Output has risen steadily, though it still falls short of demand. There is a lack of skilled labour, even though the knitwear firms find it easier to attract workers than the tweed manufacturers, and some firms have had to set up small workshops in outlying villages. The annual output of knitwear is now valued at about £7½ million, of which exports take nearly £5 million. North America is by far the largest, and rightly the most favoured, market; the home and other overseas markets have to be content with what is left. Labour is not the only problem; costs are rising and selling prices have recently had to be increased—which might be thought a disturbing trend for garments that are already expensive. And while knitted outerwear has prospered, the trade in underwear has not, because it has been hit by changes in fashion and habits. This trade, once a staple of Hawick, was declining before the war; it has now dwindled almost to vanishing point.

Battle of the Bantams

If there is a place for the very small 4-seater car—the 5-7 cwt vehicle—in the markets of this country and others, it seems that it will not be filled by the motor-car manufacturers. For if their faith is to be judged by their works, they have hitherto declined to believe in the market for the smallest size of car to which the continental automobile manufacturers have demeaned themselves—such vehicles as the Fiat 600, the 4 c.v. Renault and the 2 c.v Citroen. But it is more surprising that the motor cycle manufacturers—who are finding it hard this year to sell much more than half their potential output of conventional motor cycles—have not made any attempt to explore the possibilities of the market next above their own, showing the same sort of disbelief as they showed for years in the possibilities of the scooter market. In Germany, where more than 60,000 of these smaller vehicles are produced each year, it has been left to an agricultural machinery maker to demonstrate that a real market exists by producing the Goggomobil. This little vehicle has an air-cooled two-stroke engine of 300 c.c. and a kerb weight of less than 8 cwt, and it gives very tolerable transport on four wheels to two adults and two near-adults with a top speed close to 60 mph and a fuel economy of around 60 mpg.

Two of the latest British competitors also have no previous experience in the manufacture of self-propelled vehicles. The Berkeley Caravan Company has produced an open car, of semi-sports type (a closed version, it appears, is to follow) with a two-cylinder air-cooled two-stroke motor cycle type engine made by British Anzani, and motor cycle type gear box mounted in front driving the front axle. Using the same engine and gear box unit, but mounted at the rear, S. E. Opperman, a gear-manufacturing company, has produced a car which is more closely comparable with the Goggomobil. The body is built of fibre glass which, compared with the Goggomobil, may well save a hundred lb in weight, and a heavy investment in body dies but is almost certain to give a higher total cost per car if production runs into the tens of thousands—as the Goggomobil has.

The Opperman Unicar gives ample room and a comfortable ride to the two front passengers but rather less room for the rear passengers since the engine is mounted ahead of the rear axle, and not behind as in the Goggomobil. There is also more engine noise than will be relished; and the power-plant-gear-box unit, with two chain drives, seems to be costly and will call for occasional adjustment. The German unit shows evidence of more concentrated design.

NEWS CHRONICLE

on Monday, October 29th.

KNOW WHY THEY DIED

THE AGONY OF BUDAPEST will change the world

THIS has been heroism on the grand scale, the boiling heroism of insurrection against tyranny, something to stir the blood.

I knew Hungary and used to work there. I knew the Hungarians as tough and gay, and immensely proud.

This gives me no particular right to preach. It just gives a sense of emotion that is hard to express in words and which I wish everyone could share; not necessarily humility but something fairly near it.

This has been a week in Hungary when danger has known no frontiers because it has stalked in every street; streets I well remember.

time we woke up

The men and women have spat in danger's face, and certainly in hundreds, almost certainly in thousands, have died for freedom.

We in Britain *must* understand how much this means. For better or for worse this is one of the sharp corners of history.

THOSE DEAD CHILDREN IN A BUDAPEST MORTUARY AFFECT US.

We who live in ignorance of revolution, and of rule by terror, have no conception of our own good fortune. The Hungarian people have lived through both before. In that lovely, torn-up country bloody defiance has greeted a series of oppressors.

Kossuth, who led the struggle for independence in 1849, is the archetype of recurring resistance to tyranny.

What has been happening in the past week is the fifth reign of terror there in this century alone: the fifth in 40 years.

In 1919 there was the Red Terror, when the defeated and humiliated nation became briefly Bolshevik under Bela Kun. This was followed immediately by the White Terror under Admiral Horthy, when untold thousands died.

Under the peace treaties, the country had been torn apart. It lost four million nationals and great areas of land to Czechoslovakia, Yugo-Slavia and Rumania.

IT ALWAYS LOOKED TO BRITAIN TO PUT THINGS RIGHT.

In the Second World War came a Nazi tyranny, followed again by a second Red Terror. Ten years of Communism imposed from above, bringing hunger and slavery, have now brought about another bloody and desperate upheaval.

Central Europe is always full of feuds and hatred. The Yugo-Slavs hate the Bulgars, the Bulgarians hate the Greeks, the Hungarians hate the Rumanians, and always *vice versa*.

In this bubbling hotpot there has been only one enduring friendship.

THE HUNGARIANS HAVE NEVER QUARRELLED WITH THE POLES.

They have much in common. However old-fashioned it may sound, they share pride and courage.

Both are steeped in folk-lore, understand horses, produce beautiful women, worship music and the dance, have a sense of humour—and both have experienced the best and the worst in feudalism.

But there is one fundamental difference which gives this last Hungarian revolt its special meaning.

The Pole, traditionally, fights at the drop of a hat: and does his thinking afterwards. The Hungarian has always been more level-headed. He has always been just as courageous, but thinks before he strikes.

The inference is obvious. When Hungarians behave like Poles, only more so, they expose the misery of Soviet servitude beyond all argument.

When they die fighting with their fingernails against Red tanks, they expose for all time the Big Lie of the Twentieth Century.

THIS HAS BEEN SOMETHING MORE THAN THE COURAGE OF DESPAIR.

It may have been madness, but it was a great madness. This need not mean that the Hungarians are saints, nor that we need forget that they fought against us in both the big wars. This still leaves room to respect the unbelievable guts of a tortured people.

signed with blood

The Hungarians have always loved the British, probably for the wrong reasons, and our reactions have been fatuous. In the 1920s a British lady of title amiably declared that Hungarians make "model servants."

I would rather quote the Hungarian Count Apponyi, who at the age of 83, welcoming British visitors, reminded them: "Ten eventful centuries of Hungarian history have taught us never to despair."

Despair has too often been Hungary's bed-fellow. It is time we began to understand this tough, rebellious nation.

WHATEVER LIES IN STORE FOR IT, ITS PEOPLE HAVE SIGNED, WITH THEIR BLOOD, THE PRINCIPLES OF LIBERTY AND FREEDOM.

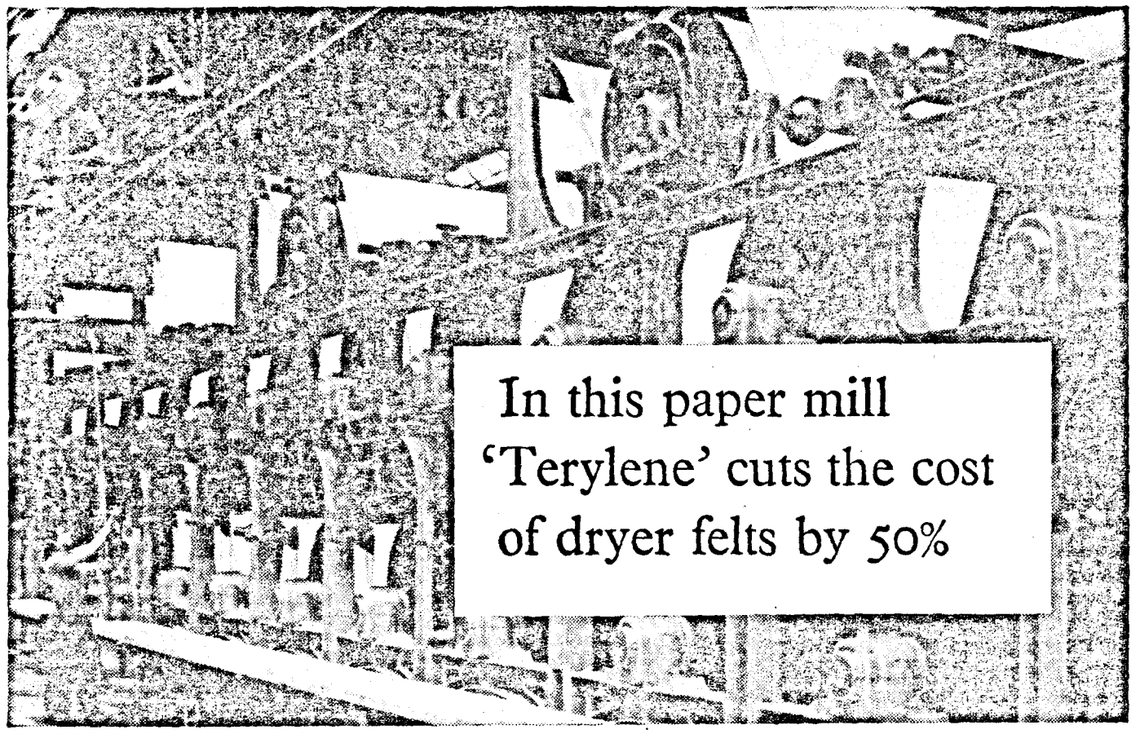
To pretend what they have done will affect themselves alone is nonsense. It will affect the course of Communism, the future path of Russia and, inevitably, ourselves.

This is a turning point in time to which no thinking person in this country can remain indifferent.

YOU CAN HELP

Donations to help the Hungarian people in their fight for freedom should be sent to any of these addresses.

- *The Treasurer, Oxford University Hungarian Relief Fund, Balliol College, Oxford.*
- *The British Red Cross, 14 Grosvenor Crescent, London, S.W.1 (which has already allocated £1,000 to the League of Red Cross Societies in Geneva to send help through Austria).*
- *Father Anton Molnar, Central Committee of Hungarian Exiles, Cardinal Mindszenty House, 5 Arundel Gardens, London, W.11.*



THIS IS WHY

It was found, after a three-year intensive trial by the East Lancashire Paper Mill, that 'Terylene' *saves 50% in expenditure on felts.*

As a result of this trial the paper mill has decided to replace all conventional dryer felts (which press the wet paper web to the heated roller) with 'Terylene' felts, which have exceptionally high resistance to constant abrasion, heat and acid conditions.

CAN 'TERYLENE' SAVE MONEY IN YOUR BUSINESS?

These exceptional properties of 'Terylene' are already being applied successfully and economically in many industries. Perhaps they can save money for you too. Have you a need for a textile fibre that:

is strong wet or dry, has low stretch, resists corrosion by acid, resists heat, does not rot, has low moisture absorption, has high abrasion resistance, withstands weather, and is ideal for electrical insulation purposes?

Then find out more about 'Terylene' for industry by writing to:

Imperial Chemical Industries Limited, Fibres Division, Hookstone Road, Harrogate, Yorks. Telephone: Harrogate 68021.

'Terylene' is being used to make: electrical insulation fabrics; lifeboat covers; deck awnings; fire hose; ropes; filtration cloths; sewing threads; fishing nets; laundry machine clothing; dye bags; conveyor belts; industrial clothing, and very much else besides.

'TERYLENE'
ICI
Polyester Fibre

IMPERIAL CHEMICAL INDUSTRIES LIMITED, LONDON, S.W.1 TE103A

Flour Prices Up Again

THE public may well be suspicious when flour prices first fall by 7s. for a 280 lb sack within two weeks, and then rise as quickly by 6s. What are the millers up to, now that the bread subsidy is off? Their motives are hardly sinister. Ranks' second reduction of 4s. to 95s. a sack at the beginning of last month was designed to win back business after the small bakers staged a buyers' strike, and it succeeded. But at that price Ranks and other big millers were making little profit, and the small millers may have lost money. Plainly the price could only be held if wheat prices fell, and they did not; hence the increase of 4s. to 99s. a sack on October 8th.

Since then prices of millable grades of home wheat have risen by over 10s. a ton; cif prices of imported hard wheats have risen slightly, and will rise further when the St Lawrence river is closed to navigation next month; and prices of offals—the by-products of milling which go into feeding stuffs—have eased. That is the basis of the latest increase of 2s. to 101s. for a sack of flour. The price now is 2s. higher than when the plant bakers fixed the price of the 1½ lb loaf in port areas at 10d. That should not mean that bread will become dearer yet, for bakers normally buy up to three months' requirements at a time, and the higher prices of flour will hardly be felt until the New Year.

Competition for Chemical Exports

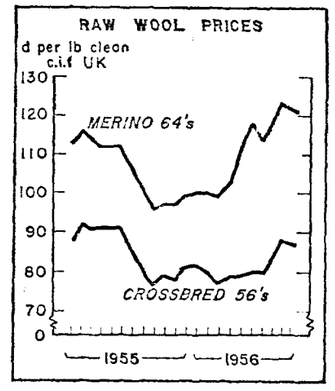
THE long shadow of German competition has fallen across the export markets of the British chemical industry. It is patchy competition, severe in some markets and almost non-existent in others, but it has lifted German export sales to a point where they are running neck and neck with those of Britain. The values of British and German exports of chemicals last year were more or less equal at rather more than £230 million. The Board of Trade estimates that Germany's share of the export trade in chemicals has risen from 13.5 per cent to 17.4 per cent between 1952 and 1955, while Britain's share had slightly contracted from 17.3 per cent to 16.7 per cent.

Most of the postwar expansion in the British chemical industry has been in petroleum chemicals, the investment in which will be doubled in little more than two years. It is second only in size to the petrochemical industry of the United States, and nothing in Germany compares with it. But the organic chemicals that form the basis of all the new chemical products can be made from a variety of different raw materials of which crude oil is only one. British expansion has been built around oil, as a convenient raw material, whereas the German factories turn out the same or similar materials from natural gas, coke oven gas and acetylene—the latter being a rich source of chemicals but dependent on cheap hydro-electric power.

Exports of these chemicals are largely confined to countries without a developed chemical industry of their own. But there is a growing trade in chemical plant and technique rather than finished products. Where research costs are heavy, and time an important factor in marketing, the big chemical manufacturers find it easier to buy the know-how of a new process, and sometimes the complete plant, from each other rather than to try and copy in their own laboratories work that has already been done successfully elsewhere. For example, three separate processes are about to be used in Britain for making the plastic, polyethylene: one German (used by Shell Chemicals), the second American (used by the Distillers-British Petroleum subsidiary, British Hydrocarbon Chemicals), and the third the original process evolved by Imperial Chemical Industries which is now used throughout the world. The rapid postwar growth of the chemical industry in Britain is an outcome of this tendency. The industry is attempting to chart its growth by making its own survey every four years; the third survey is due to be made early in 1957 and may be published by next summer.

Futures Trading in Crossbred Tops

THOUGH opinion in Bradford remains sharply divided on the merits of the London futures market in merino wool tops, now three and a half years old, there is no doubt that it provides a service that many traders find useful; the turnover is proof of that. But it has been of little help to traders in crossbred wool. As the chart shows, prices of merino and crossbred wool do not necessarily move together; hence the trader in crossbreds cannot be sure of hedging the risk of price changes by dealing in merino top futures. To meet this need the London market has introduced, from November 1st, a contract in crossbred tops to coincide with the start of the main selling season for crossbred wool.

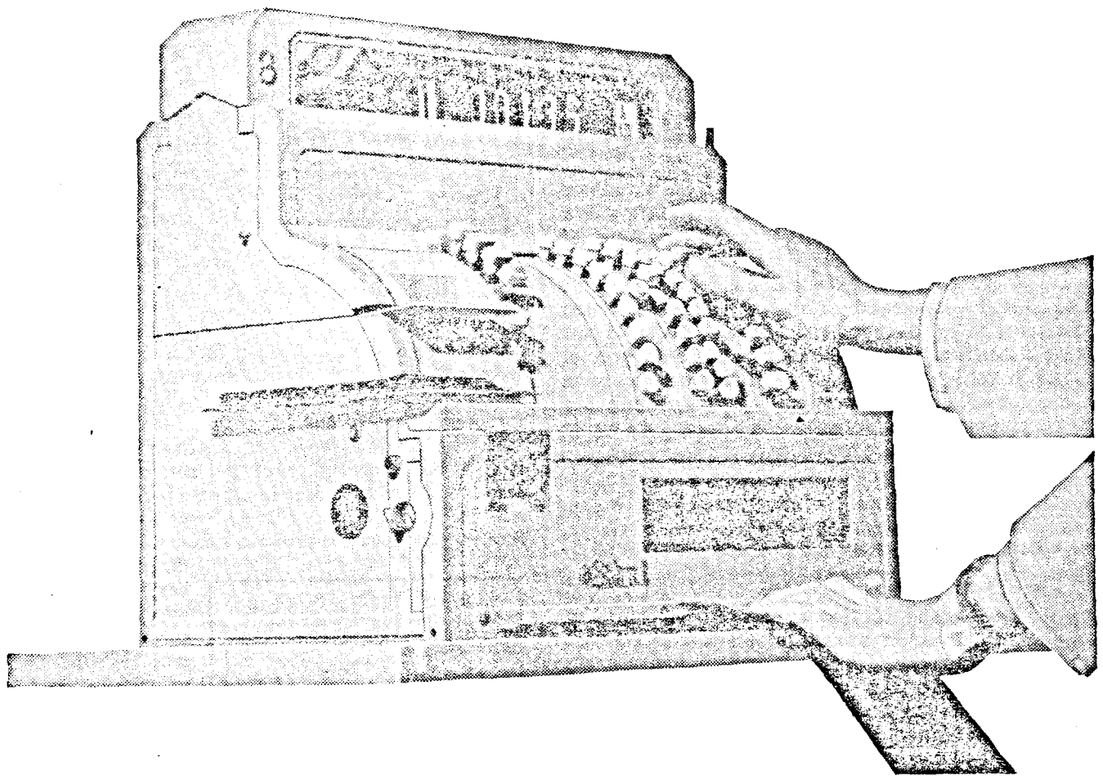


The basis is a Bradford 50's quality top, and qualities ranging from 46's to 56's are tenderable, as long as they are made of Australian or New Zealand wool. At the close of the first day's trading on Thursday January futures, the first delivery month, were quoted at 86½d. a lb, which is slightly higher than actual prices in Bradford, and the discount on July futures was about 3d. a lb. Uncertainty about wool prices in face of the Suez troubles may help to get the new contract off to a good start.

Silver's Record Price

THE price of silver has this week risen to 81d. a fine ounce. This is the highest quotation since 1920. It should be noted, however, that silver is now quoted per ounce .999 fine, whereas at the peak levels reached after

Did she buy your brand?



COLOUR Rings the Bell! —FASTER

Experience proves that the tremendous visual impact of colour assures maximum sales motivation. This dynamic, new medium builds and maintains brand recognition, enhances product appeal.

THIS IS AN AGE OF COLOUR. From cosmetics to carpets, fashions to foods, alert manufacturers have discovered colour as the priceless ingredient of merchandising; it penetrates people's hearts and minds and purses.

That's why more and more businessmen are harnessing the striking realism of full-colour to their advertising campaigns; **a fact manifested by the huge five-year increase in colour advertising in WOMAN, JOHN BULL and ILLUSTRATED of over 300%.**

These great magazines play a leading part in national marketing and selling. And rightly so; theirs is a combined readership of 13,500,000, spread the length and breadth of the country, *including nearly 45 per cent. of British womenfolk.*

Assure higher sales for your brand by using the powerful, irresistible realism of colour in WOMAN, JOHN BULL and ILLUSTRATED, as the backbone of your national campaign.

JOHN BULL *Woman* ***ILLUSTRATED***

BRITAIN'S GREATEST COLOURGRAVURE WEEKLIES.

World War I the quotation was for standard silver 11/12ths fine; on the current basis the 1920 peak would be equal to 96.6d. The recent rise in the price of silver reflects the continuing industrial demand and the virtual drying-up of the supplies of demonetised coin, which in recent years have helped to keep the price down. The latest of these special sales were of demonetised Saudi-Arabian coin, supplies of which began to reach the market about a year ago but have recently dropped to a trickle. The only demonetised coin in sight that is likely to reach the market is a Japanese holding of some 60 million ounces of looted Chinese silver that the US authorities have recently returned not to China but to Japan. But there has been no evidence of sales from this quarter yet. All other demonetised coin is fully earmarked for repayment of lend-lease silver to the United States.

SHORTER NOTES

British Petroleum has made the formal offer to buy the ordinary capital of Trinidad Petroleum Development which the directors have recommended shareholders in TPD to accept. The offer is of one £1 ordinary stock in British Petroleum plus 1s. in cash for every three 5s. ordinary units in TPD. The liquidator of British Controlled Oilfields has accepted British Petroleum's cash offer of 47s. 6d. per share for BCO's 50 per cent interest in TPD.

★

The agreement between Britain and India that regulates the rate of withdrawal of the sterling balances accumulated by India during the war expires on June 30, 1957; it has now been agreed that it will not be renewed. In practice, this is not expected to have any effect on India's actual drawings—which in the past few years have been significantly below the maximum of £35 million permitted. The Indian government has stated, moreover, that the ending of the agreement will not affect its policy of permitting the free transfer to the United Kingdom of savings and repatriation of capital.

★

The tourist allowance for the year beginning on November 1st is to remain unchanged at £100; but the whole of this may now be drawn in foreign currency notes. Hitherto, a maximum of £25 has been obtainable in notes, the remainder in travellers' cheques. The amount of sterling notes that may be taken abroad remains unchanged at £10.

Company Notes

DEBENHAMS. Since Debenhams, the biggest group of department stores in this country, had to postpone its intended debenture issue the question dominating the market in its 10s. ordinary units is how the group will finance the rebuilding and modernisation of its stores. This question is not answered in the preliminary statement for the year to July 31st. Indeed, it is posed again in another form, for while the directors say they propose to increase the authorised capital by 5 million 10s. ordinary shares, they have "no immediate plans to issue any of this additional capital for cash or otherwise."

Until the question of new finance is answered, and perhaps until modernised stores are making their full contribution, shareholders must expect the main emphasis to be put on the retention of profits, not on their disbursement. This is what the directors have done. About £750,000 is ploughed back into the business and the ordinary dividend is left unchanged at 27½ per cent. This decision has been made after a further increase in consolidated trading profits from £5,025,131 to £5,244,379 (possibly reflecting a first contribution from modernisation) and in net profits after tax from £1,668,474 to £1,757,306. The latter figure provides good cover for the net dividend of £790,625. The 10s. ordinary units at the current price of 38s. 6d. yield 7⅛ per cent.

★

FISONS. A year ago the directors of Fisons, the biggest manufacturers of chemical fertilisers in this country, reported a setback in profits. Now they have reported a strong recovery. Before depreciation and loan interest gross trading profits have risen from £3,683,949 to £4,190,405. The increase is large enough to suggest that in the year to June 30th last, in contrast to the experience of most other industrial concerns, Fisons' profit margins were not being squeezed excessively hard. Yet they could not have been completely happy on the score of profit margins, for a few days after the end of the financial year they announced another increase in fertiliser prices, designed merely to cover the increased cost of raw materials and sea freights.

Net earnings have not gone up in line with gross profits. This is due in part to a heavier provision for taxation (which has risen from £1,384,029 to £1,557,223) and in part to the £250,000 (against £75,000) written off an investment in an associated company. As a result net profits have only crept up from £1,197,426 to £1,238,762, and though the write off has played a big part in this result, the directors do not explain where and why it has occurred. With net earnings practically unchanged and a development programme under way, the board has left the dividend unchanged at 15 per cent. This dividend, absorbing £500,672 net, is paid on a capital of £5,804,863, as increased by the rights issue in April, 1955. On this dividend the yield on the £1 units at the current price of 50s. 6d. is 5.9 per cent.

★

FAIREY AVIATION. After the 100 per cent scrip issue by Fairey Aviation hopes were entertained that the ordinary dividend payment for the year to March 31st last would be effectively raised. These have been dashed, for the dividend of 1s. 6d. per 10s. unit represents the exact equivalent of the 1954-55 payment. Perhaps the reason for this decision lies more in the costly developments Fairey has on hand (as, for instance, in the Rotodyne and in guided missiles) than in the actual movements in profits.

Before tax profits have fallen slightly from £2,159,568 to £2,065,097. Little weight can be attached to this movement, for aircraft companies' results are affected by the uneven incidence of contract settlements from one year to another. Taxes charged against these earnings have fallen from £1,347,194 to £1,154,195, and net profits have gone up from £802,394 to £898,322, from which the net dividend takes the comparatively small sum of £177,287. At the current price of 22s. 6d. the 10s. units offer a yield of 6⅔ per cent.

★

BROOKE BOND. One paradox of the preliminary report of Brooke Bond for the year to June 30th is that this company with a highly geared voting structure should present its shareholders (who have only a small voice in the direction of the concern) with such a wealth of information. Profits are compared over a span of three years; a gross trading account, showing sales, is published; and the directors provide a running commentary of the results.

The statement is as satisfying in its content as in its form. The ordinary dividend is 6d., tax free, on each 5s. share, which is equivalent to 17.391 per cent gross and compares with 12½ per cent gross in 1954-55. The net profit for the year is £2,722,376, after charging £1,907,540 in tax. In 1954-55 the net profit was a mere £467,862 (after charging tax of £1,302,242) and for 1953-54 £1,261,651 (after tax of £1,489,990). The directors explain that profits in 1954-55 were

"abnormally" low owing to the loss of £1,200,000 made by the parent company on tea but that profits in the latest year are "abnormally" high because of the low tax charge in 1955-56 when the previous year's loss was offset against taxable profits. They suggest that 1953-54 was a more normal year, when profits were of the order of £1,250,000. What is "normal" or "abnormal" for a company engaged in a trade of violent ups and downs can be arguable, but the directors suggest as one measure of the group's achievement the fact that over the last two years net profits have averaged £250,000 above the 1953-54 figure.

In the last financial year, proceeds from the sale of "tea, coffee and materials" came to £75,781,000, including inter-company sales of £16,700,000. This compares with £84,648,000 in 1954-55 and £57,287,000 in 1953-54, including £16,400,000 and £13,800,000 respectively of inter-group sales. In money values sales were down on the year because the cost of tea was lower, but in volume sales were up, and the group earned a higher margin of profit on them.

This recovery provides the background for further issues of ordinary shares. First, "A" and "B" ordinary shareholders are to be offered 3,000,000 "B" ordinary shares by a rights issue in the ratio of one new share for every four held. This will be followed by the capitalisation of £3,750,000 from reserves in order to make a 100 per cent scrip issue of 600,000 "A" shares and 14,400,000 "B" shares. The principal point for investors is whether these issues will lead to more liberal dividends. Much bigger dividends are already technically possible because of the size of earnings, and the hope of things to come is reflected in the current price of the 5s. "B" units at 19s. 7½d. xd to yield no more than 4.4 per cent.

★

JOHN I. THORNYCROFT. The cut in John I. Thornycroft's ordinary dividend from 15 to 12½ per cent took the market by surprise. The £1 ordinary shares were immediately marked down by 5s. 1½d. to 39s. 4½d. and later fell further to 37s. 6d., at which they yield 6¼ per cent. To justify the reduction the directors could point to the sudden decline in gross trading profits from £1,145,053 to £805,348; the latest profit figure includes £99,000 of profits on contracts completed in earlier years, compared with £98,000 in 1954-55. Net profits after tax have fallen by £189,546 to £290,546.

But to argue simply from these profits that a cut in the dividend was necessary would seem unduly cautious. The net dividend of 12½ per cent absorbs only £107,812 and a 15 per cent dividend £129,375 net. Unfortunately the directors do not explain why the dividend has been reduced or, indeed, why profits have fallen. Whether the ill winds blew in the group's commercial vehicle division or in its ship-building and ship-repairing division or whether its business was affected by a shortage of materials or its profits by a rise in costs are, presumably, among the questions that the chairman will answer in his forthcoming statement.

★

CROMPTON PARKINSON. Shareholders of this electrical manufacturing company are again offered a wholesome but dull dish. Gross profits have risen only slightly from £2,236,420 to £2,325,431 in the year to June 30th. At the beginning of that financial year the group had plenty of orders on hand and there cannot be much doubt that the latest results reflect bigger sales but smaller margins of profit.

Net profits have gone up from £899,532 to £988,800 and the directors have done nothing more than satisfy shareholders' appetites by leaving the full year's ordinary dividend unchanged at 16 per cent (including a 6 per cent cash bonus). The company's dividend policy has not been open-handed and last year the chairman drew attention to it by arguing that conservative dividends were in line with the policy of the Government. Hence investors will not be far wrong in putting the company's 5s. ordinary units among the income stocks. At the current price of 13s. 3d. these shares yield 6 per cent—a yield well above those offered by the growth stocks of the electrical industry.

LONDON STOCK EXCHANGE

Next Account begins: November 14th

Next Contango Day: November 14th

Next Settlement Day: November 6th

Government stocks were firm up to the crisis on Tuesday. On Monday following the conversion offer 3¼ per cent Australia 1952/56 rose ½, and the new 5 per cent Esso Petroleum debenture reached a premium of ¾ in early dealings. On Tuesday, however, the West Ham loan, four times over-subscribed on Monday, came on to an unfavourable market and slid rapidly from ⅛ discount to 2 discount on Wednesday, but subsequently recovered. After the severe falls on Wednesday, when 3½ per cent War Loan touched its lowest point this year at 68⅞; a sharp recovery took it back to 69¾ xd at the close. Falls in industrial stocks have not been accompanied by heavy selling, but the weakness has been general. *The Economist* indicator fell from 189.3 to 183.8 during the week.

Several of the leading stocks fell to their lowest points this year; Bowater declined at 42s., ICI touched 39s. 3d. before recovering to 39s. 10½d. and Imperial Tobacco fell back to 46s. 3d. Stores were weak, with Debenhams declining to 38s. 6d. following the results. GUS "A" dropped to 33s. 3d. and Marks & Spencer and Woolworth sank to their lowest level this year. Textile shares were lowered, Courtaulds falling to 31s. 6d. xd. and Horrockses dropping 4s. 9d. to 28s. Thornycroft suffered a sharp set-back to 37s. 6d. and Cannon Holdings fell 1s. 6d. to 17s. 9d. following the results.

The crisis caused heavy falls in oil shares on Tuesday, but although some ground was regained later, further losses followed on Wednesday. British Petroleum fell to 136s. 3d. xd. and Shell to 144s. 4½d., but Burmah recovered to 86s. 10½d. after 84s. 4½d. Kaffirs have been weak; Merriespruit fell 1s. 4½d. to 4s. 1½d. following the flooding, and Anglo-American receded 3s. 9d. to 138s. 9d. Free State Geduld lost 6s. 3d. to 80s. and Randfontein declined further to 32s. 9d. Camp Bird rose 10½d. to 14s. 10½d., but tin shares became dull. Copper shares are easier.

(1) The Alexandria spot quotations for Karnak and Ashmouni cotton have been replaced by the current month futures quotation at Alexandria. (2) Figures up to July, 1953, relate to delivered prices and subsequently to ex-warehouse prices of H.C. electrolytic copper; from May, 1955, onwards the proportion of copper sold at fixed prices has been taken into account. (3) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (4) New series based on January 17, 1956=100. (5) Surveys made twice a year; annual figures relate to October survey. (6) Revised series based on Liverpool spot market prices, as from July 1, 1954. (7) Revised figures for September 25th: food 93·6; fibres 84·5.

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. Italy includes Trieste. (3) New drachmas introduced May 1, 1954 (1 new drachma=1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area. (6) Average for first quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended October 27th, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £11,478,000 compared with a deficit of £47,073,000 in the previous week and a surplus of £18,214,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £7,997,000, bringing the total deficit to £642,873,000 (£615,927,000 in 1955-56).

THE MONEY MARKET

THE discount houses made no change in their bid of £98 15s. for the 91-day bills on offer at the Treasury tender on Friday last. Higher bids were, however, offered by outside applicants, who in the previous week had been taken by surprise by the market's jump of 7d. per cent. The upshot was that the average rate of discount fell by a further 4d. per cent to £4 19s. 9.85d. per cent, while the allotted proportion of the market's tender fell from 66 to 30 per cent.

Last week's tender was the first this year to include offers of 63-day bills, maturing early in January. The market bid at £99 2s. 9d. per cent for the £60 million on offer, and secured 91 per cent of its tender. Its average allotment on both maturities came out at about 44 per cent. At yesterday's tender, the Treasury again offered £200 million of three months' bills and raised its offer of two months' bills to £70 million.

Credit conditions in Lombard Street have again been generally comfortable in the past week; but on Monday funds were very short, and despite large special purchases by the Bank four or five houses took seven-day loans at the penal rate. Otherwise, market supplies of credit were adequate for demands, and on Wednesday there was a small surplus of funds.

The Bank return for the week to Wednesday shows a rise in discounts and advances by £8.6 million to £28.2 million.

THIS is where it all began—with a policy on part of a cargo in the Pool of London. By *it* we mean the London Assurance, and it began in a small way indeed—two hundred and thirty-five years ago, with a staff of six and a doorkeeper. And to-day? To-day, the London Assurance discharges its business all the world over, dealing with insurance of every sort. For example:—

RESULTS OF AN ACCIDENT

Accidents don't always happen to somebody else. You can end up in hospital for months. But there is one bright spot on the horizon. When you're properly insured with our Personal Accident policy you won't need to worry about such things as medical expenses and loss of earnings. Neither, of course, will your family.

GETTING READY FOR SCHOOL

It's never too early for the far-sighted parent to pave the financial way to his children's education. By taking out our Education Policy you thin out the schooling expenses over the years before school caps are put on for the first time.

THAT'S NOT ALL

No, indeed! It's just a couple of policies from a wide selection. Should you want to know more about us, our policies, or insurance problems generally, our address is 1 King William Street, Dept. 6, London, E.C.4.

Abridged Prospectus.

Consent of Her Majesty's Treasury has been obtained to this issue in compliance with the Order made under Section 1 of the Borrowing (Control and Guarantees) Act, 1946.

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA CONVERSION LOAN

Offer of Conversion to Holders of

£6,950,700 Commonwealth of Australia 3¾ per cent. Registered Stock, 1952-1956,

into

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA 5½ PER CENT, REGISTERED STOCK, 1970-1972,

at the rate of £97. 10s. per cent.

Interest payable 15th December and 15th June.
Six months' interest will be paid on 15th June, 1957.

The Government of the Commonwealth of Australia will comply with the requirements of the Colonial Stock Act, 1900, in order that Trustees may invest in the Stock, subject to the provisions set forth in the Trustee Act, 1925.

Commonwealth Bank of Australia is authorised by the Government of the Commonwealth of Australia to offer to holders of £6,950,700 Commonwealth of Australia 3¾ per cent. Registered Stock, 1952-1956, maturing 15th December, 1956, Conversion of their holdings, in whole or in part, into an equal nominal amount of Government of the Commonwealth of Australia 5½ per cent. Registered Stock, 1970-1972, on the terms set forth in the full prospectus.

Principal of the new Loan will be repaid in London at par on 15th December, 1972, the Government of the Commonwealth of Australia having the option to redeem the Stock at par, in whole or in part, on or after 15th December, 1970, on giving three months' notice by public advertisement.

Holders who convert will receive on 15th December, 1956, a cash payment of £2. 10s. per cent. representing the difference between the issue price of the new Stock and the redemption price of the old Loan. They will also receive the usual six months' interest payable on that date.

Six months' interest on the new Stock will be paid on 15th June, 1957.

Holders accepting the offer of conversion must lodge their acceptances on the appropriate forms accompanied by the relative Stock Certificates, at the COMMONWEALTH BANK OF AUSTRALIA, Stock Department, 8, Old Jewry, London, E.C.2. These forms have been posted to the Stockholders or, in the case of joint accounts, to the Stockholder first named in such accounts.

Any Commonwealth of Australia 3¾ per cent. Registered Stock, 1952-1956, not converted will be paid off at par on 15th December, 1956, together with the six months' interest then due.

The Stock now offered will be registered and transferable in any amount by deed, at the COMMONWEALTH BANK OF AUSTRALIA, Stock Department, 8, Old Jewry, London, E.C.2. Stamp duty on all transfers will be paid by the Government of the Commonwealth of Australia.

Commonwealth of Australia Stocks issued and payable in London and the interest thereon, the property of persons not domiciled in Australia, are not, and will not be, subject to any taxes, duties or levies in Australia.

All Commonwealth Loans, all Loans issued by the several States and now taken over by the Commonwealth and all Loans guaranteed by the Commonwealth, carry a Sinking Fund in accordance with the provisions of the National Debt Sinking Fund Act, 1923-1934, and the Financial Agreement Acts.

The revenues of the Commonwealth of Australia alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of Her Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 19.

A commission of 5s. per £100 Stock will be paid to Bankers and Stockbrokers on allotments made in respect of conversion acceptances bearing their stamp.

Full Prospectuses, with Statistical Statement relating to the Commonwealth of Australia, may be obtained from the Commonwealth Bank of Australia, Stock Department, 8, Old Jewry, London, E.C.2; from Messrs. R. Nivison & Co., 25, Austin Friars, London, E.C.2; and at the Offices of the Government of the Commonwealth of Australia, Australia House, Strand, London, W.C.2.

Commonwealth Bank of Australia,
8, OLD JEWRY, LONDON, E.C.2.

26th October, 1956.

The List for Conversions will be closed at 3 p.m. on Tuesday, 6th November, 1956.

COMPANY MEETINGS

CAWOOD WHARTON & COMPANY

RECORD TRADING RESULTS

INCREASED TURNOVER IN MOST SECTIONS

MR ERIC W. TOWLER'S STATEMENT

The thirty-fourth ordinary general meeting of Cawood Wharton & Company Limited was held on October 19th in Leeds, Mr Eric W. Towler (the chairman), presiding.

The following is his circulated statement:

Increased turnover in most sections during the year under review to March 31, 1956, resulted in the record Group Trading Profit of £519,098.

After providing Depreciation and Amortisation at £108,795, which once again is on a conservative basis, and £11,875 for Unsecured Loan Stock Interest, the profit before taxation is £398,428, an increase of £109,745. Taxation provisions absorb £215,711, leaving a net profit of £182,717, an increase of £58,502, which, together with £118,843 brought forward from the previous year's accounts, and £13,545 Taxation previously overprovided, leaves £315,105 available for appropriation.

Preference Dividends costing £5,175 have already been paid, and in view of the satisfactory results attained the Directors recommend the payment of a dividend of 1s. 9d. per Stock Unit, less Income Tax, on the Ordinary Stock, which will absorb £50,313, and the transfer of £140,000 to General Reserve, leaving £119,617 to be carried forward.

CONSOLIDATED BALANCE SHEET

Capital and Reserves have increased from £707,510 to £902,480, principally accounted for by the transfer of £140,000 to General Reserve, and the addition to Capital Reserves of £54,196, being profits on the sale of plant and equipment, our Leeds office building, and certain land, on which the mineral workings, in which we are primarily concerned, have been assured on satisfactory terms.

Fixed assets have increased to £704,572; the additions, less sales, amount to £101,829, and include, *inter alia*, freehold and leasehold property, motor vehicles, quarrying, briquetting and concrete works plant and equipment.

The net Current Assets are £640,378, an improvement of £179,740 during the year.

REVIEW AND PROSPECTS

Last year the group participated satisfactorily in the good demand for fuels of all kinds; certain sections, notably the Irish and Export trades, are currently meeting with reduced demands. The introduction of drying and crushing plant at our three Northern Briquette Works has resulted in the production of a useful low ash content product, the demand for which should persist for some time in view of the continuing decrease in the production of large coal in this country. Research on the production of an anthracitic fuel for the London market, with alternative binders to pitch, has so far not fructified on a commercial basis, but in the light of certain developments we are pursuing we hope to operate new and additional plant during the winter 1957-58. The development of sales of fuel oil is slow with an increasing number of competing distributive influences in this sphere, although we shall soon have a small number of road tankers in traffic as hauliers of oil for the Shell Group.

Our transport fleets continue to be well employed, and we have again renewed the contract for the haulage of NCB opencast coal from site to screens in the Notts/Derby/Leicester area.

Our quarrying, building materials, wharfage and ancillary activities showed progress which is currently maintained.

The production from our various Sand and Gravel quarries again increased, and current outputs reflect our expansion in this section.

Our Anglesey seaborne quarries produced satisfactorily last year, and production is now profitably concentrated at Dinmor; in view of the deferment of certain projects due to the credit squeeze we have temporarily reduced operations at two small stone quarries in North Wales. The new plant at Llanarmon Limestone Quarry is now turning over and reasonable results are expected from this unit.

The Department engaged on prefabricated schools, and the export of houses and buildings, last year carried out a satisfying volume of work for Local Authorities and Government, and its capacity is fully engaged for at least the remainder of the current financial year; the civil engineering and building sections continue to find work increasingly competitive.

Within the limits of existing plant capacity, the concrete block works at Blackwall Lane has maintained target outputs of the well-known BA block for the last few months, and the installation of additional equipment, which is expected to be working by the end of this year will then enable us to concentrate the production of the full range of sizes at this point. This will in turn permit the expansion of the West Drayton Works on our precast flooring and other units which, along with the development of prestressed concrete, will eventually result in two sizeable and economic units in their respective fields.

Group capital expenditure for the current year has been approved at £182,000 including, *inter alia*, diesel tipping vehicles, road tankers, additional warehouse accommodation and handling equipment at our Mulberry Wharf, further mechanisation at works and quarries, additional forward reserves of sand and gravel land, and the completion of our new administrative headquarters in Harrogate.

Your thanks are due to all concerned in their continuing and enterprising efforts which have made these record results possible; the profits so far this year encourage us, subject to circumstances over which we may have no control, to look forward again to another good year of trading.

The report and accounts were adopted.

ANGLO-CEYLON & GENERAL ESTATES

SATISFACTORY RESULTS

The seventieth annual ordinary general meeting of The Anglo-Ceylon & General Estates Company Limited was held on October 23rd in London.

Mr Francis W. Douse (chairman and managing director), in the course of his speech, said: When I addressed you last year I expressed the hope that despite curtailment of crop and fine plucking in Ceylon brought about by the market upheaval in April and May, 1955, the ultimate result of our operations would be satisfactory, and this has proved to be so.

For the year the total trading profit of the Group was only £44,286 below that of the record year ending March 1955 and on profits of around £1,300,000 is quite a small amount.

The actual trading profit of the Group and other gross income was £1,288,943 and the net profit was £556,895 as against £546,537 last year, and after providing for all taxation and deducting the profits applicable to the outside shareholders of subsidiary companies the net profit of the company itself was £367,695 compared with £386,231 for last year. The earnings of the company itself, after deduction of all taxes, were the equivalent of 2s. 1.57d. per 5s. unit, and the total proposed distribution by way of dividends, is equivalent to 1s. 8d. per unit.

TEA AND SUGAR PROFITS COMPARED

I have recently been asked by various shareholders why it is that our company's results have not disclosed a set-back in profits for the past year in contrast to some other Tea companies. The reason for this is that it may not be generally realised the company's interest in Sugar is considerable. Taking the average of six years' profits from sugar during that period have accounted for 64 per cent and from tea 36 per cent of the total.

In Ceylon very large sums have been reinvested in upkeep and improvement of factories and equipment, new housing for staff and labour and extensions in the form of new planting and replanting. Further, our crop has increased from 4 million lb of tea in 1939 from 15 estates to 6 million lb in 1956 from 10—five estates being disposed of in the interim period. This has been achieved largely as the result of heavy expenditure on manuring and cultivation in general. In addition the company has expended a large sum in developing its dairy farm at Mahaberiatenne.

RECORD MAURITIUS SUGAR CROP

Regarding Mauritius, the crop of the Island for the past season was a record at 533,261 tons and of this we produced as a group 63,325 tons or 11.9 per cent of the total crop. The large yield was due to an excellent sugar content in the canes, mainly as a result of good weather conditions.

As to the prospects of the company for the current year I will be very brief. To date our Tea Crop is up on last year and another excellent outturn of Sugar is expected. The price of sugar comes mainly under the Commonwealth Sugar Agreement and tea prices so far are better than last year. Provided the weather is favourable and prices for tea do not vary much I see no reason why our results should not be as good as those we have now presented, if not better.

The report and accounts were adopted.

BERALT TIN AND WOLFRAM LIMITED

PLANS FOR EXTENDING SCOPE OF MINING OPERATIONS

MR F. GATES REVIEWS THE POSITION

The twenty-eighth annual general meeting of Beralt Tin and Wolfram, Limited, was held on October 25th at Winchester House, London, E.C.

Mr F. Gates (Chairman) presided.

The Chairman, in the course of his speech, said: I think you will agree that the accounts for the year ended March 31st last call for little detailed comment.

The Balance Sheet continues to show a strong financial position with net current assets higher by some £100,000 than at the end of the previous year, but the plans for extending the scope of the Company's mining operations to which I shall refer later will, if they develop satisfactorily, entail heavy expenditure and the cash resources built up during recent years will stand the Company in good stead.

The Board have thought it prudent, having regard to the anticipated cost of equipping and developing the recently acquired tin-bearing property mentioned in their Report, to make an allocation of £100,000, in the accounts under review to a Reserve account but, if the new mine develops as we hope, expenditure well in excess of that amount will ultimately be required.

TAXATION

Net profit before UK taxation for the year under review shows an increase of £154,000 over the figure for the previous year. The greater part of this was accounted for by a reduction in Portuguese export duty arising out of revision of the formula on the basis of which the duty is calculated. The revision took place in November, 1954, and was, therefore, applicable to the whole of the year under review.

You will have noted that during the debate on the 1956 Finance Bill the Chancellor promised to look carefully into the possibility of introducing legislation in next year's Finance Bill to give effect to the Royal Commission's recommendation that profits earned by companies overseas which are not distributed should be exempt from UK taxation. Legislation on these lines would afford the Company welcome relief of its present onerous tax burden, but we regard it as no less important that the taxation borne by the Company in Portugal should be admitted by the Inland Revenue for double tax relief.

WOLFRAM PRICES AND PRODUCTION

The highest market price for wolfram during the Company's financial year was 277s. 6d. per unit; in April, 1955, it was as low as 207s. Nevertheless, thanks to the one outstanding contract at a substantially higher price for a monthly quota of about 40 tons, which continues until end-September, 1957, and to sales at premium prices reflecting the exceptional quality of the Company's concentrates, an average price of 291s. per unit was realised for the year's sales.

The greater part of the Company's production still comes from the block of ground east of the main fault between main adit level and Level 1 some 200 feet lower, and you will remember that at our last meeting I said that this block contained sufficient ore to meet requirements for some years to come. I mentioned also at that meeting that work on Level 2, 325 feet below Level 1, had confirmed the continuity of well-mineralised veins to that depth.

We then expected that it would soon be necessary to commence working downwards from Level 1, but, in the meantime, diamond drilling and underground workings west of the fault have disclosed veins of good grade wolfram over an extensive area outside the bounds of what we formerly regarded as our main mine, not only between main adit level and Level 1, but also above the former level. We are now planning to stope this area and, since it is desirable to exhaust the higher level first, it seems unlikely that we shall be extracting ore from the block of ground between Levels 1 and 2 for a number of years to come.

EXTENSION OF MINING INTERESTS

As you were informed in the Directors' Report, we recently bought a tin property which lies between our mining concession and Fundao, and have already commenced driving and diamond drilling on it. If the deposit persists in depth, as we hope, really substantial expenditure will be required for erection of a mill and other buildings with the plant and equipment needed for an operation of this nature.

GENERAL OUTLOOK FOR THE WOLFRAM MARKET

Notwithstanding our efforts to extend the scope of the Company's activities to other minerals, the fact remains that for the present we must continue to be largely dependent for our prosperity on the price of wolfram, and that obviously is subject to many influences outside our control.

I reminded you last year of the "mercurial possibilities" of wolfram (of the ups and downs of which I have had such long experience), whilst at the same time expressing confidence in the immediate outlook. That confidence has been justified by the strength and relative stability of the market until recent weeks, when there has been some weakening. There is no doubt that supply and demand are at present in somewhat delicate equipoise, due to the substantial rise in world production which has been artificially stimulated by Governmental action since 1950. But, whether or no there is some further temporary price recession, Beralt is in a strong competitive position as a large efficient and low-cost producer of concentrates which have a world-wide reputation for high tungsten content and comparative freedom from impurities. Moreover, our finances are now in healthier shape than ever before—a most important factor. We are thus well equipped to face the future. It is my personal belief that over the years the demand for tungsten will increase, due to the development of new techniques and the expanding requirements of the steel industry all over the world; and in my opinion all these considerations give ground for confidence in the long-term outlook.

The report and accounts were adopted.

WILLIAM DOXFORD AND SONS

BENEFITS FROM REORGANISATION

The sixty-fourth annual general meeting of William Doxford and Sons, Limited, was held on October 30th in London.

Dr E. P. Andreae, the Chairman, presided, and in the course of his speech said:

Before charging Taxation, the Trading Profit amounted to £860,883 as compared with £619,230 for the previous year, an increase of some £241,000.

We have increasingly felt the benefits of our schemes of reorganisation. They have proved to be an important contributory factor in speeding up production on the most economic lines and will continue to be of vital importance.

The Profit and Loss Account shows that the Balance from Trading Account exceeded the million mark.

The impact of Taxation continues to be formidable. The net charge this year totals £468,000, which represents some 54 per cent of the Profit. After charging this figure there remains a Net Profit of £392,883, as against £357,230 for the previous year.

Goodwill, which has appeared in the Balance Sheet in previous years at the nominal figure of £50,000, has been written off and £146,000 transferred to General Reserve.

Your Directors now recommend a final dividend of 15 per cent—an increase of 2½ per cent over that for last year. This will amount to £129,375 after deduction of Income Tax, and leaves a balance of £223,836 to be carried forward.

The Balance Sheet again reveals great financial strength. Current Assets exceed Current Liabilities by more than £1,500,000. We have in the Balance sheet transferred all specific Revenue Reserves to General Reserve, which now stands at £1,250,000. The consolidation of the various Revenue Reserves was decided upon as a "tidying up" step in connection with the remodelling of this company as a Holding Company, which will in future submit Consolidated Accounts.

In common with all British shipbuilding companies, we have been working at high pressure in recent years, and in these circumstances our achievement in speeding up production and its concomitant economic advantage is undoubtedly attributable to the admirable new lay-out of our shipyard and to the extensive additions and re-equipment of our engineering works.

With regard to research and development your Board maintains its conviction that no expense which appears at all likely to produce material results should be spared.

THE OUTLOOK

The outlook is very promising. The demand for new ships of all types is as strong as ever, though their cost has now become a factor of such importance that any further increase, whether it be in wages or materials, may have a retarding effect on future enterprise.

We ourselves have done, and are doing, all in our power by increased efficiency of production and by restricting our own profit margins to prevent, or at least to counteract, the tendency towards higher prices.

Our order books are as full as we like to see them. Our shipbuilding company will be fully engaged for at least five years from now.

Our engineering company is also well committed for several years ahead.

HARTEBEESTFONTEIN
(Inc. in the Union of S. Africa)

INCREASED TONNAGE MILLED

The seventh annual general meeting of Hartebeestfontein Gold Mining Company, Limited, will be held on November 30th in Johannesburg.

The following is the circulated review of the chairman, Mr B. L. Bernstein: I have pleasure in submitting my review of the results achieved at your Company's mine during the first year of production. The milling rate was increased from 44,000 tons in July, 1955, the first month of production, to 66,000 tons in June, 1956. This was achieved despite a marked increase in the amount of waste rock discarded in sorting operations in stopes and on surface, from 6,000 tons in July, 1955, to 32,000 tons in June, 1956. The grade of ore milled was correspondingly improved and the recovery grade increased from 6.704 dwt per ton to 9.580 dwt per ton. Although the high rate of sorting achieved has resulted in a high working cost per ton milled, the trend of working costs is more appropriately reflected in the drop in costs per ounce fine of gold recovered from 178s. 2d. in July, 1955, to 137s. 9d. in June, 1956.

Further improvement has been effected since the close of the year and during the first quarter of the current year a working profit, including sundry revenue, of £378,075 was derived from the milling of 201,000 tons at a recovery grade of 9.75 dwt per ton. Working costs averaged 65s. 9d. per ton milled, equivalent to 134s. 10d. per ounce fine recovered.

Faulting has continued to influence the amount of development footage required to open up the eastern area for stoping. If this is taken into consideration, the ore reserve of 1,636,000 tons, available for stoping, is satisfactory. In addition, the values exposed in development have continued to be encouraging. In this connection I would like to draw attention to the resue raising now being carried out. This practice will result in a temporary reduction in the footage sampled, but will ensure a higher grade and smaller tonnage of development ore sent to the mill.

Extensions to the Reduction Plant to bring the capacity to 66,000 tons per month have been completed and a third milling unit is now being installed to bring the rated capacity of the plant up to approximately 90,000 tons per month. It is proposed to provide additional capacity at a later date.

URANIUM

The erection of the uranium plant, which was started in September, 1955, was sufficiently advanced to permit of the commencement of plant testing in September, 1956. It is anticipated that the production of uranium will be commenced in November, 1956, and that the plant will be operating to its capacity of 100,000 tons per month in January, 1957. Until such time as the rate of production of current slimes reaches the full capacity of the uranium plant, supplementary tonnages will be provided from slime accumulated from past operations.

In order to ensure that adequate stope faces will be available to maintain the tonnage requirements of the mine, taking into account a high rate of sorting, it has now become necessary to proceed with plans for the opening up of the deeper north-western portion of the mine. It has therefore been decided to sink two shafts to the Vaal Reef in this area. No. 2A sub-vertical Shaft has been sited 400 feet south-east of No. 2 Shaft (which, as shareholders are aware, is situated in the deeper portion of the mine), and will be sunk from the transfer level at a depth of 3,095 feet to a depth of approximately 6,300 feet below surface. No. 3 vertical Shaft which has been sited near the mine's northern boundary, east of No. 2 Shaft and north of No. 1 Shaft, will be sunk to a depth of approximately 5,700 feet. This shaft will serve to expedite the exploitation of the deeper area and will become the main upcast ventilation shaft. No. 3 Shaft has been sunk to a depth of 90 feet below the surface and the shaft collar is under construction. Work on the haulage connections, engine chambers and rope races for No. 2A Shaft is in progress. Full scale sinking operations are expected to be commenced in May, 1957, as soon as permanent winders are commissioned.

FINANCE FROM OWN RESOURCES

The capital funds raised for gold mining purposes were spent by May, 1956, and of the capital expenditure of £1,752,302 for the year, £366,246 was appropriated from profits. It is anticipated that future capital expenditure on gold mining will be financed out of profits without affecting the capacity of the Company to distribute dividends.

The total profit for the year amounted to £1,426,592 and after appropriating £365,246 for capital expenditure, £250,977 for repayment of loans and £450,000 for the payment of Dividend No. 1 of 10 per cent, there remained a balance of £359,369 which was carried forward to the current financial year.

This concludes my review of the year's operations and I desire to place on record your Board's appreciation of the services rendered by the Manager of the Mine, Mr G. S. de Villiers, and his staff, as well as the staff at both the Head and London Offices of the Company.

Binding Cases

Binding cases for THE ECONOMIST *are available from* EASIBIND LTD. *The cases are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding and will hold* 13 *issues of the normal edition together with the quarterly Index, or* 26 *issues of the air edition with two quarterly Indexes. The year can be stamped on the spine. The cost per case, post free throughout the world, is* 11/-. *Orders, stating requirements clearly and enclosing a remittance, should be sent,* **not** *to* THE ECONOMIST, *but to—*

EASIBIND Ltd.
(Dept. E),
84 Newman St., London, W.1

APPOINTMENTS

THE UNIVERSITY OF HULL

Applications are invited for a Lectureship or Assistant Lectureship in Economics (mainly in the field of Applied Economics) to date from January 1, 1957. Salary scale: Lecturer £650 × £25-£1,150; Assistant Lecturer £550 × £25-£650 per annum, with F.S.S.U. and children's allowances. Further particulars may be obtained from the undersigned to whom applications (five copies) should be sent not later than November 16, 1956.

W. D. CRAIG,
Registrar.

COMPUTOR PROGRAMMING

We at E.M.I. Electronic Limited are presently engaged on the development of a large-scale electronic computing system of very advanced design for integrated data-processing in business, government and similar applications. The programming of this machine presents novel problems calling for intellectual ability of a high order. We now invite application for the following positions on our programming staff:—

1. A man or woman with at least one year's programming experience and enthusiasm to apply this to non-scientific computing. The selected candidate will be responsible for general-purpose routines. Experience in statistics or punched-card and other forms of data-handling would be an advantage. Preferred age, 25-35.
2. Mathematician with good honours degree, knowledge of numerical mathematics, and a keen intelligence to study theoretical programming problems; previous experience not essential.
3. Programmer to undertake the coding of business procedures. Experience in business, banking, insurance, government or similar organisation essential, preferably with some interest in the O. & M. approach. This post requires keen organising ability. Programming experience not essential. Preferred age 25-35.

We should also be pleased to hear from persons who wish to be considered for junior programming positions. These persons must have proved ability and discipline calling for sustained, detailed logical thinking, such as mathematics, accountancy or actuarial science; but degree standard is not essential.

Please send full details to Personnel Dept. (EL/E.19), E.M.I. Electronics Ltd., Hayes, Middx.

SECRETARY AND PERSONAL ASSISTANT

to Personnel Manager of Glacier Metal Co., Ltd. Challenging post for young woman who can handle heavy administrative load as well as being good secretary. Work includes maintaining confidential files, some statistical work, appointments, etc. Slightly overstretched but his help of a good assistant. Age 25 to 35; training in Social Science useful; experience in industry, esp. in personnel work. Monthly paid; Salary () start £475 to £525 p.a. Personal Manager (Ref. 6D), GLACIER METAL CO., LTD., Ealing Road, Wembley, Middx.

ACCOUNTANT FOR NIGERIA

The Western Region Production Development Board of Nigeria has a vacancy for a Cost Accountant.

It is essential that the candidates should have a sound knowledge of plantation accounting, especially cost accounting, as the selected candidate will in the first instance be required to design and install cost accounts at the Board's several plantations. These range in size from about 500 acres to 12,000 acres. Two of 4,000 and 8,000 acres are rubber plantations, while the largest plantation of 12,000 has mixed crops, mainly oil palms, cocoa and citrus. Each plantation will have its own processing factory, so that the applicant should also have a knowledge of processing accounts. The applicant will also be required to supervise the accounting at two existing Processing Factories independent of plantations.

The commencing salary will be in the range £1,100—£1,470, excluding Inducement Allowance, which will be £250 or £300 per annum, according to point of entry, which depends upon qualifications and experience.

Other terms of service include partly furnished accommodation at one-twelfth of the basic salary; free medical service; outfit allowance; free first-class passages for wife and for children not over the age of thirteen once each tour and up to three in number; car purchase facilities on favourable terms and generous car allowances. Home leave at full pay at the rate of five days per month of overseas service. Employees are required to contribute up to 10 per cent of their salary to a Provident Fund, their contributions being matched with an equivalent contribution by the Board and carrying interest at the rate of three per cent.

The normal length of tour is eighteen to twenty-four months.

Applications, in duplicate, together with details of age, experience and qualifications, and the names of three personal referees, should be sent to:—

The London Representative,
W.R.P.D. Board,
18 Grosvenor Gardens,
London, S.W.1.

Closing date: November 30, 1956.

EXPORT MANAGER
ENGINEERING

One of the leading British Companies in the field of precision engineering, with several manufacturing establishments at home and abroad and with a world wide selling organisation, requires a first-class engineering executive to train for appointment as Export Manager.

The minimum requirements for the post are:—

1. A professional qualification in engineering.
2. Wide and successful experience in overseas selling, both in its direct and organisational aspects.
3. A detailed knowledge of world markets, with *particular reference to the selling of engineering products.*
4. The vitality and personality to regard problems of export selling as a challenge.

As this is a senior appointment of considerable responsibility and with exceptional opportunities, it is unlikely that the successful candidate will now be less than 35 and earning less than £2,000 per annum.

Applications, which will be treated with the strictest confidence, should be sent in an envelope marked "Overseas" to Box 552.

APPOINTMENTS

UNIVERSITY OF CAMBRIDGE
DEPARTMENT OF ESTATE MANAGEMENT

The Appointments Committee of the Department of Estate Management hope soon to be in a position to appoint a University Assistant Lecturer in the Department of Estate Management. Applicants should hold a degree in Economics or Estate Management. The person appointed will be required to undertake duty on January 1, 1957, and to give instruction in Imperial and Local Taxation and Fiscal Policy. The appointment will be subject to the Statutes and Ordinances of the University.

A pensionable stipend £500, to £800 a year subject to certain variations. Non-pensionable children's allowance. Further particulars of duties and stipend from the Secretary of the Appointments Committee, Department of Estate Management, 74 Trumpington Street, Cambridge. Closing date for applications, November 21, 1956.

THE UNIVERSITY OF MANCHESTER

Applications are invited for two full-time posts of RESEARCH ASSISTANT in the Faculty of Economic and Social Studies. One Assistantship will be available for research in GOVERNMENT, and the other for research in SOCIAL ANTHROPOLOGY or SOCIOLOGY. Applicants should be graduates in any of these subjects or in Modern History or Economic History. There are two grades: Grade II—salary £550 to £650 per annum; Grade III—salary £450 to £500 per annum.—Applications should be sent not later than November 12, 1956, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

FIRCROFT COLLEGE
(Residential adult education college for men)
BIRMINGHAM

The Trustees invite application for the post of WARDEN (Principal), for appointment on or before April 1, 1957.

Present salary £1,250 × £50 to £1,400, together with Warden's House and superannuation scheme.

The college is to occupy larger buildings in January, 1957, and important new developments are envisaged. The post offers an opportunity for enterprising pioneer work in the field of adult education.

Further particulars and application forms may be obtained from the Warden, Fircroft College, Bournville, Birmingham, 30.

KODAK LIMITED, KINGSWAY, W.C.2

A new post occurs in the Statistics and Economics Department for an Economic Research Assistant. Applications are invited from graduates in Economics, about 25 years of age, who have Economics as their special subject with statistical method as a subsidiary. Some experience of economic analysis as a tool in business reasoning and a knowledge of problems of international trade would be an advantage. The range of products manufactured and markets served are extensive; there are interesting possibilities for the growth of the range of work carried out in the department by advancement. Letters may be addressed in confidence to the Personnel Manager.

MILK MARKETING BOARD
AWARDS IN AGRICULTURAL ECONOMICS

The Milk Marketing Board invite applications for their awards for vocational study and for research in agricultural economics. The awards are open to men and women who are graduates of universities in the United Kingdom in any subject, but preference is given to those whose degrees have been obtained in economics, in social or business studies or in agriculture. Candidates are expected to have gained a first-class or good second-class Honours degree but any qualifications of similar status may be accepted.

There are three categories of awards:

(a) *Scholarships* (£500 per annum) are primarily for students of subjects other than economics or agricultural economics during their undergraduate career but who may wish to study these subjects before proceeding to post-graduate work;

(b) *Studentships* (£600-£700 per annum) are for post-graduate students qualified to study for a post-graduate degree or diploma or to take up research work in agricultural economics;

(c) *Fellowships* (£800-£1,200 per annum) are for persons who have already had experience in post-graduate study in some subject cognate with agricultural economics.

Applications should be sent not later than December 31, 1956, to the Secretary, Awards in Agricultural Economics, Milk Marketing Board, Thames Ditton, Surrey, from whom further particulars and forms of applications may be obtained.

THE ASSAY OFFICE
NEWHALL STREET, BIRMINGHAM 3

Science Graduate required (Metallurgy—Chemistry) for administrative and technical duties. Salary according to age and qualifications.—Application to be sent to the Assay Master.

RECKITT & COLMAN LTD. have a vacancy for a Research Officer in their Market Research Dept. The position is an executive one carrying responsibility for the planning and execution of research on a wide variety of food products. The Department employs all the major forms of research, and the Research Officers have no shortage of either problems to interest them or resources with which to tackle their problems. The appointment is a permanent one in Norwich and carries a starting salary commensurate with responsibility. Preference will be given to applicants with experience in Market Research. Applications, in confidence, stating age, qualifications, experience and salary required, to Secretary, Reckitt & Colman Ltd., Carrow Works, Norwich.

MARKET RESEARCH. Planning Supervisor required. Good working conditions and prospects offered. Salary *not less* than £800 p.a. Candidates should have experience in the field and be capable of training field staff and planning and developing field studies.—Write, giving full particulars of education and experience, to Market Research Manager, The Hotpoint Electric Appliance Co., Ltd., Crown House, Aldwych, W.C.2.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited for the post of Assistant Lecturer or Lecturer in Social Science. Candidates should have an Honours Degree and experience of social work. The starting salary will be at a point between £550 and £950 per annum, according to qualifications and experience. Further particulars may be obtained from the undersigned, to whom six copies of applications, together with the names and addresses of three referees, should be sent as early as possible, and not later than November 23, 1956.

E. R. EVANS,
Registrar.

Cathays Park, Cardiff.
October, 1956.

THE SCOTTISH GAS BOARD
GLASGOW DIVISION

Applications are invited for the post of Manager of the Organisation, Research and Planning Section at the Headquarters of the Glasgow Division of the Board.

Applicants must hold an appropriate University degree. They should have experience of operational research within industry and sound knowledge of the application of statistical methods to commercial problems. Experience of organisation and methods procedures would be an advantage.

The salary scale applicable to this post will be £1,375-£1,575 per annum, with initial placing in accordance with qualifications and experience.

The post is pensionable and the successful applicant will be required to pass a medical examination.

Applications, stating age and giving particulars of education, training, experience and qualifications, together with the names of two referees, should be addressed to the undersigned for receipt not later than November 12, 1956.

A. T. HERD,
Secretary

26, Drumsheugh Gardens,
EDINBURGH, 3.
19th October, 1956.

MANAGEMENT SELECTION LIMITED

have been retained to advise on the selection of a

SALES MANAGER

for an expanding and progressive pharmaceutical company with an international reputation. The company is already a leader in its present fields, and is about to enter the proprietary pharmaceutical field. The company, which is situated in the South, now seeks a senior executive to plan and direct the total marketing effort of this new division.

Candidates must have experience at Senior level of sales management and a progressive and successful record of marketing new consumer products—preferably through chemist outlets. Also required is a sound knowledge of modern market research and marketing techniques. A degree or similar qualification in chemistry or pharmacy would be an advantage. Age not over 40. Salary £2,500-£2,750.

Please send brief details in strict confidence to P. J. H. Fryer (S.185), Management Selection Limited, 8 Clarges Street, London. Applications will not be disclosed to our clients without candidate's permission at interview.

ASSISTANT STATISTICIAN required by N.C.B.'s Statistics Branch at London Headquarters. Duties include the examination and presentation of statistical information. Candidates should be graduates in economics, with statistics, and have experience in drafting reports and concise appreciations of statistical data. Knowledge of the sources and nature of general economic statistics is also required. Appointment (superannuable) within inclusive scale £811-£1,081, male; £754-£940, female, according to qualifications and experience.

Write, with full particulars of age, education, qualifications and experience to Staff Dept., National Coal Board, Hobart House, London, S.W.1, marking envelope X.455, before November 12, 1956.

GENERAL MANAGER
REQUIRED FOR PROGRESSIVE FIRM IN EAST LONDON AREA

Applicant should be between 40/50 years of age and must have had first class executive experience.

Successful applicant will be required to introduce new products, market and produce them.

A first class opportunity for the right man, who, in addition to agreed remuneration, will be granted rights to special shares in company's equity capital.

C.H.B., 22 Upper Grosvenor Street, London, W.1.

GRADUATE IN ECONOMICS (female) required in *Marketing Department for interesting* market-research work relating to marketing of spray chemicals in agricultural industry. Previous agricultural experience a distinct advantage. Selected candidate must be prepared to move from Cambridge to Felixstowe in December. Five-day week. Good future prospects. Write (quoting No. 12963), stating age, full particulars of experience and qualifications and salary required, to Personnel Manager, Fisons Pest Control Limited, Bourn, Cambridge.

APPLICATIONS are invited from young men (up to age 26 years of age) for the position of Tabulation Controller in a Market Research firm, specialising in television research. Previous experience in research and figure aptitude are essential; training in statistics an advantage. Write, in confidence, stating age, education, previous experience and stating salary required.—Box 551.

CITY OF BIRMINGHAM
PUBLIC HEALTH DEPARTMENT
APPOINTMENT OF MEDICAL STATISTICIAN

Statistician required holding an Honours Degree in Mathematics, Statistics, Biology or other appropriate subject.

The successful candidate will be required to control a large public health statistical department under the technical guidance of the Corporation's Statistical Officer. Experience of punched card systems advantageous.

Salary A.P.T. Grade VI (£880-£1,080 p.a.); pension scheme; medical examination.

Applications, stating qualifications, experience, etc., and the names of two persons to whom reference may be made, addressed to the Medical Officer of Health, Public Health Department, Council House, Birmingham, 3, should arrive not later than November 10, 1956.

BUCKINGHAMSHIRE EDUCATION COMMITTEE
SLOUGH COLLEGE OF FURTHER EDUCATION

(Principal: R. Edgar, M.Sc., M.A.)

Applications are invited for the post of Assistant Grade B (main) to teach Bookkeeping and Accounting to full-time and part-time students. Ability to teach subjects of the Management range will be an added recommendation.

Salary will be paid in accordance with the Report of the Burnham Committee on Scales of Salaries for Teachers in Establishments for Further Education, 1956.

Further particulars and forms of application may be obtained from the Principal, College of Further Education, William Street, Slough, to whom completed forms should be returned within two weeks of the date of this advertisement.

SALES MANAGER required by well-known firm in London area manufacturing fans and ancillary equipment. Applicants aged 35-45 must have a general education (preferably Public School), personality and social background which will enable them to deal with clients at highest level and qualify for possible appointment to Board of Directors. They must also possess a Degree, H.N.C. or Institutional equivalent and have an intimate knowledge of and some years' experience in the heating and ventilating and fan industries. Generous salary commensurate with qualifications and pension scheme.—Write in confidence to Box 549.

INDUSTRIAL FINANCE HOUSE requires experienced man with some knowledge Stock Exchange and Accountancy. Interesting possibilities for right man.—Write Box 606, c/o Walter Judd Limited, 47 Gresham Street, E.C.2.

SALES PROMOTION MAN required by an American company in the UK to develop a Sales Promotion service. Applicants should be under 35 and have experience of modern Sales Promotion methods and displays, preferably in the textile trade. Ability to be persuasive to plan and direct the total marketing required, to Box No. 550.

THE National Mutual Life Assurance Society has vacancies in its Actuarial and Investment Departments for clerks with mathematical ability who would study for, or are taking, the Institute of Actuaries' examinations. Applicants should be under 25. Generous salary scale plus annual bonus. Apply to Actuary and Manager, 39 King Street, Cheapside, E.C.2.

PRODUCTION—Economics graduate, 32, executive experience in light engineering covering production planning, production control, materials control, shop floor, seeks change with added responsibilities. Four figure salary required. Please reply Box 553.

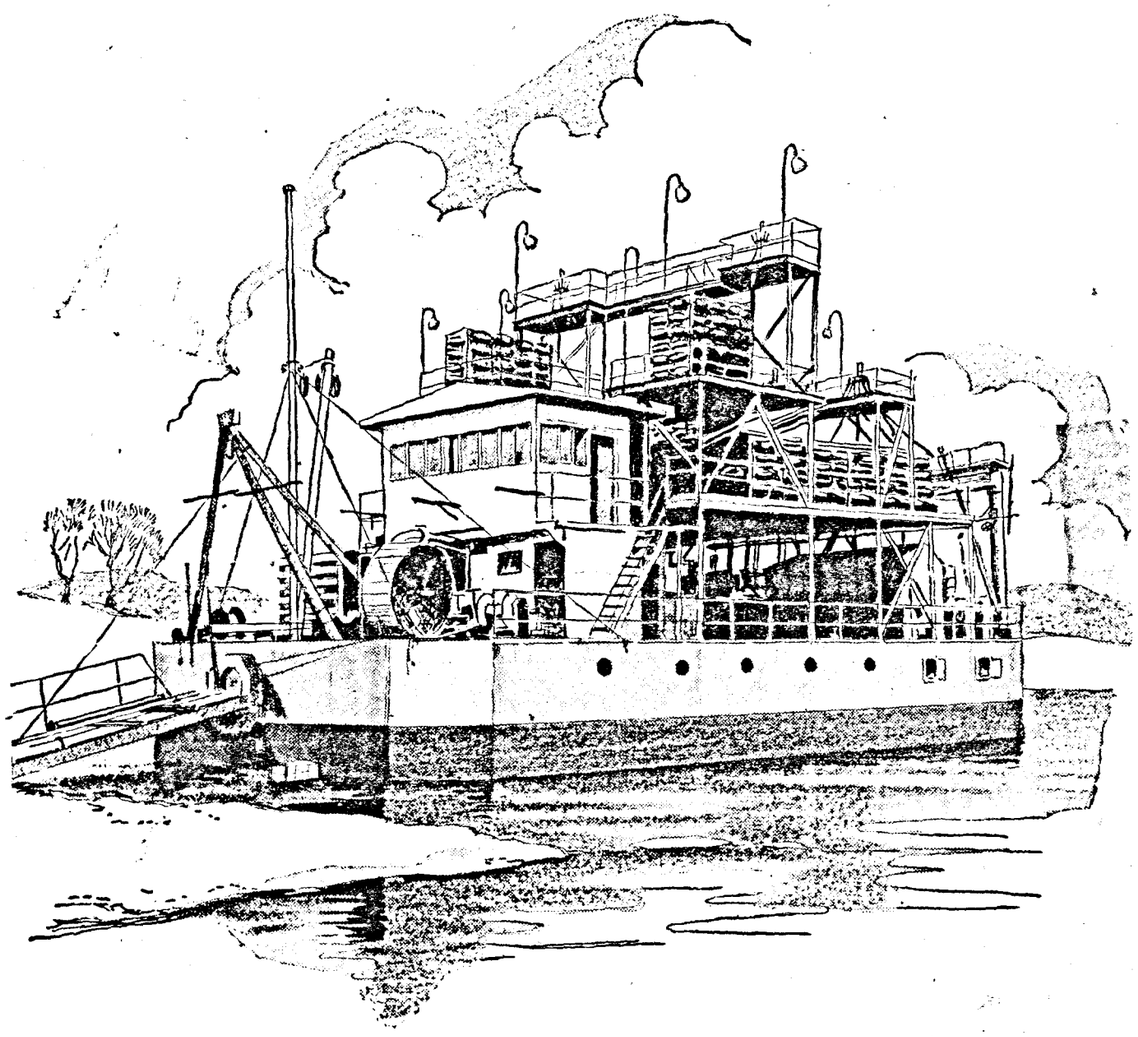
INVESTING FOR THE FUTURE IN . . . RUTILE-ZIRCON



Along the Pacific shores and among the lonely dunes of Stradbroke Island off the coast of Queensland our geologists discovered sands rich in Rutile and Zircon.
After recovery and preliminary separation on the dredge, the minerals travel by miles of aerial ropeway to the separation plant and thence to the main metal markets: Rutile for titanium production and for welding rod coatings; and Zircon for refractories and abrasives.
C.Z.C. continues to explore and develop the mineral resources of Australia for use throughout the free world.

"Gentlemen, we are installing TELEX"

"and about time too" muttered the Sales Director.

Every day more and more commercial and industrial organisations are becoming Telex subscribers. Go-ahead concerns can no longer afford to be without this new communication system that combines the speed of the telephone with the authority of the printed word. Telex is a 24-hour Post Office Teleprinter Service that enables you to exchange messages with any other Telex subscriber either at home or overseas. A Telex call to a subscriber beyond a 25-mile radius costs about half as much as a telephone call of the same duration. Most overseas calls, too, are cheaper than their telephone equivalents. Telex requires no special staff; a competent typist is an efficient operator after the briefest instruction.

"Are you on Telex yet? If not, shouldn't you be? Ask for the Telex booklet from your local Telephone Manager or from the address below. Your Telephone Manager will be pleased to arrange for his representative to call and discuss the service with you and for you to see Telex in action at your nearest Demonstration Centre."

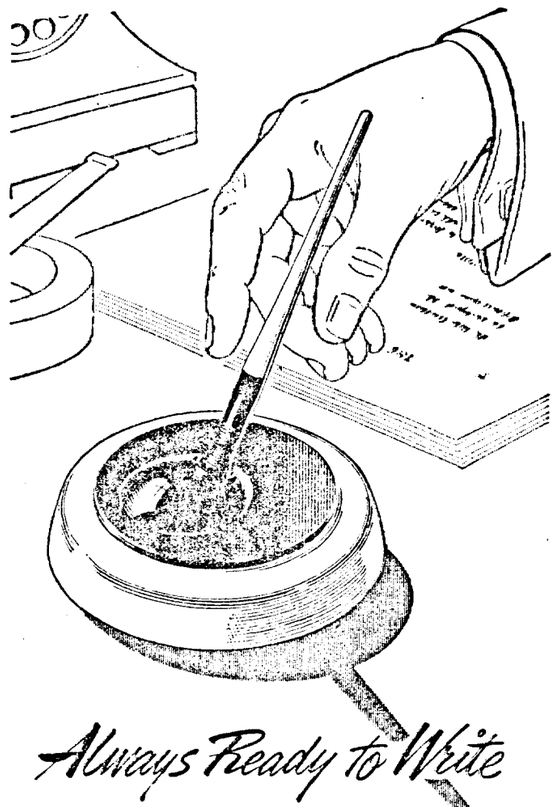
Cordon Rouge

The très sec Champagne



Always Ready to Write

The popular Esterbrook writing set needs no attention, no special care, and your writing glides on instantly and smoothly the moment point touches paper.
The ink fountain is in the base instead of the pen-holder. It holds 40 times more ink than the ordinary fountain pen and the pen fills itself every time you return it to the socket. It is always ready to write a full page or more whenever you pick it up.
There are 30 numbered points to choose from to suit your type and style of handwriting.
Just the gift for business friends with your name and trade mark engraved.

In Black, Grey and Ivory at 34/3 and 37/10. Also the two pen model in Black (Model 487) at 68/5 and 75/8 from all leading stationers.

CAPILLARY ELEVATOR

- *Pen seals base (which is spill proof) and thus prevents evaporation.*
- *Combined ink-feed and writing point (30 to choose from).*
- *Exclusive filling device also cushions point against damage.*
- *Reservoir holds 40 times more ink than a fountain pen.*

So much turns on paper – even more turns on finding exactly the right paper for each particular purpose, and *that* is one of Spicers many specialised functions in the world of paper. Able to look back on a hundred and fifty years' experience, Spicers have always preferred to look forward instead – by anticipating the needs of tomorrow.

All the best *

PAPERS

meet at

SPICERS

* *"Best", to Spicers means any variety of paper which is the correct, expert choice for a particular purpose – printing, writing, packaging or wrapping – and represents, price for price, the highest quality. The right paper for any job can be found at Spicers – together with the long experience which will helpfully guide you to it.*

Noise can be taught to tiptoe

WE may as well acknowledge at the start that we've yet to come across any part of industry which can function without noise. Let's face it—this machine age ensures that every part of our life is affected by noise to some degree. Try walking round any factory and see how many different voices noise can have. Start with the offices where maybe twenty typewriters clatter ceaselessly; walk through the workshops, foundries, assembly lines; call in at the canteen. Listen to the scream of severed metal, the crash of giant hammers, the racking roar of drills and the tintinnabulation of tin trays. Everywhere you walk noise walks with you in hobnailed boots. Let's see how we can teach it to tiptoe.

As a matter of technical interest, those plaster walls in the typing pool absorb only 2% of the sound impinging on them—and that's not much. Yet it is quite practicable to absorb as much as 75% of sound generated—that's quite enough to make conditions bearable. Throughout the entire factory, machines and equipment can be muted by the application of the principles of acoustic insulation efficiency.

The installation of insulating materials such as Newalls (Reg'd Brand) Paxtiles can relieve noise pressure by as much as 75%. Their application, by Newalls experienced technical staffs, can, in many cases, be effected without structural alterations and without interrupting working arrangements.

If your working efficiency—and profits—are being impaired by too much noise it may help to bring in Newalls for preliminary investigation and consultation. You will be under no obligation whatsoever.

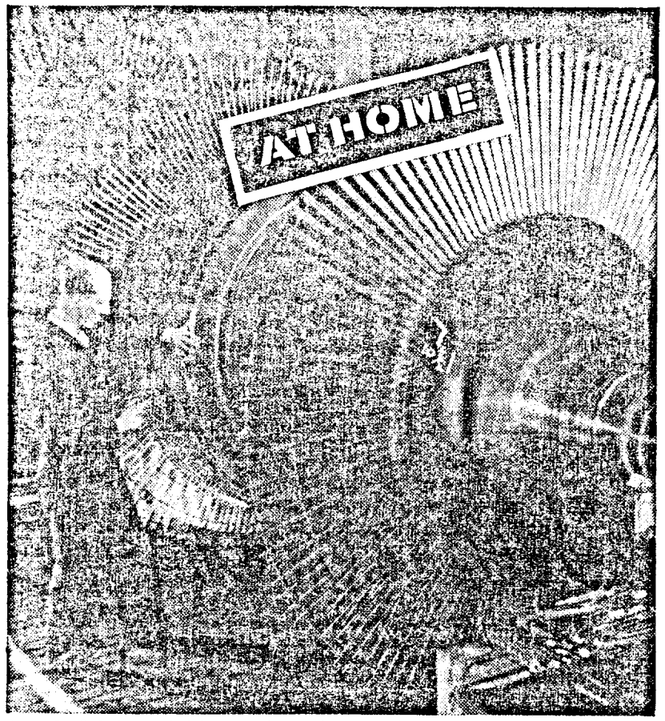
A TWOFOLD JOB...

How The English Electric Company is working for Britain at home *and* abroad



Power for Industry. Britain's industries need more and more electric power; to meet this demand many new power stations are being built, and ENGLISH ELECTRIC is helping to provide their equipment. This picture shows shrouding being fitted to the impulse blading stage of the low-pressure shaft of one of many large ENGLISH ELECTRIC steam turbines on order for the Central Electricity Authority.

THESE ARE CHALLENGING times for Britain. Great strides have been made since the war in rebuilding our economy. The problem is to *maintain* this progress.

From 1949 to 1955 our total industrial output rose by 27%, and the value of our exports by 58%. British industry is busy, and actively developing—there are more jobs than workers. Our standard of living is high. But to ensure *still better living for Britain*, we need still higher production, still more activity in competitive export markets. In both these ways, ENGLISH ELECTRIC is playing its full part.

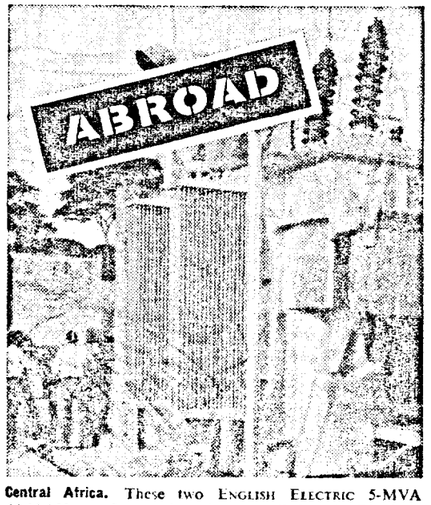
At home, this company helps to supply the generators, transformers, switchgear and other plant needed for Britain's expanding power generation programme; it also makes the electrical equipment by which industry *uses* this energy for production—not only for home demand but for the world.

In addition, ENGLISH ELECTRIC is itself a vigorous and successful exporter; *about half the Group's business is overseas*, earning foreign currency for Britain.

With the world-wide experience of its engineers and technicians, backed by great manufacturing resources and advanced research, ENGLISH ELECTRIC is hard at work, making an important *twofold* contribution to Britain's economic progress.

To young men and their parents

To any boy or young man considering a career in science or engineering, ENGLISH ELECTRIC *offers almost unlimited opportunities—first-class training, and a choice of rewarding jobs at home or abroad. For details, please write to Mr. G. S. Bosworth, Central Personnel Department D.8.*



Central Africa. These two ENGLISH ELECTRIC 5-MVA 66/11-kV transformers have been installed at the Rhodesia Congo Border Power Corporation's Bancroft Substation. The Company has also supplied two 60-MVA 220/66/11-kV transformers to this Authority.

'ENGLISH ELECTRIC' **bringing you better living**

The Prime Minister

LET us be frank. As the dust swirls over the Middle East—and, funereally, over eastern Europe—there is only one subject in domestic politics. It is the Prime Minister: should he go or stay? His friends (and there are many of them) cry "Glory be"; his critics (and there are many of these, too) cry "disaster." But it is not by these cries and countercries that the question should be answered; it is by the stark test, made here by the British people and Parliament, of the national interest.

Now that some sort of cease fire has sounded across the Middle East, there is a natural tendency to seek to sound some sort of political cease fire at home. Unfortunately, if one agrees with the views on the Suez adventure that are set down in subsequent articles in this issue, this is impossible. It would be a blessed relief to be able to say that by its belated wisdom on Tuesday the British Government had pulled its chestnuts out of the fire. But—the Anglo-American alliance is badly hurt; the Commonwealth is at odds (the message from our Ottawa correspondent on page 516 is painful to read); the uncommitted nations are alienated; the canal is blocked; there is the searing question mark over Suez's effect upon Hungary. Too many chestnuts have been burned already.

Inevitably, there must be a reappraisal of political leadership; and it is a reappraisal that must centre on the personal position of the Prime Minister. It should be made clear why this question is asked, in this personal form. The need now is not for vindictive retribution for the past fortnight's errors, monumental though many believe them to have been; the need is for sober recognition of the nation's problems ahead. The campaign which was to try to strike Colonel Nasser down by force—and which has in fact pulled so much else down by force instead—was formally launched by a united Cabinet; but statesmen and nations across the world, as well as troubled heart-searchers here, believe that it would not in fact have been launched, or pursued as it has been, under any other leadership but Sir Anthony's. In many foreign countries, and especially in the uncommitted nations—for whose support much of the cold war will be fought in these next few years—Sir Anthony's name is now suspect; the danger is that, so long as he remains Prime Minister, Britain's name will remain suspect, too.

Would this matter? Obviously it would. This is not to say that "foreigners" have any sort of voice or veto in the choice of a British Prime Minister. But it is in the light of Britain's vital interests in the world that the British people and Parliament have to decide for themselves. The reason why a British Prime Minister must not be personally alienated from the leaders of the uncommitted countries (and, very much more, must not be at loggerheads with the leaders of America) does not rest on any assessment of the political or moral worth of Mr Nehru or Mr Dulles; it rests on the opportunity that is then given to our real potential enemies, who are the Russians. If the

experience of the past few years has taught statesmen of the free world anything, it should surely be that the heat of the cold war (or of worse) depends upon one factor: the Russians are aggressive when they think that the non-communist world can be divided, and they are more peacefully co-existent when they know that it is united. This is why the ending of the gunfire over Suez may spell only the beginning of the real Suez tragedy. There is a real danger that the dark tide of Russian imperialism, which only ten days ago looked momentarily as if it might even be drawing back, will rear, and strike again (as it struck so tragically last Sunday) in gleeful enjoyment of its new and lush breeding ground of western disunion.

What conclusion should be drawn, especially by the middle of the road opinion which has for the past four years tended to support the Conservatives? Does it change its party allegiance? Or can it conceivably look to one of Sir Anthony's colleagues to heal the breach? It is still possible to say "wait and see." Overseas bitterness against Sir Anthony could prove to be less durable than this week's signs and portents cause one to fear. The full consequences of Suez, and indeed the position in Suez itself, are still obscure. But unless the bitterness is diverted to where it should belong by some new Russian viciousness (and nobody wants that) this consummation does not look likely; to trust to it would be a triumph of hope over evidence. And the hope will be made more tenuous still if Conservatives go on pretending that these events have been in some way a great national victory.

Those now grievously in doubt—including very many who still firmly believe that present Conservative domestic policy is much better than present Labour domestic policy—still have one last question to face. What alternative leadership in fact is there, in the Tory party itself (the obvious name, despite Mr Macmillan's bid, is Mr Butler), or elsewhere (they must compare him with Mr Gaitskell)? Though for the moment judgment on the Prime Minister is being held suspended by the politicians themselves, in the political corridors the question is already being put. Sir Anthony Eden has always been, in a career of long public service, a man of principle and patriotism. There may rest upon him a painful but inescapable decision.

In the Wilderness

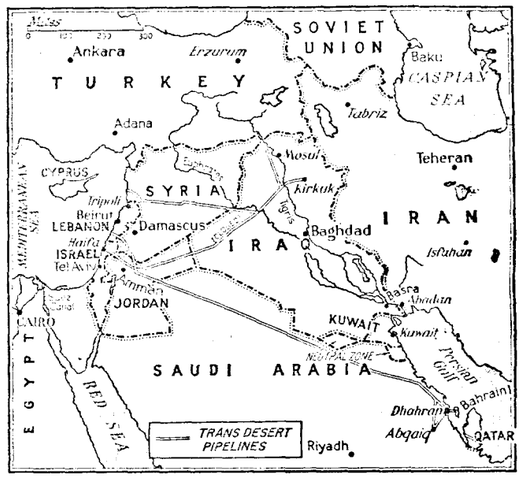
WITHIN ten days Egypt has been the scene of two of the shortest campaigns in military history: one, by Israel, completed; the other, by Britain and France, suspended unfinished. The Israeli attack on the Egyptian army in Sinai and Gaza opened on Monday, October 29th. On Friday, November 2nd, Gaza fell and the Israeli government announced that the operation was "practically completed." By Sunday, November 4th, when the last Egyptian remnants had been mopped up, Israel held the whole Sinai Peninsula from the Gaza strip to the southern entrance of the Suez Canal. According to a telegram from the Israeli government to Mr Hammarskjöld on Monday night, "Since this morning, November 5th, all fighting ceased between Israel and Egyptian forces on land, sea and air and full quiet prevails."

This was the day on which the British and French paratroops landed at Port Said and Port Fuad; seaborne forces followed them 24 hours later, but by then only twelve hours or so remained before Sir Anthony Eden, giving in to world-wide pressure, notified Mr Hammarskjöld of the decision that the Anglo-French operation should stop. By midnight, when (so far as can be learnt) fighting did stop, the Anglo-French forces held the Mediterranean entrance to the Suez Canal but little more. Unlike the Israelis, they had announced their objective in advance: it was to clear all other forces from a strip twenty miles wide from Port Said to Suez, and to occupy the strip themselves. The Israelis had achieved their purposes, and possibly more; the British and French did not achieve theirs.

In striking this military balance it has to be conceded that the British and French air attack on Egypt, together with the threat of the British and French landing, undoubtedly helped the Israelis to finish their campaign as quickly and neatly as they did. This air action started on Wednesday, October 31st, and continued for five days before the landing; it destroyed the Egyptian air force almost totally. Like his other forces, President Nasser's costly air force seems to have been a passive object in these campaigns; no resolute physical resistance has matched Egypt's political intransigence. Concerning each of these actions, the Israeli and the Anglo-French, the argument may go on for many years about whether they were right or wrong. What seems to admit of no argument is that one of them, the Israeli, was at any rate intelligible, and succeeded in its purpose, whereas the other, the Anglo-French, remains unintelligible and did not attain its purpose, whatever that may have been.

Sir Anthony Eden, when he announced the ultimatum to Egypt on October 30th, told the Commons of the grounds for the action he was taking —"Unless hostilities can quickly be stopped, free passage through the canal will be jeopardised"—and of its purpose: "To separate the belligerants and to guarantee freedom of transit through the canal by the ships of all nations." True, the combatants are now separated, but they had separated themselves before the British and French troops landed, and even now it is not the British and French that keep them apart. "Action has to be rapid," the Prime Minister told the Commons on the 31st; there was not time to wait upon the procedures

of the United Nations. This was of the essence of the British case, but in the end action was inexplicably slow. Day after day went by with the world hourly expecting the news of a landing, while the pressure of the world's and its own opinion bore down upon Britain: most of the Commonwealth, the United States, the European partners in Nato, nearly the whole of the United Nations, and finally, on Monday, Mr Bulganin, unperturbed by his government's atrocious misdeeds in Hungary, threatening without disguise to "crush the aggression . . . by the use of force." While these pressures accumulated, the revulsion in the Arab states was dealing heavy blows at the Middle Eastern interests which the British action had been designed to protect. The Iraq pipelines across Syria were put out of action; disorders flamed up in Kuwait, Bahrain, and Qatar; the canal itself was blocked. It remains uncertain what pieces of the British position in the Middle East can now be salvaged, and for how long. Some people have always held that a reassertion of British strength in the area would stop the rot; others hold that displays of force are no substitute for policy. No one can expect an ineffective and irresolute stroke of force to achieve any purpose at all, unless it is the bitter demonstration—which defenders of the government have actually claimed in these disastrous days as a virtue of British policy—that the props of world security have given way, and that the United Nations must reform itself if this kind of anarchy is not to become perpeutal.



The British and French tug-of-war with the United Nations opened when Britain and France used their vetoes in the Security Council and called into action the "uniting for peace" procedure which permits the Assembly to act on its own. The Assembly then met in special session, and on November 2nd called on Israel to withdraw behind the 1949 armistice lines and on all parties to cease fire. UNO stopped short of applying the label "aggressor" to anybody at this stage. British and French dealings with the United Nations from then onwards were clearly dictated by the desire to establish a position in Egypt before the breach with the Assembly became total. At first the two governments talked back and refused to comply. The Assembly in the early hours of Sunday, November 4th, resolved: (1) that the Secretary General should within 48 hours submit plans for an emergency United Nations police force; and (2) that the cease-fire resolution should be complied with within 12 hours.

Despairing of so quick an answer, Mr Hammarskjöld on his own initiative extended the time limit for a cease-fire to 5 a.m. on Monday. But when that time limit in turn expired, of the four countries involved, only Egypt had accepted the resolution. Israel had asked for further clarification. Britain and France were silent; their paratroops were landing early on Monday. For the moment the Assembly contented itself with approving the establishment of an emergency international force. The telegram informing Britain of this crossed with the replies to the two resolutions of the previous day. Israel declared itself ready to agree to a cease-fire (but said nothing about withdrawing to the armistice line or about the international police force). The British and French said that as soon as Israel and Egypt accepted, and the United Nations endorsed, a plan for an international force, Britain and France would stop all military action. The United Kingdom representative next declared that all bombing of Egyptian territory had ceased. But by then New York knew of the landings.

When the Assembly met on November 6th, it was baffled by another British smoke screen: the vague and conflicting information about a cease-fire (which proved to be merely local and, in any case, abortive) at Port Said. Then, since British and French compliance seemed to depend on the quick formation of an emergency police force, the Assembly turned to Mr Hammarskjöld's proposals for the force. Into the middle of this discussion Mr Eden dropped his surprise packet of a promise of cease-fire at midnight.

Britain's declaration of a cease-fire differed by one vital omission from the conditional acceptance of the previous day. It was still contingent on the setting up of a competent international force: there was, however, no longer the condition that Egypt and Israel should accept this police force, but only that they should accept an unconditional cease-fire (which they had in fact done on November 4th and 5th respectively).

Naturally the Assembly welcomed the British and French decision, but was it the Assembly that caused the decision? Britain and France had been fencing with the United Nations for some days. Ingenuity could have kept it in play a little longer; but something changed the plan. Expressions of disquiet and dissent must have been coming in greater or less degree from many other sources at home and abroad, but only from one was there any decisive new development on

Monday that might explain Tuesday's decision to halt the adventure.

The new development on Monday was Mr Bulganin's threat to intervene with force, a threat which it was possible neither to accept with a good grace nor to ignore with safety. By his letter of Monday, Mr Bulganin gave formal notice that the Soviet Union will stop short of no means to prevent the reassertion by Britain and France of their former control of the Middle East. Most people will assume, and probably rightly, that Moscow—in spite of Mr Bulganin's unaffected reference to the rockets—would not be prepared, or not at this stage, to start a world war on account of the Middle East. There are, however, ways short of a world war in which Moscow can intervene in the region—ways that are all the more easy and practicable when Britain and France, largely because of their own actions, are at odds with their natural ally, the United States, and on almost intolerably bad terms with nearly every state in the region.

★

So sombre is this picture that it may seem hopeless to search it for the possibility of constructive arrangements by which the Middle East, instead of dissolving in anarchy and violence, may serve the world and develop into a stable and prosperous region. This, however, has to be done. It can hardly be done by the first and most obvious formula, which recommends itself almost inevitably to the Assembly of the United Nations: the simple request to everybody to go home. Understandably, the Israelis have no intention of going home until they have a peace settlement in their hands. Britain and France have agreed to hand over to an international United Nations force, but if, having landed, they were to leave before it arrived, they might possibly do more harm than good. But if the UN force is to keep the two sides effectively separated, it will need Egyptian and Israeli agreement to the positions it is to take up; for Mr Hammarskjöld has said that it will not be organised to operate without the consent of the local government. No automatic solutions, therefore, are available ; the unlamented *status quo ante* cannot be restored. The UN force can do no more, at best, than hold the ring ; it can solve nothing.

All the elements necessary to peace in the Middle East have become alive and must be put in order—the future of the canal ; the problem (not, as is supposed, identical) of the Egyptian monopoly of the means of transport from the Red Sea to the Mediterranean ; Israel's right to security and to freedom from blockade ; the intolerable irritant of the unsigned peace, the unrecognised frontiers, and the unobserved armistice left behind by the Palestine war.

Here the United Nations may have the chance to perform its first act of pacification on the creative level of world politics. From the endless unrest on the borders of Israel, from the Suez Canal dispute, from the persistent concealed crisis along the oil pipelines, and from the conflict between Colonel Nasser and Britain, the need can equally be deduced for an international strip of territory from the Gulf of Aqaba to Gaza. This would at once separate Israel from Egypt and link the oil-producing Arab countries to the Mediterranean by a channel legally immune from Egyptian or Israeli interference. Clearly it could not be attained without a general settlement between Israel and the Arabs, and between the canal users and Egypt. Those settlements have to be wrested from the present turmoil.

President in the Saddle

HISTORY did not wait while the last lap of the four-yearly political marathon in the United States was being run. Now, with huzzas echoing in his ears, the winner finds himself face to face with questions as urgent and as formidable as any posed to a President since Abraham Lincoln made his sombre way to Washington for his inauguration. What is the consequence for his country, for the world, and for the transatlantic alliance, now without doubt in its deepest trough, of President Eisenhower's great victory ?

It was always expected that the President would win again. In fact he has won by what the race-goers call a distance. Yet he has not succeeded in carrying his party in Congress to the winning-post with him. It is a personal triumph without precedent ; but, by the same token, it stands as brusque proof to the Republicans that, after four years' occupation of the White House and four years of prosperity in the country, they are still a minority party.

In his congratulation to the President Mr Stevenson said that, with the verdict given " we are all Americans." That is President Eisenhower's strength today. Refreshed by this massive vote of confidence, he is a national leader in a sense not seen before in peacetime in any democracy. On the issues at home of civil rights and Negro schooling, calling as they do for something like Lincoln's own sagacity and resolve, he is in a position to propound a national policy ; on the still greater issues of peace or war in the world, at least as challenging as any that faced Wilson or Franklin Roosevelt, he can speak for America. He can be, personally, the hope of his country and the world.

All this is true ; but it is mere rhetoric if we do not weigh also the President's liabilities. The people have chosen him, but not his party ; and, both by law and by the fact of his age, his party must choose another champion next time. From now forward, in the party reckoning, President Eisenhower's influence wanes—

and, though the war of the succession is bitter, Mr Nixon's waxes. But cannot the President, with his mandate, now make his own coalition ? In his wrestle with Congress to make good his policies, both at home and abroad, he has to look beyond party alignments. Already in the midst of the fevered campaigning he has shown his willingness to do this. His government cannot be accused, at any rate during these last days, of suspending its policies for the sake of politics ; the charge, for instance, that during an election the Jewish vote must be a muzzle has been refuted. The charge that does stand, more accusing than ever, is that the Eisenhower Administration, while having a policy towards the world, has consistently lacked policies for particular parts of it. It has had an attitude but no solutions, a diagnosis but no remedies. It must bear its share—ungrateful though it may seem to say so—for the international anarchy. If the determination now reported from Washington to wrest out of the present smouldering embers a permanent settlement of Middle Eastern frontiers and refugees had been pressed before with wisdom and a consistent resolve, how different might our predicament have been today.

That is above all the challenge to the President and to his Secretary of State, whoever he may be. While the President has, after all, grown in fitness and health, Mr Dulles has been sadly stricken by serious illness. All will wish him well ; but all, too, will hope that in the coming months the combination of generalities and improvised manœuvres, which has become too much the mode of American foreign policy, will be replaced by the particularities which alone can meet the bill of accounts now rendered by the war in the Middle East, by the Hungarian tragedy and by the renewal, at both points of crisis, of the Russian threat. It means making a foreign policy that looks ahead instead of looking, politically, over its shoulder.

To British eyes, and indeed in the whole world balance, the first question is how swiftly the alliance, bruised and almost broken by what has happened, can be repaired. It is without any question the President's own desire to repair it. No man was more shocked or more affronted both by what the British and French governments did in Egypt and by the way in which, without consultation or warning to their allies, they did it. Yet no man, after the first anger, was more intent upon rescuing the partnership ; and in this, as so often, he has reflected, as many American commentators have done, the surprising amount of sympathy, even though critical, shown by ordinary citizens. The President is a man of simple faith. The re-entry of Russia bearing menaces confirms again his conviction that, at all costs, the western powers must stand together ; and here indeed is still the overriding test. The transatlantic alliance cannot be restored simply by the President, for all the confidence his people have given him. It will need the backing of Congress itself, now resentful and suspicious of European intentions and open to the pressures of a more isolationist mood. And it will need, too, a metamorphosis in the leaders on this side of the Atlantic who have placed the alliance thus in the hazard.

Hungary and the European Future

THE horror and tragedy of the Soviet reconquest of Hungary have been obscured for too many of us both by the cutting of communications between Hungary and the outside world and by the smoke of war in Egypt. To praise the Hungarians for their heroic and protracted resistance to the Soviet Army would be presumptuous, but two significant lessons can be drawn from their conduct. The first is that communism is profoundly unpopular with the very people whom it is supposed to benefit most ; many Hungarian workers have now paid with their lives for their refusal to rest content with any modified, more " liberal," communist regime. The second flows from the evidence—confirmed, less dramatically, in other communist countries —that the ability of communist regimes to fasten mental and spiritual blinkers on the younger generation has been prodigiously overrated. The students whose demonstrations sparked off the Hungarian revolt were also demonstrating the ineffectiveness of communist double-think on what should have been its most promising and malleable material, the young men and women who know no other world.

It is not possible to discover how it came about that the Hungarian patriots suffered such a violent change of fortune, from apparent victory to crushing defeat, or whether in fact they were not really doomed from the start. For the Russians, the sticking point probably came when Mr Nagy announced his country's neutrality and its desire to get rid of the Red Army. His formation two days later of what seems to have been intended to be a genuine multi-party government took place after Soviet reinforcements had begun to roll into Hungary. But whether the earlier Soviet offer to discuss withdrawing troops was genuine or only a feint to gain time, whether the change of policy, if such there was, was advocated by the whole Soviet leadership or whether it was imposed by the Army—the answers to these questions remain obscure.

So does the future of Hungary. The new prime minister, Mr Janos Kadar, was imprisoned by Rakosi as a potential Titoist in 1951, although since his release about two years ago he seems to have kept his " national communism " within discreet bounds. His appointment, his programme of very moderate reforms and the official denunciations of both " the Rakosi clique " and of Mr Nagy all suggest that Moscow will try to

damp down popular discontent while maintaining its iron grip on the country, by introducing a very carefully controlled Gomulka-type regime. This experiment is unlikely to succeed. Savage repression—and the meagre reports coming out of Hungary suggest that this is no exaggeration—and the bitter resentment of the oppressed will not produce a propitious climate for a "liberalised" communist regime; and even if the government makes a genuine attempt to overcome the country's economic plight and raise living standards, its efforts will be seriously hampered by the non-co-operation, and even the passive resistance, of the workers. Large-scale Russian help, if it is forthcoming, may help the regime, but it will not make it popular.

Elsewhere in eastern Europe, the ruthless crushing of the Hungarian revolt has flashed a warning signal. In all of them except Poland, the communists have all along shown great reluctance and timidity about "liberalisation" and they have not so far found themselves pushed irresistibly from behind by popular feeling. The Hungarian revolt will only confirm them in their suspicion of dangerous experiments; their press and radio are already joined in a nauseating chorus in praise of the Red Army's suppression of the "counter-revolutionary terror" in Hungary. Even the Jugoslav communists, evidently alarmed by the heady influence that the Hungarian patriots might exert elsewhere, have subscribed to this wicked travesty of the facts.

It is, however, in Poland that the Hungarian crisis will have the most significant repercussions. Mr Gomulka has so far shown great skill in riding the storm of popular discontent (his performance is discussed further in a Note on page 500). He has treated the reconquest of Hungary with a marked lack of official enthusiasm. But he will probably be more helped than hindered by Russia's ruthless action. On the one hand it should bring sharply back to a grim reality those Poles who have been made dizzy by their success in retreating from Stalinism. And on the other hand the obvious resentment in Poland at Russian ruthlessness will strengthen Mr Gomulka's hand when dealing with the Russians.

Thus on a coldly cynical calculation, and leaving the deep and simmering popular resentment out of account, the Russians can hope to reap from their action in Hungary immediate short-term benefits throughout eastern Europe. But to off-set this, they have seriously increased their military liabilities. They have made a blatant demonstration that the communist regimes of eastern Europe rest nakedly on the presence or proximity of the Red Army, and this demonstration must increase the peoples' hatred of the communists. What is more, the Hungarian revolt revealed that satellite armies cannot be trusted to fight for their Russian masters against their own people and perhaps not against anyone else either. In spite of continued talk about the eventual withdrawal of the Red Army from Hungary, the Russians are more likely to find themselves obliged now not only to maintain, but even to increase their pre-revolt garrison in Hungary and possibly elsewhere as well; and they will probably consider it wise to cross the greater part of the satellite armies off their list of military assets.

More problematic, but in the long run more significant, is the damage which Russian ruthlessness will have done to the power of communism to attract new converts outside the communist world. True, the lessons that should be drawn from the Hungarian tragedy, especially by the under-developed countries of Asia and Africa, are bound to be at least partially obscured and distorted by the Anglo-French intervention in Egypt, and this is lamentable. But to the extent that they do strike home, the sacrifices of the Hungarian patriots will not have been entirely wasted.

Think Again, Whittington?

ONLY one commoner signed Magna Carta, and he was the Mayor of London—subsequently made Lord Mayor by John, the same sovereign. The City is now the smallest local government area in the country, but its head still has something of the same pre-eminence. Within the square mile he takes precedence of everyone but the monarch, and even she must ask his leave to enter. He may be called upon by the Foreign Office to help in entertaining distinguished visitors; he may travel widely abroad on visits of civic good-will (Sir Cuthbert Ackroyd, who retires from the office this week, has been to Austria, Germany, Italy, the United States and Northern Ireland, as well as Edinburgh and Cardiff during his year of office); he gives state banquets to which the Queen and her ministers are invited; he has a seat in the Privy Council. He is, in fact, the constitutional (and temporary) sovereign of the City, and he is pretty sure of a baronetcy.

Two doubts arise in the mind on contemplating all this magnificence: one is whether, now that more and more big firms are on the move out of the centre, the City still means enough to justify the continuance of the pomp. Another is whether there will for long be people who can afford the time and money demanded by the office. The first can quickly be disposed of, for the spiritual centre of business remains firmly in the Stock Exchange and the Bank of England, however far firms may stray geographically, and there is no lack of businessmen who belong to the livery companies which are the backbone of City ceremonial and tradition. The second doubt is much greater, and, in this week when Sir Cuthbert Ackroyd hands over to his successor, Alderman Colonel Sir Cullum Welch, it may be worth looking at the duties and responsibilities of the Lord Mayor in order to consider it.

How does a present-day Whittington set about achieving his ambition? The usual path is as follows. First, the hopeful young man must be a liveryman of a City company: this can be inherited, bought or earned by "apprenticeship" to an existing liveryman. Then he may be elected from one of the wards of the City into the Common Council, the City's House of Commons (as Sir Cullum was from 1931 to 1947). The ward electors are all those who pay rates in the city of £10 and over, and councilmen must be of the same status, or householders within their wards. The elections, held every year, are in a few cases contested, although not with any great bitterness. While it is not strictly necessary for a Lord Mayor to have been in the Common Council, he must be an alderman—these, confusingly, are also elected from the wards, but their elections are for life. (Sir Cullum became an alderman in 1947, on ceasing to be a member of the Common Council.) The Court of Aldermen stands roughly in the position of the House of Lords in the constitution of the City—it regulates admissions to the freemanship of the City, and to the livery companies, lays down provisions for the ward elections, and is a court of justice, the alderman becoming justice of the peace on election.

★

The step which determines Whittington's fate is this election to the Court of Aldermen, for the existing court veto any election if it thinks the man elected is not suitable, either personally or financially, to be one of its number. The scrutiny here is pretty close, with regard not only to the qualities usually expected of an elected man—popularity, good reputation, and so on—but also to the possession of a big bank roll and the kind of job which permits the holder to spend a great deal of time attending (unpaid) to work outside the normal range of business. For an elected alderman is more or less predestined to become, if he wants, a Lord Mayor. Before he reaches this eminence, he will pass one year as Sheriff, for the City has the privilege of electing its sheriffs although they are officers of the Queen; of each year's two sheriffs, one will be an alderman and the other not, and as the Lord Mayor must have held both offices, the one who is both is in the direct line for the highest office. When a man becomes Sheriff, the burden of public duty has already begun to be severe, for a Sheriff pays a share of the City's entertaining, must constantly (more constantly than the ordinary members) be attending the Court of Aldermen or that of Common Council, and he has the additional responsibility of being Execution Officer of the Old Bailey.

While the Sheriff's year is a busy one, the Lord Mayor's year of office might put a strain, both physically and financially, on anybody in the kingdom. The Lord Mayor must leave home to live for a year in the Mansion House, and from there—to judge from a recent Lord Mayor's diary—he will have an average of some four engagements of one kind or another each day, five days a week, for a year. During his year he will make about 1,200 speeches (royally non-political and non-partisan) of various lengths. He will visit officially all the 82 livery companies and the 26 wards of the city, speak at state banquets, at the City's schools, and so on. Although he may well be a Jew or a Roman Catholic, he is a trustee of St. Paul's Cathedral: he is honorary head of the City's Army and RAF units. He is chief magistrate of the City, with a court in the Mansion House, where he sits about twice a week, to deal with the usual motoring offences and applications—the City, surprising as it may seem to those who know Fleet Street, has virtually no drunks in its courts. The Lord Mayor's Appeal Funds, in aid of those who suffer from disaster, are worked out in an agreed mechanism with the Bank of England—but that does not alter the fact that he has a lot of work in connection with them when they occur. Add to all this regular work his appearances in connection with junketings such as the Bolshoi visit, and it can be seen that, whatever the attractions of being for a year a quasi-royal figure, his job is certainly no sinecure.

The Lord Mayor not only has to be able to spare this whole year away from his work; he has also to spend a great deal of money. The official salary attaching to the post is £12,500—but it is conservatively estimated that he must spend some £15,000 to £20,000 more, mainly on entertaining. It is, of course, an advantage to firms to number a Lord Mayor among their officers, but they cannot very well pay him more because of it, and the expense must come for the most part out of his own pocket. It is a tradition that he should not spend more than is needed to keep up the customary dignity of the position, and he must consult with an advisory body of aldermen before accepting invitations abroad—invitations which may commit their successors to have the hosts back and to give them a banquet. The scale of hospitality must also be kept within the traditional limits, to avoid invidious comparisons between the amounts spent by the various incumbents, while even details such as the provision of an extra cigar at a dinner for three hundred people may make a very large difference in the budget. The union of Lord Mayors and future Lord Mayors operates a tactful restrictive practice about these matters. The office is certainly a great maker of good will for British business abroad, and a symbol of the great days of the City as the banking house of the world, and at present there seems no shortage of men able and willing to fill the post—those in the know hint that the next five Lord Mayors are likely to do the City good service. But for how long more will people be able to afford either so much time or so much money?

As it happens, this week's ceremony raises this question in a rather embarrassing form. The Lord Mayor's Show, the pageant which accompanies the incoming Lord Mayor, with his predecessor, to the Law Courts to

take the oath before the Lord Chief Justice as the sovereign's representative, was due to take place as this issue of *The Economist* appeared. Traditionally, the show is arranged to illustrate the interests of the new Mayor, and has of recent years usually been put together, somewhat haphazardly, by the companies with which he is connected. This year the incoming Lord Mayor is a solicitor; as this is not a profession whose activities can picturesquely be shown on floats, the show is being organised and paid for by the British Aluminium Company, who have employed one designer to create a combined history of and boost for aluminium. It will no doubt be very good publicity for them. One cannot take exception to this—one previous show, for example, was in honour of the Wool Secretariat, and Lord Mayors have not paid for their shows for some thirty years—but it opens out a rather uncomfortable picture of future Lord Mayors, under the pressure of taxation, presenting their dinners by courtesy of Wizzo the Wonder Washer, or entertaining the head of a foreign state at the expense of Kozy Katering Ltd.

Perhaps this would be a logical way out of the difficulties of financing a post which makes such enormous demands on the holder. But one may ask whether, rather than come to this, new thought should not be given to the whole problem of financing and filling this office. It does not particularly matter that the whole thing is thoroughly undemocratic, for the City is one of the few places which can, for the moment, afford to remain an unashamed plutocracy. What does matter is that the post may become either untenable or undignified.

Bills in Prospect

THE Queen's Speech on Tuesday was overshadowed by events in the Middle East; it also seems to have been a little dog-eared by them. It is true that the only major—and regrettable—omission among measures that Government spokesmen had foreshadowed is that there is to be no action on gambling reform, according to Lord Selkirk, because "consultations have revealed differences of opinion." But several minor projected measures seem to have been held up in the sieve, presumably because for the first few weeks of the session at least the House will want to spend much of its time talking about more pressing things than pensioners' de-retirement. From the score or so of measures mentioned in the speech, four call for detailed comment.

★

The Rents Bill looks like being by far the most important piece of legislation in the session. It is also to be one of the first to be handled, and has already been published. In it Mr Sandys strikes a sensible and fairly bold blow at the fatuities and waste of the present system of rent restriction. As the Minister hinted at Llandudno the bill proposes to free immediately not only all those owner-occupied houses which would at present be subject to control if they were let, but also a slice of the more highly rated properties which have tenants in them. At present the upper limits of rent control are £100 rateable value in London, £90 in Scotland and £75 elsewhere; the new limits will be £40 in London and Scotland and £30 elsewhere. The effect will be to free from control about 800,000 of the better-class rented houses, in addition to the 4¾ million that are owner-occupied. The bill also provides for the graded decontrol of further categories of houses by ministerial order (which could be important if Mr Sandys means business in his stated intention of "getting rid by stages of rent control altogether") and for the automatic termination of control as houses fall vacant.

Meanwhile, however, the bill will leave more than 4½ million houses still (temporarily?) subject to control; for these houses controlled rents are to be placed on a more reasonable and uniform basis. The new maximum rents will be equal to twice the gross value of a house where the landlord is responsible for repairs, and 1½ times this figure where he is not responsible. No rent increase whatever will be allowed if a tenant holds, or can secure, a certificate of disrepair; if at some subsequent date the landlord defaults in his obligations, the maximum rent chargeable will revert to the lower of the permitted figures. Landlords must also give three months' notice of their intentions, and confine increases for a further six months to not more than 7s. 6d. a week.

Two questions should be asked. First, is the route taken towards decontrol the best and the speediest? The expedient of releasing dwellings as they fall vacant was tried before the war, when it did not work well. Experience then suggested that the arrangement tends to embitter relationships between landlords and tenants, and that its effects are very slow. It would be much better to proceed faster with wholesale measures of decontrol. In particular, it is vital that enough dwellings should be released initially to have an appreciable impact upon the housing situation and to avert the resentment engendered by large rent increases concentrated on a narrow front. Judged by this criterion the first instalment of decontrol (which covers about 15 per cent of rented properties) is not large enough.

Secondly, will the proposed system of maximum rents form a more serviceable interim measure than Mr Macmillan's ill-fated "mouldy turnip" in the last Parliament? Mr Sandys's bill starts off with a great economic advantage over Mr Macmillan's; it is, however, an economic advantage that could also be a source of political difficulty. Under the new rating system the gross values to which rents will be related have been uniformly calculated for England and Wales and are themselves based on 1939 rental values; they provide without doubt the most equitable and up-to-date basis for rent revision which is available (Scotland, which has an unreformed rating system, has had to settle for the unsatisfactory device of allowing a simple percentage increase in controlled rents). The political difficulty about the English solution, however, is that permitted rent

increases will vary very considerably, because of present rent anomalies; tenants who have been unduly favoured under the long-ossified control will face quite sizeable increases, while other tenants may not suffer an increase at all. But there are two political mitigations. First, Mr Sandys's bill seems to provide a more potent incentive than did Mr Macmillan's for landlords to put their properties in decent condition—without which no increase can be claimed. Secondly, even Labour spokesmen will find it difficult to contend that maximum rents which will be something like twice their 1939 equivalents are oppressive or unreasonable. All in all, this first bill of the session, though it has minor blemishes, seems to be a reasonably well-conceived measure—and just a little bolder than appeared probable when Mr Sandys first adumbrated it at Llandudno a month ago.

★

The Homicide Bill, which has also been published, has two main groups of proposals. First, it changes the law of murder in four ways: it abolishes the doctrine of "constructive malice"; it allows the responsibility of murderers suffering from abnormality of mind (including those at present outside the scope of the McNaghten rules) to be "diminished," and they will instead be convicted of manslaughter; provocation by words is expressly put on the same footing as other provocation, and the jury is to determine whether the provocation was such as to constitute a defence; the survivors of genuine suicide pacts will be convicted of manslaughter, instead of murder.

Secondly, the Bill limits the death penalty to five classes of murder, in all of which the Government has obviously had in mind public and police anxiety lest abolition would increase murders committed by professional criminals. Thus a murder done in the commission of theft will attract the death penalty (though whether a person who unintentionally kills someone while robbing him will in fact be convicted of murder depends on how the judges interpret the law when the doctrine of constructive malice is abolished). The other murders that will attract the death penalty will be those committed to avoid or prevent an arrest; murders of policemen and of prison officers; and murders by shooting or by causing an explosion (presumably to deter gangsters and political criminals). The death penalty is also retained for multiple murders.

All other murders will be punishable by imprisonment for life, and the Government has wisely not attempted to retain hanging for poisoners and sexual murderers, as the Labour Government tried to do in the compromise clause put into the Criminal Justice Bill in 1948. The Bill, in fact, goes farther than one had expected. Bentley would not have been hanged under it, for the death penalty, even where still applicable, will only be passed on the person who actually commits the crime. Nevertheless there will still be cases which will attract the full glare of undesirable publicity because a person's life will be at stake; for instance, Mrs Ellis could have been hanged even under this Bill, and so could Heath as a multiple murderer, if they were unable to establish a defence of provocation or diminished responsibility.

The abolitionists' course should thus be clear. Let them vote as they like on the Government's bill (for which the whips will be on), but let them then unite to make nonsense of it by doing all they can to press through Mr Silverman's private members' bill for total abolition as well. In view of the debates ahead, it is worth drawing attention to the figures released last week of the number of murders in January to September this year compared with the same period of 1955. Abolitionists will, rightly, not cite the small fall this year (122 against 125) as evidence that the suspension of hanging since Mr Silverman's bill received its second reading in February has actually reduced the murder rate: comparisons have to be made over a long period of years before any conclusions can be drawn. But what use, one wonders, would abolitionists have made of the figures if they had "shown a trend" even slightly the other way?

★

The most significant things about the third major project revealed on Tuesday, that for **Lords Reform**, are that the Queen's Speech refers only to reform of the "composition" of the House—there is no question of changing its powers; and that the speech says only that the Government will "put forward proposals"—Ministers are not committed to legislation. This is to be an attempt to tackle Lord Salisbury's abiding worry that the House of Lords is steadily declining in value because a few, ageing Labour peers simply cannot sustain the role of Opposition.

What the Government has in mind is not at all clear. It may again try to get a negotiated settlement, but Labour is now most unlikely to co-operate; the Lords vote on hanging settled that, by (wrongly) reviving all Labour's prejudices against the Upper House. The Government can still talk with the Liberals, and possibly produce a white paper. It seems likely that Ministers are thinking of a fairly limited operation, designed to create a batch of 50 or more Labour and Liberal peers—probably life peers, some of them women—and at the same time to change the standing orders so as formally to exclude the backwoodsmen, who at present turn up only when the House is discussing hanging or television or how to shoot rabbits. But the Government will never get the extra Labour peers if it cannot offer them at least a daily expense allowance. This, in turn, will revive the never very dormant agitation for a rise in MPs' pay. It may be that Lord Salisbury's powers of persuasion are being underrated, but the reaction to this new gambit on Lords Reform must be one of believing it when we see it.

★

A fourth measure that deserves some comment is the proposed **Shop Hours Bill**. The relevant passage from the Queen's Speech says that Parliament "will be invited to approve a bill to amend the law about the closing hours of shops and related matters." The interest of this is that it presumably means that the Government is going to brave the disgruntlement of the TUC by delaying full implementation of the "shop and office workers' charter" recommended in the Gowers Reports of 1947 and 1949. No tears need be shed about this delay. One had always suspected that Parliament would be in danger of making an ass of itself if it tried to set about legislating on a report which, if implemented in full, would attempt to regulate the temperatures of offices and shops, and to prescribe the numbers of lavatories and wash basins to be installed.

But there may also be some dangers even in a limited

Shop Hours Bill. Two points need to be made. First, it has never been clear why one-man shopkeepers should be subject to a compulsory closing hour at all; if the new bill follows the pattern adumbrated a year ago, however, it may oblige some of them to close down an hour earlier, so as not to be "unfair" to shops that employ wage earners. If so, the bill will be a compulsory restrictive practice.

Secondly, it is to be hoped that the new bill will be less rigid than existing legislation, and allow shops even within one local authority area to stagger their half-days and experiment without impediment with such devices as late night opening and Monday closing; the shopworkers' union is now powerful enough to prevent exploitation of staff and to get extra remuneration for any assistants asked to take their days and half-days off at unpopular times. Unfortunately, neither the union nor the Government seems to realise this.

The other measures outlined in the Queen's speech can be dealt with in more summary form. The speech referred to the coming independence of the Gold Coast on March 6th next and to constitutional developments in the Caribbean and British Guiana; the proposed integration of Malta, incidentally, was not mentioned. At home the anti-dumping bill held over from the last session is being revived and has added significance when freer trade is being canvassed; the voluntary film levy is to be made compulsory; the politically uncontroversial proposals for financial assistance for the railways will require legislation, and there will be a (possibly more controversial) measure for greater regional devolution in electricity supply. The bill for compensation for subsidence caused by coal mining is to be brought in, as is another for continuing aid to fishing; the provisions for back pay for the police, the revision of Scottish housing subsidies, and consideration of coming review of local government finance are as expected.

There is only one comparative surprise. Legislation is to be introduced not only to make permanent the "existing emergency powers in respect of hire purchase and hiring agreements," but also "to regulate borrowing by hire purchase companies." Parliament should not let this bill pass without debate; the cumulative evidence that the Government is inclined to regard the whole system of hire purchase as merely an administratively untidy nuisance is getting rather disturbing. Hire purchase is a logical development of expanding consumption in an expanding society; there is a case for curbing it at times of financial crisis, but not for feeling that the duty of government is to stand continuingly in its way.

Notes of the Week

Tory Revolt?

TORY reactions to the crisis seem to be in a state of silently seething chaos. Is there a possibility of revolt by the Suez group against the cease fire? As it becomes clear that the consequences of any settlement are not going to be exactly those which the Prime Minister claimed on Tuesday, there quite conceivably is. A speech by any one of the group's leaders could set it alight. But the fuel for this sort of revolt is not necessarily tinder dry. Some Suez members may feel that their task now is to defend Sir Anthony against what could be a mortal attack for having tried to follow their policy, instead of attacking him themselves for having eventually desisted from it. For the moderates, they fear, are moving towards control of the party.

The future tactics of the moderates, however, are equally in doubt. There were a large number of Tory MPs who were instinctively opposed to the use of force at Suez from the start; they now seem to have reached the stage of explaining to themselves, but not to the public, why they did not promptly say so. It is easy for an outsider, but not so easy at Westminster itself, to criticise them for this caution. They were dumbfounded by the initial news of the assault; they felt that they deserved time for reflection before committing what they assumed would be personal as well as party political suicide; and the noisiness of the Opposition backbenchers did not make things any easier for them, suggesting as it did that any surrender then would be surrender to disorder. Then, on Sunday, came news of Mr Nutting's resignation. The moderates' reaction to this was intriguing. They did not think that Mr Nutting had been braver than they, but suddenly realised that he had probably been brighter. In their view, Mr Nutting, having followed the elder Anthony in so much, has now also followed him in this: that he has resigned office at an early stage of his career on what, at a later and more crucial stage of it, will certainly be regarded as a popular point of principle. Mr Nutting has gained from his "Munich." Sir Edward Boyle appears to have made his decision to resign about this time, but backbench Tories did not know it and still hesitated to threaten to vote against Government policy. It was therefore left for high level pressure in the seclusion of the Cabinet, rather than for defection by lesser Tories in the House, to turn the tide of policy. Every journalist and MP seems to have his own story of what actually happened in Cabinet; the stories range, as Government policy has done, from dramatic action by ultimatum to more reliable stories of peace by fairly forcible negotiation. But, whichever story is true, Sir Anthony Eden this weekend seems to have bogles at the bottom of his garden.

The World Crisis

In addition to leading articles on events at home, in the Middle East, in the United States and in eastern Europe (on pages 481, 482, 484 and 485), the crisis is discussed in Notes of the Week on this and the following pages; in dispatches from our special correspondent in Port Said, and from our correspondents in Beirut, Ottawa and India and at the United Nations (on pages 513 to 520); and in a Business leader on the oil emergency on page 523.

A Truncheon for the UN

CANADA'S proposal that an emergency international force should be created to hold the ring in Egypt promptly drew from Mr Eban, the Israel delegate at the United Nations, the derisive comment, swiftly proved wrong, that the UN was unlikely to agree in 48 hours on a matter it had vainly debated for 48 months. Mr Eban did less than justice either to the United Nations' ability to move like a hare when really alarmed or to the tortoise-like torpor it affects in between these bouts of panic. It is not four years but eight since the then Secretary-General, Mr Trygve Lie, begged the fifty-odd governments he served to authorise the formation of a force of between 5,000 and 10,000 men to help stem the flow of blood in Palestine. Not even the murder of their own mediator in Palestine, Count Bernadotte, moved the member governments to agree. They preferred to watch the carnage proceed, striking an attitude which might have passed for praiseworthy stoicism if it had not been so obviously the product of fecklessness, financial meanness, and funk.

After fifteen months of persistence Mr Lie was fobbed off with permission to recruit an unarmed Field Service of up to 300 men, which has proved its value in Palestine and elsewhere within the modest limits set by the peace-loving but nevertheless prudent governments. Some of them have also allowed the organisation to which, in 1945, they pledged their wholehearted support, to borrow a few officers from time to time to watch truce lines and disputed boundaries in Kashmir, Greece, Palestine and Korea. And in Korea in 1950, thanks to the unhesitating courage of Mr Truman's Administration, backed up by Britain, four Dominions, and ten other member nations, a full-scale army fought under the United Nations flag against a full-scale invasion intended to obliterate a state which was the UN's own godchild.

There is nothing full-scale about the emergency force now being assembled at the behest of 57 of the present 75 member nations. Only a dozen of them—including five Commonwealth and four Scandinavian countries—are, at the time of writing, expected to contribute units, and the units already offered are for the most part very small. But Mr Hammarskjöld hopes to receive more offers when the governments have had time to digest his proposals,

Divided Commonwealth

ONE of the gravest indictments of the Government's action in Egypt is that it has torn the fabric of the Commonwealth. The damage is probably not permanent so far as the older Dominions are concerned: Australia and New Zealand have shown much the same division of opinion as Britain itself, South Africa has been discreetly silent, and fundamental goodwill between Britain and Canada can probably stand the strain. In the Asian member countries the position is very different. The Government must have been prepared for angry reactions there, but it would appear to have underestimated their extent and intensity. India's protests have been matched by Ceylon's, and Pakistani opinion has been still more demonstratively outraged. And the loss of Asian confidence in Britain has been accompanied by a closing of ranks among the Asian-African "Bandoeng" states.

Canada has never before been forced so far away from the British and towards the American viewpoint. But the Canadians at once began to engineer a bridge, and their official attitude, which, despite sharp words from Mr St Laurent, was sorrowful as much as angry, was somewhat mollified when Britain eventually swung towards the Canadian project for a UN force. Public opinion had much sympathy with Britain's difficulties, and the baffled shock felt at the news of the attack on Egypt did not compare with the unanimous revulsion at Russia's onslaught on Hungary; yet the effect of the shock cannot be belittled, as our Ottawa correspondent points out impressively on page 516.

In *Australia*, the government of Mr Menzies, who had been involved with Suez from the start, sided with Britain after some early confusion at the Security Council. But Parliament and the press are deeply divided, although tempers have not run as high as in Britain. Dr Evatt, head of the Labour opposition, has attacked "gunboat diplomacy" but has not demanded a vote.

New Zealand's support for Britain throughout the UN debates has not come from the heart of the country, where there is deep concern. Mr Holland has refused to recall Parliament and the Labour opposition has thus had no occasion to take a formal stand.

South Africa has abstained in the UN voting, and the Minister for External Affairs has said that the Union, not having been consulted, will bear no responsibility for British actions "in regard to this or to any other matter in the future." While the English-language press is by and large benevolent, nationalist newspapers, although unsympathetic to Egypt, voice fears of a reversion to Britain's 19th-century imperialism.

India's moral leadership in Asia will be strengthened not only by its firm stand against Britain but also by its choice of constitutional and constructive remedies. The revulsion with which Indians first greeted the Anglo-French action has not been diminished; but Mr Nehru has also reacted strongly against the suggestion of Russian force being used in Egypt. Marshal Bulganin's messages were seen as a step in the direction of world war. On page 519 our correspondent in India discusses the contrast between the country's attitudes on Egypt and on Hungary, which have been modified in the last few days.

Ceylon has shown similar unanimity and bitterness in condemning the attack on Egypt, and, as in India, there has been angry talk of leaving the Commonwealth. Mr Bandaranaike has dropped his plan to spend a few days in London *en route* to the UN Assembly.

Pakistan's anti-imperialist feeling, reinforced by the bond of Muslim brotherhood with Egypt, has been expressed in violent anti-British demonstrations, in "quit the Commonwealth" demands and in the initiating of the meeting of Baghdad Pact allies without Britain. After this meeting Pakistan may join India, Burma, Ceylon and Indonesia, with which it sponsored last year's Bandoeng conference, at a meeting in Delhi on Monday.

If the Delhi meeting is held it is likely to lead to a second "Bandoeng" conference. The links between the thirty-odd Asian and African states will be strengthened by a common fear that the old colonial powers are unrepentant and watching for a new chance to spring.

which define the responsibilities of the force with care and caution. And, in any case, what the United Nations now needs in Egypt is a policeman's truncheon rather than a howitzer. The case for excluding contributions from the great powers was overwhelmingly strong even before Russia brandished its threat of large-scale intervention; and the other member nations can easily put together a force perfectly capable of doing the job assigned it, if—in this as in other respects—they face the fact that the mantle of responsibility for averting a general disaster has now fallen squarely upon their shoulders.

The West Through Arab Eyes

EAST of Israel, three thoughts dominate Arab minds. The first is "The Russians have saved us." The degree to which pressure inside Britain, in the Commonwealth and in the United Nations brought about the cease-fire passes unheeded by comparison with the Soviet Union's threat to "crush aggression"; the news from Hungary carries no weight with Arabs. Their next thought is that America ranks as a second saviour; educated Arabs are surprised and impressed that Mr Eisenhower and Mr Dulles should have pursued their policy on the eve of an election without the usual pause to weigh the effect on the Jewish vote. Their third thought is that, thanks to the partisan action of Britain and France, the menace of Israel is greater than ever.

The oil-exporting states view the picture from a special angle. Each depends for its bread and butter upon revenue earned from oil sales to Europe; as the map on page 526 shows at a glance, and as our Beirut correspondent explains on page 514, the country chiefly affected is Iraq. Iraq has had its main export channel, from its large northern oilfield, cut by Syrians determined to strike a blow at Britain and France; it seems clear that they were groups beyond the control of their government, which, being itself a beneficiary from the transit of oil, is keen to mend the pipeline quickly. The Saudi Arabians, as a precaution against a similar assault on revenue, insured against sabotage by cutting off relations with Britain and France; but the Iraqis were ill placed to make a corresponding move on account of their membership of the Baghdad Pact. It is questionable whether the communiqué issued by the four Asian members of the Baghdad Pact on Thursday will represent a sufficiently strong gesture of solidarity against Britain and France.

At an early stage in the Suez dispute, the Iraqis had suggested to London that, if the quarrel with Egypt over the canal were at some moment to run high, it might be prudent to stop pumping for a spell in order to safeguard the installations; but they were pooh-poohed. Now their government is the victim of British over-confidence, and it may have to forestall public indignation by demonstrating that it no longer relishes British company.

Riots in the Oil Sheikhdoms

BRITISH action in Egypt has raised the political temperature of the three Persian Gulf oil sheikhdoms —Bahrain, Kuwait, and Qatar—to a dangerous level. For the moment the lid is clamped down and there is little fear of an immediate explosion. But the authority of the sheikhs, bolstered as it is by British support, will be further weakened by the anti-British, pro-Egyptian emotion now being generated.

In Kuwait some shopkeepers are refusing to serve European customers, and dockers will not handle goods from British ships—a boycott encouraged by the Committee of Clubs, to which most of the reforming societies of the young intelligentsia belong. Within the public service, two promising Kuwaiti administrators at director level in the police and the public works department have resigned in protest against the measures used to quell disorder. In Bahrain several members of the Committee of National Unity were arrested and the committee dissolved (the Sheikh has parried criticism with promises to continue with his reform programme). Nevertheless, there was rioting, and British troops lately stationed there at the Ruler's request had to help the police to restore order. Several

Embittered Europe

THE Suez crisis has divided opinion in Europe as in the Commonwealth, but in every continental country except France there has been shocked dismay. Belgium and Holland abstained from voting on the cease-fire motion in the United Nations, and their cautious attitude reflects a public opinion more favourable to Britain and France than that of other countries. But throughout the press elsewhere there has been sad and sometimes bitter criticism of this moral betrayal of the West, of the blow struck at the United Nations, and of the manner in which Britain and France took without consultation action which may have devastating effects on the whole European economy. And at Nato headquarters there is a sense of deep division which may take years to heal.

European criticism has taken on a special sting because of the tragedy in Hungary, which, for most Europeans, has completely overshadowed Suez. Only the more extreme hold the view that the allied action in Egypt was a decisive influence in the Kremlin, but many other Europeans feel that the Russian assault on Hungary was made easier.

German opinion has been the most bitterly critical. The process of relaxation in Eastern Europe had been arousing fresh hopes of German reunification within the context of a wider European settlement; the repression of Hungary has dealt these hopes a cruel blow. The German press has bitterly attacked Britain and France for undermining the moral authority of the United Nations and the West at so vital a moment.

Quite apart from the Hungarian issue the feeling that Britain and France have committed a moral outrage is very widely held. The danger of this disillusion with Germany's western allies is obvious. The assumption behind the new German army is that it is to be part of a western organisation in which no partner acts alone. Now Britain and France have used their Nato troops in their Egyptian adventure without even consulting with their allies. Their action will hardly make it easier to restrain German forces if there is, for example, an East German "Hungary." Some German politicians doubt whether Nato can ever be the same again and are much concerned not only at the weakening of western defence but also at the loss of a vital counter in bargaining with Russia.

Italian opinion has been less united and bitter. The Christian Democrats have long been divided over the use of force in Suez and a section of the party supports the allied action; but the government has backed the UN appeal for a cease-fire and has had most of the press and public behind it. Though many moderate papers have tried to explain Anglo-French motives, there has been widespread dismay at the failure to consult with an ally like Italy, whose economy will suffer so severely from the severance of fuel supplies and to whom peace in the Mediterranean is of such importance.

The *Scandinavians'* reactions have reflected their traditional idealism and belief in international organisation. The Swedish and Norwegian governments have expressed deep concern. Many newspapers emphasised Egypt's provocation of Israel, but few could find any justification for the British and French action. "An atom-bomb against Nato" ran the headline in one Norwegian liberal paper; and in Nato itself Norway has protested against the allied action. Danish feeling has been less unanimous, partly perhaps because of the Conservatives' wish not to embarrass the British Conservative government.

It is only in *Belgium and the Netherlands* that there has been any widespread sympathy for Britain and France. The Dutch experience over Indonesia has inspired a certain mistrust of the United Nations, and the Dutch press on the whole attributed more blame for the Middle East crisis to the United States than to Britain. The wisdom of the attack on Egypt is doubted, but press and government seem anxious not to make things more difficult by violent criticism.

In Belgium the press has been more favourable to the "entente" than anywhere else in western Europe. But while the government, above all concerned for the future of the western alliance, has been careful to adopt a neutral stand between the United States and Britain and France, for the same reason M. Spaak made a personal appeal to M. Mollet to stop the fighting.

Law, Not War

A staff correspondent of "The Economist" covered last Sunday's Labour demonstration in Trafalgar Square and Whitehall. He has turned in the following report which, in its comments upon the behaviour of the mounted police, is frankly disturbing:

THE most significant thing about the demonstration in Trafalgar Square last Sunday, against what was called "Eden's War," was its un-doctrinaire sincerity. The crowd, which filled the square to overflowing, was not of the militantly leftward bias one had expected; there was a considerable leaven of the more earnest type of student, demonstrating determined but unpartisan opposition to what they regarded as an unjust war. Two of the main speakers. Dr Edith Summerskill and Mr Harry Nicholas, made the error of thinking that they were addressing their habitual audiences of convinced Labour supporters, and their speeches fell rather flat. It was for Mr Aneurin Bevan—the new Mr Bevan who is at the moment trying so hard to sound moderate—to feel the mood, and he made an undeniably brilliant speech. The general agreement with him seemed to be broken only by an exuberant who let off a smoke grenade, and by two diligent hecklers whom he quickly silenced. When the meeting broke up, the platform were left to go it alone in their singing of the Red Flag. "Dig that crazy choir" said a nearby Teddy boy. And one would have liked to leave this report at that.

Unfortunately, one can't. A far more serious misjudgment of the temper of the crowd was made subsequently at the admittedly noisier demonstration in Whitehall, and it was made by (of all people) the mounted police. The men on foot controlled the crowd with all their usual firm skill, acquired at many a film premiere. Perhaps the mounted police had read too much about what happened to their more sinister counterparts in Hungary: they were, in any case, thoroughly undisciplined, and far too rough. Your correspondent saw one deliberately lean down from his horse to strike some students who were doing their best to retreat in the direction that was wanted. When I told him that I had taken his number, I was met by the startling cry of "Get that man"; it is a pity that the police didn't. They did start to arrest a correspondent from one of the few papers which enthusiastically supports the Government—but dropped him like a hot brick when he produced his press card. Finally, when the crowd was in orderly retreat up Whitehall towards Trafalgar Square, they made an entirely needless charge at speed on their horses, knocking down and injuring at least one middle-aged man, who appeared to be an innocent spectator.

The police on foot made no such mistakes of judgment with a crowd, which, although vociferous, was certainly not inclined to be violent until the horses came on the scene. Perhaps the isolation of the mounted man, much vaunted as enabling him to keep his head, also prevents him from sensing what kind of crowd he has to deal with. These mounties gave the disturbing impression that they were rather pleased to try out in practice the techniques they have learned, and which they have so mercifully few occasions to use. Whether through excess of zeal or through indiscipline they succeeded in deeply antagonising the crowd, and very nearly in turning a demonstration into a riot. When they first came on the scene they were greeted by cries of "Cowboy, go home." Half an hour later the cry was "Fascists."

Their behaviour, however un-English, was put in perspective by a recently arrived Cypriot, whose amazement (expressed in the brokenest of English) turned out to be at the fact that the police had not yet used tear-gas. This comparison from across the water seemed, at first hearing, to be reassuring. But, on reflection, as Cyprus is a British colony, was it? It would be absurd to make too much fuss about the mishandling of one afternoon's demonstration. But your singularly undemonstrative correspondent, who has never before been at the receiving end of a mounted police charge, certainly came away with a disturbed feeling that the present techniques of the police—whom he still wants to regard as wonderful—now need watching.

buildings, including a newly established newspaper office and the public works office, were burnt down and a curfew was imposed—all the more necessary now that Saudi Arabia has stopped pumping oil to the Bahrain oil refinery. The stoppage may not last long, since the Bahrain oil company is American owned, but while it lasts the four thousand workers standing idle have little to do but blame Britain. Whereas in both Kuwait and Bahrain security in the oil areas was unimpaired, in Qatar the local pipeline was actually cut, but inexpertly, since it was repaired within twenty-four hours. A son of the Sheikh with his retainers broke up the political demonstrations.

Pressure for more democracy on the western pattern has been increasing in the oil sheikhdoms for some time, and has always been accompanied by anti-British feeling; but the handling of the Suez conflict, and the bracketing of Britain with Israel as assailants of Egypt, seem to have ensured that hatred of Britain and enthusiasm for political advance will henceforth be synonymous in the area.

Collusion with Israel?

EVIDENCE is piling up to indicate that the close timing of Israeli and Franco-British action was not as accidental as the leaders of this strange *Triple Entente* would like their peoples to believe. Most of the indications come from France. There, it had been known for a long time that M. Lacoste, the minister resident in Algeria, was making headway with his appeals to the government to revise its Middle Eastern policy and to put its money on Israel in order to bring President Nasser down. It was also known that M. Mollet and his colleagues, when accused of having climbed down in regard to Suez, were replying with hints about "secret weapons" which would enable them to reach their goal before the end of the year. But more detailed analysis has now appeared, particularly in the Mendès-France weekly, *L'Express*. It is alleged that the British, having at first wanted to play only the Iraqi card, later accepted the French idea of using an Israeli trump in the game against Colonel Nasser; and that not only were troop shipments speeded up shortly before the event, but Israeli staff officers sat at the French ministry of defence almost to the last. According to this version of events, the only surprise for the French and British governments was the timing. Originally, it is said, the Israelis were not to strike until last Tuesday; but, fearing that American intervention would foil this gunpowder plot if they waited until after the fifth of November, they attacked eight days ahead of schedule.

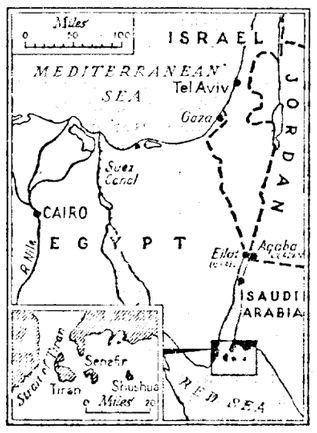
The French accounts leave it uncertain how far the British are supposed to have been in on the plan. It is true that the British and French prime ministers and their foreign ministers were in frequent consultation. But it is unfortunately true, too, that many ministers in both governments did not know what they should have known, or only a part of it.

When the French Assembly was faced with an accomplished fact, only the Communists and some poujadists openly opposed the government, while the closest Radical supporters of M. Mendès-France and a few individual deputies expressed their uneasiness through abstention. M. Mollet's action was endorsed by an impressive majority. But the higher the hopes raised, the more bitter must the disappointment be. The Right will doubtless blame M. Mollet for having got stuck in the illusory Suez short-cut to a solution in Algeria, the Left for having embarked on his military venture at all. French Socialists, in particular, will now have time to ponder over Mr Gaitskell's indictment of their own leader's Tory allies. In this difficult position the French government will be helped by the tragic events in Hungary, which have once again changed the powerful Communist group into parliamentary untouchables. But M. Mollet is only beginning to grasp the full political and economic consequences of this abortive war.

Whose Gulf of Aqaba?

AT moments when diplomacy counts, Gentile can usually outstrip Jew, but when it comes to business the boot is on the other foot. Israel is very naturally bent on securing during the present hiatus the basis of a permanent arrangement with its neighbours that will free Israeli homes from the nightly fear of a raider's grenade through the window.

Mr Ben Gurion told the Knesset on Wednesday that Israel held most of Sinai, that the armistice line with Egypt no longer had any validity, that Israel would stay where it now was so long as there was no permanent settlement with its neighbours, and that it would not agree to the stationing of a foreign force, however styled and composed, in Israel or any of the areas now occupied. Who, if anyone, will be in a position to cause Israel to withdraw from the positions it has advanced to, if it wants to hold them? A test case will be the island of Tiran; Mr Ben Gurion has announced that it will be retained.



Tiran has been a thorn in Israel's flesh since 1949. With the island of Senafir, it makes the Red Sea entrances to the Gulf of Aqaba so narrow as to fall within national territorial waters. Egypt, with Saudi Arabia's agreement, occupied both islands in 1949; they lie only about three miles from the coast of Egyptian Sinai and four miles from the Saudi Arabian shore. But on January 28, 1950, Egypt assured third parties interested in maintaining an international channel through the strait that everyone's right to "innocent passage" would be respected "in conformity with international practice."

This undertaking has not been observed; the island was used as a weapon in Egypt's blockade of Israel's Red Sea trade. Masters of ships of many nationalities have been

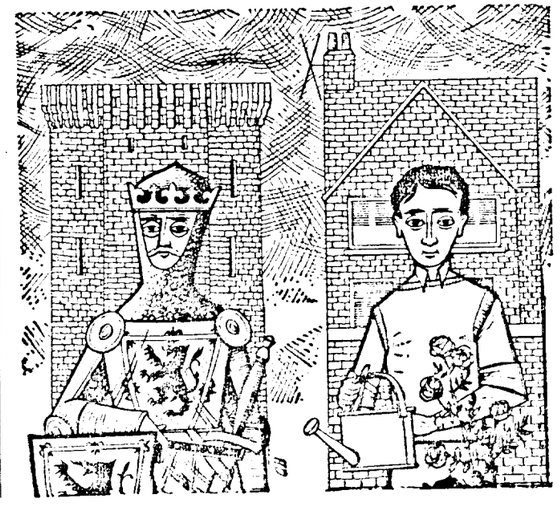
Protection

The desire for protection is as strong in man now as it was in the primitive beginnings of time. But today, man can have the added protection of Life Assurance to safeguard his security. In this way, the unknown future can be faced with confidence.

Whether you need the protection of Life Assurance for yourself or others, you'll find it a good idea to contact a Scottish Mutual representative first. *Write to:*

The Scottish Mutual Assurance Society

HEAD OFFICE: 109, ST. VINCENT STREET, GLASGOW, C.2



To be fairer than the evening air Madame needs time.
Carriage and escort must wait while the final touches are applied. Here comes
cleansing tissue—what *would* one do without it—and with it a question:
what is this to Bowaters or Bowaters to this? The answer is that Bowaters
are not only makers of paper for newspapers and magazines, even though
their name is synonymous with newsprint. And the making of tissues for Madame
(and for Monsieur when he has a cold) is not the only variation
on the paper theme. They are not glamorous, these square containers that bring
detergents to the grocer, these adaptable industrial drums, these hygienic
paper sacks. Those sweet wrappers, biscuit packs and jolly paper bags, now,
they are much more appealing. And the solid, workable worth of hardboard
is demonstrated a thousand times a day by carpenters, paid and unpaid.
All are part of the varied and fascinating contribution that Bowaters make
to modern living. And it all begins with a tree in Canada,
perhaps, or Tennessee or Scandinavia.

The harvest of the forest is given many forms by **BOWATERS**

THE BOWATER PAPER CORPORATION LIMITED

stopped, and some of them fired on—even when bound for Aqaba in Jordan and not for the Israeli port of Eilat. (Two British ships fired on by Egypt were the *Empire Roach* in July, 1951, and the *Anshun* in July, 1955, both bound for Aqaba.) Just as UN members bowed to the denial by Egypt to Israel of the Suez Canal, so they acquiesced in this second piece of arbitrary behaviour. Since August, 1955, Egypt has required 72 hours' notice of entry into the gulf and Britain, among others, has observed this *de facto* arrangement.

Great as the Egyptian provocation has been, the island has now changed hands in a way that the United Nations exists to stop. After its misuse by Egypt, to hand it back would be absurd. Other states, besides Israel, have rights in the Gulf of Aqaba. Tiran would be a good point on which to station a perpetual international authority.

Samuel Smiles

MR BUTLER'S political ambitions can only be judged from his public statements. During the last month these have become a connoisseur's delight. At Llandudno his laudatory references to "my able successor Harold Macmillan"—conveying just the tinge of a suggestion that the office boy had succeeded to the post from which he himself had moved up—were a lesson in self-non-abnegation by most delicate condescension. His references there to Sir Anthony Eden ("I have served under at least five Prime Ministers, sometimes in difficult times . . . and I have never known, under any Prime Minister I have served, the qualities of courage, integrity and flair more clearly represented than in our present Prime Minister") were—remembering, as one was meant to remember, that Mr Butler's last Prime Minister was Sir Winston—an example of how to damn a leader by praise that nobody will believe. But it was on Thursday of last week when given—by Sir Anthony?—the unenviable task of summing up one of the Suez debates, that Mr Butler really took the biscuit. The whole of his speech is worth reading, as a study in the art of maintaining a reputation both for loyalty and yet also as a "Suez moderate"; but it was the following brilliant impromptu, when a Labour member was kind enough to bring up one of Mr Butler's own famous earlier statements, which must on no account be missed:

> Mr Butler: It seems to me that the Prime Minister has himself today made an intervention in the debate which was of the highest possible quality, and which has rather belied the description of the right hon gentleman the member for Ebbw Vale of my right hon friend as being a bully and endeavouring to cheat other nations.
>
> Mr Ian Mikado (Reading): "The best Prime Minister we have got."
>
> Mr Butler: That observation remains eternally true, and it will be even more so at the end of my intervention.

If any members needed a reminder—which of course they did not—that Mr Butler and Sir Anthony are nowadays being constantly compared with one another, the reminder was here gently pressed home. This is all very delightful. Is it also becoming just a little bit naughty?

The Busmen's Pay

IN a week less packed with news, an early move in the wage contest would not have escaped notice so widely as it has. As was pointed out in *The Economist* of October 20th ("A Douche for the Wages Ferment") this autumn's claims for wage increases throughout industry have been led by the busworkers, who have in turn been led by the employees of the municipal bus services outside London. It was announced over the weekend that these latter have been awarded a general increase of 5s. a week by an Industrial Disputes Tribunal: their demand had been for 9s. to 18s. for drivers and conductors, and 19s. to 25s. 6d. for maintenance men. The foundation of their claim had been that, since their last increase, the rise in the cost-of-living index of 4.7 per cent represented a value in their wages of 7s. 5d.: the rise they have in fact been granted is only an increase of 3 per cent in their wages. The unions went ahead with this claim first, presumably, in order to get their offensive going on a weak front: the municipal employers have not got enough men, and might well have wanted to attract some more into their service. The smallness of this increase is thus doubly significant.

It should be noted that, since the last round of wage claims last winter, the cost-of-living index has gone up, but also that, since April it has been steady, with at times an inclination to drop. Although bread, milk, the health service charges—and Suez—may start it moving upwards again for a time, this is an encouraging sign that the Government's policy is working. The engineering employers will undoubtedly be unwilling to give anything, but they may take courage at the size of this award, and do their best to avoid strikes due to any unwillingness to arbitrate. Yet another sign of encouragement comes from Mr Jim Campbell of the National Union of Railwaymen, which has demanded a rise of 10 per cent. He gave an assurance that his union "would not take any precipitate action to disrupt the country's transport system"—although he makes it plain that he believes that any fair solution of his claims will be a settlement in his favour. But, with the example of this test claim before them, perhaps the unions will come to see that there is a strong argument for moderation. In any case, it will serve to make some of them pause and think again before holding out extravagant hopes to their members.

Information and the Crisis

TWO points are worth making in the context of public information and the crisis. One is to take note of and regret the resignation of Mr William Clark as press relations adviser to the Prime Minister. Since the Suez crisis began in July Mr Clark has carried an impossible can, but has continued the not inconsiderable feat of expounding the Government's policy to the press with both loyalty and lucidity. His reward at one stage was to be attacked by a Labour member in the House; the burden of that attack seemed to be that Mr Clark should stop telling the press what Government policy was, but should be more impartial

by telling us what it was not. It would be a misfortune if this sort of attack, combined with any tendency by Sir Anthony to attribute his recent bad press to anything other than bad policy, were to lead to any change in the nature of the post of press adviser; after some experiment both by himself and his predecessors, Mr Clark had moulded the functions of this office into just about the right pattern.

The other point concerns the BBC and the crisis. What should be the rules for guiding BBC overseas service broadcasts during a war with which half the population disagrees? There are no rules, because there should not be such wars. Probably the best emergency recipe, however, is that overseas broadcasts to the areas affected can in such circumstances legitimately give more weight than usual to Government policy, but that they should not be obliged to serve the purposes of more propaganda. The recipe seems, with modifications, to have been followed. At home during the crisis, broadcasting's problem has not been a lack of rules, but a surfeit of them. The so-called "row" between the parties about whether Mr Gaitskell should be allowed to broadcast last Sunday seems to have been technical rather than genuine. The Opposition has the right to reply to a ministerial broadcast only if it can persuade the BBC that the ministerial broadcast concerned has been a "controversial" one; the Tories' rather niggling point was that they objected to the unofficial intimation on the Friday that Mr Gaitskell would broadcast on the Sunday, because the Opposition could not prove that the Prime Minister's Saturday broadcast was controversial until they had heard it. This Gilbertian quarrel was a direct result of Britain's Gilbertian broadcasting rules: namely that decisions on whether a politician should broadcast are determined by whether another politician has been adjudged to be controversial, instead of by the normal journalistic principle that a broadcast should go on—as, of course, Mr Gaitskell's had to—if a large number of people will certainly want to hear it.

The other problem thrown up for broadcasting in the last two weeks has been the familiar one of the fourteen day rule. Since Parliament was almost continuously debating the Suez crisis, broadcast discussion programmes should theoretically have refused to take note that Suez existed; early on in the crisis, therefore, the BBC attracted some sensible publicity by cutting off a programme in which one participant referred to "a British attack upon Ruritania." Inevitably, however, commonsense has gradually triumphed over legalistic interpretation; all broadcast and television services have discussed the crisis, nominally merely relaying the facts but progressively allowing the distinction between facts and comment to be blurred. Let them go on blurring it. This has been a good psychological moment to get this indefensible fourteen day rule further on the run.

Advance on the European Front

ALTHOUGH German opinion, as a summary on page 492 shows, has been fiercely critical of the latest actions of France and Britain, Dr Adenauer and M. Mollet have managed to make another notable contribution to the building of "Little Europe." Dr Adenauer's role was not an easy one; under pressure from some members of his cabinet, he himself seemed doubtful whether the time was right for his visit to Paris. But he chose to go, putting the need to press on with the European plans before everything else, and perhaps also feeling that his time is running short.

The original purpose of the meeting was to discuss the Common Market and Euratom; but with the sense of European solidarity so stricken by the Suez conflict, Dr Adenauer was naturally deeply concerned for its wider future. He pressed for closer consultation and collaboration in high policy as well as in more detailed matters, and obtained M. Mollet's agreement to regular consultations on general matters between the governments of the Six.

At the same time, despite the hectic atmosphere and the bombardment of messages from the Middle East and London, remarkable progress was made on Euratom and the Common Market. The last meeting of foreign ministers of the Six, described in *The Economist* of October 27th, ended in disagreement on two vital matters. Euratom was obstructed by German opposition to its monopoly of nuclear materials; the Common Market by failure to reach agreement on the French demand for the standardising of working hours. Since that meeting, Dr Adenauer has evidently brought his ministers to heel, and he arrived in Paris ready to make valuable concessions. Euratom, it was agreed, will have its monopoly, though if the prices it sets are an "abuse" (too high), Germany or any other country may buy directly elsewhere. As to the Common Market, it was agreed that by the end of its first four years working hours should be substantially uniform in the six countries, and that France could maintain its compensatory taxes on imports as long as it had balance of payments difficulties. Lack of time prevented discussion of the one large remaining issue, the inclusion of French dependencies in the Common Market, but this is a relatively small omission. New economic difficulties are darkening the prospects of the Common Market in France, where it has yet to pass the Asembly; but if Dr Adenauer and M. Mollet can survive in power long enough, the European projects still have a good chance of going through.

The Cost for France

FRANCE, like Britain, will pay a stiff economic price for its action in Egypt. Last year it imported 24.6 million tons of oil, a little more than Britain did; the closing of the canal and the severing of pipelines will hit these supplies hard. The government has so far optimistically postulated a mere ten per cent cut in supplies, and it seems to intend only to restrict private motoring and press the nationalised railways and electricity boards to use more low-grade coal instead of oil. But a much bigger cut in supplies seems quite possible, and in any case oil brought round the Cape or from the United States may cost between $5 and $10 more per ton than the oil that formerly came through the canal.

The interruption of oil supplies may therefore strike a severe blow at the French balance of payments. Experts' estimates of the loss vary between a rate of $300 million and one of under $100 million a year. If the canal is only blocked for a few months this does not seem disastrous in itself, for France's gold and dollar reserves, which totalled $1,640 million at the end of August, provide a fair-sized cushion. But though reserves are still adequate, more than double the miserable $600 million to which they fell in 1953, they have fallen so alarmingly this year that the OEEC has sternly warned the French government of the need to curb inflation. Reserves have fallen by over $500 million since December, in contrast to the increase of over $1,100 million in 1954 and 1955. Part of the drop this year is attributed to "temporary" factors—the Algerian war and the frosts of last winter. But if the Algerian war and the ill-effects of Suez prove lasting, the French government may within a few months face a balance of payments crisis which will force it to put a sharp brake on expansion. And as a result, French enthusiasm for the European Common Market, already inhibited by the over-valuation of the franc and the Algerian war, may wane still more.

Awkward Anniversary

ANNIVERSARIES of the Russian revolution have been celebrated since Stalin's death in a cheerful atmosphere, with optimistic reports on both the home and the foreign situation. But on the 39th anniversary, which fell on Tuesday, Mr Suslov, a member of the Politbureau, who delivered the main speech for the day, was hardly in a position to claim a further relaxation of international tension. On Suez he could hardly fire anything louder than Marshal Bulganin's diplomatic rocket, although each of his attacks on Britain and France was greeted with thunderous applause. His speech had been preceded by well-timed demonstrations at the French, British and Israeli embassies, and it was followed by Marshal Zhukov's order of the day in which he offered Soviet troops to the United Nations to "crush the aggression." The Russian people have thus been impressed with the fact that the situation in the Middle East is dramatic—which may have helped to divert their attention from Hungary.

On that painful subject Mr Suslov repeated Moscow's official version. He admitted that some mistakes had been committed in the past, but put most of the blame on "the counter-revolutionary underground, which led the youth astray" and on Mr Nagy, who by giving up one position after another created a danger "not only for Hungary . . . but for the neighbouring socialist countries." But he also reaffirmed the recent Soviet declaration about the need to revise relations between communist countries, and took the line that only on a basis of equality between them can the block become really monolithic.

If this meant the acceptance of the "Polish solution" as a lesser evil for Eastern Europe, the Russians may need all the economic achievements Mr Suslov claimed. The Soviet harvest was apparently excellent, while this year's steel output is estimated at 49 million tons and oil production has jumped from 70 to 84 million tons; but there are great strains ahead. A new system in Eastern Europe would present the Soviet planners with many problems. The switch to consumer goods is already playing havoc with the co-ordinated plan for the whole block drawn up earlier this

The Economist Diary

The Christmas present for the man who seems to have everything.	A memorandum book, an appointments register, and a complete reference book.	A diary lay-out specially designed to meet the needs of the busy man.
A week's appointments at an opening; a book that lies open flat on the desk.	Facts and figures covering the world always available when required.	All information easily found by means of handy thumb-indexes.
Bound throughout in red leather; title blocked in gold.	Price (U.K. only) 43/- including postage and purchase tax	Prices to overseas addresses vary widely; a schedule will be sent on request.

ILLUSTRATED PAMPHLET AVAILABLE FROM

DIARY DEPT · THE ECONOMIST · 22 RYDER ST · LONDON · SW1

year. The satellite governments are now urging that not only fairer selling prices, but Soviet credits and immediate aid, are indispensable if they are to survive the critical period. Finally, if the East Europeans are allowed to pay more attention to consumer demand, no iron curtain will prevent the Russians from hearing about it and from demanding that their rulers keep the popular pledges made by Mr Malenkov in 1953. A retreat to cold war tactics may prove the only means of resisting this pressure.

Polish Alternative

POLAND saw in the flames of Budapest the limits of its own revolution. From the very first the Polish people, including the communists, greeted the Hungarian rising as a sequel to their own stand. Instead of echoing *Pravda's* vituperations against the insurgents, Warsaw newspapers branded the die-hard Stalinist leaders in Budapest as the guilty men responsible for bloodshed which could have been avoided. But when it became obvious that the regime born of Hungary's national revolution would not be "Titoist" but profoundly hostile to communism and to Russia, Mr Gomulka and his colleagues, after an anguished change of mind, gave their reluctant support to the Soviet tanks. In a tortured way, however, the Polish communists may find backing for their case in the Hungarian tragedy, arguing that their experiment should be encouraged, because the alternative would be to turn all Eastern Europe into a Hungarian battlefield.

Events in Hungary have compelled Mr Gomulka to rally his ranks. He had to put even more emphasis on the need for Soviet friendship and has attacked "hooligans" who wanted the present orderly movement to get out of hand. At the same time he has given warning against wholesale judgments on the security forces and on former Stalinists. People, he declared, should be judged by their present and future actions rather than by their past. So far, he has managed very well to harness the Polish storm to fill his own sails; at the moment, even Cardinal Wyszynski is endorsing his appeals.

But if he is to keep control Mr Gomulka will have to keep moving forward. If the Russians want to help him, they may be compelled to give communist Poland more than the trappings of independence and the Soviet army may have to be made less conspicuous. Above all, he will need economic aid, since his position largely depends on the new regime's ability to provide a better life. The Poles are now switching the emphasis in their industry to consumer goods and will ask Russia for substantial help instead of exploitation.

London Closes the Lists

THE London County Council has thrown up the sponge, closed its housing list, and in effect told the 165,000 families waiting for a home that most of them will not get one. The LCC's exasperation is understandable. In the last ten years it has housed (inside and outside the county) 103,000 families—the equivalent of creating a new town the size of Plymouth; but during the same period its waiting list, instead of shrinking, has somehow accumulated an extra 100,000 names. The list has been swollen by the exceptional degree of overcrowding in London (partly the legacy of wartime bombing), by the almost complete lack of sites for private housing, and by the recent renewed expansion of employment in the centre of the city. In addition there is now need to give priority to slum clearance—a need which has prompted the discovery that few LCC housing applicants are dwelling in official slums. Many, in point of fact, because of overcrowding, are living in far worse conditions than slum dwellers are.

Apart from slum rehousing, the LCC estimates that it can house no more than 2,000 families within the county of London during the next three years. It therefore proposes to pick out the favoured few immediately, and put the claims of the other 163,000 applicants into cold storage. New applicants will not be officially refused, but their registration (save in exceptional circumstances) will be purely formal. As most of the waiting families are never going to get a council home inside London, it is common sense—as well as obvious economy—to tell them the bleak news. There is no point in spending £130,000 a year upon maintaining the records of an unshiftable housing list.

There remains, of course, the possibilities of rehousing Londoners outside London. The LCC's own programme of out-county estates is finished—perhaps only temporarily. In the new towns and in certain other towns such as Swindon and Bletchley, the waiting London applicant may find a home if he possesses the right skills required for job vacancies. These applications are funnelled through a special industrial selection scheme. But the rate at which these schemes are relieving congestion in London is extremely slow, and the LCC has now decided that the best way to speed up the process is to build a new town itself. The project deserves central government support; it offers the only likely way—together with the natural reallocation of housing space which should follow rent de-restriction—of easing the vast human problem which London's suspended housing list still presents.

Spiral in Spain

THE Spanish government had to do something to satisfy the long pent-up discontent about wages, but the drastic nature of the increases announced last Monday has left employers aghast. The whole wage structure is to be completely reorganised throughout industry, and the addition to the total wages bill, including social charges, is unofficially estimated at between 40 and 50 per cent.

The background to the changes is this. In January, 1954, when prices had far outstripped wages, a cost of living bonus of 25 per cent was compulsorily added to basic rates. Prices then rose the faster, but the government at first refused to increase the bonus for fear of making inflation worse. But under pressure from the *sindicatos* it eventually gave way and decided to raise wages in two stages. The first increase, of 20 per cent on basic rates (which probably amounted to only about 8 per cent on average earnings including the cost of living bonus) was given in April, and the government had the bright idea of minimising its burden on employers by reducing the social insurance charges and making good the resulting deficit out of general taxation. Prices still rose inexorably, and among the more highly paid workers of the north, who had gained proportionately least from the wage increase, discontent reached such a pitch that they defied the law and resorted to strikes—although later they took the more prudent course of refusing to work overtime. The second instalment of the wage increase was to have been up to 6 per cent, and this should have been paid on October 1st, but it never materialised, and the unrest grew.

The wholesale reorganisation now introduced (it is to be back-dated to November 1st) is based on the wages of the unskilled worker. Whatever his industry he is in future to be paid between 31 and 36 pesetas a day, according to the zone he lives in. Hitherto there has been no general rate for the unskilled worker, so the increase he will get will vary from industry to industry. But in each industry the rise the unskilled worker gets will be applied to all other grades as well. At the same time the government has thrown back on the employers the whole of the social charges that it shouldered in April.

Again it is the highly paid worker who will gain proportionately least, although a recent law allowing employers to pay more than established rates will make it possible at last to reward output. The effect on prices has to some extent been anticipated, but is bound to be severe. With imports running well ahead of exports, which have been actually falling, and the peseta daily losing value, Spain's economy will be anxiously watched.

Cracks in Asian Communism

NOT only in Europe have the People's Republics been obliged to admit that the people have been oppressed. It has now been announced that in North Vietnam, "cadres, badly guiding the peasants or relying on bad elements, dealt indiscriminate blows in the struggle against the enemy and made an excessive estimate of crop area and land yield. As a result a number of poor or landless peasants have themselves been hit, many middle peasants were also affected, rich peasants were regarded almost as landlords." Even the communist verbiage of self-criticism makes it clear that the peasants have become exceedingly discontented with the application of "mass mobilisation for land rent reduction and land reform." The general secretary of the party, Truong Chinh, who, though Chinese-trained, was regarded as an archetypal Stalinist, has been replaced by President Ho Chi Minh himself. "Uncle Ho," who had lately held himself somewhat aloof from politics, is, by comparison, a moderate, though he is probably stepping in merely to lend his prestige to the party in a difficult moment. The party's central bureau has promised to develop democratic practice, improve living conditions, and increase the party's contact with "reality and the masses." Civil rights and property are to be restored to those who have been wrongly condemned and the unjustly executed are to be formally cleared of the charges against them.

The pattern is becoming familiar. Although it is not known at the moment what popular pressure was applied to achieve the promises of reform, the party may have taken heed of European examples to appease the dissidents before it became too late.

Nibbling at the German Surplus

REPORTS that the German authorities have decided to repay some £30 to £35 million of foreign debts ahead of time should warm the hearts of "European" politicians as well as of Germany's creditors. For Germany's growing hoard of exchange reserves seems now to jeopardise not only the short term reserves of other EPU countries, but economic projects vital to Europe's future, the Common Market and the scheme for a related free trade area. Britain's continuing payments difficulties and the French deficit, which has grown so alarmingly this year and is so evidently inhibiting French negotiators, are the counterparts of Germany's giant surplus. Early repayment of foreign debt has long seemed an obvious way of reducing it. Further short-term relief may be given by the extension of additional German credit to EPU.

The Making of Paper Money

To the creation of bills, no State places any limitation. This is solely determined by the wants of commerce. To many species of business, too, no limitation is placed. Some are encouraged. But to the creation of the smaller paper instruments of exchange, which in the course of society and civilisation everywhere come into use to supplement the metallic instruments—to the creation of bank notes, the very instruments with which the larger bills are ordinarily discounted—every State, whatever its form of government, however nominally given to free trade, has placed arbitrary, narrow, and ignorant restrictions. The State knowing little or nothing of the great principle of credit—producing nothing itself, and having nothing coming forward to redeem its obligations, except the produce of taxes paid out of production—has either taken the issue of bank notes into its own hands, or has arbitrarily and ignorantly placed restrictions on the issue of them by private individuals. But bank notes, promises to pay on demand, are really loans taken up by bankers, or whoever issues them, from the public. Small notes would seem, therefore, if we may so speak, natural means and instruments for borrowing from all—spreading amongst all to the greatest possible extent and in the most useful manner, the credit so essential to future production, and especially to the completion of enterprises of long duration. They are admirably adapted to emergencies, which they can equalise at the smallest cost. They can be increased or contracted to correspond to all the fluctuations of trade. A mere metallic currency from its inflexibility is now no longer a possibility. Small notes, then, such as individuals find it advantageous to issue, appear in the natural system of society to be as necessary to bills as weaving is to spinning.

The Economist

November 8, 1856

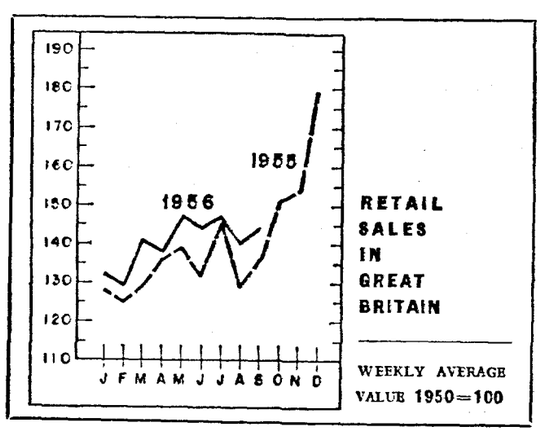
Germany is thus making real efforts to carry out the insistent recommendations of the OEEC and behave as a virtuous creditor. Tariff cuts and import liberalisation have already done a good deal to help imports this year, and the reduction of ½ per cent in the discount rate in September, which brought it down to 5 per cent, helped to stem the influx of short-term funds to Germany.

Yet all the signs suggest that the surplus is growing with undiminished vigour. Debt repayment will bring a momentary alleviation, but its effect may be more than discounted by a slowing down of defence orders and payments abroad. And though some of the recommendations recently put forward by the OEEC to Germany are being followed, others are not. Sweeping liberalisation of farm products seems as remote as ever. Private capital exports are still crippled by the frailty of the capital market. Large scale capital export by the state seems politically remote. Above all, there has been no general lowering of interest rates such as the OEEC recommends, for inflationary price increases are still tying the central bank to a restrictive policy. The growing surplus of foreign exchange is making it clearer than ever that if a restrictive internal policy is to go on much longer it must take forms which are less harmful externally. But this can probably only be achieved through a basic change in tax policy towards industrial investment, savings and the capital market.

£3 million for the Guy

VISITORS from Central Europe perhaps need to be assured that the bangs they could hear in British streets last Monday had nothing to do with the public's reaction to Sir Anthony Eden's policies. The annual firework boom seems to have been bigger than ever this November 5th. Manufacturers were unable to keep up with the demand, although they work all the year round to build a stockpile for these few smashing weeks. One big firm estimates the total number of explosive devices sold this year at about one hundred million—which would have put ten in the hands of all those between the ages of four and seventeen, at a cost to them of some £3 million retail. Big rockets and set-pieces are now only a small part of the trade and the Fireworks Act of 1951 regulated the production of dangerous thunderflashes; so most business was done in small bangers and firecrackers which can easily be got behind the unsuspecting adult. Since prewar days prices of fireworks have doubled, but four times the prewar number of them are sold. The scaring of old ladies out of their wits is no longer a rich boy's privilege, and there are other sources of funds than indulgent parents.

Some of these other sources are becoming more and more questionable. To raise the considerable capital now needed to make adequate bangs, guys appeared earlier than ever this year, while a new type of juvenile racketeer has emerged who demands pennies (often with menaces) without even having a guy to justify his claim. One suspects that these excursions are as much an end in themselves as a way of raising money, and questions of gang prestige no doubt become involved with the simpler pleasure of getting something for nothing. Should the police take firmer action against this increasingly irritating form of begging? There has been a curb, this year, for such curmudgeonship. It was hard to grudge all but the most aggressive of the small boys their part of the well-distributed £3 million when it is compared with the cost of the other sort of fireworks that were being set off simultaneously by their seniors.



SHORTER NOTES

In the vote for a new general secretary of the Amalgamated Engineering Union, just under 3¾ per cent of the union voted for Mr J. M. Boyd, just over 2½ per cent for Mr C. W. Hallett, just under 2 per cent for the communist Mr Joe Scott, and another 2 per cent for four other candidates. There will now be a run-off between Mr Boyd and Mr Hallett. The total poll of under 10 per cent may seem a poor proportion, but it is at least an improvement on last year's poll of 6.8 per cent. The widespread publicity given to this election, on television and elsewhere, has had some effect, and the small proportion of votes cast for the favoured communist even in this tiny poll is all the more encouraging in view of the fact that almost all the genuine communists in the union are likely to have turned out to vote for Mr Scott.

★

As was briefly reported in *The Economist* last week, Mr Sandys has now finally abolished the general Government subsidy for housing which had already been drastically cut. A special subsidy is being retained to encourage local authorities to provide houses for old people. Otherwise Exchequer assistance for new houses will in future be confined to slum clearance schemes and to "overspill" schemes catering for congested cities. Councils are free, if they wish, to raise the rents of their existing dwellings, and divert the subsidies thus saved to new building. But, one way or another, the whole cost of the new houses will fall on local resources (either on the ratepayer or the council rentpayer), and very few councils will be prepared to build many houses on this basis—particularly at present interest rates. This probably means that the majority of councils will now confine themselves more or less to slum clearance.

Letters to the Editor

From a heavy postbag this week we have selected a few from the large majority which take an opposite point of view from that expressed in our leading article entitled "Splenetic Isolation" on November 3rd.

SIR—Your leading article of today has dealt a shattering blow to the respect with which I have hitherto regarded your opinions. It is based on a number of assumptions, every single one of which is absolutely wrong, and the statement in your opening sentence has already, within a few hours of publication, been disproved by events.

You imply that Israel is the aggressor. So far as this particular action is concerned, of course it is, but one cannot disregard the events which have led up to it. To take one factor only, the murderous Egyptian raids across the border show clearly that, morally speaking, the aggressor is Egypt, not Israel.

You further imply that we must at all times be guided by America in our foreign policy. I do not think that the majority of our people would find that proposition acceptable, important though the American alliance is. Further, I suggest that the initial American reaction has been caused not so much by what we have done, as by the fact that we have taken over the leadership from them for the time being, and have taken a crucial decision on our own initiative. The usual roles have been reversed, and after the first shock, many Americans are beginning to feel glad that this has happened.

Thirdly, you imply that, because we have taken immediate action in a situation of great urgency without consulting the Commonwealth, we have thereby imperilled the Commonwealth link. I would ask one question: Would the Commonwealth prefer its leading member to be a country which must always go around saying "we really are not sure what to do—what do you think would be best?" or would it prefer it to be a country which in a critical situation can make up its own mind and take firm, decisive action? I think I know the answer.

In your last paragraph you put forward another extraordinary thesis: that all sober men in Britain must be in general agreement with you. I can assure you that many men who are not only sober, but who are highly intelligent and well-informed about world affairs, take a view which is diametrically opposite to your own.

One final point: if the British and French had not intervened in this manner, precisely what do you suppose the course of events would have been? Please let us have a sober answer.—Yours faithfully, K. CLARENCE-SMITH
Oxted, Surrey

SIR—"The intervention of her Majesty's Government on behalf or rather against Egypt has no doubt prematurely brought the operations in the Sinai desert to a close." These are Mr Gaitskell's words and, if he is correct, they give away everything that is material in his case against the Government.

The more prematurely the operations were stopped the better. If it was in our power to stop them more prematurely than the United Nations could have stopped them, that in itself justifies our intervention. Indeed, to throw away the certainty of an immediate stoppage for the doubtful prospect of the United Nations stopping it at some undetermined future date, would have been the height of pedantry. President Eisenhower took much the same view in the matter of Quemoy and he was undoubtedly right.—Yours faithfully,
Gerrards Cross D. E. W. GIBB

★

SIR—As an old and regular reader of your paper, I write today for the first time to any paper to say how deplorable I think your leading article of this week.

It is a great pity that Aneurin Bevan is the only person on the Labour side to behave in a statesmanlike manner. To a former Fabian and early Labour party member this past week has been a sad confirmation of their bankruptcy.—Yours faithfully, AGNES A. CROSTHWAITE
London, S.W.1

★

SIR—I am disappointed in your article, for it seems to lack perspective. If a comparison is made between the years from 1914 to 1939 on the one hand and those from 1939 to date on the other hand, it is clear that the major mistakes of the earlier years have been and are being avoided in the later period. Surely in the years to come it will be recognised that the mistakes that killed the League of Nations were avoided by the United Nations, firstly in Korea and secondly as a result of the present action by Great Britain and France in Egypt?

The League of Nations died because it had no teeth and was flouted by dictators. The United Nations may well live because teeth were forced into it by men who had learned the dangers of merely passing resolutions and who had the courage to give the lead required—President Truman and Dean Acheson, Sir Anthony Eden and M. Mollet.

It will surely seem clear in a few years' time to everybody that it was absolutely right (I believe that it will be absurd to question it) to stop by the present action a war between Israel and Egypt with all the possibilities of such a conflict spreading throughout the Middle East and to internationalise the Suez Canal under terms such as those outlined by the 18 Users—the necessary policing being taken over by the United Nations? Is not the conflict in Egypt likely to make the member countries of the United Nations realise that wars can be stopped before they become out of hand by firm and courageous action?

I believe that in the not very distant future all the ridiculous talk of British and French imperialism and aggression will be completely forgotten and that the events that we are now witnessing in Egypt will stand out as one of the great examples of how statesmen after the second world war learned from the mistakes of the statesmen of the 1930s and made the United Nations Organisation a real power to stop aggression.—Yours faithfully, P. R. R. COAD
London, S.W.1

★

SIR—This is a sad day for one old and fond subscriber. After watching politics for fifty years I am sure the main thing is to distinguish between appearance and reality. In March 1936 Hitler marched from one part of Germany to another. That was the obvious and trivial appearance. In doing so, he marched through two treaties. That was the highly important reality that hardly anyone noticed. I thought you knew this as well as I do—until today. Unhappily "Splenetic Isolation" is concerned only with appearance.

"In the Middle East," you say, "the harmful effects . . . will be many and widespread." That is the appearance. The reality is that we have checked a drift that would certainly have ended in the murder of 2½ million people and more other evils than it is possible to estimate.

You say our action puts Dulles's failings in the shade. The reality is that it may well put Dulles himself in the shade. The whole Washington government has been given notice that if it wants followers, it must produce something remotely resembling a lead.

You say we have reduced the Security Council procedure to uselessness. But it was always useless. It only worked once (as you well know), through a Russian blunder that will not be repeated. Why should we seek to deceive ourselves? Much better face the truth that the existing United Nations gives great aid and comfort to the lawbreakers. The appearance is that the UN keeps order (though even as an appearance that is getting thin). The reality is that it assists the disorderly by making their correction more difficult.

And more and more people are coming to perceive these facts. The situation is grim, but it is no longer as hopeless as it was.—Yours faithfully,
Oxford H. B. BARWISE

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

They Like Ike

Washington, D.C.

TUESDAY'S election left President Eisenhower soaring still further into the empyrean and his plodding Republican party still more earthbound. Four years ago he only smothered Mr Adlai Stevenson's presidential aspirations by 442 electoral votes to 89; this time Mr Eisenhower did it by 457 to 74. His share of the popular vote was about 58 per cent, instead of just over 55 per cent; he carried 41 states this year, compared with 39 in 1952. On the other hand, then the Republican party did at least just manage to take control of Congress; this year, with Mr Eisenhower's name on the ballot, his party did no better in either House of Congress, or in the fights for State Governorships, than it did two years ago, when his name was not on it. It is over a hundred years since a President was sent to Washington with a Congress controlled by a different party.

Final returns of the last doubtful contests have not yet come in, but it looks very much as if, with the Democrats and Republicans each capturing four new seats, the Senate will remain Democratic by 49 to 47. The House of Representatives will also probably remain Democratic by about the same majority as before—232 seats to 203. Moreover, the Democrats have made a net gain of at least one Governorship; they have captured five and lost three, while the result in Rhode Island, which used to be a Democratic preserve, is so close it will not be known until absentee ballots have been counted in a month's time. For the Republican party such a stalemate is a dismal return for a presidential triumph only exceeded in scale by Franklin Roosevelt.

Within the President's massive total of popular approbation there was an eastward and southward tilt compared with four years ago. In New England and the Atlantic states his vote was of startling proportions, while in the no longer solid South, so far from receding from his previous surprising incursion, he did even better than before. Mr Eisenhower's majorities in Massachusetts, New Jersey and New York were doubled: he won New York by over 1½ million votes, and in New Jersey he achieved the feat, unprecedented for a candidate of either party, of carrying every single county. In the South he not only held with the greatest of ease the four states he took last time—Florida, Tennessee, Texas and Virginia—but he added to them Louisiana which had not gone Republican since immediately after the Civil War. Even in Alabama, which as a state did stay with Mr Stevenson, Mr Eisenhower collected majorities in the cities of Birmingham, Montgomery and Mobile, while in the borderlands he deprived Mr Stevenson of his former hold over Kentucky and West Virginia. In short, his progressive and intellectual rival was left only as the sectional choice of the most irreconcilable—Alabama, Georgia, Mississippi, the two Carolinas and Arkansas.

In other parts of the country the people's enthusiasm for "Ike" was pronounced, although not quite so emphatic. In California his share of the vote was down by about 2 per cent from 1952, while his margins in parts of the agricultural belt reflected the feebly flickering remains of the "farm revolt" on which the Democratic strategists had counted so much. In Iowa his majority was cut almost in half, while in Missouri Mr Stevenson had one lonely success.

★

But if Mr Eisenhower's triumph was of this majesty, what of his famous coat-tails? It cannot be said that they were wholly without effect. They probably helped Mr Jacob Javits to become Republican Senator from New York in place of the retiring Democrat Mr Lehman, in spite of the impact of the Middle Eastern crisis. Perhaps they should be given some of the credit for the probable double victory in Kentucky: Mr John Sherman Cooper has certainly captured one of the Senate seats there and the likelihood is that when all the votes are finally in Mr Thruston Morton will just have won the second. But a more important cause of the Democratic setback in Kentucky is the bitter factional strife within the state party, while it is certainly this and the chronic difficulties of the Democratic state administration in West Virginia which are responsible for the Republicans' Senate gain there.

Indeed it would be better in discussing this election if the metaphor of coat-tails were abandoned in favour of two others: that of a safety net, since the magnitude of the President's majority has held up such Republicans as Governor Stratton of Illinois and Senator Bush of Connecticut whose political lives seemed in imminent danger; and that of a strong tide breaking against a Democratic barricade. Where there were specific weaknesses in the barricade, because of mismanagement and corruption in West Virginia or personal feuds in Kentucky, the tide penetrated; elsewhere, mighty though it was in force, it was repelled. Only in West Virginia, where the Democrats have lost, besides one of their two Senate seats, the Governorship and two seats in the House of Representatives, and in New Jersey, where three House seats have gone, has there been any general Democratic collapse. On the other hand, in Massachusetts

the shock of seeing the hitherto Republican Governorship lost to the Democrats by 155,000 votes, while Mr Eisenhower was winning the state by 446,000, has torn from the Republican chairman in the state the confession that "this was a colossal defeat, one of the worst whippings we have ever taken."

The Eisenhower Administration's confidence in its farm policy will not be much shaken by the dimensions which the farm revolt has in fact assumed. It seems to have cost the Republicans single congressional seats in Iowa, Nebraska, South Dakota, Oregon and Montana and caused both the Republican Governor and Senator in South Dakota to be run uncomfortably close. But Senator Hickenlooper of Iowa had no difficulty in securing re-election even though he had stood by the Administration's farm policy against vehement attack. While the Republicans can now pursue their aims on the farms with less fear of retribution, they can take little comfort from the verdict of the voters in the Pacific Northwest where fierce ideological battles have revolved around the right methods of developing natural resources. Outside the Presidency, the Democrats have made nearly a clean sweep in this region, holding Senate seats in Washington and Oregon, capturing the Governorships of both and taking a Senate seat in Idaho.

When he comes to reflect on the full lesson of an election which has been such an uplifting personal tribute to himself, Mr Eisenhower must feel anxious about the prospects of his self-set task—that of re-making the Republican party. He has gained two and probably three "New Republicans" in the Senate—Mr Javits, Mr Cooper and Mr Morton—and has lost one he previously had—Mr Duff, of Pennsylvania, who went down as expected before the onslaught of Mr Joseph Clark, the former Mayor of Philadelphia. As against this, three of his hand-picked candidates —Mr Langlie, of Washington, Mr McKay, of Oregon, and his close personal friend, Mr Thornton, of Colorado—have failed. His party is better for the loss of one of its worst reactionaries, Senator Welker, of Idaho, but in exchange it has regained one that it lost once before, Mr Revercomb, of West Virginia.

If President Eisenhower is to do his duty by his own concept of the Republican party and by the innumerable Democrats and independents who have put their faith in him, he will have to force the Republican traditionalists to face bluntly the fact that the vote of confidence has been in him and not in them. The new political (and personal) vigour the President showed during the campaign will need constant exercise during the next sessions of Congress.

Gunboat Diplomacy

THE international bad weather—and the meteorological good weather—drove an unprecedented number of Americans to the polls on Tuesday to affirm their confidence in President Eisenhower as the man best qualified to steer them through the present stormy world. This does not, however, mean that all these voters are as ready as he now seems to be to make the best of the bad Franco-British job in the Middle East for the sake of saving the Atlantic alliance. The Administration decided that this alliance must be preserved at almost any cost once the Russians had attacked Hungary, but most Americans, sick at heart, believe that this attack was encouraged by, if not the direct result of, the immoral and outmoded "gunboat diplomacy" which the British and French were pursuing on the Suez Canal.

This, of course, is just what the right-wing press and nationalist extremists expected. They had always predicted that, when it came to an emergency, America's allies would put self-interest before international co-operation. Britain, having proved them right, is now popular—or at least less unpopular—in some unusual quarters. But this approval will hardly take the practical form of offering Britain the dollars which will presumably soon be badly needed. And habitual friends, in the Administration and in Congress, disgusted at what they consider to be Britain's perfidy, will be less ready than they have been in the past to inconvenience themselves in order to protect Britain from embarrassment, whether it arises from shortage of cash, restrictions on foreign trade or from some of the many other causes that are particularly likely to develop now that the whole question of foreign aid is under review.

Nor is comfort to be found in the fact that in the last stages of their election campaign Democrats attacked the indecision and dilatoriness in Washington and blamed the Administration for the desperate action in the Middle East. For this has made a partisan issue of the question, something which in the long run can hardly be helpful to America's allies. Moreover, sympathy for Britain and France will in practice be counteracted by disillusionment; this is particularly likely among the more conservative Democrats, who head the party which controls Congress and who were already sensitive to the widespread, if not yet very deeply rooted, recrudescence of isolationism in the United States.

Farm Revolt that Failed

THE Democrats' captures of the Governorships of Iowa and Kansas are the result of complicating local factors more than a backwash from the farm revolt which had been forecast earlier. In both cases the voters have turned against the Republican Governor as a person rather than against his party. In Kansas the Republicans themselves did it earlier in the year, when they rejected the incumbent Governor and chose another man as their candidate. It is the resultant dissension in the party which has let the Democrats in there. Iowa has elected its first Democratic Governor for twenty years in Mr Herschel Loveless who defeated the incumbent Governor, Mr Leo Hoegh, an able and energetic, but hardly tactful, Eisenhower-Republican. But in this and some of the other votes in the state there is an element of protest which shows that many Iowans blame the Republican party for failing to see that farmers share fully in the national prosperity. This seems a little unfair on an Administration which has been doing its best for the farmers—a best which, according to the Democratic argument, was conveniently timed to make them feel thankful as they went into the polling booths.

Farm prices just before the election were, indeed, about 2 per cent above those of a year ago, but they were still 27 per cent below the all-time record of early 1951. And

special factors affect individual states. In Iowa, for instance, the great "corn on the hoof" area, where maize is grown and fed to pigs, hog prices have fallen from an average of $21.65 a hundred pounds in 1953 to $15.25 two weeks ago. Then last week the Department of Agriculture announced that it would spend $100 million on pork products to support these falling prices, which naturally rose at once. During the autumn, for the first time in President Eisenhower's Administration, the government moved in to buy "surplus" eggs and turkeys; it has also been supporting the prices of fruits and vegetables recently.

This year's bad harvests in Europe are helping the department in its energetic attempts to get rid of its surplus stocks abroad. But its long-run hope for solving the problem of surpluses is in the soil bank programme. Under it, if farmers take land out of production, the government makes up the income they might have earned on it. This year's cheques began to fall like a sweet rain from heaven at the thirsty time of electioneering—but they fell on loyal and disloyal alike. Here again Iowa farmers did well; by the end of October they had received more than in any other state—$32 million, with only $14 million going to Texas, which came next.

But the greatest worry for farmers has been the drought; there is real fear that conditions are ripe for dust storms as terrible as those of the nineteen-thirties. A cycle of exceptionally dry years has had a cumulative effect and about 600 counties in fourteen mid-western and south-western states have been declared "disaster areas" qualifying for emergency loans, subsidies for feed, and other special help from the government. But even Mr Kefauver does not seem to have blamed the Republicans for the drought by linking it with the hydrogen bomb experiments.

Paying for the Campaign

FROM A SPECIAL CORRESPONDENT

ON Capitol Hill in recent weeks the Senate Subcommittee on Privileges and Elections, under the chairmanship of Senator Gore, a Democrat from Tennessee, has been investigating whether the laws regulating campaign contributions work in practice as they are intended to do in theory. Meanwhile, at the other end of Washington, the money-raisers of both parties have been busily engaged in circumventing those laws.

The Federal Corrupt Practices Act, the basic statute that governs campaign contributions and expenditures on elections for federal office, is a patchwork of laws, each one originally passed to still a public clamour over a particular scandal, and probably inadequate to deal with the problem it was designed to remedy. The central difficulty is that the limits placed on spending in a political campaign are totally out of proportion to present-day costs, so that there has been irresistible pressure to leave some loopholes in the law. It is highly unrealistic, for instance, to limit direct expenditures by candidates for Congress to $25,000 for prospective Senators and to $5,000 for aspirants to the lower House. (The law does not apply to the primary contests in which the parties choose their candidates, although these not infrequently determine the outcome of the general election, at least in the South. Nor does it apply to candidates for state office, whose expenses are limited only by state law.) In congressional contests, where expenditures are customarily several times in excess of the statutory limits, the difference is made up by so-called independent committees, operating in close co-operation with, but theoretically not under the direct control of, the candidate or his campaign manager.

So long as these committees stay within the boundaries of a single state, federal law imposes no limitations on their expenditures. They must, however, also remain independent of the national committees of their respective parties in order to escape the limitation of $3,000,000 imposed on annual contributions to and expenditures by any national political body. Since even this larger limitation is quite out of touch with the cost of the television age, national committees tend to proliferate in an election year: The "Citizens for Eisenhower-Nixon" and the "Stevenson and Kefauver National Committee" can each spend its separate $3,000,000, and when President Eisenhower's birthday falls providentially in the middle of the campaign, a special, and independent, committee is set up to handle the celebration; when the Democrats gather for $100-a-plate dinners across the country, their host is another special committee.

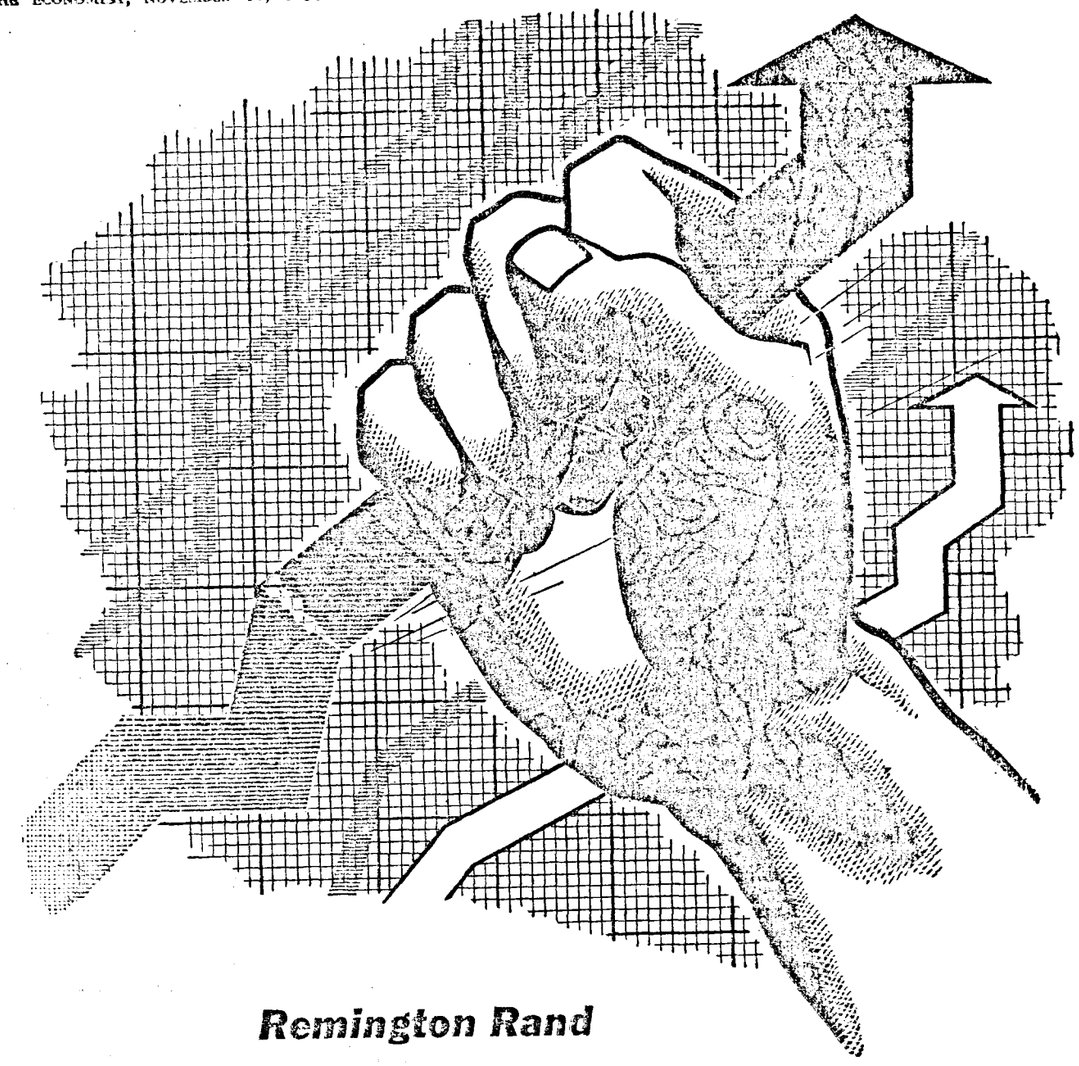
★

Political money-raisers traditionally rely on large contributions, something that the law has tried to prevent by limiting individual contributions to $5,000. But again the loopholes are such that he who runs may read them in the statute. The limitation applies separately to contributions "to or on behalf of" individual candidates, and independent national committees. It does not apply at all to contributions to or by state or local committees. And, most important, it permits individual contributions of $5,000 by members of the same family, including minors. Thus a man and wife with three minor children could easily dispense $25,000 without turning to any of their sisters or their cousins or their aunts.

In fact, it appears that the practical limitation on contributions from wealthy individuals is contained not in the Corrupt Practices Acts, but in the Internal Revenue Code. Political contributions are treated as gifts subject to tax under federal legislation, and the taxpayer has an annual exemption of $3,000 for each individual or collective recipient.

The limitation in terms of the source of the gift is the most discussed: contributions or expenditures by corporations and by trade unions are forbidden. Unions have, in fact, given a great deal of support to certain candidates, but only through their own organisations; these activities have been challenged, but so far not found illegal. Corporations have tended to skirt the problem by encouraging individual contributions from highly paid officers, by quietly lending the services of experts in public relations and similar fields and by occasional "institutional" advertising with a strong but not an explicit partisan bias. While the Gore committee has exposed a number of these abuses, largely in support of Republican candidates, the net effect of the hearings is thought to have been more detrimental to the Democrats.

The publicity turned away some large contributors from both parties. But the Republicans had more money in hand before the hearings opened and thus had less to lose. The Democrats had to launch a widely-publicised



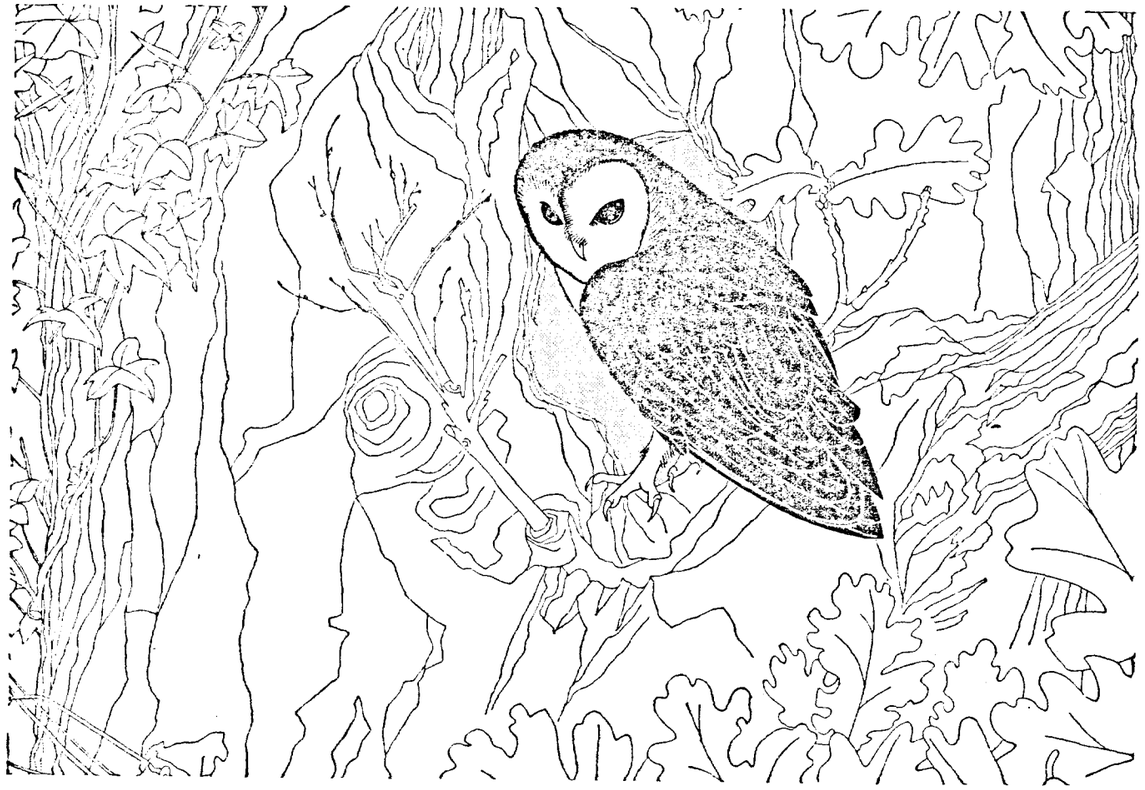
Remington Rand
office efficiency gives you
the upper hand on rising costs

There is one way to force down the graph of rising costs. It is the sound way of office efficiency and planning.

The business executive who is wise will give as much attention to streamlining his office planning as he does to factory equipment. In fact, the office is of equal importance because it is the finger on the pulse of finance, production, and selling; the *organised* office will save you money.

REMINGTON RAND

REMINGTON RAND LIMITED · 1-19 NEW OXFORD STREET · LONDON WC1



'I hear,' said Owl to Town Mouse, 'that you are being obstinate about the British farmer. Perhaps you would like to come out into the open so that I may present my case. I have it at my talon tips.'

BUT TOWN MOUSE SAID

I'll stand fast

'Because,' said he, 'I fear your case will be quite annihilating!'

OWL (*domineering*) 'Hold your ground then, but listen! The British farmer, as you have been told repeatedly, does a very good job for a modest reward. He is hard working, highly skilled and most productive—more than half our food is now home-grown. Is this clear?' The answer was a gentle snore. Town Mouse, overcome by logic had found the only answer. This provoked a hoot of wrath.

OWL (*in a feathered frenzy*) 'WAKE UP AND LISTEN.' Town Mouse did so. 'I will go on. The British farmer has doubled production since 1939, although the average size of a British farm is only 80 acres. And from this small acreage he usually earns only £10-£12 a week—if he works at least a twelve-hour day seven days a week. Now—have you got that?'

* * *

But Town Mouse had slipped away. In the face of both fact and threat he found his resistance going. If he had not left Owl to hoot on alone it is almost certain he would have been forced to admit that the British farmer, in return for only a fair living, does us really proud.

IT'S FISONS FOR THE FARMER

"Dollars for Democrats" drive, seeking large numbers of contributions in amounts as small as one dollar, something unusual in a party system in which "membership" usually means no more than fairly consistent support in the polling booth. Whatever the revelations of the Gore committee, it seems clear that the machinery to control the size and source of election expenditures is almost worn out, yet no one has shown any serious disposition to repair or replace it.

Ships from the Reserve

EVEN before the blocking of the Suez Canal intensified the world shortage of shipping, the American government had taken several steps to ease the situation. The ample reserves of dry cargo vessels in the "mothball" fleet include some 2,000 old freighters of the Liberty and Victory types; these are at present laid up in harbours and estuaries round the coast and are used chiefly as temporary storage space for the government's stocks of grain. At the beginning of October the recently formed American Coal Shipping Company was authorised by the Federal Maritime Board to charter 30 of these vessels to carry coal to Europe. As more American coal is now needed in Europe to offset the imminent reduction in oil supplies, additional freighters may perhaps be released from the reserve fleet for this specific purpose. Last week permission was given for another 30 freighters to be "broken out" of their mothballs to carry agricultural commodities, mainly to Asian countries, under the scheme for disposing of the government's surpluses abroad. The board found, in each case, that insufficient privately-owned American freighters were available for chartering at reasonable rates, and that therefore the release of some of the government's tonnage would not weaken the market unduly.

But the American government has much scantier reserves of oil tankers. There are 23 in the reserve fleet, but only 18 are worth reconditioning and work has started on only a dozen of these. Six T-2 tankers which the government took over from the Niarchos interests will be put up for sale on November 16th. The remainder will be either chartered to private operators or transferred to the Military Sea Transportation Service which should then be able to release some of the privately-owned tankers it has been using. The MSTS has already pulled out of reserve for its own use eight tankers which it laid up some time ago, and the US Navy has started reconditioning eight of the score or so it has in its own reserves. The total number of extra tankers made available for commercial use, however, is unlikely to be more than twenty, and many of these are in poor condition and will take a long time to put into service.

To meet future demands there are about 25 tankers under construction and 11 now being converted in American shipyards. The Administration has also been discussing with the oil industry its plans for stimulating the building of another 50 new "supertankers" of between 30,000 and 60,000 dwt capacity to assure the "efficient and adequate distribution of petroleum supplies in the free world." The closing of the Suez Canal gives this project added urgency, but there are many problems to be overcome before the first keel is laid.

Oil on the Ballot

FROM A CORRESPONDENT IN CALIFORNIA

IN California, the most costly political campaign this year has been concerned not with the next President or even with the next Congress but with a proposed amendment to the state's constitution. Known as "Proposition 4" from its place among nineteen proposals on the ballot, this amendment dealt with the regulation of oil production in California. The process by which such proposals are put directly to the public is the "initiative petition," bearing a certain number of signatures required by statute. Although intended as a check on the legislative influence of special interests, the initiative is frequently employed by those interests; although it often fails, the device has succeeded often enough to swell the Californian constitution to ten times the length of the United States Constitution, by the inclusion of more than 300 amendments, some dealing with such parochial matters as the breeding of crustacea or the duration of wrestling matches.

The formal purpose of Proposition 4 was to "prevent waste" in the production of oil by facilitating "unitisation"—the operation of each oil field as a unit to permit the wider use of secondary recovery methods. Under its terms, a new public commission would be created to regulate oil production in any Californian oil field in which the owners of 75 per cent of the field consent to its administration as a unit. Secondary recovery methods involve the re-establishment of underground pressure in an oil field by injecting water or gas and by controlling the operation of all wells on the field in order to maintain this pressure.. In this way substantially more oil can be recovered than by unco-ordinated pumping.

The major oil companies have spent considerable sums on the promotion of secondary recovery methods in other parts of the United States, but these have seldom been employed in California, where the ownership of a field is usually split up among many leasing and operating interests which cannot all be persuaded to co-operate in its operation as a unit. Several laws to facilitate unitisation have been rejected by the state legislature and in sponsoring Proposition 4 the major oil companies have sought to bypass the influence which the opponents of unitisation have on the legislature. But in drafting a law exactly to their own specifications they have provoked the opposition not only of their old enemies, but also of many responsible members of the oil industry and of the public.

*

Suspicions have been aroused by the huge sums which have been spent to gain the public's favour, and the attempt to popularise and oversimplify the measure has created almost total confusion. In a state where nearly every voter buys petrol almost every day, signboards saying "Keep Gas Prices Down—Vote YES on 4" are answered by almost identical neighbours saying "Don't Pay More for Gas—Vote NO on 4." The proponents of Proposition 4 have put several million dollars at the disposal of Whitaker and Baxter, the celebrated husband-and-wife public relations firm in San Francisco, who have created a "Citizens Conservation Committee" to argue that the proposition, by increasing California oil production, would lessen dependence on imports of foreign oil. The opposition, in answer,

has conjured up a "California Committee Opposed to Oil Monopoly," which maintains that Proposition 4 would restrict California's oil production and lead to a flood of imported oil, with disastrous effects on the state's tax revenues and employment.

The major oil companies, who want to unitise, already own at least a 75 per cent interest in most Californian fields. But they cannot unitise completely unless the owners of the remaining 25 per cent, or often less, of the field agree; Proposition 4 would compel these minority interests to conform to the wishes of the majority. The successful operation of secondary recovery methods, so that ultimately the maximum amount of oil may be drawn from the field, may mean that current production has to be restricted. The major oil companies, who have large capital resources, could offset any decline in Californian output by importing supplies from their own oil fields overseas. They can therefore afford to draw from Californian fields at a much slower rate than the smaller domestic producers whose profits depend entirely on the current rate of output from their Californian wells. This conflict between the long range objectives of the major producers and the short range objectives of their smaller competitors may be most acute in the development of the rich underwater reserves of oil off the coast; this has not yet begun on a large scale.

The most serious criticism of Proposition 4, and the one most wildly exaggerated by the opposition, was its failure to define with precision the "waste" which it was intended to prohibit. The opposition argued that it would be interpreted in the same way as it is in Texas, where "waste" is defined as any excess of production over market demand after allowing for imports. California cannot produce enough oil to meet the needs of the west coast, and already has to import some 200,000 barrels of oil a day. The opponents of the proposition contended that it would enable the major companies to accelerate these imports and that the output of Californian oil would be restricted below the point fixed by the purely technical objective of achieving the greatest ultimate recovery.

Rational discussion of oil imports and even of so elementary a fact as the relative cost of domestic and imported oil, has been almost totally smothered, however, by the fevered visions of millions of barrels of Californian oil irrecoverably lost through the defeat of Proposition 4, and nightmares of output being ruthlessly suppressed by monopolistic importers if it succeeded. Political leaders, dependent on the oil industry's campaign contributions, have for the most part been neutral, and the newspapers of the state have been split. Nowhere in the barrages of propaganda has there been any clear indication where the public interest lies.

Upset in Idaho

Boise, Idaho.

THE main reason why Mr Frank Church has won a Senate seat for the Democrats in Idaho this year is Senator Herman Welker, his Republican opponent. By almost any standard Mr Welker has been one of the Senate's most dispensable adornments. His record in Congress is reactionary and McCarthyite to the last degree, his temper is violent, and his harangues on communism morbidly unbalanced. On top of this he has skimped his duties to his constituents and ignored those to his local party organisation in order to concentrate on the hunting of domestic communists, a task which has no special interest for the people of Idaho. He is detested by the other Republican Senator from the state, despised by the Republican Governor, and was only renominated as Republican candidate because he had so many opponents, each of whom felt he was easy to beat.

Yet Democrats in Idaho also had their embarrassments. Ever since 1940 a normally unemployed carpenter, Mr Glen Taylor, had made a career of running for the Senate. A captivating personality with a fondness for the guitar, Mr Taylor built up over this period a hard core of about 20,000 supporters—a sizeable group in a state of only 600,000 people—who followed him through thick and thin. He has only won once, in 1944, and his subsequent adventure as vice-presidential candidate for the fellow-travelling Progressive party made it certain that he would never win again. But being a poor loser, he has disrupted his party, alienating its more conservative elements, in repeated efforts to stage a comeback. These culminated this year, after he lost the Democratic nomination to Mr Church, in an attempt to get voters to write in his (Mr Taylor's) name on the ballot paper and thus wreck Mr Church's chances.

Mr Church's delicate task was to rally behind him a coalition of Republicans disgusted with Mr Welker and of Democrats disgusted with Mr Taylor. In Mr Church's favour were his detachment from previous factional fights, the pleasure of many Democrats at having for the first time in years a candidate of whom they need not be ashamed, and Mr Welker's inactivity while his young opponent was making himself known by a hand-shaking expedition all over this huge, sparsely populated state.

SHORTER NOTES

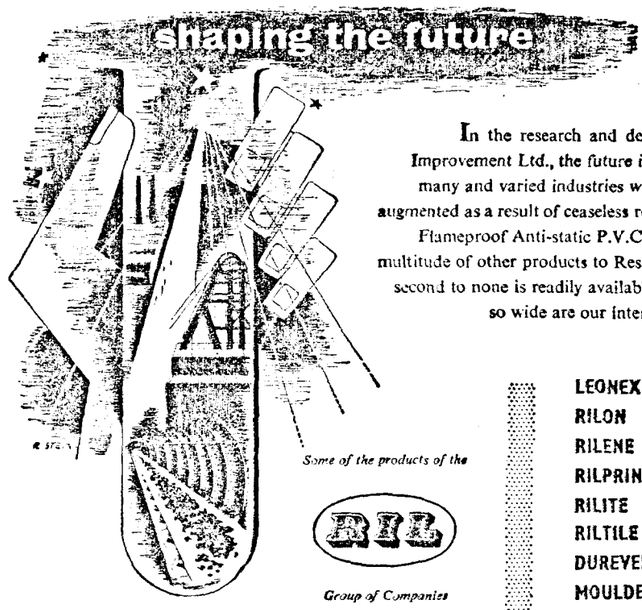
The President's special committee on foreign aid, known as the President's Citizen Advisory Committee on the Mutual Security Programme, has at last got down to work. It is to make a preliminary report next month and a final report by March 1st. Headed by Mr Benjamin Fairless, of the United States Steel Corporation, its seven members also include Mr John L. Lewis of the mineworkers' union, General Walter Bedell Smith, and Mr Whitelaw Reid.

★

A special survey conducted for the government's Fish and Wildlife Service shows that last year some 25,000,000 Americans travelled about 10 billion miles and spent nearly $3 billion in order order to fish and hunt (shoot or stalk in English).

★

At the beginning of the century there were 94 domestic servants to each 1,000 Americans. Now the figure is 34.



In the research and development laboratories and factories of Rubber Improvement Ltd., the future is being shaped, not only for ourselves, but for the many and varied industries which use our products. These products, constantly augmented as a result of ceaseless research, cover a wide field ranging from Multi-ply Flameproof Anti-static P.V.C. Conveyor Belting through Vinyl Flooring and a multitude of other products to Resin Rubber Shoe Components. A technical service second to none is readily available to help you with your problem—it is possible, so wide are our interests, that it is already under active consideration in the R.I.L. Laboratories and Research Centre.

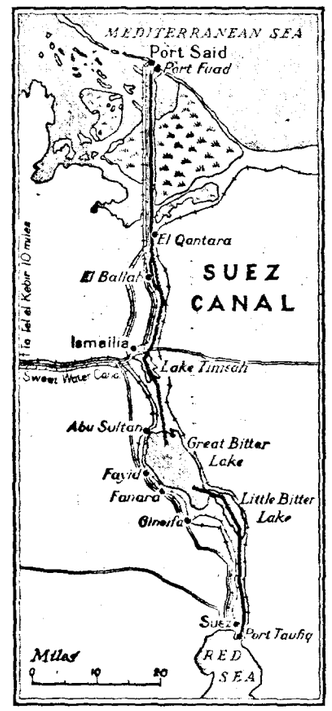
The World Overseas

Armed Conflict in Egypt

FROM OUR SPECIAL CORRESPONDENT

Port Said, Wednesday Evening

THIS has certainly turned out to be the most limited of limited wars, but it is uncertain that it is quite over. It seems to be a case of the fire brigade putting out the fire and receiving a sousing in return. It was certainly an error to assume that Egypt's military strength was entirely destroyed after one week of bombing and a two-day invasion. There can be no doubt that the allied forces are fully capable of driving on to Suez; their spearhead of tanks is poised at El Qantara. But military men have frequently told your correspondent, writing this in a slightly battered hotel at Port Said, that the position could not be stabilised unless Egypt was entirely occupied. From this dilemma, the same one which originally prompted the withdrawal from Suez in 1954, the cease-fire and the prospect of a UN police force may now deliver the allies. There are many indications that the allied command, under Sir Charles Keightley, has all along been kept on a strong political rein which is irksome at times; but it could at most have done no more than capture the canal, leaving the next, more difficult, stage to the governments. This point is emphasised by the background here of shots indicating that snipers are not observing the cease-fire but are falling back on Egypt's traditional strategy of making limited operations impracticable.



However that may be, anyone touring the battlefields and talking to those engaged must confirm that the whole operation has been most thoroughly planned and brilliantly executed by the RAF and by French and British paratroopers and commandos. It was not easy, for example, to drop on Gamil airport in what should have been annihilating crossfire, and rapidly eliminate the opposition. It would have been impossible but for the Egyptians' incompetence in handling modern weapons although they often showed personal bravery. Their shooting was incredibly bad; they found it impossible to bring their tanks effectively into action, and one of the latest Russian self-propelled guns was captured entire by our forces and retrained on the enemy. It has been said that Egyptian resistance rapidly disintegrated when foreign officers withdrew, presumably to avoid capture; some bodies of non-Egyptian officers have been found. But after the first surprise our men were almost grateful to the Egyptians for giving them a hard fight beyond Gamil airport, especially in a cemetery where the third paratroops had clear machine-gun positions among a maze of crumbling Mahommedan mortuary stonework that stretched for a mile or so. Even so our casualties are extraordinarily light; the enemy's are heavy. To some extent the Egyptians recovered after the first knock, and expectations of some tougher fighting were current as the allies drove south. None the less the main lesson was the inability of the Egyptians to face efficient modern forces, however numerically inferior. The cease-fire, of course, gives the Egyptians an opportunity to regroup. There is even talk of reinforcements from Russia, but allied superiority is unquestioned in spite of the enforced loss of impetus.

A strange atmosphere of unreality broods over the area. Considering it is only D-day plus two, one would expect reinforcements to be pouring ashore and an immediate build-up to be in progress, but in fact this is modest. The allies have not yet enough men to do more than hold the area; they certainly could not effectively police it. Most of the allied strength, however, faces the Egyptians and is ready to advance if the United Nations scheme should fail, as some hope it will—notably the tough French paratroopers on Cyprus airfield, who complained to your correspondent of the unfairness of the whole thing because they had not yet dropped or fought.

Port Said is considerably battered from air attacks. Sniping is occasionally unpleasant, enforcing constant patrols of the streets by tanks and the placing of machine gun strongpoints at intersections. All moving vehicles have a tommy-gunner with his eyes on the rooftops, whence it

is believed that Egyptian soldiers, who have abandoned their uniforms but kept their arms, are still trying to even the scores. The pall of smoke from the burning oil storage tanks still pennons across Port Said ; there is much superficial damage to buildings, but it is in fact readily repairable. Oddly, the statue of De Lesseps was untouched. But in some areas whole blocks have been burned out. Fortunately, a large part of the civil population acted on the allied warnings and evacuated itself in dhows during the RAF attacks. Casualties, including children, are certainly high enough to work up atrocity tales, but several Egyptian residents told your correspondent that deaths have been surprisingly few considering the terrifying force and impact of the air-raids, which are said to be "bigger even than in American films." Nevertheless, they hastened to supply neutral correspondents with stories of allied frightfulness.

There is sporadic looting, mainly of flour stores, and some inhabitants are appealing to the troops to intervene. Water is short, but the public services generally are intact. It is even expected that a cinema or two will open this evening. It will not, however, be long before allied or United Nations forces will have to engage on relief operations, especially if there is another flood of evacuees. The port facilities are not badly damaged and are already partly used by the allied armada of warships and supply ships standing impressively offshore. The greater part of the port was spared the naval bombardment which smashed much of the waterfront. But the Canal entrance is blocked by six ships, four close together, including a dredger, a ten thousand ton freighter with its funnels barely protruding, and what appears to be a blockship. It looks a formidable salvage operation requiring time and extensive equipment, but it is expected that the techniques used in the war to clear Cherbourg would apply to Port Said, and probably elsewhere, notwithstanding the fragility of the banks. But if the channel should be blocked as extensively elsewhere, it would be unwise to assume that clearance will be rapid, however great the effort.

The immediate problem is how soon the United Nations can take control, because the cease-fire could quickly deteriorate and certainly could not be maintained indefinitely. It is not yet clear whether sniping will develop into organised guerilla warfare, but it is potentially dangerous. The army will certainly argue that it must soon decide whether to resume the advance or hand over to a new policeman. It is in everybody's interest, therefore, to get the policeman on the beat as quickly as possible. He will not have an easy task ; the Middle East will cost the United Nations a sizeable little army.

Broken Pipelines

FROM OUR CORRESPONDENT IN BEIRUT

THE damage to the pumping stations on the Kirkuk-Homs pipeline is the first solid blow struck by Arabs in support of Egypt. The news was brought to Beirut by Lebanese pilots returning from a training mission. They reported major fires at T2, T3 and T4—news which has since been confirmed.

Owing to the disruption of communications with the pumping stations it has been impossible to determine the extent of the damage with any accuracy. Broadly speaking, the installations at a pumping station consist of the pipe, the pumps and the power station, and only the first can be quickly repaired. The tenor of eyewitness reports suggests that the destruction is thorough. This leads to two conclusions: first that the attacks on the pumping stations were not the work of a few hotheads, but of people who knew what they were doing ; second, that the work of repair on the pumping and power equipment will take many months, even if the Syrians agree to an early start. Presumably the British Government already had a plan to deal with this situation, since it was a clearly foreseeable result of Anglo-French action in Egypt.

The Syrian reply to the British request for immediate repair to the damage is satisfactory on the surface ; it says it will facilitate all necessary repair work. But the temper of the great oasis-city of Damascus is notoriously explosive and unpredictable, and the Sabry Assaly government has never been conspicuous for firm control of the situation. Nationalist feeling was whipped up to a rare pitch by Cairo radio until this was silenced by British bombs ; the good work is now being carried on by our old enemy, the ex-Grand Mufti, Haj Amin al-Husseini, preaching a holy war from the vast courtyard of the Ummayad Mosque. Unconfirmed reports speak of the growing power of Colonel Sarraj, head of the army security service and an associate of Khalid Biktash, the ablest of the Arab Communists. If this is true, it is unlikely that the British request will meet with prompt action.

Far the greatest single sufferer from this act of destruction is Britain's ally, Iraq. The Baghdad government has been drawing revenue from oil this year at a monthly rate of nearly £7 million sterling, of which about £6 million is derived from Kirkuk oil that flows along the pipeline to the Mediterranean. Unless compensated from another source, Iraq stands to lose at least £50 million—possibly much more —before the pipelines are in working order again.

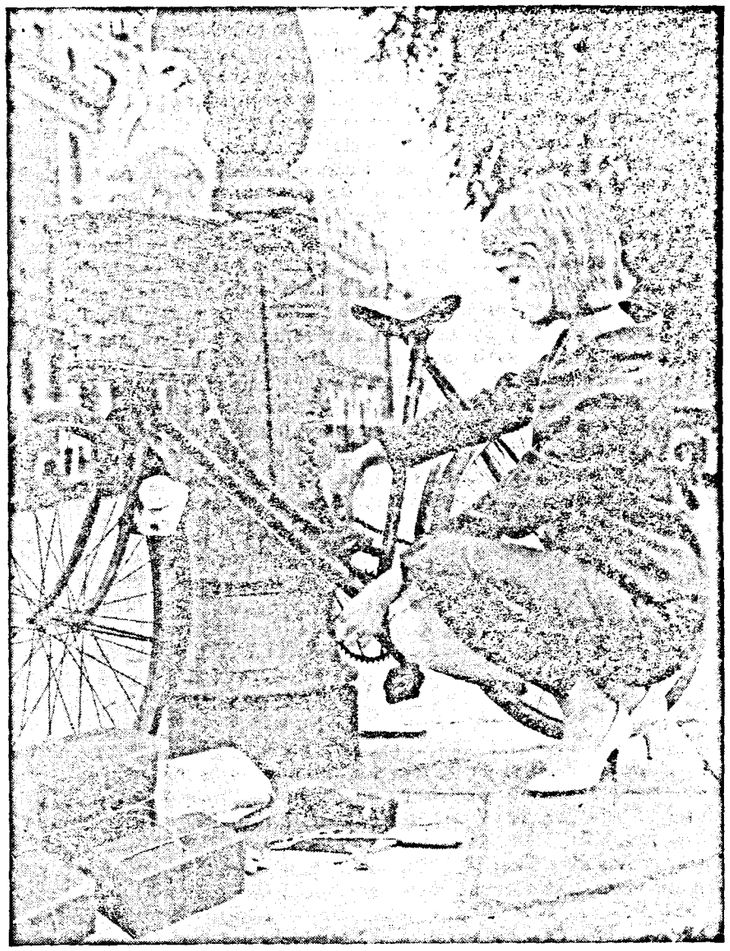
The Scales Tilt Against Nuri

Three-quarters of Iraq's oil revenues are devoted to its development programme—the pride of Iraq's economy. Therein lies the danger. There is little popular enthusiasm for the government of Nuri es Said and the political aim of the development programme was to win solid support for the regime by improving living standards. But the programme is still in an early stage and the great capital investments (in flood control, irrigation, communications and new industries) have not yet yielded recognisable benefits for the masses. The essence of Nuri's problems is time. Can he hold down this dangerous situation until the results of capital development have percolated down to the people? The omens were uncertain a week ago. The new setback may tilt the scales against him.

It is no secret that Nuri is furious at the Syrian action and at any other time would have countered strongly. Now, however, his hands seem tied. Unlike the British Government, he can in no circumstance appear to be supporting Israel. From his point of view the timing and method of the Anglo-French attack on Egypt could hardly have been more embarrassing. The next greatest sufferer is Syria itself. This year's revenue from the transit dues and loading charges would probably have totalled about £6.5 million sterling. The loss of revenue from this source will knock a sizeable hole in the Syrian budget—not that the Syrians in their present mood seem to care. It is more than probable that President Shukru Kuwatly discussed this with the Russians during his visit to Moscow at the height of the crisis.

How reliable is YOUR transport?

BRITISH ROAD SERVICES take your urgent loads to any destination on time —and in good condition



AN OUTSTANDING transport service — fast, flexible and economic. That is what British Road Services offer you. *And they give you thorough reliability.*

This is because B.R.S. are a highly organized and nationwide concern with great resources behind them. They are geared to carry all kinds of traffic, in any quantity, over any distance, with speed and care. A teleprinter network, unique in the road haulage business, ensures smooth, fast, behind-the-scenes communications. Substantial advantages which only a large organization can offer.

Nothing is too awkward

Whether your requirements demand a fleet of vehicles, a single vehicle or the conveyance of one package, B.R.S. have the service for the job. Whether your goods are to be moved from Croydon to London, or from Cardiff to Edinburgh, B.R.S. will transport them with speed and economy.

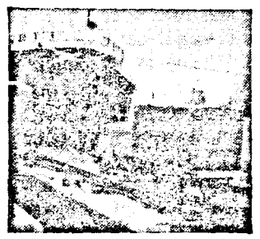
Planning saves time

Good transport needs planning. And British Road Services have experienced men ready and eager to discuss your transport problems with you, and to advise on the most efficient and time-saving methods, including mechanical handling and palletization. In this way B.R.S. can help you to economize. Just telephone your local man. Action will follow immediately.

British Road Services Ltd

Look up your nearest depot in your local telephone directory

1 Thoroughly reliable, speedy service. Regularly every night, from hundreds of B.R.S. depots throughout the British Isles, thousands of vehicles set out on journeys to far destinations. Most of these loads will be delivered next morning. Are you making use of these services?



2 The most suitable vehicles. This articulated vehicle operates on runs to Ireland in co-operation with B.R.S. associated ferry services. It reduces the handling of goods and avoids costly packing.

3 Vehicles maintained in peak condition. The B.R.S. nationwide engineering service keeps vehicles in first-class order. Preventive maintenance ensures a fully reliable fleet — always.

Syria's own oil requirements are normally met from Lebanon by the output of the Tripoli and Sidon refineries; the rest is imported. The Sidon refinery is fed by Tapline and is therefore unaffected by the interruption of the flow from Kirkuk (it is significant that the Syrians are patrolling the American-owned Tapline in force to prevent sabotage). Syria's normal quotas from Sidon should cover more than one-third, but less than a half, of its current needs. For the rest, it must now look abroad.

Meanwhile, one of the few certainties in the obscure military situation is that Jordan is the sensitive point. Reports from Amman and Jerusalem speak of a gradual relaxation after the high tension of last weekend. Yet Syrian and Iraqi troops are certainly on Jordanian soil; their numbers, quality and movements are naturally veiled by censorship. The nervousness of a few days ago was due partly to the fear that Israel would react against their entry, partly to suspicious movements in the Jerusalem sector. Recurring rumours that the combined forces of Jordan, Syria and Iraq are preparing to attack Israel in support of Egypt can only evoke the comment that in doing so they would run head on against a stronger army, flushed with victory and with its rear cleared of any threat from Egypt.

Shock and Distress in Ottawa

FROM OUR OTTAWA CORRESPONDENT

COMMONWEALTH ties have been weakened by British action at Suez, said Mr St Laurent in a broadcast last weekend. But their tradition remains strong enough for the Canadian Prime Minister to tell Sir Anthony Eden just what he thinks of his policy in terms which have been called "blistering." Fortunately Commonwealth tradition also holds that such exchanges should take place in private.

In public the Canadian government has taken a position of much greater moderation than it feels. Officially it has not used any word blunter than "regret" about the British action, and that word does not begin to convey the shock and horror and deep distress caused here by the ultimatum to Egypt. All these emotions were doubled by the use of the veto in the Security Council, allayed not at all by the feeble defence (as it seemed here) put up by Sir Pierson Dixon, and redoubled again when British and French forces continued their landings in spite of the overwhelming United Nations vote against their intervention.

There was much heartburning among Canadian ministers before they decided to abstain from the United Nations Assembly votes on the British and French action, though Mr Pearson found most skilful—and, as it fortunately happened, genuine—grounds for doing so. This was the lack of reference in the original American draft to any steps for promoting a settlement in the Middle East and it allowed the Canadian government to take the initiative in launching a proposal for a UN police force.

A distinction must be drawn between the official government attitudes and the general public reaction. Among the ministers and diplomats the indignation probably contained more anger than sorrow at first and now it is chiefly compounded of anger and fear for the consequences. Among the public, the original indignation seemed to contain more sorrow than anger. The preponderant feeling was stunned disbelief that Britain could be doing this. There were even some people who had faith enough to say that if Britain was doing it it could not be as bad as it seemed. One of the best Canadian commentators on international affairs (I. Norman Smith of *Ottawa Journal*) hit the nail on the head when he wrote that this was "disintegration, not of the British Empire, but of the British 'thing,' that mysterious prestige which has arisen vaguely from Britain's being so long associated with so much that the world has been proud to call its best." In such terms Canadian reaction was almost tearful, like finding a beloved uncle arrested for rape. Many Canadians, including probably most of those in official circles, would rather bitterly say that this analogy is almost exact.

Over the years, with some notable exceptions, most Canadians have come to regard London as exercising a more mature and balanced judgment in world affairs than the United States. Many have almost relied on London to exercise prudence and restraint when Washington was behaving in a particularly immature manner. Now that prop has gone. Long and painful efforts to build up better habits of consultation among the western powers are shattered. And always in the back of the public mind lingers the painful thought that this was done by the people whom by and large we had trusted most.

By the middle of the week the public had had time to absorb the arguments put forward in defence of the British case and to understand the view of Middle Eastern affairs lying behind the precipitate British action. With the fighting petering out, many people, who cannot maintain a sense of crisis for long, were feeling calmer about Britain's position. Some were even ready to say "perhaps it may all come right in the end." But there was no parallel relaxation in government quarters. Future vistas offered little or no ray of light. Canada, as always nowadays, is strangely sensitive to Asian opinion and it appeared here that the harm done by British action to the whole western position in Asia was practically immeasurable. For all the criticism of the United States administration's bumbling and shillyshallying over the Middle East, which Canada shares, Ottawa was finding it very difficult to see how any decent confidence could be re-established between Washington and the present British Government. For all the care Canada has taken not to make things even worse by public reproaches, Mr St Laurent's mild statement that "Commonwealth ties have been weakened" remains a serious understatement of the Canadian official view. If the first shock of sharp anger against Eden has been blunted in the last week, it has been replaced by an even deeper gloom.

Now in its second year

The Paper Bulletin

This is a bulletin service for paper users and makers. It deals with the supply, demand and price trends for paper, paper products and raw materials. The seventh quarterly issue is now available.

RONALD MORRISON & CO. LTD., EDINBURGH

France in Two Grooves

FROM OUR PARIS CORRESPONDENT

HOWEVER closely their fortunes have been linked in the Middle East in the past week the French and British have been worlds apart in their reactions to events. The moral indignation of the French has been reserved for Hungary. Over Suez, opinion seems to have been anxious rather than shocked and, apart from the extremes, deputies nursing reservations, such as some thirty "Mendèsistes" and socialists, have abstained, not opposed. It seems typical of the difference in the French and British attitudes that it was generally accepted in Paris on Wednesday that the British Government (as well as the American) had pressed the French into agreeing to a cease-fire twenty-four hours before the Suez Canal area could be fully occupied. Inevitably the cease-fire has been connected with the receipt of Mr Bulganin's brutal note and there is already a tendency in the conservative parliamentary groups to criticise the government for either having failed to carry its action through vigorously enough or not having properly weighed the risks beforehand.

Algeria is an important reason, but by no means the only one, why many liberal Frenchmen have not been so shocked as the opposition in Britain at what *Le Monde* calls the liberties taken by the two governments with international law and puritan morality. Basically the French are reacting to an accumulation of strain—that of the cold war which divided them more deeply than it did the British and that of colonial loss. Since the eviction from Syria in 1943 these strains have led to a mood of national frustration that was already evident in the EDC crisis two years ago. Harried by setbacks the French have become increasingly resentful at being arraigned by countries which they feel have no right to moralise.

Moral Critics Condemned

Nearly all comment in the last week even from much of the non-communist left has condemned France's moral critics, real or presumed; who is the United States to criticise, with Guatemala in its cupboard, or India with Kashmir, or Russia with Hungary, or the Yemen and Saudi Arabia with their slave trade? Nasser seems to the French to be the culmination of this kind of hypocrisy, appealing for liberty for Egypt but trying to spread his own power by interfering in Algeria and breaking his contracts at Suez. In 1956, having finally accepted Tunisian and Moroccan independence with a fairly good grace and comparing themselves with Nasser, the French have stopped believing that they alone are in the wrong over imperialism. Hence, the attacks on the United Nations which is criticised for the ineffectiveness of its resolutions. Hence, also the lack of opposition to the government's action at Suez, despite the doubts of a number of parliamentary leaders about its wisdom.

French public opinion has been far more sensitive to events in Hungary. There is an element of evasion in the fact that since the Israeli attack on Sinai, the National Assembly has debated Hungary more thoroughly than it has the Middle East situation. But the evasion arises from a real outburst of anger and sense of outrage. The split between the Communists and the rest of the country is greater now than at almost any time during the cold war. Even the "neutralist" intellectuals are violently against the Communist party on this issue. The rioting in the Communist party headquarters in Paris, the demonstration strikes called by the non-Communist trade unions, the rousingly undignified sessions in the Assembly—all testify to the passions that once again divide the Communists from the rest of the country. The government has offered asylum to all Hungarian refugees who ask for it.

The Hungarian repression strengthens M. Mollet's hand. For the moment, the atmosphere is almost that of a national coalition government. On the other hand, in all the parties that support him the dominant attitude on Suez has in the last few days been "we shall judge by results." After the cease-fire those results look to many to be meagre. Maybe Britain and France have improved their chance of obtaining the kind of settlement they want for the canal. But the Russians are more solidly in the Middle East than ever. Will Anglo-French unity with America prove more cohesive in pursuit of a settlement than it has been in the past? Already the French are bewildered by Sir Anthony Eden's attitude to Israel. They are asking whether Nasser's power to inflame the Arabs, and in particular Algeria, has really diminished. The landing at Suez was designed to improve the chances of an Algerian solution. New proposals will be expected of the government. The demand for a policy remains.

Delhi, Suez and Budapest

FROM OUR CORRESPONDENT IN INDIA

WHEN Mr Nehru opened the Unesco conference in Delhi on Monday with a left at the Russians and a right at the British, many people in India were relieved. Their Prime Minister had not taken sides. He had expressed equal detestation of what was happening in Egypt and Hungary. To many in the west, however, this will not seem enough. Mr Nehru said nothing about the Russians quite equal to his initial remarks about the "naked aggression" of Britain and France. But there are many reasons why Indians' reactions were bound to be much stronger in regard to Egypt than to Hungary.

First and foremost, it is much easier for Indians to identify themselves with Egyptians than with Hungarians, just as it is easier for a European to identify himself with the Hungarians than with the Egyptians. The Egyptians are fellow Afro-Asians, fellow opponents of the Baghdad Pact, and fellow neutralists; and Egypt, like India, was until recently under British rule. By no means everybody in India approves of President Nasser, but everybody understands his emotions and can sympathise with his aims, even when, in the case of the nationalisation of the Suez Canal, they could cut across Indian interests. By comparison, Hungary is a remote and unknown place with people of unknown desires, where something not altogether understandable is happening.

Here it is important that the quality of the news about Egypt and about Hungary is quite different. Everybody knows exactly what Britain (France and Israel hardly matter) is doing in Egypt. Sir Anthony Eden himself has made his position perfectly clear. At first nobody quite knew what was happening in Hungary, and for a long time it seemed as if the Russians might give way peacefully. As long as

that was so, nobody in India wanted to rock the boat by criticism. It is a firm Indian belief that the Russians may relax if one shows them the advantages of reasonableness by being nice to them, but that being tough with them will only frighten them back into Stalinism; and India is very eager indeed that they should not go back to Stalinism.

It also makes a difference that both the Americans and the British Opposition have been so forthright in their criticisms of the British Government's action. Few Indians believe that criticising the Russians is any use, that it will deflect them in any way from their chosen course. Most believe that the British are in the end reasonable and decent people, who can be nagged and goaded back to the right path if occasionally they err. It has indeed been argued in India that to leave the Commonwealth on account of Suez would be a mistake because the present British action, it is said, is only an aberration, and one should not permit temporary causes to produce permanent effects.

But perhaps the main reason why Indians condemn British and Russian misbehaviour in quite different tones is that they apply different standards to the two peoples. They do not expect much from the Russians; as people will say to one, the Russians are behaving no worse in Budapest than at home. They expect a great deal more from the British. In short, they apply to Russia Russian standards. It can be trying; it is also of course a very great compliment.

42nd Street Fantasia

FROM OUR UNITED NATIONS CORRESPONDENT

THE United Nations has been facing the greatest crisis in its history, unquestionably greater than the Korean war. The communist invasion of South Korea, though shocking, was not out of keeping with Stalinist policy; but the British and French military operations in Egypt represented an unexpected departure from current standards of international conduct. The virtually unanimous condemnation of the Anglo-French adventure was more than a temporary diplomatic setback for Britain and France; it also threatened the foundations of the Commonwealth. American opinion was particularly shocked by Britain's first veto in the Security Council, which was imposed to block action on the American cease-fire resolution. The sheer physical weariness of UN delegates and officials (your correspondent himself has not been to bed for ten days) has not made things easier. The problem of keeping up with outside events and of communicating with governments at all hours of the day and night has also contributed to the atmosphere of fantasy in 42nd Street.

The flouting of UN resolutions and the breach in the Atlantic Alliance seemed to give the Russians a green light to repress the Hungarian struggle for freedom. It is questionable whether the western powers were wise to raise the matter of Hungary without a request from the Hungarians, but once Mr Nagy had appealed to the UN, the Security Council had every reason to respond. Mr Brilej of Jugoslavia repeatedly pressed the Council to stop complicating the Hungarian situation, where negotiations were taking place, and to turn to Egypt where there was fighting. Mr Sobolev denied reports that "the Soviet Union is introducing new armed formations into Hungarian territory." He insisted that negotiations on the withdrawal of Soviet forces from Hungary were taking place, and the Council was reluctantly persuaded to adjourn. At the very moment Mr Sobolev was speaking, Russian planes and tanks were attacking Budapest. Nevertheless Mr Brilej's attitude was shared by several members of the Bandoeng block, and it was significant but sad that India, Ceylon, Burma, Indonesia, and the Arabs joined Jugoslavia in abstaining on the Assembly resolution on Hungary.

When the Israeli thrust was first brought to its attention, the Council assumed that the parties to the Tripartite Agreement of 1950 would work together for a rapid withdrawal. The United States took the initiative in calling for an emergency session of the Council; it did not then know of the Anglo-French ultimatum. The deplorable discourtesy to an ally caused as much anger in American official circles as the Anglo-French intervention in Egypt. Mr Lodge was white with anger as he pressed the cease-fire resolution to a vote. After Sir Pierson Dixon had said that Britain would veto it, the only laughter in a fortnight of mounting tension was heard when Mr Sobolev blandly said that "the Security Council cannot simply accept the position in which it has been placed by two permanent members through their exercise of the veto."

The motives of Britain's and France's enterprise were so obscure and confused that it was difficult for their friends to devise a means to end the fighting without too much loss of face for London and Paris. The first emergency session of the Assembly in the history of the United Nations was quickly called under the 1950 "uniting for peace" resolution, and the Assembly immediately endorsed the American cease-fire resolution by the largest vote ever recorded. In the small hours of Sunday morning Mr Lester Pearson introduced Canada's proposal for an international force to take over policing functions. The Russians took full advantage of the West's disunity by proposing joint Soviet-American intervention to save Egypt.

Plight of Gaza Refugees

In the diplomatic posturing of the past fortnight, a human tragedy has been in danger of being forgotten. United Nations officials, on instructions from New York, withdrew from Gaza. An American ship later returned at the invitation of the Israelis with supplies of food and medicines which should be enough for a few weeks. But the damage to morale was tragic; an uprooted people demands more than material relief. To the Palestine refugees are now added both military and civilian casualties and refugees from the Suez fighting. Britain and France have a particular obligation to see that these unhappy victims receive prompt help.

It is too soon to say whether the UN can recover from the blows of the past fortnight; but Mr Hammarskjöld and his colleagues are bending their efforts to turn defeat into victory. Mr Hammarskjöld has summed up his conclusions as follows:

> I do not believe that it is by invoking the letter while forgetting the spirit of the law that you build a future of peace. I do not believe that acts of violence, whatever the reason, lead to co-operation. I do not believe that victories bought at the price of violations of treaty obligations create confidence among neighbours. But I do believe that respect for decisions of the United Nations earns those concerned the support from the world community which every nation needs.

Titanium

is to the metals of today

At rare intervals, new developments touch off sweeping changes in traditional methods. Today, titanium—at last harnessed to the needs of industry—heralds new conceptions in engineering design.

Already, aircraft designers are finding in it the answer to some of their most exacting problems. It may provide the answer to yours.

I.C.I. are now producing titanium as a raw metal, and are also making sheet, strip, rod, tube, wire, plate and forging stock from titanium and its alloys. For full technical information about this remarkable new metal, write for the booklet "Wrought Titanium."

THE BUSINESS WORLD

Oil Is Critical

THE cut of 10 per cent that the Minister of Fuel and Power has called upon the oil companies to make in the supplies of their petroleum products to almost all customers is probably the most that could be achieved on a voluntary basis without dislocation of transport and industrial activity, plus a grey market. That consideration, rather than any confident arithmetic about the oil that Britain is likely to be able to secure in the next few months, settled the size of this first cut. It does not by any means imply that the Government expects to be able to get 90 per cent of the country's ordinary rate of imports of oil after the last tankers to clear the Suez Canal and the Mediterranean terminals of the Iraq pipeline, most of which will be here within the next few days, have delivered their cargoes. But Whitehall believes that full-scale petrol rationing—which may still become necessary and for which recruitment of staff has begun—could not be mounted, with all the apparatus for deciding applications for supplementary fuel, for six weeks or so.

Oil stocks in Britain are somewhat higher than normal, but probably not much more than six to eight weeks of normal consumption. How long the country can afford to consume petroleum products at 90 per cent of the normal rate without running down those stocks to a level where more drastic cuts have to be attempted depends on the oil it can get from the rest of the world and from Middle East oilfields deprived temporarily of their normal routes via the canal and the pipelines from Iraq to the Mediterranean.

Only thorough examination by experts can determine how long it will take to clear the dozen or so block ships and the bridge now sunk across the canal. The Government has warned shipping companies that they should be prepared for an interruption in canal transit of three months at least; unofficial estimates have ranged from six weeks to six months for the largest technical operation of clearing a sea channel that has ever had to be attempted. Of the three pumping stations that have been sabotaged on the Iraq Petroleum Company's line from Kirkuk to Banias and Tripoli, one at least appears to have been very heavily damaged, and supplies through this pipeline may have to be written off for several months. No physical damage seems to have been done to Aramco's Tapline from Saudi Arabia to the Mediterranean, but whether fuel supplies through this line will be allowed to be loaded to tankers for Western Europe at Sidon must remain in doubt; Saudi Arabia has banned exports into British or French tankers and has stopped supplying Bahrain refinery with crude oil, though it may not worry about where an American or other foreign tanker takes the oil it may load from its terminals. The West, for some uncertain but it is to be hoped short period, must be prepared to manage for oil without the canal and with at the best only 40 per cent of normal supplies from the pipelines.

★

As the map and tables on page 525 show, this means that nearly 90 per cent of Western Europe's oil will have to be shipped round the Cape, replaced from elsewhere, or done without, for several weeks at least. So far as Britain is concerned, the proportion cut off would represent nearly 70 per cent of our oil imports (some 40 million tons a year, of which about seven million tons is normally re-exported as refined products); for France, the proportion cut off would be over 90 per cent of its gross imports.

How much Middle East oil can be moved to the West during the next few weeks, from the Eastern Mediterranean and round the Cape? The last tankers from Suez and the Iraq pipeline terminals in Syria and the Lebanon will have docked by the end of next week. Tankers cleared from Sidon, presuming that the Syrians allow Aramco operations to continue normally, should

continue to move oil to the West: ordinarily these work to Mediterranean terminals for continental countries, including France, and to the United States. For Britain, there may ensue a hiatus in arrivals from the Middle East of two to three weeks, until, say, the first week in December, before tankers diverted round the Cape after the middle of last week can be expected to arrive in Western Europe. Over the next four to five weeks, therefore, Western Europe might be fortunate to get two weeks' normal supplies of oil.

There are few spare tankers on the market or readily available to be diverted from other trades. Using the whole fleet normally employed from the Middle East, the amount that it has generally been estimated could be brought round Africa might be of the order of four million tons a month—as compared with normal imports from the Middle East to Western Europe of about 8½ million tons a month, imports from elsewhere of about two million tons a month, and a current consumption, including bunkers, of about ten million tons a month. With the 1¼ million tons a month that could be moved from Sidon if the Aramco pipeline is functioning normally, this reduced rate of flow would offer something over 60 per cent of Western Europe's normal imports from the Middle East—provided all of it can be diverted to Europe.

★

On the crudest figuring, which is all that can be done at this time, the continuance of nearly normal consumption in Britain and Europe might halve the oil stocks they hold in the next six weeks, if they were forced to depend entirely upon the oil they are now likely to be able to get from the Middle East during that period. Nor would the steadier, but curtailed flow of oil they can hope for after early December, when tankers begin arriving round the Cape do more than slow the drain on European stocks. Even if consumption is cut more sharply than is at present proposed, it will be necessary to supplement these sharply reduced supplies with a huge tonnage of oil from elsewhere before European stocks run down to danger levels. Heavy buying of oil in the United States and Venezuela has already begun and tankers are being sent there even in anticipation of firmer purchases. It seems fairly clear that the refineries in Western Europe will have to reduce their throughput significantly within the next couple of weeks; this in itself is a very costly operation. Other European countries, as well as Britain, have introduced measures to restrict consumption.

There are no physical or commercial reasons why a very large proportion of the oil that Western Europe temporarily cannot bring from Middle East sources should not be produced at fairly short notice in the Western Hemisphere. But there will be genuine difficulties in transporting it to Europe; and the operation seems certain to cost Britain and France, at any rate, far more dollars than was hoped when this was discussed as a combined exercise with the United States Government in July and August, following Nasser's nationalisation of the Suez Canal. Commercially, the American companies are probably only too ready to help (though Europe may have to expect strictly commercial bargaining, such as the independent Texas producers' reluctance to open up their shut-in capacity until prices rise or they are guaranteed a market for long enough to make reopening profitable). There seems little doubt that the United States and Venezuela could increase their production, over the next few months, by, say, four million tons a month, or roughly as much oil as Europe may temporarily be missing from Middle East supplies. But this would not save Europe some weeks at least during which far less oil than usual will be arriving. Moreover, if the American companies that normally import from the Middle East switch their supplies to Europe they would need about a million tons a month of this extra output to replace them. And most of the tankers to carry the rest across the Atlantic would have to be found from the Middle East tanker fleet—thus reducing the oil that can notionally be carried round the Cape.

The extra oil, that is to say, could fairly readily be made up so far as production is concerned. The cease-fire in Egypt makes it more likely than it seemed a week ago that the international oil companies will be able to co-operate in a closely integrated tanker exercise to move extra oil to Europe in the most economical way. Although the work of the American Middle East Emergency Committee on Oil Supplies was suspended last week and the lack of the usual waiver on anti-trust regulations appears to have made it impossible for the American-controlled oil companies even in Britain to join in the British and French tanker emergency committee, it seems likely that the original degree of co-ordination between the international oil companies to help Europe will again be possible. The Anglo-French committee—Royal Dutch/Shell, British Petroleum, and the *Compagnie Francaise des Petroles*—owns and has on charter about a quarter of the world's tanker fleet.

★

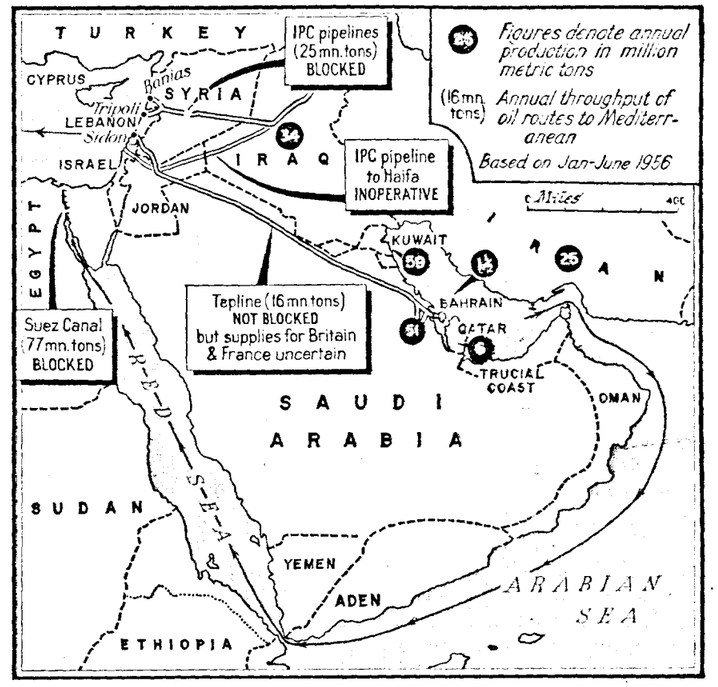
On the other hand, neither Britain nor France can at present expect to receive the assistance in finding hard currency to pay for American and Venezuelan oil that was much talked over—though never formally promised by the United States—when this operation was considered as a result of a possible closing of the canal by Colonel Nasser. Other Western European countries might hope to receive some financial co-operation, though in any event this will probably have to await the new Congress.

It is worth noting that these financial circumstances will greatly affect the emphasis of any integrated tanker operation. If dollars were no object, the greatest economies in the integrated use of tankers would be

The Disruption of Middle East Oil Supplies

DURING the first six months of 1956, Middle East oil was moving through the Suez Canal at an annual rate of 77 million tons; 25 million tons a year was flowing through the IPC pipelines to the Mediterranean, and 16 million tons a year through Tapline—a total of 118 million tons a year. Of this some 8 million tons a year through the canal and 5 million tons a year through Tapline went to the United States, leaving 105 million tons a year for Europe. The Suez Canal and the IPC lines are now blocked, denying passage to 102 million tons a year of oil, of which 94 million tons would have come to Europe. This last figure, which assumes that Tapline remains open, represents over 90 per cent of Europe's retained imports.

Some countries are worse hit than others. Britain brought 58 per cent of its gross oil imports via Suez and 9 per cent via the IPC pipelines (assuming that the destination of the oil shipped through the pipeline was the same this year as last). Over 90 per cent of France's gross imports came via Suez or the IPC pipelines, and Italy is also particularly heavily affected. Certain countries, however, rely on oil to a much greater extent than Britain and France. Oil supplied in 1955 only 14 per cent of the total energy consumed in Britain, and 20 per cent of the total in France. But Sweden relies on oil for 44 per cent, and Denmark for 37 per cent, and this oil is supplied mainly from refineries in Britain, France and the Netherlands.



The whole tanker fleet that formerly took 69 million tons of Middle East oil to Europe via Suez and 25 million tons from IPC's Mediterranean terminals could bring not much more than 50 million tons a year from the Persian Gulf round the Cape of Good Hope. This amount could easily be made available—if necessary from Kuwait alone. But any diversion of tankers to draw supplies from the Caribbean would reduce the quantity that could be shipped from the Persian Gulf.

achieved by carrying as much oil as possible across the Atlantic from the Western Hemisphere and making up the balance of Europe's needs from the Eastern Mediterranean and, round the Cape, from the Persian Gulf. When it is as important to save dollars as tanker tonnage and time, the emphasis must be upon bringing all the oil one can carry from the Middle East and making up the needs from the Western Hemisphere; political reasons, too, may make it wise to keep the offtake from Arab oil producers as high as possible.

The technical question arises in any major movement of extra oil across the Atlantic whether this should be crude or products. Probably the advantage lies in bringing crude. This is cheaper in dollars, and likely to rise less in price than products; Western European refineries will get the refining margin; it will save time in cleaning out tankers between different products; the crude from Venezuela gives a high proportion of fuel oil, which may well be the petroleum product most crucially in demand; and refiners here are naturally anxious to continue re-exporting products refined from this crude to Europe, since in the present state of the European Payments Union the currencies in which Britain is paid for oil are comparatively "hard." The success of the exercise depends upon the degree of integration in purchasing and tanker operation that can be achieved—in the first hurried buying so far this has not been very much—and upon learning as soon as possible whether this is a matter of a few weeks or a few months. The kind of tanker operation required in each case would differ a good deal.

The timetable, indeed, is crucial to all measures of restraint upon oil consumption in Western Europe. In Britain, the cut of 10 per cent in supplies by the oil companies made this week affects all consumers except public transport, agriculture, essential coastal shipping, police, fire and medical services. Garages are being cut by 10 per cent, and an order has been made prohibiting the supply of motor spirit except into the tank of a vehicle; motorists who drive only for pleasure are being asked to cut their weekly mileage by 20 per cent.

The 10 per cent cut in fuel oil falls impartially upon all industry; the gas and electricity services, indeed, are being asked to cut their use of fuel oil by more than 10 per cent, since nearly all of the power stations and gas works concerned can readily switch to coal. The Federation of British Industries has told the Minister that this 10 per cent cut need not have any "untoward effect on production, granted the level of stocks in this country." Right across industry, oil after all accounts for no more than 10 per cent of fuel used, so that this cut would restrict total fuel supplies by only 1 per cent at most. But the effect will be extremely uneven, as the table shows. Oil accounted for about a quarter of the fuel that was used in steel making and finishing last year; at present about 7½ to 8 million ingot tons of steel a year are being made in oil-fired furnaces and some of the steel made in gas fired furnaces goes into oil-fired soaking pits and reheating furnaces. The worst conceivable effect of a 10 per cent cut, therefore, might be the loss of, say, 15 thousand tons of steel a week. In practice, the industry's stocks should assist it to hold production close to its present rate for some time; other liquid fuels, such as creosote pitch and tar, can be used, possibly with some difficulty in steel furnaces and rather more readily in soaking pits and reheating furnaces. There seems no reason why pig iron output need be affected; no oil is used in blast furnaces and comparatively little in ancillary processes of iron making. The glass industry, which uses oil for more than half its output, must be comparatively sharply hit. Other industries—which are customers for steel and glass—will be much less directly affected.

* 89 per cent if railways are excluded. † Gas, diesel and fuel oils only ‡ Total excludes blast furnace coke.

Agriculture, which depends very heavily upon liquid fuels, will not be restricted. Road haulage, which depends almost entirely upon motor spirit and diesel oil, will be cut, but services within it such as food, milk, newspaper and medical supplies distribution are likely to get some priority, not only in bulk supplies, but where their vehicles pick up fuel at garages. British and foreign ships normally take nearly 5 million tons of oil a year for bunkering; the Ministry of Transport is asking shipowners to restrict their offtake from British ports as much as possible and pick up oil wherever possible from sources that are not affected by the cut in supplies from the canal and pipeline. The oil companies are continuing normal deliveries of aviation fuels, vaporising oil, lubricants and paraffin for the moment, though asking users to exercise restraint.

As yet, there would be no purpose in announcing any decision to ration petrol or to introduce any licensing system for fuel oil supplies; the Ministry of Fuel and Power knows no better than anyone else how long restoration of the canal and the pipeline can reasonably be expected to take. But unless the most optimistic guesses so far advanced about clearing the canal do appear practicable, it seems fairly obvious that consumption in Western Europe will have to be cut back much more than 10 per cent in a few weeks, and for a while. And it is very doubtful whether bigger cuts than this could successfully be made under voluntary arrangements.

Business Notes

What Are the Costs?

GIVEN the utter uncertainty of the political and international prospect, it is impossible to make even broad guesses at the size of the additional economic burden that Britain will have to bear. By far the most important factor in the equation is that of duration: for how long will the special military and associated expenditures continue, and for how long will the Suez Canal be blocked and the flow of piped oil remain below normal? These uncertainties about the length of the dislocation are more important than those about the degree of dislocation. The economy must suffer added strains upon the budget, upon the balance of payments and—probably though not immediately—upon the volume of production. But the total strain, substantial though it would be on adverse assumptions, could readily be shouldered for a short period, in the sense that it would not radically alter the broad shape of Britain's economic problem. Major changes in economic policy, as distinct from specific expedients to lessen the immediate dislocations, are not likely to be needed unless the interruption of supplies is prolonged.

At present, the direct pressure upon the budget is probably relatively small. On the eve of the Anglo-French intervention, the cost of Britain's shift and maintenance of additional forces into the Eastern Mediterranean was apparently running at about £1½ million a week, of which nearly one-third was the cost of requisitioning of ships; the total additional expenditure incurred for these purposes in the three months to end-October appears to have been rather under £20 million. The cost since the action began in Egypt has obviously been larger, but the addition has to be related rather to the usage of consumable stores requiring immediate replacement than to the loss of weapons and equipment. The total budgetary burden to date may still, therefore, be comparatively moderate.

★

The wider strains upon the economy have scarcely begun to be felt, except for the psychological pressure upon sterling. But this strain on the gold reserves will be quickly (though not largely in the short run) augmented by the expenditure of dollars in purchasing and moving oil from the western hemisphere, and the balance of payments as a whole will be saddled with an increase in freight costs and, probably, with a worsening of the terms of trade. It is not certain, however, that there will be a worsening of the balance of visible trade. In the short run at least, it is possible that the volume of imports will be more affected by the shipping difficulties and delays than will the volume of exports. But if the shortage of oil and of other imported supplies impinges seriously upon domestic production, which is by far the most disturbing of the economic possibilities, export business would unquestionably suffer. These, however, are the risks of the slightly longer run. If the canal were to be working again within, say, a couple of months, and if total oil supplies were not then reduced by more than could be accommodated by rationing of non-essential users, the impact upon production and upon exports might be very slight. This, however, is a very optimistic assumption: the danger of considerable and continuing dislocation remains.

Shipping Without Suez

NOW that shipping companies have been officially advised to reckon the Suez Canal as closed probably for as long as three months, possibly for a longer period, they are at least able to arrange schedules upon a basis of certainty. When the canal was nationalised a number of vessels were hastily re-routed round the Cape, only to drift back again as the need for precaution seemed to diminish. Last week, too, when the Israelis made their raid and the British and French dispatched their ultimatum, shipping operations were still run on a day-to-day basis; no company could tell for certain how long, or whether, the canal route would be impracticable. But it is now quite obvious that the route that formerly carried just under a quarter of this country's import and export trade must now be counted as out, at least until some time in the early new year.

Most of the major passenger and cargo lines had already sketched plans for that eventuality. The present and rather disorganised pattern of movements, which has already made itself felt in employment at several British ports, must now be fitted in to these new schedules, but it is not yet possible to estimate how long this transitional stage will take. It is thought that bunkering and store facilities at ports on the Cape coast will be able to cope with the much increased volume of traffic they can now expect, but there will probably be some delays at these ports until shipping arrivals acquire a regular rhythm, and there may be some pressure on repair facilities even then. It will also take some time before the need for larger feeder services in the Mediterranean and in the Indian Ocean to link up with the Cape route can be measured in full. There is probably some idle tonnage in these areas at present. But when the new traffic and route pattern has had time to emerge, extra tonnage will almost certainly be required.

Tonnage and Costs

THE major need for additional dry-cargo tonnage will however be to offset the longer voyage times on the Cape route. From London to Hongkong one round trip will now take 65 days instead of 48, to Singapore 58 days instead of 41, to Bombay 54 days instead of 31, and to Colombo 52 days against 34. To Australia and New Zealand the Cape trip takes only a day or two longer than through the canal; Australasian freight conference rates, accordingly, have not so far been altered. But all the main shipping lines operating regularly between this country and East Africa, India, and the Far East have imposed a 15 per cent surcharge on freight rates (with a 25 per cent increase for cargoes destined for Port Sudan), which will operate whether cargoes are carried round the Cape or through the Panama Canal, and most passenger fares to the same destinations have been raised by 20 per cent.

These increases allow for the extra costs incurred in longer transits and they should be sufficient to cover most extras, since the shipping conferences made some fairly detailed calculations when they imposed the same surcharges in September only to cancel them when the need disappeared. But no forward guesses could be made then of how much extra tonnage shipping companies would need if the Suez Canal was closed or of the price they would have to pay on the dry-cargo market to get it. Now, when the canal has been closed, the supply of free tonnage is already very tight and transatlantic grain and coal freights are not far short of the highest level reached during the Korean War. The ending of military operations in the canal area should mean that no more ships will be taken over by the Government, apart from one or two to meet specific requirements. But the fifty or so that are still requisitioned, representing about an eighth of the total British foreign-going tramp tonnage, are likely to remain off the market for several weeks to come. Clearly the operation of switching a substantial part of world trade from the canal to the Cape will have to contend with a marked shortage of shipping space.

Market Cross Currents

HOPE and fear have struggled for mastery in Throgmorton Street as they have across the world. Security prices have been tossed up and down on the international swell, but throughout the week the volume of business has been so slight that the depths of the investment ocean have never been sounded. It was the jobber taking precautions and not the investor taking decisions who ruled the market. The pattern of movements—up before the week-end, then down and up again immediately after the "cease-fire"—mirrored international uncertainties; all the investment uncertainties have been left aside for the moment. The nervousness of the market was revealed again on Thursday when, despite the cease-fire and despite the re-election of President Eisenhower, security prices fell sharply again after Wall Street a few hours before had closed weak.

The biggest swings in prices, as the table shows, were recorded inevitably in oil shares. Yet over the week to Wednesday's close (the day when the market moved up in response to the cease-fire) *The Economist* ordinary share indicator rose from 183.8 to 186.4, within three points of the figure of 189.3 recorded a fortnight ago. One casualty in the market was the Australian 5½ per cent stock (1970-72), of which 66 per cent was left with the underwriters and which closed on the first day of dealing at 1/16 discount on the issue price of 97½. If the sea becomes calmer there will be many new issues waiting to be launched. The ICI issue has been postponed for a few weeks, but on the slipways are a large issue by British Oxygen, a £5 million loan stock issue by Fisons and a local authority issue by Derby. But by then the market will have counted the economic consequences of the British intervention, of the closing of the Suez Canal and of the interruption to oil supplies. New issues will have to be shaped to a new equilibrium, and it would be optimistic at this moment to suppose that it will be a favourable one for new borrowers or present investors.

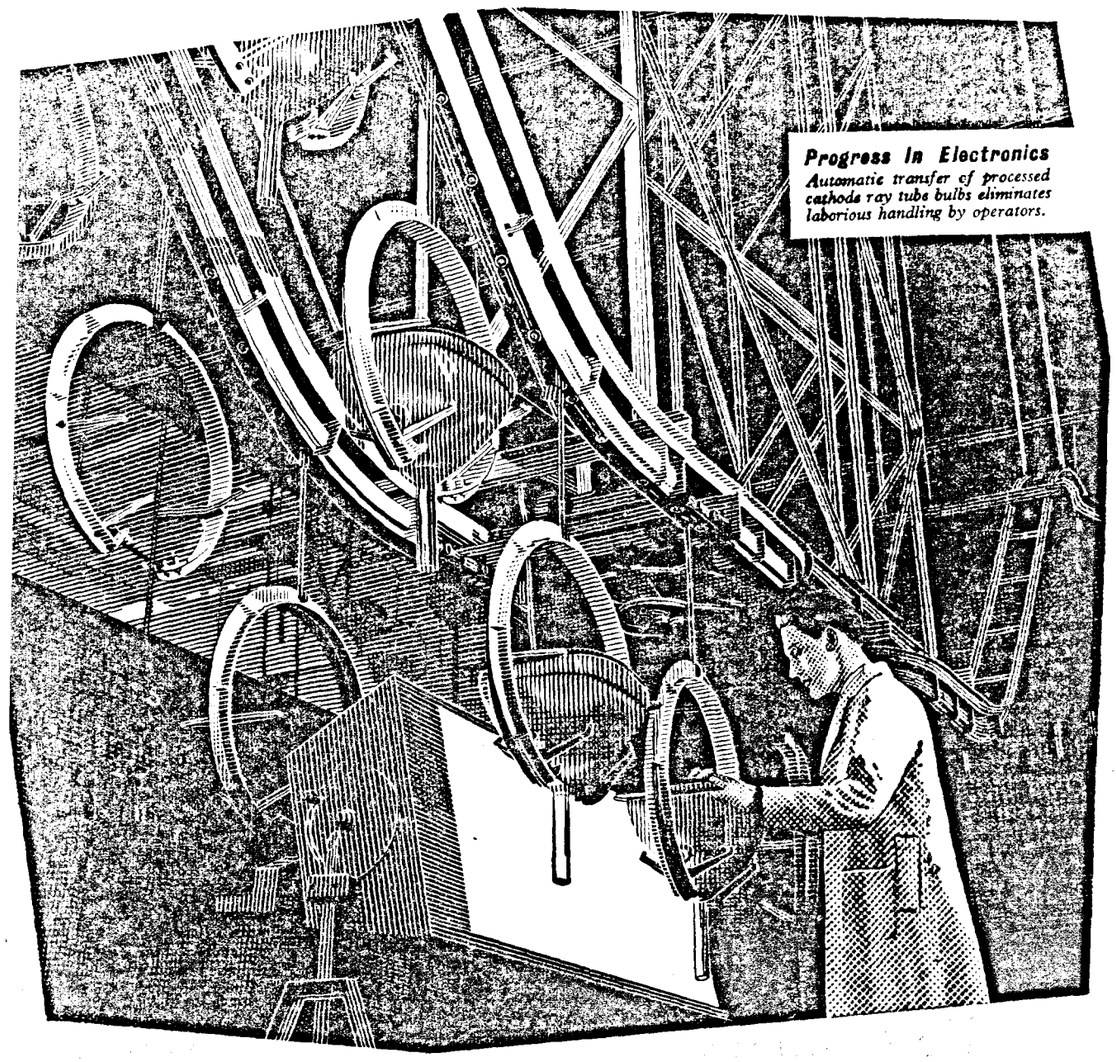
Full Circle in Sterling

STERLING continued under considerable pressure on the first two days of this week and some support from the Exchange Account was needed to maintain the rate in the official market above $2.78¼, which is now the effective floor. In the transferabe market, despite some support, the rate fell sharply to $2.73¼. This marked the lowest rate touched since March, 1954, when the Exchange Account was first given authority to intervene in the transferable



Men and machines

Over the past ten years the machinery on which Mullard electronic valves and tubes are manufactured has been completely revolutionised in design. This has been achieved through intensive research into manufacturing techniques and by a bold productive investment policy.

To-day's machines produce more and better valves and tubes because many processes are automatically controlled, and the unavoidably erratic element in human intervention largely eliminated.

This trend towards increased mechanisation and automatic process control has accompanied the great development of the Electronics Industry. Since 1950, the number of men and women employed in Mullard factories alone has increased by more than 110%.

The Mullard attitude towards production takes heed of the welfare of the employees and the prosperity of the towns in which Mullard factories are situated. Above all, it recognises the responsibility of a leading organisation in a vital industry to produce efficiently in the national interest.

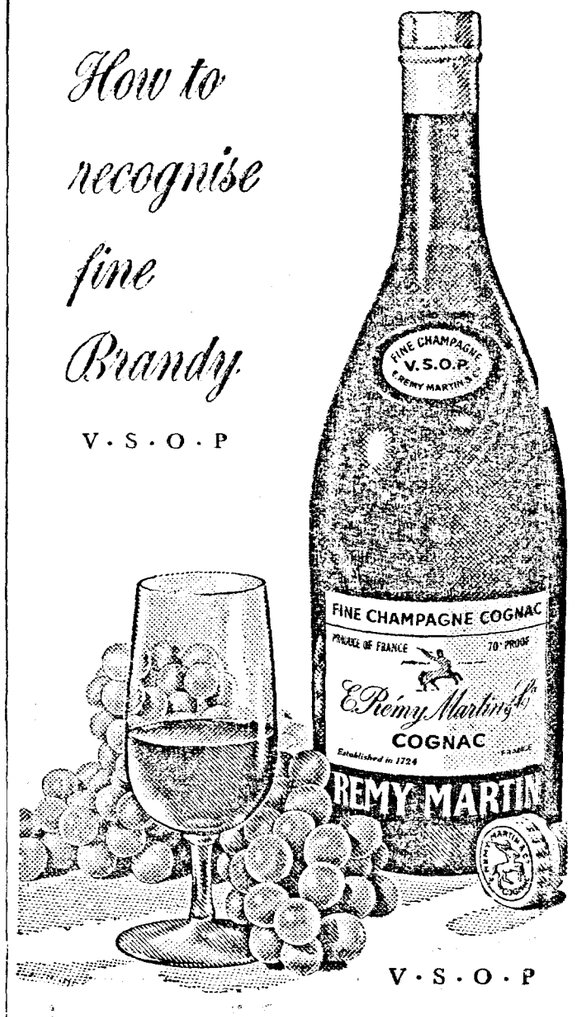
How to recognise fine Brandy

V · S · O · P



V · S · O · P

The finest brandy comes from the Grande and Petite Champagne districts of Cognac. Only Cognac originating from these two areas, at least half of which must be from the Grande Champagne, is entitled by French law to be called Fine Champagne Cognac.

Remy Martin produce Fine Champagne V.S.O.P. Cognac and *nothing less good*. They only offer for sale Brandy which has reached perfection. That is why when you insist on Remy Martin you can be sure of getting a *really fine Cognac*.

REMY MARTIN

market. On Wednesday, the overnight news of the cease-fire brought a dramatic *volte face*. It became clearly apparent that the earlier weakness was the result of some outright speculative bear selling, and that the speculators in question were coming in to cover. The authorities appear to have allowed the covering to have its full effect on the transferable rate, which jumped in Zurich in a matter of minutes from $2.73\frac{1}{4}$ to over $2.75. In the market for official sterling, covering by bear speculators had little effect on the rate; the Exchange Account appears to have taken the opportunity of recouping some of its earlier losses. The conjuncture in the official and transferable markets was also in line with the policy of preventing any substantial discount on transferable sterling; on Wednesday this was up to nearly 2 per cent.

On Thursday, renewed Middle East uncertainties, partly on rumours of Soviet movements, turned the wheel full circle in the exchange market. The weakness was marked in Continental currencies and against the US dollar, though the rate was held at $2.78\frac{5}{16}$.

Gold Hoarders Active

HOSTILITIES in the Middle East and the threat of their extension have had the traditional effect of stimulating gold hoarding; but in present conditions this led to only a small rise in the market premium above the price paid for gold by central banks. The gold price has risen considerably in the Far Eastern and Middle Eastern markets, which have been temporarily cut off from their normal sources of supply. But in the western markets for gold the alarums of the past week have been accompanied by a remarkably moderate rise—to the equivalent of $35.08. This, moreover, was the peak figure reached early this week. The dollar equivalent of the free market price of gold has since fallen back to a mere 1 per cent premium over the parity of $35.

This resilience of the free market is a mark of the ease with which supplies of free gold are now attracted to the market by the appearance of even a modest premium over the dollar parity. This is partly due to the fact that all gold producers now have the right to sell in the open market and naturally do so whenever it pays them to canalise their gold there rather than to central banks. It would need a tremendous expansion in hoarding demand to offset this element of elasticity in the supply of free market gold—and that elasticity becomes almost limitless because the central banks, particularly in Europe, are now regular operators in the free gold market. Whenever they see a premium they sell gold against dollars and, if necessary, they can reconvert their dollars back into gold at the official US Treasury price. Given these arbitrage operations by central banks it becomes wholly abnormal for the free market price to deviate by more than a modest margin from the official parity.

The hoarding demand for gold has had its greatest impact in the price of gold coins on the Continent, where the premium on sovereigns over their gold parity has this week widened to 27 per cent. Even these premiums have been narrowing again during the latter part of the week, and in the Paris market the price of gold in the form of small kilo bars has now dropped back to Frs. 450,000, the level prevailing before the outbreak of fighting between Israel and Egypt.

Reserves on the Eve

THE new strain on sterling comes at a time when the commercial dollar balance is still unfavourable. The movement in the reserves in October was disappointing; they fell by $84 million. The last two days of October, Tuesday and Wednesday of last week, marked the onset of the latest pressures on the pound; on the Tuesday, in particular, the amount of official support given to sterling was considerable. It is not clear how far these operations were reflected in the statement of the reserves on October 31st. There is a delay of at least a day, and sometimes more, before sales of gold or dollars are debited in the books of the Federal Reserve Bank of New York; it may be, therefore, that only part and not the whole of Tuesday's loss figured in the gold statement.

Until the very last days, conditions in October were moving modestly in favour of sterling. The bulk of the month's gold loss must therefore be attributed to the heavy seasonal demands, partly on account of purchases of tobacco and grain from North America. Grain imports seem to have been notably heavier than in 1955, partly because of the much less favourable harvest.

* Including settlement with European Payments Union, relating to balance in previous month. † Special funding payment to EPU creditors. ‡ Subscription to International Finance Corporation. § From sale of Trinidad Oil Company.

The combination of heavy commercial pressures and the Suez uncertainties has made the trend of the reserves in the past three months compare unfavourably even with that at this season last year. In the first seven months of 1955, as the table shows, the reserves fell by $218 million, whereas in the first seven months of this year they rose by $285 million. But in August, September and October of this year the dollar deficit, before taking account of defence aid and known special payments and receipts, was larger this year than last. Without the $177 million received in September from the sale of the Trinidad Oil Company, the fall in the reserves in these three months would have more than offset the rise from January to July. Now, the pressures

seem to be continuing (though the scope for going shorter still on sterling must be nearing its limit); substantial dollar outlays on Western Hemisphere oil seem unavoidable; and at the end of next month, the annual instalments on the North American loans of over $180 million become due. Not until after the turn of the year can seasonal factors be expected to become favourable.

Decline in Commodities

COMMODITY prices, too, have turned with each change in the news. A rally on Tuesday, which carried tin to a new peak of £892 a ton for cash metal, was followed by a sharp decline, and on Thursday prices of rubber and all the metals except zinc closed lower than a week ago. Supplies of tin, which were short before the troubles began, are affected most of all by the blockage of the Suez Canal, and the premium for cash metal has only dropped by £6 to about £40 a ton. The pressure on natural rubber may be eased if the United States government accepts consumers' pleas to change its procedure for rotating the strategic stock. The rate of rotation, now 7,500 tons a month, may be increased and buyers may be allowed more than the present 60 days in which to deliver replacements to the stock. In the tea market this week events in Egypt set off a marked increase in demand for the lower qualities, and the quotation for common tea in London rose by 8d. to 4s. 5½d. a lb. But in most other commodities it is still true that consumers have not bought heavily. The cut in supplies of fuel oil may reinforce their caution. If some European consumers dependent on fuel oil should eventually have to restrict production, their needs of raw materials will also be restricted.

HOW COMMODITIES MOVED

	Oct. 25	Nov. 1	Nov. 8
Tin, cash, £ per ton	810	882½	856
Copper, cash, £ per ton	289	295	236½
Lead, prompt, £ per ton	115	119	118½
Zinc, prompt, £ per ton	96	100	100½
Rubber, spot, d. per lb	27	31½	30
Common tea, d. per lb	41	45½	53½

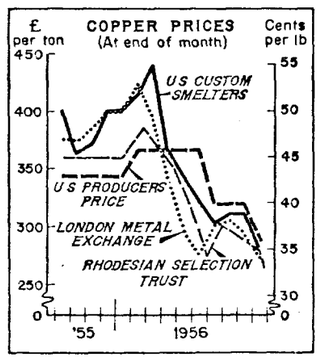
Premium Bonds Sales

THE results of the first week's sales of premium bonds seem to be broadly in line with the expectations of the authorities. Sales totalled £15½ million, compared with official expectations of total sales of £50 million in November as a whole. The experience of the past week suggests, however, that the sales will taper off somwhat during the rest of this month (which is itself especially favourable for purchasers). The daily sales dropped steadily from the initial £5 million or so on Thursday of last week to £1½ million on Wednesday. So far, sales through the banks appear to have been about half as large again as sales through post offices.

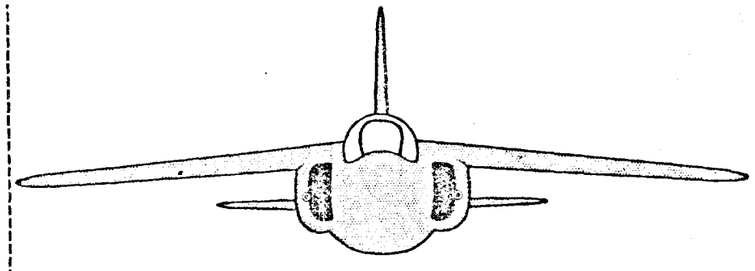
No figures are yet available to indicate how far the purchases of premium bonds have been financed from withdrawals from other forms of national savings. In the week preceding the introduction of the bonds, encashments of defence bonds and savings certificates rose by appreciably more than new sales, and the week's net saving through these channels and the post office and trustee savings banks dropped from £6.1 million to £1.4 million—which still, however, compared well with the corresponding week of 1955, when there was a net excess of encashments and withdrawals of £2.9 million. Savings through all of the four traditional channels of the national savings movement have been stimulated by the more favourable terms introduced since the Budget. The improvement over last year's experience is now impressive. In the thirty weeks since April 1st, total net saving (before crediting accrued interest) reached £33.6 million, whilst in the corresponding weeks of 1955 there was a net dissaving of £25.9 million. The question now is whether this improvement will be maintained together with the flow of funds into premium bonds.

Copper Comes Down

THOUGH it is pre-eminently the "war" commodity, copper has not reacted strongly to the troubles in the Middle East. After a sharp rise to £302 a ton in the middle of last week prices sagged, and on Thursday cash metal closed at £286 10s. a ton, with three months' £1 dearer. One reason for the lack of strength is that the closure of the Suez Canal will have only a marginal effect on shipments of copper. The bulk of Rhodesian production is normally sent round the Cape, and most of the remaining world production originates in the western hemisphere. The main reason, however, is that world production has outstripped consumption. Late last month American producers were finally obliged to cut their prices by 4 cents to 36 cents a lb (£288 a ton), and at least two producers have backed that cut by restricting output. American and Canadian companies have been offering substantial quantities of copper to Europe, and it was these offers that checked the advance in the London market. Dealers here have done a brisk trade, buying at prices ranging from 35 to 36½ cents a lb fob (£280 to £292 a ton), and selling chiefly to Continental, but also to British, consumers.

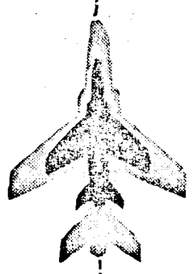


Consumers in this country are believed to be fairly well covered by their forward contracts with Rhodesian and other producers. In addition, supplies amounting to about 7,000 tons a month are being released between November and March from the British government's strategic stock,



Now FINLAND ORDERS THE GNAT

THE GOVERNMENT OF FINLAND, LIKE THAT OF INDIA, HAVE CHOSEN THE GNAT FOR THE RE-EQUIPMENT OF THEIR COUNTRY'S AIR FORCE.



This light jet fighter — half the size, a third of the weight and needing less than half the thrust of the conventional fighter — makes big savings in initial and operating costs yet matches the conventional fighter in the nature and duty of its essential equipment and in flying and fighting performance. In some respects — e.g., in rate of climb, manœuvrability and maintenance — it has conspicuous advantages.

and there is a possibility of a further release after that. At the beginning of next year, too, the new Bancroft mine in Rhodesia is due to come into production, initially at a rate of about 3,600 tons a month. Unless the Americans overdo the restriction of output, or the troubles in the Middle East get much worse, it is difficult to feel very bullish about copper.

A Lowered Standard

NOTHING in the preliminary report of Standard Motor can have surprised investors. But facts, whether anticipated with delight or fear, make their own impact and after the report was issued the company's 5s. ordinary shares fell from 7s. 1½d. to 6s. 9d. The ordinary dividend has been cut—as every rational investor expected—from 12 to 8 per cent. This dividend, absorbing £318,665 net, has been short earned. Some may regard the deficit of earnings to meet it as an unexpected blow; others may see a gleam of hope in the decision, on the grounds that the directors would not have declared this rate of dividend save in the expectation of a recovery in profits.

That argument rests on the assumption that nothing in the future could be possibly worse than what happened to Standard in the year to August 31st, when gross trading profits fell with a thud from £5,924,807 to £3,005,115 and net profits from £1,954,664 to £393,121. It is an argument to which the directors lend indirect support by their emphasis on the temporary nature of some past difficulties. They recall that the accounts covered a period in which the company had to carry through a complete changeover of tractor production to a new model; that is reflected in the drop in sales from 70,909 to 52,869 tractors. The "temporary loss" in output, they add, was "aggravated by a series of labour disputes." Other difficulties mentioned by the directors were the credit squeeze, increased purchase tax, and import restrictions in Australia and New Zealand, the company's largest export markets. The result was a decline in production (with car sales falling from 98,647 to 79,360 units) and an inevitable increase in manufacturing costs, which was accentuated by a rise in the cost of bought-in materials.

More Technologists Needed

PERENNIAL argument whether the supply of qualified scientists and engineers in Britain is keeping abreast of the growing needs—and how this country fares in comparison with other industrial nations—has always been handicapped for want of reliable statistics. The Government's recent proposals for more technical education and, one hopes, the plans now being prepared by the universities for their next quinquennium, 1957-62, are based upon the simple, and obviously safe, assumption that there are too few technologists and that the shortage will soon grow much worse.

But precisely what that assumption implies becomes clear for the first time from a survey of technological manpower recently published by the Ministry of Labour. How many qualified scientists and engineers are at present employed? And how many more would be needed by 1959? The answer to the first was 119,700 and to the second 150,000, which meant a "hoped-for" rather than a "prospective" increase of more than a quarter in three years.

In an accompanying report the Advisory Committee on Scientific Policy made its own estimates of the country's needs in 1966 and 1970—on the major assumption that industrial output as a whole will grow by four per cent a year—slightly less than the rate between 1948 and 1955. The estimate eventually reached by the committee—a combined total of 222,000 qualified scientists and engineers by 1966, which means attaining an annual output of 17,000 by then and 20,000 by 1970, or double the present figure—is, it stated, "a minimum goal which needs to be achieved if the economy is to grow at an acceptable rate."

The production of the new tractor and the settlement of the labour disputes give colour to the argument that Standard need not expect another year like 1955-56. But the road to recovery may still be slow and painful. Vehicle production is sharply down and manufacturing costs are sharply up; sales of new cars in recent months can hardly have earned a net profit for the industry as a whole and where sales have fallen by more than the average there may be sizeable net losses. And the manufacturers, who until this year were able to absorb a steep increase in costs without equivalent increases in selling prices, cannot hope (though they may desire to do so) to raise prices to re-establish their former margins of profit.

Rejections for Camp Bird

"YOUR directors emphatically deny that Camp Bird is a suitable undertaking to be trusted with the affairs of your company for this or any other purpose. They cannot see anything in its past history or in the record of its directorate or management to justify its extravagant claims." Thus speak the directors of Hongkong Tin in answer to Camp Bird's bid. Statements, couched in words equally strong, have come from the boards of some of the other eighteen tin companies who are opposing Camp Bird and its chairman, Mr Dalgleish.

Ex parte statements are the battle cries of all take-over struggles, but never has such a volume of passionate rejection been aroused as in the Camp Bird case, coupled with candid warnings about detrimental effects which might come from the acceptance of the offers. In the meantime Camp Bird has sent formal offers directly to shareholders, taking one batch of companies after another. It has said that its offers for shares in four of the companies (whose shareholders received another circular this week from Mr Dalgleish urging them to accept the bid) are unconditional and that acceptance is no longer dependent upon the receipt of 75 per cent of the shareholdings. Such a statement does not necessarily mean Camp Bird has gained control; it may be no more than a further ploy in the bidding.

★

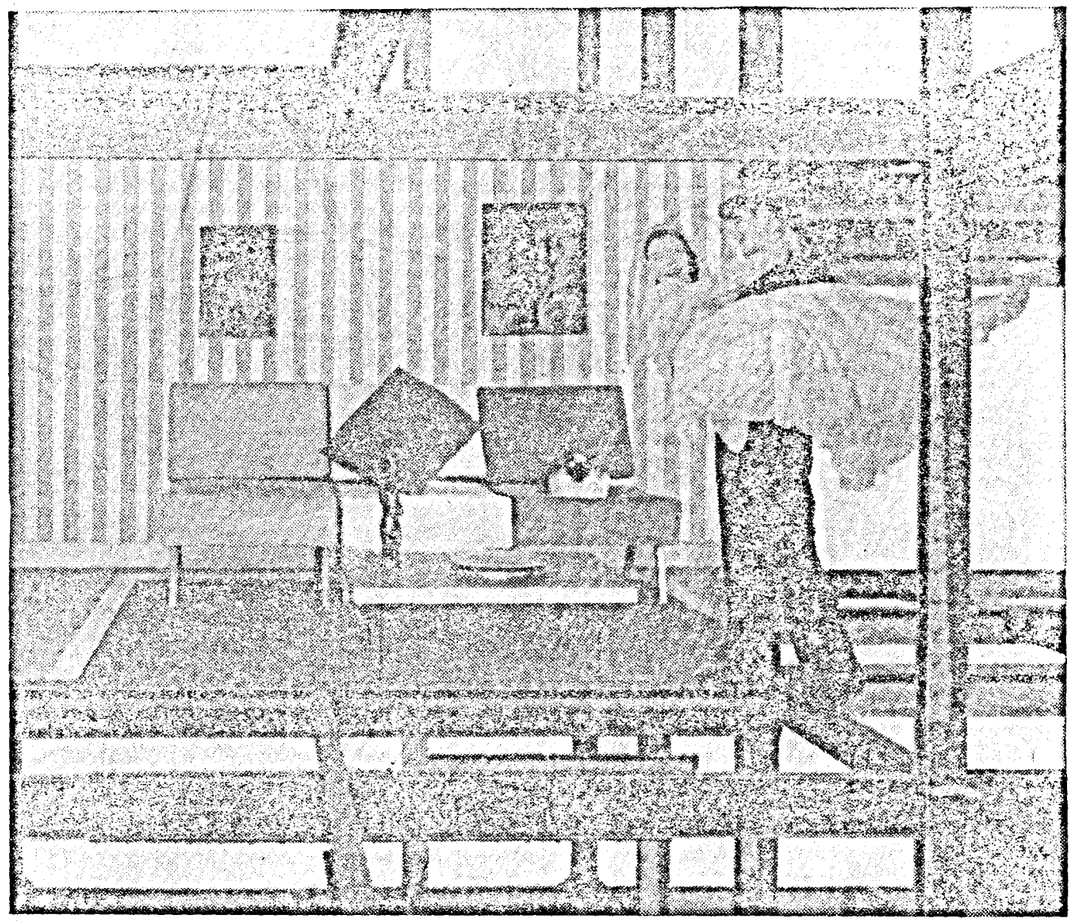
Some of the companies concerned have announced capital payments to shareholders. Camp Bird has described these as "panic" measures, but in the Redruth group at least these payments were in mind before Mr Dalgleish announced his bid. Camp Bird did not oppose the capital payment of Kinta Tin Mines, where 366,878 proxies were in favour and only 150 proxies against it, as it "did not hold in excess of 50 per cent of the Kinta Tin shareholding at the closing date for proxies." The Camp Bird offer is not in cash but in shares which are still to be issued. Shareholders in the tin companies cannot be certain of the price that these shares would command if the offers went through; they cannot calculate how many potential sellers there would be. Since Mr Dalgleish's first press announcement Camp Bird shares have gone up from 13s. 10½d. to 14s. 6d., having touched 15s. on October 26th, the date on which in the latest circular Mr Dalgleish makes his calculations of the worth of the various offers. From the evidence so far available it looks as if most shareholders in the tin companies will turn their faces against these bids.

Haulage Rate Cutting

THE seasonal growth in road haulage traffic that normally comes with the autumn and winter months is doubly welcome to the industry this year, for it has brought a noticeable reduction in the amount of rate cutting on the long distance routes and it has provided the national organisations in the industry with an opportunity to seek some stabilisation of charges. A few months ago, especially in July and August when traffic was seasonally at its lowest, rate cutting was rampant on the busiest routes between major industrial areas and the ports that serve them, such as those between Birmingham and London and between the Midlands and Liverpool. The railways too were finding long distance freight revenue falling more than the volume of tonnage carried.

The broad reason for this outbreak of competitive rate cutting, the sharpest the industry has experienced since the thirties, is that carrying capacity has been growing at a faster rate than the amount of traffic available. Haulage rates are always highly sensitive to the volume of traffic on offer since capacity can be adjusted only gradually. The flattening of industrial output this year has meant that traffic has not been increasing at the rate of a year or two ago, though the shifts that have been occurring in production have brought sharp reductions in some traffics and increases in others. On the other hand lifting capacity has continued to grow apace. The increase in the "C" licence fleet of lorries owned by industry has remained unchecked, making nonsense of the argument that industry acquired its own transport solely because of the poor service provided by the state transport monopoly. And the fleets of private road hauliers are also still growing. Many of the newcomers to long-distance work since the end of 1954 when all restrictions on private haulage activities were removed have been aiming at the best routes that offer relatively easy traffic and full loads; and they have been prepared to quote exceedingly attractive charges in order to get it, but without fully realising, it seems, the full costs, including overheads, of supplying their services—though some hauliers have been able to compete by blatently disregarding the statutory rules about drivers' hours and maximum vehicle speeds.

This year, however, unlike the rate cutting episodes of the thirties, there has been one very large organisation in long distance haulage, which has helped to keep charges in line. Apart from making some minor adjustments to its schedules where formerly rates were averaged, British Road Services has been following a general policy of holding rates rather than traffic. The private enterprise organisations are trying to follow its lead. The National Conference of Road Transport Clearing Houses issued a recommended schedule of rates to its members this week; and the Road Haulage Association passed a resolution at its annual conference a few weeks ago in favour of a stabilisation of present charges dressed up as a "contribution" to the Chancellor's price plateau.



A new world of chemicals **welcomes the pioneers**

The pattern of a new world of chemicals is unfolding on every side. An exciting and stimulating pattern, adding much to the richness and variety of everyday living — in which chemicals won from the flexible heart of petroleum play an increasingly dominant part. In the production of petroleum chemicals, the swiftest growing of all industries, the Shell Chemical Company has achieved a leading position through brilliant research and large-scale development. From Shell today come vast tonnages of standard chemicals and a constantly widening range of radically new base materials which are challenging inventive minds, creating new and better goods for world markets. Shell chemicals—everywhere in industry, agriculture and the home—are contributing much to this thrilling new age in which we live. *You can be sure of Shell.*

Of Dragons, Guns and Waterspouts . . .

IN MEDIEVAL TIMES sailors regarded waterspouts with great terror. The Chinese, and others, believed these were caused by the violent ascent and descent of dragons. The danger was real enough, for the wind in wild blasts near the waterspout could capsize small vessels carrying much sail. The standard practice for averting this danger was to discharge artillery into the clouds to frighten away the dragon.

Today, goods in transit on land, sea and in the air are not held to be in great danger from dragons. But they are in danger of damage from rough handling and they do need sound protection — reliable packaging. Many leading manufacturers find "Fiberite" cases, and cartons made from "Thames Board", more than adequate to safeguard their products and display them to advantage. These modern packaging materials are the products of many skills and experience unique in the industry.

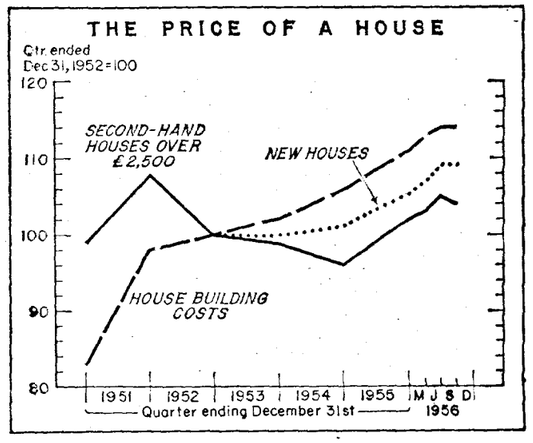
House Prices Before the Rent Bill

THE higher rents that will follow from the Government's new Rent Bill must eventually affect prices of houses for purchase. The Co-operative Permanent Building Society's indices of house prices, published last week, give a useful indication of the course of prices this year before the appearance of the new bill: they suggest, incidentally, that the announcement that the bill would appear this session had no anticipatory effects on house prices. Nor do they bear out the suggestion that there has been a general fall in prices under the squeeze on credit and on house mortgages. Any decline that has occurred is probably seasonal. The volume of sales must have fallen because of the difficulty of securing mortgages; but only in a few areas has this been accompanied by any reductions in the level of prices.



The chart shows how the indices for new houses, second-hand houses selling at over £2,500 and house building costs have moved. The trend revealed for houses worth more than £2,500 is parallelled in the indices for cheaper houses. The indices are based on the reports of the Co-operative Building Society's own surveyors on those properties on which it has made mortgage advances. The index of house building costs makes no allowance for changes in productivity, and therefore exaggerates the increase in real costs which has occurred. But a substantial increase has taken place: this is one reason why, in spite of the large number of new houses which have been built, house prices on the eve of a new Rent Act are not far below the postwar peak touched at the end of 1951.

The Price of Changing Jobs

IN a year such as 1956, a report on the cost of labour turnover may appear rather oddly timed: many words have recently been expended upon the cost of labour that does not turn over, the employees who are retained on short time when their employer cannot sell all that they normally produce. But even in a year such as this, labour turnover does cost industry money: few industries, even in the latest months under the squeeze, have needed (in their own judgment at least) to lose all the people who have in fact left firms within them. In a paper to the British Institute of Management conference last week, Mr R. L. Webster, chief personnel officer of Hoover, reported that a study group of experts has estimated that this turnover costs manufacturing industry perhaps £230 million a year, and the whole economy perhaps £700 million a year.

This estimate, rated up from a calculation that labour turnover adds between 5d. and £3 a week to the wage cost of each employee, transient or not—perhaps 10s. a week per worker, on the average. This range of costs was culled from a study of 16 companies, which are wildly unrepresentative of British industry as a whole, but might tend to have lower costs than the average on this count, since all are already attempting to replace labour turnover. Whatever the justification of rating up such fragmentary findings, the figures and the range are interesting in themselves. Most of the items of cost debited to labour turnover are reasonable enough: advertising for replacements, the extra scrap wasted during training work, and proportions of the cost of the personnel department, any medical department and any training sections. Nevertheless, it is noticeable that the companies reporting very high costs per employee for labour turnover—one put this as £43 in three months—included in this cost liberal allowances for the overtime worked and the loss of profit arising from lost sales. Just how accurately these items can be attributed to labour turnover seems rather uncertain: if they were excluded the highest cost shown for turnover would be very much lower. There is no doubt that labour turnover is a real cost and that there is much more turnover than would really be needed for labour mobility. But at the same time the changing of jobs is one instance where the total social cost to the community cannot really be assessed by adding up the costs to every individual company of every man they hire, lose, or fire. Is industrial mobility worth nothing?

Wool Workers One Lap Behind

THE offer of higher wages to 150,000 workers in the Yorkshire wool textile industry does not give these workers a flying start in the new wages race; they were already a lap behind. As the employers are at pains to point out, the last increase, of six per cent, was in June last year. The unions based their new claim (of 10 per cent) on the rise in the cost of living since then. On grounds of equity and of the need to retain workers the employers could not reject it out of hand. They offered an increase of six per cent which the National Association of Unions in the Textile Trade has accepted and it is likely to be accepted by the woolcombing union. The new agreement takes effect from December 1st and runs until December 31st next year. A new clause provides for reconsideration of the agreement if the index of retail prices should in the meantime rise to 109 (January 17, 1956=100); the September figure was 102.1.

Fight for Sterling Markets

THE export race in overseas sterling markets has become as fierce as elsewhere. Even with the advantage of preferential tariffs and long-standing trading ties, British exporters have not been able to prevent their competitors from gaining some ground. Their gains this year, to Britain's detriment, were shown in the Board of Trade Journal last week. Between the first half of 1955 and that of 1956 imports of the overseas sterling area rose by £138 million (seven per cent) to £2,246 million. Imports from Britain, which amounted to one-third of the total, rose by only £16 million (two per cent) to £757 million. That rise was smaller, relatively and absolutely, than the gains secured by Germany, the other OEEC countries taken together, and Japan in the overseas sterling markets.

British shipments to Australia, New Zealand, South Africa and Pakistan fell in the first half of this year; yet

IMPORTS INTO OVERSEAS STERLING AREA
£ million

Imports from	First Half 1956	Increase on First Half 1955	
		Actual	Per cent
Britain	756·3	16	2
Germany	110·2	20·6	23
Other OEEC	240·9	23·9	11
United States	229·9	11·6	5
Japan	119·4	22·1	23
Total of above	1,457·2	94·3	7
Total imports	2,246·1	137·9	7

Germany managed to increase its shipments to all these countries except New Zealand. Britain's shipments to India rose sharply by £19.5 million (33 per cent) to £79 million, but Germany's shipments rose at the greater pace of 52 per cent, by £9.2 million to £27 million. Other OEEC countries also did well in India, their shipments rising by £15.6 million (53 per cent) to £45 million. Japan's biggest markets in the overseas sterling area are Hongkong, Malaya, India and West Africa; in each of them Japanese shipments rose at a faster rate than Britain's, though its total shipments remained much smaller (except to Hongkong). Britain is still the giant in sterling markets, but its stride is not matching the speed of its competitors.

EXPORTERS

Our three-monthly reports give concise information on market conditions and prospects in all countries in the world. The report issued this week on

ITALY

includes information and comments on:

Development plans
Rising industrial production
Exploitation of oil and natural gas resources
Expanding import market
Italian interest in African and Asian markets

The report is illustrated by charts and has a useful statistical appendix.

New Start for the Sugar Scheme

THE United Nations sugar conference which ended in Geneva last week had one main object: to broaden the membership of the International Sugar Agreement. A secondary object was to revise the price range and the methods of adjusting export quotas. The first indications are that the conference has been more successful in the second object than the first. Peru, the largest exporter outside the agreement, is unlikely to join; Brazil, another non-member exporter, took no part in the negotiations; Indonesia probably will join. In fact, the conference was more successful than that tally implies. Since the initial negotiations in New York last May the free world market has at last been freed from the threat of burdensome stocks. Demand has increased substantially, Russia and other East European exporters have been unable to fulfil their quotas, and as a result Cuba, the largest exporter, will end the year with no more than a reasonable carryover. With the prospect of a buoyant demand next year the major exporters might well have been tempted to throw off the restrictive apparatus of the agreement and strike out for themselves. For various reasons they have decided against that course. Instead the agreement has been amended for its two remaining years, and if a sufficient number of countries approve it will start in its new form on January 1st.

The price of agreement is a substantial increase in the basic export tonnages, which now add up to the somewhat formidable figure of 5,897,000 metric tons, plus a special reserve for four exporters of 140,000 tons in 1957 and of 190,000 tons in 1958. The total of six million tons in 1957 compares with free market requirements estimated at 5,325,000 tons. The supply actually available will be less than six million tons, and the council still retains the power to reduce the effective quotas by up to 20 per cent of the basic tonnages. The adjustment of quotas will be more responsive to changes in the market than hitherto. The minimum price of 3.25 cents a lb fas Cuba and the maximum of 4.35 cents are replaced by four adjustment points: 3.15, 3.25, 3.45 and 4.0 cents a lb. When the market price is below 3.15 cents the quotas can be cut by the full 20 per cent; above 4.0 cents all restrictions are to be removed; between those points—and the aim will probably be to keep the price somewhere near 3.25 cents—the adjustment of quotas is partly automatic and partly at the council's discretion.

SHORTER NOTES

Two further controls over credit were announced by the Government this week. On Tuesday the Queen's Speech disclosed that the present emergency powers for regulating hire purchase are to be replaced during the present session by a permanent statute. And on Wednesday the Board of Trade issued a new Control of Hiring Order which will make car rental schemes less attractive to business. From now on a rental firm is forbidden to give the hirer a rebate related to the value of the vehicle at the end of the hiring period.

★

The Iron and Steel Realisation Agency has completed the sale of the entire share capital of Kettering Iron and Coal, together with a 25 per cent interest in Loddington Ironstone, to Stewarts and Lloyds for £260,000; Kettering Iron and Coal has also made a special distribution of £240,000 to the Agency. Similar arrangements have governed the sale of the entire share capital of Burnell and Company to John Summers for £350,000, with Burnell also making a special distribution of £250,000 to the Agency.

The Hudson's Bay Company proposes to increase the membership of its board from nine to fourteen so that members of the Canadian Committee can be invited to join the board.

★

Evidence has become available casting doubt on some of the borehole results, published in May, June and July, of Zandpan Gold Mining. Some of the remaining half cores have been assayed and give results far below those published earlier. The police are investigating the matter.

★

The total of new companies registered in 1955, according to the Board of Trade's official report, was 17,507, which is the highest figure since 1947. At the end of last year there were 291,153 companies on the register, with a nominal share capital of £6,811 million; of these 11,204 were public companies with a share capital of £4,340 million.

Company Notes

TUBE INVESTMENTS. Just over a year ago Tube Investments gave a new twist to the usual form of rights issue by making a one-for-one issue at a low price, offering the shares on attractive bonus terms. At the time of this offer the directors indicated that the full year's dividend for the year to July 31st would be equivalent to 14 per cent per annum. Now in the preliminary statement they have been a little more liberal. On the new capital, allowing for the period in which this capital was partly paid up, the dividend is equivalent to a rate of 15 per cent per annum. The actual dividend declarations are a 7½ per cent final following a 6¼ per cent interim and compare with a payment of 22½ per cent in 1954-55 on the original capital. The yield has to be calculated on the basis of 15 per cent, so that at the current price of 58s. 6d. it is 5⅛ per cent.

The dividend is backed by impressive trading results. Trading profits before depreciation have risen from £10,800,864 to £14,615,922 and although the provision for tax has gone up from £4,393,401 to £6,286,704, net earnings have advanced from £4,428,523 to £5,271,209. These earnings provide a fourfold cover on the net dividend, which absorbs £1,152,957. Currently earned profits do not seem to be running at such high levels, for the directors say that "during the latter part of the year there was some falling-off of orders in certain sections of the group's activities. This trend has continued during the first quarter of the present financial year and has imposed a curtailment of activities."

★

BROOKE BOND. The issue by Brooke Bond of 3 million "B" ordinary shares at 12s. 6d. in the ratio of one for four to "A" and "B" shareholders makes the rights to "B" shareholders at the current price of 20s. 3d. worth 1s. 6d. a share. Neither the rights issue nor the 100 per cent scrip issue ushers in more liberal dividends—at least for the moment. After the two issues the dividend for the year to June 30th next will not be less than 2½d. per share, free of tax. On the present capital the tax free dividend for 1955-56 was 6d. per share. The forecast dividend represents, the directors say, a gross yield of about 5¾ per cent on the issue price and, excluding distributed profits tax, involves a cash distribution of £312,500. There is a wide margin between this figure and the indicated £1,500,000 for net profits which, the directors suggest, is a reasonable way at looking at profits over the last two years. And they comment that "trading prospects for the current year are good."

To set the issue in perspective shareholders must look beyond the immediate horizon. From the observation post of the latest accounts, which reveal that bank overdrafts have gone up from £2,087,437 to £2,262,274 and stocks from £19,261,156 to £20,508,094, they will recognise that new permanent capital is needed if the company is to expand. Expansion is clearly what the directors desire. They intend, for example, to expand the group's interests in tea plantations, especially in East Africa; they say that "the benefits of this policy should soon begin to be reflected in profits as the young plantations come to bearing." A substantial part of the tea crop from the company's plantations is sold outside the group and tea of its own growing represents only 11 per cent of its total world sales of packet teas. In looking beyond the narrow horizon of the current financial year, investors have already decided that Brooke Bond is a growth stock. If they are right and if the violent fluctuations in profits in the last three years can be regarded as abnormal, the rights issue may seem to them a reasonably cheap way of increasing their stake in the business. Sooner or later, they will presume, the company will be much more generous in dividends. The new issue invites them to back this presumption with hard cash.

★

UNITED MOLASSES. Dividends depend upon what boards of directors think about sales and profits and not upon their attitude towards scrip issues. But if a board has been reasonably liberal with dividends in the past and earnings are good then a scrip issue can heighten the expectations of future dividends. A case in point is provided by United Molasses. In July the company made a one for two scrip issue, but the directors said nothing about future dividend policy. Now they have declared on the increased capital a tax free interim dividend of 5d. per 10s. unit, against 6d. per unit, tax free, on the old capital.

Investors can hope that this effective increase will be followed by a bigger final payment. A larger dividend seems likely; the directors say that "trading conditions for the current year have been satisfactory and profits for the first nine months show a substantial increase over those for the corresponding period last year." Some investors who do not regard themselves as excessively sanguine are guessing at a final payment of not less than 1s. tax free.

★

WIGGINS TEAPE and A. E. REED. Smaller profit margins have a depressingly familiar ring to investors this year. The stock market has anticipated the effect that this squeeze on profits is likely to have upon dividends and assumes that

dividends will mark time at best. Further confirmation of this view comes this week in the interim reports of the two paper makers, Wiggins Teape and Albert E. Reed. Wiggins Teape's gross profits in the six months to June 30th were £2,373,477, compared with £2,675,535 in the first six months of 1955; sales were "approximately the same" but "profit margins are smaller due to sale prices not keeping in step with the increased costs of production." The directors of Albert E. Reed do not give profit figures but they say that while production has increased profit margins have narrowed and that gross profits for the six months to September 30th show a decline of about 12 per cent compared with the corresponding months of last year.

On dividends also the two companies speak with the same voice. The interim ordinary dividend of Wiggins Teape is left unchanged at 5 per cent and "unless conditions deteriorate" the final payment of 12½ per cent too will be left unchanged; on a maintained payment of 17½ per cent for the year the £1 stock units offer a yield of 6¼ per cent at 51s. The directors of Albert E. Reed have not gone beyond the forecast, made last May at the time of the rights issue, of an interim dividend of 6 per cent; "provided no unforeseen circumstances arise" they expect to pay a final dividend of 10 per cent—a payment also promised then. On a full year's dividend of 16 per cent, the £1 ordinary shares yield just over 6½ per cent at 49s.

★

BIRMID INDUSTRIES. This year the motor industry has been an unreliable customer to its suppliers but one of them, Birmid Industries, achieved a slight increase in net profits—from £1,467,052 to £1,488,659—in the year to July 31st last. The group makes castings for the aircraft industry as well as for the vehicle manufacturers and some of its output of light alloys goes to export markets. It is perhaps to this spread of interests that the group owes its success in a year when, over and above the troubles in the motor industry in the latter months of the period, costs were rising.

As the tax provision has gone up from £1,272,787 to £1,329,948, gross profits after depreciation appear to have risen from £2,739,839 to £2,818,607. The directors have left the ordinary dividend rate unchanged at 17½ per cent but the latest dividend is paid on a capital of £3,196,667 as increased by a one for three rights issue in April. The market was pleased with these results and the £1 ordinary shares gained 1s. 9d. to 64s. 3d.; the yield of nearly 5½ per cent is below that offered by many motor equities.

★

JOHN I. THORNYCROFT. The fall in trading profits from £1,159,304 to £793,155 and the cut in the ordinary dividend from 15 to 12½ per cent were discussed here last week. The chairman, Sir John Thornycroft, has now reminded shareholders that the company's performance "cannot be judged on one year's results, because contracts and the results from development expenditure run over a much longer period." In the year to July 31st the company found it impossible to increase turnover and thus to absorb rising costs of labour, materials and overhead charges. It was handicapped by a shortage of labour which in the Southampton shipbuilding yards "disorganised production." Some of its energies were devoted to new design and development work at the expense of current profits.

The margin for the company between a profit and a loss, Sir John says, is small. Prices must be kept down in a competitive market but costs continue to rise and more cash resources are being absorbed in working capital. Prospects in the shipbuilding yards depend on the policies adopted by the unions this autumn. Sir John seems despondent about increasing the labour force in the group's commercial vehicle production. "These problems," he says, "have been continuously in the minds of the board, but no simple solution seems possible at the present time, and, as world competition increases in severity, are assuming even greater importance."

LONDON STOCK EXCHANGE

Next Account Begins: November 14th
Next Contango Day: November 14th
Next Settlement Day: November 20th

PRICE movements in the stock markets this week have been dominated by the development of the Middle East crisis, but business has been relatively small. Two firm rallies, the first on Friday, which embraced both gilt-edged and industrial stocks, and the second on Wednesday, which after an unsustained advance in gilt-edged was mainly confined to industrial stocks, brought a rise in *The Economist* indicator of 2.6 to 183.8. In the week to Wednesday's close government stocks remained little changed on balance. The fluctuations in Middle East oils each day were severe, but although there was an overall recovery up to Wednesday prices were again lowered on Thursday. There were sharp movements in the new corporation scrips. Dealings in 5½ per cent Australia 1970/72 began on Wednesday at ⅜ discount and the stock weakened further to ⅛ discount at the close.

Marks and Spencer "A" rose 2s. 3d. to 60s. 3d. following the increased interim dividend, but after the cut in dividend Loyds Retailers "A" lost 1s. to 4s. 10½d. Electrical stocks were firmer and Sun Electrical jumped 3s. 9d. to 41s. 3d. on the results. Motor shares were mixed following the cut in the Standard dividend, but after dropping to 6s. 5½d. Standard recovered on Wednesday to 6s. 10½d. British Aluminium were active and rose 5s. to 71s. 3d. over the week. United Molasses gained 1s. 6d. to 36s. 3d. after the effective increase in the interim dividend. Steel shares recovered well after declining earlier in the week.

British Petroleum closed on Wednesday at 145s., a gain of 8s. 9d. on balance, but a sharp fall to 136s. 6d. occurred on Thursday. South African gold mines were affected by the Zandpan statement. Middle Witwatersrand fell 1s. to 8s. 7½d. and Free State Geduld suffered a sharp setback on Tuesday, but recovered later to 79s. 4½d. Coppers tended to ease and tins were lowered. Following the reduced interim United Sua Betong lost 1s. 3d. to 48s. 9d.

[1] Electricity production for New Zealand represents about 87 per cent of total generation. [2] Copper and tin refer to metal production. [3] General trade (including re-exports) except for Canada, which is special trade only. Imports are cif except for Australia, Canada and S. Africa which are fob; exports are fob. Trade for India includes that going by land; annual figures for India are for 12 months beginning April 1st of year stated and for Australia 12 months ended June 30th. [4] Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. [a] Including bullion and foreign investments. [b] Including semi-processed gold. Beginning January, 1955, including South-West Africa. [c] In July, 1948, part of holdings was transferred to the State Bank of Pakistan. [d] April, 1948—March, 1949. [e] Including some long-term securities. [e] Average for second quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended November 3rd, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £1,486,000 compared with a deficit of £11,478,000 in the previous week and a surplus of £29,699,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £12,659,000, bringing the total deficit to £657,018,000 (£589,655,000 in 1955-56).

THE MONEY MARKET

NOTWITHSTANDING the flare up in the Middle East, the discount market made no increase in its rate at the Treasury bill tender on Friday last. In the absence of the political factor, however, the market might have reduced its rate, as the increase in the bids offered by outside applicants at the preceding tender had cut sharply into the market's allotment. At last week's tender, outside applicants appear to have shaved their bids somewhat, and they also reduced their total applications. The upshot was that the market's allotment rate rose from 30 to 36 per cent of its tender for the £200 million of 91-day bills on offer, though for the £70 million of 63-day bills the allotment rate declined by one point to 90 per cent. The average rate of discount on all 91-day bills allotted rose to £4 19s. 9.85d. per cent.

Credit conditions in Lombard Street have generally been stringent in the past week—though on Wednesday funds became freely available and some remained unlent. Before the week-end, the Bank helped the market through small special purchases. On Monday, however, when there were no bill maturities owing to the incidence of the August holiday, two or three houses were forced to renew their seven-day loans from the Bank. On Tuesday the market was kept out of the Bank only by large special purchases.

The Bank of India Ltd. Head Office building in Bombay, India

For business with India...

THE BANK OF INDIA LIMITED

Now celebrating 50 years of service

THIS YEAR, the Bank of India Ltd. celebrates its Golden Jubilee ... 50 years of vigorous growth ... a growth that today covers India with 36 offices and extends to 11 overseas branches between London and Tokyo.

The world over, more and more business houses are taking advantage of these excellent overseas facilities—particularly for the ever-growing volume of trade with India. If you have business connections with India, it will be to your advantage to deal with the Bank of India Ltd.

The Bank of India Ltd. is one of the largest joint-stock banks in India. In 1906, its working capital was only Rs. 6,700,000 (£502,500); today this has *increased more than one hundred-fold* to about Rs. 1,000,000,000 (£75,000,000).

The remarkable success of the Bank of India Ltd. during the past 50 years indicates the soundness of its foundations. Its cornerstones are prudence, caution and wise stewardship—and these will continue to be the strength behind its future growth.

Chairman: Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E.

General Manager: Mr. D. R. Thom

Golden Jubilee

1906—1956

COMPANY MEETINGS

FISONS LIMITED

STEADY INCREASE IN CONSUMPTION OF FERTILIZERS

FURTHER EXPANSION IN RESEARCH FACILITIES

MR F. G. C. FISON'S REVIEW

The sixty-third Annual General Meeting of Fisons, Limited, will be held on November 30th, at Harvest House, Felixstowe, Suffolk.

The following is the review of the Chairman, Mr F. G. C. Fison, which has been circulated with the Report and Accounts for the year to June 30, 1956:

BOARD OF DIRECTORS

Mr C. E. Horton, CBE, who joined the company in 1951 as Director of Research, has been elected to a seat on the Board.

THE ACCOUNTS

Sales for the year, including those of our Subsidiary Companies, but excluding sales by our Associated Companies at home and abroad, were £37,500,000 compared with £32 million in the previous year.

The Group Trading Profit, including dividends from our Associated Companies, and after deducting Debenture and Loan interest, was £3,051,269 compared with £2,656,276.

We have written a further amount of £250,000 off our investment in the Société Industrielle d'Acide Phosphorique et d'Engrais which reduces the value of this investment in our books to £178,000 and we have transferred £600,000 (the same) to General Reserve.

In the notes attached to last year's accounts it was stated that under the terms of a contract for the sale of chemicals by a Subsidiary Company, unused goods were returnable in certain circumstances and the opinion was expressed that no loss was likely to arise from this source. In fact a settlement has been arrived at under this contract which has resulted in a loss, but which should be of considerable value to the Company in future years.

FINANCE

Our plans for the erection of a new factory on the Thames for the manufacture of nitrogen compounds, and the extension and modernisation of our manufacturing capacity for compound fertilizers, as well as our investment in new industrial chemicals, will involve heavy capital expenditure during the next few years. It is proposed to raise immediately approximately £5 million by an issue of Unsecured Loan Stock for which the permission of the Capital Issues Committee has been obtained. The magnitude and pace of our extensions will require the Company to raise further capital in due course and it is at present proposed to do this by the issue of Ordinary Shares.

RAW MATERIALS

Raw material constitutes over 60 per cent of the cost of compound fertilizers. In consequence substantial rises in raw material costs must inevitably affect to a large extent fertilizer prices, although they may be offset in some degree by improvements in efficiency and in the volume of output.

We compile a price index of our raw materials from year to year and the following are the figures for the fertilizer year 1955/56 compared with a figure of 100 for the year 1953/54.

1st Qtr.	2nd Qtr.	3rd Qtr.	4th Qtr.	Year
112·1	118·1	120·9	121·9	119·0

In the year under review we had marked increases in the costs of phosphate rock and sulphate of ammonia. In the case of phosphate rock these increases were chiefly due to the continued rapid increase in freight rates. Sulphate of ammonia, of course, is produced entirely in this country, but the level of prices had been uneconomic to the producers, of whom a Government department was one of the most important, and in consequence increases have had to be made considerably above those necessitated by current increases in cost. We very much hope that prices have now reached a level which is economic to the producers.

Other major materials, namely potash, sulphuric acid and packaging materials, of which we are one of the largest users in the country, showed only small increases substantially below in most cases those ruling for other materials and this to some extent reduced the impact of the major movement of phosphate rock and sulphate of ammonia prices.

All our important raw materials were in free supply during the year, although, owing to the unprecedented demand in the spring, some sulphate of ammonia was purchased from the Continent to fill a temporary gap in our supplies, but the situation in North Africa continued to occasion us serious concern. We took the precaution of making very substantial increases in our stock holding of phosphate rock, although the cost of these precautions is extremely high, both in storage facilities and working capital. We also considered it necessary, in view of the importance of fertilizers in our economy, to contract for certain purchases of rock in the United States, and the effect of this will be felt in the current year's operations.

Recent events have tended to increase the uncertainty of the situation in North Africa. We have always felt serious doubt about the ability of the Sultan to steer a middle course between the extremists in Morocco on the one hand and the French administration on the other, but when the irregular armed forces were absorbed into his army, although there were serious incidents involving the French administration and colonists, law and order was maintained to a much greater degree than the French considered was possible. We have never had any doubt about the competence of the French administration of the Moroccan phosphate mines and our confidence in the Director General and his staff has been justified by the manner in which production has been maintained and even increased. Our doubts centred on the extent to which the French management would be able or allowed to operate under the new political regime. A permanent settlement of the Moroccan question can, of course, hardly be envisaged without a settlement of the Algerian issue and events in Egypt have probably made the opposition to the French administration more intransigent than previously.

For many years we have relied on a steady flow of rock from Morocco and, in consequence, have maintained only relatively small stocks. Whatever policy we follow in the future is likely to result in substantially higher costs than in the past.

FERTILIZERS

In terms of plant nutrients deliveries of fertilizers in the United Kingdom compare with the previous years as follows:—

	1954/55 tons	1955/56 tons
Nitrogen in terms of N	248,100	291,300
Phosphates in terms of P_2O_5	334,500	385,900
Potash in terms of K_2O	252,400	305,500
Total plant nutrient	835,100	982,700

It will be seen that there has been a considerable increase in the consumption of the three plant nutrients, of which we have enjoyed our share. It is worthy of note that though farm incomes have declined during the past three or four years, nevertheless the usage of fertilizers has steadily increased. The increase in fertilizer consumption this year reflects the higher tillage acreage planted in the 1955/56 season, but at the same time it shows that the knowledge of the value of fertilizers is now widely accepted. This is due largely to the constant efforts of the Ministry of Agriculture and of commercial firms to convince farmers of the value of the greater use of fertilizers. We have made our contribution through our Technical Sales Service which now covers the entire country. Every farmer in the United Kingdom who wishes to do so can now freely call in one of our Technical Sales Representatives in connection with any fertilizer or crop protection problem. Our service has been widely used by Agricultural Merchants who play an important part because they are in everyday contact with farmers, and with whom we maintain most friendly relations.

All our factories worked at full pressure throughout the year and it is greatly to the credit of the managements and operating staffs that we were able to meet the unprecedented demand in the spring. At the same time I must utter a word of warning: for the difficult and protracted harvest of 1956 has delayed autumn cultivations and sowings and this may well lead to an even greater seasonal demand in the spring of 1957, which would be bound to cause serious delays in delivery at a time when farmers cannot afford to wait.

Good progress is being made with our plans for the production of nitrogenous fertilizers on our site on the Thames and it is hoped that the first stage of manufacture will be achieved in the autumn of 1958.

The rapid and most satisfactory expansion of our Horticultural Trade has led us to plan a modern manufacturing and packing plant at Bramford, near Ipswich, work on which has already commenced.

FERTILIZER PRICE POLICY

It is well known that the demand for fertilizers in the postwar years has been very strong indeed and that, unlike a number of other countries, there has as yet been no over-supply of the market. This country does produce a substantial surplus of nitrogen, but export prices have been higher than internal prices and, in consequence, there cannot be said to be any state of oversupply. It is also well known that we have a very strong position in the industry. This fact, of course, as I have mentioned previously, has been of great benefit to us in that it has enabled us to operate our plants to capacity with consequential economies in operation. We have, however, raised substantial sums of money from shareholders and the public in the last few years, and our capital expenditure programmes will certainly require further finance not available from the Company's own resources.

I think it will be evident from the statements I have made in previous years that we have thought it right to follow a very moderate profit policy and to ignore largely the factors which would have made it possible for us to make large profits. We have been very conscious of the difficulties of the farmer and of the fact that there has been some decline in farm incomes in recent years, and also that agriculture is subsidised by the Government. Our policy, therefore, broadly speaking, has been to fix prices at a level which provided a reasonable return to shareholders and which allowed us to retain part only of the capital required for expansion. When there have been exceptional circumstances to the farmer's disadvantage, as there were two years ago in the form of a very unsatisfactory harvest, or, as in the present year, due to exceptional increases in costs, we have felt it appropriate to carry part of the burden ourselves until matters should improve. This is so, for example, in the present year. There have been very large increases in costs, due to freights and raw materials, as well as increases in our own costs, resulting from a very large expansion in agricultural research which we have undertaken.

In such a basic industry as ours supplying a subsidised agriculture, an industry moreover peculiarly subject to fluctuations beyond anyone's control, we have felt obliged to pay great regard to the public interest. We think that this is in the longer term interest also of shareholders, and certainly I think our Company enjoys exceptional goodwill amongst the farming community. Perhaps I should mention in this connection that for the reasons to which I refer we have not thought it necessary or desirable to make any public statement regarding prices, which has been done by a number of other prominent companies. The cost of fertilizers is to a great extent beyond our control and depends on world trading conditions affecting freight rates, while profit margins are so moderate that we could not undertake to absorb any exceptional increases in costs which may at any time occur.

FISONS PEST CONTROL LIMITED

The year under review was characterised by an extremely dry spring and, in consequence, weeds were slow in germinating and the volume of spraying which it was possible to carry out was considerably below that of recent years.

Although we made substantial increases in turnover, the improvement was not as marked as last year, and our costs advanced considerably. We made, however, further important progress with the improvement of our manufacturing processes, and in the efficiency of our contracting service, which has now become a satisfactory profit earning business.

We continue to devote great attention to expansion on the overseas side and in particular we reached agreement in principle with Tatas, the well-known Indian industrial group, for the formation of a joint company to manufacture and sell pest control chemicals. The market, of course, in India is potentially very large indeed and we are very happy to become allied with such an important concern. We have also established manufacturing on a small scale in Ceylon in conjunction with Harrisons & Crosfield, with whom we have other connections. Another small interest was established in New Zealand and we strengthened our overseas force of technical representatives. We achieved in consequence a very large increase in export business in chemicals, although much of it on very slender profit margins.

The pest control business, both in this country and abroad, is highly competitive, but we now have one of the most up-to-date research laboratories in the world and a very able team of scientists from whom we are confident that new products commanding a wide use and contributing substantial profits will become available in due course.

THE AGRICULTURAL SITUATION

Just as the fine harvest and fine weather of 1955 stimulated the demand for fertilizers last year, so we must expect that the indifferent harvest and more than indifferent weather of 1956 will tend to slow down the normal rate of increase in demand this year. Nevertheless, I believe that over the years there will be a steady increase in fertilizer consumption, first because the use of fertilizers becomes more essential when farm profits tend to fall (and we have by no means approached the optimum usage in this country), and secondly because it will certainly be necessary to encourage agricultural production to protect the National balance of payments.

I therefore welcome the Government's reaffirmation of their policy set out in the White Paper issued after the Annual Review of the industry's position this year, in which emphasis was put on the need to maintain a large arable acreage to produce crops that can replace imported feeding stuffs, and secondly to improve the standards of our temporary and permanent grass for the production of beef, mutton and milk. I hope, too, that the discussions which are now proceeding with a view to formulating a longer term policy may be successful, for the uncertainty created by the present Annual Reviews has been a disturbing feature in recent years.

WHIFFEN & SONS LIMITED

Sales of industrial chemicals of Whiffen & Sons Limited again showed a marked increase, both in the home and export markets. The demand for derivatives of Hydrazine, of which Whiffens are the only manufacturers in the United Kingdom, was stimulated by their acceptance as a deoxygenator in high pressure boiler installations and for use as expanding agents in the rubber and plastics industries. Another important application is in the veterinary field for the prevention of fowl typhoid, whilst yet another provides the basic material for a new flux for soldering aluminium. Whiffen's work on the expansion of plastics has resulted in the production, in pilot plant quantities, of a new type of expanded PVC. This material, called "FI-VI," can be produced in sheet or other forms and is of particular interest to the aircraft and other industries because its insulating properties are combined with strength and remarkable lightness. Our exhibition of FI-VI at the British Industries Fair was enthusiastically received.

As I have previously reported, intense competition, particularly from East Germany and other Russian territories has reduced or eliminated profit margins in pharmaceutical chemicals such as Bromides, Iodides, Theobromine and Caffeine, and this has affected Whiffen's profit very considerably. Whiffens have completed a new plant for the synthesis of Theophylline, a chemical important to the medical profession as a diuretic and coronary artery dilator. Theophylline is thus being produced commercially for the first time in Britain. Imports have previously come from Germany. Whiffens have also completed plans for the manufacture in India of Emetine, used in the treatment of amoebic dysentery.

BENGER'S LIMITED

Benger's Limited have achieved increased sales and profits. I referred last year to licensing arrangements overseas for Benger's new product "Imferon" for the treatment of iron deficiency anaemias. By far the largest single market for ethical pharmaceuticals is the United States, but it is, unfortunately, rare for British pharmaceutical products to find a place in this highly competitive market. If is, therefore, particularly encouraging to be able to report that "Imferon" will shortly be available in the United States and contributing to our dollar earnings. The American medical profession has displayed great interest in our new drug and satisfactory licensing and supply agreements have been concluded with an American company.

GENATOSAN LIMITED

Genatosan Limited have had a most successful year, and in particular, sales of Sanatogen have reached the £1 million a year mark. Their new ethical liquid shampoo has now been launched as a popular product under the brand name "Sebbix" and sales have exceeded the most optimistic forecast.

FISONS CHEMICALS (EXPORT) LIMITED

Fisons Chemicals (Export) Limited has continued to make exceptionally good progress, export sales being substantially above those for the previous year.

ASSOCIATED COMPANIES

The new plant of Murgatroyd's Salt & Chemical Company Limited to produce chlorine and caustic soda was successfully commissioned during the year and we look forward to the benefits of the increased output. This is a Company which we own jointly with the Distillers Company Limited.

In Canada our Associated Company, International Fertilizers Limited, which operates in Quebec and the Maritime Provinces and in the State of Maine, USA, has had a difficult and unprofitable year, due to

bad weather, uncertainty about crop prices and fierce competition from the USA.

In South Africa, fertilizer consumption continues to grow, and our factories have worked at high pressure. To meet the continued increase in demand, we have approved in principle a project to erect an additional factory for the manufacture of superphosphate and granular compound fertilizers.

In Rhodesia, lower prices for the tobacco crop have created some uncertainty amongst the growers, but I am confident that the country's requirements of fertilizers will continue to increase. The reorganisation of our marketing arrangements, to which I referred last year is proceeding satisfactorily.

The Société Industrielle d'Acide Phosphorique et d'Engrais has increased its production of triple superphosphate this year, but owing to technical difficulties in the sulphuric acid plant it has not yet reached a production figure at which a profit can be earned.

RESEARCH AND DEVELOPMENT

On May 1, 1956, HRH The Duke of Edinburgh paid a visit to the Company's new Research Station at Levington, in Suffolk, and laid a commemoration stone to mark this important milestone in the evolution of the Company's research activities. He was shown a number of field trials designed to further our understanding of fertilizer usage and economy. He was also able to see, nearing completion, the comprehensive range of laboratories associated with the Station. In addition to chemical and physical laboratories, adequate engineering facilities have been provided for exploring new developments in all aspects of fertilizer technology.

In the chemical industry, and in the fertilizer industry in particular, expansion in research must be matched by a strong development organisation, and we have therefore decided on a major programme of expansion of our development facilities at Bramford, near Ipswich, the first stage of which is already operational.

In the countries of the world which enjoy an advanced agriculture, there is an increasing demand that fertilizers should give the farmer what he needs in the most reliable, convenient and economic form. New processes are now being developed, both in Europe and America, and there is a need for critical assessment of the relative advantages and disadvantages of these new formulations, both solid and liquid, which are being put forward as possibilities for the future. For this work, so vital for the future soundness of the Company's products, we now have the necessary resources. It can be assumed that the Company's fertilizers are backed by fully informed experiment and trial, directed by impartial scientific minds of mature experience.

We have now completed the construction of important new facilities at the Research Station of Fisons Pest Control Limited at Chesterford Park, near Cambridge, which were officially opened on October 2nd by Sir William Slater, Secretary of the Agricultural Research Council. Chesterford Park and Levington, which are of approximately equal size in personnel, will provide us with a research organisation for fertilizers and pest control chemicals equal certainly in quality to any in the country, and ranking indeed with the most important in the western world.

An important part of the Company's business is now in specialised industrial chemicals such as hydrazine and its derivatives. These demand for their development very considerable technical resources and skill.

In the field of medical products covered by our subsidiary, Benger's Limited, the early discovery and rigorous assessment of new therapeutic agents is a specialised type of activity calling for the highest standards of scientific manufacturing and clinical experience.

The range of research activity required by the Group as a whole, therefore is necessarily very wide. In each part of it, however, it is essential, if the research is to have practical effect, that it should be in close relation with the associated production and sales effort. At the same time care is taken that good contact is facilitated between the several research units of the Group; undesirable duplication of effort is avoided and the total research resources of the Group can be brought to bear on any problem should it become advantageous to do so.

Recruitment of scientific and technical staff of the right number and quality is not easy. The problem is a national one of outstanding importance, and your Company has thought it right to support generously a number of organisations whose aim is to increase the flow of properly educated technologists available to the country. It has also given support to selected Universities and Learned Societies as part of a policy of keeping industry in touch with fundamental knowledge and maintaining proper standards of scientific research in its own laboratories.

STAFF

During the past year a number of improvements have been made to the welfare arrangements provided by the Company for its employees. The finances of our Group Pension Fund are in a satisfactory condition and the last quinquennial valuation disclosed an estimated surplus of £121,000. Our Actuary in his report recommended that the surplus should be applied in granting an immediate increase of 5 per cent to all existing pensioners and that a special bonus of 5 per cent should be credited to the pensions currently being purchased for the salaried staff. These recommendations have been accepted and in addition last April it was decided to make a major improvement to the non-contributory section of the Pension Fund dealing with wage-earners. Pensions will in future be based not only on length of service, but also for the first time will be related to the employees' basic wages at the time of retirement in the same way as the staff pensions. The Widows' Pension Scheme introduced for the staff three years ago has already proved its value, and we have now extended similar arrangements for the widows of married male wage-earners who die while in the service of the Company.

We have also introduced recently a staff grade scheme designed to give improved status and greater security to certain selected factory operatives, who, in the opinion of the management, have proved themselves reliable and willing. The essential features of this scheme are that those promoted to staff grade status are entitled to four weeks' notice of termination of employment and during absence through sickness or injury the Company will make up to a guaranteed staff grade wage for a period of 26 weeks any sickness benefits to which the employees may be entitled. The scheme has been well received by both the Trades Unions, with whom our relations remain cordial, and the operatives. First promotions to staff grade status in respect of about 500 of our wage-earners were announced on November 1st.

Once more I would like to express on behalf of my colleagues and myself our great appreciation of the services rendered to the Company by all those working for it, both at home and abroad.

THE BRITISH LINEN BANK

STATEMENT TO THE STOCKHOLDERS BY THE GOVERNOR, LORD AIRLIE

In place of his customary address to the Proprietors at the Annual General Meeting to be held on 20th instant, The Right Honourable The Earl of Airlie, KT, Governor of the Bank, has circulated with the Accounts a Statement, of which the following is an extract:

The figures of the Balance Sheet show that the Note Circulation has risen by some £940,000 to over £12,957,000.

Deposits at over £80¼ million are up by £2,852,000 on the figure a year ago. Although in some degree this increase is attributable to oscillations from day to day, there are grounds for satisfaction that the volume of Deposits has been more than maintained in the face of consistently tight monetary conditions, but for which the continued progress of our business, measured in terms of activity and of extension of connections, would have been more manifest in the Balance Sheet.

Passing to the Assets side, cash on hand, cheques in transit, money at call and Treasury Bills aggregate £32,079,793 (an increase of £2,020,022). The ratio to the combined total of Deposits and Notes in Circulation is 34.27 per cent as compared with 33.47 per cent a year ago.

Investments appear at over £41,384,000—a rise of £1,895,000. Partly out of increased resources in the form of Deposits, but also because our application of the credit squeeze caused a marked contraction in the average figure of our Advances during the past year as compared with the mean of the previous year, we were enabled to make substantial additions to our investment portfolio, principally in Government issues.

Our total resources have expanded by fully £2.8 million on the year to just over £192 million. Although this total is £5.5 million short of the record created two years ago, I regard the partial recovery as a very creditable performance under prevailing conditions.

PROFITS

Net profit for the year at £290,562 shows a downward trend from the previous year's figure. It is commonly supposed that dear money suits the banks. In Scotland, at least, that is not true today. Half of our Deposits bear interest, and this interest-bearing portion is in excess of the total of our Advances plus Money at Call on the London Discount Market. Our investment portfolio was in the main built up in the days of cheap money. It necessarily follows that when, in February last following the change in Bank Rate, we simultaneously raised our deposit rates and our lending rates by 1 per cent per annum, our net earnings suffered.

It will be observed that with the sum of £209,796 brought forward from last year, the amount available for distribution is £500,358. Of this, a payment of £64,687 10s has already been made in respect of dividend for the half-year to March 31st last at the rate of 18 per cent per annum, less Income Tax, and it is now proposed to devote a like sum towards a distribution at the same rate for the second half of this year, after deducting Income Tax. Transfers as before of £85,750 to Staff Pension Fund and £75,000 to Contingencies Account leave the balance of Profit and Loss Account to be carried forward at £210,233—a small increase on the amount brought in.

RONEO LIMITED

RECORD NET PROFIT

INCREASED SALES

SIR GREVILLE MAGINNESS'S SPEECH

The forty-ninth annual general meeting of Roneo Limited was held on November 1st at the Connaught Rooms, Great Queen Street, London, W.C., Sir Greville S. Maginness, KBE (chairman of the company), presiding.

The secretary (Mr A. C. Hall) read the notice convening the meeting and the representative of the auditors, Messrs Barton, Mayhew and Company, read the report of his firm.

The chairman said: Ladies and Gentlemen, the Directors' Report and Accounts for the year ended June 30, 1956, have been in your hands for the requisite period and I assume that you agree to take them as read.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The trading profit of the Group last year was £811,246, compared with £731,910 for the previous year. The latter figure included the sum of £59,916 written off—the cost of purchase of shares in our Canadian Subsidiary.

After providing for taxation, depreciation and amounts written off the net profit for the year is £260,661 and to this figure has to be added the sum of £285,302 profit brought forward from last year, making a total of £545,963. It is proposed to transfer to general reserve the sum of £160,000, bringing this item in the balance sheet to £700,000 and having paid dividends on the 6 per cent and 10 per cent Preference Stocks, together with an interim of 5 per cent, less tax, on the Ordinary Stock, to pay a final dividend on the latter of 10 per cent, making 15 per cent, less tax, for the year. There would then remain to be carried forward to next year the sum of £302,744, compared with £285,302 for the previous year.

TRADING

I am pleased to report that our trading profit last year reflected a considerable improvement over the previous year and that the net profit of £260,661 is a record to date. Sales increased in every division; in fact, overall they exceeded those of last year by some 20 per cent. This satisfactory result was due to our having been able to take advantage of the active trading conditions existing and to the benefit of increased production at the factory as the result of the expansion programme which your Board sanctioned two years ago. Without this greater production and turnover we could not have absorbed the higher cost of labour, materials and services which we—in common with other companies engaged in manufacturing and retailing businesses—have had to meet and the full impact of these additional costs has not been reflected in the accounts under review.

Your Directors will continue to pursue their progressive sales policy to improve their methods of manufacture and to take advantage of every possibility of expanding your business both at home and abroad, but, having regard to the more difficult trading conditions now prevailing, unless there is a halt to the continuous spiral of additional costs the future level of profits will be adversely affected.

DUPLICATING MACHINES AND SUPPLIES

We have continued to make good progress in this division and we introduced early this year a new model Duplicator—the Roneo "750." This machine incorporates many improved features both of design and operating efficiency. It is the result of intensive research work spread over many years and in developing this new model we have kept constantly in mind the requirements of the user. The machine possesses the latest refinements and it embodies the simplest of controls, fully automatic inking system, means for pre-selecting the desired number of copies, has a speed range up to 150 copies per minute and devices for copy levelling and stacking. It has been very well received by users and we are confident that it will establish itself firmly on the market both at home and abroad.

The demand for the exclusive Roneo electronic stencil continues to grow and this unique feature coupled with the Roneo "750" Duplicator offers to the user the widest possible scope of work to be produced and—what is so important in these days—more opportunities for economies in costs.

STEEL EQUIPMENT AND FILING SYSTEMS

The demand for our standard lines of Steel Office Equipment and Filing Systems has been at a satisfactory level although competition is very keen. At the same time, there is a constantly growing appreciation of the benefits of modern steel office equipment installations for business premises whether large or small and the special department of our business established to give advice—without cost or obligation of any kind—to make surveys and to submit detailed proposals has had to be extended to provide the services demanded by the nature of this business. I am sure that it would be well worth while for any business house who may be contemplating new office accommodation, alterations or extensions to existing premises to "Call in Roneo and do the job properly."

Sales of lateral filing equipment have continued to advance, but there is still plenty of scope for its further application especially where the problem of bulk filing exists. Roneo lateral filing is a method of classifying large quantities of files using the minimum of floor space and it is based on our long-established principle of suspended interlocking pockets and fully visible titles. It can also be used to advantage in awkward wall recesses or corridors too narrow to accommodate drawer filing cabinets. In short it is a space saver.

EXPORTS

Last year I was pleased to be able to report that our sales abroad exceeded by 40 per cent those for the previous year. I am glad to be able to say that our progress in the export field has continued—albeit at a slower pace—and our turnover last year in foreign markets established a new record. I hope Stockholders will regard this result as gratifying especially in the light of the many import restrictions, currency difficulties and growth of local manufacture with all of which we have to contend in so many markets.

Stockholders will be pleased to learn that our new venture in Canada, upon which we embarked early in 1955, has now operated for a full year and is already earning profits, thus confirming the wisdom of our decision to establish our own organisation in that market. Your Board look forward to even better results when the business is fully developed to meet the requirements of that market.

NATIONAL SITUATION

Last year, in attempting to describe the general economic setting within which we could assess the prospects of our own Company, I said that the halting of inflation presented us with the most pressing of our immediate domestic problems.

Since that time recognition of this has become widespread. The Prime Minister himself has carried out a long series of meetings with representatives of the central employers' organisations and the Trades Union Congress as part of a campaign to make more widely realised the dangers of a continuing upward movement in prices and wages, and last March he presented to Parliament a White Paper on the Economic Implications of Full Employment. This was followed in June by announcements by the boards of nationalised industries indicating their intention of avoiding further price increases during the coming year.

In July, the Association of British Chambers of Commerce, The British Employers' Confederation, the Federation of British Industries and the National Union of Manufacturers recommended that private industry should also follow a policy designed to steady prices and the British Employers' Confederation, in a statement issued concurrently, pointed out that steadiness in prices depended on steadiness in costs and that wages were a major element in costs. Meanwhile, the General Council of the Trades Union Congress had, in February, issued a statement which broadly accepted this and which recognised that the world did not owe the British worker a living.

CAUSE FOR SURPRISE AND CONCERN

In the light of this general agreement as to the needs of the situation, the fact that claims for substantial increases in wages have again been launched in many of our leading industries has understandably given cause for both surprise and serious concern. The surprise, but not the concern, was to some extent dissipated by the discussion at the Trades Union Congress in September, which showed that several of the leading members of the General Council of the TUC were unwilling

to accept the responsibility which clearly rests upon the trade unions.

With many industries now feeling the effects of contracting markets both at home and abroad, however, the days are past when industrial peace can be lightly bought by a concession by employers, and the months that lie ahead will clearly be troubled ones. If the outcome should be that the present attempt to put the pound sterling again on a really firm basis fails, the public at large will know where the responsibility lies.

AWARENESS OF DANGER

The degree of awareness among the general public of the continuing dangers of the present economic position of this country is, I believe, far greater today than it was a few years ago. The very fact, however, of living for so many years in a precarious situation without being overtaken by actual disaster has to some extent dulled the apprehension of a lot of people. Inflation has, in fact, produced an illusory sense of well-being through the stimulation of business activity produced by the general desire in times of rising prices to buy today what it would otherwise be prudent to put off buying until tomorrow. What is, however, putting an end to such illusions is the hard fact of our need to sell our goods in the markets of the world under increasing competitive conditions. I have reiterated this theme many times in the past and I make no apology for returning to it again.

That need arises not only from the fact that it is only by exporting that we can purchase abroad the bulk of our requirements of raw materials and food which we cannot produce at home. We must also export to provide the means for meeting our debts to other countries and for playing our part in the development of overseas areas to which we may look in the future as markets for our goods. We must also build up our gold and dollar reserves to such a level that we no longer find that every small adverse change in our circumstances generates rumours of a further devaluation of the pound sterling, and a consequent speculative movement against it.

These reserves constitute the ultimate means of settlement of accounts with the outside world not only of this country but of most of the countries of the Commonwealth and of some others besides. On September 30th last they stood at £830 million and are sufficient to pay for our own imports for only about 2½ months.

TOTAL WORLD TRADE

Total world trade has shown a tendency to expand in recent months as have, in fact, our own exports. Our proportionate share of that trade, however, has for some time been falling as many of our competitors, and notably Germany, have increased theirs. The difficulties recently experienced in many industries which have hitherto been large exporters are a warning to all. If we are to hold our own, let alone improve our position, we shall have both to keep down our prices and improve our delivery dates. This means that we must avoid anything likely to increase the costs or reduce the output of our exporting industries. As yet we cannot gauge the effect of the recent developments over the Suez Canal.

The avoidance of any increase in costs brings us back to the necessity for stopping inflation. It is idle to expect that this can be done without making things more difficult for those of us who have benefited from the easy conditions which inflation has induced. It would be wrong to ask the Government to relax the measures it has taken for this purpose before they have done their job. We are entitled, though, to ask it to make far greater efforts than hitherto to reduce the volume of Government expenditure and consequently the demand put by it on our national resources both directly and through the maintenance of the present high rate of taxation.

UPSURGE OF INDUSTRIAL INVESTMENT

While the sudden upsurge of industrial investment 18 months or more ago undoubtedly contributed to the inflationary pressure, no one can gainsay the need for such investment if we are to increase our output, to reduce our costs, and to keep abreast —and, if possible, ahead—of our competitors. We must not regard investment in industry as a residual legatee after all forms of public expenditure and private expenditure on current consumption have been met. The savings to pay for such investments may come to some extent from undistributed profits but, if prices are to become increasingly competitive, there are limitations to what, beyond replacement of existing capital, can be done in this way.

Institutional investors, including pension funds, will no doubt become an increasingly important source of such savings. There must, however, be a much greater possibility and encouragement for the private individual to resume his role as saver and investor. With the redistribution of incomes which has occurred in recent years, attention will in future have to be directed to a much greater extent than hitherto to the small investor, and particularly the working man, and ways of guiding small savings into industry are well worth exploring.

A CHALLENGE

In short our present situation constitutes a challenge to the enterprise, inventiveness and energy of all of us. I do not believe that the task before us is beyond our powers. What it does call for is a whole-hearted co-operative effort by the entire community and no section of our people can contract out of their obligations without endangering the future of all.

In conclusion, I desire to express once more on behalf of the Board sincere thanks to all those employees both at home and abroad who by their loyal and devoted services to the Company have made their contribution to the successful results of the past year.

The report and accounts were unanimously adopted and the dividend as recommended was approved.

The retiring director, Sir Greville S. Maginness, KBE, was re-elected and the proceedings terminated with a vote of thanks to the chairman.

RANSOME & MARLES BEARING COMPANY, LIMITED

LARGER TURNOVER

The fortieth annual general meeting of this company was held on November 1st at Newark, Mr Edward W. Senior, CMG, chairman, presiding.

The following is an extract from his speech circulated with the report and accounts for the year to June 30, 1956:

During the year under review the economic climate has been variable, particularly during the second half, when the credit squeeze had a marked effect on the demand for durable consumer goods which perforce had its effect on the demand for ball and roller bearings. There is also active competition both in the home and overseas markets, so I am particularly pleased to report that, in spite of the difficulties referred to, sales in the second half of the year were well maintained and there has been a satisfactory increase in turnover for the whole year.

Our subsidiary Companies all showed improved results, as did our overall export trade, although difficulties associated with import licences and intense competition remain. A visit was made to Australia last autumn and a favourable impression was received of the operations of our subsidiary Company and the potentialities of that vast country. It is unfortunate that it is presently encountering economic difficulties similar to those in this country but the prospects are good. The closest possible personal contact is maintained with our overseas subsidiaries, representatives and customers.

PROFIT AND DIVIDEND

Once again, through increased productivity and a shading of profit margins, we have absorbed a part of the increase in wages and material costs; this is the policy we have continued to pursue in the fight against inflation. Consequently our trading profit before taxation shows only a modest increase of £62,457 to £889,724, a percentage less than our percentage increase in turnover; the net profit of the group is some £6,000 up at £400,132, of which £339,996 is transferred to the Holding Company's Appropriation Account. The Directors recommend that the amount available for appropriation should be dealt with by making a final distribution of 7¼ per cent less tax, and a bonus of 2½ per cent less tax.

INCREASED PRODUCTIVITY

Our productivity has again been increased and I trust will continue to increase, but the benefits which should flow from the increases in the shape of reductions of costs will be nullified if, as has been happening, wage increases more than cancel these reductions; this is not sharing the benefits of increased productivity, it is the appropriation of all the savings and something more.

In prevailing conditions it is difficult to assess the future trend of events. The present position is that the Annfield Plain extension is practically completed and the order book stands at a higher level than a year ago. However, since the end of the financial year under review the situation in the Motor Industry has deteriorated further with a consequent effect on bearing requirements; as a result it has been necessary for the time being to make some reduction in working hours in the affected sections. Regrettable as this has been, it is gratifying to note that we have had the understanding co-operation of the Unions.

At the same time I feel confident that your Board has followed the right policy in developing our resources; there is a wide spread of demand for our products in fields of engineering not concerned with durable consumer goods, and, provided costs can be kept down, we also hope to expand further our export trade.

The report and accounts were adopted.

NEEPSEND STEEL & TOOL CORPORATION, LIMITED

SIR STUART C. GOODWIN'S STATEMENT

The thirty-sixth annual general meeting of this company was held on November 6th at Neepsend, Sheffield, Sir Stuart C. Goodwin, JP, chairman, presiding.

The following is an extract from his circulated statement for the year to March 31, 1956:

Since the last annual general meeting your company has acquired the total capital of three further companies, namely, William Turner & Son, Limited, Wincobank Rolling Mills Company, Limited, and Albion Twist Drill & Tool Company, Limited.

The three firms acquired should contribute substantially to our income in future years. Their acquisition also explains our reduction in liquid assets, as your Board consider it is far preferable to utilise our surplus capital in acquiring companies that can add to our annual earned revenue than by leaving such capital on deposit and thus drawing but a small yield. I would emphasise that the firms acquired manufacture products on which we have specialised knowledge.

The trading profits for the year, before taxation, have amounted to £1,030,916, as against a figure of £889,355 in the previous year. The total of our issued capital and reserves now amounts to over £4 million. Current assets of the whole group amount to £3,669,349, as against current liabilities and provisions and amounts set aside for future taxation £1,207,623, giving an excess of £2,461,726. It will be seen that the Neepsend group of companies is in a very sound financial position.

While it is difficult to forecast the future, yet after six months of the present year our output has been fully maintained, despite the recession in the motor industry, and I am hopeful of satisfactory results a year hence, unless something exceptional intervenes.

The report and accounts were adopted.

JOHN J. THORNYCROFT & COMPANY

FACTORS AFFECTING TURNOVER

The fifty-fifth annual general meeting of John I. Thornycroft & Company, Limited, will be held on November 28th in London.

The following are extracts from the statement by the chairman, Sir John E. Thornycroft, KBE, circulated with the report and accounts:

Last year the balance of trading of the Group showed an increase of £319,878 compared with the average of the preceding three years. This year there has been a decrease of £200,310, over the previous three years. I can assure shareholders that this has not been through any lessening of the efforts on the part of the Board and Management, and would remind you that your company's performance cannot be judged on one year's results, because contracts and the results from development expenditure run over a much longer period.

If the Government cannot stop depreciation in the value of the £, and wear and tear and initial allowances continue to be based on historical cost, something must be done to enable primary industrial companies to accumulate cash resources. Balancing allowances do not produce the necessary amount of cash to replace worn-out plant. Investment allowances should be re-introduced for companies undertaking work basically essential to the country. It is suggested that those companies complying with this basically essential definition who can show that over 33 and one-third per cent of their annual income is directly paid out in salaries, wages and national insurance, and whose profits distributed to shareholders do not exceed 2.5 per cent of their annual income, should qualify for such investment allowances. Profits tax, distributed or not, should not be levied on such firms. This would benefit the nation by keeping down primary costs for all industry.

In order to maintain the standard of living of the Country's workmen, it is essential that semi-skilled and other men be allowed to join craft unions, even if only temporarily.

ABERFOYLE PLANTATIONS LIMITED

The twenty-second annual general meeting of Aberfoyle Plantations Limited was held on November 1st in London, Mr P. J. Burgess (the Chairman) presiding.

The following is an extract from his circulated statement:

The twelve months under review have been profitable with an average crop of 480 lb of rubber per acre. After paying export duty of £56,663, we realised an Estate profit of £128,569, of which taxation takes eventually more than one-half, and we are finally left with a net profit of £57,437, which is equivalent to £7 1s. 8d. per planted acre.

Shareholders were informed during the year by circular letter of alterations in the method of developing the Company's interests in Southern Rhodesia. It was realised that the development was a large scale operation, and to bring the scheme to early maturity in a big way would make demands on the Company's financial position, which would be impossible. Arrangements were accordingly entered into with the James Finlay group, whereby a Company was to be formed in Southern Rhodesia with an initial Authorised Capital of £3 million. This Company has taken over all Aberfoyle's assets in Inyanga, and the consideration for the acquisition is to be allotment to Aberfoyle of fully paid shares to the value of £200,000. Aberfoyle has also the right, until 1960, to take up further shares at par in the Rhodesian Company and to representation on the board.

Progress on Tea development continues energetically and so far can be said to be very satisfactory. The labour force continues to increase, and while labour difficulties must be expected, nevertheless the outlook is rather cheerful. The building programme is also proceeding very satisfactorily and specifications are being prepared for an initial factory to manufacture up to 3 million lb tea per annum.

The report was adopted and the total distribution of 25 per cent was approved.

APPOINTMENTS

UNIVERSITY OF CAMBRIDGE

DEPARTMENT OF ESTATE MANAGEMENT

The Appointments Committee of the Department of Estate Management hope soon to be in a position to appoint a University Assistant Lecturer in the Department of Estate Management. Applicants should hold a degree in Economics or Estate Management. The person appointed will be required to commence duty on January 1, 1957, and to give instruction in Imperial and Local Taxation and Fiscal Policy. The appointment will be subject to the Statutes and Ordinances of the University. Pensionable stipend £700 to £850 a year subject to certain variations. Non-pensionable children's allowance. Further particulars of duties and stipend from the Secretary of the Appointments Committee, Department of Estate Management, 73 Trumpington Street, Cambridge. Closing date for applications, November 21, 1956.

THE UNIVERSITY OF SHEFFIELD

Applications are invited from graduates of any University for a DOUGLAS KNOOP RESEARCH FELLOWSHIP. The Fellow will be required to undertake research in ECONOMIC HISTORY in the University of Sheffield. The duties of the Fellowship will be £525 a year, and it will normally be tenable for three years. Applications (3 copies) including the *line of research proposed* by the applicant, should reach the Registrar from whom further particulars may be obtained by November 30, 1956.

ACCOUNTANT OFFICE MANAGER required by old-established Company in East Africa. The appointment is attractive, permanent and pensionable, requiring *experienced man, preferably qualified, age approximately 30/35.* Good conditions, leave, salary, housing allowance, etc. Married man considered. Interview Parent Company in London.—Write full details to Box "M.O.," c/o J. W. Vickers & Co. Ltd., 7-8 Great Winchester Street, London, E.C.2.

KODAK LIMITED, KINGSWAY, W.C.2

A new post occurs in the Statistics and Economics Department for an Economic Research Assistant. Applications are invited from graduates in Economics, about 25 years of age, who have Economics as their special subject with statistical method as a subsidiary. Some experience of economic analysis as a tool in business forecasting and a knowledge of problems of international trade would be an advantage. The range of products manufactured and markets served are extensive; there are interesting possibilities for the growth of the range of work carried out in the department. Starting salary by arrangement. Letters may be addressed in confidence to the Personnel Manager.

THE ASSAY OFFICE

NEWHALL STREET, BIRMINGHAM 3

Science Graduate required (Metallurgy—Chemistry) for administrative and technical duties. Salary according to age and qualifications.—Application to be sent to the Assay Master.

WANT a desk job? Have you an opening for a man of 40, reasonably bright, good with staff, no industrial experience? Background: Graduate, war-time Staff Officer, then *administration of Field Research in* Far East. Tropics now forbidden (ex T.B.) but fully fit and genuinely willing to learn. Bottom rung new ladder gratefully accepted.—Box 554.

AVELING-BARFORD, LTD.

NOTICE IS HEREBY GIVEN that the Transfer Books of the 5½ per cent Cumulative Preference Stock and the 5 per cent Second Cumulative Preference Stock will be closed from Friday, December 7, 1956, to Friday, December 21, 1956, both days inclusive.

Invicta Works, By Order of the Board,
Grantham. H. C. RYAN,
November 1, 1956. Secretary.

THE CHARTERED INSTITUTE OF SECRETARIES

Employers requiring the services of CHARTERED SECRETARIES to fill secretarial and similar executive posts are invited to communicate with the Secretary of the Institute (Dept. E), 14 New Bridge Street, London, E.C.4.

THE Economists' Bookshop has the world's widest range of books on Economics, Politics, History, Anthropology and the Social Sciences. World-wide mailing service. Second-hand books bought.—11-12 Clements Inn Passage, Aldwych, London, W.C.2.

SUCCESSFUL TUITION FOR THE B.Sc.(ECON.) DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees, *instalments.* Over *1,000* Wolsey Hall students have secured this valuable degree since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

INTRIGUING PASTIME: make amusing candle-holders from the bottles that Duff Gordon's FLOR D'ID Sherry comes in. What's so intriguing about that? Well, you have to empty the bottles first, don't you?

EXPERT POSTAL TUITION for Examinations—University Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus—and/or advice, mentioning examination or subjects in which interested, to the Secretary (09/2),

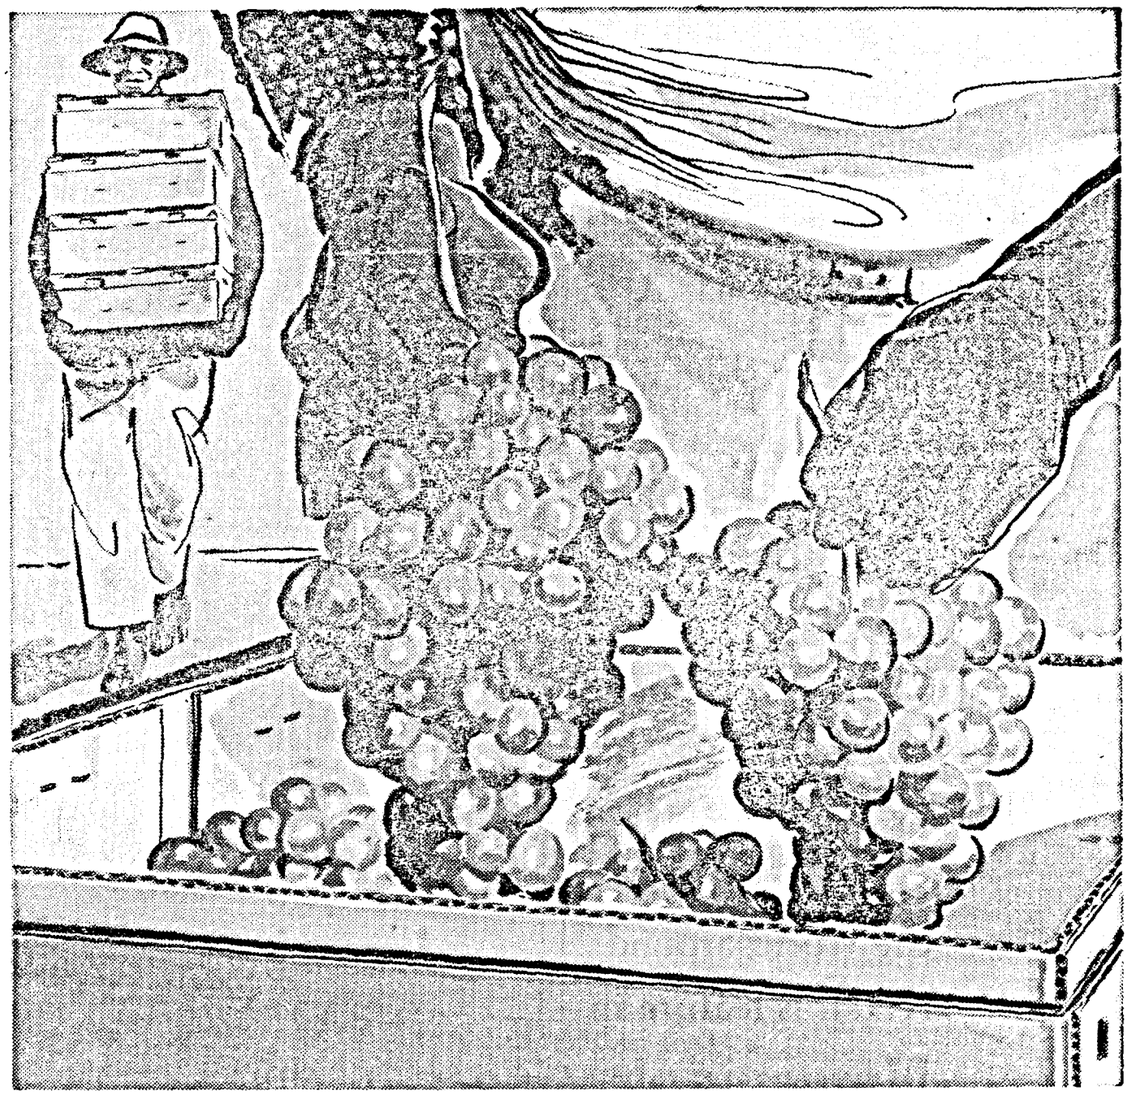
COVENTRY CLIMAX ENGINES LTD. (DEPT. E.) COVENTRY, ENGLAND



CORRUGATED boxes protect grapes from vine to market

To bring a good price, grapes must reach market plump, juicy, uncrushed. So today at many South African vineyards, grapes are packed in protective corrugated boxes.

Because they're so strong, corrugated boxes can be stacked without buckling. And they keep out dirt, moisture, insects, and hungry hands. Yet they're light in weight and low in cost.

Today more and more box users are switching to corrugated for an infinite variety of packaging purposes. Frequently attracted by corrugated's economy, they quickly discover its other advantages: light weight, rigid construction, low heat conductivity, and easy printability for better brand identification. Of all packaging materials available, only corrugated does so much for so little.

If you have something to package, take a tip from thousands of other packagers: think first of corrugated. Your nearby boxmaker can lend you the assistance you need in designing your box. Have a talk with him soon.

Langston doesn't sell corrugated, only the machines that make it. Since 1902, these machines have led the field in efficiency and dependability. *Samuel M. Langston Co., Camden 4, N.J., U.S.A.*

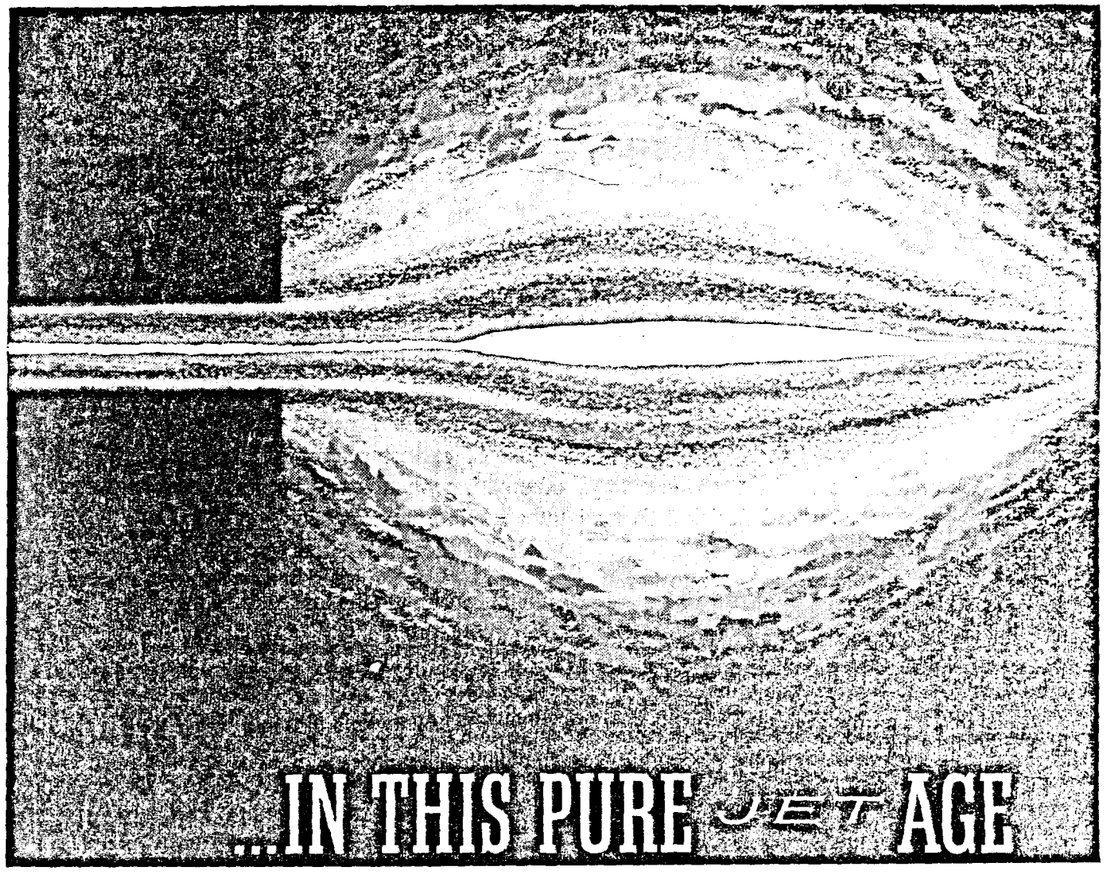
Sole Importers: Lambert & Butler of Drury Lane
Branch of The Imperial Tobacco Company (of Great Britain and Ireland), Limited

LT39F



The technique of steel furnace boosting with a jet of pure oxygen stabilizes quality and batch uniformity.

This principle, whether applied to Open Hearth, Blast or Bessemer, enables manufacturers to widen still further their range of specialised quality steels.

Growing demands of scientific and industrial progress require speedier delivery in the face of increasing competition. It is vital that manufacturers employ this latest technique which shows greater economy and is only made possible by employing the proven principle of the Butterley on-site Tonnage Generator.

This compact, efficient plant produces a continuous supply of Oxygen and/or Nitrogen at any desired purity and pressure, piped direct to the point of usage, in the exact quantity desired. Its efficiency eliminates production hold-ups by maintaining a constant supply, and maintenance costs are low.

The Butterley Company have acquired the sole production and sales rights of this, the most successful American Process, for the United Kingdom, British Commonwealth, and certain European countries.

If you can use oxygen, consult

BUTTERLEY OXYGEN DIVISION

The Butterley Company Ltd., 9 Upper Belgrave Street, London, S.W.1. Telephone: Sloane 8172 3

Current contracts include: British Celanese Ltd., Brymbo Steel Works Ltd., Imperial Chemical Industries Ltd., Steel Company of Wales Ltd., Stewarts and Lloyds Ltd.

Makers since 1790 of: Railway and other bridges; constructional steelwork; unit bridging; overhead cranes; railway wagons and mine cars; mechanite castings; iron paving; mining and sheet metal machinery; wrought iron bars; sewage ejectors; pumps and air compressors; wool washing machinery.

MATERIALS HANDLING
FISHOLOW
SERVICE TO INDUSTRY

IS THE CREDIT SQUEEZE GIVING YOU PRODUCTION STENOSIS?

The credit squeeze is restricting expenditure on new buildings. In many cases this will mean a real loss of export potential. The wise executive looks for other ways of creating capacity — does not just accept a Board decision that schemes for increased production cannot go ahead because of credit difficulties. In fact, this situation presents a challenge to find another way.

Does he know that one of the many features of Fisholow Material Handling Systems is " Space-Saving " ?

Does he know that " Space-Saving " can bring in its train new layouts and new methods ?

Does he know that new layouts and new methods in conjunction with Fisholow systems may give him the best of both worlds — extra production at no capital cost for buildings ?

Does he know that Fisher & Ludlow offer an Advisory Service to tell him if this sort of new thinking can help him ?

A note (in confidence if you say so), on your company letter heading, to the Technical Director, Material Handling Division, Bordesley Works, Birmingham 12, may start off a chain reaction with surprising results.

Without obligation, of course — all part of the Fisholow Material Handling Service to Industry.

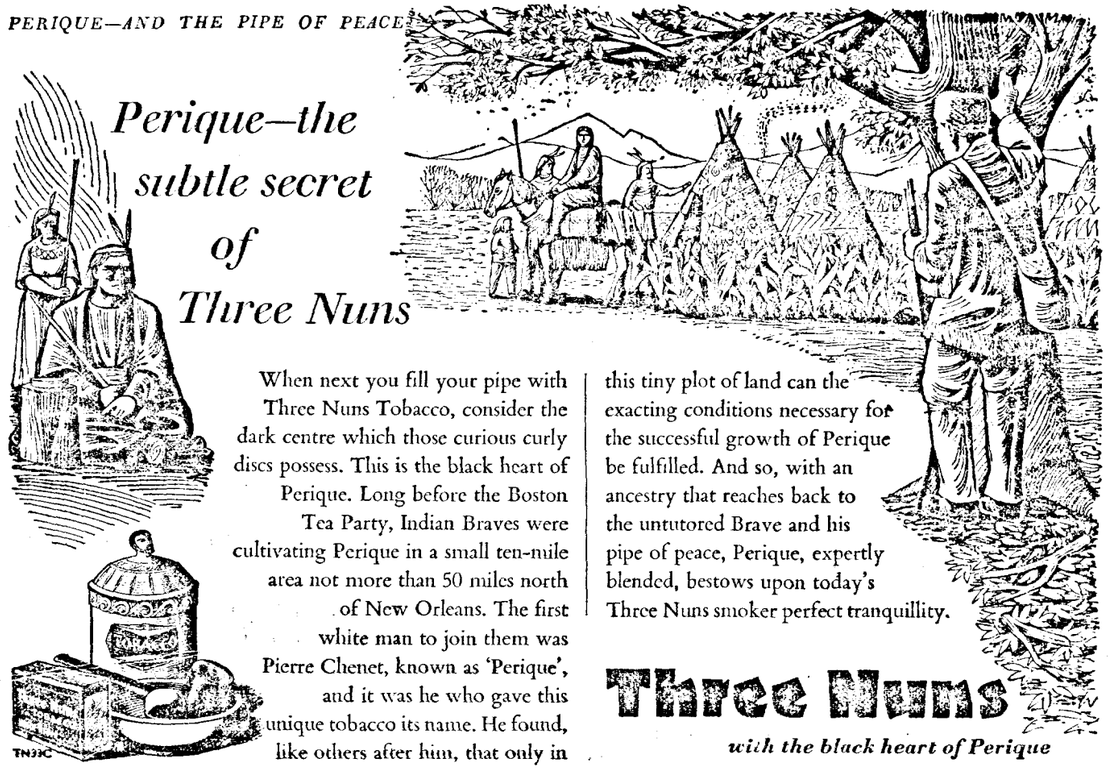
PERIQUE—AND THE PIPE OF PEACE



Perique—the subtle secret of Three Nuns

When next you fill your pipe with Three Nuns Tobacco, consider the dark centre which those curious curly discs possess. This is the black heart of Perique. Long before the Boston Tea Party, Indian Braves were cultivating Perique in a small ten-mile area not more than 50 miles north of New Orleans. The first white man to join them was Pierre Chenet, known as 'Perique', and it was he who gave this unique tobacco its name. He found, like others after him, that only in this tiny plot of land can the exacting conditions necessary for the successful growth of Perique be fulfilled. And so, with an ancestry that reaches back to the untutored Brave and his pipe of peace, Perique, expertly blended, bestows upon today's Three Nuns smoker perfect tranquillity.

Three Nuns
with the black heart of Perique

From beginning to being

Continuity plays a prominent part in the services offered to industry by Sondes Place Research Institute The Institute undertakes both pilot plant development—essential for efficient and economical transition from bench-scale to factory-scale—and, based upon extended and meticulously observed pilot plant test runs, the design of the full-scale plant

Nor does this service necessarily stop with design; the Institute will send engineering staff to supervise the erection and operation of plant in the factory. The Institute will also design special-purpose machinery and construct working prototypes

Under a bushel

Most of our best achievements result from confidential research work for firms whose commercial security we are bound to respect. May we send you a booklet about our services? Our successes must remain unsung!

The Alliance

"THERE is no better answer than the alliance": General Gruenther's words are a timely warning and reminder. "The tragic element in foreign policy is the impossibility of escaping conjecture; after the 'objective' analysis of fact there remains a residue of uncertainty about the meaning of events or the opportunities they offer." This quotation from a striking essay on American diplomacy in the October issue of *Foreign Affairs* is only too true. But certain facts need no conjecture: these are the facts of power.

Articles on later pages of this issue of *The Economist* seek to unravel the meaning of what is now going on in the Middle East and to assess the opportunities—and perils. One fact stands out above all; it is that none of the perils can be averted, and none of the opportunities be grasped, without the American alliance—or without the positive exercise by the Americans of their power and influence.

The great task of statesmanship now is to rebuild the alliance. There is no substitute. We cannot, as we should now know, go it alone. It is no answer to say that, if the Americans will not act, we will act without them; we cannot. The facts of power remain: Russia cannot be resisted, whether the challenge is by direct attack or by indirect subversion, nor can the United Nations be activated, without the Americans. That is why, despite the resentful regrets of those who naturally gird against the decline in Britain's world power, much the largest casualty of the Middle Eastern misadventure (and of the manner in which it was embarked upon) must be seen to be the transatlantic link.

The alliance, like the peace we seek to secure, is indivisible. The call, it should be emphasised, is to the White House just as much as to Westminster and Whitehall. Between us and the Americans it is, in a sense, a tale of two inferiority complexes: ours because we harp upon prestige, without recognising that prestige can only be earned by our success in managing our affairs and in gaining the respect of others and cannot be bolstered by words and gestures; theirs because by ill-timed criticisms and an indifference to their allies' interests they still work off the last traces of their long-gone colonial (and isolationist) status.

The recipe is simple, if harsh. We must learn that we are not the Americans' equals now, and cannot be. We have a right to state our minimum national interests and expect the Americans to respect them. But, that done, we must look for their lead. And they, on their side, must accept, as they have not done, the obligation to protect our interests and provide, as they have not provided, clear leadership. It is a relationship that requires far more, even brutal, frankness on both sides (our doubts about Mr Dulles have been vastly too muted), but on ours a sure loyalty and willingness to follow the lead when given. It is for President Eisenhower now to give it, and not to wait upon others. And, for us, the question remains: who in London now is able to repair the bridge we broke?

East of Israel

SURPRISE: upheaval: reversal of policy: over the past fortnight a succession of such events has left participants in the Middle East breathless and onlookers bewildered. But both can already say with certainty that there has been a sharp shift in the balance of power in western Asia—a little less for Egypt, a little more for Israel: much less for Britain, far more for Russia. Maybe the pattern is still changing; but an attempt must be made, in the pause for breath after the conflict in Egypt, to take a snapshot of the scene as it appears east of Sinai.

There, Arab and Iranian opinion is riven into two unequal parts. The larger one, numerically speaking, consists of middle classes and workers who see the world in poster colours and the events in Egypt as part of a familiar pattern. By their standards, old-fashioned Anglo-French imperialism sought to win back its hold and was thwarted thanks, principally, to a threat of Soviet intervention; to people without much to lose, this is not unwelcome. The other sector, numerically tiny by comparison, is more powerful and more responsible, but more uncertain where it stands. Its members are kings and ministers, high officials and well-to-do merchants—a thin upper crust with a classic aversion to violent change, and dubious about the pass to which President Nasser has brought the Arab world by his over-dependence on Russia.

★

The Arab members of this group have been meeting in Beirut for some days this week. The choice of meeting-place suggests their perplexity. Never before has a full Arab League meeting of such high-level personalities been held outside Cairo; they could have chosen the fervid pro-Nasser climate of Damascus; they have preferred calmer surroundings. Nevertheless, their meeting is bedevilled by a confusion of mind even greater than that which riddles non-Arab capitals for, by their standards, the arch-enemy is still Israel. The conflicting themes they have to reconcile are their need for strength against Israel and their aversion to leaping, as Egypt has leapt, into the orbit of the Soviet Union. Even governments that shrink at the thought of such a calamity feel constrained, in order to please their publics, to utter cries that mask realities.

For instance, the Iraqi cabinet this week put up just the kind of smoke-screen that precludes rational policy-making and clear thinking. After its meeting of Tuesday last, it called on the United Nations to "end the State of Israel," an objective that could not—after last week's display by the Israel army—be attained by any conceivable means short of aid from Soviet troops; yet on the same day a "responsible spokesman" on Baghdad radio gave the following warning:—

> The arrival of Russians in Arab countries, and particularly in Syria, under whatever pretext or guise, may be considered by Nato as a provocative act, which in the present critical circumstances might serve as a direct cause for the outbreak of a third world war. . . . We urge senior officials and those engaged in national affairs to be vigilant and to realise the seriousness of the phase through which the world is now passing.

No one envies the rulers in Beirut, caught between the devil of hatred for Israel and the deep sea of distaste for Russian support. What are they to do? Veil it in platitudes or seek a way round the dilemma?

★

What counterweights are available? Britain is, for the moment, a discard; its policies have tended to increase the local confusion of mind. Had the British cabinet directed its "police action" against Israel as well as Egypt it might have preserved Arab minds from confusion; it might even have retained some influence on their thinking. Because it attacked Egypt only, it is written off for siding with Israel, and can look for no hearing in the Arab world. But there remains the United States. President Eisenhower electrified Asia, and has won a respect he has never previously enjoyed, first by speaking without thought of the Jewish vote in the United States on the eve of a presidential election, and then by the firmness with which he warned both his Anglo-French friends and Israel that they must conform to the will of the United Nations. To Arab rulers who see only two choices ahead—that of getting rid of all invaders as quickly as possible, and that of becoming the Spain of the third world war—his words were unbelievably encouraging. The Syrian Prime Minister and Military Governor, Sabry el Assaly, sent him broadcast "greetings, gratitude and appreciation" just as warm as those he sent to the Soviet Union.

Even President Nasser, using slightly different emphasis, did the same. As he told a huge crowd in the Al Azhar mosque on November 9th:—

> I was notified that Russia had informed Britain and France of her determination to subdue Anglo-French aggression by force unless the aggressors, Britain and France, did not desist. Upon this I contacted Mr Eisenhower and informed him of Egypt's attitude and asked him to let me know the attitude of the USA before the Russian warning and after the Russian warning. I found that he opposed this aggression and that the USA would endeavour by every means to subdue the spirit of aggression in France and Britain and to stop these barbarous acts. Thus today there are two big powers on our side.

It is clear from Russian broadcasts (one is quoted in the review of Russian utterances on page 578) that this classification of the United States among the saviours is not pleasing to Moscow.

How will the Soviet Union handle this tendency of Arab leaders to take out a reinsurance policy? Are its offers of volunteers intended for them, or only for western ears. Are they merely designed to intimidate, or are they a practical proposition? Until the moment of the Anglo-French ultimatum, Russia's handling of the Middle Eastern governments had been a courtship sweetened with armaments and training missions. Only Egypt and Syria had accepted these, and both had done so for use against Israel.

The Soviet purpose was other; it was not to destroy Israel, but to keep tempers simmering along the oil routes from the Middle East to the west. Israeli evidence from Sinai, which still needs to be checked by neutral eyes, suggests that the Russians had supplied more than was known at the time when, on account of Egypt's undue dealings with Russia, Washington and London called off the Aswan Dam loan. Along with the armaments, the Russians had sent 1,000 technicians and instructors. But there is no evidence yet that they had done more than prime other people's arsenals. A Turkish report from Aleppo on the Syrian premier's visit to Moscow (which ended in the week of the Anglo-French ultimatum) says that he was told he could have any help he liked "short of war." The qualification is underlined by the departure of Russian and Czech technicians from Cairo, along with other foreigners, when hostilities began; about 300 are said to have made for the Sudan. The Soviet government did not talk of sending Russian personnel to fight in the Middle East until after the deployment of the Anglo-French forces. By what it said then it gave notice that the area is no longer a western preserve, but one in which Moscow too has a vital interest. Yet Soviet policy would be best suited by a return to the old device of priming others to harass the west. It is a fair guess, judging by past experience of local nationalisms, that into the vacuum left by the British decline, Soviet influence will flow more quickly by that method than by pressing "volunteers" on gun-shy governments.

★

Arab leaders deny that there is a vacuum; by their reckoning, their national movement is expansive enough to fill the Middle East to capacity. Yet, tacitly, they admit its existence when they turn to President Eisenhower as a counter-pressure to Russia. But only by the most strenuous of policies can the President hope to make that counterweight felt. He starts with a tremendous handicap. His prime objective must be peace between Egypt and Israel, or, if not peace, at least a *modus vivendi* secured by some form of insulation. Yet this calming of tempers is what the Soviet Union has not wanted, and can still avoid if he chooses to go on winning Arab friends by selling them arms. The President will be dealing with governments who desire neutrality and safety as between east and west, but who hanker after a state of war between themselves and Israel. Can he demonstrate to them that the first is from now on incompatible with amassing armaments or enlisting foreign volunteers to turn against Israel? Can he show them that to plan for the one war brings on another?

He can win their attention by meeting Mr Nehru, but merely to join India in detached and inactive exhortation will not win any Arab hearts. In the realm of things that Arabs can touch or see, he will have his work cut out to offer attractions as great as Soviet arms, though perhaps goods on the scale of the Aswan Dam could work the miracle. If there were peace

in Palestine, it might become possible, and profitable, to utter the message that the Asian peoples want to hear—to offer proof that it is possible to be neutral. If the President is able to reinforce the local desire for a quiet life, and for removing the greatest local industry—the oil industry—out of the realm of east-west politics, he will have stolen a popular theme that was open to the Soviet Union in the days when Britain was seeking alliances, but would no longer serve if the new seeker after bases and landing rights were to be Soviet Russia. Who then would champion "independence" against "imperialism"? Not Russia against Britain, but America against Russia.

What Suez Means Now

In addition to leading articles (on pages 571, 572 and 575) on the international aspects of the Middle Eastern crisis, the economic implications for this country are examined in a leading article on Government policy (on page 574); in a Business Leader (on page 615), which analyses the possible industrial and financial consequences; and in Business Notes from page 619.

No Ordinary Crisis

THE economic debate in the House of Commons on Monday was disappointing. The impression was that politicians of both parties have not yet adjusted their thinking to meet an economic crisis which is bound to be of an unusual sort, and is likely to have to be tackled by unusual policies. The task of adjustment is admittedly daunting. A detailed assessment of the most likely economic consequences of the blockage of the Suez Canal is made in an article on page 615. The object of this article is to consider, as uncontroversially and specifically as possible, the policy decisions that might be recommended for meeting them.

First, then, would it now be wise to increase Bank rate? The arguments are fairly evenly divided, but the balance seems to be just on the side of saying "probably not." The great argument for an increase, of course, is that Britain is now launched upon a period of considerable dollar strain, both because of the direct effect of diverted oil purchases upon the dollar account and because of the speculative movement which will almost certainly be associated with it; it may therefore seem important to show the flag of a determined policy to the world, in addition to making use of the direct attractions of a high Bank rate to foreign short money. But in economic, as in political, affairs there must be some limits (though not rigid ones) to arranging policy solely with an eye to what foreigners will think. And the domestic arguments for raising Bank rate, at a time when the main new impediment to British exports is going to be the Suez shipping bottleneck, are plainly not as good as during previous balance of payments crises. The main function of a high Bank rate (and of an emergency budget, against which the domestic case is still stronger) is to cut demand at home, and thus release goods for the export market; but it will not be much use releasing more goods for the export market if there are not the ships available to take them. The best recipe is probably to wait, watch the tide of speculation, and see.

Secondly, is there anything to be said for another expedient that has been whispered in the City—a new devaluation of sterling, presumably through resort to a floating rate? Devaluation can be a sensible (not merely an inevitable) instrument of policy when speculation against the currency has become intense and when it is clear that more British exports could be sold (or more British imports choked off) by a cheapening of the exchange rate. Both these conditions obtained in 1949. In 1956 and 1957, however, British exports—which are now going to be held up by shipping bottlenecks rather than by price resistance—would not gain from devaluation at all; and if we devalued and still did not stop a drain upon the reserves there would be no logical end to the devaluation. This is therefore one of the cases when it will be worthwhile to cast out every dollar upon the speculative tide, a tide which will have to come back sooner or later, rather than let the exchange rate go.

Thirdly, what about physical controls? Once again, there should be no shuddering at the mere mention of the idea. Mr Macmillan has often been attacked in these columns for saying how undoctrinaire he would be about re-imposing controls if circumstances demanded them; but one could not foresee at that time in what very peculiar circumstances the Government to which Mr Macmillan belongs was about to become involved. Most people now accept that oil and petrol rationing, and probably quite severe rationing, is almost inevitable. About direct import controls, however, the balance of argument is more complex.

The important thing about direct controls on imports or investment—and it is depressing that Labour politicians and Mr Macmillan still do not understand this—is that they are likely to have no effect whatever on a general balance of payments deficit caused by overdemand; so long as direct controls are imposed but purchasing power is left unchecked, demand within the economy is not cut but is merely diverted. The essence of temporary post-Suez economics, however, is that while there may not be much case for cutting total demand, there is in the circumstances a case for diverting it—away from any of the "less essential" imports which take up trans-Suez shipping space, if this could be done. If the internal purchasing power thus set free went chasing after British goods that normally would be exported—but now cannot be because of the shortage of shipping—there might be no great harm in that. There are, however, certain conditions to be fulfilled before any such heterodox course as banning these imports could be seriously considered. Obvious ones are that Britain should co-operate with its European partners about any physical allocation of shipping space; and that we should make it clear that controls would be kept in force only so long as the canal was blocked (thus minimising the risk of more durable retaliation against ourselves). But the most important, and the one that raises most doubt in contemplating the idea, is that there should be some assurance that an effective scheme for controlling such imports could in fact come into operation before the canal is opened again. Import controls take much longer to be effective than is generally realised. The case for imposing them will probably only have relevance if the salvage survey at Suez (a Business Note on page 619 surveys its prospect) suggests that the canal is likely to be blocked for, say, a year.

There remains, as a more immediate policy, the final expedient: that of taking the impact of the post-Suez crisis in a fairly drastic fall in the reserves, with all that would imply for economic policy after the crisis is over.

This seemed to be the Government decision announced by Mr Maudling in the least unsatisfactory speech in Monday's debate; the decision was guyed by Mr George Brown as "a remarkable new doctrine . . . that the reserves do not matter." It is nevertheless the right doctrine at this time, and—in a debate that was too much taken up with Mr Macmillan's personal testament—almost certainly represented the authentic voice of the Treasury.

But two questions have to be asked. First, to what level can the reserves in fact be allowed to fall? The answer is that the Treasury probably should not be too frightened of allowing them to fall even below their previous postwar nadir, provided they do not fall to a level where speculation against sterling makes the fall itself intolerably faster. It is this balance between the evil of speculation against sterling and the evil of unnecessary under-employment—which may mean, in effect, the balance between leaving Bank rate where it is and increasing it to a penal level—that Government policy will need to weigh constantly through the anxious winter ahead. Secondly, what are the implications for policy when the canal is open again? The answer is that Britain will then have to follow a sufficiently disinflationary policy to make the rebuilding of the reserves the first charge upon our production. After a period of austerity through petrol rationing—and, possibly, of some unemployment—Britain will be faced by a period of no great domestic relaxation. It is a bleak prospect. It could be made bleaker still by wrong decisions now.

Uno in Egypt

ALL that has been achieved in Egypt so far is an uneasy cease-fire. True, the three invaders have agreed that they will withdraw; true, all four parties to the ten-day conflict have agreed that the polyglot United Nations force shall be admitted. Mr Hammarskjöld, at the same time as he presses the United Nations foot into the Hungarian door, has on his hands the task in Egypt of seeing that these undertakings are carried out, so that the hostile armies can be taken out of contact and the cease-fire made reasonably secure. Intricate as it is, this limited task does not make a beginning on the real work that has to be done, the settlement of the two disputes out of which the conflict in Egypt arose—the Arab-Israeli conflict, and the Anglo-French dispute with Egypt over the Suez Canal.

The two disputes are inter-related. The Israeli attack on Egypt on October 29th was in effect rebellion against the state of affairs (which the United Nations, or rather the powers that compose it, had tolerated too complacently) in which Egypt demanded all the freedom of action flowing from a state of war with Israel—the right to harass with raids, blockade, and threaten—while expecting to enjoy the safeguards of the armistice. Perhaps this Egyptian attitude arose from a desire to distract attention at home from the wobbly political and economic condition of the country; perhaps President Nasser genuinely miscalculated the relative Israeli and Egyptian military strengths; perhaps he was merely concerned that his country should cut a figure as leader of the Arab League. Whatever the reasons, his government's attitude up to the moment of its military defeat was not an attitude which the United Nations need, or could, condone, and it is no function of the United Nations to put Egypt back in a position in which it can take up the same attitude again. This needs to be said just now because Mr Hammarskjöld in his dealings with Egypt is acting on the instructions of the General Assembly, and the natural bent of the Assembly in such a case is to restore the *status quo*.

One of the Egyptian government's instruments in the unlawful blockade of Israel which it has maintained since 1949 is its physical control of the Suez Canal. This by itself is enough to entangle the Egyptian-Israeli conflict with the dispute between Egypt and the users of the Suez Canal. As is known, *The Economist* has never held that the grievances of the Suez Canal users against Egypt were of a kind that military action would remedy. Physical action can open a canal that has been closed; but until the fighting started, President Nasser had not closed the Canal against the users. He had, however, kept it closed against Israel, and the breaking of this blockade, together with the blockade of the Gulf of Aqaba which Egypt maintained from the island of Tiran, is, quite intelligibly, one of Israel's war aims.

On November 2nd, the day on which their defeat of the Egyptian army east of Suez was practically complete, the Israeli government announced that it would not withdraw from Egypt without a definite peace, negotiated bilaterally with Egypt, which would settle all these matters. A week later Mr Ben-Gurion was constrained by Soviet and American pressure to change his tune, and the Knesset accepted his reasons for the change with a mature self-discipline. The Israelis are now committed to withdraw from the Sinai peninsula, as the General Assembly required them to do. In fact, the General Assembly's demands go further and embrace an Israeli withdrawal from all the territory they have overrun, including the Gaza strip (a part of Palestine, though until lately Egyptian-held) and the islands of uncertain national status at the mouth of the Gulf of Aqaba. On those two fragments of territory the Israelis may still argue the point.

When the Israeli foreign minister, Mrs Meir, wrote to Mr Hammarskjöld that the government "will willingly withdraw its forces from Egypt immediately upon

the conclusion of satisfactory arrangements for the international force," she added the "urgent request" that Egypt should be called upon to stop the policy of organised raiding and drop the boycott. This reasonable request was not, however, a condition of the withdrawal, as Mr Hammarskjöld was quick to point out; it merely expressed what he called "certain hopes and demands." As the servant of the General Assembly he could probably make no other comment. The Israeli forces, like the British and French forces at Port Said, had no right to be where they were. The Assembly had required them to withdraw and had established a force to take over from them. Whoever had the power, only one government had the right to stipulate conditions for letting the international force in. As the secretary-general pointed out on November 6th, the General Assembly "could not request the force to be stationed or operate on the territory of a given country without the consent of the government of the country." This may account for the marks of British and French irritation at the way negotiations were going this week, when the force was assembling and, as it seemed, awaiting President Nasser's permission to go in.

Since this is the position, there may very well be more strains on British, French and Israeli patience as the position in Egypt is disentangled. The Israelis have not even been able to require of the United Nations that, if they give up territory to the international force, there must be guarantees against a repeat performance by Egypt. But the force may then hand over the territory to Egypt, and indeed will do so, without procuring any guarantees, unless a power as yet uncommitted takes steps to see that the hand-over is synchronised with a political settlement. The best practical arrangement would be a demilitarisation of the Sinai peninsula.

The British public, which has been prepared to expect that the Anglo-French operation would produce some results in the way of holding or opening the Suez Canal, may blink its eyes when it sees President Nasser regain practically all he has lost without being required to give any pledges, and when General Burns's force finishes up holding only a strip along the eastern edge of the Sinai peninsula. Even that the force would hold in a symbolic and not a military sense; it is only a para-military force, not organised to fight other armies.

The British and French governments, when they withdraw from Port Said, will not be surrendering anything comparable with what the Israelis are giving up. Their position at Port Said could only be of use to them in case they wanted to fight another Egyptian campaign, which they surely cannot be proposing to attempt now. It does not strengthen their hand perceptibly in the Suez Canal dispute, since the possession of one end of a canal does not enable the holder to open it, merely to close it; and they can have no possible interest in keeping it closed. If, therefore, in spite of what they have said they were to hold on to their end of the canal in the hope of getting assurances about a final settlement, this would not serve them very much.

It has been argued in London that the international force when it takes over Port Said will be acting under a responsibility to promote a canal settlement. Certainly the Security Council was seized of the two canal disputes—that of Israel and that of the users—before the fighting broke out. It is true, too, that the Assembly set up the present force with, among other purposes, the purpose of securing compliance with the Assembly resolution of November 2nd; and that resolution spoke of steps to "reopen the Suez Canal and to restore secure freedom of navigation." General Burns, however, said at Jerusalem on Sunday that his force would neither occupy the canal nor operate it: "My orders say nothing about occupying the canal. Clearing the canal is not one of my duties or responsibilities."

If the force is not to do it, Uno can still concern itself with reopening the canal through normal civilian agencies. There have been reports that it is hiring dredgers, Mr Hammarskjöld having declined a British offer to help on the ground that the work had better be done by people who have not been parties to the conflict in Egypt.

President Nasser's negotiating position begins to appear very much stronger than a ruler can usually expect when he has just been, militarily, almost completely deflated. In effect, the consequences of his military defeat have been offset, or at least masked for the present, by the diplomatic defeat which Britain, France and Israel have courted and suffered. In its shadow his pretensions are able to revive; and the old sources of conflict stand exposed again.

The next few weeks may see an example, good or bad, of the possibilities of the United Nations as an instrument for peacefully clearing up a field of conflict and resolving a complicated dispute. As is plain, there is inherent in the process, because of the necessary legalism of the international body, the danger of merely restoring an undesirable *status quo*. But to see merely this danger, or to blame it on the United Nations or on the principle of international action, overlooks that the United Nations is no more than the sum of its members and that its slender instruments of authority are only one among many powers at work.

Of those powers, the British and French governments have severely damaged their ability to influence what is done, because they have produced a situation in which the United Nations mechanism is inevitably directed in part against them. The taking of initiatives and the marshalling of effective international support are therefore for the present hardly in their grasp; they may repair their position, but in the meantime the outlines of the final settlement will be influenced and the conditions of future action will be prejudiced by the moves of the next few weeks. If real settlements of the canal, and of the Israeli-Arab relationship, are to be extracted from the present state of confusion and deadlock, an impetus will have to come from another quarter. It is now that the United States will have to decide to bring its influence actively to bear.

Notes of the Week

In Cabinet

WHERE stands Sir Anthony Eden this weekend—in the cabinet, in his party and in the country? The most important, but inevitably also the least readily fathomable, question concerns his relations with the rest of the cabinet. There now seems to be almost unanimous agreement among political commentators—one is almost inclined to say gossip writers—that moderate elements in the cabinet had to over-persuade Sir Anthony into accepting the cease-fire on Tuesday of last week; there is a fairly general consensus among them that two cabinet members may now feel privately that they would make a better party leader themselves—and that a small group of other cabinet members agrees with one of them; it is perhaps a fair summary that personal relations in the highest reaches of the Conservative party now seem rather akin to personal relations in the Labour party at one of the many moments when Labour claims it is "more united than ever before," and when the Tories themselves greet such a claim with a smirk. Where the gossips differ is in their assessment of whether this is a stable position for the Prime Minister, especially if economic and political troubles mount. It must remain a personal opinion that while in the Labour party the rows inherent in this sort of situation erupt only in occasional attempts from above to spank the ambitious challenger below, in the Conservative party an equally likely development might be for a challenger from below eventually—although now certainly not immediately—to attempt to edge out the man at the top.

—in the Party

IN the lower reaches of his party, however, Sir Anthony's position is now undoubtedly very much stronger than it was a week ago. The rebel MPs have called off their rebellion in the belief that they have achieved their objectives; as one MP has put it, Sir Anthony has now become the Mr Nagy of the Conservative revolution. The Tory rebels have good reason to be proud of the concessions they were able to wring out of the Government. Even allowing for the propaganda value of two middle tier ministers resigning and one pro-Nasser backbencher leaving the party, a group of never more than 20 active moderates would not normally have been able to achieve so much with a Government which commands a majority of 60. They were helped by several factors: the powerful moderate group in the cabinet, a general uneasiness among a wider section of Tory backbenchers, and perhaps by the haunting memory in the Prime Minister's mind of how Chamberlain had fallen—on a vote which he had won, but with a halved majority.

It is now known that about a dozen Tory backbenchers formed the nucleus of the moderate group. They opposed Sir Anthony's policy from the start, but decided to work from within for a return to compliance with the rule of United Nations law. They wrote three joint letters and on each day a major concession was later announced. For this the moderates are entitled to claim at least some of the credit, and one of the few good things which has come out of this crisis is the emergence of an active and organised Tory "Keep Progressive" group. The Prime Minister's main immediate worry in the party, however, is not about them; it is about the reactions of the Suez group to the realisation that the United Nations force is not going to be at all the sort of body they originally envisaged, and is not going to control the canal. Having left the war half-finished to satisfy his pacific critics, Sir Anthony may have to reckon with the growing frustration of his belligerent supporters.

—and in the Country

THE biggest factor behind the rallying of party support behind the Prime Minister, however, has been the discovery that public opinion is on Sir Anthony's side. The Gallup poll published in the *News Chronicle* on Wednesday has been the talk of Westminster. At the beginning of November only 40 per cent of those questioned told the pollsters that they agreed with the Government's Suez policy; now 53 per cent say they do. More striking still, while 48 per cent of those polled on November 2nd said that they would vote Labour in any general election and only 42½ per cent said that they would vote Conservative, the Conservatives lead in the latest poll by 46 per cent to 45 per cent. This is the first time for a year that the Conservatives have been in the lead in this reckoning. While a section of thinking opinion was profoundly shocked by the Suez Invasion, and reacted sharply at once, the poll suggests that less articulate opinion has swung in the Government's favour. For the first time since Llandudno the Conservative chief whip, whose support of Sir Anthony throughout the crisis has been stalwart and heroic, has a contented smile on his face.

How significant is this switch of public opinion? Labour MPs profess to believe that while the middle-class people who have reacted against Sir Anthony will remember that reaction and will not now vote Conservative, the working-class people who apparently rather approve of being tough with the Egyptians will not really, in the last

resort, desert Labour; they also say that petrol rationing and other economic sorrows to come will be particularly resented by that considerable part of the pro-force floating vote which is composed of what one Labour MP calls the "lumpen-bourgeoisie." As this issue of *The Economist* goes to press, a three-cornered by-election is in progress in the normally safe Conservative seat of Chester; all three parties are preparing to try to prove almost anything by whatever swing it reveals.

Germany's Smaller Army

HERR STRAUSS, the new west German defence minister, has now announced more details of his new plans for the German army. Its build-up will be slower than was originally planned. By the end of this year only some 70,000 to 75,000 men will be under arms instead of the 96,000 proposed by Herr Blank, his predecessor; by the end of 1957, 120,000 instead of 250,000. But these smaller forces will be quickly ready to go into the field as fighting units instead of merely forming the nucleus of an army of twelve divisions to be built up over a period of four years. Herr Strauss's continual emphasis on quality and speed has seemed timely, for with British and French forces weakened by withdrawals and its own infant forces capable of providing very few fighting units, West Germany has been feeling peculiarly naked in face of Russia's threats and display of force.

★

A correspondent in Germany writes: Lack of barrack space—owing to Allied failure to vacate it as fast as was promised—was given as one of the first reasons for the change in Bonn's defence planning. This had long been sacrosanct. All talk of a basic change in the principles and methods of defence policy was frowned on.

But the replacement of Herr Blank by Herr Strauss at the Ministry of Defence coincided with events abroad so momentous that the change in planning seemed not only necessary and expedient, but also proper. When the new minister took over the Bundeswehr, he stressed the need for an instrument of self-defence in turbulent days. Cadres are not such an instrument, but an element of long-term planning. Bonn's plans so far had envisaged cadres for twelve divisions which were to be built up gradually and simultaneously by the intake of volunteers and conscripts. The new minister wants three fully-fledged divisions to be formed at once and two or or three more to follow later.

The first three divisions are to be based on units of the Federal Frontier Force. The official plan still is that these should be joined by conscripts as well as volunteers. But it may now change. There is no love of conscription either among the age groups affected or among the strategists. Dr Jaeger, who favoured the short, twelve-month period of conscription, now wants the call-up of recruits to be postponed if accommodation and supplies are still inadequate by April 1, 1957, the date fixed for the call-up.

In fact more volunteers have already been accepted than can be housed. Unless there are political reasons for rejecting volunteers and preferring conscripts, it would seem sensible not to conscribe. Indeed, with the approach of federal elections there is a strong political incentive to make do with willing men (though it would have been better to do without former members of the Waffen-SS, however keen). It is electorally unwise to allow national servicemen's grumbles to be added to the Opposition's complaints about Germany's place in Nato. These have become louder with the growing Anglo-American inclination to reduce ground forces. Herr Strauss may ask for tactical atomic weapons. Their production was renounced in the Paris Agreements, but their possession is an open question.

Russians on the Middle East

NEVER since the war have the Russians sounded such an alarm or spoken with such a threatening voice as they now have over the Suez crisis. Broadcasts were interrupted on Moscow radio and additional news bulletins introduced. After the beginning of hostilities the headlines of Soviet newspapers proclaimed: Aggression Against the Egyptian People Must Be Stopped Immediately. The campaign reached its peak with the threatening Notes to Britain and France broadcast on November 5th. It has not subsided with the cease-fire, and both its volume and violence indicate that this is something more than a mere smoke-screen for the Hungarian tragedy.

The threats: Marshal Bulganin's message to Sir Anthony Eden contained the ominous question: "What would be the position of the United Kingdom should she be attacked by stronger states that possess all kinds of modern destructive weapons? And such countries could at the present time, instead of sending naval or air forces to the shores of Britain, use other means such as rocket weapons." Further on, Marshal Bulganin expressed Soviet determination "to crush the aggressors by the use of force and to restore peace."

The paragraph referring to rockets was omitted in the Note sent to M. Mollet. But France was soon reminded that the Russians are well aware of its vulnerable spot. By a tacit agreement the Soviet press had been cautious in its handling of Algeria since the visit of the French premier to Moscow. Tass (the Soviet news agency) was no longer bothered by such inhibitions in its recent statement: "The Soviet people condemn the colonial war which is waged against the unarmed people of Algeria, where blood has been flowing for several years already."

The Israeli government was "advised" on the same day "to ponder the matter before it is too late and cease its aggression against Egypt." This was coupled with a warning that the hatred now sown by it "will leave its imprint and bring into question the very existence of Israel as a state."

United States described as an accomplice: From the very first the United States was described as a sleeping partner in the Franco-British plot. "Israel would never have dared to attack," wrote *Pravda*, "if she were not backed by the USA, Britain and France." A Moscow radio commentator explained the apparent contradiction by "electoral considerations" which induced the American Administration to remain temporarily "in the shade." This line was not dropped even after Marshal Bulganin's message to President Eisenhower in which he invited the United States to common action as two "great powers possessing all types of weapons, including atomic and hydrogen bombs." The Russians argue that the aim of the western powers is to occupy the canal and impose a solution, and that the Americans merely want to achieve that end under a better disguise.

Call for vigilance during the cease-fire: This is consistent with the Soviet interpretation of western aims. The cease-fire is really "a manœuvre to gain time," while plans are being worked out "for operations to occupy Egypt, this time under cover of the United Nations." A broadcast in English argued that "the sole purpose of setting up an international force is occupation of the Suez Canal" and that according to the UN charter such a force can only be used "to defend victims of aggression, not to occupy countries which have been attacked by interventionists."

It was after the cease-fire that Moscow uttered its threat about sending volunteers. "If Britain, France and Israel, contrary to the decisions of the UN, do not withdraw all their troops from the territory of Egypt and, under various pretexts, delay the implementation of these decisions . . . then the appropriate organs of the Soviet Union will not hinder the departure of Soviet citizens—volunteers who wish to take part in the struggle of the Egyptian people for their independence."

Appeal to Afro-Asians: One of the first Soviet moves was to call on Mr Nehru to summon a conference of the Bandoeng states. In the Arab world and in Asia the Russians now parade as the true defenders of colonial states against imperialism. Hence their insistence that the United States are only blaming Franco-British intervention for the sake of appearances. The Soviet Union also claims the chief credit for obtaining and preserving the cease-fire.

Home front: This propaganda is destined not only for foreign consumption. Mass meetings are being held in factories and offices throughout the Soviet Union. Motions are voted and messages pile up. Muscovites have been allowed (or encouraged) to demonstrate outside foreign embassies, an unprecedented event. Mr Khrushchev, addressing a meeting of Soviet youth, claimed that "the voice of the Soviet people in defence of Egypt was listened to above all because of the might of the Soviet Union."

Suez and Asian Trade

JAPANESE industrialists have mixed feelings about the blocking of the Suez Canal. It will seriously increase the price of some essential imports—particularly potash fertiliser, steel and cotton—while the cost of oil, although the Japanese do not get it through the canal, will be affected by the world shortage of tankers. But these are minor drawbacks compared to the help it may give Japan to extend its foothold in European, particularly British, markets in South East Asia. The Japanese have always felt that these markets were naturally theirs, but, since the war, progress has been slow in building them up (last year Western Europe sold $2,300 million worth of goods to South East Asia while Japan sold $700 million worth). Now the Japanese hope that the extra cost of sending goods by the Cape will enable them to undercut European prices, particularly of heavy industrial goods.

The timing has been fortunate. A Tokyo newspaper speaks of a recent "flood" of requests from the Middle East, as well as from South East Asian countries, for Japan to co-operate in local economic development and to participate in international bidding. This development has been attributed to "intensified moves by under-developed countries, following the (original) Suez crisis, to attain economic as well as racial independence by pushing their industrialisation and the development of their resources." It is difficult to see the logic of this statement but, whatever the reason, Japanese trade missions have been displaying great ubiquity and energy lately and the Suez conflict has certainly been welcome news to the Japanese arms producers, who are said to be preparing to export arms through third countries to nations involved in the Middle East conflict.

His Master's Voice

HISTORIANS of the Suez crisis may find it odd that the first report of a "Russian plot" in Egypt was made to the House of Commons by a President of the Board of Trade. Contemporary observers at Westminster are less surprised. Twelve days of almost non-stop Commons debating about the crisis have severely tested the Government's ability to produce effective speakers on foreign affairs. The Prime Minister has made five statements and three speeches, not to mention a television broadcast and a major speech at the Guildhall, while the Foreign Secretary was also in action daily until he left for New York. It is therefore understandable that the job of defending the Government has been deputed twice each to Mr Butler and Mr Lennox-Boyd, and once to Mr Thorneycroft. If this spreading of the load reflected a genuine spreading of cabinet responsibility it would indeed be welcome. Unhappily, however, it may have been due mainly to the fact that the sudden resignation of Mr Nutting had created a gap which the two Under-Secretaries at the Foreign Office lacked the weight to fill, and to certain special circumstances connected with each speaker. Mr Butler's first speech was designed to show his loyalty—and his second speech to give him a chance of making a better job of it. Mr Thorneycroft and Mr Lennox-Boyd were useful first reporters of the Russian plot; the Prime Minister was shrewd not to handle it himself until he had seen how the House reacted.

A much more important question than this matter of who is to speak for the Foreign Office is the old one of who is to make decisions at it. This is not the place to reopen the familiar controversy about the Prime Minister's continued personal involvement at the Foreign Office, although it is now clear that the history of the world might have been different if this tired man had not insisted on still trying to do two jobs at once. Unfortunately, however, Sir Anthony has himself just stirred up the controversy again. To succeed Mr Nutting as Minister of State, and therefore presumably as the most frequent Government spokesman at the United Nations, Sir Anthony has appointed his own former Parliamentary Private Secretary, Commander Alan Noble. Inevitably, and perhaps unfairly to Mr Noble, hostile critics are preparing to dub him in his new post as merely Sir Anthony's second smaller boy; for this reason alone, the appointment seems to be a tactical mistake.

Shadow of the Shadow

THE one thing that may prevent Mr Bevan from being at the top of next week's poll for Labour's shadow cabinet is the sudden realisation by many Labour MPs that he might be going to be. A majority of Labour members

would regard it as a misfortune if by failing to give their own votes to Mr Bevan they ensured that he did not get on to the shadow cabinet at all ; but many of them feel that it would be an equal misfortune if by voting for him they ensured him the pride of first place. The hurried calculations they are now making could be of some importance. For if Mr Bevan is at or near the top of this popularity poll among Labour MPs, Mr Gaitskell may feel that the movement to make Mr Bevan Labour's shadow foreign secretary has become irresistible.

In logic, of course, the shadow foreign secretaryship should not be determined by accidents of this sort. Nor should it be influenced solely by Mr Bevan's brilliant, but partly tactical, self-containment during the Suez crisis ; it has not been difficult for Mr Bevan to remember for this period to be more moderate even than Mr Gaitskell, on an issue where lesser Labour members have confused righteous fervour by unparliamentary noisiness. There are two important things to say about Mr Bevan at this juncture. First, he is so clearly one of the biggest men in the Labour movement that he ought to be given one of the biggest jobs in any Labour government. Secondly, however, any Labour MP who thinks that Mr Bevan will not some day re-open his personal feud with Mr Gaitskell is almost certainly living in a fool's paradise. It is a matter for legitimate party consideration (the broader national interest is not at present directly involved) that if Mr Bevan were to launch a fresh feud from the shadow foreign secretaryship, this would be of greater electoral advantage to the Tories than a mere renewed rumbling from his present colonial wilderness. Mr Gaitskell therefore has a difficult decision to make. Whichever course he chooses, some peace-loving Labour MPs, who are now urging him to do one thing, are likely to pretend in a few years' time that they always had urged him to do the other.

A Pipeline *Canard*

THE explosion which wrecked the Iraq Petroleum Company's disused pipeline in north-west Jordan on Monday night was either a deed of derring-do in a quiet sector, or else a piece of propaganda designed to give currency to a tale that the company had been pumping oil to Israel. For the news that " oil flowed out " and was set alight has been widely spread by Syrian and Jordanian sources.

Help for Hungary

UNABLE to assist the Hungarians directly in their struggle, millions of people in this country and the rest of the world are contributing money in the hope that they can help a little to alleviate their sufferings. To many Hungarians it is a poor substitute, perhaps, for the military help they crave ; to the free outside world a meagre expiation for the shameful feeling that it can do nothing to help a people who are fighting a lone and hopeless battle so vital to the free world itself. But both inside Hungary, where bloodshed, starvation and disease are causing appalling suffering, and outside, where refugees now number over 20,000, help in the form of medicine, food and clothes is still badly needed. Perhaps, too, it can do a little to heal the Hungarians' bitter feeling that the free world has passed them by on the other side.

In the early days of the rising, before the massive Soviet intervention, help in the form of medicine and food poured across the frontier all over Europe in every form. Thousands of individual Austrians drove across to help and evacuate the wounded. Caravans of trucks loaded with supplies were driven from Switzerland to Budapest by students who had helped collect them. Relief aircraft came in to Budapest from Poland each day loaded with medical supplies. £50,000 of food and medicine from BAOR was flown in by RAF transports. But on November 4th Soviet troops sealed off the Hungarian frontier with Austria and it was only a week later that they allowed convoys to enter, and then only from the International Red Cross. So far three convoys containing doctors, medicines and food have crossed the frontier this week, and entry is now becoming easier and quicker. It is hoped to restart the airlift soon. By last Monday $584,000 had been collected by the League of Red Cross Societies in Geneva from all over the world ; the British Red Cross total has since reached £97,000, about half of which is now going into Hungary, about half to refugees.

The refugees' immediate needs seem already to have been met, though many arrived only with what they stood in. The initial burden, of course, fell on Austria. There the Government has appealed for everything from clothes to toothpaste. The provincial authorities are trying to find homes for women and children and are making use of all available space. Hotels, youth hostels, trade union centres and church premises—every empty space is being used. The aim is to get the refugees out of camps as quickly as possible. To help the Austrian authorities in the first critical days, the United Nations Commission for Refugees immediately gave £8,500, which it had available, and it has since been able to send on some other early contributions from European countries —from Britain £2,000 from the Balliol college relief fund, for example, and £5,000 from the United Nations Association appeal. The great importance of this money is that it could be sent at once to meet the first urgent need. Since then the United States has contributed $1 million and the Canadians and Australians have promised $100,000 and £30,000 respectively, so the immediate problem of finance is not acute.

The long term problem of finding homes for the refugees also seems likely to be handled by the United Nations High Commissioner. He has already received national offers to house about 30,000 refugees. Britain has offered to take some 2,500, West Germany some 3,000, despite its own refugee problem, France an indefinite number, Australia some 3,000. But it may be some time before offers from countries outside Europe can be accepted, for many refugees are reluctant to leave until there is no more hope of returning home. Most are women and children whose menfolk stayed to fight, and who left to escape immediate starvation or death in the fighting ; some may wish to go back even if there is no hope of a democratic regime. But at present the host of refugees continues to grow.

In Britain most of the various funds, including the Lord Mayor's fund, collected will be shared out in about a week's time between the various distributing organisations. By then it should be clearer how much will be needed for the refugees and how much can be sent to Hungary itself through the Red Cross. Some of the money will certainly go to the British Council for Aid to Refugees which is arranging the reception of them in this country, helping to find them homes. The Council has already received £10,000 from the Government for preliminary organisation and £5,000 from the United Nations Association, which has so far collected £30,000. The Council will certainly need a good deal more.

In fact, the point at which the deed was done—in the hills from which the pipeline drops to the upper Jordan valley and the Israel frontier—is one at which its only content was still oil left there as a preservative. Jordanians will remember that this practice was permanent if they recall an incident just three years ago, when an underground leak a little farther down the hill seeped out at some distance from the pipe and started the exciting rumour that oil had been discovered in Jordan at last.

The dead leg of the pipe that has been closed since the Palestine war because it terminates in Israel has not been idle along the whole of its length ; supplies for the Jordanian market have been boosted along it from Iraq to the first economic point of off-take. This is near Mafraq in north-east Jordan, and many miles upstream from Monday night's activities.

Hungarians Unbowed

THE amazingly protracted armed resistance of the Hungarians to the Soviet Army has at last been largely overcome. But it is a pyrrhic triumph for the Russians. The Hungarians have won a great moral victory and in spite of enormous casualties, great material devastation, and the threat of starvation and disease, their spirit is obviously quite unbroken. They may have abandoned the armed struggle, at least for the time being, but they seem determined to go on wielding the formidable weapon of the general strike, at whatever cost to themselves—and the cost is clearly already very heavy. Repeated anguished appeals by spokesmen of the Kadar government have moved only a tiny minority of the workers to go back to work, although some public services seem to be kept ticking over. Although their most crying need now is for the very barest necessities of life, they are still grimly sticking to the basic demand for which they originally took up arms—the right to live as free men in a free country.

The position of the Kadar government is not an enviable one. And it will not be made any easier by reports, which seem to be well founded, that the Russians have reverted to one of the most wicked Stalinist excesses—the mass deportation of young men of fighting age. The government's spokesmen have been protesting vehemently that it has not the slightest intention of trying to restore a " Stalinist-Rakosiite " regime. And throughout the week Mr Kadar, in an increasingly desperate effort to curry favour, has been making more and more radical concessions to popular feeling. From such comparatively unimportant concessions as the restoration of the Kossuth coat-of-arms, he moved on to promises of a 10 per cent wage increase, the abolition of compulsory deliveries from the farmers and renewed promises to abolish the secret police. He had refused to admit UN observers under the General Assembly's resolution. But on Tuesday he gave in to Mr Hammarskjöld's pressure to the extent of agreeing that UN representatives should enter Hungary to organise relief work on the spot. On Wednesday he announced that a number of leading (and most-hated) Communists, including Mr Gerö (not, apparently, dead after all) and Mr Hegedüs, who was premier when the uprising started, have been debarred from political life.

Finally, on Thursday, it was reported from Budapest that Mr Kadar had capitulated to the Hungarians' demands for free and secret elections and the re-establishment of all left-wing parties. He also agreed to negotiate with Mr Nagy with a view to handing over the premiership to him. The whereabouts and attitude of Mr Nagy are uncertain. Having taken refuge in the Jugoslav embassy, he is believed to be determined not to re-enter politics until the Russians have completely withdrawn. So far, Mr Kadar has stuck at demanding this. But unless he does, and the Russians agree, the rest of his promises are not worth much.

South Africa's Lawful Revolution

THE Nationalist government has won legal blessing for its removal of the bauble of Senate opposition. The Appeal Court's dismissal of the Senate Act appeal brings the curtain down on a five-year struggle in which the legal issues have been as confused as the moral issues were clear. The Nationalists' overt purpose in the long fight was to strike the Coloured voters of Cape Province from the common electoral roll: since this could not be achieved constitutionally, the constitution had to be changed. In order to obtain the two-thirds majority in both Houses of Parliament sitting together which was needed to revoke the entrenched clause protecting the Coloured franchise, the government unscrupulously packed the Senate with its own nominees. The Senate Act, passed earlier this year, nearly doubled the number of Senators but, at the same time, by altering the electoral procedure, actually reduced the opposition seats. The United Party challenged the validity of this action in the courts, but the government, having already been defeated over the Coloured vote in the Supreme Court, took the precaution of appointing six new judges from among its supporters. In the event, this safeguard proved redundant: the appeal against the Senate Act was dismissed by ten of the eleven judges.

The presence of the 50,000 Coloured voters on the common electoral roll was an irritant to the Nationalists. Ideology apart, the small Coloured vote had a certain influence on marginal seats in Cape Province. But since the Cape Coloured will now elect their own representatives to Parliament, the practical advantages of the new system are limited. It is questionable whether the immediate prize was worth the odium which the government received for fiddling with the constitution. But the government—and the opposition—were playing for higher stakes. The Coloured vote was little more than a pawn in the Nationalists' inexorable battle for complete dominance in parliament and in law. The government was after a flexible constitution and a rule of law unable to challenge white supremacy. On the substance of the question of Coloured rights the political opposition is at best equivocal, but it is able to recognise the threat of single-party rule. Thus the opponents of the Senate Act were of two kinds—the United Party, who saw Nationalist ascendancy even more firmly established than before, and law-respecting citizens of all parties who fought the sapping of their constitution. But now the law has taken the brakes off the Nationalist steamroller.

Ghana's Rough Road

In its revised proposals for the constitution of Ghana (the Gold Coast), Dr Nkrumah's Convention People's Party has conceded next to nothing to Opposition demands: the new version differs more in wording than in substance from the proposals issued last April. This is a disappointment for the National Liberation Movement (the backbone of the opposition) which had at last abandoned its inept tactics of campaigning for a federal form of government while boycotting all constitutional negotiations with the CPP. On two at least of the three principal points of difference now being debated in the Assembly, the government is likely to be obdurate. The opposition has so far had no success in its attempts to check the government's legislative and executive powers by the establishment of a Second Chamber (composed mainly of chiefs) and an extra-parliamentary Council of State to advise the Governor-General on the running of the civil service and judiciary. But the third issue between government and opposition—regional devolution—is a question of extent rather than existence and is therefore a more fruitful bargaining point. The NLM objects to the government's proposal that the regional assemblies should gradually attain to powers similar to those of the London County Council, for they claim that such powers are neither adequate nor sufficiently protected.

Although on paper the revised proposals go some way towards calming the opposition's fears—they give, for instance, an earnest of decentralisation of the police (while retaining ultimate central control) and they make it rather more difficult to change the constitution—on the most contentious points the provisions are still too vague to amount to much more than a moral commitment to protect regional interests. The Ghana government is believed to be in general agreement with Sir Frederick Bourne's suggestions for regional devolution, but does not intend to write its agreement into the constitution. The clauses dealing with devolution have purposely been left imprecise where definition and entrenchment would serve the interests of the minorities.

While some members of the opposition are arguing constitutional points in the assembly, others outside are still flogging the lame notion of federation and, in default of this, threatening secession of Ashanti, the Northern Territories and possibly Southern Togoland. Since the last election showed that sizeable minorities in these territories

Crisis in King Street

Not since the Molotov-Ribbentrop pact has the British Communist Party experienced anything like the internal dissension sparked off by Russian behaviour in Hungary. The resignations include the *Daily Worker's* cartoonist (Gabriel), a growing batch of trade union officials—including Mr John Horner (Fire Brigades Union), Mr Alex (not Abe) Moffat (National Union of Mineworkers), Mr R. B. Seabrook (Shop, Distributive and Allied Workers), and Mr Leslie Cannon, (Electrical Trades Union)—and leading members of communist clubs and branches at several universities. In addition, protests against the Russian action have flooded into the *Daily Worker*.

The official party line has, as in 1939, fluctuated wildly before settling down to a clear echo of the Kremlin's directive. On November 3rd, the *Daily Worker* welcomed the new People's Freedom government, and reported the hopes of one of the new cabinet ministers that "the declaration of Hungary's neutrality would result in the withdrawal of Soviet forces." It also reported with regret that its one-time reporter in Hungary, Dr Edith Bone, who had disappeared in 1949, had been liberated by the rebels from a Budapest prison after seven years of "inhuman treatment" during which British communists had been unable to elicit from their Hungarian comrades any information about her whereabouts. The same issue contained a dispatch from Mr Peter Fryer, the *Daily Worker's* present special correspondent in Budapest, in which he described the communist terror and brutality in Hungary and the popular hatred of the Russian occupiers. The next news that readers had about Mr Fryer was that he had taken refuge in the British Embassy.

By then the Russians had launched their counter-attack. That week-end the party executive was called to a special meeting and, on Monday, November 5th, issued a policy statement declaring that the Soviet troops were in Hungary "in response to the appeal made to them by the Hungarian people to help defend Socialism" against Fascism. Many party members found this unconvincing, and on Wednesday, November 7th, Mr John Gollan, the party's secretary, issued a new statement in which he simplified the issues considerably: "the success of counter-revolution [in Hungary] could have sparked off similar forces elsewhere in Eastern Europe," and to prevent this the use of Soviet forces was essential. This flat-footed admission was the last straw for many comrades, and since then the party has mobilised all its dullest hacks to repeat Mr Gollan's sermon. Their main achievement so far has been to stimulate more resignations and more protests.

★

It would be a mistake to regard the events in Hungary as the sole cause of the present crisis. The first signs of dissension appeared when at the Easter conference the party delegates held a closed session to discuss the horrible but true (i.e. Moscow) news that for at least two decades innocent people had been framed, tortured, imprisoned and murdered in the Soviet Fatherland. The party's old guard, led by Mr Palme Dutt, at first attempted to brush off these facts as personality errors on the part of a fundamentally progressive and kindly genius. The blast of protests that met this version led to an abject surrender on Mr Dutt's part and the opening of the columns of the party's weekly (*World News*) to critics of the party leaders. As a gesture to the malcontents the party announced the formation of two commissions of inquiry; one to reconsider the official policy declaration "The British Road to Socialism," and the other to examine the working of inner party democracy.

The fatuity of the latter commission was heavily underlined by the party's treatment of "The Reasoner." This was an occasional bulletin started by two communist university teachers seeking to discover a Marxist explanation for Stalin's errors. After the appearance of the first issue they were ordered by the executive to cease publication—since "the executive committee has the duty to protect the party"; the paper now has closed, but its two editors have resigned from the party. It is by this sort of behaviour that the executive has alienated many of the younger middle-class intellectuals in the party, and many of its self-educated trade unionists. It is left now with a rump of aged intellectuals and party bureaucrats whose unwavering support of Russia is beyond reason. When the party met at Easter members were called upon to raise the then membership of 34,000 to 50,000. It will be surprising if at the end of this year there are 20,000 paid-up members.

Pension scheme trusteeship

A SPECIAL SERVICE OF LLOYDS BANK

LLOYDS BANK is particularly well equipped to act as Trustee of new or existing Company Superannuation Schemes.

The Bank's Executor and Trustee Department has wide experience in the investment of Superannuation Funds and an official of the Department would be pleased to explain the service to any interested Company.

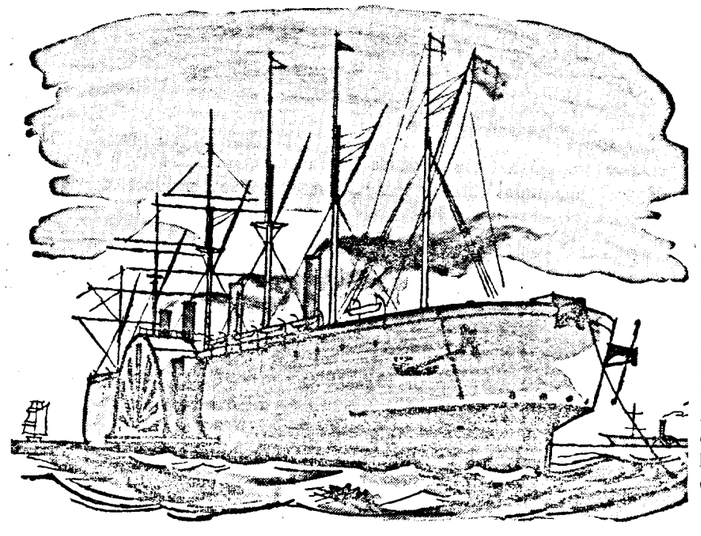
Initial enquiries may be made at any branch of the Bank or at the address below:

LLOYDS BANK LIMITED

Executor and Trustee Department

CHIEF OFFICE: 54 THREADNEEDLE STREET, LONDON, E.C.2

Twelve years before Cable Contact



The first South American cable was laid between Pernambuco and Lisbon in 1874—twelve years after the Bank of London & South America had opened its doors in Brazil.

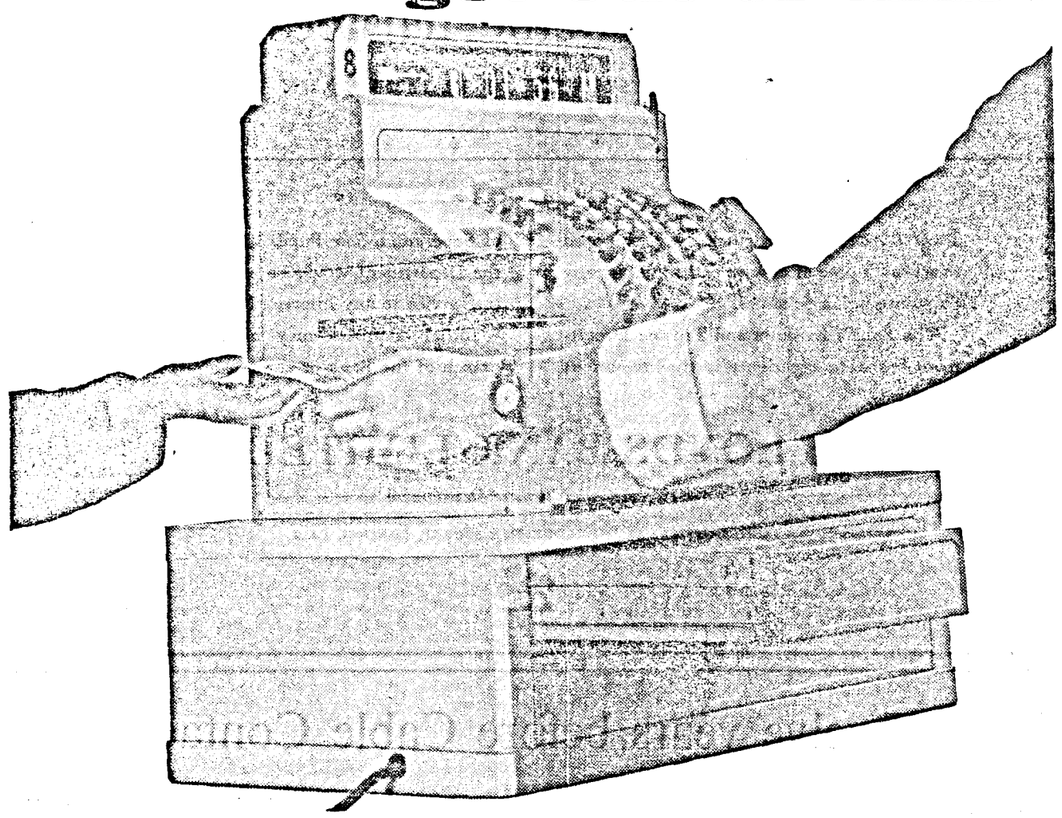
Since then, commerce with Latin America has increased enormously, and with it have grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America. It has Branches in most of the important trading centres of that vast Continent.

Up-to-date reports on local markets, trading regulations and general economic conditions, are received regularly from branches overseas and are summarised in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

BANK OF LONDON & SOUTH AMERICA LIMITED

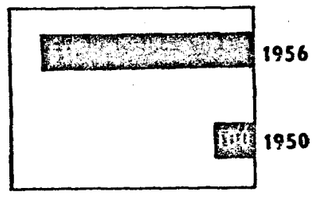
HEAD OFFICE AND LONDON OFFICE: 6, 7 & 8 TOKENHOUSE YARD, LONDON, E.C.2 MANCHESTER: 36 CHARLOTTE STREET
BRADFORD: 55 WELL STREET CONTINENTAL REPRESENTATIVE'S OFFICE: TALACKER 35, ZÜRICH

What did YOU get out of this?



COLOUR Rings the Bell! —FASTER

Growth of Colourgravure Advertising in ODHAMS COLOURGRAVURE MAGAZINES.



Up to December, 1955, this growth was nearly one-third greater than all mass-sale colour-gravure weeklies combined.

Experience proves that the dynamic new medium of full-colour advertising builds and maintains brand recognition, enhances product appeal and stimulates sales.

In a world that has taken colour as one of the essential elements of modern living, alert manufacturers employ it as a workaday necessity to sell and promote all products. National Advertisers, too! **A fact manifested by the great increase in colour advertising in WOMAN, JOHN BULL and ILLUSTRATED—over 400% since 1950.**

With a combined readership of 13,500,000 spread throughout the country, including nearly 45% of British womenfolk—these great magazines play a dominant part in national marketing and selling.

Use the powerful realism of colour in them as the backbone of your national campaign!

JOHN BULL *Woman* **ILLUSTRATED**

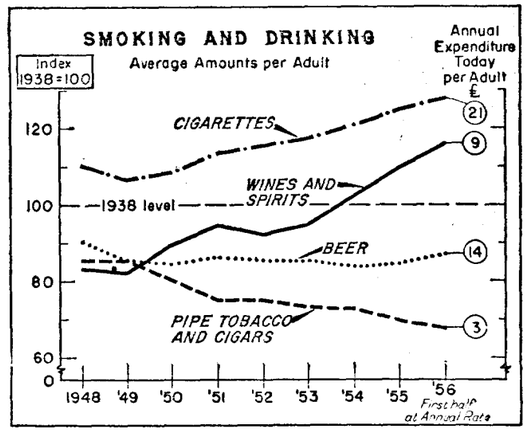
BRITAIN'S GREATEST COLOURGRAVURE WEEKLIES

supported the CPP, these theories will not wash. Unfortunately the leader of the opposition, Professor Busia, has chosen this time to pursue his academic career in Europe. Without him, the Ashanti are more than ever influenced by the Asantehene, whose personal animosity towards Dr Nkrumah and the CPP is probably incurable. Time is now running short—the constitution has to be thrashed out in the next three months—and the Ashanti might be wise to use bargaining instead of threats.

Drinks and Smokes

LAST year there were 54,000 convictions for drunkenness in England and Wales, equivalent to about one out of every 635 adults. In 1938, when there was less money to spare, the number was very slightly higher, but the disquieting trend today is the increase in young offenders; for their numbers, nearly as many people get drunk between the ages of 18 and 21 as they do in their most susceptible years—the twenties. Figures of convictions may, of course, be influenced by the zeal of the police. As the accompanying chart shows, consumption of beer a head has fallen since 1938, and although that of wines and spirits has risen, Britons drink slightly less alcohol than before the war. More of the extra spending today has gone into cigarettes than into drink.

This has an ominous significance in the light of the new findings of Dr Doll and Professor Bradford Hill, reported



in last week's *British Medical Journal*. In their earlier investigation of the relation between smoking and lung cancer they compared the smoking habits of lung cancer patients and other patients in hospital wards. In this one they obtained five years ago the smoking habits of some 40,000 doctors and then studied the deaths among them in the ensuing period. They thus claim to have eliminated any bias that might have been caused by an unwillingness on the part of actually ill people to say how much they smoked.

Since October, 1951, when the replies from the doctors were received, there have been 1,854 deaths among them, of which the investigators accept 84 male cases as having a confirmed diagnosis of lung cancer—there were only two established cases among the women doctors. Looking at their declared smoking habits, and using various statistical techniques, Messrs Doll and Hill drew several conclusions, of which the most striking are as follows:—

1. The death rate from lung cancer among heavy smokers (past or present and including pipe and mixed smokers) is twenty times that of non-smokers, and there is a steady rise in the rate as the amount smoked increases.
2. The mortality from lung cancer is significantly greater among cigarette smokers than pipe smokers, with mixed smokers falling in between.
3. There is a progressive reduction in mortality with the increase in the length of time over which smoking has been given up.
4. Doctors reporting themselves as heavy smokers of cigarettes at the beginning of the investigation had a mortality forty times the rate of the non-smokers.

Yet the chart shows cigarette smoking going up and pipe smoking going down. Shall we soon hear of people not drinking themselves, but smoking themselves to death?

Mr Gomulka's Journey

UNDETERRED by rumours of Soviet troop movements and of an impending return to Stalinist methods, Mr Gomulka has gone to Moscow (where he has been received with the red carpet treatment) at the head of an important Polish delegation, including the prime minister, Mr Cyrankiewicz. Nor has he preceded his journey with any recantation of the Polish way to socialism which he had announced before the Hungarian rising. On the contrary, a government reshuffle on the eve of this trip was yet another sign that he is determined to keep on the path he had chosen. As a symbol of this change Marshal Rokossovsky was officially removed from the ministry of defence and replaced by General Spychalski, who once sat in jail together with Mr Gomulka. These governmental changes have followed wholesale dismissals of Soviet officers from the Polish forces and a purge of the most faithful Stalinist stooges in the party and the trade unions. Mr Gomulka has secured his rear.

Undoubtedly he will plead in Moscow the case for further liberalisation, despite Budapest, not only for Poland, but for the rest of Eastern Europe as well, as the only means of salvaging something for communism out of the Stalinist bankruptcy. Indeed, at this hour of acute conflict within the Soviet leadership, some Russian rulers may want to parade him as evidence that the Hungarian disaster was avoidable, and to use his pleas to strengthen their own arguments. To the champions of Stalinism he will certainly reply that in Poland naked force can only lead to terrible bloodshed.

Mr Gomulka will also have to plead *pro domo sua* in prosaic terms. For the success of his experiment he needs not only Moscow's blessing, but its aid. Poland requires at least a million tons of grain together with other foodstuffs and industrial consumer goods. The demand is urgent and, if Russia cannot provide the goods, it will have at least to acquiesce in Poland turning to the West for credits; the new Polish regime has obviously no desire

to make such a move look like an intentional gesture of defiance. The question of aid to Poland will involve discussions about the economic co-operation within the Soviet economic block as a whole. The mind of Moscow has lately been too split to allow a prediction of the way in which it will react. When Mr Gomulka returns from this vital journey it will be easier to see what lesson the Soviet leaders have drawn from Poland's quiet revolution and from the Hungarian upheaval.

Squaring the Circle in Belgrade

It is not surprising that a Jugoslav commentator should have feelingly remarked that the Hungarian crisis is "in the very neuralgic centre of contemporary international problems." It has made the Jugoslavs' balancing act between East and West even more hazardous. It has already put them in the bad books of both sides. And it may possibly end up with the Jugoslavs, who have been enjoying more or less friendly relations with most countries in both camps, finding themselves with precious few friends in either.

Marshal Tito's difficulty is obvious. His chief claim to fame is his staunch refusal to allow Moscow's interference in his country's internal affairs. But he is also a staunch and shrewd communist whose spokesman makes no bones at all about the imperative necessity of preserving "the basis of socialism" in eastern Europe. But what if this basis cannot be preserved without the Red Army's intervention? To square his circle, Marshal Tito has been forced to fall back on the Soviet fabrication that reactionary counter-revolutionary terror had begun to take over in Hungary. This line will not increase the respect felt for him in the non-communist world. But then the disapproval in the Jugoslav press of "the employment of foreign troops to clarify an internal situation," and the somewhat equivocal attitude of the Jugoslav delegate at the UN, will not add to the popularity of the Jugoslavs in Moscow.

*

Indeed, the Jugoslavs are clearly bothered about their whole position in the communist world. Those communist leaders who were never very sympathetic to Titoist ideas will be confirmed in their doubts; while the Hungarians and the Poles, who accepted them, have in effect wrested the leadership of the "liberalisers" from Marshal Tito. Moreover, *Pravda* has published an attack on Jugoslavia by the Albanian leader, Mr Hodza, which contains far the most bitter criticism of the Jugoslavs that has appeared in the Russian press since the death of Stalin. True, it mentions neither Jugoslavia nor Marshal Tito by name, but there is not the faintest doubt against whom the diatribe is directed; it denounces, for instance, those "who seek 'new forms' and 'organisation' of socialist power" and who belittle the achievements of the Soviet Army. The Jugoslav press has not taken this lying down. It has complained strongly of an organised "campaign" in eastern Europe, of which Mr Hodza's article is an example, to pin on Jugoslavia the blame for what has happened in Hungary. The sharpness of its reaction is no doubt inspired by a very natural alarm about where the campaign may end.

Rescuing Thorez

Soviet tanks in Budapest aroused more vocal protests in France than in this country, possibly because there was less heart-searching in Paris than in London about the Suez crisis. French intellectuals shared in this mood of indignation. Many prominent fellow-travellers, including M. Jean-Paul Sartre, ostentatiously left the communist bandwagon and were followed by a few party intellectuals. Unrest was spreading to the ranks and even communist workers could hardly swallow *L'Humanité's* version of the Hungarian tragedy as merely the result of a fascist plot. At this stage violent anti-communist demonstrations have probably come to the rescue of M. Thorez. Some of the men in the front rank of a procession mourning the Hungarian victims—MM. Laniel, Pleven and Bidault, for instance—are too often associated with the Dien Bien Phu disaster to have been ideal men to lead such a march. Afterwards, part of the crowd, apparently with a large sprinkling of Poujadists and ex-collaborators, went on to the headquarters of the Communist party and attempted to set fire to these places with very little police opposition.

The French communists may feel that these events help them in propagating the story of a fascist plot in Hungary. The mechanism of self-defence has been set in motion. A counter-demonstration held the day after was handled not very gently by the police. The communists are counting their dead and a touch of martyrdom was needed more than anything else at this time of moral crisis. Any prospect of a popular front has vanished, but M. Thorez may console himself with the idea that communism in France has roots in the native soil and that these may be strengthened by the economic consequences of Suez and Algeria. This Stalinist diehard sees no reason for relinquishing the leadership of his disciplined party.

M. Thorez may have gained yet another respite, but the internal crisis of his party is not over. It was well in train before the Hungarian rising. Ever since the Khrushchev report, dissenting voices could be heard among the rank and file. Many preferred the Polish and Jugoslav examples to the intellectual sclerosis and barrack-room discipline of the most Stalinist party in Western Europe. If French communism is to regain some of the drawing power with which it emerged from the resistance, it will not only have to learn to act independently; it will have to change its methods and to get rid of M. Thorez and his men.

Dockers Old and Unemployed

The dockworkers' unions had two requests to put before the port employers last week. One was for an increase in the "fall-back" pay of men who are temporarily out of work, and the other for a pensions scheme. The background to the first request, which has been accepted, is that recent events, especially the pile-up of shipping off Suez, have reduced work at the docks. Last week, for example, as many as 9,000 men, or nearly 13 per cent of the labour force, were "proving attendance," which means not finding

work. The existing rate of fall-back pay has been £5 4s. 6d., which may seem a lot of money for doing nothing except turn up twice a day for the "calls" to work; but it means a very sharp drop from normal earnings, which in the middle of this year were averaging over £13 a week, and are often a good deal more. (It is true that the same dockers are not unemployed every day, although under the call system there does tend to be a hard core that is always left unwanted.) The whole purpose of the dock labour scheme was to protect the men from fluctuations in international trade; there is no question of getting rid of dockers who will be wanted again in a few months' time, and it is right that the fall back pay should be enough to tide them over the bad patches. It is therefore to be raised to £6 1s. from next Monday. At the same time the Dock Labour Board is trying painlessly to reduce the number of men who are drawing it, by suspending recruitment.

The background to the request for a pensions scheme is that in the docks they work until they drop. Of just under 77,000 dockers, 5,000 are over 65, and of these 2,000 are over 70. It is a most unsuitable age structure for an industry in which what matters is physical strength, and if the labour force is too big this is where it should be reduced. The employers' remedy for this situation has been to ask for a retiring age, the unions' to demand a pensions scheme which would encourage people to retire. At last week's meeting, however, the unions did not make any specific proposals about the kind of pensions scheme that they had in mind, and both sides are considering the matter further. This is certainly an industry where a pensions scheme is desirable and it is a good cause for the unions to advance.

Dr Rhee's Latest Move

Now is the best time, according to President Rhee, for peoples to exercise the right of self-determination and resist the Soviet Union. "All free peoples must exploit this opportunity." If the North Koreans will not do so themselves he proposes to help them. "Unless the communist forces withdraw from North Korea there is a strong possibility of war. . . . We may not remain quiet after the American presidential election." This was said on November 6th; two days later a South Korean plane was shot down over North Korean territory (the first time a plane has been attacked since the armistice), and there were rumours of some kind of clash on the frontier. The communists seem to be moving troops along the 38th parallel; they have accused President Rhee of planning to invade them and have called a meeting of the armistice commission.

Ominous as all this sounds, it can hardly come to serious fighting if the North Koreans keep their heads. They certainly do not want to provoke a war with the South at the moment, and President Eisenhower will not give President Rhee any backing unless there is a clear case of aggression from the North. Nor is there any reason to suppose that the North Koreans will revolt and fling themselves into President Rhee's rescuing arms, although President Kim Il Sung is a communist of the Stalin vintage whose position may be precarious, and a North Korean paper recently said in a leader that

> the transformation of socialism demands heightened creativeness among the masses . . . this demand by the party means that in literary, scientific and cultural activities each individual has his own freedom of creative views, criticism and conclusion. It also means that right and wrong cannot be determined by administrative means but by discussion. . . . The slightest bureaucracy cannot be allowed to paralyse the creativeness of the masses.

This may be the beginning of a cautious liberalisation, but there is no evidence that it is a sign of unrest; and if it were, the communist world would not stand by and watch President Rhee make use of it. His threats are probably only a move in his constant struggle to prevent the world from forgetting about Korea; but it is a dangerous gambit.

Footsteps of Perón?

The French government in handling the case of *Le Monde* has struck a blow at the free press. A high intellectual standard and great independence of outlook have gained for *Le Monde* the respect of many people whether they like its views or not. But a newspaper, to be independent, has to be able to remain solvent. Lately the directors of the paper decided to raise its price from 18 to 20 francs—that is, by about ½d., to 5d. They have now been compelled to cancel the increase by official threats of legal proceedings, fines and other sanctions, including the withdrawal of government advertising.

The Economist Diary

THE CHRISTMAS PRESENT FOR THE MAN WHO SEEMS TO HAVE EVERYTHING

A week's appointments at an opening; a book that lies open flat on the desk	A diary lay-out specially designed to meet the needs of the busy man
Bound throughout in red leather; title blocked in gold	All information easily found by means of handy thumb-indexes
A memorandum book, an appointments register, and a complete reference book	Facts and figures covering the world always available when required
43/- Price for U.K. only, including postage and purchase tax	Prices to overseas addresses vary widely; a schedule will be sent on request

ILLUSTRATED PAMPHLET *FROM DIARY DEPARTMENT*
THE ECONOMIST · 22 RYDER STREET · ST JAMES'S · LONDON SW1

Ostensibly the government has acted to defend the cost of living under its special powers to freeze prices. Such powers are of doubtful use when applied to a commodity like a newspaper. In this particular case such a heavy weapon has been brought to bear upon so small a danger as to arouse suspicion of the French government's motives. *Le Monde* with its relatively small circulation is already dearer than the other evening papers; its example was unlikely to influence its mass-circulation competitors. The impact of the increase on the French cost of living would be even less than that of a halfpenny rise in the price of the *Times* or the *Manchester Guardian* in this country. Some critics have suggested that the real purpose is to do to *Le Monde* what Colonel Perón did to *La Prensa*.

The refusal of *Le Monde* to take money with strings attached has made its struggle for survival hard. Financial groups, remembering the day when its predecessor, *Le Temps*, was more amenable to industrial or official pressure, made several attempts to buy the paper, or to win over its staff through promises of higher salaries. Those efforts having failed, the attempt was made to conquer it by frontal attack earlier this year, when *Le Temps de Paris* was launched with powerful financial backing. It proved a costly and fruitless venture and had to be wound up. Can a Socialist government by a stroke of the pen do what money has failed to achieve? The director of *Le Monde* has said that unless the government can be brought to reconsider its decision, his newspaper may have to choose between bankruptcy and the loss of independence. It is to be hoped that M. Mollet may change his mind.

The Ten Per Cent

A CORRESPONDENT who has been making inquiries at petrol filling stations writes: Perhaps, in order to be a motorist, one must be a fatalist. Private car owners have been asked to cut the amount of petrol they use by ten per cent; the only result, at most of the garages whose owners I have interviewed, has been a mildly increased demand as motorists, no doubt convinced that rationing is inevitable, build up their private stocks. Garages and bulk users of fuel oil have had their deliveries of oil cut down by the wholesalers, who have set up a committee to decide how much everyone should have. Transport companies, relying for the time being on their bunkers, are hastily revising their schedules: London Transport, for example, is keeping its regular services working at full pressure, in anticipation of extra demands to be made on it if rationing begins, but is cutting down on such things as excursions and football specials. British Road Services and some of its competing concerns hope to be able to reduce their fleets by one lorry in ten, and to compensate for this by making sure that their lorries are quite fully loaded. It is thus to the individual motorist that the request for voluntary rationing is addressed: there is unfortunately not much evidence that he will voluntarily do any such thing.

For those garages who have many regular customers the task of voluntary allocation is not so hard: they can try to keep regulars on the road, while limiting the amount they give to casuals. But the number of casuals has increased in the last few days, and garages on the outskirts of cities and on highways, which depend mainly on casuals, have had an exceptionally high demand, although they have been limiting the amount they allow to each customer. Over the weekend many such garages had to close down early for fear of using the week's supply of petrol in advance, and much petrol must have been wasted in the hunt for petrol. The memory of real rationing is too vivid to allow people to ration themselves—and motorists, since the war, are not the innocent beings they used to be. Although purchases of petrol in the can for private hoarding are being refused by most big garages, it is now widely known how to siphon petrol from the tank. In any case, shortage or no shortage, the daily flow of cars in and out of the towns seems no smaller, despite the request for economy. One annoying thing about the present shortage is that it encourages once more in garage men that autocratic attitude towards the customers which one hoped had at last disappeared. Another thing which is bound to cause fury among motorists, if rationing comes, is the smug look on the faces of scooter-owners, happy on a teaspoonful of petrol a day. There will be many prayers for rain to spoil their journeys.

A Comparison of Ministers

Lord Palmerston is . . . very generally regarded on the Continent, and very generally represented here, as one of the most uncomfortable Foreign Ministers this country ever possessed—litigious, pertinacious, aggressive and imperious—always inclined to assert the pretensions of Great Britain too haughtily and to push them too far . . . and perpetually on the verge of a quarrel with surrounding States. Whence he derived this unenviable reputation we need not here inquire. Thus much is certain: that he took the direction of Foreign Affairs at an epoch of singular difficulty and peril . . . [and] has held that post with occasional intervals till he exchanged it for the Premiership—during which period he has had to deal with many delicate and dangerous questions of diplomacy and statesmanship. . . . Questions of American boundaries and American ambitions, questions of Russian designs on Turkey and of French designs on Egypt . . . have arisen and threatened disturbance to the harmony of the world. . . . Yet during the whole of that trying time England enjoyed unbroken peace at home, and the often imminent peril of a European war was as often successfully averted . . . but no sooner had Lord Palmerston resigned the Foreign Office to a Minister whose prudence, conciliatory demeanour, and genial disposition had always been the theme of universal praise, than a war of most formidable character broke out, and threatened to last for years and to involve all Europe in its range. The "Peace Minister" par excellence found himself under the hard necessity of declaring war. . . . Now we are far from meaning to infer from this that Lord Aberdeen is pre-eminently bellicose or Lord Palmerston pre-eminently pacific. . . . The treatment which would succeed with one antagonist would be out of place in dealing with one of a different mood. Tact and knowledge of men and nations, to determine when to be obstinate and when to be yielding, are needed in an especial degree by every Foreign Minister, and these are points about which the most honest differences may and will arise; and statesmen must be judged, not according to our own opinion as to the wisdom of their proceeding in this or that individual instance, but according to the general success which has followed their system when in their own hands.

Letters to the Editor

We again use this page to publish a few of many critical letters about our attitude to the Government's policy in Egypt:

SIR—With all the sources of information available to you, it is inconceivable to me that you are not aware of the deep Russian intervention in the Middle East, and yet in your articles on the Middle East you give little or no indication of this fact. Surely this is the crux of the whole matter. Russia for a long time has instructed Nasser, who has faithfully carried out the instructions of his master. The intense anti-British propaganda in the Middle East has been Moscow-inspired. A combination of events in Poland and Hungary and the speedy armed intervention of Britain and France has prevented Russian control of the Middle East by a margin—who yet knows—of perhaps a few hours. Bulganin's hostile threat is the measure of Russian resentment at the upset of her plans. What Sir Anthony Eden has done is to prevent the control of the Suez Canal and the Middle East oil supplies by Russia. Events in Hungary have shown what would have happened to the Arab states (Israel having previously been liquidated) once the Kremlin had obtained control on the well-known pattern.

The one hope for the future is the establishment of a powerful United Nations force with sufficient power to keep the peace and refuse the admission of all armaments to that part of the world. If that force can be effectively composed of contingents from countries other than the USA, USSR, France and Britain so much the better.

What is needed now is an intense publicity campaign throughout our own country and the world to make known how nearly Russia succeeded, and unless resolute action is continued may still succeed in impoverishing Europe with all that that will mean for the rest of the world.

With your authority and the respect with which your paper is held, are you going to sit back and deride from the touchline or are you going to get your head down and really give a shove to public opinion?—Yours faithfully,
House of Commons W. W. WAKEFIELD

★

SIR—When I came back from a business journey to the East this spring I felt sure that the struggle between Russia and the United States and the ineffectiveness of Uno would allow Nasser to take over the canal and might bring the Russians into the Middle East. In encouraging Nasser, the Russians were following the common practice of politicians and those in power in that their behaviour does not, and indeed usually cannot, coincide exactly with the principles they are supposed to follow.

One watched the events of the summer and autumn. The seizure of the Suez Canal by Egypt, the repudiation of debts to the Dutch by Indonesia, the retrospective taxation of oil companies by Lebanon: then followed a series of blood-curdling threats from Arab capitals about blowing up pipe lines, destroying oil wells and seizing all Western investments. And as in the case of Hitler's entry into the Rhineland in 1936 nothing happened. At last one man had the courage to act and it seems to me that he has been given less than the honour, respect and support due to one whose advice, if followed by those who have made the most noise over the last few weeks, would have kept us out of the bloodshed and misery of the 1939 war. Ten days ago, after being a life-long Liberal in thought, I applied for membership of the Conservative party.

The Socialist party and those papers such as the *Manchester Guardian* and yourselves who have supported them recently bear a very heavy burden. Do you believe that Uno would have taken action in the Middle East? You have chosen to fight on a narrow moral issue and in doing so, if one assumes that you have for the time being been successful, you, and our inactive and sometimes jealous allies of the US, have much to be responsible for. It is significant to me that the hysterical conduct of a section of the population of London has not been matched in the provinces where some commonsense still remains.—Yours faithfully, S. B. HAINSWORTH
Brough, East Yorkshire

★

SIR—For many years your famous journal has been guide, philosopher and friend, in the sphere of public affairs to a host of readers who hold it in such esteem that they habitually quoted it as a shining example of impartial judgment and practical common sense in a world where these commodities were often at a premium. And so it came as a tremendous shock to us when—forsaking your traditional sense of values—you severely castigated the Prime Minister and virtually demanded his dismissal on the score of a political decision which—though admittedly unorthodox and distasteful to a man of his moral convictions—he adjudged to be the only effective means of averting the immediate danger of a world war—a judgment since endorsed by millions of his countrymen.

Who can doubt that, but for the recent joint action of Britain and France, Egypt's pocket dictator, backed by the might of Russian armaments and the ruthlessness of Russian "technicians," would speedily have carried out Nasser's threat to destroy Israel? Who can deny the probability that, in the event, this initial action would have kindled a blaze throughout the whole of the Middle East and the Moslem world, which nothing short of global war would have finally extinguished?

It should not be forgotten that the Governments of Britain and France—the countries with most at stake, had, unlike the majority of their critics, the advantage of long experience of the problems facing them, and a mass of inside knowledge of grave happenings behind the scenes. They clearly saw that Uno—ham-strung by the veto and choked by endless legalistic debates—would be powerless to take deterrent action in time. And so the two Prime Ministers adopted the only available means of quickly averting a general conflagration without wasting time in further consultations—they grabbed the fire-extinguishers nearest to hand and doused the rising fire with the minimum of damage to life and property.

People who disagree with the policy of the two Prime Ministers have, of course, every right to voice their disagreement. But to do so in terms calculated to split the nation on this issue, at a time when the world outlook is still so grave, is doing their country great disservice and playing into the hands of its enemies.—Yours faithfully,
London WILLIAM SHARPE

★

SIR—The views of the Labour Party on Middle East affairs are plainly based on political opportunism. Your motives for your unhelpful articles of the last two weeks are far more difficult to discern. It might be wiser if you suspended judgment, particularly on a really courageous Prime Minister, until the full effects of his action can be seen. At the very least it can be said for him that fighting has ceased—however temporarily—at a time when, but for the actions of Britain and France it would most certainly be spreading.—Yours faithfully,
Caterham, Surrey G. J. MORTIMER

★

SIR—It has been said that the crisis has caused strange bedfellows, but none stranger than yourself, jew-baiters and police horse baiters in whose company you have placed yourself by your attacks on the organisers of police whether operating in Egypt or Whitehall. How you must regret that you cannot put back the clock and get the Austrian Corporal to make a four at your cosy little party.—Yours faithfully,
Burford, Oxford F. M. COOK

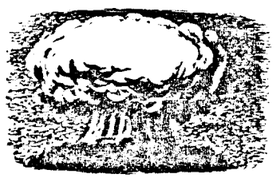
HEINEMANN



ATOMIC QUEST

A PERSONAL NARRATIVE
ARTHUR H. COMPTON

Dr Compton—winner of the Nobel Prize for Physics at the age of 35—was one of those responsible for American wartime atomic research, and a leading participant in events that led to the bombing of Japan. His book tells of the top-level decisions, the drama, the personalities, and of the agonized personal questionings behind the project that began the atomic age.

OXFORD UNIVERSITY PRESS

The Bishops' Bench

SIR—On personal grounds I was fascinated by your article in your issue of October 20th.

The article seems to agree that bishops are still "upper-class intellectuals." Although my knowledge of these things is now rather out of date, this seems to me a rather surprising description, even of the situation a few years ago, and one would have thought that it would be even less true now. Surely the test whether someone is "upper-class" (if such a thing still exists) is not where he was educated himself but where his father was educated. I am not in a position to make a detailed statistical check, but I should have thought that the number of bishops whose fathers were educated at public schools or the older universities was much smaller than the number who were there themselves. I should also have expected that this position had become much more marked in the past thirty years. There can be very few bishops nowadays with the social background of Alwyne Compton or William Cecil, or even of the present Bishop of Norwich, who became a bishop in, I think, 1923.

As for intellectuals, surely the test is not where someone was educated, or how he has spent his life, but the degree which he took at a university. Here, too, surely, the situation has changed greatly over the past fifty years. At the beginning of the century it was normal to appoint men with first-class academic brains, who would advance theological and other learning. Today the commonest criticism would seem to be that bishops are appointed mainly for their administrative ability. This is surely the real reason why so many headmasters and heads of colleges go on to be bishops. It is also why so many bishops nowadays are former archdeacons, which would not, I think, so often have been the case in the past. The same need is presumably why so many bishops have a background of military experience, although I think that the decorations to which you refer were largely the result of Mr Churchill's policy during the war. Although you may be right that he did not take a very direct interest in individual appointments, there was a distinct impression at the time that a DSO or an MC was an almost essential qualification for high preferment.

It is very possible that this general trend is occasioned by the changing standard of people going into the church as a whole, as you say, and it is perhaps inevitable that, out of the general run of clergy, bishops should be chosen from among those whose background ought to fit them for leadership. But it is surely because of the intellectual trend, and not because of the political method of appointment, that bishops tend to lack distinct or cross-bench opinions. In this context, I was sorry to see your comment on the MacDonald Government; the Dean of Canterbury was not its only appointment.

No doubt you have given as much space as you can spare to this subject already, but, if your statisticians were able to compare the present bench of bishops with their predecessors, say, twenty-five and fifty years ago, I think that the result might be very interesting.
—Yours faithfully, E. J. W. BARNES
*The Athenæum, S.W.*1

Law, Not War

SIR—Your correspondent in his article in *The Economist* of November 10th seems to have his facts a little out of perspective. The mounted police who controlled the demonstrations outside Whitehall on Sunday last were not undisciplined. The skill with which they controlled the "demonstrators" was particularly praiseworthy. They, in most cases, kept their tempers and tried to disburse the crowd in an efficient manner. The crowd would not comply with the mounted police or the police on foot. They kept on shouting and pushing and making the situation much worse than it need have been.

Your correspondent does not seem to realise that the greater majority of the demonstrators were "communist influenced demonstrators." In fact, it had been arranged for the various communist young people's groups to meet and provoke demonstrations outside Whitehall. This communist influence led the demonstrators to use violence, and numerous fights broke out between youths, and youths and police. As for the mounted police being rough, this is ridiculous; in fact, they were not rough enough. Your correspondent does not mention that a mounted policeman was dragged off his horse, beaten up, trampled on, and his horse kicked. He was later taken off to hospital with cuts and bruises all over him. Should not the police be allowed to treat people rough if treated rough themselves?

Furthermore, your correspondent says the mounted police were called "fascists." Does not this prove that a large majority of the demonstrators were communist influenced? The great cry of the communist newspapers over the last few weeks has been the word "fascists." The communists seem to have adopted this as their pet slogan.
—Yours faithfully, A. J. CASEY
Edgware

Europe's Homeless

SIR—In your review of my book, *The History of the IRO*, you suggest that I am incorrect in stating that the IRO was the first agency to be set up by the United Nations organisation, since FAO and Unesco came into being earlier. The constitutions of both FAO and Unesco were drafted by inter-governmental conferences before the United Nations organisation existed. IRO was created on the basis of deliberations in the UN and its constitution was drafted by the UN, the first agency for which this was the case.—Yours faithfully,
L. W. HOLBORN
Connecticut College, USA

Books & Publications

Canada's Military Epic

OFFICIAL HISTORY OF THE CANADIAN ARMY IN THE SECOND WORLD WAR: *Volume I, Six Years of War.*
By C. P. Stacey. 642 pages.
Volume II, The Canadians in Italy, 1943-1945.
By G. W. L. Nicholson. 822 pages.
Queen's Printer, Ottawa. $3.50 each volume.

A GREAT epic lies encompassed within these two enormous volumes. Canada is one of the least military nations in the Commonwealth, or indeed in the western world. A society devoted to developing the wealth of half a continent, with no natural enemies and no overseas commitments, is apt to equate soldiering with play acting. Canada, lacking the traditions of the Civil War, was before this last war an even more civilian society than the United States. It has never been possible to get French Canada to agree to any form of national service, and until the advent of Nato its forces were organised only for home defence in time of peace. In 1939 its regular army consisted of 4,200 officers and men, no modern equipment, and a sufficiency only of harness. Five years later it had been built up into a force of a half million men (in addition to a large air force and a sizeable navy), consisting of five divisions and two armoured brigades fighting in the two main theatres of the European war.

The vigour and scale of Canada's war effort are the more striking because the course which the war took was deeply frustrating to Canada's national aspirations. In the late thirties Canada, under the leadership of Mackenzie King, was expressing a deep urge to assert its own sovereignty and to make London learn once and for all that it was no longer a colony. It was the dearest wish of Mackenzie King and the Canadian generals that the Canadian troops should fight as a homogeneous force, representing an ally as powerful as Free France, in the final battle against Germany. But as the build up of the Canadian divisions in Britain gathered momentum in 1941 and 1942, the boredom of troops kept inactive for long periods thousands of miles from home, coupled with the mounting criticism in Canada that the government was afraid to risk Canadian lives, forced it to accept whatever opportunities of action Allied grand strategy could offer. So when it became clear in early 1943 that a cross-channel invasion could not take place for another year, it was decided to split the Canadian army and send two divisions to participate in the invasion of Sicily and Italy.

Colonel Stacey in the first volume traces the years of bored inactivity in Sussex and the diversion of Canadian units to minor enterprises to satisfy the Canadian public demand for a role that would match, say, the gallantry of the New Zealanders at Tobruk. (The story of the Canadian part in the battle for France and Germany is for a later volume). By far the most important of these was the Dieppe raid of August 19, 1942. But Colonel Stacey's careful, austere narrative disposes of myths that this disastrous episode, in which more than half of a Canadian force of 5,000 men were either killed or captured, was executed merely to give the Canadians a little bloodletting.

To many an overworked British senior officer in London and Algiers, the insistence of the Canadian generals on maintaining the "cohesiveness" of Canadian units and formations often seemed a tiresome and neurotic form of nationalism. In fact, what emerges from these volumes is how loyally the Canadian high command fell in with the requirements of a grand strategy which they had had no real hand in determining. Perhaps the least defensible assertion of Canadian nationhood was the insistence on imposing the full apparatus of a separate corps headquarters and its attendant troops on the already choked communications of the Liri valley in the battle for Rome. This led to a full scale row between General Oliver Leese, the 8th Army Commander, and General E. L. M. Burns, the ineffective commander of the 1st Canadian Corps (later to distinguish himself as the reliable Administrator of the Palestine Truce Commission). It drew from the Canadian Army Commander the *cri de cœur* that the demands of Alexander and Leese for the disbandment of the Corps meant in practice "that no Canadian or American or other 'national' commander, unless possessing quite phenomenal qualities, is ever rated quite as high as an equivalent Britisher."

But in fact this incident only serves to emphasise what both official authors are too discreet to make explicit—the weakness of Canadian generalship. This is not surprising since at the outbreak of war Canada possessed only 400 regular army officers, many of them chairborne or elderly, and those who ended by commanding divisions and brigades had been captains or majors a few years before. The brilliance of Canadian staff work and administration (a commercial people applying the energy that had built Alcan or the Canadian Pacific Railway to the ends of war) was not matched by skill and dash in handling large formations. The commander of a German SS Division in Normandy correctly noted in his diary that "Every Canadian operation bore the work of intensive planning. Every opening phase was a complete success. . . . But the Canadian Army never followed up their opening successes. . . . Everyone of the Canadian attacks lost its push and determination after a few miles." Apart from General Andy McNaughton, who by the accident of age and fortune was forced to be content with the role of military statesman rather than leader, only one officer, Lt. General Guy Simonds, possessed the "quite phenomenal qualities" which made him perhaps the greatest corps and divisional commander on either side in the last war, and one of the most original military thinkers in the uneasy peace that succeeded it.

But the importance of these two scholarly, admirably produced volumes rests on their implicit commentary on the Canadian character. Canada is a nation which has elicited the best from the American capacity for improvisation, yet has retained the discipline of the British military tradition without its blimpishness. As Napoleon and the Duke realised, the military achievements of a modern state reflect the quality of its internal inspirations. Canada's great reputation as a warrior nation rests not on its generals, but on the embattled farmers of the South Saskatchewan Regiment on the beach at Pourville, the bankers and insurance clerks of the Black Watch of Montreal in the fire-swept uplands below Caen, the market gardeners of the Hastings and Prince Edward Regiment scaling the rock face at Assoro, or the filling station mechanics of the British Columbia Dragoons flogging their burning tanks through the nightmare of the Gothik Line.

Bloomsbury

OLD FRIENDS.
By Clive Bell.
Chatto and Windus. 200 pages. 21s.
VIRGINIA WOOLF AND LYTTON STRACHEY: LETTERS.
Edited by Leonard Woolf and James Strachey.
The Hogarth Press and *Chatto and Windus.* 118 pages. 18s.

MR BELL, in his fascinating reminiscences, quotes without enthusiasm Keynes's description of him in "Two Memoirs" as "a gay and amiable dog," and contrives to throw some doubt on it. No one doubts the gaiety of his life, but this analysis of his friends' characters is serious, and the tone of his recollections is, on occasion, unamiable and catty. On occasion only—he has more good than bad to say of most of his subjects; but when dealing with faults he shows a detached but undeniable gusto: Sickert's poses; Strachey's charm and brilliance, but also his selfishness; Keynes's cleverness, but also his cocksureness; Fry nearly all

Can You take your Politics *NEAT*?

Of the multitudes who follow present-day Affairs, only a select number are capable of looking a straight fact in the face and forming their own opinion on it.

They are the elite—many of them *Economist* readers—for whom KEESING'S Service was started 25 years ago—to give factual information and dependable data on current Politics, Economics, Social Questions throughout the world for the constant enlightenment of those whose intelligence rebels at "news" being presented in a watered-down, embellished, one-sided or exaggerated form.

But in KEESING'S you get much more than a regular and orderly flow of undoctored data. As its weekly bulletins are covered by a unique "living" Index which is constantly reborn to embrace the latest entries in the diary, and are designed for permanent filing in the book-like Binder, KEESING'S enables you to build up your own work of reference on the important happenings of our time, always truly up-to-date.

The present is a particularly advantageous moment for you to join the Service, because an entirely new Volume will soon start.

praise, but with a few side-kicks. Indeed, only Virginia Woolf and T. S. Eliot come out wholly unscathed, though Sir Gerald Kelly comes near it.

But a book is none the worse for being cattish rather than doglike, and Mr Bell throws a great deal of light, for the uninitiated, on that strange phenomenon Bloomsbury. Before he goes off to Paris for a couple of light-weight and anecdotal chapters, he attacks the central theme—what was Bloomsbury? His attack is rather defensive; it is designed as a reply to some of the strange assaults delivered on Bloomsbury, so called, in recent years. He lays down a smoke-screen and implies that, as there are contradictions between all attempted definitions of Bloomsbury, it is doubtful if it ever existed. His book, of course, is a proof of the contrary, and is doubtless so intended. One lands in contradictions if one tries to be too exact: Bloomsbury was not a body like the Royal Academy, with formal rules of membership and a stable constitution. But is anything less to be doubted than the existence, over a number of years, of a certain group of friends, a certain sphere of influence, a certain turn of thought and phrase, to which the name Bloomsbury can reasonably be applied, provided that one does not look for firm boundaries where none existed? And is defence now needed? The attacks never had much force and have now ceased, as the ideas spread by Bloomsbury have become familiar; Bloomsbury is in the past, not the present; and we can look back to it as one of the most brilliant and stimulating phenomena of the first quarter of the century.

If further proof is needed of the existence and character of Bloomsbury, it can be found in the letters exchanged over twenty-five years between Virginia Woolf and Lytton Strachey, now edited by the husband of the one and the brother of the other. They warn the reader that these letters are a little more self-conscious than was the habit of either. Hardly one of them is serious; they are light-weight, designed to amuse. But they are charming reading, and show how much brilliance was engendered by the constant contact of this group of friends, always meeting and writing to each other and about each other, sometimes catty, always fond.

In Praise of Dev

DE VALERA AND THE MARCH OF A NATION.
By Mary C. Bromage.
Hutchinson. 328 pages. 25s.

THIS book must be classified as an essay in hagiography rather than an historical study or a political analysis. Mrs Bromage cites a variegated list of authorities; this does not, however, include some works in which Mr de Valera is regarded with something less than sympathy. She has not profited by these sources; there are very many errors of fact and date.

Possibly that does not matter, granted the kind of book this is. The preface remarks that the legend about Mr de Valera, "proliferated by both hate and love, is less compelling than what really transpired as a result of his boyhood dream." But it is the legend that we get here. Throughout forty years, Mr de Valera occupies the centre of the stage in which indeed he is usually the only actor. Cosgrave and O'Higgins enter at times only for virtue's heightening. Hogan does not receive a single mention. That, however, is possibly better than the role reserved for Mr Lemass, who never appears in any higher status than that of an acolyte. During this lengthy and perplexed period, Mr de Valera is always right. *Il Duce ha sempre ragione.* And *mutatis mutandis* (which of course covers a great deal, all of it in Mr de Valera's favour) this is the kind of book that enthusiastic ladies did write about the Duce in the good old days.

This is a great pity because there is a story to tell, if only Mrs Bromage had looked for it beneath the surface. To her, as to his older followers, Mr de Valera is still "the Chief," the successor of Parnell. That won't wash; at the best he has never secured more than a bare majority ever since he set up in business on his own. But he is the first example in Irish history of a leader who came back after a shattering defeat. He possesses today the respect, though not the support, of many who accept that he was wrong, and the signatories of the Treaty right, in the period before the Civil War. That respect comes partly from his defence of Irish neutrality against Sir Winston Churchill in May, 1945: the one occasion in a quarter-century when he spoke for all. But it is right to say that it comes also from the realisation that Mr de Valera can compare more than favourably with those who have held office in Europe in the last three decades.

On another level Mrs Bromage might have studied the paradox of a man who has held power and office for twenty years and has done so little with them. Apart from the constitutional issues, which were settled in essentials before he came into office, his main interest has been the revival of Irish—the one issue on which he has not been able to shake public indifference. The economic changes which have been effected under his governments do not seem to have aroused his interest, or indeed attracted his attention. However, Mrs Bromage has every right to decide what kind of book she wants to write; and no devotee of Mr de Valera will quarrel with her decision.

114 new firms have opened up in Northern Ireland since 1945

Over 50 have expanded beyond their original plan

Here are some examples of progress:

BRITISH TABULATING MACHINE COMPANY LIMITED
Two factories occupied in 1949. Third now being built. Employ 1,400 manufacturing office machinery.

LINES BROS. LTD.
Factory now being extended. Labour force to be doubled. They make toys as well as prams.

U.K. OPTICAL BAUSCH & LOMB, LTD.
Trebled size of original plant. 600 employees in what is now the most modern lens and spectacle frame factory in Europe.

PYE, LIMITED
Corran Works, in 1947 employed 300 workers. Expanded to 450 in 1951, to 550 in 1953; second extension in 1956 will take pay roll to over 1,000. Make radio, TV and electronic equipment.

LOTUS, LIMITED
Down Shoes factory now being doubled in size to employ over 500 workers. New manufacturing method introduced.

BERKSHIRE KNITTING MILLS (U.S.A.)
Commenced production of nylon stockings in 1947. Factory extended by 20,000 sq. ft. Third expansion nearly completed.

BIRMINGHAM SOUND REPRODUCERS, LTD.
Original factory now being extended for second time. New factory being built. Manufacture gramophone record players.

COURTAULDS LIMITED
Employ about 1,200 in a most modern viscose rayon plant, turning out over 17,000,000 lb. of rayon yarn per annum.

BRITISH THOMSON-HOUSTON CO. LTD.
Building £8 million turbo-generator plant to employ 3,200.

CHEMSTRAND LIMITED (U.S.A.)
Recently acquired a 70 acre site to build a £3½ million plant. This wholly-owned subsidiary of the Chemstrand Corporation which is jointly owned by the American Viscose Corporation and Monsanto Chemical Company will manufacture acrylic fibre.

In addition a further 50 long-established firms have expanded

NORTHERN IRELAND OFFERS YOU:

CAPITAL GRANTS for plant, machinery and new buildings. Other financial assistance available.

12 FACTORIES PLANNED OR BUILDING TO RENT (average 9d. per sq. ft. per annum). Also factories on repayment.

MALE LABOUR IN PLENTY and trainable. Shifts possible. Low labour turnover. High output per man.

NO C.I.C. SQUEEZE ON FACTORY DEVELOPMENT because the Chancellor has told the Capital Issues Committee "... the Treasury will be ready in principle to consent to proposals to raise money for investment in Northern Ireland..."

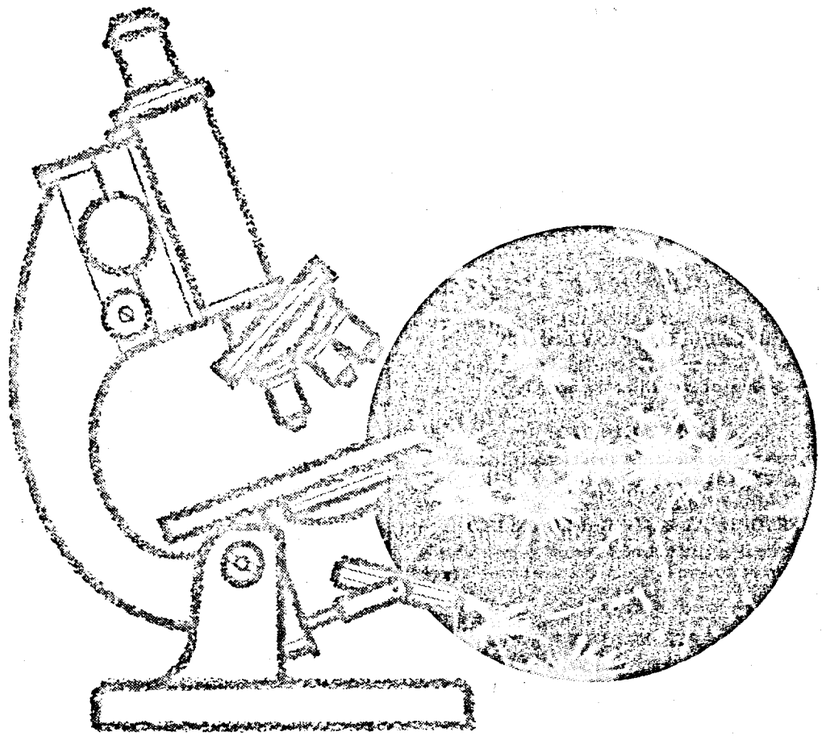
centre of growing industry



The answer to an age-old problem...

UNION CARBIDE Sorbic... Selective inhibitor for control of many molds and yeasts in foods and other products.

When confronted with the problem of product spoilage created by mold, fungi or yeast development examine the solution offered by UNION CARBIDE Sorbic. This remarkable mold inhibitor is up to four times more effective than any other fungistat designed for similar applications.

Sorbic is both tasteless in required amounts and safe for human consumption because it is so readily metabolized.

Solve your mold, fungi or yeast problems with UNION CARBIDE Sorbic . . . the chemical that prevents mold development *before* it starts.

For your sample or additional information describing UNION CARBIDE Sorbic and its *increasing range of applications* in the food processing industry write for the free booklet CE-11

UNION CARBIDE

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Coalition Government

Washington, D.C.

IN spite of his heartening victory, even though his Secretary of State is ill in the middle of a foreign crisis, the President must now make urgent decisions on political strategy at home which will set the character of his next Administration. Never again does a President get as good a chance of placing his imprint on the legislative programme as he does in the congressional session immediately following his endorsement by the people. Mr Eisenhower wasted this opportunity in 1953 through political unpreparedness and an antiquated conception of the presidential function. Now that he knows better, will he do better?

The President will be tempted to list everything he thinks ought to be done in a long State of the Union message next January, warning his political leaders that they must conduct themselves in such a way that other Republicans will be able to inherit his extraordinary majorities, and then to leave them to get on with it. But this method is not likely to bring much credit for practical achievement to the "modern Republicanism" which the President is trying to establish. It is in the nature of congressional committees to start unlimited public hearings all over again at each session, regardless of how many times the same question has been gone over before. It is in the personal nature of Congressmen and Senators not to spoil the "club" atmosphere by offending elderly and respected members who are experts on some particular subject and hold reactionary views on it. And finally, when left to their own devices, the "economic conservatives" who form a majority of the Republican party instinctively avoid doing anything which will offend their natural allies, the Southern Democrats.

With the Greatest of Ease

Herblock in the *Washington Post*

Only an outside agency, with the unique prestige of the Presidency, can hope to galvanise the legislative process into action over these cumulative sources of inertia. In a sense Mr Eisenhower, if he is serious about remodelling his party, must represent in Congress the "missing" Republican members, those who would have been elected if the urban voters who expressed confidence in Mr Eisenhower personally had also liked his party. To be specific, extraordinary energy is needed from the White House early in the session if anything is to be achieved on building schools, protecting the civil rights of Negroes, extending health insurance or removing some of the barriers to immigration.

The acid tests are civil rights and schools, and here the President's difficulties are immediately apparent. At the last session the Administration wisely chose to concentrate on one aspect of civil rights, trying to get Congress to guarantee the rights of Negroes to vote in the southern States; at present they are frequently stopped from casting their ballots by tricks or intimidation. A forceful repetition early in the session of the Justice Department's programme for preventing this is the least the Negroes expect as a reward for the substantial switch of their votes to Mr Eisenhower, which was one of the marked features of the election. But political advisers will point out to the President that southern voters also swung to him in unexampled numbers, thus opening the brilliant prospect of a two-party system in the South, if the atmosphere is not poisoned by racial argument. Moreover, he is almost certainly politician enough by now to know for himself that, if civil rights legislation is presented at the beginning of the session, everything else will be held up almost indefinitely by southern resistance; personal relation-

ships will also be so embittered that it will be difficult to get co-operation on any other business from the Southerners who will control most of the committee chairmanships in the Democratic Eighty-fifth Congress. On the other hand, if civil rights are left to the end of the session, they will almost certainly be quietly buried in committee until Congress is safely adjourned.

Even if the spectre of civil rights did not hang over the halls of Congress, the President would require the utmost skill to fulfil his most specific electoral pledge. This was that he would see that as much federal money was spent on building schools in the next four years as would have been spent in five if his plan had gone through last year. Since the very idea of involving the federal government in the field of education is repulsive to natural conservatives, whether Republican or Southern Democrats, particularly in the House, success depends on an early start and constant presidential vigilance; this must be accompanied by a readiness to use Mr Eisenhower's unique access to public opinion to bring the wind of impatience whistling round the legs of flagging legislators.

If the President is to get either of these measures, and still more if he is to achieve the political miracle of getting both, he will have to apply himself to the minute, time-consuming and frustrating task of building up special coalitions to achieve each objective. No one else can do it for him because he alone has the mandate of the people, though the White House liaison officers can act as his eyes and ears. To manage Congress he must personally be manipulator as well as tribune and high priest. And it is not merely one coalition that he must build, but a new coalition with a different membership for every major controversial measure that he wishes to get through.

★

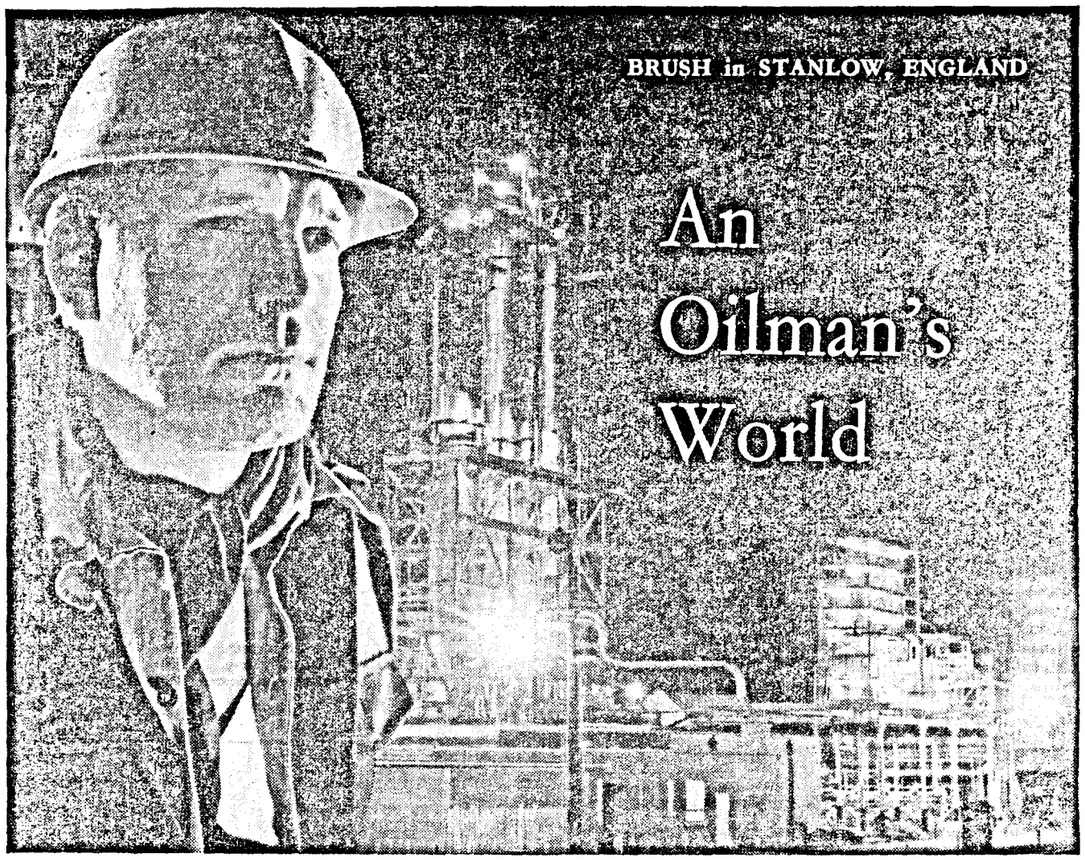
While it is quite possible that the President's apparent personal vigour and new zest for politics may lead him to be more assiduous than he has been in this part of his function, it needs to be clearly understood that it is absolutely out of the question for him to by-pass, as a regular matter, the congressional leaders of his party. If, for example, he is planning the extraordinarily delicate manœuvre of forcing a civil rights measure out of the Senate Judiciary Committee, which is dominated by Southern Democrats, he cannot rely on neophytes like Senators Case of New Jersey and Javits of New York, even though the presence of these progressive Republicans will be a great help. The job could only be done by established members such as Senators Knowland and Dirksen, who have the weight and skill to do it and who, in addition, in spite of the general impression to the contrary, have regularly supported domestic legislation that the President has really wanted. But if Senator Knowland is asked to disrupt his pleasant working relations with Southern Democrats in order to respond loyally to presidential urgency, how can the President on his side completely ignore Mr Knowland's feelings when it comes to foreign relations?

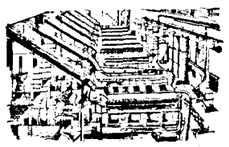
Furthermore, the President's freedom of manœuvre is somewhat limited by the tradition that a party's legislative experts on a subject must be treated with respect. Unfortunately Senator Knowland is the only Republican of standing on the Senate Foreign Relations Committee. His influence cannot be dispensed with, although it will be restricted by the special confidence which the people have obviously shown in the President in the international field and by the alertness of the remarkably talented and articulate group of Democrats on the committee. Now that the President has so far outdistanced his party in popular esteem, he can probably write off the small, utterly irreconcilable group, whose most powerful figure is Senator Bridges and whose most notorious members are Senators Jenner and McCarthy. Also, if he really applies himself to the task, Mr Eisenhower should be able to work out bargains with Northern Democrats so that their votes can help some of his more progressive measures through. But they will only be prepared to co-operate with his programme if he in return controls enough Republican votes to overcome obstruction from Southern Democrats. To do this he must, as has already been pointed out, cultivate men whose sympathies are with the Grand Old Party rather than with modern Republicanism.

Test for the United Nations

ON Wednesday President Eisenhower met the press for the first time for over a month, for the first time since crisis burst on the Middle East and on Hungary, for the first time since he took over direct responsibility for foreign affairs from Mr Dulles and for the first time since the people of America reinvigorated his authority by giving him another overwhelming vote of confidence. But, even with all this behind him, there was disappointingly little indication that he was ready to offer the positive and imaginative lead to the free world which many in Washington and elsewhere believe to be vital at this time and which only he can provide. Naturally, Mr Eisenhower could not agree with the reporters who suggested that the past American policies of "drift" in the Middle East and of "liberation" for satellite countries were responsible for the present situation. And he is justified in thinking that the election results were a specific endorsement by the American people of his efforts to preserve peace through the United Nations. But this does not mean—indeed, there are indications to the contrary—that the American people are still satisfied that the United Nations is strong enough to deal adequately with the immediate difficulties in the Middle East and in Hungary.

But this, Mr Eisenhower insisted, is what the United Nations should be left to do, although he conceded that the international machinery would be very thoroughly tested in the process. Admittedly he was hampered by the danger, to which he drew special attention, that the present UN negotiations might be impeded by too much public discussion. Moreover, he stressed the support which the United States gives to the United Nations and pointed out, when asked about Soviet "volunteers" in the Middle East, that the United Nations is able to do more than pass resolutions —an oblique reference to Korea. Finally, Mr Eisenhower suggested that, once the immediate causes of friction had been disposed of, then the United States would be ready with constructive proposals for the future. But to many observers what matters now is the present: they may be forgiven for feeling once again that the President is failing to exercise the responsibilities of his office.





Ask Bill here about oil and he will tell you about Stanlow — a Shell family refinery on the Cheshire-side of the Mersey. Working there man and boy for 30 years, he has seen it grow into one of Britain's major refineries. It covers 1,400 acres, employs 5 thousand workers and produces 5 million tons of petroleum a year. As expansion became necessary a special need was for pumping plant to supply cooling water for the process of distillation. And that is where The Brush Group came in. Eight National Harland pumping units were chosen. Another Brush installation at the refinery consists of two Brush-Reavell turbo compressor sets.

BRUSH EFFICIENCY

Installed in the pump-house, the eight National Harland units provide the cooling water for all the refinery's major requirements. Each unit consists of a National R4AAU7-type, 656 bhp, pressure charged diesel engine coupled to a Harland 20/24 in. Electroglide pump with a capacity of 13/170 gallons a minute. Diesel engines were chosen because of their flexible performance.

The Brush-Reavell turbo compressor sets provide compressed air for specialised services and instruments around the refinery. A special feature of these sets is the Reavell-Askania regulator in the turbine governor system which not only maintains constant air delivery pressure at fluctuating loads by varying the turbine speed but still allows the speed governor to take over control at a pre-determined speed. The normal output is 2,500 cu. ft. of air per minute at 120 lbs. per sq. in. with an inlet temperature of air of 85°F.

A WORLD-WIDE ORGANISATION

The Brush Group has long been providing the petroleum industry with a wide range of electrical and diesel equipment. Through an international sales and service network, the Group offers a comprehensive range of power plant for general and specialised needs, together with on-the-spot advice. The Brush Group produces about a third of the U.K. output of industrial diesel engines and generating sets — and is, in fact, the world's largest exporter of this type of equipment. The Group constantly exports over fifty per cent of its entire production and, in the past few years, it has exported as much as seventy per cent.

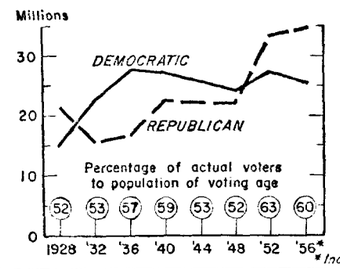
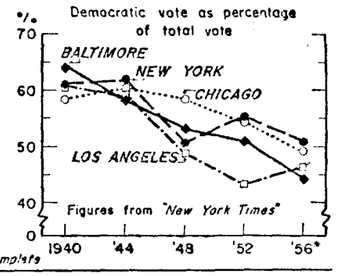
Republicans	203	197
		four undecided
STATE GOVERNORS		
Democrats	27	28
Republicans	21	19
		one undecided

COMPARED WITH OTHER YEARS

TOTAL VOTES



IN THE CITIES



THE most extraordinary result of last week's election is that for the first time since 1848 a President has been chosen without his party also gaining control of Congress. A record number of voters wanted to keep Mr Eisenhower in the White House, but they made it quite clear that they did not want the Republicans to be in charge on Capitol Hill. Such discrimination in balloting is not easy to practise and the many people who took the trouble to split their votes must have felt strongly on the matter. By acting as they did, they once again confounded the experts, who had predicted that the Republicans would lose the House of Representatives unless there was a landslide vote for Mr Eisenhower. There was such a landslide but the Republicans still lost Congress.

Analysis of the returns shows a clear trend to the Republicans in the east and to the Democrats in the west. In the House of Representatives the nine seats won by the Republicans were all east of the Mississippi and all but two of the eleven lost to the Democrats were west of the river. In the eastern states Mr Eisenhower won by higher percentages of the total votes cast than he did in 1952, while in the western states his majorities tended to be lower. This pattern was also reflected to some extent in the contests for Senate seats and Governorships, although here it was distorted by the personalities of the candidates and by other local conditions. For example, dissension in the state Democratic machine and the popularity of Mr Mechem, the Republican candidate for Governor, explain the Republican victory in New Mexico, while the invincibility of Mr Lausche accounts for the Democratic win in the senatorial election in Ohio, where the Republicans in their turn won the Governorship relinquished by Mr Lausche.

One reason suggested for this trend is that voters in the east may have been more concerned about the international situation than were those in the west. Westerners were certainly more influenced than were easterners by the difficulties of farmers and the Administration's lack of interest in the conservation and development of natural resources. Mr Eisenhower's greater success comparatively in the urban east is also due to his popularity among town dwellers. This has accelerated the movement away from the Democrats in the cities which used to be their strongholds.

Bonds and Ballots

ON November 6th Americans voted not merely for President, Congress and a wide variety of local offices, but also, somewhere near the bottom of the long ballot papers, for—or against—issues of state, county and municipal tax-exempt bonds. The voters went to the polls in a mood of great confidence about continued prosperity; for they approved, it is estimated, 95 per cent of a record number of proposals which totalled $2.7 billion. This was in marked contrast to the fate of about two-thirds of the proposals in the mid-term elections of 1954 for spending $1.5 billion. And $100 million of the small amount rejected this year was on one measure, a New York State plan to build houses for middle-income groups.

Voters approved borrowing for a wide variety of projects, whereas in the last elections only school construction bonds were well supported. School bonds still lead the field, but bonds for highway construction and for various benefits to ex-servicemen did almost as well. The amounts vary almost as much as the purposes: Little Rock allows its city fathers to issue $1,295,000 worth of bonds for a new library; Sandusky $2 million for new sewers; and Fresno, California, $11,775,000 for schools, although the citizens of Trumbull County, Ohio, for the third time of asking refused to let a cent be raised to build a new county jail. Outside of Trumbull County these bond issues will certainly provide another fillip for the construction industry.

Ever-expensive California led the field, voting in all at least $800 million. But the Californian voters in their enthusiasm for bond issues did not approve of all the other propositions on their extensive ballot. They defeated overwhelmingly the much-vexed Proposition 4, an attempt by the big oil companies to gain by popular initiative a common conservation policy for all Californian oilfields; this was a rare reverse for the famous firm of Whitaker and Baxter, which specialises in political public relations and managed the campaign for the proposition.

Oil for Europe

IN spite of the urgent need for closer integration, the Middle East Oil Emergency Committee, which was to have co-ordinated the supply of American oil to Europe, is still dormant. This unfortunate "hands off" attitude, when the committee had already worked out detailed plans for mitigating the effects of the closing of the Suez Canal, is to be explained partly by the Administration's distaste for the British and French action, but American interests are also more directly involved. American companies controlled nearly 60 per cent of the oil produced in the Middle East in the first half of this year. The charmed life of Tapline, the continuation of Saudi-Arabian production (except for the supplies to the Bahrain refinery), and the Arab tolerance of American oil companies in the other Middle Eastern countries owes much to the refusal of the United States to endorse the British and French intervention. Official American offers, even now, to ease the burden for Britain and France might end this tenuous immunity.

However, the individual American oil companies are showing no reluctance to provide the extra supplies needed in Europe, and the limits within which this help will be given are now becoming clearer. The Secretary of the Interior has made it quite plain that the government does not intend to ration American consumers to release more supplies for export. It is also safe to predict that the state agencies which control the production of crude oil in the United States will not permit output to be increased to an extent which would conflict with sound conservation practices. But in so far as output has been held down because of lack of demand, there is scope for a fairly rapid increase in supplies. Louisiana has already raised its allowable production by 75,000 barrels a day (about 3 million tons a year) and the permissible production rate in Texas is now being reviewed. Producers in Texas are at present working on a schedule of 15 days a month, which means in theory that they produce only half as much oil as they could without engaging in wasteful methods. In practice, however, it is estimated that they could not increase output by much more than a quarter, and that the pipeline network in Texas would in any case find it difficult to transport this extra quantity to the ports in the Gulf of Mexico. The most commonly quoted target for the total increase in American output is 800,000 barrels a day (about 40 million tons a year), of which some 300,000 barrels a day would be needed for domestic use to replace supplies formerly imported into the United States from the Middle East. It will take time to open up this reserve capacity, but fortunately some exports can be made directly from American stocks of both crude oil and petrol, which are at present well above normal. Extra fuel oil shipments will be much more difficult to obtain, and the price of fuel oil for export has already risen.

Filling Up the Basin

FROM A CORRESPONDENT IN COLORADO

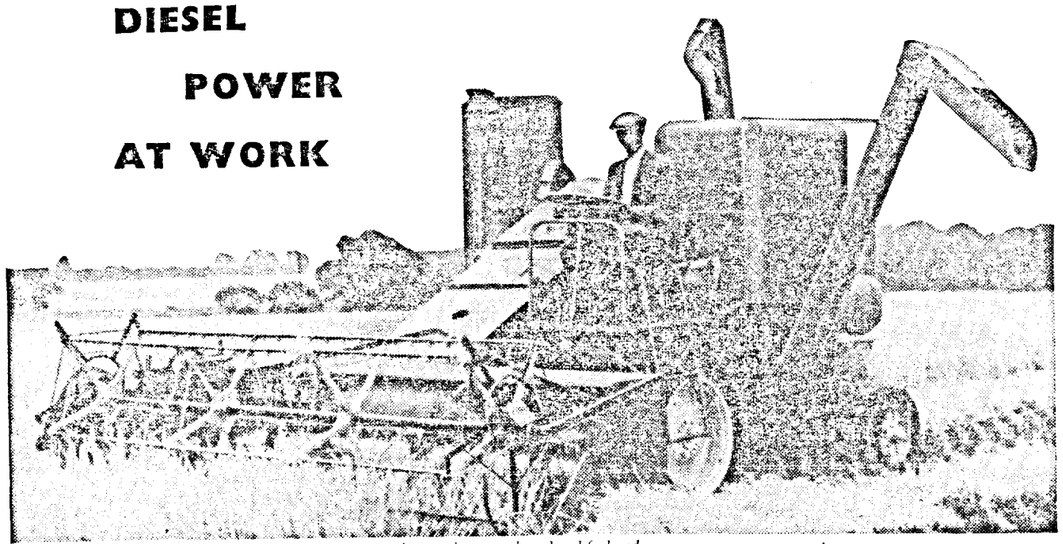
THE mountain states have the only large-scale hydro-electric development which has been undertaken by this Administration—the Upper Colorado Basin project which has been under discussion for years. Work on the first two dams was actually begun with great publicity just three weeks before the election, when President Eisenhower pressed a switch in Washington and set off the first blast at the dam sites. Residents of the states which will benefit—Colorado, Wyoming, Utah and New Mexico—should therefore have gone to the polls with the gratitude of those who are nearing a promised land.

The project authorises the United States Bureau of Reclamation to spend $760 million to store the water of the Colorado river and its tributaries to provide hydro-electricity and irrigation in these states. It is the largest federal reclamation project ever authorised at one bite, perhaps the last of the giants. It will take many years to build the whole of it and much of it may not actually be built; further, it will be nearly a decade before the Upper Basin begins to feel the economic stimulus of the project, apart from that which will come from the outlays on construction itself. But dirt is flying and the people of these states feel triumphant because they won the project against powerful opposition. The Colorado is a "thin" river, which flows for its entire length through an arid region;

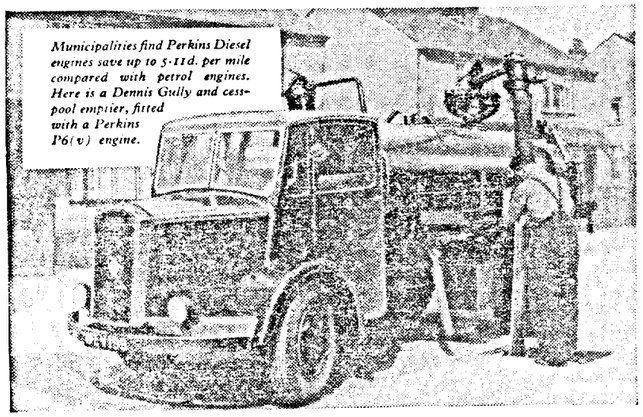
The seats are emptying fast. Nothing runs across the field now but the wind. Another great game is over and yet not quite over. For, warm in our chairs at home, we shall live it through again while the White Horse whisky glows softly in our glasses.

Maximum prices: Bottles 36/-, ½-Bottles 18/9, ¼-Bottles 9/9, Miniature Bottles 3/9.

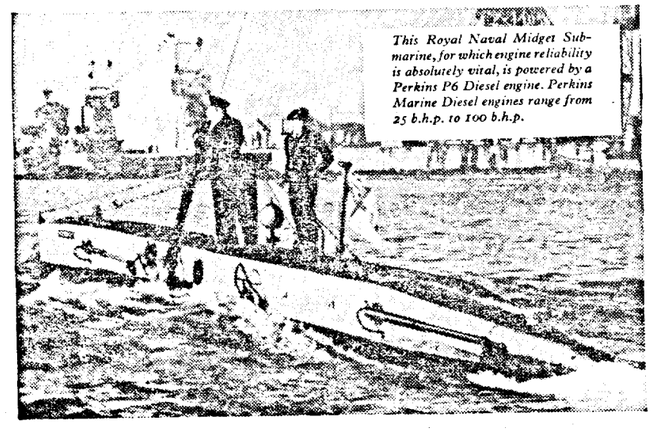
DIESEL POWER AT WORK



On the farm Perkins Diesel engines offer greater power, easier starting, greatly reduced fuel and maintenance cost. This is a Massey-Harris 780 Combine Harvester fitted with a Perkins L4 TA type diesel engine.



Municipalities find Perkins Diesel engines save up to 5·11d. per mile compared with petrol engines. Here is a Dennis Gully and cesspool emptier, fitted with a Perkins P6(v) engine.



This Royal Naval Midget Submarine, for which engine reliability is absolutely vital, is powered by a Perkins P6 Diesel engine. Perkins Marine Diesel engines range from 25 b.h.p. to 100 b.h.p.

POWER, SPEED AND ENDURANCE are three of the outstanding characteristics you'll find in every Perkins Diesel engine, at work on land or at sea. But that's only part of the story. Diesel engines start easily, and their thermal efficiency means fuel costs about half that of petrol driven engines. Fire risk, particularly important in marine application, is eliminated. Diesel reliability is a by-word. Statistics prove that they outlast any other type of engine. Whether you need power for vehicles or boats, for farm equipment or industrial applications there is a Perkins engine to suit your particular requirements.

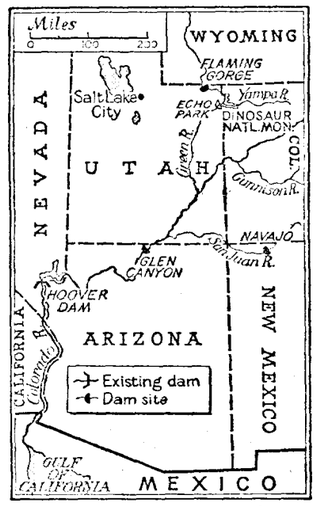
its average annual discharge is only about one-thirtieth that of the Mississippi and less than one-fifth that of the Tennessee river. Yet it drains a basin of more than 300,000 square miles, occupied by seven states, all of which feel that its waters are a vital component of their future growth. There simply is not, and never will be, enough water to supply the desires of them all. This was realised many years ago and led to acrimonious and long-drawn-out efforts by the various states concerned to divide up the water—in the end one half was reserved for the Upper Basin region—and agree on the dams proposed by the Bureau of Reclamation. Then California, the rapidly growing state which obtained the right to, and is already using, most of the remaining water, fought the necessary legislation in Congress at every turn. Only Mr Eisenhower's support finally got the Bill approved.

The programme contemplates four large key structures to dam the main stream or its major subsidiaries for the purpose of storing water and generating electricity, and about a dozen smaller "participating projects" to provide benefits at various strategic points in the four states. There will be more of the latter if plans mature, and if there is enough water. From the engineering standpoint the project was marred when the stout and fiery opposition of wild-life conservationists succeeded in eliminating the so-called Echo Park dam because it was to be built in the Dinosaur National Monument. This dam would have stored 6 million acre-feet of water (an acre-foot is about 325,850 gallons) and developed more than 200,000 kilowatts of power; its substitute, the Flaming Gorge dam in north-eastern Utah, will only store up to 4 million acre-feet, and provide 72,000 kilowatts of electricity.



The giant structure, however, is the Glen Canyon dam just on the Arizona-Utah border which at capacity will hold 26 million acre-feet (enough to cover the state of Rhode Island 30 feet deep) and provide 800,000 kilowatts of power; it will cost nearly $400 million. It is nearly the size of Hoover dam and its purpose is to store water so that the agreement under which half the river's flow is to go to the lower states can be fulfilled. The electricity from this dam will be used largely in California and will earn money to help pay for the projects higher up. Thus the Glen Canyon dam is only of indirect benefit to the Upper Basin, but that benefit is great.

The third major unit is the $33 million Navajo dam in New Mexico which will store about 1.5 million acre-feet of water, partly to irrigate the big Navajo Indian reservation, but which will provide no power. The fourth will be on the Gunnison River in western Colorado and will probably consist of three "stairstep" dams. The first three projects are under way: Congress appropriated about $13 million to start the work this year.

All revenues from the sale of electricity are to be divided among the states of the Upper Basin in roughly the same proportion as water supplies are to be divided, half to Colorado, about 22 per cent to Utah, and the rest in approximately equal shares between New Mexico and Wyoming; all the money is to finance "participating projects." Altogether the grand plan is for the provision of somewhat more than 1,000,000 kilowatts of power and the ultimate irrigation of 360,000 acres of land which is now desert. However, other considerations may interfere with the latter goal. The people of these states want industry as well as agriculture, and some of this water may, before the programme is finished, be diverted to refining uranium, or to developing the reserves of shale-oil in Colorado and Utah or to promoting the beautiful mountains as holiday and residential centres. One thing is sure—the exploitation of the river will never stop until, as one ardent advocate of development once expressed it, "every drop of water is burned up in human use before it reaches the Gulf of California."

Houses on the Move

FROM A SPECIAL CORRESPONDENT

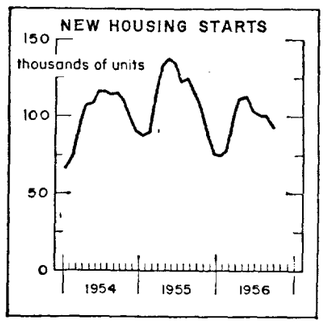
THERE has been no autumn upturn in house building in spite of the predictions of the government experts and the hopes of the builders themselves. It is now clear that the number of new homes started in 1956 will only be about 1.1 million, compared with 1955's record 1.3 million; some private forecasters think that 1957 may be even a bit lower than this year. Builders place the blame for this situation entirely on credit restrictions. Fewer new houses are being started because lending institutions will not commit themselves to take as many new mortgages as would be required if building went ahead full steam.

Fundamentally, however, it is not merely the scarcity of credit, but the changing nature of the housing market which prevents a return to the mass building practices and record housing rates of the last ten years. The recent high levels of building activity have wiped out the backlog of need for shelter that was so large in the early postwar period. Even California and the southwest, where there has been a large influx of new residents, are now pretty well "built-up" and in most areas there are some houses available for sale to new arrivals. The number of vacancies is not large, and most of them do not last long, but some mobility has been restored to the market and the supply of good, modern dwellings is no longer limited to new buildings.

As families who can afford it move to larger quarters, or more suburban districts, their original postwar homes become free for young couples who want a small house or flat. The real demand for new houses is now found among growing families who want bigger, better homes; they belong to the middle and upper income groups and the market for builders now depends more on the level of disposable income than on the number of new families formed. Prospective buyers in this market want far more than the rapid, cheap construction that enabled builders to

fill the huge housing developments in 1948 and 1950—and even in 1954 in some areas. It takes attractive styling, careful pricing and real salesmanship to convince a couple that they should "trade in" their present home for a new one. They always have the alternative of modernising or enlarging their older house; the same credit facilities are now available for these improvements as for new building, and the cash outlay is considerably less.

Surveys indicate that a high proportion of families want better houses than they have now; but while some people can easily afford to move up on the housing scale, many wait for bargains. Few builders, however, have paid the close attention to costs which is necessary if bargains are to be offered in the larger, more attractive types of housing —and everywhere costs are now mounting rapidly. The price of land has risen; suburban towns are making new housing developments bear more of the cost of the new utilities which have to be installed and are restricting the number of units that may be built on a given land area; materials and labour are more expensive too. The new buyers will not accept shoddy materials, efficient but unattractive designs, or inconvenient situations. The only answer to these rising costs is, therefore, more efficient techniques in construction. But, so far, gains in this direction have been small.



As a result, builders are selling more high-priced houses this year, aiming at those who can pay for what they want in spite of stiffer credit terms. Middle-income homeowners are concentrating on alterations and "fixing-up." In these ways, more money is being spent on housing than in 1955, even though fewer new units are being started. If credit eventually gets easier, more people will be able to afford completely new houses and, in time, increased efficiency will enable the builders to widen their market considerably by offering as good bargains in quality houses as they did in the earlier mass developments. But now the industry faces a challenge that is fresh to most of its members—how to design houses and sell them to people who do not really need them.

Where Television Failed

LAST spring the managers of both parties believed that 1956 would end the political era in which presidential candidates cultivated the voters individually by touring the country's grass-roots and would begin one in which they wooed the electorate *en masse* at the television screen with nationwide broadcasts discussing national issues. For this year there were over 40 million television sets covering 70 per cent of American homes, compared with 18 million and only 40 per cent of homes in 1952, and, from experience in that year and during the McCarthy hearings, it was widely believed that politics had great television appeal. So in August the Republicans planned their presidential nominating convention almost entirely as a television show and the Democrats, who had more real business to conduct, altered their usual procedures drastically to make them more suitable for the screen. But the viewers quickly had too much of what even after these efforts was not always a very good thing; the big television companies make no secret of their determination never again to broadcast the complete proceedings.

When the campaign proper got under way, the Democratic candidates, through poverty as much as through policy, found themselves using the old methods more than the new: Mr Stevenson flew from state to state and Mr Kefauver seemed to be everywhere at once. Soon, to the alarm of the Republicans, it became obvious that people were turning out in large numbers to see the Democratic contenders in person rather than on the screen. An early survey showed a disturbing lack of interest in national televised appearances and Mr Stevenson's vivid failures when he did go before the cameras warned Republicans as well as Democrats that television was not a trustworthy medium. The President had intended to confine his campaigning to "five or six television addresses" but, as his party began to "run scared," he appeared glad to undertake an active peripatetic candidacy.

It is not therefore surprising that the congressional committee on election expenses has reported that "the widely-held belief prior to the campaign that television costs would soar to unprecedented height does not appear to be confirmed." But this does not necessarily mean that the new era has been abandoned before it has begun; instead, 1960 may find it developing rather differently. The Republican leaders may well be wondering whether Mr Eisenhower could have made better use of television and carried his party with him into Congress, by concentrating, as the Democrats began to do towards the end of this campaign, on regional and statewide television programmes, in which national and local candidates appear together and discuss mainly local issues. What seems now to be agreed is that nationwide appearances by the presidential aspirants alone are neither good television nor effective politics.

Israel After the Fight

FROM OUR SPECIAL CORRESPONDENT

Tel Aviv, Tuesday

THE mood in Israel is a mixture of triumph and apprehension. On the one hand the swift victory in Sinai and the destruction of half President Nasser's army removes the threat to Israel's southern frontier—perhaps indefinitely, if the United Nations force can create a demilitarised zone. It is felt that an overdue decision has been successfully taken. Your correspondent came across plenty of evidence of the completeness of the victory. On every road there were long columns of captured motor transport and artillery, while at the roadside weary young men and women in uniform, often with stirring battle stories to tell, were thumbing lifts homeward. But on the other hand, the fact remains that Mr Ben Gurion was plainly forced to back down and surrender his territorial gains under the same Russian threat which halted Britain and France at the canal. His retreat has been accepted with astonishing unanimity as a piece of realistic statesmanship.

People here fear that new threats to Israel's security are developing on the Syrian and Jordanian frontiers, where Russia, discomfited by the revelations in Sinai of its long-term plans in the Middle East, may be planning new initiatives; all Israelis soberly face the fact that increased Russian influence in the Arab states rides high on Arab anti-Israeli fanaticism. It is the same entrenched fanaticism that inspired Colonel Nasser's famous order of the day to his Sinai troops anticipating a war of extermination against the Israelis—photostats of which are likely to be thrust under the noses of the world's statesmen for months, perhaps years, to come. At the same time, the reduction of British and French influence in the Middle East, the extent of which, in the Israeli view, is as yet uncertain but may be very heavy, compels reappraisal of the whole of Israeli foreign policy. The present indications are that the Israelis propose to lay as much blame as possible for the danger to world peace at Britain's, and to a lesser extent, France's door; they themselves take the position that their action was self-defence—a position that many statesmen, including the Vatican, have conceded. Indeed, they argue that the Anglo-French "failure" on the canal has robbed them of a large part of the fruits of their victory, including the intended heavy blow at Colonel Nasser's prestige, which would have been damaged more severely by defeat at the hands of Israel alone than by defeat at the hands of the powerful western nations.

It is, therefore, firmly denied that there was any collaboration with Britain and France. Their intervention, it is said, was unexpected, if only because the Israelis did not think that Sir Anthony Eden was up to it. In any case, they now assert, it was unasked, unwanted, and unnecessary; the timing and tactics of the Anglo-French intervention made it worse. It is even denied that the Anglo-French bombing of the Egyptian air force significantly reduced the danger of air attack on Tel Aviv; the possibility of this had been taken into account and Israel says it was ready to meet it.

On the other hand, the Anglo-French intervention caused Israel to be bracketed with these powers as aggressors by the United Nations. If Britain and France had not acted, the Israelis feel they would not have been so flatly condemned. The unkindest cut was the Anglo-French abstention on the Afro-Asian resolution of November 7, which called on all the intruders to withdraw. Britain and France then left Israel in a minority of one; cowardly is the word applied here to their action.

It is readily accepted that the probable decline of British influence in the Middle East is damaging to Israel's interests, although it is insisted here that Britain has for a long time ludicrously overestimated what influence it had left in Jordan and Iraq and even in the Trucial States. It is hoped that some of that influence survives, but Israel's future is now reckoned to depend on two things; first on the United States, and secondly on the demonstration to an affrighted world that a third world war could start in the Middle East as a result of the Arab refusal to make peace with Israel.

Although Mr Head's last minute visit to Cyprus certainly suggests that Britain's mind was not entirely made up even when the invasion fleet was three days out of Malta, there is evidence of the extent of Israeli collaboration with the French. There is evidence that French fighters manned by French pilots arrived before Israeli mobilisation began, with all arrangements made for maintaining and refuelling them. It looks possible, seen from here, that when the Israeli advance proceeded so much faster than anyone expected, the French reckoned the moment ideal for stampeding Britain to take action. If there had to be Anglo-French intervention, then the Israelis, indifferent to the problems of amphibious landings, criticise the slow arrival of Anglo-French troops and even more the failure to carry through at all costs what had been started, so as to present Russia, the United States and Colonel Nasser with a *fait accompli*. That, the Israelis think, could have produced a satisfactory situation—one in which a United Nations force would have taken control of the canal, probably permanently, instead of, as seems certain

now, leaving it in Egyptian hands—although the Israelis insist that they have not been concerned with the canal in this operation.

Israel's immediate steps await clarification of the UN force's instructions. It certainly will not withdraw from Sinai until the force is in being ; moreover, the Israelis are sceptical of the efficacy of the force in the long run, especially if Colonel Nasser's prestige is maintained and Russian intervention in Egypt resumed. But in return for his promise, given under unprecedented pressure, to abandon Sinai, it is widely hoped that Mr Ben Gurion has extracted some undertaking from the United States to underwrite at least Israel's southern frontier. It is also hoped that the United States will recognise its vital interest in the Middle East, because of Nato's dependence on oil supplies, and will therefore warn Russia that, in spite of reduced British influence, any attempt to exploit the situation and penetrate further would entail the risk of war.

Israel also intends to "reveal" fully to the rest of the world the extent of Russia's preparations. This is already exciting foreign correspondents on conducted tours. They are being shown not only dumps of up to 6,000 tons of ammunition, fuel, the latest weapons, in sufficient quantity to re-equip a second Israeli army, but also airstrips capable of taking the heaviest bombers at Eltor, Sharm el Sheikh and Ras Nirzan, partly built workshops capable of servicing two armoured divisions at Rafa and El Arish, and forty kilometres of fortifications under construction at Abu Agela. It is hoped that this will "force the United Nations to take the Middle East seriously at last," and will focus the world spotlight permanently on Russian build-ups in Syria and Jordan. Meanwhile, the success of the Israeli army has strengthened not only its prestige but also its political influence. It is firmly convinced that the only answer to fedayeen tactics is reprisals. The prospect of new incidents, if not of operations comparable to Sinai, must keep the world on the hop as the Israeli forces return from the desert and move northward.

Arab Anxieties

FROM OUR SPECIAL CORRESPONDENT IN BEIRUT

ARAB conferences are rarely productive of hard news and this week's meeting of heads of state in Beirut is no exception. The Lebanese government took unusually rigorous security measures to protect its distinguished guests ; the local press was not allowed to mention the fact of their arrival until the conference was under way. The concluding communiqué is unlikely to be any more revealing than usual. Yet the anxieties besetting the Arab governments are well enough known to permit a confident guess at the subject matter for debate.

The convening of the conference was due to the determined initiative of President Camille Chamoun of Lebanon. That in itself is a revealing fact. Lebanon, while consistently championing Arab causes, has always used its influence in favour of moderate courses. Its interests lie in maintaining a balance of forces both within the Arab world and in the wider international field. It seeks Arab unity, not through the domination of the Arab world by any one state or doctrine, but through compromise between such diverging interests as exist. Similarly, in the international field, it would certainly resist any tendency to hitch the Arab wagon to the star of any one great power.

The Anglo-French attack on Egypt and the violent Soviet reaction brought home to Arab consciousness—almost for the first time—that the feud with Israel is not a parochial matter. It was a genuine shock when realisation dawned that the world had been brought to the edge of the abyss. President Chamoun is not alone in his conviction that some serious rethinking of the whole Arab position is necessary. The fact that Libya, the Sudan and the Yemen are also represented at Beirut makes the present conference one of the most representative ever held in the Arab world and reflects the alarm that has spread wide throughout the Middle East and North Africa.

It is probable that the only reluctant participant at the conference is President Shukru Kuwatly of Syria. Although the immediate cause of the gathering is the crisis in Egypt, recent developments in Syria are beginning to take pride of place. For the Arab states, the position with regard to Egypt is now relatively simple. They stand firm by the United Nations resolutions calling for the withdrawal of Israeli forces behind the armistice lines, the withdrawal of British and French forces from the Canal Zone and the setting up of the international police force to patrol the Arab-Israeli frontiers and keep the peace. It is more than likely that the international force will incur Arab resentment as disguised imperialism when the war scare dies down. But for the moment it is welcomed as a shield for Jordan and as the only likely means of winkling the British and French out of the Port Said district. For the implementation of these resolutions, the Arabs are looking to the United Nations, particularly to the United States. President Eisenhower's prestige never stood higher among the Arabs.

But if the position as regards Egypt is fairly simple from the Arab angle, that of Syria is desperately complicated. On the one hand, Syria is the vociferous champion of Arab nationalism and the closest ally of President Nasser, whose prestige still stands undimmed. On the other . . . [*Our correspondent's reference to the extent of Russian penetration or influence in Syria was censored.*]

The Soviet condemnation of the Anglo-French action in Egypt won a ready response from the masses. The balance between east and west is therefore delicately poised. The Soviet Union will surely seize the golden chance of getting a firm footing in the Arab States. Yet President Eisenhower can probably outbid them if he will. It is sad that Britain and France will have little to say in the debate.

Further Thoughts in Canada

FROM OUR CORRESPONDENT IN OTTAWA

THE Canadian government will not escape political attack for its official position "regretting" British intervention at Suez. Now, when every effort is being devoted to the speediest possible installation of a United Nations police force, including a Canadian contingent, in the Sinai desert, when Britain's truncated operation at Suez promises to be succeeded by a complete withdrawal, and when everyone hopes all further fighting may be avoided, a whole series of indications points to the continuing strength of pro-British sentiment in Canada. It shows itself predominantly in parts of the country with a traditional "imperialist" background, notably Toronto and south-western Ontario, but also in the Atlantic provinces. "Imperialist" in this context is not a word which need alarm Egyptians, nor will it justify Russian protests. It is used to connote deep-rooted ties with the motherland. So closely is it associated with the great early days of the Conservative party that one might as well say "Tory imperialists." Their spokesmen are already saying that Canada should have "stood by" Britain as Australia and New Zealand did.

Since the whole political standing of "Tory imperialists" has been unimpressive under Liberal rule, its revival at this stage is a most interesting new flowering from the historical stem. Although it does not now seem likely to result in any major political debates, it does contain a hint of historic Canadian divisions. If these were to revive in anything more than the present form it would be the most intriguing of the unforeseen effects of Sir Anthony Eden's Suez intervention. It remains to be seen whether the Conservative party in the House of Commons will echo this "Tory imperialist" criticism. To do so will be a great temptation, but it may involve some risks in that other powerful sections of opinion will be ready to jump to the Government's defence.

Problems of a UN Force

Apologists for the British, who for the moment are heard more loudly than detractors, are saying that any present hope of a successful United Nations action to effect a Middle Eastern settlement results from the British action and could not have been achieved in any other way. They are making the most of the London stories about Russian arms and volunteers in Egypt, though none of these has revealed anything that the Canadian government did not know two or three months ago. Government circles, too, have somewhat softened their attitude towards Britain. This is not simply due to considerations of political expediency but also arises from the more co-operative British attitude to the United Nations after the first intervention.

No Canadians show any signs of opposing the contribution of a Canadian contingent to the UN police force, though probably very few realise the problems and hazards involved. As Mr Pearson makes clear on every possible occasion, the UN troops will not constitute a fighting force. Canada is committing a battalion of young troops with young officers who have received some training in fighting but none at all in the art of being policemen. They are to be put down in a desolate country with nobody to fight and with the constant risk of being sniped at or slugged by marauding and possibly starving bands. The military authorities are trying to ensure that the troops shall have all possible comforts in the way of food and supplies to help them to keep in good heart. They have hit on the brilliant idea of using the aircraft carrier, *Magnificent*, as a forward supply base for the Canadians. She will provide hospital facilities, signals centre, rest centre and supply depot. In case of need she would also furnish a means of withdrawing the force, which, after all, will not be equipped to defend itself if full-scale fighting were to break out again. The force will have helicopters, reconnaissance planes and plenty of ground transport. But its largest weapons will be battalion weapons, machine-guns and mortars. It is hoped that the UN can make these complicated military arrangements work so that the governments can get on with the even more difficult business of arranging political settlements. Mr Pearson has said publicly that he looked to two distinct political settlements, one resolving permanently the dispute about Israel's status and frontiers, and the other establishing a permanent agreed status for the Suez Canal. Both promise to be so difficult that no one is unduly sanguine. But Canada is undoubtedly much cheered by the co-operative attitude which Britain is now showing toward the United Nations efforts and by the continuance of Anglo-Canadian contacts, for instance, at the United Nations, on the old familiar basis of friendly candour.

"Tory imperialists" in a momentary absence of mind sometimes attack the Canadian government for not "standing four-square with the Commonwealth." At that point the government is quick to call them back to what they mean. It is intelligible to say that Canada should have supported the motherland right or wrong. It is nonsense to talk of standing by the Commonwealth when it has been so deeply divided. The alienation of Asian members, coupled with the absence of consultation by London are perhaps the two deepest wounds left in Ottawa.

The Little Siege of Gibraltar

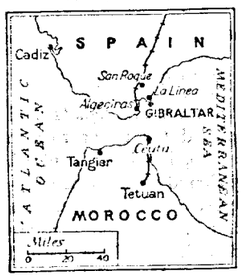
BY OUR SPECIAL CORRESPONDENT

OF Britain's bases in the Mediterranean, Malta and Cyprus have, of course, played the major role in recent operations. But Gibraltar, too, has been involved. Modern warfare has not materially altered its strategic significance: it is an important air base, a naval dockyard, a staging point for water and fuel: it has a storage capacity capable of being greatly increased, with remarkable natural protection against modern weapons. How right, most servicemen would say, that such an important place should be under British sovereignty. The Spanish case, fortified by the American example, is that this arrangement is not modern ; that Gibraltar is valuable to us only if Spain is neutral or an ally, and therefore Britain would lose nothing by ceding it to Spain and leasing it instead—of course, on terms which would allow the base to operate as before. The service point of view, however, as over Cyprus, is that treaties can be denounced, and standing on one's treaty rights does not preclude charges of colonialism: better to be certain that we can do as we please.

If this strategic argument for holding on to Gibraltar is mentioned to a Gibraltarian he becomes angry. Gibraltar must be British, he would say, not because the services need it but because Gibraltarians will have it so. The 23,000 inhabitants of the Rock are more British than the British and nothing pains them more than the assumption that they are Spanish. When Sir George Rooke took the Rock in 1704 the Spanish inhabitants fled from the looting British soldiery and made themselves a home at San Roque on a nearby hill. (The Mayor of San Roque still sends out Christmas cards which begin: "The Mayor and Council of Gibraltar, who since the loss of their town in 1704 have been temporarily residing at San Roque. . . .") So the British invited immigrants from Genoa. They also

admitted Jews from Morocco, whose forefathers had been expelled from Spain in 1492—although the Treaty of Utrecht, which confirmed British possession of Gibraltar, had included an express condition that no Jews or Moors should be allowed to settle there.

Only by day is Gibraltar full of Spaniards. Twelve thousand of them daily cross the frontier to work, some in private employment, and some for the "official employers"—the colonial government, the city council and the three services. Gibraltarian workers by contrast are almost all working for official employers. They have good reason to do so because these employers pay them 24s. a week more than a Spaniard would get for the same job, on the dubious ground that this is the difference in the cost of living in Gibraltar as compared with La Linea. Even so, however, a Spaniard working in Gibraltar can earn two or three times as much as he would earn in Spain, and this is quite apart from what he can earn by smuggling. He rarely goes home without a little something—coffee or sugar or cigarettes—which is dutiable or scarce in Spain. Strange sights are to be seen at the end of the working day. Old women sit by the roadside in quiet corners of Gibraltar sewing small bundles into the innermost of numerous black petticoats. At the frontier hundreds of men with bicycles are waiting to be searched by one of the Spanish customs officials. It is said that if this official finds something in a certain pocket he knows that it is for him, and thereafter makes no fuss about a mysterious bulge elsewhere. Gibraltar certainly presents attractive opportunities to the enterprising Spanish worker.



Thereby hangs a sad tale. The Spanish authorities are now refusing to grant exit permits for work in Gibraltar except to those who have worked there in the last two years: in other words, workers who die or retire cannot be replaced. Ostensibly the purpose of this ban is "to stabilise the labour force." Actually this is all part of the latest Spanish campaign to recover Gibraltar, which began with the Queen's visit in 1954. At that time Spain gave up the struggle by diplomatic activity and began applying economic pressure. As one spokesman said, "Remorselessly but politely we shall, restriction by restriction, turn the screw until Gibraltar like a ripe plum falls into Spanish hands." The metaphor was mixed, but the general idea was plain.

Other restrictions did indeed follow. Spanish workers in Gibraltar must change four-fifths of their earnings into pesetas in La Linea; and Spaniards are not allowed to visit Gibraltar, as many used to do, in order to buy things. One particularly annoying restriction is not a matter of economic pressure—at least not on the Gibraltar side: in order, it is said, to protect the virtue of Spanish women, no servicemen other than officers and married n.c.o.s accompanied by their wives are allowed passes to visit Spain. Not long ago, someone captured the stamp used for the coveted passes, and it was merrily in use in a sergeants' mess for eighteen months before its operation was discovered. But now, alas, some 5,000 servicemen can again leave the Rock only by the troublesome and expensive method of passport and visa.

From the Gibraltarian, as distinct from service, point of view the worst of the restrictions is their effect on smuggling. Living as they do in a free port, with customs duties of only 8½ per cent *ad valorem* on such things as cameras, watches and lighters, the local inhabitants have done very well out of other people's controls. This is not illegal in Gibraltar, nor, indeed, is it illegal to be a smuggler oneself—as some have been with great profit and considerable connivance from Spanish officials. It is for each nation to deal with its incoming smugglers.

The smuggling angle is not, of course, the one that the Gibraltarians stress when they say that Her Majesty's Government should have done more to combat Spanish economic pressure. The answer to this complaint seems to be that trade sanctions would not have been effective because Germany is waiting to fill the gap. That being so, Gibraltar must help itself, and it can do this in two ways: it can make itself independent of Spain and it can try to develop more friendly relations. Independence of Spain involves better use of labour, mechanisation, perhaps even a new immigration, and new sources of income to replace the smuggling (tourism and the port are very properly being developed). Friendlier relations with Spain mean the removal of reasonable grievances. For example, in the new discussions about social insurance contributions, which Spain would like handed over to its own *Mutualidad*, the Gibraltarians should not expect too many *quids* for a not very large *quo*.

At best, however, official relations between Gibraltar and Spain are not likely to improve much so long as the British Government refuses even to discuss hauling down the British flag that flies on top of the Rock. General Franco probably would not wish them to improve: dictators like a grievance. On the other hand he cannot be too pressing while he has his own gibraltars, Ceuta and Melilla, on the coast of the now independent Morocco. If he should ever be succeeded by a pro-English monarch, by a government which Britain would like to strengthen, then the pressing offer of a satisfactory lease would be more difficult to refuse. But it would still be true that if it were not refused the voices of twenty-three thousand Gibraltarians would be raised in passionate accusation of betrayal.

Hungary's Glimpse of Freedom

FROM A CORRESPONDENT

October 31st and November 1st

SOME facts are more difficult to grasp than fiction. For years we Austrians had got used to accepting the barbed wire along our eastern frontiers as the insuperable dividing line between two hostile worlds. Now it was like a dream: that the wooden barrier should go up and that our convoy of hospital vans, trucks and cars should be allowed to proceed without even a visa or a passport. Only a few miles beyond the border we stopped at the first town, Szopron. Large crowds were in front of factory gates, and on the main square were queueing up at food shops. They soon gathered round our vehicles. Their mood was far from rebellion. It was rather one of firm determination to stick it through or perish. "How long will the strike go on?" This question, whether put here, or later on

DEVELOPING OUR RESOURCES

INCO NICKEL puts a landslide to work

A triumph of mining skill has given the world thousands of tons of one of the most vital of modern materials—nickel. At their Creighton Mine, in Northern Ontario, Inco—The International Nickel Company of Canada—have successfully developed lower grade ores, not worth mining in the ordinary way, by a method known as 'panel caving'. In caving, a vertical 'slice' of the sloping ore body to be mined is undercut and, as the material from a previous slice is drawn out, the unsupported ore fragments and crumbles. Drawing continues, the 'caved' seam settling continuously. The broken ore is treated in a crusher 2,000 feet below the surface, and carried over a quarter of a mile on conveyor belting to the vertical hoist shaft. After the ore has been concentrated, it is pumped through a pipeline 7½ miles long to the smelter.

This lower-cost bulk method of mining is typical of the efforts made by the Inco-Mond organization to ensure for industry the maximum yield of metal at the lowest possible cost. It is only one page from a story as fascinating and romantic as any in modern history.

Serving Europe, all Canada, U.S.A., Bermuda, Nassau, the Caribbean

in Györ and Budapest, fetched the same answer everywhere: "Until the last Russian has left our country." And we felt that they all meant it.

The nearer we got to Budapest the more frequently we were stopped by armed guards of freedom fighters. They were young boys, students and industrial workers, very polite and very pleased to see us. These youngsters were carrying their guns not from any joy of fighting but from a deep conviction that they must get rid of Russian domination and Moscow's hated henchmen, the secret police.

"What will happen after your final victory?" we kept asking. And again the answer was surprisingly unanimous, especially as concerted leadership was so obviously lacking: "There should be several parties, and elections as soon as possible." We then tried to find out their views on how far the economic changes of the present regime should be reversed. They left us in no doubt that they certainly did *not* want the big landlords to come back to their estates but that they also did not want the enforced collectivisation of the peasants on their newly acquired land to continue. And what should become of the big industrial plants which had been erected in recent years and were the property of the state? Certainly, they should remain state-owned and so should all the key industries. But the rest of the economy should go back to its former owners, especially where the small man was concerned.

In Budapest everyone seemed to be out in the streets. Old men and young kids, housewives and workers, gathered in crowds round our cars, eager to talk, eager also to try and get some share of almost forgotten luxuries. As we were passing the crowds on a bridge I pulled off my modestly red scarf to wave it at them and immediately noticed heads turning away. A young motor-cyclist who was showing us the way immediately whispered to me: "Not with a *red* scarf." It is plain that if free elections were held this violent antagonism to Communist rule would have its effect on the Socialist vote. The Small Farmers' Party too, which once seemed to have a chance of gaining a majority would now have to follow a very determined policy in the interests of the little man if it wanted to retain his support.

Disciplined General Strike

We were deeply impressed by the way in which Hungarian youth took up arms against the Communists. In a hospital there were wounded boys of twelve, thirteen and fourteen years of age who had thrown hand grenades and bottles of petrol at Russian tanks or had stood in ambush armed with guns. We were also strongly impressed by the completeness and discipline of the general strike. As long as the resistance movement was in power all essential services were performed without fault. The food shops were open, potatoes, bread and flour seemed to be in sufficient supply; there were no traces of plundering or demoralisation. At the central bus station where I filled up my car with petrol for the return journey they refused to take money—it being state-owned they could not issue me with a bill!—and would not even accept a tip. No alcohol was allowed to be served, not even with a meal.

When we left Hungary on November 1st we had not seen one single Russian soldier. We were told by people who had watched them that the Russians had taken an hour to get out of Budapest. Near Györ a Russian division was in barracks with the gates locked. The fears of Communist officials then may be deduced from the fact that we had to refuse a Hungarian diplomat's plea to take him, his wife and plenty of luggage with us across the border. We left with the delusion that the fight had been won. But Russian guns have now reconquered most of the country. It remains to be seen whether they will be able to enforce a working puppet government on Hungary. What they will never conquer are Hungarian hearts and minds.

Austria; Neutral Neighbour

FROM A CORRESPONDENT IN AUSTRIA

VIENNA was the world's observation post for the Hungarian rising. It is still the base and clearing house of the world's compassion. The city is the capital of a country that bought its freedom with neutrality and has only been free of occupation troops for a year. Austria juts out into the Soviet satellite orbit (once its empire) and has a smaller population than London. A very small fraction of that population is communist. Early attempts by the Russians to win over their zone of the country with the aid of Austrian communists were defeated by the workers.

When the communist *Volksstimme* alleged that arms and ammunition were being flown from Schwechat airport to Budapest (and the allegations were promptly taken up by Moscow and satellite radio stations) one could not know whether this was just the routine calumny with the hint of intimidation, or whether it might not have been the propaganda prelude to a Russian violation of Austria's neutrality—a move which the West might be impotent to counter. The Chancellor, Herr Raab, at once broadcast a denial of the reports. His speech was re-broadcast several times; such repetitions are usually a sign of crisis. Repeated and long visits by the Russian ambassador to the Austrian Ministry of Foreign Affairs were another sign. The government had the Sunday (November 4th) edition of the communist paper seized and applied for a charge of treason against its editors.

Meanwhile the Austrian government had already taken steps in Moscow—where it appealed for a cessation of the Russian intervention—and in Budapest, where it denied that there was any Austrian intervention. It assured the Nagy and Soviet governments that it was not allowing Hungarian emigrés to enter Hungary, either armed or unarmed. It also invited representatives of Russia, America, Britain and France—the signatories of the State Treaty—to inspect the frontier arrangements on the spot. Here, incidentally, the Russian observance of Austria's neutrality is as meticulous as Austria's own.

After the black Sunday when the Russians started the massacre of reconquest, the Austrian Foreign Minister, Herr Figl, announced the government's intention of asking them to allow Red Cross aid to continue. He spoke of Austria's duty as neutral and neighbour. And whatever mixture of feelings Austrians may once have had about the Magyars, it is now submerged by a wave of admiration and sympathy. The inability to help them achieve their freedom is made

more bitter by geographical proximity. What adds further to the bitterness is the feeling that the free countries might have brought their united moral pressure to bear on the Russians but for the Anglo-French action in Egypt (which has an almost uniformly bad press). But though there is some rhetoric, the passionate participation of the people in the Hungarian events is a fact. The shopkeeper talks knowledgeably of guerillas ; the garage-man tells one the latest news and adds his view that " that system will not survive our generation." Even children are distracted from their Red Indian stories and ask questions of those who cannot long stay away from the wireless.

Cyprus Over Greece

BY OUR SPECIAL CORRESPONDENT

THE Greek Prime Minister, Mr Karamanlis, has gone to New York to argue his country's case on Cyprus before the United Nations. He leaves behind him a country that appears to be obsessed with the problem. Reminders of Greece's preoccupation, which absorbs the Athenian press (and sends up its circulation), crop up everywhere and all the time. In the waiting-room at Athens airport there are lurid leaflets denouncing British " repression " in Cyprus. At the military parade in Salonica on the anniversary of the day, sixteen years ago, when Papagos said " No " to Mussolini, a solitary voice in the crowd near the royal reviewing stand suddenly shouts " Eoka." The word is scrawled everywhere across the sides of buildings ; one may come across it, too, at a bend in the road, painted boldly on a wall in the middle of the remote Rhodian countryside. And when, on Delos—once, as Apollo's birthplace, the most sacred of Greek islands, now uninhabited, shadeless and given over to its ruins—one climbs to the highest point to view the encompassing Cyclades, there is " Eoka " scratched faintly in the rock.

To a considerable extent all this agitation has been artificially whipped up by successive governments as a stick with which to beat the British, by opposition politicians as a stick with which to beat the government, and by both as a distraction from the pressing problems that face the Greeks in their own backyard. To be fair, the present government has not a bad record on the domestic front. It has failed to grapple with the crucial problem of the recurrent budget deficit, but this summer it has worked energetically and successfully to hold down the cost of living ; the investment programme has been considerably slowed down this year, but this is probably due as much to American prompting as to the government's foreign preoccupations.

Mr Karamanlis would undoubtedly prefer to concentrate on domestic problems. The trouble is that the genie whom the politicians of all parties have united in conjuring up has now got out of hand ; he is no longer the servant but the master of those who summoned him. The present government feels compelled by the popular pressure which it and its predecessors have built up to strike truculent attitudes over Cyprus ; but it has gone a long way in its search for a compromise solution. It has been roundly attacked for its pains by opposition politicians who are convinced that the road to power in Athens runs through Nicosia.

But Greece's preoccupation over Cyprus cannot be dismissed simply as the outcome of the self-centred manœuvres of Athenian politicians. There is more to it than that. There is the genuine conviction of many ordinary Greeks that Cyprus is Greek and should belong to the mother country. These people deplore the excesses of Athens radio. They are embarrassed when their English friends ask them to translate the rude remarks about the British that are now scrawled on so many Greek walls ; they try to dismiss these epithets as the work of thoughtless youths, and one feels it would almost be in bad taste to point out that someone must have deliberately taught them to brand the British as assassins.

If one inquires why it is that the Greeks now feel so much more violently about Cyprus than they seemed to do five years ago, the answer comes pat that, until Mr Hopkinson's famous " Never," they assumed that the British Government would hand over Cyprus in its own good time, and were therefore prepared to wait patiently. For most Greeks the roots of their friendship with this country go deep ; in their present falling-out with Britain they tend to revert to the peculiar bitterness that is common in quarrels between old friends. Unfortunately, thoughtful Greeks have little practical guidance to offer on the best way out of the present deadend. They plead eloquently for some " gesture " by Britain that would restore Greek confidence in its good faith, but when they are pressed to describe this gesture more precisely, vagueness creeps into the conversation.

Turkey's Part

In dealing with the third party to the quarrel, Turkey, the Greeks are no more helpful. Most of them think that Turkey's fear for its security, should Cyprus pass into Greek hands, is a put-up job, in view of the many Greek islands that hug the Turkish shore so much more closely already ; Cos, for instance, is only four miles from the mainland, and in parts of the island it is impossible to see the blue strip of water intervening between the Greek island and the Anatolian hills. The Greeks forget that the Dodecanese are, by treaty, demilitarised, and that Cyprus commands Turkey's vitally important port of Iskenderun. Responsible Greeks will admit privately that their government made a grave mistake in not trying to reach an accommodation with the Turks some years ago. Now relations are at such a low ebb that the Greek Foreign Minister, Mr Averof, feels bound to confess that bilateral negotiations between the two countries would be pointless ; and the Greeks are becoming seriously worried at the use to which the Turks intend to put their press campaign alleging Greek discrimination against Turkish minorities in Western Thrace.

Mr Karamanlis, in leading the Greek delegation at Uno, is risking his immediate political future. If he comes back with completely empty pockets he is unlikely to survive in office ; even before he set out, his small parliamentary majority showed signs of crumbling away. The only doubt is whether another coalition or a general election would follow. In either case, the chief question is whether Greece's angry frustration over Cyprus will cause it to turn left. Spokesmen for the present government maintain, no doubt perfectly sincerely, that it will not contemplate leaving Nato. But they add that if public opinion became very moved—and the Greeks, they add, are a highly emotional Mediterranean people—the government, whatever its complexion, might have to bow before the storm. Whether this is a gentle threat as well as a friendly warning, one cannot tell.

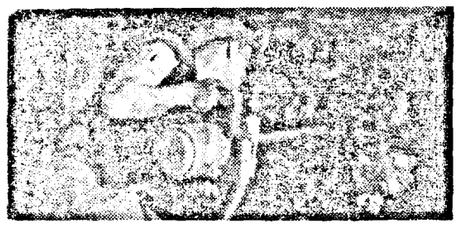
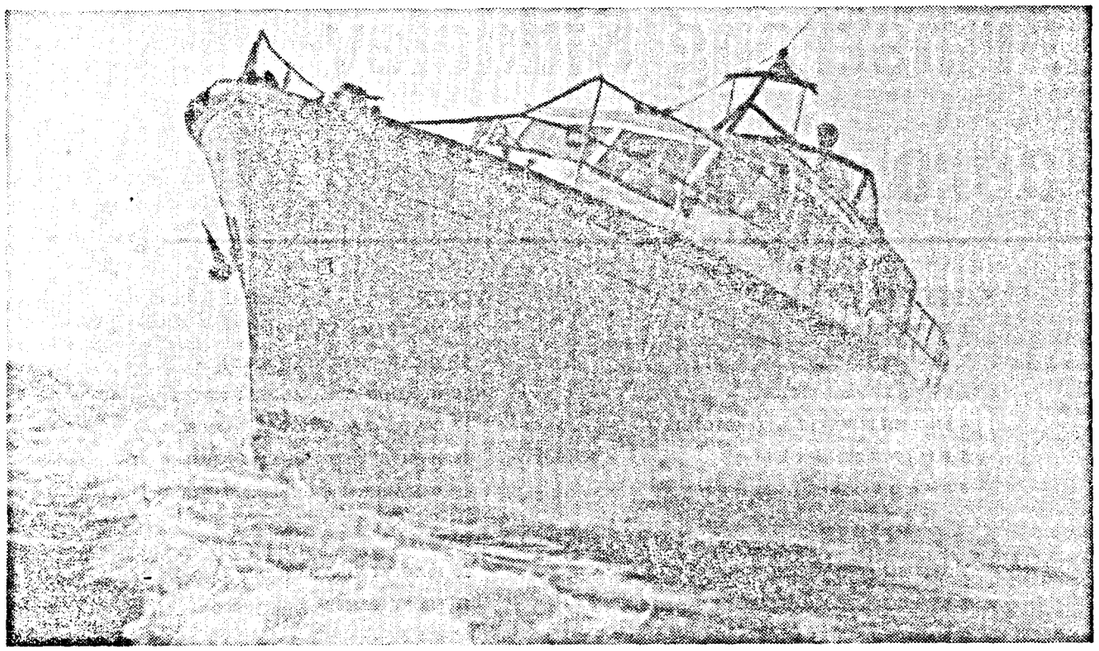
Through creative chemistry, Monsanto turns yesterday's dreams into present-day realities



MONSANTO

Deep in the coal mine, the boats of tomorrow



"Perpetua's" hull was built by Halmatic Ltd. Halmatic are moulding 56-foot hulls for service in Venezuela, Singapore and the Persian Gulf. Another moulded hull is being fitted out as a twin-screw Pilot's launch, to the order of the Southampton Harbour Board.

THIS PICTURE of M.V. "Perpetua" both conceals and demonstrates an exciting breakaway from traditional boat-building practice. "Perpetua" *looks* like an orthodox seagoing motor cruiser — but there's a vital difference. The hull is *moulded* in *one piece* — the mould working in much the same way as a housewife's jelly-shape; and it consists mainly of glass-fibre sheet, and polyester resin — for which Monsanto supplies raw materials.

For these raw materials, Monsanto goes back to sources even more basic: Maleic and Phthalic Anhydride originate in the coal mine; and Styrene Monomer comes from oil.

Polyester resins can be used to mould boat-hulls, car-bodies and caravans which will not deteriorate with corrosion or weathering; which never need painting — for the colour is in the material; which are strong, light and easy to repair. The full scope of polyester resins is not easily predictable. There are hundreds of possible applications for them . . . and as many more advantages. They're just another way Monsanto brings a better future closer.

THE BUSINESS WORLD

First Reckoning for Suez

TIME is the essence of the Suez reckoning. Every day since the cease-fire in Egypt has altered the estimates of ships and equipment sunk in the canal; the guesses, official and unofficial, of the period it will take to restore navigation have varied from as much as 12 months or more down to Mr Macmillan's repetition of an Egyptian boast that it might be done in six to eight weeks.

Any attempt to reckon the orders of magnitude of the additional costs that the last fortnight will have imposed upon the British economy, therefore, depends upon the assumptions one adopts about the time it will take to clear the canal (the resources that could be assembled for this job are examined on page 574). The estimates below are based upon two alternative assumptions, to give a range of possible cost; these might be called optimistic and pessimistic, since the one may not be quite the best and the other is certainly not the worst. The first is that normal traffic through the canal can be restored in three months' time; the second is that this will take nine months. It is assumed in both cases that in three months' time the Iraq Petroleum Company should be able to move about 40 per cent of its normal supplies through the pipelines, by simply repairing pipes—and that full throughput can be restored in about nine months, by repairing the pumping stations.

In the simple arithmetic of oil shortage, the difference between these optimistic and pessimistic assumptions is broadly a matter of duration, not degree. Either points inexorably to a cut of about 20 per cent in oil supplies to Western Europe. Optimistically, this might last, say, three months from the time it has to be imposed—perhaps four or five weeks from now, when stocks approach danger levels in Britain, though some other countries look to be moving faster. On the pessimistic assumption, rationing might not be over much before next September.

A 20 per cent cut in oil supplies means only a 2 per cent cut in total fuel supplies to British industry—which this year seems to have been using rather more fuel in producing hardly any more goods. On the more optimistic time table, at least, it seems doubtful whether this alone need retard industrial activity very much. The same can broadly be said where oil is used as a raw material for chemicals, and about such industrial materials as are imported from east of Suez, over the next three months or so. Even in this short period, the reduction in capacity to export that must come about from the longer voyages ships have to make (even though they may travel rather more fully loaded than usual) might affect output rather more directly. Seasonally, production is usually high in November, down in December because of Christmas, up again in January and February. On the optimistic assumption, the worst one need practically fear now might be rather less than the normal recovery of output in the New Year. The seasonally corrected index, that is to say, might slip a point or two from the level it has been jogging around for the last 15-18 months.

★

If the disruption of trade lasted six months beyond that, all these marginal restrictions might begin to pinch trade rather harder. But still the main effect of Suez on the level of industrial activity might be counted in growth forgone, rather than in a large actual reduction; it is possible that production might decline by two per cent or so during the next nine months. This would mean considerable under-employment of capacity, raising fixed costs; the prices of oil and of certain commodities are beginning to rise, while freights are already shooting up. These may be significant additions to Britain's industrial costs.

This prospect of continued stagnation in output, or possibly of slight decline—set against the resumed

growth that the Chancellor has been affecting to discern for months and which less credulous observers thought he might be persuaded to encourage in a few months' time—constitutes one real effect of Suez on the budget prospect. If disinflation will have been carried through at the price of perhaps £450 million of extra goods that industry could have produced this year, Suez, on the pessimistic assumption, might cost about the same in potential production forgone.

★

Little light has yet been shed from official sources on these matters. Last Monday the Minister of Supply, Mr Reginald Maudling, estimated that in the current fiscal year the additional budgetary expenditure arising from the intervention in the Middle East after the end of July would "not be likely to exceed something between £35 million and £45 million," which the Chancellor, later in the debate, widened to £50 million. Mr Maudling affirmed that this figure was "not large enough, particularly in the light of the present level of savings, to upset in any way the disinflationary balance of the budget." On this theme the Chancellor went further: aside from the direct Suez outlays, he still saw no reason why his originally estimated surplus of £460 million "above-line" should not be "largely realised." This presumably means that he expects the year to end with a surplus of between £410-425 million—despite the fact that up to November 10th the above-line account had deteriorated by £197 million, whereas over a full year it was originally expected to improve by £63 million.

On the wider questions, all the Ministers kept to the self-evident. The fact that there is still confidence that present economic policy may prove to be sufficiently disinflationary, in spite of the added budgetary costs and probable loss of tax revenue, could mean, however, that the Government is privately taking a pessimistic view of the wider, non-budgetary effects. For the more considerable any general dislocation proves to be, the more likely is it that the disinflationary effects of this crisis may balance or even outweigh the inflationary ones—so long as the dislocation lasts.

Towards Oil Rationing

BY taking as much oil as possible from the Western Hemisphere, all of the deliveries of Arabian oil through Tapline to the eastern Mediterranean, and as much from the Persian Gulf as the remaining tanker tonnage will carry round the Cape, Europe may be able to obtain perhaps 80 per cent of its normal supplies. Extra shipments are already moving to Europe from the Caribbean, but the fully-integrated operation for emergency supplies, which had been planned with the backing of the American government, cannot now be implemented. And, as an American note on page 600 shows, American consumers are not going to be rationed in order to free supplies for Europe. The current prospect is that Europe may be able to import about 7½ million tons a month : about 4 million tons a month from the United States and the Caribbean, 1½ million tons through Tapline to the eastern Mediterranean, and 2-3 million tons a month round the Cape. The Government has already made it clear that all European countries are expected to share equally the burden of the cut in supplies, but we could hardly expect them to bear more. None of the oil delivered through Tapline, in any case, can be sent to Britain or France.

This means that the present, concerted cuts of 10 per cent in sales to consumers throughout Western Europe will not be enough for long. The American crude oil that Europe is buying to make up supplies from the Middle East gives a higher proportion of fuel oil ; moreover, the operating flexibility of refineries will presumably be used to maintain the yield of black oils as high as possible at the expense of high grade gasoline. It seems unlikely, therefore, that supplies of fuel oil need be reduced more than 20 per cent ; but possible that motor spirit supplies might have to be cut rather more than this.

Such a cut in petrol supplies clearly means rationing—and fairly short commons for the motorist who drives purely for pleasure. Transport services, agriculture, and industry buy more than half the motor spirit consumed in Britain, and the first two, at least, cannot be cut very sharply. If transport supplies were cut 10 per cent, agriculture still allowed to escape restriction, and industry cut by 20 per cent of its motor spirit supplies, motoring in private cars would have to face a cut of about a third in its total supplies.

★

A cut of 20 per cent in black oil supplies to industry could not be carried through successfully without some scale of priorities, formal or informal. Many industries use practically no fuel oil at all, while others such as steel and glass depend quite heavily upon it ; among those that burn oil, moreover, the possibilities of switching to other fuels vary a good deal, while the sheer tonnages that certain major industries consume would affect the balance of any allocation scheme very sharply. Leaving out the refineries, one may illustrate this last point simply enough : if fuel oil supplies to the iron and steel industry were cut only 10 per cent within a general reduction of 20 per cent in total supplies, the rest of industry would have to make do, in total, with about 25 per cent less oil.

Several of the industrial groups that use significant tonnages of fuel oil—steel, glass, and non-ferrous metals—sell their products mainly to other industries in which activity is unlikely to be significantly affected by oil shortage ; on this count, demand for their products may tighten. In steel, given the industry's ability to shift the product pattern of its output within limits, and its rather more limited chance of switching from oil to other liquid fuels or gas—and given, too,

the exceptionally high level of steel stocks in the hands of consumers—it might be possible to get by without giving steel much priority, on optimistic assumptions about restoring oil supplies. Glass furnaces offer even less technical flexibility—in switching to other fuels or in rate of firing—and glass is not a material of which anybody ordinarily carries large stocks. So this industry might require priority in oil supplies even if the restriction lasted no more than three months.

How far certain consumers will need priority, therefore, depends once again largely upon the time-table. Others should find it more easy, if inconvenient, to make up reductions in their oil supplies with other fuels. Total coal stocks throughout the country are still about two million tons higher than a year ago. Capacity exists to increase gas supplies to industry in some areas—though a few industrial areas are dependent upon coke-oven gas from the steel industry, which could thus transfer its own oil shortage neatly to gas consumers outside. Output of creosote-pitch and tar, again, could probably be increased slightly, and perhaps diverted from uses other than as a fuel.

Oil and the Trade Balance

IF Britain is importing 20 per cent less oil, will this save money ? A first guess suggests that it may cost nearly as much. At present, it costs little more to land crude oil from the Western Hemisphere in Europe than it did to bring crude from the Persian Gulf via Suez. Crude is selling in the Gulf of Mexico for about £7 a ton, and at the spot tanker rates ruling this week costs over £6 a ton to land in Britain ; before the canal was blocked, Middle East crude cost about £5 a ton, but over £8 a ton to carry to Europe. The increases to be reckoned with in replacing oil from the Persian Gulf with oil from America, therefore, will arise from probable rises in prices of refined petroleum products, crude oil, and tanker freights—plus the extent to which Middle East crude has to be replaced by American products. In the first six months of this year Britain spent £188 million on oil imports, of which £56 million was spent on imports of crude and products from the Western Hemisphere. Until the Suez Canal is open again it seems likely that at least half of Britain's imports, or nearly twice as much as before, will have to come from the Western Hemisphere.

This time there is no shortage of refinery capacity, and many European refiners will prefer to buy crude oil, rather than products, from the United States and Venezuela. But although crude oil stocks in the United States are plentiful at the moment, a continued rise in the demand for American crude will bring pressure for higher crude prices. So even if a higher proportion of the additional supplies is taken in the form of crude oil, one ought perhaps to assume that a doubling of total imports from the Western Hemisphere will mean a doubling of the bill—from about £30 million a quarter to £60 million. Rising product prices and rising tanker freights are likely to offset the advantage of taking a higher proportion of crude oil. It seems, therefore, that to import about 20 per cent less oil Britain may have to spend over 90 per cent of the money it had been spending. And Britain's own oil exports must be counted as declining by about 20 per cent.

★

The effect of the oil switch on the visible balance of trade, therefore, may not be considerable one way or the other—except in dollars. But the disruption will also affect the invisible earnings of the British oil companies operating in the Middle East. During the first half of this year British companies controlled just over one-third of the oil produced in the Middle East. If supplies for local consumption in the Middle East and for distribution East of Suez are maintained, and if 16 million tons is shipped through Tapline and 25 to 35 million tons round the Cape, Middle East production as a whole will fall by about 40 per cent, from 176 million tons a year to 100 to 110 million tons a year. The 47½ per cent British interest in Iraq production, which is the most directly affected, and the lack of British participation in Tapline, the only short route to the Mediterranean still open, will put at least as big a burden on the British companies as on their American competitors.

On this reasoning the British companies must expect to lose at least 25 million tons, and probably more, of the 62 million tons of annual production they control in the Middle East. At an fob price of about £5 a ton, this means a loss of about £125 million a year in revenue. Half of this will be lost through the cutting of the IPC pipelines to the Mediterranean ; the rest of the cut will fall on Kuwait, and possibly Iran and Qatar. Apart from royalty payments, the costs of oil production are largely fixed, and cannot be expected to decline much with output, so that oil profits are likely to decline more sharply than total revenue. Even the royalty payments—as in Iraq and Iran, where minimum outputs are guaranteed—may pose new problems when output falls.

The royalties paid to Iraq last year, which are equivalent to the profit retained by the oil companies operating there, were over £70 million. The share of the British companies was probably of the order of £35 million, and it is difficult to see how much profit at all can be made during the next few months. In Kuwait, the British share last year was £50 million, and if production is cut by a fifth, the loss of earnings could not be much less than £20 million a year. In sum the British oil companies might lose some £35 million a quarter in revenue and about £15 million a quarter in profits.

It is quite impossible to estimate the effect of the Suez disruption on Britain's net earnings from dry-cargo shipping services. The main factors which will influence these earnings are known ; their relative emphasis is not. Dry cargo shipping earned a net £64 million in the first

half of 1956; of this a net £17 million was earned in dollars. But the net earnings of British shipping have recently been the product of a deficit on tramp cargoes more than offset by profits on liner operations. It is evident that freight rates will continue to rise sharply, and that tramp freight rates will rise more sharply than liner rates. Whether this will raise or lower Britain's net earnings depends on the share of trade carried by tramps as opposed to liners, and the extent to which this balance is changed by rerouting. Earnings would certainly be lowered if much British tonnage formerly employed in carrying foreign cargoes has to be diverted to carrying British imports round the Cape or remains requisitioned for long. The same considerations will affect the net dollar earnings of British shipping.

The cost of improvising oil supplies, therefore, may not make much difference to the visible trade balance—Britain will be paying about as much for 20 per cent less oil. In dry cargo trade, imports will be affected before exports, but subsequently the disruption may affect imports about as much as exports, since much the same proportion of both inward and outward trade (just under 25 per cent) used to pass via Suez. The emergency may also have some adverse effect on the terms of trade. On the invisible account, Britain may suffer a loss of about £15 million a quarter from oil company earnings in the Middle East, less any extra net earnings on rising tanker freights, but plus anything the country might lose on net shipping earnings as a result of the rise in dry cargo freights.

But the really heavy addition to the country's bills comes on the dollar account. Before the emergency all the oil companies operating in Britain, whether British or American, were managing to hold the average dollar content of their imports, including supplies from the Western Hemisphere, down to 30 per cent or less of the total cost. But with the exception of part of the freight charge, almost all the extra £30 million a quarter that the extra oil from the Western Hemisphere is liable to cost will have to be paid in dollars. Moreover, 75 per cent of the price of oil formerly sold by British-controlled companies in the Middle East to Europe and its dependencies, which can no longer be delivered, was in effect paid for in gold, owing to Britain's situation in the European Payments Union; the same applies to Britain's exports of refined products to Europe. So the dollar cost of doing without Suez is liable to be rather formidable—perhaps £25 million a quarter for purchases of extra oil from the Western Hemisphere, plus possibly another £20-£25 million a quarter for the loss of the "hard currency" element in sales of British oil to Europe.

A Preference Trimmed

AFTER months of hard bargaining, the trade negotiations between Britain and Australia have produced an agreement that does credit to two countries that are each other's best customers (and earns a special tribute for those who have negotiated it). Australia has tempered its claims, and Britain has accepted most of Australia's case. Australia contended that the preferential arrangements negotiated at Ottawa in 1932 had become of greater value to Britain than to itself. Last year, for example, nine-tenths of Britain's exports to Australia enjoyed preferential tariffs, and the average margin of preference was 15 per cent. One-quarter of Britain's imports from Australia enjoyed preference, and the average margin was less than 10 per cent.

An arithmetic approach, however, has little meaning, as both countries recognised. It ignores Britain's long-term contracts for the purchase of Australian meat and sugar, which are preferential arrangements of a different kind. It also ignores the fact that Britain grants Australia duty-free entry, plus a modest preference on some items, whereas Australia grants preferences on a high tariff. But the balance of preferential advantage remains with Britain.

This balance could not be counter-weighted by increasing the preference on Australian goods. Preferences on primary commodities are of limited value, and higher preferences were in any case ruled out by Britain's obligations under the General Agreement on Tariffs and Trade. The remedy could lie only in some reduction of preference on British goods. Australia sought that reduction not simply on grounds of equity; it hoped to secure more favourable treatment for Australian products in certain foreign markets if it could offer a reduction in the standard (most favoured nation) rate of duty on foreign goods in return. The further hope—if exports could indeed be expanded in that way—was that its import restrictions could be lifted sooner.

How far Australia would go in demanding narrower preferences turned in part on Britain's attitude to Australia's second grievance. Before the war, Britain imported about 1¼ million tons (wheat equivalent) of Australian wheat and flour a year; in the last three years imports have averaged only about 530,000 tons. Australia's shipments have been squeezed partly by the subsidised expansion of British production and partly by subsidised competition from French and other exporters. A low-cost producer normally able to fend for itself, Australia argued that such restriction of its opportunities in the British wheat market was demonstrably unfair.

On both counts Australia has every reason to be satisfied with the British response. In the new agreement, which is to run initially for five years from now, Australia obtains the right to lower the margin of preference, but undertakes to maintain a minimum margin on goods of interest to Britain. On items carrying a preferential duty of not more than 10 per cent *ad valorem*, the minimum margin of preference will be 7½ per cent; above 10 per cent the minimum margin will be 10 per cent. At present the minimum margins of preference are generally 12½, 15 and 17½ per cent, according to the rate of duty. Items which now have a minimum margin of less than 7½ per cent will not be further reduced.

In addition, the minimum margin of preference on all by-law items of the Australian tariff, and on nearly fifty other items, will in future be 7½ per cent, whatever the preferential duty. As the items affected here are capital goods, Australia will presumably not be slow to cut the cost of goods which are important to its development, but which do not compete directly with domestic industries. Apart from these items and goods that are the subject of a report by the Tariff Board, Australia undertakes to consult Britain before reducing any margins of preference to the minimum.

The Customs by-law procedure enables the administration to suspend the duty on the import of a particular item of equipment not made in Australia, if it is satisfied that the equipment is not available in Britain, or not available within a reasonable time. Before the decision is taken, however, the British government has the right to express its views. It is understood that Australia does not intend to operate this procedure any less strictly than in the past, and it has evidently dropped any idea of eliminating altogether the duties on certain items of capital goods.

The only substantial change in Britain's obligations lies in the "desire and expectation" of the two governments that sales on commercial terms of Australian wheat and flour in Britain shall not fall below 750,000 tons a year (wheat equivalent), or below any smaller quantity that the Australian Wheat Board may offer. Though the British millers will not relish this further encroachment of their freedom, the official view is that they can be expected to observe the arrangement in the same sense that they have observed a similar informal obligation to take up 1¼ million tons a year of the domestic crop. The arrangement has the merit of meeting Australia's wishes at no cost to the consumer; it is rightly intended that countervailing duties on imports of subsidised foreign wheat should be used only as a last resort.

It will be some time before British exporters feel the effect of the concessions that Australia has secured. The Commonwealth government proposes to introduce in the spring legislation empowering it to reduce the preferential margins to the new minima. With these powers up its sleeve, the government can then start negotiations with foreign countries. Progress is bound to be slow, and the preferences will not necessarily come down to the minimum. Even with the existing preferences, many of which are well above the minima, Britain's share of the Australian market is tending to decline. But it should still be possible for Britain's exports to grow in total as the Australian market grows. If that cannot be done behind a minimum rate of preference of 7½ and 10 per cent, what chance have British exports in a European free market?

Business Notes

Clearing the Canal

IT will be some time yet before the full nature and scale of the task involved in clearing the Suez Canal can emerge. The latest of many estimates is that at least 27 ships have been sunk between Port Said and the Red Sea entrance, of which 10 lie in the channel of the canal itself. The bridges at El Firdan and Ismailia have been destroyed. The bulk of the Canal Company's floating equipment and shore based installations, including its own salvage gear, has been sunk or damaged. And it appears, too, that the Egyptians have been putting pressure on the crews of the 12 merchant ships trapped in the canal to abandon them.

But what sort of salvage problem the sunken ships and bridges represent and how many more obstructions there are or may finally be (the present count of 27 ships sunk includes 20 vessels located in the area under Anglo-French control and a minimum of seven, south of Port Said, beyond the cease-fire line) must await the first full detailed survey on the spot. Even when that first stage in the operation can be tackled is at present shrouded in uncertainty. It is clear, however, that previous optimistic estimates of the time the job will take must be raised quite substantially, even on the rather doubtful assumption that all the technical resources that are available and could be applied are in fact put to work. From its purely technical aspect, the task is not beyond the salvage capacity now available in the area or on call, but the bulk of that capacity is British. The Admiralty has been assembling a sizeable force and it has already started work in the Port Said area.

At present the Navy has eleven assorted salvage vessels, with other equipment, in Port Said. It is mustering a further force of 35 ships including civilian craft, most of which are in fact Admiralty ships on peace-time charter to

private contractors. The bulk of this large armada was specially built during the war in preparation for the task of clearing harbours and waterways on the continent and around the Mediterranean as fighting receded. As the work diminished in the years after the war (it has not ceased even yet) these ships were either leased for civilian use or placed in the "mothball" fleet. They were designed to tackle exactly the kind of problem that will now be encountered in the canal; that is the principal reason why Britain is now relatively so well-off in resources and experienced crews for this kind of salvage work.

Politics and Salvage

DECISIONS about who is to clear the canal will probably not be decided on technical factors alone. The present political atmosphere has already led the United Nations Organisation to commission a Dutch firm, L. Smit and Company of Rotterdam, with Danish and possibly other associates, to take control of operations. Smit and its appointed Danish associate, Svitzers, are the leading salvage contractors on the Continent. They have a substantial fleet and they also had much experience of clearing ports blocked during the last war. But inevitably the resources they are able to call upon are much more limited than the British Admiralty now has at its disposal, and it will take some time, too, before their fleets can be assembled in the canal area.

★

Without the help of British salvage capacity, therefore, the task of clearing the Suez Canal would be formidable. Fortunately, the weather in the canal zone is almost perfect for salvage operations. But this is the only intrinsically favourable factor. The canal is a thin, straggling strip of water, 100 miles or so in length and in places not much more than 60 to 70 yards wide. So it may be difficult to pass more than the lightest vessels down the canal in order to broach the work at more than one place at a time. By far the bulk of the equipment, moreover, British or otherwise, lies to the north of the canal. Svitzers operates a salvage station at Aden, and there is a limited amount of salvage equipment further east at Karachi, Calcutta and Colombo which might be called in. But there is a tidal fall of almost six feet every six hours at the southern end which could lead to a serious problem of silting. If obstructions have been placed at certain points near the canal entrance it would be possible for mud to shift into the canal channel fairly quickly—as the Germans were aware during the war. Modern dredging equipment would not find that an overwhelming task, but dredgers would have to be brought to the Red Sea first.

Elsewhere in the canal there is barely any tidal movement. Although salvage technique makes considerable use of tidal lift there are many other ways of raising sunken objects. But there are not all that many "camels" and other heavy-duty, direct-lift vessels outside Britain. Clearly shipping companies must now count the Suez route as out for rather longer than the three months suggested in last week's official warning. Unless the political element in the present situation is cleared up satisfactorily, they may have to reckon on a period perhaps three or four times as long.

Reinforcements for the Reserves?

I—Credit Lines at the IMF

IN his speech last Monday the Chancellor of the Exchequer referred to the effect of the new burdens on the gold reserves, and declared that these "have behind them very substantial available reserves which can, I believe, be brought into play." There are three possible reinforcements that spring to mind. The first is the International Monetary Fund. Britain now stands all square with the fund; its loan of $300 million of 1947-48 has been discharged by purchases of sterling by Brazil, Japan, the Netherlands and Turkey and by the repurchase by Britain in 1954 of the outstanding $112 million. The fund's present holding of sterling is therefore now at the equivalent of $1,064 million, which was the amount paid in sterling as Britain's initial capital subscription.

Britain's total quota is $1,300 million; $236 million was paid in gold in addition to the sterling. Access to this gold tranche is now granted by the fund with little formality. In addition, it has been the policy of the Fund in recent years to permit "when necessary" additional drawings up to 25 per cent of the quota. The available reinforcement to Britain's reserves from the fund, then, seems to be at least $236 million and possibly $561 million.

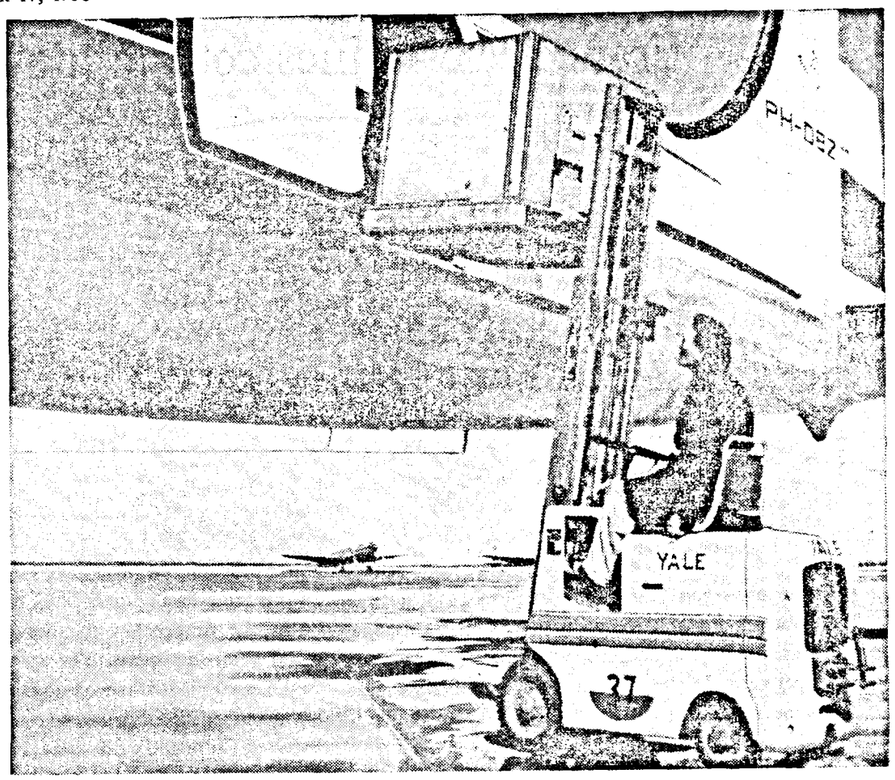
II—Dollar Securities Tally

The second possible reinforcement of the reserve would come from a sale in the United States of the dollar securities that used to be pledged as collateral against the loan from the Reconstruction Finance Corporation, and were freed when that loan was repaid in 1951. When the loan was raised the securities in question were valued at about $400 million. Given the rise that has since occurred in American equity prices, their value must now be in the neighbourhood of $1,000 million. In July of last year a question was put in Parliament suggesting that the value of these securities might be as much as $2,000 million; the questioner was assured that the true total was "less than half that figure." If these securities are to be realised in any substantial amount, it would obviously call for a joint enterprise on the part of the United Kingdom Government on the one hand and the New York financial community on the other.

The third possible reinforcement, but one which would obviously be brought in only in the direst necessity, would be the requisitioning of United Kingdom residents' dollar securities, the total of which is known to have expanded spectacularly since the end of the war, and particularly since 1951. These dollar stocks are readily available, as the titles are deposited with authorised depositaries and their mobilisation would offer very little technical difficulty—though it would strike a formidable blow at London as an international capital market. Of the three choices, priority would obviously be given to the first, namely, the assistance from the IMF.

III—Invoke the Waiver?

Just possibly, a further relief for the reserve might be secured by invoking the waiver on the payment of the interest due on December 31st next on the United States



At Schiphol Airport near Amsterdam, Yale Trucks load cargo with maximum speed and handling ease.

At transport terminals, warehouses and factories...

YALE TRUCKS

SAVE TIME, SPACE AND MANPOWER

TODAY, fast production, transportation and distribution of goods not only requires modern machinery and carriers, but also modern mechanized handling equipment. That's why you can find YALE TRUCKS wherever fast, easy and safe handling of materials is essential. At transport terminals, YALE trucks speed loading and unloading of cargo . . . help meet delivery schedules. In warehouses and factories, YALE Trucks promote a smooth flow of goods . . . make greater use of storage space . . . reduce handling time . . . increase production . . . release workers for more productive jobs. These savings in time, space and manpower often result in a 50% reduction of handling costs. These savings apply to your own operation because — no matter how heavy, bulky or fragile your materials — there is a YALE Truck exactly suited to your handling needs. And remember, wherever you buy YALE Industrial Lift Trucks, they are built to the same high standards.

France streamlines coal-mining

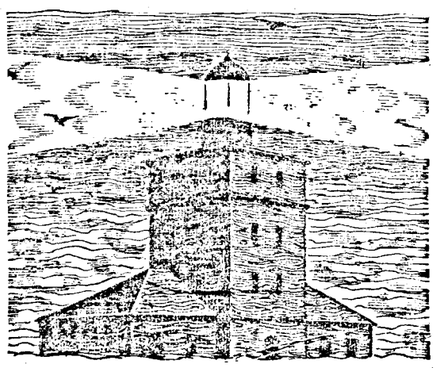
In just seven years, from 1948 to 1955, output per manshift down new and modernised French coal mines jumped by as much as 64 per cent. In these mines, where methods and equipment are the latest, productivity is the highest in Europe; and throughout the industry generally, output has never been greater. Now, with a need for more and more new seams of coal, France is drilling up to 125 miles of galleries a year to search for them.

In this vital development work which is going on all the time below the French coalfields, speed is all-important. The answer has been compressed air drilling equipment. By bringing in Atlas Copco lightweight rock drills and Sandvik Coromant drill steels, French mining engineers have found the most efficient and fastest possible method of opening up the way to further sources of coal—and the way to maintain the present high rate of production.

When fog shrouds Table Bay

Compressed air is versatile. Atlas Copco provide the means for all its many applications. In the lighthouse at Mouille Point near Capetown, a small Atlas Copco air compressor has been installed. During dense fog, which even the powerful beacon cannot hope to penetrate, air from the compressor operates a siren.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in ninety countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.



Atlas Copco puts compressed air to work for the world

and Canadian postwar loans. The total annuity due next month is about $176 million, of which $104 million will be interest and subject to the waiver, and the balance of $72 million will be repayment of capital, to which no waiver applies. The waiver can be invoked at the request of the United Kingdom government if two conditions are fulfilled: (i) that the Government of the UK finds a waiver necessary "in view of the present and prospective conditions of international exchange and the level of its gold and foreign exchange reserves," and (ii) the International Monetary Fund certifies that UK exports plus net invisibles over the five preceding years have averaged less than annual imports during 1936-38, namely £866 million—this figure to be adjusted for changes in import prices.

It is almost impossible to interpret these waiver conditions in terms of the current situation. Furthermore, the application of the waiver clause is made wholly impossible by a related clause in the agreement which requires that if the waiver is invoked there must be a proportionate reduction in the releases and repayments of accumulated sterling balances. This was written into the 1945 Financial Agreement on the basis of assumptions regarding the future treatment of sterling balances that—following the convertibility fiasco of 1947—have been utterly disregarded in the arrangements actually made with the sterling creditor countries.

It was stated on high authority a year ago that the United Kingdom government could technically have invoked the waiver clause, but decided to pay. The requisite juggling with figures and definitions might conceivably lead to the same conclusions this year; but in view of the prevailing nervousness of the exchange market, it is doubtful whether the use of waiver would on balance come to the aid of sterling.

had a little time to consider the economic consequences of the "armed conflict." To some of them it seemed that whichever way they look—towards sterling, the terms of trade, the balance of payments or the disruption in oil supplies—the horizons are dark with forebodings.

The Storm Clouds

THE storm clouds have piled up above Throgmorton Street this week. Investors have taken what shelter they could by cutting down their dealings to the bare minimum. But some have been caught in the storm. On the first day of the new account some of them had to sell gilt-edged securities to meet their losses on oil shares and War Loan fell to a new low point of 68⅛. Other Government securities tumbled after it, bringing the *Financial Times* index of Government securities down to 82.74, the lowest point in its history, but prices rallied on Thursday. Some investors, too, had to sell oil shares for cash, and on Wednesday alone British Petroleum fell 5s. to 123s. 9d. Apart from a few shipping shares, which were bought on the rise in freight rates, the industrial market was thin and weak. So weak, indeed, that by the close on Wednesday prices were at or near their lowest points for two years. In the week to Wednesday's close *The Economist* ordinary share indicator fell from 186.4 to 177.2, only a little above the lowest points touched since the beginning of 1955. Kaffir prices have begun to improve—an almost inevitable reaction when sterling and gilt-edged stocks are weak.

Just over a week ago gilt-edged and equity prices moved up and down on the gusts of the international winds. Until Thursday this week prices fell steadily, for investors have

Running Before the Wind

THE need for money must be urgent to make a company brave the thunder clouds of today's stock markets and to come forward with a new issue. The underwriters of such issues have demanded and secured the umbrella of higher commissions. The tactic of making an issue now is to gain the support of the institutions, in whose coffers money has been piling up steadily throughout the summer, by offering them the new stock on sub-underwriting terms.

Three such issues have been announced this week. Fisons has made a £5 million offer, discussed on page 635, of a 6 per cent unsecured loan stock (1976-81) at 97. Leyland Motors, to cover the cost of acquiring and expanding the tank arsenal at Farington previously owned by the Ministry of Supply, is to raise about £5 million by a one for three rights issue of 2,478,161 ordinary shares at 41s. each. Allotment letters will not be posted until the beginning of December and the existing units have already fallen to 42s. 3d. The sponsors, Helbert, Wagg & Company, are thus exposed to a big risk and the sub-underwriting commission is 8½d. a share. It counts in the issue's favour that profits in the year to September 30th last are not, in the directors' opinion, lower than those in 1954-55 and that the directors intend to maintain the ordinary dividend rate of 12½ per cent on the increased capital.

The biggest issue of the three is by British Oxygen, which

will secure £9,525,000 net from a £10 million issue of a 5¾ per cent debenture (1981-86) at 98. The terms seem to have been adjusted to current market levels, but nonetheless they have been shaved so fine that they can hardly commend themselves to a private investor; the running yield on the issue price is £5 17s. 4d. per cent and the redemption yield £5 17s. 9d. The redemption yield offered by the Esso 5½ per cent debenture at a discount of 2 points on its issue price of 97 is £5 18s. 3d. Here again success turns on the attitude of the institutions. The sub-underwriting commission is 1½ per cent and if institutional lenders effectively secure the stock at 96½ the redemption yield on their investment is £5 19s. 10d. per cent and the running yield £5 19s. 2d. On such terms over a life of thirty years the institutions, which are still anxious to take good industrial debentures into their portfolios, may give their support; another factor which may make the issue attractive to them is that the last call of £48 per £100 stock is not until next March. British Oxygen needs new money towards its development programme of some £30 million over the next three years. In the last year or so the group has already run up a bank overdraft of £3½ million on the first stages of this programme, designed to keep the capacity of the group, both at home and overseas, in line with the increase in capacity of the steel and other industries.

More Pressure on the Pound

THE foreign exchange market during the past three weeks has behaved as it usually does at times of international crisis. Foreigners have been divesting themselves of sterling (though their positions were already short) and have also covered, by forward sales of sterling, assets that they cannot withdraw from this country and that in more normal circumstances would not be protected by a hedge operation of this kind. At the same time merchants in this country and the sterling area have been covering themselves forward for commercial requirements of foreign currencies at an earlier stage than is normal. They have also been buying stocks of commodities in anticipation of possible shortages; restocking at higher prices has brought considerable pressure on sterling.

During the past fortnight the exchange market has been extremely active and the ominous stability of the official rate at the merest fraction over $2.78¼ suggests that persistent official support has been necessary to prevent the rate falling below that level. Some of the pressure on sterling within the last ten days has been due to heavy selling from Middle Eastern quarters. The sheiks have been running down their sterling balances and the conversion to dollars has been effected through the transferable market, where the rate for sterling in terms of dollars dipped towards the end of last week to $2.73, then recovered to $2.74½, but has again weakened to $2.73½.

There has been equally persistent pressure on security sterling, which this month has dropped from $2.60 to below $2.50, its lowest since the summer of 1952. Correspondingly, the premium on dollar securities, which is linked with the discount on security sterling through arbitrage in the Middle East and other centres, rose to 12 per cent. The pressure on security sterling is in part explained by offerings from the United States of sterling oil shares, of which American investors were such persistent buyers last year and in the early part of this year.

Most of the recent pressure on sterling has been of a once-for-all character. The great majority of the short positions must in time be covered and, to the extent that raw material stocks have been built up, this will take future weight off sterling. More permanent depressing factors are, however, already being felt—in particular, the open market purchases of dollar oil, the loss incurred by the reduced production of Middle East sterling oil and the higher bill for tanker and other freight charges. These more tangible burdens must be expected to increase progressively in coming weeks.

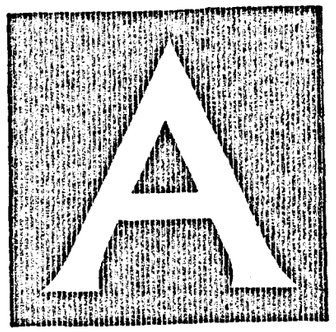
The Trading Bill

THE blockage of the canal has a four-fold impact on British trade: imports and subsequently exports will be delayed; some export business may be lost or cancelled; stocks of raw materials will be run down; and the terms of trade will deteriorate. Just under 25 per cent of Britain's imports and exports normally went via Suez. All of Britain's imports of raw jute and jute goods, most of its rubber, wool and tea, over half of its lead and much of its vegetable oils, sugar, meat and butter are normally shipped through the canal. Shipments of eastern commodities will be delayed by up to three weeks for the round trip via the Cape, but shipments of wool and other Australasian produce will be affected little. A good deal of New Zealand wool is normally sent via the Pacific, and the re-routing of Australian cargoes adds only a few days to the voyage. Stocks in Britain are large enough to tide consumers over foreseeable delays, but stocks of certain commodities, such as lead and tin (which was short before the crisis) may fall uncomfortably low. If a shortage of key materials became critical the government would have to decide whether it was justified in releasing supplies from strategic stocks.

THE ADVANCE IN COMMODITIES

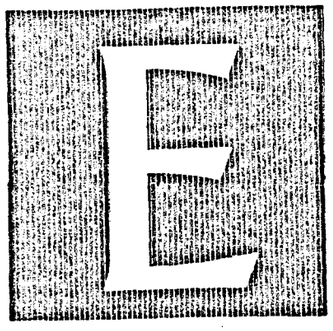
	Oct. 25	Nov. 8	Nov. 15
Tin, cash (£ per ton)	810	856	852½
Copper, cash (£ per ton)	269	286½	282
Lead, prompt (£ per ton)	115	118½	121
Zinc, prompt (£ per ton)	96	100¾	101
Rubber, spot (d per lb)	27	30	31¾
Common tea (d per lb)	41	53½	55
The Economist Indicator, all items (1952=100)	91·8	95·4	95·3

The movement of exports is unlikely to be interrupted before December, when ships that should be in Britain awaiting cargoes will still be in the Atlantic. Delays in getting goods away to eastern markets may lead to some loss of business to Japan; Mediterranean markets will probably suffer too. But it would be foolish to be too gloomy; improvisation by shippers may overcome some problems. There are two influences on Britain's terms of trade. Prices of many commodities have risen, partly because



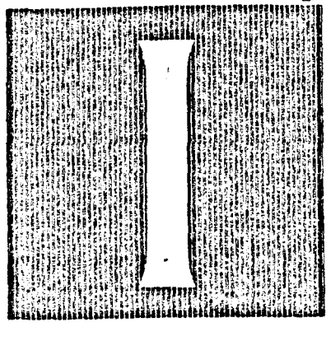
The Furness Shipbuilding Company has recently placed orders for steam turbines and turbine generators worth £1¼ m. with Metropolitan-Vickers, a member of the A.E.I. Group of Companies. This equipment will power seven new tankers now being built.

every day

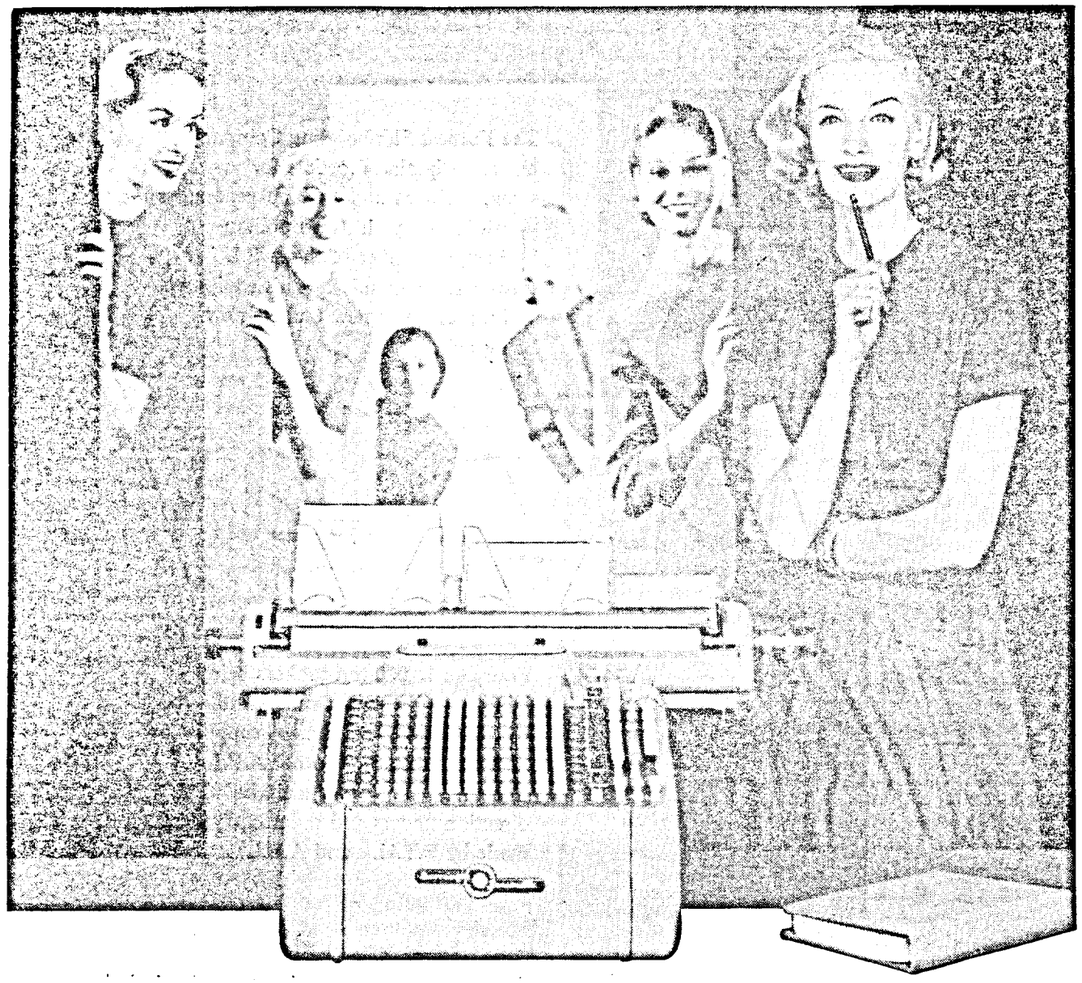


Fourteen 18,000-ton tankers being laid down for Shell Tankers Ltd. will have radio equipment supplied by Siemens Brothers, another A.E.I. Company. The order includes direction finders and radar equipment made by B.T.H.—and A.E.I.

every way



B.T.H. have in hand orders for 59 auxiliary geared turbo-alternator sets totalling more than 30,000 kW for installation in tankers being built in this country alone.



All eyes on the girl with the Sensimatic!

Of course they all envy her—they envy her for her ability to do superior work with less effort on her Burroughs Sensimatic. It's the truly modern accounting machine with the *exclusive sensing panel* that automatically follows the correct accounting procedure—makes so many decisions formerly left to the operator. It simplifies the most complex operations. The Sensimatic is her pride and joy—so easy to learn, so fast, so accurate. And so versatile! Each sensing panel permits a choice of four jobs with a turn of the knob. That's why your Burroughs Sensimatic Accounting Machine will stay modern—when you change accounting methods, just change the panel, not the machine. It's a long-term investment in modern accounting. To see how you could speed up *your* work with the Sensimatic, call your nearest Burroughs office. Burroughs Adding Machine Limited, 356-366 Oxford Street, London, W.1.

Burroughs
Sensimatic

freight rates have risen, but mainly because of anxiety to secure prompt supplies. It will be many months before the higher cost of materials is reflected, if at all, in the export prices of the finished products. For most commodities the rise in freight rates is small in relation to value, but it is significant for grains and coal.

Other European countries will suffer less disruption of their trade. None is as dependent as Britain is on overseas supplies, particularly of foodstuffs; nor are they so dependent on overseas markets for their goods. The biggest markets of European countries lie in Europe. But Italy, Austria and Jugoslavia, which are now at the extreme end of the Cape route, will suffer much longer delays—and higher costs—on shipments to and from the East.

The Shipping Gap

THE gap in shipping supplies to Western European and Indian and neighbouring ports, caused by the closing of the Suez Canal, is beginning to appear. Most of the last ships to pass through the Canal will have arrived at their destinations; and a week or more must pass before those which had to turn back and deviate by way of the Cape of Good Hope will start to arrive. Their arrival may, in fact, coincide with the arrival of ships which were diverted before approaching so near to the Canal, so that bunching may well occur in some ports, as is inevitable in such circumstances. South African ports, particularly Cape Town, are beginning to handle unprecedented numbers of ships for bunkering and storing purposes, but there is not likely to be untoward delay on this account. The possibility of having to readjust shipping services has been in existence for some months now, and preparations have been made. Feeder services from South and East African ports are expected to come into operation smoothly, so that ships on longer voyages can save time. The 15 per cent surcharge generally prevailing on the services most affected by the Canal closure is only a temporary measure, and will scarcely cover the cost of the extra voyage distances involved.

An increase in oil bunker prices must be expected very soon, even if only because of the higher freight rates being paid for tankers as a result of the Suez closure. By Thursday, the spot rate for a Caribbean/UK voyage had reached four times the datum "scale" rates laid down by the London Tanker Brokers' Panel, while "Scale plus 350 per cent" has

Scrapping Endorsements

Some six hundred million cheques that require endorsement are issued in the United Kingdom each year. A committee appointed to consider ways of dispensing with the need for endorsement now recommends legislation to make it unnecessary on any cheque or similar instrument paid in for credit to the account of a customer who is also the payee of the cheque.

THE endorsement of cheques, it has long been urged by would-be reformers, serves in most cases no useful purpose, yet involves a vast amount of wearisome work for the banks and for the cheque-using public — especially business users. Two years ago the intermittent campaign for getting rid of endorsements was made a live issue by the drafting, and later the presentation, of a private member's Bill, by Mr Graham Page, the member for Crosby. The Government, as well as the banks, showed sympathetic interest, and Mr Page withdrew his bill upon the decision of the Chancellor, in April, 1955, to set up a Committee to explore the possibilities. The report of this Committee was issued last week.*

The committee is unanimous in its findings; its arguments are clearly expressed and its proposals workmanlike; and it appears to have paid due attention to the needs of all the principal interests concerned. Now, therefore, there should be a good chance that an effective reform will be carried through without more delay.

The committee satisfied itself that the "present labours" could be much reduced without involving offsetting disadvantages, but it rejected the various suggestions that this could be done by increasing use of other instruments in place of "order" cheques; none of these methods, it thought, would offer "a really satisfactory solution." It therefore proposes a change in the practice (and the law) affecting order cheques and similar instruments. These will still require endorsement if they have been transferred ("negotiated") by the payee to a third party (e.g. a tradesman who has "cashed" a cheque for a person having no bank account of his own), or if they are presented to a banker for payment in cash across the counter. But if the payee-customer simply "pays" the cheque into his own account, no endorsement will be required.

The three main difficulties that were, or might have been, caused by this change appear to have been satisfactorily met:

(*a*) a supplementary change in the law will ensure that there is no impairment of the legal protections at present afforded to bankers (and the paying banker under the new procedure will be absolved from all responsibility for endorsements);

(*b*) any inconvenience caused to bodies that at present combine the endorsement practice with a specific form of receipt is to be mitigated (i) by an agreement of the clearing banks to continue to scrutinise cheque-receipt forms for customers "by arrangement in suitable cases" and (ii) by a specific provision in the law that payment of a cheque by the banker on whom it is drawn shall be *prima facie* evidence that the named payee has received the money —a provision that, it is hoped, will cause a diminution of the use of cheque-receipt forms through sheer redundancy;

(*c*) the committee is satisfied that the security for cheque-users, so far from being lessened, will actually be improved by the proposals.

The instruments other than cheques to which the proposals extend are dividend and interest warrants, bankers' drafts and other comparable instruments (within the scope of Section 17 of the Revenue Act 1883); extension to certain kinds of Government "payable orders" is also discussed.

In simple language, the idea is that where a customer of a bank is the person to whom a cheque is made payable it can be received for credit of his account without being endorsed or discharged by his signature. Individuals who receive only occasional cheques or dividend warrants may think this is a trifling matter, but the business needs of the country involve the use of well over two million such instruments every day. Almost all of them have to be endorsed, and the endorsements have to be examined and scrutinised for regularity by both the collecting bank and the paying bank. Much additional friction and labour are involved for all parties in the "return" of the considerable proportion of cheques on which the endorsements are technically irregular.

* Report of the Committee on Cheque Endorsement. Cmd. 3.

been paid for a voyage from the Persian Gulf, via the Cape, to French Atlantic ports. The main feature of the tanker market this week, however, has been the strength of forward rates, which appear to discount any future reliance on either Suez Canal or Middle East pipelines. Several tankers not yet built have been fixed for periods that will not expire even until 1970. One tanker of 19,000 tons dw, due for completion next spring, has been taken for two years at 55s. 9d. per ton dw per month, followed by a time charter for seven years at 35s. 6d. Terms like this approach the point at which the cost of building the vessel will be recovered in its first two years of existence. Looking further ahead, a vessel of 40,500 tons dw was this week fixed on time charter for seven years at 30s. 3d. per ton dw, but this vessel is not due for completion until mid-1963 and has probably not yet even been designed, let alone laid down.

The dry-cargo tramp market justifies the use of the cliche "suspended animation." Time chartering activity has dwindled to insignificance, and such spot coal and grain chartering as has taken place in the last few days has forced rates up to near-Korean peaks, although the Chamber of Shipping voyage index for October, at 153.6, showed a fall of 2.5 points. While the United Nations machinery tries to find gear, the shipping market can only guess the answer to inevitable questions: How long will it take to open the Canal to navigation? How many ships will be requisitioned and for how long? From what source are we going to draw our oil supplies? And to what extent will the political situation lead to a resumption of stockpiling on the Korean scale?

Record British Exports

As luck would have it British exports hit a new record on the eve of the blockage of the Suez Canal. Exports in October were valued provisionally at £294.9 million fob, a jump of £72.6 million compared with September and £11 million higher than the previous peak in May. October is normally a month of recovery from the seasonally low figures of the holiday months, and the figures happen to cover 28 working days, a much longer period than the average. Moreover cargoes that had to be held back in September owing to the requisitioning of ships probably got away last month. Imports were also high; at £354.3 million cif they were £59.1 million higher than in September and nine per cent above the monthly average for the first nine months of this year. Here again a recovery from the unusually low figure for September was to be expected. With re-exports £3.5 million higher at £12.7 million, the gross visible trade deficit fell sharply by £17 million to £46.7 million; this was £6 million less than the average monthly deficit in the first nine months.

Exports to North America jumped by £7.9 million to £41 million in October. Shipments to the United States rose by £4.2 million to £24.7 million, including a further instalment, worth £2.8 million, of repayments of silver bullion (making £17.6 million worth so far this year). Excluding this capital item, last month's shipments were over £500,000 higher than the previous peak last May, and 24 per cent higher than the average of the first nine months. Shipments to Canada, at £16.3 million, were 11 per cent higher than the first nine months' average.

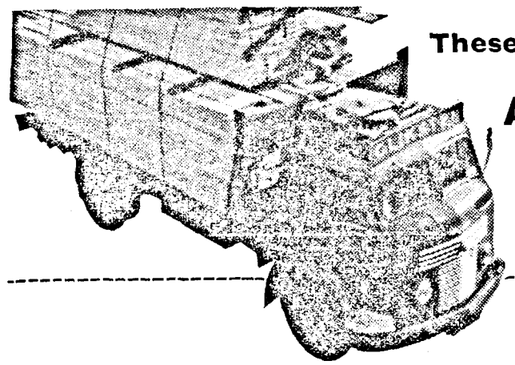
Two Bills for Transport

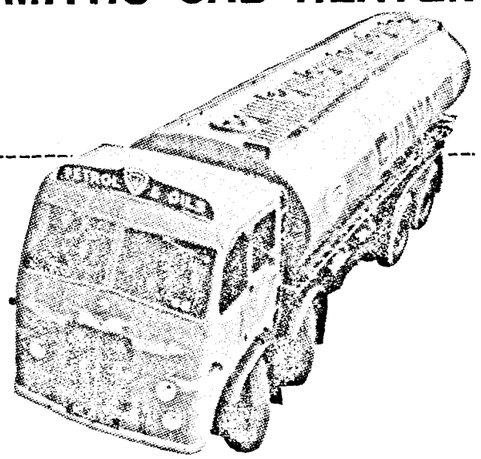
Two new parliamentary bills published in the past week are intended to put the seals of statute upon decisions that have already been taken about the future capital programmes of the railways and the state airlines. The Transport (Railway Finances) Bill is one; it spells out the details of the measures the Government recently announced to lift the burden of past and imminent railway deficits off the shoulders of the Transport Commission, until it expects to regain operating solvency in the sixties. These fall into four parts. The Minister of Transport first of all may make special advances from the Consolidated Fund to cover the net deficit on the Commission's whole undertaking (after capital and central charges have been met) in any of the years between 1956 and 1962. These payments are limited to a total of £250 million. The Minister may also make similar advances to cover the interest the Commission will have to pay on these "deficit" payments, but only for a period of five years. Repayment of both sets of advances must start by 1963; including "interest" payments they may eventually total £330 million. Thirdly, the Commission may capitalise the first three years' interest charges on the long-term capital it borrows, under its present powers, to finance the railway modernisation programme. And finally, the Commission's accumulated deficit at the end of 1955, some £70 million, is to be placed to a special account to be written down, in time, as the Minister directs. None of these measures can be quibbled at. The Commission's reasoned programme for revitalising the railways merits a reasonable chance to justify itself by results, and these cannot be expected to emerge in major array for another five years at least.

By contrast, the one-clause Air Corporations Bill is purely formal. It virtually doubles the borrowing powers of BOAC and BEA, but this would have to be done soon since both corporations have heavy programmes of fleet replacement and expansion ahead of them. BEA has now used just under half of the £35 million it is at present authorised to borrow. But its order book for aircraft and



These two have something in common...

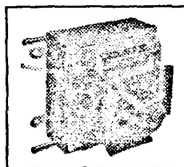
A SMITHS CAB HEATER



Fina Petroleum Products Ltd. and J. Gliksten & Son Ltd. are two of many famous companies who have installed Smiths cab heaters in their fleets. They have done so because they believe in making their drivers warm and comfortable; they believe in giving them the safest possible driving conditions; and they believe in helping them to keep fit.

Smiths are Britain's largest producers of vehicle heating equipment and their extensive research and development programmes include the sending of fleets of vehicles to the coldest parts of Europe and Canada where heaters can be tested under the severest working conditions.

Thanks to Smiths research and Smiths production resources, the Smiths cab heater is the most efficient equipment of its kind—yet its price is very competitive.



THE SMITHS 3-KW. CAB HEATER

* Compact and easy to fit, size 8½" x 7½" x 7½".
* High heat output of 67.8 BThU/Hour/°F.T.D. with total airflow of 126 cu.ft./min.
* Maximum forced airflow for demisting of 30 cu.ft./min.
* Sturdy and simple construction ensures reliability.
* Models for 6, 12 or 24 volt operation.
* Retail price £12.10s. 0d. including full kit of accessories.

6 *Good Reasons for choosing*
SOUTH AFRICAN SHERRY

1 Because South African Sherry is very good sherry: *real* sherry, most carefully matured, expertly selected—genuine in every way.

2 Because South African Sherry costs *you* less: as it benefits by a preferential import duty.

3 Because you can count on a South African Sherry to suit your personal taste—from light and very dry to full, rich and sweet.

4 Because the wonderful climate and soil of the Cape makes South Africa one of the finest wine producing countries of the world.

5 Because there is a guarantee of quality in South Africa's 300 years of wine-growing experience.

6 Because once you've chosen South African Sherry you'll choose it again.

SOUTH AFRICAN SHERRY

PERICLES c. 490–429 B.C. Athenian statesman and one of the greatest leaders, in times both of prosperity and adversity, that the world has known. *The drawing is after a bust in the British Museum.*

In industry to-day organisation and enterprise and even the greatest of resources are brought to fulfilment only through the agency of a universal spirit of leadership.

its other commitments now total £40 million. BOAC is more heavily committed. It has run through £60 million of the £80 million it can presently borrow, but it has a £142 million programme on hand, of which only £32 million has so far been paid on account. The remainder includes about £43 million for the ten Douglas "Seven Seas" and fifteen Boeing 707's it has booked, to be paid for in dollars.

Less Strain on Building Societies

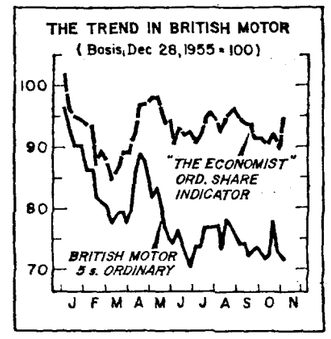
In recent weeks most of the leading building societies have raised the rates they pay on shares and the rates they charge on at least their new mortgages. Why they had to do that—and they did it against the grain—is made clear in three documents published this week. The first is the statistical analysis for the third quarter of the year from the Building Society Association. The figures cover about 90 per cent of the total assets of the whole movement, and support the association's comment that the demand for advances, "is far greater than has ever previously been known." In the first nine months of this year the reporting societies have lent £222 million and over the full calendar year are expected to lend over £300 million, a figure less than the 1955 record but nonetheless substantial.

This figure, however, reflects a deliberate restriction in advances, a restriction forced on the societies by heavy withdrawals by investors. The pressure on shares and deposits now seems to be slackening. Withdrawals in the third quarter of this year came to £73.1 million and new receipts to £96.9 million; the net inflow is thus better than in the second quarter when withdrawals came to £71.8 million and new receipts to £85.7 million. Some societies have recently been able to lend a little more freely. The liquidity ratios of the member societies have also improved; at the end of September liquid assets came to £284.9 million out of total assets of £1,981.7 million, compared with £267.1 million out of £1,942.8 million at the end of June.

The cumulative pressure on the building societies is also revealed in the figures of the biggest of them all, Halifax Building Society, for the nine months to October 31st. In that period withdrawals came to £37.1 million (against £33.5 million in the comparative period of 1955). Equally clear is the relief that came as soon as higher (and fully competitive) rates of interest to investors set the money rolling in. The society has now had three months of higher share interest, and over the nine months to October 31st new advances of £33,560,000 (against £37,890,000) were made while the liquidity ratio rose from 15.3 per cent to 16.2 per cent. Liquid assets on that date amounted to £46.1 million out of a total of £284.3 million. The same story is repeated in the accounts of another big society, Leeds Permanent, for the year to September 30th. Over the year its new mortgage advances came down to £15.7 million (against £17.8 million) and its receipts from investors to £19.6 million (against £20 million) while withdrawals went up to £15.1 million (against 12.8 million). All these are figures from the larger societies; some of the smaller societies have doubtless fared much worse. The figures, too, relate to periods when most societies had not put up their rates; currently, despite the attractions of Government savings and the recent fall in gilt-edged prices, the strain on the bigger societies should have slackened.

British Motor Comes Through

NOTHING in the preliminary report of Standard Motor can have surprised investors, but there was something in the preliminary report of British Motor Corporation to surprise and to cheer them. Like Rootes Motors, British Motor was able to report that turnover was maintained in the year to July 31st—which includes the relatively good last five months of 1955, in which car output was as high as the previous year, and commercial vehicle output 25 per cent up. The decline in BMC's gross profits, though heavy, was not so sharp as that reported by other motor manufacturers. The group's gross trading profits before all charges have fallen from £22,333,776 to £14,360,898 and its net income, after charging £5,853,023 (against £9,102,785) for tax, has gone down from £10,498,999 to £5,403,345. The decline in earnings has not been so heavy as to put the ordinary dividend in danger; it has been left unchanged at 12½ per cent. One measure of the stock market's relief was that since the report was issued the 5s. ordinary shares in an otherwise cheerless market have risen from 6s. 4½d. to 6s. 9½d. At this price the yield is about 9$\frac{7}{16}$ per cent.

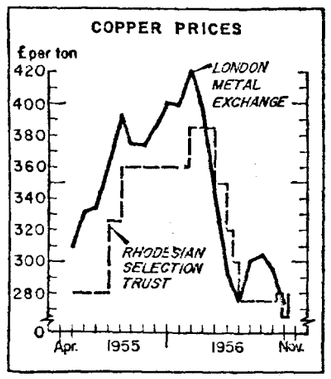


The directors' comment on these results is that "the expected expansion in demand did not materialise and profit margins were reduced by the rise in costs which were common to the industry." This report covers a year which ended over three months ago and which includes about five months when the group was comparatively free from troubles. It would not therefore be advisable to take a view of British Motor's current earnings until Sir Leonard Lord makes his statement to shareholders. At the moment only questions can be posed. What is the present level of sales? Has the introduction of new models improved the immediate prospect? And how much of the cost of putting in new lines of production can be attributed to the past financial year?

End to Fixed Copper Prices?

IT is hardly surprising that the Rhodesian Selection Trust and Anglo American groups are again discussing the pricing of Rhodesian copper to British consumers. Since May 9th last year there have been two price bases. In an attempt at stability RST then introduced a fixed price, while Anglo American continued to sell on the basis of open market quotations established on the London Metal

Exchange. RST can hardly be happy about the outcome of its fixed price policy. In the last seven months the group has been obliged to change its prices eight times, following the open market price down rather more quickly than it has followed it up. RST's pursuit of stability has made it reluctant to raise the price ; but it has to meet its customers (who would otherwise be at a disadvantage with their competitors) by making prompter reductions. So the swings do not balance out the roundabouts, and consumers in both camps feel aggrieved in turn when the disparity between the fixed and free price moves against them.



As Anglo American have given no indication of wishing to change their own method of pricing, is RST now considering a move back to the open market basis? It might be readier to do so if Anglo American would help by delivering more copper to the open market, and delivering less copper direct to consumers. That policy has always seemed to offer the best hope of bringing more stability to copper prices.

Guthrie Scheme Dropped

SIR JOHN HAY, who has every claim to be regarded as an elder statesman of the rubber plantation industry, has this week shown one of statesmanship's highest accomplishments—the art of retreat. The scheme for rolling up £1½ million (eventually £2 million) of the surplus investments of the Guthrie group of rubber companies into an investment trust that would initially be private and unquoted has been dropped. Shareholders of United Sua Betong, which was to have been the largest contributor to that trust with an investment of £700,000, were so informed on Monday. In announcing the decision Sir John gave as his reason the fact that some opposition had been expressed, while the large majority of shareholders has merely given their silent consent (by not voting) whereas he wanted positive support.

The decision not to proceed was certainly appropriate. The scheme had a chilly welcome, and however strongly Sir John may still feel that he has "transgressed no principle" it is certain that many shareholders had serious doubts about a method of redeploying assets that would take them out of the effective control of the shareholders of the companies that owned them. He gave no hint of any further step, but mere withdrawal of an unpopular scheme ought not to be the end of the matter. Since even the directors of the successful rubber companies now admit that part of the liquid assets of the producing companies is surplus to foreseeable requirements, the argument for putting them to other uses or for returning the surplus to stockholders becomes overwhelming.

Car Output Cut

THE latest figures of vehicle production—those for September—make sad reading. Motor car production is down by a third compared with 1955, at 59,732 against 90,320, and of commercial vehicles by almost as much (24,704, against 35,845). Even heavy vehicle production—of over 6 tons carrying capacity—which until the end of July was over 40 per cent above the previous year's figure, is falling behind, with an output of 2,071 units against 2,609 for September, 1955, though the total for the 9 months, 20,031, is still handsomely ahead of last year's 16,683. No doubt, the difficulties in getting shipping space for exports are affecting output—Vauxhall gave these as the reason for working short time—but it seems likely that they have been no more than the last straw. In September, 1955, of the output of cars of 90,320, exports of 30,584 and home registrations of 42,224 totalled 72,808, leaving a balance of 17,512 to add to stocks of one sort or another. If home registrations for September are down by 30 per cent, as the number of hire purchase transactions and other indices suggest, the addition to stock this year would be no more than 8,000. Clearly the industry and the motor trade are anxious not to be caught with the kind of stocks they had at the end of last year: the probability of petrol rationing, moreover, is already affecting second-hand prices.

Taxing the Manager

WHICH is the happiest country for an international business to prosper in? Without answering that question, Lord Heyworth, the chairman of Unilever, looked at some of the difficulties and advantages of several possible countries in his Stamp Memorial lecture before the University of London on Monday. Each of the three countries he chiefly considered—the United Kingdom, the United States and the Netherlands—has disadvantages. The United States makes companies conform to domestic anti-trust ideas when they are doing business in foreign countries, managerial salaries are high and capital gains are taxed. Holland taxes scrip issues.

Dear money

How much does it cost to collect your money?

Whether you sell goods or services, run a business or control the finances of a local authority, the preparation of invoices, bills, demands (call them what you will) involves costly clerical effort.

Powers-Samas punched card methods make light work of the job. Machines do the arithmetic and produce the finished bills — swiftly, at low cost and with machine accuracy. Then they fill in their time with other accounting, costing and statistical tasks.

What does punched card equipment cost? Powers-Samas have matched their ranges of machines to the needs and budgets of the small, the medium and the large organisation.

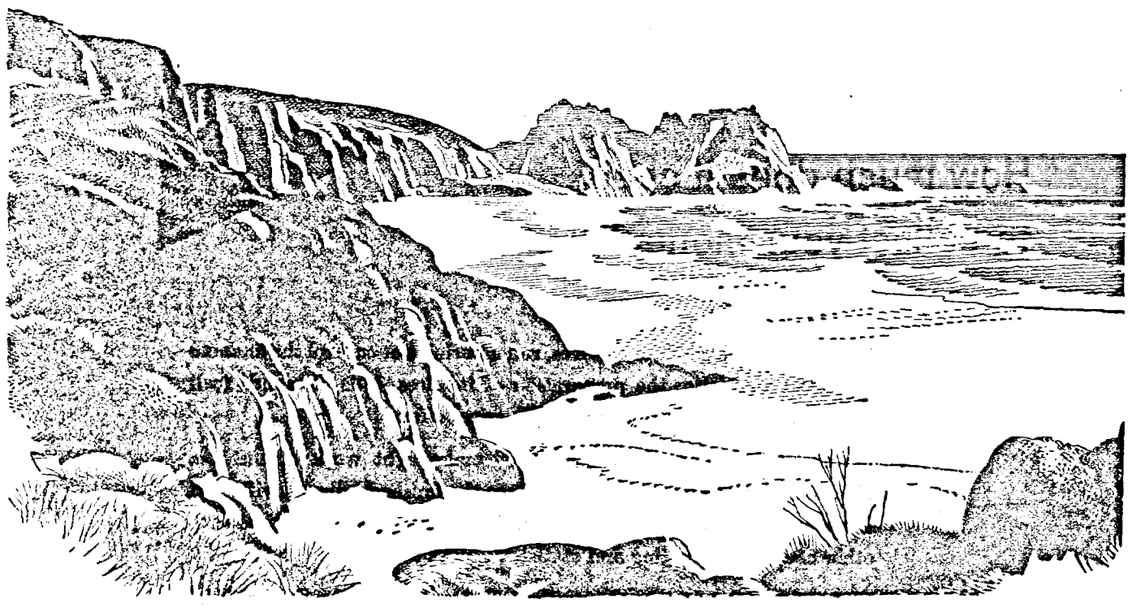
PICCADILLY CIRCUS

GREAT PLACES FOR TRAFFIC

Traffic in terms of wheels at Piccadilly Circus . . . . traffic in terms of words at Porthcurno. Snaking across the soft sandy beach of this quiet Cornish cove to disappear in flurries of spray amongst the Atlantic rollers, go eleven cables. They link the United Kingdom with the world. Cable and Wireless Limited's cable station at Porthcurno is the beginning of the British Commonwealth's vast submarine cable system. The station can handle traffic to the tune of over a million words a day!



PORTHCURNO COVE, CORNWALL *by Rowland Hilder, R.I.*

Cable & Wireless Ltd. owns a world-wide network of 150,000 miles of submarine cable, maintaining it with a fleet of 8 cableships. Day and night, these ships, stationed at strategic points, are ready to steam at full speed to the estimated position of any fault that may occur in the Commonwealth system.

But this is only one aspect of the Company's work. It also owns and maintains wireless relay stations on the trunk routes, operates the overseas telegraph services of most of the colonial territories and cable services in various other countries throughout the world.

This great organisation, although it does not accept or deliver cables in this country, is always at your service overseas. It is set in motion whenever you send a cable from any Post Office which accepts telegrams, or from your telephone or Telex installation. Cabling is very easy, very swift and very sure. A Greetings cable to anywhere in the Commonwealth costs as little as 6s. 8d.

In Britain there is one outstanding handicap—the steep rate of progression of the tax on managers' salaries. The table gives a shortened version of the full comparison that Lord Heyworth made showing that only in the Scandinavian countries does the proportion of a high salary absorbed by tax approach what it is in Britain. Even if the sterling dollar exchange rate were $5 to the £ (which is just another way of assuming that the cost of living in the United States is about twice what it is in this country) the American manager would still be relatively well off. The comparison of necessity cannot be exact. The United States taxes capital gains while Britain does not; several countries allow deductions for medical services; all countries except India allow more liberal business expenses than does Britain, but Britain allows higher retirement contributions.

The general lesson, however, is clear. A truly international business has to make its managers circulate into and out of various tax systems, and it is Lord Heyworth's experience that it is almost impossible for a citizen of the United States or of Canada to accept an appointment in the United Kingdom without feeling that he has come down in the world. It is necessary to bring non-residents to the United Kingdom both to train them and to let them teach their British colleagues. Men who are brought home for promotion feel that they have had an "Irishman's rise." For the returning Britisher there is the compensation of living in the home country. But for non-British managers there is no such consolation.

Home Service Life Assurance

HOME service life assurance made solid progress in 1955. The annual report of the Industrial Assurance Commissioner shows that the 14 companies and 102 collecting friendly societies that transact the business set up new records last year in premium income and total funds, but the numbers of new policies issued and the total policies in force continued to decline. Though overshadowed by the £219 million addition last year to ordinary life and annuity funds,

	1954	1955
	£ mn.	£ mn.
New sums assured	287·1	302·7
Premium income	148·4	156·0
Total funds	1,034·3	1,093·2
Number of new policies issued ('000)	5,885	5,781
Policies in force ('000)	121,200	120,800
Average expense ratio (companies)	29·9	30·4
Average expense ratio (societies)	35·0	38·2
Average lapse ratio (companies)	17·8	17·2
Average lapse ratio (societies)	20·8	19·6

the £59 million increase in industrial assurance funds was a significant contribution to personal savings, with the added virtue of being the fruit of regular collections at weekly or monthly intervals at the homes of policyholders.

Two indicators are closely watched by the critics of the industrial assurance offices. One, the expense ratio (the proportion of premiums absorbed in management expenses including staff bonuses and superannuation contributions) rose last year; higher wages, which inevitably form an important part of industrial assurance costs, were not fully offset by greater productivity. The other, the lapse ratio (the proportion of new assurances forfeited without any return) continued to move in the right direction. The lowest expense ratio amongst the companies and large societies was 27.1 per cent for the Co-operative. The Prudential had the smallest proportion of lapses at 10.6 per cent.

SHORTER NOTES

Steel output in October reached 419,100 ingot tons a week, which is the highest ever for the month, though below the peak of 425,800 ingot tons reached last March. Demand has slackened for certain light steel products, though it remains very strong for plates and other heavy products. At the end of September stocks in consumers' and merchants' hands were still very high, 3,999,000 tons of finished steel, though they had come down about 30,000 tons from their level at the end of June.

★

Birmingham Small Arms Company announces a group trading profit for the year ended July 31st of £1,604,941, compared with £2,865,676. After crediting £239,236 (against £9,571) profit on disposal of fixed assets the net figure after tax was £914,887 (against £1,313,455). Final dividend of 5 per cent makes 8 per cent for the year (against 10 per cent). The board, which was reorganised in the summer, states that the machine tool businesses had another most satisfactory year with improved results; the motor cycle business showed smaller, though substantial, trading profits; severe losses were sustained by the motor car companies of the group.

★

In the year to August 31st last, Horrockses Crewdson made a net loss of £35,149, compared with a net profit of £92,381. The payment on ordinary shares has been cut from 12½ to 10 per cent.

EXPORTERS

Our three-monthly reports give concise information on market conditions and prospects in all countries in the world. The report issued this week on

THE UNION OF SOUTH AFRICA
and on
SOUTH-WEST AFRICA

includes information and comments on:

Rising mining production
The gold price issue
Easing of import restrictions
Competition for U.K. exports by Italy and Germany

The report is illustrated by charts and has a useful statistical appendix.

Company Notes

TUBE INVESTMENTS. Early this year Tube Investments raised over £8 million from its rights issue of ordinary shares. It has since bought the issued capital of Park Gate Iron and Steel and the complementary pig iron and iron ore capacities of Renishaw Iron and Byfield Ironstone; its £3½ million programme to develop its subsidiary, Round Oak Steel Works, is under way; it still owes the Iron and Steel Realisation Agency £4,600,000 for Park Gate and this must be paid up before February, 1958; and its directors have sanctioned capital expenditure of £6,600,000. Hence the group, as the chairman, Sir Ivan Stedeford, points out in the report, needs still more new capital: "I take this opportunity, therefore, of informing stockholders that we expect to provide for this during 1957."

The programme, which will quickly absorb the liquid resources revealed in the

£1 ordinary stock at 52s. 9d. xd. yields £5 14s. per cent.

balance sheet at July 31st, goes beyond the development and modernisation of existing capacities. It envisages a redeployment of the group's resources. "Radical and costly changes" are involved in concentrating the production of bicycles at Handsworth. Moreover, the group has substantially increased its investment in steelmaking. The primary consideration which brought Tube Investments into steelmaking was to secure an adequate supply of carbon steel billets for seamless tubemaking. But recently it has had to pay high prices for alloy steel billets from abroad and this experience will to some extent fashion its plan for developing and expanding its steelmaking capacity.

This emphasis in Tube Investments' policy suggests a shift from secondary processing towards integrated production. The decision to do so must have been taken some time ago but its justification can be seen in the group's experience in sales and profits in the year to July 31st and in what is likely to happen to them in the current year. A gain of over £22 million was recorded in sales, deriving mainly from new products and from new plants, but profit margins were eroded. Profits after depreciation rose by £2,806,334 to £11,332,921 but £900,000 of this sum represented "exceptional profits arising from price increases of raw materials." The one exception to the upward trend in sales and earnings was the cycle division, where trade declined both at home and abroad. The directors add that "during the latter part of the year there was some falling off of orders in certain sections of the group's activities. This trend continued during the first quarter of the present financial year and has imposed a curtailment of activities in certain divisions."

Redeployment and expansion will be costly and will no doubt involve an increased commitment for working capital too. New capital will have to be raised; in addition a high proportion of earnings will have to be ploughed back at a time when earnings themselves may be squeezed. But the claims of shareholders have not been ignored in the past; the rights issue was on bonus terms and by effectively recommending a dividend of 15 per cent on the new capital the directors did a little more than they had originally promised. Shareholders' claims it must be supposed will not be forgotten when the next new issue comes along.

★

JOSEPH LUCAS (INDUSTRIES). When the motor industry's sales and profits fall so too do those of Joseph Lucas. But the company also supplies accessories and equipment to the aircraft industry and the importance of these interests may help to explain why, though the company's earnings have fallen, they do not appear to have taken such a hard knock as the troubles in the motor industry might have suggested.

Joseph Lucas sets out its earnings in an individual way which falls somewhat short of complete clarity. The preliminary statement shows that the gross trading surplus for the year to July 31st last has fallen from £7,078,422 to £5,010,441. But this surplus is struck after charging £1,268,623 (against £1,330,995) for depreciation, £625,000 (against £850,000) for replacement reserves and nil (against £475,000) for stock reserves. If these appropriations and charges are added back, the gross profit appears to have declined from £9,734,417 to £6,904,064. After a tax provision of £3,848,730 (against £5,187,437) and after making the replacement and stock reserve appropriations, the statement shows that the group's net income has fallen from £2,207,087 to £1,519,722. By any reckoning, net earnings have been heavily reduced. But dividend policy in the past was ultra-conservative and the latest earnings still provide an adequate threefold cover on the maintained dividend of 7½ per cent. On this dividend the £1 ordinary shares at the current price of 29s. 6d.xd. yield just over 5 per cent.

FISONS. The high running yield of £6 3s. 9d. per cent offered on the new unsecured loan stock of Fisons may ensure its success. Its terms—£5 million of a 6 per cent. stock (1976-81) at 97—have attractions even in today's uncertain markets, especially for the institutions which can take in the stock at sub-underwriting terms. But they are a reminder of the heavy costs of financing expansion for those companies that are committed to it. The directors of Fisons have authorised capital expenditure of £6,930,000, to build a new factory on the Thames for the manufacture of nitrogen compounds, to extend and modernise the capacity for compound fertilisers and to add to the group's investment in industrial chemicals. The £5 million issue of loan stock will not be enough for these needs and the company intends "to raise further capital in due course and it is at present proposed to do this by the issue of ordinary shares."

The prospect for Fisons shareholders suggests stable dividends with a chance of increasing their stake in the business on preferential terms through a rights issue. So much can be inferred from one comment by the chairman, Mr F. G. C. Fison: "Our policy has been to fix prices at a level which provided a reasonable return to shareholders and which allowed us to retain part only of the capital required for expansion."

	Years to June 30, 1955	1956

Ordinary capital	5,804,863	5,804,863

£1 ordinary stock at 49s. 3d. yields £6 2s. per cent.

In the past year, Mr Fison claims, the group carried some of the extra burden of increases in costs, and fertiliser prices were increased only after the end of the financial year. Thus margins were reduced though sales went up from £32 million to £37½ million. Looking ahead, Mr Fison believes the increase in the consumption of fertilisers in the current year will be less than "normal" but that there will still be a definite increase. But profit margins, he argues, are so "moderate" that the group cannot undertake to absorb "any exceptional increases in costs." Mr Fison draws particular attention to the element of freight rates in costs—a comment which is now given added point by the closing of the Suez Canal. Much of the group's raw material, too, comes from North Africa, which poses a question mark on the subject of supplies; shareholders will note that the group has been building up its stock of raw materials and that it has written £250,000 off its investment in the *Société Industrielle d'Acide Phosphorique et d'Engrais*. Everything in this statement, then, indicates unchanged dividends—a prospect discounted in the yield of 6.1 per cent offered by the £1 ordinary units at a price of 49s. 3d.

★

IND COOPE & ALLSOPP. The directors of Ind Coope, one of the largest breweries in this country, have pursued a most conservative policy on dividends. For a decade the ordinary dividend was effectively unchanged at 12 per cent. Now, for the year to September 1st, they have increased the dividend to 13 per cent. Small though it is this is a break with tradition.

The increase in the payment does not follow on a sudden and sharp advance in earnings. Indeed, although the group's gross income has risen from £3,223,347 to £3,547,562, its net earnings have merely crept up from £1,122,716 to £1,136,574 as the tax bill has risen from £1,200,244 to £1,390,434. But this belated increase in dividend seems to suggest that the directors are reasonably confident that earnings will continue to run about their present level. There are grounds for confidence. Sales of draught beers are not buoyant—a bear point for Ind Coope with one of the biggest chain of public houses in the country—but sales of bottled beers are. And Ind Coope was one of the first and one of the biggest in selling its bottled beers outside its own tied houses. Moreover, it has interests in the export trade and in wines and spirits and it has the resources to spend on improving the amenities of the properties it owns. More than this it has recently acquired a number of large hotels.

All this suggests that earnings should remain stable, though in such a competitive trade they are unlikely to expand spectacularly. The one per cent increase in the dividend does not therefore mean that investors have to change their view on the 5s. stock units. Rather like "Imps" among tobacco shares these units should be considered as income stocks—they yield £7 13s. at the current price of 8s. 6d.—with a rare touch of the equity in them.

THOMAS W. WARD. This was the first company to receive an award by *The Accountant* for its full report. Its latest accounts, for the year to June 30th, maintain an excellent standard though the story they have to tell has grown familiar in the telling. It is of increased sales but of smaller profit margins. The turnover of the group went up from £36,635,000 to £44,714,000, carrying trading profits up from £2,573,445 to £3,088,406. Of the £44½ million, about £21 million arises from "transactions of a merchanting nature"; on this trade in coal, metals and manufactured products the margin of

	Years to June 30, 1955	1956

£1 ordinary share at 64s. yields £4 14s. per cent.

profit is slighter than on the goods manufactured by the group itself.

Mr. H. W. Secker, the chairman, comments in detail on the prospects of each division of the group. But whether he speaks of cranes or of machine tools or of iron and steel products, either in the role of a merchant or a manufacturer, he reaches the same conclusion of reduced profit margins. He expects that the volume of trade will be maintained and only in a few isolated incidences is there any indication of a falling off in demand. From his remarks shareholders may draw the conclusion that the ordinary dividend may be in no danger but that an increase is unlikely. That possibility, set against a more cheerful view of the longer term prospects, governs the prospects of the £1 ordinary shares, which at 64s. offer the low yield of 4½ per cent on the maintained dividend of 15 per cent.

LONDON STOCK EXCHANGE

Next Account Begins: November 28th
Next Contango Day: November 28th
Next Settlement Day: November 20th

Nervousness has been the keynote in markets this week, causing considerable falls. On Friday of last week the *Financial Times* ordinary index actually rose by 1.1 to 174.0, but on Monday some end of account selling reduced prices all round. The decline then gathered momentum and on Wednesday the *Financial Times* ordinary share index broke through the year's low at 168.3. Not until Thursday when a broad recovery particularly marked in gilt-edged stocks occurred was the fall checked.

Gilt-edged have declined 1 to 1¼ points, 2½ per cent Consols falling one point to 50½, while 4 per cent Consols fell to 76½ and 2½ per cent Treasury to 50⅜. Among new issues West Ham 5¼ per cent scrip (£10 paid) has fallen from 1⅛ discount to 3 discount. Australia 5½ per cent 70/72 in which dealings started at ⅜ discount declined to 1¼ discount.

Oil shares were again affected sharply. British Petroleum over the week have fallen by 21s. 3d. to 123s. 9d., Burmah 12s. 3d. to 77s. 9d., Shell 8s. 1½d. to 140s. 7½d. and Royal Dutch 2½ to 79½. On the brighter side Ultramar have improved from 54s. 6d. to 56s. 3d. and Canadian Eagle from 66s. 3d. to 69s.

The industrial share market also records considerable losses, *The Economist* indicator now standing at 177.2, against 186.4 last week. Among shares affected for specific as well as general reasons are Plessey, which fell from 67s. 3d. to 62s. 3d. on the results, Leyland Motors which dropped 5s. 4½d. to 42s. 3d. on the announcement of the rights issue, and Johnson & Phillips which fell 5s. 9d. to 31s. 6d. on the cut in the interim dividend. Steel shares have recorded heavy declines, Stewarts & Lloyds falling from 60s. 3d. to 54s. and United Steel from 37s. 9d. to 34s. 3d. English Sewing Cotton received support and improved from 24s. 3d. to 26s. 7½d.

There was some support for the older mines, Crown Mines rising 1s. to 33s. 1½d. while OFS issues have recently tended to harden.

(1) Relates to wholesale prices in Athens and Piraeus only for Greece. Figures for Ireland are based on January, 1952 = 100. (2) July-December. (3) Relates to prices in capital cities only for Austria, France, Greece and Turkey. Belgium and Austria exclude rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953 = 100. (4) Including direct taxes. (5) Including trade with Faeroe Islands. (6) Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. (7) Deposit money and notes and coins held by business, individuals and foreigners. Except for Greece holdings of the issuing authority and other banks are excluded. (8) Holdings of the government and central bank at end of period. Figures for Greece are gold reserves only; foreign exchange figures for Norway exclude government holdings; Norway and Sweden include foreign investments; Ireland include some long term securities. (9) Beginning May, 1954, a new drachma equal to 1,000 old drachmas introduced.

Financial Statistics

EXCHEQUER RETURNS

For the week ended November 10th, 1956, there was an "above-line" surplus (after allowing for Sinking Funds) of £19,529,000 compared with a deficit of £1,486,000 in the previous week and a surplus of £13,313,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £14,181,000, bringing the total deficit to £651,670,000 (£583,104,000 in 1955-56).

THE MONEY MARKET

At the Treasury bill tender on Friday of last week the discount market maintained its bid at just 5 per cent for the third week in succession. At last week's tender, the market's proportion of the £200 million of 91-day bills fell, from 36 to 27 per cent, though its allotment of the £80 million of 63-day bills rose slightly from 90 to 92 per cent. The average rate of allotment of both maturities fell fractionally, to £4 19s. 10.86d. per cent for the 91-day bills and a fraction over that for the 63-day bills. At yesterday's tender, the offer of the 91-day bills was reduced to £190 million, but that of the shorter maturities was raised by a further £10 million, to £90 million.

The exceptional stringency in the money market where short loan rates have been 4⅞ per cent and occasionally 5 per cent has been due in part to the shortage of maturities, caused by the postponement in the corresponding week in August of take-up of bills until the maturity on the 15th of the National War Bonds. Moreover, a number of houses needed funds on Monday for repayments of seven-day loans to the Bank. Further Bank borrowing at the penal rate was necessary on Tuesday for two houses, though the amount involved was very small. The week's net repayment by the market is reflected in the fall of £10.3 million to £16.9 million in discounts and advances shown in Wednesday's Bank return.

WHY A HOT WATER CYLINDER FLEW THROUGH THIS ROOF

It was a hot water expansion cylinder 5 ft. long x 2½ ft. diameter of welded ⅜" steel plate.

Dished to saucer shape, but not flanged, the ends were merely corner welded to the cylindrical shell without any plate edge preparation. This welding was very defective and the structure was highly stressed under the required working conditions.

After only a few days' service the cylinder violently exploded, took off like a rocket, and flew disastrously through the roof.

What Vulcan say about it...

It is essential in the interests of safety that any vessel to be used under pressure should be examined by an experienced person before use.

A Vulcan Standard Boiler Policy specifically provides for prior inspection of new plant by one of Vulcan's engineer-surveyors. Such a report would not have sanctioned this cylinder's use, and the accident would have been prevented.

RECORD TURNOVER AND EARNINGS

GROWING STEEL INTERESTS

Record gains in turnover and earnings—mainly derived from new products, new businesses, new plant coming into fuller production and generally higher productivity—were reported by Sir Ivan A. R. Stedeford, KBE, Chairman of Tube Investments Limited, in his annual statement circulated to stockholders on November 15th.

Sir Ivan said that trading profits before tax but after depreciation were £11,332,921, an increase of £2,806,334 over the previous year. Included was some £900,000 of exceptional profits from raw material price increases. Allowing for this, profits became £10,432,921 and the increase over last year about £2 million. There had been a rise in turnover of over £22 million, with all Divisions but the Cycle Division exceeding their previous year's performance. There was, however, a progressive erosion of margins which, with present restraints on activity, made it unlikely that these records in turnover and profits would be challenged for a while.

The Board recommended a final dividend of 7½ per cent which, allowing for the share capital not fully paid for the whole of the period, made a rate for the year equivalent to 15 per cent, an increase of 1 per cent on the rate forecast. Stockholders, he felt, would not see in this a step away from the policy of retaining within the business the main sinews of development. The acquisition of further companies, and costs of modernising them, presented TI with a need for more new capital, for which the company expected to provide in 1957.

PROGRESS OF DIVISIONS

The return on large-scale capital expenditure in the Aluminium Division had for the first time touched reasonable proportions, a sharp contrast to the losses of two and three years ago. The results of the extrusion plant at Redditch were particularly satisfactory. Here a new foundry recently completed would provide further economies. The shortage of virgin metal continued throughout the year, and once again, whilst demand was good, prevented the South Wales sheet mill from approaching its rated capacity. Nevertheless, sales reached a record level. Later in the year, with orders falling off, metal became easier, and with the freer supply competition became and remained much keener.

The reduced earnings of the Cycle Division clearly reflected intensifying competition. Perhaps the most disquieting feature was the effect of the competition in America, the largest individual export market for bicycles, where in the first eight months sales of British machines dropped by 43 per cent. Conditions were no less severe at home. Government measures to restrict credit purchase took heavy toll, and here total sales by the industry fell to about one half. A major scheme of reorganisation had been undertaken to effect still lower production costs. The British Cycle Corporation, a new subsidiary, had assumed full authority over a great part of TI's bicycle manufacturing operations, and production in the Birmingham area would, apart from components, be concentrated in what he believed would be the most modern integrated bicycle factory in the world. These were radical and costly changes, but there could be no half-measures if Britain were to hold her own in this industry.

The redeployment of forces had inevitably given rise to some redundancy. Every effort had been made to lighten hardship by a generous scheme of notice and compensation agreed in consultation with the men's representatives. TI's cycle companies had a long history of successful trading, a record which, with goodwill all round, would, he was sure, remain unbroken.

NEW ELECTRICAL PRODUCTS

An increase of nearly 15 per cent in the sales of the Electrical Division—each company contributed—in what proved to be a contracting market for domestic appliances was a significant feature. The main reasons for this were to be found in the Creda "Carefree" and "Stargazer" cookers and Creda Water heaters. New space heaters and the "Debonair" spin dryer had been recently introduced, which sounded the knell of the garden washing line. TI had acquired the Power Centre Company Limited, of Walsall, which specialised in electrical distribution gear; plans were in hand for expanding its capacity.

A record volume of output was achieved by the Steel Tube Division, certain of the big new plant operating at full production for short periods with gratifying results. Orders, however, fell off later with the effect of credit restrictions. Given reasonable conditions, the Division was well equipped with plant and skilled labour to broaden its trading front at home and abroad. He was glad to record a contribution by the Division to the world's first atomic power station at Calder Hall, in the form of 100 miles of tube in alloy steel for the reactor. Events alone would tell what TI's future contribution would be to these great nuclear developments, but he was confident that they would earn as integral a place in the power and propulsion systems of the future as they had in the past.

GROWING STEEL INTERESTS

TI had acquired during the year the total share capital of the Park Gate Iron & Steel Company, of Rotherham; the Renishaw Iron Company, in North Derbyshire, and half of the share capital of the Byfield Ironstone Company, in Northamptonshire, at a total cost, including loans, of £6,115,000. Of this, £1,515,000 had been paid, leaving a balance outstanding of £4,600,000, to be paid by 1958. An expansion scheme was already in hand at Park Gate, and modernisation plans were in preparation for Renishaw. With the original investment in Round Oak Steel Works three years ago, TI had invested just on £12 million, excluding development schemes, in these steel-making interests, which were currently producing ¾ of a million ingot tons a year.

If justification were needed for TI becoming steel-makers: Round Oak had supplied during the year almost 100,000 tons of tube and structural steel for the Group, which could not have been obtained from British makers, nor probably from overseas, even at high premiums. The £3½ million expansion scheme at Round Oak was well under way.

TI's primary consideration in becoming steel-makers was to secure adequate supplies of carbon steel billets for seamless tubes, but the very serious shortage of alloy steel billets, already involving high premium imports, would to some extent fashion the development of TI's steel activities. The Group would still look to its friends in the steel industry for a considerable proportion of total requirements.

The mounting demand for TI's expanding range of capital equipment—from rolling mills and heavy forgings to machine tools and conveyors—bid still fairer prospects. The purchase had been arranged of Bennett Tools Limited, of Redditch, a small company of precision engineers with a bright future in the highly specialised and automatic machinery field. Its productive capacity would be expanded.

WORLD MARKETS EXPAND

TI's despatches overseas were more than 5 per cent up in value, in spite of the contraction in sales of bicycles in some markets. All-time records were returned by many companies. Dollar business again took pride of place, with America still heading the list and sales to Canada increasing by over 30 per cent. Satisfactory results had been reported from all overseas associate and subsidiary companies. Fifty per cent of the share capital of Cycle Saddles (South Africa) Pty., Limited, had been sold, a substantial proportion being taken up by J. B. Brookes & Company, Limited, of Birmingham, the world-famous saddle makers. He hoped that the works, near Madras, of the new tube company, Tube Products of India, Limited, formed in association with Murugappa & Sons, would be in production next spring. He was looking forward to attending the opening ceremony of the first stage of this promising new enterprise.

The progress made in research and development had strengthened the conviction that long-range research designed to advance technological development would be of great value to operating companies. Technological activities were being grouped in one centre at Walsall, the control engineering, nuclear engineering, plastics development and data handling and computing sections being installed there already. There might be nothing new in principle in what was called "automation," but there was something new in the scope of electronic applications to manufacturing processes and machinery, and in the bold attacks now being made in various countries on conventional methods with these powerful weapons. TI had a team of investigators reviewing the needs of the Group to secure the benefits of these modern methods, far reaching and costly though the consequent reorganisation might be.

NEW TRAINING CENTRE

Commenting that a new appraisal of the status and remuneration of science and mathematics teachers might be necessary to gain

and keep highly qualified teaching staff, Sir Ivan said that another problem for industry concerned management. TI was giving particular attention to plans for the training and recruitment of managers of the right calibre, for the present shortage was hardly less acute than that of skilled scientists and engineers. The Group was fortunate in its present managers, and had many promising ones in the making, but the continued expansion of activity made some recruitment from outside necessary. Some years ago TI started a four-year management training course for university graduates and others of promise, and it was yielding satisfactory results. TI was also strengthening arrangements for the training of supervisors. Nine years ago the company established a residential training centre, one of the first of its kind, to provide courses in nearly all functions of management. Since then over 1,600 TI people—including men from the shop floor—had passed through these courses. A new and larger residential training centre was being opened in Edgbaston. It was TI's purpose that every employee promoted to supervise others would be trained for this important work.

THE FUTURE

Sir Ivan said that the problems before us gave sharp point to the proposals for a free trade area in Europe. This country's bitter experience of over a quarter of a century ago, when the UK was the only big unprotected market, had, however, left some of our industries with not a few inhibitions. The submission now of a scheme for combining open European trade with Imperial Preference could not, in itself, dissolve all doubts and difficulties, which until recently prompted general opposition to earlier proposals. Obviously, the greatest caution was necessary, but for this country, dependent as it was on exports, the possibility of steady and freer trade undoubtedly had attraction. If all went well in practice, the establishment of this free trade area, which was one of the world's fastest growing markets, would be a great step forward for the good, and reason prompted that Britain then could not afford to remain aloof. Whatever decision was reached, the United Kingdom must, as always, keep the closest relations with our Commonwealth associates. But we dared not scout the idea of Britain turning more, but not exclusively, towards Europe, for while the tide of Commonwealth affairs seemed to be running towards economic independence strong currents were obviously carrying Europe towards economic integration. A realistic reappraisal, therefore, now faced the Commonwealth no less than Europe.

Commenting on the testing times ahead, Sir Ivan said these called for an industrial capital development policy to which we should now devote mind and effort. He did not question the policy adopted to check inflation, but of one thing he believed there was no doubt: British industry's need of heavy capital investment if it were to surmount the competitive struggle now begun. He appealed to the Government to end present discouragements at the earliest moment possible. It took a long time to plan and construct plants with competitive power to match those which would be challenging us in all our markets.

"It seems," he continued, "the time has come for the nation to give industrial capital investment the sort of moral priority which housing has had for the past decade. Let industry be given a run for a few years to spend capital on a massive scale. By these means, and by these means only, are we likely to succeed in expanding exports and in bringing about a rising standard of living."

HARMONY GOLD MINING COMPANY LIMITED

EXPANDING SCALE OF OPERATIONS

The Sixth Annual Meeting of shareholders will be held in Johannesburg on November 19, 1956. The following is an extract from the circulated statement by the Chairman, Mr P. H. Anderson, dated November 12, 1956.

CAPITAL

During the year the 1,857,445 reserve shares were issued and allotted, bringing the issued capital up to that authorised, namely, £4,500,000 in 18 million ordinary shares of 5s. each.

WORKING RESULTS

The rate of milling was steadily built up from 67,000 tons in June, 1955, to 80,000 tons in June, 1956, the total ore milled during the year under review being 897,000 tons. The average yield per ton milled at 7.705 dwt was 0.689 dwt higher than that attained during the previous financial year, and unit working costs, mainly as a result of the increased tonnage, were 6s. per ton milled lower. The working profit from gold was £1,791,284, and the working profit from uranium was £1,059,471 (subject to adjustment), making a total working profit for the year of £2,850,755, equivalent to 63s. 7d. per ton milled.

ACCOUNTS

An amount of £128,714, being the difference between sundry items of income and expenditure, was deducted from the total working profit, leaving a profit of £2,722,041 before taxation. There was a transfer to Capital Reserve in respect of expenditure on mining assets and trade investments of £1,276,420, a repayment on account of the capital portion of the uranium loan amounting to £260,114, and a provision for taxation of £172, leaving a balance in the Income and Expenditure Account of £1,185,335 to be carried forward to the current year. This unappropriated balance, together with the Abnormal Costs Reserve of £65,093, and the balance of uranium and pyrite loan funds on hand amounting to £334,645, totalled £1,585,073, which sum was represented by net current assets as detailed in the Balance Sheet.

The short term loan from The Central Mining & Investment Corporation Limited, and Rand Mines, Limited, which at the beginning of the financial year stood at £765,000, was repaid in full during the year. The loan facilities of £3,687,000 arranged through the Atomic Energy Board for the construction of the uranium and pyrite plants were fully drawn by the end of the year in terms of the loan agreements. This amount, plus £130,998 in respect of capitalised interest to June 30, 1956, gave a total capital indebtedness of £3,817,998, of which £260,114 had been repaid, leaving a balance of £3,557,884 still owing at July 1, 1956; this balance is redeemable in 36 equal quarterly instalments from the beginning of the current financial year.

DEVELOPMENT

The footage developed during the year was 51,348 feet, an increase of 19,723 feet over the development accomplished during the previous year. Of the 51,348 feet developed, 20,217 feet were on reef of which 19,065 feet were sampled; 13,560 feet or 71.1 per cent proved payable at an average value of 14.2 dwt over a channel width of 33 inches. The occurrence of areas of elevated footwall in the Ventilation Shaft—3 Shaft zone was one of the two main factors responsible for the substantial decrease in average channel width from 54 to 33 inches, with a consequent decline in both payability and inch-dwt value; the other main factor contributing to the decrease in the average channel width was that, while development northwards from the Ventilation Shaft has not shown the presence of any areas of elevated footwall, the reef body itself has become narrower.

At September 30, 1956, the 17th level twin haulage which is being driven northwards from No. 3 Shaft had progressed to within 1,500 feet of No. 2 Shaft, and a total of 55 boreholes had been drilled to test the reef body above the haulage. Core losses, varying from slight to heavy, were recorded in 30 of the holes. The 55 boreholes gave an average undiscounted value of 471 inch-dwt over a channel width of 36 inches. In the first 1,000-feet stretch north of No. 3 Shaft, four boreholes were drilled averaging 599 inch-dwt over a channel width of 68 inches. In the next 1,500 feet, where the narrow channel width exposed possibly indicates the existence of areas of elevated footwall, 24 holes were drilled averaging 340 inch-dwt over a width of only 18½ inches. In the following 2,000 feet, where two gaps of 600 feet and 500 feet straddling the water-fissure zones were left undrilled, 13 boreholes averaged 360 inch-dwt over a channel width of 43 inches. In the last 1,200 feet the 14 boreholes so far drilled have averaged 14.8 dwt per ton over a channel width of 53 inches, equivalent to 784 inch-dwt.

Preparations for the sinking and equipping of No. 2 Shaft were completed subsequent to the close of the financial year, and full-scale sinking with the permanent equipment commenced during September, 1956. At September 30, 1956, the Shaft had been sunk to a depth of 481 feet below the collar, had been concrete lined to a depth of 436 feet, and had been equipped to a depth of 270 feet.

ORE RESERVE

The payable ore developed during the year amounted to 1,420,000 tons at an average value of 8.6 dwt per ton over an estimated stoping width of 53.4 inches. This represents an increase of 363,000 tons compared with the previous year, the value being 0.8 dwt per ton higher and the width 5.4 inches lower. The available ore reserve recalculated at the year end totalled 1,700,000 tons, or 769,000 tons more than at June 30, 1955. At 8.5 dwt the average value of the available reserve was 0.5 dwt higher than that of the previous estimate, while the stoping width was 3.6 inches lower at 54.3 inches. The calculation of the ore reserve tonnage has been made on a conservative basis.

EXPANSION IN SCALE OF OPERATIONS

Since the close of the financial year, the Board of Directors has decided, now that the sinking of No. 2 Shaft has commenced, to proceed with the next stage in the Company's plans for expanding the scale of mining operations. Plans have been put in hand to increase the milling capacity of the gold reduction plant to 135,000 tons a month from the middle of 1958. An application was submitted during September, 1956, to the Uranium Production Committee of the Atomic Energy Board to extend the capacity of the uranium production plant.

CAPITAL EXPENDITURE

During the year a net amount of £1,479,544 was spent on capital account in respect of gold mining activities, mainly in connection with No. 2 Shaft, including the permanent headgear and permanent hoisting equipment; on European and non-European housing; and on underground equipment, including pumps and fans. As mentioned under the heading of "Accounts," a sum of £1,276,420 was appropriated from profits to Capital Reserve towards meeting this expenditure. During the current financial year capital expenditure is expected to be approximately £2 million, which it is intended should be appropriated from profits. The main items of expenditure now contemplated include the sinking and equipping of No. 2 Shaft; the disposal, by means of large evaporation areas, of underground water, which at present is being pumped at the rate of approximately 1,750,000 gallons a day; and the building of a further 100 houses for employees.

Capital expenditure during the year on the uranium plant amounted to £148,586. The construction of the uranium plant, which now has a capacity of 80,000 tons a month, has been completed except for a few refinements.

A sum of £109,847 was expended during the year on the pyrite flotation plant. The completion of this plant will cost approximately a further £300,000, which sum has already been borrowed in terms of the loan agreements. It is expected that the plant will be commissioned early in 1957.

TAXATION

As this Company still has a large balance of unredeemed capital expenditure for tax purposes, it is not at present liable for the formula tax.

DIVIDEND

Dividend No. 1, at the rate of 6d. per share, was declared on September 14, 1956.

CONSOLIDATED MAIN REEF MINES AND ESTATE, LIMITED

NARROWING MARGIN OF PROFITABILITY

The Fifty-eighth Annual Meeting of shareholders will be held in Johannesburg on November 20, 1956. The following is an extract from the circulated statement by the Chairman, Mr T. Reekie, dated November 13, 1956.

WORKING RESULTS

The ore milled during the financial year, at 2,035,000 tons, was lower by 51,000 tons than the tonnage for the previous financial year, and the yield declined from 2.882 dwt to 2.816 dwt per ton. Consequently, although there was a slight rise in the average income received by the Company per ounce of gold, the working revenue was £172,807 less than the previous year's figure.

Due to the reduction in the tonnage milled, total working expenditure was lower by £52,242, but mainly on account of increased costs in respect of European labour, power and silicosis contributions, unit working costs were higher by 4d. per ton milled.

In effect the working profit for the year fell by £120,565 to £190,739, which indicates the narrowing margin of profitability in the mine.

ACCOUNTS

A credit adjustment of £35,157 in respect of the difference between sundry items of income and expenditure was added to the working profit of £190,739, making a total profit for the financial year of £225,896 before taxation. To this figure the unappropriated balance at the end of the previous year of £434,574, and £19,633 in respect of a retransfer from Capital Reserve on the realisation of mining assets and trade investments were added giving a total of £680,103. Appropriations were made for taxation—£7,509, and Dividends Nos. 92 and 93 of 2s. 6d. and 2s. per share, respectively—£280,710, leaving an unappropriated balance to be carried forward to the current financial year's accounts of £391,884. This unappropriated balance was represented by net current assets totalling £573,206 as detailed in the Balance Sheet, less Retiring Gratuities and Abnormal Costs Reserves.

DEVELOPMENT AND ORE RESERVE

Primary development has reached the stage at which, due to the low percentage payability encountered, its continuance is considered uneconomic.

Consequently, less development was done during the year and it was more selective in that it was advanced from positions where payable values had been exposed. The tonnage of payable ore developed was also lower. The available ore reserve declined further by 556,000 tons to 1,780,000 tons and it appears inevitable in the circumstances that this decline must be expected to continue.

PNEUMOCONIOSIS (SILICOSIS)

The Pneumoconiosis Act 1956 came into force as from August 1, 1956. As a result it is estimated that the costs to the Company in respect of pneumoconiosis will rise from last year's figure of 1s. 2d. per ton milled to about 1s. 8d. per ton milled for the current financial year.

POSITION AT THE MINE

The Reports of the Directors and the Statements from the Chair in recent years have made it clear that mining operations are being conducted in the face of increasing difficulties. This position has developed mainly because of the steady depletion of the actual and potential reserves of ore which is resulting in a decrease in the number of working places and is causing the control of grade to become more difficult. A gradual reduction in the tonnage of ore milled is therefore now inevitable, but as the remaining ore is scattered and occurs over five different reefs mainly with common shaft systems, it is proving difficult to effect the reduction in mill tonnage and at the same time to decrease working costs commensurably. This problem is aggravated by the adverse effect on costs generally of items such as increased pneumoconiosis charges over which the mine has no control. Under these circumstances, some further reduction in the margin of profit on a declining tonnage of ore milled may be unavoidable during the current year.

DALGETY & CO.

GRATIFYING RESULT

The annual general meeting of Dalgety & Company Limited will be held on December 6th in London.

The following is an extract from the circulated review of the chairman, Mr D. Abel Smith, MC:

Having sounded a note of warning twelve months ago, it is gratifying for me to be able to report that the net profit for the year which ended on June 30th last is less than the record of the previous year by only just over 3 per cent.

The company handled 628,120 bales of wool in Australia and 168,605 bales in New Zealand. Pressure on our Wool Store accommodation has increased during the year. Our produce business has continued to expand. The results of our merchandise business have left something to be desired, but only by comparison with recent years, and they still represent a useful contribution to the overall net profit. The East African merchandise result profited from a reorganisation carried out over the past two years. The stock season has not been unsatisfactory and the Department has again produced a favourable result. Our Land Agency business continues to be hampered by the "credit squeeze," but is nevertheless a useful adjunct to our other activities.

FINANCE AND ACCOUNTS

Inflation is still unchecked and our advances, which at June 30, 1950, were £3,329,418, had risen at June 30th last to no less than £11,248,324. It was largely to cope with the strain placed upon us by advances of this magnitude that during the year we took steps to place privately an issue of Terminable Debentures in this country and Secured Notes in Australia. The proceeds and those of the issues of Debenture Stock and the Preference Shares, to which I referred last year, have considerably improved our liquid position and the Net Current Assets have increased by over £3,300,000.

Even now, the Company's loan capital of £3,691,000 is less than in 1939 when it was £4,235,000 although the Company's assets have, in the meantime, risen from £11,404,000 to £28,457,000. It is therefore unlikely that we shall be able to play our full part in the development of the countries where we operate without again having recourse to the capital market before long.

Our ability to sustain a postwar business on what, until now, has been virtually a pre-war capital, is largely due to our policy of ploughing back a useful proportion of the profits; the beneficial effect of this policy would have been more apparent were it not for the attitude of HM Government as regards taxation of earnings overseas, which are subject to British Income Tax irrespective of whether they are remitted to this country or retained in the business abroad.

The profit for the year, after providing for all expenses and taxation (other than profits tax on distributions), amounts to £756,025 as compared with £781,633 for the previous year. We are recommending a final dividend on the "A" and "B" Ordinary shares of 8½ per cent, which makes a total of 12 per cent for the year.

The unsettled world outlook makes it harder than usual to predict the level of future profits. If inflation persists, the company's costs will continue to rise, but so should many of its earnings. The immediate outlook, coupled with the recent rise in the level of wool prices, is quite promising.

BLYVOORUITZICHT GOLD MINING COMPANY, LIMITED

MR W. M. FRAMES'S STATEMENT

The Nineteenth Annual Meeting of shareholders will be held in Johannesburg on November 20, 1956. The following is an extract from the circulated statement by the Chairman, Mr W. M. Frames, dated November 13, 1956.

WORKING RESULTS

Compared with the figures for the previous financial year, there was little change in the tonnage of ore milled but the yield declined by 0.242 dwt. to 11.258 dwt. per ton. The gold recovered decreased by 9,550 ounces and in consequence the working revenue at £8,958,372 was lower by £109,991. Working costs increased by 3s. 6d. a ton milled due mainly to higher costs of European labour, power and stores and materials, and working profit fell by £357,138 to £5,207,292. There was, however, an improvement in the working profit from uranium extraction of £87,938 to £1,192,764 (subject to adjustment) and total working profit at £6,400,056 was lower by £269,200.

ACCOUNTS

Provision for taxation and mineral lease consideration amounted to £3,143,081, dividends declared during the year totalled £2,400,000, a repayment of the capital portion of the uranium loan absorbed £362,680 and £264,890 was transferred to Capital Reserve in respect of expenditure on mining assets and trade investments. The unappropriated balance was thereby increased to £1,635,009.

DEVELOPMENT

The total footage developed at 53,228 was 414 feet more than in the previous year. Of the 22,607 feet driven on reef, 17,205 were sampled and 16,280 or 94.6 per cent were payable at 764 inch-dwt. These results represented improvements of 4.6 per cent in payability and 52 inch-dwt. in value, due mainly to a slightly greater proportion of the reef development being carried out in the richer eastern section of the mine.

The payable ore developed at 1,162,000 tons was 100,700 tons less and the average value of 11.5 dwt. was 0.4 dwt. lower than the figures for the previous year.

ORE RESERVE

The available ore reserve, re-estimated at June 30, 1956, to be 5,341,000 tons, was 150,000 tons more than the estimate at the end of the previous June, the value at 12.1 dwt. and the width of 46.4 inches remaining unchanged.

CAPITAL EXPENDITURE

During the year a net amount of £261,650 was spent on the Company's gold mining operations. Of this amount £115,953 was expended on shaft equipment, £69,987 on increasing the pumping capacity of the mine from 14,880,000 gallons a day to 16,800,000 and £50,565 on the erection of a water treatment plant which has now been completed, thus enabling the Company to cease purchasing water from the Rand Water Board. The twin haulages on 6 level from No. 1 Shaft were advanced to the proposed site of the No. 1 Sub-Vertical Shaft, but no further work has been undertaken in connection with the sinking of the Sub-Vertical Shaft. The continuation or otherwise of this work will depend upon the outcome of certain detailed investigations into future mining policy. It is estimated that £520,000 will be spent on capital account during the current financial year, chiefly on the disposal of water, pumping equipment, equipment for the sub-incline shafts, ventilation, housing and the supply of power underground.

Expenditure on the uranium plant totalled £97,702 during the year and £279,467 was spent on the erection of the sulphuric acid plant.

URANIUM AND SULPHURIC ACID

The uranium plant operated to capacity throughout the year.

Of the total loan of £4,068,281, including capitalised interest, obtained through the Atomic Energy Board for the erection of the uranium plant, an amount of £936,316 has been repaid, leaving a balance of £3,131,965 to be repaid in the remaining 29 equal quarterly instalments.

The construction of the sulphuric acid plant is well advanced and is expected to be completed before the end of the calendar year. The loan of £750,000 arranged through the Atomic Energy Board to finance the construction of this plant, together with accrued interest, is repayable by quarterly instalments over a period of ten years commencing January 1, 1957. At the financial year end an amount of £240,052, including accrued interest, had been drawn against this loan.

PNEUMOCONIOSIS (SILICOSIS)

The Pneumoconiosis Act, 1956, came into force as from August 1, 1956. As a result it is estimated that the costs to the Company in respect of pneumoconiosis will rise from last year's figure of 2s. 1.4d. per ton milled to about 2s. 10.2d. per ton milled for the current financial year.

CURRENT YEAR'S RESULTS

As disclosed in the recently published quarterly report the yield, although below the average for the year under review, was slightly higher than that of the previous quarter. The tonnage milled was at the same level as in the previous quarter but, due to the increased yield and certain additional revenue received in respect of sales of gold between February and July, 1956, the total revenue from gold was higher by some £60,000. It is encouraging to note that working costs decreased by 5d. a ton milled and that working profit from gold was higher by about £68,000 than the figure for the previous quarter.

Satisfactory progress continues to be maintained in the sinking of the four sub-incline shafts, and 6 level haulage is being extended steadily towards the western boundary.

The alteration to the formula for gold mining taxation with effect from January 1, 1956, represents a reduction of slightly more than 4½ per cent in the formula tax and is therefore welcome. The amortisation allowance for taxation purposes will, however, decrease in the future when capital expenditure falls below the high level of previous years and this will tend to increase the taxable income.

MODDERFONTEIN EAST, LIMITED

MR N. W. S. LEWIN'S STATEMENT

The Fortieth Annual Meeting of shareholders will be held in Johannesburg on November 19, 1956.

The following is an extract from the circulated statement by the Chairman, Mr N. W. S. Lewin, dated November 12, 1956.

The tonnage mined was much the same as for the previous year, but a larger tonnage of ore was drawn from old development rock dumps on the surface, and the ore milled increased by 87,000 tons to 1,577,000 tons.

There was a decline of 0.118 dwt in the yield to 2.100 dwt per ton. While the working revenue for the year at £2,082,402 was only £4,847 higher than that for the previous financial year, working costs rose by £95,530 with the result that the working profit fell by £90,683 to £87,114, or from 2s. 5d. to 1s. 1d. per ton milled.

The payable ore developed at 260,000 tons was lower by 145,700 tons with the value unchanged at 3.1 dwt per ton. The generally disappointing results obtained in development in the last few years provide little hope of any appreciable tonnages being added to the ore reserves in the future. In consequence, the development programme during the current year is likely to be on a lower scale.

Regarding the future prospects in the light of the present price of gold and the level of costs, it will be clear that only a limited period of profitable mining operations lies ahead of the mine.

EAST ASIATIC RUBBER

FURTHER IMPROVED RESULTS

The Thirty-Third Annual General Meeting of East Asiatic Rubber Estates, Limited, was held on November 9th, in London.

Mr H. T Karsten, the chairman, in the course of his speech, said : The year's trading showed an increased profit, namely, £98,654, against £78,592.

The crop produced, namely 3,356,700 lb., was some 228,000 lb. more than last year. The estimated crop for the current year is 3,220,000 lb., and the production so far has been at a higher rate.

The board consider it prudent to continue to put aside to our replanting reserve £50,000 each year, in view of our formulated programme of replanting approximately 500 to 600 acres per annum from 1956-57 to 1961-62. Our project of extending the Company's activities to the Gold Coast is progressing satisfactorily. In Nigeria we have so far been unable to obtain satisfactory leases, but one of our associated companies is at the moment investigating the possibility of investing in timber-growing propositions in South Africa, and may invite us to join such a venture.

Since the end of our financial year the price of natural rubber has moved at a considerably lower level than during the previous year. During the last week or so the market has naturally been influenced by the intervention in the war between Israel and Egypt, and values at one time advanced very sharply, but until the position is finally settled, prices are likely to fluctuate erratically.

The report was adopted and the dividend of 12½ per cent, less tax, approved.

THE PERAK RIVER HYDRO-ELECTRIC POWER COMPANY

CONTINUED DEMAND FOR POWER

The thirtieth annual general meeting of The Perak River Hydro-Electric Power Company, Limited, was held on November 14th in London, Mr Hugh G. Balfour (the Chairman) presiding. The following is an extract from his circulated statement:

The Company's undertaking in Malaya once again produced a satisfactory result in spite of costs which have risen steadily during the year. The demand for power continued throughout the year during which 436.1 million units were generated as compared with 432.1 million units in the year before, whilst the maximum system peak load rose to 68.9 mW as compared with 67.4 mW previously. Due to a higher river flow, the hydro-electric power station at Chenderoh generated 195.1 million units or an increase of 5.7 per cent on last year.

In consequence of the greater output at Chenderoh, the steam stations at Malim Nawar and Batu Gajah generated 241 million units as compared with 247.5 million units last year. The heavy loading of the Company's system puts a high premium on efficient maintenance, particularly of boilers, and the increased costs shown in the Accounts are in part due to the necessary heavy maintenance programme.

I mentioned last year that an order had been placed for a new 12 mW turbo alternator and ancillary 140,000 lb per hour boiler for Malim Nawar. This set is due to come into operation in 1958. The situation with regard to development by the Central Electricity Board of hydro-electric power in the Cameron Highlands is not yet clear, and in view of the increasing load on the Company's system, your Directors decided to order a further 12 mW generating set which is scheduled for operation in 1959. These two new sets are to a certain extent replacement of existing generating capacity which is nearing obsolescence, and consideration will have to be given in the near future to further additions unless substantial bulk supplies become available from the Central Electricity Board.

Our Subsidiary, The Kinta Electrical Distribution Company, Limited, had another satisfactory year. A full programme of extension and development was carried out.

The gross revenue from sale of current and miscellaneous income at £1,618,470 shows a slight increase. The balance transferred to Net Revenue Account was £877,910, a decrease of £32,290. The sum provided for Depreciation Account has this year been increased to £275,000 and taxation takes £315,000, leaving a balance of profit for the year of £287,910, which after addition of the balance of £130,555 for the last account, brings the total sum available up to £418,465. We have transferred £125,631 to General Reserve which now totals £633,000.

The Directors recommend payment of a final dividend of 6 per cent on the Ordinary Shares, making 10 per cent for the year.

In the current year we should be able to look for a continuation of demand equivalent to that of the year under review. Returns for the first three months are satisfactory, and in the absence of any unforeseen circumstances and providing costs remain at their present level, our next Accounts should be no less favourable than those presented for the year ended July 31, 1956.

The report and accounts were adopted.

PETER BROTHERHOOD LIMITED

PROFIT NOT UNSATISFACTORY

The forty-ninth ordinary general meeting of Peter Brotherhood Limited was held on November 13th in London, Mr A. Marcus Neal, JP, ACGI, AMICE (the chairman), presiding.

The chairman, in the course of his speech, said: As a result of a continuance of our policy of modernisation, the value of the fixed assets has increased during the year by £114,157. This figure is, of course, arrived at after deductions for depreciation and is largely due to the new pattern shop, machine tools and further additions to general plant.

Our expenditure upon capital equipment during the last three years has been in the region of half a million pounds and we now feel we have the Works in a state of efficiency and preparedness which will enable us to deal satisfactorily with any work which may reasonably be entrusted to us.

CAPITAL COMMITMENTS

The Capital Commitments at March 31, 1956, stood at the reduced figure of £22,000, an indication that, in the opinion of your Board, expenditure upon Fixed Assets in the near future will not need to be upon the same scale as during the past few years. There is no project involving large expenditure envisaged in the near future, but we shall, of course, continue to add to our fixed assets as may be necessary from time to time.

The value of our sales for the year varies but little from last year's figure—actually it is 2½ per cent less—resulting in a trading profit, before taxation, of £299,908, against £367,864 last year.

This reduction in trading profit results to a great extent from the circumstances mentioned in my statement two years ago when I referred to the large proportion of Government work on the books on which profit is somewhat narrow, and to the keener competition which could be expected generally; it was again pointed out last year that a continuance of the somewhat less favourable conditions might be expected. Under all the circumstances, therefore, it is considered that a trading profit of £299,908, before taxation, is not unsatisfactory.

Of this trading profit of £299,908 provision for taxation absorbs no less than £157,000, leaving us with a net profit for the year of £142,908 available for distribution and allocation. The question of a dividend has been considered by your Board, who have decided, in view of the sum available, to recommend the payment of a final dividend of 15 per cent, less tax, a total for the year of 20 per cent, less tax, on the Ordinary Capital.

THE OUTLOOK

As to the immediate future, in the absence of troubles, industrial or international, from the latest figures available I do not expect the profits for the current year, that is to March 31, 1957, to be any less satisfactory than those with which we are dealing today. Taking a longer view, although there has recently been some diminution in the rate at which orders have been received, our order book remains at a high level, and in view of this and of the special nature of many of our products I feel sure we may, in the absence of circumstances unforeseen, look forward to a continuing period of prosperity.

The report and accounts were adopted.

EASTWOODS LIMITED

A DECADE OF CONTINUOUS PROGRESS

The thirty-sixth annual general meeting of Eastwoods Limited was held on November 15th, in London.

Mr G. W. A. Miller, FCIS (chairman and managing director), in the course of his speech, said:

During the twelve months ended March 31, 1956, Eastwoods manufactured and delivered a greater tonnage and value of building materials than ever before and for the first time in its long history the Trading Profits of the Group exceeded one million pounds.

We have again transferred £100,000 to General Reserve, making a total of £650,000 at March, 1956, and after maintaining the dividend on the increased Ordinary Stock at 17½ per cent the carry forward at £281,000 shows an increase of £20,000.

In only a decade, the Trading Revenue has been enlarged almost tenfold, a record of vigorous growth of which our old Company can be justifiably proud.

CURRENT TRADING AND FUTURE PROSPECTS

During the seven months since March, 1956, all works of the Eastwoods Group have been fully employed and up to the end of October we have again manufactured and sold a greater quantity and value of building materials than in any comparable period ever before. It is, however, now clear that the Government's disinflationary measures are beginning to exercise an increasingly restrictive effect on the tempo of building and we may expect some reduction in demand from December, 1956, onwards, with more intensive competition among manufacturers and suppliers of building materials.

But, taking a longer view, there is a great backlog of building work still to be undertaken, so that we have every reason to look forward to a busy and constructive future.

The root cause of our present difficulties and the main reason for anxiety about the future is the continuing rise in wages, since wage advances without increased production inevitably mean further price increases. Unpalatable measures have been imposed by the Government in an endeavour to stop the rot and most people will have been shocked at recent irresponsible utterances by Trade Union leaders when rejecting the Chancellor's appeal for restraint. It is now all too easy to be priced out of any market and this leads straight on to reduced production and unemployment with all its baneful consequences. It is sincerely to be hoped that more realistic considerations will weigh with the Trades Union leaders when off the public platform, and that the true interests of the workpeople will be given paramount consideration.

Last year I reported that the problem of future brickearth reserves for the Stock Brick Industry was still under discussion with the Ministry of Housing. Astonishing though it may seem, the Industry had actually been informed by the Planning Ministry that a term of 40 years' life had been put on the manufacture of Stock Bricks, and after that period no further brickearth excavations would be permitted. This was quite an arbitrary decision which we were totally unable to accept, and after a lot of hard work we have earned some sort of reprieve.

The report and accounts were unanimously adopted.

BRITISH ASSETS TRUST LIMITED

TOTAL INCOME EXCEEDS £1M

MR ALASTAIR C. BLAIR ON INVESTMENT TRUSTS AND THE SMALL INVESTOR

The Fifty-ninth Annual General Meeting of British Assets Trust Limited will be held on Thursday, December 6, 1956, at the Registered Office of the Company, 9 Charlotte Square, Edinburgh.

The following is the Review by the Chairman, Mr Alastair C. Blair, CVO, WS, which has been circulated with the Report and Accounts for the year ended September 30, 1956.

The year under review has seen a milestone passed in the growth of your Company, as for the first time the total income has exceeded £1 million and also the valuation of the investments at a Balance Sheet date has passed £20 million. As your Company has now entered its sixtieth year it is interesting to look back at the growth which has been achieved during that period. For this reason, we have this year produced an Annual Report in a new form which we hope stockholders will find both interesting and informative. Tables have been produced showing how the Company's funds are invested and how the equity has grown over the years.

BOARD'S INVESTMENT POLICY

The past twelve months have seen an intensification of the credit squeeze in the UK and a reaction from the easy optimism of 1955. In spite of this, however, both our income and the value of our investments have continued to rise. You will notice from the Accounts that the average return which we earn on our investments is only 5 per cent. In these days of high interest rates this return is low, and I should like to explain the reason for this. The two principles which have guided your Board in their investment policy have been security and growth; in order to achieve these they have been prepared to forgo a high immediate yield. During the last few years when conditions have been favourable and Stock markets have been strong we have tried to eliminate from our portfolio the weaker companies which might suffer when times become harder. In doing so we have reduced the number of our holdings in Ordinary and Common Stocks (which comprise 86.7 per cent of our total funds) to about 200 companies which have been selected for their strength and promise of future growth. We believe that this policy which has restricted the earnings currently available for our stockholders will be to their advantage in the years ahead, and therefore we have felt justified in recommending this year a fairly full distribution of income.

ASSOCIATED COMPANIES

In the Report you will find a table showing the distribution of our Investments. This speaks for itself but I might say a word in explanation of the heading Associated Companies. One of these is Second British Assets Trust Limited in which we still retain a holding although as you will remember most of the shares we formerly held in this Company were sold to our own stockholders in 1947. Also included is a holding in Atlantic Assets Trust Limited which has the same management as this Company and has a portfolio valued at about £1,700,000. A considerable part of that Company's funds are invested in new and developing Companies. And finally there is Rhodesian Assets Investment Company Limited, a Rhodesian Company whose funds are invested entirely in Central Africa.

SAVINGS AND INVESTMENT

The troubles which have beset this country in the economic field since the war can be traced largely to the failure of savings to keep pace with investment. The great progress which has been made in the United States in the last ten years flows directly from the high level of savings in that country which have been invested in new factories and plant for industry. It is important that we in this country should equal the American rate of saving if we wish to match their rate of progress and the Investment Trust movement forms an important part of the mechanism by which small savings can be invested in productive industry.

ADVANTAGES FOR THE SMALL INVESTOR

The Investment Trust movement has not always been popular with the financial press, and had some difficult days during the early 1930s. It is for this reason that we have published at the end of the Report some information showing how a stockholder has fared who invested £100 in our stock at different dates over the last fifty years. From this table you will see that all have done well and some amazingly well, and that even those stockholders who bought their stock at the peak price in 1930 (the highest price reached by our stock between the wars) have still made a substantial profit. The real advantage of the Investment Trust for the small investor, however, lies in its spread of investment and its skilled management. It is hard today for the small investor to take a stake in investments in the United States and Canada, and if he does so he will be faced with various taxation problems. By buying the Ordinary Stock of an Investment Trust he can, however, obtain an indirect interest in these countries, and, what is more important, with one investment he can achieve all the advantages of a well-balanced list. It is not necessary for him to read a lot of Company Reports and study changing economic trends because this job is done for him by the management of his Company. An Investment Trust stock should provide for the small shareholder a trouble-free investment from which he should obtain a steady and in good times a rising income.

A table in the Report shows the income and dividend record of this Company over the past twelve years; it is one of which the Board is proud and with which I hope that stockholders are satisfied.

COCHRAN & COMPANY, ANNAN, LIMITED

SATISFACTORY RESULT

MR ROBERT ADEANE'S CONFIDENCE IN THE FUTURE

The Fifty-Fourth Annual General Meeting of Cochran and Company, Annan, Limited (engineers and boilermakers) was held on November 14th, at 117 Old Broad Street, London, E.C.

Mr Robert Adeane, the chairman, who presided, said:

Gentlemen, the Company, for the year under review, made a trading profit of £267,000, against £284,000 last year. After the additions and deductions, which you will find set out on the left-hand side of the consolidated profit and loss account, a net profit of £99,000, against £130,000 last year has been made, a reduction of some £31,000. This reduction is in part the direct result of increased costs under almost every heading, combined with finer profit margins about which I made reference and gave warning in my speech last year. It is also in part due to an increase of £6,000 in depreciation, which charge will be relatively constant for some years due to the improvements and extensions recently made to our factory and plant. A further reason is the increase of some £7,500 in special expenditure incurred in resiting a 1,500 ton press and in unusually heavy house repairs; these two items will be non-recurring.

So much for the explanation of why our net profit is down. It is still a very satisfactory result and a set-back in profits, such as we have experienced, is common and will, I fear, become even more common among engineering businesses in this country. Of the £99,000 net profit it is satisfactory to note that our subsidiary company, Ruths Accumulators, Limited, contributed £6,800 against £4,200 last year

APPROPRIATION OF PROFIT

You will see in the consolidated profit and loss account the reserve allocations are set out separately under Holding Company and Subsidiary Company. Taking the figures together, £47,000 brought forward from last year falls to be added to the net profit of £99,000, making a total of £146,000. This is the sum which we have to deal with. £64,000 has been transferred to general reserve; £35,000 has been allocated to the payment of dividends on the Preference and Ordinary stocks, including the final dividend of 5½ per cent, free of tax, which we are now recommending, making a total of 8½ per cent, free of tax, for the year. After these payments, £31,600 remains to be carried forward.

So much for the past year. Now I come to the current year. We have a full order book, and orders are coming in at a satisfactory rate.

While costs may rise still more, we shall benefit from the new machines—many of them labour saving—which we have installed in the works during recent years, and I think we can look forward to the future with confidence, not only this year, but for many years to come.

I cannot sit down without paying a tribute to Mr Dougan, our secretary for 40 years. He contributed an incalculable amount to the growth, success and good relationships which have long persisted in our works at Newbie. He was loved and respected by all who knew him and, on behalf of the stockholders, I express to him thanks and wishes for happiness in his retirement.

The chairman then moved the motion for the adoption of the report and accounts and the payment of a final Ordinary dividend of 5½ per cent, making 8½ per cent, free of tax, for the year.

Mr R. R. Stokes, managing director, seconded the resolution, and it was carried unanimously.

THE SUNDERLAND SHIPBUILDING DRY DOCKS AND NGINEERING COMPANY

HIGHER VOLUME OF BUSINESS

SIR HENRY WILSON SMITH ON DEVELOPMENT POLICY

The second annual general meeting of The nderland Shipbuilding Dry Docks and ngineering Company Limited was held on ovember 8th, at Sunderland, Sir Henry ilson Smith, KCB, KBE (the chairman), esiding.

The following is his circulated statement: he Accounts now submitted to the shareolders deal with the second year of our istence as a Group. As one would expect om the general level of national activity the shipbuilding, shiprepairing and engieering industries in 1955-56, the figures ow further improvement in our results.

In varying degrees, those three sides of e Group's business all contributed to the crease in the total profits. Each of the ain Companies once more has had a busy ar, and it is a higher volume of business ather than any increase in the rate of profit r unit of work completed) which has proced the improvement in profits. In the ssessment of these generally satisfactory reults, the problems presented by the rising nd of costs must not be overlooked. oreover, in the year under review, the roup did in fact benefit from a number of nusually favourable circumstances, especilly as regards the number of ships delivered y the Shipbuilding Companies.

NEED TO IMPROVE EQUIPMENT

As regards the future, I am not in a osition to forecast any particular level of rofits but, always provided that progress is ot disrupted by any national or international vent outside our own control, immediate rading prospects continue to look favourble. On that assumption, I make no apology or reiterating that the main problem conronting us is the need to improve still further he equipment of the Group's shipyards, dry docks, and engineering works to ensure the owest possible cost of production and to nable us to keep pace with modern requirements and modern methods. Many examples could be quoted, but to take only one, the shipyards must be able to build the larger size f ships (especially tankers) now in demand, sing the latest methods of construction and f assembly. Before the amalgamation of he various Companies into one Group, and since that date, many improvements have been made, and work is proceeding on further substantial schemes, but much still remains to be done.

Your Board are determined to pursue this policy. In consequence, there must be a considerable ploughing back of profits into the business and a constant watch to ensure that the financial resources required for necessary and justifiable capital expenditure are available for that purpose. My colleagues and I have no doubt about the wisdom of this course, which is in the interests of management, workpeople, and shareholders alike.

The report was adopted.

HAROLD WESLEY LIMITED

(Manufacturers of Paper Products)

TRADING PROFIT MAINTAINED

The tenth annual general meeting of Harold Wesley, Limited, was held on November 15th in London, Mr Percy Day-Winter (chairman and managing director) presiding.

The following is an extract from his circulated statement for the year ended June 30, 1956:

Sales have shown an increase over last year, due in some measure to the Plastic Section of the business, which now appears to be well established.

Sales abroad, including Dollar areas, were substantially the same in value as for the preceding year, in spite of increased restrictions operating in many countries overseas and the fact that some have commenced to manufacture within their borders similar products to those of your Company.

Although the Trading Profit of the Company was slightly lower than last year, the Net Profit shows a small increase, while Taxation increased by approximately £4,000. During the year, wages, carriage and other expenses increased and your Directors feel, under the circumstances, that the Accounts show a satisfactory year of trading.

The Bank Overdraft at June 30, 1956, was £112,408 which, at the time of dictating this Statement, has been reduced to approximately £39,000 in consequence of deliveries of Seasonal goods, a large portion of which are manufactured during the months of January to June with deliveries commencing in August-September.

During the year new Machinery and Plant, etc., has been purchased to the extent of nearly £16,000 and your Company is pursuing a policy of buying and developing the best machinery for the particular job.

The report was adopted and the final dividend of 8 per cent, making 14 per cent for the year, was approved.

VITAMINS LIMITED

THE LOW COST OF DRUGS IN THE TOTAL HEALTH SERVICE EXPENDITURE

At the Annual General Meeting of Vitamins Limited, held in London in September, the Chairman, Mr H. C. H. Graves, said that the net Group Trading Profit (which included the agricultural division) for 1955/6, was £106,169 (£92,928), after providing for depreciation of £69,957 (£54,258) and tax of £82,659 (£81,869). Ordinary dividend at 15 per cent was the same as last year on the capital increased by a one-for-four "rights" issue. This absorbed £33,638 against £26,846 last year.

The Chairman drew attention to the misleading impression in existence concerning the cost of drugs to the National Health Service.

The shareholders, he said—and 99.99 per cent of the electorate of this country—had been led to believe by those who, in his opinion, should know better, that if the National Health Service foundered on the financial rocks, it would be due to the "high cost of drugs." Such a statement or impression was the reverse of the truth. Of the total cost of the National Health Service the cost of the medicines which it used accounted for 5 per cent—the other 95 per cent was made up of other costs including administration. The 1955/6 estimates alone showed an *increase* of £41 million in the "other" costs, a sum greater than the whole of the drug bill for the year. The concentration of public attention on the 5 per cent, however, had undoubtedly served as a most effective diversionary effort or smoke-screen to obscure criticism of the other 95 per cent of the expenditure.

During the past financial year sales of Bemax had set a new record in excess of anything achieved in the postwar era. It was no doubt a tribute to the marked effect on health of regular Bemax that the product was so well known throughout the length and breadth of the land and indeed in most parts of the civilised world. We heard many complaints these days of a feeling of frustration, or of undue fatigue or of being under par. We heard of listless children, of infants who did not grow as quickly as they should. The National Health Service treated them and us when we were ill but what about when we were not ill but below par? It is that twilight stage, that stage of betwixt and between, which most dramatically benefited from the steady use of Bemax. How different many of the frustrated and listless would be on Bemax.

The report and accounts were adopted.

APPOINTMENTS

ACCOUNTANT REQUIRED by old-established Company in East Africa, age approximately 23-30, single. Person studying for finals would suit. The appointment is attractive, permanent and pensionable. Good conditions, leave, salary, housing allowance, etc. Interview Penny Company in London.—Write full details to Box "N.V." c/o J. W. Vickers & Co. Ltd., 7-8 Great Winchester Street, London, E.C.2.

STATISTICIAN: Reckitt & Colman Ltd. have a vacancy in their Statistical Department. The staff of this department work as a team and their services are very widely sought within the business on both technical and commercial problems, e.g. production control, the design of laboratory experiments, the design of market research enquiries, etc. Besides the opportunity to use the knowledge of statistical methods in an extremely varied range of situation, great emphasis is laid on the development of new techniques.

Those who wish to apply for this appointment should possess a good degree in mathematics or statistics and experience in the use of statistical methods would be a great advantage and would command a higher starting salary. The department is housed in new laboratory buildings at the headquarters in Hull. All appointments are pensionable.—Applications should be made in writing to the Personnel Adviser, Reckitt & Colman Ltd., Dansom Lane, Hull.

THE UNIVERSITY OF LIVERPOOL

The Council of the University of Liverpool invites applications for the newly established Chair of Political Theory and Institutions. The salary will be within the approved range for professorial salaries.

Further particulars may be obtained from the undersigned, by whom twelve copies of applications (one in the case of overseas candidates) should be received not later than January 5, 1957.

STANLEY DUMBELL,
Registrar.

November, 1956.

UNIVERSITY COLLEGE OF RHODESIA AND NYASALAND

Applications are invited for Lectureship in Social Anthropology. Salary scales: Assistant Lecturer, £950 x £50—£1,050 per annum; Lecturer (Grade II) £1,050 x £50—£1,250 per annum; Lecturer (Grade I) £1,300 x £50—£1,600 per annum. Superannuation scheme. Passages to Salisbury for appointee, wife and dependent children on appointment with allowance for transport of effects. Unfurnished accommodation at rent of up to 15 per cent of salary.

Detailed applications (6 copies) naming three referees, by December 31, 1956, to Secretary, Inter-University Council for Higher Education Overseas, 29, Woburn Square, London, W.C.1, from whom further particulars may be obtained.

DEPUTY CHIEF DRAUGHTSMAN required for new post being created to deal with re-organisation in the A.P.V. Drawing Office. The person selected for this important position should be within the age group 30-45 and must be a trained engineer with proved ability to handle staff, capable of exercising authority and accepting responsibility with adequate drive and initiative. The prospects are good and a contributory pension scheme operates. New Town Housing available. Applications will be treated in confidence and all acknowledged, but will not be considered unless accompanied by fullest details.—In the first instance application should be made to the Personal Assistant to the Managing Director, A.P.V. Co. Ltd., Crawley, Sussex.

MAJOR Petroleum Distribution Company requires B.Sc. (Econ) preferably a specialist in Accounting or Statistics for Management Accounting Group, to assist in the analysis, interpretation and presentation of the group's financial statistics to Management. Candidates should be between 20-30 years of age. Starting salary commensurate with age, qualifications, and experience. Excellent pension scheme; plenty of scope for promotion throughout the Company for keen men of ability and intelligence.—Apply, in writing, to Box 561. Replies can only be sent to those selected for interview.

OTHER NOTICES APPEAR ON PAGES 650 AND 651

APPOINTMENTS

UNIVERSITY OF BELFAST

The Senate of The Queen's University of Belfast invites applications for the Chair of Economics (to be rendered vacant by the appointment of Professor K. S. Isles to the Vice-Chancellorship of the University of Tasmania). The appointment will date from October 1, 1957. The salary will be not less than £2,000, plus F.S.S.U. benefits. Applications should be received by January 31, 1957. Further particulars may be obtained from G. R. Cowie, M.A., LL.B., Secretary.

ACCOUNTANT FOR NIGERIA

The Western Region Production Development Board of Nigeria has a vacancy for a Cost Accountant.

It is essential that the candidates should have a sound knowledge of plantation accounting, especially cost accounting, as the selected candidate will in the first instance be required to design and install cost accounts at the Board's several plantations. These range in size from about 500 acres to 12,000 acres. Two of 4,000 and 8,000 acres are rubber plantations, while the largest plantation of 12,000 has mixed crops, mainly oil palms, cocoa and citrus. Each plantation will have its own processing factory, so that the applicant should also have a knowledge of processing accounts. The applicant will also be required to supervise the accounting at two existing Processing Factories independent of plantations.

The commencing salary will be in the range £1,100—£1,470, excluding Inducement Allowance, which will be £270 or £300 per annum, according to point of entry, which depends upon qualifications and experience.

Other terms of service include partly furnished accommodation at one-twelfth of the basic salary; free medical service; outfit allowance; free first-class passages for wife and for children not over the age of thirteen once each tour and up to three in number; car purchase facilities on favourable terms and generous car allowances. Home leave at full pay at the rate of five days per month of overseas service. Employees are required to contribute up to 10 per cent of their salary to a Provident Fund, their contributions being matched with an equivalent contribution by the Board and carrying interest at the rate of three per cent.

The normal length of tour is eighteen to twenty-four months.

Applications, in duplicate, together with details of age, experience and qualifications, and the names of three personal referees, should be sent to:—

The London Representative,
W.R.P.D. Board,
18 Grosvenor Gardens,
London, S.W.1.

Closing date: November 30, 1956.

THE NATIONAL EMPLOYERS' ASSOCIATION OF RAYON YARN PRODUCERS

invite applications for the post of Industrial Relations Adviser. The work entails certain responsibilities for collective bargaining arrangements; determination by industrial agreements of rates of pay and conditions of employment; preparation of statistics relating to employees and their earnings; provision of information services on trends and practices in the industrial relations and personnel management fields. The office of the Association is in Manchester.

Candidates should be between the ages of 35 and 48 and should already have held a senior post in industry or in an Employers' Federation. Commencing salary in the range £2,000 to £2,500 per annum, with contributory pension.

Applications should be addressed to the Chairman of the Association, Duchy Chambers, 4 Clarence Street, Manchester 2.

SENIOR SCIENTIFIC OFFICERS; SCIENTIFIC OFFICERS. The Civil Service Commissioners invite applications for pensionable appointments covering a wide range of scientific research and development in most of the major fields of fundamental and applied science. In biological subjects the number of vacancies is small; individual vacancies exist in the Natural History Museum for candidates who have special knowledge of, or who are interested in, malacology, helminthology, acarology, mammalian taxonomy, taxonomic botany (monocotyledons), X-ray crystallography.

Candidates must have obtained a university degree with first- or second-class honours in an appropriate scientific subject (including engineering) or in Mathematics, or an equivalent qualification; or possess high professional attainments. Candidates for Senior Scientific Officer posts must in addition have had at least three years' post-graduate or other approved experience.

Age Limits: Senior Scientific Officers, between 26 and 31, but specially suitable candidates under 26 may be admitted; for Scientific Officers between 21 and 28 during 1956 (up to 31 for permanent members of the Experimental Officer class). Salary (London) Senior Scientific Officers: (men) £1,135-£1,345; (women) £1,026-£1,240. Scientific Officers: (men) £605-£1,055; (women) £605-£962. Women's scales being improved under equal pay scheme. Somewhat lower rates in the provinces.

Further particulars from Civil Service Commission, Scientific Branch, 30 Old Burlington Street, London, W.1, quoting No. S.53/56 for Senior Scientific Officers and S.52/56 for Scientific Officers.

Interview Board sits at intervals, as required.

Early application advised and in any case not later than December 31, 1956.

A VERY interesting vacancy will shortly occur for an able woman at the Head Office (in Manchester) of an internationally established light engineering Company. The job has two distinct aspects:

(a) Personal discharge of the duties associated with the job of Personal Assistant to the Managing Director.

(b) Control of a small secretarial pool engaged in work of a confidential nature.

Applicants should have a lively interest in current affairs and a discriminating well trained mind able to select what is and is not relevant to the operation of a Company of this nature. It is thought that these qualities will be found among University Graduates from whom the Company will be particularly pleased to hear.

On the secretarial side a high degree of personal accomplishment is not essential but an appreciation of the skills involved is necessary so that the work of the pool can be maintained at a very high standard.

Conditions of work are excellent.

Please write fully, stating education, experience (quoting salaries) and interests to Box 564.

THE SCOTCH WHISKY ASSOCIATION will shortly require a successor to their Public Relations Officer, and invite applications for the post. He should be a practised writer and speaker, with a wide knowledge and experience of public relations in the full and proper sense of the term, and he would be required to live in London.

The salary contemplated would be determined by the qualifications and merits of the successful applicant. —Applicants should write fully to The Secretary, The Scotch Whisky Association, 77 George Street, Edinburgh, 2.

OTHER NOTICES APPEAR ON PAGE 649

THE POLYTECHNIC, 309, REGENT STREET, W.1

DEPARTMENT OF MANAGEMENT STUDIES

Applications are invited for a full-time post as LECTURER in MANAGEMENT STUDIES, with special reference to Work Study and Factory Management or Organisation and Method.

The salary scale commences at £1,200 per annum, rising by annual increments of £30 to a maximum of £1,350, plus London allowance of £36 or £48 per annum.

Candidates should have academic qualifications, preferably in Engineering, and industrial experience. Some previous teaching experience is desirable.

Duties will include teaching the appropriate subjects to high level and establishing contact with firms in the London area. Research and consultative work will be encouraged.

A form of application may be obtained by sending a stamped addressed foolscap envelope to the undersigned. Closing date November 21, 1956.

J. C. JONES,
Director of Education.

ADVERTISING OFFICER

FOR LONDON OFFICE OF COMMONWEALTH FOOD ORGANISATION

with Nationally advertised product.

Applications are invited from qualified men between the ages of 28 and 35 years, who have U.K. experience, for the above position. Duties would cover co-operation with Advertising and Public Relations Agents on ideas, production and administrative matters.

Applicants must be capable of supervising and organising distribution of advertising material.

Salary according to experience and contributory superannuation scheme is available.

Applications (which will be treated in strict confidence), stating age, experience, qualifications, salary required, should be addressed to Box 560.

BRITISH IRON & STEEL FEDERATION

MANAGEMENT TRAINING

The British Iron & Steel Federation invites applications for one further appointment to the administrative staff engaged in preparing and conducting residential courses for managers in the Iron and Steel Industry. The work would involve the preparation of material for study, in consultation with persons in the industry, and participation in the conduct and organisation of the courses.

It is intended that the administrative staff shall collectively be representative of the main specialised branches of the industry. In completing the existing team, therefore, experience of hot rolling or the hot finishing processes in the industry would be of particular value.

The initial salary paid will depend upon the extent to which the successful candidate's experience and capabilities can contribute to the work involved. It is envisaged that it will not be less than £1,400 and in appropriate cases may appreciably exceed this figure.

Application forms may be obtained from the British Iron & Steel Federation, Hoyle Street, Sheffield, 3. Testimonials and references are not required at this stage.

METEOROLOGICAL OFFICE. SCIENTIFIC OFFICERS. The Civil Service Commissioners invite applications for permanent posts. Early application is advised. The duties include research in atmospheric physics, covering the study of cloud structure, synoptic and dynamical meteorology, large and small scale diffusion and turbulence, climatology, and development of instruments. There is a limited number of posts for forecasting work at the more important centres. Successful candidates will be given a course in meteorology before being assigned to a research or forecasting establishment for further training and experience. In some instances candidates with national service obligations can be commissioned in the R.A.F. for forecasting duties at R.A.F. stations.—Further information may be obtained from the Director, Meteorological Office, (M.O.10), Air Ministry, Kingsway, London, W.C.2.

Candidates must be between 21 and 28 during 1956 (up to 31 for permanent members of the Experimental Officer class). They must have a First- or Second-Class Honours degree preferably in physics or mathematics. Salaries (London rates) £605-£1,055. Women's scales lower but being improved under equal pay scheme. Somewhat lower rates in provinces. Opportunities for promotion to Senior Scientific Officer (£1,135-£1,345), and higher posts.

Particulars from Civil Service Commission, Scientific Branch, 30 Old Burlington Street, London, W.1, quoting No. S52/56. (Mfet.)

Early application advised and in any case not later than December 31, 1956.

AUSTRALIAN NATIONAL UNIVERSITY

RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for appointment to the position of RESEARCH FELLOW in the field of ECONOMIC AND BUSINESS HISTORY. Work is being carried out on Australian economic development since 1860, on studies of industries and market institutions and on biographies of business firms and entrepreneurs. Other things being equal, preference will be given to applicants whose qualifications lie in these directions. Qualifications may, however, be either in history or in economics. Appointment will be made within the Department of Economics for three years with a possible extension to five years.

The salary will be within the range £A1,224-£A1,824 per annum.

Superannuation on the F.S.S.U. pattern will be provided and reasonable travel expenses will be paid.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in Australia and London, is December 17, 1956.

STATISTICAL OFFICERS are to be appointed immediately by a progressive Midlands Company which is continuously expanding. Two new positions are to be filled and applications are invited from young candidates with a recognised qualification (e.g. Final A.I.S.) or with experience in industrial and commercial statistics.

The posts involve the application of up-to-date techniques to practical data under the direction of the Chief Statistical Officer, and are open to men and women under 28 years of age. Good commencing salaries will be paid, and assistance will be given in securing suitable accommodation. The Company also operates a generous and comprehensive Social Security Scheme.

Applications, giving details of career to date, should be addressed to Box 562. All replies will be acknowledged.

THERE is a vacancy in the Atomic Energy Department of The General Electric Company for a man aged 30 to 40 with combined legal and commercial training, preferably with an LL.B. and/or B.Com. Degree. The appointment is a senior one and applications are invited from men with a sound knowledge of commercial law and wide experience in dealing with all legal problems connected with large commercial transactions.—Applications should be made to the Personnel Manager (A.E.D.), The General Electric Company Limited, Fraser & Chalmers Engineering Works, Erith, Kent.

UNIVERSITY COLLEGE OF THE WEST INDIES

Applications are invited for (1) Lectureship Assistant Lectureship in Economics. Salary scale £900 x £50—£1,200 x £50—£1,600 p.a. (2) £750 x £50 p.a., entry point determined by qualification experience. Child allowances. F.S.S.U. Unfurnished modation at rent of 5 per cent basic salary. P up to 5 persons on appointment, normal terminatio study leave (once every 3 years)

Detailed applications (6 copies) mentioning interests in Economics and naming 3 referees by D ber 17, 1956, to Secretary, Inter-University Coun Higher Education Overseas, 29 Woburn Square, L W.C.1, from whom further particulars may be ob

STATISTICIANS, DEPARTMENT OF STATISTICS, FEDERATION OF NIGERIA

REFLECTIONS ON PRICE

The cost of mechanical polishing of tableware is a considerable proportion of the cost of the finished product. Savings can be made—and prices kept competitive—if chemical or electrolytic polishing (in solutions based on phosphoric acid) is adopted instead. The process can be used by industry on stainless steel, aluminium, nickel silver and other copper alloys, not only to replace or improve upon mechanical polishing but also to provide a smooth surface for electro-plating. they saw this man— increased exports 200 times•

with acknowledgement to JOHN BARTHOLOMEW & SON LIMITED

Five years ago a firm making building components had an annual export turnover of under £2,000. But they had a plan for increasing this—and their plan included E.C.G.D. They saw the E.C.G.D. Man—took out a policy—and in their first year of insurance their turnover went up to £14,500. Figures for the next three years were: £92,000, £250,000 and £275,000. And then last year, £468,000—a two hundredfold increase over their original turnover! Give them all the praise that's going for this remarkable expansion. But E.C.G.D. had a hand in it too, providing for premiums of just over 15/- per cent the security the firm needed to build up this credit business—much of it on terms exceeding 6 months. If you're an exporter, the E.C.G.D. man will be calling on you. It will pay you to see him—and listen to what he's got to say.

• This is a true story, but because business between E.C.G.D. and exporters is strictly confidential any details which could identify the exporter have been left out.

E·C·G·D

E.C.G.D. is a Government Department set up to help exporters. Its services are fully explained in the booklet—'Payment Secured'. Write for a free copy.

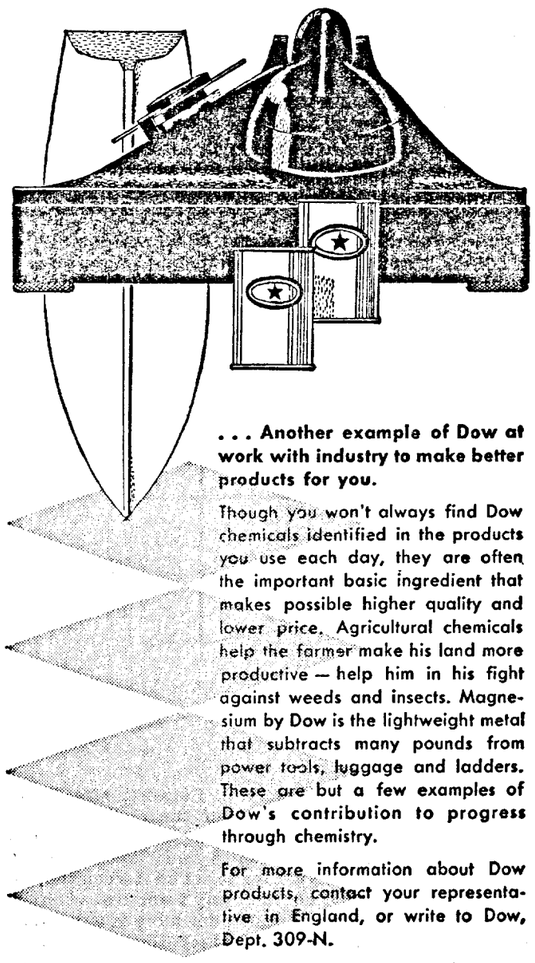
phenol

Telephones of phenolic resin are more functional and durable, plywood adhesives for boats more dependable, quality of motor oils improved at low cost—all through one common ingredient, Dow phenol.



. . . Another example of Dow at work with industry to make better products for you.

Though you won't always find Dow chemicals identified in the products you use each day, they are often the important basic ingredient that makes possible higher quality and lower price. Agricultural chemicals help the farmer make his land more productive — help him in his fight against weeds and insects. Magnesium by Dow is the lightweight metal that subtracts many pounds from power tools, luggage and ladders. These are but a few examples of Dow's contribution to progress through chemistry.

For more information about Dow products, contact your representative in England, or write to Dow, Dept. 309-N.

The Chairman speaks . . . on

SHIPOWNERS AND TAXATION

'What the shipping industry has been saying for years is now passing from the theoretical to the practically demonstrable stage, viz., that earnings, less taxes, cannot keep pace with the increased cost of replacing the older units of the fleet . . . One obvious "counter-measure" would be for British shipowners to take advantage of the protection afforded by suitable Colonial flags to build up their fleets by means which are denied to them through excessive taxation in the Mother Country.' *Sir Ernest Murrant, Chairman of Furness, Withy & Co., Ltd., in his annual statement published in The Birmingham Post, Sept. 4th, 1956.*

'Companies with their ships registered under flags of "advantage" or "convenience" continue to thrive in happy and almost total avoidance of taxation, and will be in a very strong competitive position in the future. If Cunard had been able to work under a company registered under a flag of "advantage" instead of in Britain, their profits over the six years 1949 to 1954 would have been increased by over £14m. saved in taxation.' *Col. D. H. Bates, Chairman of Cunard Steam-Ship Co., Ltd., in his annual statement published in The Birmingham Post, April 23rd, 1956.*

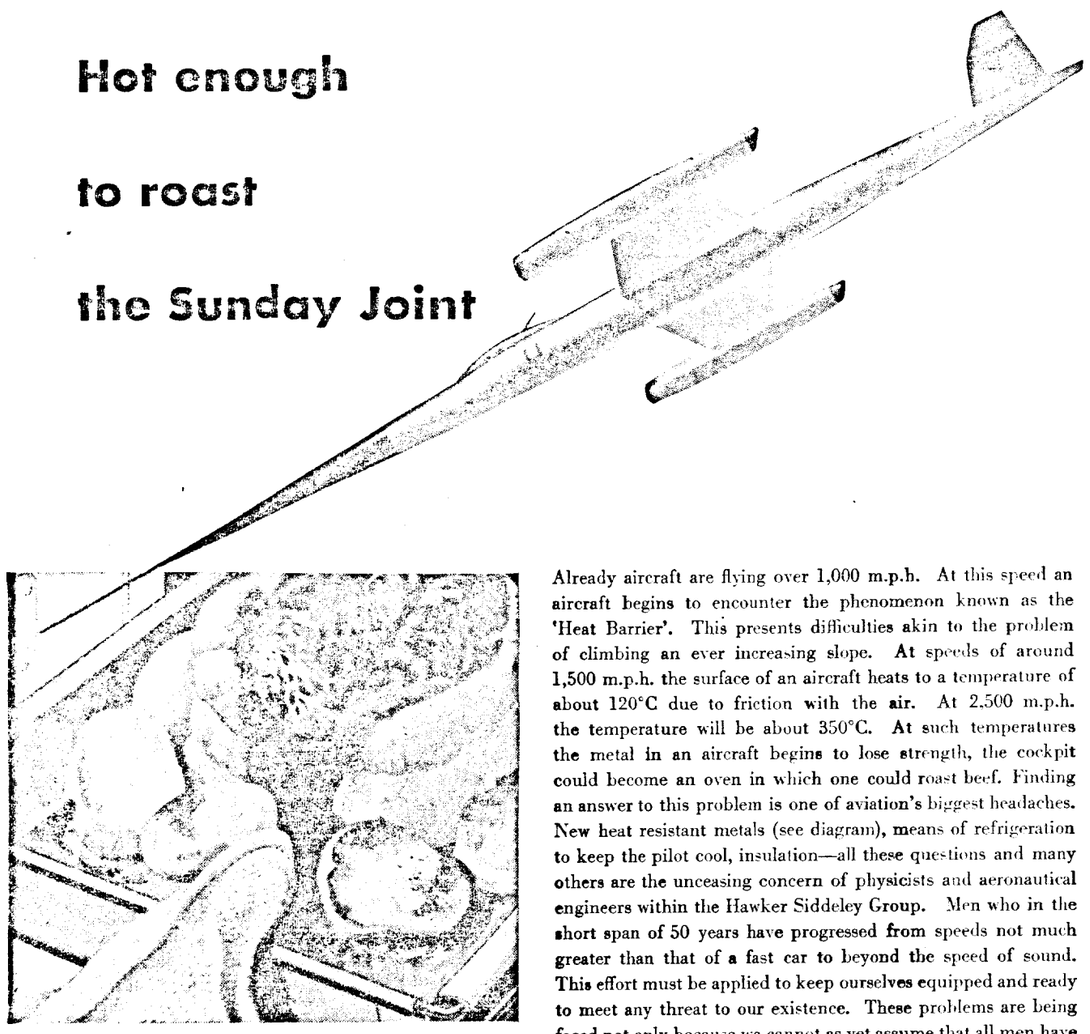
PROBING THE FUTURE OF AVIATION / No. 3 in a series

Hot enough to roast the Sunday Joint



Already aircraft are flying over 1,000 m.p.h. At this speed an aircraft begins to encounter the phenomenon known as the 'Heat Barrier'. This presents difficulties akin to the problem of climbing an ever increasing slope. At speeds of around 1,500 m.p.h. the surface of an aircraft heats to a temperature of about 120°C due to friction with the air. At 2,500 m.p.h. the temperature will be about 350°C. At such temperatures the metal in an aircraft begins to lose strength, the cockpit could become an oven in which one could roast beef. Finding an answer to this problem is one of aviation's biggest headaches. New heat resistant metals (see diagram), means of refrigeration to keep the pilot cool, insulation—all these questions and many others are the unceasing concern of physicists and aeronautical engineers within the Hawker Siddeley Group. Men who in the short span of 50 years have progressed from speeds not much greater than that of a fast car to beyond the speed of sound. This effort must be applied to keep ourselves equipped and ready to meet any threat to our existence. These problems are being faced not only because we cannot as yet assume that all men have learned the lessons of two World Wars and the Hydrogen bomb, but because perhaps tomorrow we can apply our knowledge, so hard gained, to the pursuit of peace.

Performance curves show the endurance of metals at the elevated temperatures of supersonic flight. Notice how aluminium loses its strength quickly at high temperatures; while titanium, both lighter and stronger, keeps its strength at these high temperatures.
A. A titanium alloy. B. A stainless steel. C. An aluminium alloy.

WHEN Sir Winston Churchill told the House of Commons after Munich, "We have sustained a total and unmitigated defeat," it was still the prevailing notion that the agreement had been a triumph of statesmanship. As he noted in his memoirs, "The storm which met me made it necessary to pause for a while before resuming." But before long the truth of his words began to seep into the mind of the British nation, to good effect, hastening the pace at which the country ceased to rest on fancied success and set about repairing the damage, not quite irreparable, that had been done.

Britain will be lucky if the damage done to its position in the world through the events of the past four weeks in the Middle East proves capable of being repaired. Once more this country has suffered a total and unmitigated defeat, and once more the voices of self-justification urge the British to indulge their natural bent of supposing that everything really went very well—which, in turn, is met by a frustrated and useless carping in the Opposition, whose spokesmen harass ministers at question-time for admissions of collusion, or press them for promises of instant withdrawal from Egypt.

The withdrawal of the British and French forces is unavoidable, but it will not wipe out the blunder of sending them in. Collusion is an intriguing subject. Parliamentary needling might in time succeed in attaching an imputation of prior consultation with Israel somewhere—perhaps on the leading men of the French government, leaving uncertain the extent to which their British colleagues were in their confidence. Let the journalists and the historians inquire into it; this is no work for Parliament just now.

None of it might do much harm if Britain—not the Government, not the Opposition, but the nation—had not in fact suffered a reverse of the gravest character. The adventure in Egypt was ill-conceived in that it could never, with all success, have solved the problem which it was intended to solve. As it has turned out, it has not achieved even a local, temporary, or factitious success. The canal has not been seized. It has not been kept open, but has been very thoroughly blocked. President Nasser is still with us, and no likelihood has been established that, when he falls—as he will, one day—anyone better will follow him. The ill-will that has been created has blocked other channels of oil, besides the canal. Because of this, Britain has lost what freedom of action it had and is physically dependent on American goodwill, which it has lost. Backbenchers may still dream of a renewed bid for victory, but things have gone too far wrong for that.

If great care is not taken, President Nasser will get away not only with the seizure of the canal but with the spoils of Israel's victory as well; in that event, the Middle East—on which British and European dependence will not diminish, but will increase—would be more unsafe than before; already it is more open than ever to Russian influence. All that can be done now is to pick up the broken china, not shuffle it about.

Khrushchev on the See-Saw

CO-EXISTENCE has become anything but peaceful. The combined effect of recent events in Hungary and Egypt threatens to take the world back into a worse state of tension even than the cold war. Does the brutal Soviet intervention in Hungary mark the end of a chapter in postwar history, a return to the Stalinist method of ruling the satellites, coupled with a more bellicose attitude to the western world?

It may be premature to assume that such a fatal turning point has yet been reached. The balance of the conflicting evidence suggests rather that Moscow—bewildered, divided, and indeed in something of a panic—is still groping after a coherent line of conduct. Mr Khrushchev has candidly admitted that the Hungarian crisis was thrust upon his government, which was caught unprepared and had to improvise an answer. The answer they chose was dictated partly by the fear that the fire of revolt would consume the whole edifice of communism in Eastern Europe, and partly by the Russian obsession with security. But it was an *ad hoc* decision in a specific case, a tragic expedient, not a stage in a calculated programme.

Undoubtedly, Hungary had its effect on the Soviet handling of the Middle Eastern situation. Suez provided the worried Soviet leaders with a golden opportunity for counter-propaganda as well as for a show of strength. Rocket threats to London were a startling new departure for Stalin's heirs, who, on taking over the succession, had promptly settled the Korean and Indo-Chinese entanglements so as not to risk a world conflagration. But, although alarm over Hungary may have increased the violence of the Soviet reaction, it probably did not determine its substance. Having exerted great efforts over the last two years to get a foot in the Middle East, the Soviet Union could not stand idle watching an Anglo-French come-back. Inactivity would have meant loss of face in the Arab world and the loss of painfully won ground as well. The western divisions made interference safe.

Marshal Tito, in his recent speech, mentioned the cleavage between Stalinist diehards and partisans of change within the world communist movement. He confirmed that the Soviet collective leadership is suffering from a split mind. Symptoms of the disease are numerous, though none is more striking than this week's simultaneous blessing of Mr Gomulka, embarking on his "Polish way to Socialism," and cursing of Marshal Tito, who urged the Soviet leaders to extend the Polish precedent to other parts of Eastern Europe. Mr Gomulka had defied a most impressive Soviet delegation, argued calmly that his regime represented the last chance of keeping Poland communist without bayonets, and won. (Poland's position is discussed in an article on p. 703). Other Russian rulers promptly used the columns of *Pravda* to publish attacks on Marshal Tito, lest Mr Gomulka's success should be taken as a general licence for Titoism.

The present Soviet leadership is not split simply because it is collective. It has to make its decisions now in a completely novel set of circumstances. Stalin sat at the top of a pyramid, from which orders were transmitted down and had to be applied ruthlessly. His successors not only destroyed the apex; they have also been tampering with the whole complicated structure. Willy-nilly, they have encouraged the inarticulate Russian masses to play a larger part in the life of the country, and have encouraged the satellites to take the slogans of equality in earnest. In the Soviet Union, where the foundations of the communist society have been consolidated over nearly forty years, the dismantling of Stalinism may still, to a greater or lesser extent, be carried out in a slow and controlled fashion. In Eastern Europe, where a decade of breakneck industrialisation and Stalinist domination has utterly failed to provide the "revolution from above" with a popular basis, it cannot. "Their pace," as a member of the Polish politburo exclaimed, "will not do for us." In Eastern Europe it is a deadly race to make up for lost time, a race against the clock, in which each delay, as Hungary has shown, can prove fatal. To keep the restless masses behind him a Gomulka has to make a show of independence, improve living conditions, and persuade his present followers that they have both a say and a stake in the regime.

★

Russians, brought up in the Stalinist school, could hardly realise from the outset the full implications and dangers of the movement they themselves had started. Only now are they beginning to grasp the loss of direct control involved in exchanging pawns for partners and the economic sacrifices involved in helping such partners to gain a popular hold. From the very beginning Stalinist diehards—of whom Mr Molotov and Mr Kaganovich seem to be the spokesmen—resented reforms at home and the movement of liberalisation within the block, initiated by the reconciliation with Tito. But they had to put up with it so long as it paid dividends abroad and did not cause too great an upheaval. Even the Polish rebuff they had to accept, but the fighting in Budapest provided an opportunity to strike back. Alarmed army commanders sided with the diehards. Indeed, while control of the situation was passing out of Mr Nagy's hands and the Russians saw a real risk of losing Eastern Europe, probably nobody dared to oppose intervention. Did not both Marshal Tito and Mr Gomulka, reluctantly, accept this second Soviet act in the Hungarian drama?

Such a rallying of communists to the system in the hour of danger did not prevent the split from reasserting itself on the morrow. Hungary in chaos, with numerous Soviet divisions bogged down trying desperately to restore order in a country paralysed by strikes and passive resistance, provided the reformers (whose probable leaders are Mr Mikoyan and Mr Malenkov) with a new argument. Against this background, concessions made to the Poles looked like a bargain for Moscow. Mr Khrushchev once again joined hands with the reformers and Mr Gomulka, who went to Moscow last week with apprehension, was given a smiling welcome. But the Stalinists remain both unconvinced and undefeated.

★

The reasons for Soviet determination to keep a grip on eastern Europe are twofold: strategic and political. Strategic considerations are obvious: advance positions are useful for attack and defence equally. Radar has given new substance to the old idea of a *cordon sanitaire*. The political balance-sheet is more complex, with assets or liabilities more evenly distributed. The Russian rulers have cause to fear that the withdrawal of Soviet troops might be followed by the collapse of the communist regimes, the substitution of unfriendly ones and a consequent loss in allies and prestige. But equally, they can well argue that nothing could be more disastrous than the Hungarian bloodshed, which overnight cancelled in the West the gains of three years of "co-existence," sowed unrest in communist parties and destroyed prospects of "popular fronts." Believers in communism may very well argue that their creed would have more chance of success without the stigma of reliance upon Soviet armed force—which, indeed, as a method of repression may one day fail to work. Thus the whole concept of communism is at stake, though the test is deferred by the determination of the Soviet rulers, for quite other reasons, not to evacuate eastern Europe, at any rate without a military bargain in which Nato would have to pay a price.

The immediate prospect, therefore, is one of unstable compromise. Within the Soviet block each case will probably be treated on its merits and the Russian rulers will be guided by events rather than guiding them. They may write off, temporarily, the possibility of communism spreading its influence in the West and pin their main hopes on Asia and the Middle East.

★

Within the Soviet ruling group, Mr Khrushchev is the man of compromise. As such he can be attacked by both sides in Moscow. Stalinist diehards will accuse him of indulging in dangerous experiments, explosive "secret" speeches or risky negotiations with the Jugoslav heretics, instead of leaving well alone. The opposing faction will blame him for doing too little too late; for having bowed to the Poles only after damage had been done; above all, for a personal responsibility for what has happened in Hungary. Mr Nagy's fall in 1955 was merely an echo of Mr Malenkov's disgrace. Who can say what results a Malenkov policy of reforms and concessions to the consumers might have brought in Hungary?

The new equilibrium is unstable by its very nature, and herein lies the chief danger for Mr Khrushchev. Liberalisation has its own momentum and cannot be isolated within, say, Poland's frontiers. By blowing alternately hot and cold, the divided Soviet leaders may precipitate a second Budapest and in that case the army may step in to administer Stalin's heritage. Mr Molotov's appointment as Minister of State Control may even be a move in that direction. As long as the see-saw continues, however, Mr Khrushchev can sit, uncomfortably, on the middle of the plank; but if it tips either way, he may fall off.

Future Soviet policy is thus obscure and uncertain. It is the more important to try both to understand it and, if at all possible, to influence its course. The evident Hungarian hostility to Russia gives the West no ground for complacency. Events have shown that the Western powers lack any means, short of atomic war, of restraining Russian conduct. President Eisenhower has reasserted that the east Europeans were never encouraged to start a hopeless struggle. His specialists in psychological warfare had not made this message clear in advance; disillusioned hopes now breed a bitterness in Hungary which gift parcels, however generous, will not allay. What more the West is willing to do for them is only one of the many questions calling for an immediate answer. Should national communism be assisted, through economic aid and other concessions, though its limitations are only too plain? A settlement of the Oder-Neisse frontier, which would remove one Soviet justification for keeping troops in Poland, is one question about which the western powers ought to be thinking. Beyond it looms the great question: what price, short of the departure of American troops from Europe, could induce the Russians to withdraw within their own borders? It is in the light of these questions that the Soviet disarmament proposals as well as Mr Khrushchev's utterances have to be scrutinised and countered.

The present time of tension and mutual suspicion could not be less propitious for a conference. Many consultations, probings or feelers and much thought are needed before it could even be contemplated. But the change of course in Poland and the revolt in Hungary have altered, potentially at any rate, the balance of power in Europe. There is a danger that, left to themselves, events may lead inexorably to a renewed building up of international tension. The pity is that the West itself stands at odds at a time when there is an urgent need for concerted action and, perhaps, great scope for new initiatives. It is one thing to decide that a return to the cold war, or even something worse, is unavoidable. It is quite another to drift into it blindfold, or rather to stumble into it because one's eyes were fixed on Suez.

Three Little Sins

IT so happens that three topics that have been in the news this week (two of which are discussed more fully on later pages) raise the same difficulty. They are all economic topics, concerned with restrictions or protection, and the liberal in discussing them has to strike a balance between what is expedient in the world as it is and what would be sensible in the world one should want (that is, in a world where no frictions from established interests existed). They are all cases in which it may be right to connive at a compromise with the abstractly sensible, in pursuit of the politically possible or the temporarily wise. But let us realise what we will be conniving at in each instance.

First, the Government is introducing an Anti-Dumping Bill in the House of Commons. The abstractly sensible course would be to introduce a pro-dumping bill instead. Dumping arises because foreign governments or foreign manufacturers decide to subsidise British consumers at the expense of their own taxpayers and consumers; it is a bad thing when they offer these gifts in third markets where we compete, but a good thing when they offer them to us. The reasons why Britain is nevertheless going to refuse, instead of encourage, these foreign subventions are: first, to avoid irritation to British workers who would have to move jobs out of competing industries (although the cost of movement, in a fully employed economy, would be slight); and secondly, because it is advisable to placate British industry at this time in order to persuade it to accept with good grace the much bigger disturbance likely to be caused by the advance towards general freer trade in Europe. For these reasons, and because the anti-dumping bill looks like being a relatively mild one, it is probably impolitic to oppose it. But we should be clear what Britain will be doing: it will be turning away gifts offered to it by foreigners because the Government is chary of facing institutional and political friction at home.

Secondly, the Government last week published its Shops Bill. There are certain features of this extraordinarily bad bill which will need to be opposed on every ground of moderation as well as of economic interest; an article on page 675 discusses the amendments that every MP should be urged to support in committee. But the main economic blight upon the bill is that it continues a ban on enterprise first introduced into British shops legislation by a late amendment to the Act of 1928: an amendment which laid down that statutory shop closing hours should be compulsory even for small shopkeepers who employ no assistants. The reason for this restriction is that the majority of small shopkeepers who (quite sensibly) do not want to work until all hours of the night themselves are determined to prevent the minority who do want to work hard from gaining what they call "an unfair advantage." Almost certainly, whatever the fate of more moderate amendments to the bill, Parliament will be tactically obliged to accept this restriction again. But, once again, let us be clear what it will be accepting: it will be accepting the re-enshrinement into legislation of a compulsory restrictive practice.

★

Thirdly, and most immediately depressing, petrol rationing is to return to Britain next month. In a letter on page 682 the socialist economist, Dr Thomas Balogh, twits us for not opposing this, and for not supporting rationing by price instead. Now, there is an orthodox economic, as well as a political, riposte to Dr Balogh's suggestion that the whole problem might be solved by an increase in the petrol tax: the maximum amount of petrol that can be brought into this country is going to be suddenly restricted, demand has got to be cut to that level, and nobody can be quite sure what increase in price would precisely do the trick. One cannot experimentally move the petrol tax up and down each successive week. Nevertheless, there would be a way out of this dilemma: coupons equal to the amount of petrol that can be allowed for pleasure motoring could be issued, and *sold* (instead of allocated) through the post office, to all comers and at a price which would be moved up and down to equate demand with varying supply.

There would have been, in principle, no obvious economic objections to such a scheme. It would have been rather more equable than an ordinary rationing scheme because it would recognise that some people would be willing to incur financial sacrifice in order to get more petrol, while others might hardly be incommoded by the new basic ration of 200 miles a month; and it would have brought useful fortification to the revenue. The main objection to it, of course, is political: motorists are going to be so cross at having to put up with petrol coupons again that to ask them to buy those coupons instead of drawing them free would have been the last straw. That, one can be sure, is why such a scheme was never even considered; and all that can reasonably be asked is whether some limited thinking along these lines should still necessarily be excluded. For example, when one motorist sells a petrol coupon to another, both presumably feel that they benefit and nobody else is hurt, so why should the new regulations be as fussy about this sort of transaction as they were last rationing time?

In all these three instances the liberal, when faced by the clash between public opinion and the logic of his own philosophy, is likely in some measure to run away. He need not be ashamed of this; discretion is often the better part of valour. What is important is that he should feel some slight guilt at running away, rather than any guilt at putting the liberal case.

A Plan for Sinai

FOR a week the United Nations has played the lead on the Suez stage. Mr Hammarskjöld has flown in and out of Cairo, and the first units of the Assembly's task force have reached the Suez Canal. To avoid confusion of mind about what these international servants have to do, it must be recalled again that they are handling two disputes. One is that between the Anglo-French partnership and Egypt over the canal; the other, that between Israel and Egypt, ranging over armistice and frontier topics that include the canal, but not at the top of the list. What are the UN objectives in both quarrels? In neither will it do any good if, inhibited by legalism, it sets out simply to restore the *status quo ante*. To stop a fight only to put the clock back to where fighting started is to set the stage for a repeat performance; it would be to forget the UN's preventive role. Those who give the force its orders must weigh now what it must do at both points, on the canal and on the border of Palestine, so that trouble will not happen again.

The canal is in Egypt's sovereignty, but Egypt has violated treaties by blocking passage, and on a wanton scale. To deal with the task of clearance it has been induced to ask help with the job from Mr Hammarskjöld, at United Nations expense. Those who will foot the bill of several million pounds sterling are entitled to insist that Egypt accept arrangements to guard against blockage in future, whatever the pretext.

UN's problem on the Israel frontier is less simple. Here items that must figure in the reckoning before the balance is struck are overlaid by confusing considerations—among them Israel's victory in Gaza and Sinai and its later promise, under heavy simultaneous pressure from America and Russia, to withdraw. The UN is bound to insist on the withdrawal. But to ask Israel, as the Egyptians demand, under cloak of the Anglo-French attack and cease-fire, to accept a return to an era of Egyptian commando strongpoints would be wholly unreasonable.

★

What course can the United Nations plot in this confused terrain? Individual American and Australian delegates in New York have been canvassing for a demilitarised Sinai under Egyptian civil administration. This would be much better than nothing. But a more watertight and far more useful plan would be that briefly outlined in *The Economist* of August 4th (page 383) at the very outset of the Suez crisis, but not then amplified because, at the time, it appeared, perhaps, visionary; it looks less visionary now, and its virtues look larger.

This plan was for a permanent international zone to consist of the Gaza strip, plus a narrow strip of Egyptian Sinai running all down the frontier to the Gulf of Aqaba south of Israel's Red Sea outlet at Eilat, plus the island of Tiran at the mouth of that gulf. The proposal was that this area should be permanently manned by a United Nations authority and should be available for the passage of oil pipelines, air and land traffic—in fact, all international communications agreeable to the United Nations. It would be a remedy for Europe's Achilles heel—the Suez bottleneck.

There are evident snags, always, in a venture that has no precedent, but this plan's advantages can be plainly stated. First, the international authority could pay its way by leasing wayleaves for pipelines, air staging posts and other amenities likely to reduce the dependence of Europe and Asia on the several precarious passages through unstable lands. The scheme would supply Arab exporting countries whose markets are in Europe with unchallengeable access to a free port on the Mediterranean—an outlet for Jordanian phosphates, and for Saudi oil and natural gas; these could cross the Gulf of Aqaba and arrive at a free port at Gaza without crossing the territory of any other state. Iraqi lines could cross either Jordan or Saudi Arabia to reach Gaza—precious alternatives to Syria. Moreover, this buffer (as well as transit) zone would make it possible for Israel and Egypt to reduce their military budgets to a size compatible with their resources and welfare. Israel, in return for the occupied territory it would be giving up, would get a blockade-free outlet to the Red Sea.

This does not exhaust the credit balance. The works undertaken and the installations put up by investors would give employment to many of the 200,000 Arab refugees in the Gaza strip. The enterprise would open the Gulf of Aqaba to all traffic, as it should be opened, instead of only to that acceptable to whatever power controls the mouth of the gulf. Unlike most territorial transfers, it would displace no settled nationals of any country. The building of a second canal is not worth including, now, in the list because of the difficulty of the terrain; but it, too, is a project that might not be visionary for ever.

The essence of the continuing crisis at the world crossroads in the Suez area (and what has happened since President Nasser's seizure of the Canal Company's rights and properties has made matters worse, not better) is that the right of passage can be denied whenever a transit country is minded to exercise its right of sovereignty. What is needed is an arrangement by which along at least one line of communication these two rights are never in conflict. In an international zone, law and power can be on the same side.

The scheme has practical drawbacks. The area is almost waterless; the international authority might have to distil water from the sea. The coastal waters off Gaza are shallow, and long jetties would cost money

—yet they need not be as long as the jetty that the Saudis have already built to the horizon at Damman on the Persian Gulf. Egypt will protest loudly at the "surrender" of territory—but the noise may well be offset by welcoming sounds from the oil-exporting Arab states beyond Suez, who for the first time would have unirammelled access to their best markets. Israel has said that it will not surrender Gaza or Tiran to Egypt —but it would probably surrender both to a United Nations authority to hold in permanence, if only to recover the ground lately lost in United States and world opinion. The Soviet Union will dub it a new manifestation of old colonialism—but only because it will upset Russian plans for keeping the tempers in the Middle Eastern vacuum at boiling point. All told such an arrangement promises vastly more assets than liabilities. Who, and the question is crucial, is now ready to champion it in New York?

Operation Musketeer

FROM OUR SPECIAL CORRESPONDENT LATELY IN CYPRUS, PORT SAID AND ISRAEL

NO doubt the lessons to be drawn from the conduct and outcome of the allied expedition against Egypt are more political than military. But there will also have to be a military post mortem on Operation Musketeer; the generals will have to ask themselves why, in the event, they were unable to give the allied governments the military instrument they needed to carry out their policy (whether right or wrong). In the end the timetable of operations simply did not fit the demands of the political timetable. If the reason why is found to be more political than military, Operation Musketeer will merely prove to be yet another example of a war (or armed conflict) which the politicians considered far too serious a matter to leave to the generals.

At present only a tentative appraisal can be made. The public is asking four main questions. The first is why the seaborne landing could not be made until seven days after the Prime Minister issued his ultimatum to Egypt and Israel, and three months or so after the first determination to use force, if need be. The second is whether the bombing of Egyptian airfields and military positions, prolonged over five days, was really necessary, since, despite the care in its directions, it was politically disastrous; or whether it was intended as a substitute for landings, or whether indeed it was simply a way of filling in the time-interval. The third question is why, after all the incubation, it took 36 hours for the allied forces to get 25 miles down the canal The fourth, inevitably, is how long it would have taken to reach Suez if the allied governments had ignored world opinion and threats of intervention by Russia and decided once they were in to finish the job.

These questions are asked in the light of the situation produced by the Israeli attack in Sinai; but it is worth remembering that the Anglo-French military planning began a long time before in quite other circumstances. The first plans must have been made immediately after the nationalisation of the canal, and they had to take account of the likelihood that Britain and France would have to act alone. The scale of the mobilisation of specialists (REME, signals, RAOC, etc.) from the reserve and the preparations made in Malta and Cyprus suggest that the chiefs of staff had two main possibilities in mind: first, that "very quick" action might have to be taken at any time—for example, if British lives in Egypt were endangered—in which case airborne forces would have to be thrown in at short notice, whatever the risk; second, that, if the canal itself was to be taken and held (the original motive), a very large force, of between two and three divisions, and possibly more, would have to be landed by sea. The nearest base at which such a force could be embarked, and held for a long period in readiness, was Malta.

At an early stage, the idea of an attack on Suez based on Aden was dismissed as impracticable; so also was the idea of an attack on Alexandria from Libya—though it looks as if President Nasser had wind of the latter plan since he sent his best armoured brigade to Alexandria on October 30. Cyprus is the nearest base to Egypt, and the chiefs of staff are insisting that it is vital, but its harbour, Famagusta, is inadequate to handle more than a few small ships; these facilities were not increased after the canal zone was evacuated in 1954; and the navy was prepared only to use it for subsidiary operations.

As soon as plans were made for a seaborne landing, based on Malta, the timetable imposed itself. So, too, did the problem of the effectiveness of the Egyptian airforce, equipped with Russian MiGs and Iluyshins and widely reported at that time to be partly manned by Russians. It takes four days for tank landing craft to sail from Malta to Egypt; one day for any ships that could be sent from the limited harbourages in Cyprus; probably seven days for any ships carrying French armour from Marseilles. Upon arrival, the position would be that there would be virtually no air cover for the armada, except from obsolescent carrier-based aircraft. Hunters operating from Cyprus would hardly have ten minutes' flying over the canal zone. With the experience of Salerno in mind, the military planners must have seen in the period which the transports and LST's must be at sea the logical time to smash the Egyptian airforce by bombing from Malta, Cyprus and carriers. (Cyprus had not even enough airfields to mount the whole air operation.)

These plans had to be adapted to the circumstances created by Israel's attack on Egypt—which was brought forward swiftly to take advantage of Russian involvement in Hungary. If there was foreknowledge, or at least well-founded anticipation, of Israeli plans, there were now two new factors to take into account: first, that a large part of Egypt's army and air force would be drawn off to Sinai (in fact, it was already poised there); second, that it was possible to think about dates. Israel in fact mobilised on October 25, and even a limited degree of "constructive" collusion would have enabled the allied command to make final plans then and start final embarkation. Full collusion would have permitted the Malta-based seaborne forces to have been on their way when the Prime Minister issued the ultimatum—either to Port Said or to a rendezvous off Cyprus.

★

Either the allied command made no use of the advance warnings which knowledge of Israeli intentions might have supplied, or they were not passed on. Some of the seaborne force left Malta the night of the ultimatum, but much of it followed two days later, and could not have hurried on the way. The two days were probably taken up in planning, embarkation, and last-minute reorganisation. When it was at sea, the completeness of the Israeli victory became clear; perhaps half President Nasser's army was destroyed, though not his large guerilla formations in the canal zone. The timetable was, however, adhered to. The heavy air attack continued and the seaborne force landed on November 6th. The airborne landings were advanced one day, the paratroopers and commandos successfully reaching Port Said with only air support.

It looks, therefore, as if, on the timetable, the allied forces were unduly slow in arriving. But it also seems that there was no attempt to consider a quick change of plan, whereby the air attack would have been curtailed and the Cyprus-based forces flown in earlier—say, on November 3rd—taking a calculated risk on the break-up of Egyptian morale. Israeli forces had already stopped on the ten-mile line indicated in the allied ultimatum when the Anglo-French airborne formations created their bridgehead and took an airfield (November 5th). But neither they nor the seaborne forces, which landed on the beaches on November 6th, were able to exploit this initial success. Time had then become precious, as the governments well knew, though the allied command was not told so.

Obedient to their instructions to take every care to keep both allied and Egyptian casualties to the minimum, the allied commanders negotiated for the surrender of Port Said for nearly twelve hours, and in the end had to take it by storm; it fell finally soon after 4 p.m. (GMT) on November 6th. Armour was coming ashore from 7.30 a.m. The town's resistance did not entirely hold up the advance southwards, but, allowing for the time taken in disembarking, there was very little time to win a good position to renew the offensive at El Kantara before the cease-fire at midnight. The allied commanders, however, had no idea that there was any need to put on speed; the order to cease fire at midnight came over the tape as a complete surprise to them sometime around 6 p.m. (GMT).

Mr Head, the Minister of Defence, flew to Cyprus on November 3rd, so that the decision to stick to the original plan must have been made then—to "take police action" despite the fact that it could not begin for another two days, even by sending the paratroopers in a day ahead. At that time, too, the period needed for its completion must have been discussed. It is most improbable that the allied command ever promised to reach Suez in 48 hours from landing. All the indications are that they expected to take five to seven days to complete their occupation of the zone—which involved holding 100 miles of exposed flank and the occupation of three large towns as well as the destruction of the enemy's forces. In the first thirty-six hours they had not yet deployed to face the main body of the enemy.

★

These plans were all along agreed with the governments, and the only way in which the Anglo-French expedition could have reached the canal sooner would have been either (a) by starting sooner from Malta—a political decision—or (b) by taking the risk of trying to use the airborne forces several days in advance of the seaborne force. It may be doubted whether the paratroopers and commandos in the numbers landed (there was one French battalion undropped), and unsupported, would have got much farther down the causeway in the face of the Egyptian resistance actually met on the ground. It is, however, almost certain that they would not have been incommoded from the air. Though the allies put out statements that Egypt's air force outnumbered theirs by two to one, against the Israelis the Egyptians never got more than twenty MiGs in the air (and never in formation) or more than ten Ilyushins—not because of the allied bombing, but for lack of personnel of which the Egyptians made no secret.

There seem, on a first and no doubt incomplete assessment, therefore, to be two conclusions to be drawn. The original military timetable, even if a day or two could have been shaved off it, was doomed politically in the circumstances. A sudden airborne seizure of the canal—or points on it—depended on taking risks of much bigger allied casualties, a truer assessment of the Egyptians' air potential, and a quicker appreciation of the Israeli achievement. Perhaps if the allied command had had another parachute brigade they might have risked it. But the strange fact emerges that the existence *on the ground* of 300 or 400 Russian planes which the Egyptians *could not fly* was a decisive factor in frustrating the allies' aims.

Notes of the Week

Overstrain

EVERYBODY will sympathise with Sir Anthony Eden for his overstrain, not least those of his critics who have been increasingly worried at the mounting obviousness of the overstrain itself. The political consequences of his very necessary holiday in Jamaica cannot easily, or sensibly, be assessed. It comes at a time when the Conservative party is seething again—not against Sir Anthony, nor indeed directly against any of its other leaders, but mainly against the Secretary General of the United Nations; Mr Hammarskjöld has taken over from Mr Dulles and Mr Gaitskell as the convenient bogeyman of back bench mythology. Whatever decisions are taken about the phasing of the British withdrawal from Port Said, the important point to make to the Government is that the back bench Tories in the 1922 committee are certainly in no fit condition to influence them. The ruling emotions of back bench Tory MPs at the moment are an amalgam of all the emotions that make the worst counsellors—hurt national pride, the desire for party unity by members who never wanted Britain to go into Suez but who are now inclined to agree with the militants that there would be even more danger in getting out precipitately, the desperate urge of the militants themselves to prove that the operation has in some way been a success. It is not sensible to try to speculate what sort of "compromise" the leaders might be able to sell to a party in this condition; according to the reactions of the moment, and to the temper of the speeches made then by particular excited individuals, almost any compromise might have an equal chance of success—and a more than even chance of failure.

The Prime Minister is not likely to ask Mr Butler to incur the odium of dealing with this party situation, although some other politicians would; any decisions that are made are likely to be made before he leaves for Jamaica or after cabled consultation with him there. That is one reason why the possible personal consequences of the Jamaica interlude cannot at this stage usefully be brought up for discussion. But the Prime Minister's enforced rest does bring into the spotlight what has been one of the most worrying features of the whole crisis: namely the way in which decisions have had to be taken by very small groups of men who have driven themselves, by sheer devotion to duty, into a physical state that would be regarded as a bar to adequately filling any other job save apparently that of running the country. This sense of overstrain has been apparent not only in the Prime Minister, but in some other politicians and in some of the very few high officials who have been at the centre of policy-making in the last few critical weeks. Sir Anthony should be urged to do as little work as possible while in Jamaica, for his health's sake; when he comes back he should also be urged to spread more of the work around.

New Light on Policy

NOW that airliners have resumed normal flights through the Eastern Mediterranean, mailbags are pouring into London from beyond Suez and bringing tales of incredulity and dismay from the British citizens at work there. Merchants, contractors' men, technicians working on development for foreign governments, missionaries, schoolmasters, even—in their more discreet way—government officials all say the same: they write from among the ruins of goodwill. They tell of the work of years smashed in a week by what amounted to taking sides in the Palestine conflict. From too many places the story is of boycott and the probable loss of contracts and trade.

All writers admit that Egypt needed curbing, but all ask the same question: who chose the method? Who weighed its consequences in Asia, and particularly among the thin layer of friends gathered into the Baghdad Pact? Some letters add that once the cabinet knew it had gone too far, it might as well have gone to the limit and on to Suez. What did it expect to retrieve out of what it did?

These people write in ignorance of the still prevailing complacency in this country, and of the degree to which the form chosen for the Labour attack caused an upsurge of party feeling that has diverted too many Conservatives from the facts of life in Asia. Till now, members of the House of Commons, busy shoring up the party keep, have not had time to heed any distant evidences of national disaster. An exchange of their views with those of British friends working anywhere between Baghdad and Colombo would be profitable. The greater the knowledge, the greater the disquiet.

Quandary on the Jordan

THE Syrian delegate who interrupted the UN debate on Hungary in order to read out a cable from his government about "imminent aggression" by Britain, France and Israel unwittingly gave away the degree to which rumour and confusion of mind prevail in Damascus. A country sealed off from the world by army censorship is unaware of the effect such yarns will have on outside ears. Even gullible delegations had their doubts about a story so out of keeping with the current efforts of the alleged culprits to recapture American goodwill.

In fact, there is evidence that the Russian penetration of Syria has been exaggerated; it comes even from Iraq (which has no reason to damp down the stories). It is true that at the recent Arab conference in Beirut, during

which the fear of Soviet penetration that fills many rulers' minds imparted a "stick to America" slant to the discussions, the Syrian delegate differed from his colleagues. But even he was not for all-out dependence on Russia. He merely advocated keeping in with Moscow because the Bulganin letter had "saved" the Arabs. What is clear is that to use the phrase "Syrian opinion" is misleading for the present, because country and army are both riven by conflict as to how far they can bear left without falling under a new foreign domination.

On the immediate border of Israel every state is in the same dilemma. In an effort to solve it, the Jordan parliament has unanimously approved recommendations calling for the establishment of relations with Russia and China, and for abrogation of the British treaty. It will probably go through with this operation regardless of the help which Jordan may have received from the British warning to Israel of October 14th against attacking Jordan. From the British angle, the treaty is now a liability; at least its cancellation, now that Jordan has become irrecoverably unstable, will save £10 million or so a year.

No Clues at Chester

THE result of the Chester by-election was very much the sort of result one would have expected if the Suez crisis had never occurred. As the accompanying table shows, the extreme swing against the Conservatives in the Tonbridge by-election last June, which most people now agree was due to rather special factors, narrowed considerably at subsequent by-elections at Newport (in July) and Chester-le-Street (in September). Now the predominantly conservative constituency of Chester has recorded a very similar swing as the predominantly socialist mining constituency of Chester-le-Street did two months ago.

BY-ELECTIONS SINCE TONBRIDGE

Constituency and Date	% Swings to		
	Labour	Conservative	Other
Tonbridge, June 7th	+8½	−8½	—
Newport, July 6th	+2½	−6½	+3½*
Chester-le-Street, Sept. 27th	+4½	−4½	—
Chester, Nov. 15th	+4½	−5	+ ½†

* Welsh Nationalist. † Liberal.

One plausible guess at the reason for this is that, although differences of opinion about the Suez issue have been wide and have cut across party lines, they may not have been differences of the sort that cause the ordinary man (as distinct from the occasional sophisticate) to change party allegiance; the ordinary man, on this view, still votes for whichever party he feels is promising to make life economically easier for him. If this is true it could be depressing for the Conservatives, since the main economic consequences of Suez are still to be felt; it is, however, even more depressing for the country. Whatever assumptions one makes, Chester should probably be regarded as the datum line from which to measure post-Suez effects on British politics, not as a result that has itself incorporated any of those effects. To make this datum line clear: the Chester swing (of between 4½ and 5 per cent to Labour) would, if spread evenly across the country, return Labour to power at a new general election with a majority of between 70 and 90 in the House.

Less Than Four Hangings a Year?

IT is now almost certain that Mr Silverman's bill to abolish the death penalty will not be reintroduced this session. The Tory abolitionist who drew fourth place in the ballot for private members' bills has decided not to substitute it for her own measure, and although Miss Alice Bacon, having drawn eighth place, has agreed to reintroduce it, her chance of being able to do so is remote.

It is thus important to look more closely at the Government bill, which received an unopposed second reading last week. If it goes through as it stands, the effect merely of limiting capital punishment will be, according to the Home Secretary's rough estimate, to reduce the number of death sentences passed from an average of 25 a year to 6, and of executions from 13 to 4. As the bill also allows wider grounds for reducing a conviction from murder to manslaughter, the future number of death sentences and executions should be lower still—unless, of course, the judges make havoc of the bill's intentions by interpreting these provisions too narrowly. Thus Mr Lloyd-George is keeping all the machinery for executions, including the training of the hangman, for use perhaps two or three times a year; and for a few years only, since, as Mr George Benson pointed out in the second reading debate, the next Labour Government will abolish capital punishment altogether. If Labour comes back in 1959, what Parliament is now being asked to legislate for is the right to take the lives of probably less than a dozen murderers.

Does Mr Lloyd-George really believe that this right is essential for the preservation of law and order—the criterion he has adopted in his bill for distinguishing between "capital murders" and "life sentence murders"? Does he think it is worth the cost of sponsoring this anomalous, vagarious measure, which the law lords will almost certainly ridicule, even if, with an eye to the future of the Upper House, they do not seek to amend it? The Homicide Bill does not settle the death penalty controversy. On the contrary, it will stir up the old agitation and debates every time a future Heath or Christie or Straffen tries to establish a defence of "diminished responsibility," every time, in fact, that a person is on trial for his life; that the number of such trials will be fewer once the bill is law will only intensify the high-

Oil and Petrol

The effects of the serious shortage of oil and petrol in Britain and Europe, and the restrictions which are being applied, are discussed in a leading article on page 666, in Notes of the Week on page 674, in a message from our Paris correspondent on page 697, and in Business Notes on page 711.

light on them. The controversy cannot be settled except by complete abolition, and it is a thousand pities that Mr Lloyd-George, who has performed so many changes of opinion on this subject, could not bring himself to go back to the views he held in 1948.

Kadar's Taxis

THE spirit of the Hungarian people continues amazingly high in spite of bitterness at the failure of the outside world to come to their rescue and despair at their future prospects. In spite of everything their sense of humour keeps breaking through. The people of Budapest have now christened the Soviet tanks "Kadar's taxis." The other day one Russian tank crew were surprised to find themselves loudly cheered by the bystanders; the reason was a large notice fixed to the back of the tank which read, in Hungarian, "We are Russians and we must go home." Unfortunately, the Russians are not taking the hint and in the absence of any sign that they intend to go, the far-reaching verbal concessions made by Mr Kadar at the end of last week seem to have made little impression. The same obstacle seems to have thwarted his efforts to make his government more attractive by bringing in Mr Nagy and some non-Communist politicians. In his desperate efforts to break the general strike, Mr Kadar's tactics have ranged from violent threats of deportation to a bland admission (in the official newspaper) that the strike was *not* the work of terrorists and counter-revolutionaries, but arose out of the workers' determination to reform the country's economic and political life.

A more potent weapon than verbal threats or blandishments is the regime's attempt—it is not yet clear how successful it is—to control strictly all food supplies and use them as a bait to bring the workers back to the factories: there is evidence that even Red Cross supplies are being diverted to this end. There was a very partial resumption of work early this week. The estimates by independent observers of the proportion who went back varied between 10 and 30 per cent; and it is generally agreed that few of these did anything more than stand about and talk after they had clocked in. A new general strike was called on Wednesday night, initially for 48 hours, in protest against attempts by Russian and Hungarian troops to prevent a meeting of the national council. The council has issued a far-reaching list of the conditions on which it is prepared to negotiate a full return to work with Mr Kadar. If it sticks to these, the Soviet Army may fall back on fresh repression. Bitter resentment at the deportations by the Soviet Army has stiffened the workers' resistance. Freezing weather and shortages of food, fuel and shelter, together with the constant nagging fear that they too might find themselves sealed up in an east-bound box-car, may force some, at least, of them to give in. But the Hungarian resistance is still quite unbroken.

Secretary-General on the Stage

UNDER the Charter, the Secretary-General of the United Nations is administrative chief; Mr Trygve Lie after seven years in the job described it as impossible; according to Mr Hammarskjöld's own way of thinking, his functions are "to find and to keep alive and to broaden whatever is the common denominator in the foreign policies of the nations." As with many of Mr Hammarskjöld's statements, the precise meaning of this is ambiguous, but the general idea plain. The function of the Secretary-General, as he understands it, is not to initiate policies or to strike attitudes, but to search for and strengthen points of agreement among the disunited.

Over the last few weeks he has been doing this on a more public stage than hitherto in his four years of office. The pressure has been greater and the issues more momentous, but his methods have not basically changed. In the white heat after the news of the Anglo-French ultimatum, the Secretary-General announced that his impartiality must not degenerate into expediency; ultimately the aims of the Charter must determine for him what is right or wrong (sentiments which, loosely interpreted, might mean that he was going to stand no nonsense from Britain, France or Israel). Having stated his position, Mr Hammarskjöld wasted no further breath on pronouncements.

He was commissioned by the General Assembly with two main tasks in the Middle East imbroglio. Within 48 hours he was to design an international police force; and in 12 hours to effect a cease-fire in Egypt. The terms of reference for the force, produced on time and confirmed by the Assembly, are a perfect example of Mr Hammarskjöld's inspired woolliness. While the United Nations is safeguarded against employing a fighting army, the functions, areas of authority, life-span and composition of the force are left open to interpretation. But the vaguer the definition, the more likely the force would be to be accepted by warring parties, attract contingents round the world and not be held up by debate in the Assembly. Mr Hammarskjöld has now the exacting task of making interpretations conform.

The Secretary-General's second brief was to stop the war, and here again he went after essentials at the temporary expense of details. As an experienced civil servant he knows when he can, without reproach, exceed his powers, and for the greater chance of success, on his own initiative extended the time limit for a cease-fire. The peace when it came was an untidy one: the one war was over, the other half-finished, and the conditions for peace barely matched even on paper. The timing and extent of the withdrawals were unsettled; the work and placing of the force in dispute; Mr Hammarskjöld's deliberate vagueness, together with a pile of over-hastily drafted resolutions, is food for months of international controversy. But the Secretary-General seized upon what pieces of agreement he could find: if they do not fit, at least the intricate jigsaw has been started.

In bleak contrast to his achievements in the Middle East, Mr Hammarskjöld's methods in Hungary have yielded little. Characteristically, he has concentrated on what he calls the operative parts of the Assembly's several resolutions on Hungary: he has found out which specific items of relief Hungary most needs and he has appointed a group to investigate (from outside) the situation caused by Soviet intervention. He has also tried to get United Nations observers to Hungary and to supervise relief distribution in Budapest, but in both cases has been rebuffed. But however strong Mr Hammarskjöld's personal feelings, he sees nothing gained by pronouncements of policy or judgment: it is significant that instead of beating for Soviet withdrawal on what was bound to be a stone wall, he has knocked firmly on a door already cracked open for relief—though still closed to observers.

The Secretary-General has shown what he can do in one of the most complicated crises of our time. In Hungary this has so far been very little. In the Middle East, where the principals are less intransigent and their motives multiple, he has achieved a lot. Stage one is over: Mr Hammarskjöld has his "common denominator" of a cease-fire and the establishment of an emergency force. In stage two, his powers will be tested in "keeping alive and broadening" the meagre points of agreement. But on the issue of immediate Anglo-French withdrawal he showed on Wednesday that he will not compromise on the Assembly's basic requirements.

The Hungarian Deportations

THE UN Assembly has interrupted its general debate to condemn the mass deportations of Hungarians by the Russians. It could hardly do less. Strong and prolonged pressure by world public opinion may or may not eventually prevail on the Russians to abandon this inhuman weapon of repression, or otherwise to alter their course in Hungary. But there would be no excuse at all for the free nations adopting a defeatist attitude; the heat must be turned on—and it must be kept on.

The charges, set down in a Cuban resolution, of forcible deportations of men, women and children by the Soviet army have been indignantly denied by the Soviet delegate at Uno and by Mr Horvath, a former supporter of Mr Gerö; his presence in New York as their country's representative is bitterly resented by the Hungarians. But there can be no reasonable doubt that the deportations are taking place. Budapest radio virtually admitted them (although it later denied them). So did Mr Kadar when he told a workers' delegation that had come to protest about them that "the Russians were not likely to be deflected from their purpose." The commander of the Russian forces in Budapest denied direct responsibility for any deportations, but admitted that "individual units have arrested and deported people on their own initiative." In Debrecen an official news-sheet said that the townspeople had been agitated by the trainloads of deportees passing through the town; it attempted to reassure them that this would not happen again. There are also the scribbled notes thrown by the victims from their trains, and the incident, confirmed from several different sources, in which freedom fighters and peasants succeeded in stopping a train and rescuing about a thousand deportees. There is also the first-hand testimony of those who had actually been rounded up for deportation and somehow escaped.

Mr Hammarskjöld renewed on Wednesday his offer to go in person to Budapest. Such a visit, if it achieved little else, would at any rate give immense psychological encouragement to the Hungarians. It is unprecedented for a member of the United Nations to refuse entry to the secretary-general in person. Until the Kadar government mends its ways at least in this elementary respect, the Assembly should surely mark its displeasure by refusing Mr Horvath the right to speak and vote at its debates.

Closing the Ranks in Belgrade

JUGOSLAV party officials who sought in Marshal Tito's speech at Pula some clear-cut guidance on the international situation must, on the crucial point of the Soviet army's intervention in Hungary, find themselves just as confused as they were before. Marshal Tito had no difficulty in condemning the first Soviet intervention as "absolutely wrong." But when he came to the second he said it was an "error," but that if it "saves socialism in Hungary, then, comrades, we will be able to say, although we are against the intervention, that Soviet intervention was necessary." One suspects that the comrades may have wanted a detailed exegesis of this passage.

Although he did not hide his sympathy for the Hungarian people, Marshal Tito's insistence that their "justified" revolt against the "Rakosi clique" had been taken over by reactionaries, and his support for the "honest" men in the Kadar government, have made him extremely unpopular in Budapest. On the other hand, he was sharply and even contemptuously critical of the Russian leaders—or rather of the "strong" Stalinist element among them—for their "wrong and defective views" on Poland and Hungary and for their failure to realise that the Stalinist system itself must be destroyed. He is angry at the way communism has been "*compromised*" by events in Hungary. He hopes that "a little light will reach the eyes of the comrades in the Soviet Union" and that all the east European leaders will realise that their apparatus of control is "worth nothing if they do not change the methods they have used and if the people revolt." It is not surprising that this outspokenness should have been attacked by *Pravda* and by its faithful echo in Prague, *Rude Pravo*.

Mr Djilas's arrest on a charge of spreading hostile propaganda may well be a by-product of Jugoslavia's impaired relations with Moscow. For some months Mr Djilas had been publishing highly critical articles about Russia in the western press; he was left alone, although at the time the official line was to think the best of the Russians. But divergencies which may seem harmless when things are going smoothly tend to take on a menacing tone when things begin to go badly. Whether intentionally or not, it looks as if Marshal Tito has ruptured his *entente cordiale* with the Russians; *Borba's* firm, if restrained, reply to the attack in *Pravda* suggests that he fully intends to stand his ground. The arrest of Mr Djilas may be intended as a warning to all party members that in the difficult days that may lie ahead, they must all close their ranks behind the Marshal.

Misuse of the House

TWO depressing incidents in the past week raise the question whether some people in active political life have any conception of what Parliament is supposed to be and be for. One is the decision of the Wednesbury Constituency Labour party to call for the resignation from the Commons of Mr Stanley Evans, who has supported Sir Anthony Eden's policy in Suez. Mr Evans, for principle's

sake, should never have acceded to this request. The score or so people in a small back room at Wednesbury have no more right than the 43,000 other adults in that constituency to decide whether Mr Evans should go—and the time for those 43,000 electors to pass their decision should be at the next election. In their protest at what they regard as the rape of Egypt, the Wednesbury Labour party have raped the British Constitution. The best that can be said of this incident is that the methods used to get Mr Evans out seem to have been slightly less horrifying (on the plane of personal calumny) than those used—although not directly by the Melton Conservative Association—to get Mr Anthony Nutting out of his seat on the other side.

The other depressing occasion was the Commons debate on Wednesday of last week, in which a group of Conservative MPs accused the home services of the BBC of being too partial (and its overseas services of being too impartial) in their treatment of the Suez issue. No doubt these critics were sincere in their belief that the Labour case has been given too favourable a share of the stick; Labour members are equally sincere when they make—all too frequently—similar charges about alleged unfairness to themselves. But what is surprising is that men as intelligent as some of last week's Conservative speakers usually are should not realise that charges of partiality against the BBC should be referred direct to the Governors and Director-General of that organisation, and should never be debated in Parliament. Decisions about the interpretation of the BBC's Charter require the same sort of consideration as decisions that are made in a court of law. And the House of Commons must be one of the worst courts of law in the country; otherwise, and rather obviously, it would not be a good House of Commons.

Off-colour

NOTICE should be taken of Lord Mancroft's statement in the House of Lords on Tuesday that the Government is "satisfied that, if the necessity arose, it would be possible to devise legislative and administrative measures which could be put into operation at short notice" to arrest the immigration of West Indians into Britain. Lord Mancroft was careful to sandwich his statement between assurances that the Government realises that any such move would be repugnant to British traditions—and that the immigrants are fine, acceptable people doing decent jobs—but he left the way open for the excuse that the barriers might be put up in the West Indians' own interests. This was an unfortunate concession to noble lords who plainly felt that coloured immigration was thoroughly undesirable just because it was coloured, and recklessly declared that the West Indians brought in undesirable habits, undesirable diseases and caused undesirable marriages to take place. It was also a concession that happens to be untrue.

West Indians are coming here—along with migrants from the "white dominions" and elsewhere—because there is employment here, at better pay, than they can get at home. This is likely to be the case for a long time to come. Lord Mancroft's reference to the situation that would arise if unemployment grew in Britain was frankly puzzling. The Government has been trying to cut down demand for labour so that it does not greatly exceed the available supply; if this is then taken as an excuse for cutting down the supply of labour in turn, Government policy will be standing on its head. As was pointed out in the debate, the colonies tend to send Britain their best workers; and this increases income here. If the argument is that Britain should forgo this advantage for fear of miscegenation—"poorer but purer"—it should be candidly stated. If it is that Britain, for social reasons, can take a few coloured people but not many, the percentage should be defined and defended. What is worrying is that irrational attitudes are now being dolled up in specious reasoning.

Oil through OEEC

CRISES and a sense of weakness have often been the most effective inspiration for European integration in the past; today the fuel shortage which has exposed so nakedly Europe's economic dependence on the outside world is forcing forward new efforts to co-ordinate Europe's fuel supplies. The OEEC, already strengthened recently by its role in the development of the free trade area, may take on new functions and importance. It contemplates setting up a special oil group, containing representatives both of governments and of the large oil companies. If accepted by governments, this will organise and co-ordinate supplies and if necessary introduce an allocation scheme, giving to the schemes of the oil companies a political sanction most valuable when the claims of various countries have to be weighed up.

Such a scheme would obviously be valuable to Europe as a whole. Smaller countries, like Denmark, whose economic life is specially dependent on oil, may benefit a great deal from an equitable European supply and distribution scheme worked out between the oil companies and governments. But the scheme should be welcome above all to France and Britain. Anxious to avoid political and economic isolation, and to persuade the United States to overcome its political doubts and supply them with oil under the emergency arrangements, they have naturally sought to show that the oil crisis which has followed their Suez intervention affects not only them but Europe as a whole, and must be dealt with on a European scale. Whatever their doubts about the independent action of the two powers in Suez, their European neighbours seem to have accepted the view that its consequences must be dealt with co-operatively. The United States has not yet agreed to let the emergency oil arrangements go forward. But once it does, OEEC's new job may give it more prestige and importance.

Britain and the Community

OIL shortage will of course increase demand for coal in the six-nation European Coal and Steel Community as well as in Britain. Last week the council of association between the Six and Britain considered how big the increase might be and how they should co-operate if shortage became acute. So far it is not clear how far substitution will go if the crisis is prolonged, but the council suggested that furnaces which can use either oil or coke might quickly require additional coal at the rate of 5 to 6 million tons a year. This could be easily bought in the United States; neither the Community nor Britain has yet decided to introduce any new form of coal rationing.

In the Community, however, rationing is once more a live topic. Rising imports of American coal, which may reach some 35 million tons in West Europe next year, have for some time aroused requests that something be done to share the burden of its high cost between consumers who buy it and those lucky enough to receive cheaper European supplies. The High Authority hopes to do this by some sort of price equalisation scheme, but, if shortage becomes acute, all round price controls and a system of rationing, sanctioned by the declaration of a "state of shortage" by the High Authority, might have to come.

It would not be introduced, however, the representatives of the Community promised last week, without prior consultation with Britain—a welcome concession. Britain, in return, though unable to grant the continental request for larger exports next year, will certainly take no steps to reduce them without prior consultation. Both in OEEC and in the council of association, the British Government is thus making welcome efforts to co-operate with Europe. It must be hoped that this spirit will outlast the emergency.

Shop Shutters

THE Shops Bill, which was published last week, is one of those untidy pieces of legislation—like the original Copyright Bill in the last session—which liberal-minded MPs should be encouraged to put up a fight about in committee. The bill is intended to be a "codifying" measure for existing Shops Acts, and also an instrument for effecting the welfare recommendations made by the Gowers committee on closing hours of shops as long ago as April, 1947. But there are three points of principle in the bill, the second and third of which are answered unsatisfactorily; paradoxically, if the first point looks at present as if it might be answered more satisfactorily, this is because one part of the bill (its fifth schedule) could have consequences which the bill's draftsmen may not have completely foreseen.

(1) This first point of principle concerns *early closing days*. The proper liberal point of view on this matter seems clear. It was put to the Gowers committee by the witness who argued "that, since every shop assistant must be given a weekly half-holiday, there is no need [for each local authority] to compel all shops [in its area] to shut on a particular day and so create inconvenience to the public." The committee (which, appointed in 1946, could not unfairly be described as a rather heavily Labour-represented committee) did not seem to be over-concerned about inconvenience to the public; but it did show some sympathy with the liberal point of view, because it was worried about the untidy effect of the exemptions at present allowed to early closing. The most dispensable of these exemptions concern things—such as tobacco and sweets—that are sold in places of entertainment and licensed premises (which are not affected by early closing regulations) as well as in shops; the law's theory has been that it would be unfair to oblige shopkeepers to lose trade to competitors in this way. The Gowers committee believed, however, that these exemptions were bringing the law into contempt because many mixed shops (grocers, stationers, etc.) sell sweets, "with the result that the sale on those premises of other commodities after closing hours . . . has become frequent and almost undetectable." The committee therefore recommended that these exemptions should be "drastically curtailed," but added that if these curtailments "prove unacceptable, we feel strongly that the abolition of compulsory half-day closing should be seriously considered."

The Government's new bill does not curtail these exemptions as drastically as the committee recommended (it leaves the law about afternoon sales of tobacco and sweets unchanged), but there is no evidence that the abolition of compulsory half-day closing has been seriously considered. It is here, however, that an odd feature of the bill intrudes. As the bill stands, all local authority orders nominating the early closing day in their area would appear to lapse; the local authorities would have to fix new half-days (or confirm the old ones) by going through the usual machinery of traders' polls. The new regulations for these polls, laid down in the fifth schedule of the bill, are surprisingly rigid: all retail traders in the area would have to be entered on a register, and 50 per cent of those on this register would have to approve of any order. If the intention is to hold a poll on all these orders in all local authority areas between the date of royal assent to the bill and the appointed day of operation, this would represent the biggest trade general election in British commercial history; and past experience suggests that, in some districts, the aim of getting 50 per cent of traders on a register to agree to anything (or even to vote at all) is going to be extraordinarily difficult to achieve. Yet, in districts where this aim is not achieved, compulsory half-day closing would apparently lapse, and individual traders could then presumably take their half-day on any day they like. It remains to be seen whether the Government's intention in this bill is to do good by stealth; or whether it has merely fallen, through over-meticulous draftsmanship which it may seek in committee to amend, into the danger of doing good by mistake.

(2) The second point of principle concerns *evening closing hours*. Here the bill is completely restrictive. It provides that shops should be closed at 7 pm (8 pm on one day each week) instead of 8 pm (9 pm on the late day) as at present; and that most of the present exemptions to this rule (as criticised by the Gowers Committee) should be withdrawn. It is going to be very important to try to introduce some flexibility into this part of the bill in committee. Experience in America has shown plainly that, as a country gets richer, the natural tendency is to move towards late night shopping—although, of course, with a five-day week and longer staggered holidays to shop assistants as compensation. The door should not be incontinently slammed on future experiments.

(3) Finally, the bill continues the bad old practice of making all these restrictions apply even to *individual shopkeepers* who do not employ any assistants; they are not to be allowed to work as hard as they want to. For reasons discussed in an article on page 666, any hopes of wholesale reform of this restriction are probably impractical politics, but one need not be so impassive about the new regulations for "mobile shops." Is it really necessary that the bill should make clear (what was previously unclear) that even for barrow boys conservative freedom must now not be allowed to work?

Universities' Bulge and Trend

THE universities have got to do their homework again. When the vice chancellors and principals were asked, earlier this year, what they thought they ought to do about the population "bulge" that is now beginning to burst the walls of the secondary schools, they jointly replied that the universities should take in all those who, at present standards of entry, would qualify for a university education. But when they sent the University Grants Committee their separate proposals about what their own universities should do, these did not add up to anything like the total that their first premise required. They have proposed to increase the total number of students from 84,000 at present to 106,000 in ten years, an increase of 26 per cent. This, it is true, would be more than enough to deal with the Bulge alone, which is expected to add 15 per cent to the number of university candidates by that time. But there is also the Trend. The Trend is the tendency to stay at school longer; in the last five years the number of seventeen-year-olds at school has increased from 31,000 to 45,000, an average annual increase of 5 per cent. This is far more important than the Bulge in increasing the number of potential university candidates. By 1970 it is expected to have increased them by 70 per cent over the present level.

Another reason for judging the universities' proposals to be inadequate is that they could not provide the extra scientists and technologists who will be needed. Of the

Before the New Plan for Agriculture

NEXT week, unless the international crisis causes further delay, the Government is expected to announce a new system of guarantees for British agriculture. Before judgment can be passed upon their suitability, it is right to ask some fundamental questions. Why and how should British agriculture be supported at all? Four reasons are usually put forward for supporting it, and two of them are not now very good:

(1) As an *insurance against the danger of war*, the present system of subsidies is excessive and largely pointless. It is supporting large numbers of livestock (particularly pigs and poultry) which in a war would have to be destroyed, and a level of cash cropping which, if anything, is reducing the land's capacity to get in a sudden burst of increased production. The most that strategic considerations warrant is a little selective aid aimed at keeping fixed equipment in good repair and the land in reasonably good heart.

(2) This recipe would also satisfy the various *aesthetic arguments* in favour of preserving an attractive, well-kept countryside—although, if the protection of rural beauty is the prime aim, it is not subsidies but a revision of estate duties which is really needed.

(3) The third argument for supporting British agriculture is the need to safeguard the nation's *balance of payments*. This is a respectable argument, even if one does not agree with it. At an admirable special agricultural conference, organised last weekend by Imperial Chemical Industries, Professor E. A. G. Robinson suggested that home demand for food may increase by 15 per cent in the next two years. If (as he contended) any likely expansion of exports will be fully offset by an increased demand for imported fuel and raw materials, it follows that the extra food will have to be produced in this country. Not everybody would accept Professor Robinson's calculations; he was quite wrong in some earlier estimates about the extent to which British manufactured exports could be expected to increase just after the war. But obviously there is an "insurance case" for trying to keep up agricultural production and, if it can be done reasonably economically, to expand it—just in case he is right.

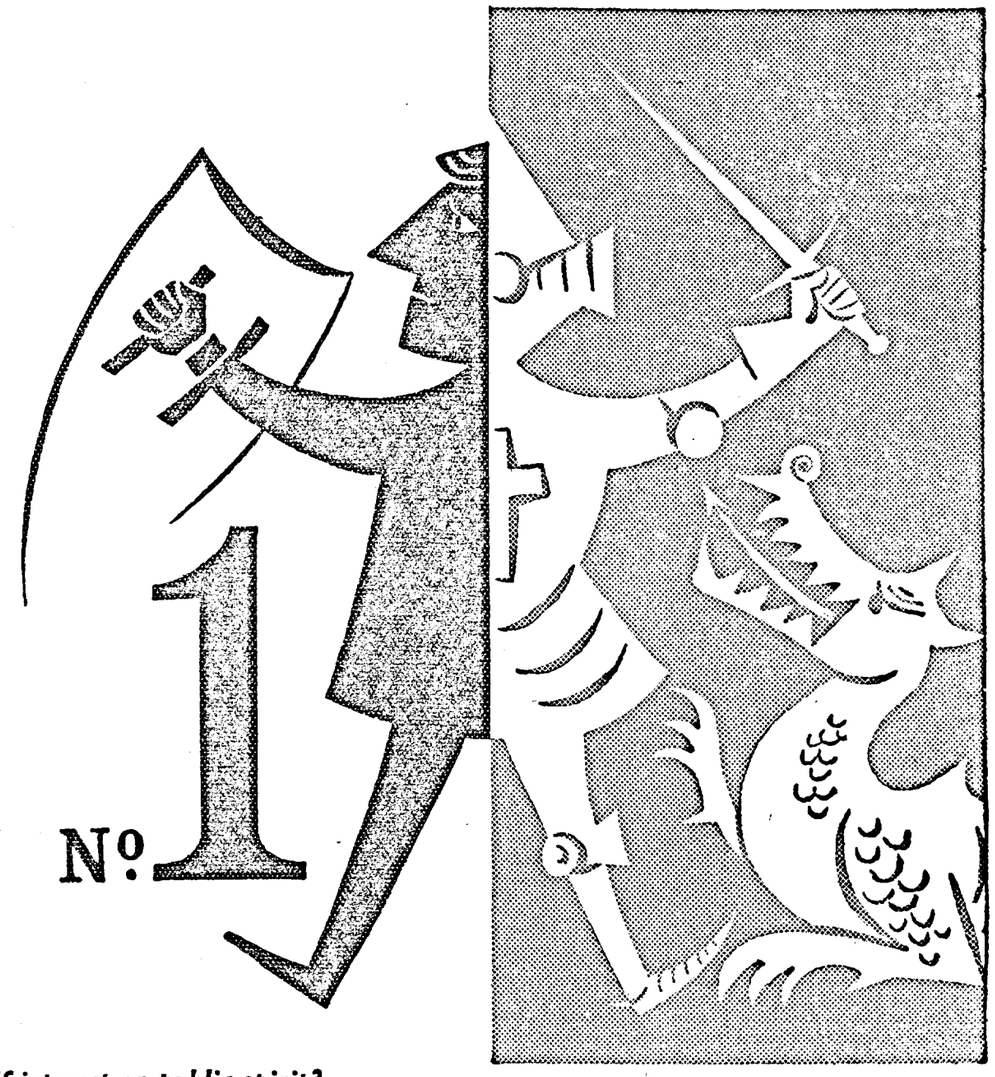
(4) This third argument, therefore, merges into the fourth and best argument, which is quite frankly the argument of *disturbance*. At present, the subsidies are equivalent to at least two-thirds of net farm income. Their complete removal would cause intolerable rural upset as well as a sharp fall in production. Many farmers would go bankrupt, many others would reduce their commitments and make do with a lower standard of living in preference to risking their capital under adverse conditions. But this, to repeat, is what would follow a wholesale scrapping of the subsidies. It is an awkward political fact that a cut in them would not, purely from the point of view of efficient production, be nearly so disastrous; it might even—by ending the present excessive security of tenure, and eliminating many of the worst farmers—have a beneficial effect.

★

That, as soberly and realistically as possible, is the economic and social case for supporting agriculture. However strong the emotional case for emphasising Britain's dependence on foreign food, the economist's job is to point out that that dependence is very far from being absolute or unconditional. Whatever view one holds about the future of the balance of payments, it still remains wasteful to put resources into home production if the difference in relative costs and efficiency between the home and imported product is very great. Judged by this criterion, the support given to milk, pig, and egg production is already excessive. In these cases the import saving (which is, in any case, reduced by a substantial consumption of imported feeding stuffs) is handsomely outweighed by the burden placed by price support upon the whole British economy, including the export trades.

Again, British agriculture ought not to be supported at the expense of disrupting highly advantageous trading relationships. The farmers' demand for protection against the periodic dumping of subsidised imports is as reasonable as any other argument against dumping; but it is another matter to try to squeeze out Danish bacon and eggs or New Zealand butter and lamb. These countries have always catered with great efficiency for the British market, and adopted a consistently helpful attitude towards the solution of trading difficulties. It would be folly to deny their producers the opportunity to win a larger share of the expanding British market.

Thus the conclusion is that British agriculture must continue to be supported—but preferably at a less expensive level than hitherto, and certainly not by rigid quota or tariff or monopoly protection. The support should be channelled in ways which will increase the efficiency of British farmers *vis-à-vis* their overseas competitors. It is by these standards that the Government's new measures will need to be judged.



Self interest or public spirit?

Taking care of number one is nothing more than the instinct of self preservation. It's only human nature after all—but it can be enlisted in the public interest.

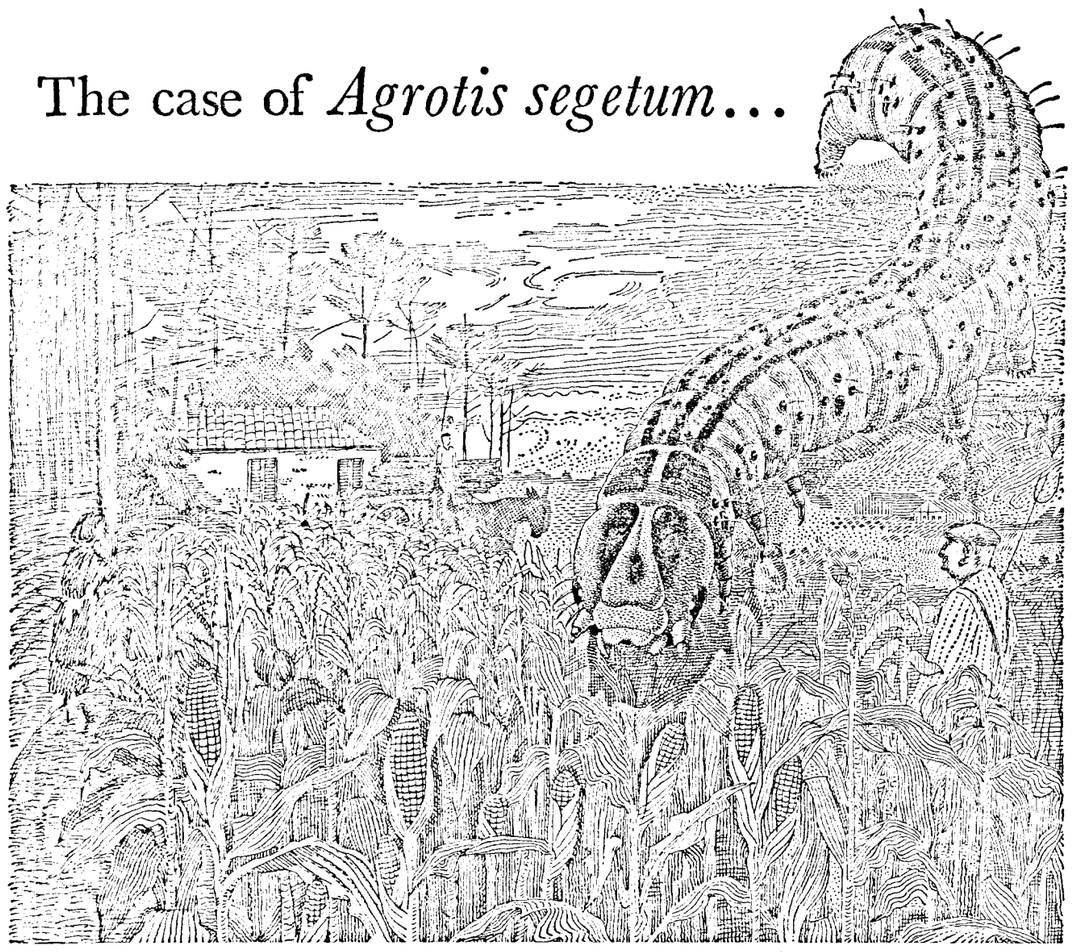
Consider the man who assures himself of a comfortable retirement—and looks after his family—through Life Assurance. Money he pays in premiums is invested by his Life Office and helps to provide much-needed capital for British industrial expansion.

In the past four years, the annual amount paid in Life Assurance premiums has increased by over a hundred million pounds. The motive may be self interest, but the effect is to the benefit of all.

Life Assurance *a safeguard of real prosperity*

Issued by The Life Offices' Association, London. Established 1889

The case of *Agrotis segetum*...



To the farmers of Southern France maize is as important a cereal crop as is wheat further North. Yet until recently it was no uncommon sight to see whole fields of young plants destroyed by 'Cutworms'—the larvæ of various common noctuid moths, the commonest of which is *A. segetum*, the turnip moth.

The trouble begins in the Spring when the seedlings are attacked by newly-hatched *segetum* larvæ and other 'cutworms' that have overwintered in the soil. Many of the plants are killed quickly; the survivors have their leaves eaten and their stems and flower heads drilled by succeeding generations.

This major pest of a major crop, for years defying all attempts to bring it under full economic control, has now been conquered by aldrin, one of the newer Shell insecticides.

Non-tainting aldrin has exceptional persistence in the soil and it is worked in before planting—often with fertilizer to save separate applications—or sprayed on the surface during the growing season.

Just one dressing of aldrin each season at 2 lbs. per acre gives complete protection against 'cutworms' throughout the growing life of the crop—and, in France, has brought farmers a new assurance of successful harvests.

Aldrin, dieldrin, endrin . . . these three advanced insecticides developed by Shell are complementary to each other. Between them they control most of the major insect pests which menace agricultural production and public health throughout the world. Have you an urgent pest problem in your area?

aldrin

aldrin, dieldrin and endrin are SHELL insecticides for world-wide use

22,000 extra students proposed by the universities, about 15,000 would be reading science or technology—an increased output of between 3,000 and 4,000. But the Government, the Lord President announced in the House of Lords on Wednesday, regards an extra 10,000 scientists and engineers a year (over and above the 10,000 now produced) as the minimum target for 1970; it has, in fact, accepted the estimate of the committee on Scientific and Engineering Manpower, whose report was published last month. And in the light of this estimate the universities' first proposals are certainly meagre.

★

It is true that the greater need is for technologists rather than pure scientists, whose supply is on the way to becoming adequate. But that does not mean that the task can be left to the new colleges of advanced technology. Last year the universities produced some 1,750 engineering graduates, while the technical colleges produced about 500 graduates and 2,850 professional engineers with other qualifications. But it seems that even if the technical colleges double their output, the universities will have at least to treble their engineering departments if the Government's target of an extra 10,000 is to be achieved. No doubt they will be willing to make more generous proposals now that the Chancellor has told them that they can have £34 million for building over the next three years—enough to double the present rate. Excessive humanist fears of being "swamped by scientists" should not be allowed to stand in the way.

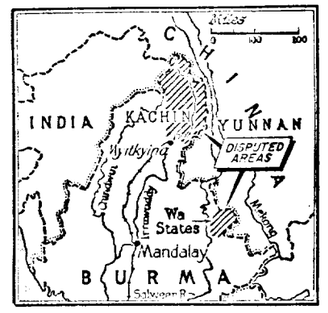
Chiang's Chair

IF the United Nations Assembly had voted last week in favour of considering the replacement of delegates from Formosa by delegates from Peking, it would have instantly multiplied the difficulties that already confronted it. Sheer horror at the idea of piling new problems on top of existing ones may indeed have helped some delegations to make up their minds, and robbed Peking of their marginal votes. In the light of recent events, particularly of the closing of Asian ranks against the West and of the communist block's ardent championship of Egypt, there seemed at one moment a possibility that over thirty delegations would support the motion in favour of a change, which this year was tabled by India instead of Russia, and that, given a certain number of abstentions, the race might at least be close run. In the event, only 24 favourable votes were cast, against 47, with eight abstentions.

Analysis of the voting indicates that on this issue neither anti-communist nor anti-colonial solidarity held the field. Profuse as Communist China has been in its support for the Arabs' cause, it got only four of their eleven votes; altogether only ten Asian and Arab countries joined with the ten communist delegations and four Scandinavian states in siding with Peking, while six abstained and nine voted for indefinite postponement of any discussion. "Neutrals" were found in both lobbies, as were also members of Nato. The Peking government must have been disappointed at its failure to get the support of a number of governments whose heads it has lately wined and dined. For the United States, which has so much at stake in the matter, the voting must have come as heartening evidence that Asians and Arabs do not regard it as tarred with the same brush as Britain and France—despite the intensive propaganda campaign waged by Moscow and Peking in recent weeks to brand America as the master-mind behind the Anglo-French action in Egypt.

China at the Cheese

WHILE the rest of the world is loudly condemning aggression China has been nibbling away at Burma in an atmosphere of such peaceful cordiality that it might almost be supposed that Burma enjoys being eaten. U Nu, the former Prime Minister of Burma, has just returned from a visit to China with the news that the Burmese "have no right, as the Chinese have" to possession of northern Kachin, it was unjustly taken from China by the British in 1913 and it ought to be given back at once. The Kachins themselves have not yet consented to being handed over in this fashion; they are a tough hill people who enjoy local autonomy under Burmese rule and provide some of the best soldiers in the Burmese army. Their leaders are now in China, where the vulnerability of their position and the justice of the Chinese cause will no doubt be explained to them. If they prove amenable, and probably if they do not, the boundary agreement will be signed when Chou En-lai visits Burma next month. Chinese troops in Kachin will probably stay there until the district changes hands—they will be useful in quelling any popular protests there might be. But Chou En-lai has promised (not for the first time) to clear the Wa state of his soldiers, who have served their purpose as a threat and a bargaining point.



★

The cession of northern Kachin, by itself, would not be a great material loss to Burma, although it might raise a popular storm. But there are signs that China has only taken its first bite at the cheese. Well indoctrinated "refugees" from China have been entering Burma in considerable numbers. The majority of the Chinese community in Burma is now communist. Also there have been ominous hints from China of the desirability of a "great Kachin state," embodying all the peoples of the same racial stock on both sides of the border—of course under Chinese suzerainty. Burma can do nothing to protect itself without definite backing from India, and this, in spite of repeated requests, India has found itself unable or unwilling to give. There seems a very real danger that between the communist Chinese within, Chinese pressure on the borders, and increasing dependence on trade with the Soviet block, Burma may find itself sucked into the communist camp.

Storm in a Fish Kettle

FOUR years ago the Icelandic government announced that it had extended its territorial waters from three to four miles, measured not from the low water mark but from headland to headland; only line fishing, not trawling, was allowed within these limits. The British trawler owners replied by imposing a boycott on the landing of all unprocessed Icelandic fish in Britain, and there the matter stuck. In 1954 the Organisation for European Economic Co-operation tried to settle the dispute, and it was on the point of arranging an agreement last spring when the Icelandic government fell. Now the British have at last agreed to raise their ban in return for a promise from Iceland not to extend its territorial waters any farther until the UN Assembly has discussed the International Law Committee's report on sea law. This is hardly an equal bargain, and it is uncertain what will happen if the report condemns the Icelandic action—or what other repercussions there will be if it condones it.

But no one seems to mind much what the British trawler owners decide. British domestic prices for fish are unlikely now to be much affected. The Icelanders have taken to processing two-thirds of their fish. This they can sell to England without incurring the ban, or to the communist countries, with which they have developed a flourishing barter trade. A new agreement has been signed with Russia, which now takes about 28 per cent of Iceland's fish (it was 7 per cent in 1952) and the Icelandic government has made it clear that it cannot undertake to supply the British with as much fish as they used to get. Certainly it will be nice for Iceland to know that it now has an alternative market if the Soviet Union tries to exercise economic pressure through its trade agreements, but so far Russian influence seems to have been tactfully and persuasively used. There has been no suggestion that the settlement of the dispute will modify the Icelandic government's determination to close down the Nato base at Keflavik—although the increase in international tension and the fate of Hungary may provide more effective arguments.

The Economist Diary

THE CHRISTMAS PRESENT FOR THE MAN WHO SEEMS TO HAVE EVERYTHING

A week's appointments at an opening; a book that lies open flat on the desk	A diary lay-out specially designed to meet the needs of the busy man
Bound throughout in red leather; title blocked in gold	All information easily found by means of handy thumb-indexes
A memorandum book, an appointments register, and a complete reference book	Facts and figures covering the world always available when required
43/- Price for U.K. only, including postage and purchase tax	Prices to overseas addresses vary widely; a schedule will be sent on request

ILLUSTRATED PAMPHLET *FROM DIARY DEPT, THE ECONOMIST 22 RYDER STREET LONDON SW1*

Ho's Shaky Republic

IT would be an over-simplification to see a direct connection between the Hungarian uprising and the relatively minor disorders reported in the communist half of Vietnam. But there is an indirect connection: in one communist regime, as in another, there seems to be a breaking-point at which repressed discontent erupts into violence. Few details are available yet; those that are, come from official Viet Minh sources and would tend, it must be assumed, to minimise the incidents. The official version is that "a group of reactionaries" had used the mistakes made in agrarian reform to whip up dissatisfaction, disturb order and wreck property. Catholic villagers a few miles north of Vinh, the principal Viet Minh port in Annam, had manhandled troops and local party officers and stolen firearms. There had been a few killed and wounded; in several other regions "saboteur elements" had also disturbed order.

Perhaps the most striking thing about these disturbances is that they took place on November 13th, more than a fortnight after the changes in party leadership reported in *The Economist* of November 10th. The discontent revealed by the changes apparently goes deep. In replacing Truong Chinh, the "Stalinist" party boss, by President Ho Chi Minh, and in dismissing several other leading communists, the central committee blamed them for mistakes in land reform. One of the most serious of these mistakes seems to have been the failure of the party branches to distinguish between landlords—who, it is claimed, have been abolished as a class—and rich peasants, towards whom the policy is to "reach an understanding." Excessive estimates of crop areas and land yields bore hardly on poor and landless peasants.

The policy of collaboration with rich peasants was laid down in September, 1953—that is, at the height of the Indo-China war—because these peasants were then regarded as allies against the French, and it was carried on after the armistice of 1954. In practice, however, the *phat-dong* system of denunciation of landowners, and their trial by people's courts composed of landless peasants, were bound to confuse the dividing line between rich peasants and landlords. It is too early yet to say whether the return of Ho Chi Minh to the active direction of affairs and the measures discussed by the Lao Dong (communist) party to "strengthen democratic legality" will halt a trend which could rock the Democratic Republic of Vietnam, and which is already of great propaganda value to President Diem's Republic in South Vietnam.

A Leaving Certificate?

THE question of an examination for secondary modern schools has been arousing an increasing amount of discussion. When universal secondary education was started in 1947 educational opinion was very down on examinations; all the emphasis was on "freedom" from their "tyranny." But the experience of teaching without them has caused many teachers to change their minds. Parents, for their part, have never had much sympathy with the educationists' opposition to examinations, and would prefer their children to have a piece of paper to show for the years of schooling. Employers, too, like some tangible evidence of attainment.

This lack is not felt in the grammar and technical schools, where the General Certificate of Education is part of the course. But the usual age for taking it, at the lower or ordinary level, is sixteen. An increasing number of secondary modern school pupils—28,000 in 1955—do stay on after reaching the leaving age of 15 in order to take the GCE. An increasing number too take the examinations of private organisations such as the Royal Society of Arts and the College of Preceptors (the latter mainly in shorthand typing). But the vast majority of children (the secondary modern schools contain three-quarters of the total) leave school without a national certificate of any kind.

In a circular to local authorities issued in July 1955, Sir David Eccles welcomed discussion of this problem, and gave it a lead by setting out the disadvantages of a new national examination, especially the danger to standards of providing a soft option to the GCE. Sir David said firmly that he would not alter the grant regulations by which schools cannot enter pupils under sixteen for any examination other than the GCE. He did, however, welcome experiments (as in Lancashire) whereby an external examination is organised by a group of schools for themselves. But the Secondary Schools Examination Council has had to take notice of the continuing demand for the new examination, and Sir David would now be wise to accept its recommendation to refer the question to a special committee with direct experience of the problem.

The Nigerian Emirs Win

THE victory of the government party—the Northern People's Congress led by the Sardauna of Sokoto—in the elections in Northern Nigeria was expected. There were no direct elections, except in nineteen urban areas, and the party was well entrenched. It has governed the region reasonably well and taken good care of its strong regional and separatist susceptibilities. Although the opposition has gained some seats (complete returns are not yet available), even in the urban areas, the NPC won the majority of seats—eleven to the eight won by the main opposition party, the Northern Elements People's Union, whose leader lost his seat. This is a setback to the prestige of the NEPU, whose main platform is the rapid extension of direct elections and the ending of the "feudalistic" regimes of the emirs. The NEPU is just as strongly regional as its rival, and, so far as it is anything, is a left-wing anti-Nasser muslim party—it has been complaining that the Sardauna is preparing to sell Northern Nigeria to Colonel Nasser. This cry has not produced much response. It did not deserve to.

The opposition will, however, be strengthened if the alliance between the NPC and the Action Group in the Northern Region disintegrated because of the big victory won by the Action Group in Ilorin. There, the Yoruba vote of 250,000 put four highly tribally-minded Action Group members in, and their demand is likely to be the transfer of Ilorin from the Northern Region to the Western. This the Sardauna's government cannot be expected to approve, and is certainly strong enough to prevent for the time being. But it may emerge as a difficult side-issue at next year's constitutional conference on Nigeria's future.

The New President

It seems certain that Mr Buchanan has been chosen President by a large majority. This is no more than we have expected for several weeks. But it is also affirmed, and we fear correctly, that the Congressional elections will give to the same party a preponderance in the House of Representatives as decided as that which it possessed last year in the Senate. The whole result—it is useless to blink the truth—is a triumph, more complete than either friends or foes anticipated, of the Southern States, or rather of the Slave-holding Oligarchy of the Union reinforced by the Democracy of the North and West. It is the victory of the Party whose principles of policy are the extension of Slavery, the acquisition of fresh territory in order to aid that extension, and the destruction of the few remaining restraints on popular tyranny which the wisdom of the founders of the American Constitution had established. . . . But this is not the worst feature of the affair. The success of the Slave-holding and Democratic Party has been achieved in spite of every consideration and of every influence which ought, and might have been expected, to render that success impossible. It has been achieved in the face of the fact—proclaimed by the one Party and felt by the other—that this contest was to be a deliberate and conclusive trial of strength . . . that in all likelihood it would decide for a long series of years if not for ever, all the vital and agitating questions which are under litigation between the two sections of the Union. . . . It may chance that Mr Buchanan and his advisers—alarmed and sobered by the state of internal discord which late events have brought about . . . may take advantage of their success to adopt more moderate counsels and to avert the danger by some admissible compromise. This—the only remaining hope—is possible, no doubt. . . . But every fact we observe and every recollection we recall point in a different direction. . . . Moderation has not for a generation back been a characteristic of any section in the United States; and it is not now, when mutual animosity had been inflamed almost to madness, that we can expect either victors or vanquished to learn so difficult a lesson.

Letters to the Editor

The Alliance

SIR—The shrillness of tone of your attack on the Prime Minister and the obsessional recurrence to the theme on almost every page of recent issues are strongly indicative of a not uncommon psychological malaise. Psychiatrists have a name for it. They will tell you sadly that another symptom is inability to appreciate the point of view of others.

This, in your unfortunate case, has led to a vivid appreciation of the evils attending the Government's action, but a traumatic inability to state the disadvantages which would have followed from failure to act in the way they did—the likelihood of a general war in the Middle East; the probability of Russia intervening with volunteers, the possibility of this leading to a world war, the cost in each of these circumstances in the way of interruption of traffic through the Canal and loss of oil supplies, and so on.

Those of us who benefit from your balanced judgments when in reasonable health look forward hopefully to your early recovery.—Yours faithfully,

House of Commons J. E. S. SIMON

★

SIR—At risk of infuriating still further the "old and fond" subscribers whose outrage flooded your correspondence columns this week, may one American reader commend you most earnestly for having sounded the voice of sanity in a time of crisis? We Americans are most of us neither so spiteful nor so childish as to wish to write *finis* to the grand alliance, merely because two of the partners, without so much as a word of warning to the third, have dealt a bad blow to the common cause. But we have needed to hear voices like your own to be reassured that the Britain we thought we knew had not gone stark mad under the provocations of Mr Nasser.

Your angry correspondents demonstrate the confusion which seems to be sweeping the bulk of the British public into Sir Anthony's camp. One letter, ignoring the massive UN votes condemning Britain and France, prattles of how the blow at Egypt has "made the United Nations Organisation a real power to stop aggression," while another rejoices that the UN has at last been shown up as useless except to give "great aid and comfort to the lawbreakers." Again, the undeniable and lamentable fact that US policy on the Middle East has been weak, vacillating and unclear is taken to excuse the Anglo-French action, as if bad leadership from this country made it less, rather than more, necessary than ever for British and French statesmen to act with wisdom and foresight. It is also suggested that American shock at the invasion of the canal zone springs from pique at seeing the lead taken away from us. Yet it is precisely those Americans who, like the writer, have been most dissatisfied with our own policies in the Middle East who have also been most horrified by the Anglo-French move. The danger now is not that Americans will resent losing the leader's role, but that a dangerously large minority of them may once again desire to abandon that role for good, and retire behind the walls of Fortress America.

Meanwhile, the Russians have scored immensely at no cost whatever to themselves; the uncommitted nations have had Egypt to take their minds at least partly off the much greater horrors of Hungary; the oil situation is close to catastrophe; and Mr Nasser has been made that most dangerous of political phenomena, a living martyr. By any practical test, leaving aside the emotional release of twisting the eagle's beak, how can a policy that has led to all these evils be considered anything but disastrous?—Yours faithfully,

St. Louis, Mo. RICHARD W. LYMAN

★

SIR—The first article in your number of November 17th suggests that England has no alternative but to follow the foreign policy of the United States. Since we cannot join in Presidential or Congress elections, you suggest that we should represent our views by bringing criticism to bear on the American Foreign Secretary, if we do not approve of his policy. Do you seriously consider that our criticism of Mr Dulles in the last few months has persuaded America to look at the Suez Canal question through our eyes?

During the Truman administration America had a foreign policy in which we were proud to join. Aid to Greece and Turkey, Marshall Aid, the Berlin airlift and Korea were all different expressions of the most imaginative, courageous and generous foreign policy that the world has ever known. But since 1952 America, behind the ramparts of Nato, has been sliding back into isolationism. With a mixture of bluff and appeasement it has been reverting to its position of twenty years ago.

It seems odd that a paper, hitherto spirited and progressive, should now seriously suggest that, for better or worse, we ally ourselves with a Republican right-wing policy of inaction and appeasement.—Yours faithfully,

Boars Hill, Oxford CECILY GOODHART

No Ordinary Crisis

SIR—I was interested to observe that no protagonist of the subtle operation of the price mechanism advocated a rise in petrol prices sufficient to stifle demand. Yet, surely, in this particular instance they ought to be able to say much in favour of relying on this method. Petrol is used in considerable quantities for pleasure and convenience and public transport could easily be subsidised. Thus if the increase in price benefits profits it could help in financing a permanent increase in tanker fleets. If the increase is operated by raising excise duties the increase in revenue would help in general disinflation. This failure of the advocates of the price mechanism seems strange if we contemplate their vocal support for the rise in rents, and milk and bread prices,—Yours faithfully,

T. BALOGH

Balliol College, Oxford

Help for Hungary

SIR—A Staff-Student Committee has been set up to raise a fund to assist the Hungarian refugees to be granted asylum in this country. Among these refugees, there are likely to be a number of students—for students played a prominent and heroic role in the struggle for liberation. Accordingly, the primary aim will be to maintain at least one such student at the School until graduation. For this purpose approximately £1,500 is likely to be needed and this is the first target that has been set.

Contributions should be sent to:
Hungarian Students' Appeal Fund,
London School of Economics and Political Science,
Houghton Street, London, W.C.2

Any money not used for the primary purpose will be utilised by the committee in their discretion for general purposes of refugee relief, giving priority, so far as possible, to assisting Hungarian refugee students whether graduate or undergraduate.—Yours faithfully,

B. C. ROBERTS, Hon. Treasurer

London School of Economics

★

SIR—A Hungarian Student Scholarship Fund has been opened with the backing of the heads of five Oxford colleges and has received wide and spontaneous support throughout this University. The Warden of St Antony's College has already flown to Vienna to investigate selection problems.

We are urgently in need of funds. At least £1,200 will be required to support each student for three years. An account has been opened at:—

Hungarian Student Scholarship Fund,
Barclays Old Bank,
High Street, Oxford,

and contributions may be sent directly to this address.—Yours faithfully,

REX JAMIESON

Merton College, Oxford

What other industry can make this claim?

1 **Prices kept stable and low during five years of galloping inflation.**

2 **Quality of the product steadily improved and supplies stepped up.**

3 **Vast capital investment in new cost-reducing equipment in spite of penal taxation.**

4 **Wages notably increased without industrial strife.**

5 **The public provided with an abundance of the cheapest first-class food money can buy.**

These are notable achievements — achievements any other industry will find it hard to beat — achievements which make the British Distant Water Fleet without doubt the premier fishing fleet in the world.
However, this supremacy is threatened. Rising costs, dearer fuel, wage demands unrelated to productivity — all these combine to sabotage our hard-won success.
The Distant Water Fleet has achieved great things, but there are limits. It cannot go on absorbing these mounting expenses indefinitely.
Fish is the cheapest first-class food money can buy — we want to keep it that way . . . *the cheapest first-class food money can buy.*

TRAVEL BY TRAIN

-to be sure!

CAR HIRE SERVICE. You save time and trouble when you are met at the station by a French Railways Self-drive Hire-car. This special service for French Railways passengers operates in Paris and *115 other towns* in France. Make arrangements for your Renault or Simca hire-car when booking railway tickets in this country.

NEW DIESEL RAILCARS. Ideal for businessmen! New diesel railcars offer travellers high speed with noiseless running and complete comfort on many long-distance non-electrified runs between large centres.

OVER-NIGHT TRIPS. You can leave in the evening, travel from 500 to 600 Km., stay the night at an hotel, devote most of the following day to your affairs and return that night. Examples: Over-night return trips from PARIS include Bordeaux, Grenoble, St. Nazaire or Zurich.

DAY TRIPS. You can leave in the morning, travel from 350 to 500 Km., have several hours in which to conduct your business and return the same evening, in comfort. Examples: Day return trips from PARIS include La Rochelle, Lyon, Antwerp or Sarrebruck.

Politics of the Centre

THE UNADJUSTED MAN.
By Peter Viereck.
USA: *The Beacon Press.* 348 pages. $5.

IT would be a pity if the highly unsystematic, indeed at times almost chaotic, presentation of Mr Peter Viereck's important thesis in this book seriously reduced the number of readers prepared to give it a full hearing. The chaos is largely incidental—the price paid for having gathered together a collection of essays, articles and lectures and given them chapter numbers. But the thesis is a sustained one and almost provides the unifying frame which, one feels, would have been apparent if Mr Viereck had given us a book and not a sheaf of his occasional writings.

The important point, however, is the theme. To some extent it is becoming familiar on both sides of the Atlantic as a response to the disillusions of the thirties and forties during which time men saw totalitarianism reached with equal deadliness by way of either Left or Right. Whereas in the thirties, under the shadow of the depression, men of liberal conscience were tempted to believe that "economic democracy" was more vital than the checks and balances of political freedom, today the new mood tends towards a constitutional centre, to politics of moderation, to the belief that, confronted by totalitarian extremism, "ethical parliamentary capitalism (when tempered by social humaneness) and ethical parliamentary socialism (when tempered by anti-statist safeguards) stand on the same free side." Mr Viereck calls this realisation of a common constitutional framework the "new conservatism." But he would also agree that it is, in a sense, an old and venerable conservatism. It is, in fact, the same outlook as was evoked in Europe in the late eighteenth and early nineteenth century by the excesses of the French Revolution. It is in the political philosophies of such men as Burke in England, John Adams in America, de Tocqueville in France, Burkhardt in Switzerland or Cortès in Spain, that we first find the systematic defence of rooted, inherited freedoms against the abstract rationalist freedom of the Jacobin revolution. These men realised how easily the entrenched safeguards of individual liberty in society could be overridden in the name of the perfect society, conceived in abstraction, embodied in a general will and in fact at the mercy of manipulated mobs. They saw that reality under Robespierre. A later generation has seen the same dire phenomenon under a Stalin or a Hitler.

A particular merit of Mr Viereck's study is to present this struggle for a constitutional centre against radical extremes in the context of recent American history. There is, for instance, the disturbing resemblance between some New Dealers' indifference to constitutional safeguards when businessmen were being smeared and pilloried by the Nye Committee and the McCarthyite gibes of two decades later.

This ambivalence has deep and curious roots. Much of the reforming ardour of the New Deal was drawn from an older tradition—that of the Populists and of the Progressive movement sponsored by the La Follettes in Wisconsin. The protest was not simply against the gross injustices of a plutocratic industrial order largely dominated by eastern finance. The western and middle-western movements resented, too, what they took to be an educated, aristocratic tradition, entrenched in existing institutions—in the Supreme Court, the judiciary, the Senate, the older universities. The radicals were also levellers. La Follette secured direct voting for the Senate because he believed that progress depended upon the people's direct will. He also sought an elective and recallable judiciary. When President Roosevelt attacked the "nine old men" of the Supreme Court as protectors of privilege, he was drawing on the resentments of five decades.

The New Deal and postwar economic expansion have reduced American poverty to so marginal a problem that economic levelling is no longer an emotional mass issue. But what has survived from Populism to spark the McCarthyite Right is resentment at status, education and established tradition. Once again, judiciary and Supreme Court are attacked, the older universities decried, intellectuals denounced, checks and balances in the constitution opposed and appeals made, over the elected Senate, to an aroused mass opinion. The attack is based now on inflamed nationalism. Before it sprang from embattled poverty, but its drive is the same—to undo the built-in defences of society in the name of direct popular emotion. It is no coincidence that Senator McCarthy came from Wisconsin. He lacked La Follette's generous sympathies, but he inherited the suspicion and the levelling mood.

What, then, are the safeguards against the extremes of radical mass emotionalism, whether of Right or Left? In part they are the old familiar defences —the rule of law, the independent judiciary, the separation of powers, the plural society. But these defences fail if men do not cherish them. Freedom, as Judge Hand has said, will not survive in constitutions if it has died in people's hearts. The defence of freedom therefore must include the ability of men and women to know and savour their own freedom. Mr Viereck's most eloquent pages denounce the dangers of accepted conformism, of spontaneous group adjustment driving freedom from its last defence—the free human spirit. This is the basis of his argument for the "unadjusted man," for his passionate attack upon the politics of manipulation, hucksterdom and mass conditioning.

It would, in fact, be quite false to suggest that he has written anything like an academic exercise on freedom. His illustrations from past history are simply an effective part of his polemics. He is a strong partisan. He wants to stir people to passionate disagreement. He waves his theories under their noses—and tweaks their noses, too. Like many expounders of liberal conservatism, he perhaps underestimates the dynamite needed to break down the inhumanities and encrusted injustices of any traditional social order. He could invite to himself Tom Paine's scorn for Burke's reactions to the French Revolution: "He pities the plumage and forgets the dying bird." Equally, however, he could claim that we are not short of treatises on dynamite. They have been the staple reading of this century. He does no more than redress a balance in suggesting we should be very careful what we blow up.

Wooing the Indian Princes

THE STORY OF THE INTEGRATION OF THE INDIAN STATES.
By V. P. Menon.
Longmans. 511 pages. 45s.

ON the eve of independence, India's territories were criss-crossed by 554 princely states. Since paramountcy was not to pass to the new dominions but to revert to each state, the sub-continent was menaced with balkanisation on a scale never achieved in the Balkans. The stage was set for intrigues between the states, the two hostile dominions, and foreign powers fishing for trouble. The stability of south-east Asia had been weakened by the emergence of three successor states in Pakistan, India and Burma: the emergence of 557 would have created a power vacuum with world repercussions. It is therefore beyond dispute that the Indian government was right to exert itself to mop up the milky way in which it threatened to drown. The task was formidable and hazardous. A civil war was raging over northern India. The army, police, the administration itself, were all at sixes and sevens in process of being partitioned and reorganised. The princes had but to display unity and resolution and keep dry the powder of their considerable armed forces to maintain their pullulating sovereignties.

That in these extraordinary circumstances the Indian Minister for States, the late Sardar Patel, and his vigorous aide, Mr V. P. Menon, succeeded in

Chester Bowles

American Ambassador to India 1951-1953, makes a plea for a reappraisal by the Atlantic Powers of their African, Asian and Middle Eastern policy.

THE NEW DIMENSIONS OF PEACE

"He argues cogently, drawing freely from history. He can generalize from his own experiences in India and south-east Asia. Almost everything he says impels support." THE TIMES

Illustrated 25s

"It is nearly 20 years since **M. Maurois** first published his **HISTORY OF ENGLAND** (25s.) and during those years nothing has quite superseded it, so that this new edition, with its extra chapters bringing it up to the end of 1954, provides a most welcome reappearance."

THE TIMES EDUCATIONAL SUPPLEMENT

THE BODLEY HEAD

Introduction to Keynesian Dynamics

By KENNETH K. KURIHARA

A coherent and compact study of macro-dynamic analysis in general and particularly of the two outstanding "post-Keynesian" developments in this field—dynamic theories of cyclical fluctuations and secular growth analysis. 21s.

Theory and Working of Union Finance in India

By R. N. BHARGAVA

An original contribution to the study of the problems of public finance in a federal state. 30s.

Industrial Structure of American Cities

By GUNNAR ALEXANDERSSON

A geographic study of urban economy in the United States.
11 x 8. 40 maps and figures. 40s.

GEORGE ALLEN & UNWIN

cajoling, bluffing and bullying the princes into accession without firing a shot (save in the walk-over action against Hyderabad) is one of the most remarkable strokes of *realpolitik* in modern times. Its justification was expediency. But in this Age of Principles and of the People, expediency is abhorred as immoral, inadmissible. Consequently, Mr Menon feels compelled to describe his statecraft not in frank and ringing Palmerstonian tones, joyously defying the world, but like a sucking Khruschevian dove liberating the Hungarian people. An exciting, dramatic and well told tale is smothered in smug, Orwellian double-speak. Crowds which come out in support of India are, of course, "the People"; those which challenge India are "mobs" instigated by "unscrupulous agitators." Mr Menon shows how prince after prince was coerced by intimations that autocrats could have no chance against agitations that could be engineered in their states if they were unco-operative, and by promises that their individual incomes and status, and in many cases the separate identities of their states, would be guaranteed and respected. To read page after page of such assurances, given in the most solemn manner in the name of democracy, induces a wry smile when one reflects that not one of the states of 1947 survives and that revision of the privy purses guaranteed nine short years ago is now being debated.

Mr Menon's book is an important original documentary source for historians of India and a document that should not be overlooked by historians of our times.

A Learned Art

STUDIES IN THE HISTORY OF ACCOUNTING.
Edited by A. C. Littleton and B. S. Yamey.
Sweet and Maxwell. 403 pages. 50s.

THIS collection of 23 essays, tracing the history of accounting from the Greeks and Romans to the Companies Act of 1900, makes an important contribution to the re-establishment of accounting as a learned art. This it was in the curriculum of Oxford at the end of the thirteenth century, even though it has no place in the twentieth century. The essays provide a fascinating historical survey because of the constant interplay of two opposing themes: the slow progress made in the conversion of the business world to the Italian invention of double entry perfected somewhere between AD 1250 and 1350; and the ingenuity of the non-Italian world in running its business affairs quite efficiently with very primitive book-keeping techniques. Professor Raymond de Roover shows that by the middle of the fourteenth century the Italians had all the refinements of book-keeping—balanced books, prepayments, accruals, reserves, depreciation provisions, management accounting; accounts were being filed for tax purposes as early as 1427 and, a few years later, tax was being avoided by the preparation of special accounts for the revenue authorities.

Yet Mr Rudolph Robert can trace the history in England of wooden tallies notched to form primitive receipts which were not finally abandoned until 1826 and were last heard of in quantity when they were responsible for the burning down of Parliament in 1834; Mr Harold Pollins makes it clear that the theory of depreciation baffled many boards of railway companies throughout the Victorian era; and, according to Mr J. G. C. Jackson, a rational system of teaching double entry without pages of rules or mythical personages such as Mr Chest and Mr Box did not get into a standard textbook until 1949. A reader of this book is forced to ask both how this could have happened and whether we are sure that we have not still got things to learn from Luca Pacioli writing about AD 1493 or Hugh Oldcastle writing in English in 1543. The essays on Pacioli himself and early English books on book-keeping show that instructional treatises were available from these dates and had demonstrated that despite the difficulties inherent in making any calculations with Roman numerals good accounting could be an aid to management. Indeed Mr de Ste. Croix in a scholarly study of Greek and Roman accounting makes one wonder why one of the Greek notational systems did not make the arabic system superfluous. We can draw comfort only from the last essay by Mr Nishikawa in finding that even Japan, a country which assimilated much of the western heritage quickly and profitably, took only reluctantly to double entry.

The essays contain much more than a mere history of the spreading of double entry. Some are essentially learned, well provided with notes and throwing out a challenge to scholars to study and publish sources known to exist but not yet adequately studied; others are frankly anecdotal though demonstrating the delightful incidental bits of history to be derived from a man's rough or not so rough accounts; in this category comes the depressing joint disclosure by Messrs Edey and Panitpakdi that in the last quarter of the nineteenth century *The Economist* could not decide for or against the compulsory publication and filing of accounts.

This book can be recommended to all those who recognise accounting as a vital part of modern business and wish to know what put Italian business on top five centuries ago and produced an early but very successful tycoon.

Poet's Prose

THE PROSE OF RUPERT BROOKE.
Edited by Christopher Hassall.
Sidgwick and Jackson. 254 pages. 15s.

THE reputations of some writers may have been heightened by an early death: not so Rupert Brooke's. It was clear, from the moment of his death, that he would be the legend of his time. Everything conspired towards it: his beauty and his charm; the circumstances of his death; the widespread emotional response to his famous sonnet; and the fact that, as Henry James said, "while he is still in the highest degree of the distinguished faculty and quality, we happen to feel him even more markedly and significantly 'modern'." Alas, the modern of one day is on the shelf the next, and his lasting merits were overlaid by his aptness to a passing time. But we are far enough from him now to disinter them from these overlays of fashion and out of fashion, and to recognise in him a serious poet of considerable merit, and a steady developer who had the bad luck to die before his prime.

Mr Hassall's texts, which he introduces with sympathy and knowledge, are in the nature of *mémoires pour servir* to the revival of Rupert Brooke's memory. As the editor says, "his comments are entertaining and often illuminating in themselves, but their special interest lies in their being the opinions of the young man who wrote the poems and was one of the originators of the Georgian movement." Mr Hassall draws from Brooke's travel letters (excellent, these) and from his dissertation on Webster, which have both already been published in book form, and for the rest he quotes reviews, articles and so forth. Brooke died when he was twenty-seven, leaving no prose writings behind him except his dissertation and some ephemera; so the field of choice is rather thin and Mr Hassall has to rely on much that Brooke himself, no doubt, would not have republished. But a clear enough picture emerges of a talented and perceptive Cambridge man, one of the setters of a good and long-lasting tradition in his college and university.

We should be grateful to Mr Hassall for bringing one aspect of Brooke to light. It is time that his work should be reassessed, and this book helps. The next move is for more of his letters to be published, since those that have appeared are delightful and revealing. One hopes that his literary executors will soon arrange for this.

The Seaman's Secrets

THE HAVEN-FINDING ART.
By E. G. R. Taylor.
Hollis and Carter. 307 pages. Illustrated. 30s.

TO write a good history of the art of navigation one must be geographer, historian and mathematician combined. No wonder few such books exist, and none before this which explains in such confident detail the unrecorded mysteries of the old voyagers, ancient Greeks, Irish saints and Viking explorers of the dark ages. The most abstruse utterances of the schoolmen do not deter Professor Taylor from lucid descriptions of the beautiful but baffling instruments used in the later middle ages. Even if the layman cannot follow her among the mathematical problems of those Renaissance scholars who introduced latitude sailing and the use of the true chart, he can appreciate the contributions made by the Arabs, the Portuguese or those mathematical practitioners of whom the author has only recently compiled an erudite dictionary.

Dr John Dee has always been her favourite, and here he towers above his fellow Elizabethans, even above Edward Wright, the Cambridge don, from whom she takes the title of her book. She devotes more space to these academics than to the seamen themselves, so that John Davis, the finest navigator of his age, is never mentioned for his "Seaman's Secrets" which popularised their methods. Captain Cook, two centuries later, was the first fully equipped navigator in history and the last to establish those basic principles on which modern navigation is based. The way in which he vindicated Harrison's solution of the problem of longitude is familiar; but for the beginnings of mathematical navigation, and for the earlier chapters of the long story from Odysseus to Cook, this book has unique value. How nice it is to be told that the Irish discovered Iceland by following the migration of geese, and that the compass is not an importation from China but a natural evolution from the discovery of the lodestone about 1100. Alexander of Neckham, the first Englishman to describe it, "was strongly of the opinion that no one should go to sea except under extreme necessity." Yet as far back as Homeric times men were sailing out of sight of land by wind and star, since land has always been to the sailor a danger to be avoided rather than a friend to be hugged.

The author is a true descendant of those professors of Gresham College, the ancestor of her university, who first taught navigation in public to make it something of wider interest than the secrets of practical seamen. They rationalised the seaman's age-old institutions and she has crowned a lifetime's study of the subject by showing how they unveiled the mystery. Only two complaints can be made of this admirable book: the absence of Professor Taylor's formidable wit, and the arrangement of the index. To find "astrolabe" or "sextant" you must look under "instruments," though "compass" or "chronometer" appear under their own names.

A House Divided

ANDERSONVILLE.
By MacKinlay Kantor.
W. H. Allen. 767 pages. 20s.
MR LINCOLN'S ADMIRALS.
By Clarence Edward Macartney.
The Mayflower Publishing Company. 335 pages. 37s. 6d.

THE United States is suffering from an inflation of books about the Civil War. With the centenary only a few years away and with spoken traditions still alive (particularly in the South, where almost any old gentleman is prepared to trot out the story about Lee or Hood he heard from an eye witness), the market seems inexhaustible. The documentation of the war is superb—it is almost possible to know exactly when Grant looked at his watch—and the military parks on the old battlefields keep the story alive for this motor-driven generation. The tragedy of the internecine struggle catches at the emotions while the skill of the generals and the endurance of their troops in this first of the modern wars appeal to the reason.

The interest in the Civil War is genuine. But too many second-rate books have been published to feed it. The boom has produced good books, but these two are certainly not among the best: "Andersonville" comes to this country as a best seller in the United States. For those who do not give "Gone With the Wind" too high a rating the claim that "Andersonville" is the greatest Civil War novel since that volume swept the market may just pass muster. But for those who know Stephen Crane's "The Red Badge of Courage," the vaunt that "Andersonville" is the greatest Civil War novel ever written will stick in the throat. It is an unusual book; it possesses a bibliography, and it portrays (occasionally with vigour) the horrors of a southern prison stockade for Union troops. But filth, nastiness and brutality do not necessarily make a tragedy, and turgid over-blown metaphors do not make a novel. For all that, it has the mark of a professional writing for a market he understands—a market which must have tremendous powers of patience to stomach the horrible details of its 767 pages.

"Andersonville" is semi-documentary; "Mr Lincoln's Admirals" is pure documentary. The author, like Mr MacKinlay Kantor, knows his market, and this is the umpteenth book he has produced on the Civil War (usually with Lincoln mentioned in the title). The history of the naval conflict in the Civil War has often been told, and parts of it (such as the battle of the *Monitor* and the *Merrimac*) are well known even in this country. To cast his volume in a new mould, Mr Macartney tells his story in the form of separate biographies of the Union admirals: Farragut (who did not say "Damn the Torpedoes: Full Steam Ahead"), Foote, Porter, Worden and the rest. As a result, the narrative tends on occasion to become confused and repetitive. For the English reader the only appeal of this book (which unaccountably misses out those tiny vivid details that make familiar history come alive again) is that of novelty, but it can hardly be recommended to those who have access to earlier and more detailed histories of this naval conflict.

American Survey

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Faults on the Transatlantic Line

Washington, D.C.

IT will be a long time before geniality is restored between London and Washington. It will take longer to restore mutual esteem between Washington and Paris, since American officials have been exposed to outbursts of Gallic cynicism in recent weeks which they have found little to their taste. But the circumstances of a fast-moving world are driving the erstwhile partners back into the same bed. While this is realised on both sides of the barriers of officialdom, its implications have been comprehended more thoroughly in influential sections of the American press than at desks in the State Department.

There was one heady moment, with the mortifications of the Anglo-French ultimatum freshly gnawing at Mr Dulles, when new vistas of American diplomacy appeared to be opening up. The simultaneous disintegration of the Soviet Empire in Eastern Europe and of the Anglo-French hegemony in North Africa and the Middle East seemed to offer a way of escape from a sapping ambiguity in the American position. Mr Dulles is not the first postwar Secretary of State—and he must now be sadly reckoning that he will not be the last—who has fretted at the frustrations of trying to be both loyal to the Atlantic alliance and effective in exploiting America's reputation for anti-colonialism. The independent British and French action might have freed the United States to follow the second line decisively in areas where the two conflict, since the prospect of a buffer zone emerging in Poland and Hungary suggested that any damage to the alliance could be equally endured.

The massive Russian retaliation on Hungary and the prospect of "volunteers" in the Middle East brought an end to such dreams. But the impact of these events is still noticeable, although more in the press than in the State Department; some newspapers, with the *New York Times* in the van, are calling for the alliance to be wheeled around to face all the frontiers of Russian malignancy. Among American diplomats the dominant note is still the tender care for the opinions of the uncommitted, which used to be the stock in trade of British advice to the United States. And there is a nerve twitch of irritation at the success which the British have had in spreading what is called the "*ex post facto* explanation" of a "Russian plot" in the Middle East.

In so far as there is a State Department opinion in the absence of Mr Dulles, it appears to be that the lonely asset surviving the wreck of western influence in the Middle East is the moral advantage of America's speedy initiative in the United Nations. It is considered essential not to compromise this by any manifest collusion with the British and French, such as a "big three" meeting or a guarantee of fuel supplies, so long as the invading troops are in possession at Port Said. The Americans earnestly believe that their own ability to curb Russia's capacity for mischief by lining up African and Asian support behind a permanent solution of both the major issues, is dependent on showing good faith by getting the British and French out of the canal zone.

This belief does not derive from anti-colonialism, as the term is usually understood, among American officials. It does derive from conviction that America's reputation for anti-colonialism is a card which the United States has in reserve for use on just such a desperate occasion as this. Moreover, although it is a long time since Americans in general failed to give prominent recognition to the positive British achievements in the bestowal of self-government, there is about the British pronouncements on the Suez Canal and on other issues in the Middle East a "colonial" tone that grates upon the American ear.

Rather, it should perhaps be added, it grates on some American ears. There are Americans, critical of the Administration's initial revulsion from the Anglo-French ultimatum, who have long felt that a little of the colonial tone, delivered in the accents of those accustomed to use it, would have an excellent impact on the Middle East. There is good reason to believe that some senior members of the Administration would have shared this view if they had not been antagonised by the British failure to give them advance warning. But the sympathy of those whose natural impulses were on these lines was then forfeited by the mortal slowness of the Anglo-French operation. They had all along assumed that the whole object of incurring the odium of imperialism in Cyprus was to hold available a striking force of parachutists which could intervene within forty-eight hours at any point in the Middle East. It was disillusioning to the "realist" school of diplomacy, and to habitual Anglophiles, to find that a convoy from distant Malta was required before the sleepy lion could strike. The British reputation for imperialist efficiency and Palmerstonian vigour is almost as total a casualty of recent events as the even stronger faith in the special maturity and patience of British statesmanship.

★

Regardless of the past, the Americans are now faced with the problem of what to do next. Unfortunately their two present improvisations, reliance on the United Nations and determination to find some permanent solutions for both Israel and the Suez Canal, are beginning to carry them on divergent currents. As on occasions in the past, the Americans seem to have waited on the Secretary-General's diplomacy without making sure that he had the same things in mind as themselves. In this case the point at issue is how long the United Nations police force is to remain vigilant on the Suez Canal.

The Americans want the police force to stay there until there is a permanent solution of the dispute over the canal. At this one point at least American policy appears now to overlap with that of the French and British. A joint stand would be possible against the Russians, and the British and French would have their justification for leaving, although the Americans insist that any pronouncement from Sir Anthony Eden claiming personal or national vindication would be fatal to the enterprise. But the weakness of this manœuvre has turned out to be that the Secretary-General has not, like the United States, shifted his position from one of keeping separate the disputes between the Arabs and Israel and that over the canal to one of drawing from the imbroglio a solution to both. And before a firmer turn can be given to events either Mr Dulles must return or a new Secretary of State be appointed. To anxious foreign diplomats the President appears relatively inaccessible and Mr Herbert Hoover, the Acting Secretary of State, personally impenetrable.

From the viewpoint of the Anglo-American alliance some lessons should be mastered, even as recriminations are extinguished. There has, to be blunt, been altogether too much use of the vocabulary of comradeship without the reality of genuine expression. The doubletalk of mutuality has induced a kind of deafness to plain words and a garbling of clear situations. For nearly a year Britain and America have been shouting at each other without hearing, Britain saying that it would use force in the Middle East without waiting for the United Nations, and the United States saying that it would countenance no such procedure. The British and French grossly exaggerated the paralysing effect of an American election; the Americans did not grasp the intensity of Anglo-French despair at Mr Dulles's disappearing solutions. The British for a time gave Mr Dulles the impression that they were prepared to let the United Nations settle the matter. But Mr Dulles had equally failed to explain to the British his own, much-prized long-term plan for bringing Colonel Nasser to his downfall within a year by political and economic pressure. From now on, the improved facilities provided by the new transatlantic cable between London and Washington, on which Sir Anthony Eden could have spoken to President Eisenhower before he rose in the House of Commons had he so chosen, must carry an exchange of understanding as well as of language.

Economic Advice

DR ARTHUR BURNS'S resignation from the President's Council of Economic Advisers is for "personal" reasons; he has stayed in Washington longer than he intended when he was appointed early in 1953 and he is tired. Certainly Mr Eisenhower is sorry to see him go. Dr Burns has returned the council to the back room where by statute it belongs and has removed it from the political limelight and congressional distrust which were turned on it by the controversial activities of Mr Truman's economic advisers. More important, to Dr Burns, an expert in the business cycle, accrues much of the credit for the successful control of that cycle, and for the steady growth in the national economy, during Mr Eisenhower's first term of office. But the economic advisers have no executive responsibility; that rests finally with the President and is exercised mainly by the Secretary of the Treasury and by the chairman of the independent central bank, the Federal Reserve Board. Some at least of Dr Burns's present tiredness may be due to his fears, of which he has made no secret during recent months, that these officials have been pursuing too restrictive a credit policy. As he leaves, the Federal Reserve banks are expected soon to raise their discount rates once again and so make it even more expensive to borrow money.

Dr Burns's main concern is with the damage being done to the house building industry by the present scarcity of credit. This is also the concern of his successor as chairman, Dr Saulnier, who is already a member of the Council; the vacant place is being filled by Dr McCracken from the University of Michigan; the third member is Dr Davis, an agricultural economist from Stanford. Dr Saulnier is an expert on mortgage borrowing and consumer credit and he takes office as the Administration seems ready to admit that the builders are a special case and that something must be done to make more money available for them. At the same time, however, the inflationary danger which drove the Federal Reserve Board to embark last spring on its series of monetary restrictions are becoming more obvious and more generally recognised. The Secretary of the Treasury now seems to be in full agreement with the board's actions, as he was not earlier in the year. President Eisenhower himself, at his first press conference after his re-election, promised to fight against any continuation of the recent rise in the cost of living. With the index of industrial output at record levels for the last two months, and with the gross national product running in the third quarter of the year, in spite of the steel strike, at an annual rate of nearly $414 billion, an increase of 4 per cent in twelve months, the national economy is clearly pressing against its ceilings.

Strike On Both Coasts?

AS the dock strike on the east and Gulf coasts of the United States entered its seventh day, it was still uncertain whether the dockers on the west coast would join in sympathy and confront the employers, for the first time, with a national stoppage. Already some 250 ships are lying idle, and the cost of the delays, which have repercussions extending far beyond the ports, has been estimated at over $20 million a day. Even perishable cargoes cannot be unloaded—chestnuts for stuffing Thanksgiving turkeys are rotting—and the congestion at the docks is so acute that all railway freight shipments to the east and Gulf coast ports have been halted. Only oil tankers and military cargoes remain unaffected.

The strike has its origin, as usual, in New York, where the notoriously corrupt International Longshoremen's Association has failed to agree on a new contract with the shipping lines. The key to the strike is the union's demand that the New York employers negotiate now a contract

covering their operations at all other east and Gulf coast ports as well, and pave the way for a "national" agreement between the ILA and all employers except those on the west coast. The right of the ILA to represent the New York dockers has just been confirmed, for the third time in succession, in an election fought against its rival on the New York waterfront, the International Brotherhood of Longshoremen. But the challenge to the ILA's authority still persists and, by gaining recognition as a national bargaining agent, the ILA could take advantage, in any future struggle for power, of its strength in the "outports" on the east and Gulf coast, where the IBL has little support. The New York employers, quite understandably, will bargain only over conditions in the port of New York, and the National Labour Relations Board is seeking a court injunction which would force the union to abandon its insistence on this point. This would not end the dispute, but the union's other demands, which are mainly of the conventional, more pay for less work, variety, would at least be negotiable. If no progress is made soon, the government will be forced to invoke the provision of the Taft-Hartley Act which imposes an eighty-day "cool off" period during which the dockers would have to return to work.

In all ports except those on the west coast the dockers are blindly striking in support of the ILA regardless of the state of their own negotiations with their local employers. On the west coast, where work was stopped for a day to consider the position, the dockers have given their leader, Mr Harry Bridges, a free hand to decide whether to call a strike in sympathy with the ILA and thus close all ports in the United States. The ILA's leaders have announced brusquely that they want no help or sympathy from Mr Bridges, but, as he is involved at the moment in bargaining with the west coast employers, he may still decide to support the ILA in spite of itself.

Jim Crow Shot Down

LAST week the Supreme Court, in a decision of great importance, declared unconstitutional a city ordinance in Montgomery, Alabama, made in compliance with state law, which enjoined racial segregation on city buses. The Court unanimously affirmed on appeal the two to one ruling of a lower federal court which had declared the Alabama statutes to be in violation of "the due process and equal protection clauses of the Fourteenth Amendment." So "Jim Crow" legislation, already unconstitutional in interstate transport (that is, in trains and vehicles crossing state borders), is now banned even within a single state. And this finally kills, legally at least, the historic "separate but equal" interpretation of the Amendment (Plessy *versus* Ferguson, 1896), already rejected in its application to schools by the Supreme Court in 1954 and again in later decisions on parks and other public services. Separate facilities, however physically equal they are, are no longer deemed to give "equal enjoyment of the laws" to Negroes.

The case was related to the Negro boycott of the Montgomery bus services, which has remained unbroken for almost a year. The Negroes have now voted to end the boycott, as soon as the decree of the Supreme Court is put into effect. But it is easier to declare a law unconstitutional than to secure its enforcement, as the argument over racial integration in the schools still shows, although segregation in travel is not quite as universal or as deeply rooted as in education. White opinion in Alabama is defiant and outraged at the Court's "interference with state rights" and local custom. Southern reactions generally show that movement towards compliance with the law will be painfully slow, although now, as in the schools, there must be some movement.

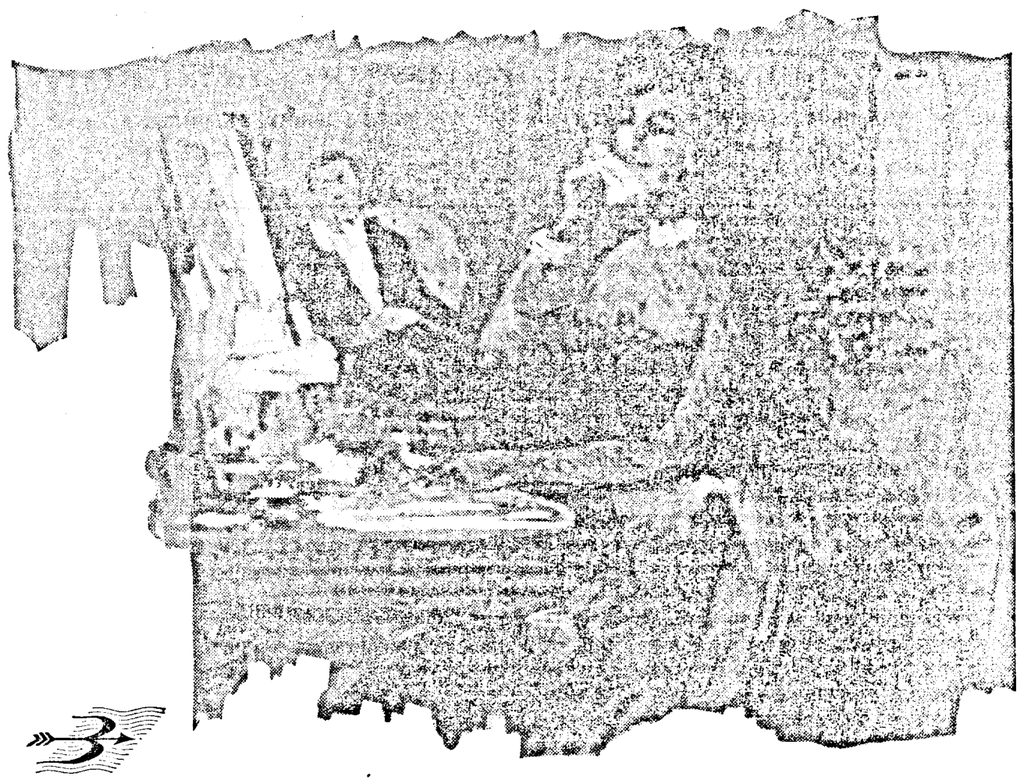
The boycott has so far cost the northern-owned bus company an estimated $750,000, and it may lose still more if white people in Montgomery prefer not to have buses at all rather than to share them on equal terms. "As far as I'm concerned," said a state senator, "they can move the bus lines lock, stock and barrel to Washington, DC." However, in Washington, DC, the Attorney General, Mr Herbert Brownell, in an unusual burst of activity, has summoned a conference of United States Attorneys from fourteen southern states to consider how the Court's decision is to be implemented. Continued discrimination, Mr Brownell went so far as to say, will be considered "a crime against the United States." It remains to be seen whether this is a mere gesture of thanks to Negroes who voted Republican or the beginning of full-scale federal enforcement of the Court's decrees against segregation.

The President's Family

ALL nineteen of the officials who sit in President Eisenhower's cabinet have handed in their resignations; but their action is purely a courtesy conventionally extended to a re-elected President. In fact, none of these offers has been accepted, although several members of the cabinet, notably the Secretary of Defence, Mr Wilson, and the Secretary of the Treasury, Mr Humphrey, would like to resume private and business life. Many of the businessmen whom the President brought to Washington in 1952 seem to have found the frustrations many and the rewards few—particularly in dealings with Congress. The call of duty and the earnest persuasions of the President will prevent any mass exodus; but there is clearly some room for amicable changes, though they will probably come gradually throughout the coming year. The two heads which some Republicans would like to see roll, those of Mr Benson, the Secretary of Agriculture, and of Mr Harold Stassen, the special adviser on disarmament and Vice-President Nixon's political enemy, show no signs of rolling or even of wishing to bow out quietly.

Speculation is greatest about whether Mr Dulles will continue to recover from his cancer operation at the present extraordinarily rapid rate. Certainly, he shows no sign at all of wishing to withdraw. The names most frequently mentioned as possible successors have been—in addition to earlier forecasts of Mr Herter, the retiring Governor of Massachusetts—Mr Lodge, the head of the American delegation to the United Nations; Mr McCloy, once United States High Commissioner in Germany, and Mr Dewey, a former Governor of New York and presidential candidate and a leading sponsor of Mr Eisenhower's own political career. Mr Lodge is already in the cabinet, *ex officio*, and Mr McCloy and Mr Dewey may soon be plucked from the

To be fairer than the evening air Madame needs time. Carriage and escort must wait while the final touches are applied. Here comes cleansing tissue—what *would* one do without it—and with it a question: what is this to Bowaters or Bowaters to this? The answer is that Bowaters are not only makers of paper for newspapers and magazines, even though their name is synonymous with newsprint. And the making of tissues for Madame (and for Monsieur when he has a cold) is not the only variation on the paper theme. They are not glamorous, these square containers that bring detergents to the grocer, these adaptable industrial drums, these hygienic paper sacks. Those sweet wrappers, biscuit packs and jolly paper bags, now, they are much more appealing. And the solid, workable worth of hardboard is demonstrated a thousand times a day by carpenters, paid and unpaid. All are part of the varied and fascinating contribution that Bowaters make to modern living. And it all begins with a tree in Canada, perhaps, or Tennessee or Scandinavia.



The harvest of the forest is given many forms by **BOWATERS**

world of banking and law to take high government posts. Mr Herter, an esteemed liberal Republican, seems certain to be offered some high post in the Administration.

Sooner or later the President is expected to make some use of General Gruenther, who has just laid down his North Atlantic command to become president of the American Red Cross. This worthy post seems something of a political waiting room: General Marshall was president of the Red Cross when he became Secretary of Defence and its recent head, a businessman turned diplomat, Mr Elisworth Bunker, is the new Ambassador to India. In Rome, Mrs Luce is to be succeeded by Mr James Zellerbach, a west coast businessman with experience of Italian economic problems. A very promising appointment is that of Mr Arthur Larson, known as the Republicans' "Number one egghead," to be director of the United States Information Agency. An ex-Rhodes scholar from South Dakota and Under Secretary of Labour for the last two years, he wrote a book earlier this year which the President endorsed as defining his own "progressive conservatism." Welcome as he is in his new job, it is perhaps permissible to wonder whether Mr Larson's talents may not be needed even more to present "modern Republicanism" to America than to present America to the world.

Bourbons for Britain

THE health of the Board of Trade was being drunk last week on both sides of the Atlantic, when it was learned that American bourbon whiskey and Canadian rye whiskey can now be imported into Britain without limitation on open general licence. The British Government's decision, which took the American distillers by surprise, has come after several years of pleading, both by the Scotch Whisky Association and the Travel and Holidays Association in Britain and by the whiskey industry in the United States, for some relief from the very restrictive token import scheme which has been enforced in Britain since the war. Based on imports between 1936 and 1938, when American distillers, still suffering from the effects of prohibition, had few aged whiskeys available for export, the quota provided for imports of only £2,500 worth of all dollar whiskeys a year, and £1,800 of that was for Canadian rye.

The Travel Association's desire to provide Kentucky sour mash in Scotland for all those brave enough to ask for it is understandable; and the Scottish distillers were in favour of relaxation here in order to offset some of the pressure in the United States for higher import duties on imported Scotch. Sales of Scotch whisky (including some Irish) in the United States have risen from 4 million proof gallons worth £8 million in 1947 to 8 million proof gallons worth £23.4 million last year. As the total consumption of spirits in America has been rising more slowly, the share of the American market captured by Scotch has grown from less than 5 per cent in 1947 to nearly 8 per cent in 1955. American distillers, who are now operating at just below half of their capacity, have had the additional worry of carrying heavy stocks of aged whiskeys in the face of a law which taxes all whiskey stocks over eight years old, whether kept in bond or not. Pressure from the trade for higher protective duties has consequently been growing, and the lobby was particularly successful in catching the ear of Senators in the last Congress. The one mitigating factor is the generous profit earned by American distillers who distribute imported Scotch—and as the recent anti-trust case filed by Park and Tilford, Inc., against the Distillers Company makes abundantly clear, these franchises are not lightly regarded by the American distillers.

The stronger bargaining position now given to the Scottish producers is expected to justify the extra expenditure by Britain on dollar whiskeys. Both the Government and the trade feel that the increase in the consumption of bourbon and rye whiskeys in Britain will not be spectacular. But there is still the danger that whiskey bought for dollars may be re-exported to soft currency countries, although Britain's obligation to settle debts with its partners in the European Payments Union to the extent of 75 per cent in gold should do much to lessen any net dollar loss. And in 1954 the American distillers, to escape the operation of the American tax laws, suddenly exported over 2 million American proof gallons of whiskey to Belgium. Very little of that can have been sold, and it could form the incentive for a promotion campaign to dispose of it in Britain. If the experience of the staff of this journal has any relevance, the British taste for "Old Grand-Dad" ("on the rocks," of course) may not be as difficult to stimulate as the Scotch whisky industry thinks.

Slippery Majority

THE Democrats' majority in the new Senate is the same as in the old, the smallest possible, so small that it may easily slip through their fingers. This does not at first glance seem to matter very much, since a vote of the whole house on straight party lines is almost unheard of. But on one occasion it is obligatory—on the day the new Senate meets, January 3rd. Then the members vote on the organisation for the coming session; they pick the party which is to have a majority on the committees, where most business is conducted, and provide the chairmen, who decide what that business will be. That is when the 49 Democratic votes to the 47 Republican will make all the difference—provided the Democrats can hold on to their total.

The first narrow squeak came some time ago when the new Senator from Ohio, Mr Lausche, who has always been an Eisenhower Democrat, threatened to vote Republican on questions of organisation. This would have made the two parties equal, with 48 each, and given the casting vote to the Republican Vice President, Mr Nixon, who presides over the Senate. Now Mr Lausche has decided to stay in Ohio until his term as Governor expires on January 14th; he will not therefore be in Washington on the vital days and the Democrats will have 48 votes to the Republicans' 47. The Republican total will in fact probably be 46, for the new Senator from New York, Mr Javits, wants to remain there as Attorney General until the State Legislature meets on January 9th. This will allow the Republican majority on that body to appoint his successor, instead of giving the Democratic Governor an opportunity of offering the job, which carries substantial patronage with it, to one of his own supporters.

But even so the Democrats are not safe. Their Senator

Daniels has promised to stay in Washington until he takes over as Governor of Texas on January 15th, but it is possible that the present Governor, Mr Shivers, another Eisenhower Democrat, may manage to get in first and appoint a Republican to take Mr Daniels's place. In any case, there will have to be a special election for the Texas Senate seat during the next few months, and the local Democrats are in such confusion that a Republican may win. Finally, although it is perhaps ghoulish to draw attention to it, there are two, and possibly three, octogenarian Democratic Senators who come from states with Republican Governors—Mr Neely of West Virginia, Mr Murray of Montana, and Mr Green of Rhode Island. If any one of these dies, a Republican will be appointed to fill the vacancy until November, 1958.

A Block Breaks Up

FROM A CORRESPONDENT IN PROVIDENCE

ONE of the dramatic upsets in the recent election was in the contest for Governor in Rhode Island, the smallest state in the union. Mr Christopher Del Sesto, a Republican relatively new to fights for office, appears to have defeated Governor Dennis Roberts, a Democrat who had been Governor for three terms and almost unfailingly successful in politics for more than twenty years. Only once since 1930 (the office is at stake every two years) has Rhode Island elected a Republican Governor. The final result this time will probably not be known until a count of absentee ballots ends early in December. But whoever wins, the fact that the Governor led Mr Del Sesto by only 190 votes, out of just under 380,000, on election night makes this a remarkable change in the state's political pattern.

This is the outcome of a long and fascinating political process which has been going on in Rhode Island and in other areas where voting by blocks, according to country-of-origin, or country-of-heritage, had become characteristic. In Rhode Island in the beginning the Yankees ruled. In 1928 the Irish began to push the Yankees aside. The Irish in turn were challenged by the Italians, but in most cases were able to hang grimly on to places at the top until now. Governor Roberts and Mr Del Sesto are both Americans, but in political terms the first is Irish and the second Italian. A principal reason for the way their fight came out is that the Italians, perhaps as many as 25 per cent of all the voters in the state, shifted massively from the Democratic candidate to Mr Del Sesto, the Republican.

But they did not shift blindly, as a block, simply because Mr Del Sesto is an Italian, but for deeper-reaching, in some respects almost subtle, reasons. The passage of the years had created a new kind of Italian-American society in Rhode Island, sophisticated, economically and culturally advanced, mixed with other blood, spread more widely through the state, but always remaining in some degree Italianised in its politics. The Irishmen running the Democratic party failed to recognise this change in the "Italian vote." They did not see, or would not admit, that in important matters like money to spend on politics, and the influence provided by group leadership, there are as a practical matter more millionaires among the Italians today than there are ditch-diggers, more doctors and lawyers and artists than costermongers, more successful businessmen than factory hands.

The Democrats produced as their evidence of Italian support mainly men from the lower levels of 20 or 30 years ago who had then gone into politics asking first what was in it for themselves and had never stopped asking. There are distinguished exceptions, like Senator Pastore and his friends, but the Irish jealousy at the top meant that most of the Italian leaders of the party were confirmed "ward-heelers." The contemporary Italian-American community disliked this, for reasons going even beyond politics. They were not worried because these men did not properly represent them, in the political sense, but they were concerned because these men were not representative of them in the social sense ; they were bad examples of the new community for the general public to meet.

Mr Del Sesto, aged 49, four years younger than Governor Roberts, is only one generation removed from the old country, his parents having arrived in the eighteen-nineties, but he is the product of this century's accelerated assimilation. Night-school studies in law and accounting made him a boy wonder when he became State Director of Finance at 28. He moved on to government work in Washington, and with the war returned to Rhode Island as director of price control and rationing, doing the work well. All this was on Democratic patronage. He undoubtedly has his own explanations of why he switched parties, but the practical can suppose that as an ambitious young man he decided that his better opportunity lay with the Republicans.

The contest between Mr Del Sesto and Governor Roberts was not entirely one of Italian against Irishman. The Governor's long tenure had produced an inevitable boredom and dissatisfaction in some voters. Mr Del Sesto attacked with vigour and diligence, promising better house-keeping and fuller development of the state's resources, both industrial and recreational. Clean-cut, incisive, and with a new face, he evidently appealed to the younger voters ; according to one estimate, he won the support of 70 per cent of that increasingly important group whose voting habits, perhaps mainly a habit of independence, are still in the formative stage. But the shift of the Italians appears to have been decisive, and the apparent reasons for it, relevant far beyond Rhode Island, promise that the bane of block voting by "nationality groups" may be approaching the end of its course in American politics.

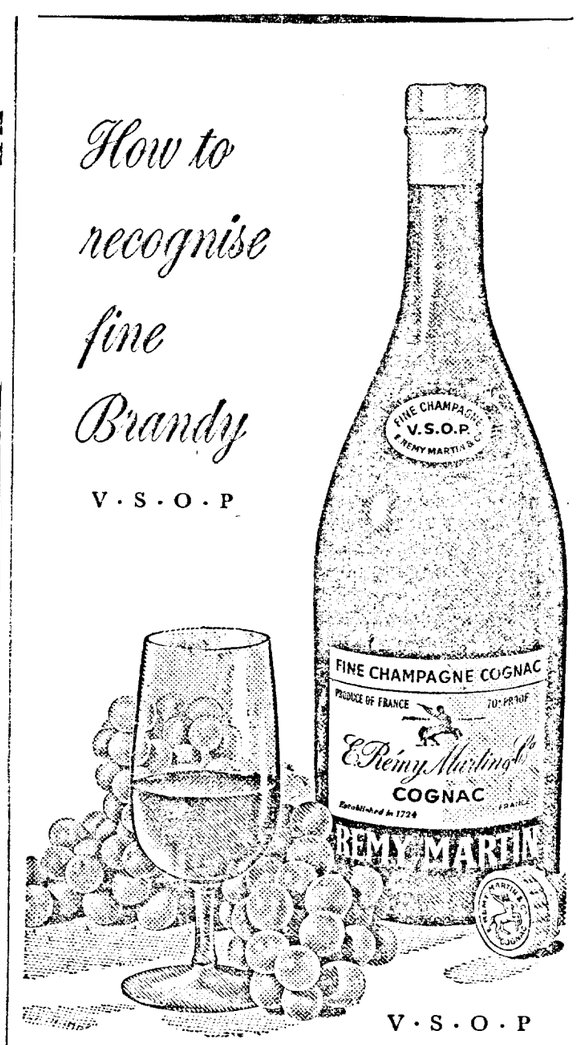
How to recognise fine Brandy

V · S · O · P



V · S · O · P

The finest brandy comes from the Grande and Petite Champagne districts of Cognac. Only Cognac originating from these two areas, at least half of which must be from the Grande Champagne, is entitled by French law to be called Fine Champagne Cognac.

Remy Martin produce Fine Champagne V.S.O.P. Cognac and *nothing less good*. They only offer for sale Brandy which has reached perfection. That is why when you insist on Remy Martin you can be sure of getting a *really fine Cognac*.

REMY MARTIN
Grande Fine Champagne Cognac

Monarch luxury service across the Atlantic

Particular people—who are accustomed to choosing the *luxuries* of life—always fly the Atlantic by B.O.A.C. "Monarch" *direct* to New York or Montreal. In all its aspects this de luxe First Class service offers that "extra something" which makes all the difference to your enjoyment. You'll appreciate the spacious interior of your *Stratocruiser* . . . its friendly downstairs cocktail lounge . . . the excellent 7-course dinner, served from a silver trolley with vintage wines . . . the *personal* service from the courteous staff of 3 Stewards and a Stewardess. At bedtime, for a nominal extra charge, you can enjoy the foam-soft comfort of a full-length sleeper berth. Fly "Monarch" and *see* how B.O.A.C. takes good care of you!

First Class return fare—London–New York, £282.18.0; London–Montreal £273.18.0.

Consult your local B.O.A.C. Appointed Travel Agent or B.O.A.C., Airways Terminal, Victoria, S.W.1 (VIC 2323); 75 Regent Street, W.1 (MAY 6611); or offices in Birmingham, Leeds, Manchester, Liverpool and Glasgow (see your Telephone Directory for details).

France's Economy After Suez

FROM OUR PARIS CORRESPONDENT

EVERY day of the last week has brought a new turn of the screw as the economic implications of Suez become clearer. Motorists who were first forbidden to drive outside their own or neighbouring departments will now find the petrol pumps (many of which are already short of petrol) closed on Sundays; it is expected that, unless they voluntarily cut consumption by 30 per cent, rationing will become inevitable. The railways have dropped some services; gas oil for heavy road transport will be rationed; the power stations and gasworks are using more low-grade coal (of which France normally has a surfeit) instead of oil. Most important, though little noted, has been the restriction by a third of fuel oil deliveries to industry (though exceptions—for the steel industry, for instance—can be made). About a quarter of the power used by French industry comes from oil, and there is little more than a month's stocks of fuel. This, though less is being heard about it than the motorist's hardships, is in fact the most serious aspect of the oil shortage. It explains more than anything else the irritation in French official quarters at American slowness in releasing oil supplies. Unless the bodies set up under the OEEC can quickly come to agreements with the American companies, French industry is in serious danger of heavy, if temporary, dislocation.

No one knows how much America will finally supply, but France will be lucky if it obtains from across the Atlantic ten or twelve million of the sixteen or seventeen million tons a year (out of a total import of 24 million tons) it has lost in the Middle East. That would mean a cut of 25 per cent in oil consumption and a direct cut of 5 or 6 per cent in production possibilities. For it seems that, quite apart from the problem of reconverting oil burners to coal, the amount of extra coal that can be imported will be limited. The government's present intention is to buy a million tons more coal, 300,000 tons of it before the end of the year. Some industries will be more affected than others. Steel, for instance, stands to lose less than in Britain, since it has fewer open-hearth furnaces using oil and expects to convert these in two or three months to coal. Nevertheless, it might lose 200,000 tons of much-needed output if fuel supplies were cut by a third now. Cement, chemicals, heavy engineering and, especially, glass—industries among the fastest-expanding or most important for exports—will all be hit.

The motor car industry which has been one of the pilots of the economy has already felt the effect of petrol shortages. In certain areas, even customers who have paid a deposit on their cars are hesitating to fetch them from their agents. In the last year, there have been signs of increasing difficulties in the medium and large car market, and the proposed tax on cars to finance old age pensions (now being contested in the Assembly) and the oil cuts have crystallised them. Simca-Ford, the second biggest and most rapidly growing car manufacturer in the country, has already had to cut production on the French Ford, the Vedette, from 45 to 40 hours a week. Unless American supplies exceed expectations, industrial expansion will be halted. The chain effects of restriction might even lead to a certain regression, lasting beyond the critical period when stocks are running out and the petrol tankers from America have not begun to arrive in full force.

The government itself is not clear whether these cuts in production will finally compensate for the inflationary effect of shortages, increased freight rates and the citizen's tendency to stock up when the outlook is uncertain. What is clear is that its former policy, which has mainly been based on the prospect that rapidly increasing output might relieve the pressure of rising wages and profits barely contained by official restraints on prices, wages and credit, will have to be completely revised. The probability is that the inflationary tendency will remain. For in two fields at least, the government's present problems are likely to be aggravated: the budget deficits and the foreign trade accounts.

The loss of 25 per cent of oil taxes would cost the budget £100 million a year. If the car tax is repealed, as the Assembly's finance committee has requested, this would leave a further gap of £40 million a year. This is serious, for the budget deficit, swollen by Algeria and Suez, is already one of the main inflationary influences in the economy, and will increase in relative importance if national output falls.

France was expected to have a trading deficit of $800 million in 1956. Though French exchange reserves are fairly high (about $1,400 million at the end of October), and France has credit facilities worth several hundreds of millions of dollars with the IMF and EPU, this situation could not continue. It was hoped to cut the deficit to $500 million in 1957 by increasing exports, and thus to avoid the balance-of-payments crisis which would otherwise have followed in 1958. The extra costs of bringing oil by the Cape and from America (even if the quantity is reduced by a quarter) would certainly, over a full year, wipe out this hope. Further, rising freight rates will raise the cost of imports, especially from the Far East; and though purchases of raw materials may fall, their fall is likely to be more than

offset by the loss of export trade to the Middle East and Far East, as well as to European countries which face similar difficulties to those of France. Hitherto, the increasing weakness of France's trading accounts was chiefly caused by internal inflation and expanding output. From now on they will also be limited by direct restraints which are less amenable to government action.

Whether the restrictions on the French standard of living come automatically through falling output or through the government measures to halt inflation and the drain on the foreign exchange, the result is bound to be an increase in social and political tension. The deputies, like the country, are more sensitive to economic than political shocks, and the first signs of economic difficulty have significantly coincided with the first indications of possible parliamentary trouble for the government. These clouds are still no bigger than a man's hand. But it has always been clear that France's international reverses in the past three years were muffled by domestic prosperity, and that they would have more serious internal repercussions if the domestic expansion were halted. Economic trouble in France will almost certainly strengthen the movement to end the Algerian conflict, but it may do so in a way that leads, as in 1954, to a restrictionist and nationalist reaction. Similarly, any injury to the structure of the French economy, even if it is shared by other European countries, is likely to counteract the recent tendency to view a European common market with a more favourable eye.

Canada and the Oil Crisis

FROM A CORRESPONDENT IN CALGARY

INEVITABLY, the closing of the Suez Canal and of the Iraq pipeline have stimulated interest and discussion in western Canada on the opportunities this situation creates for expanding still further the markets for western Canadian oil. The trouble in the Middle East is bound to remove some of the barriers that earlier stood in the way of this expansion. It is likely to raise crude oil prices throughout the world. It is bound to alter the pattern of ocean distribution. It helps to overcome political difficulties peculiar to the North American continent. It does not, of course, of itself increase western Canada's existing means of oil distribution but it may very well affect financial decisions to expand them and make the raising of the capital needed that much easier. All in all, western Canadians are confident that expansion will be accelerated.

Canada's production of crude oil—and virtually all that production is at present in the western provinces—was in 1955 approximately 129½ million barrels, an average of some 354,000 barrels per day. Based on this year's figures so far, production for this year should be approximately 165½ million barrels, a daily average of 460,000 barrels. About a quarter of this production is exported, as crude oil, from Canada. The distribution of the oil out of the producing areas, Alberta, Saskatchewan and Manitoba, depends upon two pipelines, supplemented by tankers on the Great Lakes. One pipeline is the Interprovincial, which runs eastwards from Redwater, Alberta, to the lakehead on Lake Superior and on to refineries at Sarnia, Ontario. The other is the Trans-Mountain, which runs westwards from the Redwater area to Vancouver and across into the State of Washington and the Puget Sound area. With the exception of a small amount (about 8,000 barrels a day) exported directly southwards into Montana, each pipeline carries about one-half of the total production, but 84 per cent of the crude oil going into the Trans-Mountain line comes from the Alberta fields. It is the capacity of these pipelines that imposes a limit to the present export capacity of the country.

The Interprovincial serves the Lakehead-Wisconsin area, and as far south as St Paul-Minneapolis, and south-eastwards to the Sarnia refineries, from which two pipelines for products run further east to Toronto. Next year will see the completion of a line for crude oil to Toronto as well. Trans-Mountain is beginning to supply more of the north-western States and crude oil has been shipped experimentally south from Vancouver to California and (two tanker loads this year) across the Pacific to Japan. Interprovincial has a mean capacity throughout its length of about 200,000 barrels a day. Trans-Mountain has a present capacity of about 180,000 barrels a day, which will be increased to 200,000 within six months. The ultimate capacity of the present line can be increased, by looping and the construction of additional pumping stations, to some 300,000 barrels a day.

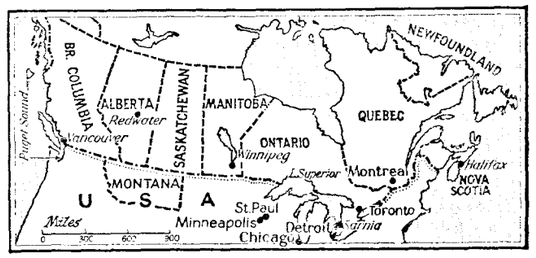
In price, Canadian crude oil is already competitive at the extremities of these lines. Taking a wellhead price of $2.50 a barrel at Redwater, Alberta (the approximate figure for January last) the following table shows how oil from that field would compare in price with other sources of supply:

Cost per Barrel	At Wellhead	At Sarnia	At Montreal	At Puget Sound	At St Paul
	$	$	$	$	$
Redwater	2·50	3·25	3·50	3·20	3·20
Nearest US airfield	...	3·27	...	3·40	3·45
Arabia	...	...	3·50	3·55	...
Iran	...	...	3·52	3·60	...
Venezuela	...	...	3·30	3·68	...

Before the Suez crisis reached its present state, discussion in western Canada was already concerned with how existing markets could be expanded, which was very much a problem of how transportation costs from wellhead to refinery could be cut down. Some argued that the Canadian fields should plan to supply the Montreal area, which has a consumption of over 200,000 barrels a day, but any project for extension there would have to face the heavy competition of seaborne oil from the south landed at Halifax, Nova Scotia, and piped on into Montreal. Further, any substantial increase in eastern Canadian markets would require the construction of a second Interprovincial line, involving a capital outlay of at least $250 million. Others hoped for an expansion south-eastwards from St Paul-Minneapolis towards Chicago and Detroit, but expansion there would mean that as Canadian oil became dearer, American oil would become correspondingly cheaper. Most agreed that the main outlet must be towards the west, to the Pacific coast, by expanding the capacity of the existing Trans-Mountain line, perhaps by duplicating it, which would cost only half the amount required to duplicate the Interprovincial line. On that discussion has been superimposed the new situation created by the Anglo-French action.

That has had its political repercussions in the North

American continent. On November 15th, the Federal Power Commission altered its earlier stand that no United States project should be allowed to become wholly dependent upon oil or natural gas imported from Canada, a most significant change of principle. This has removed one important barrier to Canadian oil expansion. Secondly, it is unlikely in the ensuing months that much oil will be tanked east across the Pacific, when tankers could be much more economically employed on the shorter run south from Vancouver. Thirdly, the prices of all ocean-borne oils



should rise, which will increase the competitive power of Canadian oil in all the markets adjacent to those it already serves on or near either coast of the continent. Fourthly, there may be an absolute diversion of oil originating in the Caribbean area from its existing markets to Europe; this may compel the workers in eastern Canada which now rely on the Caribbean to find other sources of supply, even if these are more expensive. Of the Canadian provinces, Alberta and Saskatchewan should be the principal beneficiaries from these developments; and among the distributing agencies, the Trans-Mountain company.

Nato Under Trial

FROM OUR PARIS CORRESPONDENT

THE strong parliamentary delegations from the Nato countries which are visiting the Organisation's headquarters here this week could not have picked a more stimulating moment to discuss the new perspectives of Nato's future. Has Nato, like the UN, a chance of emerging stronger from the Suez crisis—in itself the worst patch of what Lord Ismay, the secretary-general, has called the "bad patch" of the past year? The Nato allies of Britain and France had unanimously protested that the insult of a monumental example of non-consultation should have been added to the injury of a blunder on the canal. But the very prospect of real disunity was enough to bind the alliance together again, and the Soviet repression in Hungary gave the members a rallying-point. The Secretariat astutely encouraged the daily meetings of the Council for the better part of three weeks. The governments exchanged information on Hungary, and co-ordinated what UN action about Suez could be co-ordinated from Paris. In fact, it was little, and Nato's work has been marginal. But constant contact has had a good effect. The French and British, smarting from their experience at the United Nations, have appreciated an understanding, if far from admiring, audience. Their partners have been glad to stress the virtues of collective strength—and prudence—over Hungary, an issue which the Nato states will try to keep in the forefront at the UN. Thus, after the shock of recent weeks, Nato is ready for a fresh start. The necessary condition is that the next full-scale council of Ministers takes decisions which plainly carry the alliance forward.

An international organisation to which the members do not give up sovereignty can by its nature only arrive at solutions that are, in the current Nato catchphrase, "evolutionary," that is to say, far from spectacular. Yet in the new atmosphere, the recommendations which the "three wise men" led by Canada's Foreign Minister, Mr Lester Pearson, will put to the Ministers for machinery to provide greater political consultation on issues directly, or indirectly, affecting the alliance, have a better chance of finding a sympathetic audience. So far Nato has been, politically, only an information centre; allies usually learnt of each other's decisions too late to have a say in them. Suez is an unhappy example, but not an exception; only a few weeks ago Dr Adenauer angrily lowered the German call-up period to twelve months without a hint of consultation. Real consultation before the event would be a genuine advance.

The smaller countries and Germany, which have few commitments but many interests outside the Nato area, are anxious for this. It would safeguard them against having to gather up broken crockery they had no part in smashing. More important is the attitude of Britain, France and the United States. Would Britain allow consultation (even, as many Nato countries would like, conciliation) over cases like Cyprus? Or France over Algeria? Or the United States over the Far East? (Or, for that matter, the Federal Republic over German reunification?) The encouraging factor is that the United States, which since Suez is more than ever the great power in Nato, has been showing signs of a generous view towards "consultation." The British and French attitudes are more obscure.

The centre of Nato's life is necessarily the military alliance, and this too has been passing through the "bad patch." The postponements of German rearmament; the withdrawal of troops and equipment to Algeria and the Eastern Mediterranean; the lack of co-ordination evident in the flurry over the Radford memorandum; and the doubts raised among their partners by the increasingly thrifty attitude to defence of several members, including Britain—none of these made for cohesion. The recent weeks have restored it on the broader level: the revelation that Russia still has a mailed fist has, especially in Germany, revived the concern over Nato's "shield." It has been generally agreed, and wisely, that there is no case for extending the Nato area to Africa, whatever the danger from the "flank." But Shape's technical problems remain. It is radically short of manpower even for tactical atomic warfare, and the German contribution remains the top priority. As for the change-over to atomic weapons, this is retarded by United States law, which prevents allies from having them in peacetime, and by inadequate European budgets and resources. Work on the "Annual Review" of defence, which the Council will have to endorse (as it must every year), is more or less bogged down. The difficulties are such that it is hard to see how they can be removed without a new and bold approach. One might be the reversion to the old "pool" method, applied not only, as in 1950, to budgets, but also to atomic arms, which could be placed in Shape's hands. Inevitably, America would have to pay the highest price in money and in weapons withdrawn from the secret list. But to opt for less is to risk condemning Nato to a permanent and undermining sense of military inadequacy.

The problem is a double one: Nato has still to achieve

sufficient military strength; and at the same time it has become apparent that the purely military approach is not enough. A military pact was natural and adequate for the Atlantic Powers in the cold war days of Czechoslovakia and Korea. But the dangers in the Middle East, where the West is at grips with Arab nationalism as much as with Russia, or in Eastern Europe, where the Soviet Union is struggling hard to control its sphere of influence, require a more flexible—and a more political than military—cohesion from Nato.

Israel Takes Stock

FROM OUR CORRESPONDENT IN TEL AVIV

IN a completely new situation Israel now has to try to find its bearings. This is a harassing job. The first reaction to the Prime Minister's change of policy over the withdrawal of Israeli troops from Sinai was a widespread feeling that the fruits of victory were being snatched from Israel. But on second thoughts the immense complications of the political problems facing the country are slowly being realised. With the collapse of the French and British action in Egypt, the threat of a third world war, and the intense Russian pressure, it has become evident that the Israeli-Arab conflict cannot be decided by arms and certainly not by arms alone.

The military aims of the Sinai campaign were to destroy the Egyptian army stationed in the peninsula and thus remove the threat from the South and clear up the centre for commando raids in the Gaza strip. Both were achieved and at the same time it is thought that the Israeli reports of vast military stores uncovered in the peninsula should give warning to the world of much bigger threats than the destruction of Israel by the Egyptians. But Colonel Nasser did not fall and is today probably less inclined to talk peace than ever. Already some voices can be heard in Israel pointing out the high political price to be paid for the military victory. Israel is today considered by the colonial peoples of Asia and Africa as the vanguard of imperialism and an imperialism which failed in its latest attempt to recover its position in the Middle East. It will be very difficult to explain that Israel did what it did not for the sake of the imperialists but in order to ward off the danger of attack. It has alienated the United States, at least for the time being, and lost Israel ground in the United Nations at an awkward moment.

Such reflections are, to be sure, by no means typical of the general attitude in Israel today. But they are uttered, if cautiously, by thoughtful people, and the repeated warnings from the highest quarters that the political struggle will be much longer and harder than the military campaign are a sure sign that the government is aware of the difficulties ahead. At present two problems occupy the centre of the stage in addition to anxiety over border-raids, and the feeling of tension fostered by Russian influence in Syria and the threat of Russian volunteers. The first is the ability of the international force to function properly and the second the fate of the Gaza strip. If the international force is used to demilitarise the Sinai desert, the rebuilding of Egyptian military positions there could be prevented and thus the threat of a new danger from the South averted. If, however, the international force were to enter but later to leave again without effective guarantees from Egypt, the campaign would have been fought in vain. When Israel agreed to evacuate its forces from Sinai according to the United Nations resolution it had to give up an important card in the struggle for a final settlement. It is sincerely hoped that the stationing of an international force in Sinai will be used to bring about such a settlement.

The problem in the Gaza strip is exceedingly delicate. The return of Egypt to this area would bring back the intolerable conditions of guerrilla warfare as they have existed for the last few years. Moreover, the Egyptian regime in Gaza was content to leave the 200,000 refugees concentrated there in a hopeless state of idleness and suspense. If the Gaza strip were to remain under Israeli administration means could be found to settle the refugees. This would not be easy, but it could be done. And at long last there would be the beginning of a practical solution of the refugee problem.

Spanish Students and Hungary

FROM A CORRESPONDENT IN MADRID

IN Spain, as elsewhere in the non-communist world, anger and revulsion at Soviet repression in Hungary have sought expression through demonstrations in the streets. But if the manifestations in Madrid and Barcelona seemed relatively subdued, they were notable for disturbing political overtones. For dissident elements in the population, spearheaded by university students, sought to convert demonstrations of solidarity with the Hungarian people into agitation for more democracy in Spain. Mindful of last February's riots, the authorities banned all demonstrations except one—apparently designed to render any other massing of crowds superfluous. Attempts by students of Madrid University to stage their own public denunciations of Soviet oppression were quickly suppressed by the police.

Madrid's single officially-sanctioned demonstration consisted of several hundred youths who paraded down the main thoroughfares carrying Spanish and Hungarian flags. They assembled outside the non-communist Hungarian legation, a relic of earlier times which the Franco regime continues to recognise since Spain has no diplomatic relations with the countries of Eastern Europe. The minister in exile appeared at the balcony to thank the crowd for their moral support of the Hungarians' fight for freedom, and the assemblage dispersed. In downtown Madrid official sympathy for Hungary's ordeal was symbolised by a Hungarian flag flown at half-mast from the headquarters of the Falange.

The following day the state-controlled press unanimously approved the "correct" attitude shown by the demonstrators. Accounts of the event, identical in phraseology in all Madrid's newspapers, expressed the regime's approbation. But newspaper readers found nothing in the press about some quite different goings-on in Barcelona. There university students combined manifestations of sympathy for Hungary with cracks at the Franco state. They appeared on the streets with placards calling for an end to dictatorship in Hungary, but the words "in Hungary" were in such small letters compared to the rest of the text as to be almost indiscernible. There were scuffles with the police, arrests and official retaliation: the university was closed for a week.

Leaflets have appeared in Madrid calling on Spain's students to show "active solidarity with the heroic students of Hungary who are fighting for liberty against tyranny."

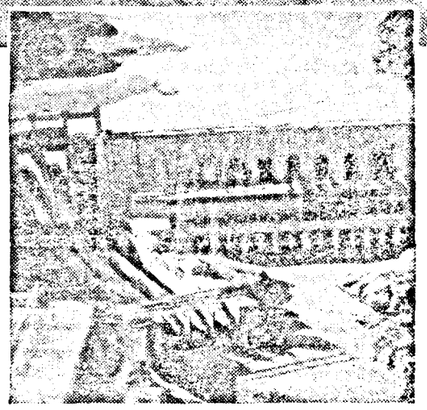
Preliminary work beside the River Clutha.

Dam and Power House ready six months ahead of schedule

The Roxburgh Hydro-Electric Project, on the River Clutha in South Island, is New Zealand's largest hydro-electric undertaking. It is an example of international co-operation in civil engineering construction, being built by Cubitts' New Zealand Company in association with Conrad Zschokke Ltd., Geneva, Switzerland and Downer & Co. Ltd., Wellington, New Zealand. Cubitts are pleased to acknowledge the efforts of their own staff and the staff of their associates who formed the successful team which completed this large project so far ahead of schedule.



The 1,200-ft. dam completed.

THE SILENT REVOLUTION

No merciless clacking of knitting-needles. Instead, a peaceful revolution—the painless rising of the working classes, which has changed the nation's economic structure.

Between 1949 and 1954 the number of people in the middle income group, between £500 and £1,000 after payment of tax, *more than trebled.* It is into this category that the averagely successful working man can now expect to graduate.

Industrial and factory workers have benefited most. They, and their tastes, have been 'Americanised' into what used to be considered the middle-class standard of living. This in turn is why the Empire News & Sunday Chronicle—read by one fifth of the country's adult population—has greatly strengthened its already strong position, and why it can help others to do likewise.

For the Empire News & Sunday Chronicle is indispensable to any advertiser aiming to cover the vital Midlands and North, the great industrial regions. The IPA Survey showed that 64% of Empire News & Sunday Chronicle readers were concentrated in the North—32% more than any other national Sunday newspaper.

Here too are concentrated the greatest number of multi-income households. Families with four-figure earnings and low overheads can well afford what were recently middle-class 'luxuries'. The Empire News & Sunday Chronicle's unequalled penetration into these homes confirms the paper's dominant advertising significance.

'The most interesting phenomenon of recent years' is how The Economist describes this revolution. As a phenomenon it is not only to be marvelled at. It alters the work of the statistician, the social worker, the politician. It also strengthens the living bond between the advertiser and the Empire News & Sunday Chronicle.

AIR CEYLON

tine appeal) have condemned Soviet aggression in Hungary. By showing their solidarity with the Hungarians they have re-affirmed those freedoms which are the heritage of honour: freedom of religion, freedom of opinion, freedom of association, freedom of expression. . . . Spanish students! Support the Hungarian students who are fighting for those very ideals for which we are struggling. In the East and in the West there resounds a unanimous call to liberty. Down with tyranny, down with police states based on terror and the rule of silence! Down with all dictatorships which debase religion and culture, which falsify the law and falsify the truth with their controlled press! Down with Soviet tyranny! Down with all tyrannies!

Admittedly these fiery leaflets have a limited readership, and are unlikely to spark the nation into open disobedience. But in a country where strict censorship of the press and radio is the rule they cannot be shrugged off. Nor can restiveness among Spain's students and intellectuals be lightly dismissed if one recalls that in the nineteen-twenties it was student strikes that paved the way for the end of Primo de Rivera's dictatorship.

Poland's October Days

MR GOMULKA'S return from Russia this week across Polish territory was one long ovation. People spontaneously crowded into the stations to shout "good luck, hold on, comrade Wieslaw." In Moscow, Mr Gomulka openly proclaimed that, after past mistakes, Polish-Soviet relations were being put on a new footing of equality. He brought back some tangible proofs of a change. He had in his pocket the promise of 1,400,000 tons of grain and of further credits amounting to 700 million roubles. At the same time all Polish debts were cancelled with a specific recognition that this was partly in compensation for the unduly low prices paid for Polish coal deliveries up to 1954. In turn, the Polish leaders accepted a joint declaration backing the Kadar regime and agreed, as was expected, to the maintenance of Soviet troops on Polish soil until a German settlement is reached. These troops, however, are not to be moved about the country without the authorisation of the Polish government.

Events during those memorable October days centred around the 8th meeting of the central committee of the Polish Workers' Party. It made a drastic change in its Politburo, which was symbolised by the return to power of Mr Gomulka and the removal of Marshal Rokossovsky. The full proceedings of that meeting have now been published. They began with a *coup de théâtre,* the surprise arrival of Mr Khrushchev at the head of a formidable Soviet delegation for a last attempt to force the Poles into line. One angry delegate suggested that the meeting should proceed and the distinguished guests be asked to wait, but the motion was defeated almost unanimously. Meanwhile mass meetings were being held throughout the country, particularly in Warsaw and Wroclaw, at which workers and students proclaimed their support for Mr Gomulka and their willingness to fight any "plot" to foil his return. Rumours that Polish and Russian troops were converging on the capital threatened to turn anger into an explosion. But Marshal Rokossovsky, questioned by the central committee, replied that Polish forces were doing nothing unusual, while the Soviet troops were on their "autumn manœuvres." On behalf of the Polish leadership he requested Marshal Koniev to recall them to their barracks. The first round was won. Mr Khrushchev did not resort to force and the Russians departed, having to content themselves with assurances that the new regime had no intention of breaking with Russia. The central committee resumed its feverish debates.

The indictment of the past concentrated on police terror and economic blunders. Mr Gomulka attacked both the system and the men who fitted into it so well. Some other speakers thought that certain men were now hiding too easily behind the system and took to task in particular Mr Berman, who until recently had been in charge of party control over the security police. One member, in a speech full of passion, asked him how he could ignore what the whole of Warsaw knew, that there were jails in which people "stood for three weeks in their own excrement" up to the ankle, that after a few days in the hands of the police inmates were fit only for the lunatic asylum, while others hid there pretending to be mad in order to escape. In some ways Mr Berman's defence was more damaging to the Stalinist legend even than this violent attack. His plea was really that he was at the receiving end of the Moscow line, that both he and President Bierut had tried to resist the pressure for Mr Gomulka's arrest but in vain. He himself, so seemingly powerful, was suspected of treason by the Russians.

Mr Minc, the former economic boss, defended himself more effectively. He admitted mistaken assumptions about the growth of agricultural production and failures to adjust the economy to a changing situation. But he put much of the blame for breakdowns and shortages on the arms race imposed on the country between 1951 and 1953. Poland, unlike Czechoslovakia, had to build its armaments industry almost from scratch and this absorbed the most skilled personnel as well as scarce resources, which could not be bought from abroad because of the West's strategic embargo (and presumably the Russian inability to supply).

One sign of the new atmosphere was that these two men could freely defend themselves. Another sign was that, although most delegates agreed with Mr Gomulka's general thesis, many questioned the wisdom of his proposed concessions to the smallholders. Here was a real discussion, not merely about the past but about the present and the future,

EXPORTERS

Our three-monthly reports give concise information on market conditions and prospects in all countries in the world. The report issued this week on

ARGENTINA

includes information and comments on:

- Better opportunities and greater competition for British exporters
- Market for capital equipment
- Improved trade prospects for 1957
- The wages issue

The report is illustrated by charts and has a useful statistical appendix.

For a free specimen of one of the 54 three-monthly reports in this series and full particulars, please apply to:

about the pace and extent of "democratisation." In the prevailing mood of the country nobody dared to oppose this openly. But the difference between the two opposing factions could be gathered from their respective attitudes towards the freedom of the press, and towards public meetings of workers and students. The Stalinists of the so-called "Natolin group"—headed on this occasion by Mr Nowak and Mr Jozwiak—viewed both with suspicion as dangerous phenomena, likely to provoke the Russians and encourage "counter-revolutionaries." Mr Gomulka and his friends, on the contrary, saw in this new interest of the masses in the political life of the country a healthy sign, and the only possible way of reviving communism in Poland. In their opinion it would become dangerous only if the party failed to lead the movement. To do so it must make a complete break with the past and stop copying blindly the Soviet model. Even after the departure of the "distinguished visitors," the Stalinists did not give in. A last-minute hitch occurred over the election of the new Politburo. A common list of nine members, excluding Marshal Rokossovsky, had been agreed upon. Just before the vote an opponent of Mr Gomulka suggested that such an exclusion would be an insult to "our friends" and the marshal thus had inflicted upon him the final injury of a defeat at the polls.

The victorious Mr Gomulka then set about consolidating the new regime. But the next round was somewhat simplified by Hungarian events. Mr Khrushchev must have realised that his Polish protégés could have landed him with yet another Budapest. Mr Gomulka left for Moscow without hiding his apprehensions; returned unscathed.

India's Favourite Child

FROM OUR CORRESPONDENT IN INDIA

KASHMIR is booming. There have never been so many tourists and they have never bought so much. There has never been so much expenditure on development; real wages have never been so high; the peasants have never been so well assisted. This year 70,000 tourists were expected. These tourists do not fish and trek and shoot as British officers used to do, but they spend far more on embroidery and silk and occasional tables. Moreover, they increase each year, for industrialisation is rapidly swelling India's middle class, while land reform is cutting it off from the ancestral village. In such a paradise for the tourist, the state has a unique solicitude for his welfare. Nobody breathes the horrid word "prohibition." Rates for most services are fixed and almost kept to; houseboatman and dealer alike go in terror of the official black list. Amenities, roads, accommodation, transport services, are always being improved; this year there is even a Kashmir Festival.

For the peasant, land reform and the development programme are much more important than tourists. The land reforms limited holdings to 22 acres apiece. The excess went to the tenants, who thus got some 450,000 acres, about one sixth of the cultivated area. Nearly a third still remains under tenancy, but rents have been limited to a quarter of the crop (with the landlord paying the land tax) and ejection has been made impossible, except in the case of contumacious non-payment of rent; the peasant no longer has to buy his cloth and sugar from a monopoly or to sell a quarter of his crop at confiscatory prices. Only one monopoly remains, on salt, and that is to his advantage.

The Kashmiri pays less tax than anyone else in India, and yet gets more spent on him. The reason is twofold. Three-quarters of the revenue arises from the profits of state enterprises—forests, electricity, silk, irrigation—and from the grant given by India in return for the Kashmir government's surrender of its right to levy central taxes (income tax, customs, central excises); and of the quarter raised by taxation, the tourist pays a considerable part, notably of the taxes on liquor and petrol. Where the other states are stiffening their sales tax, Kashmir manages without it. On the other hand, Kashmir has been allowed the biggest development budget per head of any state in India, half as big as that of Bombay, which has twelve times as large a population. The reasons are that Kashmir is the central government's favourite child; it is backward; and it benefits very little from central expenditure on, for example, railways.

State expenditure on education has nearly tripled since 1947-1948; on health it has doubled, on agriculture quadrupled; and capital expenditure is running at nearly eleven times the 1950-1951 rate. One family in two belongs to a co-operative society, and in the Kashmir valley most credit is co-operative; the all-India average is 3 per cent. Everywhere one sees new roads, new dispensaries, new girls' schools, new irrigation works and electric transmission lines. In Kashmir, moreover, progress is not only a benefit conferred from above; it is something demanded from below. When a minister goes to a village—and the prime minister tours three days a week—he is told in very definite terms what the people want, a girls' school, perhaps, a road, or a "miss" (a midwife); and if he once promises, he is very definitely expected to provide.

Freedom Not Complete

The boom would not be possible without political stability. Without Gallup polls, one cannot say whether the people want to join Pakistan or not, or even whether they want a plebiscite. What one can say is that any desire they may have to join Pakistan is strictly controlled. The prime minister, Bakshi Ghulam Mahomed, walks among the crowds unguarded. The Indian army has been reduced, and both it and the Kashmir militia are largely at the cease-fire line. The Kashmir government is determined there shall be no plebiscite; but it proposes to hold elections next year.

This does not mean that freedom is complete. Mr Bakshi is still afraid of pro-Pakistani agitation and of the attraction of the ideas about Kashmiri independence associated with his predecessor, Sheikh Abdullah, who is still the people's national hero. To agitate in favour of Pakistan is to be guilty of sedition. A number of the leaders of the opposition Plebiscite Front are under arrest. Above all, Sheikh Abdullah himself remains in jail, where he has been for three years without a trial. Nevertheless, there has been a great change in atmosphere in the past five years. As the people of Kashmir have made up their minds that India is in earnest, that there really is never going to be a plebiscite, so Kashmir has been going back to normalcy. Houses are being built, businesses extended, land improved. Even a pro-Pakistani may be forgiven for preferring a boom to a plebiscite; and in Kashmir there is no substitute for India as a provider of tourists, assistance and markets.

THE BUSINESS WORLD

Housing Market

WHILE the price of almost everything else has risen, house rents have remained pinned down by law. Since 1939, only two significant tugs have been exerted to pull away some of the deadweight of restriction. Mr Macmillan's Housing Repairs and Rents Act of 1954 was the first; Mr Sandys's Rent Bill before parliament this week is the second. The Macmillan Act was half-hearted; it sought to allow the good landlord a modest increase in net rent in order to enable him to maintain his property, and it made that increase conditional on the expenditure he put into the property. It also sought to allow landlords to recover the higher cost of their services, but the rent tribunals whittled down considerably what they were able to recover. "Landlords are being offered a mouldy turnip," sneered Mr Bevan at the time; by now many landlords agree that Mr Bevan was right.

No one will call the Sandys Bill a mouldy turnip—not even those who would prefer to see the whole rigmarole of control on residential rents swept away at once. The impression cannot be avoided that the Minister would have liked to go the whole hog and has with difficulty been restrained. Complete abolition of rent restriction, as he told the Conservative conference, is still what he ultimately intends. In the meantime, he offers a substantial instalment. He has taken a large block of houses right out of the scope of control; he has left himself the option to widen the area of that free market without further legislation; and he has granted a rent increase up to a uniform limit to the landlords of sound houses remaining within the scope of control. The activities of the rent tribunals will in future be restricted to the field of furnished lettings below the rent control limit, and disputes between the landlord and the tenant of unfurnished houses or flats will return to the county courts—where they belong. And with the bill come the first decent statistics of the nation's stock of houses and its rent roll. The bill is roughly all the landlords wanted.

About 810,000 privately owned houses will be moved at once out of the scope of rent control. They will form the biggest single contribution to the new free market in residential rents. The freer that market the better the guide the revenue authorities will have when they come to revalue residential properties for rating in 1961. Two other sources will send a trickle of decontrolled houses on to the free market. All the 4,700,000 owner-occupied houses will be nominally decontrolled. Few of these naturally will come on the market for letting, but it will at least be possible for owner occupiers who want to move to let their houses instead of selling them, and for those whose houses are not fully occupied to let part of them without the fear of being saddled for life with an undesirable tenant.

be freed, and the Parliamentary Secretary to the Ministry of Housing has estimated that such vacancies will occur at the rate of about 125,000 a year. Statutory tenancies automatically end on the death of the member of the family who succeeded to the tenancy, and some of these tenancies have now been running for over 40 years. Landlords who have preferred to sell or to let furnished when a controlled house came in will now be encouraged to relet unfurnished. It is fair to add that this proviso is open to the objection that it may impede the mobility of labour, as did the decontrol of vacant houses between 1923 and 1933: the tenant who leaves a controlled house will find no controlled house to move into. The Minister, looking ahead towards the complete abolition of rent control, has evidently (and not unreasonably) decided that this was one of those lesser evils that have to be accepted to get a free market working.

For the remainder—the 4,900,000 dwellings in Britain that will remain in control out of a total of dwellings of all kinds of 15 million—permission is to be granted for a rent increase from 2½ times to 1½ times the gross value, depending on the proportionate responsibility of landlord and tenant for repairs, the maximum increase being limited to 7s. 6d. per week in the first six months. Rateable values are round about 40 per cent higher than they were when the Macmillan Act was passed. And that Act placed a rent "stopper" at twice the old gross value and imposed conditions of expenditure on repairs that many property owners could not satisfy. So to landlords kept on short commons for many years, the new bill must seem corn in Egypt. The increases are not automatic; landlords will still have to serve notice in the proper form, and if the house is subject to a certificate of disrepair, the rent will be limited to 1½ times the gross value or the previously controlled rent, whichever is lower. The procedure, however, for obtaining or cancelling a certificate of disrepair is greatly simplified, and is to be made in a form which should improve relations between landlord and tenant. The chances of recovering the increased cost of services, which are estimated to have risen by a further 20 per cent since the Macmillan Act, are also greatly improved. In Scotland, where there has been no rating revaluation, a different yardstick has to be devised; the bill raises the 40 per cent increase granted under the Macmillan Act to 50 per cent, and where the landlord could not claim that increase because he had not made the qualifying expenditure he will still be able, if the property is in sound repair, to claim a 25 per cent increase.

Landlords will still have a few points to argue as the bill passes through its stages. Many of them think it unfair that, by holding a house in requisition and not offering the landlord the option of accepting the occupant as a tenant, a local authority should be able to avoid the rent increase that would otherwise have been granted. But these are minor troubles. The bill does give the landlords for the first time a reasonable prospect of gradual release from the restrictions of rent control, and that release should be progressive as the Minister makes use of his new power to release by order, subject to the approval of parliament, further categories of houses. Even where the landlord has appealed against a rating assessment just over £40 he can sleep in peace. The status in the rating list on November 7th will determine whether the house is or is not controlled.

The vital question now is how far the landlords will exploit their new liberty. To judge by the high rents that the few properties newly built for letting command, property owners could, if they wished, go a long way in forcing up the rents on those houses and flats that will now be released from control. But opinion is hardening among the more responsible landlords against forcing the pace. Some will spread their intended rent increases over periods up to three years. Most will take care that no sudden gap develops between the rent of houses just within the control limit and the rent of those just outside it. Few landlords wish to build up bad will: none wishes to run the risk of empty property. Far more likely is a tacit understanding to try to let rents find a temporary level not far from twice the gross value, whether the property is controlled or not.

* Old rent control basis

That would still mean a sizeable increase in rent rolls. It would also mean that a wide gap still existed between the rent of a newly constructed house or flat and the rent of an old one. But from a national point of view—and this truth should not be disguised—housing may for years still be a wasting asset, because rents will still not cover full replacement costs. In the end, the disparity between rents on new property and on old must disappear. Rents must be moved to what the market will stand and the remaining controls must be swept away. That might also mean that tenants would have to pay about three times their pre-1939 rental. There is no early prospect of a rise of that order. About one and three-quarter times pre-war rental is more likely to be the immediate target of these landlords that spend a fair amount on services and a still lower figure for those who do not.

So the anomaly must arise that the property companies will draw in an increased rent roll and yet this income will still represent less than a true economic rent of the properties. Investors, as the table of property shares suggests, seem to have taken this prospect of increased income—and unexhausted potentialities—to heart about the time Mr Sandys made his speech to the Conservative conference last month. Property shares rose sharply and have since held steady in an unsteady market. It may in the end be proved that the rise was justified, but at this stage judgment must be hedged with qualifications. First, nearly all the expenses that the landlord suffers have been rising; secondly, there is the uncertain political future. The bill is not yet law. How far will Mr Sandys's policy have developed before the Government changes (In colour?) and how far will it then prove attractive to reverse it?

Lastly, the gradual build up of gross income for which landlords now hope cannot be immediate. Assuming that the bill reaches the Statute book next April, and that three months' notice of increased controlled rents and six months' notices of decontrolled rents are served on the June quarter day, hardly any companies can show much increased revenue in the accounts they will publish in 1957. They may indeed still be collecting some sweepings from the Macmillan Act. After that revenue should begin to rise, but the chief change in next year's balance sheets will not be a gain, for shareholders. Revenues will remain inelastic, and they will be bearing a higher rate of profits tax.

Capital in Manufacturing

HOWEVER a business may value the assets in its balance sheet, and whatever its depreciation policy, it will normally try to keep its fire insurance valuation up to date. That is the assumption—a simple and on the face of it a safe one—upon which Dr T. Barna of the National Institute of Economic and Social Research has based the first direct inquiry ever made into the replacement value of the fixed capital employed in British manufacturing industry, the results of which he presented before the Royal Statistical Society this week. This characteristically pioneering piece of economic research offers, moreover, the first detailed comparison of the extent to which different industries in Britain use fixed capital in their production processes—ranging, according to Dr Barna's figures, from the £13,350 worth of plant and equipment for every worker in oil refining to the £620 worth that is all a worker in china and earthenware making has to help him. Incidentally, it also challenges one economic generalisation which has recently become popular—that over the years less capital tends to be needed for a given amount of national output—and differs sharply from the results of an alternative method of measuring the country's fixed capital recently adopted in Whitehall.

Most attempts to measure the value of the national stock of capital have in the past been based upon the capitalisation of income from property at current rates of yield, or upon the application of mortality rates to the annual value of capital assessed for death duty. The Central Statistical Office this year adopted a "perpetual inventory" method of estimating capital consumption first applied in this country by one of its staff, Mr Philip Redfern, which assumes that assets depreciate in value and are taken out of use strictly according to Inland Revenue schedules.

In comparison with such indirect calculation, Dr Barna's method was the simple one of asking manufacturers what they reckoned to be the value of their buildings and offices, plant and machinery, and operating stocks, for fire insurance purposes. In practice, he asked only a very small sample of public companies in British manufacturing, including all the biggest ones, and received answers from an even smaller number. His final estimates—a selection of which are set out in the large table on page 710—are in fact based upon replies from only 90 companies, though these cover about 13 per cent of employment in British manufacturing and perhaps 17 per cent of its capital assets. Dr Barna considers the sample satisfactory on the whole, though pointing out that its coverage varied greatly from industry to industry. At the Royal Statistical Society meeting this week other statisticians expressed much less satisfaction with the sample: and since it covers 38 industries, some of the individual figures must obviously be pretty shaky.

From the data these companies gave him Dr Barna has calculated that in mid-1955 the replacement cost new of the fixed assets (excluding vehicles) used in British manufacturing industry amounted to about £1,800 per person employed (which might be about £300 out either way) or to about £15,000 million (plus or minus £2,500 million) in total. "Replacement cost new" is what a firm's fixed assets would cost if completely replaced at mid-1955 prices: it makes no allowance for the writing down by normal depreciation that in practice will have occurred. At one point in his paper, Dr Barna assumed that the value of fixed assets, at 1955 prices but normally written down, might be about two-thirds of his total—say, £10,000 million.

Broadly, he concludes that in degree of "capital intensity" British manufacturing industries can be divided into three classes: the ten groups of industries with assets amounting to more than £3,000 per employee—oil refining, coke ovens, sugar refining, chemicals, grain milling, paper, rayon, drink, iron and steel, and cement—which account for about 10 per cent

Fixed Assets in British Manufacturing Industries

of manufacturing employment; four groups of industries that have only recently left the handicraft stage, clothing, wood manufactures, china and biscuits—all of which have less than £1,000 worth of capital per employee; and the bulk of industries between these extremes, which account for nearly 80 per cent of the people in manufacturing.

★

Businessmen may find it interesting to compare their own ratios of fire insurance valuation to employment and "value added" (i.e. turnover net of purchases from outside) with the averages for their industry given in Dr Barna's tables, and indeed with the "capital intensity" of other industries. The ratios include some rather odd figures, particularly when Dr Barna uses the figures to show a notional "rate of return"—net output, less wages and salaries, giving a residual figure to cover overheads and profits, which can then be expressed as a percentage of capital value. Many businessmen will wonder whether these ratios can really apply to small firms, as well as the big ones that bulk so large in the sample: but Dr Barna has been unable to gather any clear indication that there is much difference in the proportion of capital that big and small companies use in the same kind of production.

Dr Barna has concluded from secondary research upon his data that over the years the ratio of capital to output in manufacturing industry is increasing, and that the value of capital required to produce an extra unit of output is higher than the average value of capital now employed; in other words, about £3 of capital is used at present in producing £1 worth of Britain's national output, but it requires the investment of about £5 to produce an extra pound's worth of output. This conclusion, it should be noted, is in contrast with similar calculations based not on direct inquiry, but upon the use of time series; the point will no doubt provide a diverting argument for econometricians. But his figures for total capital employed are also sharply at variance with those calculated by Mr Philip Redfern within the "perpetual inventory" system that the Central Statistical Office is now using; Dr Barna's estimate of total capital employed in manufacturing is more than 50 per cent higher.

This, to the outsider, would seem at first sight to put in question the whole validity of the estimates of capital consumption that are now published in the annual Blue Book. In practice, it is said not to; Dr Barna and Mr Redfern are agreed that for statistical reasons their different methods make much less difference to the estimates of the way in which capital value declines in the years of use than they do to estimates of the total stock of fixed capital.

As a method of valuing the capital employed in industry at any one time, Dr Barna's method is almost certainly the better; although obviously, as he proposed this week, the exercise really needs repeating with a larger and more representative sample. He proposed, also, inquiries into the length of life for which assets are in fact used in industry, as distinct from their notional depreciation "lives." Most businessmen would share his impression that in practice most buildings, much plant, and a good deal of machinery work far longer than the Inland Revenue has arbitrarily set down as their useful lives—either in the original works or after sale secondhand to less exacting users. Buildings, as Dr Barna says, can be kept in use almost indefinitely with periodic modernisation; and the extent to which plant, in particular, can have its working life extended by maintenance and minor replacement is fairly considerable. The one-hoss shay is a rarer animal than the Inland Revenue might imagine.

Business Notes

Rationing on the Road

A CUT of 25 per cent in Britain's oil supplies, which is the assumption upon which the Minister of Fuel and Power has designed the measures of rationing that he announced this week, is rather worse than independent estimates had suggested; and the British restrictions are rather greater, as the table on page 712 shows, than any other country in Europe has yet announced. But more optimistic estimates have been based upon the assumption that integrated operation of tankers, even while the Suez Canal and the Iraq pipeline remain closed, might bring enough oil across the Atlantic to give Europe 80 per cent of normal supplies. The Minister is clearly wise not to bank on too much help from America, given the present attitude of its Administration—though the major oil companies appear ready to aid us together as they are allowed. If supply prospects look better in a few weeks, it would not be difficult to revise the ration upwards quickly; the rationing and allocation schemes have been kept simple enough for that.

But this rationing scheme seems to have been designed to cut road goods transport more than one would have

expected. The basic ration for goods vehicles, certainly, has had to be set at the level the authorities cannot deny even to the least essential of "commercial" activities (say, loud-speaker vans in the by-election that will follow Mr Stanley Evans's resignation?); and the basic ration of derv fuel has had to be cut even more in order to allow roughly the same mileage as for petrol-engined vehicles. Supplementary allocations of fuel, in both cases, will bring the total amount actually available for goods vehicles up to 75 per cent of their normal consumption. The large proportion of fuel that the Ministry will be able to add at its discretion should ensure a high proportion of normal supplies for traffics that can prove priority—though the stipulation that no commercial user will be told how much supplementary fuel he will get until he has used half his basic ration seems quite stupid, and designed to make sensible utilisation of a firm's transport impossible.

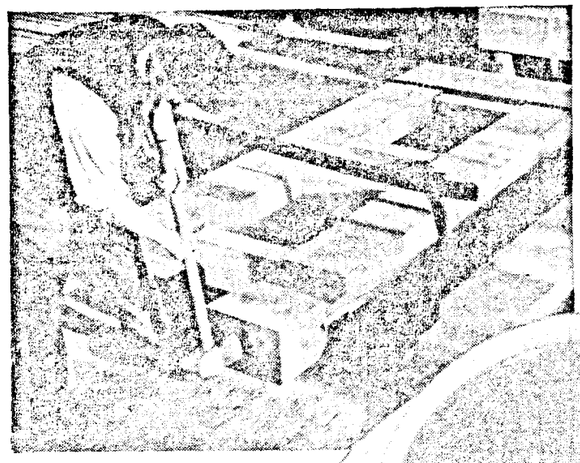
Moreover, a cut of even 25 per cent is a severe one, and Sir Brian Robertson's confidence that the railways can carry the additional load cannot avoid a considerable amount of difficulty for industry in keeping its products moving and therefore its output at current levels. In 1952, about 46 per cent of total goods traffic (measured in ton-miles) moved by road; if the proportion were the same now and a full 25 per cent of it were transferred to rail, the railways would have to carry about 20 per cent more freight than they are carrying today. Obviously, economies can be effected by running lorries fuller—and the Government ought clearly to consider the suspension of restrictions that preclude "C" licensed vehicles from getting return loads of other people's goods. But in fact railway freights have been declining in recent years while industrial activity boomed, so that the proportion carried by road today is almost certainly higher. The addition to railway freight, in terms of ton-miles, might thus be closer to a quarter; and the freight terminals are less well equipped to handle this extra load than the wagon fleet may be. Shifting such a load will be a complicated business.

Industry's Oil Supplies

CUTS in road transport, complementing the shortage of shipping space to move exports, may affect output when these oil restrictions begin to bite; but the 20 per cent cut in gas/diesel supplies for industrial use, which is to

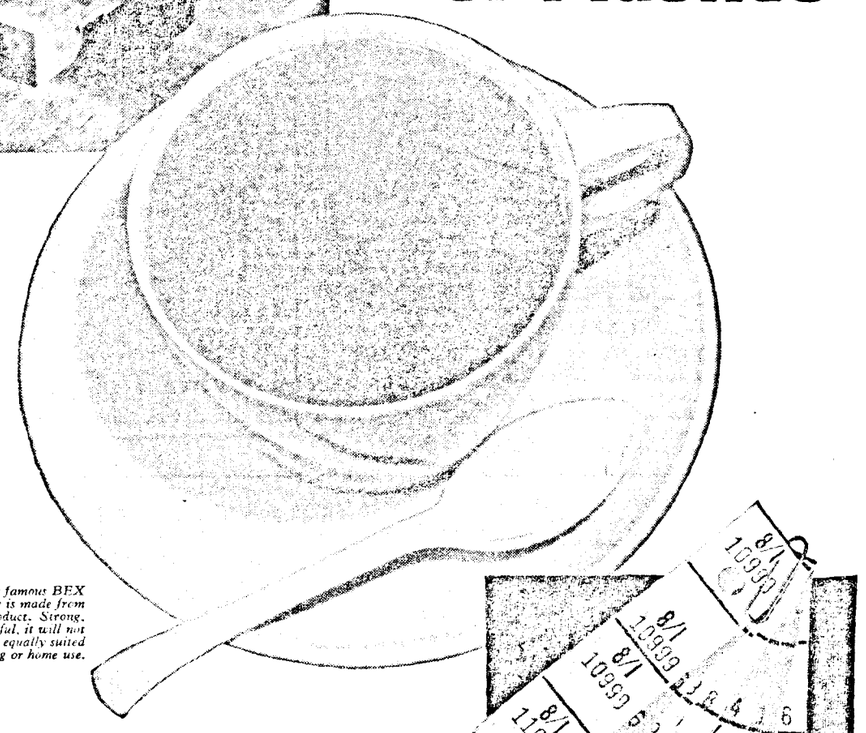
OIL RESTRICTIONS ON THE CONTINENT

Country	Oil as a Percentage of Total Energy Used in 1955	Degree of Restrictions Announced
France	20	Refinery throughput cut by 25 per cent; production of high octane petrol prohibited. Petrol pumps closed at weekends; deliveries to dealers cut by one-third; motorists asked for 'voluntary' cut of 30 per cent; radius of private motoring limited. Diesel and fuel oil rationed; diesel oil deliveries cut by 20 per cent; fuel oil by about one-third, varying with user; 20 long-distance oil-fuelled train services cancelled.
Belgium and Luxemburg	16	Sunday pleasure motoring banned; petrol deliveries to dealers cut by 10 per cent. Diesel oil for central heating cut by 20 per cent; fuel oil for industry cut by 10 per cent
Netherlands	26	Sunday pleasure motoring banned; petrol deliveries to dealers cut by 15 per cent motorists asked to make 10 per cent voluntary cut in petrol consumption. Diesel oil for central heating cut by 20 per cent; fuel oil for industry cut by 10 per cent
Italy	33	Petrol deliveries cut by 5 per cent.
Denmark	37	Motorists asked to make 'voluntary' cut of 25 per cent in petrol consumption. Fuel oil rationed by oil companies; deliveries cut by 20 per cent, retroactive to July 1st
Norway	25	Deliveries of petrol and of diesel oil for central heating cut by 10 per cent.
Sweden	44	30-week ban on weekend pleasure motoring, hoped to cut petrol use by 13 per cent Deliveries of diesel oil for central heating cut by 20 per cent.
Germany	9	No petrol rationing proposed, but refinery output cut by 10 per cent. Rationing of diesel and fuel oil by oil companies; deliveries cut by 20 per cent.
Switzerland	29	Pleasure motoring banned on Sundays and public holidays to cut petrol use by 10 per cen
Turkey	30	Petrol rationed; Sunday pleasure motoring banned.



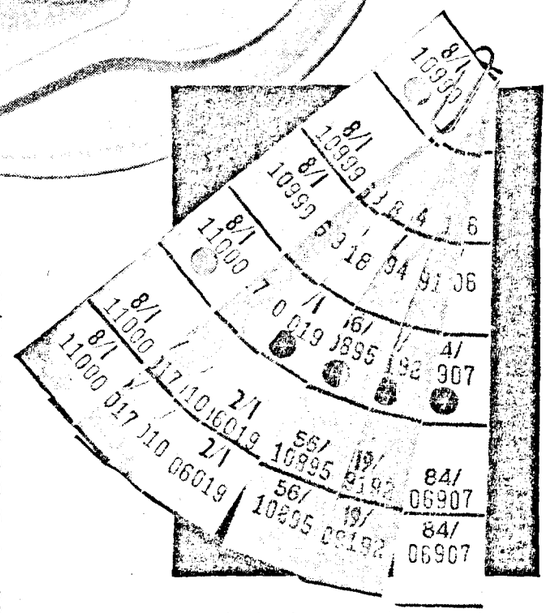
British Waterways workman assembling a lock gate at Tipton, Staffs. The gate is the first of its kind to rely on resin adhesives instead of eighty cold driven rivets, and Beetle Adhesive—a B.I.P. product—is the chosen bonding material.

the Wonder of Plastics



This new cup in the famous BEX range of housewares is made from Melmex—a B.I.P. product. Strong, shapely and colourful, it will not easily chip or crack and is equally suited to industrial catering or home use.

In laundries and locks, in tableware and textiles, plastics today play their part. Their role may be contributory, it may be fundamental, but the wonder of plastics is in their versatility, their infinite possibilities. Types and grades are innumerable, each with its own properties—and limitations—presenting a wide field of choice to the intending user. The leading plastics materials manufacturers maintain extensive consultative and development services and none is better qualified to advise and assist than B.I.P.



Laundries, these days, are using laundry tags of paper—wet-strengthened with Beetle Resins—a B.I.P. product. Even wet scrubbing has no effect on these tough tags. (Wet-strengthened paper made by Robert Craig & Sons Ltd., a subsidiary of the Associated Paper Mills Ltd.)

B.I.P. SERVICES

The full resources of the B.I.P. Research, Technical Development and Design services are at the disposal of manufacturers interested in the possibilities of plastics. Advice will gladly be given on any problem concerning plastics applications, irrespective of the type of material involved.

allow at the beginning of January unless prospects improve, eed not have any great effect upon production. One has o reckon with a possible cut of 20 per cent in fuel oil as ell. It may be that the present cut of 10 per cent has for he present not been increased simply because to cut any nore would not be practical until an allocation scheme is evised. Gas/diesel oils have hardly the same importance o any industry that fuel oil has to a few, and a flat-rate cut ight be practicable for them—though the Federation of British Industries doubts this. Farming and trawlers, two ctivities which have hitherto been guaranteed their full oil upplies, are now being cut by 10 per cent along with other ndustrial fuel users.

The motorist, basic or supplementary, comes at the end f the line. The basic ration is designed to allow about 00 miles of motoring between December 17th and April, or the various sizes of car (some cars in each class should e able to beat the bogey a little). This is said to nean about half the normal motoring consumption at present, though in fact it seems fairly generous to the weekend motorist in wintertime. Rationing may drive a certain proportion of cars right off the roads for the winter, though the basic ration is certainly not small enough to persuade the average pleasure motorist to lay up his car. Nobody now knows how much motor spirit is used for business purposes; though the proportion of new cars bought by business is nowadays guessed to have fallen sharply, one might expect the business share of mileage done still to be very considerable. If so, the basic ration of 200 miles a winter month may allow a good deal more than half of the current amount of motoring for pleasure. Such a ration, certainly, may obviate a good deal of paper work on supplementary applications. But on the assumption that a total cut of 25 per cent will in fact be necessary, it still leaves some doubt whether the private motorist has not been unduly protected at the expense of industry's road transport.

Investors Prefer Liquidity

To all the other adverse events that have been pressing investment markets downwards has been added a Stock Exchange failure—a small broking firm, but nonetheless the biggest failure since the war. It looked at first as though the uncovered differences might amount to £80,000, though later reports were a little more reassuring. The investing public naturally is fully covered by the Stock Exchange guarantee fund. The members of the Stock Exchange are not thus protected and the eventual loss which might perhaps turn out to be of the order of £50,000 must involve an unpleasant—but fortunately not crippling—burden on the jobbers, principally in the oil share market.

That event must naturally be regarded as one of the short-term technical influences accentuating the weakness of markets. On the political and economic fronts there have been plenty of longer-term influences ensuring that the market could not have been strong even if that particular misfortune had not occurred. Oil rationing, Suez, Colonel Nasser's distaste for Canadians, and Hungary all added up to a strong preference by investors for liquidity. During the week ended on Wednesday the *Economist* ordinary share indicator dropped from 177.2 to 173.7, a lower point than it has touched either this year or last. The *Financial Times* ordinary share index has also dropped to its lowest since August, 1954, and the index of Government securities which established its lowest point since compilation (82.74) in the previous week has hung near that level, rallying only to 82.83. Chartists can claim that the previous low point of the present "bear market" has been broken through; they will no doubt read the industrial market as still headed downwards.

* Ex dividend. Gilt-edged prices are shown net.

The decline has been general, reflecting a marked loss of confidence by investors and the one section notably exempt from the general movement only serves to emphasise its meaning. The premium on dollar stocks in London (over the rate of $2.80) has risen from 12 per cent last week to over 13 per cent at one time on Wednesday of this week. That was its highest for several years.

Yet More New Issues

It is a remarkable but probably only a passing feature of present weak investment markets, that weak markets are going hand in hand with substantial borrowing on new issues. Hard on the heels of the British Oxygen issue this week come a number of other substantial industrial offers. Fresh talk about a large ICI issue has already gone about Throgmorton Street and four large issues were brought forward this week. It is difficult now to make an issue but easy to imagine the weighing of pros and cons that must go on between the issuing houses and their clients—the borrower emphasising his need for money, the underwriter urging that this is not a good time but admitting that in a few months the market could be even worse. Mutually the borrower and the underwriter may console themselves that the institutions still have money to invest even though high rates will be needed to attract it.

This week came the first short dated Corporation stock with a 5½ per cent coupon. Under the auspices of Pember

and Boyle, the West Riding of Yorkshire offered a 5½ per cent stock, 1964, at 98. Half of the loan, £1½ million, has already been taken firm on underwriting terms, the remaining £1½ million being offered to the public at a running yield of £5 12s. 3d. and a gross redemption yield of £5 16s. 7d. The issue which was tailored with the trustee banks in mind was quickly over-subscribed, applicants for up to £10,000 receiving full allotment and smaller applicants 72 per cent of their applications. In earlier issues Pember and Boyle has made a point of securing firm subscriptions at underwriting terms for the whole of the issue; that they did not do so with the West Riding loan may reflect a little extra caution by underwriters in today's weak and uncertain markets. With a smaller operation, Ruston and Hornsby is to place £1¼ million of a 6 per cent unsecured loan stock (1975-80) at par. These are the kind of terms for an industrial loan stock which the institutions still find attractive.

Reyrolle and C. A. Parsons, both companies whose ordinary shares are among the growth stocks of electrical engineering and atomic fields, have chosen to raise their new money by rights issues. C. A. Parsons is to offer 3,600,000 ordinary shares in a one for one rights issue at 30s. per share, accompanied by a free scrip issue of 1,800,000 ordinary shares. On the eve of the announcement, Parsons' existing units stood at 88s. 6d. Since then they have fallen to 85s. 9d. but there is still a bonus element in the issue. Reyrolle will presumably use about £2 million from its own £5.3 million issue to take up its entitlement of Parsons' shares. It is offering its own shares in the ratio of one for two 1,526,470 ordinary shares at 70s. each. Since the eve of the announcement Reyrolle's existing units have fallen from 98s. 6d. to 93s. 9d. Both Reyrolle and C. A. Parsons can point to a big earnings cover on their latest dividends. In a reasonable market their rights issues would have been joyfully received and may still attract shareholders if the directors promise a more liberal dividend policy. Yet whatever the terms today underwriters are exposed to big risks—and reasonably demand high rates for accepting them.

Sterling Portents

STERLING remains basically weak, but in the past few days that weakness has not been over-evident. In the official market, the rate has remained at just over $2.78¼, the point beyond which the Exchange Account does not in practice allow it to fall. There has again been some evidence of official support, though the amount of support needed was probably smaller than it was earlier in the month. The volume of dealing has been relatively small with some indications of transatlantic demand for sterling to cover short positions. Against Continental currencies, sterling has shown a modest improvement; rates are now generally above the lower limits at which sterling was being supported in the first phase of the current strain. This, naturally, may reflect the realisation that dollar burdens will fall also on the Continental countries, as well as on Britain. The rate against the dollar for transferable sterling has remained at just over $2.74, the point at which support has latterly been given. Security sterling, however, which has not since August, when the Government broker sold American Treasury bonds to limit the premium on dollar stocks in London, been supported by the Exchange Account, has fallen further, to below $2.49. The discount on security sterling is closely linked by arbitrage operations through Kuwait and other free Sterling markets with the premium on dollar stocks in London.

Commodity Prices Move Higher

COMMODITY prices are still rising. *The Economist* Indicator rose by two points this week to 97.8 (1952 = 100), the highest level reached since February last year. Though metal prices have weakened other commodities have taken up the advance—not always for reasons directly connected with the troubles in the Middle East. Raw jute and jute goods have risen sharply. Raw jute was short before the Canal was blocked. Shipments from the interior of Pakistan are held up partly by transport difficulties and partly because the growers, who are getting high prices for their rice, are holding back jute in the hope of still higher prices to come. Consumers are prepared to pay premiums of up to £6 a ton for shipments afloat. The rise in raw wool prices was evidently touched off by the Suez crisis, even though this has only a marginal effect on shipments of wool. Before the crisis the market was weakening and many buyers were naturally tempted to wait. Afterwards they hastened to cover themselves and pushed prices up. But these covering orders will not be placed twice, and prices may ease in time.

HOW COMMODITIES HAVE MOVED

	Oct. 25	Nov. 15	Nov. 25
Tin, cash (£ per ton)	810	852½	850½
Copper, cash (£ per ton)	269	282	271
Rubber, spot (d. per lb)	27	31⅜	32
Canadian wheat (£ per ton)	31½	31⅜	32
Raw jute, firsts (£ per ton)	95	100	112
Merino wool top futures (d. per lb)	124¾	133½	140½
Common tea (d. per lb)	41	55	61
The Economist Indicator, all items (1952=100)	91·8	95·7	97.8

Rubber prices have changed little over the week, but consumers have shown more interest in nearby supplies and afloat shipments have commanded premiums of up to 1d. a lb. Despite the cheapness of American synthetic rubber, manufacturers here and on the Continent are not keen buyers; the technical difficulties of changing over to the use of more synthetic rubber appears to outweigh what may be a temporary advantage in price. The advance in wheat prices is the direct result of the continued rise in freight rates. In the past month No. 2 Northern Manitoba wheat has risen by 14s. a ton to about £32 a ton cif, and Australian wheat is about 25s. dearer at £30 a ton cif; at least £10 of that price represents the cost of freight. With English wheat also dearer an increase in the price of bread may be unavoidable. Retail prices of tea may go up before Christmas; common tea is now quoted in the auctions at 5s. 1d. a lb, compared with 3s. 2d. two months ago. The sharpest rise of all has occurred in raw sugar. In the last two weeks the spot price has shot up by one cent to 4.25 cents a lb fas Cuba, the highest point reached for over four years. Anxiety about the Middle East is only partly responsible; there is a growing belief that the outlook for sugar next year is good.

Freights Past Korean Levels

AS there has been little spare dry-cargo tonnage available this week the tramp shipping markets have been running more or less in "neutral gear." But the week has not been without its significance. The few fixtures that have been made have broken the "Korean barrier" in several trades. On Tuesday, for example, the National Coal Board chartered a ship for three voyages starting in December or January at the rate of 94s. 3d. a ton from Hampton Roads to Holland with the option of discharging in Britain at 101s. 9d.; this was 1s. 9d. a ton more than the previous highest figure paid during the Korean war. New peaks have also been set in transatlantic grain shipments; from the Gulf of Mexico to Britain at 142s. 6d. a ton, or 4s. 6d. a ton more than six years ago, and from the River Plate to the Continent at 172s. 6d. a ton with the option of discharging in Britain at 180s.—43s. 9d. a ton more than the Korean peak.

A little relief to shippers may soon come in the shape of more derequisitioned tonnage. The Government is still using about 43 requisitioned ships, against 50 or so three weeks ago and about 70 in September; these represent perhaps a tenth of all British tramp tonnage and the Government's need for them should not last much longer. The United States Government has also been releasing some Liberty ships from its "mothball" fleet. Thirty have been chartered (with more likely) to the American Coal Shipping Company recently set up by the mineworkers and the railway companies to move American coal to Europe. Another thirty have also been released for the shipment of grain and other surplus agricultural commodities to Asia. It will be a month or two before any of these begin operating. But it was the longer term problems of the blocking of the Suez Canal that exercised the International Chamber of Shipping this week. Its standing committee pressed—naturally—for the salvage work to proceed quickly and regardless of political considerations, but it also showed concern over the delay the blocking meant to the Canal's improvement programme. Perhaps it is optimistic for the Chamber to hope that this work might be pressed ahead while there is no traffic passing through the Canal; but the rate and scale of expansion of the Canal's capacity is certainly a question that should not be lost sight of in the present international political argument.

Car Output Now

CAR output this year must now be expected to fall below last year's record level of not quite 900,000 by rather more than the 15 per cent estimated in these columns a few months ago. To the losses in production caused by the labour troubles that arose from this summer's redundancies, the recent shortage of shipping space, and lower expectations of sales this winter in southern hemisphere markets, must now be added the consequences of a blocked canal at Suez: petrol rationing at home and a much greater tightness of export shipping space. The latest production figures—to the end of October—cover the period before traffic through the canal ceased. Car output for these ten months totalled 601,500 and commercial vehicle output reached 246,200, 18½ per cent and 15½ per cent respectively fewer than up to October last year. During the month of October, production of both was down by nearly a third.

A winter selling season—both at home and abroad—similar to those experienced before the war was to be expected this year even before the latest Suez crisis; the industry could hardly have hoped to have equalled during the final two months of 1956 its high production rate of November and December, 1955—when this year's troubles were beginning to emerge. The recent shipping difficulties of car exporters were more the occasion than the major cause of the current crop of further short-time working. Vauxhall Motors, which is now producing about a fifth to a quarter less than at its busiest period in the summer, intends to work a four-day week three weeks in four for the rest of the year; for the past two months it has maintained a four-day week for only one week in four. The Rootes factories at Coventry, which produce the Humber, Hillman, Sunbeam, and Singer lines, are expected to go onto a four-day week within the next week or two. Ford is still working a full week but, since it is now producing between 1,300 and 1,400 cars, lorries and tractors a day against 1,400 to 1,500 a day in June and July, it may not be able to hold to its five-day week for the whole of the winter. Short time working at BMC, on the other hand, has been cut since the Motor Show. All the Nuffield factories and considerably more of the Austin departments are now back on a full working week, but the group as a whole is employing 6,000 workers less than the 55,000 it had before this summer's dismissals. At Standard there has been little change lately; the car plant is still on a four-day week, and the tractor plant, where output of the new Ferguson has now reached about half ultimate capacity, is operating for the full five days. Standard is hoping to benefit from any switch in new sales to the only 8 hp car now produced by any major maker during this winter of petrol rationing; but for the industry as a whole the outlook is decidedly bleak, and the 1956 crop of new cars may well be only about 710,000 to 720,000—fewer than in 1954.

Retail Business

CUSTOMER TRENDS

This is a new quarterly bulletin for those interested in the home market for consumer goods. It includes short and long-term forecasts of sales by different outlets and merchandise groups, regional surveys and reports on special investigations.

Any More for Bermuda?

Two more shipping companies have been casting their eyes in the direction of almost tax-free Bermuda. The chairman of Court Line, Mr J. P. Philipps, has told shareholders this week that the company had made application to the Treasury to form a subsidiary in Bermuda, that negotiations are still proceeding and the matter must be regarded as *sub judice*. The giant P & O Company has gone further ; it has announced that it "is proceeding with the registration of a subsidiary company in Bermuda in case it should be decided in the near future that an investment in this company would be desirable." It will be seen that these two moves differ from previous excursions by shipowners to Bermuda. The three principal shipping companies formed in Bermuda so far are not subsidiaries and therefore Treasury consent was not needed. London and Overseas Freighters has taken only a half interest in London and Overseas Tankers in Bermuda. Stanhope Steamship Company, of which Mr Jack Billmeir is chairman, will take only a 49 per cent interest in its Bermudan offshoot. The company controlled by Silver Line and two other companies is not a subsidiary of any one of them.

Court Line wants to hold "at least a majority if not 100 per cent" of its Bermudan company and evidently P & O also contemplates at least a majority holding. Court Line is clearly testing the official reaction, and by implication P & O has already tested it. What either intends beyond that has not been disclosed, but a reasonable surmise is possible. P & O has before it a tanker building programme so big that the investment allowances on the new ships will provide a fine tax cushion, and any plans to accumulate tax free profits in Bermuda for fleet replacement would have little significance for the first ten years. Court Line has three tramp ships building, one of them to come in next year. It must be thinking about placing further orders soon, and has probably also been wondering whether to add tankers to its tramp fleet. The value of any tax saving for Court Line might develop more quickly than for P & O.

But both companies appear still to be thinking aloud and neither to have reached a decision. But decision may well be near. All that has happened in the Middle East has emphasised the necessity of maintaining a maximum of British flag tonnage. The question is how far and how fast a subsidiary in Bermuda paying no tax on its retained profit will help that objective. The shipowners are now making their plea to the Chancellor of the Exchequer in advance of next year's budget. It is not too wild a guess to suggest that the tax reliefs he gives them next April may enable them to find the answer.

Britain's Terms of Trade

It is some consolation that the "post-Suez" deterioration in Britain's terms of trade starts from a favourable level. The average ratio of import to export prices was 99½ in the first ten months of this year, 1½ points more favourable than the 1955 average and slightly better (a decline represents an improvement) than the average in the base year 1954. As the index of import prices is of necessity calculated cif, it records the cost of materials and freight at the time of sale, which may be several months before the goods arrive in this country. There is an appreciable delay, therefore, before the index reflects a rise in commodity prices and freight rates ; and a rise in the latter exaggerates the real deterioration in the terms of trade to the extent that Britain is a net earner of freight payments. Last month both factors were at work.

The index for imported fuels jumped up by seven points to 115 (1954 = 100), owing mainly to a rise in tanker freight rates that started long before the Suez Canal was

THE TERMS OF TRADE THIS YEAR (1954=100)

Import Prices	Food & Tobacco	Basic Materials	Fuels	Manufactures	Total
1955.....	101	104	102	109	103
1956 1st Qtr ...	100	105	107	115	105
2nd Qtr ..	102	105	107	113	106
3rd Qtr ...	99	106	107	107	103
October ..	103	107	115	108	106

Export Prices	Engineering goods	Metals	Other mnfrs.	Total	Terms of trade
1955.....	103	104	102	102	101
1956 1st Qtr ...	105	110	105	105	100
2nd Qtr ..	105	111	104	105	101
3rd Qtr ...	108	112	104	106	97
October ..	109	111	104	107	99

blocked. Food prices rose by four points to 103, thanks largely to the earlier rise in prices of the higher grades of tea, and the composite index of import prices rose by two points to 106. With the composite index of export prices unchanged at 107 the terms of trade worsened by two points to 99. As the table shows, the improvement in the terms of trade over the year as a whole has been more the result of a rise in export prices than of a fall in import prices. Export prices of metals in October were 6½ per cent above the 1955 average, engineering products were six per cent higher and "other manufactures" two per cent higher ; textiles (excluding clothing) alone were no dearer in October than the 1955 average.

Uranium Bombshell

President Eisenhower's characteristically generous decision to cut the export price of uranium 235 from $25 a gramme to as little as $16 a gramme has ominous overtones for the British groups now working hard to establish export outlets for the Calder Hall type reactors they are designing for use at home. The new American fuel offer is intended specifically to help the building of power producing reactors as distinct from research plants. Uranium 235 is very costly to produce, taking roughly as much electricity to get as the uranium itself is likely to generate in useful power. The overriding economic advantage of the Calder Hall type reactor is that it uses

the things they say!

I don't like "Big Business".

Why? Just because it's big — and successful?

No, because of the amount of economic power it wields. Take I.C.I., I feel there should be some control over their production, and over the way they spend their profits — and over their prices, too.

What would be gained by that?

Well, we could then be sure that I.C.I. was working for the common good.

But I.C.I.'s prices are already remarkably low, all things considered. Most goods today cost more than three times as much as they did pre-war but, on average, I.C.I.'s prices have only about doubled during that period.

Let's forget I.C.I.'s prices. We could step up their production.

In the last nine years, I.C.I.'s manufacturing capacity has been *doubled.*

All right, but what about the public getting a share of their profits?

That part of I.C.I.'s profits which it distributes as dividends is shared among 250,000 stockholders and over 80,000 I.C.I. employees — quite a fair number of British people. A great deal is ploughed back — into more production — which means more exports, more jobs, more wealth for the country.

M

Imperial Chemical Industries Limited

C.P.V. and the British exporter

WHEN we talk about the C.P.V. World Organisation, we mean just that. For the maps at our London headquarters are flagged in unexpected, as well as in obvious, parts of the globe.

In Fiji, for instance, it is perfume that C.P.V. advertisements are selling. In Istanbul, sewing threads and air services. In the great markets of Africa and Malaya, a host of things, from toothpaste to silver polish. There is hardly an overseas country where we are not working, with our own organisation or an associate, to market and advertise the varied products of our British clients.

To *market* them, we say. For though C.P.V. advertising weapons are tactically powerful, it is marketing strategy which dictates their use. We do not regard export marketing as a casual affair—a mere matter of sending translated advertisements through the post, for example. We believe it is a serious business. And we know a good deal about it; as our clients, and their sales, will testify.

To help the British exporter to market his products in almost any part of the world: indeed, to advise him whether, where and when he should market them at all; that is one of the chief purposes for which C.P.V. exist.

SHE

Well, that's what I used to say a year or two ago, when the magazine first started—but now I'm not so sure. SHE has caught on so well with women of all ages and types that you never know who *isn't* going to ask for a copy! Even husbands buy it to take home. 'It's a good shillingsworth' one man said the other day, 'but it costs me a packet in the long run. Every time my wife and daughter look at the advertisements they seem to find something they want!'

It costs only £265 a page to advertise in Britain's liveliest monthly magazine for women

SHE is published by

natural uranium, smelted and refined into metal rods but still basically as it came from the mines. The expensive process of extracting the 0.7 per cent that is uranium 235 is by-passed. So although more uranium 235 means a more efficient reactor, it has also meant a more expensive reactor to operate.

Now there is a real prospect that the American cut in the price of "enriched" fuel—it contains only 20 per cent of uranium 235—will price British reactors out of the export market. It is a move that British salesmen have feared for some time because they are aware of the huge military investment in the United States in plants for making fissile materials, among them uranium 235, and know that much of this investment is surplus to military requirements. The American wish to make some of this surplus available to foreign countries with no uranium extracting capacity of their own has always carried the implicit risk of price cuts for no other reason than to encourage countries to afford experiments in atomic power. Britain, with severely limited capacity to produce uranium 235, all of it earmarked for military and experimental use, can only continue to offer those countries the Model T type of reactor that runs cheaply enough on natural uranium—but not so cheaply that it can compete with continuous cuts in the price of the "enriched" fuel for more advanced designs.

The American offer, however, is hedged with restrictions that may not be palatable to all countries. The most important of them is the proviso that none of the plutonium produced as by-product in power reactors shall be used for military purposes: it must either be put to civil use or sold back to the United States at prices rather lower than those charged for the original fuel.

Smaller Copper Dividends?

SIR RONALD PRAIN, the chairman of the Rhodesian Selection Trust group of copper companies, tells shareholders of Roan Antelope bluntly: "Unless the price of copper should undergo some very appreciable, and at this stage unexpected, upswing, our dividend for the current year will be lower." In exactly the same words he gives shareholders in Mufulira the same warning. Sir Ernest Oppenheimer, the chairman of the Rhodesian Anglo American group, is not quite so blunt, but to many his words will convey the same meaning. Sir Ernest says to the Rhokana shareholders: "Certain conditions have arisen to emphasise the desirability of maintaining a realistic and prudent policy in regard to reserves and dividends."

	Sales (long tons)	Sales revenue (£'000s)	Estimated gross profit* (£'000s)

Quarter to Sept. 1956..	3,970	1,120	458

* After provision for replacement which is subject to revision at end of financial year.

These warnings should not unduly perturb shareholders in the copper companies who have received fat dividends from the extraordinarily lush profits of the latest financial year (to June 30th) and who must expect a fluctuating income from their investments. The price of copper is now much lower than it was; the companies still have large sums to spend on development; and production has in the current year been hit by strikes. How revenue has already been affected is shown in the accompanying table of the sales and earnings of the Selection Trust group of copper producers, though a gloomy superstructure should never be built up on the evidence of a single quarter's figures alone.

Australia's Wheat Quota

BRITAIN'S obligation, under the new trade agreement with Australia, to buy on commercial terms 750,000 tons (wheat equivalent) of wheat and flour a year could hardly start at a more favourable time. Exports of French wheat, a soft wheat that competes with Australian, have been cut drastically this season by the poor harvest; Britain, latterly France's best customer, has had to look elsewhere. With no official encouragement British millers would have bought roughly 700,000 tons from Australia this season.

UK IMPORTS OF WHEAT, JANUARY TO OCTOBER
(thousand tons)

	1954	1955	1956
Australia	253	446	511
Argentina	296	318	295
France	310	479	184
United States	262	443	728
Canada	1,512	1,943	2,291
Other	90	195	87
Total	**2,723**	**3,824**	**4,096**

Indeed shipments of Australian wheat and flour to Britain between August 1st and November 10th, published by Broomhall, show an increase of 29 per cent to 206,000 tons over the same period of last year. There should be little difficulty in arranging to buy the extra 50,000 tons needed to fill Australia's quota. This assumes that this section of the trade agreement applies to the British season beginning on August 1st, not to the Australian crop year that begins on December 1st—a point that has yet to be decided.

Compared with Britain's imports in recent calendar years, however, the quota of 750,000 tons implies a substantial increase in purchases. Imports of wheat and flour from Australia in 1955 amounted to 620,000 tons, and the average of the past three years was 530,000 tons. It is a simple matter for the big port millers, given competitive prices, to use more Australian wheat at the expense of French, American and other soft wheats. For the small millers the main difficulty is to obtain a regular supply in the quantities they require. In the past they have criticised the Australian Wheat Board for failing to meet their needs fully, but with good will on both sides the difficulties should not prove insuperable.

Savings New and Old

SALES of premium bonds in their second full week—daily figures are no longer being published—naturally did not reach the volume attained in the opening rush. They totalled just under £10 million, compared with £15½ million. The pace is likely to rise, however, in the next few days, since bonds bought at the end of this month rank equally with those bought earlier for participation in the first draw for prizes next June. So far as can be judged, only a moderate proportion of the opening sales were achieved at the expense of other "national" savings. (The net yield of these, after deducting encashments, was £4.2 million, compared with £7.2 million in the previous week and £6 million in the corresponding week last year.) Much the same can be said of the excellent performance of the new savings certificate introduced last August. In the first thirteen weeks—before the introduction of the premium bond—sales of certificates amounted to almost £200 million, compared with only £46 million in the similar period of 1955; this gross gain was partly offset by an increase in encashments, and the net yield from certificates was £59 million (compared with a net deficit of £2 million). But the performance of all other national savings was still much better than in 1955: in the relevant thirteen weeks then there was a net deficit, apart from savings certificates, of £5.7 million, whereas this year there was a credit of nearly £24 million.

It is evident, however, that a large part of the initial rush of funds into a new savings medium will almost always represent transfers or diversions from other forms of saving—if not from other "national" savings, then from deposits at the banks, building societies and other financial institutions. And if the new security offers particular attractions to holders of substantial cash balances, such as surtax payers, the special flow of funds may continue for some time. Some useful light has been shed on this point, in relation to the new savings certificates, by an analysis made by the official statisticians. This shows that in the month of August no less than 73.1 per cent, and in September 71.7 per cent, of the certificates sold were taken in blocks of 100 or more, much higher proportions than had been shown for many months. In the corresponding months of 1955 the proportions of these large purchases were 53.7 and 49.2 per cent respectively. Obviously, these "savings" mostly represented drafts on bank deposits; but this does not mean that the new certificate was to that extent failing in its task. From the very outset, the Chancellor made it plain that a large part of his objective was the minimisation of his borrowings on floating debt, in order to ensure a better control of bank liquidity—whether or no there resulted an increase in genuine new savings.

Harwell's New Plants

THE importance that the Atomic Energy Authority attaches to its newest experimental reactor, Dido, can be gauged from the fact that Dido, the eighth reactor to be completed at Harwell, was given the unexpected honour of an official opening on Tuesday. Dido is the kind of all-purpose tool that Harwell has lacked for so long. The seven other reactors, all of them considerably smaller and lower powered, have each been designed for a specific purpose, the majority to test out individual reactor designs before building the full-scale plant. Dido is in a different class, both in size, power and bulk. It is a massive structure enclosed in a 70 foot high airtight building made of 1½ inch steel plate and designed to withstand the forces of any conceivable accident to the reactor. The fuel is made up of 2½ kilograms of almost pure uranium 235 which has to be replaced at the latest every six weeks. This core, which will generate 10,000 kW of heat—making Dido the most powerful research reactor outside the United States—is suspended in 10 tons of heavy water imported from the United States at a cost of roughly £22,000 a ton, and the whole structures including its fuel, heavy water, and service buildings, represent a bill of about £2 million to the AEA.

Yet once Dido is functioning at full power, which will not be until January, the various channels that run into the heart of the reactor can be used for a wide range of simultaneous experiments on the behaviour of different types of advanced reactors. A second, identical reactor is under construction next to Dido, and a third is being built at Dounreay, suggesting that the Authority has an acute need for this type of research outlet.

The reason behind Harwell's relatively late start on such heavy water research reactors is complex. An accident to the Canadian heavy water reactor at Chalk River which brought sharply home the element of risk in these high-powered reactors; the difficulty until recently of buying the required tonnage of heavy water; and the priority given to other design work such as, for example, Calder Hall—all these combined to postpone serious work on Dido until 2½ years ago. But knowing that Dido can carry out in a matter of weeks, experiments that otherwise take years, many scientists have felt that the delay was unnecessarily long drawn out.

SHORTER NOTES

The Export Credits Guarantee Department, which withdrew cover on exports to Egypt at the beginning of August, has now announced that exports to Israel, Syria, Jordan and Saudi Arabia can only be insured if the business is covered by confirmed irrevocable letters of credit.

★

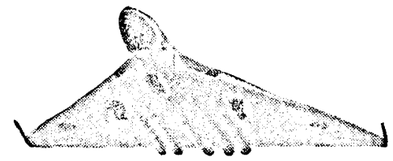
A further grant of £1 million is to be made by the Ministry of Labour over the next five years to Remploy, the Government-subsidised company that employs disabled workers. This is to be spent on further mechanising its 90 scattered factories so as to improve their ability to compete with the products of outside industry. In its latest year—to March 31st last—Remploy made a loss of £2½ million on a turnover of £3 million, but this was a smaller loss and a bigger revenue than in the previous year.

★

S. Smith & Sons (England), the manufacturer of motor accessories, aviation instruments and clocks, reports a profit of £2,333,495 before tax for the year ended August 4th compared with £2,635,274 last year. The ordinary dividend has been maintained at 17½ per cent.

Avro Vulcan

NOW IN SERVICE WITH THE R.A.F.



The Avro Vulcan, the world's first 4-jet delta bomber has entered the Royal Air Force.
Behind the recent Air Ministry announcement lies a brilliant chapter of aeronautical progress that marks the beginning of a new era in Britain's air power.
With its near sonic speed, its great range and altitude and its large carrying capacity, the Vulcan, powered by four Bristol Olympus turbo-jets, is a formidable aircraft.
Add to this its fighter-like manœuvrability, exceptional safety and pleasant handling characteristics and you have the reasons why the Vulcan is the most effective bomber in service today.
But that is not all. The Vulcan has a great development potential.
It has been engineered to allow for new operational requirements which can be met without major alteration to the basic design.
In the tough testing ground of the R.A.F., on routine exercises and on long-range training flights, the Vulcan has already shown its paces.
Like its illustrious predecessors from the Avro stable — the Lincoln, the Lancaster, the Anson, the 504 and many others — the Vulcan is destined to become one of the world's really great aircraft.

Wherever you may be . . .

HERCULES

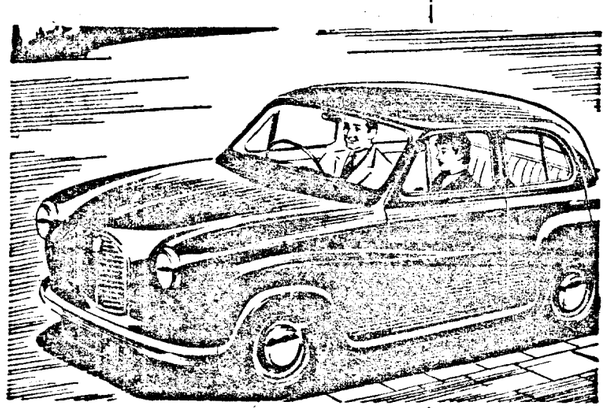
is there!

INDOORS . . .

it is likely enough that the man-made fibres from which delightful garments can be fashioned to-day, have been produced with the aid of Hercules chemicals like cellulose acetate or—wait for it!—dimethylterephthalate.

OR OUTDOORS . . .

it is just as probable that the much-admired finish on high-quality cars is a lacquer enhanced by the use of Hercules synthetic resins.



BUT THESE ARE ONLY TWO of the countless common tasks in which Hercules chemicals serve the community—invisibly but well.

If you have a problem in industrial chemistry Hercules may have the answer. Address your enquiries to the Technical Service Department.

HERCULES CHEMICAL MATERIALS FOR INDUSTRY

HERCULES POWDER COMPANY LIMITED • 140, PARK LANE • LONDON, W.1

Company Notes

DEBENHAMS. In the past statements from the directors of Debenhams have suggested a defensive attitude, which dated from the time when Mr Charles Clore was a buyer of the stock. That is now past history and the latest statement by the new chairman, Mr J. Bedford, strongly suggests that the group has not merely planned but has started on the first stages of a new offensive. Mr Bedford reminds shareholders that this large group of department stores has a high proportion of its businesses in the luxury and middle class trades. It is, he says, this end of the trade which has been particularly affected by high rates of tax and by the credit squeeze. More and more spending power has been concentrated in the hands of the weekly wage earner—a concentration which, incidentally, has brought prosperity to such store empires as Great Universal Stores and United Drapery Stores. The concentration has benefited Debenhams' own popular stores, "the results of which compare favourably with their competitors." It has benefited those businesses that deal extensively in the hire purchase and club trades, in which the Debenhams group has only a small interest, and the chain stores, in which Debenhams has no interest at all.

	Years to July 31, 1955 £	1956 £
Consolidated earnings:—		
Trading profit	5,025,131	5,244,379
Depreciation	350,692	390,712
Taxation	2,473,929	2,620,819
Net profit	*1,668,414*	*1,751,306*
Ordinary dividends	790,625	790,625
Retained by subsidiaries	576,433	647,243
Retained by parent	186,617	167,283
Consolidated balance sheet:—		
Net fixed assets	24,566,433	26,774,325
Net current assets	4,951,987	3,809,890
Stocks	6,564,041	6,699,128
Cash	1,715,234	864,488

Capital Reserves	12,343,016	12,745,880
Ordinary capital	5,000,000	5,000,000

10s. ordinary stock at 33s. 10½d. xd yields £8 2s. per cent.

But Debenhams has built up a large central buying department which has enabled its popular stores to compete with the chain stores. Mr Bedford defines his intentions: "It is our policy to expand this side of the business and also to enter the chain store field when a suitable group can be acquired." Such a business the directors intend to acquire by an exchange of shares and as a first step they propose the creation of an additional 5 million ordinary shares.

Debenhams as a potential bidder is indeed a change from the days when it was defending itself against the possibility of a bid. And it seems to be taking another leaf out of the share-bidder's book. Its properties are being revalued so that the directors can "review the insurances and re-assess whether the assets of the group are being used to the best advantage." Mr Bedford adds "if any of our businesses are found wanting in this latter respect, energetic steps will be taken to remedy the matter." The group is re-building its existing properties and it is still in need of new money; one day its postponed debenture issue may be made—unless indeed the group were to take another leaf from the share-bidder's book and realise some of its hidden property values.

A new look in any company's affairs always has its attractions. And there are solid attractions in Debenhams' new policies. They at least point the way to towards an increase in sales and profits. That is a signpost that ought not to be ignored in assessing the current yield of 8¼ per cent offered by the 10s. ordinary shares at 33s. 10½d. on the maintained dividend of 27½ per cent.

★

ELECTRIC AND MUSICAL INDUSTRIES. Capitol Records was obviously a good investment for EMI. In the year to June 30th the group's sales rose by £11.4 million to £53 million, the highest figure in its history. Of this increase £7 million came from the inclusion of Capitol Records' figures for the full year. Excluding Capitol, the group's sales rose by 11 per cent; of total sales about £19 million were made at home and £34 million abroad. Capitol itself achieved the biggest sales and profits in its history. The profits of the EMI group rose from £1,875,000 to £2,417,000, representing a return on turnover of 4¾ per cent.

This achievement must be attributed largely to the sale of records, which in the United Kingdom rose by 33 per cent, for the decline in radio and television sales "very adversely affected profits." EMI began publishing Capitol records in this country in January and "in the first six months their sales have far exceeded not only calculated expectations but the most sanguine hopes." But Capitol was not bought by EMI simply to acquire its pressings of popular records but also as an outlet for EMI's own pressings in the United States, where it had already established its own selling organisation using the trade name "Angel." The chairman of EMI, Mr J. F. Lockwood, takes a most optimistic view of the potentialities of the American market for EMI's European pressings, saying "with our own powerful and enterprising sales organisations in America—Capitol and Angel—we shall, within a few months, be in an unique and unprecedented position properly and profitably to sell in the Americas the vast resources of Europe of which EMI has the lion's share."

The immediate outlook for sales, as he sees it, "seems good although profit margins will be tight and trading will certainly not be easy." Ordinary shareholders had again to be content with a dividend of 15 per cent and as the group is still short of cash—its bank overdraft having gone up from £2,141,000 to £3,740,000—so the purchase of Capitol may not lead to an immediate or sharp increase in dividend payments. At a price of 23s. the 10s. shares yield 6½ per cent.

METAL INDUSTRIES. This Glasgow engineering and shipbreaking group has provided more than its share of excitement this year. There were the annual figures for the year ended March 31st, showing trading loss £544,923, compared with a profit of £640,576. There was the difference at the annual meeting between the new chairman, Sir Charles Westlake, and one of the honorary presidents, Col. S. J. L. Hardie. There was the disclosure of an intention to requisition a meeting with the object of putting two of the honorary presidents, Mr Hardie and Mr McCrone, and one other director, Mr R. K. Fleming, on the board. Now shareholders receive the cheerful interim profit statement. And they can look forward to further exciting events. The requisitioned meeting has still to come, and finally there is now the prospect of an interim dividend in February.

So shareholders will read the interim profit statement with both recollection and anticipation. It shows a profit before tax of £543,000 for the six months ended September 15th. That marks a notable improvement and makes the demand for a change on the board more difficult to understand.

Since it paves the way for a probable resumption of interim dividends in February, shareholders will be pleased. They should avoid the pitfall of reading too much into it. The warning of Cooper Brothers, the accountants (which the board endorses), that £543,000 would not be a prudent figure on which to base dividend decisions, should not be lost: it contains exceptional profits of about £40,000. Any losses by Sentinel (Shrewsbury), since sold, have been excluded, and the trading period is not necessarily representative of a full year.

★

INTERNATIONAL NICKEL. Shareholders in this giant among nickel producers, which is also a substantial producer of copper, had been warned that earnings had passed the peak. Now it is announced that "the volume of metal deliveries and prices on copper" have declined, though it is not clear whether deliveries of nickel and other metals besides copper have suffered. The result is that net earnings in the third quarter fell to $20,822,000, as compared with $25,158,000 in the second quarter and $22,322,000 in the third quarter of last year. Net earnings per common share fell to $1.39, compared with $1.69 in the second quarter and $1.49 in the third quarter of last year. But operations for the first nine months of 1956 still show a useful increase on the same period of 1955, with net earnings $4,943,000 up at $72,594,000.

The board has decided against an increased distribution this year; the final quarterly dividend is maintained at 65 cents per share and the year end extra dividend is cut from $1.35 to $1.15, making $3.75 in all, the same as last year. The market was disappointed and the shares closed on Tuesday at $198½ (London terms), compared with $204 previously. Shareholders can hardly

blame the board for its caution. Supplies of copper are ample and it would be foolish to expect a sharp recovery in earnings from this source in the near future. The company has big development schemes in train and is believed to be about to open up a huge new nickel property in Northern Manitoba. Moreover all the $35 million of preferred stock is to be redeemed on February 1st.

★

GLAXO LABORATORIES. In the year to June 30th, the group turnover of Glaxo Laboratories at home and overseas rose by 10 per cent, gross trading profits went up from £2,825,527 to £3,002,692, the ordinary dividend from 12½ to 14 per cent and the directors are recommending a 50 per cent free scrip issue. The results, Sir Harry Jephcott confesses, "were somewhat more favourable than might have been expected from the half yearly statement." In part, Sir Harry explains, "this was due to some improvement in prices but more substantially to an increase in the volume of business during the second half."

No less than two thirds of the group's sales are made in overseas markets. And Sir Harry emphasises that "overseas subsidiary companies contributed substantially" to the increase in sales. "With their manufacturing facilities," he adds, "these companies are well placed to take advantage of the rising demand for the company's products that has accompanied the rise in income and standards of living in many countries." They have remitted more profits to the parent company at home. But their financial strength has not been impaired; indeed profits retained in their own accounts this year are three times as much as those retained in the previous year. The group will continue to develop the business of these overseas subsidiaries. At 33s. 3d. the 10s. shares yield only 4½ per cent—a legacy of the wonder drug boom and a reflection of the big earnings cover. Shareholders must recognise that a business such as this must always spend a great deal on research and that its markets are highly competitive.

ROOTES MOTORS. Sir William Rootes, the chairman of Rootes Motors, says nothing about the prospects of the company or of the motor industry in his statement issued with the company's full accounts. Many will regret that he has not done so. He does confirm that while turnover was maintained in the year to July 31st profit margins were eroded, bringing the group's trading profits down from £4,482,617 to £3,155,254. The consolidated balance sheet wears a new appearance, the acquisition of Singer Motors and of the remaining share capital in Rootes Motors (Canada) being reflected in the increase in fixed and working capital. The group thus entered a testing year that must surely be one of the most testing that the motor industry has recently experienced with its liquid resources depleted.

	Years to July 31, 1955 £	1956 £
Consolidated earnings:		
Trading profit	4,482,617	3,155,254
Depreciation	801,656	1,006,513
Taxation	1,808,504	1,019,489
Net profit	*1,503,367*	*687,136*
Ordinary dividends	230,000	230,000
Retained by subsidiaries	940,962	299,321
Retained by parent	381,132	178,746
Consolidated balance sheet:		
Net fixed assets	8,805,080	11,832,957
Net current assets	11,057,103	9,297,189
Stock and tools	13,352,005	19,438,199
Debtors	4,495,672	4,944,396
Hire-purchase debtors	2,262,729	3,117,440
Liquid assets	4,000,064	1,026,375
Bank overdrafts	...	1,442,685
Acceptance credits	735,000	3,800,000
Reserves	6,197,292	6,682,872
Ordinary capital	5,000,000	5,000,000

4s. ordinary shares at 4s. 3d. yield £3 per cent.

How difficult the year will be for Rootes Motors is hard to calculate and Sir William Rootes does not offer a view. But, like its competitors, it has recently shortened the hours its factories work. Profit margins will remain small and it is hard at the moment, with petrol rationing and the blocking of the Suez Canal added to a pile of troubles, not to predict, despite the introduction of new models, a contraction in sales. At least this can be said: any recovery in motor sales in the spring and summer will have to be very strong to make good the bleakness of the winter months for the industry.

LONDON STOCK EXCHANGE

Next Account begins: November 28th
Next Contango Day: November 23th
Next Settlement Day: December 4th

RENEWED weakness this week had by Wednesday almost eliminated the rally made by gilt-edged towards the close of last week. Most stocks remained slightly above the lowest points reached last week, though nationalisation issues were sometimes lower, 3 per cent Transport 1968/73 losing ¼ to 73. The new corporation scrips were exceptionally weak on new issue activity; West Ham fell ⅝ to 3¼ discount and 5½ per cent. Southend 1964/66 fell ⅛ to ⅛ discount. Japanese bonds were lower, but German stocks improved. The premium on dollar stocks over the rate of the day rose to 12¼ per cent.

The decline in industrial shares accelerated this week and large losses following the announcement of oil rationing brought *The Economist* indicator down to a low point of 173.7, compared with 177.2 last week, and the decline went further on Thursday. Motors and oils suffered heavy losses. Ford dropped to 28s. 1½d. and Rolls-Royce fell to 101s. 3d. after rising to 106s. 10½d. on Monday following the announcement of large engine orders. Raleigh lost 4s. 1½d. at 30s. 10½d. British Petroleum tumbled 6s. 3d. to 117s. 6d. and Shell lost 3s. 7½d. to 137s. Brewery shares were weak. Meux's non-assented rose 4s. 6d. to 39s. before the announcement of the Ind Coope bid. C. A. Parsons and A. Reyrolle declined on the rights issues, dropping 3s. and 6s. 6d. respectively. International Nickel receded to $197 (London terms) on the lower earnings. Shipping shares had lost part of their rise by Wednesday; Donaldson fell back to 75s. 3d. after reaching 78s. 1½d., a net gain of 2s. 9d. Cunard rose 1s. 3d. to 24s. 3d.

Kaffirs were generally firm, although Harmony weakened 1s. 6d. to 23s. 9d. Coppers declined, Rhodesian Anglo-American losing 3s. 1½d. on Wednesday to 101s. 3d. and Rhokana being 2½ lower on balance at 38. Teas improved, but rubbers remained quiet.

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. Italy includes Trieste. (3) New drachmas introduced May 1, 1954 (1 new drachma = 1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area.

Financial Statistics

EXCHEQUER RETURNS

For the week ended November 17th, 1956, there was an "above-line" deficit (after allowing for Sinking Funds) of £9,478,000 compared with a surplus of £19,529,000 in the previous week and a deficit of £19,762,000 in the corresponding period of last year. Net expenditure "below-line" last week reached £30,149,000, bringing the total deficit to £691,297,000 (£604,307,000 in 1956-56).

THE MONEY MARKET

THE discount houses again made no change in their bid of £98 15s. per cent for the 91-day bills on offer at the Treasury bill tender on Friday last. Total applications were down by over £33 million, to just under £300 million, whereas the offer was down by only £10 million, to £190 million; the average rate of discount rose by over 1d. to just £5 per cent. The market's allotment rate rose from 27 per cent to 39 per cent. The market did make a reduction, of 2d. to £99 2s. 7d. per cent, in its bid for the £90 million of £63 day bills on offer; but total applications increased by no more than the amount on offer, and the market's allotment actually rose by one point, to 93 per cent.

In Lombard Street large official help was given on Thursday before the week-end, and on the first two days of this week smaller official purchases were made. But credit was comfortable at the week-end and on Wednesday—although this was the make-up day of the clearing banks.

The price of gold in the London market fell from 251s. 5½d. a fine ounce on Thursday before the week-end to 251s. 2¼d. on Tuesday, notwithstanding the steadiness of the sterling rate at around $2.78⅝. The fall thus marked a decline in the dollar price (to $34.95), caused mainly by sales of gold by European central banks.

COMPANY MEETINGS

RHODESIAN SELECTION TRUST GROUP OF COMPANIES

Incorporated in Northern Rhodesia

The following are abridgments of the Statements dated October 15th, 1956, by the Chairman, Sir Ronald L. Prain, OBE, circulated to the Members.

RHODESIAN SELECTION TRUST LIMITED

I propose to begin this statement by a brief review of the main Companies in which we are interested.

MUFULIRA

Mufulira is now capable of mining and milling about 400,000 tons of ore per month which would yield about 100,000 tons of copper in a full year.

More recently the discovery of additional ore to the west of the existing mine has led the directors of that company to contemplate the development of "Mufulira West," which might increase the productivity and capacity of the whole enterprise by as much as 50 per cent. Such a programme will require very large sums of capital.

Our holding in that company is now 63.98 per cent and whatever plans are announced by that company for financing the expansion project will no doubt require us to subscribe substantial new sums which in turn will necessitate our advising our shareholders how it is proposed to raise these sums.

CHIBULUMA, CHAMBISHI AND BALUBA

The bringing of Chibuluma into production has been successfully achieved and the prospects for that company are promising. Our holding in Chibuluma is 64.29 per cent and we do not at present contemplate having to provide any finance for that company out of our own resources.

The directors of Chambishi have under consideration the opening up of this property on a scale which, initially anyway, would be similar to that of Chibuluma. No further details have been announced, and the scheme is dependent upon Chambishi being able to arrange the necessary finance. Our holding in Chambishi is 64.29 per cent.

Our holding in Baluba remains at 64.29 per cent. Exploration work is continuing.

Rhodesian Selection Trust Exploration Limited has had an active first year in which it has begun the investigation of several prospects in Southern Rhodesia and Nyasaland.

FINANCIAL

Our income, as hitherto, came predominantly from dividends of the Mufulira Company and amounted to £4.4m. This enabled us to pay an interim dividend of 2s. per share, less taxes, and a final dividend of 4s., less taxes, is now recommended.

The distribution this year will cost £4.2m, and this will allow the cash position of the Company to be further built up after making provision for all commitments, and transferring £75,000 to General Reserve.

MISCELLANEOUS

Granted freedom from interruption, Mufulira should have a successful year, and Chibuluma should come into normal operation on a profitable basis. It appears unlikely, however, that Chibuluma will pay any dividend until it has repaid its loan to the United States Government. Its equity value, however, will increase annually, even if no dividends are received in the near future.

The Mufulira Chairman's Statement sounds a note of warning as to the possibility of lower profits this year, due to the present price of copper being at a substantially lower level, and to costs not being appreciably reduced.

Mufulira has its expansion plans and Chambishi the possibility of opening its mine. Both these developments will have implications for your Company, though their nature and extent cannot yet be determined. It is hoped, however, that the coming year will clarify this position.

Your Company announced during the past year that it had joined with several other sponsors in creating the Merchant Bank of Central Africa. In this way the Company hopes to be in a position to play a part in the development of the Federation in spheres not necessarily connected with mining.

CONCLUSION

Your Companies, since they emigrated from the United Kingdom and more particularly since they moved to the capital of the Federation, have tried to associate themselves more and more with the general development of this young and virile country. It is my conviction that the prosperity of the country and the prosperity of the copper mining industry are indivisible and that your Companies must inevitably face duties and responsibilities which go far beyond those which normally concern the management of a mining enterprise.

MUFULIRA COPPER MINES LIMITED

The production of ore for the first time exceeded 4m tons, and the output of molten blister copper was 97,698 long tons, which is easily a record. Saleable production totalled 94,500 long tons, made up as to 27,623 tons blister copper, 57,335 tons cathodes and 9,542 tons wirebars.

The average cost per long ton of copper in all forms delivered buyers increased from £133 to £153.

FINANCIAL RESULTS

The average price at which our copper was sold was £340 per ton, an increase of £66 over the previous year. The profit margin per ton thus increased from £141 in the year ended June, 1955, to £187 during the year under review, and gave us a profit of £16.8m, to which has to be added the increase in the value of copper stocks and interest earned. Tax amounts to £6.6m, and from the resulting net profit £2.3m has been appropriated to Replacements Reserve and £2.5m to General Reserve. This latter compares with £1m last year, the increase being accounted for mainly by reserving £1.3m, namely 1/5th for the loans to the Federal and Territorial Governments estimated to amount to about £6.5m by 1960.

The interim dividend of 8s. per share, less taxes, and the final dividend now recommended of 17s. per share, less taxes, will make a total dividend of 25s. less taxes.

I must enter a note of warning as to the possible results for the current year. The price of copper since July 1st has been much lower than the average realisation for the year under review. On the cost side we know of forthcoming increases under various headings which, in spite of the effect of a lower price on the reduction of mineral royalties, may mean that our overall cost is not appreciably lower.

We expect that our production will reach the 100,000 ton mark, but even this factor will not compensate for the reduction in profit margin based on the present price of copper. Our commitments under the heading of Replacements Reserve and General Reserve will continue heavy. Therefore, unless the price of copper should undergo some very appreciable, and at this stage unexpected, upswing, our dividend for the current year will be lower.

MINE EXPANSION

Exploration to the west of the mine has disclosed the continuation of the "C" orebody to an extent not yet defined, but well beyond the previously anticipated limits. This development has led to the decision to embark on an expansion programme for the development of "Mufulira West." The drilling to the west has disclosed ore in areas hitherto outside the ore reserve calculations. The extent of this additional ore is not yet fully calculated, but it is known to be of sufficient magnitude to warrant an expansion of the Mufulira operation, which we hope will be of the order of 50 per cent.

LABOUR POSITION

Constructive progress was made in implementing the practical aspects of the African advancement agreement signed between the Copper Mining Companies and the European Mine Workers' Union in September, 1955.

Unfortunately, towards the end of the financial year, the African Mineworkers' Trade Union began a series of strikes which continued into the months of July, August and September. The direct cause of these strikes was the wish of the African Union to eliminate the Mines' African Staff Association. This association, which came into being in 1953, was recognised by the companies and the African Union in 1955 as representing certain senior categories of African jobs.

The strikes which the African Union called, while not being illegal, were unconstitutional in that the Union had not gone through the procedure laid down by its

agreement with the companies. For this reason the companies on August 1st, 1956, declared a dispute with the African Union and asked Government to set up a Board of Inquiry to investigate the whole position. Later in August the Government appointed a Commission of Inquiry, which is sitting at the time of writing.

African strikes continued throughout August. Early in September circumstances became such as to bring about on September 11th a Government declaration of a State of Emergency, followed by prompt Government detention of some of the officers of the African Union. Since then work has been resumed at all mines, and operations have reverted to normal.

POWER

The Federal Government completed arrangements for financing the Kariba hydro-electric scheme. The four major copper-producing companies agreed to lend the Government £20m by subscriptions to Federal Development Bonds carrying maturities varying from one to 28 years, with interest of 4½ per cent per annum. The share of each company in this total loan, part of which is earmarked for railway development, is a subject for discussion, and that of your Company is tentatively put at £5m. The companies entered into this arrangement with Government willingly, realising that without the Kariba scheme the Copperbelt would be faced with having to provide alternative and costly methods of producing more power than the present installations can deliver.

During the last few weeks the Copperbelt electric power system has been interconnected with the Belgian Congo system, and power is now flowing the 320 miles from the Le Marinel installation on the Lualaba River to the Central Switching Station of the Copperbelt system at Kitwe.

MISCELLANEOUS

Prospecting and exploration under the ægis of the companies formed for this purpose, and in which your Company has an interest, continued on an increasing scale during the year.

The question of the future of the mine townships and the problems of stabilisation and urbanisation of African labour have received attention regularly, but by their very nature these problems are not such that solutions can be found quickly, and the studies on these questions therefore continue.

During the year Vainona Estates Limited, in which your Company has a financial interest, decided to proceed with an experimental agricultural scheme on the Kafue Flats. This takes the form of a pilot polder which will during the next five or six years seek to prove whether or not some of the engineering problems of a greatly extended scheme on the Flats can be solved, and whether the soils can produce a rotation of wheat, rice and barley which would make a major contribution to the Territory's food supplies. This pilot scheme has the full support of the Northern Rhodesia Government, and we should like to acknowledge the great help that we have received from various Government officers.

(The Chairman's remarks under the headings Northern Territories and Copper Price are similar to those contained in the abridgment of his statement to the Roan Antelope Members.)

ROAN ANTELOPE COPPER MINES LIMITED

The production of ore for the first time exceeded 5½m tons, and the output of blister copper was 88,714 long tons, constituting a record.

The average cost per long ton of copper in all forms delivered buyers increased from £142 to £167 per ton. Over £10 of this increase is represented by an increase in mineral royalties based on the higher price of copper during the year compared with the previous year. This same factor accounted for an increase in the cost of employees' bonus scheme on the mines, and if these two factors are eliminated from the cost comparisons, the operating cost increase was about £10 per ton, represented by increased costs of labour, power and supplies.

FINANCIAL RESULTS

The average price at which our copper was sold was £336 per ton, an increase of £66 over the previous year. The profit margin per ton thus increased from £128 in the year ended June, 1955, to £169 during the year under review, and gave us a profit of £14.1m, to which has to be added the increase in the value of copper stocks and interest earned. Tax amounts to £5.7m, and from the resulting net profit £1.5m has been appropriated to Replacements Reserve and £3m to General Reserve. This latter compares with £1.4m last year, the increase being accounted for mainly by reserving £1.1m, namely 1/5th for the loans to the Federal and Territorial Governments estimated to amount to about £5.5m by 1960.

The interim dividend of 1s. 9d. per share, less taxes, and the final dividend now recommended of 3s. 3d. per share, less taxes, will make a total dividend of 5s., less taxes.

I must enter a note of warning as to the possible results for the current year. The price of copper since July 1st has been much lower than the average realisation for the year under review. On the cost side, furthermore, we know of forthcoming increases under various headings which, in spite of the effect of a lower price on the reduction of mineral royalties, may mean that our overall cost is not appreciably lower. Moreover, our production is unlikely to be as high as last year, when we were producing virtually to capacity. This year our operations have already been affected by strikes. Our commitments under the heading of Replacements Reserve and General Reserve will continue heavy. Therefore, unless the price of copper should undergo some very appreciable, and at this stage unexpected, upswing, our dividend for the current year will be lower.

MINE AND REFINERY

The long-term outlook for Roan will continue to depend on the exploration results on the Muliashi Special Grant. In the meantime Roan continues to be one of the largest operations in the mining world, and it is not impossible that the mining and milling rate during the next twelve months might reach a rate of 6m tons per annum.

It is of interest to record that this month sees the completion of 25 years of blister production at Roan, during which time it has produced more than 1.6m tons of copper to a total value, in historical pounds, of about £186m.

The construction of the electrolytic refinery at Ndola, owned by Ndola Copper Refineries Limited, continued satisfactorily. The capacity will be increased to 110,000 tons of copper, and the cost will correspondingly increase from the original figure of £3m to £4½m.

NORTHERN TERRITORIES

During the year your Company offered a loan of £1m to the Government of Northern Rhodesia and £500,000 to the Government of Nyasaland, to be used exclusively for African development. These loans, which were gratefully accepted by these Governments, are interest-free until 1960, when the Governments have the option to convert all or any part of them into loans for up to 20 years at an interest rate of 4½ per cent per annum.

COPPER PRICE

The price of copper continued to rise on the world markets and reached a high point in March of this year. Then, touched off by a change of pricing policy on the part of the Chilean Government, the inevitable reaction took place. It was marked in its severest form in the quotations of the London Metal Exchange which, from a high point of £437 on March 19th, declined to a figure of £264 on July 3rd. This fall in price, both for magnitude and speed, is unprecedented in the history of the copper business. Most of the other major quotations in the copper market also registered severe falls, though none to the extent registered by the London Metal Exchange. Since June the market has steadied and at the time of writing the world prices range from £280 to £320.

As far as the copper produced by your Company is concerned, we have continued to sell at fixed prices, which policy we introduced in May, 1955, in response to a request made to us by the copper fabricating industry of Great Britain. During the year under review our price changed six times compared with 242 moves in the London Metal Exchange price, or, if we eliminate price changes of less than £2 in the latter, the comparison would be with 170 changes in Metal Exchange quotations. During the period between May, 1955, and the present time the price of our copper has changed nine times compared with 237 movements on the Metal Exchange, eliminating price movements of less than £2 on the latter.

We realise that there exists in the United Kingdom a two-price system, and that this can cause certain inconveniences to the trade. In our opinion, such inconveniences are not such as to warrant our returning to a system of daily price changes, though we are at all times prepared to consider any constructive proposals designed with a view to introducing greater stability into the price of not only our product, but the copper price generally.

MISCELLANEOUS

Your Company has applied to the Rhodesian Stock Exchange for the listing of its stock on that Exchange. We hope in this way that greater facilities will be provided for the gradual building up of a body of local stockholders.

At the beginning of this year informal stockholders' meetings were convened both in London and New York. This was the third consecutive year in which we had tried this experiment, and the attendances have increased with each year. As it is, therefore, evident that these meetings are of interest to, and carry the support of, a considerable number of stockholders resident in Great Britain and the USA, I propose once more to call such meetings within the next two or three months.

CONCLUSION

To sum up, it is our hope that after the unsettled labour position of the last three months conditions may now settle down to enable us to get on with our job of producing copper, and of continuing thereby to provide some of the sinews necessary for the development of the Federation.

Owing to the developments in hydro-electric power the immediate prospects for our power supplies seem better than for some years past.

So far the copper price for the current year is much below last year's average. This situation, if it continues, coupled with no expectation of any appreciable reduction in our costs, indicates a lower profit margin per ton, hence lower profits, and therefore a lower dividend.

A sense of proportion should however be kept. The profits for the past year must be considered exceptional by any standard, and a return to lower profits can only be regarded as a return to more normal conditions.

(The Chairman's remarks under the headings Labour Position and Power are similar to those contained in the abridgment of his Statement to the Mufulira Members.)

CHIBULUMA MINES LIMITED

The mine started hoisting ore in October, 1955, and the concentrator came into full operation in April, 1956.

The plan for Chibuluma is to mine about 40,000 tons of ore per month and to produce at the mill a copper concentrate and a cobalt concentrate. The copper concentrate will go to one or more of the three Copperbelt smelters. The cobalt concentrate will be sent to the Chibuluma cobalt plant at Ndola.

The year under review was, therefore, not only a broken period, but being the early stages was not representative of Chibuluma's capabilities, either as to production rates or costs. Too much attention, therefore, should not be paid to either of these. In fact it mined about 81,000 tons and milled about 126,000 tons of ore, representing all the ore from mining and the rest from previous development work.

The costs, again for what they are worth, were about £153 per long ton of blister copper delivered buyers. For the first two months of the current year, however, costs have been £116 per ton, reflecting a rate of mining and milling under more normal conditions than can obtain in the first few months of any mining operation.

Of the 4,340 long tons of blister produced, 2,324 were sold at an average price of £319 per ton, giving Chibuluma an apparent profit margin of £166 per ton. The profit for the period, after providing £20,000 for Replacements Reserve, was £287,282.

AGREEMENT WITH UNITED STATES GOVERNMENT

Under this agreement we are to start repayments on our loan, in the form of metal, in the year after the first year in which profits exceed £150,000. As a result we shall during the current year be making deliveries to the United States Government of copper to the value of about £285,000. This will be wholly on account of interest incurred in the pre-production period, while, during the following year, we hope that our deliveries will not only clear off the total arrears of interest, but begin also on repayment of the principal.

COBALT PLANT

This plant, which is being constructed at Ndola, under the management of Ndola Copper Refineries Limited, is now expected to begin operations in the middle of 1957. The overall recovery of cobalt is expected to be unusually high. If these expectations are fulfilled in the full scale plant at Ndola, our eventual cobalt production should be in excess of 1m lb per annum, compared with the original estimates of 500,000 lb per annum.

WANKIE COLLIERY COMPANY LIMITED

(Incorporated in Southern Rhodesia)

OUTPUT CAPACITY RAISED TO 5 MILLION TONS

The following extracts are from the statement by the chairman, Mr T. Coulter, which has been circulated with the annual report and accounts for the year ended August 31, 1956:

ACCOUNTS

The profit for the year, before taxation, amounted to £1,141,647 as compared with £1,084,012 for 1955, being an improvement of £57,635.

Taxation absorbed £250,000 and a sum of £105,000 was transferred to taxation equalisation reserve. An amount of £250,000 was transferred to general reserve, which now stands at £985,000.

The total distribution to shareholders for the year was 1s. per share and compares with 10½d. per share paid last year.

Capital expenditure on fixed assets during the year, less sales, amounted to £1,004,017.

Current assets (excluding stocks and stores), at £2,510,050, as against current liabilities of £1,068,093, indicate a surplus of £1,441,957 represented by Federal Government stocks and short-term loans and deposits.

The following tabulation gives a comparison of the sales of coal and coke for the past three years ended August 31st:

	1954	1955	1956
	Tons	Tons	Tons
Coal	2,732,957	3,414,719	3,695,356
Coke	154,617	220,966	242,848

It will be noted that sales of coal increased by only 280,637 tons as compared with the previous year, and this may well be regarded as the big disappointing feature of operations for the past year.

Despatches of coal are limited by the difficulties which still confront the railways in providing adequate truckage. Advance estimates of railway coal-carrying capacity for the current financial year do not encourage the hope of any appreciable improvement.

COAL PRICE AGREEMENT

In my review for the previous year it was stated that, in expectation of a further increase in despatches, coupled with improved production efficiency, the average selling price of coal was being reduced by 5d. per ton to 18s. 10d. per ton at the pit-mouth, with effect from November 1, 1955. Our hopes of a further substantial increase in despatches were not realised, and it therefore became necessary about the middle of the past year to apply, in terms of the Price Agreement, for a small upward adjustment in the average selling price. This was agreed by the Government and from March 1, 1956, the average price was increased by 8d. per ton to 19s. 6d. per ton at pit-mouth.

The price to be charged during the current year, with effect from November 1, 1956, has been provisionaliy agreed at 19s. 6d. per ton at the pit-mouth.

We can, I feel, take pride in the fact that the great task undertaken by the Company in 1953 to increase its colliery capacity to 5 million tons by the end of 1956 has now been completed.

The total proved reserves of extractable coal lying within the limits of the reduced concession and option areas is of the order of magnitude that will allow the Company to produce coal for about 95 years from present date, at the rate of 5 million tons per annum. Boring has proved the existence of over 100 million tons of high grade coal, lying at varying depths up to 150 feet of surface cover, which can be extracted economically by opencast working.

There is, however, no question of embarking on opencast work at the present time, for Wankie is already equipped to produce much more coal than the railways can handle.

COMMUNITY DEVELOPMENT

Our responsibilities to the African section of our employees have been, and still remain, particularly heavy. Three years ago accommodation for Africans, both single and married, was largely obsolete and inadequate. The conditions were such as seriously to jeopardise Wankie's ability to obtain an adequate labour force.

We have worked towards setting these things right on the basis that 25 per cent to 30 per cent of the Company's African employees would be provided with married accommodation. To date we have built some 1,420 houses, and approximately 235,000 square feet of other building work has been, or will shortly be, completed in the African areas.

The new hospital has ensured that the whole community will have the most up-to-date medical facilities at its disposal. We have also placed great emphasis on the development of welfare and recreational activities.

These endeavours have undoubtedly resulted in a healthier, happier and more efficient labour force.

KUALA MUDA RUBBER ESTATES LIMITED

INCREASED PROFIT

The thirty-first annual general meeting of Kuala Muda Rubber Estates, Limited, was held on November 16th in London, Mr L. I. Simpson, ACA (the chairman), presiding.

The following is an extract from his circulated statement for the year ended March 31, 1956:

The profit for the year, before providing for taxation, amounted to £172,937 against a profit for the previous year of £121,980. We are recommending a dividend of 15 per cent and placing £30,000 to General Reserve and £23,500 to Replanting Reserve.

In the past owing to the need to repay our Debenture Issue and enable the payment of Ordinary dividends to be resumed and also to other difficulties due to the "emergency," we have been unable to undertake as much replanting as we should have liked. These factors have been eased and we have decided to embark upon a long-term programme.

I have a great faith in the future of natural rubber, and I believe the most effective way for us to compete with synthetic rubber is by reducing our own costs. So long as our estates consist largely of seedling rubber yielding from 400-500 lb per acre, it is impossible to show any appreciable reduction in costs, but the position is very different with budded or clonal rubber, such as we are now planting, which should yield on an average about 1,000 lb per acre.

During the year under review, we continued to produce the maximum amount of our crop in the form of concentrated latex.

The report and accounts were adopted.

THE WALL PAPER MANUFACTURERS LIMITED

ESTIMATED TAXATION ABSORBS OVER £2,100,000

BENEFITS FROM SOUND CAPITAL EXPENDITURE PROGRAMME

IMPORTANCE OF MAINTAINING HIGH QUALITY STANDARDS

MR ALFRED WHITTLE ON THE YEAR'S PROGRESS

The fifty-seventh Annual General Meeting of The Wall Paper Manufacturers Limited was held on November 21st at the Midland Hotel, Manchester.

Mr Alfred Whittle, FCA, chairman of the company, who presided, said:

Ladies and Gentlemen, Once again I am happy to report a very satisfactory year's trading. The improvement in profits is entirely due to the wallpaper manufacturing section of the Group.

Before I deal with the consolidated accounts I would like to refer to the change in the directorate since our last meeting. Your board unanimously elected Mr N. Jepson and Mr E. F. West as directors in July last. These gentlemen have taken a prominent part in the control of two of our main subsidiaries—Mr N. Jepson having had 31 years with The Walpamur Company and Mr West 23 years with the company, the last 10 years with the Wall Paper Stores. Your directors are confident that their commercial and administrative experience will be of great value to the Group and today you will be asked to re-elect them.

GROUP PROFITS

The net profit attributable to the company before charging taxation is £3,699,561, an increase of £601,810. Estimated taxation absorbs £2,166,069 leaving £1,533,492. With the amount brought forward from last year the sum available for appropriation and dividends is £3,643,227.

APPROPRIATIONS AND DIVIDENDS

The subsidiary companies have transferred £170,133, and the parent company £700,000 to revenue reserves and £50,000 has again been allocated to the pension funds. The dividends already paid and those recommended, amounting after tax to £621,845, including a bonus of 5 per cent to the Deferred stockholders, will leave a balance of £2,101,249 to carry forward to next year.

At this stage I would like to refer to the items appearing as a memorandum in the Consolidated Profit and Loss Account and which have no bearing on the trading result of the year under review. Many years ago certain of our subsidiaries set aside £430,000 as a provision for excess profits tax. As this provision is now known to be unnecessary it has been devoted to the strengthening of the reserves of the subsidiary companies concerned by placing £250,000 to Renewal and Development Reserve and £180,000 to General Reserve. These are in addition to the amount of £170,133 transferred to reserves by the subsidiary companies out of this year's profits.

GROUP BALANCE-SHEET

During the year capital expenditure by the Group, after deducting disposals, has amounted to £1,806,418. Current assets, after deducting current liabilities are £12,300,000, a slight increase on the previous year. Revenue reserves and unappropriated profits (excluding reserve for future taxation) now total £9,474,571, an increase of £1,264,859. The appropriation of £250,000 (part of the £700,000 already referred to) has been placed to Investment Reserve against a further fall in values—in the main of Government securities all of which have fixed dates of redemption. The reserve now stands at a figure which is sufficient to reduce the book value of our investments to market value as at June 30, 1956. This reserve may ultimately prove to be unnecessary should the gilt-edged market improve or to the extent that the securities are retained until their maturity dates.

ADDITIONS TO BUILDINGS AND PLANT

The programme of capital expenditure covering the extensions to factory buildings and the installation of new plant continues. During the past year, the company has benefited greatly from the expenditure incurred in previous years. As I have stated further sums, amounting to £1,806,000 were spent during 1955/56; commitments outstanding at June last total £1,670,000. These big sums are all available as a result of the restraint and prudence of past years and the spending of the money on capital assets has so far thrown little strain upon the company's financial structure. The present earning capacity of the Group would now be seriously impaired if these past savings were not available. As we have built up in the past, so must we continue to build for the future.

The capital expenditure is being evenly spread over all the principal activities of the Group and every section is being strengthened all the time, including the distributing groups where substantial sums are needed for the acquisition of existing businesses offered to the company.

The maintenance of our units in the highest state of efficiency will call for continued large scale spending. We must be able to finance this expenditure from our own resources without having to go outside.

PROFITS AND COSTS

During the past year costs of all kinds—materials, wages, services—have, throughout our various activities, continued to rise.

We have so far been able to absorb these additional costs because of the considerable increase in the manufacture and sale of wallpaper and of other products in some of the manufacturing subsidiaries. In recording this I must pay tribute to the work done by our employees, factory managers and their able staffs. Improved processes, too, have contributed to the increase in Group profits. We have thus been able to avoid raising selling prices. Whilst inevitably there have been lower profit margins in some of the manufacturing units the increase in the overall profit is very satisfactory and is evidence of the vitality of the members of the Group.

WALLPAPER

It is very pleasing for me to be able to say that the manufacture of wallpaper, the company's original activity, came back last year as a substantial contributor to the final trading result. The turnover in value was the highest on record and the volume in rolls of wallpaper amongst the highest. The outstanding quality of design and colouring in all the mill collections accounted both for the increase of orders and the interest of the public in the higher quality goods. The greater demand for more expensive wallpapers threw rather a burden on the mills both in the form of overtime working and the strain that goes with the effort and watchfulness required when a heavy volume of expensive, delicately coloured and textured wallpapers is being produced. During the year more plant has had to be installed to meet the demand for the duplexed heavy embossed and coloured wallpapers which still rival in popularity the so-called "contemporary" styles. Your company is pre-eminent throughout the world in the production of these textured wallpapers which are increasingly being asked for by export customers.

Although manufacturing costs rose throughout the year, the increased costs were not passed on to the consumer. As I have stated so often, the company's policy is that all its products from every section of the Group should reach the public at the lowest possible prices.

The increase in wallpaper trading has been shared by the two avenues of distribution, the retail shops and the decorators' merchants. We offer many facilities to our customers in both sections. For the merchants we undertake the making of pattern books—the familiar decorators' pattern books which you will all have seen in your houses at some time or other. These books are made every two years and each of our mills runs a specialised department for the work which is both onerous and exacting, particularly now that it is very difficult to get casual labour for seasonal work. The race to get the books out by the appointed date and to supply the stocks of wallpaper to support the books represents an exhausting concentration of effort which is cheerfully accepted by the mill managements and staffs.

A special department at head office gives advice and practical help in the layout of merchants' showrooms whilst the company's own wallpaper centre at King's House, Manchester, demonstrates all the best current methods of showroom display. Customers from all parts of the country visit Manchester to see the centre.

Services of a parallel character are available to retailer customers; all are kept abreast of developments in display and publicity. The public is as eager as ever to see the newest patterns and to learn by demonstration or otherwise of the latest trends in decoration. It is an essential part of the work of head office to make certain that all retailer customers are placed in a position to deal with enquiries from the "Do-it-yourself" minded section of the public which is growing year by year. Happily the anxiety felt in recent years by craftsman decorators because householders are increasingly doing their own decorating is giving way to a realisation that many of their future new

customers will come from those who have become "decoration minded" through first hand knowledge and experience of what wallpaper and paint skilfully handled can do for the home.

PAPERMAKING

The company has three large papermaking mills. The two larger units, Hollins Mill and Darwen Mill, have just been extended and brought completely up to date by the installation of additional papermaking machines and equipment. The third mill, the Lower Darwen Mill, is now being brought into line with the other two mills. These units are most important members of the Group and without them the gratifying results of the past year would not have been possible.

I have on many occasions spoken of the very high cost of paper as being the factor mainly responsible for the anxieties associated with wallpaper production and for the slender profit margin realised in past years. Before the war paper was possibly too cheap; now, due to a number of reasons, it has risen in price proportionately much more than other raw materials. The continuous worry about paper supplies caused your board, as a matter of policy, to secure itself against uncertainties of the future by extending its papermaking plants and installing in them the latest and best machinery. These decisions taken some years ago, at a time when the financial resources needed still had to be built up, are now bearing fruit. The paper mills have been able to supply the paper needed for the record demand last year for your company's wallpapers. The Darwen Paper Mill subsidiary makes very substantial sales of other classes of paper in demand from many industries.

SUBSIDIARIES

The Walpamur Company has continued to progress in an increasingly competitive field, the manufacturing and trading companies, both here and abroad, which comprise the Walpamur Group, having made steady gains. You may have heard of the negotiations that The Walpamur Company has been conducting with Tip Top Paints (Australia) Limited, which, I am happy to report, have been concluded successfully. The Australian company now forms a welcome addition to the Walpamur Group, and we shall be studying its progress with the closest interest.

The Sanderson Group and the Wall Paper Stores organisation have continued to expand and all the other subsidiary companies at home and abroad have contributed to the final result.

EXPORT TRADE

It is not easy to keep up the volume of export trade year after year, because to do this, additional outlets have to be found, when, as seems to happen every year, some established markets find the need to restrict imports. Personal visits to markets abroad by manufacturers are very necessary; some of your directors are called upon to accept the strain of making long journeys by air in order to watch over the interests of the company in many parts of the world.

Our exports of wallpaper, particularly from the Crown, Sanderson and Lancastria collections, continue to be satisfactory, and sales of Sanderson fabrics still form a substantial proportion of the sales from the Uxbridge factory.

PUBLICITY AND TRADE MARKS

We give continuous study to the very important matter of publicity for the company's products, and particularly the principal trade marks, several of which have passed into everyday use. Names such as Walpamur and Lincrusta have become so widely known and accepted that they are often taken for the name of a commodity, rather than recognised as the trade mark of a particular manufacturer. In decoration, the word Crown for the public means wallpaper.

Stockholders will, I am sure, be interested to learn that the Crown trade mark is now about 100 years old. The name of Sanderson, a renowned trade mark for wallpaper and fabrics, will also shortly celebrate its centenary.

In the paint field, such well-known trade marks as Duradio, Muromatte, Marvo, Marvosheen and Trojax, are being linked in the company's publicity with the name Walpamur, and so become even more closely related to each other.

TECHNICAL DEVELOPMENT

Much is written today about mechanisation under the title "Automation" which has led many people to think that this is a new development in industry. Mechanisation of manufacturing processes has been continuous since the early days of the Industrial Revolution and this natural progress is not only inevitable but necessary. This continuous improvement of methods of manufacture and control both here and in other countries has always been an essential part of industrial progress and today the speed of such progress is more than ever necessary in this country having regard to world competition in many fields of industry. If we are to have a higher standard of living we must produce more goods and make them more cheaply and more efficiently and this means greater and greater efforts to improve mechanisation and control throughout industry.

Our own chemical and engineering research sections at home and overseas continue to make valuable contributions to our advancement in new processes.

RESTRICTIVE TRADE PRACTICES ACT

Resale Price Maintenance — that is the fixing by the manufacturer of the retail price of his product—may, under the Act, continue and the company will doubtless make no change in its long-standing practice of dividing its mill collections into two parts, one price controlled and the other not controlled. The public according to its particular requirements, gets very good value either way.

With regard to exclusive trading, with the many ranges coming from all our separate wallpaper factories, we are able to offer such a wide assortment of choice at every price step that even the largest distributors can find all they need in our collections. It is not surprising therefore that many of our customers deal exclusively with us. Many have traded on this basis for over 50 years.

I would like to assure you that our very big sales of wallpaper and the close bond between the company and its customers depend today upon a combination of quality, price and service much more than upon the terms of trading. Manufacturers producing an article which is bought by every class in the community, as is the case with wallpaper, want their goods to reach the public at the lowest possible prices. They need neither inducement nor compulsion from the Government on this matter. To keep all our factories fully occupied is our aim and policy and we can only succeed if we sell our product at prices which the public can afford. The profit margin on a piece of wallpaper is very small and even this on occasions over the last 10 years has been partly or wholly sacrificed when high paper costs or the incidence of purchase tax has forced up the price of wallpapers to a point where sales have been adversely affected.

The Government in its efforts to bring down prices ought not to overlook the part played by quality. I stress this more from the standpoint of industry generally than from the wallpaper industry. With wallpaper, quality is largely self-evident to the consumer—the weight and feel of the paper and the attractiveness of the design, texture and colouring. The use of non-fugitive colours and the permanence of the emboss are, on the other hand, features which are not obvious to the consumer and could be sacrificed to price. In many commodities consumers cannot assess quality other than in actual use by which time it is too late to do anything but regret not having paid a little more for a much bigger gain in quality.

It is to be hoped that British industry will not be pushed into sacrificing quality for price so that we become producers of shoddy goods at the time when export buyers are beginning to forget the inferior goods which due to shortage of raw materials in the immediate postwar years some industries sent abroad. If anything like this happens the Governments of the 1950's will not be remembered with respect. Basically high prices spring from inflation and inflation is caused by Governments not by industry.

TRIBUTES

In conclusion I extend on your behalf and that of the board our thanks to the management, members of the staff and all other employees of the Group (numbering over 10,000 men and women) for their continued co-operation and loyalty during the past year. I am particularly pleased to place this on record and to say that our relations with our employees are very satisfactory.

The report and accounts were adopted.

HOSCOTE RUBBER ESTATES

The twenty-fourth annual general meeting of Hoscote Rubber Estates, Limited, will be held on December 17th, in London.

The following are extracts from the address of the Chairman, Mr H. B. Egmont Hake, circulated to shareholders:

The profit for the year before and after taxation was £68,440 and £40,300, being improvements of about £14,000 and £7,500, respectively, over the previous year. In addition, there is a surplus of £24,688 on the disposal of fixed assets, of which Revenue Account benefits by £5,661; the remaining £19,000 odd is a capital profit and has been credited direct to Development Reserve.

From the available balance we have transferred a further £15,973 to Development Reserve and £10,209 to the Reserve for Replacement of Planted Areas. We are recommending a dividend of 20 per cent, compared with the 17½ per cent in 1955, and if this is approved the balance carried forward on Profit and Loss Account will be £14,220.

The crop was more than one-fifth greater than the previous year—Pertang and New Rompin Estates being the chief contributors by reason of additional areas reaching maturity and more labour being secured. Costs were up by 3.36 pence per lb, 1.4 pence being due to higher export duty and cess, and the balance to wages increases. The sale price averaged only 2.36 pence more than in the previous year, but the increased crop resulted in the greater profit shown.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

(Incorporated in the Union of South Africa)

EXTRACT FROM MR D. A. B. WATSON'S SPEECH

The annual general meeting was held on November 20th in Johannesburg.

Mr D. A. B. Watson, who presided in the unavoidable absence of Mr H. J. Joel, the chairman, said it would be seen from the Balance Sheet that the increase in the book value of investments was £1,879,000, but after allowing for the net amount of some £975,000 applied out of Reserve in reduction of the book value of certain holdings, the amount invested during the year, i.e., purchases less sales, was £2,854,000.

The net depreciation of £975,000 was more than accounted for by the further depreciation of some £1 million on the Company's holding in Freddies Consolidated Mines Limited, which holding did not alter materially during the year. There was a net re-appreciation of £43,000 in the book value of other investments.

Under the heading "Investment Reserve" a sum of £1,475,000 was transferred from Profit and Loss Account, and, after providing the amount of £975,000 for the net reduction in book value of investments, there is now an amount of £500,000 at the credit of that Reserve.

The net profit for the year before providing for taxation showed an increase of £364,000, which was more than accounted for by an increase in income from investments of £401,000.

Although the necessity to provide for investment depreciation had absorbed a substantial part of the year's profits, the Directors were very pleased at being able so soon to restore the rate of dividend to its former level. The Board naturally hoped that the necessity for such a decision would not arise again notwithstanding the fact that the position with regard to the investment in Freddies Consolidated Mines Limited could not be said to have been clarified in either a favourable or unfavourable sense.

The outlook was indeed more hopeful than was the case a year ago, but there was still much to be done and it would be some time before the future of the mine could be clearly determined. He was, however, of the opinion that any further depreciation of that investment which might have to be dealt with in the Accounts was unlikely of itself to be such as to impair the prospect of maintaining the present rate of dividend of 3s. 6d.

After reviewing the Company's interests in Subsidiary Companies, Mr Watson said that the overall picture was one of expansion. After commenting on the increased value of sales of minerals produced in the Union, of which the greatest proportion was derived from the production of gold and uranium, Mr Watson referred to the question of the so-called vulnerable mines, i.e., mines whose margins of profitability were so slender that small variations in costs or revenue might reduce profits to vanishing point and bring about their closure. Commenting on the subject of assistance for such mines, Mr Watson said that in his opinion the question of assistance was one for decision by the Government and not one which could be dealt with by the Gold Mining Industry.

RHODESIAN ANGLO AMERICAN LIMITED

(Incorporated in Northern Rhodesia)

MARKET VALUE OF INVESTMENTS TOTALS £83 MILLION

SIR ERNEST OPPENHEIMER'S REVIEW

THE twenty-seventh annual general meeting of Rhodesian Anglo American Limited will be held in Salisbury, Southern Rhodesia, on Thursday, December 13, 1956.

The following are extracts from the Statement by the Chairman, Sir Ernest Oppenheimer, which has been circulated with the annual report and accounts for the year ended June 30, 1956.

Our Company is one of the premier investment companies in the Federation. At September 30, 1956, our investments, based on market price, were valued at £83 million. We are, therefore, not only concerned with the well-being of the companies in which we have investments, but are interested in the affairs and the development of the Federation as a whole.

MINING DEVELOPMENTS

In the field of mining, the expense of proving and equipping new mines is very great indeed. At this time, some three months before Bancroft Mines—in which we have a very large stake through Rhokana Corporation—is expected to come into production, I am very conscious of the money and human effort that have been called for. About £18 million will have been spent on the first and second stages by the time the proceeds of the first ton of copper are received. It has taken five years to open this mine and it will have to operate for some time before the original investors receive any reward. All investment in developing mines carries the normal risks associated with mining ventures, and those who provide this "risk money" may justifiably expect a good reward. Bancroft is proceeding with the second stage of its development, which will increase its copper production to some 85,000 tons by 1960.

Mining developments already planned in Northern Rhodesia will require the Companies to find some £50 million by the end of 1960. Some of this money will probably come from profits, and I am confident that, provided the mining industry in Northern Rhodesia is not asked to carry too much of the burden of development outside its own sphere in the Federation, the capital will be obtained.

The Federal and Territorial Governments are devoting much energy to the provision of services to keep pace with the rapid growth of the Country. The securing of capital for these projects has not been easy, but the copper-mining companies have been prepared to make notable contributions to the funds required. They have jointly agreed to provide a loan of £20 million over five years for the Kariba project and other essential development, and to accept power from Kariba for some years at a price which should enable that undertaking to operate profitably from the start. Furthermore, our group of companies has, through Anglo American Rhodesian Development Corporation, Limited, assisted the railways with the loan of £1 million and has provided £5 million for the purchase of trucks, which it will hire to the railways. No fewer than 1,599 trucks are already in service.

The decision of the Southern Rhodesian Government to hand over the Rhodesian Iron and Steel Commission to private enterprise is a welcome one, and a great expansion of the steel industry in the Federation can be expected. Lancashire Steel and Stewarts and Lloyds and other financial institutions of high standing, including the Anglo American Corporation, have indicated that they are prepared to make a substantial investment in this essential industry, and we in turn have expressed our willingness to participate.

INVESTMENTS

We have made an important investment in Rhodesian Acceptances, Limited, which started business on October 1st. This company, which has the support of one of the most important merchant banking institutions in Britain, has as its main function the financing of transactions of approved industrial and commercial establishments by granting credits and by accepting and discounting first-class bills of exchange, including acceptances by commercial banks and other recognised financial institutions. It will finance the export of Rhodesian manufactured goods, the import of goods to the Federation, and the purchase of raw materials for local manufacturers.

We increased our investment in Wankie Colliery during the year by the purchase of 718,732 shares. This company is now equipped to produce over 5 million tons of coal a year and could export over 1 million tons a year if railway transport was available.

We have increased our investments by £1,063,290 during the year, and, to provide for this, and to strengthen our cash position, we have placed £1,500,000 of the net profit of £7,373,794 to General Reserve, which now stands at £3,100,000.

We have recommended a final dividend of 7s. net, which, together with the interim dividend of 2s., makes 9s. net for the year.

Earlier in this statement I drew attention to the large mining developments that are either in progress or which have been foreshadowed. For these and other enterprises in which we may well wish to participate, substantial funds may at some time be required and we feel that we should be in a position at relatively short notice to take advantage of new business which we may seek or be offered. To allow for some elasticity in this matter and to provide scope for wider investment, we propose that the authorised capital of the company be increased from £6,500,000 to £7 million by the creation of 1 million shares of 10s. each, and you will be asked to approve of this recommendation at the forthcoming annual general meeting.

I am confident that Rhodesia remains a field for profitable investment and that, although the country will have to tackle the normal problems which rapid expansion creates, the developments that are taking place and those which are planned will increase the capacity of the country to produce, export and earn, and that they will result in a more diversified economy which will secure a high standard of living for all its citizens.

RHOKANA CORPORATION LIMITED

(*Incorporated in Northern Rhodesia*)

RECORD PRODUCTION AND PROFITS

SIR ERNEST OPPENHEIMER'S REVIEW

The following are extracts from the Statement by the Chairman, Sir Ernest Oppenheimer, which has been circulated with the annual report and accounts for the year ended June 30, 1956.

Your Company has never had a more profitable year. Record production, record prices for copper and an operating year during which Rhokana was, until the last month of the year, free of industrial troubles, have resulted in record profits and permitted the payment of a record dividend.

Since the end of the year, however, certain conditions have arisen to emphasise the desirability of maintaining a realistic and prudent policy in regard to reserves and dividends.

The net profit for the year of £15,937,000 included the income from dividends on our investments, and, after providing £3 million for capital expenditure, £12,937,000 was available for appropriation. We decided to create a general reserve to ease the burden of our commitments, especially our obligation to subscribe for Federal Government Development Bonds, and an amount of £4,200,000 was, therefore, transferred to general reserve. This amount included £1,200,000 for the Development Bonds we subscribed in July.

We have recommended a final dividend of 55s. net, which, with the 15s. net interim dividend, makes a record total of 70s. net for the year.

It is gratifying to report an increase in the ore reserves at Nkana and Mindola from 100,449,300 short tons to 122,853,200 short tons, which represents a considerable extension to the life of the mine.

AFRICAN ADVANCEMENT

One of the most important factors in the future of the copper mining industry is the agreement reached with our European employees last year in regard to African advancement. Good progress in implementing the agreement has been achieved, and our African employees are beginning to see the practical benefits.

At Nkana 95 Africans had, at the beginning of October, already been advanced into categories of work previously carried out by Europeans, and 20 into newly-created senior African posts outside the European field. A further 71 Africans are at present undergoing training for various advanced jobs.

Our relations with our European employees have remained excellent throughout the year and I should like to pay tribute to the patience and self-control which they maintained during the recent series of strikes called by the African Mineworkers' Union.

The Government appointed a commission to inquire fully into the reasons underlying the unrest and we have submitted evidence to the Commission.

You will have read in the press of the Federal Government's decision to proceed with the hydro-electric project in the Kariba Gorge at a total eventual estimated cost of £113 million. The four Northern Rhodesian copper-producing companies offered to make £20 million of this total available to the Federal Government at a rate of 4½ per cent interest, and, in addition, agreed to accept power from Kariba, when available, at a price which will provide another £10 million. The proportion of the £20 million for which your company will be responsible over a period of 5 years will be in the neighbourhood of £4,250,000.

Included in the total profit is an amount of £5,138,000 derived from your Company's considerable shareholdings in Nchanga and Mufulira, both of which Companies have had very successful years. Nchanga paid a dividend of 30s. in respect of the year's production, but the benefit of the increased final dividend of 10s. 7½d. paid by Mufulira will not be brought into account until next year.

In addition, your Company has a considerable capital investment in Bancroft Mines, where it is confidently expected that production will start at the beginning of next year. Work on increasing the capacity of the plant to produce 85,600 long tons of copper by 1960 has already started and before very long we can expect an important contribution to our dividend income from this source.

Chibuluma Mines, Limited, in which we also have a large interest, is already in production.

IMPROVED POWER POSITION

The link with the Congo was opened in September and an improvement in the power position was immediately noticeable. The expensive expedients of wood-burning and the import of coal through Lobito can now be dispensed with. It is much to the credit of our friends in the Belgian Congo and the Rhodesia Congo Border Power Corporation that they completed this work several months ahead of the anticipated date. It remains imperative that power from the Kariba project should be available to the copper companies by the middle of 1960, as not only will the increasing requirements of the existing producing companies have to be supplied but the new projects and expansion programmes depend on this power being available.

The companies were recently faced with a steep increase in railage rates, which have been doubled. Although we have had discussions with the railways and have made the strongest possible representations, we have been unable to obtain any important concessions. The new rates will have a significant effect upon the overall cost of marketing Rhodesian copper.

During the year under review the price of copper rose on the London Metal Exchange to a figure well over £400 per ton, but it reacted sharply during the last few months and at the end of June stood at £275. World production of copper is increasing and there are signs that the unbalanced position in recent years between supply and demand is being adjusted. Within the next few years, however, expansion in the copper-consuming industries and expected growth of copper consumption in the underdeveloped areas of the world should stimulate further increases in demand, and I am confident that there will be a ready market for the full output from your mine.

ROOTES MOTORS

INFLATION AND TAXATION CRIPPLING EXPANSION

The annual general meeting of Rootes Motors Limited will be held on December 11th in London.

The products of the Rootes Group are Humber, Hillman, Sunbeam and Singer Cars and Commer and Karrier commercial vehicles, and diesel engines.

The following is an extract from the circulated statement of the chairman, Sir William Rootes, GBE: The year ended July 31, 1956, has been a difficult one; inflationary conditions resulting in increasing costs have continued throughout the year. Your Board has generally continued its policy of absorbing these increases and not passing them on to the public, in order to meet the intensely competitive conditions and to keep up the volume of our production. This has naturally entailed progressively reducing margins on all our products, but our turnover has been maintained. In addition, the profits for the year under review were seriously affected by certain supply difficulties, apart from which our turnover would have considerably increased.

The Consolidated Profit on Trading, including income from trade investments, was £2,031,129, compared with £3,557,325 for the previous year. United Kingdom and overseas taxation continues to take its toll at £1,019,489. There is a net consolidated profit for the year of £870,610. Notwithstanding the considerable reduction in the earnings of the Company for the year under review, the Board recommends the same dividend of 8 per cent, less Income Tax, on the Ordinary and "A" Ordinary share capital as in the previous year.

Several entirely new models, both cars and trucks, have been announced and have received an excellent reception from the public, both at home and overseas.

I regret that it is again necessary for me to refer to the continuous increases in our costs, due to inflation. The motor industry cannot absorb additional burdens, and any price increases must have serious effects on our national economy. It is absolutely essential that inflation should be halted and production costs should be reduced by increased efficiency, as exports must not only be maintained but increased; costs are the crux of the situation. I am not opposed to increases in earnings of employees, but if our industry, and the country, is to survive, there must be, at the least, a corresponding increase in productivity. In this respect we must be internationally competitive.

There is another factor which is crippling the expansion of our industry and affecting costs, that being the increasing burden of taxation. The industry over a period of many years, presumably due to its success, has been used by successive Governments directly and indirectly to produce an ever-increasing amount towards the National Revenue. The exorbitant rate of Purchase Tax can only have an inflationary effect.

The industry should be regarded not as the goose that lays the golden eggs for the Treasury, but as a major national asset which not only has produced greater exports than any other industry, but also is capable of producing greater exports still, if it is encouraged instead of being taxed out of existence. If the Revenue is necessary, I appeal to the Government to consider a more equitable tax than Purchase Tax, such as a Sales Tax on a lower level on all end products, instead of singling out certain industries for penal taxation.

COURT LINE LIMITED

CRIPPLING BURDEN OF TAXATION

PROPOSED FORMATION OF SUBSIDIARY IN BERMUDA

THE HON J. P. PHILIPPS ON "FLAGS OF CONVENIENCE"

The twenty-seventh annual general meeting of Court Line, Limited, will be held on December 11th in London.

The following is the Statement by the Chairman, The Honourable J. P. Philipps, which has been circulated with the report and accounts: Ladies and Gentlemen,—During the period under review there was a steady and progressive improvement in the Freight Market and we were lucky to have in service two new ships, the *Geddington Court* and the *Hannington Court*, which had been delivered to us by their builders at the end of 1954. As you will see from the Profit and Loss Account, the Profit on voyages completed during this period was £365,000 higher than that for the previous twelve months at £810,098, but the net Provision for Taxation even after taking credit for £53,584 now requires nearly £193,000 more than last time at £332,838.

One new motor ship, the *Jevington Court*, is due to be delivered about November 27th, and two others in the second half of 1957. In order to help pay for these, we have sold our two remaining steamships, the *Dorington Court* and the *Errington Court*, built in 1940 and 1945 respectively, at prices which together would have been sufficient to pay for the replacement of one of them had it not been for the Balancing Charges payable to the Inland Revenue, which take approximately £100,000 from the proceeds of sale. Thus, although we now have a comparatively modern fleet, the two oldest ships being only twelve years old, it is necessary for us to place substantial sums to Reserve each year for Fleet Replacement in order to be able to maintain our present fleet, without even considering increasing it.

CAPITALISATION OF RESERVES

In view of this need, and the increased rate of Distributed Profits Tax, your Directors are not recommending any increase in dividend or any distribution in cash of the capital profits made on the sale of the two old ships. Instead they have transferred £100,000 to General Reserve; £60,000 to Contingency and Survey Reserve; £70,000 to Taxation Equalisation Reserve, and recommend that £7,038 be added to the Carry Forward. At the same time, in order to bring the nominal issued capital more into line with the real capital actually employed in the business, the Board are recommending that £354,375 being part of the Capital Reserve be capitalised and that 1,417,500 new Shares of 5s. each credited as fully paid up be distributed free to shareholders in the proportion of one new share for each two shares held on December 1, 1956. To enable this to be done an Extraordinary General Meeting is being convened to be held immediately after the Annual General Meeting when the appropriate Resolutions will be submitted, the necessary permission having been granted by the Treasury. We are also taking this opportunity of increasing the Authorised Capital to £2 million although there is no intention of making any further issue of Shares at the present time.

To illustrate the handicaps under which we are operating, I will tell you that, when our present building programme is completed, our Fleet will consist of nine ships of a total tonnage of about 94,650 tons deadweight. The original Court Line's prewar Fleet comprised twenty-three ships with a total tonnage of 211,665 tons, but fifteen of these ships were lost during the War. These twenty-three ships cost in total considerably less to build than the three ships now on order. With the present level of taxation in the United Kingdom it is now taking approximately four years' annual Depreciation Allowances on our Fleet to accumulate sufficient funds to pay for one new vessel. Any further replacements have to be found out of retained taxed profits. Four years from now our two oldest ships will be sixteen years old and the average age of our Fleet will be eight years. In such circumstances it becomes apparent that no British Tramp Shipping Company can even maintain its existing fleet, let alone enlarge it, as it should do if Britain is to hold her former position among the maritime nations.

The Tramp Shipowner, as a general trader ranging over all the Freight Markets of the world with no fixed routes, now has to face not only the prospect of the usual extreme fluctuations between prosperity and adversity, as evidenced by the collapse of the Freight Markets in 1950, and again in 1952, but also competition from fleets registered in the "no tax" countries, e.g., Liberia, Honduras and Panama.

GROWING THREAT FROM COMPETITORS

At present the United Kingdom has about four million tons deadweight of tramp shipping, while Panama and Liberia each have about half as much. Within three or four years from now, Liberia alone, with nearly two million tons of tramps already on order, may well have a fleet which, in terms of carrying capacity, is Britain's equal. This, of course, is the fruit of being able to plough back untaxed profits, and the harvest will grow bigger and bigger as the years go by. With untaxed profits those who own ships registered in Panama and Liberia can build bigger and faster ships; the bigger and faster ships skim the cream of the traffic and make bigger and better profits; the bigger and better profits are ploughed back in ever-increasing amounts to build bigger and faster ships—all to the detriment of British tramp shipping.

It is apparent, therefore, that in the absence of any relief from the present burden of taxation the only way that the British Tramp Owner can hope to continue in business is by moving to a part of the British Commonwealth where there is virtually no Taxation of Profits as we know it in this Country.

As the maintenance of a strong Mercantile Marine under the British Flag is vital for the British Commonwealth, your Board have been exploring actively ever since last January the possibility of forming a subsidiary company resident in another part of the Commonwealth, where taxation is less onerous, but from which our ships can still operate under the British Flag. The Island of Bermuda seems to be a suitable proposition, and you will doubtless have read of certain of our competitors who have already announced the formation of associated shipping companies resident in that island. Your Directors, however, feel strongly that, if a Bermudan Company is to be formed, you as shareholders in Court Line, Limited, should hold at least a majority, if not 100 per cent, of the shares. It is only legal for a United Kingdom company to hold the majority provided the Treasury's consent has first been obtained.

We have, therefore, made application to HM Treasury for such consent. Negotiations are still proceeding, so that the matter must be treated as still "sub judice," and I trust you will not press me to say any more at this stage. I would stress, however, that unless the Chancellor can see his way either to alleviate our crippling burden of taxation or grant applications such as ours, it is inevitable that the British Mercantile Marine will continue to decline ever more rapidly in comparison with foreign fleets sailing under flags of convenience. The loss of our carrying trade, which is a valuable invisible export, would have a serious effect on the Commonwealth's balance of payments. The British Public do not realise to what extent our economy and standards of living are dependent on the earnings of Shipping under the British Flag.

At the moment the Freight Market continues buoyant, so that satisfactory profits before taxation can again be anticipated for the current year, but it is our practice to bring only the profits of completed voyages into our accounts, and only one of our new ships can contribute anything towards the results of the current year's trading ending on June 30th next.

In conclusion, I would like to thank on your behalf all our Staff both ashore and afloat, for the part they have played in the great achievements of the past year.

STOTHERT & PITT

CONTINUED PROGRESS

The seventy-third annual general meeting of Stothert & Pitt, Limited, was held on November 20th at Bath. Mr H. A. J. Silley (Vice-Chairman) presided in the absence of the Chairman, Sir Llewellyn T. G. Soulsby, JP.

The following are extracts from the Chairman's speech which was read by Mr Silley: The trading profit for the year is satisfactory and output has again increased. All departments were fully employed during the year and have contributed to the final result.

Although our turnover has again increased, we are experiencing ever-increasing competition in export markets, and at home the credit squeeze has had considerable effect. The profit of the parent Company is slightly higher than the record figure achieved a year ago, but we have been able to maintain the profit figure only by a very substantial increase in output. The figures reveal continued progress and added strength, but, while the profit margin both at home and abroad tends to decrease, we cannot relax our efforts.

Our overseas effort is world-wide, and we feel that by maintaining a considerable export proportion in last year's output we have made a very substantial contribution to the National economy. Any further substantial increase in wages, as is threatened, may well be a crucial turning point. Subject to this and to an easing of the present world economic and political tensions, we are confident that we can secure our share of the large unsatisfied potential world demand for our various manufactures.

The report was adopted and a total distribution of 17½ per cent approved.

McDOUGALLS TRUST LIMITED

(McDougalls Self-Raising Flour, etc.)

ANOTHER SATISFACTORY YEAR

MR KENNETH MOORE'S REVIEW

The Twenty-third Annual General Meeting of McDougalls Trust Limited was held on Friday, November 16th, in London and, in the course of his address, the Chairman, Mr Kenneth A. E. Moore, said:

PROFITS, DIVIDENDS AND RESERVES

I am glad to be able, once again, to present an Annual Report and Statement of Accounts showing satisfactory trading results and earnings sufficient not only to enable us to maintain our Ordinary Dividend at 15 per cent but also substantially to strengthen our reserves. The essential figures, in round terms, are as follows:

Group profits before taxation amounted to £745,000 and, with further credits in respect of Millers' remuneration and certain taxation adjustments, the total for disposal amounts to		£784,000
Provision for taxation absorbs no less than		396,000
leaving for dividends and reserves		388,000
Out of this we are proposing to distribute dividends amounting, less tax, to		158,000
and are ploughing-in, in one shape or another, the balance of		£230,000

as follows:

Transfer to General Reserve	£186,000	
Transfers to Advertising and Contingencies Reserves	40,000	
Addition to Carry Forward	4,000	£230,000

As a result, and as you will see from the Consolidated Balance-Sheet, our General Reserves now stand at £750,000, our Advertising and Contingencies Reserves at £350,000 and our Carry Forward on Profit and Loss Account amounts to £346,000, all of which have been built up over the years out of undistributed profits and after meeting heavy taxation.

TRADE, COSTS AND PROFIT MARGIN

I mentioned at last year's meeting that trade was quiet during the exceptionally fine and warm summer of 1955, but I am glad to say that it picked up well in the later months of the financial year and the total quantity of McDougalls' flour sold in the year was, in fact, higher than ever. The margin of profit was, however, reduced not only by rising costs under almost every head including, in particular, wages and distribution, but also as a result of rising wheat prices in the latter half of the financial year. As a matter of policy we exercised restraint in limiting the rise in selling prices to a minimum.

CAKE MIXES

During the year our new product—"Max" Cake-Mix—was successfully launched and met with a most encouraging reception—its very high quality being especially appreciated. You will understand, however, that, owing to the high cost involved in launching a new product, we cannot expect this to make a contribution to our profits until it becomes more widely distributed. It has, however, made a propitious start and this has been achieved without any inroad on our Advertising or other Reserves.

Our non-milling subsidiary companies, I am glad to say, have, once again, done extremely well recording increases both in turnover and profits.

PROPOSED MERGER WITH HOVIS LIMITED

You will, I am sure, expect me to take this opportunity of referring to the proposed merger between the McDougall and Hovis businesses which was announced in a joint communication dated November 2, 1956, sent to all the share and stock holders of McDougalls Trust Limited and Hovis Limited.

Both businesses are, of course, household names and both are engaged, in the main, in the flour-milling industry—Hovis are famous for their bread-flour and McDougalls for their self-raising flour. The combination of their country-wide connections with the bakery trade and the grocery trade respectively and the co-ordination of their various activities will add strength and security to the businesses and will, I have no doubt, yield substantial advantages in the years to come.

To give effect to the proposals outlined in the letter of November 2nd it will be necessary for us to hold an Extraordinary General Meeting and you will be receiving, very shortly, formal notice thereof and an explanatory letter. I shall, of course, be dealing more fully with the subject at that meeting but, in the meantime, you may rest assured that, after the most careful examination of the whole problem and with the guidance and advice of Sir John Morison, your directors are satisfied that the terms are appropriate and equitable and that the merger is in the best interests of all concerned.

In conclusion, I am sure that, as shareholders, you will wish to join with me in expressing thanks to my colleagues and to all who work in our organisation for their contribution to the successful outcome of the year's operations.

The report and accounts were adopted.

THE CEMENTATION COMPANY LIMITED

INCREASED PROFITS

The Thirty-sixth Annual General Meeting of The Cementation Company Limited, will be held on December 13th in London.

The following is an extract from the Statement by the Chairman, Mr A. R. Neelands, circulated with the report and accounts for the year to March 31, 1956:

Trading Profits of the Group for the year ended March 31, 1956, are £680,665, £48,525 more than published last year. The consolidated accounts this year incorporate those of a foreign subsidiary not previously consolidated. After making the necessary adjustments to last year's figure the increase in Trading Profit is £10,464.

There is a slight reduction in the overall charge for Taxation but because of the increased amount required for dividends on the new Capital and the Distribution Tax thereon at an increased rate, the charge for Profits Tax is increased by nearly £35,000. The net profit figure after taxation is £15,000 more than last year.

In spite of rigid control of Capital Expenditure the amount spent on Fixed Assets for the Group this year is of the order of £1,400,000 or £600,000 more than last year which with the financing of contracts fully occupied our available liquid resources. Towards the end of the year under review we raised further finance by an Ordinary Rights Issue and a further issue of Unsecured Loan Stock.

In Cementation itself our largest single Contract is abroad in Iraq at the Dokan Dam. In this work we are associated with the French Company—Enterprise P. Bachy. The work has now properly started and is well organised and by agreement with Bachy we have taken over the supervision and direction of the work on the site.

Specialist Cementation work in England continues to play a most important and valuable part in our constructional work. Today we have by no means a monopoly of this class of work and have to fight against severe competition from numerous sources, and it is with reasonable satisfaction that I can tell you that our turnover is increasing.

Piling is occasionally associated with Cementation as a possible alternative and occasionally as an accessory but our Piling business today—even though perhaps not so widespread—is in quantity greater than Cementation. The volume of work carried out during the year is again a record with an increased number of clients. Always one of our major activities in Italy, it is now beginning to play a more important part in our work overseas generally.

MINING WORK

Our Mining work in shaft sinking and underground development continues to expand in accordance with the National Coal Board shaft sinking and development programme. It is our duty and also our wish to work in close conjunction with their representatives in the different areas, an association which is to our mutual advantage and economy. We appreciate their help and advice which is not only valuable to us but to the whole country as well. We have pressed forward with our method of mechanical loading and shaft sinking and have now made and installed mechanical excavators at six contracts. Our Mining Department is still working in Turkey but our present contracts are drawing to a close. Our Company in Eire is engaged in a certain amount of shaft sinking and in South Africa underground drilling and grouting are one of our principal activities. In Canada we have under negotiation shaft sinking contracts in the Saskatchewan Potassium Fields.

Our principal Subsidiary Company at home, Messrs John Thom Limited, who are engaged in well drilling, mineral drilling and prospect drilling, had a good year. Of late years the deep drilling for the National Coal Board has been their principal activity. The National Coal Board, however, have largely completed their drilling programme and this will lead to a reduction in work available in this country. The Company hope and expect to replace this work with extra work abroad.

With your consent we propose to pay a dividend of 12½ per cent on the ordinary shares—the same as last year, but on an increased capital.

APPOINTMENTS

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

(UNIVERSITY OF LONDON)

Applications are invited for the post of Junior Research Officer to work in the field of social differentiation and selection for the Sociological Research Unit. Salary within the scale £550-£800 per annum.

Applications, with full particulars of qualifications and experience, together with the names of two referees, should be submitted before December 7th to the Chairman, Sociological Research Unit, London School of Economics and Political Science, Houghton Street, London, W.C.2.

STAFF TRAINING OFFICER. National Coal Board, East Midlands Division, invite applications for a post in their No. 3 Area at Edwinstowe, near Mansfield.

The successful candidate will be concerned with the training and further education of staff and supervisory grades; he will also have some responsibility for educational courses for industrial personnel. The development of established schemes for management training will form an important part of the work.

Applicants should have a good knowledge of the facilities provided by Local Education Authorities for those in industry. A good background knowledge of the coal industry, though not essential, would be an advantage.

Salary according to qualifications and experience on an incremental scale of £940 x £30 to £1,200. The post is superannuable.

Applications, giving full details of qualifications and experience, should be sent within ten days to Area Staff Manager, National Coal Board, East Midlands Division, No. 3 Area, Edwinstowe, Notts.

CITY OF BIRMINGHAM

PUBLIC HEALTH DEPARTMENT

APPOINTMENT OF MEDICAL STATISTICIAN

Statistician required, holding an Honours Degree in Mathematics, Statistics, Biology or other appropriate subject.

The successful candidate will be required to control a large public health statistical department under the technical guidance of the Corporation's Statistical Officer. Experience of punched card systems advantageous.

Salary A.P.T. Grade VI (£880-£1,080 per annum); F.S.S.U. superannuation scheme; medical examination.

Applications, stating qualifications, experience, etc., and the names of two persons to whom referees may be made, addressed to the Medical Officer of Health, Public Health Department, Council House, Birmingham, 3, should arrive not later than December 10, 1956.

SALES MANAGER

One of our clients (a major Company in the food manufacturing industry) is looking for an outstanding Sales Manager.

We invite enquiries about the post from men who:—

(a) have a first-class record of achievement in sales management and marketing, and

(b) would welcome the opportunity to join a firm with long-standing traditions, new ideas and a challenging development programme.

Write to M.W.M. (London), Limited, 121 Queen Victoria Street, London, E.C.4, for details of the post.

THERE is a vacancy in the Atomic Energy Department of The General Electric Company for a man aged 30 to 40, with combined legal and commercial training, preferably with an LL.B. and/or B.Com. Degree. The appointment is a senior one and applications are invited from men with a sound knowledge of commercial law and wide experience in dealing with all legal problems connected with large commercial transactions.—Applications should be made to the Personnel Manager (A.E.D.), The General Electric Company Limited, Fraser and Chalmers Engineering Works, Erith, Kent.

A CHARTERED OR INCORPORATED ACCOUNTANT

is wanted to co-operate with Management Consultants in setting up a "nerve centre" for a world-wide group of trading companies, and eventually to take charge of the Centralised Accounts Department of the Group. There is no age limit, but applicants must have had good commercial experience (including mechanised accounting) and get on well with people of various nationalities at all levels. The position will be based on London, but applicants must be willing to travel. Commencing salary in the range of £1,200 to £1,800 per annum.

A substantially higher figure (£2,500 per annum upwards) could be offered to a man who has also proven his worth as an executive, in return for carrying wider management responsibilities, in addition to those of Chief Accountant.

Applications to A.23, Urwick, Orr and Partners Ltd., Management Consultants, 6 Buckingham Palace Gardens, London, S.W.1, will be treated in strict confidence and will not be passed to clients without applicants' permission.

PERSONNEL MANAGEMENT.—The Booker Group of Companies in British Guiana wish to appoint a Deputy to their Georgetown Personnel Manager. This is an opportunity for the right man to make an important contribution to the Group's progressive economic and social policies in British Guiana. He must have held practical responsibility in management, and have had some experience in the personnel field. Candidates between the ages of 30 and 40 are preferred. The appointment is permanent, with a starting salary in the neighbourhood of £1,800 a year, depending on qualifications and experience, and there is an excellent Pension Scheme.—Please apply in writing, giving full particulars, to Booker Bros., McConnell and Co., Ltd., 37-41 Gracechurch Street, London, E.C.3.

STATISTICIANS.—Applications are invited for the appointment of a mathematical statistician to take part in and advise on investigations relating to operational research, experimental design and the application of mathematical statistical techniques to a wide range of industrial and business problems. This is a senior position calling for considerable original thought and ingenuity and additionally tact and patience in the earlier stages.—Applications, giving details of qualifications, age and experience, should be sent, in writing, to Group Personnel Officer, Albert E. Reed and Co., Ltd., Aylesford Paper Mills, Larkfield, near Maidstone, Kent.

AUSTRALIAN NATIONAL UNIVERSITY

CANBERRA

RESEARCH SCHOOL OF SOCIAL SCIENCES

Applications are invited for an appointment either as Senior Fellow or as Senior Research Fellow in the Department of Political Science. (Head of Department, Professor L. C. Webb.)

Preference will be given, other things being equal, to an applicant qualified to conduct and supervise research into political and administrative aspects of public corporations and other semi-governmental agencies and undertakings in Australia.

The salary for a Senior Fellow is determined within the limits £A2,224-£A2,674, and appointment is made for an initial period of five years; thereafter the appointment may be made permanent.

The salary for a Senior Research Fellow is within the range £A1,924-£A2,374, and appointment is for three years, with possible extension to the maximum of five years.

Superannuation on the F.S.S.U. pattern will be provided, and reasonable travel expenses will be paid.

Further details are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on December 21, 1956.

THE RUBBER RESEARCH INSTITUTE OF MALAYA

KUALA LUMPUR, FEDERATION OF MALAYA

The Board of the Rubber Research Institute of Malaya invites applications for the post of Head of the Statistics Section of the Institute at Kuala Lumpur.

Applicants should have high academic qualifications and considerable statistical research experience. The duties will include design of field and laboratory experiments and conduct of research in statistical matters relating to all branches of the Institute's work.

The appointment will be made on the Research Officer's scale, the point of entry being according to age, qualifications and experience. A suitable candidate with the required qualifications will be appointed in the upper part (half) of the salary scale which is: basic salary £981-£1,918 per annum on a time scale with increments averaging £46. Superscale at £2,086, £2,254 and £2,506 per annum. Allowances: cost of living and, if married, in the range £238 to £491, expatriation allowance for married officers £448-£672. Salary and allowances are paid in Malayan currency.

Quarters with heavy furniture, medical attention and passages for a wife and two children under 12 years of age are provided.

Application forms and more detailed information may be obtained from the Secretary, London Advisory Committee for Rubber Research (Ceylon and Malaya), Imperial Institute, London, S.W.7, to whom completed applications should be sent by January 1, 1957.

MANAGEMENT SELECTION LIMITED have been retained to advise on the selection of a

JOINT GENERAL MANAGER (MARKETING)

for a large international Food Company extending their activities in Great Britain. The Company in Great Britain will be directed by General Managers who, in addition to their general management duties, will be responsible respectively for Finance, Marketing and Production.

The special duties for this appointment will be to evolve a marketing policy and to direct all sales, market research and advertising in accordance with this policy.

Candidates must have had responsible experience in marketing and selling nationally advertised consumer goods for some years. Experience of general management useful. A degree in statistics, economics or related subject would be useful background. Age 35-50. Salary about £3,600 to start. No information will be passed to our clients without the candidate being aware of their identity and giving permission. Please send brief personal details, in confidence, to G. K. Dickinson (S.196) Management Selection Limited, 17 Stratton Street, London, W.1.

THE NEW ZEALAND Dairy Products Marketing Commission, a statutory corporation responsible for acquiring and marketing all exports of New Zealand butter, cheese and other dairy products, invites applications for the post of General Manager to take up duties in Wellington, New Zealand, on August 1, 1957.

Applicants with a knowledge of the dairy industry will have an advantage, but such knowledge is not regarded as essential.

Salary will be according to qualifications, but not less than £3,000 per annum, with appropriate allowances. There is a contributory superannuation scheme.

Applications close at Box 597 on December 12, 1956, and should give the applicant's age and details of his experience. Applicants may obtain from Box 100 an outline of the duties of the post.

GENERAL MANAGER, age 30/40, preferably with agricultural background, required for interesting permanent post in Kenya with young and vigorous company dealing with marketing of agricultural sprays chemicals and machinery, contract spraying and advisory service. Candidates should have sound educational qualifications, dynamic personality and be thoroughly experienced in sales planning and promotion of consumer goods. Administrative and organising abilities necessary. Previous African or other overseas marketing experience an advantage. Excellent future prospects.—Applications (quoting No. 1302), stating salary required, to Personnel Manager, Fisons Pest Control Limited, Bourn, Cambridge.

ECONOMIST.—Applications are invited for the appointment of an economist in an expanding industrial organisation in a leading growth industry, to undertake investigations in connection with development projects, business forecasting and economic research with direct reference to the organisation's operations. The position is a senior one, calling for considerable ability and powers of judgement.—Applications, in writing, giving details of age, qualifications and experience, to Group Personnel Officer, Albert E. Reed and Co. Ltd., Aylesford Paper Mills, Larkfield, near Maidstone, Kent.

SHELL PETROLEUM COMPANY

has a vacancy in a department engaged on the economic aspects of the development of the Company's world-wide petroleum chemical interests. Candidates should be

GRADUATE CHEMISTS

of up to 30 years of age and ability for clear expression in writing is essential.

Commencing salary according to qualifications and experience. Attractive pension fund.—Write, giving full details age, qualifications, etc., to Staff Department (R.C.S), 16 Finsbury Circus, London, E.C.2.

MARKETING OFFICERS required by Nigerian Federal Government for Marketing and Exports Department for one tour of 15-24 months in first instance. Commencing salary according to experience in scale (including inducement addition), either £744 rising to £1,410 a year, with prospect of permanency, or £798, rising to £1,530 a year on temporary basis, with gratuity of £100-£150 a year. Outfit allowance £60. Free passages for officer and wife. Assistance towards children's passages and grant up to £150 annually for maintenance in U.K. Liberal leave on full salary. Candidates, preferably under 35, should have had several years' good commercial experience in a responsible capacity, or hold a degree in Economics or Commerce and a diploma from, or membership of, a recognised institute of commerce.—Write to the Crown Agents, 4 Millbank, London, S.W.1. State age, name in block letters, full qualifications and experience, and quote M1B/43051/EN.

EXPORT MANAGER, Pharmaceutical and Cosmetic.—Successful experience, preferably in ethical and lay pharmaceutical and in cosmetic sales promotion in the Crown Colonies and elsewhere. Thorough knowledge of shipping, import and export regulations in the areas of our operations. Ability to keep an Export Department on its toes, to lead it well, to get on with agents and customers. Age about 40. The Department will move to Eastleigh, Hampshire, about September, 1957.—Send full particulars, marked "Confidential," to Managing Director, William R. Warner and Co., Ltd., Power Road, London, W.4.

SALES MANAGER.—A Sales Manager is required for a Sales Company distributing gramophone records throughout the world. Ability to advise on sales policy and experience and knowledge of distribution methods at home and abroad are required. A knowledge of the gramophone record industry is not essential, but may be helpful. Salary will be commensurate with experience, but this is required as a senior appointment.—Applications in the candidate's handwriting, giving details of experience and salaries earned, should be sent to Box 565.

MARKETING RESEARCH.—This is a new post in an expanding department which can be filled by an enterprising person with preferably a degree in statistics and/or psychology. Experience in market research an asset. Age under 30 desirable.—Full particulars to the Personnel Adviser, The Rank Organisation, 11, Belgrave Road, S.W.1.

ECONOMETRICIAN required by The Distillers Company Limited for an operational research unit in their Research and Development Department at Epsom. Age over 24. Honours degree in Economics, with knowledge of mathematical statistics, or in Mathematics, with knowledge of applied economics. The work would include a variety of subjects, such as production scheduling, inventory control, and distribution problems, covering the whole of the Company's activities in the United Kingdom.—Apply Staff Manager, The Distillers Co. Ltd., 21 St. James's Square, London, S.W.1. Quote Ref. 66/56.

A VERY interesting vacancy will shortly occur for an able woman at the Head Office (in Manchester) of an internationally established light engineering Company. The job has two distinct aspects:

(a) Personal discharge of the duties associated with the job of Personal Assistant to the Managing Director.

(b) Control of a small secretarial pool engaged in work of a confidential nature.

Applicants should have a lively interest in current affairs and a discriminating, well-trained mind, able to select what is and is not relevant to the operation of a Company of this nature. It is thought that these qualities will be found among University Graduates, from whom the Company will be particularly pleased to hear.

On the secretarial side, a high degree of personal accomplishment is not essential, but an appreciation of the skills involved is necessary, so that the work of the pool can be maintained at a very high standard.

Conditions of work are excellent.

Please write fully, stating education, experience (quoting salaries) and interests to Box 594.

GENTLEMAN (33), single, past three years representing leading U.K. manufacturer based in East Africa, seeks similar appointment of trust and responsibility or executive position with leading E.A. trading concern, preferably in Nairobi. Extensive experience all aspects sales representation, market research and management, home and abroad. Returning U.K. late December, 1956.—Box 566.

BARRISTER-AT-LAW, owner of several small but profitable and progressive businesses, wishes to contact someone able to provide finance over next three or four years to consolidate expansion. Excellent return, including capital appreciation. First-class references and fullest investigation offered.—Box 557.

AMATEUR DRAMATISTS.—Go over big with a glass of Duff Gordon's EL CID Sherry before "Curtain up"—and, if they leave any backstage, have some more after the show. "You were wonderful"—so is the Sherry.

THE Economists' Bookshop has the world's widest range of books on Economics, Politics, History, Anthropology and the Social Sciences. Worldwide mailing service. Second-hand books bought.—11-12 Clements Inn Passage, Aldwych, London, W.C.2.

EXPERT POSTAL TUITION

for Examinations—University Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus and/or advice, mentioning examination or subjects in which interested, to the Secretary (Q9.2)

SOME FACTS ABOUT ATOMIC POWER . . .

[for peaceful use]

▸ ELECTRICITY — The electricity produced by atomic power stations is exactly the same as electricity produced by any other means. The nuclear reactor simply replaces the conventional coal or oil burning plant which produces heat in thermal stations.

▸ EFFICIENCY — Uranium 235 is theoretically capable of producing 3 million times the energy obtained from an equal weight of coal. At the same time it can save the cost of haulage, storage and handling and plant maintenance as well as the cost of ash disposal.

▸ SUPPLY — The world's store of atomic fuel is virtually inexhaustible — whereas coal and oil supplies are limited and insufficient to meet future world needs.

▸ CONVENIENCE — Nuclear fuel is compact and easily transportable. It can be carried to parts of the world where the transport of conventional fuels is impossible or where means of transport do not exist.

▸ SAFETY — Boiling water reactors are safe and in the United States are being built in centres of population. There, they are also being erected at various universities for training students in this all-important development.

MITCHELL DEVELOPMENTS in the field of atomic power are the logical outcome of 35 years' exceptionally wide experience in all branches of engineering and electrical supply.
The agreement between Mitchell Engineering Ltd and AMF Atomics Inc of New York will undoubtedly have far-reaching effects in applying atomic power for the benefit of mankind.

MITCHELL COMPANIES are at present engaged on three important contracts for the United Kingdom Atomic Energy Authority.

Leyland's extensive export trade keeps home prices in check

Although Leyland's world-wide trade is in the limelight nowadays, it must not be forgotten that it is this big-scale production that keeps our prices down for the domestic market that we have been serving for 60 years.

The stabilisation of our own prices . . . which compare favourably with any equal capacity vehicles . . . has created a restraining influence throughout the industry in general.

HOW DO WE WORK TO SUCH LOW COST LIMITS?

Because we are more or less self-contained. We operate our own iron and steel foundries so efficiently that we actually supply substantial quantities of quality castings to the motor industry as well! The vast Leyland factories are equipped with the finest production plant and research laboratories . . . to pass on fine workmanship at minimum cost to the transport industry.

Our comprehensive 'manufacturer to operator' service depots, located in 20 or more towns throughout the U.K., keep customers' vehicles moving and earning. Spare parts . . . available for an expected vehicle life of 25 years . . . are available at a moment's notice. Fully guaranteed re-manufactured units can be fitted on a low-price exchange basis. Repair and heavy breakdown facilities are all to hand.

Looking ahead, Leyland is developing big expansional plans which, as they mature, will offer fresh scope for trained personnel in the transport industry. The great Leyland comprehensive training school is playing its part in producing fully qualified men to take their places in the new order, and it is from there that transport executives of the future will be found.

V.S.O.P

What do these famous letters mean?

NO ONE seems quite to remember. The Hennessy family in Cognac say that when they first used the symbol many decades ago, letters such as V.S.O.P. and X.O., as well as the famous * markings, were chalked on the hogsheads of brandy by the blender as his personal guide to the brandy's maturity. V.S.O.P. probably meant 'Very Special Old Pale'.

Nowadays, however, as an indication of age and quality, the letters V.S.O.P. on liqueur brandies have become as equivocal in the brandy trade as the description 'Final Night Extra' on an evening newspaper.

But one thing is certain. *The label 'V.S.O.P.' means nothing unless coupled with the name of a shipper whose stocks are good enough, large enough and old enough to ensure continuity of quality and age.*

Note for the Curious. Why 'Very Special Old PALE'? Because once upon a time there was a fashion for BROWN BRANDY, which was heavily coloured by the addition of burnt sugar.

An Invitation to a Memorable Experience

When you are on holiday in France, visit the Hennessy premises in Cognac. There you will learn with your own eyes and palate what V.S.O.P was originally meant to stand for.

You will see the vast stocks of matured and maturing brandies. You will be able to taste their quality—choosing at random from this hogshead and that: and you will learn why Hennessy loses none of its bouquet as it ages, but rather gains in character as it mellows in the wood.

You will learn from such a visit why no one in the world can offer a better choice of genuinely aged Liqueur Cognacs than –

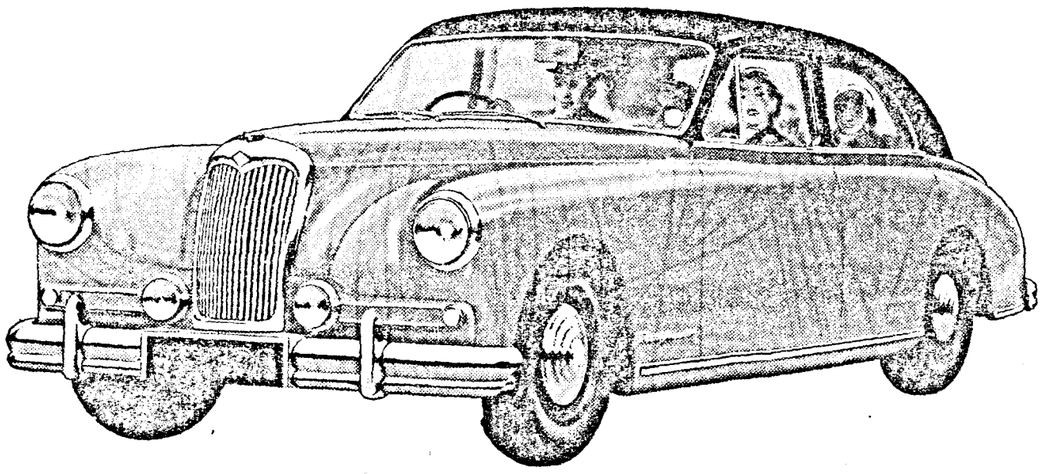
HENNESSY

V.S.O.P – X.O. – EXTRA

P.S.—Hennessy ★★★ is very often served as a liqueur, and why not? It is drawn from the very same stocks as its elder brothers and matured for many years in wood.

Incidentally, it was Maurice Hennessy who, in the year 1865, chose the sun as a symbol, inspired by the device embodied in the window catch in his office. You can see it for yourself when you visit Cognac.

Go far and fast



Here is the rich, rare comfort you have always desired. In this car you are completely relaxed. And let's admit it, one feels proud of the way the PATHFINDER is singled out and admired. But the worth of this car—the best of all Rileys—goes deeper than the sweeping grace of its brilliant styling. You *must* drive the Pathfinder. It is the only possible way to appreciate its performance. Visit your Riley dealer and see for yourself what he means when he says "Riley for Magnificent Motoring."

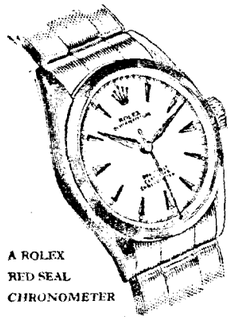
Men who guide the destinies of the world wear Rolex watches

NEVER before have the great men of the age been so well known to their contemporaries as today. News of almost all their words and actions is flashed round the world in seconds. Their faces and voices are made daily familiar to us in newspaper photographs, on the radio, in films, and on television. We are intensely aware not only of their importance but also of their personalities. Their impact is enormous on us as well as on world events.

It would not be fitting to name them here, for they include royalty, the heads of States, great statesmen, and service chiefs. But there is one unusual thing we invite you to look at when you next see them or their pictures—the watch on their wrists. That watch will most likely bear the name of Rolex of Geneva.

Accustomed though they are to the very best, these eminent men are nevertheless amazed at the accuracy and reliability of their Rolex watches. Rolex are proud, if unsurprised, that they quickly take these qualities for granted.

The Rolex Oyster Perpetual Datejust, the most remarkable achievement in watchmaking. Every Datejust is awarded an Official Timing Certificate by a Swiss Institute for Official Timekeeping, with the mention "Especially good results." This accuracy is protected by the famous Oyster case. Thirty years ago the Oyster case won fame as the first waterproof watch on the wrist of a Channel swimmer. In 1953 it withstood the rigours of the successful British Everest Expedition. It protects the movement from all hazards. The watch is self-wound by the Perpetual "rotor" mechanism, another Rolex invention, that makes for even greater accuracy. The date is shown on the dial, changing automatically every midnight, and magnified by the "Cyclops" lens for easy reading.



A ROLEX
RED SEAL
CHRONOMETER

The Rolex Oyster Perpetual—culmination of three Rolex triumphs. In 1910 Rolex gained their first Official Timing Certificate for a wrist-chronometer. Now Rolex have produced over 275,000 Officially Certified wrist-chronometers—over twice as many as the rest of the Swiss watch industry combined. In 1926 Rolex invented the Oyster watch-case, the first truly waterproof case in the world and still the finest. This rugged and sturdy Oyster protects the movement permanently, from water, dust and dirt. In 1931 Rolex invented the first "rotor" self-winding mechanism. A new refinement of this Perpetual "rotor" powers the Oyster Perpetual, silently and automatically, actuated by every slightest movement of the wrist.

ROLEX

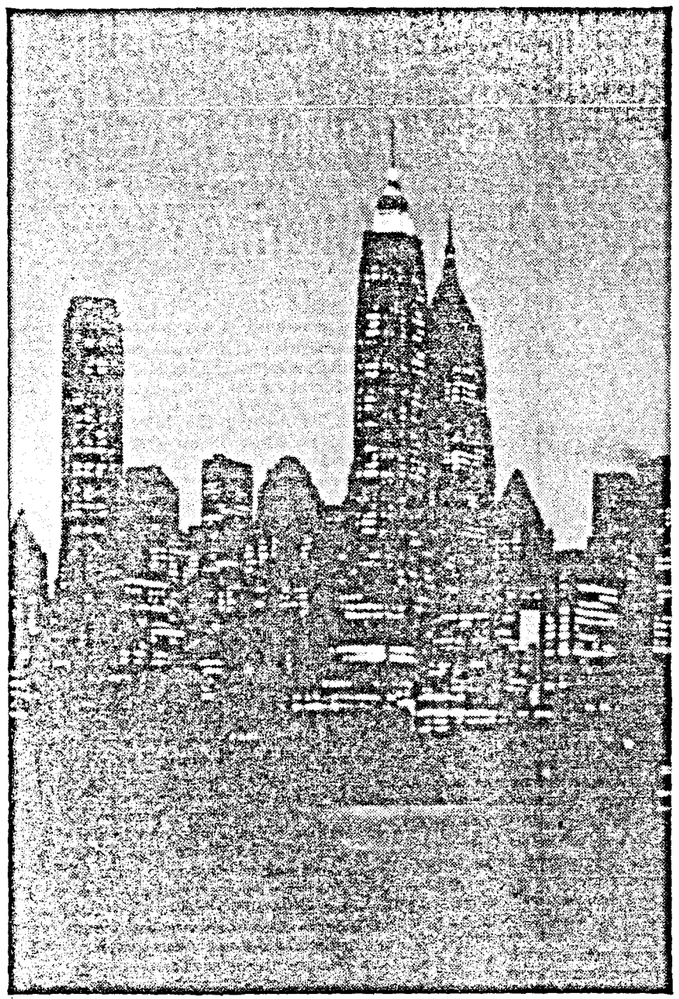
You can start your business trip at Southampton...



...you're in America the moment you step on board

*IN THE PERFECT ATMOSPHERE FOR BUSINESS CONTACTS**

ALL THE THINGS that say "America" — the easy courtesy of the Deep South, the streamlined efficiency, the glamour, the glitter, the heart-warming friendliness—all these are yours only two hours away from London!

Over the fifty feet of gangplank onto the famed "United States" or her running-mate the "America" and you're *in* America; the luxury, the hospitality and the gaiety of this friendly country surround you.

And if you're a businessman, remember that here is the perfect atmosphere to lay the foundations of a really successful business trip. In informal, friendly surroundings you meet the men who might make all the difference. The extra reserve of speed of the "United States" (the Blue Riband holder) helps you, too, for it means that she has an outstanding record for punctuality. And if you have a business appointment soon after you land, that's important!

But there's fun aboard, too, lots of it. You'll find unexcelled food and superb wine, magnificent cinemas equipped with CinemaScope, top-grade orchestras, every "keep-fit" facility, well-stocked libraries, and, of course, just rest and relaxation if you prefer. Yes, the few days that separate you from New York pass all too quickly. You travel fast in the utmost comfort when you travel by United States Lines.

One man helped Collins the publishers to save time on the "books"

The Burroughs man, Mr. J. R. West, on your right, discusses with Mr. R. A. Jamieson, a director of William Collins, the new Burroughs system that brought them valuable up-to-date sales figures and eliminated unnecessary overtime.

William Collins Sons & Co. Ltd., the well-known printers, publishers, stationers, and diary publishers, sell millions of books and stationery lines every year in Britain and overseas. Management must be kept up-to-date on the position of sales. A long-standing problem, however, was that staff had to put in long hours of overtime in order to get out the required figures. Even then, details were often available too late to be useful.

So Collins asked Burroughs' advice. The Burroughs man who tackled the problem was Mr. West—one of Burroughs' expert consultants on accounting methods. Together with members of Collins' accounts department he made a detailed study of the difficulties. The solution was found in a new system built round Burroughs Sensimatic accounting machines.

This proved so successful in the home market that Collins have also applied it to export sales figures. Now there is no unnecessary overtime, especially on customer analysis. The management, with more comprehensive sales figures available, are making practical and advantageous daily use of this information.

WHATEVER YOUR BUSINESS, if you have an accounting problem, the Burroughs man can help you. He is an expert on modern accounting systems, and well able to work with your accountants or auditors. Backed by Burroughs' world-wide experience, he will make a full analysis and suggest the most economical, *workable* solution. If he thinks no change advisable, he will say so; if he does recommend a change, he will make a detailed plan and help you get it working smoothly. Call in the Burroughs man—you're committed to nothing. His advice is free.

Burroughs make the world's widest range of business machines. You'll find your local Burroughs office in the telephone book.

Bravado

THE motion of censure on the United States put down by 100 or more Tory MPs is a distressing signal of the brainstorms that are now distorting British politics and policies. These put in peril the nation's whole future. On October 14th the Security Council of the United Nations voted unanimously that the operation of the Suez Canal should be insulated from the politics of any country. It is plain from which country's politics it most needs to be insulated now. In the last two weeks the British Parliament has presented the unhappy spectacle of two parties threatening to cut off the country's nose, the Tories in order to save their face and the Opposition in order to spite it.

When envenomed feelings take over from statesmanship, no patriotic purpose is served by doing more to ruffle them; that is why it is right to begin with a word to fellow critics of the Government. It is indeed the critics' duty to oppose; it is also their duty, and above all at times of great national emergency, to propound another policy. To pretend now, gleefully, that penance for the Government's sins is a policy in itself—or to concentrate on scrabbling about, as Labour has been doing, for more damaging evidence of alleged Anglo-French-Israeli "collusion"—is to fall short of that duty. It is perfectly true that until the Government admits, first to itself and then to others, at best that it has been wrong and at the least that it has woefully failed, no policies to extricate the country from its predicament can be hopefully fashioned; the repudiation of the policy of Sir Anthony Eden remains a precondition. But it is the remedies that matter; and the first and principal aim, of Opposition as well as Government, is the repair of the western alliance, so as to be able to build upon the rubble in the Middle East a structure that will stand against the winds that are blowing there from the north.

This is the stupidity of the anti-American motion. The Tories are at the moment racked by two sets of emotions. One of these, which still appears to be uppermost in the Cabinet, is the desire to pretend that the defeat at Suez has really been a great success. It might be argued that the most extraordinary manifestations of this—the continuing and blatant ministerial misstatements in the House of Commons about the purposes (original and present) of Mr Hammarskjöld's police force—are merely intended as well-understood dissimulations towards Tory MPs (who apparently still want to be deceived). It is also argued that opinion generally is swinging to the Government's side; but this is a question not of the national mood but, simply and solely, of the national interest. The great danger has been that these political prevarications might determine policy and action over the withdrawal, ordered by the United Nations and dictated by the facts, from Port Said. The critics' final judgment on this can be deferred until Mr Selwyn Lloyd's statement on Monday. There has been an argument for the delay so far. A case can be made that some Anglo-French show of slowness in the unavoidable process

of evacuation may have been justified by its possible use as a bargaining counter, not by Britain towards the United Nations—for we have no counters left—but by Mr Hammarskjöld towards the contumacious Egyptians.

Even so, the all-important thing for the Government to recognise now is that any conceivable bargaining gains from a little delay have to be weighed all the time against the losses caused by it. There is a mathematically calculable loss in every day's delay in passing salvage ships down the canal past Kantara and in moving engineers into Syria to repair the pipeline damage. There is the desperate urgency of setting the United States free (and getting it willing) to counter Russian penetration in Syria. There is the question whether there is any hope of securing a strip of international territory across eastern Sinai. There is, too, the risk of letting loose, at last, the Cairo mob. In all these vital matters Britain has lost most of its capacity for influence ; but the United States feels and says that it cannot use its influence in our stead until the British and French troops have left Port Said. The longer the troops stay there, the greater the danger that the United States will not even try ; Achilles remains in his tent at Augusta. He (and the Secretary General) should at least be given a timetable.

★

It is, however, the second twisted emotion in the Conservative party that can in the end be even more dangerous. That emotion is resentment. After searching for scapegoats all round the compass, it has now lighted upon the most perilous place of all. Historians will readily analyse the reasons for this week's backbench motion: Britain's inferiority complex, arising from its diminished imperial present, is working itself off on the State Department inferiority complex that arises largely from America's colonial past. No doubt the Tories are quite right to believe that there is a group in the American State Department which has worked consistently against Britain's view of the free world's interests in the Middle East during the last four years; Mr Graham Greene's "quiet American" is a recognisable Washington type. What is impossible to understand is why so many Tories should strive so hard and so deliberately to force the rest of the American administration into the hands of this group.

For that is what the Suez militants have been doing ; and that, to an extent which can now only after immense exertion be repaired, is what Sir Anthony Eden has already done. Yet the recipe for avoiding this catastrophe was not hard to find, though it may be hard for some to swallow. Britain's proper attitude towards the United States is the attitude that Australia has long maintained towards Britain. It is an attitude of blasphemous private candour about most matters and about awkward foreign secretaries, but of sufficient loyalty to allow any American leader to feel confident that when really big issues arise Britain will never deceive him. The British Government, personally polite to Mr Dulles, but eventually perfidious to President Eisenhower, has played the hand precisely the wrong way round.

It is easy enough to table an emotion that everything is really the Americans' fault. But this deliberately impedes realistic confirmation of the tremendous problems, strategic, political and economic, which this unsuccessful adventure has uncloaked and already exacerbated. And the core of all these problems—touching off the emotions discussed in this article in their most prickly form—is the question of the international future of this country as what used to be called a great power.

★

When this crisis started, many Tories said that the Suez bid would determine whether Britain was to remain a great power, or whether it was doomed to become another Sweden or Holland (doomed is perhaps the wrong word, for these countries—and western Germany—free of commitments have more rapidly rising standards of life). The bid has failed ; the question stands. The proper relation of commitments to resources, and of policy to both, will have urgently to be worked out, when the immediate bill for Suez has been met. But the danger of relapsing too far into a self-defeating little Englandism is as real as the danger now of discouraging the Americans into a "fortress-America" isolationism. There is one clinching argument against pushing de-commitment farther than the facts dictate. If Britain decided to become another Sweden or Holland—and if no other country became another Britain, in its role as the most experienced pilot fish to lead the protective big American fish to the threatened peripheries of the non-communist world—there might be no more Swedens and Hollands at all. But the pilot fish does not do its salutary work by biting the big fish.

That is the real lesson of Suez. This crisis has shown that Britain cannot succeed in any major external adventure on which it embarks alone ; the resentful Tories will themselves be the first to agree that it has also shown that the United Nations cannot take over the burden ; there remains, inside and outside the United Nations, only the American alliance—and the enduring friendship upon which it rests. It is clear now—and it should have been clear before—that the Americans can only be steered by careful, patient diplomacy into areas where they are not yet doing their duty ; they cannot be shocked into them by their friends, but are much more likely to be shocked out. (When the United States at last comes into the Middle East, Israel and Russia will have achieved this ; Britain and France will have delayed it.) If now, impatient at being the junior partners of a sometimes somnolent (and at present sulky) giant, our politicians seek by their bravado to endanger that partnership still more, they will be doing their best to turn defeat into sheer disaster. There could be no forgiveness for that.

What the Assembly Is

FOR the first time, a United Nations Assembly is in session with the great majority of its members in sharp conflict with Britain—a conflict which may be sharpened to the point of a demand that some kind of sanctions be imposed on this country and France. To be arraigned in the world's forum is a painful experience ; but it can also be educative. Most nations tend to assume that they are among the UN's faithful supporters, even if it is occasionally misled into taking a view different from theirs. Yet, in the nature of things, any government pursuing what it regards as an urgent national interest may risk collision with an organisation created to serve the collective long-term interest. Now that Britain has joined the ranks of those members —nearly a score of them*—who have at one time or another flouted the United Nations' express wishes, it is time for a fresh look at that risk. And it is an apt moment for a good look at the United Nations itself—at the organisation which the British and French governments say they want to galvanise into action, and which has responded by condemning their actions.

The controversy of recent weeks has once again shown how little of the UN's real nature is generally understood. Champions of the Anglo-French action in Egypt have often seemed to think that it is the organisation's duty to secure the two powers' aims for them ; their opponents have sometimes talked as if it were an independent entity, a bench of impartial judges handing down detached rulings to a docile world. Both lines of argument run into the sand, for the United Nations is neither of these things. Essentially, it is a compact. The member governments agreed to create and use the organisation for certain purposes, of which the foremost was and is the preservation of peace. They defined its functions ; they alone can enlarge its powers ; they alone decide which of the functions allotted to it shall in fact be exercised, and how and when.

Formally, these decisions are taken by voting in the two major UN organs, the Security Council and the Assembly. The long dormant council recently enjoyed an apparent revival. During October it was asked to act, in quick succession, on the Suez Canal dispute, on clashes on the Israel-Jordan frontier, on Soviet intervention in Hungary, and on Egyptian support for Algerian rebels. But a fortnight later the casting of British and French vetoes against a resolution on the conflict in Egypt, and of a Soviet veto against a resolution on Hungary, brought into play the procedure devised during the Korean war under which the assembly may be called into emergency session. Thus, when the full assembly began its regular annual session on November 12th, representatives of most of its members had already been hotly disputing the Egyptian and Hungarian issues for a week. Its usual stately habit of devoting the opening days of a session to a series of prepared speeches, misnamed "the general debate," was disrupted by more urgent calls upon its attention ; and Egypt and Hungary, together with the associated danger of a wider conflict, now dominate the delegates' thoughts and actions.

Yet this is not the first assembly to sit under a shadow ; that of 1950, for example, was overcast by the Korean war and China's intervention ; that of 1948, by the Russian blockade of Berlin. The delegates will have to think about many things unconnected with the Middle East and Eastern Europe before they adjourn in the spring. Their agenda includes a mass of increasingly complicated "housekeeping" chores. It calls for debates on disarmament, on larger funds for developing backward areas, on the creation of a world food reserve, on refugees and statelessness, and on Korea. And a dozen of the seventy-odd items that confront it concern colonial and racial issues, which range from hardy annuals, like South Africa's treatment of Indians, to such newer developments as the proposed merger of British Togoland with the Gold Coast.

★

The friction which debates on these colonial and racial questions arouse between western nations and members of the Asian-African group is unhappily familiar, and it will not be lacking this year. But the new shape of these debates will not be solely due to the bitterness aroused east of Suez by the actions of Britain and France in Egypt. Changes in the assembly itself will also play their part. The admission of Morocco, the Sudan and Tunisia means that there are now 79 member states. When last year's assembly met, there were only 60—a figure to which membership had risen only slowly from the original 51 of 1945. The new admissions inevitably affect the balance of forces within the Assembly.

The significant figures here are the two-thirds majority needed to carry any resolution other than a procedural one, and the one third of votes cast that suffices, therefore, to block a resolution. In an assembly of 60, the 20 Latin-American members jointly exercised an effective power of veto. The disappearance of their

* They include India, the Netherlands, Egypt, Israel, the other participants in the Palestine war, South Africa, Jugoslavia, China, Russia, Bulgaria, Albania, Hungary, and North and South Korea.

Middle East Conspectus

The present troubled scene and prospect in the countries of the Middle East are surveyed in a series of messages from our correspondents from page 791 onwards, and in Notes of the Week on pages 762 to 764.

commanding position is the most eye-catching result of the increase in numbers. At first sight, the other changes seem less striking : the communists' voting power has risen from 6 to 10, the non-communist Europeans' from 12 to 17, the Asian-African from 17 to 26, three roughly proportionate increases. Many commentators are now pointing out that the Asian-Africans and communists together have a veto power ; but so they had with 23 votes in an assembly of 60. One must go a little deeper to identify the real changes, classifying the member states not so much by geography as by alignments—alignments which vary according to circumstances. And the most important variation is the difference between issues that divide the communist from the free world, and issues that divide the " white West " from the " anti-colonial " nations.

When communist actions are at issue, the effective " western " grouping in fact comprises the Atlantic allies, the Latin Americans, the " old Commonwealth," the Asian members of the Manila and Baghdad treaties, and a few other states such as Ireland, Spain and Nationalist China. Its voting power, when fully exerted, makes the passage of a resolution almost certain ; it can muster a basic 46 votes, and although 53 are theoretically required for a two thirds majority, there are usually enough abstentions for 46 to suffice amply. But things are very different when the issue is one between Europe and Asia.

★

On some of these issues, Britain and other colonial powers have long been accustomed to find themselves facing a majority which is usually critical and sometimes acutely hostile. Newly independent nations such as Pakistan and the Philippines are no less " anti-colonial " than their " neutral " neighbours ; most of the Latin Americans take a similar line ; and the colonial powers cannot expect enthusiastic support either from the United States or from other European countries. The conflict in Egypt is almost certain to solidify this built-in majority against the " colonial " powers ; it may not often touch the level of 64 votes by which the assembly's cease-fire resolution was passed on November 2nd, but there is scant likelihood of its falling below 45.

Given this situation, the obvious tactics for the communist powers in the assembly are to avoid head-on collisions and to foster neutralism not by openly challenging the free nations but by embroiling them in colonial, racial and similar disputes. They have ample raw material, quite apart from Egypt. Cyprus, Algeria, South and South-West Africa, and West New Guinea are already on the agenda. Portugal's admission means that, even if the issue of Goa is not raised, conditions in other Portuguese possessions will come under the eye of an assembly committee. Debates on these matters will take place in an atmosphere exacerbated by the Egyptian conflict. In spite of Hungary, Russia's effort to present itself as the Arabs' saviour may make it a more acceptable ally to them and some others among the anti-colonial nations than it has been in the past. It will profit from the dissensions within the western camp, and from the fact that most of the new members, in Europe as well as in Asia and Africa, are inclined to neutralism or to anti-colonialism, or to both.

★

It is going to be a thoroughly unpleasant assembly for Britain and France. It is going to be a very difficult one for the United States, which will risk losing the new goodwill it has won in the UN and throwing the Asians and Africans into Russia's arms if it is seen to be defending Britain and France against them, or opposing anti-colonial moves in other fields. During the next few months there will undoubtedly be louder complaints than ever from various quarters in Britain about the lop-sided way the assembly operates, about its preference for pulling the tail of a retreating western imperialism when it should be girding its loins against the danger of the communist advance. The cynical may say that Britain and France have at last given the Asian-African group some justification for its oft-told tales of western wickedness, and that it ought to be pleased at finding that it was right all along. But many a man in the British street, contrasting the way the assembly keeps up the pressure on his government with its lack of effectiveness in the matter of saving Hungary from Russia's grip, will be inclined to ask whether things would not go better if the whole elaborate affair were scrapped.

There is a simple answer to that question. The assembly exists. Even if Britain and France took the drastic step of withdrawing from the UN altogether, the organisation would survive. It is not an impartial judiciary ; it has no means of securing enforcement of its decisions ; even the moral force of its verdicts is impaired by the fact that they are obviously the result of an interplay of sectional interests (as are the decisions of national parliaments). But, to adapt a phrase of Mr Butler's, it is the best world forum we have. To flout it, or, worse, to boycott it, would be to turn down innumerable opportunities of exerting influence. Even the Russians, when they found themselves voted down by huge majorities time after time in earlier assemblies, were never unwise enough to stage more than a brief walkout (and even that did not pay them). It may be easier for a nation that finds itself condemned by the great majority of its fellows to shed some of its illusions and, from the " sinner's " point of view, to see the assembly more clearly for what it really is. What would be inexcusable would be to pretend that the assembly does not exist and to throw away the opportunities it offers for aligning national policy with the policies of as many other nations as possible—or at least, when that course is barred, for explaining national policy with sincerity and patience to a unique audience whose members, whatever else divides them, have a general interest in peace.

Victory for the Farmers

THIS week the Government has set the farmers' doubts at rest and has demonstrated that while it may bark loudly it will not willingly bite so politically valuable a sector of the community. For some time a tug of war has been taking place over agricultural policy. The Government has been rightly keen to reduce the cost of the agricultural subsidies and to redirect them so as to raise farming efficiency ; the farmers' unions have responded by pressing for a system which would give them more " confidence "—i.e., confidence that if they produce types of food which the market turns out not to want, taxpayers will go on paying remunerative prices for them. The revised system of guarantees which has now been announced represents a victory for the farmers' viewpoint.

The new system will not replace the annual price reviews of which both Government and farmers have become heartily sick. What it will do is introduce a new formula which will limit the Government's present nominal freedom of action. The formula is complicated. In effect, the Government has undertaken that it will not reduce the total value of its guarantees in any one year by more than 2½ per cent, after allowing in full for any changes in costs. At present, the total value of the guarantees (i.e., guaranteed prices multiplied by total qualifying output, plus production grants) is about £1,150 million. Theoretically, the Government might cut this figure next year by a maximum of £29 million, if costs remain static. Over the last six years, costs have in fact risen by an annual average of about £40 million. Presumably—and this is the one thing that can be said for the bargain—the Minister may feel that he now has an implied mandate to make the industry absorb up to £29 million of any such rise without provoking an annual allegation that he is " betraying the farmers' trust " ; and if the rise in costs is slowed down, as with an effective disinflationary policy it certainly ought to be, he might be in a better position to maintain something like the *status quo*. But even this gain in bargaining posture is limited. The Minister has been at pains to point out that, while the new guarantees to farmers are absolute and unconditional, there will be nothing automatic about resort to the Government's right of 2½ per cent economy.

★

In return, the Minister has accepted a system which must make it a harder and slower business than now to influence the pattern of production. The revised guarantees for individual commodities are deplorably rigid. No product is to be allowed to suffer a cut of more than 4 per cent a year in the value of its guarantee, and in the case of livestock products the cut must not exceed 9 per cent over a three-year period. This arrangement will rule out any save gradual changes in price emphasis between individual commodities. For example, the maximum possible cut in the milk price between now and 1965-66 (again on the unlikely hypothesis of static costs) would be about 3½d. a gallon—from the present 3s. 2½d. to 2s. 11d. Yet the country is swimming in surplus milk. Moreover, even this illustration oversimplifies the arrangement. What is being guaranteed to farmers is not a given price but a given income. If, for example, the Government insists upon more rigorous standards of quality (as it ought to do in many cases), it will have to compensate farmers for any temporary fall in the amount of production which qualifies for its guarantee. On the other hand, any increase in production will automatically push up the datum line for calculating the amount of income to be guaranteed in future years—unless the Government specifically places a quantitative limitation upon its liabilities. This has so far been done only in the special case of milk.

★

The Government is also proposing to introduce a new system of grants for the improvement of farm buildings and other fixed equipment. These grants will pay for a third of the works in question and will be available to all farmers, rich and poor. They will not, however, be available for propping up uneconomic holdings, and it is the Government's hope that their introduction will facilitate the amalgamation (on a voluntary basis) of small farms. This measure should do something to raise farming efficiency, although it seems extravagant to pay grants (especially at so high a rate) to prosperous farmers, most of whom are busy investing capital in any case. The really extraordinary feature of this proposal, however commendable it may seem so far, is that these grants (which are expected to cost £50 million spread over ten years) represent an entirely fresh subsidy and not a re-channelling of existing aid. So much for the original agreement between the Government and farmers on the desirability of paying a higher proportion of the present subsidies in the form of direct grants.

The basic trouble with the new system is that it is likely to aggravate instead of alleviating the economic ills of British agriculture. Greater price stability can be expected to give a still stronger boost to agricultural production. The new capital grants will act as another stimulus. The Government hopes that this higher output will largely take the form of a greater self-sufficiency in feeding-stuffs which will save foreign exchange. But it has no reason to expect this result. Indeed, it is very likely that it will not get it. Much of the increase seems bound to be in such commodities as milk, eggs, and pigs where any expansion, at present

prices, must prove a costly embarrassment. In these cases, the Government's self-imposed limitations upon price adjustments may eventually force it into the highly inefficient expedient of introducing quantitative restrictions—or, worse still, of imposing penal tariffs upon imported food.

All this is a long way from the original intentions of the Minister of Agriculture. Instead of reducing the burden of the agricultural subsidies, he now faces an uphill struggle to prevent the burden growing greater. Instead of substantially redirecting Government aid in ways which would stimulate efficiency, he has introduced yet another extra subsidy. Instead of cutting the wholly unnecessary degree of support which the larger farmers enjoy, he has if anything increased it. Even the one tactical victory which Mr Heathcoat Amory can report in the white paper—the elimination of special price reviews to meet special and sudden increases in costs—is not complete, since these reviews will continue to be held if a substantial increase of costs occurs in the earlier part of the agricultural year. And the Minister has bound himself (and his successor) not to make any changes in the new arrangements before 1962.

The farmers, on the other hand, have every reason to feel satisfied with this "bargain." They have been promised a guaranteed minimum income from the Exchequer which can be cut only slowly and by small amounts, and which will be automatically adjusted for any rise in costs. Moreover, this is the minimum they will get; they are free to bargain for more. Sir James Turner's purring endorsement of the new guarantees is not surprising. He has brought an erring Minister safely back into the fold.

Notes of the Week

To Withdraw or Not

IMMEDIATELY after the cease fire in Egypt, the General Assembly called on Britain, France and Israel to withdraw their troops, and for the last three weeks it has been trying to get this resolution obeyed. So far there has been more argument than compliance. When on November 19th, the Secretary-General asked the representatives of the three governments what was being done, the Israelis replied that they had withdrawn for varying distances along the whole front; by November 25th Israeli troops equivalent to two infantry brigades had left Egypt. The French announced that they had withdrawn about a third of their forces; this third apparently amounts to an infantry battalion, a parachute battalion, and a naval commando. The British took out one battalion as an earnest of their intention to withdraw once UNEF becomes "effective." (The larger part of a British parachute brigade, which had returned to Cyprus after taking part in the landings at Port Said, is now being sent home for "training.") Dissatisfied with these replies, the General Assembly reiterated its call to the three powers to withdraw and, as before, the resolution was passed by an overwhelming majority which included the United States.

The Israeli position is different from the Anglo-French. Israel agreed on November 8th to withdraw as soon as "satisfactory arrangements" were concluded in connection with UNEF. Pressed to explain what was meant by this condition, Israel interpreted it very loosely as a guarantee against "the recurrence of the threat or danger of attack." The Secretary-General has taken the view that Israel's security is a separate question and should not be a precondition of withdrawal, but Israel, with everything at stake, by playing a delaying action still hopes to gain some advantage from its victory in the field.

Mr Selwyn Lloyd said on November 21st that the Anglo-French force would be withdrawn when the British Government is satisfied that UNEF "is in a position to assume effectively the tasks assigned to it under the Assembly resolutions"—which include taking steps to open the Canal and secure free navigation. But since the United Nations endorses the Egyptian refusal to allow salvage to start until foreign troops withdraw, the British Government has only produced a stalemate. While it is by now clear that the Anglo-French troops will have to leave Egypt sooner or later, the timing is a matter of domestic politics. The French are more willing than the British to cut their losses, recognising it as an inescapable fact that their main object, the overthrow of President Nasser, has failed. But many Tories, including some ministers, have never lost sight of the object they have had since the end of July of imposing international control on the canal by hook or crook. Some of them appear to believe that UNEF has been established to do this for them—a completely untenable view. The primary task of the emergency force is to get the British, French and Israelis out of Egypt as quickly as possible.

President Nasser Thinks Twice

FOR a reason known only to those who attend Egyptian cabinet meetings, President Nasser greatly modified on Tuesday an edict he had issued only three days before. This was his decree that all British and French nationals, and all Jews, were to be expelled with only twenty pounds apiece in pocket. He has now given the Swiss legation—which is taking care of British and French interests—a formal assurance that no mass expulsion was ever intended and that only individual expulsions will be carried out. These are bad enough, of course. But there has been a *volte face*. What caused it?

Many neutral travellers agree in thinking the original order a sign of weakness. It was designed to pander to the emotion which President Nasser, unlike his predecessors, has so far kept well under control, and was meant to deflect attention from the economic pinch that is about to be felt by everyone in cities when, in midwinter, there is no kerosene with which to light stores and bake bread. (Egypt's own main oil wells are in Sinai, in Israeli hands; further, its Suez refinery is at the wrong end of the blocked canal for the deliveries of eastern European crude for which it has contracted.)

But the *junta* is on a tightrope. Aberrations that may keep up the courage of cold and hungry mobs deflect the foreign investor without whose help the regime cannot in the end survive. The change of policy may have been helped on by outside pressure—notably vehement Swiss representations, and intimations of a likely American cold shoulder. But it came also from within.

For the *junta* is torn by the disagreements that rack any team that has made a mess of things—in Egypt, by recriminations about military defeat as well as uneasiness about the economic consequences of too haughty a policy. There seems to be agreement to make a military scapegoat of the C-in-C, General Hakim Amer, but who is to be answerable for the lack of bread? Temporarily, perhaps, the British and French troops in Port Said; so long as they are there, nationalists can be silenced with the injunction not to argue with the man at the wheel during an emergency.

Keeping the Tories Tame

THE Government's handling of the Tory party during the Suez crisis has so far commanded admiration for its dexterity, if not necessarily for its political honesty. Between November 7th and November 29th Mr Butler, Mr Macmillan and Mr Heath have raised the art of being all things to all men to new and undreamt of heights. To Mr Julian Amery and Mr Angus Maude they have appeared as tough, intransigent fellows, ready to hang on in Port Said until Domesday; to Sir Edward Boyle and Sir Alexander Spearman they have presented themselves as men just tightening the last straps on their suitcases before pulling out. How long they can keep up this balancing act without letting one group slip out of their hands is problematical; certainly no prophecies must be made in an issue of *The Economist* that goes to press immediately after Mr Selwyn Lloyd's statement on Thursday. But the Tories' disparate trio deserve applause—credit is scarcely the word—for keeping the party together thus far.

Other things being equal, the Government has always had more to fear from its left than from its right, since Labour is unlikely to find an excuse for voting with the Suez group whereas it will usually be automatically on the side of the "rule of law" Tories. Thus during the early stages of the crisis the Government's main papering efforts were designed to patch over the crack on its left. About the middle of last week, however, a veritable chasm suddenly opened on the right. Not only the 30 or so members of the Suez group but dozens more "crypto-Suez" men got wind of the idea that the Government was preparing for immediate withdrawal. Something near a stampede followed. Nearly 80 Tories wrote letters of varying strength, but all carrying a "stand firm" injunction. The Prime Minister at this stage scarcely helped matters by announcing his imminent departure for Jamaica. This raised in right-wing bosoms the fear that once the "Munich eer" Mr Butler took over control, retreat would be immediate.

At this juncture Mr Butler found at his side the one man who could have given the right a lead—Mr Macmillan. To the dismay of the Suez group, the Chancellor, no doubt thoroughly alarmed by now about the economic prospects (or about something else), came out in favour of the policy of "phased withdrawal." The crisis in the party reached its peak on Thursday of last week—and the Government's handling of it was masterly. First, Mr Butler made a Commons statement so brilliantly equivocal that even the right was left ruefully admiring. Then, he and Mr Macmillan had a private meeting with all the junior ministers. Finally, they went together to the 1922 Committee, where Mr Butler did well and Mr Macmillan pulled off a half-hour *tour de force* in his best Lyceum style, complete with throbbing reference to his advancing years. This was a reminder of how poorly the Suez group is led—and of how dangerous it might have become had Mr Macmillan chosen to place himself at its head.

Baghdad Pactitis

AFTER three rueful weeks spent among the rubble of the British position in the Middle East, optimists are beginning to count one small blessing that is a by-product of a sorry situation—the awakening of the weaker members of the Baghdad Pact to a grasp of the pact's true purpose, which is, and always was, defence against Soviet penetration.

At meetings held at the shortest of notice in Teheran in the second week in November and again in Baghdad last week, the four Asian members—Turkey, Iraq, Iran and Pakistan—met without their British partner in deference to Iraq's unwillingness to sit down with a country that had fought on the same side as Israel. Thus they met without any western prompting. At the end of the second meeting, their communiqué made specific reference to their "anxiety and alarm at the rising tide of subversion in the Middle East," by which they meant the current build-up of communism in Syria.

A Turkish delegation led by the acting foreign minister arrived in London on Thursday, no doubt to press the Asian members' point that only speedy United States aid can stop the mouths of protagonists of Russian aid in Syria and critics of Nuri Pasha in Iraq. Will they press London to get out of Egypt so as to hasten this American action, and will they go on to stir up President Eisenhower in Washington?

But the blessing of a more cohesive pact is offset. The change is no more than the rush to get vaccinated, rather late, because smallpox has broken out in the neighbourhood. Politically speaking the epidemic entails chaos in Syria and Jordan—both lands important to the transit of oil. One

result in Jordan is the intention to terminate the treaty with Britain, and therefore the loss of the British military footholds there, for what they were worth. The situation in Syria is more difficult to measure for lack of hard news owing to restrictions on movement and on communication. It is pieced together in an article by our Middle Eastern correspondents on page 791.

Throttling Back on the Persian Gulf

THE pinch that is afflicting the oil consumer of western Europe is also being felt at the producing end in the Persian Gulf, though not as seriously, or for as long, as pessimists expected. The first of the tankers to come round the Cape are already beginning to reach the Gulf and in one place—Iran—output should become nearly normal at some time in December. Iran will suffer less than the sheikhdoms, since between a half and two-thirds of its refined products go east and are therefore not involved in a longer haul. Where crude oil is concerned, about the same proportion is sent west as east, and though refinery output has been very little affected, total operations have had to be cut by about 25 per cent during the last fortnight. But over 1956 as a whole, the consortium expects to achieve the output targets implied by the agreement of 1954; it cannot now rise to the higher levels for which the Iranian government had hoped.

In Bahrain, where the refinery is normally fed both by local production and—to a much greater extent—by pipeline from Saudi Arabia, the Saudi supply has been cut off at source. But Iranian oil shipped from Abadan has enabled the Bahrain refinery to run at about half its capacity; a major problem here is that there are only five berths for tankers, and that these berths now have to serve ships bringing in the crude oil as well as ships loading the refined products. Iranian oil has saved Bahrain much unemployment.

Kuwait and Qatar have been harder hit by the tanker shortage; Kuwait had at first to reduce normal output by more than three-quarters, but the tankers are now beginning to arrive and the rate of production should recover day by day. While the canal is blocked a proportion of tankers which normally load in the Persian Gulf will be fetching oil from America. So long as this goes on the sheikhdoms will probably not be able to resume their normal production, but it should be possible to keep revenue and employment at a level sufficiently high to prevent acute social or political unrest. There have been no dismissals, although in Bahrain some refinery employees have had to be put on public works. The atmosphere is still tense, but there have been no repetitions of the rioting and sabotage which took place when the British and French entered Egypt.

Two Treaties in Doubt

ALLIANCE with Britain is a two-edged weapon for a Middle East Moslem state. Jordan, deciding that the material gains are not worth the moral opprobrium, has announced that it intends to end the Anglo-Jordanian treaty and is taking "all steps, diplomatic, political and economic" in this direction. The Jordan treaty was awkward for Britain, too, and Whitehall will be able to hold back its tears. But the treaty with Libya is a different matter: neither partner is so ready to let it die.

At the opening of the Libyan parliament on Monday the prime minister, Mustapha ben Halim, said that the treaty with Britain must be reviewed. Situated as he is, he could hardly have said less. But it is significant that he said nothing about breaking the treaty: his promise to review it may satisfy Libya's neighbours, but it does not commit him to anything definite. Libya, dependent on funds and equipment from overseas, and no more viable as a political unit than Jordan, is not at all happy at the possibility of replacing British and American aid with Egyptian help—or Russian, either. Britain on its side would miss its bases in Libya—one of the few desert exercise grounds left to the army—even though Libya has succeeded in exercising a veto on their operational use.

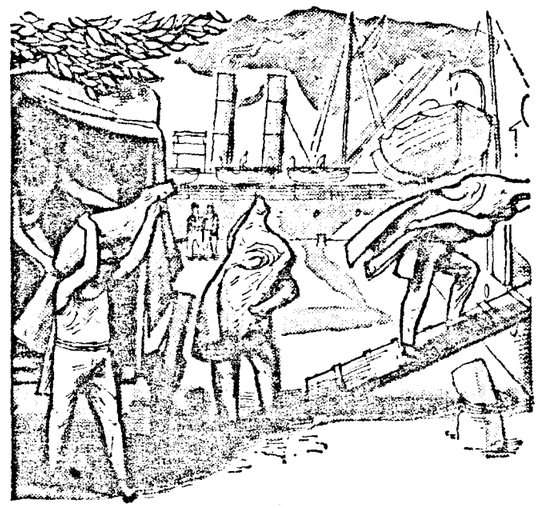
Libya was bound to protest at the aggression against Egypt. But if the prime minister has his way, his gesture of Muslim solidarity will probably end there. Egyptian ambitions are regarded with mistrust, and the cabinet was recently shuffled in order to throw out a pro-Egyptian element. Except among young and ardent nationalists, Libya's great anger with Britain is diluted by its wary attitude towards Egypt and its fear of Russian designs. The Anglo-Libyan treaty may survive, though its value has become dubious.

Labour's Team

MR GAITSKELL has made his choice of colleagues, and it is difficult for an outsider to criticise him for it. Mr Bevan's appointment as shadow Foreign Secretary should not frighten the country; most of his policy aberrations in the past few years have been personal aberrations on the road that did not lead to power, and he has it in him to be a more thoughtful Ernest Bevin. But the appointment should cause some nervousness in the Labour party; if the old Adam of personal incompatibility still lurks—and one suspects that it does—Mr Bevan is now better placed than ever to embarrass Mr Gaitskell and lose his party the next election. The other changes in the shadow cabinet are mostly quite obviously for the better. Mr Robens goes back to be spokesman on labour relations, a role that fits him to perfection. Sir Frank Soskice is to be partly the spokesman on legal problems (he is continuing with a fair amount of outside legal work), but is also to serve the party as a probably invaluable parliamentary handyman. Mr George Brown is to concentrate on defence policy; over the past year he has shown himself a better stand-in spokesman on this than on what was his own official field of labour relations. Only the appointment of Mr Callaghan as shadow Colonial Secretary is questionable. Labour has a good opening for constructive work here; but if Mr Callaghan is to take it he will need to rely more on reasoned argument and his undoubted ability—and less on shallow gibes, usually shouted in the middle of other people's speeches.

In making his changes, Mr Gaitskell faced one tough personal problem: what to do about Mr Robens, whose

Fifteen years before Frozen Meat



Frozen meat was first shipped from the Argentine in 1877—fifteen years after the Bank of London & South America had opened its doors there.

Since then, Latin American trade of all kinds has increased enormously, and with it have grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America. It has branches in most of the important trading centres of that vast continent.

Up-to-date reports on local markets, trading regulations and general economic conditions are received regularly from branches overseas and are summarised in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

BANK OF LONDON & SOUTH AMERICA LIMITED

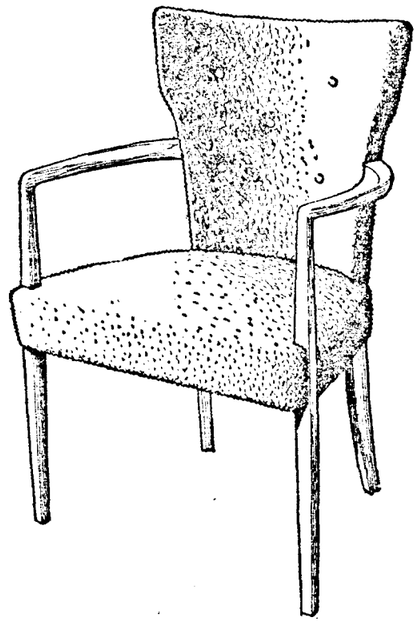
Not the retiring kind



Here is a chair that will positively inspire you. Look at its brisk, almost eager lines. See how it holds itself poised, ready to launch the busy executive into a welter of work. Indeed, once ensconced in this chair you'll find yourself working at pre-luncheon speed throughout the day. Yes, this is definitely a businessman's chair.

See it at Heal's along with the many other examples of modern furniture for boardrooms and offices. If you cannot manage a visit to our showrooms, may our furnishing adviser call on you? Or can we send you our leaflet "*Chairs for Executives*"?

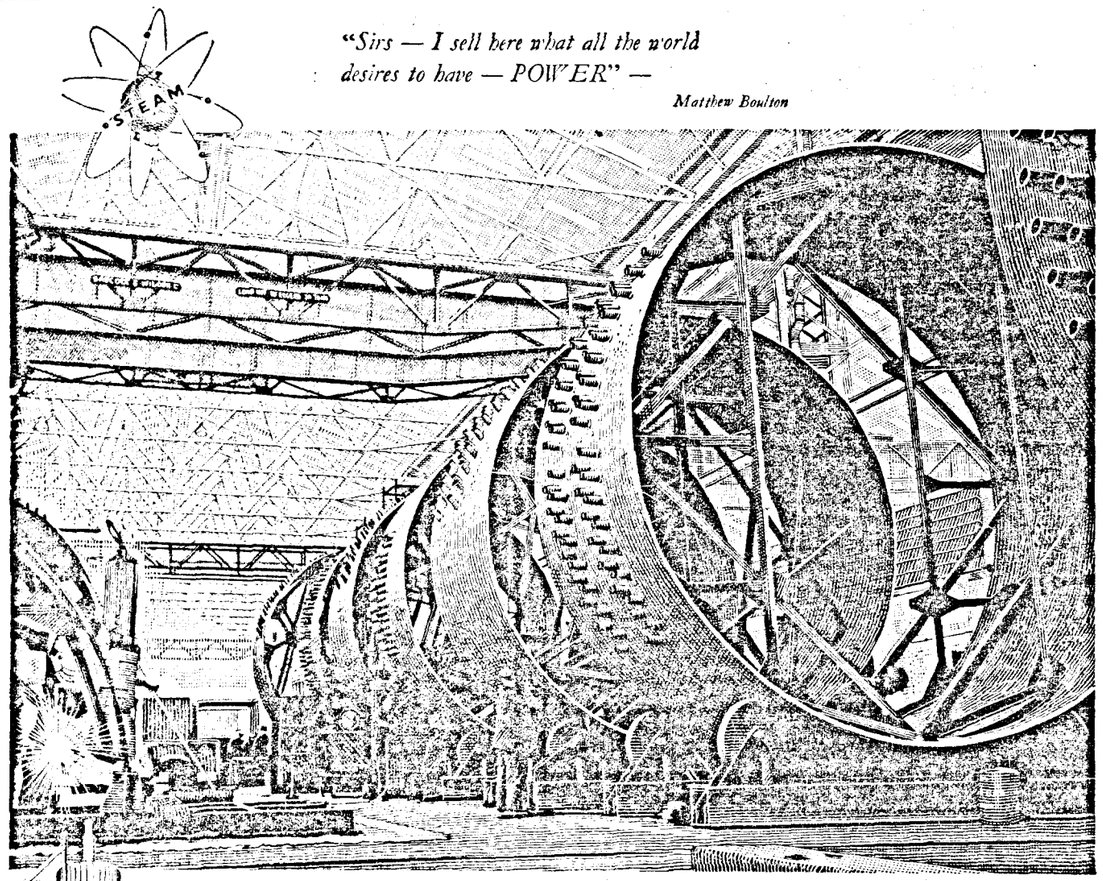
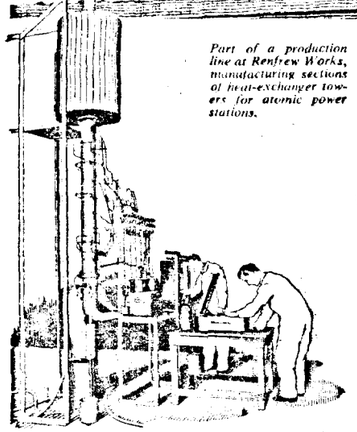
"Sirs — I sell here what all the world desires to have — POWER" —

Matthew Boulton



Part of a production line at Renfrew Works, manufacturing sections of heat-exchanger towers for atomic power stations.



Testing nuclear-reactor fuel cans at the Babcock Research Station.

Equipped for the job

Over £7,000,000 has been invested by Babcock & Wilcox Ltd., over the past 10 years in the extension and re-equipment of their Renfrew Works—largest of their kind in the world—and much of this development has a direct bearing on the Company's rapid advance in nuclear power engineering.

In the design and construction of nuclear power plant they have an unsurpassed experience of the problems involved and are bringing to bear well-proved research and manufacturing techniques which they had already developed for the manufacture of orthodox steam-raising plant and industrial pressure-vessels. At Renfrew Works they have laid down complete production lines for nuclear plant manufacture.

Already they have made the sixteen giant 80-feet high heat-exchangers for Calder Hall atomic power station and are far advanced with another sixteen for Chapel Cross. They are engaged in the design and construction of large and complex reactor pressure-vessels including one 35-feet high by 12-feet diameter, of steel 6 inches thick, to operate at a pressure of 1,200 lb. per square inch, for the first nuclear power plant in the Commonwealth, outside Great Britain.

The Company's Atomic Energy Department, with a trained and experienced personnel, co-ordinates progress in the nuclear field and operates in collaboration with a Research Department employing a staff of over 270, which is tackling the problems of nuclear power plant design and performance on a wide front.

Babcock & Wilcox Ltd. are moving fast in nuclear power engineering because they are *equipped for the job.*

THREE KINDS OF EXPERIENCE

For the design and building of complete atomic power stations of the gas-cooled, graphite-moderated type, Babcock & Wilcox Ltd. are in association with English Electric Company Ltd. and Taylor Woodrow Ltd. bringing to such undertakings an outstanding combination of facilities and experience in mechanical electrical and civil engineering.

BABCOCK

BABCOCK & WILCOX LTD., BABCOCK HOUSE, 209 EUSTON ROAD, LONDON, N.W.1.

career as foreign affairs spokesman threatened to be a total disaster. Happily, two events helped Mr Robens to leave the job with dignity. First, he made by far his best speech on foreign affairs, and then he won an unexpectedly big vote in the elections for actual membership of the shadow cabinet. Labour MPs knew that Mr Robens had been going through a tough time personally as well as politically, and a spontaneous "dear old Alf" vote lifted him into second place. He was one vote ahead of Mr Bevan, who undoubtedly suffered from a minor last-minute panic among Labour MPs that he might finish on top. The result, however, was to leave one shadow member whom everyone has temporarily forgotten to regard as a left wing danger—Mr Harold Wilson—top of the poll by a huge margin. The only change in the elected twelve was the expected return of Sir Frank Soskice, who had not yet returned to Parliament a year ago. To make way for him, the party firmly dropped Mr Stokes.

The careful juggling of the Robens-Bevan votes reflected a fairly strong trend of playing for safety. Mr Gilbert Mitchison, an elderly lawyer who is the incarnation of the useful party wheel horse, nearly doubled his vote; the nearest runners up were all eminently safe men; and not only most of the left wing, but even such left of centre stalwarts as Mr Strachey and Mr Strauss, finished near the bottom end of the poll. Mr Bevan has a mandate for mellowness, not for unorthodoxy.

Rent Facts and Myths

As expected, the Opposition summoned its full rhetorical powers of righteous indignation to assault the Government's Rent Bill on its second reading. But although Labour is likely to strike sparks among the third or more of the electorate who may face rent increases under the bill, it is in some danger of raising jealous antagonism among the two thirds or less who do not. The new statistics published by the Government last week (Cmd. 17) seem destined to find their way into Conservative, not Labour, propaganda. Almost three-quarters of the 4¼ million dwellings which (under the bill) will continue to be controlled have a current rent of less than 10s. a week. A very similar, though not of course identical, proportion of these dwellings will become liable under the bill to rent increases ranging up to a weekly maximum of 10s. It is clear that under the new system the majority of controlled rents will remain below £1 a week and a substantial proportion (perhaps a quarter) below 10s. Doubtless the change will cause some hardship among old-age pensioners and other special groups, for whom an adjustment in social security payments will be necessary. But the general prospect is hardly an alarming one for most working families, who will continue as a class to be more cheaply housed in Britain than almost anywhere else in the world.

The chief Labour spokesmen were consequently reduced to visiting their ire upon the still unexpurgated sins of landlords as a class. Mr Mitchison saw the bill as a present to landlords of £100 million a year, and Mr Lindgren cheerfully viewed it as a pay-off for assistance rendered to Conservative party funds. The facts that a great deal of house property now yields a negative return and that, even under the bill's provisions, the return will be very modest were waved aside as irrelevant. But Mr Mitchison surely made a mistake in suggesting that the cost of repairs (which will absorb a considerable proportion of the landlords' increased income) might—under Labour's alternative scheme of municipal ownership—be wholly or partly put on the rates. Since housing is itself the main source of rateable value, this is an absurdly circuitous notion to come from a likely future Minister of Housing and Local Government.

Free Trade Edges Forward

Britain's advance to freer trade with Europe is not going to be a matter of inter-party dispute. In the Commons debate on Monday spokesmen for both front benches gave conditional support to negotiations with the Messina powers; the team of Labour economists who are usually known as "Mr Gaitskell's young men" seem to have been pushing a cautious Mr Wilson into liberalism on the matter, almost as successfully as Mr Thorneycroft has plainly pushed the Chancellor. The protectionist mutterings from either set of back benches were much less troublesome than anybody would have forecast a few months ago; indeed they seemed at times to be confined to Mr Nabarro's concern for Kidderminster carpets, glass and cherries.

It was confirmed in the debate that the Government now has not merely "an idea under sympathetic consideration," but "a proposal to make to other countries as a basis for negotiation." Some fresh light was thrown on what this proposal will be. The scheme is to be a very gradual one. Mr Macmillan "doubts whether 1957 will see the end of the negotiations"; only after "a year or more" may the negotiations "be followed by action ultimately leading to a treaty." The treaty the Government has in mind is one under which European tariffs will disappear over "a period of ten or more years"; and it "envisages this being achieved through a number of more or less automatic and predictable provisions by all the members." At each stage of the advance, under this system, every industry will know well in advance when next the tariff on its goods is to come down. The intention is that all import quotas in Europe should be progressively abolished in step with tariffs, but Mr Macmillan said depressingly that this would be "subject to a strict proviso that they may be restored temporarily at any time by a country faced with balance of payments difficulties." Mr Thorneycroft, more sensibly and liberally, said merely that this provision for possible emergency reimposition of import quotas should not be allowed to serve as an excuse for backdoor protection of particular industries; he promised that any list of exempted strategic goods would also be "very closely scrutinised" with this danger in mind. The Government's project for exemption of agricultural products, however, is very much wider. It will extend to all "foodstuffs, whether for man or beast, whether in the raw, manufactured, or a processed state"; the exemptions will include drink and tobacco, thus enabling Britain to continue imperial preference on Commonwealth wines and Rhodesian tobacco. Apart from these agricultural exemptions, however, the proposal Britain has in mind—which Mr Thorneycroft, not Mr Macmillan, is plainly managing—seems to be a remarkably liberal one; Mr. Thorneycroft deserves again to be congratulated on an exceptional political and economic achievement.

Mr Kadar Shows His Teeth

NOBODY believes that Mr Nagy went to Rumania of his own free will. His abduction reflects badly on the Kadar government whichever way one looks at it; it was also a gratuitous insult to Marshal Tito. The Kadar regime had given the Jugoslav government a written undertaking that Mr Nagy and his companions could leave the shelter of the Jugoslav Legation in Budapest and go to their homes in safety. Either Mr Kadar and the Russians deliberately agreed to play a trick in order to get rid of the popular Mr Nagy, or else Mr Kadar acted in good faith and was overruled by the Russians—in which case his position as a helpless Russian puppet is exposed more mercilessly than ever.

Whatever the truth, Mr Kadar now seems determined to brazen it out. In a broadcast on Monday he said that "the Imre Nagy question," in his opinion, "belongs to the past." The increasing toughness of his recent utterances on this and on other matters suggests that he feels more confident that the Russians intend to keep him in power even if at the point of the bayonet. In a speech last Sunday, he declared bluntly that his government "cannot give in and will not be soft." Later he said that one does not "fight against counter-revolution by yielding to its demands, but by smashing it." He appears to have dropped his earlier promise to introduce a multi-party system; and his statement that his government was determined to go on rounding-up "counter-revolutionary inciters" suggests indiscriminate repression of anyone opposing the regime. Altogether it is a very different cry from the almost pathetic appeals for co-operation that the regime was making two or three weeks ago.

Mr Kadar in a stern mood is no more likely to move the Hungarians than is Mr Kadar in a melting mood. Indeed his new vindictiveness has, it seems, antagonised them still more. But the latest reports from Budapest suggest that despair at the failure of the outside world to come to their aid, the pressing need for cash so that they can eat and keep warm, and the ever-present fear of arrest are all combining to send the Hungarians gradually back to work. But although the Budapest workers' council has recommended a resumption of work, it has not withdrawn an inch from its original political demands—the return and restoration of Mr Nagy as premier, free elections and the withdrawal of Russian troops.

The outlook for the Hungarians is black, and they know it. But their will to resist is not yet broken and observers in Budapest believe that the situation could be transformed—at least psychologically—by some gesture from the outside world. Uno should go on insisting on getting Mr Hammarskjöld and his observers into Budapest.

Nervous Communists on Guard

IN Prague, Bucharest and Sofia the ferment in Hungary and Poland seems to have struck fear into the hearts of the communist rulers but little spark of revolt in the ruled. Only from Rumania have there come reliable reports of student demonstrations; although these demonstrations do not seem to have been of a very revolutionary character, the tremendous vigour with which the authorities are denying their existence suggests that they are seriously alarmed by them and by their possible repercussions. Moreover, the former Minister of Education, an ex-professor, has been replaced by one of the first vice-premiers, Mr Miron Constantinescu, a tough Communist and number seven in the Rumanian Politburo, who recently went to Cluj to quell student dissatisfaction there.

Yet although there is scant evidence that popular feeling in the Soviet block has reached boiling point, the regimes are leaving nothing to chance. Their press and radio have been full of cautionary tales about the lurid atrocities committed by the counter-revolutionaries in Budapest; the Czechs have also carried out a cautionary series of arrests of "spies." From all three countries come reports that the guards on public buildings have been increased and given better arms. In Czechoslovakia indiscreet sympathisers with Hungary and Poland have been summarily thrown out of their jobs. In Rumania, the frontier districts adjoining Hungary and the areas along the Russian lines of communication have been closed, and strict security measures introduced in districts populated by Hungarian and other minorities. From Bulgaria come reports of large-scale arrests, of the arming of Communist party members and of the arrival (which has been officially denied) of Soviet troops. These precautionary measures in Bulgaria—if they are indeed true—may be the result of fear, not so much of a popular rising, as of serious trouble with the anti-Stalinist dissidents within the party. Since Mr Chervenkov lost the premiership last April, there has been no real effort to liberalise the regime and Mr Chervenkov himself is now believed to be again both active and influential behind the scenes. Events in Hungary and Poland will not help to reconcile his opponents to his come-back.

The nervousness of the Communist leaders must be increased by their economic difficulties. Both Rumania and Bulgaria complain of a bad harvest, and supplies have certainly also suffered from peasant intransigence. A few weeks ago the Bulgarians appealed (successfully) to the Russians for emergency supplies of grain. This week the Rumanians, who have just had to introduce flour and sugar rationing, have sent a mission to Moscow, which is thought to be primarily concerned with begging economic aid. Moscow may find its east European empire an increasing economic liability.

Wage Bargaining After Suez

THIS has not been a good week for unions intent on wage increases. On Thursday the engineering employers rejected outright a claim for a 10 per cent increase. This was only to be expected: as long ago as last summer, before any claim had been presented to them, they announced (to the great annoyance of the unions) that they would be granting no wage increase this year. The leaders of the Confederation of Shipbuilding and Engineering Unions will now have to report back to their constituent executives, and no doubt they will decide to make a new approach. They are not impressed by employers' arguments that export prices will not bear another wage increase, for they say they have heard these too often before; but

the closing of the Suez Canal may cause them to move cautiously. They are more confident about the paying prospects of the shipbuilding employers, whose answer to the claim is not being given until December 11th. But it would be unprecedented, since the war, if that answer were different from that of the engineering employers. Possibly, despite the difficulty that some engineering and shipbuilding workers work side by side, it would be a good thing if the eventual answer were different; the monolithic forces negotiating this annual engineering claim could do, on both sides, with a little breaking up.

In contrast, the effect of petrol rationing has been slightly, but only slightly, to strengthen the bargaining power of the railway unions. The claim of the Associated Society of Locomotive Engineers and Firemen, however, has got beyond bargaining, and was heard this week by the Railway Staff National Tribunal. The tribunal's verdict will not be known for another two or three weeks, but it is surely bound to deal very roughly with a claim for 15 per cent from a union which got its last increase in January. (The explanation of Mr Hallworth, the general secretary, is that the 3 per cent rise in the cost of living index since then "seriously fails to show the incidence of the various factors.") The decision on this claim will be anxiously awaited by both the Transport Commission and the National Union of Railwaymen, whose claim for a 10 per cent rise is in the first stages of negotiation.

The London busmen have rejected as inadequate an increase of 5s. a week. They are always more militant than the busworkers outside London who accepted this sum three weeks ago (when it seemed likely to set the wages standard for 1956-57). The London busworkers are losing some of their overtime earnings through petrol rationing, and they now ask the union executive to give their negotiators plenary powers. There is good reason for confidence that this will not mean a strike. An eloquent Mr Cousins trying to make a good impression on the platform and a realistic Mr Cousins getting down to wage negotiation for his busmen are two different people. The unions in general are very nervous about unemployment in the next few months. The evidence is mounting that the Suez crisis will be deflationary—in the sense of making jobs harder to get.

The Bill That Got Away

SOME more information has become available about the Government's proposed Betting Bill, which was disappointingly missing from the legislative programme outlined in the Queen's Speech last month. The Home Secretary has lately held a meeting with representatives from the Stewards of the Jockey Club, from the National Hunt Committee (steeplechasing), from the Racecourse Betting Control Board (the tote), from the Racehorse Owners' Association, and from the sinister-sounding but respectable Bookmakers' Protection Association. Mr Lloyd George, making it clear that he was speaking for himself and not outlining proposals that had yet been accepted by the Government, suggested that his bill might usefully fall into two parts. The proposed "betting shops" should be run by the Racecourse Betting Control Board, presumably on the lines of the tote. Off-the-course bookmakers in England and Wales should be allowed to accept cash bets by post (as they already can in Scotland), but not over the counter; otherwise their business should be in credit betting as now.

All the delegates turned down these proposals. Why? The answer of the Stewards of the Jockey Club is that their cardinal principle is that a levy must be placed on all betting on horse-racing so that it can help the finances of racing, which are admittedly in fairly desperate straits. The tote already contributes to racing; from its present annual turnover of £25 million, half a million pounds is ploughed back into racing, compared with £2¾ million that goes in tax. Under Mr Lloyd George's proposals the tote's turnover and its contribution would inevitably be increased; but racing would still get no money from the bookies. That seems to be the stewards' main objection to the scheme. More potent objections to it are that, as many people prefer fixed odds betting to the tote, a lot of illegal street corner gambling might still go on; and—although this point probably was not raised—that it might be easier to take away the licence of a competing individual if his private enterprise betting shop were badly run than it would be to ensure the efficiency of a semi-official monopoly like the tote. But the racing world would be foolish to reject any new system simply because it did not promise to conform exactly to the pattern it wants; and Mr Lloyd George should not hold up this social reform for ever because of racing's claim for financial help. If racing needs help, it might be better to give it in the form of normal tax concessions—which the Exchequer would be better able to afford if the revenue from taxation on betting were raised by as much as it should be when cash betting is allowed.

Plunging On in Kashmir

THE constituent assembly of Indian-held Kashmir has been putting the finishing touches to a new constitution which declares that the whole state, including "Azad" Kashmir, which is under Pakistani control, "is and shall be an integral part of India." Pakistan has protested to the Security Council and asked that India should be reminded of its pledge to the United Nations that it would hold a plebiscite in Kashmir before finally accepting that state's accession. Mr Suhrawardy, the Prime Minister of Pakistan, has described as "pathetic" the Indian government's move "to secure from this self-styled assembly a verdict which has no juridical value, in order to give itself an excuse for not holding a plebiscite." The adjective seems inapt, for India's position is strong. It not only has physical possession, thanks to its army, of the greater part of Kashmir, including the Srinagar valley; it has also (as an article last week recorded) brought prosperity to this area by generous economic aid and preferential treatment, and a visitor sees little sign of open discontent. The Indian government argues that a plebiscite would jeopardise this economic progress as well as resurrecting religious bitterness (three-quarters of the population of Kashmir is Muslim) and, if the vote went in favour of accession to Pakistan, precipitating an exodus of Hindus that might upset the communal stability of all India.

It is, of course, impossible to take seriously India's claims that the Kashmiris have freely voted for union with India

through the constituent assembly (which is a highly selective body) or that they will have a chance of expressing their views again at the "elections" due next spring (which no party favouring either union with Pakistan, or independence, will be allowed to contest). India will not even permit United Nations observers to watch over these elections. Its intentions in Kashmir fully explain the way its delegate voted, in solitary company with the communist block, against the UN Assembly resolution of November 9th calling for internationally supervised elections in Hungary. A week later Mr Nehru was loudly applauded when he told the Indian parliament that the most objectionable feature of that resolution was the proposal for UN supervision of elections, which would set a precedent for similar meddling elsewhere. There is no doubt about India's physical power to hold Kashmir, which is reinforced by Soviet support. But, much as Russia now faces the problem of co-existing with Eastern Europe, India's real interest is not to maintain a military grip on Kashmir, but to achieve a friendly relationship with Pakistan. When, if ever, is Delhi going to recognise the injury it is doing itself?

Socialist Gains in Germany

COUNTY and communal elections this autumn in five Länder of west Germany, which are in some measure an augury for the general election next year, brought remarkable gains for the Social Democrats. Their share of the votes cast increased by more than eight per cent as against the local elections four years ago, and naturally by still more in comparison with the general election in 1953 when Dr Adenauer won his sweeping victory. The Socialists polled some 43 per cent of votes in the five states. Some observers are beginning to suggest that if the trend persists they may poll as much as 40 per cent in the Bundestag elections next year; in 1953 their national vote fell to 29 per cent.

They seem unlikely, however, to overhaul the Christian Democrats as the largest single party. The CDU can also claim gains, over 1952, at least. Indeed, the most important long-term trend which the results show may prove to be the trend towards a two-party system. Extremists lost everywhere: the Communists, now banned, disappeared altogether; the neo-Nazi DRP failed miserably, getting only 2.5 per cent of the votes in its stronghold, Lower Saxony. The BHE lost heavily; this refugee group is paying the price of its divisions, and its title of All-German Block looks more hollow than ever. Even the Free Democrats lost so much ground that their leader, Dr Dehler, has come under heavy fire again. Among German voters, despite the system of modified proportional representation, the feeling that a vote spent on a small party is a vote wasted is steadily gaining ground. Electoral strength is polarising round the SPD and CDU. Indeed, only the possibility of a balancing position between the two big parties preserves the Free Democrats as a major factor in German politics. As the socialists approach equality with the Christian Democrats, however, this potential source of leverage grows.

The socialist gains cannot be taken to indicate that German opinion is moving away from the western alliance. Indeed, the harsh turn of Russian policy in Eastern Europe has had the reverse effect. The feeling (which had been gaining ground in Germany) that Russia was moving towards a European settlement which would permit German unity has been cruelly rebuffed; and the display of Russian force has sharply reminded west Germans of the frailty of their defences. Despite their resentment against Britain and France, Germans have been forced back to the realisation that their survival depends on their western friendships.

Such feeling may be little comfort to Germany's Nato allies, who have been told this week by Herr Strauss, the German Defence Minister, that conscription will not, after all, start next April on an effective scale. But Herr Strauss is still trying to put up a show of standing by Germany's defence commitments. A token call-up of perhaps 10,000 men is still planned for April, although the approach of the general election tends to make conscription politically difficult, and the modifications in the plans for arms procurement appear likely to be less severe than was once believed.

Press Standards

THE third annual report of the Press Council, which appeared last week, records the patient building up of a body of established good practice in journalism and press reporting by a group of responsible investigating journalists. Sir Linton Andrews, the chairman, was perhaps optimistic when he claimed that the council was already an institution; a professional institution in the usual sense it is not and cannot be. Its progress in raising press standards has been modest; it still has good reason to condemn too many cases of "coarse impertinence," and of descent "to the lowest levels of bad taste and worse manners." But to suppose that any other sort of body would do better would be to oversimplify a difficult problem turning on the definition of the public interest, and perhaps to fall into Lord Selborne's grave error of supposing that coercion could do what professionalism cannot.

The council's approach is refreshingly pragmatic and constructive. It cannot do much in the short run to transform the press and with it public taste. But it is showing how lapses can be reduced in magnitude and impact by those who themselves have most reason to complain of the lapses. The more promptly and fully news is supplied to the press as a whole, the more difficult it is for sensation-mongers to run "revelations" based on whispers. The council thus puts forward a sensible set of proposals for the better handling of news by Buckingham Palace; its call upon the press relations section of the Palace to stop being the sort of section that seems to resent any relations with a part of the press was a call that needed to be made. Among the council's suggestions and achievements, this advice to the Palace has received most publicity; but it has many others to its credit—for example the sensible new code of press relations with hospitals which, if observed, should end the snooping by reporters in hospital corridors and the publication of details of illnesses of patients in the news which has called down so much medical wrath. Those who rightly resent intrusion into privacy do not always realise how their claims to it can set a precedent for those who wrongly resent investigations into public practice; local government officials are a case in point. By negotiating and suggesting model rules the Press Council can guard against this danger, and yet perhaps help gradually to bring a measure of civilisation even to the remotest fringes of the Sunday press.

Middle Road for Pigs

THE Government has chosen to follow a middle course with the bristly problem of pig marketing. It has refused to allow producers to establish a statutory marketing monopoly, on the grounds that this would prove injurious to the economic adaptability and the technical development of the pig industry. (It is curious that other marketing monopolies have never been tested by this excellent criterion. The Government cannot pretend that pigs are completely unique.) Equally, however, the Government has rejected the marketing proposals of the Bosanquet Commission, which were aimed at creating a freer market in bacon pigs and at breaking the present near-monopoly of the Fatstock Marketing Corporation.

The Government therefore proposes to leave pig marketing in its present hybrid state, and to concentrate on fostering technical improvements. As a first step, grading standards for bacon pigs are to be progressively raised and brought more into line with Danish and continental standards. As proposed in the Bosanquet report, a Pig Industry Development Authority will be set up and financed by a levy on each pig slaughtered. It will undertake a broad programme of research and development, but it will have no coercive powers. Since the authority will mainly consist of representatives of the pig industry, its activities will provide a valuable test of the ability of British agriculture to improve its standards by co-operative effort, while not being allowed to beat consumers with a big monopoly stick.

Turning Point for the United Party?

THE United Party of South Africa has elected a new leader; it remains to be seen if it will find a new policy. The decision to replace Mr Strauss by Sir de Villiers Graaff comes at the end of a long period of frustration, with which the former leader, who conscientiously did his best to follow in the footsteps of General Smuts, was inevitably associated; the United Party, despite its long and desperate rearguard action, has not prevented the Nationalists from having their way even against the constitution, and the dismissal of the appeal against the Senate Act by the High Court was the party's last and heaviest defeat. Inevitably though honourably, the United Party has been against policies rather than for policies in this long struggle; the question is whether under Sir de Villiers Graaff it can take a more positive line. The new leader, though relatively little known in the north, comes of a well-known Afrikaans Cape family; if his hereditary title counts somewhat against him, his traditional ways of thinking on colour questions as well as his earnest Afrikaans respect for law will act as a counterpoise. He is probably to the right of Mr Strauss (and Mr Harry Oppenheimer) in politics, but this will give him the chance of reuniting the conservative splinter party with the UP just at the time when Mr Strydom and some other ministers are beginning seriously to worry about the extremism of Dr Verwoerd and his group. Though there may yet be no split in the Nationalist ranks, there are fissures to be exploited once the opposition has a clear alternative.

So far it cannot be said that in his speeches Sir de Villiers Graaff has shown any sign that he can come forward with such an alternative; the call for more white immigration and retention of the Commonwealth link is not yet a platform. But there is plenty of political ammunition in the failure—as yet hardly recognised—of theoretical apartheid following the Tomlinson report. The sheer impossibility of extreme Nationalist policies is beginning to appear to the growing number of Afrikaners in secondary industry, and the time for a more moderate and realistic policy may be coming. But Sir de Villiers Graaff's problem is to find an acceptable policy with electoral appeal which is yet consistent with the principles of the United Party which Mr Strauss, however barrenly, rightly upheld. It is unlikely that such a policy can be worked out and successfully offered to the electorate by the time of the next election in 1958; the erosion of liberty does not prevent the country from being immensely prosperous. The new leader of the United Party is almost forced to think forward to the middle

The Economist Diary

THE CHRISTMAS PRESENT FOR THE MAN WHO SEEMS TO HAVE EVERYTHING

A week's appointments at an opening; a book that lies open flat on the desk	A diary lay-out specially designed to meet the needs of the busy man
Bound throughout in red leather; title blocked in gold	All information easily found by means of handy thumb-indexes
A memorandum book, an appointments register, and a complete reference book	Facts and figures covering the world always available when required
43/- Price for U.K. only, including postage and purchase tax	Prices to overseas addresses vary widely; a schedule will be sent on request

ILLUSTRATED PAMPHLET FROM DIARY DEPT. THE ECONOMIST · 22 RYDER STREET · LONDON SW1

nineteen-sixties when he thinks in terms of getting power. The fact must be faced that Dr Verwoerd certainly has extensive plans for that period.

Nato Conference

The second conference of parliamentary delegates from member countries of the North Atlantic Treaty Organisation met in Paris last week. The conference was intended to serve the double purpose of making MPs "Nato-minded" and of considering how to extend Nato's functions by adding a parliamentary forum to the organisation. Not much progress seems to have been made in the second half of this programme, although some of its difficulties were vividly illustrated when delegates from various political parties explained, sometimes with brutal frankness, their attitudes to international affairs. A Dutch Socialist accused the United States of trying to win over the neutralist nations "by fawning and flattery"; two French Gaullists asked for Nato support against the Algerian "tools of Egypt"; the Greeks submitted a resolution on self-determination for Cyprus; a British conservative is reported to have said that Britain should consider withdrawing from the United Nations if Uno proves incapable of securing a general settlement in the Middle East. After this airing of national opinion it might be supposed that there was little hope of achieving, as the conference urged, a common Nato policy, machinery for consultation, and an extension of Nato activity into economic and cultural fields. But the air may have been cleared by these explosions. Consciousness of the malaise which has oppressed Nato for more than a year, coupled with the helplessness felt during the last month, may spur the Atlantic powers to first-aid.

Quick and constructive action is badly needed. General Norstad, who has succeeded General Gruenther as Supreme Allied Commander in Europe, has inherited some formidable problems. The size of the German military contribution, the balance between atomic weapons and conventional arms, and the use of Nato arms in national wars, are pressing questions; their solution, as the parliamentary delegates emphasised, will depend on closer consultation between Nato members on military and political subjects. If consultation does not bring agreement it can at least cushion the shock of unilateral action and provide, in Mr Gaitskell's words, "clearer and more precise understanding of the duties of one Nato member towards another." The conference does not seem to have produced any clear suggestions for achieving this, but at least it should now be harder to keep the problem of consultation buried as it has been buried in the past.

Trial of Strength in German Yards

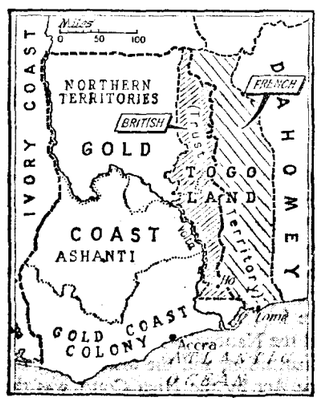
For five weeks over 30,000 workers have been on strike in plants and shipyards in Schleswig Holstein, in the longest major stoppage in Germany since the war. It is a straightforward trial of the employers' strength by the metal-workers' union. The employers agreed last June to cut hours from 48 to 45 and raise wages 8 per cent, but on condition that no substantial new demands be made for a year. Now the metal-workers in the shipyards claim six more days of paid holiday, full pay for up to six weeks' sickness, and some 12s. 6d. extra a day on holiday. If their claims succeed they will press them on other employers when yearly agreements expire.

This vigorous action reflects in part the traditional militancy of the metal-workers' union, exacerbated by a number of irritating recent disputes with employers. Both the miners' and metal-workers' unions, for example, sharply attacked employers' organisations last month for organising disguised anti-strike funds. But the metal-workers' strike can also be seen as part of an increasingly effective industrial campaign by the German trade unions as a whole. The last German trade union congress was characterised by a greater sense of political moderation than before, but an ambitious programme of industrial claims was adopted, now that full employment is at hand.

The unions at present appear to be as much concerned with greater leisure as higher wages, with the five-day week as their central claim. In the metal industry the cut in hours from 48 to 45 was agreed in principle last June, but difficult negotiations are still going on in individual industries; in the steel industry, for example, a tentative agreement was only reached last week after two months' tussle. And the cuts in hours are being accompanied by wage increases as well. Costs are therefore rising, and are evidently affecting prices. But whether the unions' strength will be checked by deflation and by the oil shortage remains to be seen.

The Togolands Choose

The future of both British and French Togoland should be coming before the United Nations General Assembly during the present session. After being held in trust for nearly 40 years, the two territories have now voted on their future political status. In May a small majority in British Togoland voted for federation with Ghana: a month ago about three-quarters of registered voters in French Togoland favoured joining the French Union as an "autonomous republic." British Togoland's decision already has the Trusteeship Council's blessing: the French choice may have a tougher passage before the General Assembly. The difference lies mainly in the circumstances in which the two plebiscites were held. While the United Nations associated itself from the start with the choice



put before British Togoland—whether or not to join next year with Ghana—the French have disconcerted the Trusteeship Council by hurrying their plebiscite forward. This offered a straight choice between incorporation in the French Union and continued French trusteeship, though a United Nations mission had recommended that Togoland should have the opportunity to end its association with France. A slight suspicion of sharp practice decided the Trusteeship Council against sponsoring the referendum: more unfortunate, the opposition parties in French Togoland made strenuous efforts to boycott the whole affair.

The opposition aim in both French and British territories is a united Togoland. The arbitrary colonial borders of these two strips of West Africa cut across a complexity of tribal communities. In the southern half of the territories, the frontier splits the territory of the active and relatively well-educated Ewe tribe, and its members therefore lead the opposition. But a united independent Togoland is not now considered a viable political unity. Through the long trusteeship, French Togoland has become as closely aligned with France as British Togoland with the Gold Coast.

It would be a pity if France's maladroit procedure over the referendum obscures the fact that its Togoland plans represent a new departure for French colonial policy. The Republic, with premier and cabinet responsible to a Legislative Assembly, has virtual control over internal affairs, and although foreign policy, defence and security are directed from France, its degree of autonomy is a noteworthy advance over other French colonies south of the Sahara. The statute might have been less liberal, and almost certainly would have been delayed, if France had not feared the pull of a free and comparatively wealthy Ghana. It is still uncertain whether the concessions have gone far enough.

Tied-Up Money

The circumstances in which the ultimate beneficiaries of a will cannot receive their bequests until complicated, unexpected and sometimes unforeseen conditions have been fulfilled—usually involving the life-interest in the bequest of other beneficiaries—have long been in need of reform. Recommendations have now been made by the Law Reform Committee in its fourth report.

Under English law there are limits to the period for which trusts can be made for the benefit of intermediate beneficiaries. Normally this must be the lifetime of interested persons living at the time the will was made, plus twenty-one years to cover the possible minority of offspring born to them subsequently; nor can income be accumulated for an ultimate beneficiary longer than some such period. But it can happen, for example, that a trust cannot be alienated because of some highly improbable event—such as the birth of a child to a woman of over 50. There are many less improbable contingencies laid down by a testator which become extremely hard to ensure have been fulfilled. The committee is sensibly in favour of driving a fairly rough horse and cart through them. Broadly, it proposes that improbable but possible events should not now hold up the satisfaction of other claims in order; that the validity of a limitation to the satisfaction of claims should depend on events most likely to occur; and that the trustees may apply to the court for a decision on the validity of any such limitation on the intermediate use of income or capital under a bequest. Should the court be proved wrong under this "wait and see" rule, the claims of any prior interest would be subsequently adjusted without the trustees being liable to action.

The committee also tackles the problem of trusts created for a purpose (such as the furtherance of a cause) rather than for a human beneficiary; it clearly leans to the view that such trusts are merely powers to trustees who are bound in honour but not equity to apply the property to such purposes. This is a proposal with which most people, considering the use of money over long periods for what may once have seemed a cause but later proves a whimsy, will readily agree. All these proposals are in the nature of compromises; but they seem to be a fair one between the claims of the living and the dead.

Womanpower

We doubt whether more folly has been displayed or more nonsense talked in the cause of women than in that of currency, education, or political science; but public opinion allows to the latter subjects the privilege of shaking themselves clear of the dirt through which they have dragged, while to the former it denies it. Whatever be the reason of this partiality—whether it be the comparative novelty of the subject, or a natural antipathy of the majority towards it, or a general misrepresentation of the question—it matters little. . . . It proves that more workers and wiser workers are required in the cause: it by no means proves that the cause is a hopeless one. On this account we welcome with satisfaction the efforts of Mrs Jameson. . . . The object of the lecture now before us is to prove that there exist certain departments in our social organisation in which the help of women would not only be possible, but highly advantageous. It is not sufficiently considered that men and women are not higher and lower, stronger and weaker beings, but supplementary beings, possessing each their own peculiar strength and their own peculiar weakness. The supplementary position of the man to the woman is universally recognised, but the corresponding truth which proclaims the woman the necessary supplement (or complement) to the man is not practically admitted, and it is for the results of this admission that Mrs Jameson contends. No one who has any knowledge of society can deny the existence of a large number of unoccupied ladies, a class quite distinct from the domestically useful or the contentedly trifling, a throng of fretting, unsatisfied minds—ready to work, but finding no field—ready to sacrifice themselves, but seeing no shrine on which to lay the offering. Is there no means of turning all this wasted power to account? . . . Mrs Jameson has devoted particular attention to certain hospitals, prisons, and penitentiaries in France, Austria, and Piedmont, which are either entirely or partially managed by ladies. . . . There is much to be done in the way of training before such a state of things can be attained as that described in these continental institutions. . . . But much is being done at the present time; workers are not wanting; efforts such as those of Mrs Jameson will fan the flame of zeal, but it is already kindled.

Letters to the Editor

A Plan for Sinai

SIR—Your proposal of November 24th is a really constructive one. Extend it and it can become an even more positive proposal and one pregnant with even richer expectations of long-term benefit. But before advancing the extension may we not commend a modification—that the sovereignty of any such area from Sinai and Palestine should be *bought* by the United Nations?

The extension is that the United Nations should (1) station permanently in that international area a UN Constabulary, and (2) reform its Charter so that it may have the new authority and the new organisations appropriate to the government of an internationalised "national state."

Benefits which may be expected are:

(i) Purchase will give a more acceptable approach to the thorny question of sovereignty about which Egypt and Israel will otherwise be touchy—and all other nations alarmed at the principle of punitive sequestration. Even Russia could hardly oppose it without loss of face. Moreover, purchase might be further acceptable to Egypt as a means of financing the Aswan High Dam.

(ii) A small (even a para-military) UN constabulary of troops directly employed by UN and situated in their own sovereign territory could be effective in keeping the peace in that strategic area and in assuring an objective and international operation and control of the Canal—because a "police station" (into which, incidentally, may be deployed the supporting forces of peace-keeping member nations) has been shown to be the one missing factor in both of these recent failures.

(iii) The UN itself could be subjected to the "behaviour test" of whether it could, by parturition, achieve a new and truly governing "wing" which might enjoy the confidence of the national governments and lead them to offer to sell (or lease) areas in other world-communicating or otherwise strategic places (e.g., Panama, Bosphorus, Aden, Kiel, Cyprus) for permanent stationing of a UN Constabulary.

There is, however, a most important caveat. The tacit transfer in recent days of security functions from the Security Council to the General Assembly must not blind us to the fact that whereas the swamping vote of the Asian-Afro national governments on the General Assembly may perhaps be tolerable for matters of recommendation by a UN which was deliberately created to be without responsibility and power, it would be highly dangerous to attribute the responsibility and power for governing even an area as relatively minor and experimental as your internationalised Sinai to a body in which the voting strength is so cock-eyed and the political purposes so different.

There could thus come from your Sinai proposal a further most valuable long-term benefit—the initiation of a well-balanced political unit of international character from which there could emerge, in a change from nationalism to a supra-national government, the same evolution of security, law and order which emerged from feudalism once the foundations of a national state had been laid.—Yours faithfully,

I. J. PITMAN

House of Commons

Salvage

SIR—Quite right: "pick up the broken china." But throw it away. Get a new piece. Look at the broken bits.

(1) The world is not ruled by the UN, but by America and Russia who rule the UN. No country has any hope in the UN if it is in the Russian ambit. Look at Hungary. It is dubious if any communist state in Panama would: at least recent events in Guatemala show that Americans look after their interests there. The council and assembly only act as sounding-boards for Russian and American policy. Our "time of troubles"—Greece-Turkey, Berlin, Korea, Formosa, Indo-China, the Middle East—has been a decade of Russian pushing along the curtain: sometimes right through, sometimes not, depending whether Americans were ready to "contain" Russians. The UN only runs at all because it has built-in stabilisers of Russian and American power.

(2) The Middle East, from India to Nato's and Europe's right flank in Turkey, has been a theatre of conflicting American policies—including the impolicy of denying any concern with it—since a sick Roosevelt started to woo the Arab states before the war ended, to please a myopic American "oil lobby." Not even Truman could reduce a dog's breakfast of policies to integrity: "getting the British on the run" from Persia to Egypt, producing a vacuum there but not filling it with American power, putting up vast numbers of illegal immigrants into Israel for an American electoral auction to ditch the British, selling Israel out to the Arab states who were ably keeping the British on the run, making the region safe for American oil by igniting everyone else's, not backing the UN's decision against Egypt over the use of the Canal by Israel, then not coming across when Egypt begged for *baksheesh*.

(3) Hence the UN's shocking double standard: one for countries inside the Russian ambit, for whom Americans are not prepared to lead a policy to the fighting-point; another for powers on the American side of the Curtain, whose interests are either "expendable" for peace (what an eye-opener for American critics of Munich!) or are courageously and generously defended by America for American interests.

(4) So Britain, France and all Western Europe are really second-rate powers—more cosily and kindly treated by Americans than are the second-rate satellites by Russia. Sir Winston saw all this coming long before, and shocked Europe at Zürich and America at Fulton by proclaiming it a decade ago. But Americans still haven't learned that a boat can sink wherever the leak is. They restore and defend Europe, then help to outflank it—where, as a peninsula, it has always been outflanked—by way of the Middle East and North Africa. Only Americans seem unaware of those 300 to 400 Russian planes *on the ground* which the Egyptians *could not fly* (your italics, Sir, last week). Well, Americans must pay the cost for the correction of myopia.

(5) So must the British. We must stifle our self-delusion, which now sounds like the *bravura* of little boys singing in a graveyard. After Suez and its bills, the Commonwealth and sterling area will become unworkable by 1958—due to the economic tug towards America and economic losses as new Dominions emerge in 1957—unless Britain takes the lead swiftly in Europe. We had Europe at our feet in 1945. Due to a narrow Tory-Labour "national socialism," we have done it dirt ever since. It is high time we stopped dragging our feet there over coal and steel, the common market, etc., and made amends.

(6) We must slash our defence burden, and integrate our armed forces far more closely with those of France, Germany and the rest, first and foremost for European defence. It is now clear that our defences in Europe can only be used hopelessly without American support, or perhaps fatally but victoriously with it. What on earth are we doing, or getting, with year after year of £1,600 million—one-third of a Budget taking one-third of the national income—on defence? Why not be realists? Americans are. They are also richer. We could strengthen ourselves, Europe, the under-developed people (quite as much as Americans have done, on the latter), and overcome the dollar gap by cutting out one-third to one-half of our defence effort. And even if the worst then befell, I don't see how we could be worse off than we have been, and are now: either we shall be overrun, or be a small ally of a big one.—Yours faithfully,

GRAHAM HUTTON

London, W.1

★

SIR—Much is being heard about the United Nations Police Force which government apologists are now claiming to be one of the positive gains from a British policy which some of them admit was not perhaps U in all respects, and certainly not UN! So it seems relevant to ask why at the United Nations we voted against the resolution calling for a Special Assembly which was the forum needed to enable our Canadian friends to propose the police force? We then abstained from the vote setting up the UN force for whose existence we now seem to be claiming credit. It is all very odd.—Yours faithfully,

London, S.W.1 STEPHEN KING-HALL

Shock and Distress in Ottawa

SIR—When your Ottawa correspondent in the article "Shock and Distress in Ottawa," expressed the anger of Canadian Government ministers and implied that this represented the reaction of the Canadian people to the Franco-British action in Egypt, many of us here were furious.

At the time the article reached Western Canada, we felt that we probably did not know all the ins and outs and possibly secret information about things which must have happened very recently to prompt the British Government to act so precipitately. But we realised that Britain was the last country in the world, and that Sir Anthony Eden was the least likely of any of Britain's leaders, to start something of this sort unless it was absolutely necessary. Furthermore, if we lacked the information to fully justify the event, at least we promptly recognised an aspect of the situation which we could heartily approve. This was and is that an individual whose vital interests are threatened by thugs is considered a fool not to protect them and is respected for so doing almost regardless of consequences. In so far as this widely accepted view is applicable to the situation in question, perhaps we were encouraged to admit the principle more quickly in Canada, because we are accustomed to our armed police shooting thugs quite frequently before risking asking questions, and we approve of this action. Evidence that I am right in thus suggesting that the first reaction in Western Canada to Britain's action was one of approval is provided by a very great majority of a vast number of letters to editors of the local press as well as by general conversation in the normal course of events.

While everybody was proud of Canada's proposal to the United Nations to organise a police force, the west at any rate and the coast in particular deplored the Canadian government's implied condemnation of England in the UN in company with Russia and the United States. Not having been in the east recently, I cannot speak of the east, but here in the west we are not very proud of Canada, and less so now that more information has been forthcoming.

Your Ottawa correspondent might be right in saying that Commonwealth relations have been damaged by England's action insofar as this applies to the Afro-Asian members of the Commonwealth, but I would say that in so far as the rest of the Commonwealth and US-Commonwealth relations are concerned, it has been more damaged by our action than by that of Britain.

I hope that this letter may do something to correct a most unfortunate impression which appears to have been gained in England partially resulting from your Ottawa correspondent's misinterpretation of opinion here. I find it hard to believe that opinion in eastern Canada differs very much from ours, but there are nevertheless great differences in many respects between east and west of our country, so this example of misinterpretation from Ottawa might constructively prompt you to have two correspondents in Canada, one in the east and one for the west, as the result of which your readers might well be better informed. As for your own views on this unfortunate Suez affair, these disgust us in the west to an extent that several of your readers took the trouble to telephone me to express these sentiments. How, may I ask, is peace to be achieved if it is not enforced? How is liberty to be enjoyed if those who wish to achieve it are not disciplined? How is Russia to be contained if her external meddling is not checked? Last but not least, how can one's vital interests be maintained if one is not ready to protect them in an age when too many covet others' rightful possessions?—Yours faithfully,

JOHN R. HORNE-PAYNE

Vancouver

Three Little Sins

SIR—Your polite answer is splendid to my plaint about the failure of the protagonists of the subtle and smooth working of the price mechanism to come forward and demand a rise in petrol prices. (Mr Schwartz must be honourably discharged from among the defaulters: in his weekly clowning he has upheld his tradition politically come what may.) I only hope—doubtlessly in vain—that in future there will be no more pretence in your columns about the "intrinsic economic superiority" of the price mechanism over other methods of equalising supply and demand. As you say the choice is a political one: who should bear the burden. This puts your previous support of rent-de-restriction and of the brutal ending of subsidies at last in its proper perspective.—Yours faithfully,

T. BALOGH

Balliol College, Oxford

India's Favourite Child

SIR—Your correspondent in India, writing in your issue of November 24th, made only a passing reference to the strict control exercised by Bakhshi Ghulam Mohammed over the people who wish to join Pakistan. This proves that, despite the lavish manner in which economic help is being given to occupied Kashmir by India, the Kashmiris have not accepted the bribe and have to be "kept down" by force.

It is also a pity that your correspondent made no reference to the passing of the so-called constitution making Kashmir "an integral part of India" in violation of the Security Council resolutions of August, 1948, and January, 1949, wherein it was agreed by both India and Pakistan that the final disposition of Kashmir would be in accordance with the will of the people expressed in a plebiscite conducted under the auspices of the United Nations.

In March, 1951, a Security Council resolution made it clear that any action the Constituent Assembly (in Indian occupied Kashmir) might attempt to take would not constitute a disposition of the state. India's representative, Sir B. N. Rau, said: "My Government's view is that, while the Constituent Assembly may, if it so desires, express an opinion on this question, it can take no decision on it."

As late as August, 1953, when the Prime Ministers of India and Pakistan met in New Delhi to resolve the Kashmir dispute, a communiqué issued by them affirmed "it was their firm opinion that this should be settled in accordance with the wishes of the people of the state." It was also decided that the Plebiscite Administrator should be appointed by April, 1954.

It now appears that India feels that the process of "conditioning" in Kashmir has reached a point at which those who fervently hope that India would carry out her international commitments may be faced with the bald truth and asked "to take it or leave it."

Miss Mirdula Sarabhai, a prominent social worker of the Indian National Congress, in a letter to members of the Indian Parliament, says:

"Why does not India have an efficient checking system to stop misappropriation of grants given for development and other purposes which are largely used for building up party strength, supporters of the present rulers, and for paying for a Gestapo system that reminds one of Hitler's regime where family members were pitched one against the other? The major part of the state funds does not go to public benefit, but goes to build up a new class of rich men in Kashmir. . . ."—Yours faithfully,

S. M. HOQ

Office of the High Commissioner for Pakistan Press Attaché

Capital in Manufacturing

SIR—In your issue of November 24, 1956, you gave my estimates of the replacement cost of assets in manufacturing, together with the margins of error (page 709).

At the Royal Statistical Society's meeting last week Mr Redfern thought that these margins were too high and a subsequent check has shown that he is right. The correct figures are £1,800 per person employed, plus or minus £70 (instead of £300) and for the total £15,300 million plus or minus £600 million (instead of £2,500 million).—Yours faithfully,

T. BARNA

London, S.W.1

Books & Publications

Churchill's England

A HISTORY OF THE ENGLISH-SPEAKING PEOPLES: *Volume II, The New World.*
By Winston S. Churchill.
Cassell. 344 pages. 30s.

SIR WINSTON CHURCHILL'S second volume opens with the accession of Henry VII and closes with the flight of James II. His sub-title suggests, and his preface outlines, a broad and spacious treatment of these two centuries, which saw not only the discovery of the American New World but also the opening of "other new worlds" in the realms of literature, science, political thought and art. But Sir Winston's treatment is much more restricted and, at first sight, more conventional: his theme is the political history of England, not the general history of the English-speaking peoples. There is only a short chapter on the settlements in America; Milton, Hobbes and Newton are not mentioned, and the universities' political sympathies receive more notice than do their contributions to thought and knowledge. It would be easy but foolish to add to the list of omissions: Sir Winston is not a competitor with the writers of textbooks, but a statesman reflecting on men and issues.

In the first third of this volume, devoted to the Tudor age, the author's strength is everywhere apparent without being fully deployed. He is not afraid to retell the old stories; he can condense the findings of specialist research into a single sentence with almost contemptuous ease; and he records the growth of Tudor strength without concealing the cost. The acts of persecution under Henry VIII "stand in repellent contrast to the enlightened principles of humanism"; doctrinal changes under Edward VI and Mary "exposed our agitated Islanders in one single decade to a frightful oscillation." In thirty-two pages Sir Winston gives us a wonderfully compact and temperate summary of the Elizabethan achievements. As a writer he relishes the Marprelate Tracts, "loaded with coarse, effective adjectives, though the sentences lumber along like the hay-cart in which the press itself was at one time concealed." As the Former Naval Person he soberly assesses the views of the English captains after the Armada:

> Their own ships had been sparingly equipped. Their ammunition had run short at a crucial moment. The gunnery of the merchant vessels had proved poor and half the enemy's fleet had got away. There were no boastings; they recorded their dissatisfactions.

But Sir Winston has reserved two-thirds of this book and his full strength for the great political and religious conflicts of the seventeenth century. "Free men may always take comfort from the grand lesson of history, that tyrannies cannot last except among servile races," he writes, catching again the cadences of 1940; and this theme of constitutional liberty reverberates throughout the book, enlisting the eloquence, the respect for law and precedent, the watchful regard for public opinion and the shrewd judgment of character formed and developed by decades of service in the House of Commons. It is not to be expected that Sir Winston should show much sympathy for James I, who wrote against tobacco, advertised his dislike for the House of Commons, and "had a deep-rooted nervous distaste for fighting." He notes with equal restraint and approval the far-reaching interest shown by James's subjects in European affairs: "Events in Prague and Ratisbon seemed as important to Englishmen as what happened in York and Bristol." He has a refreshingly commonsense view of Wentworth, whose desertion to the Crown he sees as the product of ambition, and of whom he writes magisterially: "That man, if given his full career, would have closed perhaps for generations the windows of civic freedom upon the English people."

His chapters on the civil war and its aftermath are extraordinarily effective and powerful, and full of Churchillian touches. Like his own ancestor and namesake he is repelled by the Scots. "We must admire," he writes, "as polished flint the convictions and purposes of the Scots Government and its divines, but one must be thankful never to have been brought into contact with any of them." And of Dunbar he observes sardonically: "Both sides confidently appealed to Jehovah; and the Most High, finding so little to choose between them in faith and zeal, must have allowed purely military factors to prevail." His account of Cromwell is masterly in its insight and balance. As a twentieth-century statesman he writes: "We know too much of despots and their moods and power to practise the philosophic detachment of our grandfathers." But as an historian he insists on the many ways in which Cromwell's dictatorship differed from modern patterns. Sir Winston describes the discords of the later Stuart period firmly and vividly. He is surprisingly kind to Charles II's personal rule, but this, after all, was an administration supported by a Churchill.

The reader expecting a comprehensive survey of all the changes and movements in English society in these centuries will be disappointed. This book displays something different: a strong and sagacious mind applying itself to great issues and institutions, drawing on extensive reserves of experience and feeling, expressing itself always with force and often with eloquence. It is as valuable for the light it throws on its author as for that it casts on its subject matter.

Outsider on the Inside

LOW'S AUTOBIOGRAPHY.
Michael Joseph. 387 pages. 30s.

"I FELT old," Mr Low writes after an interchange with Professor Laski eight years ago. In fact, Mr Low has remained peculiarly young ever since, a generation ago, he came to this country, from New Zealand *via* the Sydney *Bulletin* feeling that "uninhibited by reverence for the institutions and traditions of the Old World I had to be a nuisance."

What best destroys: a lampoon or a cartoon? Faced with this question a few weeks back, the BBC television Brains Trust fluffed it. A lampoon, they said rather cautiously, because it lasts; but they were, of course, comparing good lampoons (of which there are sadly few these days) with bad cartoons (of which there are sadly many). They did, however, put in a saving qualification; it was, rightly enough, the name of David Low.

Not that Mr Low has ever been a destroyer. It is obvious from even a glance at the pages of this book, as it has been from his writings for many years, that, if he had not been bent on cartoons, he would have made his mark well enough with lampoons; his pen is as tersely and as vividly to the point as his pencil. But, in his art as here, his purpose has always been "the old Gillray practice of using the person of the politicians to symbolise their policies"; "I never could be angry or hate for more than five minutes."

The cutting edge has always been there, however, if not the killing stroke. Mr Low came from down-under with all his "native tartness." From the start he stood up perkily against the "blood-and-iron school": he had "no sympathy with the type of British imperialist who assumed the possession of primitive emotions about one's native land to be patriotism among the British, but treason among the lesser folk." Nor had he any sympathy with the paternalism by which "the Big Ones governed for the Little Ones." He describes the Zinoviev letter election as a "raw debauching of the democratic process"; he calls the general strike of 1926 a ludicrous fiasco, born of the "clutter of jealousies, sordid ambitions and idiotic suspicion of 'brains' that hampered trade union and Labour party relations." He was perhaps more than anyone else the potent symbol of a reasonable liberalism between the wars, backed by no utopianism and certainly by no Marxism but by an Antipodean downrightness with its "disrespect and irreverence"—which he again and again asserts to be the essence of satire.

First and last Mr Low is an artist—"It must be awful to be a slave of skill" Max Beerbohm said of him. He is persistent and pernickety about the functions of the satirist: "a satirist perverted to hero-worship becomes pathetic and sickening." Satire is indeed at its best when it has something constructive behind its ridicule. Mr Low's goal has been "the right to lift up one's voice and utter one's opinions." So he has been solidly against "the impatient ones who [on the right or on the left] took the view that the earthly paradise would be reached much sooner if people were made to shut up and do what they were told." Between the wars, and in the wars, he was "pacific but not pacifist"; he favoured "evolution towards a world view along federal lines." He has been, outstandingly, a man of his times. He found his art to begin with in *Chips* and *Comic Cuts;* he found his first ideas, like so many of us, in H. G. Wells.

That he came as a gadfly from the Dominions was an added strength. Like Lloyd George, the "outsider," and Lord Beaverbrook, who "did not fit the frame at all," he did not belong. But, as his darts struck home, he "found new doors began to open"; "it was not long before I was attending diplomatic functions and inside the embassies." He was now the outsider on the inside. Has he become too much part of the scene he so sincerely and independently satirises? Is he, for all his origins, too kindly? Has he, charming and civilised, perhaps come to accept, too sensibly for satire, the view that "well-disposed men, whatever their allegiances, do not differ so much in their essential ambitions"?

"Ulysses" on England

ULISSE 23.
Edited by Marie Luisa Astaldi.
Florence: *Sansoni.* 168 pages. 700 lire.

A FLORENTINE review called *Ulisse,* which comes out three times a year, devoted its summer number almost entirely to "Inghilterra." Almost any political and economic description of countries, our own or others, published before the swift and radical events of the first weeks of November, 1956, is already dated, and too many of these articles are by English authors writing for foreign consumption in explanatory vein. Nevertheless, the number is a most interesting one.

In the post-November-1956 world, it is odd to read that the *Pax Britannica* was a naval peace, reinforced by the battleship, whereas the new *Pax Americana* is an air peace, reinforced by United States aeroplanes, and to find in Mr Herbert Nicholas's essay on Anglo-American relations that the marriage exists, that it is respectable, and that England holds the place of the Victorian wife, one of slight inferiority, but with important and "functional possibilities."

Another Fellow of New College, Mr Bernard Williams, disposes of a popular continental myth that the study of philosophy at Oxford has become bogged in logical positivism. Wittgenstein's influence has simply been "therapeutic." Mr Walter Taplin optimistically announces that England's "splendid isolation" ended in 1954 with the Paris agreements by which Britain keeps four divisions permanently on the soil of Europe, but, he adds, most British people have not realised what has happened. Mr Graham Hutton has three essays on the silent revolution of the welfare state. Mr David Stirling, describing the self-government developments in British Africa, makes one realise how far more vigorous those developments are than anything in the oil-producing Arab countries. Inevitably the most interesting contributions are those by Italians who know or have studied England for a lifetime, and how informed they all are about our contemporary literature, music, even our lack of anti-clericalism and our propensity for clerihews. We do not come too badly out of it all.

A Socialist Centenary

KEIR HARDIE.
By Emrys Hughes.
Allen and Unwin. 248 pages. 15s.
THE HUNGRY HEART: *a Romantic Biography of James Keir Hardie.*
By John Cockburn.
Jarrolds. 286 pages. 18s.

IT is a hundred years since the birth of Keir Hardie, and the anniversary is being marked by the placing of his bust in Westminster Hall, by a special exhibition at the Labour Party conference, illustrating his life and work, and by the publication of these two books. Of the four tributes the second is the most appropriate, for Hardie, although a man of real and unusual distinction, was neither a great parliamentarian nor an easy subject for biographical treatment. For documentation there is not much available except the texts of his speeches in the House of Commons, newspaper reports of some of those which he made outside, and a mass of propaganda articles which he wrote over many years for his own paper, *The Labour Leader.*

These limitations do not worry Mr Cockburn. His object was to write "a romantic biography," by which he means the selection of some of the better-known incidents in Hardie's life, and the erection around them of imaginative descriptions and not very convincing pieces of dialogue. He supplies few dates and, lest anyone should be tempted to work them out for themselves, he almost always prefers the "flashback" to the straightforward chronological description. His avowed object in writing the book was to wean some of the younger generation away from an exclusive interest in "TV and recording artists," and he does his best to make the transition as gentle as possible.

Mr Emrys Hughes has produced a

Reflections on International Administration

A. LOVEDAY

The author—with 25 years' experience as an international official—draws mainly on the record of the UN, and the larger specialized agencies, to discuss the problems involved in getting the states members of international organizations to work together efficiently and constructively.

War and the Neutrals

(*Survey of International Affairs* 1939-46)
Edited by ARNOLD *and* VERONICA TOYNBEE

In considering the history of the Second World War, the position of the neutral countries should be given due prominence. This volume relates the chief events in these states during the war, and attempts to make clear their concept of neutrality, to take account of their difficulties, and to assess the significance to the belligerents of their neutral status. *50s. net*

Nigerian Cocoa Farmers

An Economic Survey of Yoruba Cocoa Farming Families

R. GALLETTI, K. D. S. BALDWIN *and* I. O. DINA

'The picture presented of the Nigerian cocoa belt is quite unique in the quality of its detail. It is obviously based upon minute observation and careful recording. The authors must be congratulated upon their inquiries and upon the skill with which the raw mass has been served up for human consumption.' THE ECONOMIST

POPULATION GROWTH AND LEVELS OF CONSUMPTION

Horace Belshaw

Considers the practical problems of economic development in the countries in which the increase in the rate of population growth makes it difficult to escape from a "Malthusian" situation. 25*s.*

AN INTRODUCTION TO KEYNESIAN DYNAMICS

Kenneth K. Kurihara

A coherent and compact study of macro-dynamic analysis in general and particularly of the two outstanding "post-Keynesian" developments in this field—dynamic theories of cyclical fluctuations and secular growth analysis. 21*s.*

GEORGE ALLEN & UNWIN
40 MUSEUM ST., LONDON, W.C.1

more serious work. There are no imaginary conversations, quite a number of dates, and long, almost too long, quotations from the sources which are available; and, on the whole, he writes well, with an infectious enthusiasm. It is not, of course, an objective book. Mr Hughes is Keir Hardie's son-in-law and one of the foremost exponents in the House of Commons of the 1912 school of socialist thought and oratory. He is impelled both by family and political affiliations to a hagiographic approach, although he sometimes seems more concerned to use his father-in-law as a stick with which to beat the heads of those within the Labour Party with whom he himself does not agree than to portray him as a figure in history. Thus he begins by recalling that when Mr Gaitskell was elected leader of the party *The Economist* suggested that his chief task must be "to turn his back on the age of Keir Hardie." Mr Hughes sees his chief task as the refutation of this point of view. He wants a party of warm-hearted, uncompromising agitators, as militant at home as they are pacific abroad; and he is anxious to portray Keir Hardie as a prototype for this kind of politician.

But is this fair to Hardie? It pays scant attention to the shrewd patience with which he coaxed the trade union leaders into forming the Labour party; and it involves glossing over such a pregnant sentence as the following, which he wrote in *The Labour Leader* in 1908, discussing the politics of local government in his constituency: "But I would rather have Andrew Wilson, a plain working collier, Labour Mayor of Merthyr with twelve trustworthy Labour colleagues under him, than have every ward in the borough strewn with the remains of the slaughtered Socialist candidates, however valiantly they have waved the red flag and shouted out their class war dogmas." Is Mr Hughes quite sure that Hardie, had he been alive today, would have been as firmly wedded to 1912 as is he himself?

A Constitutional Detective

LAWS AND FLAWS.
By E. F. Iwi.
Odhams. 224 pages. 21*s.*

ALMOST all the matter in this book is interesting; but the author himself is more interesting still. Mr Iwi is a solicitor by profession, but his true love is for constitutional law, and here his detailed knowledge and his powers of penetration are astonishing. His mind is stored with minutiæ of procedure and forgotten sections of Acts of Parliament. When he needs spiritual comfort or stimulation he draws on his stock of learning, turning over in his mind former precedents and present problems. Like the householder in the gospels he brings forth familiar treasure, things both old and new, getting the same solace from them that some men get in times of stress from reciting to themselves passages of scripture or the blank verse they learnt in their youth.

On a Sabbath afternoon, at the height of the war, he was walking in a London park with his two small children, and suddenly he began to speculate on whether it would be constitutional to send the crown of England out of England for safe keeping. At once he forgot all about the children and drifted home alone, pondering a memorandum which he afterwards sent to the authorities. They told him that the crown was buried, and only three people knew where. Very like the Musgrave Ritual.

He joined the wartime fire service and in the bombing of London went through some very unpleasant experiences. In 1940 during a heavy raid, while he was running up and down ladders and doing all the other dangerous things that firemen do, he felt that he needed distraction, and accordingly turned his thoughts to "the proviso to the motion first passed by the Commons in 1938," providing for the recall of the House during the adjournments. With bombs falling north, west, south and east of him, he thought the proviso out and decided that it was *ultra vires*. Then and there he made a note of it. Next day he wrote to the Speaker, who had the standing order put right.

Among his other successes Mr Iwi got the Regency Act 1937 amended, because he saw—what everyone else had missed—that Princess Elizabeth would not come of age at eighteen. An heiress-presumptive comes of age when she is 21, and the popular notion that 18 is the right figure is nonsense. But the Regency Act had been based on the fallacy and it had to be altered. Mr Iwi got the law altered, too, when he pointed out that county court judges did not take an oath before starting their judicial careers. Now they have to. He called attention to the fact that the Duke of Edinburgh at the opening of Parliament sat beside the cloth of Estate. It was a grave breach of constitutional law. By the House of Lords Precedence Act 1539 the Duke was undoubtedly offside throughout the ceremony.

On other matters Mr Iwi has some weighty things to say. His chapters on delegated legislation and administrative tribunals are excellent. The dangers of an encroaching civil service cannot be pointed out too often and Mr Iwi points them very well.

Poetic Alliance?

BYRON AND GOETHE.
By E. M. Butler.
Bowes and Bowes. 237 pages. 30*s.*

PROFESSOR BUTLER'S thesis in this book proclaims her an ardent believer in Shelley's dictum that poets are the unacknowledged legislators of mankind; for it is nothing less than that Byron and Goethe in conjunction left to Europe the legacy of daimonism—"an indescribably baneful force, sanctioning spiritual evil in high places"—which fostered Hitlerism and consequently changed the face of the world we live in. There cannot be many readers of *The Economist* who would agree with this

account of the origins of Nazism, even if they are prepared to grant that there is an incalculable power latent in personal relationships and diffused ideas.

What makes the thesis extravagantly Romantic is the fact—fully admitted by Miss Butler, and indeed amply demonstrated—that the association between the two poets was of the most tenuous kind. It was not based upon personal contact—they never met. Nor could they fully appreciate one another's poetry. Byron, with his contempt for uncouth Teutons, neither knew nor wished to know any German. Goethe's knowledge of English was very imperfect, and this made him a conspicuously poor judge of the relative poetic merits of Byron's writings. Nevertheless, he succumbed to the fascination of his unorthodoxy, and came almost to adore a dream-figure that did not much resemble the man who was Byron.

An intricate story is entertainingly unravelled in this book—of dedications, intended by Byron as tributes (by no means solemn) to "old Goethe . . . that illustrious patriarch of European letters," that were suppressed, mislaid or tactlessly revealed, almost as though a mischievous fate had been at work to frustrate even an exchange of literary courtesies between the two great poets. But nothing could quench Goethe's passionate enthusiasm for the name and fame of Byron, which came to poetic fruition in the second part of *Faust*.

Miss Butler deploys her learning in a way calculated to convince the non-specialist that here is learning made easy, but there are times when her style gets quite clogged with clichés. Her wish to arrest sometimes leads her into absurdities; for instance, when she heads a chapter describing a temporary coolness "The Ice Age," or entitles another section "Sound Barrier," when she merely means that linguistic difficulties hampered communication between Byron and Goethe. However, there is much new and interesting material here, and plenty of provocative ideas.

Retailing from Afar

SHOPS AND STORES TODAY.
By Ellis E. Somake and Rolf Hellberg.
Batsford 231 pages. 63*s.*

THIS book will be valuable to the architectural and town-planning student, for in the short compass of 200 odd pages it gives them a quick and broad view of the whole retailing field. But it will be of less interest to the specialist concerned with distribution problems in terms of town planning. To big retailers, who have grappled with the subject at first hand, it will inevitably seem elementary and superficial, and, indeed, not to deal with many of the major problems at all.

Thus fewer than eight pages have been devoted to the technical problems raised by self-selection, self-service and supermarkets, which now overshadow the whole future of retailing. Little attempt has been made to relate the problems of the retailer to the economics of rapid technical change. However permanent the structure of a store may be (and even this may have a useful life of only thirty-five years), the rest of the normal equipment of retailing must be regarded as having a very short life. The inside of an entire store today may well have to be written off in ten years or less. In the same period a new town centre may become out of date unless the effects of traffic problems and changing social habits are taken into account in periodic reorganisation.

The British architect, town planner and shop designer today must understand these questions; but this book will not answer many of them. It will serve as a reminder of the many independent variables to be taken into account in working out store policy for the years ahead; but the merchant seeking the answers will be forced back to the usual wet towel round his own head and the usual interminable arguments with his board and his experts. The authors have clearly put an immense amount of work into this book, but it does not provide the comprehensive study of applied economics in modern retail practice for which those who have to build and rebuild stores are waiting.

Shorter Notices

SOUTHWEST PACIFIC.
By Kenneth B. Cumberland.
Methuen. 383 pages. 28*s.* 6*d.*

In this straightforward account of the geography of Australia, New Zealand and their neighbouring Pacific islands, the main emphasis is on descriptive agricultural and industrial geography. The physical background is more lightly sketched, particular attention being given to its effect on the extension of European settlement in Australia and New Zealand.

Written by the Professor of Geography at Auckland, this is very much a New Zealand book. Australia, for all its size and importance, receives only two more pages of text. Particularly on the rapidly changing Pacific Islands, and on New Zealand, this is a valuable advanced textbook for geographers, which should also provide a useful background of basic knowledge for others interested in the southwestern Pacific countries.

★

WEBSTER'S NEW WORLD DICTIONARY.
Macmillan. 1,716 pages. 70*s.*

The world "discriminative" on the cover arouses a slight feeling of resentment; but this dictionary is a descendant of the traditional Webster, and justifies itself entirely by its definition of the word. Its disadvantage is its typography; but it gives the words you want with great efficiency, and helps you with not very pretty little pictures of the things that take too long to describe. It is particularly useful for giving the national variants between English and American usage, and it only seriously betrays its origin in its phonetics; it also gives the explanation of some, though not all, of the groups of initials, such as Nato, by which national and international organisations are known. All this is compassed in one, not unwieldy, volume.

What Next for the Democrats?

Washington, D.C.

THE Democratic party, badly shaken by its stunning defeat in the presidential election but still in control of both Houses of Congress and with a majority of state governorships, is more sorely vexed by the character and significance of its successes than by the magnitude of its failure. The members of the party's executive committee, who gathered this week for a two-day meeting on strategy, were disposed to regard Mr Eisenhower's great triumph as an unnatural phenomenon, distasteful enough but not likely to be repeated by his Republican party. The Democratic victory in Congress, however, poses hard questions of future plans and legislative programmes which cannot be rationalised away so easily. The Democrats' paradoxical fate was vividly summed up by Mr Jacob Arvey, the party's leader in Chicago, who commented: "All this talk about a great victory is fine. I think we scored a great victory. I also think we got hit by a truck."

The issue confronting the Democrats is whether it would enhance their chances of winning the great prize of the Presidency in 1960 to continue the conservative policy of "moderation" which has been followed during the past four years by Mr Lyndon Johnson, the Democratic leader in the Senate, and his senior congressional colleagues. There are many in the northern liberal wing of the party who believe that it would not. They point to certain grim statistics concealed behind the pleasing façade of the Democratic majorities in Congress. Only eight of the forty-nine Democratic Senators come from the heavily populated tier of northern states stretching from New York to Iowa. Moreover, outside of the South and the border states, the Democrats hold only 130 seats in the House of Representatives compared with 193 held by the Republicans. In the opinion of liberal Democrats, these figures tell a story of dangerous weakness that must be countered by a progressive legislative programme tailored to fit the needs of the voters in the cities and suburbs of the North because it is there that the Presidency is won or lost.

Senator Johnson's moderate policies are founded on two premises: the Democrats are partners in running the government since they control Congress and should, therefore, place co-operation with the Administration in the national interest ahead of partisan militancy; secondly, the crucial domestic problem of guaranteeing civil rights for Negroes cannot, in his view, be settled by Congress. Mr Johnson's critics contend that he has shown excessive tolerance toward President Eisenhower and his Administration and that, as a result, political issues have been blurred and the party has failed to build a record for future elections. They argue further, that the party is "digging its own grave" by evading the civil rights issue.

Last week Senator Humphrey of Minnesota and five of his northern colleagues proposed a 16-point legislative programme for the congressional session which begins in January. The programme covered a long list of domestic items such as housing legislation and tax reform, but its most explosive recommendation was for the repeal of Senate Rule XXII: this rule makes it impossible, as a practical matter, to cut off debate and thus enables southern members regularly to talk civil rights Bills to death by "filibustering." A struggle over changing the rules of the Senate is certain to rend the party and gravely to embarrass Mr Johnson's plans for harmony. Indeed, merely to offer a Democratic programme was a challenge to his leadership. When, after the election, Mr Johnson was asked at a press conference whether the Democrats would present a legislative agenda of their own, he replied: "No, we'll wait for the President. We'll support him when he's right and oppose him when he's wrong."

★

Senator Humphrey's decision to wait neither for the President nor for Mr Johnson is a significant indication of the new mood of the northern Democrats. An agile and perceptive politician, Mr Humphrey had accommodated himself quietly during the past four years to the prevailing mood of "moderation," much to the disappointment of his liberal admirers who were thereby deprived of one of their few skilled and articulate spokesmen in the Senate. The executive committee this week provided limited but effective backing for Mr Humphrey's revolt. Although the members did not specifically endorse his 16-point programme, they reaffirmed their support for the Democratic platform adopted at the National Convention last summer which contains a precise pledge to revise the Senate rules. The committee also authorised the appointment of an advisory group of seventeen party leaders to formulate Democratic positions on major issues, a form of assistance which Senator Johnson and his congressional colleagues clearly regarded as gratuitous and unnecessary. Finally, the committee declared that the Democratic majority in Congress

> not only has the power but the duty to act on its own in the country's interest. We therefore hope our party will make Democratic initiative the order of the day so that we can quickly resume social progress at home and save the situation abroad.

The course of this incipient revolt will depend largely on Mr Stevenson, since the northern Democrats in Congress are much too weak in numbers and influence to carry the fight very far without broad support from the party outside of the legislative chambers. Mr Stevenson's prestige is now completely eclipsed, for he polled fewer votes almost everywhere than did other Democratic candidates seeking lesser offices. Yet his star is not likely to hang low on the horizon indefinitely. Although he has no formal power as the party's titular leader (this being a dusty and anomalous honour), and although he is no longer regarded, as he was in 1952, as a possible candidate for the Presidency again, he remains the party's most eloquent spokesman and commands a devoted and influential personal following. The new advisory body set up this week may afford him a convenient vehicle for bringing his weight to bear.

His defeat shattered the uneasy agreement established among Democrats for the past four years. During that period, Mr Stevenson agreed that "moderation is the spirit of the times"; he maintained good surface relations with the southern leaders in Congress; and Mr Stephen Mitchell, his personal choice as chairman of the Democratic National Committee, busied himself binding up the wounds of various disaffected southern elements who had bolted from the party in 1952. Former President Truman, Governor Harriman of New York, and other advocates of a more radical course, grumbled about this strategy, but they were powerless to break through this concert of interests. Yet in the recent election, Mr Stevenson failed spectacularly to derive any benefits from the policy of moderation: the same southern states which bolted four years ago deserted him again and were joined by Louisiana.

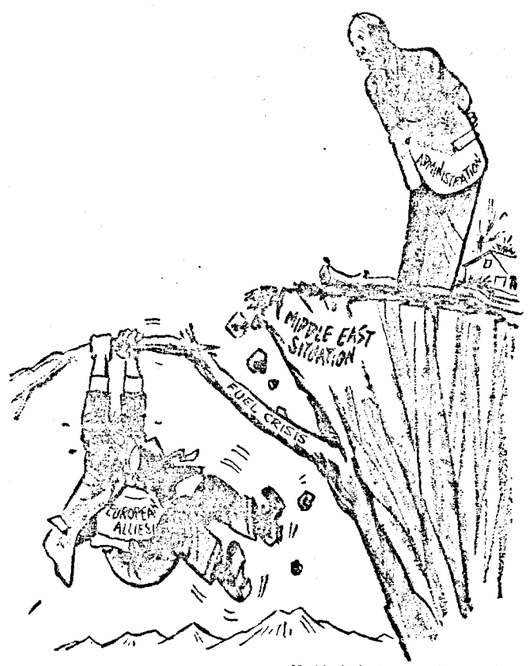
Mr Stevenson's liberal advisers are now urging upon him the view that a policy designed to calm the South not only fails in that objective, but also handicaps the party in the North. If he accepts this, he may provide the present incohate restiveness among northern Democrats with a personal rallying point which Mr Humphrey and the other lonely rebels in the Senate cannot supply. However, it must be remembered that Mr Stevenson is a shrewd and wary politician. He is reasonably certain to exhibit the same caution and subtlety in protecting what he regards as the long-range welfare of the party in the future as he has in safeguarding his own interests in the past. In other words, Mr Stevenson may challenge the congressional hierarchy for interim leadership of the party, but he will avoid the role of a knight errant tilting at impossible windmills.

Some Oil for Europe

THE difference between the arrangements already made by the major American oil companies to supply extra oil to Europe, and what they could do, if they were given active encouragement by their government, is not wide enough to give any justification for applying the term "sanctions" to the American government's studied disinterest in Europe's oil famine. Nor does it mean, as seems to be too commonly supposed, that no additional American oil is being sent to Europe. Tankers carrying the first fruits of the co-operation by American companies are in fact arriving in Britain this weekend. Stocks of crude oil in the United States, which were abnormally high when the Suez canal was blocked, form the first reserve from which the extra supplies are being brought, and a start has been made with drawing on shut-in capacity both in the United States and in Venezuela. But the minimum assistance that Europe must have from the United States, if consumption is not to fall below even 75 per cent of normal, can hardly be less than that envisaged by the American government when plans were drawn up to support a possible boycott of the Suez canal on the assumption that the Mediterranean pipelines would remain open.

These plans provided for an increase of 800,000 barrels a day in American output of crude oil, of which 300,000 barrels a day would make up for middle eastern supplies formerly imported into the United States, leaving 500,000

"Tsk Tsk"



Herblock in the *Washington Post*

barrels a day extra for Europe, to be supplemented by any additional supplies obtained from Venezuela. The major crude oil buyers wanted production for this month raised in Texas by 300,000 barrels a day: but the Texas Railroad Commission allowed only an extra 75,000 barrels a day; a similar increase has been permitted in Louisiana. Uncertain about the duration of the emergency demand, and with no official assurance from Washington that the additional output will all be sold, or even that imports of middle eastern oil are coming temporarily to an end, the state regulatory bodies are reluctant to authorise any sharp increase in output. The producers also prefer to wait until the burdensome stocks of crude oil are reduced, and the price begins to harden, before seeking to open up much of their shut-in capacity.

The absence of a lead from the government is even more serious in its effects on the degree of co-ordination and integration that can be achieved in purchasing oil and operating tankers. American companies can and are diverting tankers to the Caribbean/European run and utilising as best they can the tonnage they control individually. But although the Department of Justice has announced a half-hearted relaxation of the anti-trust laws to facilitate emergency arrangements, the oil companies are still uncertain whether they could with impunity exchange full information about their supply position, purchasing plans and tanker operations. In any event they have not succeeded in doing this, and have forgone a gain in efficiency, and thus in the amount of American oil that could be delivered to Europe, of perhaps 5 or 10 per cent.

The American government now has the opportunity of aiding, by assurances of the type suggested above, a co-operative movement of oil to European countries who are already co-ordinating their own activities through OEEC. To give aid in this manner need not imply any formal resurrection of the Middle East Emergency Committee—nor need American support for innocent bystanders in Europe be construed as condoning the British and French intervention in Egypt.

Open Door for Hungarians

BY a striking coincidence, the first plane load of Hungarian refugees landed in the United States just in time for Thanksgiving Day, November 22nd, when Americans celebrated the successful survival of the first refugees to flee to North America. The Hungarians are coming in under the Refugee Relief Act of 1953, which provided for special entries in addition to the narrow and restrictive quotas of the McCarran-Walter Act of 1952, the basic immigration law; 209,000 additional immigrants, in various categories, were to come in over a three-year period. The category which applies to the Hungarians, that for political refugees resident in West Germany and Austria, contained 35,000 of these extra visas but many of them have already been used.

Previously the modest intent of the Refugee Relief Act was seriously frustrated by its administration; the *Washington Post* called it "a compound of the kind of red-tape that strangles men's hopes." But the President has now given a lead to a vast wave of official and popular sentiment that is unravelling the red-tape at almost breakneck speed. The hitherto tortuous process of screening and personal sponsorship has been either dramatically accelerated or else waived. The President spoke of 5,000 Hungarians being admitted before the Act expires on December 31st and since then hopes have been expressed that room for 10,000 will be found.

Before the Hungarian rebellion, it had been confessed officially that the number of immigrants actually coming in under all categories of the Act would fall short of the number allowed by about 30,000. But now procrastination has given way to speed; forty per cent of the 500 Hungarians arriving last week have already been found homes and jobs. Some of the applicants of the last few years may well be envying the Hungarians; the *New York Times* has asked: "if this could be done now, why hasn't it been done all along?" Certainly President Eisenhower's hand will be strengthened when he next asks Congress to redeem his pledge to revise the McCarran Act drastically. The most stalwart opponent of such revision, the Act's joint author, Representative Walter, a right-wing Democrat, after visiting Hungary to see that the Act was not being evaded, is now urging the speed-up of immigration procedures and is pointing to hitherto unnoticed "flexibility" in the Act; he has generously said that he does not believe that there are many subversives among the refugees.

Congress Without George

THE man whose absence will be most noticed—and most regretted—when the new Congress meets next January will be Senator George of Georgia. Even though a Democrat, he was by far the most powerful and respected supporter of the President's foreign policy in the past four years. Mr Eisenhower could also rely on his help nearly, although not quite, as much when it came to questions of taxation, a matter on which Mr George also exercised great influence over his fellow-members. His successor as chairman of the Foreign Relations Committee is Senator Green of Rhode Island, who is more vigorous and more progressive than is suggested by his age; at 89, he is the oldest man in the Senate. He, too, is a believer in a bipartisan foreign policy, but under his rule the other competent Democrats on the committee, notably Senators Fulbright and Mansfield, are likely to get more chance to advance constructive alternatives to the Administration's proposals than they have had in the past.

The House Foreign Affairs Committee will have a new chairman as well, to succeed Mr Richards of South Carolina—Mr Gordon of Illinois. In both these cases, northerners are replacing southerners, a matter of some importance in these particular committees at a time when isolationism is beginning to develop, especially in economic directions, in the South. But a more important change, from the point of view of weakening the grip of the South on the Democratic party, is the expected replacement of the defeated Senator Clements of Kentucky, by Senator Mansfield of Montana, an energetic and respected liberal, as Democratic whip; the holder of this appointment is in effect the deputy leader of his party in the Senate.

Unfortunately, nothing is apparently being done about replacing Senator Eastland, of Mississippi, as chairman of the Judiciary Committee; the knowledge that, if the Democrats won again, this racial bigot would be responsible for dealing with civil rights had much to do with the Negroes' defection to the Republicans in last month's election. Mr Eastland's prejudiced school of thought has been reinforced by a newcomer to the Senate, Mr Talmadge, of Georgia, the Democrat who replaces Senator George. The Republicans have lost a reactionary with the defeat of Senator Welker, but have gained one by the arrival of Senator Reverconb from West Virginia. The other seven newcomers to the Senate, whichever their party, are all active, articulate and able men, most of them experienced in government; with the possible exception of the unpredictable Mr Lausche from Ohio, they are all expected to have a progressive approach to both domestic and foreign affairs.

Enforcing the Court's Decree

FROM A SPECIAL CORRESPONDENT

THE defiance with which southern states received the Supreme Court's recent decision against racial segregation in buses in Alabama has focused attention once again on the question of how the Court can impose its rulings if local authorities refuse to accept them. That the answer is both complicated and not very satisfactory became apparent in the early autumn when riots broke out in a number of places where racial segregation was being abolished in schools, in accordance with the Supreme Court's decision of May, 1954. In Clinton, Tennessee, the State Governor sent troops to quell the disturbances; these soldiers were there to enforce the order of a federal district court forbidding segregation in Clinton, and they have now been withdrawn, leaving Negro and white children in school together. But in the towns of Sturgis and Clay, in the neighbouring state of Kentucky, where the local school boards also tried to integrate the two races, the direct compulsion of a court decree was lacking. As a result, the boards gave up in the face of violence, even though here, too, the Governor sent troops to their aid. However, in Texas, where Governor Shivers refused to back up the Mansfield school board, which was acting under an order from a federal court, the board chose to obey him rather than the court.

Whether these school officials in Mansfield will be held in contempt of court remains to be seen. In the Deep South, where Governors and Legislatures say that they intend to defy the principles laid down by the Supreme Court, no federal district court has yet had to meet the problem of enforcing its own decrees in the face of organised resistance by a state government. No one knows quite what would happen if it came to a show-down. There is little historical precedent to rely on, and public discussion of school integration tends to avoid the issue as involving problems too unpleasant and too distant to consider.

In fact the procedural stages leading to a show-down are long and complex, and the case may be settled at any stage by compromise or by default. To begin with, court orders are binding only on the parties to the litigation. As the school boards of Sturgis and Clay discovered, the original decision of the United States Supreme Court applied only to the five boards directly involved in the particular cases then under consideration. In order to enforce the principle of the decision against another school board, even in one of the same five states, it would be necessary to bring another law suit. If the local court chose not to accept the Supreme Court's interpretation that the "equal protection" clause of the Fourteenth Amendment to the Constitution outlawed racial segregation in schools, then the losing party would have to appeal, sometimes through two or more appellate courts, and perhaps even to the United States Supreme Court. Even then the case goes back to the lower court for the terms of compliance to be fixed according to the standard of "all deliberate speed" laid down by the Supreme Court.

Even when a local court has issued a decree requiring a school board to take definite steps towards integration, within a specified time period, such a decree is not self-enforcing. The ordinary way of compelling compliance with a court order is a contempt proceeding. This is a separate stage in the process of litigation, and requires a separate hearing. The court may impose a fine on the defendants, payable either conditionally, if they fail to comply with the original decree, or absolutely. The court may also require its marshal to take the defendants into custody, again either as a condition of compliance, or simply as punishment for non-compliance. But courts are reluctant to hold state officials in contempt, and they will be strongly influenced by arguments that law and order could not have been maintained if compliance with the court's decree had not been postponed; this was the contention in Mansfield, Texas.

★

Even a contempt order has no special magic of its own. Where a court has the backing of state authority, it can rely on the police powers of the state to enforce its orders. State Governors can and have called out the state militia and, in exceptional circumstances, have even sought and obtained the help of federal troops to stand behind the court's marshal. But where a federal court attempts to enforce its decree in defiance of state authority, it faces extraordinary difficulties. Federal courts are at best half-strangers in their own homes. They sit to enforce the federal Constitution and the laws enacted by Congress, and to decide controversies between citizens of different states, where a state court might tend, in theory at least, to favour its own fellow-citizens. Nevertheless, federal courts have made their orders stick, despite organised resistance by state governments, and the President today has express statutory authority to back up court orders with force, either by calling out the state militia, which can be federalised in times of national emergency, or by employing the armed forces of the United States.

One of these statutes specifically authorises the President to exercise these powers when conditions within a state result in a denial of the equal protection of the laws guaranteed by the Fourteenth Amendment to the Constitution. President Roosevelt did send federal troops into Detroit, during the 1943 race riots, but at the specific request of the Governor of Michigan. Short of these drastic remedies, it has been argued that the Attorney-General of the United States has authority, without additional legislation, not only to enforce the very limited criminal sanctions now available against persons who deprive Negroes (and others) of the equal protection of the laws, but also to obtain decrees in equity, applying the principles of the school decisions in other specific cases. There is some disagreement within the Department of Justice as to whether the Attorney-General can act without further legislation, and there might be additional resistance from the United States Attorneys who represent the federal government in their local communities, and who would have to undertake the actual lawsuits. These Attorneys from southern states have now been summoned to Washington to discuss how the latest decision against segregation in buses is to be carried out.

Positive action by any branch of the federal government necessarily waits—like so many other things—on the leadership of the President himself. Thus far he has not exercised that leadership on the school issue, but has contented himself with general statements urging "moderation." It remains to be seen whether his resounding victory at the polls will give him heart to take positive steps to achieve equal rights for coloured citizens.

The variations to be played on the theme of the corrugated case are endless. Look inside one today and what will you find . . . animal, vegetable or mineral? Could be any one of them, for they all travel safe and sound in corrugated cases—the day-old chick to the country market, the carnations to the West-End reception, the record-changer to the radio shop in Sydney. Diverse indeed are the uses, and the users, of corrugated containers. And diversification can proceed even quicker—and on an even greater range of packaging products—now that the experience and the resources of Bowaters and Eburite are linked in . . .

Classified Results

A HARDY annual of Washington politics is the struggle for clarification and limitation of "classified" information. The deliberate leakage of confidential matters has gradually become an habitual technique of inter-departmental warfare, without which the great syndicated newspaper columnists would be mere astrologers. The main offenders, both as regards unjustifiable restrictions on information of public interest and as regards spreading secret information for the sake of stealing a march on governmental rivals, have been the service departments. The Department of Defence this year chose self-criticism as the best form of counter-attack; it set up a group of high-ranking retired officers to enquire into the reasons for "unauthorised disclosures of classified information."

The committee has found that the heart of the problem is inflation, that military men use "secret" and "confidential" rubber-stamps far too readily; it recommends steps to curtail "over-classification" of documents so as to keep press and public better informed and to help protect real secrets. The committee urges that inter-service courts of enquiry be created to track down and to punish severely the guilty in any particular service. The report, indeed, seems more precise about discipline than about "declassification." One of the biggest difficulties has been that "national security" classifications have protected purely administrative policies from premature divulgement. The report recommends more frequent resort to a "For Official Use Only" markings upon papers that do not involve national security.

The Secretary of Defence has expressed serious reservations about one aspect of the report—a proposal to summon journalists before "grand juries" to be questioned about the source of any leak which "obviously gravely damages the security of the Nation." He thus blunted some of the blows of the House of Representatives' subcommittee on government information, which has been holding highly critical hearings on the Defence Department's restrictive policies. It has, however, taken up the cudgels very effectively on behalf of the scientists who are still worried that needless security restrictions are seriously hampering their research. The committee has now cancelled its hearings until January, claiming a lack of co-operation from defence officials—though it may be that the official report has spiked its guns, or at least gained time in which to demonstrate reform.

More for the Railways

IT is now virtually certain that the three-year contract concluded a month ago between the American railway companies and their 728,000 employees who are not directly engaged in operating trains will be accepted, without any substantial modifications, by the four unions to which the footplate men and other train crews belong. The agreement, which provides for a total increase of 26½ cents an hour in wages and other benefits over the three-year period, has already been accepted by the powerful Brotherhood of Locomotive Firemen and Enginemen. As part of the price of securing their agreement, the railway companies have had to abandon once again their forlorn attempt to remove the redundant firemen from the footplates of diesel locomotives.

Without waiting for the loose ends of the wage contract to be tied up, all the railways have already petitioned the Interstate Commerce Commission for permission to pass on increased wage and material costs by increasing freight rates by an "emergency 7 per cent." Of greater interest is the application by the railway companies in the east and west of the United States—although not in the south—for a separate 15 per cent increase in freight rates. This, in the opinion of the railways, although apparently not of the ICC, should be considered an addition to the 7 per cent demand, making a 22 per cent increase in all. While rising labour, steel and other material costs can be used to justify a 7 per cent increase, the additional 15 per cent can be vindicated only by the need of the railways for additional profits to plough back into large purchases of new locomotives and rolling stock and into other capital expenditure.

At the same time, the eastern railways have pending before the ICC a request for an increase of 5 per cent in "coach" or third-class passenger fares and a spectacular increase of 45 per cent in first-class fares. This has been interpreted as a barely disguised move by the eastern railways to divest themselves completely of their unprofitable luxury operations, and their competitors in the west, who do not agree with that policy, have submitted a separate request for an increase of only 5 per cent in first-class fares in an attempt to put a spoke in the eastern railways' wheels. Hearings on the emergency increase are going on at present, but the larger questions, and the crucial argument about the allocation of overhead costs between passenger and freight services, may be dealt with in greater detail in the full-dress hearings on the application for the 15 per cent increase in freights, which are to be held in February and March of next year. The outcome of the later hearings may do much to settle the future pattern of growth of the entire transport industry in the United States.

Louisiana Against Long

FROM A CORRESPONDENT IN NEW ORLEANS

PRESIDENT EISENHOWER'S most unexpected success on November 6th was in Louisiana, which gave a majority to a Republican candidate for the first time since 1876. Mr Stevenson's narrow victory in the state in 1952 came from the Negro voters, who provided him with his only solid block of support there; this year they turned against him, expressing dissatisfaction with Louisiana's Democratic Senators and Governor for "not doing anything for us" and for "not speaking up on the segregation issue." Other people in the state voted for Mr Eisenhower out of gratitude for the prosperity they had enjoyed during the past four years, when an Eisenhower Democrat, Mr Kennon, had been Governor, and in protest against the threat to that prosperity from the present Governor, Mr Earl Long, a Stevenson Democrat. He had put on the ballot a series of constitutional amendments which, if approved, could hardly have failed to check the recent vigorous industrial

expansion in the state. The press and public opinion, in the business community, at least, were massed against Governor Long, and his fight for the survival of his programme quite overshadowed the presidential contest.

There is, therefore, no reason to suppose that Louisiana has been permanently converted to Republicanism. The state sent a Democratic Senator, Governor Long's nephew, back to Washington unopposed even as it turned to Mr Eisenhower. Louisiana's verdict this year was partly an endorsement of the President's non-partisan popularity and even more a reaction against Mr Long's attempt to start the state off on another hayride which might have made the era of his notorious brother, Huey Long, seem like a Sunday school picnic.

The voters rejected overwhelmingly Governor Long's proposed amendments to the constitution—already the longest and most complicated of any state in the union. They would have opened the way for punitive taxation of such vital resources as timber, sulphur and natural gas and would have enabled the Governor to fill with his supporters various public commissions dealing with such matters as wild life, fisheries and social welfare. The most important amendment would have made it possible to repeal the constitutional provision that two-thirds of the members of the State Legislature must approve bills increasing taxation ; a simple majority would have been substituted. It is this provision which brought defeat after defeat to the Governor, within six months after he had been elected with a stunning majority, in a legislature which was swept into office on his coat-tails and filled with his hand-picked supporters. The voters of Louisiana have now finally thwarted his hopes of turning the state into his own happy hunting-ground.

Yet only last January those voters sent Mr Long back to office for the third time—the law did not allow him to succeed himself, so he could not run in 1952. After a campaign loaded with personal vilification of his political foes he rode into office on what he interpreted as a " mandate from the people." Casual observers might well have thought that he truly had such a mandate, for with all its zesty love of the rough and tumble of old time politics Louisiana is not sophisticated in the modern arts of government. Since the heyday of Huey Long, whose creed that " every man's a king" won him election both as Governor and as United States Senator, the rural voters and those voters in the cities who hope for rewards from political patronage have unfailingly given the Long political dynasty a free hand in their state.

★

Much of this has been based upon the shrewd techniques employed by every member of the family who seeks office in Louisiana. The southern part of the state is predominantly French Catholic in history and mood, and gay New Orleans has always reflected the volatile Gallic attitude of the region. Today a modern, bustling seaport and industrial city, it still recalls with pleasure the lusty old days when sleek gamblers plied the river boats and quadroon belles displayed their charms in the shadow of St Louis Cathedral. Upstate Louisiana, a lush and verdant land, is largely peopled by the conservative descendants of Scotch-Irish pioneers. They are chapel-going farmers and small businessmen who look upon the legendary licence of South Louisiana with the moral suspicion that every countryman directs upon his city cousin. Mr Earl Long, with his neck as red as any dirt farmer and his voice as raucous as the turkeys he raises on his farm in northern Louisiana, is, perhaps, the epitome of these people. But he is more than that. He is a throwback to the brawling backwoods politicians of frontier America a century ago, dependent on the ruthless personal approach to political power.

Governor Long was elected on a platform which promised higher wages for teachers, higher old age pensions and many other benefits for the " common man," all coupled with constantly reiterated pledges of no increase in taxes. Thus the voters caught in the spell of his oratory had brilliant visions of a Utopia where no one had to pick up the bill. Then came the inauguration and Louisiana awoke next morning to find new tax after new tax in the Governor's legislative programme. He wanted a tax on the state's vital sulphur industry of almost 200 per cent over the present schedule and taxes on timber, natural gas and other resources were all to go up. Mr Long also intended to emasculate the state's voting machine law which guarantees a fairly honest count at the polls. Lastly he tried to boost taxes at the Fair Grounds, New Orleans' historic and beloved racecourse.

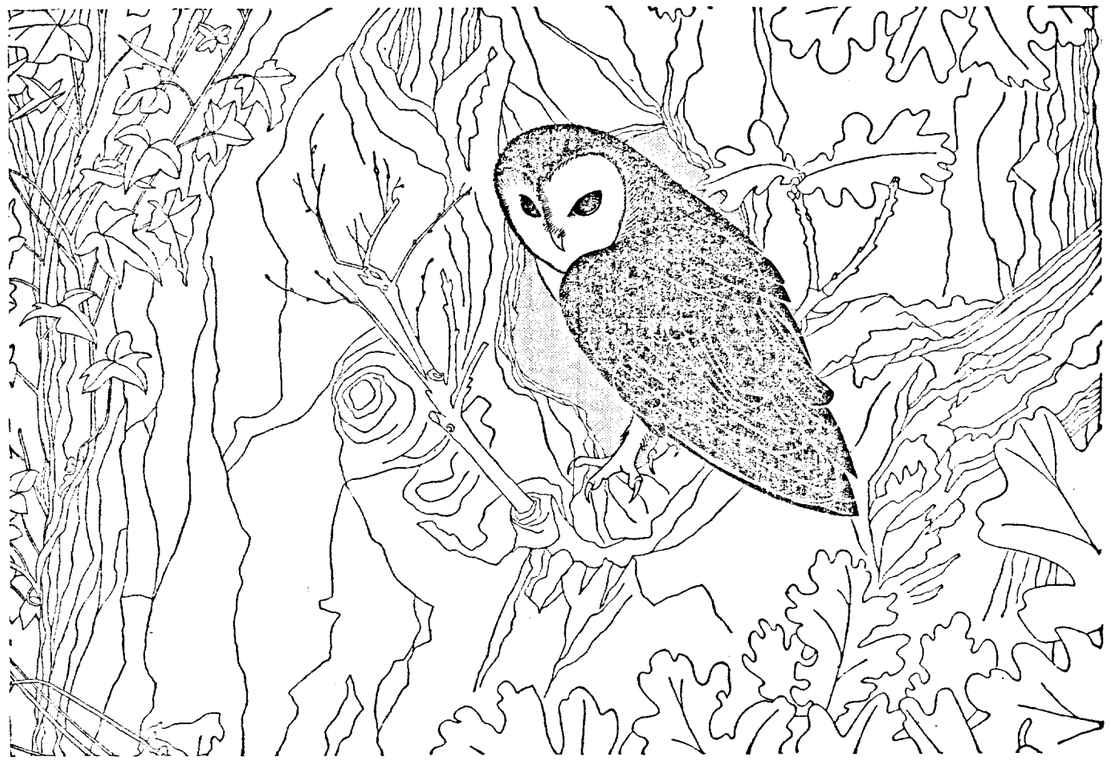
This shock treatment stunned the state. Farmers and merchants, industrialists and small businessmen set up a wail and the board of directors of Fair Grounds announced they would close the racecourse rather than pay tribute. But Mr Long, blustering through the state house, summoning party henchmen and roaring defiance at all who opposed him, with his vision clouded by his " mandate," could not or would not heed the cries of anguish. Meanwhile, legislators hurried home over weekends to consult with their constituents and returned to the state capital at Baton Rouge with grim faces, for throughout the state the voters made it clear that the Governor's " pie in the sky " offers were not to be paid for with new taxes. None of Mr Long's bills was overwhelmingly defeated, but none obtained the necessary majority.

Yet even the recent endorsement of the state legislators' action by the voters as a whole has not buried " Ole Earl." Governor Long has over three more years in office and his personal grudge against the timber and sulphur industries will probably spur him to further attacks on these two main targets. But the industrial planners feel that his decisive defeat in his attempt to gain one-man control of the state and its various governmental boards will force him to abandon the tax programme which threatened the state's industrial expansion. And even if he varies his schemes, it is now extremely doubtful whether he can ever line up enough legislative strength to put them through in any form.

INDEX

The Index to *The Economist* is published quarterly. The subscription rate is 5/- a year; single copies are priced at 2/- each. The Index to Volume CLXXX (July to September 1956) is now available from:

The Publisher, 22 Ryder St., St. James's, London, S.W.1.



'I hear,' said Owl to Town Mouse, 'that you are being obstinate about the British farmer. Perhaps you would like to come out into the open so that I may present my case. I have it at my talon tips.'

BUT TOWN MOUSE SAID

I'll stand fast

'Because,' said he, 'I fear your case will be quite annihilating!'

OWL (*domineering*) 'Hold your ground then, but listen! The British farmer, as you have been told repeatedly, does a very good job for a modest reward. He is hard working, highly skilled and most productive—more than half our food is now home-grown. Is this clear?' The answer was a gentle snore. Town Mouse, overcome by logic had found the only answer. This provoked a hoot of wrath.

OWL (*in a feathered frenzy*) 'WAKE UP AND LISTEN.' Town Mouse did so. 'I will go on. The British farmer has doubled production since 1939, although the average size of a British farm is only 80 acres. And from this small acreage he usually earns only £10-£12 a week—if he works at least a twelve-hour day seven days a week. Now—have you got that?'

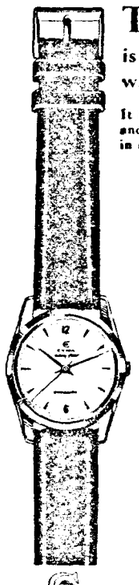
* * *

But Town Mouse had slipped away. In the face of both fact and threat he found his resistance going. If he had not left Owl to hoot on alone it is almost certain he would have been forced to admit that the British farmer, in return for only a fair living, does us really proud.

IT'S FISONS FOR THE FARMER

The most welcome gift of all!

20/- bottle · 10/6 half-bottle
Also Magnums 40/-

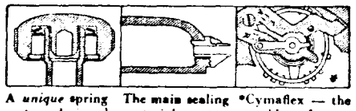


This particular Cyma
is NEW! It is the *navy star*
watertight . . . yet slim and so elegant

It is one of the 60 CYMA 17-jewel lever models for ladies and gentlemen, from £15 in chrome/steel and from £25 to £85 in solid gold.

CYMA *navy star* —a masterpiece of Swiss craftsmanship. Its ultra-slim stainless steel case is so designed that faultless watertight sealing is achieved without the bulk usually associated with watertight watches. 17-jewel precision lever movement. Anti-magnetic, Anti-shock* Price **£24.10.0**

Other watertight models from £11.7.6



A *unique* spring system, designed to counteract wear, permanently seals the winder.

The main sealing material, a *new* metal alloy, retains its elasticity.

*Cymaflex — the world - famous anti-shock device fully protects the balance staff.

CYMA

*ONLY Cyma watches have the Cymaflex anti-shock device—but every CYMA has it.
From Good Jewellers everywhere.

The World Overseas

The first five despatches this week depict aspects of the Middle East today seen by our correspondents

The Syrian Vacuum

FROM OUR CORRESPONDENTS IN THE MIDDLE EAST

DESPITE the alarums of the past week the Syrian government, an uneasy coalition of left and right, is still in the saddle. Excitement began when Damascus radio announced the finding of a cache of arms in the Jebel Druze and flatly accused the Iraq government of complicity. Since the announcement was delayed for more than a week after the discovery of the arms, it was clearly designed for political effect. A "stab in the back" twist was imparted to it by saying that it had been found "just as Syria was going to the aid of Egypt." The Iraq government indignantly rebutted the charge, so we are left with the allegation and the denial. The known facts are that a Druze deputy in a notoriously unstable province was caught distributing arms to his friends and is now in custody.

Yet the situation in Syria is slipping. The Syrians have been growing increasingly anti-western for a long time, and the tendency was immensely accelerated by the Suez crisis, and particularly by the invasion of Egypt. In the week following the latter, there was a panic flight of Druze and Alawite notables into the Lebanon, where they are said to be under guard to prevent kidnapping. The reason for their flight was the spate of rumours of Soviet intervention on a large scale, and the obviously increasing dominance of the left-wing elements in the government, in the administration, and in the army. What the minority leaders feared was a systematic, communist-directed, outbreak of nationalism.

There is no doubt that the Syrian left, and notably the Baath Socialists and the Communists, hope to exploit the current wave of xenophobia to consolidate their hold. Emerging from the ruck of Baath and near-communist army leaders is Colonel Abdul Hamid Sarraj, head of the Army *deuxième bureau*. He is about as near to communism as one can be without actually carrying a party card, and a close associate of Khalid Bikdash, the ablest of Arab Communists. He has been largely instrumental in putting pro-Soviet sympathisers into the army staff and into the mechanised columns, which have always played a decisive part in military coups in Syria. His hand has been immensely strengthened by the Anglo-French action in Egypt and he is helped by a rabble-rousing ally in Britain's old enemy, the ex-Grand Mufti, preaching against the west in the Umayyad Mosque. The politicians in this camp appear, however, to be in some doubt whether the moment has come to strike. Anyway it is improbable that the Baath Socialists are prepared to take over the whole government themselves. They are well organised—by Arab standards—as a political party; they have an able leader, Akram Haurani; yet their hold on the army is incomplete and they lack the mass support to enable them to govern alone even with Communist backing. They still need allies and, above all, a prime minister with real popular appeal.

It is in this context that the name of Khalid el Azm has been mentioned as the likeliest successor to the present prime minister, Sabry Assaly. Khalid el Azm qualifies reasonably well as an elder statesman, though he was born as late as 1900; he is a wealthy member of an old Damascus family; he was foreign minister as early as 1939 and has been prime minister three times, and is accustomed to being called in to keep the boat from rocking at moments of crisis. More important still, he headed the poll in the Damascus district in the 1954 elections, largely on account of his personal appeal to the masses. For the past few years he has been drifting towards the left at the head of a group of independents and has co-operated loosely with the Baath socialists. His seniority and popular appeal and his present political outlook would fit him to be the head of a cabinet the real power behind which would be the Baath socialists in alliance with the Communists. It would remain to be seen whether he would be able to check the wish of Colonel Sarraj and his friends to replace links with the west by links with the Soviet Union and China.

Now that British influence in the area has vanished, the only hope of checking this trend comes from America, and the continuing silence from that quarter fills pro-western Syrians with alarm. The statement made by Mr Eisenhower before his election was received throughout the Arab world with almost incredulous relief and satisfaction, and it was widely assumed that he would act immediately after his election. The result has been a disappointment, as deep as the previous hopes were high. More sophisticated people realise, of course, that considerable American pressure is being put on Britain, France and Israel behind the scenes. But that is not enough for the unsophisticated. America must not only act, but must be seen to act. Otherwise, the Arabs will merely assume—indeed, are beginning already to assume—that Mr Eisenhower is hiding behind Mr Hammarskjöld, out of lurking sympathy for Britain, France and Israel.

It is the internal political trend in Syria, rather than the arrival of Soviet arms, that is the immediate danger. The arms situation needs to be looked at in a perspective which too few people vouchsafe to it. Whatever is coming in, the Syrians are even less able to use the material than the

Egyptians were, and their training in its use and maintenance will take years. It is impossible to check what is arriving; guesses differ widely. But what stands to reason is that unless the Russians want to use the goods themselves (which they did not do in Egypt, or the collapse on the first two days of the Israel attack must have been less complete) they are unlikely to hand out large quantities of arms to an even less efficient but equally over-confident army. To do so would be to run the risk of watching Syria surrender another huge consignment to better-led soldiers (Israelis, for example, or Turks). What seems likeliest is that the Russians will supply just enough to keep Colonel Sarraj and his political friends in the local lead. Part of the programme will be to rock the government of Iraq by creating instability along the major Iraqi line of oil export. The consolidation of the left-wing grip on Syria would leave the country at the mercy of Soviet exploitation long after the dust had settled at Suez, Sinai and Gaza.

Three Men in Gaza

BY A SPECIAL CORRESPONDENT

DURING its years of Egyptian control Gaza was notable for a manner of muffled anonymity. Nobody in particular seemed to be running the place. The Egyptians used to emphasise that it was not part of Egypt at all; passports were issued by the All-Palestine Government, sitting nebulously and distantly in Cairo; the Egyptian army seemed to be in a constant condition of being posted somewhere else; and the refugees in their camps, though they largely set the tone of Gaza, formed a vast amorphous mass from which few faces and fewer names stood out. The place felt purposeless, vulnerable and leaderless; like some huge over-ripe maggot-ridden apple, only waiting for a wind.

The wind has come with a vengeance, and the impressions one takes away from Israeli-occupied Gaza are of forceful momentum, determination bordering upon amorality, and a clash of memorable personalities. Three men in particular stand out. An Israeli military governor is in control. A Scottish official of the United Nations Works and Relief Agency looks after the refugees. An American leads the little corps of United Nations truce observers which remains forlornly in Gaza, stranded by the tide of events. All three play their parts convincingly.

Take the Israeli first. Colonel Chaim Gaon is a young, quick and very self-assured soldier who has a captured Egyptian tommy-gun hanging on the wall of his office. He talks well and rather embarrassingly freely, and the bosomy girl orderlies who move in and out of his office seem to regard him with favour. If Colonel Gaon has any profound sense of right and wrong in international relationships, he does not parade it; his attitude to his task is frankly governed by the needs of the State of Israel.

He is, for example, adamant that Israel must retain control of the Gaza strip. Government officials in Jerusalem may talk of relinquishing it; but Colonel Gaon is the man on the spot, and he says without pretence that neither the return of the Egyptians to Gaza nor a United Nations administration would give Israel the security it imperatively needs: indeed, it would be a very good thing if Israel's frontier ran even farther to the south, so as to exclude from Egyptian sovereignty other centres of population (and possible fedayeen bases) along the Sinai coast.

In the meantime, Colonel Gaon works skilfully and overtly to integrate Gaza with Israel. He has sponsored a local city council under an Arab mayor. He has seen to it that Israeli currency is circulating, Israeli stamps are on sale, Israeli government departments are functioning. The railway from the north runs into Gaza again for the first time since 1948. Subversive elements are being suppressed. Everything is being done to return Gaza to a state of normality which will be indelibly marked with the stamp of Israel.

Against this hard political background Mr Jamieson, the Scotsman, conducts an exercise in practical humanity. *Realpolitik* is totally alien to him, and he is concerned only with the welfare of the 250,000 refugees still festering menacingly in the camps around Gaza. He is the man of down-to-earth commonsense, unflustered among the passions and rivalries; and it is entirely owing to him and his helpers that the refugees have once again escaped starvation.

The passions impeded him, none the less. The Israelis, though they realise that the work of UNRWA is essential to them, have not been invariably helpful. They have (for example) raised difficulties of finance, and their manners, though not deliberately cruel, have so frightened some of the refugees that in one camp riot, according to Mr Jamieson, at least 50 Arabs were killed. The refugees themselves took the opportunity of the emergency to do some looting. The Lebanese government refused to allow supplies to be transferred from UNRWA stocks in Beirut, on the ground that they would be helping the Israelis. When the fighting began most of the UNRWA officials were withdrawn, and for a few days the threat of anarchy hung over the refugee camps.

Mr. Jamieson's Triumph

It was a situation to strain the serenity of a saint, but Mr Jamieson, a Glasgow man, looked it in the eye and mastered it. He and Colonel Gaon make a formidable pair of negotiators, but he has succeeded in extracting from the Israelis most of the concessions accorded UNRWA by the Egyptians. Supplies destined for the Lebanon have been diverted to Haifa and brought to Gaza by rail. The enormous mechanism of distribution, which threatened to disintegrate, has been restored. This is a triumph for an undeservedly little-known agency of the United Nations.

As the policeman of the Middle East, though, as against the philanthropist, the United Nations has yet to be proved; and Gaza well illustrates its past impotence to deter any resolute and confident transgressor. Colonel Bayard is a personable, friendly, uncomplicated officer of the United States Marines who leads the United Nations truce observers in Gaza. He has been swept aside by the force of events like a curate opposing a bank robbery. He represents international order, in the abstract: and alas, abstract it remains.

When the Israelis took Gaza they declared flatly that the armistice with Egypt was no longer valid and that the United Nations' observers therefore no longer had a function to perform. On the pretext of safeguarding military security Colonel Gaon seized the UN radio transmitter (it has since been returned) and virtually confined the truce observers to their compound. Their bright white jeeps stand idly in a car park, and if you visit the compound the officer on duty will greet you with an air of helpless or even cynical resignation.

For the Israelis have never had much respect for General Burns's representatives, and they have even less now. Colonel Bayard is therefore both a sad and a disturbing figure. He sits in his bungalow in his immaculate uniform, the ribbons and the parachute on his chest bearing witness to his prowess, and he talks of the events that have overcome Gaza rather as a loyal spaniel might describe an inexplicable beating. He stands, proudly and patently, for fair play, for honest dealings, for all the plain old-fashioned virtues; and when you mention Colonel Gaon to him a pained and puzzled expression enters his eyes.

So these three men of Gaza stand in improbable juxtaposition: *Realpolitik*, common-sense, idealism: which of them, one wonders, will come out on top? Or will the old hopeless anonymity return to Gaza, as the Middle East slips back, with grumblings and reproaches, into its customary cloaca?

Exodus

FROM OUR CORRESPONDENT LATELY IN CAIRO

ALL that is left of a century of Britain in Egypt are people with nothing to do but scramble to get out. The retired official has left behind in his empty house the intangible asset of his years of service. Victoria Colleges, the English School at Heliopolis, all those British schools which fed British manners and customs into the turgid stream of Islam and egyptianism are empty or, perhaps, serving temporarily as prisons for British people in course of being expelled. Those accountancy firms which laid the foundations of sound actuarial practice are emptied of their severe practitioners and the doctors and surgeons who brought British family practice into the more mercenary field of Egyptian medicine have departed. Shops, warehouses, factories which long years of effort created and sustained through troubled years are closed or now run by other than British. British holdings in Egyptian firms are being marketed to Egyptian businessmen or banks. Barclays Bank, Shell Company, Anglo-Egyptian Oilfields, Eastern Tobacco Company, the Ottoman Bank are sequestrated and run by Egyptian officials. Nothing at this moment is left for Britain or for France.

What the current loss to Britain amounts to depends on the calculation of capital or market value, but rough computations put the total for France and Britain at £400 million. Of this, Britain's share is possibly less than half, but Britain has, in addition, lost the contents of the Canal Zone base, which have been estimated at £60 million. When the "police action" or, as the Egyptians prefer to call it, "the act of war," has been liquidated by the withdrawal of British and French troops, it may be possible to recover some of these assets; but not all can or will be recovered in the final bargaining which, on the Egyptian side, will take account of the damage done to Egypt by bombing and invasion. The residual £100 million of blocked sterling in Britain, most valuable to Egypt as a further five-year contribution to its unbalanced foreign trade position, is a heavy counter in the coming poker game. Egypt, it should be remembered, is being forced to run down its non-sterling assets in order to meet its obligations from day to day. These blocked sterling balances will be the only large foreign exchange assets remaining. The tighter Egypt's position, the more important they will become. At the same time they would not be enough to make good the British losses. The waste of British treasure parallels the waste of the British men and women who struggled through years of political turmoil and administrative troubles to the profit not only of themselves but of Britain.

All this takes no account of personal losses. Somewhere between 1,700 and 5,000 United Kingdom citizens (for the 1,700 now being expelled are the hard core after many had voluntarily departed) seem to have lost all their possessions in Cairo. So far there is no certainty that the Egyptian government intends to confiscate this property but, again, it is another item in the ultimate account and, in any case, people had to leave without time to provide adequate security. They turned the key in the door, slammed down the garage shutter and departed with enough luggage for an air journey.

Some will arrive in England to be cared for by their firms or with funds in England to keep them in comfort. Others, particularly those too old to start again, will return to actual poverty or at least more discomfort than their years of service deserve. The position of the Maltese artisan or labourer or petty trader may well be desperate; they must number a large proportion of the 5,000 Maltese who are presumably to be expelled. (The 4,000 Cypriots, protected by being labelled *en masse*, however unjustly, with the Eoka ticket, will almost certainly be allowed to remain.) Many of the Maltese have lived in Egypt through generations, preserving their foreign citizenship in order to take advantage of the consular courts and then of the Mixed Courts. The Egyptians have always disliked their persistent foreign status, most of all when in language and manners they had ceased to seem foreign. Now there appears to be nothing to save them from indignity and indigence. British policy has been for them a cataclysm, an act of God as arbitrary as an earthquake or a cyclone.

Effect of the Bombing

For it is apparent, on returning to Britain, that the sense of the Egyptian situation has been lost in a mist of political debate. The Egyptians think quite simply that Britain and Egypt have been at war ever since the first bombs began to fall on the outskirts of Cairo. The bombing of the airfields was done with the utmost precision, and the bombs seem to have been kept very small in order to narrow the margin of error in aim. Civilian casualties in the Cairo region were remarkably few. But all this is academic to the average person in Cairo who heard bombs and ack-ack fire almost continuously for six days and nights and saw the clouds of black smoke rising from the outskirts of the city. The impact was heavier in the Port Said region where invasion was added to bombing. A British Minister of State may consider the damage there less than expected (but mostly in the native quarter where the population was densest), but there was damage and people did die. The Egyptian government, therefore, is inclined to think that, far from barbarity, it has shown some concern for civilised practice by keeping the foreigners safe and by not interning British, French and Jews at the outset.

Perhaps the most common feeling of the average Egyptian whom one met before internment was that of bewilderment and to the end some made a distinct separation between British people they knew and the present British Government. The opposition of sections of the British press and political parties encouraged that view.

Some were simply distressed and it was remarkable how much personal association could be retained with Egyptians even after the bombing started. Nevertheless, there were many very angry Egyptians, and the difference between the good treatment of one Englishman and the bad treatment of another was probably due to the accident of the type of person they met. There has been much unkindness at the Customs and the reports of people stripped and searched with the utmost indignity were as true as the good treatment received by others. There had been attempts at smuggling to justify some of the rigorous searches but not all.

It seems clear, however, that the wholesale expulsion of British, French and Jews with only £20 a head is indicative of the increasing bitterness of the government and of President Nasser himself. Wholesale internment was considered early last week and abandoned for the expulsion plan. Either plan involved great hardship and suffering for many people who either were friends of Egypt or at least had never sought to do Egypt harm. Undoubtedly, it had to be reckoned with as part of the price for an act of war.

Future of the Pipelines

FROM OUR SPECIAL CORRESPONDENT IN BEIRUT

THE position of the pipelines through Syria is as confused as the Syrian political situation ; this is not surprising in view of the close link between the two problems. Matters are not improved by the Syrian ignorance of oil industry techniques. A curious mission of the Syrian oil expert Anwar el Shallal is negotiating the supply of 50,000 tons of crude oil from Iraq "as soon as oil begins to flow through the pipelines." His mission is, in fact, doubly curious since the amount stipulated is much less than Syria needs, and since the Syrian government already has an agreement with the Iraq Petroleum Company which would meet its requirements. More significant is the statement by Mejdeddin Jabri, the Syrian minister of public works, that no repair of the pipelines will be permitted until "the forces of aggression" have left Egyptian soil. A local wag has wondered whether the abrogation of the Anglo-Jordanian treaty will be delayed on the same pretext.

The repair of the pumping stations is inextricably bound up with Syria's political future. Mejdeddin Jabri, replying to the British Note holding Syria responsible for the repair of the stations, ascribed their destruction to "lawless elements" and said Syria would repair them. But this was an airy statement made (it may be guessed) without first computing the cost. The problem is one on which all concerned, and especially IPC, may well suspend judgment. For all the importance of the pipelines to western Europe (it is perhaps untrue and politically unwise to call them a "vital interest") there is little point in sinking large sums in elaborate installations that are liable to sudden destruction—whether the blame in this case lies with Colonel Sarraj, President Nasser, or Sir Anthony Eden. It is believed that emergency boosting equipment might produce a flow of something like a third of the normal rate of 26 million tons a year, and that might well be considered a reasonable compromise arrangement pending the reconsideration of the whole position in the light of Syrian policies.

The repair of the stations is not the whole story. The pumping stations are lonely, desolate places, where the conditions of life are trying. Oil company staffs need some inducement to work there. If in addition to the trials of exile and boredom they are exposed to the hostility of the local population ; if they are liable to be locked up while their machines are blown up ; and if they are compelled to suffer the unfriendly attentions of the local security forces—then it will be very difficult to man the pumping stations even if they are repaired.

Repercussions in Cyprus

FROM OUR SPECIAL CORRESPONDENT

EOKA has made a supreme effort to draw attention to Cyprus by new bomb explosions, killings and general outrages. And indeed more British troops and civilians as well as Cypriots were killed in the first two weeks of November than in the whole of any previous month. Officials think that plans had been made for a demonstration when the United Nations Assembly came to discuss Cyprus, and were then advanced to coincide with and embarrass the allied use of the Cyprus base for the Suez operations ; these plans also took advantage of the unusual concentration of American and foreign newspapermen in the island. They failed of course to inconvenience the working of the base—and indeed Cypriot civilians worked overtime helping the military during the operations against Egypt.

There is, however, no doubt that the concentration of military effort over the last two months on training and preparations for the invasion of Egypt drew off troops which had hitherto been used to hunt the terrorist groups in the mountains; it has also diverted more troops and police to guarding essential services. The government considers that it had almost got terrorism under control in July after it had had the use of the paratroopers, and again in October, after it had used commandos and other troops in mountain sweeps. But now the position is back where it was in June. The government does not confess to such a gloomy view, but it admits that the terrorists have twice been reprieved by the withdrawal of troops from offensive operations, and that they are now well placed to mount a strong campaign for several more months. This has happened despite rigorous controls, collective fines, constant searches and checks, the incarceration of fully 700 suspects, and pass laws and curfews for men and women of Greek Cypriot origin between the ages of 15 and 27. Independent observers believe that—as was forecast in *The Economist* on July 2nd—these operations have failed to suppress the terrorists, but have turned the Greek Cypriot population more solidly against the government than ever—and made it readier than ever to aid Eoka, passively or actively. The terrorist technique is also showing increased skill—for example, in the use of electrically-detonated bombs under roads, in trees or in booby traps. The murder of suspected traitors to Eoka by gunmen, of whom there are said to be not more than 40, continues with almost daily casualties.

In spite of this, the government has carried out its threat to bring in still more repressive measures. The most important of these is the imposition of the death penalty (with no alternative sentence allowed) for simple possession of arms or ammunition, as well as for acts of terrorism. New restric-

tions are being placed on personal liberty of movement which will add to the irksomeness of the curfew ; and the new powers over the press have produced bitter protest. There seems little more short of martial law the government can do. Now that the fighting at Suez is over, considerable hopes are placed on the renewed availability of troops to attack the mountain gangs, which have already been reduced from fourteen to about eight. The official view is that a brigade trained in these duties (which, however, takes two to three months) would before long restore the July position and go on to suppress the gangs entirely. This would not end terrorism in the towns, but officials say that whenever the gangs are suppressed in the country districts, the Cypriots become far more friendly and co-operative ; indeed, they almost revert to the carefree condition that was normal before the Eoka campaign, while the flow of information recommences. Military opinion favours the prosecution of this campaign to show that the base can be cleaned up, but other voices in the administration urge that this is, at best, only the first stage in regaining Cypriot co-operation.

Official opinion in the island assumes—against the opposite conclusion of other observers—that the Suez operation has demonstrated the strategic importance of Cyprus and the need for British sovereignty over it. Indeed, the Cyprus government even seems to think that this should now have become obvious to both the Turkish and Greek governments, as well as to the Cypriots themselves. The result seems to be, if anything, less disposition on the official side to make concessions. On the contrary, for the sake of the west's weakened security in the eastern Mediterranean, the government here is prepared to rule with a firm hand for a further considerable period, notwithstanding the cost and casualties, arguing that these might be far greater in the long run if the base was cast away.

Ideas for the Future

The deadlock is thus still apparently unbroken, but it is possible to detect two new lines of thought in official and unofficial circles here, though these are as yet the merest hints of the direction in which ideas are moving. One school is thinking that while it is impossible to " negotiate " with Makarios, as Mr Lennox Boyd and the Governor frequently insist, it might be possible to arrange for the exiled Ethnarch to " look at " the Radcliffe constitution when it is ready ; it is hinted that it will be a very liberal one, comparable to that offered to Singapore. If he did this his exile might be modified or transmuted. The other idea is that if no *détente* follows the publication of the Radcliffe constitution, Britain may be driven to consider an ultimate partition of the island between the communities, with reserved enclaves for naval and air facilities—assuming that the chiefs of staff would accept such a change.

Meanwhile, however, time is getting short if Cypriots and Britons are ever to be reconciled. As an anglophile Cypriot put it to your correspondent: " If I can't even show Radcliffe's constitution to my friends, I can't convince them that Britain is sincere. I have nothing to say—but they have an endless fund of grievances in the curfew, the searches, the fines, and what people say happens, whether it is true or false, to people interrogated by the police or the troops. People like me are being reduced finally to silence—and not by the bullets. Is that what you want ? "

Trouble in the Wake of Perón

HALFWAY between the overthrow of General Perón and the elections promised for late next year, Argentina's provisional government under President Aramburu is in the thick of political and economic trouble. The arrest last week of two right-wing leaders, General Bengoa and General Uranga, and the purge of army officers are both stages in a recurrent crisis of plots and counterplots, army against navy, disgruntled generals against the ruling junta, in which the government's main protection so far has been naval support and its opponents' lack of unity. Economically, the country is engulfed in a wave of strikes and exorbitant wage demands—the backwash of *Peronismo*—and inflation threatens the caretaker government's survival as seriously as does revolution.

Argentine politics are confused by religious and personal loyalties that cut across party lines. It is roughly true to say that the hard core of President Aramburu's supporters comes from the centre and moderate left: the opposition is drawn mainly from the extremes of both right and left. On the right, the militant Catholic nationalists have been deep in subversive plots against the post-Perón government since their former leader, General Lonardi, was ousted from the presidency a year ago. Bengoa, one of the two generals arrested last week, was being built up as the party's new leader, but if he stands for president next year he will still have to face middle-class distrust of a military leader, the dislike felt for him by an important section of the navy and the divided loyalties of the army.

A Radical Comeback

This strong right-wing Catholic element is joined in uneasy opposition by the Communists (who are in the process of being outlawed) and—more important—by ex-Peronistas. The attitude of these former followers of General Perón is the crucial question for all political parties. At one time, about half the population was behind the dictator, and though in his last few years his personal repute dropped sharply, there is no reason for thinking that his doctrines were similarly disgraced. The word " Perón " is now banned from the vocabulary, but it is clear that whichever party can attract the votes of ex-Peronistas will win the elections. Consequently there is the curious anomaly of militant conservatives reaching across the gulf of their dearest principles to join hands with Perón-indoctrinated workers. But so far they seem to lack the touch which might galvanise a left-wing group to vote right, and are therefore putting their faith in less constitutional means to victory.

The government is politically supported by the Radical party and by the rather weak collection of conservatives who did not follow the late General Lonardi into opposition. In political limbo for a quarter of a century but now supported by a powerful and growing middle class, the Radicals have a good chance of making a come-back in the elections if they can by then heal the dissensions within the party. They have now elected a leader—Dr Arturo Frondizi—but only in the teeth of vociferous opposition. Indeed, Dr Frondizi's victory at the Radical convention has widened the breach between his supporters and the rest of the party.

Although Dr Frondizi's own party is split, his presidential chances may be enhanced by the ex-Peronista vote. He possesses some caudillo-like qualities which might appeal to

Perón's followers. He is inclined to be dictatorial ; he is an able demagogue ; he is very much of a nationalist (although his views run so far to the Left that his enemies call him a Marxist) ; he is strongly opposed to the acceptance of foreign aid for the oil industry and he has declared against Argentina participating in any UN police force. But by many of the electorate, he is feared rather than loved.

Political upheavals inevitably slow down Argentina's economic progress. Dr Prebisch, the very able economist called in immediately after General Perón's downfall, designed a new economic structure. Agriculture, upon which Argentina depends for nearly all its foreign earnings, has been rescued from its neglected corner ; glimmers of a free economy shine through cut-down state controls ; the peso has been reduced to a truer value and the exchange system simplified ; foreign debts are being consolidated and bilateral treaties replaced by multilateral trade and payments agreements. The purpose of these changes is to acquire more foreign money, partly by increasing exports, partly by presenting Argentina as a reliable beneficiary of long-term loans and investments. Without additional foreign currency, desperately needed capital equipment cannot be bought since the available exchange is largely earmarked for basic raw materials and particularly for fuel ; and, to complete the profitless circle, self-sufficiency in fuel and raw materials cannot be achieved without more equipment.

The chances of breaking the circle depend, firstly, on the willingness of other countries to lend on Argentina's terms and, secondly, on the willingness of the industrial workers to accept, for a time at least, a slightly lower standard of living. Both questions are politically awkward. The foreign loan and investment issue brings down the thunder of extreme nationalists, and it would be a rash politician who sponsored a loan attached by even the frailest of strings to an oil or public services concession. But even with the fullest foreign goodwill Argentina would be hard put to it to raise the $1,200 million long-term loan which Dr Prebisch estimates as necessary for his plans.

The government are having small success in keeping wages down. It was, perhaps, naïve to expect General Perón's disciples in the trade unions to sacrifice their interests on the altar of his destroyers. One trade union after another is demanding government intervention to compel employers to grant higher wages—and driving their point home with strikes. They claim in some cases a rise of 150 per cent—which is about five times more than the rise in cost of living since 1954. To avoid a general strike, the government may be forced to intervene and decree a flat increase of around 35-40 per cent for all workers, which is just what they wanted to avoid. So far the government has been reasonably successful in keeping the rise in money supply moderate, but with its doubtful political strength, it is fearful of alienating the uncommitted vote. As inflation smokes upwards, the government may find that its policy yields small political returns.

"Motor Business"

The December issue of this quarterly research bulletin for the motor and allied industries will appear shortly. It will include :
The outlook for 1957.
The French motor industry.
The East African market for motor vehicles and tractors.
The Bulletin is fully illustrated by charts, amongst which are :
Price indices of used cars and vans.
New registrations in Great Britain, and the hire purchase share of the market.
For full particulars of this Bulletin apply to :
THE ECONOMIST INTELLIGENCE UNIT LIMITED
22, Ryder Street, St. James's, London, S.W.1.
WHitehall 1511 Ext. 49.

Trouble for the Viet Minh

FROM OUR CORRESPONDENT IN SAIGON

THE claim that Mr Chou En-lai's recent visit to Hanoi resembled Mr Khrushchev's dash to Warsaw seems to be justified ; and the view is perhaps the main reason for supposing that the rising which took place on November 13th in the province of Nghe An is a bigger affair than it was made out to be in the Hanoi press. The sudden announcement that the Chinese Prime Minister would look in on Hanoi on his way to Cambodia was made just two days before he actually arrived, hardly the length of notice usually accorded to the visits of important persons. There was no time even to erect triumphal arches, and the astonished press had only one day in which to chorus its approval and to insist on the centuries-long friendship between those two old enemies—China and Vietnam.

Actual reports of the rising are still somewhat fragmentary. The fact that there have been any at all in the Hanoi press and radio is interesting, since this is the first time that any demonstrations hostile to the regime have been made public. It seems that clashes occurred in five districts north of the town of Vinh, and that a battle ensued between the demonstrators and the army and communist cadres, with casualties on both sides. The official reason given for the demonstrations was discontent with the execution of the agrarian reform. This statement is, of course, entirely in line with the current orgy of self-criticism over " errors " in land reform.

It is doubtful, however, whether discontent with the agrarian reform is the real reason for the trouble, just because it does fit in so suspiciously well with the new party line. The more probable reason, and the reason which is put forward in the more sober circles in Saigon, is that recent promises made by the Northern government that freedom of movement across the parallel would soon be made a reality were taken too literally by many of the hot-headed Catholic inhabitants of Nghe An (traditionally the " Gascony " of Vietnam and the birthplace of Ho Chi Minh and many other famous revolutionaries), who for a long time had wished to escape the iron Viet Minh regime and rejoin their compatriots in the south. When they found the promises were not being kept, or were not being kept with sufficient speed, they rose in a body against the regime.

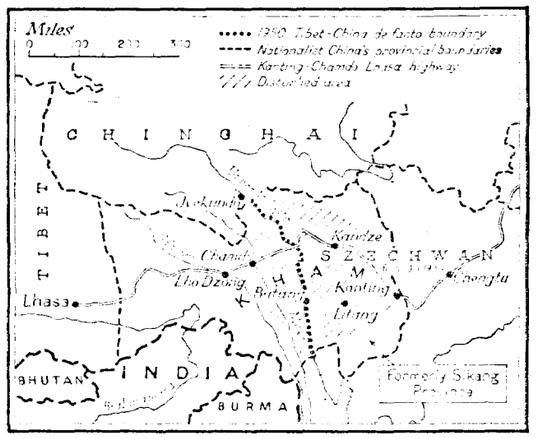
Whatever the exact truth about the recent rising it seems clear that the new policy of " liberalisation " which the North Vietnamese government introduced last July is posing the same sort of problems as in other communist countries. The wholesale *autocritique* of the land reform policy, the abolition of the terrible peoples' tribunals which murdered the landlords, and the rehabilitation of " persons wrongly classified as reactionary and traitor landlords " is all easy to interpret as a general relaxation of the rigorously repressive regime which the Viet Minh have imposed. But here, as in other satellites, it remains to be seen whether the safety valve can be unscrewed without blowing its top off.

Rebellion in Tibet

BY A CORRESPONDENT

THE arrival of the Dalai Lama in India is a reminder to the outside world of the reports of disturbances and uprisings that have been coming out of Tibet over the past few months. Those reports have been too meagre to give much idea of the extent of the rebellion and of the successes achieved. The area mainly affected appears to be in the wild gorge country of the east, the region known to Tibetans as Kham. This is a Tibetan-populated region about a quarter of the size of Burma, astride the Upper Yangtse; it stretches from Lho Dzong in the west to Kanting—still called Tarchiendo by the Tibetans—in the east. Some present-day maps still include it in the Chinese province of Sikang, but, since 1918 at least up to the Chinese Communist invasion of 1950, Tibet as an autonomous state had full authority over the whole of Kham as far as the Upper Yangtse, and Chinese authority over the remaining area was, in the main, nominal and effective only in the larger towns.

The Khambas—the people of Kham—are a hardy mountain folk whose semi-nomadic life has imbued them with a real love of freedom. Although devout Buddhists, their



religious beliefs do not seem to have weakened their martial spirit. Indeed, it is said that the most treasured possession of every Khamba is his rifle. Traditionally they are averse to authority but, in common with other Tibetans, are unswerving in their loyalty to their God-King, the Dalai Lama. When the Chinese Communists invaded late in 1950 they resisted stoutly—a fact which had little publicity at the time—and even continued their armed struggle for a year after the signing of the 1951 agreement between Lhasa and Peking. They only laid down their arms after a personal appeal by the Dalai Lama. Now once again they are in revolt.

According to Tibetan resistance leaders, heavy casualties were inflicted on the Chinese garrison troops in the wave of rebellion which swept through the area, and the Communists lost control of much of the area, except for the more strongly-fortified bases of Chamdo, Kandze, Kanting and so on. Traffic on the newly opened Kanting-Chamdo-Lhasa highway was reported to be at a standstill after repeated attacks and destruction of bridges by the insurgents. The entire male population between the ages of eighteen and fifty took to the mountains. They are reported to have captured a considerable quantity of arms and ammunition.

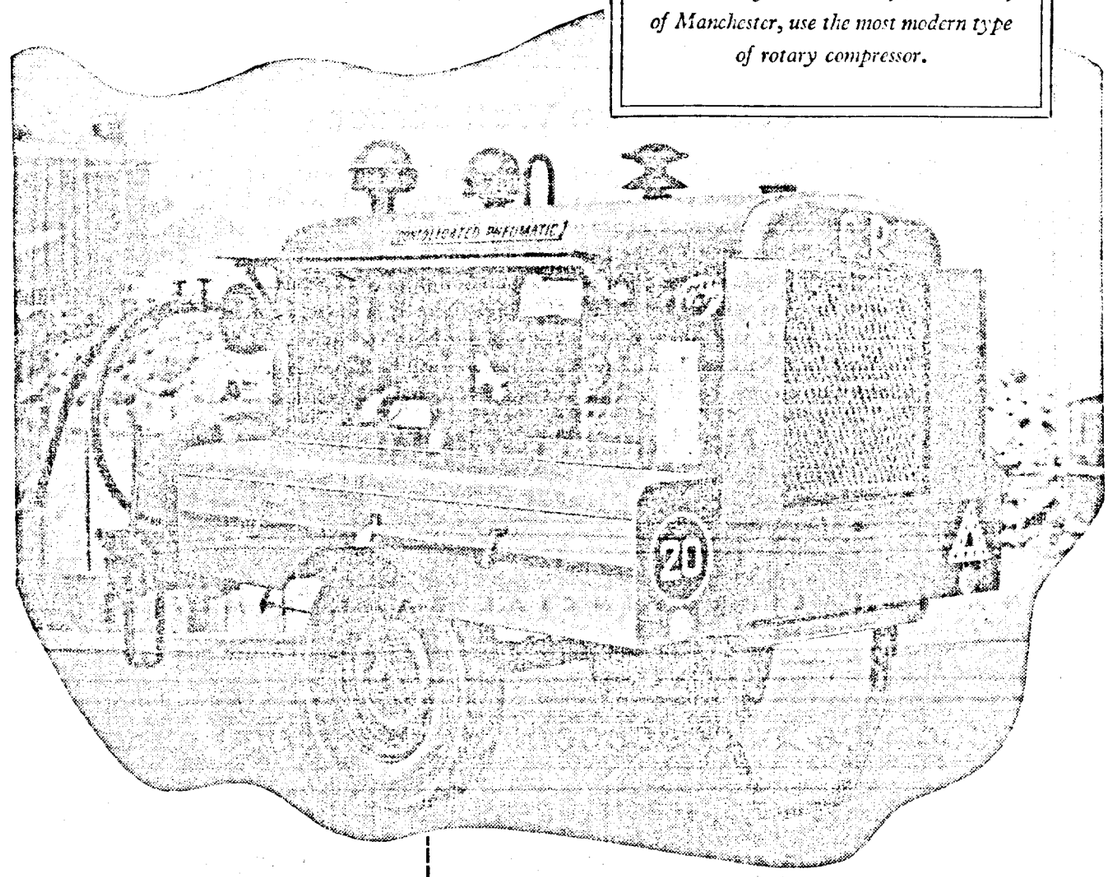
The Chinese are reported to have again asked the Dalai Lama to use his influence to stop the fighting. They have also undertaken direct military operations involving large-scale redeployment of troops and including the bombing of, amongst other places, Litang. A petition addressed to Mr Nehru by a group of anti-Communist Tibetans accused the Chinese of killing more than 4,000 men, women and children in the bombings. The rebellion is reported to be under the direction of the Mimang Tsongdu (People's Village Council), whose organisation is established throughout Tibet. The system of village councils was originally introduced by the Chinese Communists themselves in an attempt to tighten their grip over the outlying districts. Ironically it is now being used against them.

In August Peking issued a categorical denial of rebellion in Tibet. Only last year Liu Ke-ping, Chairman of the Committee for Nationalities Affairs, announced the incorporation of the affected area into Szechwan; he was thus able to announce that the rebellion was not in Tibet, but in Western Szechwan. He confirmed rebellion in Litang and added that it was "limited" to the Batang-Litang area—a sizeable one, since the two places are about 100 miles apart. Mr Liu stated that military measures were necessary, and his admission that the rebellion had only been "mainly settled" implies continued resistance. His insistence that Tibetan territory was not involved and his reference to "feudal landlords" are red herrings intended to obscure the fact that Tibetan nationalism is involved.

An earlier hint at trouble may be found in the speech made at the National People's Congress in Peking last June by the Tibetan Deputy Governor of Chinghai, Sherab Galtso, who referred to an "unpleasant incident" in "certain Tibetan areas of Szechwan." He listed the causes as improper measures of land reform, the commercial tax on monasteries, the registration of farmland and stock and the collection of weapons from the Tibetans. Sherab Galtso advocated a policy of education and propaganda, a method of "slow beginning and quick results." This indeed seems to be the policy in operation further to the west—in Tibet proper to use the Chinese definition. It is a policy of wooing the ruling circles and indoctrinating Tibetan youth. Opposition here, particularly amongst the nobility, is, in the main, attempting to delay or moderate the proposed reforms. Tibetan Ministers who have dared to criticise have either been dismissed, forced to "retire" or go on "long leave." In the countryside resentment against the large Chinese garrison is widespread and non-co-operation seems to be the order of the day. Even the Chinese paper currency is still not accepted and Chinese propaganda teams have had only limited success.

It is difficult to say whether the Tibetans, without outside support, will gain anything by open rebellion. Should it spread to central and southern Tibet, the Chinese, following the Soviet pattern in Hungary, would certainly take large-scale repressive measures. The disturbances have, however, shown that the Tibetans have by no means resigned themselves to Chinese domination. The critical time would seem to be next spring when the recently formed preparatory committee for the Autonomous Region of Tibet will introduce "experimental social changes."

For the operation of Breakers and Picks, Robert Carlyle & Co. Ltd., Contractors, of Manchester, use the most modern type of rotary compressor.



The Compressor that costs virtually nothing to maintain

No more compressor troubles for Plant Engineers—gone are the problems associated with clutches, crankshafts, valves and pistons, which are all potential causes of costly breakdowns and hold-ups.

The modern compressor is the "Power Vane" Rotary, a machine running in oil and oil-cooled, designed for continuous duty with complete protection given by fully automatic safety devices.

A full range of models available with capacities of 120, 175, 210, 365 and 600 cu. ft.

Atomic Contest

THE long process of scrutinising four sets of tenders for the Central Electricity Authority's first two atomic power stations has been finished. Four booklets of detailed comment and criticism on the designs have been sent from Harwell to the Central Electricity Authority, and the 75 scientists who have worked on the scrutiny can return with relief to their normal work. In the next few weeks the Central Electricity Authority is expected to make known the names of the companies to which it is awarding its two contracts, and the name of the group to build the first atomic power station for the South of Scotland Electricity Authority is likely to be decided at the same time.

This has been one of the most tense contests in the record of modern engineering. Four design teams in industry, representing the cream of electrical engineering ability in the country, started at the same time and from roughly the same condition of ignorance to learn the rudiments of atomic engineering, and from there to go ahead and design a commercial power station, of which the only source of heat will be atomic fission. They had studied at Harwell for barely six months, from the late summer of 1954—shortly after the Atomic Energy Authority was formed—to early in 1955, when the Government's ten-year programme for atomic power came upon them from out of the blue. Under this plan, a start would have to be made on the buildings for the first two stations by January, 1957, leaving industry no breathing space for leisurely experiment between the end of the basic training course at Harwell—the first atomic training ever given to British industry—and the start of serious design work. It left, in fact, just eighteen months for the preparation of designs and the submission of tenders. When these were delivered to the Central Electricity Authority on October 1st, the combined weight of these tenders was six tons.

Although all four groups are working to the same basic design, the difference between each of their four designs is quite astonishing. They vary by as much as 40 per cent in price, and they are by no means all of the same size. Neither price nor size, however, is the decisive factor in this instance. The Central Electricity Authority is putting up the first big commercial power stations in the world to run off uranium in place of fossil fuels. The basic design may be the design of Calder Hall, but the emphasis is different. The prime purpose of these two stations is to produce electricity; at Calder Hall it is to produce weapon-grade plutonium, with electricity as a by-product. The stations are bigger than Calder Hall, and incorporate new features that have been suggested from experience gained in building that first nuclear station, but have still to be proved practical. And, finally, they were designed and the bids were sent in before the Calder Hall turbines had started to sell electricity, and thus without benefit of the knowledge that teething pains there are starting to give the Atomic Energy Authority engineers.

★

With so much at stake, and so much unknown, the bids are going to be judged strictly from the engineering standpoint—according to whether they are reasonable engineering propositions, given the present level of skill (many attractive atomic designs are more or less unbuildable at present) and equally important, according to whether the tendering group has the experience, ability and resources to build what it has designed.

The odds on each of the four contestants have fluctuated wildly as the scrutiny proceeded, but it now seems reasonably certain that the Associated Electrical Industries—John Thompson group will get a contract for one of the English stations. It is difficult to guess whether the General Electric Company—Simon Carves group or the team headed by C. A. Parsons will get

the second. In all-round quality, the design submitted by GEC is probably the best of the four, possibly because it came closest to the type of station that the Atomic Energy Authority's own engineers would have designed if they, not industry, were dreaming up an improved Calder Hall. But this design has brought up certain technical questions which had not been foreseen, and were raised only during the scrutiny of tenders.

If the Central Electricity Authority is prepared to delay the start of the second station while these points of design are settled with Harwell, as it may well do, GEC should get an English contract. Otherwise the group is almost certain to get the Scottish station. The next two atomic power stations, on which work is scheduled to begin eighteen months after the commencement of the first, would then be divided between the English Electric—Babcock Wilcox group and the new team that is now being formed by Crompton Parkinson, the only big electrical manufacturer hitherto outside atomic contracting. A site in Somerset has just been chosen for the first of next series of stations, but how soon work can start there depends on the time it takes to surmount the administrative hurdles of planning permission, amenity inquiries and the like.

Industry regards the contracts for the first two English stations as a very special prize, not because they will be profitable, rather the contrary, but just because they are the first of their kind to be awarded anywhere in the world. The atomic programme is in fact so big that it is only by spreading the orders among all five groups that there is any chance at all of carrying it out and each company, in setting up an atomic division, has done so in the certain knowledge that it would receive an order to build one or other of the first five stations under the CEA's plan.

★

So far, therefore, no company has been in real danger of losing its investment in research. But technically, in tendering for atomic power, these big industrial groups are gambling with their bread-and-butter. It seems more probable each day that the electricity supply industry will take the huge risk involved in stopping the building of any more conventional coal or oil-fired power stations within a few years, in which case the English manufacturers of heavy electrical plant must learn the new atomic method or change their business. The risk is substantial, because the electricity authorities will not know what even these first stations will cost to run much before 1963. The skeleton atomic plan on which it is now working covers the period up to 1965 and, on strictly rational grounds, the CEA would not have enough experience of atomic power generation to be justified in deciding to pin its entire future on atomic power. It must already be mystified to find that what one company thinks will cost the best part of £200 per kilowatt to put up, another believes it can build for £120 a kilowatt of capacity. The same wide differences run through the engineering aspects of the tenders, the first of their kind that any public utility has ever had to study.

Equally bewildering is the uncertainty that surrounds the designs that will succeed these first, Calder-type plants. On Friday, delegates from industry went down to Harwell to discuss, or rather to be informed about, the lines that reactor development is expected to follow. The Atomic Energy Authority has very broadly summarised its own development programme as one involving a study of six specific reactor types, two for commercial production before the end of 1965, and four for the second atomic decade, 1965-75.

★

The logic behind this scheme is that the first two types of station would run on fuel mildly "enriched" with plutonium manufactured in the early, more primitive, types of power station. The more sophisticated designs of the second decade would run on pure fissile material that should by then be available in quantity from the atomic power network, and should in consequence be quite cheap. This admirably simple concept is, however, in danger of being upset by the quite appalling engineering problems that are coming to light, one by one, as serious design studies begin.

It may very well be true, as Sir Christopher Hinton has persistently argued, that there is a longer future for his simple Calder-type system than many scientists have been prepared to admit; work is already in hand at Harwell to raise the gas temperatures used in it by several hundred degrees, and with them the whole efficiency of the plant. The mistake would be to think that every project studied at Harwell will ultimately evolve into a safe and economical producer of power for the national grid. The CEA has received an unexpected atomic bonus in the sense that, since the atomic power stations that industry is prepared to design turn out to have twice the electrical capacity first thought possible, the quantity of atomic power that is likely to be available by 1965 has been doubled at a single stroke. Neither the government nor the CEA can take credit for this: it is in no sense a premeditated expansion in their atomic power programme. But it would not be surprising if the success of this first experiment encourages the CEA to put up more atomic stations in the decade than originally contemplated, though probably not substantially more than, say, fifteen in place of the original twelve.

Industry's designs, even the best of them, are going to need a considerable amount of amendment under Harwell's direction before the first power stations are built. But the most encouraging aspect of the contest has been that the designs are so many times more successful than was ever thought possible when the bids were first invited.

Copper Edged

TO finance an economic revolution and yet to receive big dividends has been the happy lot of shareholders in the Rhodesian copper companies. They have ridden, and never higher than in the last few years, to fortune on the tide of an expanding electrical industry. Copper prices have been high, touching an all-time peak of £437 a ton in March, and a large proportion of earnings has been distributed in dividends. The net profits of Rhokana, a member of the Rhodesian Anglo American stable leapt by 59 per cent to £15.9 million in the year to June 30th, and its dividend was increased by a third to 70s. a share. Investors in the other group, Rhodesian Selection Trust, have not fared quite so well, mainly because its sales were made at fixed prices, which over the last financial year were on an average about £20 a ton below the London Metal Exchange prices on which the "Rho-anglo" group bases its prices. Even so, the net profits of Mufulira rose by 45 per cent to £9.3 million, and its dividend was increased by a quarter to 25s. a share.

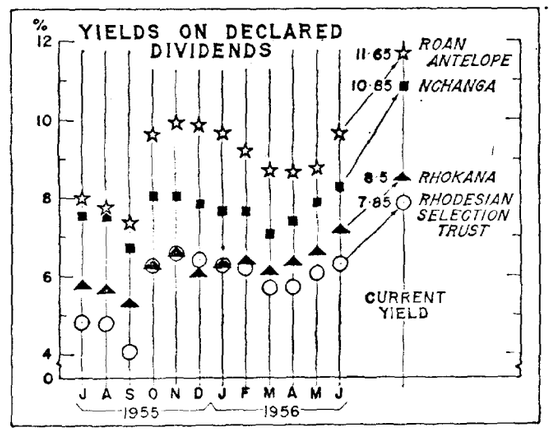
At last this prosperity seems to be meeting a check. World production has not been crippled by strikes, and consumption has fallen. For the first time in years copper is in surplus, and the London price, after rallying on the troubles in the Middle East, is back to £275 a ton. Unless there is a fresh outbreak of political troubles or strikes the price seems unlikely to rise much at present. The chairmen of both groups are cautious about immediate prospects, Sir Ronald Prain saying dividends will be lower in 1957 and Sir Ernest Oppenheimer hinting that they may be.

But the growth of productive capacity on the copperbelt goes on, so much so indeed that Sir Ernest has estimated that the companies will need to find another £50 million to finance their own developments between now and the end of 1960. The effect of these developments on productive capacity, if Mufulira's projected expansion is completed by 1960, can be seen in the following estimates:

Productive Capacity	1956 (Long tons)	1960 (Long tons)
Nchanga	120,000	120,000
Rhokana	80,000	80,000
Mufulira	90,000	135,000
Roan Antelope	90,000	90,000
Chibuluma	16,000	16,000
Bancroft	...	85,600
Chambishi	...	16,000
Total	**396,000**	**542,600**

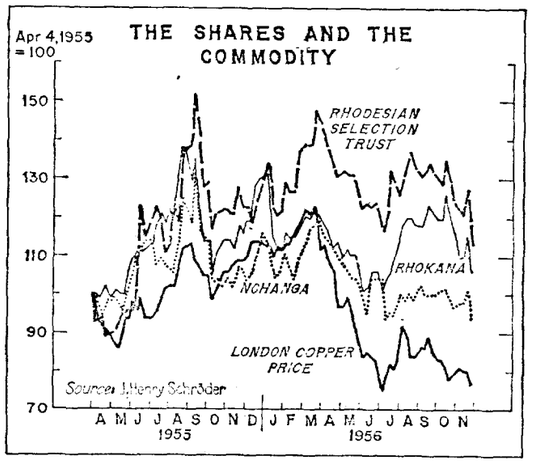
Mining in such a young country as Rhodesia is not only a matter of finding ore and turning it into metal. The building of townships, schools, hospitals and the like make their call on resources. Above all, the copper companies have to be concerned with the supply of power. No one knows how much the Kariba scheme will cost in the end, but each time an estimate is made it is higher than the last. Hence the £20 million loan to the scheme from the copper companies (4¼ million from Rhokana, £4 million from Roan, £5 million from Mufulira, and £6¾ million from Nchanga), and the £10 million surcharge they will pay on the price of power may not be their full commitment.

Thus huge sums of money are still required at a time when copper prices and profits are lower than they have been. But if the price of copper is unlikely to rise much above its present level it can also be argued that it is unlikely to fall much below it. No commodity can escape the effects of deflation, but copper is more strongly supported than most; it serves industries which are strongly favoured by the postwar pattern of industrial development. If the considerable increase in world production which is planned over the next few years does outrun consumption, prices will not necessarily collapse. The American strategic stock has a call on the output of many American mines, and there and elsewhere copper production is in the hands of powerful groups which could defend the price by restricting output. In 1954, American producers dug their heels in at 30 cents a lb—£240 a ton—and it is doubtful whether they would follow the price down so low today. Recession is in any case likely to be short lived, because each move towards higher living standards calls for more copper. Mining a higher grade of copper than some big American concerns, and with royalties and bonus charges which vary with the price, the Rhodesian companies have a cost advantage, and when they plan their expansion on the basis of a price range of £240-£260 a ton they are being neither unduly pessimistic nor optimistic. At that price the



present producers would continue to make a handsome profit.

As the development of the copperbelt has progressed, investors have re-assessed the value of Rhodesian copper shares, accepting lower yields on them as they progressively realised that long-term growth lay ahead. Every mine exploits a wasting asset; investors will allow for that in the yields they expect, but those who are looking to the copper companies in 1960 and after will still look for bigger outputs and bigger profits. That is the year in which the copperbelt should at last have all the power it wants. A further bout of new developments might then be contemplated, though it could hardly match the size and earning power of the present schemes. However, as the accompanying chart shows, copper share prices have failed to follow the price of the metal downwards. Taking a short view, those who pin



their faith on charts may argue that copper shares are more likely to fall than the price of copper to rise. Indeed, in the last few days copper shares have begun to come down—hardly a surprising reaction after the cautious statements by Sir Ronald Prain and Sir Ernest Oppenheimer. For those willing to hold copper shares for a few years, and to accept a fluctuating income on them, this is not the time to sell; for those who wish to increase their investment in them the time to buy has not, perhaps, yet arrived.

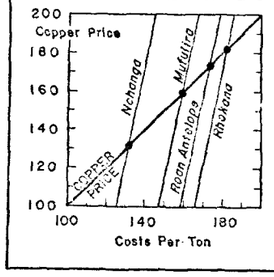
★

But this may be the time to reassess the four main companies in their relation to each other. They are not of one piece, each producer having its own virtues and drawbacks. Mufulira is a "wet" mine, and this threat to its production will be lessened as power supplies become more certain. Roan Antelope has the shortest life of the big producers, but when the Ndola refinery is working it will gain by having its electrolytic copper refined locally. Nchanga is a low cost producer, but it is to lose some of that cost advantage by bringing a large volume of lower grade ore mined by opencast methods into production. So its costs will perhaps rise more than the average. Rhokana's costs are the highest on the copperbelt, but it has large investments in Bancroft, Nchanga and Mufulira, and a profitable sideline in cobalt.

On the basis of the last published accounts, and making allowance for Rhokana's cobalt production, it is possible to estimate total costs per ton of blister copper, these costs including royalties, employees' bonuses as well as operating expenses. On this basis the cost per ton of blister copper produced in 1955-56 was £125 for Nchanga, £145 for Mufulira, £160 for Roan Antelope, and £165 for Rhokana. Over the last six years these costs have risen by about 85 per cent, but the rate of increase has been slowing down. In the future, costs will be affected by the forthcoming increase in rail charges (rail freight on copper from the copper belt to Beira may be doubled to £16 a ton), and by an outstanding African wage demand. Conversely, power costs should fall as more hydro-electric supplies become available, while labour productivity should improve as African advancement moves on. Whatever assumptions are made about the way costs will in fact move the relative ranking of the mines as low or high cost producers will not be altered.

These costs can be compared with the yields on the shares. By this reckoning, Nchanga appears in the past to have been neglected while Rhodesian Selection Trust, controlling shareholder in another low cost producer Mufulira, has been strongly favoured—thanks in good measure to its listing on Wall Street. Compared with the holding companies, Rhokana is an unpopular share—perhaps because its market price is "heavy" and its market restricted. Yet, like the holding companies, it offers a spread of investments in the producers and developers of the copper belt. And taking account of their market values, a stake in Rhokana's own mine, the highest cost producer of them all, does not fetch an excessively high price. If it is just an interest in the copperbelt and not a choice of an individual mine that the investor fancies he can take it in the "Chartered" company—the landlord of all of them with a financial interest in each of them. But wherever he invests in the copperbelt, he is in a middle-distance race and not in a short sprint.

BREAK-EVEN POINTS



On the assumption of an increase in operating costs of £40 a ton for each mine by 1960, the intersections on the diagram show the minimum copper price at which each company would make a profit on its estimated production. The estimate is based on existing blister costs and takes into account refining and administration costs and the variable mineral royalty and employees' bonus payments.

Business Notes

ICI Takes the Plunge

It has not been the sort of week on the Stock Exchange that most people would have fancied for launching the biggest industrial issue that the London market has ever tackled. *The Economist* indicator has dropped another 3.7 points to 170.0, its lowest point yet. The *Financial Times* industrial index at 162.9 is also at its lowest of the present bear market. In the same week ended Wednesday the *Financial Times* government security index has dropped from 82.83 to 82.57. Both in gilt edged and in equities there has been a steady drift of small selling with no buyers about and with no certainty that the clearing up after the recent failure is yet complete. Investors still prefer liquidity.

In that market Imperial Chemical Industries has gone ahead with its arrangements to raise £40 million although the group could, it is believed, have waited up to twelve months had it thought it wiser to wait. It is a bold move that reflects credit on the financial standing of the group and on the audacity of its financial advisers, Hoare and Co., Panmure Gordon, Rowe and Pitman and J. and A. Scrimgeour. Assuming the final outcome to be satisfactory, it will be a feather in the cap of the London market as a whole and it will also limit the funds that that market can find for other borrowers for some time. The stock chosen to tempt out the great sum of money is a 5½ per cent convertible loan stock dated 1977-79, issued at £96, giving a flat yield of £5 14s. 6d. per cent and a gross redemption yield of £5 16s. 3d. That is designed to attract the institutions even though the offer is made though not in a fixed proportion to preference and ordinary stockholders including naturally the employees who are stockholders through the co-partnership scheme. In a group as big as ICI the institutions are nearly all stockholders, and the only advantage of confining it to stockholders is that it is permissible to wrap up an element of bonus in the price. Here there is no obvious element of bonus but there is a bait, the conversion right into ordinary shares starting at the equivalent of a price of 40s. in July, 1958, rising to 41s. 9d. in July, 1959, and to 43s. 8d. in July, 1960.

ICI Ordinary now stand at 36s. 7½d., but they have touched 49s. 6d. this year and 61s. 6d. last year. The chance of the option being worth exercising some time in 1958, 1959 or 1960 looks good, and it should look even better to the investor who is being paid nearly 5¼ per cent on his money while he waits for his opportunity. The company faced with the alternative of repaying £40 million between 1977 and 1979, must also hope that the options will be exercised. To the institutions who will take most of the stock the prospect is particularly attractive. Underwriting commissions at the moment are necessarily large. Sub-underwriters will be acquiring the stock at the equivalent of £94½ per £100 stock that makes the first conversion price the equivalent of 39s. 4½d. per share. To succeed the issue needs an attractive look, and it has been given one. That attractive look must make the rest of the market look relatively less attractive.

A Spate of Issues

Whatever the fate of that giant issue the outstanding fact about the present unhappy share market is that it has continued to absorb a fair volume of new industrial issues as well as a trickle of tiny municipal issues. The events speak for themselves: British Oxygen's £10 million issue was on paper a disastrous failure; 84 per cent of it was left with the underwriters, but in practice it turned out to have been a moderate and qualified success. The underwriters were investors who had counted on taking up much of the stock on sub-underwriting terms. They actually obtained a little more than they wished, but they had no difficulty in selling that surplus on the opening day (Monday) when between £1¼ and £1½ million stock passed through the market. The prices they obtained must have varied between £1 discount and £1¼ discount, so that allowing for underwriting commissions they made a small profit.

The most unusual of the new issues is the £7½ million of 6 per cent first mortgage debenture stock of London and Overseas Freighters at £97 10s. which has been placed privately by Philip Hill, Higginson and Company. It will provide part of the cost of the company's £17 million tanker building programme and in normal times might have been judged a poor issue on the ground that shipowning is a risky business that should be financed only in small proportion by debenture issues. Now when a tanker can be chartered for a period of years to a big oil company long before she is delivered the security can be viewed much more favourably. The stock cannot be dealt in until January 15th when the first call of £20 becomes due and a period of no less than three years separates that first call from the last call of £27 10s. on January 15, 1960. Funds are intended to flow in as the shipbuilding programme progresses, and it will be noted that the finance is intended wholly for the shipbuilding of the parent company in this country and none of it for that of the offshoot in Bermuda.

The issue has most unusual redemption provisions. Final redemption is at par in 1982 and a substantial sinking fund is provided but the right to earlier redemption at any time after 1963 is reserved at the higher of these two prices: either £110 in 1963 the figure falling by 10s. each subsequent year, or a price that would result in a gross redemption yield to the final date of redemption 1.4 times the flat running yield on 2½ per cent Consols on the date when notice is given.

In the realm of municipal finance two small placings have been announced, both tailored to suit the trustee savings banks and both reasonably well received. Newport, Monmouth, has placed £1 million of 5½ per cent stock dated 1961 at £98¼ and Middlesbrough £1 million of 5½ per cent stock 1967 at £97.

What Price Petrol?

WHEN oil tankers are being chartered at rates more than double those prevailing during the summer, and double those of last winter's peak, a rise in petrol prices at the pump is merely a matter of timing. While the oil companies have temporarily absorbed the rise in freights until a clearer picture of the cost of the emergency supply pattern can be discerned, there is now little doubt that at least part of this cost will be passed on to consumers before rationing starts on December 17th. The extent of the increase, however, will be governed more by the rise in the average cost of supplying the British market than by reference to the extreme costs of spot tankers chartered to move marginal supplies. The rise, when it comes, seems likely to be about 3d. a gallon.

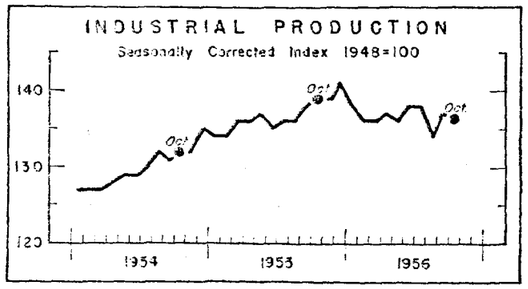
Motorists vainly searching for the last drop of unrationed petrol may suspect that dealers are holding stocks in order to make a killing on the price increase or even in anticipation of the re-emergence of the wartime black market. Expected price increases are without doubt an incentive for dealers to hold back stocks, but the uncertainty of future supplies may be a more compelling reason. In particular, the oil companies normally refuse, on economic grounds, to make delivery to dealers in less than 200-gallon lots. To obtain such a delivery after rationing has started the dealer will have to produce 200 gallons' worth of coupons. To keep in regular operation, therefore, he must have more than 200 gallons in stock when rationing commences.

The availability of supplies and their price are two of the motorist's chief concerns; a third is the quality of the petrol he may be able to buy. It has already been announced that no more 100 octane petrol will be sold to private motorists after existing stocks have been exhausted. And a note on page 813 discusses some of the technical factors affecting the quality of petrol output from the refineries. But it seems safe to discount, at least for the present, the persistent rumours of an imminent return to a single grade of petrol.

Output Before the Oil Cuts

EVEN before the oil shortage began, industrial production had begun to slip a little from the level along which it had been running since early in 1955. The seasonally adjusted official index for September, at 137 (1948 = 100), was a point below a year before, and the indications are that this index will be 136 to 137 for October, against 139 in October 1955. This would be about two per cent below the peak index of 141 reached in December last year.

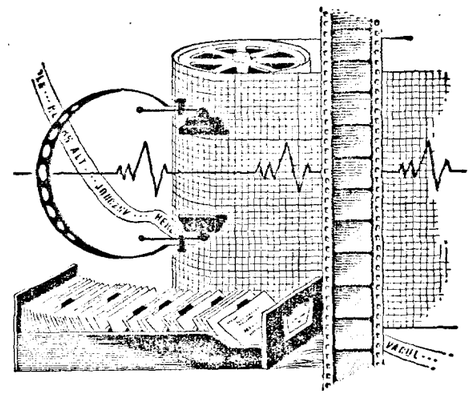
The very slight downward tendencies in the index during the last three months have partly resulted from revisions to the index figures: there were no signs of the recovery for which optimists had been waiting, as resources were switched into industries where business remained good. That recovery seems now certain to be postponed. If the government can in fact maintain 90 per cent of fuel oil supplies to industry, the shortage need hardly have much



effect in depressing output further, but it still seems probable that heavier cuts and an allocation scheme may have to come. The dislocation of road transport to move industry's supplies to the docks and of shipping to carry them onwards might have rather more effect on output; moreover, petrol rationing has finally extinguished what confidence remained in the motor industry and its suppliers about immediate prospects, and production there is being cut back even more than already seemed likely during the remainder of the year.

New Balance of Power

MR AUBREY JONES has accepted the central conclusion of the Herbert Committee on nationalised electricity that the area boards which distribute electricity retail to the public should in future be quite independent of the central generating authority from which they buy power wholesale. But he has not accepted the committee's suggestion that a rather shadowy Central Electricity Authority, bereft of most of the present responsibilities of CEA but exercising many of its powers, should supervise the whole industry. In the Electricity Bill that he laid before the House of Commons this week, the Minister of Fuel and Power proposes instead that an Electricity Council, made up of the chairman and deputy chairman of the new central generating board, the chairmen of the 12 area distribution boards, and an independent chairman, should advise him upon the industry and act as the industry's agent for services best performed in common, such as labour negotiations, major research projects and the raising of capital; it would have no powers of direction. Mr Jones's formula for the structure of the electricity industry, therefore, might be crudely summarised as "Back to the old CEB pattern with a Gas Council on top." Whatever one's reservations about the importance of the formal structure in these industries, this is a clearer and more sensible one, which should remove the excessive centralisation of power now wielded by CEA.



How much information can you use?

Most people, even if they are not closely connected with industry, know what a recording instrument looks like. Like a Seismograph it goes on giving a record line of information about conditions which are generally quite normal. The geologist usually only wants to record the frantic jump in this record line when an earthquake occurs; similarly the man in industry usually only wants to know when the recorded condition is abnormal. For some time Sunvic Controls Ltd. have been developing new means of monitoring this information so that it provides a more easily used record—not of the *normal* conditions about which nobody wants to know, but about the *abnormal* on which action has to be taken. One method is to record this information digitally—or in more simple terms to print it out as with a teleprinter. Alternatively the information can be placed on punch cards so that it can be analysed mechanically.

Sunvic do not pretend that they are the only people in the world thinking about this. But because of their experience in automatic controls and processes they do believe that they have more of the answers than most people. They have them because some of the best brains in industry are working on these problems. And incidentally, Sunvic are anxious to hear from younger men with scientific and technical qualifications who would like to join this Brains Trust.

...who me?

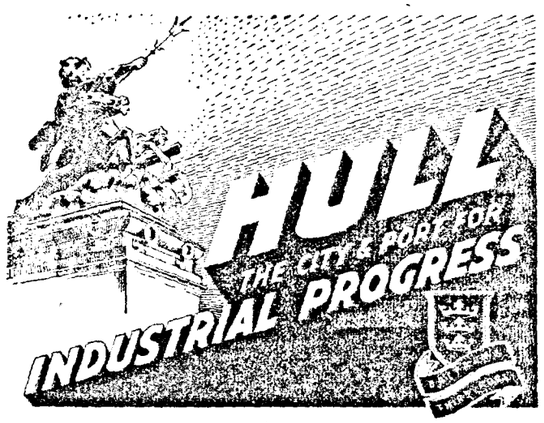
Yes, you. What do you know about your industry's activities or, for that matter, the big problems that confront industry generally? Are you a man who thinks for himself or do you merely repeat what you have heard someone else say?

THE FINANCIAL TIMES helps you to mould your opinions and to understand the big issues affecting industry. Read its industrial news, the techniques your competitors use, the market opportunities that exist in the Commonwealth, in America and elsewhere. Read of the new projects being developed and the articles on economic and financial affairs. They will help you develop a sounder business judgment . . . broaden your vision . . . prepare you for additional responsibilities.

THE FINANCIAL TIMES provides all the facts the business man needs. Try reading it every day for a week. It's the only way to keep up with the man who means business.

Men who mean business read

THE FINANCIAL TIMES



Advantages for the Location of New Industry

RAW MATERIAL SUPPLY. — World-wide shipping services and direct access to inland waterways.

LOCAL SUPPLIES — Chemicals, solvents, pigments, adhesives, oils (mineral and vegetable), chalk, cement, leather, engineering services, fish, grain and wood products, packing material.

LABOUR — Immediately available.

MARKETS — HULL serves an inland population of 14,000,000 and exports to all parts of the world.

The area boards, which under this new bill would receive the independence they were offered in form but not in fact under the original nationalisation act in 1947, would be required to balance their own accounts "taking one year with another"; at present, this is required only of the whole industry, not of individual boards. They would submit their capital development programmes in the first instance to the Electricity Council for its observations, but would not be bound to accept any amendments suggested by the council in placing their programmes before the Minister (who would also receive the Council's observations) for final approval. Moreover, they would have as a reserve in bargaining with the new generating board the power to generate electricity themselves, if the Minister approved. The Minister has not accepted the Herbert Committee's suggestion that individual boards should raise their own capital through public issues (if and when the financing of nationalised industries is returned to the market); the Treasury would not abide this. Nor does he consider the further idea with which the committee toyed, that the industry should issue stock without Treasury guarantee, practicable in view of the vast and still-growing capital demands of electricity.

Energy for Success

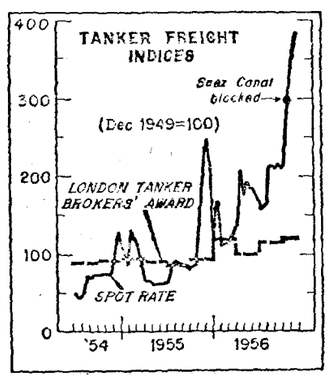
THE Central Electricity Authority has been asked for a detailed estimate of how much a switch to nuclear power on a larger and earlier scale would add to its capital requirements. This switch to basing new generating capacity on nuclear rather than conventional power stations would be, according to Mr Jones's intentions under the new Electricity (Reorganisation) Bill, a particular responsibility of the new central generating authority; he intends, as the Herbert Committee suggested, that the design and construction of conventional generating capacity should be left largely to the regional generating divisions.

It is no secret, and was inevitable, that liaison between CEA and the Atomic Energy Authority was not always intimate or easy; this was to be expected at the introduction of an entirely new fuel technology, particularly when one established and immensely self-confident profession of technologists encountered a newer band, even more flushed with success and intolerant of advice from any but their own odd kind. For a time it did no harm to see the bafflers with science baffled in their turn (though chastening on either side remains almost imperceptible). But the authority that will have to deliver atomic electricity to Britain will be the new CEGB (Central Electricity Generating Board), not AEA; and Mr Jones's hope that an element of joint membership can be achieved, in which full-time members of CEGB may become part-time members of AEA and vice versa, seems a wise one. There are already rumours that major appointments to the new generating board might make the link even more intimate.

This is an amending bill, not a completely new constitution and charter for nationalised electricity; it does not, for example, attempt to legislate anew on tariff principles. Financially, the Minister takes two powers that might give him some leverage upon pricing policies: he is now to be able to issue directions on depreciation policy and upon the financial reserves the electricity boards are required to create. Mr Jones argues that commercial flexibility and the relation of tariffs as closely as possible to costs are not matters for a bill. And although he is proposing this thorough-going reform of the industry's structure, he still believes that the success of these newly independent and more genuinely commercial enterprises will depend largely upon personalities. But upon the means of securing the right personalities he appears to have made no headway. There is no reference in this bill or its attendant White Paper to the "rate for the job" salaries that the Herbert committee and so many other observers have argued ought to be paid to get the right men for these exhausting and particularly vulnerable jobs at the head of nationalised industry.

Freights for Extra Tankers

TRAMP tanker freights have been soaring, as was to be expected. It is now costing an oil importer about £7 3s. a ton to ship oil from the Caribbean in newly fixed tramp tankers. This is about the same as the highest rate paid during the Korean war, more than half as much again as the highest payment last winter, and more than double this summer's average. In comparison the cost of bringing oil in tramp tankers from the Persian Gulf has rocketed. The London Tanker Brokers' Panel have fixed a new datum rate of 80s. 10d. a ton for the return trip via the Cape, which compares with the datum or "Scale" rate before the Canal was blocked of 49s. 2d. a ton plus Canal dues of 6s. 3d. a ton. Thus, although tramp tankers are now being fixed at Scale rate plus 340 per cent against Scale rate plus 250 per cent at the end of October, the change in the Scale rate means that the shipping cost to the importer is now more than £18 a ton against just under £9 a ton a month ago, an average of £5 a ton during the summer, and £6 15s. at the peak last winter.



Since the tramp market supplies about a tenth of all tanker tonnage—possibly less over the last few months—the extreme pressure for extra tanker tonnage must inevitably be reflected in enormously high tramp rates; and oil importers must expect to pay much more before the winter is out. All the oil companies in Britain and from the continent have been in the market, but few fixtures have been made this week since they are not prepared to pay the full prices tanker owners are asking. Scale rate plus 375 per cent has been offered for the Caribbean route this week, but the highest fixture so far has been at Scale rate plus 340 per cent. Recent consecutive voyage fixtures also demonstrate the firmness of view about future freights. A 10,000 ton tanker was chartered last week for

three months' voyages starting in December, with a minimum rate of Scale plus 200 per cent and a maximum of Scale plus 350 per cent. This week two slightly larger vessels have been fixed for twelve months at a flat charge of Scale plus 310 per cent.

Pressure on Forward Sterling

THE speculative pressure on sterling shifted this week to the forward market. Spot sterling on New York has been kept steady at $2.78¼-⅜ since the day of the Anglo-French ultimatum. In the first three weeks of November there was no dramatic rise in the discount on forward sterling; in the past week, however, the discount has increased sharply—from ¼-$\frac{9}{16}$ to 1⅛-1 cents one month forward, and from 1⅝-1¼ to 2$\frac{11}{16}$-2$\frac{9}{16}$ three months forward. On an annual basis, the three months' cover represents an interest cost of nearly 4 per cent.

The pressure on forward rates has been attributed to sales of sterling forward arising from purchases of spot sterling necessitated by the need to replenish working balances. There have been some indications of such transactions, but the short account as a whole appears to have grown. The big influence in the weakening of forward sterling has been the withdrawal of official support from this market. The authorities have apparently decided that such support provides a needless help to the speculator.

Sending Goods by Rail

THOUGH petrol rationing will start at the time of the year when both road and rail traffic is normally at its busiest—and also when the weather does not often make it easier for the railways to handle substantially extra loads—the Transport Commission should have little difficulty in accepting part of the traffic the Minister of Fuel and Power expects to be transferred from the roads in the next few months. On the other hand, neither industry nor the railways could quickly or with ease adjust their operations to a shift in the region of a quarter of road goods traffic, which is what the present ration, basic and supplementary, might mean. This would probably be equivalent to between a quarter and a third of present rail freight movements, measured in ton miles, and a much higher proportion of the tonnage passing through rail terminals. But road goods movement may not be cut by as much as its oil supplies, since the petrol shortage will provide its own stimulus for hauliers and especially for firms with their own "C" licence vehicles to try to improve loadings of their vehicles. Mr Watkinson's intention to ask the licensing authorities to grant hauliers' "B" licences for short periods to firms with "C" licences will help pooling arrangements.

But much will depend on the way supplementary rations are awarded; the present lack of a stated policy has hampered both state and private road hauliers from planning new arrangements. The silly rule that no applications for supplementary allowances could be made before half the basic ration had been used was quickly dropped. But both the basic and supplementary rations have been fixed globally on average petrol consumptions by different sizes of vehicles, and the range of variances from this average is wide with BRS lorries on the whole running a higher mileage than private hauliers, and private hauliers generally more than "C" licensees. The sample survey of its members' "C" licence operations the FBI is conducting next week should help in the framing of this policy by giving some indication of how far the basic ration may cut movements and how much of the remaining traffic could not be moved by rail.

Retail Business

CUSTOMER TRENDS

This is a new quarterly bulletin for those interested in the home market for consumer goods. It includes short and long-term forecasts of sales by different outlets and merchandise groups, regional surveys and reports on special investigations.

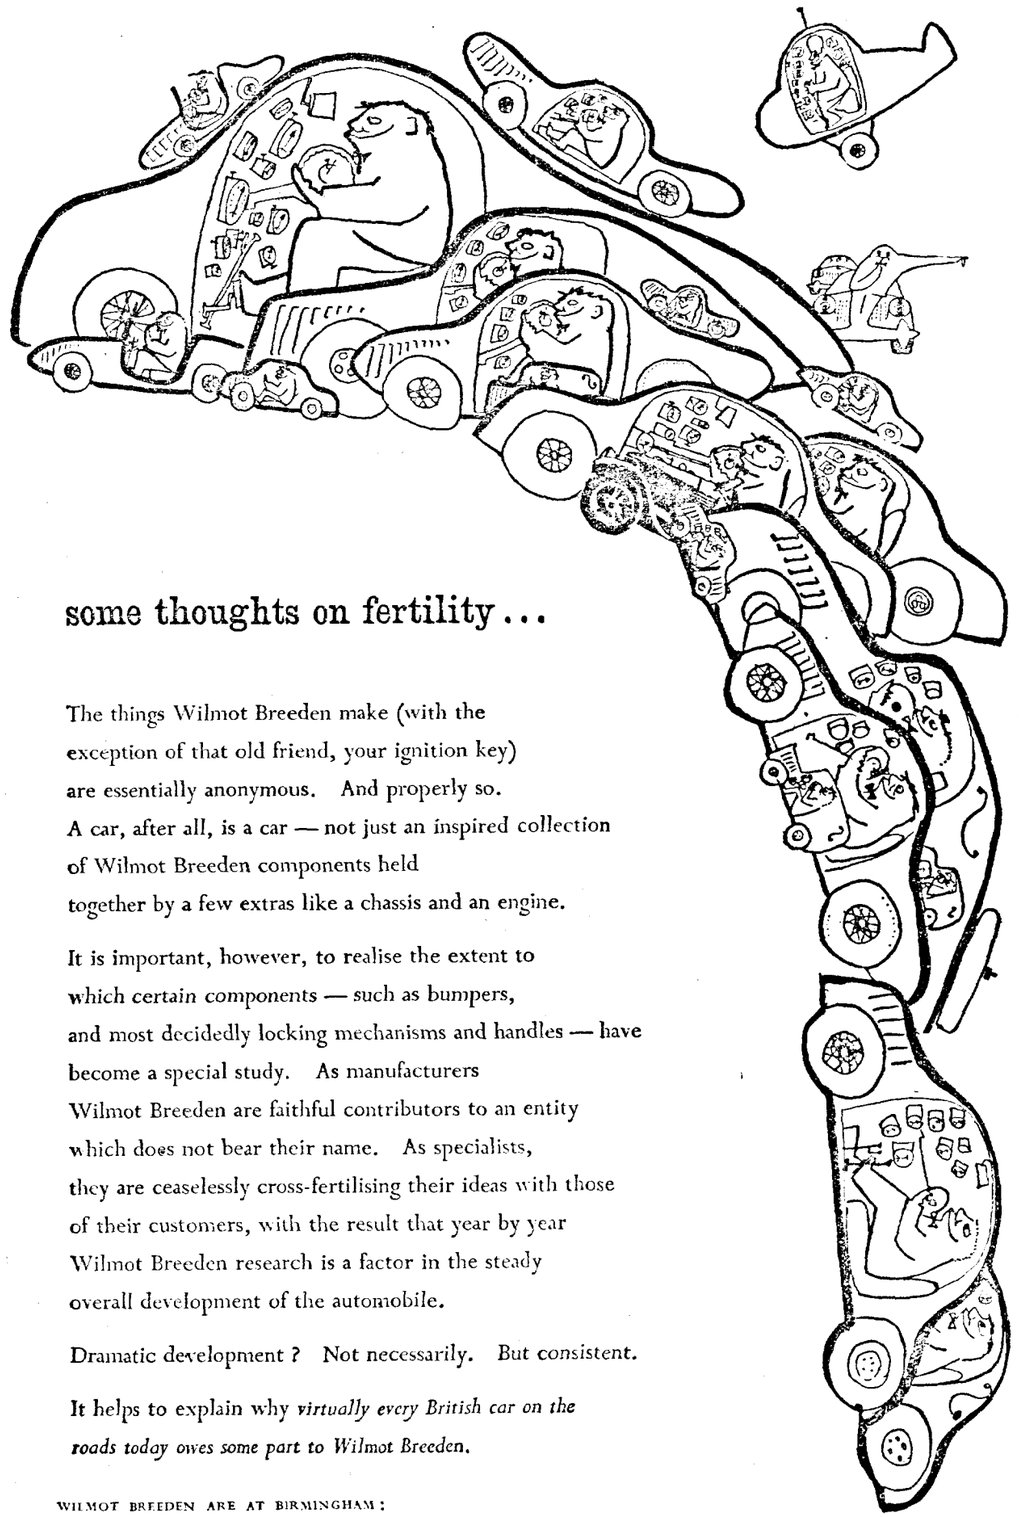
Ample Coal Stocks

COAL this year has been doing about as well as the economy: no more chilling reflection could be cast upon the rest of industry. Up to the end of last week production was fractionally higher than in the same 47 weeks of 1955, with deep-mined output about 90,000 tons less and opencast output about half a million tons more. Coal consumption at home has risen, and imports have been cut more than exports and bunkers; but the industry's total stocks are still about 23 million tons, 1¼ million tons higher than at this time last year and substantially above normal "safety margins" for the winter. Even for this winter, that total looks pretty safe.

Elaborate arithmetic over "the stockturn" went out of fashion a year or two ago when it became evident how readily the Government were prepared to call upon coal stocks in Pennsylvania and West Virginia to supplement whatever the National Coal Board and consumers here had in hand for the winter. That costly alternative may not be so easy this winter; dollars have become short again, the continent is already importing American coal at a high rate, and the closing of the Suez Canal is pushing up demand for dry cargo as well as tanker tonnage. To dust off the old subtraction sum, one may assume that in normal circumstances Britain would have consumed about 6-7 million tons more coal than it produced between October and May, reducing stocks to perhaps 16 million tons.



some thoughts on fertility...

The things Wilmot Breeden make (with the exception of that old friend, your ignition key) are essentially anonymous. And properly so. A car, after all, is a car — not just an inspired collection of Wilmot Breeden components held together by a few extras like a chassis and an engine.

It is important, however, to realise the extent to which certain components — such as bumpers, and most decidedly locking mechanisms and handles — have become a special study. As manufacturers Wilmot Breeden are faithful contributors to an entity which does not bear their name. As specialists, they are ceaselessly cross-fertilising their ideas with those of their customers, with the result that year by year Wilmot Breeden research is a factor in the steady overall development of the automobile.

Dramatic development? Not necessarily. But consistent.

It helps to explain why *virtually every British car on the roads today owes some part to Wilmot Breeden.*

WILMOT BREEDEN ARE AT BIRMINGHAM:
ALSO AT LONDON MANCHESTER BRIDGWATER GLASGOW MELBOURNE TORONTO

Industry and other consumers (excluding the refineries) use about 5½ million tons of fuel oil a year, and perhaps 3½ million tons of it, equivalent to about 6 million tons of coal, during the "coal winter." If substitution were universally practicable, and the situation extreme, possibly the whole of that might be replaced from coal stocks during this winter without doing more than worry the Coal Board a little more than usual. Nowadays the board likes to think about 12 million tons in stock as the minimum for the end of the winter; but on several occasions since the war the actual figure has been around 10 million tons. Obviously, substitution would not in fact be practicable in many cases, and nobody is thinking of a cut in fuel oil supplies, for the moment, of more than, say, 15-25 per cent. Against either of these contingencies, if coal could be used instead of oil, there should be ample—plus a fair margin for extra coal consumption on the railways.

Motor Insurance on the Petrol Ration

AMONGST the few who do not recoil with unmixed horror from the thought of petrol rationing, must be counted the underwriters of motor insurance. There have been long faces in most motor insurance offices since 1954, the last good underwriting year. Claims have been inflated by the crowding of new cars on the road, the soaring cost of repairs, and personal damage assessments based on rising incomes. Rates, which were last increased in December, 1955, and then only by an average of about 5 per cent, have not kept pace. The resultant loss has been heaviest amongst the "tariff companies"—so called because they adhere to a common minimum rate tariff—who tend to regard their motor departments as a bait for other more profitable business. But even for the Lloyd's underwriters and non-tariff companies specialising in the motor field, the year 1956 is likely to show an underwriting loss.

In the opinion of virtually all motor insurers, therefore, the time was ripe for a substantial increase in rates—until the Suez canal was blocked. It is now obvious that all thoughts of a rate increase must be stored away until petrol rationing ends. And as vehicles are laid up, so premium income will fall. But, with the possible exception of comprehensive cover on part of the lorry fleet, policy cancellations are not expected to be large. The basic ration of 200 miles a month is more than double the 90 miles a month allowed when petrol was last rationed, even though supplementary allocations will be granted more sparingly than before. And the motor insurance companies, cheated of the prospect of a much needed rise in rates, feel that the uncertain, and possibly short, duration of rationing, justifies their refusal to grant rebates on existing and new premiums to compensate for reduced mileage. Nor is there any sign so far of the reappearance of the half-duty licence for motorists driving solely on the basic ration, which might make a rebate more difficult to refuse.

Premium income, therefore, should not fall as fast as petrol consumption and mileage. Costs, on the other hand, may. Fixed office overheads will admittedly have to be spread over a smaller volume of business. But the really big item in cost is claims, and here the underwriters look for a substantial reduction. Much will depend on where the petrol restrictions are most severely felt—whether good risks suffer as much as bad risks—and there are many factors operating in each direction. But since 1954 the increase in the number of cars on the road has been accompanied by a more than proportionate rise in claims. A decline in mileage now might therefore lead to a more than proportionate fall in claims. These hopes, at any rate, have awakened some unaccustomed optimism even in the breasts of claims managers. If they are realised, the saving in costs may make an effective understudy for the role that was due to be played by higher rates.

Squeeze on Scottish Banks

THE effect of the credit squeeze on its practitioners has generally been self-compensating: the big banks have probably gained at least as much from the higher rates obtained on advances, loans and Treasury bills as they lost from the higher rates paid on deposit accounts; aside from this they have suffered substantial depreciation (and some realised losses) on their gilt-edged securities. But two of the three Scottish banks that have recently issued their reports—the British Linen Bank, for the year to September 30th; the Commercial Bank of Scotland, to October 27th; and the National Bank of Scotland, to November 1st—have suffered a net fall in current profits. Costs have risen more than in England because a considerably larger proportion of deposits is held in interest-bearing accounts (stated by the British Linen Bank to be 50 per cent, compared with the published ratio of rather over one-third in the clearing banks), whilst the rise in earnings has been rather smaller than in England on account of the lower proportion of assets deployed in call loans and in bills. The only bank of the three to show a decline in profits is British Linen (by £9,000 to £290,000); but in the Commercial Bank the profits from actual banking declined. The National Bank of Scotland shows a small increase, by £7,000 to £343,000. All three have maintained their dividends.

The level of deposits is little changed over the year—the biggest movement is a decline of £3.9 million, to £117.4 million, at the Commercial Bank. Lord Rotherwick, the Governor, attributes this partly to switches into Treasury bills, tax reserve certificates, and also of small deposits into the post office and trustee savings banks. Both he and Lord Airlie of British Linen castigate the Chancellor for failing to extend the tax concession on the first £15 interest to savings deposits at the commercial banks.

Each of the three Scottish banks shows an increased depreciation on its gilt-edged portfolio. The portfolios of all three are valued at or under cost and redemption price, with market values disclosed in marginal notes. The Commercial Bank shows a depreciation below market value of 7.6 per cent (compared with 6.8 per cent in 1955) on a portfolio valued at £49.8 million—without making any transfers from contingencies or reserve funds. The amount of the disclosed depreciation, at £3.8 million, compares with Reserve Funds of £3 million. The depreciation at the National Bank, whose balance sheet date fell after the spasm of weakness in gilt-edged that followed the Anglo-French intervention in Egypt, has risen from 3.7 per cent last year to 7.2 per cent; at £3.7 million it is more than half as large again as the Reserve Fund. The depreciation shown by British Linen—on a portfolio increased over the year by £1.7 million to £40.1 million—is £2.2 million (5½ per cent, compared with 5 per cent in 1955), but this is well covered by the Reserve Fund of £2.5 million.

Cocktails in the Refinery

THE most acute problems arising for the operation of European refineries from the reduced rate of oil supplies from the Middle East will come less from the physical shortage of supplies than from the rather unpredictable quality of many of the new crudes. Normally, refiners assiduously plan tanker arrivals well ahead, and programme long runs of crudes bought to close specifications and processed according to well-tried formulæ. Batches of different crudes are carefully separated, and the reactions of each batch closely controlled. Now, refiners, operating on more of a hand-to-mouth basis, must deal with an unsteady rhythm of unfamiliar arrivals—heavy crudes from Venezuela if they can get them, assorted light crudes picked up from Texas and Louisiana, or the reduced volume of Middle East oil shipped round the Cape.

"Cocktail runs" of mixed crudes of unfamiliar qualities can produce some rather unpredictable results. The quality of refined products seems bound to suffer, partly for this reason, and partly because the emphasis will be on producing the maximum quantity of products, with the minimum losses and fuel consumption in the refinery. The product balance will also change, with even more emphasis on black oils for industry and less on the lighter products. Already it has been announced that 100-octane fuel will no longer be supplied to motorists. Most refineries are going further than this. By shutting down some of the catalytic cracking units, both the feedstock and the fuel used in operating the plant can be added directly to the supply of fuel oils. But some of the by-products of cracking, such as propylene and the other gases used as feedstock for petrochemical plants, will be lost, raising acute problems of replacement. The quality of gasolene can be kept up to some extent by running higher quality crudes, and relying on reforming processes to raise the octane ratings of naphthas produced by straight-run distillation. But some

Building, This Year and Next

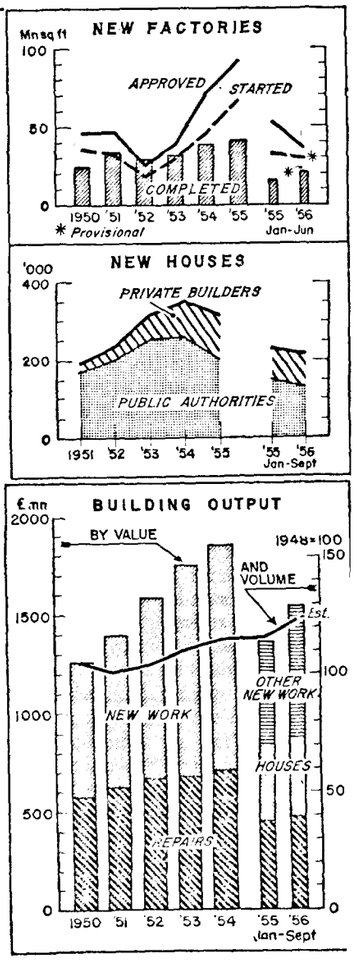
AT the beginning of this year building contractors expected to be more active during most of 1956, but thought that towards the end of this year the level of operations would begin to flatten out, and that during 1957 it would probably start to fall, as the flow of new business booked before the Chancellor's restrictions on investment reached the end of the pipeline. So far, their forecasts have been borne out.

Up to the end of September, 1956 was certainly a year of expansion—perhaps more marked than most contractors expected. The total value of all building work for the nine months reached £1,538 million. This was 12 per cent more than last year; it included a 15 per cent increase in new construction, which totalled £1,068 million, and a 6 per cent increase in repair work. Allowing for the rise in prices—5 per cent so far—the physical expansion for 1956 as a whole will probably be of the order of 6 per cent. Productivity has risen, too, under this stimulus of a marked expansion in activity.

Within these global figures the shift from housing into other forms of social investment and into industrial and commercial building followed expectations. New building for all public authorities rose by only 8 per cent, to £570 million, whereas new work on private account jumped by 24 per cent, to £498 million. Industrial building rose by 32 per cent to £200 million for the nine months (thus broadly confirming the Board of Trade's survey of industry's investment intentions this year); other new building for private owners, excluding housing, rose by 29 per cent to £115 million; and new building in the public sector, again excluding housing, rose by 16 per cent to £327 million. The total number of houses completed by the end of September was 218,500, against 233,300 last year, but the value of this smaller output was about 4 per cent more.

Already, however, signs of slackening can be seen. The physical increase in building output was lower in the third quarter than in the previous six months. The portents are even more noticeable in contractors' shrinking orderbooks. House building has provided more than 40 per cent of the industry's new work, even this year, but the number of houses under construction at the end of September was 282,900, against 296,100 in September, 1955. The number started has fallen more sharply.

Factory building is also showing signs of being cut. The latest figures show a reduction of an eighth in starts, and of a third in Board of Trade approvals. Next year, according to present information about the investment plans of manufacturers, the amount they expect to spend on new building will be 9 per cent less than this year. In general the prospect for 1957 is of a definite slowing down of building operations.



of the refiners are curtailing reforming operations as well to save fuel, and relying on adding more lead to premium grade petrols.

By these means the physical supply of refined products within the Government's rationing pattern may be achieved. But the refiners are far less happy about their economics. Higher crude costs and soaring tanker freight rates will soon be passed on to consumers, and at the restricted level of consumption the customers will be prepared to pay the higher prices. Economy in refinery fuel consumption, and in the use of expensive catalysts, means a reduction in costs. But a high proportion of refinery cost is fixed, and all plants will be running well below capacity. Problems of refinery balance, already serious before the Suez Canal was blocked, will be intensified. When petrol sales fall, as the Government intends them to, more sharply than deliveries of much less profitable fuel oil, refinery revenues will be affected even more than the cut in throughput would suggest.

Hire Purchase Trends

THE Commercial Bank of Scotland, which is the only Joint Stock bank to have acquired subsidiaries in the hire purchase business, shows an increased profit for the year ended October 27th. Net profits are returned at £488,155, compared with £473,315, and Lord Rotherwick, the chairman, tells shareholders that the whole of that increase and more comes from the hire purchase subsidiaries. Moreover, at the balance sheet date the bank's advances to its hire purchase subsidiaries had actually increased from £7 million to £8.8 million. The deposits of private customers in the hire purchase business (represented by the difference between the deposits shown in the statutory balance sheet and those shown in its consolidated balance sheet) however showed a fall from £4.2 million to £2.4 million. At first glance this well maintained supply of bank money for the hire purchase subsidiaries looks strange in relation to present directives. The explanation must lie in the fact that the peak of borrowings from the bank was passed long before the balance sheet date of October 27th and that those borrowings are on the way down.

There is, therefore, not necessarily any conflict between the bank's hire purchase experience and the national figures, even though the Board of Trade shows the nation's hire purchase debt to have shrunk every month this year. At the end of September it was put at "at least £374 million" representing a reduction of about 17 per cent below the estimate of "at least £450 million" at the beginning of the year. That winding down is the inevitable consequence of the fact that old hire purchase debts, on which the amount of borrowing was high, are being repaid and new debts, on which the amount of borrowing per article is low, are taking their place. The rate of unwinding—only about 1 per cent between August and September—is, however, according to Board of Trade figures, now slowing down, while on the retail side of the business the volume of new hire purchase trading seems to have found a level and begun to rise again.

But at that point any similarity between the experience of the household goods shops and that of the Commercial Bank of Scotland ceases. The bank's subsidiaries are engaged in financing an instalment trade in vehicles and machinery, not consumer goods. That trade is not yet obviously expanding again. Competition among the lenders of money is still becoming more acute as money is released by the gradual repayment of old hire purchase debts. Rates offered to depositors have passed their peak; the Commercial Bank of Scotland group is offering 5½ per cent for three months' deposits.

Graphite for Atom Power

THERE has been concern for some time over supplies of high-quality graphite for the atomic power programme. Only one company, British Acheson Electrodes, has so far been able to supply large quantities of graphite to the standard required, although several abortive attempts have been made. It takes 2,000 tons of graphite to cut the 58,000 blocks that fill each reactor shell at Calder Hall, nearly half the weight being lost during the machining of the blocks. The four reactors that make up the Calder Hall installation therefore need between them 8,000 tons of graphite, and the Atomic Energy Authority's other power station at Chapel Cross, another 8,000 tons. On top of this, tonnage of the same order must be found for the Central Electricity Authority's atomic power programme on which building starts in the new year. Some new capacity was therefore badly needed. It will now be supplied by a new graphite factory, estimated to cost £6 million and to have a capacity of 10,000 tons a year, which is to be built by C. A. Parsons and several of the companies working with it on atomic power, and the Great Lakes Carbon Corporation of New York. The American company is one of the world's major suppliers of this quality of graphite. Its know-how will presumably be used to overcome what seem to be the very considerable technical difficulties in producing this essential material.

Advances to State Boards

IN the first four months of the new system of capital financing of the state industries, direct advances from the Exchequer have reached £107.8 million. This compares with the budget estimate of a total of £350 million in the fiscal year. The latest mid-monthly instalment on November 17th, as the table shows, was £26.9 million, against £18.2 million in October; advances to the Electricity

How to beat the peacock!

The peacock expands his plumage just for the glory of it and sometimes to attract the female. Modern advertisers, seeking more than ever in these competitive days to capture the feminine eye, are expanding more and more into the irresistible attractiveness of full-colour advertising.

That the results are giving them something to glory about can be seen from the fact that in Britain's three great colourgravure weeklies—WOMAN, JOHN BULL, AND ILLUSTRATED—ADVERTISERS HAVE, SINCE 1950, INCREASED THEIR USE OF COLOUR ADVERTISING BY OVER 400 PER CENT.!

Full-colour announcements in these outstanding weeklies, which have a combined readership of some 13,500,000 people, are an essential part of every national campaign.

"I ALWAYS FLY WITH MY NEW BRADSHAW"

Bradshaw's new Air Guide now lists flights alphabetically.

It's the air traveller's dream come true! The only easily-understood, quick-reference alphabetical Air Guide published for the European area and main trunk routes. Instead of puzzling your way through indexes and tabular tables you just turn the pages to your departure point, look up your destination beneath it, and you'll find the times of the flights scheduled between the two points. In addition you'll see which Air Lines are concerned, types of aircraft used, fares and any other relevant information. When you are at home, in your office or abroad on a tour, Bradshaw's new Air Guide is an essential part of your equipment.

New alphabetical edition 5/- per month (plus postage).

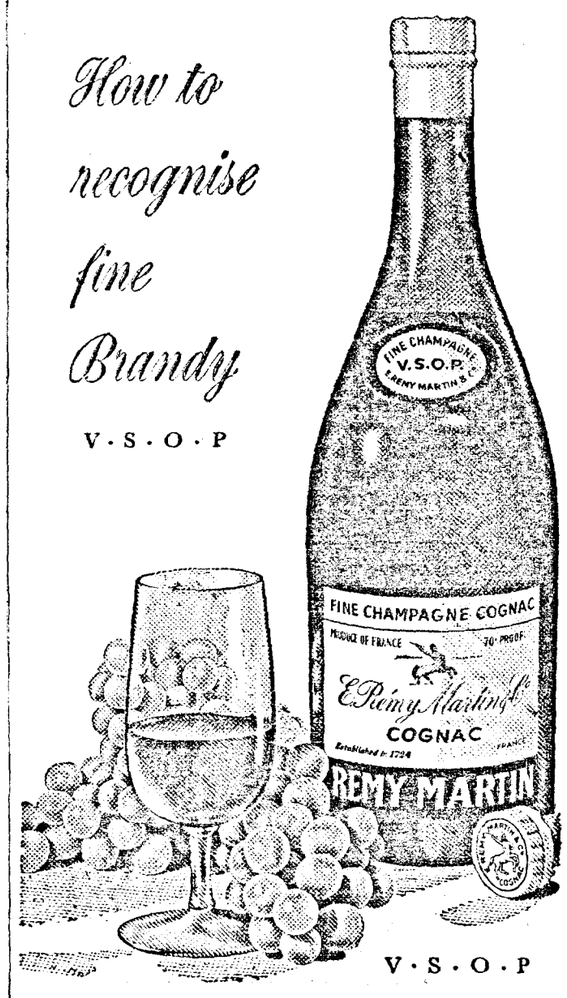
How to recognise fine Brandy

V·S·O·P



V·S·O·P

The finest brandy comes from the Grande and Petite Champagne districts of Cognac. Only Cognac originating from these two areas, at least half of which must be from the Grande Champagne, is entitled by French law to be called Fine Champagne Cognac.

Remy Martin produce Fine Champagne V.S.O.P. Cognac and *nothing less good*. They only offer for sale Brandy which has reached perfection. That is why when you insist on Remy Martin you can be sure of getting a *really fine Cognac*.

REMY MARTIN

Pride of Cognac

Authority were lower than in any of the three previous months, but the Transport Commission apparently took two months' instalments in one (having borrowed nothing in October). These month to month variations, however, are of minor significance for they largely reflect temporary fluctuations in payments and receipts. In this initial phase, a portion of the Exchequer advances is being used to repay overdrafts used to finance the boards' capital outlays. The details of the boards' advances from the banks at the November make-up date will be published with the clearing bank figures next week.

More 6 per cent Mortgages

THE two remaining big building societies that did not announce increased mortgage charges to old borrowers in the summer have now done so. The Abbey National will raise its charge to them from a general rate of 5½ per cent to 6 per cent on March 1, 1957. The Woolwich Equitable Society's rate will also go up to 6 per cent on April 1st, which happens to be half-way through that Society's financial year. Both societies are treating their old borrowers well, the Abbey National carrying the burden of increased share and deposit interest for five months and the Woolwich society for six months before passing it on to old borrowers.

During the period they have certainly been making no margin of profit and probably have been incurring a small loss on that part of their business. At last they have evidently now abandoned hope that dearer money was a transient phenomenon. The recent decision fixing the composite rate of income tax at 5s. 4d. in the £ (compared with 4s. 10d. last year) has no doubt helped to force the societies' hand. Both of them will give the affected borrowers the opportunity of increasing the length of their mortgages instead of increasing their monthly payments.

New Monopolies Commission

WHEN the Monopolies Commission was reconstituted a month ago, in line with the new arrangements made by this year's Restrictive Trade Practices Act, it was left with only one reference to investigate. That was the supply of chemical fertilisers on which work started last year and may not be finished for another year. All other investigations were either completed or were allowed to lapse, since the Restrictive Trade Practices Court and the new Registrar will henceforth be concerned with all restrictive agreements (the first and biggest batch of which will be called up between now and the end of February). The Commission will be left to concentrate its experienced attention upon single-firm monopolies—that is where one firm controls a third or more of the supply of a particular article—upon export agreements, and upon other arrangements "not made subject to registration by the Act." Four references on which work was not very far advanced, including that on common prices and agreed tendering, were therefore dropped. Another five had been completed and now await publication by the President of the Board of Trade—heavy electrical plant, tea, electronic valves and cathode ray tubes, industrial and medical gases, and metal doors and windows. But the report on valves was purely factual; and on none of them will special action be taken about agreements that are subject to registration. These will be left to the Court.

The President has now given the Commission a new membership and three further references—cigarettes and tobacco, cigarette and tobacco machinery, and electrical equipment for motor vehicles, all of which appear to come within the category of "natural" monopolies. Mr R. F. Levy, QC, has been appointed chairman in place of Sir David Cairns. Five of the former sixteen members have been reappointed, and two of the four remaining vacancies have been filled by persons from industry. The Commission now has four members who are or have been in industry, two lawyers, one trade unionist, and an economics professor who has specialised in industrial organisation.

SHORTER NOTES

The British subsidiary that Du Pont set up in April has taken options on a 381-acre site near Londonderry for the purpose of erecting a synthetic rubber plant to make Neoprene, Du Pont's specialised synthetic. It plans to begin construction there in early 1957; and the Mayor of Londonderry has further stated that the plant, when it begins production in mid-1959, should employ 350-400 men. This plant, which will draw electricity and process steam from a new power station close to Lough Foyle, is Du Pont's first manufacturing unit in Europe.

★

A constructive proposal to counteract the dangers of non-voting shares came on Tuesday from the President of the Chartered Institute of Secretaries, Brigadier Kenneth Hargreaves. It is at present a Stock Exchange condition for the granting of a quotation, that "adequate voting rights are in appropriate circumstances secured to preference shareholders." Brigadier Hargreaves would like the Stock Exchange to make that read "*preference and ordinary* shareholders."

★

The visit to India of a delegation from the Lancashire cotton textile industry has been postponed by mutual agreement until mid-January. The delegation will try to persuade India to accept some voluntary limitation on its exports of cotton cloth to Britain. It will probably call on the Hongkong industry afterwards for the same purpose.

★

The price of crushing boart, an industrial diamond used mainly in polishing and grinding tools, has been raised by 1s. 6d. to 18s. 3d. a carat from December 1st. This is announced by Industrial Distributors (Sales), Limited, which is part of the Central Selling Organisation. For some time crushing boart has been fetching well over £1 a carat in the free market.

Looking at the Motor Results

IN reading the accounts of the motor companies and the manufacturers of accessories for that industry, shareholders must not forget they relate to a year that ended about three months ago; it was therefore a year containing five or six months free from the troubles which began to beset the industry in February and which beset it still.

The chairmen of the companies comment on past "difficulties"—the favourite word in this year's accounts—with the same voice and with the same inclination to put some of the blame on the Government. The points they make are familiar: import restrictions in Australasia, the credit squeeze, hire-purchase restrictions, the increase in purchase tax, the increase in overhead costs coming on top of the increase of operating costs and now petrol rationing. Profits almost throughout the industry have fallen, though not uniformly. Standard Motor Company was particularly badly hit by the labour disputes and by the introduction of a new tractor; Rover alone has been able to report an increase in profits as well as sales, thanks perhaps to the Land Rover. The two big accessory makers for the industry, Joseph Lucas and S. Smith and Sons, admit to making a loss on their production for the motor industry in the last months of the financial year, though both have done rather better on their sales to the heavy vehicle and aircraft industries. British Motor Corporation has reported a sharp drop in profits, but its output went up by about 5 per cent, the number of vehicles produced rising from 418,705 to 439,558 (of which 187,146 were exported).

Most of the companies ended their financial years with far less in liquid resources than they had a year earlier, because their stocks have been rising and because some of them were re-tooling for new models and going ahead with expansion programmes. BMC, for instance, spent £9,157,000 on capital account in 1955-56 and there is a further commitment of £6,820,000.

All this was expected, but one mystery is left unsolved. This is the identity of the buyer of Standard Motor shares. Lord Tedder, the chairman of the company, has been told in confidence who he is. He describes him as "friendly" and as not likely "to interfere with the plans to continue aggressively in the car and tractor business." The board of directors has therefore withdrawn its support for the move by some shareholders to obtain a Board of Trade inquiry into the buyer's identity.

As to the future, the spokesmen of the industry content themselves with generalities about continuing difficulties. All the boards have gone cautiously on dividend payments. Investors may perhaps assume that the words of the chairman of Rover, who says that though the dividend has been maintained this year trading prospects are much less favourable have a general application.

But the chairmen of these companies have not lost faith in the long-term growth potentialities of the industry. This view is put most clearly by Sir Leonard Lord, of British Motor: "With the present political and economic uncertainties, it is neither easy nor wise to predict the course of events or our place in them. Selling is again subject to seasonal demand, upon which are superimposed Government restrictions aimed at reducing home consumption. In these circumstances, we may ask whether we have been wise in embarking on a programme of future development. . . . Even though for the time being we are prevented from making the fullest use of these improved production facilities, I have no doubt as to the wisdom of the policy of providing them. . . . All previous advances in productive capacity have been quickly justified. The world is still hungry for motor vehicles and what we are now spending can be considered as a premium necessary to insure the future."

Company Notes

GREAT UNIVERSAL STORES. The directors of GUS have left the interim ordinary dividend unchanged at 15 per cent; in 1955-56 it was followed by a final of 47½ per cent, making 62½ per cent in all. The group's turnover in the six months to September 30th established yet another new record, even when the sales of newly acquired subsidiaries are excluded. Gross profits in this period came to £10,153,000, compared with £10,022,000 for the same period last year, but they include £233,000 (against £247,000) of profits earned by new subsidiaries. If these profits are excluded and account is taken of the time-lag element in profits on hire-purchase contracts, it becomes clear that the expansion in profits, which has been slowing down, has been halted and that the group's profits margins are lower. But there has been no severe setback and in difficult markets the group has again put up a sturdy performance.

BRITISH CELANESE. Throgmorton Street, beset by its own troubles, could draw no shred of comfort from British Celanese's interim statement for the six months to September 30th. The half-year's profits have tumbled from £1,136,000 to £685,000 and the interim ordinary dividend has been halved, from 3 to 1½ per cent. Since the announcement the £1 stock units have fallen from 14s. 6d. to 13s. 4½d.

The directors' comment on these results reads like a continuation of the story unfolded in the 1955-56 accounts, when the total dividend was cut from 10 to 8 per cent. They say: "Competition both at home and abroad continues to prevent the company from obtaining higher prices for its products and this, combined with higher costs and a slightly lower volume of sales, has resulted in this fall in the group profit. The results of the current quarter are showing a little improvement, but the amount of the final dividend will depend upon the results for the year when they are reviewed next June together with the general conditions existing at that time." The directors of Courtaulds made a similar statement when they announced an unchanged interim dividend. But British Celanese seems to be one of those most badly hit in the rayon industry.

★

BIRMINGHAM SMALL ARMS. So much has happened to BSA this year that none of the salient points in the report and accounts can have come as a surprise. It became abundantly clear during the dispute which ran from the dismissal of Sir Bernard Docker in May until the decision of shareholders in August not to reinstate him, that the motor car section of the group was doing badly. It was equally obvious that pruning and reorganising would be needed before shareholders could harvest the full crop from the productive branches of the business, the tools, the steel, the heavy engineering and the motor cyles. That is why Lazard Brothers and Deloitte, Plender, Griffiths & Co. were appointed to examine and advise.

The group trading profit for the year ended July 31st of £1.6 million, compared with £2.9 million, the net profit after tax of £770,000, against £1.5 million, the year's dividend of 8 per cent, against 10 per cent, and the fact that the motor car companies of the group sustained heavy losses have all already been announced. Shareholders will study the report mainly for signs that their new chairman, Mr J. Y. Sangster, is getting on with reorganisation. The sale of the earth moving equipment business of the Birtley Engineering company is one step that he has announced; the full accounts give the satisfactory information that that sale yielded a substantial profit over book values. Indeed, the profit on realisation of fixed assets amounted to £239,236, against £9,571 (and formed a not inconsiderable part of the year's earnings). The surrender of the licence from the Caterpillar Tractor Company (which formed part of that transaction) also brought in an addition to capital reserve of £125,000. The directors also record that they have abandoned the project of producing a medium-sized motor car and suspended plans to produce a 200 cc motor scooter. Obviously, much still remains to be done. The directors some time or other must take a decision on the future of the Daimler car and some time or other they must reinforce the group's cash, for the cash balance of £1 million in July, 1955, had turned into a bank overdraft of £2.6 million in July, 1956. Shareholders will hope the statement on the progress of the inquiry into structure and organisation, promised by the chairman for the annual meeting will answer some of these questions.

★

TATE AND LYLE. Although the value of Tate and Lyle's sales rose from £126,724,000 to £127,994,000 in the year to September 30th it sold in volume less refined sugar than in 1954-55. The decline in refined sugar sales occurred in export markets, where they dropped from 630,359 tons to 552,437 tons. The increase in sales to the home market, from 1,421,557 tons to 1,455,860 tons, was not sufficient to make good this loss of exports.

Profits after depreciation but before tax fell from £4,695,597 to £4,451,617. The company had no difficulty in maintaining the ordinary dividend at 16⅔ per cent and £925,000 (against £1,450,000) was ploughed back into the business. Until the full accounts are published it is difficult to guess at what has happened to the already small margins on refined sugar. Operating costs, as in every other industry, have undoubtedly risen but new equipment may have increased productivity. The company may, too, have benefited from the activities of its associated companies, especially those with sugar refineries abroad and those engaged in transport.

LONDON STOCK EXCHANGE

Next Account begins: December 12th
Next Contango Day: December 12th
Next Settlement Day: December 4th

GILT-EDGED stocks weakened again this week after recovering at the close of last week, but this time losses exceeded the gains and the *Financial Times* index of Government securities fell on Wednesday to its lowest point recorded at 82.57. Industrial stocks were again lower; *The Economist* indicator fell to 170.0. The heaviest falls occurred on Wednesday when British Aluminium lost 2s. 9d. to 58s. 3d., Metal Box 1s. 3d. to 44s. 3d., AEI 1s. to 58s. 9d. xd and ICI 9d. to 36s. 10½d. The general weakness of the market persisted on Thursday.

Brewery shares were affected by disappointing results; Ansells dropped 2s. 9d. to 49s. 3d. on the lower profits and Benskin's fell 3s. 7½d. to 44s. 3d. xd. But Leeds & Wakefield rose 2s. to 40s. xd. following the higher payment. Electrical stocks were firmer on balance, C. A. Parsons and A. Reyrolle recovering some of the ground lost on the announcement of the rights issues. Stores were weak; Marks & Spencer and Woolworth were both at their lowest points for the year. English Sewing Cotton were bought this week and gained 1s. 3d. to 28s. 4½d. and Horrockses 3s. to 28s. xd. Ford Motor and Rover declined further to 27s. and 11s. 10½d. respectively. Allied Bakeries "A" rose 3s. during the week to 48s. 6d. and Rio Flour 1s. 9d. to 33s. 6d. Steels fell further on balance this week; John Summers dropped to 30s., but Dorman Long recovered to 24s. after touching 22s. 9d. Turner & Newall weakened 2s. 7½d. to 92s. 9d. Unilever NV lost 4s. 3d. to 82s. on Wednesday. Calor Gas and Pyrene fell after the announcement of rights issues.

Oils declined again and were particularly weak on Thursday and gold mines were weak until Wednesday; both Free State Geduld and President Brand fell 3s. 9d. to 72s. 6d. and 52s. 6d. respectively. Rhodesian Anglo-American lost 6s. 10½d. to 94s. 4½d. Teas showed considerable gains and rubbers were steady.

(†) The Alexandria spot quotations for Karnak and Ashmouni cotton have been replaced by the current month futures quotation at Alexandria. (‡) Figures up to July, 1953, relate to delivered prices and subsequently to ex-warehouse prices of H.C. electrolytic copper; from May, 1955, onwards the proportion of copper sold at fixed prices has been taken into account. (§) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (*) New series based on January 31, 1956 = 100. (†) Surveys made twice a year; annual figures relate to October survey. (*) Revised series based on Liverpool spot market prices, as from July 1, 1954. (†) Revised figures for October 30th: food 93·7; fibres 85·7. (*) Latest figures which are for April 1956.

THE MONEY MARKET

THE discount houses changed their bid for 91-day maturities for the first time for six weeks at the Treasury bill tender on Friday last: they cut their bid by 1d., to £98 14s. 11d. per cent. They made no change in their bid for the 63-day bills. The offer of three months maturities last week was up by £20 million to £210 million, but total applications rose by £54·9 million, to £354.6 million, so that the market's allotment rate fell from 39 to 30 per cent. The average rate of discount rose from just £5 to £5 os. 3·34d. per cent. The rate on the total allotment of 63-day bills (down £10 million to £80 million) rose by ¼d. to £5 os. 10.83d. per cent.

In Lombard Street the authorities have maintained a firm hold on the market. On Thursday before the week-end no help was given, and four or five houses had to take small loans at Bank rate. Modest official help was given on Friday and on Saturday morning. Thereafter the stringency abated somewhat.

Notwithstanding the continued weakness of sterling, the price of gold in London has fallen. On Tuesday it dropped to 250s. 8¼d. an ounce, marking a fall of 5d. in ten days. This reflects the further fall in the dollar price of gold to $34.87 an ounce.

The US Treasury Bill rate this week rose from 3.043 per cent to the new peak of 3.174 per cent.

AFTER ALL—INDIVIDUAL PENSIONS NEED INDIVIDUAL ADVICE

What is best for one man may not be best for another. When I rang the Prudential's local office for their booklet on pensions for the self-employed and others like ourselves, I understood that much depended on one's tax position. Since then I've talked it over with one of their representatives and I'm very glad I did.

I suggest you do as I've done—

ASK THE MAN FROM THE PRUDENTIAL

THE

Mercantile Bank of India Ltd

For many years The Mercantile Bank of India has been intimately associated with the principal trading centres of the East and can supply to all interested exporters and merchants on-the-spot information relative to the state of markets, agency representation, financial and currency exchange problems.

COMPANY MEETINGS

THE COMMERCIAL BANK OF SCOTLAND LIMITED

IMPROVED GROUP PROFIT

EFFECTS OF RESTRAINT AND RESTRICTION

LORD ROTHERWICK ON THE POSITION

The Annual General Meeting of Shareholders of the Bank will be held in the North British Station Hotel, Edinburgh, on Thursday, December 20, 1956, at 12 noon.

The following is the Statement by the Governor, Lord Rotherwick of Tylney, which has been circulated to Shareholders with the Report and Accounts for the year ended October 27, 1956:

When I circulated my Statement to Shareholders in November, 1955, our thoughts were mainly concentrated on the problems associated with our domestic economy. While these problems are still facing us, and are much in our minds, the international events of recent months have been of such importance to all of us that we are today thinking more in terms of maps than of money. The major political issues arising in the Middle East and elsewhere have not yet had serious repercussions on our economy at home, but it is not difficult to visualise the consequences of any prolonged interruption of the flow of oil from the Middle East. Serious economic difficulties could develop rapidly and change materially the financial and monetary climate in which we have been living for the past eighteen months. It follows therefore that my remarks to you on Banking topics should be essentially historical in character.

BATTLE AGAINST INFLATION

The official policy of credit restraint has continued unabated during the past year and was fortified by a further increase in Bank Rate in February last from 4½ per cent to 5½ per cent. In the battle against inflation the Government relies heavily on the effectiveness of a monetary policy involving high interest rates—to encourage saving and to discourage borrowing—associated with a positive control of Bank lending and heavy restrictions on hire purchase trading. Such a policy cannot but have some deflationary influence since it is a deterring factor both to consumption and to industrial investment. It is not, however, easy to measure its influence since there are varying degrees of time lags. On the consumption side the effect should be fairly rapid since a variation in consumer demand is quickly transferred back to the sources of production, but on the investment side decisions made today may not be translated into capital expenditure for a year or more. The evidence to date of the effect of the monetary policy is somewhat disappointing when related to consumer goods. It would seem that the hire purchase restrictions have so far had a greater influence than the purely monetary restraints. However, since one of the ends of official policy is to reduce consumer demand, the means by which such reduction is achieved is of secondary importance. In the investment field monetary policy does seem to be having a considerable effect although its action is necessarily delayed.

DEFERMENT OF CAPITAL ENTERPRISES

As Bankers we have had, with great regret, to decline the vast majority of requests for a measure of financial support for capital enterprises, and we know that many of our customers have deferred such projects without even troubling to get our negative response. Before long the cumulative effect of such decisions will slow down the rate of investment expressed in terms of immediate demand for materials and labour. It is widely recognised that a slowing down of such investment must in the long run damage our economy and I am sure that our financial controllers must now be considering seriously the impact which monetary policy has already had on this section of our economic activities.

I would now like to tell you how the Bank has fared during the past year in this atmosphere of restraint and restriction. We have suffered from the policy of dearer money. Since I last addressed you we have raised the rates of interest allowed to depositors by 1 per cent, and increased our lending rates by an equivalent percentage. In view of the fact that our interest-bearing deposits are greater in amount than our advances, our profits suffer from such an adjustment. Moreover, our administrative costs continue to rise. Had we been allowed to increase our advances we might have restored the earnings balance but because of credit restraint we could not do so, and in consequence our Banking Profits have fallen.

SUBSIDIARIES' SUCCESS

Although there is a reduction in our Banking Profits I am glad to be able to report to Shareholders that, thanks to our subsidiary companies, we show as a group an improvement in total profit. Our subsidiary companies have had an active and successful year despite the many difficulties which they have had to face in the instalment finance field. As you probably know, the hire purchase regulations affecting vehicles and plant —our subsidiaries' main activities—have become progressively more stringent, and the total business done throughout the country has diminished as the authorities desired. I am glad to say that we have fully maintained our share of the total volume of business, and we hope to continue to develop this form of finance to industry. We are sure that there is increasing scope for new methods and applications of short-term lending to the business community.

DECREASE IN DEPOSITS

May I now more particularly refer to the Annual Accounts which accompany this Statement.

The Bank's Balance Sheet shows that our Deposits have fallen by some £4 million to £117 million. Once again this is due in some measure to the high rates of interest available on Treasury Bills and on Tax Reserve Certificates, and offered by Local Authorities for short money. We also know that some of our smaller depositors have transferred their funds to obtain the benefit of the tax-free interest available through Post Office Savings Accounts and Trustee Savings Banks. It is extremely difficult to understand the reasons behind the Government policy of discrimination against the Joint Stock Banks. The Savings Accounts—in Scottish Banks particularly—have long featured prominently in our affairs and we have encouraged our customers to use these facilities for saving against the rainy day. Suddenly, by law, we are placed at a disadvantage.

You will see that our Notes in Circulation have risen by fully £1 million to over £19 million. This increase is in keeping with the national trend of money in circulation and is a concomitant of the inflation problem.

LIQUIDITY RATIO

In each of the two previous Balance Sheets we have shown an unusually high liquidity ratio of 40 per cent. This year the ratio is approximately 38 per cent, which we regard as fully adequate. By this slight reduction in liquidity we have avoided the sale of any material amount of Government Investments, which remain at a Book Value of some £50 million. The Market Value of these investments is noted in the Accounts at approximately £46 million. The gap between Book Value and Market Value has widened during the year by £429,000 due to a further fall in the Gilt-Edged Market prices. As I said a year ago, these investments are all redeemable at par at fixed dates—and the majority are redeemable within five years. Having regard to our liquid position and to the early redemption dates of our shortest investments we have again not thought it necessary to make any transfers from reserves or contingency accounts.

ADVANCES

The Consolidated Balance Sheet shows that our Advances to the Bank's customers have fallen by almost £2 million to £33.7 million. This is the second successive year of the downward trend and follows the pattern established by the official policy of credit restraint.

The amounts advanced by our subsidiary companies on hire purchase contracts have increased by £1.8 million. The whole of this increase was attained before the days of the now statutory deposit of 50 per cent on vehicles and plant. You will appreciate that the high deposit now required before business can be done means that less money is advanced than formerly in each case, and so the trend of hire purchase advances is downwards. Consequently, the profit on each transaction is reduced, but the cumulative effect is deferred because the profit is spread over the period of the hire purchase contract, which normally is two years.

PROFIT AND DIVIDEND

I have already referred in general terms to the profit outcome of the year. The Consolidated Profit and Loss Account shows a Net Profit, after tax, of £488,155, which is an increase of £14,840 over the previous year. Out of this Profit, the Directors have again

appropriated £100,000 to Contingency Account, and £100,000 to the Pension Fund. They have also continued their support to the Widows Fund to the extent of £10,000. The Directors recommend that the final dividend to "A" Shareholders should be continued at 6 per cent (making 11 per cent for the year). The final dividend on the "B" Shares is at the rate of 5 per cent (making 10 per cent for the year). If these recommendations are approved, the Carry Forward on the Consolidated Profit and Loss Account will be increased from £112,243 to £140,273.

INVESTMENT SERVICE

Before concluding my Statement, I should like to make reference to one or two other matters which I am sure will be of interest to Shareholders. We have for some time felt that the services we offer to our customers and to the public might usefully be extended in the Investment field. As you know, we have hitherto been willing to look after the physical side of our customers' investments. We act as custodians and we are prepared to register investments in the names of our nominee companies. We deal with the documentary side of investment changes and we collect dividends. We have not, hitherto, considered ourselves equipped to offer the additional service of managing portfolios of investments on behalf of our customers. Such a service necessarily demands expert knowledge and supervision and within recent months we have appointed an Investment Manager who has had considerable experience in this highly specialised work. We now feel confident in offering an investment service, which includes portfolio management. We hope that this will be of value to those who personally have invested funds and also to Trustees of Charitable or Pension funds who may welcome the advice and guidance obtainable from our Investment department.

INTERNATIONAL ACTIVITIES

I should also like to say a word about our international banking activities. We are firmly convinced that we must play a full part —having due regard to our size—in the international sphere—particularly on behalf of our customers who operate in Export Markets, and also on behalf of our foreign banking correspondents for their own and their customers' needs. The extent of our activities in this specialised field is shown in part by the volume of transactions in foreign currencies to which reference is made in Note 5 on page 6 of the Accounts. In the past year our General Manager and Overseas Manager visited Canada and the United States to meet their opposite numbers in banking circles in these countries. The Managing Director of our subsidiary companies also visited the United States and attended an Industrial Bankers' Convention. We know that these visits helped to cement the relationships which we have in North American banking and business circles.

TRIBUTE TO STAFF

The past year has not been an easy one for our officials and managers. It is difficult to manage a business effectively in a climate of restriction and restraint associated with rules and regulations designed to limit the natural and profitable flow of activities. On your behalf, as Shareholders, I thank everyone in the service of the Bank for another year of loyal and energetic support.

It is proposed that I be re-elected Governor; that Lord Saltoun be re-elected Deputy Governor, and that the Extraordinary Directors, whose names appear on the List, be re-elected.

Mr Robert Yaxley Weir, the Ordinary Director who by rotation retires at this time, was 71 years of age this year. Special Notice of the intention to propose his re-election has been received by the Bank and a Resolution to that effect will be put to you.

During the year the Board nominated Mr James Gilchrist, Shipbuilder, Glasgow, as an Ordinary Director, and his advice and guidance have already been of value to his colleagues. His appointment falls to be confirmed by the Shareholders.

Mr Maurice Crichton, CA, Glasgow, and Mr Ronald J. Henderson, CA, Edinburgh, will, under the provisions of the Companies Act 1948, continue in office, and a Resolution will be proposed fixing their remuneration.

THE ROVER COMPANY

RECORD LEVEL OF EXPORT SALES

The sixty-first annual general meeting of The Rover Company Limited will be held on December 18th in Birmingham.

The following is an extract from the circulated statement of the Chairman, Mr H. Howe Graham, FCA:

The accounts cover one of the most difficult post-war years; a period of rising costs, increasing competition abroad and restrictions at home. Nevertheless, not only were our vehicle sales for the year slightly greater than last year, but we exported more vehicles than in any previous year and in the light of all the circumstances the results disclosed by these Accounts can be considered highly satisfactory.

For many years over fifty per cent of our vehicles have been exported and if we are to continue to export on this scale arrangements have to be made in many countries for local manufacture, either for economic reasons or because regulations make it necessary. Altogether arrangements have now been made in seven overseas countries for the assembly or manufacture of our vehicles.

At home our Cars and Land-Rovers enjoy a higher reputation than at any time in the Company's history.

At the recent International Motor Show at Earls Court we were proud to exhibit our latest Gas Turbine Car. We were the first Company in the world to make a Gas Turbine Motor Car, which was announced in March, 1950. Much development still remains to be done. Nevertheless, we thought it right to show what progress we have made and demonstrate that the British Motor Industry is still ahead in this field.

We also exhibited our new 105.S and 105.R Rover Car Models, the latter fitted with fully automatic transmission incorporating a torque converter of our own design and manufacture.

The various models of the Land-Rover continue to enjoy well-deserved popularity.

Times immediately ahead are going to be difficult. We, in common with the rest of the Industry, are meeting with increasing competition and restrictions abroad, and at the same time are faced with further wage demands at home which will make the task of selling to overseas markets more difficult.

The Surplus on Trading and Management Fees, together with Interest on Investments and Bank Interest, total £2,643,504. Taxation this year amounts to £1,244,824 and the consolidated profit after deducting Tax is £759,320. Your Directors are recommending a dividend of 22½ per cent, less tax.

REGIS PROPERTY COMPANY, LIMITED

LORD KENNET ON RENTS

The eighteenth annual general meeting of the Regis Property Company, Limited, was held on November 27th in London, the Right Honourable Lord Kennet of the Dene, PC, GBE, DSO, chairman, presiding.

The following is an extract from his circulated statement for the year to June 30, 1956:

Excess of rents over outgoings and other profits, after taking into account heavy increases in the cost of maintenance and heating, has risen from last year's figure of £465,915 to £470,323. The net profit of the Group for the year, after tax, is £107,879, as compared with £93,622 last year.

The directors have decided to transfer £50,000 to a Repairs and Renewals Reserve. The properties are in good condition, but the transfer of £50,000 to a repairs reserve would protect us in the future against the position that might arise out of any further amendments to the Rent Restriction Acts which might necessitate special expenditure in order to acquire additional revenue.

We are still facing increasing costs of maintenance and finance, but our main preoccupation is the heavy impact of taxation on companies such as ours. Increased profits taxes make a heavy drain on our resources and it will not have escaped the attention of our shareholders that the company which follows the ordinarily observed and prudent rule of providing sufficient equity capital is at a grave financial disadvantage as compared with the company which finances its business by means of loans. It should be the business of every sound company to reduce its borrowings by way of loan to a minimum by the issue of equity capital, but the company that does so is at once subject to both Income Tax and Profits Tax on the amount saved on the interest payable on loans.

PROJECTED LEGISLATION

Property owners' hopes are centred at the moment on the Government's intentions in regard to rent restriction legislation. During and since the war companies owning flat properties and hereditaments of a similar nature have, in fact, been subsidising other interests through the restrictive legislation limiting landlords' charges for flats and other residential property. A year or so ago an attempt was made by the present Government to give some relief to landlords but to a large extent this has proved to be illusory as rising costs have rapidly eaten into such increases as were permitted under the Act.

In other words, property owners are by no means obtaining today the net revenue from their properties which they had in 1939, and when it is considered that the intention of the legislation passed during the last war was to leave the tenant in the same position as he was at the commencement of the war, the obvious corollary that the landlord should be in the same position has been completely avoided by that and subsequent legislation. There is an overwhelming case for an adjustment of rent, but this is forgotten in the anxiety to avoid contentious legislation.

Despite the handicap imposed on us by rent restriction legislation and increasing costs of upkeep and by the heavy burden of taxation, we look to the future with confidence.

The report was adopted and the proposed final dividend of 9 per cent, making 12 per cent, less tax, for the year, was approved.

FOLLAND AIRCRAFT LIMITED

SUBSTANTIALLY INCREASED TURNOVER AT LOWER PROFIT MARGINS

IMPORTANT FOREIGN CONTRACTS

MR C. L. HILL ON CAPITAL REQUIREMENTS

The Twenty-first Annual General Meeting of Folland Aircraft Limited was held on November 28th at Hamble, Southampton. Mr C. L. Hill, the chairman, presided.

The following is an extract from his address, which had been circulated with the directors' report and accounts for the year ended June 30, 1956:

The year under review is quite likely to prove a turning point in the affairs of your company, for since the date of my last report we have signed our first contract with a foreign Government for the supply of a product of our own design.

During the year we made quite a lot of progress with the order for the Ministry of Supply for the six Gnat Mark I aircraft for development purposes. Negotiations with the Indian Government for the supply of Gnat Mark I aircraft have also continued throughout the year both in India and in England and culminated in the signing of a contract for 25 aircraft to be constructed at Hamble, together with a substantial volume of spares; there is a further contract for the supply of 15 sets of components at various stages of manufacture for assembly into aircraft in their Hindustan Aircraft Factory at Bangalore, India. In addition, an agreement was signed with the Indian Government licensing it to manufacture in India the Gnat and its various derivatives for a period of 10 years. The value of these contracts is initially not far short of £3 million, but substantially increased orders should derive from the production of spares for the Indian Government and for the provision of parts and components to enable the Indian Government to manufacture its own Gnats in India. The negotiations for these contracts had been continuing for more than 18 months and had proved very complex, but the significant thing is that eventually the Indian Government decided to re-equip its Air Force and launch its industry in production of the light fighter, thus placing its faith in a concept which your company has been pioneering for several years. I think this is a fitting moment to record our thanks to quite a number of component suppliers who have shown their faith in our efforts over the last few years by designing and supplying equipment, often at a fraction of the true cost. We are delighted that their confidence is now being justified by events.

WIDESPREAD INTEREST IN THE GNAT

In addition, widespread interest in the Gnat is now being evinced by other foreign Governments and it is very likely that before the Annual General Meeting of this company takes place we shall be in a position to announce at least one further contract. We are building up our sales organisation and have already many good friends acting as our agents in overseas territories, while others are still being appointed.

PROPOSED SHARE ISSUES

It will be realised that the signature of the Indian contracts and other contracts for the manufacture of the Gnat will necessitate a complete review of the company's capital requirements in view of the production expansion involved. As you know from previous reports, the company has been turning over something like £2½ million per annum on an issued nominal capital of £500,000, although of course this has been very substantially increased by ploughing back profits and borrowing on a considerable scale from the Bank. Even so, the ability to finance the present output has only been possible because our main contractors supplied us with materials, free of cost, for their contracts. We will have to purchase our own materials, components, equipment, etc., for these new Gnat contracts and also lock up money in these projects for much longer periods. This will necessitate the raising of further capital. Your directors propose to make a "rights issue" to shareholders of 500,000 10s. shares at a price which has still to be finally settled. It is also intended to offer 50,000 shares to our employees at the same price. These issues will slightly exceed the unissued capital at present available—namely, £250,000—and resolutions will accordingly be submitted to an Extraordinary General Meeting, to be held immediately after the Annual General Meeting, for the purpose of increasing the authorised share capital from £750,000 to £1 million.

CONTRACTS WITH BRITISH GOVERNMENT

In addition to orders for our own product our contracts with the British Government for the development of ejection seats, trials and rockets still continue, in addition to which we still have orders of magnitude from the de Havilland Aircraft Company Limited, on the Sea Venom and DH.110 Naval Fighter; from Bristol Aircraft Limited for components for the Britannia, and from Hawker Aircraft Limited for Hunter tailplanes. Some of these sub-contracts are now substantially completed, however, and the capacity which has been thrown up will be absorbed on what we believe will be an ever-increasing Gnat production programme, in addition to which we are still seeking a certain amount of sub-contract work.

TURNOVER

The turnover figure for the year under review, £2,915,488, exceeded last year's figure by £350,000 and was also more than £100,000 in excess of the budgeted figure. Unfortunately, the cost of production of this output rose somewhat out of proportion to preceding years and the margin of profit was therefore decreased. It must be remembered, too, that very considerable expenditure was written off on Gnat development and on the manufacture of Gnat production tools during the year under review, these costs to a very substantial extent being offset by the proceeds of the insurance claim on the loss of the Midge aircraft.

PERSONNEL

During the year the personnel employed by the company fell from 2,850 to 2,660. A reduction in the numbers of productive workers was necessarily matched by a corresponding adjustment to those of non-productive workers employed but the whole trend reflects the difficulty of holding together a labour force in the present-day position of rather smallish orders for large aircraft structures which are ever increasing in complexity. The directors are also greatly worried at the tendency for highly trained technical personnel to emigrate, particularly to North America, which is being experienced throughout the British aircraft industry. We believe this arises as a result of the crippling rate of taxation in this country and also because of an aircraft development policy which is often unrealistic, resulting in disappointment and discouragement in those engaged in carrying it out. In this respect we believe our Gnat aircraft development has been very much on the right lines and generally, our staff have stuck by us manfully, but nevertheless we do suffer from this emigration. In the struggle for the aircraft markets of the world Britain starts with the disadvantage, compared to the United States, of relatively small size. Proportionately we have much smaller staffs, we have a smaller technological training capacity and much more limited resources which can be applied to aircraft research and development work. Britain cannot afford, in addition, the gradual drift of technical ability to Canada and the United States.

The percentage of employees engaged directly on production remains about 47.4 per cent, which is a small fall compared with last year, but I warned you the percentage of workers engaged directly on production would fall because of the expansion of certain technical and flying facilities and capacity.

ACCOUNTS

The turnover figure is substantially up again this year, but the profit earned before taxation has fallen from £200,091 to £183,599 and it must be borne in mind that this includes the proceeds of the insurance claim on the loss of the Midge, of £97,859, so that the true earned profit for the year before taxation is £85,740, or 2.94 per cent on turnover, compared with 7.83 per cent last year. The taxation provision is £99,771, against £102,058 last year, leaving a net figure of £83,828, or 2.88 per cent of turnover. The board has made an appropriation of £50,000 to the general reserve and recommends a final dividend of 5 per cent for the year making a total of 10 per cent in all. The dividends for the year absorb £28,750, leaving £42,175 to be carried forward to next year. Your board realise that the net earnings for this year would have permitted the payment of the same dividends as for the last year of 12½ per cent, but we are entering a period of prolonged and intense development, during which the activities of the company will be substantially re-directed from work of a repetitive and profitable nature of a kind no longer available, to the establishment of the company's product entailing high development and substantial tooling costs and probably resulting in more attenuated profit margins. This, coupled with the fact that we shall be seeking increased capital, has led us to recommend that the final dividend this year should be reduced so as to give us a figure of 10 per cent for the year.

The report and accounts were adopted, and at the subsequent Extraordinary General Meeting the increase of capital was approved.

THE NATIONAL BANK OF AUSTRALASIA

(Incorporated in Victoria)

LIQUID POSITION FURTHER STRENGTHENED

VITAL NEED FOR FREE ENTERPRISE

The ordinary general meeting of The National Bank of Australasia, Limited (with which is united The Queensland National Bank, Limited) was held on November 28th at Melbourne.

Mr H. D. Giddy (the chairman), in the course of his address, said:

In round figures, total assets, at £287 million, are £3 million higher than last year, an increase of £6 million in deposits being offset by a decrease of £3 million in the contingent item.

Despite a rather difficult banking period, the liquid position of our Bank has improved. Liquid assets increased by more than £10 million, mainly as the result of the rise of £6 million in the deposit item and a decline of just over £4,500,000 in advances.

To meet the continued demand for banking services, 26 new branches and 44 receiving offices were opened during the last twelve months, bringing the total of points of representation at September 30, 1956, to 832 in Australia and three in London.

The Olympic Games being in progress here, and with His Royal Highness the Duke of Edinburgh visiting our country, we are meeting on a unique occasion. These Games should help to widen knowledge of Australia in overseas countries and, we hope, stimulate further interest in us and our way of life.

RESTRICTION OF FREEDOM AND ENTERPRISE

As Australians, we are often regarded as being excessively individualistic. This quality is part of our heritage as a freedom-loving people accustomed to democratic institutions, and may be due to the fact that, for the most part, we are an outdoor people. It is true that we conduct much of our affairs with a strong flavour of individualism; our politics, our sport, our internal arguments—even, so others say, our behaviour in war. In those fields there must not be any weakening of that spirit, because teamwork based on personal understanding between team members and captains is far superior to the submissive acquiescence in dictation.

In the other major sphere, our economic life, can we say honestly that there has not been some weakening of that spirit?

There is today not only government enterprise on a widespread scale, but also a massive paraphernalia of legislation, emanating from the Federal and six State Governments, which at just about every conceivable level ordains what individual business enterprise may and may not do. From determining just what, how and when the small shopkeeper or individual producer may sell or produce, there tower legislative controls comprising import restrictions, price controls, bank credit control, foreign exchange control, interest rate control, wage determination, and government-sponsored marketing regulation. To these must be added the sweeping influence of heavy taxation. Possibly this is the most potent and far-reaching factor in the constant undermining of individual enterprise, competition, and the essential incentives and rewards.

VIRTUES OF THE FREE MARKET

After commenting on the high level of public authority expenditure in Australia and in the United Kingdom, compared with that ruling in the United States and Canada, Mr Giddy said: The proportions mean in plain language that the American and Canadian free markets are much wider and far less obstructed than ours or the British.

It would be ridiculous, of course, to think or to advocate that all our government enterprise should cease and that all governmental intervention in our economic affairs should be eliminated. In the case of our country, however, it is both fundamental and practical for us to ask how far government intervention can go without further weakening, or perhaps crippling, individual incentive. And to this, I submit, an answer must be found, for we have been proceeding for many years as if the issue were not of real consequence.

Remembering that Australia is still a young nation with definite prospects of great growth and development over future years, it is as well to consider what the advantages of a free market are to us. No other economic system has yet been practised, nor is one known in theory, which can compare successfully with an unfettered price market in the speedy and efficient allocation of resources to meet the immense variety of needs of a community, in the form of materials and services of either consumption or capital nature. Free enterprise and the free market are the only known means of providing a democratic schedule whereby production is arranged to meet the needs and desires of a people.

In return for the virtues of a free market, all members of the community must be prepared to accept the risks and the responsibilities entailed. The individual must give of his best, in work and ability, in the knowledge that by so doing he has greater rewards open to him and the real value of the rewards going to others will not be impaired. Those actually in business in a free market, whether as individuals or per medium of corporate entity, have special responsibilities toward the community as a whole in respect of the privileges enjoyed as a result of being free and independent. Fortunately, the free market imposes disciplines and sanctions of its own; competition and the right of anyone to enter the market, and the liberty of the people to spurn a product, are most powerful deterrents to abuse.

CHANGE VITAL TO AUSTRALIA'S FUTURE

Australia has everything to gain, now, by reversing the trend of the last few decades and setting out to widen the scope of the free market and the opportunities for individual enterprise based on the incentive of reward. This change is vital to our future development, and as the nation grows richer we can afford to rely more and more upon freedom of enterprise and competition.

The report was adopted.

SMITH'S STAMPING WORKS (COVENTRY) LIMITED

PROFIT NEARLY DOUBLED

The sixty-first annual general meeting of this company was held on November 26th at Birmingham, Mr S. Bramhall, MBE, chairman and managing director, presiding.

The following is an extract from the chairman's circulated statement:

The profit for the year is £420,808 (£215,231). After taxation the profit is £207,379 compared with £80,805. The directors recommend a final dividend of 10 per cent, making 17½ per cent for the year.

We are in a position to produce a complete range of highest-quality drop forgings for all purposes, including forgings for aircraft and gas-turbine engines in highly-alloyed steels, and in titanium and nimonic alloys. For general engineering and transport, commitments are very heavy, particularly for crankshafts for diesel engines of all types. The output last year was a record, made possible by an improvement in steel supplies and the continued confidence of our customers in our products and service.

We are faced with ever-increasing costs and are finding it necessary to absorb these to maintain selling prices at a competitive level. It would therefore be unwise in my view to assume that profit margins can continue at quite the same level.

The report and accounts were adopted and at a subsequent extraordinary general meeting the proposed capitalisation of reserves was approved.

IND COOPE & ALLSOPP

MODERN PRODUCTION METHODS

The annual general meeting of Ind Coope and Allsopp Limited will be held on December 20th in London.

In the course of his circulated statement, Mr Edward Thompson, MBE, TD (the Chairman) said that with the Accounts was an Eight Year Review to enable Stockholders to judge the progress of the Group in recent years. The figures gave some evidence that employment of Group assets had been increasingly effective.

Commenting on the benefits which had been derived from the introduction of the technique of method and work study, which had followed the modernisation of brewing and bottling plants, Mr Thompson said that the introduction had been supported by the Trades Unions concerned and welcomed by the workpeople.

"I believe," added Mr Thompson, "that were industry generally conscious of the rewards normally following from reorganisation of working methods and the use of work study, in accordance with advice from leading firms of Industrial Consultants, it would not hesitate to seek their counsel, and, in a matter of a few years, a very great contribution would be made to the national productivity problem.

The recent marketing of their "Long Life" beer in can, brewed in their Alloa Brewery, would, they hoped, lead to a developing home trade which would help to reduce the cost of their export products. With the Accounts Stockholders would find a printed order card for a free sample of this beer. The Board hoped they would enjoy it and would tell their friends about it.

THE FINANCIAL TIMES LIMITED

"A NEWSPAPER TRANSFORMED"

CHAIRMAN'S REVIEW

The twenty-ninth annual general meeting of The Financial Times Limited was held on November 27th at Winchester House, Old Broad Street, London, E.C.

The Right Honourable The Viscount Bracken, PC, chairman, said: Gentlemen, our consolidated profit for the year ended June 30, 1956, before charging taxation, amounted to £552,551 compared with £547,414 in the previous twelve months. You will observe that we recommend a repetition of last year's dividend by the payment of a final dividend at the rate of 12½ per cent, together with a bonus at the rate of 7½ per cent, making total payment for the year of 32½ per cent.

A FINE RETRIEVAL

Your directors believe that you will wish to join with them in congratulating the Management on a modest increase in profits in a year in which provision had to be made for the high cost of a prolonged industrial dispute in the printing industry for which they had no responsibility.

Our large printing subsidiary, the St Clements Press, has always striven to maintain friendly and fair relations with all who serve it. Despite its long record as a good employer, it was hauled into the dispute between the London Master Printers' Association and the London Typographical Society. This caused a virtual stoppage of production for some seven weeks in the early part of the year, and created considerable disruption during the period of "work to rule" which preceded the actual stoppage. In consequence our customers, who include some of the leading magazines, trade papers and a very large number of businesses engaged in a variety of industries, incurred heavy losses. In our printing capacity we fully shared their undeserved misfortunes. Fortunately the increased earnings of the *Financial Times* more than made up the fall in earnings of our strike-bound printing subsidiary company. The *Financial Times* was not involved in this dispute, and its production was unhampered, whereas in the previous year it was forced, in common with all other London newspapers, to cease publication for nearly four weeks, owing to the strike of electricians and engineers employed by the national press.

THE ONLY NARROWMENT

The *Financial Times* had a very satisfactory year. It carried a record volume of advertising, and the circulation was maintained at a high level despite an increased selling price and unsettled conditions in many of the great national and international services centred in the City of London. In former times the fortunes of financial newspapers almost entirely depended upon conditions in what is called "the City." Though the *Financial Times* has steadily increased, and I hope, improved, the services manifold the City has always required of it, our advertisement revenue derived from industry is now rather larger than the ample one provided by financial advertising. The *Financial Times* is now much more than a financial newspaper. While we are proud of its international reputation as a financial journal, we must acknowledge that its name is the only narrow thing about the paper.

'THE ONLY ONE OF ITS KIND IN THE WORLD"

A friendly newspaper recently described the *Financial Times* as "a business paper, the only one of its kind in the world." This is a pleasing description but still rather narrow. We could, I think, stake out a claim to be the only daily newspaper that adequately records the astonishing progress of an ever-increasing partnership between science and industry. Most important industrial inventions, new industrial processes or improvements in managerial techniques are promptly reported to British industry by our correspondents in every Continent We are, therefore, entitled to call ourselves a trusty, well-informed and resourceful servant of industry.

"FOLLOWING THE EXAMPLE OF BRITISH CHAIRMEN"

One of the lesser but satisfying signs of the *Financial Times'* thorough and independent reporting of the world's important financial, commercial and industrial news is the steady growth of the advertising it derives from leading industrial companies in foreign countries. And the volume of our company meeting reports, by far the largest in the world, is being steadily increased by the desire of chairmen and presidents of large foreign companies to emulate the heads of British companies by giving an annual report of their progress to readers of the *Financial Times*.

The "chairman's speech" used to be an almost exclusively British form of company publicity. Heads of leading Continental companies are now following the example of British chairmen by inserting reports of their annual meetings in the *Financial Times*.

WHERE CREDIT IS DUE

The directors and shareholders owe much to the energy and resourcefulness of our editorial and business staffs who after the last war set themselves to transform the *Financial Times*. They have enhanced its long established reputation as a guide in matters financial, and by their fresh ideas and sound ingenuity have also made it the world's first daily industrial or "business" newspaper.

NEW PREMISES

At our last meeting I told you that we were about to sign a lease granted by the Corporation of the City of London to enable us to erect a new building upon a site lying between Cannon Street and Queen Victoria Street, not far from St. Paul's Cathedral. Application was made to the Capital Issues Committee for permission to raise the necessary funds, and at an Extraordinary General Meeting held on February 21, 1956, shareholders approved the issue of £1,300,000 5½ per cent Mortgage Debenture Stock, and authorised the issue of a further £200,000 of Debenture Stock in the event of the cost of the building exceeding the total estimated cost of £1,600,000. Work on the building commenced in May. So far it has consisted of excavating the basement and constructing the retaining walls, which you will realise is no small task when I tell you that the site area exceeds 30,000 sq ft and the basement is 40 ft deep. Work is about to begin on the erection of the steel frame of the building. Our builders, F. G. Minter & Son Limited, are more or less up to schedule, in spite of extremely bad summer weather, and we are hopeful of entering into occupation of the building at the end of 1958. It will house our staffs now scattered in five offices in London, and provide first-class premises for the St. Clements Press, which has long been handicapped by the inadequacy of its present densely crowded factory.

"PROPHECY"

Forecasting what may happen in the course of a new year is generally a futile and often a dangerous effort, more especially if prophets are also optimists. Nearly twenty-nine years have gone round since I became chairman of the company now controlling the Financial Times. One of the few mistakes I have not made in this long innings is to set myself up as a prophet. And so you can hardly expect me to try to anticipate what a new year has in store for us or for any other company whose fortunes are linked with British Industry.

I could generate some optimism if the consequences of this Suez Canal affair would shake the widely held belief that the hectic prosperity of the past decade, bred, as it has been, by persistent monetary inflation and by a world-wide scarcity of raw materials and manufactured products, would long continue. Before the Suez affair began there were ominous signs of a weakening of Britain's power to expand in export markets. But there was no sign of any general awareness of the fact that of all the so-called "great powers" our economy is the most vulnerable. It has often been said that when things are at their worst, our people are at their best. I should be surprised if before much time passes they will not once again be given an opportunity of proving the enduring worth of this statement. The report and accounts were adopted.

J. & F. STONE LIGHTING & RADIO

The twenty-third annual general meeting of J. & F. Stone Lighting & Radio Limited was held on November 28th in London, Mr D. G. Nairn, OBE (the Chairman), presiding.

In his circulated statement the Chairman said that for the fourteenth successive year he was able to report an increase in the Group's net profit before taxation which now totalled £1,041,817, against £833,578.

After commenting on the formidable difficulties which had had to be surmounted following statutory measures to curb the growing demand for radio and television sets, the Chairman said that compared with the preceding year they had (as was to be expected) contracted their hire-purchase business but increased all three of their other channels of income, namely, cash and credit sales and rentals. Mr Nairn said he had made it clear in his statement last year that they entered the new year "confident in the knowledge that collections from our existing hire-purchase agreements will provide a solid and excellent foundation on which to build our normal new business." So it had proved.

The Directors had decided to recommend to Stockholders that the issued capital be brought more into line with the net Assets and accordingly proposed to double the capital by capitalising £600,000 out of the existing reserves, and to issue free to Stockholders a capital bonus of new Ordinary Stock on a one-for-one basis. Consent of the Capital Issues Committee was being sought.

The report was adopted and the meeting concluded with a vote of thanks to the Chairman, Directors and Staff.

THE FINANCIAL NEWS LIMITED

CHAIRMAN'S ADDRESS

The fifty-ninth annual general meeting of The Financial News Limited was held on November 27th at Winchester House, Old Broad Street, London, E.C.

The Right Honourable The Viscount Bracken, PC, chairman, said:

Gentlemen, the consolidated profit of The Financial News Limited for the year ended June 30, 1956, amounted to £145,944, compared with £164,629 in the previous year. This fall in profit was due to the inevitable consequences of the prolonged London printing stoppage at the beginning of the year, which sharply reduced the earnings of the *Investors' Chronicle*.

Our other two wholly-owned publications, the *Practitioner* and the *Banker*, are not printed in London. They did not, therefore, suffer and their earnings were substantially maintained.

THE INVESTORS' CHRONICLE

All those concerned with the production of the *Investors' Chronicle* are to be congratulated upon their success in continuing publication during the period of the stoppage. Printers were found first of all in Holland and subsequently in France: and for seven weeks the *Investors' Chronicle* was printed on the Continent. Contents and appearance left much to be desired, and heavy additional costs were incurred, but at least continuity of publication was maintained, and this we regarded as our first duty. When production was resumed in this country, we had to bear a heavy increase in printing charges.

THE ECONOMIST NEWSPAPER LIMITED

The Economist Newspaper Limited, in which we held a 50 per cent interest, was also a victim of the printing dispute. Here, again, continuity of publication was maintained by printing on the Continent. Had it not been for the large additional costs that this involved, the profits earned by *The Economist* would have shown a satisfactory increase. As it was, they were only slightly reduced. The profits of *The Economist* are not, however, consolidated with our group profits. They are only taken to the credit of our profit and loss account to the extent of the dividend declared. Despite the heavy cost of the printing dispute, the Board of The Economist Newspaper Limited decided upon a modest increase in dividend, and this is reflected in an increase in our income from Trade Investments.

THE PRACTITIONER

The circulation and revenues of this once again showed a well deserved increase. This journal is altogether worthy of the great profession it has so long served.

THE FINANCIAL TIMES LIMITED

The principal asset of The Financial News Limited is our large shareholding in the Financial Times Limited. I shall be dealing with the affairs of that company at its annual meeting later this morning. Here I would only draw your attention to the statement in the Directors' Report that since the end of our financial year we have increased our holding of Financial Times Ordinary Stock, so that we now hold rather more than 50 per cent of the equity. The *Financial Times* is now legally a subsidiary, and its accounts will in future be consolidated with those of this company. In view of this development, we have included, as a supplement to the accounts before you, a statement showing consolidated figures for the group as a whole. You will see from this statement the very considerable assets and earnings attributable to this company.

I shall not attempt to forecast our results for the year to June 30th next. I can only tell you that the profits earned by the group as a whole for the first five months have been maintained, and we have felt justified in recommending payment of a final dividend of 20 per cent, making a total of 30 per cent for the year ended June 30, 1956. This is at the same rate as was paid for the previous twelve months.

The report and accounts were adopted.

TRINIDAD PETROLEUM DEVELOPMENT COMPANY, LIMITED

CHAIRMAN'S ADDRESS

The Annual General Meeting of Trinidad Petroleum Development Company Limited was held on November 22nd in London.

Sir Leslie Hollis, KCB, KBE (the chairman) presided, and in the course of his speech said:

Your company has again had a satisfactory year, both the profit of £1,352,000 before taxation and the production of nearly 4,100,000 barrels being the highest in the history of the Company.

PRODUCTION

The fact that we were able to increase our production by more than 600,000 barrels over that of the previous year with the same number of drilling rigs in operation was chiefly due to encountering a prolific area at Coora, to good results obtained at Palo Seco, and to an intensive programme for the maintenance and repair of old wells.

New processes to increase production such as Hydrafrac and Diesel Oil Cement were successfully introduced.

Since the end of our financial year we have extended our drilling programme with the object of proving up further reserve areas. In the current financial year we estimate that this will involve us in additional expenditure on drilling of approximately £300,000. Until this drilling has been completed it is not possible to forecast with any accuracy the benefit to the Company's revenue.

ACCOUNTS

The profit for the year before tax amounted to £1,352,174, compared with the previous record for the Company of £871,730 established a year ago. This result ensued from the record output combined with the highest price ever before realised for our crude oil and, to a minor extent, from an increase of over £34,000 in investment income.

After providing £730,000 for taxation, the net profit for the year was £622,174, in addition to which we were able to bring into account the sum of £40,000 over-provided for taxation in the previous year.

The dividend on the Preference Shares outstanding absorbed £21,699 and £7,439 was appropriated for the annual redemption of a proportion of the Preference Capital. After transferring £350,000 to General Reserve your Board decided to recommend a Final Dividend on the Ordinary Stock of 28¾ per cent tax free—equivalent to 50 per cent gross—which, with the 5 per cent tax free Interim Dividend paid on May 17th last, would make a total distribution to the equity stockholders of 33¾ per cent tax free for the year requiring £337,500.

The General Reserve was thus increased from £1,100,000 to £1,450,000, while the tax free balance available to carry forward to the current year amounted to £142,486.

At the year's end current liabilities and Provisions had risen to £1,053,920 and Current Assets to £2,504,457. Thus the surplus of Current Assets over Liabilities improved by about £547,000.

The excellent results achieved during the year reflect the efficiency with which our operations have been conducted, and great credit is due to our staff and employees for maintaining the high standard of their work, notwithstanding the uncertainty as to the ultimate control of your Company.

LABOUR

Relations with labour continued to be very satisfactory throughout the year and the scale of wages was regulated by the terms of the Wage Agreement signed with the Oilfield Workers' Trade Union on August 5, 1955.

CHANGE OF DOMICILE

At the Annual General Meeting last year I informed you that your Board was considering the advisability of applying to the Treasury to transfer the control and management of the Company from the United Kingdom to Trinidad.

The advantages to be gained by such a transfer were very much accentuated by an Ordinance passed by the Trinidad Legislature in December 1955 granting a special depletion allowance for Companies engaged in Marine drilling and whose central management and control abides exclusively in the Colony.

Accordingly, an application for permission to change the domicile of the Company to Trinidad has been lodged but no decision on the matter has yet been taken by the Treasury.

BRITISH CONTROLLED OILFIELDS LIMITED (IN LIQUIDATION)

At the request of the Liquidator of British Controlled Oilfields Limited, your Board gave permission to representatives of the Colorado Oil and Gas Corporation, of Denver, Colorado, USA, to visit your properties in Trinidad with a view to investigating the operations of the Company and the position regarding Oil reserves.

These representatives carried out their investigation between May 25th and July

10th and, after discussions with the Liquidator of BCO and members of your Board in New York, the Colorado Oil & Gas Corporation made an offer, subject to Treasury consent being obtained, to purchase the equity of your Company on a share exchange basis.

When these proposals were submitted to the UK Treasury and to the Trinidad Government, we were informed that they were contrary to the exchange control regulations and to the policy of Her Majesty's Government and that permission for the purchase could therefore not be granted.

BRITISH PETROLEUM'S OFFER

Following negotiations undertaken by my co-director, Mr Hart, British Petroleum made the offer to purchase the whole of the ordinary stock of your company, the terms of which offer are familiar to you. In considering this offer—and indeed in considering whether or not your Directors should in any way seek to obtain an offer for the Company's stock—your Board was influenced by the following considerations.

First, the fact that the 50 per cent of the Company's ordinary capital owned by the Liquidator of BCO was for sale, and had been offered for sale over a period of nearly three years, thereby inevitably creating a state of uncertainty affecting the Company's staff and creating a situation where the Company's stock was increasingly subject to speculation.

Secondly, your Directors had under consideration the fact that this Company's future must always depend upon its ability to dispose of its oil profitably. In this connection, it must be noted that this Company possesses neither a marketing organisation nor the resources to create one.

Thirdly, your Directors had under consideration the future capital requirements of this Company. The future of any oil Company must always depend upon its capacity to continue exploratory operations, and the cost of such operations is heavy. Your Board considered that if this Company were to play its full part in the development of the Trinidad oil industry, and if it were to undertake exploratory work to an extent necessary to ensure its future, it would be unlikely that the Company could continue its present dividend policy or that it could avoid having to seek further capital.

Finally, in assessing the BP offer your Directors also had in mind, first, the report on your Company's undertaking prepared in 1954 by the independent valuers appointed by the Liquidator, and secondly, the terms of the offer made by the Colorado Oil and Gas Corporation after prolonged investigation; an offer, in the view of your Directors, less favourable than that made by BP. All these factors were in the minds of your Board on October 27th when you were informed of the offer and of your Directors' recommendation. Since that date we have been confronted by the developments in Suez and the Middle East. It is not possible to say what effect these developments will have, and the many imponderables in the political and military field are matters upon which I will not venture an opinion.

FUTURE

I will again refrain from attempting a forecast for the future, particularly in view of the acquisition by BP of a controlling interest in your Company. For my part, I feel that this acquisition should inevitably lead to more intensive development of your Company's properties and to continued security for our staff.

The report was adopted.

PICKFORD, HOLLAND & COMPANY

BENEFITS FROM NEW EXTENSIONS

The annual general meeting of Pickford, Holland & Company Limited was held on November 28th at Sheffield, Mr Ronald Steel (Chairman) presiding.

The following are extracts from his circulated statement: Last year I told you that the cost of the raw materials used in the manufacture of our basic bricks had been rising sharply and that the price we received for them was not keeping pace. The effect has been felt during this year with the result that our profits from this source have been reduced, particularly at our Totley works, which specialises in these. Fortunately, such adverse circumstances have now ceased to apply and we expect a considerable improvement on this account for the year ending in 1957.

I am glad to say that the money we have been spending at the Crook and Millhouses works continues to bear fruit; so in spite of the basic brick position our trading profit for the year shows an increase of nearly 10 per cent.

The outstanding feature during the period has been the building of the tunnel kilns at Totley and at Crook. So far the results have been exceedingly successful; I think we can say that the Pickford Holland magnesite and chrome-magnesite brick compares favourably with any similar type product on the market today.

BALANCE SHEET FEATURES

The large sum of £175,000 has been spent on plant and machinery during the year, a figure greater than that in any two previous years added together. Nearly all this was spent on the two tunnel kilns and on the completion of the modernisation programme at our Millhouses works; we expect that capital expenditure during the current year will be at a reduced rate.

Two results of this high capital expenditure are that the provision for depreciation is increased from £38,000 to £52,000 and that investment allowances have reduced our liability for taxation by the sum of £15,000; your Board has decided to transfer this direct to the reserve for replacement of fixed assets. To this reserve it is also proposed to place an additional sum of £25,000, and to General Reserve £35,000; so, including depreciation, the substantial amount of £127,000 out of this year's profits will have been retained in the business and this, added to the loans from the Ministry of Fuel and Power, which amount to £44,850, is approximately equal to the money spent on the new kilns and other extensions during the year. Your directors propose to pay a final dividend of 10 per cent and the same bonus of 2½ per cent as last year.

EQUIPPED TO MEET COMPETITION

As to the future, I will only say that our valued customers in the steel trade and the coke oven industry appear to be as busy as ever and that certain of our directors and senior staff have recently visited refractory brick works in Europe, Canada and the United States of America, and taking into account the raw materials available and the probable market for our products, a comparison of our own plants and layout with those that they saw abroad indicates that we are now well equipped to meet any reasonable competition.

The report was adopted.

ABRIDGED PARTICULARS

LONDON & OVERSEAS FREIGHTERS LIMITED

Application has been made to the Council of The Stock Exchange, London, for permission to deal in and for quotation for £7,500,000 6 per cent. First Mortgage Debenture Stock of London & Overseas Freighters Limited.

Abridged particulars of a placing by

PHILIP HILL, HIGGINSON & CO. LIMITED

of

£7,500,000 6 per cent. FIRST MORTGAGE DEBENTURE STOCK.

1. The Stock will be constituted and secured by a Trust Deed in favour of The Prudential Assurance Company Limited, as Trustees for the Stockholders. The Stock will be payable in instalments, as to 20% on 15th January, 1957; 25% on 15th January, 1958; 25% on 15th January, 1959 and 27½% on 15th January, 1960.

Interest at 6% per annum will be payable on the amounts paid up from time to time and in addition further interest at ¼% per annum will be paid on the amount of the instalments outstanding.

2. The Company's fleet as at 31st March, 1956, consisted of eleven tankers of a total tonnage of 199,934 d.w.t., of which one has since been sold.

An investment of £750,000 has recently been made in London and Overseas Tankers Limited, a company incorporated in Bermuda. This investment represents one-half of the share capital of the latter company.

3. The Company has ordered nine new tankers, with a total tonnage of approximately 263,750 d.w.t., at an estimated cost of approximately £17,000,000. These vessels are due for delivery between December 1956 and 1962. The balance of the cost of this building programme will be met out of the Company's own resources.

4. It is estimated that the net tangible assets of the Company will cover not less than twice the aggregate of the amounts paid up from time to time on the Stock and the amount of the permitted secured bank borrowings.

Full particulars of this Stock may be obtained from:

The Registered Office of the Company, 8, Balfour Place, Park Lane, London, W.1.

or from

PHILIP HILL, HIGGINSON & CO. LIMITED

34, Moorgate, London, E.C.2.

BROOKE BOND & COMPANY LIMITED

GROUP RECORD PROFITS

EXPANSION OF WORLD SALES

The Sixty-fourth Annual General Meeting of Brooke Bond & Company Limited was held on November 27th. The following is an extract from the circulated statement of Mr John Brooke (Chairman):

Thanks to our staffs of many nations, our customers, and our shareholders, Group net profits are a record £2,668,430.

It has been a year in which profits were made both on the swings and roundabouts—something which, like a good English summer, occurs only at infrequent intervals.

We look forward with confidence to the future, but we must remind shareholders that a more balanced picture would be seen if the past two years' trading were taken together and an average struck.

These net results are inflated due to the effect on this year's UK Taxation Provision of last year's losses of £1,267,583 (£1,215,764 being the loss of Brooke Bond & Company Limited). These losses have been offset against taxable profits in this year, and as can be seen in the Consolidated Profit and Loss Account, the UK Tax charge has been reduced by £538,722.

Turnover for the Year.—This year the net world income of £79,696,000 is rather less in terms of money, due to the lower cost of tea during the period. In June, 1955, our Dividend Tea was retailing at 7s. 4d. a lb, as against 6s. a lb in July, 1956, and now 5s. 8d. a lb.

World sales continue to expand. On a modest calculation over 150 million cups of Brooke Bond tea are now enjoyed every day throughout the world.

In the United Kingdom, the most highly competitive market of all, the steady progress achieved year by year since derationing has continued.

Group stocks always seem to be rising in value and also in quantity. (It is all right so long as they are rising to meet increasing sales.)

Thanks to the good profits earned this year and the "Income Tax holiday" we have enjoyed in this country out of the losses brought forward, we have not found it quite so difficult to finance tea stocks. The problem is always with us, so we have decided to go ahead with plans for issuing 3 million "B" Ordinary Shares at 12s. 6d. in order to raise, after meeting expenses of the issue, £1,833,000 of new money.

Shareholders.—The total number of our shareholders has topped 10,000 for the first time.

TEA PRICES AND TRADING

In many respects this might be considered a dull year during which prices fluctuated only within narrow limits. Towards the end of the year there was an abundance of plain tea at prices which have enabled us recently to introduce a packet at 3s. a lb. We now have an exceptionally wide range of packets to please all tastes and pockets from 3s. a lb to 7s. 8d. a lb.

However, most housewives continue to demand quality blends. Consequently, good tea has been commanding market prices high enough to please the most demanding producer.

Record crops have been plucked from the Estates of our own producing Companies, and these again have contributed handsomely to our Group Profits, though obviously not on the scale of the previous year when boom prices prevailed for plain as well as good tea.

The consumer appreciates the cheapness of tea and rightly feels that the few extra pence per lb for 200 cups of the best is sound economy. She is not going to spoil a good "cuppa" by saving one for the pot. (Advertisement.)

PLANTATION COMPANIES

The Group's acreage under mature tea totals 27,000 with over 1,900 acres of new planting coming into bearing.

A geographical split of the mature tea is as follows:

Ceylon 3,900 acres, India 11,000 acres, East Africa 12,100 acres.

Mr Rutter visited all our estates in India and Ceylon this year and reports they are in good order. New planting in Assam, to replace exhausted areas, is carried out on a yearly basis; whilst in South India we are doing similar work using the most up-to-date technique of vegetative propagation put out in contoured hedgerows. High yields are expected from these new areas.

In East Africa development is taking place rapidly and according to plan—we are confident good returns will be obtained in the near future; new factories are under construction to manufacture the increased crop.

Of the crops obtained from these 27,000 acres of tea a substantial part is sold outside the Group. Tea of our own growing amounts only to about 11 per cent of our total world sales of packet teas.

The Report was adopted as were Resolutions submitted for alterations to the Articles, increase of the authorised capital and for the capitalisation of £3,750,000 of Reserves.

KAMUNTING TIN DREDGING LIMITED

MR ADDINSELL'S STATEMENT

The forty-third annual general meeting of Kamunting Tin Dredging Limited was held on November 27th at 55-61 Moorgate, London, E.C.2, Mr Addinsell (the chairman) presiding.

The following is the Chairman's statement for the year ended March 31, 1956, which had been circulated with the report and accounts and was taken as read:

During the year under review the removal of the two Pangnga dredges to the Bangtoe area in Thailand was completed, the No. 2 dredge working for nine months and No. 1 for one month. The task of removing and reconstructing these dredges was no mean achievement and our thanks are due to Anglo-Oriental (Malaya) Limited, our Managers in the East, for the excellent manner in which the work was carried out and all the difficulties overcome.

The cost of dismantling, removal and reconstruction, together with the necessary ancillary equipment for these two dredges was £572,322, which compares closely with the estimate of £570,000 I gave to shareholders in 1953. The whole of this cost, I am pleased to say, has been met from our own cash resources.

Improvements to these dredges and the new equipment required for them have been charged to Fixed Assets and the balance written off against "Transfer of Dredges Reserve." An appropriation of £96,016 has been made to this reserve from the profits made this year and, after writing off the cost of removal, there remains a balance on the reserve of £55,000 towards the substantial expenses which will arise in a few years for the removal and reconstruction of our largest capacity dredge in Malaya.

The two dredges on the Bangtoe area produced 389 tons concentrate and this output, together with an increase over last year of 423 tons from production in Malaya, resulted in the gross proceeds of sales improving to £1,005,568 from £556,548. The average price realised for our tin was £739 per ton of metal, compared with £706 per ton last year.

After providing for taxation of £160,000, writing down British Government Securities to market price and the appropriation to Transfer of Dredges Reserve there remains a net profit of £118,956.

The interim dividend of 7½ per cent already paid and the final of 22½ per cent now recommended absorbs £115,359 leaving to be carried forward £84,893.

HEAVIER BURDEN OF TAXATION

I would stress that although our profits for the current year are running at a higher level than in the year under review, we will have to bear a much heavier charge for taxation than for the last two years because we will receive no more relief in respect of dredge removal expenditure until further work of this nature is carried out, also the profits tax burden on distributed profits has been still further increased.

As I told shareholders last year, we have secured an area for the No. 6 dredge which we expect to have to move in 1958. A preliminary estimate of the cost of the removal and reconstruction indicates that some £475,000 will be required to meet this expenditure.

The No. 4 dredge is expected to work out its reserves in the near future and No. 5 in about three years' time. Though every effort is being made to find suitable areas for these dredges, present conditions still seriously restrict prospecting in the districts where future ore reserves are most likely to be found. Both these dredges are old, the No. 4 first commenced operations in 1924, the No. 5 in 1929, and, as both are of small capacity and comparatively shallow digging, suitable areas may prove impossible to find.

The International Tin Agreement came into force on July 1, 1956, and in this connection I must remind shareholders that we have to meet our share of the Buffer Stock contribution.

Details of the year's operations are given in the Technical Managers' Report.

The security position in Malaya continues to improve, but precautions have still to be taken, and our thanks are again due to the Eastern staff and to Anglo-Oriental (Malaya), Limited, our Managers, for the excellent results achieved.

The report and accounts were unanimously adopted, the final dividend approved and the retiring director re-elected.

BRITISH TRUSTS ASSOCIATION

MR J. GIBSON JARVIE'S STATEMENT

The thirty-ninth annual general meeting of British Trusts Association Limited will be held on December 6th at the registered office, 17, St. Helen's Place, London, E.C.3.

In his statement to shareholders Mr J. Gibson Jarvie, the chairman, refers to the profit on the sale of the Association's shareholding in Intermit Limited, which was included in the revenue account for the previous year, as being an exceptional and non-recurring item. Gross dividends and interest from investments increased from £54,789 to £61,997 for the year to July 31st last. Taking into consideration the gross debenture interest, this item of income from investments has nearly doubled since 1953. There has been no change in the issued capital.

The item "commissions, net profits on realisations and fees" was £28,935, against £45,061. The profit on sale of shares in Intermit Limited already referred to was however considerably in excess of this difference. Net revenue after tax was £38,964.

The dividend for the year of 10 per cent and bonus of 5 per cent, making 15 per cen less tax for the year, has been paid and cos £19,277. Capital and revenue reserves hav increased during the year from £247,280 t £271,611 and undistributed profits carrie forward are £52,767, against £39,092 brough forward from the previous year.

With regard to the current year, the profi margin in many industries is becoming less the effect of the credit squeeze continues t be felt and general conditions in the hom and export market are becoming more diffi cult. Our investment income therefore wil not continue to show the same rate o expansion which it has done in the past and will probably show little change on the past year's results.

GOODE DURRANT & MURRAY (CONSOLIDATED)

IMPACT OF DIFFICULT TRADING CONDITIONS

The Fifty-eighth Annual General Meeting of Goode Durrant & Murray (Consolidated) Limited will be held on December 21st at Winchester House, London, E.C.2.

The following is an extract from the statement by the Chairman, Mr Lewis A. Kemp, which has been circulated with the report and accounts:

The year covered by these accounts is the first since the Company ceased to trade and became solely a holding company. In consequence of this, I direct your attention particularly to the Group Balance Sheet and Profit and Loss Account, which reflect the result of the operations of all the Subsidiary Companies in the Group. Provision has been made for doubtful debts, but, to the extent that these provisions might prove inadequate in recently formed subsidiaries, the parent company's reserves for contingencies, which were created for such purposes, could be called upon.

Increasing competition, import restrictions and the credit squeeze have all had their impact on trading conditions in the various oversea countries where your Companies operate.

Australia has been subjected to more severe import restrictions, and price control has been partially re-introduced, although it is hoped the latter may prove to be of temporary duration.

South Africa and New Zealand are also subject to some measure of import control which, together with monetary restrictions, have contributed to the difficulties that have been encountered during the past year's trading.

Fortunately, the prices of wool and other primary products are maintaining a profitable level, which should, in due course, be reflected in the stabilisation of internal economies, and the loosening of restrictive controls, which hamper the freedom and development of trade.

I am pleased to report that in June last we entered into occupation of our new building—Durrant House—in Chiswell Street. Although it is not yet finally completed, we are experiencing considerable benefit from having the staff under one roof, with adequate space.

Last year my remarks, referring to the future, detailed some of the difficulties we are meeting. I am very hopeful that the re-organisation already effected and the further measures that are now contemplated will establish the Group's business on firm ground for the future.

SIR LINDSAY PARKINSON AND CO., LTD.

CONSIDERABLY LARGER PROFIT

MR A. E. PARKINSON'S STATEMENT

The nineteenth annual ordinary general meeting of Sir Lindsay Parkinson and Company, Limited, was held on November 28th at the Piccadilly Hotel, London, W., Mr A. E. Parkinson, the chairman, presiding. The following is an extract from his circulated statement:

The accounts for the year 1955 show that the group profit applicable to the members of the parent company, after taxation, amounts to £93,580, as compared with £74,918 for 1954. The profit for 1954, however, included a credit for £113,963 in respect of provisions for taxation for earlier years no longer required.

The group profit and loss balance carried forward amounts to £172,406, compared with £103,921 brought in. After providing for the dividends for the year, the balance carried forward on the parent company's profit and loss account amounts to £122,263, compared with £64,051 brought in.

PROGRESS AT HOME

Work at home has again progressed satisfactorily and during 1955 the speculative housing programme was again expanded.

Our success in securing a wide variety of building and civil engineering contracts is continuing and our operations on the production of opencast coal for the National Coal Board are also expanding.

OVERSEAS ACTIVITIES

Our subsidiary companies in Australia made a somewhat better showing in 1955 than they did in 1954. Nevertheless this field of activity is receiving close attention on the part of the board particularly having regard to the many difficulties of this market.

As forecast in my statement last year a substantial further provision has been necessary in 1955 in respect of losses suffered in Canada. Problems have, however, now been largely dealt with and while some provision will probably be necessary in 1956 we consider that the main difficulties have now been overcome.

Volume of work in Cyprus has been maintained and we are continuing to show excellent progress despite the difficulties arising from disturbed conditions.

Work under the Tema Harbour contract valued at some £8 million is still in progress. It will be recollected that this work is being carried out by Parkinson Howard Limited, an association of Messrs John Howard and Company, Limited, and ourselves. There is still a further three years' work in prospect in this area

Satisfactory progress is being shown in the British Guiana contract which is due for completion in 1958.

DIVIDEND MAINTAINED

The Board has decided again to recommend a final dividend on the Ordinary Stock at the rate of 6½ per cent (less tax), making a total for the year of 9 per cent (less tax). This is at the same rate as was paid for 1954.

1955 was a year in which many difficulties were surmounted, especially difficulties arising out of activities in Canada. 1956 up to date has also not been without its problems, but your Board is hopeful that when the figures for that year become available results will show a continued improvement.

The report and accounts were adopted.

BANIR RUBBER ESTATES

IMPROVED OUTPUT AND PRICES

The thirty-first annual general meeting of Banir Rubber Estates, Limited, was held on November 15th in London, Mr Alexander Douglas (the chairman) presiding.

The following is an extract from his circulated statement:

The 1955-56 Accounts reflect better rubber prices, also a modest increase in output at 840,500 lb against 802,500 lb in the previous season. Sales realised £109,202 against £73,372, while Replanting Cess refunds amounted to £5,944 against £2,856. Export Duty and Cess amounted to £21,564 against £10,051. The Production Account Profit is increased from £24,845 to £39,909.

It is proposed to pay a dividend of 25 per cent, less Income Tax, for the year.

The output over the last few years has shown a small increase and I expect this to continue until in about four years we reach a maximum of about 900,000 lb, after which a decline is anticipated. Although we lose old ruober because of mining, the loss will be made good by increased production from postwar replantings (the first of which is in partial bearing now), until the loss of output through mining operations overtakes the increase from the young areas.

Ultimately, as mining progresses, Banir Estate, in my view, will not be an economic proposition. The decision as to what should be done will not have to be taken for some years, but what will ultimately become of the estate must be borne in mind.

The report was adopted.

APPOINTMENTS

MERTON COLLEGE, OXFORD

FELLOWSHIP OR LECTURERSHIP IN ECONOMICS

The College proposes to proceed shortly to appoint to a teaching post in Economics which, according to the qualifications of the successful candidate, will take the form *either* of a (permanent) Official Fellowship and Tutorship, *or* of a Lectureship for three years. The appointment will date from April 1, 1957, or as soon thereafter as is mutually convenient.

Applicants who must have obtained Honours at a British university, should apply to the Warden not later than January 15, 1957, stating their qualifications for the post, and mentioning the names of three persons to whom reference can be made.

Details of salary and conditions of appointment can be obtained from the College Secretary.

The choice of the College will not necessarily be confined to those who apply.

MANAGEMENT SELECTION LIMITED have been retained to advise on the selection of a

JOINT GENERAL MANAGER (MARKETING)

for a large international Food Company extending their activities in Great Britain. The Company in Great Britain will be directed by General Managers who, in addition to their general management duties, will be responsible respectively for Finance, Marketing and Production.

The special duties for this appointment will be to evolve a marketing policy and to direct all sales, market research and advertising in accordance with this policy.

Candidates must have had responsible experience in marketing and selling nationally advertised consumer goods for some years. Experience of general management useful. A degree in statistics, economics or related subject would be useful background. Age 35-50. Salary about £3,000 to start. No information will be passed to our clients without the candidate being aware of their identity and giving permission. Please send brief personal details in confidence, to G. K. Dickinson (S.196), Management Selection Limited, 17 Stratton Street, London, W.1.

COMMERCIAL CONTROLLER (FACTORY)

directly responsible to Factory General Manager for the co-ordination and control of the use of material and financial resources. Responsible for ensuring implementation of current policies and for continuous appraisal of all Factory activities with a view to the development of new policies covering use of resources. The carrying out of this work will require close association with the Factory's Technical Manager and Personnel Manager. Subordinates include Buying Manager and Production Controller. Job requires capacity to analyse situations, develop effective policies and to see that they are effectively implemented. Useful background experience might include operational research, consultancy, cost control, and familiarity with the engineering industry. Minimum starting salary envisaged £1,600 per annum, but higher for right competent man. Comprehensive letters of application to Personnel Director, The Glacier Metal Co., Ltd., Ealing Road, Alperton, Middlesex.

ECONOMETRICIAN required by The Distillers Company Limited for an operational research unit in their Research and Development Department at Epsom. Age over 24. Honours degree in Economics, with knowledge of mathematics, statistics, or in Mathematics with knowledge of applied economics. The work would include a variety of subjects, such as production scheduling, inventory control, and distribution problems, covering the whole of the Company's activities in the United Kingdom.—Apply Staff Manager, The Distillers Co., Ltd., 21 St. James's Square, London, S.W.1. Quote Ref 66/56

LONDON COUNTY COUNCIL

London School of Printing and Graphic Arts, Department of Administrative Subjects. Senior Lecturer in Management Studies, with good academic qualifications and industrial or commercial experience in managerial role. Duties include teaching subjects in B.I.M. Certificate and Diploma courses. Applicants should state in case and which of these subjects they are qualified. Salary £1,350 x £50—£1,550, plus London allowance (£80 or £40). Application forms from Principal at School, Back Hill, E.C.1, returnable by December 14, 1956. (2229.)

ORGANISATION AND METHODS Accountant, recently qualified, aged 24-28, required by leading industrial organisation. Applicants should be preferably single, willing to work in London, the Midlands, or the North, as required, have a first-class general education and a flair for O. and M. work. The position is a permanent and pensionable one and provides good opportunities for development in this new field. Excellent prospects for advancement to a wide range of senior executive positions.—State age, education, experience and salary required, to Box 568.

SALES MANAGER.—A Sales Manager is required for a Sales Company distributing gramophone records throughout the world. Ability to advise on sales policy and detailed knowledge of distribution methods at home and abroad are required. A knowledge of the gramophone record industry is not essential, but may be helpful. Salary will be commensurate with experience, but this is regarded as a senior appointment.—Applications, in the candidate's handwriting, giving details of experience and salaries earned, should be sent to Box 565.

ASSISTANT SECRETARY required by Insurance Company at its Head Office in the North of England. Applicants should be aged about 35, qualified as Accountant or Secretary. Usual secretarial duties include mechanised accounting.—Box 571.

THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE (UNIVERSITY OF LONDON)

Applications are invited for a Lectureship in administration, organisation and cognate business studies. Salary scale £700 x £50—£1,000; £1,050 x £50—£1,400 per annum, with superannuation benefits and family allowances. In assessing the starting salary, due consideration will be given to age and experience.

Applications, with the names of three referees, should be received not later than December 22, 1956, by the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

MINISTRY OF EDUCATION: Director of Cost Investigation Unit. The Civil Service Commissioners invite applications for this pensionable post in London. The Unit is intended to assist local education authorities and others responsible for running schools and colleges to achieve the maximum economy compatible with the standards required and with varying local circumstances. The work will involve accurate analysis and comparison of the cost of various elements of the education service, the study of economical methods of achieving given standards and the dissemination of advice and information about the current range of unit costs and any suggested means of increasing efficiency.

These duties require an inquiring and experimental cast of mind and the ability to co-operate with administrative, educational and technical specialists.

Age at least 35 on October 1, 1956.

Candidates must have had suitable professional experience, and should preferably be members of one of the following bodies:—

(a) The Institute of Chartered Accountants in England and Wales

(b) The Institute of Chartered Accountants of Scotland

(c) The Institute of Chartered Accountants in Ireland.

(d) The Society of Incorporated Accountants and Auditors.

(e) The Association of Certified and Corporate Accountants.

Candidates not holding any of the qualifications listed under (a)-(e) above may, however, be admitted exceptionally, if they possess other qualifications and experience especially relevant to the post.

Salary £2,000-£2,450 (men), £1,865-£2,324 (women). Women's pay is being raised to reach equality with men's by 1961.

Further particulars and application form from Secretary, Civil Service Commission, Burlington Gardens, London, W.1, quoting No. 4646/56/9. Completed application forms should be returned by December 14, 1956.

MANAGEMENT SELECTION LIMITED have been retained to advise on the selection of a

MATERIALS CONTROLLER

for a well-known company of food manufacturers situated in a pleasant country town. Duties include negotiation for commodity buying—mainly meat, fish and cereals—on a world-wide scale. Considerable travel is involved, but where practicable permission may be given on occasions for the Controller to be accompanied by his wife at the company's expense.

Candidates should have had extensive experience of commodity buying on an international scale, and must have successfully opened up new sources of supply for these goods. Candidates should also have an interest in and knowledge of world affairs—especially as they influence supplies and prices. An Honours Degree, with economics and/or statistics, would be an advantage. Age 35-40. Initial salary not less than £5,000, together with exceptional non-contributory pension, life assurance and sickness schemes.

No information will be passed to our clients without the candidate knowing their identity and giving permission.—Enquiries, with brief personal details, to P. J. H. Fryer (S.198), Management Selection Limited, 17 Stratton Street, London, W.1.

EXPORT.—The extension of activities in the Export Department of an important manufacturing organisation necessitates the appointment of a Senior Executive to take responsibility for one group of markets. The position will carry a high starting salary, and offers an attractive career for an energetic man who can draw upon sound experience of competitive selling in the export field. Ideally, candidates should be aged 30 to 40, and have a fluent knowledge of German—one Scandinavian language would be an advantage. Preference may be given to those with a University degree. Applications should contain full career details, and will be treated in strict confidence.—Box 569.

A SENIOR LONDON ADVERTISING AGENCY will have a vacancy shortly for a marketing man on an important group of accounts. The job will be to apply market research principles to the clients planning problems. Familiarity with market research methods and their practical limitations is therefore essential, although the successful applicant need not necessarily have become expert in carrying out field surveys in all their practical details.

The important points are that he should have sufficient business acumen to grasp selling problems as they crop up, and enough familiarity with market research to recognise where it can contribute to their solution.

The Agency is of long standing, and is highly regarded by its competitors.—Box 573.

FULL-TIME SERVICES of a Solicitor required to take control of Legal Department dealing with day-to-day business chiefly connected with agreements for purchase of rights of plays, films, etc., for services of scriptwriters, artistes, production directors, etc., and general work of a Contracts Department. Commencing salary not less than £1,500 per annum. The Company has a Staff Contributory Superannuation Scheme.—Write, giving full details of experience, age, etc., to The Secretary, Granada TV Network Limited, 36 Golden Square, London, W.1.

GLACIER METAL CO. LTD KILMARNOCK

PERSONNEL OFFICER

Additional Personnel Officer required for rapidly expanding factory, at present employing 1,250. Development within Company of new techniques in Personnel field adds to interest and extends scope of Personnel Officer's job. In addition to conventional Personnel duties, there is pioneering work to be done in a new form of job evaluation (see "Measurement of Responsibility"—Elliott Jaques).

Applicants should have experience/training Personnel Management, Social Science—or an engineering qualification, with experience of Work, Methods or Time Study.

Age 23-35. Commencing salary £800-£900. Staff bonus and Superannuation.

Write E. C. Goldring, Personnel Manager, Glacier Metal Co., Ltd., Kilmarnock, Ayrshire.

MANAGEMENT SELECTION LIMITED have been retained to advise on the appointment of a

DEVELOPMENT OFFICER

for a light engineering company (near London), which is part of a large international organisation. Turnover has trebled in the last three years, and further expansion is projected at the rate of 10 per cent per annum. The Company seeks a man to be responsible to the Managing Director for preparing a "blue print" of this development specifying markets, products, finance and personnel requirements, etc. This work will take one to two years to complete, and will undoubtedly lead to an executive career in the company, which takes training very seriously and promotes from within. Overseas travel forms a significant part of this policy.

Candidates should have a degree (preferably in statistics or economics), or be qualified accountants. Industrial experience must include some practical executive responsibility; in addition, a staff appointment or consultancy would be an advantage. Capacity for analysis and decision important. Age about 28 to 35. Starting salary about £1,500-£2,000.

No information will be passed to our clients without the candidate being aware of their identity and giving permission.—Please send brief personal details, in confidence, to P. J. H. Fryer (S. 197), Management Selection Limited, 17 Stratton Street, London, W.1.

LEADING FOREIGN EXCHANGE HOUSE in the U.S.A. seeks men or women cashiers, experienced in handling foreign currencies. Starting salaries $300 per month, with possibility of improvement twice yearly. Good promotional possibilities. Banking experience desirable. Preference to those with knowledge of Spanish or other foreign languages. Interviews arranged in London.—Write to Deak and Co., Inc., 75 West Street, New York 6, N.Y.

THERE IS ALWAYS SOME SNAG about anyone who advertises as wanting a job. The snag with me is that I do not have the necessary "contacts" to find the work I am looking for.

Age 37. Public School, attended Administrative Staff College, wide commercial and technical experience, including large-scale organisational and administrative work. Sound knowledge accounting. Company law and personnel management. Unimpeachable references. Compelled, for personal family reasons, to seek employment in or near London, but willing to travel.

If you are looking for someone with complete integrity, an analytical mind, accustomed to responsibility and used to working a 65-hour week, write to Box 570.

THE CUNARD STEAM-SHIP COMPANY LIMITED

FIVE PER CENT CUMULATIVE PREFERENCE STOCK

SIX PER CENT SECOND CUMULATIVE PREFERENCE STOCK

NOTICE IS HEREBY GIVEN that the Transfer Books in respect of the above Stocks will be closed from December 8 to 11, 1956, both dates inclusive, for the purpose of preparing Warrants in respect of Dividends for the half-year ending December 31, 1956, to be paid on and after January 1, 1957.

By Order of the Board.

J. C. TOMLINSON, Secretary.

Offices: Cunard Building, Liverpool. Nov. 29, 1956.

SUCCESSFUL TUITION FOR THE B.Sc.(ECON). DEGREE

Wolsey Hall (Est. 1894) provides Postal Courses in a wide range of subjects for the two examinations for Lond. Univ. B.Sc.(Econ.) (three if Entrance is included). Moderate fees, instalments. Over 1,000 Wolsey Hall students have secured this valuable degree since 1925.—Prospectus from C. D. Parker, M.A., LL.D., Director of Studies, Dept. P.16, WOLSEY HALL, OXFORD.

"WHAT'LL YOU HAVE?" Sometimes an embarrassing question, but Duff Gordon's EL CID Sherry is always definitely "U." You'll be excused for wanting another, it's the done thing!

THE REPORTER, America's famous fortnightly, is now on sale here. This week's issue is devoted to "The Price of Peacemongering"; a perceptive analysis of the military implications of our action over Suez. Reinhold Niebuhr writes on the Theologian's dilemma over racial segregation, and there is an outstanding galaxy of reviews. Supplies are limited, so order your copy or subscription now from Transworld Publications, Park Royal Road, N.W.10. 2s. each fortnight.

EXPERT POSTAL TUITION for Examinations—University Law, Accountancy, Costing, Secretarial, Civil Service, Management, Export, Commercial, General Certificate of Education, etc. Also many practical (non-examination) courses in business subjects.—Write today for free prospectus—and/or advice, mentioning examination or subjects in which interested, to the Secretary (G9/2)

Imagine a farming world without oil!

As population increases, so must the food supply. Obviously. Yet, without proper implements — tractors, combines — agricultural progress as we know it could not have been achieved. For it is such equipment that permits more intensive, more productive and more profitable farming. And it is oil that runs this equipment, helps maintain and protect it. Caltex, in supplying finer fuels and lubricants to the peoples of 67 free nations, is indeed gratified to be part of this immeasurably important cycle.

Always Ready to Write

The popular Esterbrook writing set needs no attention, no special care, and your writing glides on instantly and smoothly the moment point touches paper.
The ink fountain is in the base instead of the pen-holder. It holds 40 times more ink than the ordinary fountain pen and the pen fills itself every time you return it to the socket. It is always ready to write a full page or more whenever you pick it up.
There are 30 numbered points to choose from to suit your type and style of handwriting.
Just the gift for business friends with your name and trade mark engraved.

In Black, Grey and Ivory at 34/3 and 37/10. Also the two pen model in Black (Model 487) at 68/5 and 75/8 from all leading stationers.

CAPILLARY ELEVATOR

- *Pen seals base (which is spill proof) and thus prevents evaporation.*
- *Combined ink-feed and writing point (30 to choose from).*
- *Exclusive filling device also cushions point against damage.*
- *Reservoir holds 40 times more ink than a fountain pen.*

Our Ref: AES PD

The British European Airways,
Dorland House,
Lower Regent Street, S.W.1.

Gentlemen,

Some four weeks ago, your Representative Mr. G. R. Allen, called upon us about air-freight. . . . Quite frankly, we did not consider even a remote possibility that our machines could be transported in this manner. However, in view of the constant increase in surface transport costs, we decided to send two machines by air to the Continent for exhibition. These weighed 2100 Kg. and 2500 Kg. and owing to their design, left us in doubt as to whether this would be a reasonable experiment.

We were most impressed by the manner in which they were handled. Despatches of this nature will obviously afford us not only a considerable saving of time, but show also a reduction in overall costs, and in the instances mentioned, the saving amounted to something like 20%.

The two clients concerned have written to us recently stating that both machines arrived in first-class condition (even though they were unpacked) and commending us for the initiative taken by using this method. Finally, we have already received further orders from the Continent, with a request that we send them by air.

Yours faithfully,

A. E. Sutton.

SGD: A. E. Sutton,
Shipping Manager.

BRITISH EUROPEAN AIRWAYS

Give him Air

Every ton of coal mined releases up to 5,000 cubic feet of dangerous fire-damp. Safety relies on dilution of the gas and millions of cubic feet of fresh air are drawn into Britain's mines every minute of every day. Thermotank design, build and install the great fans which perform this task.

The company has more experience in axial flow fans than any other organisation in Britain, and has carried out important mine ventilation installations, not only for the NCB but for all types of mines in every continent. This superiority is based on continuous research and fifty years' experience of air conditioning problems ashore and afloat.

TGA 115

The Fight Against Fahrenheit

HEAT is the Houdini of the elements. Only the most meticulous insulation applications can hold it, make it work and pay for itself.

The general principles of heat insulation have been known for at least twenty centuries. The elder Pliny commented on the ability of cork to retard the flow of heat, pointing out its application to winter footwear and roofing. Yet it's only a few decades ago that thermal insulation went almost unconsidered in industry—so long as some uncomfortably hot surface was covered with something which would not perish, the job sufficed. The vast stride which industrial insulation has taken since says much for the foresight of industrial leaders and the work of specialist insulation manufacturers.

Yet even today, in a thousand and one factories in the British Isles—from a platoon of platers in a single storey shed to those twenty-acre labyrinths of modern industry—heat is escaping into thin air. Hundreds of thousands of tons of coal are wasted each year—hundreds of thousands of tons producing nothing but loads of clinkers.

In this specialised field of thermal insulation, Newalls have led the way for more than fifty years. Factories, ships, power stations, paper mills, oil refineries, all owe to Newalls some credit for increased efficiency and economy of operation.

This organisation is at the call of any business today which considers that it can improve its own efficiency and increase its profit margin by the application of modern insulation methods. There's very little about heat control unknown to Newalls after fifty years of experiment with, and manufacture and application of, thermal insulating materials. Correspondence on the subject is cordially invited.

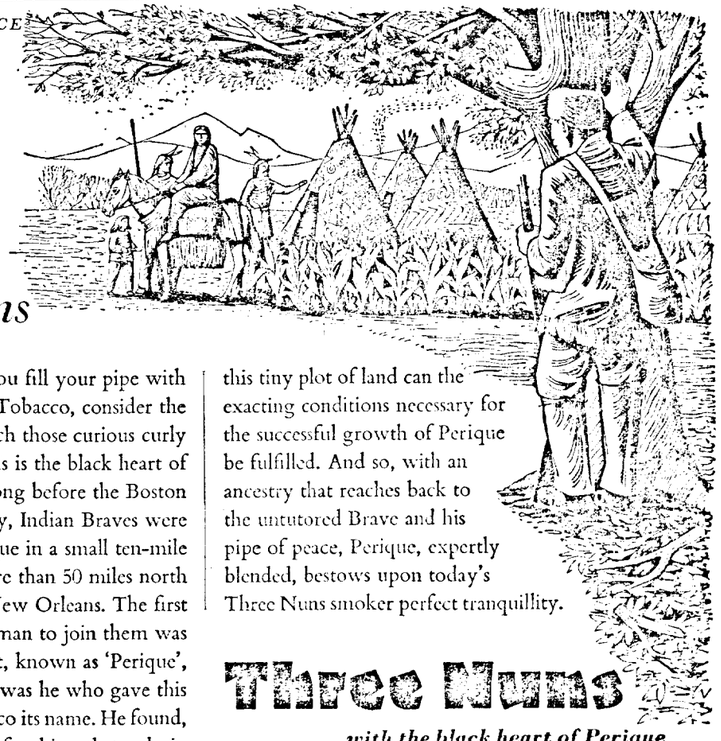
PERIQUE—AND THE PIPE OF PEACE



Perique—the subtle secret of Three Nuns

When next you fill your pipe with Three Nuns Tobacco, consider the dark centre which those curious curly discs possess. This is the black heart of Perique. Long before the Boston Tea Party, Indian Braves were cultivating Perique in a small ten-mile area not more than 50 miles north of New Orleans. The first white man to join them was Pierre Chenet, known as 'Perique', and it was he who gave this unique tobacco its name. He found, like others after him, that only in this tiny plot of land can the exacting conditions necessary for the successful growth of Perique be fulfilled. And so, with an ancestry that reaches back to the untutored Brave and his pipe of peace, Perique, expertly blended, bestows upon today's Three Nuns smoker perfect tranquillity.

A Fresh Start

ON Monday, the British Foreign Secretary at last announced that the withdrawal of British and French troops from the toehold in Egypt would take place "without delay." On Tuesday, the Chancellor of the Exchequer (whose statement is examined in the next article) revealed the dimensions of a bill that is only the first of many to pay for a disastrous month of British policy. And on Wednesday, Parliament began to debate the Government's policy. The decision to cut Britain's mounting losses must be welcomed; but the bill has to be met, and a new reckoning made for the future in the national, as opposed to a party, interest.

The shock has been gravest to those who trusted the man who was then at the wheel, assuming that he must have set his course on the basis of information unknown to other people; but this fallacy is fading. There were many who foretold the inevitable abortiveness of such a military adventure (some of the probable consequences were set out in *The Economist* of August 25th); their forebodings were vindicated by the Foreign Secretary when he described the footing upon which the long-term future of the Suez Canal must now be settled:

> first, the six requirements set out in the Security Council's Resolution of October 13th; secondly, the conversations between the Secretary-General and the Foreign Ministers of France, Egypt and myself in New York (in mid-October); thirdly, the Secretary-General's letter to the Egyptian Foreign Minister of October 24th, setting out a basis for the negotiation of a system to conform to the six principles and the Egyptian acceptance thereof of November 2nd.

All but the Egyptian letter were in being before the Anglo-French forces struck. Britain has behaved like the pedestrian who makes a thoughtless dart into the traffic, then heeds the warning shouts, pauses in his tracks, stands transfixed while drivers curse, and at length regains the safety of the pavement from which he started. We are back where we were at the end of October except for the huge loss that has been incurred of British wealth, influence and standing.

The burden of steering the errant Middle Eastern nations towards a settlement that will indeed be difficult is back with the United Nations, and many people therefore regard this body as being in some sense now "on trial." They will do well to remember that it is by its nature a lay figure unless animated by its members. So far, it has been thus animated to produce two separate bodies: the one, an international force with only one defined duty and purpose so far—the supervision of the withdrawal of British, French and Israeli forces from Egypt; the other, a team of technicians to clear the part of the canal that remained in Egyptian hands. So far so good; but some of the member governments are hinting that they must stop at that.

There is reason for grave foreboding if governments are going to confine their injection of impetus to the narrow field of getting the foreigners out and the canal cleared, and then to relax. The duty of

the United Nations, and, therefore, the duty of its participating governments, is "to take effective collective measures for the removal of threats to the peace" as well as to liquidate aggression. The truth is that, if the impetus is now left to the member states that are at present chiefly imparting it—those that are acceptable to Egypt, and so to a large extent uninfluential and anti-colonial powers—action may well become paralysed by their disposition to draw back rather than accept the odium of handling "threats to peace" that might mean censuring the country in which their forces are "guests." It is already clear, in fact, that the United Nations will fail to get any results beyond the essential but limited ones of lifting wrecks and waving goodbye to invaders unless its dynamo is now charged regardless of the susceptibilities of the interested parties, and unless the nations charging it include all the great but uncommitted states. These are few: the chief of them are the United States, Canada and India; and if India were to sign out because of Mr Nehru's disinclination to be anything but passive, his responsibility for UN failure would be heavy.

★

The task of "removing threats to peace" in the troubled, intractable Middle Eastern area is now sufficiently daunting to demand the aid and initiative of all the states that can give weight to a positive policy. There was a time when statesmen could regard the future of the Suez Canal as one problem and the Arab-Israel dispute as another, each capable of separate handling. The two quarrels were linked from the moment when Russian encouragement rendered Egypt bold on both counts; they became indissoluble when the Anglo-French combine, intent only on the Suez affair, struck at a moment, and in a manner, that turned these two powers into partisans in the other fight. As from October, 1956, the two disputes cannot be unravelled; the governments now bent on activating the United Nations have to seek means whereby "threats to the peace" can be removed in both simultaneously.

To deal first with the canal: the "basic" resolution of October 13th says that "Egyptian sovereignty must be respected" and, simultaneously that "operation of the canal must be insulated from the politics of any country," including Egypt. But if Egyptian sovereignty or politics is to produce decisions such as the panic sinking of blockships in quantities far beyond Egypt's capacity to raise (even though the prime cause of the panic was the Anglo-French attack) or the refusal to allow an imprisoned vessel to move because of the flag of the agency that has cleared a passage for her, then the 1888 Convention is likely to be a dead letter, and the fourth of the six points is liable to break at any strain. If the United Nations is to clear the canal at its members' expense, it will expose itself to failure unless it extracts a price of Egypt for blocking the waterway to a wanton and unjustifiable extent. That price must be a fresh commitment to give free passage to everyone, with defined and limited exceptions in case of active Egyptian belligerency.

This proviso leads straight to the second part of the problem: the dispute with Israel. United Nations clearance of the canal can have no permanent value—indeed, no dignity—unless executed as part of a settlement that takes the topic back to the Security Council resolution of 1951. For seven years Egypt has been claiming to be at war with Israel for some purposes but not for others. Under the Security Council's ruling, Egypt was not an active belligerent and behaved illegally when it restricted passage to shipping, including Israeli shipping. The ruling remained abortive, not because the United Nations "failed," but because the maritime members did not press it. Now, therefore, an essential part of the business ahead of the members of UN is to insist upon peace, or at the least upon an arrangement on the Israel-Egypt border that will rule out warlike acts and all claims to belligerent rights. There is nothing wrong with the idea of an imposed settlement. Indeed, an imposed settlement is probably the only one that the Arab states could accept—and only then provided that the United Nations imposed it, with full American backing. Such an arrangement might be the plan for an international strip in eastern Sinai, amplified in *The Economist* two weeks ago—a plan with the additional advantage of offering an alternative to the Suez Canal for some kinds of traffic, and reducing the intransigence that flows from monopoly.

★

In the eyes of a majority of Middle Eastern governments, the most palpable "threat to peace" in the area springs, not from local causes, but from the conflict between Russia and the West. To reduce this danger, all Arab governments that do not want to be drawn into the Russian orbit are arguing that the best course would be quickly to produce American aid on an unprecedented scale, so quashing all local temptation to espouse communism and lean on Russia. But this argument, once appealing, has been proved in the last two years to conceal a fallacy. The Arab states that put the case are would-be neutrals in the east-west conflict, but would-be belligerents in the conflict with Israel. So long as this state of mind prevails, their gratitude for American bounty may at any moment be swamped by gratification at the sense of power afforded by an arms delivery from Russia. Bargainers by temperament, they say they must "turn to Russia" unless the American help materialises. But there is no hope that it will serve its purpose unless the giver himself turns bargainer—which is the real, immediate necessity—and stipulates that only genuine neutrality is worth support, that neutrality is indivisible and that if governments want help to be neutral towards Russia, they must display neutrality towards Israel too. Unless this nettle is grasped—and it can be grasped nowhere but in Washington—during the period of fluidity brought about by Israel's military victory, the uneasy twilight that is the curse of the Middle East can but persist and the risk of war remain.

For a month, the fine points of permanent settlement have been overlaid by world-wide preoccupation with a classic UN mission—the ejection of foreign troops from soil which they have invaded in breach of the Charter. In itself no more than a bowing to the inevitable, the Anglo-French decision to withdraw from Egypt does open a new perspective. It should mean that threats to peace that fall short of actual conflict will no longer be lost to view, among them Egypt's own earlier, prolonged, unjustifiable, bellicose (and, for the matter of that, unneutral) acts.

Will the United Nations see the new vista plain and impartially before it moves further? Or will it be swept towards a blind impotence by the many states that can give no judgment unbiased by their pre-natal memories of dependency? Or will successful practical experience in Sinai give members heart and confidence to extend UN's umpiring role? Unfortunately, the British government, now tainted by its own fault with partiality in both the Middle Eastern disputes, is in no position to help charge the dynamo. Here, as elsewhere, it must pin its hopes on the United States and Canada—and, unless Mr Nehru shuffles off a collective responsibility, on India, too. If their influence is not brought fully to bear, then the *status quo ante* will be restored with all its dangers and frustrations renewed. They should be satisfied with nothing short of settlement.

To Defend the Pound

MR MACMILLAN'S task on Tuesday was to impress foreigners that the present attack upon sterling is irrational. He has done this as sensibly and, on the whole, as effectively as could have been expected. The clearest emphasis, in answer to the massive fall of $279 million which speculators caused in the gold reserve last month, should be laid on the Government's reiterated determination that it will in all circumstances defend the existing exchange parity of the pound. Foreigners would be wise to believe this, if only because the avoidance of devaluation, at almost any cost, happens to be in Britain's national interest; voluntary devaluation at the present time would do Britain no good (exports are now held up through shortages of shipping, not through too high sterling prices), while forced devaluation would spell the end of Britain's career as a banking nation (which is an important element in the British standard of life).

Rather than devalue—and domestic electors as well as foreign speculators should realise this—the Government in its present mood would deflate to the point of considerable temporary unemployment; very sensibly, however, it is not resorting to much immediate deflation until it has seen how exceptional last month's experience was. This is the main lesson of Tuesday's statement; it contained a lot of wise talk and (for all the new petrol tax) a lot of wise inaction, and was the better for both. Provided the Government's underlying determination can be taken seriously, and the indications are that it can, the Chancellor deserves general support and wide understanding—tempered by a few pointed murmurs about priorities—for the way in which he is playing this hand.

It is in this spirit of precaution not panic that the separate sets of measures announced on Tuesday deserve to be considered. The first set consists of the measures by which the Government makes ready to put on show more of the country's "hidden" dollar reserves. These prospective acts of mobilisation, by borrowings from the International Monetary Fund and from the American Export-Import Bank on the collateral of the British Government's portfolio of American industrial securities, do not mean, as Mr Harold Wilson alleged, that Britain "is throwing into the battle its second line of reserve"; but merely that it is bringing up this reserve into public view. Nobody (except presumably a few of the less-informed speculators) surely believes that the whole of the $1,965 million in the present reserve will really be drained away, and that there will therefore have to be actual use, as distinct from a public parade, of the $1,000 to $1,500 million that might now be borrowed from these other two sources. The question is simply whether it is wise to incur a small interest charge on the IMF borrowing (and presumably a larger dollar interest charge on the Eximbank borrowing) in order to advertise to foreigners the existence of a secondary reserve which every informed foreigner should already have known existed. It is fair to say that the tacticians at the Treasury are better placed than anybody else to make this calculation of advertising gain balanced against interest loss. Meanwhile, however—in advance of any Eximbank borrowing, and as a possible measure to make this borrowing unnecessary—it might be helpful if the Government were to publish running monthly figures of the market value of the American industrial securities it holds; it is not clear why these should not legitimately be counted as part of the reserve without having any new label or loan tied round them.

The other decision the Government has taken to "fortify" the reserve—the application to the United States for a waiver on interest payments under the 1946 loan—falls into rather a different category. The conditions attached to this loan were laid down in America's less magnificently generous days before Marshall aid. To a large extent, the 1946 loan arose out of the fact that Britain had expended more of its available treasure than had America in the common war against Nazi

Germany and Japan. It is no secret that negotiations have been in progress for some time about the possibility of revising the loan's terms; from time to time in the past two years there have been indications that both the British and American Governments had hoped that some revision might be made in the first congressional term after the American presidential election, possibly (it was thought at one time) in conjunction with some move by Britain towards freer world trade. Unfortunately, the negotiations with Congress for revision are now to take place under the worst possible conditions—with no *quid pro quo* from our side, and in circumstances where enemies of the alliance in both countries are going to enjoy themselves rubbing their raw antipathies against each other. Any agreement that eventually emerges will be much less liberal than the one we could have hoped for a few months ago. This, admittedly, is a criticism of the political consequences of the whole Suez adventure rather than of the case for making the application at the present time; it is doubtful if Britain would get any better terms, with less damage to the alliance in the attempt, by re-opening negotiations next year instead of this. But the best course may be to watch how Congress reacts; if the politics of the matter prove to be more awkward, and the economic advantages less immediately necessary, than the Government at present expects, Britain should stand ready to withdraw at once the request for waiver.

★

So much for the external measures. Internally, the Chancellor has followed a policy of saying a great deal about possible sternness to come, but of doing nothing immediate except to increase the petrol tax. He is probably right in both particulars. There was a strong case for accompanying petrol rationing by coupon with petrol rationing by price; an apology is due to the Chancellor from those who did not believe that he would be politically brave enough to do this. A great deal of nonsense has been talked about the effect of this increase on the cost of living. Any indirect tax can only add to the cost of living by the amount of that tax; either it adds to it all in one place, or else—as with the petrol tax—the cost is admirably widely, and therefore thinly, spread. (Those who have been saying that the cost of petrol "enters into the price of everything bought and sold in the country" have really been putting the same point in another way.) The yield of the new petrol tax (which the Chancellor estimates, possibly generously, at £30 million in the last four months of this financial year), together with the extra 5d. a gallon charged by petrol dealers, will suffice to raise the general cost of living by less than one per cent; the situation is complicated by the fact that transport concerns are trying to increase their profit margins to make up for declining business, but as purchasing power is being mopped up by the new tax they will not find this so easy. Indeed, the main criticism to be made of the Chancellor's action should perhaps be of his promise that the impost is only a temporary one; this may have been an unwise political hostage to offer in advance of the longer term reassessment of energy policy, which he himself foreshadowed.

★

The most interesting internal feature of the Chancellor's statement, however, was the combination of what he said with what he did not do. He said that an increase in income tax was the "traditional" weapon on which "the country relies in times of difficulty and crisis." It is not, Bank rate is, and if this part of the Chancellor's statement were to be taken as an expression of new doctrine it would be right to utter a loud protest. It is more likely, however, to have been an expression of expediency. If Mr Macmillan had "warned the House, and informed the world" that he would not hesitate to increase Bank rate, the world would have asked why he did not increase it on Thursday. He could also have raised purchase tax this week; although, if he had merely given warning of a readiness to do so, the result would have been a rush of forestalling purchases, which is the reverse of what he wants. By declaring instead that income tax is the "traditional" anti-crisis weapon, the Chancellor picked upon the one tax which for technical reasons could not be raised until next April, by which time the use of it may be seen to be unnecessary.

It is therefore legitimate to suspect that there may be more incantation than economics in all this. Nevertheless, and once again, the Chancellor's emphasis was broadly right. The country is not at the moment in an inflationary state, in the sense of having an excess of domestic demand over potential domestic supply; indeed, the trend may be towards rather more underproduction and under-employment, so that—but for the speculative drain on the gold reserves—it might even be right to start talking soon about putting Bank rate and taxes down. The country is also not in a state of current external disequilibrium; even "on the most pessimistic estimate of the amount of dollar expenditure we shall have to make on oil," the Chancellor believes that Britain's own accounts will be just about in balance in the year to next July, and the overseas sterling area's accounts seem more likely to improve than to deteriorate. On every ground of logic, therefore, foreign funds—which have already fallen below the level convenient for normal working balances in London—should soon start flowing back. But the important thing is to be ready—and to let the world know that Britain is ready—to take unpleasant measures of deflation in case the speculators are not logical. In this situation, Mr Macmillan's statement contained no obviously wrong decisions, and omitted no obviously right ones. The final judgment may be that he has done the least that in wisdom he could do, but that he was wise not to do more than that least. Not yet.

The Alliance after Suez

PAINS have always been taken in Anglo-American relations to smooth over differences by toning down the words that express them. The deeper the difference goes, the more trouble is taken; thus a false impression is created that only superficial or trivial differences exist, and when some turn of events reveals that the British and American governments in fact disagree decidedly on a matter which one of them considers to be vital—as they have disagreed over Egypt—the damage is worse than it need be because it is complicated by an emotional feeling of having been deceived or betrayed. Egypt is the extreme case; the Americans reproach the British with having deceived them (as they did) and the British blame the Americans for turning against them (as they did) in a crisis.

Before the moment when Sir Anthony Eden launched his ultimatum against Egypt in conscious disregard of the United States, and President Eisenhower assumed the leadership of the United Nations campaign to bring Britain and France to heel, signs of the real and deep nature of the Anglo-American division over Egypt had been visible enough to those who wanted to see them. The two governments themselves did what they could to present the division as a mere difference over procedure, as was natural and even in a way proper; but its effects have been unfortunate. The British have assumed too easily that it must always be an American interest to preserve Britain as a power—without considering that the Americans might have views of their own about the kind of power that they wanted Britain to be, or might come to desire British influence to be strong in one place and weak in another. The Americans, in the weeks when they blew hot and cold over Suez, at times appearing to support Britain and at others blandly putting on an air of detachment, took it for granted that Britain was too loyal to go off on a violent diversionary action of its own.

Each was wrong about the other. Certainly, since the British government's behaviour was marked by disgraceful folly, while the American government merely showed itself lacking in foresight and resource, it is the Americans who have the greater grievance; the British, on the other hand, having suffered a humiliating failure, feel themselves the more aggrieved.

When Mr Dulles on October 2nd talked of differences involving "fundamental things" between his government and Britain and France on the Suez question, and went on to explain those differences in terms of the "shift from colonialism to independence," it was almost an automatic reaction to assume that this was merely Mr Dulles talking in his familiar clumsy and incautious way. He himself, conforming to the assumption, hastened to amend the transcript of his press conference, so that the reporters were able to report only an innocuous version in direct speech and had to use indirect speech to indicate what he had actually said. The revised version presented the remarks on colonialism not as a pronouncement on the Suez question but as an unaccountable digression from it. As his hearers understood him, however, he treated the Suez question as an issue between the "colonial powers" and "the powers which are primarily and uniquely concerned with the problem of getting their independence as rapidly as possible," and he said that the United States could not identify itself "100 per cent" with either side. A little earlier he described Suez as

> not an area where we are bound together by treaty. Certain areas we are by treaty bound to protect, such as the North Atlantic Treaty area, and there we stand together and I hope and believe always will stand absolutely together.

But there were other areas in which "the United States plays a somewhat independent role."

★

Many men of perception and good will treated the Secretary of State's utterances of October 2nd as woolly talk. Mr Walter Lippmann pointed out that Egypt was not a colony; nobody was claiming that the canal zone was anybody's colonial property (the world had not then heard Lord Hinchingbrooke claiming that it was "in some sort a part of the United Kingdom"); and the points of difference between the United States and Britain and France had nothing to do with colonialism. One difference was concerned with whether force ought to be used, not in any circumstances or for any purpose, but for the particular purpose of overthrowing President Nasser—which, in the American view, would be an illegal and immoral use of force; the other was concerned with whether the international regime for the canal, proposed by the 18 powers, ought to be imposed on Egypt, as the British and French appeared to wish, or treated as a subject of negotiation, as the Americans believed that it should.

Mr Lippmann ought to have been right; but the British and French governments by a burlesque imitation of old-time colonialism have since convinced most of the world that the issue was as Mr Dulles, not Mr Lippmann, saw it. Another commentator, Mr Chalmers Roberts in the *Washington Post*, at the time called Mr Dulles's remark about colonialism in the context of Suez "a Freudian slip" which betrayed the real direction in which the thoughts of the American administration had been moving: "What he said was not surprising but that he said it out loud was amazing." In fact there is no real doubt that what Mr Dulles said on October 2nd was significant and accurate as an expression of the prevailing view of the American policy-makers about the Anglo-American difference over Egypt. It was not merely a personal hobby-horse

of the Secretary of State. As we can see, the American determination not to be tarred with the colonialist brush has governed American policy on Egypt more consistently during his illness, with the President himself in direct charge of foreign policy, than before.

It was, then, a settled view of Middle Eastern policy which caused the United States government to turn its back on Britain and France at the end of October. Anger at the deliberate deceit which the Americans believe Britain and France to have practised on them played its subordinate part, removing any compunction that might have been felt in Washington, and making American antagonism more frontal than it might have been ; the deciding factors were of a more abiding kind. This needs to be understood. The direct Anglo-American dispute was in some degree wound up at the week-end, when, Washington having been assured of the British and French intention to announce, and proceed with, the withdrawal from Port Said, gave permission for the emergency oil arrangements to be set in motion to help western Europe out of its mess. American spokesmen have denied that there was ever any question of American economic sanctions against Britain and France. There was, however, a firm American refusal to lift a finger to help in alleviating the economic consequences of the Egyptian adventure until the adventure had been wound up. Not from pique, but from a conviction that we are wrong and they are right, they made the renewal of their friendship contingent on a British withdrawal without conditions. The withdrawal implies the demolition of what remains of a special British position in the eastern Mediterranean —ultimately, probably, in the whole Middle East. For that, since the withdrawal is a consequence of the ill-conceived intervention, we can blame nobody but ourselves. But the Americans are aware of what it means and are by now entirely ready to contemplate a Middle East from which any special degree of British influence has been removed.

★

How effectively are the implications that flow from these facts being faced in Washington ? To the embittered British and French the American attitude of the past six weeks has appeared as a complacent readiness to let the foreigners stew in their own juice ; in Washington, it has been seen as a resolute determination to enforce the moral law and to preserve for the United States a position unprejudiced by any association with British and French actions, in which it can pursue constructive policies in the future. Certainly, the resentful British and French judgment is unjust. Whether Washington's view of itself is any more accurate will depend on the energy and imagination which are deployed now that the field is clear. The Anglo-French débâcle leaves a vacuum which cannot be preserved. If American influence does not flow into it actively, dissensions and conflicts will seethe and boil up again, and Soviet power will be drawn in by a process of nature.

In general terms, the men who make American policy understand this. Their present aloofness from the interests and nostalgic longings of the old European powers is a far cry from isolationism. It remains to be seen whether they understand its application in detail. To work, as Washington wishes to work, through the United Nations is good sense ; to "leave it to the United Nations" would be folly. The American desire to keep the goodwill of the Arab states is good sense, too, but it will defeat itself in the end if, in pursuing it, the Americans think in the anti-colonial conventions which are current coin at this time of transition. In that way they will merely seek to please everybody, committing their strength to the support of local weak men, and overlooking that the conflicts which trouble the region, being real conflicts, require solutions of substance which are bound to give offence to some.

★

As Mr Dulles indicated on October 2nd, and as American comment and actions since then have made amply clear, Washington now intends to pursue a policy of alliance with Britain and with the North Atlantic powers in Europe, while in the Middle East it pursues a separate policy independent of and aloof from the European powers, and seeking the friendship of the Middle Eastern states without regard to their friendship or hostility to Britain. Some elements of this policy have been visible in the past—as in Teheran at the time of the Anglo-Iranian oil dispute, and in Cairo when the future of the British bases on the Suez Canal were under negotiation. Still more of it has been visible in the Far East.

The Middle East is near to Europe ; the North Atlantic and the eastern Mediterranean are not separate worlds ; neither Britain nor France will readily leave their interests in American hands. The position of merely local allies implies in the end that they become merely local powers, a status which they may still show some reluctance to accept. No doubt the Americans will, in the event, recognise that European interests, together with whatever may remain of European power and influence in the region, are facts to be taken into account, just as local goodwill must be taken into account. It does not automatically follow that, because they accept this as necessary and even in some cases as desirable, they will be prepared to do all that is needed to bring it about. This is the challenge to American wisdom and statesmanship, which have still to match American power. Britain for its part has to resume the task, in which the present government has so lamentably failed, of persuading the United States government that British interests—detached from the trappings of inherited dignity and glamour—are worth the while of the United States, in its own ultimate interest, to respect and preserve. Upon the Americans for their part the new relationship will impose heavy demands in imagination and flexibility, and in positive decision, if the Atlantic alliance is to survive it in an effective form.

Asylum for the Brave

IT is bad news that a temporary suspension has been placed on the entry of Hungarian refugees into Britain, after this country had done better than any other except Austria by absorbing 11,000 refugees in the first ten days. But nobody who has seen the congestion both at the transit centres and second-line hostels will be surprised at the announcement. The moral for this country now is that the moratorium must be made as short as the digestive process permits, that more offers of accommodation and aid are needed, and that the nation must realise how big this job of resettlement is going to be, if we are not to leave an undue share of the burden to Austria. There is still no ceiling to the number of Hungarians Britain has undertaken to accept. In official quarters the fact is faced—among the public at large the aim should be set—that it may be as high as the American figure of over 21,000. It is too soon to assess the precise need. More than 100,000 refugees have already left Hungary, more are crossing the frontier every day, and some 75,000 are still in Austria whose resources are strained beyond capacity in succouring them.

The most convenient feature of the Hungarian exodus is that the young and able-bodied are heavily represented in it. These were the groups most actively concerned in the fighting, are mostly without dependants, and had strength to reach the frontier. So far as can be seen, well over sixty per cent are teenage youths and young men of working age. They cover every walk of Hungarian working life. There is a substantial proportion of industrial workers, skilled and unskilled, but few peasants. Although in terms of broken families, of fathers separated from wives and children, and young boys sent out on their own, this implies many personal tragedies, it does facilitate the task of absorbing them into British life. They are a migrant working group rather than a typical refugee group, in which the old, infirm and professional element usually tend to predominate. For this reason the moratorium should be short, because it should be possible to find employment for them quickly. There are still 250,000 vacancies and no more than 1 per cent unemployment in Britain. Many of the Hungarians' skills are highly acceptable—such as those of textile workers, miners and fitters ; and the refugees show a commendable urge to go out and get jobs on their own. Many have already succeeded—getting employment as draughtsmen, circus performers, palace servants, opticians, and farm workers, to mention a few widely differing occupations.

That some have been able to do this so quickly is testimony not only to British eagerness to help, the state of full employment and Hungarian determination to triumph over the language handicap, but also to the humane abandonment by the departments—the Home Office and the Ministry of Labour are those most concerned—of the normal routine for aliens. This should be commended ; the more so because any failure in this respect—or any imposition of tighter controls now that would prolong the moratorium—would deserve to be most heartily condemned. When the size of the exodus and Austria's plight were realised, the British immigration officials flown to Austria abandoned the system of individual interviewing, and refugees were accepted with no more documentation than a name on a visaed passenger list. In Britain, the barest necessary details of personal condition are taken in the transit centres, where the principal task, apart from providing food and clothing, is to pass the inflow along to the second-line hostels.

This is a big task. The transit centres have to sort out old and young, families from single individuals, and make use of many of the offers of private accommodation for those who by age or illness stand in immediate need of it. Further, many Hungarians hope to go on to the dominions, and this must be taken into account. Australia and New Zealand are selecting in Austria (this was not realised by some of the refugees who have arrived here), while Canada is proposing to take 6,000 of those who reach Britain. In the transit centres the refugees receive the police registration which entitles them to seek and accept employment. The work done in these centres is onerous ; it includes disabusing the new arrivals of all sorts of notions, such as that they can be compulsorily drafted to the coal mines, or that Scotland can be equated to Siberia. Many on arrival were terrified of leaving London by bus in parties—too reminiscent of Russian methods. The language difficulty is acute—not merely in the shortage of interpreters, but in the need to explain wholly new concepts and engender a wholly new attitude to authority.

★

The main job of sorting and settling must be done in the hostels, which have been provided free by every kind of organisation, ranging from the Army and the Ministry of Works, to the Coal Board, bodies like the YMCA, private firms, and *ad hoc* organisations or individuals who have adopted, furnished and staffed country houses for the purpose. Here fuller details for Home Office purposes are taken ; officials from labour exchanges can begin to match men, women and jobs with accommodation ; and a first attempt can be made to equip the refugees with an indispensable modicum of English—it is urgent that new methods of doing this should be explored. But it is also in the hostels that the danger lies. When the first rush of enthusiasm is over—and perhaps the first rush of British compassion—idleness, homesickness and personal idiosyncrasy begin to break up the original companionship in misfortune. It is urgent not only that there should be more hostels ; but that as many

refugees as possible should be moved into lodgings when they have jobs, while those who stay in hostels should get jobs nearby to absorb their time.

There have been large offers of private accommodation—somewhat tainted by middle-class longings for cheap domestic service. Many more, in industrial areas, are needed. A great deal of money has been subscribed to provide accommodation as well as the relief of personal needs—but, if more Hungarians are to be taken, the fact must be faced that money will be needed over a long period. Indeed, Britain has to invest in these new citizens (as many, if not all, will become); the universities which have selected 150 students for degree courses will between them have to find £300,000 over three or four years for them; many other students and trainees ought to be helped to complete their training in technical colleges. A university fact-finding mission has estimated that there are now 4,000 students in Austria, the greater number of whom are technological, and they played a leading part in the revolt.

The attitude of the trade unions is clearly most important. So far it has been generous: £53,000 has been subscribed to the TUC's relief fund. There has, however, been little formal discussion of the problem of employment. The National Union of Railwaymen, in spite of some opposition from the five communist members of its executive of twenty-four, has agreed to the employment of suitable refugees; and the National Union of Mineworkers has also agreed to accept Hungarians, 200 of whom want to be miners—although what the union accepts at the national level, as experience with Italian miners showed, will not necessarily suit the local lodges. In private industry there has been little discussion, not because the unions shrink from the problem, but because they do not yet expect there to be one. Union head offices are making no objections to the flood of offers of work for refugees, and there is so far no sign of local opposition. They can point to the fact that some 250,000 refugees and aliens have entered British industry since the war—not without friction, it must be admitted, because of their readiness (which Hungarians will no doubt share) to work harder or longer than their British workmates. Present attitudes, however, may change if an oil shortage leads to a shortage of jobs. In that case the Ministry of Labour will come under pressure to apply the rule that no Hungarian should be given a job if a British worker were available. On the other hand, those Hungarians who had found jobs already would (judging from recent precedents with coloured workers at Standards and Austins) be subject on an equal basis with British workers to the principle of "last in, first out." It should be added that the professional bodies, in medicine and dentistry particularly, will have to take thought. The handful of Hungarian doctors should be very welcome in hospitals, especially mental ones, provided they can make their English good enough. The professions should be liberal about this.

★

In terms of the population, the number of Hungarians to be absorbed is, over a period, small—but it comes on top of immigration from elsewhere, including the colonies; the British refugees expected from Egypt should enjoy the same care as the Hungarians, and there may be 5,000 of them. The Government and local authorities will have to take all this into account in their plans for housing. There will be other problems, educational, cultural and, indeed, even political—for the young Hungarians have their minds formed in an entirely different mould of ideas, even though their detestation of Russia is profound, and their love of liberty evidently irrepressible. But, in all but the special need for speed, these "melting-pot" problems are ones in which the British are fully versed; the Hungarians are only the latest in a long series of refugee contingents who have both diversified and enriched the complex fabric of British life. Their record suggests that they will enrich it indeed.

Anglo-American Relations

Of course a great proportion of the remarks on American affairs which now fill the columns of the English press cannot be particularly pleasing to the reading public of the United States. The citizens of that great country are said to be unusually susceptible to the opinion and the criticisms of the Old World, and especially to those of Great Britain; and perhaps some writers on this side of the water are not sufficiently on their guard against wounding a sensibility which, even if sometimes a little excessive, has yet a natural and a creditable origin. The Americans desire that every one should think as highly of their nation and its institutions as they do themselves; and when this is not the case, they are more disposed to quarrel with the critics than to amend the thing criticised. Now it cannot be denied that occasionally and in some quarters the friendly and considerable spirit which ought to pervade all animadversions on the conduct, and all descriptions of the condition, of a kindred and allied people, has not been as apparent or as unvarying as could be wished. But we pray of our Transatlantic brethren to be immoveably convinced of two things, and to bear them incessantly in mind:—*first*, that the intense interest we take in their progress and well-doing is the cause of our recurring so incessantly to the subject;—and *secondly*, that the warmth and freedom of our remarks is solely attributable to the fact that great as is our interest in the success of their career, our interest in the political problems whose solution is at stake therein, is still greater and profounder. Never let America for one moment suffer her mind to be poisoned with the unfounded fancy that England is jealous of her greatness, or comforted by her perplexities, or rejoiced at her failures. The very reverse of all this is true. . . . The world is wide enough for both. The aggrandisement of the one Empire takes away nothing from the grandeur of the other. The prosperity of the one aids and reacts upon the prosperity of the other. We are rivals in one sense, it is true; but we are not antagonists: on the contrary, we are mutual auxiliaries in each other's progress.

Notes of the Week

Revolt Damped

MR SELWYN LLOYD'S long-drawn-out apologia on Monday for the Suez withdrawal merely prolonged the bitter humiliation of the Conservative party's worst hour since 1945; it is therefore rather surprising that his performance both on this occasion and on Wednesday must be counted as a personal parliamentary success. All the indications are that the massive revolt previously threatened over the withdrawal by the Conservative right has been at least temporarily quenched. The Government was confident on Thursday morning that fewer than a dozen Tory backbenchers would refuse to vote for the confidence motion that evening, even though some seventy threatened to refuse only two weeks ago.

So much for the tough men of the right; the conclusion to be drawn is that if they had been in the Cabinet they would in fact have done, at every stage, almost exactly what the Cabinet has done under the remorseless pressure of events. They do not really prefer disaster to retreat. It is true that the particular disaster with which the right was threatened this week was the to them unspeakable one of a Gaitskell government. This was the main bogey used, and used with remarkable efficiency, by the Government Chief Whip, Mr Heath. Mr Heath will surely have earned a niche in the Tory pantheon as the man who gave the party a second chance; at a time when the spotting of Tories who may some day move to much higher office has become the most popular Westminster occupation, here is a name to enter on the list.

Welcome Home?

WHAT, in fact, are the odds on a reshuffle of Tory leaders in the near future? The main development of the past week is that it has at last become respectable among Tory MPs to talk about the possibility of retirement by the Prime Minister. It is noticeable, however, that those backbenchers who now feel that he probably ought to go seem to be assuming that, if their school of thought gains ground, the party will be able to cast Sir Anthony off like an old glove. Things would not be so easy. Whatever medical name one puts upon the condition of nervous conflict and physical overstrain that sent Sir Anthony to Jamaica, the pattern is not that of a man who is likely to give up politics in disgust because of any unpleasantness and disagreements with his colleagues and subordinates; rather, indeed, Sir Anthony might be fortified in his determination not to resign by a feeling that yet more people were unfairly "getting at him." He, although not the party, might actually prefer an election to resignation. Provided he does not go to the country, however, Sir Anthony will have considerable party support in any determination to stay personally at the helm. The constitutional doctrine enunciated two weeks ago by Mr Oliver Poole—that Sir Anthony had to go to Jamaica because Mr Gaitskell and other people had been rude to him, and that this opposition to a strained and patriotic man was somehow indecent—accords with a recognisable trait not only in the conservative, but in the British, character.

If Sir Anthony should retire, however, there is less doubt about the succession than recent wide-ranging comment has suggested. Although the disillusioned Suez extremists have been burrowing as far as to Mr Sandys in their search for a new leader, there is in fact only one man who can succeed Sir Anthony, and that is Mr Butler. Despite Mr Macmillan's impressive performance this week, to pass over the heir-apparent would split the party as surely as it would have been split by the election of Mr Butler, rather than Sir Anthony, as the successor to Sir Winston. Mr Macmillan, in any event, has been dropping hints about going out, rather than going up; by reason of age, outside interests and family circumstance, he would be more likely than any other Cabinet member to withdraw from politics if he should become fed up, and the business of government in the last two months must have been very feeding up indeed. If he should go, however—and even assuming that Mr Selwyn Lloyd, after his success this week, would now remain as a senior minister even in a Butler government—there would be a lot of top places in the Cabinet to fill. One of the built-in stabilisers of Sir Anthony Eden's position may be that many of the able younger Tory ministers, who could look for promotion under such circumstances, do not seem particularly anxious to agitate for promotion at this time.

Russia and Syria

RUSSIAN propaganda, playing on Arab nationalism and Syrian fears, and combined with the activities of a fellow-travelling party that is unusually well organised for an Arab country, seems to have pushed the Syrian government a good deal further into the Communist embrace than it really wishes to go. An arms deal which was probably concluded when President Kuwatly went to Moscow last month seems to have stepped up Soviet deliveries to Syria, although it has been estimated that £20 million worth of material has been sent in during the past year; this includes 100 medium tanks, 100 armoured cars, troop carriers, vehicles, radar equipment and minor armaments, and

Manœuvres on the Italian Left

UNLESS Signor Togliatti has cold feet at the last minute, the national congress of the Italian Communist party opens in Rome this week end. No doubt every effort will be made to present a reassuring picture of party solidarity and self-confidence. But even if the stage-management does not break down and the façade remains undamaged, the men back-stage are unlikely to feel much genuine assurance about the prospect before them.

The Hungarian revolt has given a hard knock to the biggest Communist party in Western Europe. The Soviet intervention in Hungary, and Signor Togliatti's attempts to justify the intervention as a "necessity, if a hard one," have led to open dissension and disaffection among his followers. According to some reports thousands of party membership cards have been handed back.

In this difficulty, misgivings over the correct course to pursue must be heightened by doubts about the kind of directives that are likely to emanate from Moscow. If the more "liberal" and flexible Khrushchev policies are going to be discredited and cast aside, the Italian communists might as well abandon all hope of popular appeal and make up their minds to a smaller, militant Stalinist-type party. To judge from the party press, however, Signor Togliatti still maintains that there is "no way back" from the twentieth congress of the Soviet party, and that while the Soviet Union remains the "first state" that has built socialism this cannot prevent the Italians from using "different methods" to build their own socialist way.

Signor Togliatti (unlike M. Thorez) also has Signor Nenni to reckon with. Many Italian communists, however nauseated with the party line, would be much less likely to consider breaking away if Signor Nenni did not provide a congenial bolt-hole. He now has the added attraction of having flatly condemned the Soviet intervention in Hungary. He has also stated equally flatly that his party is no longer in fundamental agreement with the communists. But he has still to take the final step of an outright break with them; too many of his followers, it seems, have too close and deep links with the communists. It has become a moot point whether the communist connection is more of a help or a hindrance to Signor Nenni. What is certain is that any advantages he may gain from the disarray in the communist ranks will strengthen his position when bargaining with the Saragat socialists over the terms of the socialist fusion which most observers think is bound to come sooner or later.

Mr Chou's Sixth Principle

AT Delhi airport last week Mr Chou En-lai was greeted by a crowd of 10,000 (according to All-India Radio) or 50,000 (the Peking news agency's figure). The discrepancy is probably symbolic. Mr Nehru, who is off next week to Washington, is not very eager to play up Mr Chou's visit; but Peking's newspapers have been pleasingly frank about the elaborate organisation required to ensure a big spontaneous reception for the Chinese Prime Minister (any reader puzzled by this should understand that Peking has not been complaining, but on the contrary has been complimenting Delhi on its organisational efficiency). Banners, posters, chanting crowds and speech-makers have tirelessly reiterated one main theme: "*panch shila*," the Five Principles of good neighbourliness and mutual non-interference which Mr Chou and Mr Nehru drew up in 1954.

In Cambodia, the previous stage of his Asian tour, Mr Chou had already leant on the Five Principles heavily. He had there put particular stress on the fact that China was "resolutely opposed to great-nation chauvinism by any nation." Cambodia, which, like Hungary, lies rather close to a great communist power, was apparently reassured by these impeccable sentiments. Yet China has backed Russia up to the hilt over Hungary. Like Russia, which is also committed to *panch shila*, it has seen no breach of the principle of non-interference in the threat to send armed "volunteers" by the hundred thousand to Egypt (a threat which India found alarming). Its most practical application of the principle has been to squeeze Indian influence out of Tibet while securing an open door for Chinese influence in Nepal. Indians who have read "Animal Farm" may wonder whether, if they could get a fresh look at the document on which the Five Principles were first inscribed two years ago, they might not find that a sixth had been mysteriously added—with some such wording as: "for some people these principles are more binding than for others."

Just a month ago, when he addressed the Unesco conference in Delhi, even Mr Nehru seemed to have lost his faith in the stopping power of *panch shila*. The slaughter of Hungarians by Russia, a fellow signatory of the principles, jolted him into losing his unbalance. "We see now," he said, "that those Five Principles are mere words without meaning to some countries." But his Chinese visitor appears to have restored the Indian prime minister's faith, for on Monday he publicly castigated all those smaller nations which, being doubtful about relying on communist rulers' pledges, seek safety in defensive alliances. The pleasant thing about this speech, in which Mr Nehru belted into the governments of Iraq and Pakistan and regretted some of the actions of the Kadar regime in Budapest, was that he began it by appealing to Indian politicians to be cautious in their utterances and not to try to sit in judgment on other countries.

Charter for Ghana

WHEN Parliament debates the second reading of the Ghana Independence Bill, MPs should not be deceived into thinking that its brevity implies that it disposes of all the problems of the new dominion. In a few decisive clauses it severs all ties of sovereignty between Britain and the former colony of the Gold Coast, leaving it with a legacy of laws and institutions—but also with unfettered freedom to change them in future. Only Togoland (whose affairs were discussed in a Note in *The Economist* last week) is excluded from the bill; it will be dealt with similarly by Order in Council after the United Nations has approved its union with Ghana. The bill, it should be noted, makes the whole existing territory an independent unitary
