable this week.

Sterling has also weakened against Continental currencies. In these markets the German mark, in demand both on commercial and capital account, has remained dominant. The German authorities, despite the chronic strength of their currency, are going out of their way to hold credit extremely tight. As a result, German exporters are repatriating the proceeds of their sales with the minimum of delay and capital movements are still flowing towards Germany partly to earn the high interest rates available there, but also because of the lure of an ultimate appreciation of the mark.

The one rate which has moved in favour of sterling and against the general trend is the Canadian. From $2.72½ at the beginning of this week, the Canadian dollar has weakened to $2.73¼. In terms of US dollars the premium on Canadian dollars has dropped below 2 per cent for the first time in many months. The weakening is due partly to commercial, partly to capital transactions. This is the time of the year when the seasonal Canadian deficit on trade with the United States is at its greatest. In addition, the trend towards higher interest rates in the New York market and the reports of an imminent increase in Federal Reserve rates are beginning to pull a certain amount of US and Canadian short money from the Canadian to the New York market. Another factor pulling in the same direction is the change in

Canadian tax law which has reduced from 95 to 51 per cent the interest in a Canadian subsidiary that a foreign parent concern needs to hold in order to qualifiy for special tax benefits. Many American firms are likely to market in Canada some of the shares in their Canadian subsidiaries. The anticipation of this has already begun to affect the exchange market.

The Radio Show

THE credit squeeze has been discreetly pushed into the background at the Radio Show which opened in London this week. Its effects are clearly marked in the industry's production figures, with television production down nearly 25 per cent in the first half of the year compared with the same period of 1955 and radio production affected nearly as badly. The total of 637,000 television receivers built during the period still represents an output of nearly 100,000 sets a month since the credit restrictions came into force in February, but this is substantially less than the rate to which the industry was geared. The rapid spread of credit sales agreements has softened the blow to retailers whose television sales have dropped by an average of only about 12 per cent. What has hit the industry hardest is the restriction on rental agreements. These had been multiplying at a phenomenal rate up to February and taking a substantial proportion of the industry's output. Now that it has become necessary to ask for nine months' rent in advance, the business in new rentals has come to a standstill.

More strenuous efforts have been made by manufacturers to reduce selling prices than for some years past. The steady growth in the size of television screens partly obscures this, but a third of those sold in the first half of this year cost £50 or less (before tax) compared with only 18 per cent last year. The average retail price of a 14-inch set is the same today, £68 (with tax), as it was 18 months ago in spite of an increase in the rate of purchase tax. The 21-inch sets, which now account for 6 per cent of sales with the balance divided largely between 14-inch and 17-inch sizes, are nearly £40 cheaper, at £110, including tax, than the average price six months ago. This, really, is a sign that the big tubes are in quantity production rather than that the set manufacturers have made special economies. But an optional choice of cheaper types of cabinet can make a difference of £8 to the retail price of a television receiver, and there is a growing tendency to market cut-price sets with fewer than the average number of components for areas not too far from a transmitter.

Transistors and Tapes

THE dimensions of the cathode tube set fairly rigid limits to what designers can do to television receivers, and there is nothing of the same variety of size, shape, performance and even trim that there is in radio sets nor the bewildering variety of experiment that is now possible in the field of sound reproduction. For the first time. radio

How much information can you use?

Most people, even if they are not closely connected with industry, know what a recording instrument looks like. Like a Seismograph it goes on giving a record line of information about conditions which are generally quite normal. The geologist usually only wants to record the frantic jump in this record line when an earthquake occurs; similarly the man in industry usually only wants to know when the recorded condition is abnormal. For some time Sunvic Controls Ltd. have been developing new means of monitoring this information so that it provides a more easily used record—not of the *normal* conditions about which nobody wants to know, but about the *abnormal* on which action has to be taken. One method is to record this information digitally—or in more simple terms to print it out as with a teleprinter. Alternatively the information can be placed on punch cards so that it can be analysed mechanically.

Sunvic do not pretend that they are the only people in the world thinking about this. But because of their experience in automatic controls and processes they do believe that they have more of the answers than most people. They have them because some of the best brains in industry are working on these problems. And incidentally, Sunvic are anxious to hear from younger men with scientific and technical qualifications who would like to join this Brains Trust.

Today Sunvic takes control

SIMON ENGINEERING GROUP

engineers, designers and contractors to world industry

Simon resources and experience are brought to bear on *many industrial developments* of national and international importance.

INDIAN STEEL

Simon-Carves have been building coke ovens for the Indian iron and steel industry for nearly fifty years. They have built most of the coke ovens in service in India today, including all those at India's two biggest steelworks, for both of which they are now carrying out important new construction.

This work is a significant contribution to India's vast plans to raise her living standards by industrial development—for industry depends largely on steel and there can be no steel without coke.

manufacturers are dabbling with the use of germanium transistors in place of standard valves. Transistors have been under development for some years, the early type of "point contact" or cat's whisker transistor having given way to the more sturdy and easily produced "junction" transistor; they are steadily increasing in power and performance. But none of the transistor manufacturers, of which Mullard is the largest, would say that the transistor is yet fully developed. It has two advantages over the glass valve: its minute size (which makes it possible to blend a high-powered hearing aid into the ear pieces of a pair of glasses) and its low consumption of power.

It is the second of these characteristics that attracts manufacturers of domestic equipment. In a battery-operated receiver, transistors in place of valves would give a substantial increase in battery life. In mains-operated sets there is no immediate advantage. But transistors are only in limited production and they are much more expensive than valves of the same power. Manufacturers can retail a battery receiver today at less than £13 including tax; if the same set were converted to transistors, the price is nearer £30. The biggest immediate market for transistors is therefore likely to be in large computers that use valves by the thousand, so that heating becomes a distinct problem.

The amount of floor space given over to sound reproducing equipment—gramophones to the non-U—is one of the surprises of the show. More and more exhibitors are showing Hi-Fi tape recorders for enthusiasts to make their own recordings and Pye presents an interesting variation—a recorder that uses a magnetised gramophone disc and not a tape. Being a recorder, this attracts no purchase tax and sells at 36 guineas; it will also play normal records, whereas the tape recorder is confined to tape. It is only a year since EMI pioneered the sale of recordings made on tape, amid much head-shaking, and of reproducing equipment fitted with two physically separate loudspeakers to give three-dimensional sound effects. These stereophonic players are now being taken up by other manufacturers like GEC. They are expensive playthings, retailing at substantially over £200. Those who prefer Lo-Fi will be relieved to find at the Radio Show that electronic engineers are also prepared to design equipment that will give one a toffee if asked politely.

The Building Societies' Reply

BUILDING societies were charged in the recent controversy between their association and the Halifax Building Society with accepting excessive deposits from limited companies. That is dangerous money to take in quantity and use for long-term lending. It consists of temporary surpluses that will be withdrawn as soon as the company's own business requires it and that often happens to be while money is tight. In the current number of *Building Society Affairs*, the Building Societies' Association has produced its reply. Out of a representative sample covering 45 per cent of all the assets of the building society movement and including big, medium and small societies, investments by companies represented 2.51 per cent of the societies' total resources. That fortieth of the total includes a fair proportion of deposits by insurance companies, which are as steady as any money that the movement takes in and some equally permanent investments by pension funds. Moreover depositors of sums

Airlines in 1955

THE world's major airlines carried nearly 16 per cent more traffic last year; 52 million passengers flew 1,800 million kilometres, and numbers of passengers increased at a faster rate than the mileage flown. The 73 members of the International Air Transport Association together owned a fleet of 2,580 aircraft at the end of 1955, 55 more than in 1954. The left-hand column shows the actual capacity that the airlines offered for sale. It was nearly 15 per cent greater than in 1954 and the proportion actually filled was also higher; on some routes and at peak periods, the airlines were turning away bookings, and the heavy order books of the aircraft manufacturers represents the airlines' attempt to catch up with mounting traffic.

The bulk of this traffic is still carried on the world's domestic routes; international traffic makes up only 18 per cent of the total passengers carried. Moreover, most of this domestic traffic is in North America. In 1954 the leading operator, American Airlines, which does not fly outside the United States, accounted for 12 per cent of the world's traffic; last year it had increased its share to 13 per cent and flew more than 7,000 million passenger kilometres with 7 million passengers. TWA slipped from third to fourth place. Pan-American increased its share of traffic slightly, as did National Airlines and British European Airways (which is doing better against its competitors in Europe than these figures would suggest). The rest lost ground.

The right-hand column shows that the effort to increase freight was beginning to bear fruit, even though the new cargo rates were not introduced until the summer of 1955. Freight traffic went up nearly 15 per cent, which is nearly double its rate of increase last year.

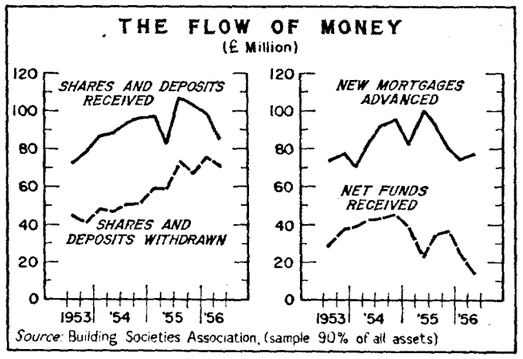
exceeding £5,000 are often required to give longer than normal notice. Periods of from six months to two or three years have been stipulated. The Association therefore claims that "there is no substance in the criticisms that have recently been made" and that such a tiny proportion of company money is "well within the capacity of the societies to deal with at any time without embarrassment."

These are trenchant words, but the association has in fact produced just half of a good answer. A 90 per cent sample of the building society movement would have carried conviction, and such a sample is used in the association's regular quarterly statistics. A 45 per cent sample is less conclusive. Moreover a bald average is not quite sufficient. What was the highest proportion of company money among the societies sampled? And what was the lowest? How many societies approximated to the best? And how many



Source: Building Societies Association, (sample 90% of all assets)

to the worst? This should not be the association's last word, for most building societies have nothing to lose by revealing the facts.

On the other matter that interests the public just now—the need for higher interest rates and mortgage charges—the results of the 90 per cent sample (to June 30th) are made available and the conclusion is crystal clear. The movement, as the charts show, was running short of funds and interest had to go up. The amount by which new investments exceeded withdrawals fell from £23 million in the first quarter of this year to under £14 million in the second. Advances at £77 million, compared with about £75 million in the first quarter, but with £100 million a year earlier. There was less money for lending than the public called for. Yet to maintain even that volume the ratio of liquid assets to total assets had been drawn down. It was 13.75 per cent on June 30th compared with 14.24 per cent on March 31st and with 13.91 per cent in June last year.

GEC's Atomic Effort

TENDERS for the first two Central Electricity Authority atomic power stations are due to be submitted by the end of next month and the GEC-Simon-Carves atomic design group, one of the four concerned, estimates that the total cost of the effort it has so far put into preparatory research and actual designing is of the order of £2 million with expenditure running at about £500,000 a year. GEC had admittedly a good deal of ground to cover, having made a later start than some of its competitors. In an effort to catch up, the company has probably been spending more than any of the other three groups and has set up extensive laboratories. Much of the work done in these is on metallurgical problems and experiments in heat transfer that have a special bearing on plant design. Basic research data is provided from Harwell and much of the practical information is available from the construction of Calder Hall.

This is one case in which British companies are having to meet their entire development costs themselves, whereas their American competitors are getting a fair measure of government assistance. Such expenditure is necessary to buy a foothold in atomic engineering though it promises no immediate return. The four design groups in industry are competing for three atomic power stations, two in southern England and one, to be announced later, in Scotland. Although the CEA's atomic programme is big enough to keep all four groups fully employed for the next decade, this does not dull the almost symbolic importance to these young design teams of winning one of the first two contracts to be awarded for wholly commercial atomic power stations.

Wage-Earning or Salaried?

LAST year the average wage-earner in manufacturing industry received about £444, and the average salaried worker about £654. That annual wage was about 60 per cent higher than the average annual wage in 1948; the average salary had gone up by only about 40 per cent. There is nothing surprising in this estimate that wages have gone up much faster than salaries; but the absolute comparison is perhaps one about which few people would have been prepared to hazard a guess. The estimates come from a new table in the Blue Book on National Income and Expenditure, in which the Government statisticians have set out not only the total annual wage and salary bill for particular industries in the postwar years, but also for the first time estimates of how many people have actually been earning these total wages and salaries. The estimates are based mainly upon postwar censuses of production.

As the table shows, the most striking change that has occurred in manufacturing employment is the sharp increase in the number and proportion of salaried people; these

Balfour Beatty and Co Limited

John Laing and Son Limited

Nuclear power for the nation's future

AN EXAMPLE of industry pooling its resources to prepare for a mighty project is the linking of the A.E.I.—John Thompson Nuclear Energy Company with two important firms of Civil Engineering Contractors—Balfour, Beatty and Co. Ltd. and John Laing and Son Ltd.

To the strength of the A.E.I.—John Thompson Nuclear Energy Company and its constituents (British Thomson-Houston, Metropolitan-Vickers and John Thompson) is added a fund of knowledge in the civil engineering field.

The Balfour Beatty Group has a world-wide reputation in all forms of engineering and construction work and is at present carrying out major contracts for the Central Electricity Authority. John Laing and Son Ltd. has carried out building and civil engineering work at the first Government Atomic Energy Establishment at Windscale and is at present engaged in the construction of power stations in the United Kingdom, as well as in major development schemes in Canada.

THE NEWEST AIRLINER IN EUROPEAN SERVICE

Swissair are now flying regular METROPOLITAN **Tourist** services between **MANCHESTER and ZURICH LONDON and GENEVA LONDON and BASLE.**

The METROPOLITAN — the **newest, quietest, most comfortable** airliner in European service — introduces a completely new standard of **Tourist** flying with:

* **Only two seats a side** for greater comfort.
* **Quiet flying** — new soundproofing system.
* **Nose Radar** which enables the pilot to miss bad weather.
* **Refrigerator** in the galley and wonderful Swissair service.
* **Telescopic passenger steps**—no waiting when you land.

Yes, this is the way to travel! You really must fly—METROPOLITAN!

Ask your Travel Agent for details.

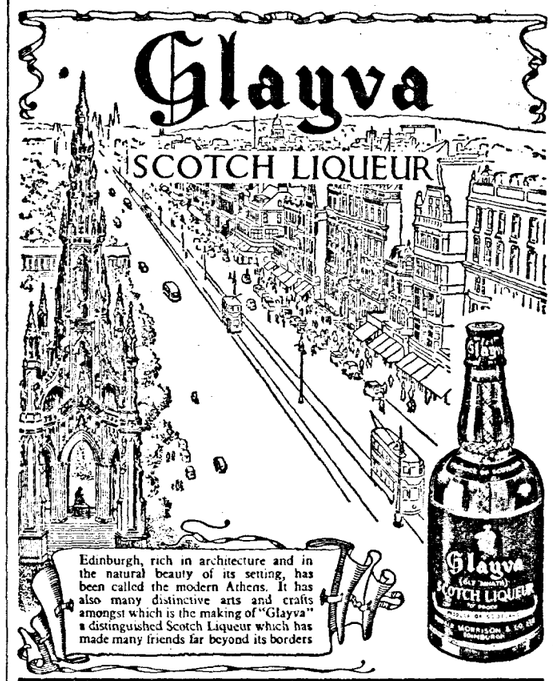
SCOTCH LIQUEUR



Edinburgh, rich in architecture and in the natural beauty of its setting, has been called the modern Athens. It has also many distinctive arts and crafts amongst which is the making of "Glayva" a distinguished Scotch Liqueur which has made many friends far beyond its borders

RONALD MORRISON & CO. LTD. EDINBURGH

We believe in

The nation's standard of living and competitive industrial strength depend in no small measure on efficient, lasting and economic construction. With long experience in building and civil engineering works, we have set ourselves these

BASIC PRINCIPLES OF OPERATION

HUMAN RELATIONS, watching the special needs and problems of those engaged on construction work, often on remote sites and under difficult conditions, without whose willing endeavour no construction project could be brought to successful completion.

MECHANISATION, cutting the time and cost of construction by making full productive use of modern machines and maintaining them to give efficient service.

RESEARCH AND DEVELOPMENT, calling on the resources of science, to ensure not only the quality of materials but new applications of existing materials and the planned development of new ones.

PRE-PLANNING, saving waste and delay by determining in advance, at every stage of a project, the exact requirements in manpower, machinery and materials, and seeing that these are available when required.

METHOD STUDY, applying scientific standards of work measurement, to increase productive output, cut out unnecessary or overlapping effort and achieve a faster, smoother flow of operations on site.

TRAINING, securing continuity of standards by systematic training schemes at all levels of staff employment—schemes designed to develop not only technical and professional skills but a sense of common purpose.

EXECUTIVE ENTERPRISE, always receptive to new ideas, techniques and concepts of construction, willing to travel far in search of them and to spare no effort in trying them out.

LAING

JOHN LAING AND SON LIMITED
Building and Civil Engineering Contractors

GREAT BRITAIN, CANADA, UNION OF SOUTH AFRICA, RHODESIA

have risen in numbers by a third since 1948, while the number of wage earners has gone up by only a tenth. Broadly, the division is between directors (other than those paid by fee only), managers, superintendents, works foremen, people in research, experimental, technical, design and drawing departments, salesmen and office staff, in the salaried category; and operatives, drivers, security guards and firemen, who constitute manufacturing wage earners.

WAGES AND SALARIES IN MANUFACTURING
W = Wage-earners. S = Salary-earners.

	Numbers Employed Millions		Average Earnings £		Index of Earnings 1948 = 100	
	W	S	W	S	W	S
1948	6·29	1·20	279	470	100	100
1949	6·38	1·25	291	489	104	104
1950	6·51	1·30	304	508	109	108
1951	6·67	1·36	330	546	118	116
1952	6·58	1·42	360	577	129	123
1953	6·64	1·47	383	599	137	127
1954	6·73	1·54	409	621	147	132
1955	6·90	1·59	444	654	159	139

The average wages given in these new figures for manufacturing industries appear to be slightly lower than those that might be deduced from the figures of earnings collected twice a year by the Ministry of Labour, which gave weekly earnings as £9 0s. 4d. in April last year and as £9 5s. 9d. in October; the earnings inquiry, however, is concerned only with workers actually at work during the weeks in question. The increase from 1948 to 1955, shown in these new figures, however, ties up exactly with the increase shown in the Ministry of Labour's figures; both come out to exactly 59 per cent.

New Rules for HP

Six months ago the drastic limitations on hire purchase put the deposit up to 50 per cent for a wide range of articles and brought hiring agreements within the scope of the control. The amended regulations that the Board of Trade introduced this week suggest that the controls must be working efficiently. Six months is long enough for the ingenious to find loopholes, but the changes that are now made are small. The Board of Trade's indices of the volume of hire trading support the impression that the controls are biting. In June, the latest available month, hire purchase debt was being paid off faster than it was being accumulated.

The country's outstanding hire purchase debt is now stated to be "at least £397 million," £53 million (about 12 per cent) lower than at the beginning of the year. Of the new total at least £164 million was owing to finance houses. The big houses that are members of the Finance Houses Association claim £126 million (77 per cent of it). The figures suggest the dominance of the big houses but do not precisely measure it since the Board of Trade's figures do not cover the full range of small outside houses. Hence the words "at least" in the official figures. The index of hire purchase debt has declined without a break from 100 in December, 1955, to 90 in May and to 88 in June, but in June there was no significant further change in retailers' hire purchase business. The household goods shops index was 68 compared with 67 in May and the percentage of their total sales by hire purchase remained steady at 28. The big decline occurred in the articles that are normally financed from finance house to consumer—cars, commercial vehicles, and motor cycles. The number of contracts declined, though the financing per contract rose.

Brushing up its controls the Board of Trade has closed two loopholes in its control of hiring (not of hire purchase) which chiefly affect radio and television. It has been made illegal to evade the regulation requiring the deposit of nine months' rent in advance by the device of shorter agreements and switching similar sets between house and house. Some traders have also exploited the clause that exempted from control hiring agreements where the hirer held the set for less than twelve days in any month by actually leasing sets to one member of a family after another in 12-day stretches. This is now stopped. One other amendment has been made, as a concession to the Federation of British Industries. Where industrial machinery, office equipment, or vehicles are being made for a consumer on a credit sale agreement with progress payments, the necessary deposit and the start of the agreement is the date when delivery is completed, not the date of the first progress payment.

Prospect for Wool

Next Monday the new wool marketing season begins in Australia, to be followed a week later by the South African sales; the first auctions in New Zealand come much later, on October 22nd. How the market will fare concerns more than growers and users: wool is the most valuable single export not only of Australia but of the whole overseas sterling area. The past season finished much better than it began. Prices of merino and fine crossbred wools were much higher than at the beginning of the season in September and higher even than in July last year. Crossbred wools closed a little higher than at the beginning, though they were still below the level of the previous July. The recovery in prices was a boon to Australia, though its wool cheque for the whole season, at £267 million, was still £15 million less than in 1954/55, and that despite an increase of over eight per cent in the quantity sold. This season few traders, even in Bradford, expect the market to weaken at the start. Floods and delays in shearing have held up supplies in Australia. Arrivals of wool in Britain and the Continent have been delayed by the re-routing of some ships round the Cape, and stocks here and in other countries are rather low. Hence there should be no lack of demand at the early sales.

Only a broad guess can yet be made of prospective supplies this season. The Australian clip is expected to be about five per cent larger, and the South African and New Zealand clips should be as large, if not a little larger, than last year. Production in Argentina and Uruguay will not be known for some time, but it is known that those countries will enter the new season carrying practically

no stock. World consumption of wool is still running at a higher rate than a year ago. The Commonwealth Economic Committee estimates that consumption of virgin wool in eleven leading countries in the second quarter was seven per cent higher than in the same quarter of last year; it was three per cent lower than in the first quarter of 1956, but as the second quarter had fewer working days the rate of consumption was the same. But the market will not pay much attention to statistics. There are other questions in traders' minds. Will Japan, which dominated the market for fine wools last season, continue to buy heavily? Will deflation in Britain and other countries affect purchases of wool goods? Will political developments in the Middle East supervene?

Trinidad Petroleum Developments

ANOTHER oil producer in Trinidad may soon change to foreign ownership. The Canadian liquidator of British Controlled Oilfields, which holds half the ordinary capital of Trinidad Petroleum Development is negotiating with Colorado Oil and Gas Company. Two directors of Trinidad Petroleum have flown to New York for discussions with him and a third is already there. Nothing has yet been disclosed of the price though it seems probable that any bid by the Colorado company will be for the whole ordinary capital of Trinidad Petroleum and not merely for the half that is held by British Controlled. It is obviously the duty and the tactics of the directors of the Trinidad company to do their best to see that any offer is laid open to all the ordinary shareholders.

The solid block of two million 5s. stock units (500,000 votes) in Trinidad Petroleum held by the liquidator of British Controlled carries effective day-to-day control of the company. His votes put the majority of the present board into office. Any question of winding up the Trinidad company or of selling the undertaking would give £693,000 of preference capital one vote per pound; then the liquidator's voice might not be decisive, unless the preference shares were first redeemed. The previous board would have resisted, if they could, the sale of BCO's half interest as a block to a single oil group. But it is far too late to cry over spilt milk, if indeed the milk is spilt. Nor is it relevant to shareholders that Trinidad Petroleum's production of crude oil is sold to the Shell group under a long-term contract that has, it is believed, still a few years to run. They can assume that the big British oil groups have had an opportunity of bidding.

There is nothing in the negotiations so far, nor in the outcry that has followed the announcement of them, that would justify the Treasury in applying a veto. But it is relevant to shareholders both of Trinidad Petroleum and of British Controlled that such a deal would need Treasury consent. And in the course of its work the Treasury could look into both the direction in which the company's oil will flow when the present contract is ended and the extent to which the dollars paid will go to Canada. Prices of 49s. 9d. for Trinidad Petroleum ordinary (compared with 36s. not long ago), 2s. 3d. for British Controlled ordinary and 28s. 7½d. for British Controlled $5 Preferred take a good deal for granted. The exact liabilities of British Controlled are not known; the Trinidad Petroleum holding is its only big asset and a price of 50s. would not apparently quite provide the full $5 per share on the British Controlled preferred capital. There was substantial and possibly well informed buying of those preferred shares on Wednesday. It may turn out right for the eventual break-up could well amount to more than the $3.90 which is the Canadian dollar equivalent of the present sterling price of the shares, but it is counting the chickens before the eggs are even laid. At present there is not even a bid. The value of the ordinary is anyhow problematical.

Record Consumption of Cotton

RAW cotton has had a remarkable year. In the season that ended last month world consumption reached a new peak; stocks in the United States rose higher than ever before while stocks in the rest of the world fell to the lowest level on record; and the American government began to subsidise cotton exports. The International Cotton Advisory Committee estimates that world consumption (excluding communist countries) rose by 600,000 bales to 28.2 million; the increase was achieved in the face of a falling market for American-type cotton that discouraged buying in many countries. In the United States, where the market was shielded from that fall, consumption rose by about 400,000 bales to nearly 9.2 million; consumption in Japan was 200,000 bales higher at 2.3 million, while consumption in India and other Asian countries rose by 200,000 bales to 6.4 million. In Britain consumption dropped sharply by 300,000 bales to 1.5 million; in other West European countries as a whole consumption was unchanged at 5.5 million bales.

WORLD* COTTON SUPPLIES
August 1st to July 31st
(Million bales)

	1953/54	1954/55	1955/56
Production	30·3	29·5	30·3
United States	16·4	13·6	14·5
Rest	13·9	15·9	15·8
Consumption	26·9	27·6	28·2
Stocks on July 31st	18·9	20·5	21·9
United States	9·7	11·2	14·5
Rest	9·2	9·3	7·4

Source: International Cotton Advisory Committee.
* Excluding Communist countries.

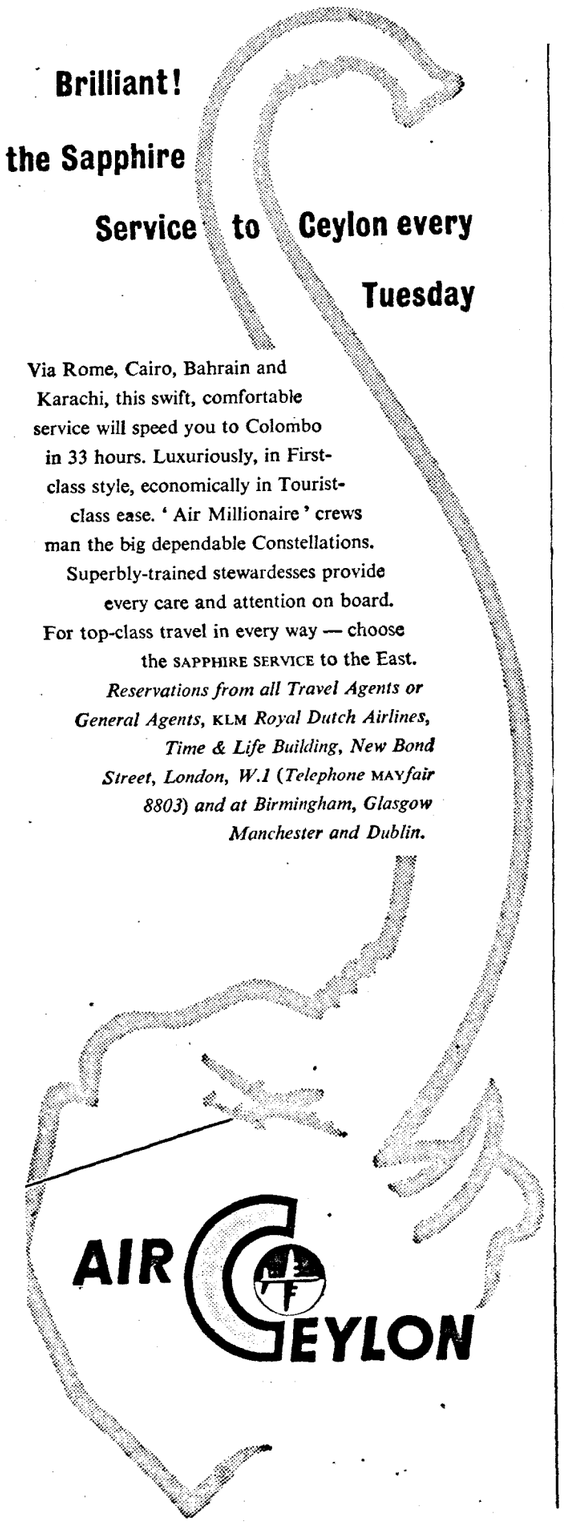
As the table shows, world production continued to outstrip consumption, thanks to a record yield of 417 lb per acre in the United States. Production there rose by no less than 900,000 bales to 14.5 million despite a sharp reduction in acreage. Though acreage in the rest of the world increased, production fell slightly to 15.8 million bales because the average yield dropped to 165 lb per acre, which was only two-fifths of the American figure. Exports from the United States dropped by more than a third to about 2.2 million bales. For most of the season American export prices were too high and buyers could foresee that cheaper (subsidised) American cotton was on the way. Sales of

Brilliant!

the Sapphire Service to Ceylon every Tuesday

Via Rome, Cairo, Bahrain and Karachi, this swift, comfortable service will speed you to Colombo in 33 hours. Luxuriously, in First-class style, economically in Tourist-class ease. 'Air Millionaire' crews man the big dependable Constellations. Superbly-trained stewardesses provide every care and attention on board. For top-class travel in every way — choose the SAPPHIRE SERVICE to the East.

Reservations from all Travel Agents or General Agents, KLM *Royal Dutch Airlines, Time & Life Building, New Bond Street, London, W.1 (Telephone* MAYfair *8803) and at Birmingham, Glasgow Manchester and Dublin.*



The heat joins the flow

Electric heat can be applied wherever it's possible to bring a pair of wires. You can bring it right into the smooth flow of the production line. You can lay out your plant as you think best and install your process heating to suit the lay-out.

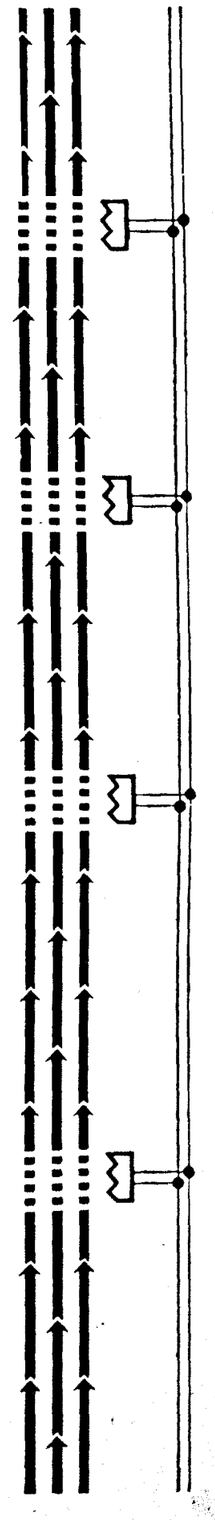
Electro-heat is economical. There's no wastage at all. It gives the appropriate *kind* of heating, at the right temperature for as long, or as short a time, as you need. It can be controlled exactly, easily; better still, automatically.

It's quick, it's compact. The equipment is light, neat, simple. It's clean. It saves overheads in many directions. With electro-heat you get higher production, lower costs and better working conditions.

Electricity for Productivity

Ask your ELECTRICITY BOARD for advice and information, or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Resistance Heating, Electric Motors and Controls, Higher Production, Lighting, and Materials Handling. Price 8/6, or 9/- post free.

Issued by the British Electrical Development Association, 2 Savoy Hill, London, W.C.2



cotton abroad at prices below the domestic level did not begin until January 1st and were limited to one million bales that season. Nearly every other exporting country, in contrast, shipped more cotton than in the previous year.

SHORTER NOTES

The half-yearly figures of Lewis's Investment Trust, the controlling company of the department store group, show little change. In the six months to August 1st the consolidated trading profit was £1,975,258, against £1,953,365, and the net profit £817,646, against £815,187. The revenue of this period accounts for about two-fifths of that of a full year. The interim ordinary dividend is left unchanged at 5 per cent.

★

New orders for machine tools placed in May were lower than in the month before or in May, 1955, though still rather higher than the rate of tool deliveries. The total order book of the industry, therefore, rose slightly during the month to £104.8 million—which at the current rate of output represents about 15 months' work on hand.

The Tube Investments group is to rationalise its bicycle manufacturing interests in the Birmingham area by concentrating them into a large factory at Handsworth that has recently been extended. It has formed a new subsidiary, the British Cycle Corporation, to take over and control the resources of the constituent cycle companies concerned, Hercules, Armstrong, Phillips, Brampton Fittings, and Walton and Brown.

★

Savoy Hotel, once itself the centre of a take-over struggle, has made an offer for the shares of Connaught Hotel. Negotiations between the two companies have been in progress for some time and they will, it is hoped, be completed in the near future.

★

Crittalls has joined Arcon, the group of companies that collaborate in designing, manufacturing and marketing all types of pre-fabricated buildings. The other members are ICI, Stewarts and Lloyds, United Steel, and Taylor Woodrow.

Company Notes

DISTILLERS. The full accounts of Distillers would make more sense to one hundred thousand ordinary shareholders if figures for the divisions of the group, which range from whisky distilling to chemicals and antibiotics, were separately shown. It must be regretted that the board has rejected this suggestion, adhering "to its view that the provision of such information would not serve any useful purpose." Shareholders have thus to be content with Sir Henry Ross's bland disclosure that "the greater proportion of total earnings is attributable to the whisky and gin companies, but, on the other hand, the industrial and general operations are satisfactory and profitable." Sir Henry adds that the increase of £1,503,208 to £19,584,795 in profits after depreciation was derived principally from whisky and gin.

The gin companies are enjoying—the use of the present tense is itself significant—"increased home and export sales." The whisky companies are increasing production, by reconstructing and redesigning their distilleries. Stocks of maturing whisky are being built up; for the industry as a whole they came to 180 million proof gallons on March 31st, and the book value of Distillers' own stocks rose by nearly £4 million. But for the Distillers' group much of the stock has not yet reached the maturity required for blending. The demand for Scotch whisky is still growing and Sir Henry believes that the group's "overseas trade will continue to expand." The group cannot meet all the demands of its distributors in the United States, its largest market for whisky. In Canada, the second largest market, Distillers has a harder fight against the competition of local brands, particularly as the Provincial Liquor Commissions fix a higher "mark-up" on Scotch (forcing the selling price up) than on the Canadian ryes and bourbons. Shipments to Australia have been cut down by the import restrictions, but Distillers has built a bottling plant in Sydney to circumvent the prohibitive duty on imported bottled Scotch. At home, more Scotch is being bought, but supplies are even more restricted than for overseas shipments.

6s. 8d. ordinary share at 20s. 1¼d. xd. yields £5 9s. per cent.

On the industrial side of Distillers, the story is also one of expanding sales—in chemicals, plastics and antibiotics. But costs are rising in these industries and markets are competitive, so there has been some contraction in profit margins. The directors hope, however, to secure "beneficial results" by organising Distillers' own sales department for antibiotics, previously marketed through other pharmaceutical companies. Prices in this market, Sir Henry adds, are hardening.

Sir Henry Ross sums up by saying "trading results in the current year are so far encouraging" and that for the year as a whole they should be "satisfactory." Investors may look upon these comments as understatements, but they must also realise that the expansion of Distillers requires considerable capital investment. A sum of about £4 million was spent on buildings and plant in 1955-56, and capital commitments of £2½ million on March 31st suggest that a sum not far short of this figure will be spent this year. Yet the directors could afford to loosen the purse strings, raising the ordinary dividend from 16½ to 17½ per cent. It is not excessively generous, but it will encourage the conversion of the remaining loan stock.

★

THORN ELECTRICAL INDUSTRIES. The 5s. ordinary shares of Thorn Electrical Industries, yielding only 4½ per cent with the price at 17s. 6d. and dividend at 15 per cent, are thought by investors to have growth potentialities. That view is partly based on the company's plans to associate itself with Sylvania Electric Products of the United States in producing cathode ray tubes in this country. Investors are also prepared to accept a low current yield because Thorn Electrical is not simply a radio and television manufacturer. In addition to Ferguson radio and television sets, it is an "independent" producer of electric lamps and it is the largest producer of fluorescent tubes in this country. But, in accepting such a yield, investors are taking a long view which extends beyond the current financial year.

The new year has now run almost five months and the company has just produced its preliminary results for the year to March 31st. The old year was good. Consolidated trading profits rose by about 15 per cent, from £1,501,610 to £1,736,780. Bigger charges for depreciation (up from £280,651 to £381,186) and taxation (up from £520,307 to £594,670) cut into the increase and net profits actually fell from £609,007 to £572,137. But, as the directors promised at the time of the one for two rights issue, the dividend rate has been left unchanged at 15 per cent on the increased capital of £1,603,125.

These results, however, come from a period in which the production of television sets rose by about 20 per cent and that of radio sets remained practically unchanged. Over the last few years it has been the production of television sets which has given an added zip to the profits of companies making electrical consumer goods. Since the fresh batch of hire purchase restrictions in February—and, hence, since the close of Thorn's latest financial year—the production of these sets in the quarter to June 30th fell by about 30 per cent. Currently earned profits from this side of the industry cannot be as buoyant as they were.

★

PINCHIN, JOHNSON AND ASSOCIATES. In its current financial year, now five months old, Pinchin, Johnson and Associates, the biggest manufacturer of paints in the Commonwealth, will be more dependent than before on its overseas subsidiaries. That itself causes no worry, for the chairman, Sir Horace Clarke, says that "reports received to date from abroad indicate that the profits of overseas companies for the current year may increase."

At home, however, he sees the outlook for sales and profits as less rosy. Sales may decline as the group's customers feel the effects of the credit squeeze on their own production schedules. Profits may fall more sharply than sales because costs are still rising. Indeed, because of yet another increase in costs, trading at home in the first quarter of the current trading year yielded Pinchin, Johnson a slightly lower net profit.

For the group as a whole, it seems problematical whether results of the current financial year will be as good as those reported for the year to March 31st last.

10s. ordinary share at 19s. yields £8 15s. per cent.
* Equivalent rate on capital as increased by 50 per cent free scrip issue.

In that year production, sales and net profit records were again achieved by both the parent company and the group. But gross trading profits remained almost unchanged at just over £2,200,000 because the increase in costs trimmed profit margins. To keep control on its share of a keenly competitive market, Pinchin, Johnson has to invest more on capital account, notably in extending its overseas interests. In 1955-56 the group spent about £800,000 on expansion, most of it being invested in Britain, Canada and Australia; the programme is not complete; outstanding capital commitments on March 31st last were estimated at £565,000. To invest on this scale the group depends upon its own resources. These, thanks in part to an improvement in the rate of stock turnover which has made it possible to economise on working capital, are ample for the task in hand.

LONDON STOCK EXCHANGE

Next Account begins: September 5th
Next Contango Day: September 5th
Next Settlement Day: August 28th

THERE was a sustained demand for gilt-edged securities in the first half of this week and prices recovered sharply after their recent steady decline. Medium-dated stocks remained firm up to Wednesday, 3 per cent Savings 1955/65 gaining 1⅛ to 85⅛, but longer-dated issues eased slightly on Wednesday, 3 per cent Transport 1978/88 losing ½, but remaining 1½ higher at 69½ on balance. Industrial shares made persistent gains, but dollar stocks receded with the decline on Wall Street.

Banks and discount houses improved and Legal & General Assurance advanced 20s. to 28½. Electrical stocks were generally higher; AEI rose 4s. 6d. to 73s. 6d. and Reyrolle and C. A. Parsons both gained 5s. to 116s. and 96s. 3d. respectively, but GEC lost 1s. to 51s. 6d. Among the stores, Debenhams touched a peak of 41s. 4½d. before receding to 40s. 3d. Imperial Tobacco rose a further 10½d. to 48s. 7½d. and BAT improved to 52s. 6d. xd. Clarke Chapman was outstanding in the engineering section with a rise of 8s. 1½d. to 123s. 1½d. Guest Keen & Nettlefolds rose 1s. 6d. to 48s., British Tabulating 2s. to 47s. 6d. and Steetley 2s. 1½d. to 59s. 4½d. Following the results, Thames Grit jumped 6s. 10½d. on Wednesday to 58s. 1½d. Shipping shares were dominated by a further leap in London & Overseas Freighters from 88s. 6d. to 107s. 6d. and a rise of 3s. on Wednesday in Stanhope to 27s. 6d. on the possibility of operating from Bermuda.

Oils suffered large losses on Tuesday, British Petroleum losing 6s. 10½d., but recovering 3s. 1½d. on Wednesday to 152s. 6d. Kaffirs were firm after weakening on Monday. Central Mining rose 4s. to 53s. 3d. on consideration of the Trinidad oil payment. Buffelsfontein gained 10½d. to 28s. 1½d. and Harmony 1s. 9d. to 27s. 9d. Rhodesia-Katanga remained active in coppers and jumped a further 6s. 3d. to 43s. 9d. On the news of the bauxite discovery Consolidated Zinc rose 4s. 6d. to 57s. 3d.

THE MONEY MARKET

THE surplus of funds in Lombard Street produced by the maturity of the unconverted War Bonds last week dried up at the weekend, and through the first three days of this week credit was short. The Bank on each day gave special help through purchases of bills, which on Tuesday were very large, but nonetheless the market was forced to take loans at the penal rate. On Monday four or five houses were involved for a small amount, and on Tuesday one or two for a trifling amount. The stringency enabled some banks to raise their buying rates for November maturities to 4⅛ per cent.

Applications for the unchanged total of £280 million of Treasury bills on offer at the tender on Friday last fell by £16.5 million to £393.4 million, and although the discount market raised its bid by 1d. to £98 15s. 0d. per cent (equivalent to a fall in the discount rate to just 5 per cent), its allotment remained at 62 per cent of its application. Outside tenderers appear to have raised their bids by rather more than the market, as the average rate of discount fell by 5½d. to £5 0s. 0.43d. per cent.

The Treasury bill rate in New York rose further this week, from £2.603 per cent to £2.818 per cent.

The Bank return shows a further post-holiday reflux of notes of £26.6 million, permitting a reduction in the fiduciary issue of £50 million to £1,950 million.

COMPANY MEETINGS

THE DISTILLERS COMPANY LIMITED

ALL DIVISIONS CONTRIBUTE TO IMPROVED TRADING RESULTS

POSITION IN WHISKY INDUSTRY FULLY MAINTAINED

INDUSTRIAL GROUP'S SATISFACTORY PROGRESS

SIR HENRY J. ROSS ON POLICY OF HIGH QUALITY

The Seventy-ninth Annual General Meeting of the Distillers Company Limited will be held in the North British Hotel, Edinburgh, on Friday, September 14, 1956, at 12.30 p.m. The following is the statement by the Chairman, Sir Henry J. Ross, which has been circulated with the Report and Accounts for the year ended March 31, 1956:

There have been no changes in the Directorate since my last statement, but I have to report the retirement from executive duties of Mr Walter Walker, the Managing Director of White Horse Distillers Limited, who had the distinction of 50 years of service with that Company. His knowledge and wide experience have been of great value to us, and he will remain on the Board of this Company in a consultative capacity for a further three years.

As you will note from the Accounts, the trading profit, after depreciation, for the year to March 31, 1956, is £19,584,795, which is an improvement on last year of £1,503,208, and confirms the indication given when the interim dividend was declared. The year's trading throughout the Group has been active, and these satisfactory results reflect the contributions of all our various divisions, although the increased profit this year has been derived principally from our Scotch Whisky and Gin interests, to which I will refer in greater detail later. At this point, however, I would say that your Board, having given careful consideration to the question of publication of separate figures for the profits earned in the various sections of the Company's business, adheres to its view that the provision of such information would not serve any useful purpose. As a general comment, I may say that the greater proportion of our total earnings is attributable to the Whisky and Gin Companies, but on the other hand, our industrial and general operations are satisfactory and profitable. Many of our new industrial developments and extensions have only been installed during recent years, and I am satisfied that, conforming as they do to a logical pattern of industrial development in the United Kingdom and overseas, they should contribute steadily improved results in the future.

TRADE INVESTMENTS

In addition to the higher trading profit, we obtained a larger income from our trade investments, dividends amounting to £1,018,441 against £431,517 in the previous year. Here the increase was derived from our investment in British Hydrocarbon Chemicals Limited, from which a dividend of £750,000 was received, compared with £125,000 last year. I shall comment on the progress of this Company at a later stage.

After deducting interest on loans, the profit from all sources is £20,311,430, out of which we have to provide £10,484,301 for taxation. Deducting the proportion of the balance attributable to minority interests in Subsidiary Companies, £617,260, the net profit of the Company is £9,209,869, compared with £7,873,409 for the previous year.

You will observe that there is a substantial credit of £1,706,382 "below the line" for taxation adjustments in respect of earlier years. I am glad to report that the Group's position in relation to the Excess Profits Tax imposed during the war has now been agreed, and this credit is mainly due to settlement of our claim for deferred repairs and renewals. I should perhaps mention that it has also been agreed with the Inland Revenue that the Group is not liable to the Excess Profits Levy which operated during some of the postwar years.

Your Directors have decided to write down certain investments in Subsidiaries and Trade Investments After applying £1,121,017 in this way, and dealing with one or two minor matters, the amount available for appropriation is £9,948,442, compared with £8,467,350 last year.

BALANCE SHEET FEATURES

Turning to the Consolidated Balance Sheet, you will observe that during the year we expended approximately £4 million on new buildings and plant. On the Scotch Whisky side of our business, this reflects the provision of additional distilling capacity and warehouse accommodation, as well as part of the cost of building new premises for one of our major blending subsidiaries. We have also been engaged on the erection of new premises for one of our principal Gin companies. On the Industrial side, the main capital expenditure has been incurred by our Plastics Division, where, as reported last year, a large extension has been made to the plant for the manufacture of "Geon" polyvinyl chloride and a plant has been erected for the manufacture of "Styron" polystyrene.

Although the Balance Sheet figure for Trade Investments is much the same as last year, there have been a number of fairly substantial changes. We have increased our shareholding in BX Plastics Limited by £500,000, by capitalising an existing loan of that amount, and have made a contribution of a similar amount to Murgatroyd's Salt & Chemical Company Limited, to wipe out losses existing at the date of acquisition. Our partners in both these enterprises have acted similarly. On the other hand, we have disposed of our interest in the Canadian Whiskey concern, Montmorency Distillery Limited.

Under current assets you will note that the value of Stocks has again risen by some £4 million, mainly through the augmentation of our stocks of maturing Scotch Whisky. There is also an increase of £2 million in Debtors, and as a result of all these additional forms of investment, our cash resources are again somewhat lower, aggregating some £7 million.

There is no significant change in current liabilities. Our long-term debt has been reduced by the repayment of the outstanding £1 million of 3½ per cent Unsecured Loan and the conversion into Ordinary Shares of £437,775 of the 5 per cent Unsecured Loan Stock.

The remaining items in the Consolidated Balance Sheet are, I think, adequately covered by the notes to the Accounts, as is the Balance Sheet of the Distillers Company itself.

DIVIDEND DECISION

As mentioned above, the amount available for appropriation is £9,948,442, of which the Subsidiaries have retained £2,803,171, leaving £7,145,271 at the disposal of your Board. In considering how this sum should be dealt with, we have had due regard to the serious difficulties which beset industry in general today. In the inflationary conditions which have marked the postwar years, it has been essential to retain a portion of profits purely to maintain our real working capital despite the depreciating currency. At the present time, having regard to the financial restrictions imposed on industry, we must also endeavour to augment our resources by such sums as we consider necessary for the essential development of the business. The burden of taxation which has to be borne makes it extremely difficult for Companies such as ours to deal with these problems.

Notwithstanding all these factors, your Directors feel that, in view of these improved results, a moderate increase should be made in the dividend paid to our Ordinary Shareholders, of whom we now have about 100,000. They therefore recommend that the final dividend on the Ordinary Capital should be at the rate of nine and one-fifth pence per share, which, with the interim already paid, makes one shilling and twopence per share for the year, equivalent to 17½ per cent, compared with 16⅔ per cent last year. Of the remainder, the Board has transferred £2,697,500 to augment the General Reserve of the Company, leaving £158,169 to be added to the amount brought forward from the previous account.

SCOTCH WHISKY

Although our Malt distilleries were scheduled to operate at full capacity, production was unfortunately somewhat curtailed by shortage of water, due to the abnormally low rainfall. The opening of the Malt Whisky distilling season was accordingly delayed and, for the same reason, production had again to be reduced at certain distilleries in May and June of the current year. On the other hand, our Grain distilleries were able to operate normally, so that over all it may be said that production was reasonably satisfactory.

In the year under review, our production side was strengthened by the re-opening of Imperial Distillery on Speyside. This distillery, which had not operated since 1925, came into production again in December last. Completely re-designed under the supervision of our own architects and engineers, it includes the latest equipment without departing in any way from the traditional processes for the production of Malt Whisky. Although the Whisky now produced at this distillery will not be ready for use in our blends for some years, I am confident its quality will prove to be of a high standard.

Extensive reconstruction continues to be carried out at a number of our other distilleries, with the object of bringing them to the highest state of efficiency. Substantial sums have also had to be provided to cover the cost of new bonded warehouses to accommodate our increasing stocks. At the same time we are engaged in an extensive programme for the construction of new houses and the modernisation of existing ones at our distilleries throughout Scotland.

The total stocks of maturing Whisky held by the industry as at March 31, 1956, were 180 million proof gallons. This is approximately 30 million proof gallons more than the quantity held in 1939, and constitutes a record. The war years with their virtual cessation of distilling, followed by limited production for some time afterwards, reduced those stocks to 82 million proof gallons. It might be thought that the current stock position illustrated by the above figures would be sufficient to meet all demands for Scotch Whisky, but, so far as we are concerned, a great proportion has not yet reached the maturity which we require of the Whiskies used in our blends.

Our improving inventory has, however, enabled us to expand our sales, and in this achievement, your Company has fully maintained its position in the industry. The increase by the trade as a whole of some 12 per cent over the preceding year is not only a tribute to the quality and acceptance of Scotch Whisky as an international beverage, but carries with it encouraging promise for the future.

The United States of America continues to be our largest market, and there is no sign of any diminution of demand. Indeed, we are still unable to meet the needs of our distributors. Although this presents difficulties, your Board is confident that their policy of maintaining the quality of our brands is wise and will be amply justified by results. Scotch Whisky is, in fact, one of the greatest dollar earners of the United Kingdom. I am sure the industry as a whole may be depended upon energetically to pursue all means to further progress, but it would welcome a more realistic and practical response by HM Government to some of its problems.

EXPORT TRADE

While dealing with the United States, I think it is right for me to tell shareholders that, as reported in the Press, your Company together with certain leading American and Canadian Companies, has been cited as a defendant in an action for damages. It would not be proper for me to comment at this stage on the proceedings, other than to say that the best legal advice has been obtained, and your Directors are giving this matter their closest attention

In Canada, our second largest market, we are having to fight hard to maintain our position against the growing consumer demand for locally produced Whiskey. Whilst recognising the natural desire of Canadians to support a home industry, one of the obstacles to our progress is the policy of the various Provincial Government Liquor Commissions in fixing a higher "mark-up" on our commodity than applies to Canadian Whiskey. This has a very serious effect on consumer prices, and consequently on our sales, but we are hopeful that representations now being made on this subject will receive favourable consideration.

Our shipments to Australia during the year have been severely restricted by a tightening of import control. Our brands are well established, however, and we hope to resume larger shipments to this important market as soon as the general economic position improves. In view of the fact that Scotch Whisky shipped to Australia in bottles is subject to a prohibitive duty, and our facilities for bottling in Australia were proving inadequate, we have built an up-to-date bottling establishment in Sydney.

It is hardly possible to make individual reference to all our export markets. We have not yet succeeded in penetrating the so-called "Iron Curtain," and certain South American markets are still—we hope only temporarily—closed to us, but otherwise our trade is world-wide. In general, there is an increasing demand for our brands, which we shall meet so far as our stock position permits. Problems of import restrictions and exchange affect our activities in a number of markets, but looking at the broad canvas, I consider the outlook is promising and that our overseas trade will continue to expand

So far as Home trade is concerned, the industry showed an increase of 500,000 proof gallons over the previous year. Here supplies, so far as we are concerned, are even more restricted than for overseas, not only because of our stock position, but to a greater extent because the national interest requires priority to be given to the Export trade.

I referred in my last statement to the much higher cost of the Whisky produced since the war, which we are now using. This factor, together with other increases in costs, made it imperative during the past year to raise both our home and export prices. It will, however, be of interest to shareholders and consumers alike, to know that our current selling price at home, apart from duty, is still little more than double the prewar figure. During the same period, the duty on Scotch Whisky has almost trebled, and today stands at the staggering figure of £10 10s. 10d. per proof gallon. Our feeling is that the retail price is in danger of reaching a level which might well place Scotch Whisky beyond the means of the consumer. Pressure from the distributive side of the trade for a higher margin has been resisted on this ground, but we are bound to say that their case is not without merit, and the Government's share of the total proceeds is unreasonably large.

GIN

As regards Gin, there are no aspects which call for special comment at this time, other than to report that our Companies are making excellent progress, and enjoying increased home and export sales. This section of our organisation plays a valuable part in our overall economy.

The plant of The Distillers Company Limited, Delaware, at Linden, New Jersey, USA, continues to operate at full capacity, and sales for the year were substantially in excess of the record established in 1954.

In South Africa, our Gin establishment at Isando, Transvaal, is also developing in an encouraging manner, with sales showing a substantial increase over the preceding twelve months.

YEAST

Although the continued fall in the consumption of bread inevitably entails a reduction in the demand for Yeast, we have achieved an increase in the sale of Bakers' Sundries. Last year, I referred to the reorganisation of the distribution system of this branch of our business. This had as its object a reduction in operating costs and, at the same time, the improvement of our nation-wide service to the Baking trade. The measures which were taken are beginning to bear fruit, and our total earnings have improved.

The Peerless Refining Company (Liverpool) Limited has had a good year, and sales of fats and margarine have shown a satisfactory increase. The development of this business is most encouraging, and has warranted an increase in the capacity of the Netherton factory.

INDUSTRIAL GROUP

The Industrial Group has made satisfactory progress during the past year in face of strong competition as regards certain products and despite the higher cost of raw materials and labour. We have endeavoured, through improved processes and efficiencies, to absorb the major part of these increases and keep our prices stable. Whilst inevitably there has been some contraction in margins, the overall profit earned corresponds closely to that of last year.

Chemical Division.—Sales of solvents and other synthetic chemicals and intermediates made at our British Industrial Solvents factories at Hull, Bromborough and Carshalton are satisfactory. We are continually extending the range of our specialities in the chemical field which are generally not subject to the intense competition that the standard materials have to face.

At Hull, the vinyl acetate plant of our Associated Company, Hedon Chemicals Limited, should be ready to start up in October next. The demand for this material continues to expand and the sales prospects are good.

Sales of carbon dioxide, which, apart from its wide use for refrigeration, is rapidly gaining importance in its industrial applications in the engineering field, showed a further substantial increase in tonnage.

During the year, the name of British Petroleum Chemicals Limited was changed to British Hydrocarbon Chemicals Limited. This was done to avoid confusion with the name of our partners in this undertaking, British Petroleum Company Limited. British Hydrocarbon Chemicals and its subsidiary, Forth Chemicals Limited, operated at Grangemouth to full capacity throughout the period, and earnings were satisfactory. The extension scheme for doubling the British Hydrocarbon Chemicals plant is progressing well and should be completed by the end of 1956. The new butadiene plant is nearing completion, and should come into operation this month. This material is of growing importance as one of the main constituents of a variety of synthetic rubbers.

The major extension to the monomeric styrene plant of Forth Chemicals Limited was scheduled for completion in April last, but owing to an unofficial strike by the Contractors' employees, completion has been delayed. It is now hoped to start up this unit almost immediately, but the delay has been unfortunate, since these additional supplies were required to obviate the need for importing this proportion of our requirements.

As regards the other subsidiary of British Hydrocarbon Chemicals Limited, Grange Chemicals Limited, in which the Oronite Company of California holds a third interest,

the detergent alkylate plant was completed and commenced production in December, 1955. I am glad to say that this plant came into operation with the minimum of difficulty, is producing a high quality product, and sales are developing satisfactorily.

The demand for industrial alcohol shows a steady increase. When the Grangemouth extensions, to which I have already referred, are completed, British Hydrocarbon Chemicals will be producing synthetically two-thirds of our total output of industrial alcohol, the balance being produced by the fermentation of molasses.

Biochemical Division.—The competitive conditions in the sale of antibiotics in general, and of penicillin and streptomycin in particular, to which I referred last year, have been keener than ever, and although we have been able to increase the volume of sales, profit margins on a considerable part of the export business have been meagre. However, during the last few months, there have been signs that the prices of antibiotics are hardening, and the future may show that there have been adjustments of the excess production which led to these uneconomic selling conditions, and prices will reach a more stable and satisfactory level.

You will be glad to know that during this year we were able to make a notable addition to our range of products. I refer to phenoxymethyl penicillin which, for the first time, makes penicillin available in a safe and effective form for administration by the mouth instead of by injections. "Distaquaine" V is really a new substance. Unlike the earlier penicillin G, it is stable under the acid conditions which normally occur in the human stomach. It is this completely novel characteristic which makes it effective in oral administration and constitutes such a great advance in antibiotic therapy. Marked progress has already been made in the sale of this product. The Company is the sole manufacturer in the United Kingdom, and has also secured exclusive rights in certain overseas markets.

When we first entered the biochemical field, we marketed our products through a number of well-known British pharmaceutical houses. This system of distribution was excellent when the products were in short supply, but, now that antibiotics are freely available and we have extended our range of products, we have decided, by arrangement with the companies concerned, to build up our own sales organisation on a world-wide basis. This re-organisation is already well in hand, and, whilst acknowledging the valuable service our distributors have given us in the past, it is anticipated that more direct sales promotion will have beneficial results.

Plastics Division.—The continually expanding demand for plastics materials resulted in substantially increased turnover. Sales of our synthetic resins and moulding powders continue to progress in many varying fields. The latest extension to the plant of British Geon Limited was completed and brought into operation in January of this year, and its product, polyvinyl chloride, is selling well. The new plant of Distrene Limited was completed and operating by December, 1955. Despite keen competition, its products, marketed under the trade name "Styron," are in good demand both at home and abroad.

Murgatroyd's Salt and Chemical Company Limited.—This Company, which we own jointly with Fisons Limited, has completed the new 15,000 tons per annum extension to its chlorine and caustic soda plant. This additional installation represents the very latest practice and is the first of its kind in the United Kingdom. The new unit is working smoothly, and the output is finding a ready sale.

Magnesium.—Magnesium Elektron Ltd., in which we are now associated with the British Aluminium Company Ltd., has had a good year of expanding sales. Of particular interest is the use of magnesium for cathodic protection of metals against corrosion, particularly iron and steel. This is being developed jointly by Magnesium Elektron Ltd. and our subsidiary F. A. Hughes & Co. Ltd., and is marketed by the latter Company under the trade name "Guardion." Sales have made rapid progress, and our method is now standard practice with many of the largest shipping Companies, particularly for tankers.

South Africa.—For our Associated Company, National Chemical Products Limited, this has been a year of considerable progress, with earnings substantially higher than last year. The new plants for the manufacture of phthalic anhydride, acetaldehyde and acetic acid have been completed and will extend further the Company's operations. The balance of the share capital of Poly-Resin Products Limited, of East London, which manufactures synthetic resins for the paint and allied trades, was purchased during the year. National Chemical Products has developed a new range of chemicals for the flotation treatment of metallic ores, which have met with acceptance by the South African mining companies. Arrangements have been made to exploit the large markets in the USA and South America, where initial developments look promising.

Australia.—I am glad to be able to report that our Associated Company, C.S.R. Chemicals Pty. Ltd., has had a more satisfactory year. Sales of cellulose acetate have increased and process improvements have reduced unit costs. It is also gratifying that the application to the Tariff Commission for some form of assistance in the development of this new enterprise has been successful, and the Australian Government has granted a bounty on production of cellulose acetate flake retrospective to July 1955. This will provide welcome support to the Company's operations. The general chemical and plastics division has done well during the period under review.

TECHNICAL DEVELOPMENT

Much is written today about what is called "Automation," which suggests to some that this is a new development in industry. It is, in fact, the progressive improvement of methods of manufacture and control which has always been an essential part of industrial progress both here and in other countries. The competitive conditions prevailing in world trade today largely dictate the speed of such progress.

Our Research and Engineering Departments play an important part in this essential field, and through their efforts we are continually improving the performance of our plants by the extended use of mechanisation and instrumentation and the introduction of the latest types of automatic control. Only in this way can we absorb rising costs and preserve our competitive position in relation to the industries we serve.

Our Research Stations throughout the organisation also continue to make a valuable contribution to our progress in the development of new and improved processes.

PERSONNEL

The Company has a continuing demand for suitably qualified men and women, and we are giving careful consideration to our recruitment and training methods. It is well known that the continuing industrialisation of the country is making overwhelming demands upon our universities, technical colleges and schools. With this in mind, the Board is happy to be associated as a founder member with the Industrial Fund for the Advancement of Scientific Education in Schools, a fund designed to provide better capital facilities for the teaching of science in those schools which receive no Government finance, and thus to encourage a larger number of young people to study science from an early age.

We pride ourselves on attracting an excellent type of employee, and we have always enjoyed good relationships with them. This is abundantly reflected in the large number who qualify under our scheme for long service awards after 25 and 40 years' service.

Your Group employs over 20,000 men and women, and to them all I should like to express our thanks for their efforts and enthusiasm during the past year.

FUTURE PROSPECTS

Trading results in the current year are so far encouraging. The operation of the "credit squeeze" and other measures introduced by the Government to combat inflation may well be expected to bring about some contraction in the home demand which, temporarily at any rate, might affect the volume of our business. On the other hand, our operations are on a broad basis, both in the United Kingdom and overseas, and I therefore feel reasonably confident that we can anticipate satisfactory results for the current year.

TEA CORPORATION LTD.

PROMISING PROSPECTS

The annual general meeting of the Tea Corporation Limited was held on August 22nd in London, Mr A. A. Estall, chairman, presiding.

The following are extracts from his circulated statement for the year to January 31, 1956:

A crop of 1,454,404 lbs. of made tea was harvested from estate leaf for the year under review, equivalent to 716 lbs. per acre.

The rubber crop at 105,398 lbs. for the year was 20,602 lbs. below the estimate.

A gross profit of £18,216 was made for the year and your directors recommend the payment of a dividend of 20 per cent, less tax, for the year.

Addressing the meeting, the chairman said: The current year began quite well; prices were good and duty remained at the reasonable figure of 11½d. per lb. In the last few months, however, the price of teas has steadily dropped; at last week's auctions our gross average price was 4s. 5¼d. per lb. Nevertheless, I feel sure that the final results will prove to be satisfactory; our crops are steadily increasing and as offerings at the auctions improve in quality better prices may be expected.

For the first six months to the end of July 814,359 lbs. of made tea had been secured, compared with 767,579 lbs. last year, an increase of 46,780 lbs. Of this crop 458,450 lbs. had been sold at a gross average price of 52.96d. per lb. Estate costs to the end of June are 3s. per lb. compared with 3s. 6d. per lb. to the same date last year.

The report and accounts were adopted.

Company Meeting

Automation

A BOON AND NOT A PROBLEM

Progress in Many Fields Reviewed by Mr. John Oldham, O.B.E.

"A YEAR of continued progress, not all of which is fully reflected in the figures before you," was reviewed by Mr. John Oldham, O.B.E., Chairman of Oldham & Son, Ltd., whose Annual General Meeting was held on August 24th, 1956.

His statement, circulated with the Annual Report, mentions a volume of production which was a record for the Company; increased home sales in all the Company's main types of manufacture, and an all-round increase of over 50 per cent. in the exports of its products; progress by Overseas Companies in South and Central Africa, India, Australia and France; the building up of "a valuable overseas trading structure"; and further technical developments by the Company's expanding Research and Development section.

The Company will continue its endeavours to play a leading part in the progress of battery-operated equipment "wherever it lies within the field of our activities."

"Results Can be Considered Satisfactory"

AFTER his reference to the Company's continued progress, Mr. Oldham's statement said: As most shareholders know, this has been a period not entirely free of difficulties in the shape of rising costs of raw materials, increased wages and other important items of expenditure. These increases have largely been absorbed by improved working methods both at home and overseas and also, to some degree, at the expense of profits.

We did not attempt to pass on to our customers the increased costs to which I have referred. Our selling prices still remained at 1952 levels and, to this extent, the Company can claim to have taken its full part in the present national need for contributing to price stabilisation.

Sales in all sections of the business materially exceeded those of the previous year while the volume of production was a record for the Company. When set against the conditions to which I have referred, the results can be considered as satisfactory.

TRADING RESULTS

Notwithstanding the fact that the Group sales increased, the over-all profit was £398,419 as against £452,958.

The Subsidiary Companies' profits in the aggregate were £158,650 as compared with £202,751 last year. It is unnecessary for me to comment further on the figures now submitted, excepting perhaps to say a word on the financial position as disclosed by the Balance Sheet now under review.

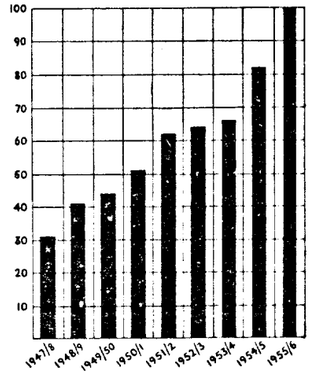
FINANCIAL POSITION

The Consolidated Balance Sheet shows a surplus asset position of the Group of £1,416,133. This position, which has been built up very considerably over the years out of profits retained in the business, by no means represents the true value.

For example, the book value of the factories and plant at home and overseas appears at £945,646, and I am satisfied that the present value is considerably in excess of the total figure at which they appear.

Our expansion programme both at home and abroad has been financed from existing resources and while we continue to resort to the aid of our bankers, we do not contemplate at this stage issuing any further permanent capital.

It will be observed that from the Consolidated Balance Sheet the surplus of our Current Assets over Current Liabilities amounts to £483,805 of which a very considerable proportion rests in the item Stocks-on-Hand.



OVERSEAS SALES YEAR BY YEAR: the steady increase in volume of total overseas sales, which in 1955/56 represented 45 per cent of total Group sales.

HOME MARKET

Sales at home of all our main types of manufacture increased over previous years—and, of course, no effort is being spared to increase our share in the expanding market for our products.

In referring to the home market, it is, I feel, appropriate to remind the Shareholders of the diversity of the Company's production—which is represented in four separate divisions. These comprise the production of miners' electric safety lamps—of which the Group is the world's largest producer—emergency lighting and other electrical equipment; electric storage batteries for commercial vehicles, industrial and Government services, and the private motorist; and a number of engineering products and manufactures.

EXPORTS

Last year, in referring to our direct export business, I said there were reasonable grounds upon which to expect that the volume would again rise this year. This expectation has been fulfilled, and on this occasion I am able to report an all-round increase of over 50 per cent. in the exports of the Company's products.

OVERSEAS MANUFACTURE

In South and Central Africa, India, Australia and France, our overseas companies continue to make a substantial contribution to the Group's trading. All in all, the Company's overseas business—taking into account both our increasing direct exports, and the expanding operations of our various overseas Companies—is developing satisfactorily, and it may be fairly said that a valuable overseas trading structure has been built up.

THE FUTURE—NEW FIELDS

In looking at the future long-term prospects of the Company, I am again encouraged by the increasing diversity of our output, and the expanding demand for our products in mining, transport, and many other essential fields of industrial effort.

Subject to conditions beyond our control, and based upon its record to date, there is no good reason why the progress of the past should not be matched in the future, as new fields open before us, in this second half of the twentieth century.

Your Company's base is too near the scenes of the Arkwright riots for us not to be conscious of all the implications of newly-devised mechanical power. Surely any reasonable economist—and any reasonable layman, whatever his shade of politics—must now realise that the more we can procure machinery to supplant the drudgery of life, the better off we all shall be.

If new battery-operated equipment can thus supplant or replace physical effort, it creates a boon and not a problem, and we as a Company shall continue our endeavours to play an increasing part in such progress, wherever it lies within our activities.

OLDHAM AND SON LIMITED
DENTON, MANCHESTER
Electrical and Battery Engineers

VENNER LIMITED

ANOTHER SUCCESSFUL YEAR

POLICY OF DIVERSIFICATION

MR ARTHUR A. ROWSE ON CURRENT TRENDS

The forty-fifth annual general meeting of Venner Limited was held on August 17th at New Malden, Surrey. Mr Arthur A. Rowse, CBE, MIMechE, MICE, MIEE (the Chairman), who presided, said:

I propose with your permission to take as read the Accounts which have already been circulated. (Agreed.)

It is again my pleasure to report a year of successful trading resulting in a net profit slightly higher than last year. Labour costs consequent on wage awards have increased and competition has become keener. However, by continuous attention to methods of manufacture and plant utilisation, coupled with an increased output, the position has been more than held. The small improvement is an indication of the inherent difficulty of the problem and how little room there is for the "substantial wage advance" claim which is so regularly put forward.

THE ACCOUNTS

The profit after depreciation is up by £5,500 at £103,367. Income Tax absorbs £44,665 and Profits Tax £12,560, a total of £57,165. The available balance is £46,202. To this is to be added the balance brought forward from last year of £16,728, making £62,930 which your Directors recommend should be allocated as follows:

	£
To Dividend on 8% Cumulative Preference Shares for the Year ended September 30, 1955, less Income Tax	1,350
To General Reserve	25,000
To a Dividend of 15% on the Ordinary Stock, less Income Tax	18,630
To be carried forward	17,950

The effect of the current high taxation on Company development is seen if we look at the Accounts for the past three years. During these years the Company has paid in taxation, apart from Excess Profits Levy, £150,329 or 53 per cent of the net profits earned (last year it was 55 per cent) before anything was available for dividend or for the development of the business and replacement of plant. The depreciation allowed by the Inland Revenue is quite inadequate for this purpose since it it is calculated on historic cost of assets and therefore ignores the reduced purchasing power of the pound sterling. During the same period the Company has paid £59,040 in net dividends to holders of Preference Shares and Ordinary Stock and added £67,605 to General Reserve and Carry Forward. Also, in order to maintain its own competitive position, to diversify its products and to handle the increased volume of business it has in this period had to spend £239,765 on new equipment and additional buildings; of this sum £67,605 has been provided by "ploughing back" as I have already mentioned and £86,767 by an increase in the provision for depreciation, making a total of £152,998 from the Company's own resources. The amount of £85,393 has therefore had to be borrowed by means of the Unsecured Loan. The balance of this Loan and the Bank Overdraft have been used to finance the increase in stocks, work-in-progress and debtors which is the consequence of higher output and more active trading. Borrowing has been forced on the Company by the high rate of taxation. The Bank Overdraft is well secured but clearly the level of the standard rate of tax and the accompanying profits taxes constitute a serious restraint on development, forcing companies more and more into borrowing to maintain their competitive position.

ADDITIONAL FACTORY SPACE NEEDED

The Battery is establishing itself in its own special field in a very positive way. The volume of business likely to be available in the reasonably near future is such that additional factory space will be needed and active steps are being taken by your Board. This will cause an immediate increase in overheads for the time being before the full advantage to earnings accrues.

On the precision engineering side there is a very wide commercial field and although some development work remains to be completed the long-term prospects are encouraging. Immediate prospects, however, are affected to some extent by the uncertainty of the precise way in which the Government economy measures will affect production of service aircraft.

The Parking Meter has been the subject of so much newspaper and public discussion generally that I almost hesitate to refer to it. Much of the criticism has been so ill-informed that one waits with some impatience to see the first public installation in this country so that the essential simplicity and effectiveness of the system of "fair shares for all" in parking can be visually demonstrated. Meanwhile, nearly all the parking meters installed in the Commonwealth have been made by your Company and the freedom from trouble in service confirms the view that in every way the manufacturing facilities which have been created will constitute a remunerative asset in due course when the Transport Bill has passed the House of Lords. But that may be too late to benefit the current financial year to any material extent.

The rise in the interest rate on municipal borrowing and the call for economy may dissuade some councils from expenditure on new projects. However, so much of the output of the Company in this field is essential to normal development that the long-term effect is unlikely to be serious, although, once again, current trading may be affected in some measure. The effect on the parking meter may be to slow down the rate of introduction, but once installation commences the advantages will be so obvious and the revenue so attractive that the pace must quicken.

GROWING POTENTIAL WORLD DEMAND

As regards the future, there are so many complicating factors that it is difficult to predict the short-term trend, but, as indicated above, prospects for the current financial year are possibly less favourable than those for the year under review. Looking further ahead, however, the potential world demand for the Company's products is undoubtedly growing all the time, but currency restrictions and import licences create serious problems and wide fluctuations in the intake of orders. We must also remember that overseas buyers just will not pay higher prices arising from a desire, however natural, that the people of Britain should be entitled as of right to a higher standard of living and more leisure. Profits on overseas orders are usually marginal when transport costs and delayed payments covering transit time are considered. But an order lost is the loss of more than profit. The gap in production has to be filled if the overhead expense of the factory is to be met.

The Board some time ago embarked on a policy designed to broaden the base of the business and ensure its stability by diversification of the products. In any recession a policy of this kind has a cushioning effect. Much has been done in this direction. We therefore face the ultimate effects of the credit restriction with the consciousness of having made timely moves to mitigate them.

And to the extent that the organisation has succeeded in these tasks during the past year, the Directors—and I am sure the Shareholders—would wish to record their appreciation of the efforts made.

The report and accounts were adopted.

WILLIAMS & WILLIAMS

ENCOURAGING PORTENTS

The forty-seventh annual general meeting of Williams & Williams, Limited, was held on August 17th at Reliance Works, Chester.

The chairman of the company (Mr B. A. Williams, CBE) presided, and in the course of his remarks said:

A year ago I stressed the important bearing on our trading results of the continuous increases in the costs of wages, materials and services. Our maintenance of fixed selling prices resulted in a heavy decline in our earnings. Fortunately, as stated in your directors' report, most of the fixed priced contracts have now been completed. We must, however, accept this as a very salutary reminder of the increasing necessity for relentlessly pursuing the most economic methods of production in all its phases, not merely to offset any upward trend of cost, but in order successfully to meet the challenge of keen and severe competition in both the home and the export markets. There is no doubt that your North American interests found the difficulties that assailed them tougher than they had expected, and consequently their development has been slower than had been hoped. However, we are looking forward to those interests producing better results in the year ahead.

I think it is right that I should express appreciation of those of your subsidiaries whose results for the year do manifest a highly creditable performance. I would refer in particular to your companies in the Union of South Africa and Rhodesia, where, in a period possibly of the greatest difficulty yet experienced in the industry there, uniformly steady and satisfying results have been achieved. Moreover, such examples give encouragement for the view that this year's disappointment will give way to next year's improvement.

The net profit of the Group after providing for all expenditure other than taxation amounted to £206,927, and after providing £99,085 for taxation and adding the sum of £263,854 brought forward from previous years, a balance remains of £371,696 which your directors recommend be dealt with in the manner set forth in their report.

The report was adopted, and the dividend of 12½ per cent less tax for the year was approved.

APPOINTMENTS

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships tenable for one year in the first instance, and renewable for a further period, not exceeding two years. The studentships are normally of the value of £350 or £400 per annum. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University.—Applications should be sent, not later than September 1, 1956, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF GLASGOW

ASSISTANTSHIP IN POLITICAL ECONOMY

Applications are invited for an Assistantship in Political Economy. Salary scale: £550 to £650. Initial salary according to qualifications and experience. F.S.S.U. and family allowance benefits.

Applications (three copies) should be lodged, not later than August 31, 1956, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHISON,
Secretary of University Court.

UNIVERSITY OF BRISTOL

SENIOR AGRICULTURAL ECONOMIST

Applications are invited for the post of Senior Agricultural Economist in the Department of Economics, Bristol I Provincial Agricultural Economics Centre at Bristol. Applicants should possess a good honours degree in Economics, Agricultural Economics or Agriculture with Economics and should have had some years of experience in research in the field of Agricultural Economics. The present salary scale is within the range of £1,070 to £1,260 per annum with superannuation under F.S.S.U.

Further particulars may be obtained from the undersigned to whom applications should be forwarded by September 7, 1956.

H. C. BUTTERFIELD, Registrar and Secretary.

UNIVERSITY OF BRISTOL

SENIOR AGRICULTURAL ECONOMIST

Applications are invited for the post of Senior Agricultural Economist in the Department of Economics, Bristol II Provincial Agricultural Economics Centre at Newton Abbot, Devon. Applicants should possess a good honours degree in Economics, Agricultural Economics or Agriculture with Economics and should have had some years of experience in research in the field of Agricultural Economics together with some experience in farm management and advisory work. The present salary scale is within the range of £1,040 to £1,220 per annum with superannuation under F.S.S.U.

Further particulars may be obtained from the undersigned to whom applications should be forwarded by September 7, 1956.

H. C. BUTTERFIELD, Registrar and Secretary.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF HISTORY

Applications are invited, preferably from those with special interests or qualifications in European and/or English History of the 19th and 20th centuries, for a temporary Assistant Lectureship in Modern History for one year at a salary according to qualifications and experience but in any case not less than £550. Applications (three copies) stating age, qualifications and experience, together with the names of three referees, should reach the Registrar, The University, Leeds 2 (from whom further particulars may be obtained) not later than September 20, 1956.

INDEPENDENT TELEVISION AUTHORITY

Applications are invited for the combined post of CHIEF FINANCE AND ESTABLISHMENTS OFFICER to the Authority. The salary is £2,500 p.a., but up to £3,000 may be paid for outstanding qualifications. Candidates should have responsible experience in finance and accounts. Experience in a public authority or a Government department is desirable but not essential, and a professional qualification will be an advantage. There will be a contributory Pension Scheme.

Applications, with particulars of education and experience, should be sent, not later than September 15th, to the Secretary of the Authority, 14 Princes Gate, S.W.7.

REQUIRED, Chief Clerk, Investments department, Bank in North Africa, trading in British and foreign securities. Capable of taking charge and delegating and all correspondence. £1,000 per annum.—Full details to Box 485.

A WOMAN MARKET INTELLIGENCE OFFICER is sought by prominent City finance corporation. Economics degree or similar, some statistical or research experience, and ability to make contact with sources of industrial, technical and trade information. Age 25-35, salary £6-800. Full details of qualifications and experience to Box 490.

DEPARTMENT OF FINANCE, DUBLIN, invites applications for a post as Economic Assistant.

Age on September 1, 1956, not less than 25 and not more than 35.

Candidates must have at least a Second-Class Honours degree in Economics or a related subject and at least three years' satisfactory experience in teaching Economics or in economic research or in an economic advisory capacity.

Salary (according to age and experience) will be in the ranges (a) £1,400 to £1,700 for a man, and (b) £1,125 to £1,425 for a woman.

Particulars and application form from Staff Section, Department of Finance, Dublin. Latest date for receipt of completed application forms—September 14, 1956.

CENTRAL ELECTRICITY AUTHORITY require a SENIOR STATISTICAL ASSISTANT in the Utilisation Research Section of the Commercial Department at Headquarters, E.C.2, to assist in applying statistical methods, especially sampling and regression analysis, to problems of consumer and load research, and to advise on statistical matters. Candidates should have a University degree in Mathematics or Economics with Statistics as a special subject. Salary £819-£895 p.a. Applications stating age, qualifications, experience, present position and salary, to D. Moffat, Director of Establishments, Wimley Street, W.1, by August 31, 1956. Quote Ref. E/872.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR

Applications are invited for the post of TEMPORARY LECTURER IN ECONOMICS for the sessions 1956-57 and 1957-58. The salary will be £650 p.a., and the appointment will date from October 1, 1956, or from a date to be arranged.

Applications should be sent to the undersigned, from whom further particulars may be obtained, as soon as possible.

KENNETH LAWRENCE,
Secretary and Registrar.

MANAGEMENT SELECTION LIMITED

have been retained to advise on the selection of the

MARKETING MANAGER

for a company making internationally famous branded consumer products. The post is created by rapid expansion which is planned to continue. The success of the British and U.S. associated companies is founded on a live merchandising policy. The Marketing Manager will direct the development, planning and execution of the total marketing effort. Wider responsibilities await success in this post.

Candidates must have experience, at senior level, of advertising, sales and marketing in a consumer product company, and have evidence of successful, original thinking in these fields. Agency experience an asset. Probable age 35-45. Initial salary about £3,000-£3,500

Preliminary inquiries, with brief personal details, should be sent in confidence to M.S.L. No information will be passed to our clients without permission at interview. — Please write, in confidence, to: H. F. Rolt, Management Selection Limited (S.155), 8 Clarges Street, London, W.1.

FEDERATION OF RHODESIA AND NYASALAND

VACANCY: AGRICULTURAL ECONOMIST
FEDERAL MINISTRY OF AGRICULTURE

Applicants for the vacancy on this staff of the Chief Agricultural Economist must possess a degree in Agriculture or Economics, together with experience in the field of agricultural economics, preferably on farm management inquiries or production cost investigations.

Starting salary—£650-£1,100 depending on qualifications and experience on scale rising to £1,600 p.a. Oxb entrant with a Second Class Honours degree and two years' experience would start at £1,000 p.a.; with four years' experience at £1,100. With a Pass Degree and four years' experience, starting salary would be £1,000 p.a.)

Duties will include the collection from farmers of economic data for the farm management surveys and cost of production inquiries. The officer will be required to travel widely within the Federation.

Application forms and further details from the Secretary, Rhodesia House, 429 Strand, London, W.C.2. Closing date September 15th.

STATISTICAL OFFICERS required by EAST AFRICA HIGH COMMISSION. Appointment on two years' probation for permanent and pensionable employment. *Commencing salary according to qualifications and experience* in scale (including inducement pay), £1,956 rising to £2,341 a year. Outfit allowance £30 in certain circumstances. Free passages. Liberal leave on full salary after tour of 30-36 months. Candidates between 25 and 35, must be of good education and have had experience in organisation and routine analysis of statistical material. Qualification in economics, statistics, or *mathematics an advantage. Female candidates must be* UNMARRIED. Write to the Crown Agents, 4 Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience and quote: M1B/45565/EN.

MULLARD LIMITED has vacancies for QUALITY CONTROL ENGINEERS in several plants, mainly in the South of England. The work will be concerned with the application of statistical methods in the development, production and testing of receiving valves, or cathode ray tubes or semi-conductors. Applicants, who should be aged between 24 and 30, should have a degree, preferably in mathematics with post-graduate statistics and in economics with statistics. Candidates offering other qualifications must have mathematical ability. They should be able to work on their own initiative and mix with people successfully, while at the same time maintaining an independence of view. Training will be given, partly in Central London. Salary at 24 will be not less than £630 a year. Applications should be sent in writing to the Central Personnel Department, MULLARD LTD., Century House, Shaftesbury Avenue, London W.C.2, marked Q.1.

SALES EXECUTIVE. William R. Warner and Co., Ltd., require a Sales Executive for their ethical pharmaceutical products. The successful applicant will be expected shortly to assume the duties of Sales Manager. Applicants should have had experience of all aspects of medical representation and have a good knowledge of planning and control of this type of work. Commencing salary according to qualification and experience and will be adequate to attract an experienced and enthusiastic executive. The company has a generous, non-contributory pension scheme. Applications, stating age, qualifications, positions held and salary earned, should be sent to Director, William R. Warner and Co., Ltd., Power Road, London, W.4.

THE Labour Party has a vacancy for a Committee Clerk on the staff of the Parliamentary Labour Party to commence in October next. Applicants should have had Committee, Secretarial or Administrative experience and have a good knowledge of political affairs. Shorthand would be an advantage. Salary £650 rising to £800 (plus £50 late-night allowance). Superannuation Scheme. The position will entail some evening work. Applications, giving age, qualifications and experience, should be addressed to Morgan Phillips, The Labour Party, Transport House, Smith Square, London, S.W.1, before Friday, September 7, 1956.

RHODES UNIVERSITY

GRAHAMSTOWN, SOUTH AFRICA

Applications are invited for the post of LECTURER or SENIOR LECTURER IN ECONOMICS from January, 1957.

The salary scales are:

Lecturer: £800 x £50—£1,050 p.a.
Senior Lecturer: £1,050 x £50—£1,400 p.a.

In the case of married persons only, a variable cost-of-living allowance, at present £234 p.a., is payable in addition. Previous experience and academic qualifications may be taken into account in fixing the commencing salary.

Full particulars and application forms may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in South Africa and London, is September 15, 1956.

ESSO PETROLEUM COMPANY LIMITED

has a vacancy in the

Education Section of

PUBLIC RELATIONS DEPARTMENT

for an Assistant

to co-ordinate activities in the field of education, and to assist in the progress of Public Relations educational activities in Universities, Schools, and Technical Colleges. Candidates should have a University education, and must be in the age bracket 28-33. Experience of public speaking and an appreciation of scientific and economic matters would be an advantage. Please reply, giving full details of career to date, to the Personnel Manager,

ESSO PETROLEUM COMPANY, LIMITED,
36 Charles II Street, S.W.1.

ECONOMIST/STATISTICIAN (30), 1st class honours B.Com., A.I.S., 6 years' University and Government experience in analysis and interpretation of statistical data, seeks responsible commercial or industrial post, in provinces.—Box 491.

YOUNG lady, British, now residing Italy, experienced secretary/translator/interpreter. English, Russian, Italian, Serbo Croat, German, French, desires employment in England. Vera Martin, 6/6 Rai Dre, Route 9, Via del Babuino.

NOTICE

The National Iranian Oil Company offers for sale, during the year 1957, a total quantity of 3,660,000 long tons of Iranian Light Crude Oil in following quarterly quantities F.O.B. Bandar Mashur

	U.S. Barrels	Long Tons
First Quarter	6,683,000	900,000
Second Quarter	6,840,000	910,000
Third Quarter	6,919,000	930,000
Fourth Quarter	7,076,000	920,000
Total	27,518,000	3,660,000

Main characteristics of the Crude Oil offered are:
Average Specific Gravity at 60° F 0.850 (34.9° API)
Sulphur % Wt. 1.3 = 1.4%
Vapour Pressure 6.5 to 8.0 lbs. at 100° F.
Salt Content 5.7 lbs. approx. per 1000 bbl.

Those interested are requested to indicate:
1. Price offered per barrel of 42 U.S. Gallons f.o.b. Bandar Mashur.
2. Quantity of crude oil required.
3. Period during which the required quantity will be lifted.
4. Currency in which payment will be effected. (Preference being given to payments in currencies of international convertibility.)
5. Whether the purchaser is prepared to put up a performance bond.
6. Whether the purchaser would arrange for vessels carrying crude oil to be bunkered by the National Iranian Oil Company.
7. Banks to which reference can be made.

This offer is open until September 10, 1956, and the National Iranian Oil Company will notify its acceptance or rejection of the proposals received before November 30, 1956.

The National Iranian Oil Company is also prepared to consider offers for long-term contracts for the purchase of Iranian Light Crude Oil.

Proposals may be directed to the National Iranian Oil Company, Tehran, or to the Iranian Embassies, Legations, or Consulates abroad.

NATIONAL IRANIAN OIL COMPANY

SUCCESSFUL TUITION FOR THE B.Sc.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees; instalments. Over 1,000 Wolsey Hall students have secured this valuable degree since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

EXPORT

Old established but vigorous export house constantly expanding its activities, would be interested in propositions providing increased business. Export and Confirming houses short of capital may be interested to discuss mergers.—Write full details, The Secretary, Box 492.

FINCHLEY CORPORATION

£5 10s. per cent offered for Mortgage Loans of three, four or five years. Trustee securities. No risk of capital loss. No charges to lender.—*Details from Borough Treasurer, King Edward Hall, London, N.3.*

EXPERT POSTAL TUITION

for Examinations—University, Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (G72)

METROPOLITAN COLLEGE ST. ALBANS

SOME FACTS ABOUT ATOMIC POWER . . .

[for peaceful use]

▸ **ELECTRICITY**	The electricity produced by atomic power stations is exactly the same as electricity produced by any other means. The nuclear reactor simply replaces the conventional coal or oil burning plant which produces heat in thermal stations.
▸ **EFFICIENCY**	Uranium 235 is theoretically capable of producing 3 million times the energy obtained from the same weight of coal. At the same time it can save all the cost of haulage, storage and handling and plant maintenance as well as the cost of ash disposal.
▸ **SUPPLY**	The world's store of atomic fuel is virtually inexhaustible — whereas coal and oil supplies are limited and insufficient to meet future world needs.
▸ **CONVENIENCE**	Nuclear fuel is compact and easily transportable. It can be carried to parts of the world where the transport of conventional fuels is impossible or where means of transport do not exist.
▸ **SAFETY**	Boiling water reactors are safe and in the United States are being built in centres of population. There, they are also being erected at various universities for training students in this all-important development.

MITCHELL DEVELOPMENTS in the field of atomic power are the logical out come of 30 years' exceptionally wide experience in all branches of engineering and electrical supply.
The agreement between Mitchell Engineering Ltd and AMF Atomics Inc of New York will undoubtedly have far-reaching effects in applying atomic power for the benefit of mankind.

MITCHELL COMPANIES are at present engaged on three important contracts for the United Kingdom Atomic Energy Authority.

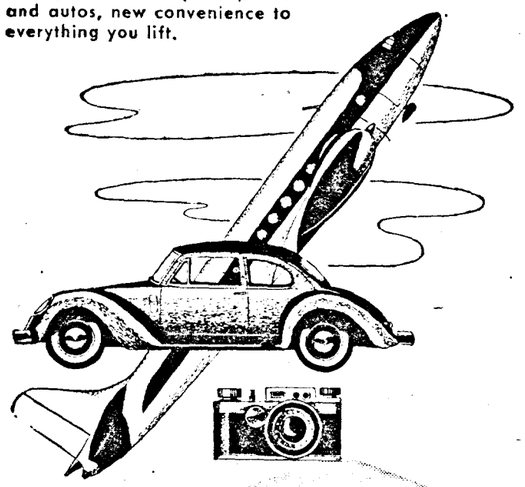
magnesium

Magnesium, the world's lightest structural metal . . . offers new opportunities to designers, is a very practical metal in production. It brings new efficiency to airplanes and autos, new convenience to everything you lift.



. . . Another example of Dow at work with industry to make better products for you.

Dow is the world's largest supplier of primary magnesium and magnesium alloy to the fabricators who make products for you. As a major chemical company Dow also supplies plastics and basic chemicals to manufacturers throughout the world. Thus *chemistry works with industry* in the continuing search for improved methods and materials, improved products for you.

For more information about Dow products, contact your local representative, or write to Dow, Dept. 316-N, Zurich.

Now! MICROFILMING AT FAR LESS COST!

Burroughs Micro-Twin combines microfilm recorder and reader *in one unit*

MICROFILMING provides a modern, compact record-keeping system giving continuous savings in time, work, money—*and in valuable office space.*

Hitherto, it has meant having two machines: a recorder, for filming documents, and a reader, for referring to them.

Now, the Burroughs Micro-Twin* cuts the cost of equipment. It combines recorder and reader in *one* compact precision unit, so that you have the complete cycle of microfilming at your finger-tips. Yet it costs *less than you would expect to pay for the recorder alone.* This low cost is made possible by the ingenious design of the Micro-Twin.

Recording is rapid and easy. Both sides of a document can be photographed at once, or one side only. Film is economized.

To refer to documents, turn the control knob to "read." The same lens is used for both recording and reading. Documents are shown on the viewing screen full-size or larger, sharp and legible even in broad daylight.

The exclusive indexing meter, the latest development in rapid document location, eliminates unguided searching for filmed records. As many as 999 locations may be indexed for each 100-foot roll of film. Any document image may be located in a matter of seconds.

Facsimile prints can be made on the spot, without a dark room.

The new Burroughs Micro-Twin thus brings you the advantages of microfilming at far lower cost than before.

Visit your nearest Burroughs office for a demonstration. Head Office: Burroughs Adding Machine Limited, 356-366 Oxford Street, London, W.1.

**British-made for Burroughs by G. B. Equipments Ltd., to Bell & Howell design.*

Our Ref: AES PD

The British European Airways,
Dorland House,
Lower Regent Street, S.W.1.

Gentlemen,

Some four weeks ago, your Representative Mr. G. R. Allen, called upon us about air-freight. . . . Quite frankly, we did not consider even a remote possibility that our machines could be transported in this manner. However, in view of the constant increase in surface transport costs, we decided to send two machines by air to the Continent for exhibition. These weighed 2100 Kg. and 2500 Kg. and owing to their design, left us in doubt as to whether this would be a reasonable experiment.

We were most impressed by the manner in which they were handled. Despatches of this nature will obviously afford us not only a considerable saving of time, but show also a reduction in overall costs, and in the instances mentioned, the saving amounted to something like 20%.

The two clients concerned have written to us recently stating that both machines arrived in first-class condition (even though they were unpacked) and commending us for the initiative taken by using this method. Finally, we have already received further orders from the Continent, with a request that we send them by air.

Yours faithfully,

SGD: A. E. Sutton,
Shipping Manager.

The types of goods you can send by BEA are almost unlimited. Low insurance costs. No pilfering. Minimum packing. Low BEA rates. For full details ask your usual Shipping or Forwarding Agent or write to BEA, Waterloo Air Terminal, London, S.E.1. Telephone: WATerloo 8030.

HOW TO CHANGE A WOMAN'S MIND OVER 2,000,000 TIMES

Among its five million readers, The Reader's Digest has well over two million women—with the susceptibility, the shrewdness, and the passion for shopping that make them such attractive customers.

Why, essentially, do the people who enjoy this magazine each month provide such a productive market for your advertising message? One reason is that they are comfortably above the average in income—for instance, over a million of our readers own their own houses, and nearly a million have motor-cars.

But more important still is our readers' *character*. The Reader's Digest deliberately sets out to please people with inquiring minds, interested in many things, receptive to new ideas. Its phenomenal success—over a million sale in Britain, a *world* sale of over eighteen millions—is the measure of the opportunity it offers to the advertiser who has something to say. Its readers really *read* it—pick up each issue many times as they browse through its articles. There is ample evidence that they read the advertisements, too. And they are exactly the kind of people, better informed than most, whose example is apt to influence their friends.

It is because of the character of its readers and their pleasure in *reading* it that The Reader's Digest is one of the great advertising media of Britain.

OVERSEAS *International editions, 27 of them, cover key export markets. The British exporter can book space in London and, usually, pay in sterling.*

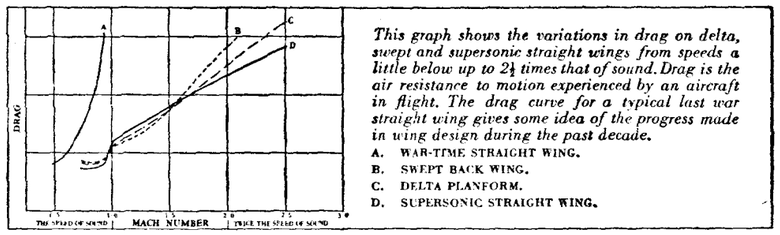
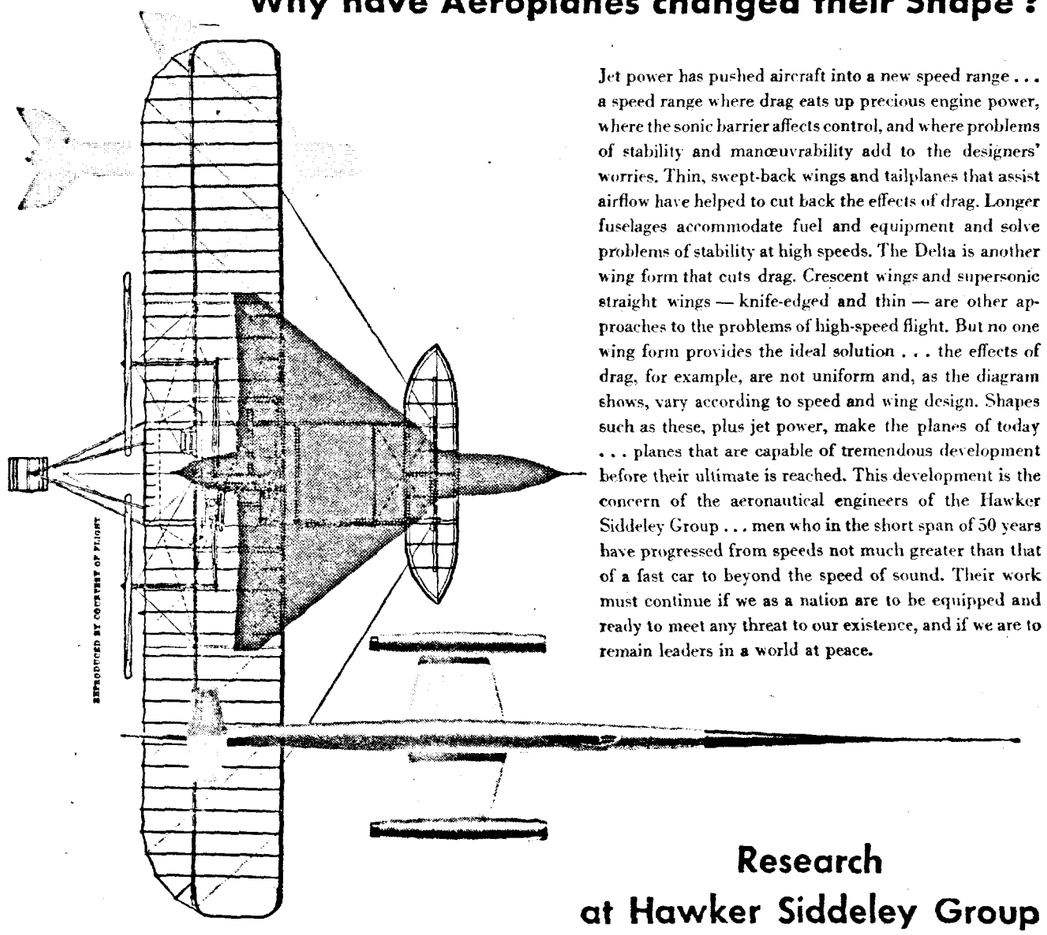
PROBING THE FUTURE
OF AVIATION
No. 1 in a series



This graph shows the variations in drag on delta, swept and supersonic straight wings from speeds a little below up to 2½ times that of sound. Drag is the air resistance to motion experienced by an aircraft in flight. The drag curve for a typical last war straight wing gives some idea of the progress made in wing design during the past decade.
A. WAR-TIME STRAIGHT WING.
B. SWEPT BACK WING.
C. DELTA PLANFORM.
D. SUPERSONIC STRAIGHT WING.

Why have Aeroplanes changed their Shape?



Jet power has pushed aircraft into a new speed range . . . a speed range where drag eats up precious engine power, where the sonic barrier affects control, and where problems of stability and manœuvrability add to the designers' worries. Thin, swept-back wings and tailplanes that assist airflow have helped to cut back the effects of drag. Longer fuselages accommodate fuel and equipment and solve problems of stability at high speeds. The Delta is another wing form that cuts drag. Crescent wings and supersonic straight wings — knife-edged and thin — are other approaches to the problems of high-speed flight. But no one wing form provides the ideal solution . . . the effects of drag, for example, are not uniform and, as the diagram shows, vary according to speed and wing design. Shapes such as these, plus jet power, make the planes of today . . . planes that are capable of tremendous development before their ultimate is reached. This development is the concern of the aeronautical engineers of the Hawker Siddeley Group . . . men who in the short span of 50 years have progressed from speeds not much greater than that of a fast car to beyond the speed of sound. Their work must continue if we as a nation are to be equipped and ready to meet any threat to our existence, and if we are to remain leaders in a world at peace.

Research at Hawker Siddeley Group

Extensive wind tunnel tests show designers how aircraft will behave in flight.

Aircraft tested to destruction on massive test rigs get more punishment than they will ever face in the air.

Ends and Means at Suez

PARLIAMENT has been recalled for Wednesday to hear the outcome of the Menzies mission to Cairo on the future organisation of the Suez Canal. It is imperative to reduce the confusion that reigns in many British minds, including some in high places, about the objectives of present policy, for until these objectives are seen clearly, instead of in a haze through which diplomacy and military preparations are simultaneously discernible, no member of Parliament can very well decide what ought to be done if Mr Menzies's team should have failed, or, still more difficult, if it has achieved only an incomplete and unsatisfactory success.

What are the facts? Last month the London Conference met and, by Egypt's choice, became a users' conference. Its members, though somewhat arbitrarily chosen, represented 95 per cent of the owners sending ships through the canal, and very nearly all of them held a belief that President Nasser's impulsive and peremptory action boded no security for them, and destroyed their confidence in Egyptian management unless this were subjected to control. The conference was a success, from the users' point of view, in that the great bulk of them—eighteen in all—reached agreement on the end they must seek if their confidence were to be restored. This end, as expressed by Mr Dulles, was to make

> institutional arrangements for co-operation between Egypt and other interested nations in the operation, maintenance and development of the Canal.

The Dulles formula specified four essentials: respect for Egypt's sovereign rights, an orderly settlement to include compensation, dependable operation without extortionate dues, and—most important of all—freedom of passage without risk of interference for political ends. So far so good. But the agreement between the eighteen covered ends only, not means; beyond sending five of its members on an exploratory trip to Cairo, it did not attempt to decide how to execute its wishes if Colonel Nasser refused to agree. Indeed, the eighteen would not, at that stage, have agreed about means if they had tried.

The danger that their unity would collapse if put to that test is brought out only too clearly by the British domestic debate on what to do next. British action in the Suez dispute has been riding two horses, not in harness. The Government, by playing host to the conference and by subscribing to its main result, implicitly accepted negotiation as the best way round an awkward bend. Yet at the same time cabinet ministers, led by an indignant Prime Minister, have given first place, not to the policy of negotiation about the future management of the canal, but to that of denouncing President Nasser as an untrustworthy fellow with whom any arrangements are valueless; it is this thought, rather than ordinary motives of prudence, that has seemed to inspire the military build-up against him. Which of the two courses do they want, and which will Parliament want when it meets to debate

their policy ? Do they seek to secure practical ends on the Canal that may be capable of achievement by negotiation ? Or are they bent on the overthrow of President Nasser on the ground that preservation of the general western position in the oil-bearing Middle East demands that he suffer a public military or diplomatic defeat ?

The incompatibility of these concurrent policies can be glossed over too easily. Glib tongues are arguing that the assembly of force is only a means of compelling President Nasser to take the users' committee seriously, and to weigh the possibility of military action in his calculations. But to test his nerves in this way begs dangerously the whole question of present-day relations between Europe and Asia. It is possible that a show of force, or the use of force, would settle the immediate matter of President Nasser's gamble, but any such military exercise merely postpones, and does not solve, the political issue of the future. It must never be forgotten that a military operation, to be effective, could not be the quick in-and-out affair that some swashbucklers envisage, but would entail grim reoccupation together, probably, with action over a very wide area. It would need to include, for instance, provision to deal with saboteurs bent on wrecking the westward flow of Middle Eastern oil and capable of doing so anywhere over hundreds of miles of desert pipeline. To strike Nasser down, Gladstone-wise, may delight the thin remains of conservative ruling classes in Asia and Africa, but will antagonise millions of younger fry whose envy and resentment of European skill and supremacy are a force to be lived with by the world's white minority for the rest of the twentieth century. An avoidable military operation against President Nasser would break the united front of the canal's customers; its only advocates are a section of British and of French opinion. Ultimately it would tend to drive all but a conservative minority of Asian and African opinion into the open arms of the Soviet Union.

★

The British Government may have to choose between the purposes to which it subscribed when it called a conference and the conflicting purpose of overthrowing the Egyptian regime. Admittedly, an outright victory for President Nasser would gravely impair western interests elsewhere in Asia and Africa. It would destroy the hopes of more than a few rulers and would-be borrowers in the Bandoeng states, and would delight only the unthinking millions of nationalists who have for years been conditioned into leaping before they look. But how likely is such a victory ? A Cairo correspondent in a message on page 802 suggests that Egypt is more likely to keep open the opportunity of negotiation than to give a categoric "No." The indications are that President Nasser sees the advantage in being flexible and in holding out the possibility of a compromise—which is likely, however, to fall far short of conceding full international control and its corollary, the repeal of nationalisation. Other reports coming from Cairo at the time of going to press suggest that the exchanges in Cairo may have developed in this way. By flexibility President Nasser may hope to preserve the asset that has stood him in such stead over the last year—freedom of manœuvre to play off East against West. At stake, as far as he is concerned, is the sympathy of important sections of world opinion, not only in the United States but in Asia, which he will lose if he plays his cards in such a way as to shackle himself to Soviet aid, trade and imperialism.

The Menzies committee undertook a heavy responsibility, not only in presenting its case in Cairo, but in reporting to its sponsors at the end of the talks. Much may depend on the conclusions that the individual members of the mission draw, for the benefit of their own governments, from President Nasser's attitude. The private observations and interpretations of five men severally representing a member of the British Commonwealth, the United States, a leading European neutral, a member of the Baghdad Pact and an African state affect a wide range of diplomatic opinion. Egypt was bound to meet them cordially, if only in the name of neutralism. Whatever President Nasser's ultimate intentions, it is presumably in his interest now to take a line which, even if it does not satisfy Sir Anthony Eden and M. Pineau, will convince other powers among the users that negotiations are worth continuing.

This being so, what is the British public to do ? Should it listen to the thesis that if Nasser is not put down there will be no end to trouble in the Middle East ? Or to the argument that if his defeat is secured by military intervention, the relief will at best be temporary—and all the current political problems of the Arab world will recur, eventually, in a more acute form because embittered by the use of force ? So long as the way of negotiation remains open at all, surely this is the sounder view. To hold it is certainly not to argue that force ought never to be used; but it would need to be backed by a broader range of world opinion than it has been able to muster yet.

British policy at this crucial stage should pursue the purposes on which the user nations are broadly agreed, rather than the aim on which they are divided. Thus it may keep at least the eighteen user nations together and preserve a united strength for use if things go wrong with the canal traffic in the future. Disruption of their unity would merely weaken the chances of getting the kind of management that will make the canal work, and of getting a measure of agreement to act if its working is impeded. This implies leaving any plan for the overthrow of President Nasser to the Egyptians. The use of force may not in the end be avoidable but it would be a misfortune, to be faced only if it proved the only way. The principal effort must still be fixed on the search for arrangements which, by confining President Nasser's ambitions, will keep the canal open, cheap and efficient.

Report from Brighton

The Trades Union Congress met at Brighton this week with the eyes not only of the country but also of an inconvenient number of foreign holders of sterling firmly fixed upon it. The reports below, from our special correspondents on the spot, summarise the atmosphere at the congress, and discuss the main lessons that seem to be deducible from it.

WHAT one wanted to find out at Brighton, of course, was the real attitude of the trade union leaders to the wage struggles that lie ahead; and one soon began to suspect that this could not be done by taking too literally the resolutions and oratory in the Pavilion. It could not easily be found out behind the scenes either, partly because many of the leaders were not stone-cold certain about their attitude themselves. But, as the week wore on, one felt more willing to chance one's journalistic arm about the undercurrents of feeling at Hotel Metropole level; there is less accounting—and fortunately less need to account—for the ideas that were simmering (rather than seething) at boarding house level lower down.

The clearest initial impression was that the old stagers on the general council are as worried as any other sensible body of men about the prospect ahead; they do not want the economy to be wrecked this autumn by extravagant wage claims and strikes. Except for Sir Tom Williamson, whose position (in two senses) seems to grow daily more obscure, however, most of these old stagers now represent the smaller craft unions, which will not have much direct say in 1956's crucial wage struggles; and at the beginning of this week they therefore seemed to have fallen back, in private and semi-private utterance, on one constant refrain. The refrain was that, in view of the vague sins of the Tory Government, "their" (the militants') views were perfectly understandable; and that it would take very considerable diplomacy to stop "them" from giving their indignation full vent. The significant point is who the understandable "they," who were said to need this careful handling, now are.

In contrast to previous congresses, "they" were no longer the union rank and file, nor even the shop stewards and activist branch secretaries who have long represented the rank and file in the average general secretary's mythology. Instead—and this represents a revolution in postwar trade union pressures—the "they" about whom the old guard were so worried were now the Cousinsites, the newly emergent group among the general secretaries themselves. The phenomenon of Mr Cousins's rise to what might be decisive power, of this sudden accession of a complex character from the third to the first eleven, is discussed in a later note. All that need be said here is that a man whose primary aims have often seemed to be Labour-political—in a way that professional Labour politicians' aims rarely are—has been ruffling the composure of the general council by an apparently instinctive belief that anything that might help a Tory Government should, *prima facie*, be considered by a socialist movement to be an actively bad thing.

It should be said straightaway that the weight of the old-guard's opinions—and weight is the right physical term for the mass gathered at Brighton—did have some effect on the eagerly awaited speech about wage negotiations that Mr Cousins delivered on Wednesday. When Mr Cousins said that his motion did not mean that his union was going "on the rampage," he was scratching the general council's back at its request; just as the general council, in pretending that the motion could be interpreted in a way that precisely coincided with its views, was scratching his. But, inevitably, the sound of this affable scratching was lost in the mass of delegates' excitement. The gap between Mr Wilfred Heywood's obvious dislike of strike threats and Mr Cousins's open willingness to issue them remained significant—the more so because both men were verbally trying to narrow it. And it is the emotions on the Cousinsite side of the gap that now really matter. For even although Mr Cousins has not tipped the balance within the council towards his more activist views, all the signs are that his union's new militancy certainly has tipped it within the Confederation of Shipbuilding and Engineering Unions; while on the railways Mr Jim Campbell was a Cousinsite before that term ever had to be invented. These are the all-important points. For it is in engineering or on the railways that the explosion of a national strike for higher wages is most likely first to come.

★

That, to an observer at Brighton, seemed to be the personal and political background to the threatened wage struggle. But it is, of course, a gross underestimate of the technical capacity of Mr Cousins and Mr Campbell (or of the leaders of the Amalgamated Engineering Union, who have become Cousinsites as a thankful relief from their own internal pressures) to suppose that personal and political factors alone weigh with them. They are also, quite obviously, making a sober estimate of their chances of winning any battle in which they may become engaged. And it is natural that, for Mr Cousins and other leaders of the Confederation of Shipbuilding and Engineering Unions, the starting point should be the lessons learned from their recent dispute with the British Motor Corporation.

The confederation's leaders remember, even though some newspaper correspondents have forgotten, that the BMC dispute showed that many workers' enthusiasm for recurring stoppages was dramatically low; and some may even lay more weight than is strictly justifiable on the recent report of the *News Chronicle* Gallup poll that 69 per cent even of Labour supporters said that they would willingly forgo wage increases in return for price stability (in answer to a question framed with a deliberate *nonne*). But the confederation's leaders have also taken note that the real difference between an official and an unofficial strike is that the former can be supported by sympathetic action; it was the threat of a stoppage of all transport facilities by the railway unions, they say, that swiftly brought the BMC to compromise if not to heel. If the first decisive clash over the wages issue was called in engineering, there would again be this threat of a stoppage of all railborne supplies; if it came on the railways, Mr Cousins's lorry drivers would refuse to take any black cargo on the roads. In their hearts the union

leaders may admit that there are weaknesses in their own position (because of the apathy of their membership) as well as in the employers' (because of the power of the sympathetic strike), so that in any struggle each side would to some extent be calling the other's bluff. But the gloomy impression one must report from Brighton is that the union leaders who for the moment really matter seem to believe that they would be able to call the bluff that decisive bit the longer.

If the new guard does put this belief to the test of a national strike, what will the old guard do? The answer may depend on where the initial clash comes, and the best starting point for conjecture is to suppose that it may come in engineering first. (Although the impression at Brighton was that the railway unions must eventually come together in face of the Transport Commission's rejection of any wage increase, the railwaymen still have an inter-union squabble to surmount; the confederation has reached the stage of unity already.) If there is a call for a national strike in engineering, and if it gets something less than a 100 per cent response, then one's guess (although the union leaders concerned would probably at present deny it) is that some people on the TUC may offer to try to help turn the wheels of compromise fairly quickly; there may also be some room for a compromise to be secured. The leaders of the engineering unions, and their members perhaps still more, have some inkling that a large increase in costs could price Britain out of export markets and lose many of their people their jobs; and there are various fringe benefits—compensation for redundancy, pensions and so on—about which agreements might be struck to save face.

If the first decisive trouble arises on the railways, however, the situation may be much more difficult. For one thing, a call to a railway strike would almost certainly get a 100 per cent response; and the general opinion at Brighton seemed to be that, given a sympathetic embargo by the lorry drivers, the NUR would be in a very strong fighting position. For another, there is little room for compromise about fringe benefits on the railways; compensation for redundancy is beside the point because the railways—this is largely why they are in such a sad plight—do not dismiss their many redundant workers anyway, and pensions increases would be expensive because so many railwaymen are so old. Moreover, it is generally assumed among all trade unionists that a rise on the railways would not price railway workers out of their jobs, but would merely add to the Transport Commission's now customary deficit. If Dr Gallup had taken a confidential poll at the Hotel Metropole this week—though not among the unions directly concerned—he would probably have got the answer that a railway strike would be likely to succeed, an engineering strike quite possibly not. It should be added, however, that there was no evidence of collusion among the new guard in order to play their stronger card first. The atmosphere at Brighton was depressing enough in all conscience, but it was not Machiavellian.

* * *

Very Conformist Congress

WHILE an outside observer usually leaves a Tory party conference feeling vaguely anti-Tory (too many horse-faced women in hats) and a Labour conference feeling vaguely pro-Labour (because of the obvious sincerity of all those decent little people taking a sacrificially late annual holiday for the cause), he leaves a Trades Union Congress feeling more than vaguely cynical. The delegates (one per 5,000 members) are chosen in different ways by different unions, but the general rule seems to be for each organisation to try to get an adequate leaven of senior unionists who are still on the work-benches to join with the mass of full-time paid officials. Many of these people have already had their annual holiday, but their employers do not usually cavil at the extra week off (they had better not); and the union often pays full expenses and compensation for loss of wages. The Sunday newspaper which suggested last week that Mr Macmillan would by now have had the unions eating out of his hand if he had introduced a capital gains tax (in a year in which there have been large capital losses) and building licences (which could not yet have had one iota of disinflationary effect) finally banished one's Brighton blues when it put forward as its third postulant a determined attack upon expense accounts. From this well-meaning recipe one looked up in delight around the hotel lounge, at a congress which largely consisted of people who were living for a week off expense accounts; whatever they might say on the Pavilion floor, they seemed to be liking them fine.

This method of choosing and financing delegations has two other effects. One is that the median age of delegates is unexpectedly high (at a guess, around fifty), and many delegates tend to conform almost caricature-wise to a type; a check along one row revealed that one in five could reasonably be described as largish men with large horn-rimmed spectacles. The second effect is that, initially at least, the floor seems to be on its very best behaviour, as the factory workers show off to the headmasters of their delegations and the headmasters show off back to them. The deadening effect of this was obvious on Monday when Mr Beard—in a courageously moderate presidential address, made the more courageous because he shouted the moderate bits and slurred over the rest—almost projected himself over the rostrum trying to strike a spark from all those horn-rimmed spectacles; but there was no spark to be had. When the seconder of the vote of thanks to Mr Beard brightly informed the congress that one of the president's great virtues in collective bargaining was his "willingness to see the other fellow's point of view," the delegates—although most of them clearly thought that seeing the other fellow's point of view was a very bad thing—quickly shushed the only man present who thought that the orthodox reaction to this was to groan. Later the floor livened a little, and the more militant the speakers the louder—undoubtedly—rang the cheers; but the instinctive tradition of brotherly good manners towards those with whom most delegates disagreed was significant. It is nonsense to say that the congress is a body that cannot be led; there was no uncontrollable spring of angry militancy gushing up here from below.

A Cousins in the Nest

INEVITABLY, all eyes at Brighton were on Mr Cousins; one had stolen sidelong glances at him at last year's Labour conference at Margate, as his predecessor lay dying of cancer, but then it had seemed almost indecent to make the scrutiny too close. The monstrously powerful post of general secretary of the Transport and General Workers' Union was originally tailored to fit Ernest Bevin (by Mr Bevin himself); Mr Bevin then prepared Arthur Deakin for the mantle, and Mr Deakin prepared Mr Tiffin. Mr Cousins stood before the TUC this week as the man acclaimed by his union to fill the gap left by Mr Tiffin's death, but not as Deakin's choice.

Seen from the floor he looked as if he is going to develop all of his predecessors' presence (and therefore possibly of their power), and he may well be more skilled than Mr Deakin in the art of personal relations; but on wider matters he still plainly lacks some of Deakin's wisdom and *savoir faire*. Granted that all the cards could not have been more favourably stacked for him, his speech on Wednesday was still a major oratorical success; it is nice to hear a union leader who speaks in short sentences instead of incomprehensively long ones. But the matter of his speech was as thin as its manner was impressive. There was no evidence that he has pushed his processes of economic reasoning beyond an implicit belief that anything that is Tory and "unplanned" must be all wrong, and that most things that are "planned" should be all right.

The same mixed verdict must be passed on his other speech to congress—on Monday, outlining his union's dispute with the National Amalgamated Stevedores and Dockers. He spanked the NASD with all of Deakin's paternal arrogance; it is plainly not true, as some people have been saying, that the relative contributions of the two general unions to British public life are now being determined solely by the accident that Mr Cousins is physically a broad-shouldered man, of the sort that the trade union movement expects in its leaders, while Sir Tom Williamson happens to be a thin one. But in the structure of his speech—which consisted largely of indignant quotes of the rude things the NASD has been saying about his union—he ran risks that Deakin would have avoided; one felt that considerable harm could have been done to his cause by the interjection of a single sacrilegious "Hear, Hear."

Although the old guard finds itself increasingly in opposition to him, it shows no sign of personal resentment. Its attitude seems to be akin to that of some civil service department that has just got a Mr Bevan as Minister. ("A very able chap despite his background and views; by emphasising where we agree instead of disagree with him we will turn him into a national asset in time.") In pursuance of this policy, the more cautious members of the general council have busied themselves this week trying to bridge the gap between his school of thought and theirs by turning as many motions as possible into bromides that mean nothing at all—or, better still, that mean several things at once. There was no variety in this approach. Every member of the old guard was seeking this week to be personally undistinctive, in order not to appear to be personally leading a reaction against the Cousinsites; and the effect was inevitably cloying. Here was the TUC at Brighthelmstone, and nary a Prinny there.

* * *

Committee of Management

SIR VINCENT TEWSON, the general secretary of the TUC, said to the press on Sunday that the function of the General Council was not to lead the unions but to serve them. Events showed that this was perhaps excessively modest; except in the wages debate—where congress and the Cousinsites led the council — the decisions taken by congress were again very effectively controlled by central authority, in the shape of the General Purposes Committee. The function of this body is to arrange such things as the withdrawal of duplicate motions and the acceptance of emergency and composite resolutions; it operated with smooth efficiency.

The fact that the steamroller was in action became evident on the first restful day. The National Amalgamated Stevedores and Dockers' complaint against the Transport and General Workers' Union, which the general council had not wanted to be discussed at all, was shelved after a very short debate by a successful motion to pass to the next business. The steamroller showed itself to more palatable effect next day. The National Union of Railwaymen had put down a motion urging the reduction of national service to twelve months, which the Society of Boilermakers wished to amend to one urging total abolition. The general purposes committee persuaded these two powerful unions to withdraw their resolutions in favour of one, from the Furniture Trades Operatives, which merely urged a "speedy and progressive reduction" in service. By doing this, as Sir Tom Williamson put it, congress formulated a policy worthy of a Labour Government rather than a mere opposition; without this behind-the-scenes activity, congress's voice on national service might have been very odd indeed.

The council also rightly gave a lead in the debate on automation. Here, no less than nine separate resolutions were compounded into two, and it was arranged that the most effective spokesman for complete state control, the communist Mr Haxell of the Electrical Trades Union, should propose the milder one, which called for the protection of workers' interests and for tripartite consultations of state, employers and unions; the powerful TGWU then put up Mr Nicholas to demolish, with smooth efficiency, the arguments for the more extreme motion—which demanded detailed state control and a national planning board of "pseudo-civil servants."

It was, however, in foreign affairs that the technique of behind-the-scenes management operated to best advantage. Some members of the council apparently

inclined to a line on Suez indistinguishable from that of the Government ; others were virtual supporters of Colonel Nasser. The council nevertheless succeeded in drawing up an emergency motion which contained almost everything, including the essential rebukes to Egypt ; which did declare, apparently after some internal argument, that " force should not be used until the question has been referred to the United Nations, and with its consent " ; but which also struck upon the happy thought that " the Egyptian government has the opportunity . . . to exhibit statesmanship which recognises world needs as being above a narrow conception of sovereignty." Once again, the motion was passed. The best comment on the management of the conference was made by the delegate who declared on Wednesday that he was taking part " not in a debate, but a demonstration." The objective of the council, which seems to have been attained in handling most of the motions, has clearly been that delegates should leave Brighton giving different—but generally self-satisfied—answers to the puzzling question: a demonstration of what ?

France's Creeping Inflation

THIS autumn, France's political troubles threaten at last to break in on the extraordinary " normalcy " of her citizens' lives in recent years. Since 1954 France has been displaying the paradox of an economy flourishing as rarely before amid political crises and social maladjustments she seems unable to solve. Even the Algerian rebellion, draining away 150,000 men as conscripts, has barely laid its bill at the ordinary Frenchman's door. But the return from the first national three weeks' holiday with pay could bring a rough awakening. Pressure on prices—coming mainly from growing consumption but screwed up to a new pitch by the cost of Algeria in men and money—has been growing for months, and the broad-rumped administration is finding it hard to sit on them effectively.

Strangely, the fault in the authorities and the business world has tended to be over-optimism, derived from the extraordinary buoyancy of industrial production. Alone among European countries, France has recently matched German industrial growth month for month. As if inspired by this vitality, industrialists are showing more willingness to invest than they have shown for thirty years. A new surge of production is expected in the autumn, and the record industrial output of 1955 may even be bettered by ten per cent this year. The government is anxious to sustain this changed mentality ; France has done notably less than its neighbours this year to restrict credit.

Unhappily, what industry has given with one hand, circumstance has withdrawn with the other. The frosts in February reduced food production ; fruit and vegetables in April were nearly twice the price they were a year before ; food is still dearer than usual. The call-up has turned full employment into manpower shortage. Lack of skilled labour, according to an official inquiry in May, was hampering 42 per cent of firms, and of engineering firms 60 per cent. Growing immigration (7,000 foreigners came in June) has not filled the gap. Finally, capacity has fallen behind demand, particularly in steel, engineering and construction. In the extreme cases, building prices have risen 12½ per cent in a year and some heavy electrical goods by twenty. The national product may rise in real terms by some £600 million, less than five per cent, in 1956, compared with a rise of nearly £1,000 million in 1955.

Against this reduced, though respectable, increment, must be set growing calls on resources. First and foremost, wages (though profits are a good second) : the first signs of inflation came after last autumn's big round of increases. Without trade union pressure it is likely that in 1956, shortages, longer hours and the government's social legislation will raise them alone almost as much as the growth of the national product. Increasing investments add to the strain : they seem to be 17 per cent higher than last year, though the statistics are poor. So, finally does the much publicised obesity of the budget deficit. True, the astronomical figures of French budget deficits should not be taken tragically. A rough approximation to British practice would turn the official deficit of £700 million in 1955 into a handsome surplus. The fact remains that, notwithstanding increased taxes, Algeria will swell the deficit by nearly £200 million this year.

The result, by the beginning of the holidays, was that retail prices had risen by 3½ per cent in six months—and it seemed more than that to the housewife shopping. The trade unions were becoming restive, and business men showed their first doubts in the franc after three years of confidence.

M. Mollet's disinflationary sternness of speech was well-timed to forestall any panic during the holidays that would have committed the country to inflation when it returned to work. He offered " rigour and severity " ; blocked prices, and no " October rendezvous " with the unions to discuss wage claims. However, when it comes, not to holding down the inflationary pressure, but to reducing it, M. Mollet's programme seems more modest. Last month credit was mildly reined in for short-term loans and hire purchase (just out of its infancy). Subsidies to private building are being slightly tightened. M. Mollet has promised " flexible " controls on investments to trim the fat ; continued high imports ; more foreign labour ; and a £250 million cut on the 1957 budget estimates. He has threatened more of the same medicine if need be. Yet it is a programme that rests on too many ifs and buts to be entirely convincing in itself. Investment controls are hard to apply. The foreign labour that is

obtainable is not skilled labour. As for budgetary cuts, M. Ramadier is now speaking of £400 million to keep the 1957 deficit within present limits. The government plainly banks on industrial growth to ease the pressures.

Every day makes this look more like an underestimate of the effort required. The official cost-of-living index at 147.1 in August (1949 = 100) is perilously near the ceiling of 149.1 beyond which the national minimum wage must be raised by 5 per cent. The margin is so narrow that seasonal variations in prices might break through it even without inflation. Technically, that need not mean general wage increases, for most are well above the minimum. Politically, it will be touch and go with wage restraint, especially with the Communists now aiding and abetting the traditional responses to inflation. Even should the Government succeed and keep prices, producers and workers in something like the present economic frame, the rate at which it is piling up trade deficits promises a balance of payments crisis by the end of the spring. Last November, the foreign exchange reserves, standing at £700 million, were almost as large as those of the sterling area. When the first slight swell of inflation began to be felt in December the government decided that this unwonted wealth justified a temporary trading deficit to meet growing raw material and investment needs without disinflationary action. Thus it hoped to keep production and supply ahead of demand. But the deficit exceeded expectations : exports outside the franc area have fallen by 3 per cent if one compares the first halves of 1956 and 1955 ; imports have risen by 16 per cent. By the New Year the exchange reserves will probably be halved. Everyone agrees that devaluation would be no solution, not least because French trading regulations already amount to a partial devaluation in practice. Next year, therefore, domestic demand will need to be further restrained to repair the deficit in the balance of payments. Self-denying ordinances will have to be maintained far into 1957.

M. Reynaud has doubted that the Fourth Republic can so deny itself. Applauding the government's good intention to reduce subsidies, now running at over £400 million, he has added sceptically : " Subsidies have such political importance that it will be impossible to touch them as long as the Constitution is not reformed." In this respect, however, the North African crises and the general anxiety to avoid inflation strengthen M. Mollet's hand. A socialist, he has been able to suggest wage restraint. He has dared to call for the publication of the tax returns of people resisting official inquiries. But to tackle inflation effectively he will probably have to grasp the bigger nettles : taxation ; restrictions on credits for investment ; or cuts in military expenditure in North Africa.

The government has already resorted to new taxes, some of which themselves tend to raise prices, and which help by their inequities to inflame the ever present class resentments. The scope for fresh ones is limited. Investment cuts are possible, for instance in private house building or transport, but a credit squeeze would almost certainly obstruct the all too recent expansion of the metal-working industries on which future growth depends. Yet, if investment is not cut, spending in North Africa must be. Algeria is not the root cause of inflation ; it is still the one that can be removed with most decisive effect. An end to the conflict would not replace a policy of monetary restraint, but it would give it a chance. Immediately, because it would help the government to restrain the unions, later because it would reduce spending and above all the labour shortage which threatens the economy. This gives added urgency to an Algerian settlement this autumn.

★

Now Suez complicates the issues. A riposte to Nasser, even a peaceful one, is likely to cost money ; but, in North Africa, a Nasser success would exalt the Algerian rebels and make the moderation of Bourguiba or the Sultan of Morocco in their dealings with France look like reprehensibly un-Arab activities. Luckily, the government does not now seem to follow M. Lacoste in his tendency to put off an Algerian solution during Nasser's lifetime. If it is really working for a settlement it is wise, not only for Algeria, but because inflation would undermine its own progressive policies in other sectors.

Prosperity has done much to mould the nineteenth-century features of France to a more contemporary pattern. The willingness of industry to invest corresponds, as many observers agree, to the arrival in management of a new generation and outlook. Last year's Renault-type agreements, tying rising wages partly to rising productivity, which spread rapidly through industry, have strengthened the trade unions and have led to the first increase since 1948 in trade union membership. The newborn confidence on both sides of industry needs time and good weather to mature it.

The unrecognised merit of the Mollet government has been to channel the existing forces of expansion into the beginnings of a coherent policy. It has prepared social reforms, as in housing and education, which growing wealth made urgent. It has worked to renew the much undermined French Union, granting greater autonomy to the overseas territories, and envisaging an industrial future for the Sahara, based on greater cooperation with the Africans and with other European states. The hopes of European integration themselves have regained ground with the Franco-German agreement on the Saar, negotiated with remarkable calmness of temper, and with M. Mollet's unexpected success in persuading Parliament to approve the Euratom talks. However uncertainly, the lineaments of a potentially new France have been shaping through the tribulations of the old in 1956. The government deserves credit as well as blame ; but its partial successes are threatened by inflation and by the unresolved problem of Algeria.

Notes of the Week

The Speculative Tide

THE $129 million fall in the gold reserves last month, the details of which are discussed in a Business Note on a later page, calls for a sense both of proportion and precaution. It seems clear that it was a consequence of the familiar Suez crisis rather than the inevitable harbinger of a new economic one. But for the speculative withdrawal of funds that Suez set off the August figures apparently would not have gone beyond the bounds of the moderate decline that the Treasury had long foreseen for this season. Britain's own current balance of payments almost certainly remains in surplus.

But the alarming feature, of course, is that a speculative movement against sterling can now so swiftly take effect. In part, this is because the channels through which funds can be withdrawn are much smoother and wider than they used to be, especially now that the D-mark rivals the dollar as a sensible currency for speculators to escape into. In greater part, however, it reflects a changed international outlook towards the British Government. Confidence, which was sterling's greatest ally in Mr Butler's heyday, has turned traitor. One reason for this, which Mr Macmillan has still not sufficiently appreciated, has lain in his own persistent remarks that he is not doctrinaire in his attitude to physical controls: some foreigners have deduced from this that at the first sign of real trouble Britain might interfere with the way in which they use their money—so, as trouble signals are hoisted, they tend to hurry to get their money out of the country. Another reason, however, is that Britain's present economic difficulties are recognised as being largely a matter of too high prices—not merely of delays in delivery dates—in export markets ; the last time this was true was in 1949, and every foreign banker remembers what happened then. The only sensible conclusion for Britain is that economic action this winter will have to take the strain not only of moderating demand at home—to some extent, it has done that already—but of pressing on far enough to recapture confidence as our ally.

"Spy Rings" and Pilots

THE number of British citizens whom President Nasser has arbitrarily thrown into gaol has now risen to four: all are business men ; in Egyptian eyes, none has the kind of status that is likely to cause London to make a real fuss. (Perhaps they are right. Why, otherwise, have only consular officials concerned themselves with the fact that these men have been held *incommunicado* for unreasonably long periods ? Why has there been no more energetic or exalted protest?) The Levantine inference from this fact is that endless impediments can safely be placed in the path of the British consular officials who, anywhere but in a totalitarian state, would have been able to see them at once.

Naturally, this behaviour, smelling as it does of Nazi and Soviet precedents, will deter foreign residents from staying and exposing themselves to the risk of the knock in the night, the extorted " confession " and the other horrid paraphernalia of dictatorship. Among the foreigners thus deterred are bound to be the Suez Canal pilots—who are suffering from strain and fatigue, and few of whom want to go on serving a master who is advertising all over the world for replacements. True, President Nasser has said that he wants the pilots to stay ; but it must be fairly plain to them that it is only a matter of time before he sets out to get rid of everybody associated with the old regime. The Egyptian propaganda machine speaks and writes of the pilots as if they were a corps subject to orders from home ; so do some people in London and Paris ; but in fact they are not. They are free men, youngish and skilled in a profession that is in short supply. They are hanging on at outside request till the Menzies mission is over, but few will want to stay if Egypt treats foreigners as it has treated the arrested Britons. Who wants to work, if he need not do so, in a totalitarian area that sets no store by human life, mental distress and the anguish that breaks up family life ?

Algiers Revisited

M. MOLLET is revisiting the scene of his inauspicious beginning as French prime minister. Last February he travelled to Algiers in hopes of announcing a new policy. He returned to Paris a few days later, having given in to the pressure of tomato-throwing settlers. The chance of winning Moslem support was missed, and France since then has been learning, in sweat and blood, the bitter lesson that the settlers are not the only Algerians to be taken into account. But by now the conclusion seems to have been reached—even by such men as Marshal Juin and the bellicose minister of defence, M. Bourgès-Manoury—that force alone will lead nowhere. It is generally assumed that M. Mollet's purpose in revisiting Algiers is to persuade M. Lacoste, the minister resident, to grant a new statute to Algeria without waiting for the ever-receding end of hostilities. If on his second visit M. Mollet succeeds in producing a formula capable of attracting Moslem Algerians, he will do much to obliterate the distasteful memories of the first visit.

The political statute proposed is not yet clearly known but seems to aim at some kind of federal Algerian state, itself federated with France. The manner of the proposal may be even more important than the substance of what is proposed. Will the new charter be granted to Algeria by the grace of the French government, or will it be negotiated, and with whom ? Only negotiation is likely to do much good. It now seems clear that the only way to break Moslem resistance will be by opening up rifts in the National Liberation Front through tempting offers to its more moderate men. For a long time the French government has been acting as a recruiting agent for its Moslem opponents ; now a more imaginative approach is urgently needed.

Unfortunately, the whole Algerian question is hopelessly entangled with the Suez dispute. Partisans and opponents of reform in Algeria alike talk of nothing but of rebuffing President Nasser. French politicians sound more belligerent than their British counterparts, and Socialist ministers, full of Hitler and Munich, are using language that is not in character. What if the whole crisis were to fizzle out without a slap for Nasser ? What effect would it have on policy for Algeria, and on the Mediterranean reincarnation of the *Entente Cordiale* ?

Mohammed V's Sober Touch

MUCH as volcanoes now and then throw out earth and rock instead of hot air, so Arab rulers sometimes give off a piece of practical home policy instead of the more usual emotional and self-deceptive talk about intentions. Nuri Pasha's Iraq and M. Bourguiba's Tunisia are the steadiest practical performers ; Sultan Mohammed V of Morocco has now joined their select number with a display of cool and effective statesmanship.

On August 19th the coalition through which he governs was shaken by a threat of resignation from its largest component, the Istiqlal party. This group, which represents extreme nationalism but also youth and the underdog in general, had been stung to act partly by an unpromising economic situation but also by the impact on its congress of Si Allal el Fassi, fresh from long exile and from Cairo, and second only to the Sultan as a popular figurehead. The Istiqlal leaders urged the Sultan to form a " homogenous " government consisting only of themselves.

His response was simultaneously to say he would consider the matter and to call many of them into inter-ministerial committees to deal with a pile of homework of daunting dimensions—integration of the half-wild " Army of Liberation " into the Royal army, or else into jobs in civil life ; unemployment ; the flight of capital and the scant measure of local technical and financial resources. The dossiers with which he confronted them are reported to top a thousand.

The Sultan has not spoken, but last weekend his Prime Minister, Si Bekkai, broadcast a sober appraisal of the national situation in which he spoke of the need for an all-party coalition at a time of growing pains and remarked, *inter alia*, that:

> The country must not allow itself to be misled into belief in a Santa-Claus state. . . . Only a combination of public order and hard work will relaunch our economy.

Undoubtedly, he spoke with the Sultan's approval, and that of those Moroccans (who include a minority of Istiqlalists) who know that there is nothing to gain from pandering to mobs led by emotional theorists. " Man cannot live by slogans alone " was the theme of the broadcast. Will the Istiqlal's managing directorate accept it ?

Laboured Agenda

NEXT month's annual conference at Blackpool will bring the Labour party one of its triennial opportunities to change its constitution. The final agenda, published this week, produces the usual crop of constituency schemes for inflating their own position, relative to that of the unions. There are the familiar proposals for giving the constituencies more seats on the National Executive, and a bigger slice of the votes at the annual conference. But any arguments in favour of such changes are going to sound very thin in face of the figures shown in the annual report: the party's individual membership dropped 90,000 last year and is now lower than at any time since 1949. The affiliated union membership, on the other hand, rose by 76,000 last year and now stands 660,000 higher than it did in 1949. The constituencies can fairly claim that this merely reflects the arbitrary decisions of the heads of a few big unions to increase the size of their affiliated membership—in order to give themselves more votes than the Bevanites. But explaining away how the union figure has risen will not help the constituency zealots to show why their own membership has sunk. A recruiting drive has been started, and will need to be pressed vigorously if Labour hopes to recover the 170,000 constituency members which it has lost since the peak of 1952.

It may be no coincidence that the decline in the constituencies has paralleled the disillusion with Bevanism, which has gone much further among the mass of the country than among local party officials. Prospective party members cannot be blamed if they find little attraction in constituency organisations dominated by extreme left-wingers. The leftward tilt is as marked as ever: in the battle for the treasurership, which threatens to be the one bright spot in an otherwise dull conference, more than a hundred constituencies have supported Mr Bevan's nomination, only seven Mr Brown's. This, of course, is no guide to the possible result ; with the Transport and General Workers' Union on his side, and the promise of other big union support, Mr Brown still has about an even chance.

The resolutions listed in the agenda, as usual, provide no accurate guide as to the likely course of the conference ; but, also as usual, they provide plenty of light relief. Hastings constituency party wants the conference to try

The Economist: September 1, 1956

We regret that owing to a printer's error last week's issue of _The Economist_ bore an incorrect issue number: 5899 instead of 5897.

to abolish the rate of interest; North West Leicester has a new recipe for public ownership—"the nationalisation of all industries unable to maintain their workers in employment"; Colchester objects to the electricity authorities' practice of asking householders to read their own meters, and adds for some reason that this and similar practices "contribute to the high cost of living, especially in the case of old age pensioners"; Richmond and Barnes thinks that it is an intolerable blight upon the welfare state that a charge should be made for the use of public conveniences; and a sight of what sort of a community some of the constituencies would like to build may have prompted South-East Derbyshire's wish to see "more of the national resources devoted to training of psychiatrists."

The Hats of Ninotchka

WHO is to blame for magnifying the incident over Nina Ponomareva, caught at an Oxford Street store without a ready proof of legal possession of five hats worth 32s. 11d., into a minor diplomatic crisis? The Russians, who called off the international athletics meeting, failed to surrender Nina to her bail at Marlborough Street, and, after trying her case themselves and finding her innocent, announced that the whole Russian team was the victim of a dirty trick? Or some person or persons in authority on the British side who, at some stage in the process of accusing, identifying, arresting, charging and subsequently sending out a warrant for Nina after her failure to appear in court, missed the opportunity to get the whole thing quietly dropped—the store, the police, the magistrate, the public prosecutor, or the Foreign, *via* the Home, Office? And what is the result? The vindication of the incorruptibility of British justice—and notably the essential separation of the judiciary from the executive? A public exposure of the touchiness of Russian dignity at not having athletes treated as diplomats, and at the suggestion that Russian supplies of consumer goods are so bad that a Russian citizen cannot resist capitalist millinery? Or a demonstration to the world, as some say, of British hamhandedness?

So far as public opinion can be gauged it seems far more irritated by the failure to get Nina off somehow, and still more by the solemn police hunt which continues, than by the violent Russian reaction which spoilt the pleasure of thousands at the White City. The *Daily Worker's* criticism of the Russian decision, enjoyable as it was, was hardly general. The store can hardly be blamed, though it is a pity that it did not have somebody about who was quick-witted enough to grasp the position. From the moment the magistrate charged Nina with breaking her bail on the Thursday morning the damage was done—Russian prestige was pitted against the judicial machine. It is a misfortune that this was ever allowed to happen. Now that it has happened, the best thing will be for the police to be really efficient and somehow let Nina slip through their clutches. A continuing massive determination to uphold the majesty of the law may win a victory for principle—which, once evoked, is certainly important; but, in terms of international realities, it would probably be widely acclaimed as a defeat for British commonsense, even if the Russians contrive no nastier tit for tat.

The Clyde Stops

THERE have not been many occasions in the past when a serious strike has been in progress as a Trades Union Congress convened, but the effect of the congress on the shipbuilders' strike on Clydeside has been an odd one; it has been that—with all the industrial correspondents, and most of the major union leaders intimately concerned, gathered at Brighton—the strike has had less publicity than it certainly deserves. It is clear that, in sharp contrast to the British Motors dispute, all members of the Boilermakers' Society have obeyed their union's call; the completeness of the stoppage may have been helped by the fact that the men are all piece-workers with some tradition of casual employment, who are not necessarily in the habit of working continuously in the same job anyway. By Wednesday 5,000 men were on strike, and nearly 3,500 others had been dismissed because there is no work for them while the craftsmen are out. The total number unemployed will rise as the work that can be done after the stoppage of one section runs down.

The issues involved in the strike are clear enough: the union is demanding a guaranteed weekly wage that the employers fear would be high enough to tempt some men to report for duty but do virtually no work at all. This looks like a recipe for deadlock. The union is making preparations for a long stoppage, and has even appointed "sports organisers" to keep the strikers happy; as the strike drags on, there is likely to be a drain of men into other work in the Clyde area. On Friday, unless there is some last-minute change of heart, 900 welders are due to stop work on Tyneside on the same issue. It remains to be seen whether this strike, in advance of the main wages struggle, will serve to make trade union members and the public even more fed up with direct action than they are already; or whether the union, from its apparently strong position, will win a victory that could set a dangerous precedent for autumn; or whether, as some shipbuilding strikes have done in the past, it will merely drag on interminably and damagingly, with the general public taking even less notice of it than they have done already.

European Free Trade Zone

FORMALLY, M. Spaak's visit this week to Mr Macmillan is merely the step decided upon in Paris in July: contact between the six Messina powers and the other members of the OEEC (of which Mr Macmillan is chairman) to gauge the chances of building a free trade zone round the promised common market of the Six. In fact, it tends to demonstrate what needed to be proved, that the British Government is taking seriously the idea of a free trade zone in Europe. It has been decided that the OEEC's working party to analyse the problems of the free trade zone will first meet on September 24th. Thus, it will work concurrently with the Brussels talks among the Six on Euratom and the common market, which have just started. The working party is due to report by the new year, and will have to work fast. For if the idea is to go further it will have to provide formulas to meet at once the problems raised by freeing trade in each of the OEEC countries—most of which depend more than Britain on European trade; by co-ordination with the common market proposals of the Six, which themselves have not yet reached a final form; and by the GATT trading rules, which will raise delicate scruples even in a favourably inclined United States.

The change in the attitude of the British government can be gauged by the official discovery that Imperial Preference is perhaps not such an obstacle after all to a free trade area with Europe. It is recognised that non-agricultural imports—those most affected by European free trade—amount to only 10 per cent of Commonwealth purchases. And the preference on these is often slight. Thus, though there has been little consultation yet with the Dominions, it should not be too difficult to apply the free trade area concept—that while trade barriers are lowered within the area, each member retains a separate tariff towards nations outside it. Cuts in customs duties and quotas would touch some protected British industries to the quick. But European trade still only accounts for a quarter of British trade, and the Spaak report on the common market for the Six suggests a transition of 15 years to its goal; these facts limit the difficulties of adaptation for the British economy. This new British attitude, once it is fully appreciated abroad, is bound to give fresh impetus to the negotiations for a European common market. The most important aspect of Mr Macmillan's talk is that he seems to have convinced M. Spaak, the moving spirit of the Brussels talks, that it is a new attitude.

Incident in the China Seas

EIGHTEEN months ago, when the tension between the United States and Communist China over Formosa was at its height, the shooting down of an American naval aircraft, with loss of its crew, by Communist fighters outside Chinese territorial waters would have been regarded as an incident endangering the peace of the world. During the last month such an event has failed even to reach the headlines of the daily press, and this fact gives the measure of the relaxation that has taken place in the Far Eastern conflict. The case has nevertheless brought out once more the fundamental incompatibility of the present claims of the two sides and should serve as a reminder of the dangers which remain inherent in the situation.

The Peking government has not denied the American assertion that the plane was outside territorial waters, but claims that it was in a "combat area," where it was "justifiable" for a Chinese Communist fighter to mistake it for a Nationalist aircraft. On this ground Peking rejects the American demand for compensation. By admitting a mistake and expressing regret for the loss of life, however, Communist China has avoided the imputation of a deliberate attack on an American air force patrol as such, and this indicates a reluctance to provoke America too far. The American government, for its part, has been wary of starting a major quarrel within three months of the presidential election, and has not talked of reprisal.

But the implied principle contained in Peking's reply that any American aircraft over the high seas off the coast of China deserves to be shot down without any liability on the part of the People's Republic is one which Washington cannot be expected to swallow. If such incidents recur, are any counter-measures to be taken, and if so, what are likely to be their results? The Communist view, of course, is that American planes have no right to be patrolling over the China Seas at all. But such patrolling is an essential part of defensive precautions under the terms of the American undertaking to protect Formosa, and the American air force is responsible for ensuring the safety of its crews as long as they are over international waters.

The Bakers' Responsibility
